RAILWAYS OF NEW SOUTH WALES.

REPORT FOR 1876.

*The Commissioner for Railways to the Honorable the
Secretary for Public Works.*

Department of Public Works,
Railway Branch,

SIR,

Sydney, 8th June, 1877.

I have the honor to submit for the information of the Government a statement of our Railway transactions during 1876. The tables and returns in the Appendix, which I have carefully revised, are prepared in similar form to those attached to my last Report. Dated 5 April, 1876.

1. LINES OPEN AND IN PROGRESS.

At the close of 1875, the Southern line was open for traffic to Gunning (165 miles), the Western to Kelso (146), and the Northern to Murrurundi (124), a total length of 437 miles, including 2 miles of Branches. In 1876, the Southern line was extended to Binalong (43 miles), and the Western to Blayney (29 miles), making an addition of 72 miles during that year, and a total of 509 miles open at the end of 1876. Lines open.

According to the extended time allowed for the completion of existing contracts, a further length of 179½ miles should be opened during the present year, namely, from Binalong to Wagga Wagga (96 miles), from Blayney to Orange (20 miles), from Murrurundi to Tamworth (62 miles), and Bullock Island Branch (1½ mile). Lines in progress.

This is exclusive of the railway from Deniliquin to Moama, 45 miles in length, which was constructed by a private company, and opened for traffic on 4th July 1876. In the appended extract from the report of the Engineer-in-chief, will be found a description of this line, which at present may be regarded practically as an extension of the Victorian railway to Echuca, and a valuable feeder to that line. Deniliquin and Moama Railway. Appendix No. 51, p. 105.

The dates of opening the different sections, the number of miles opened per annum, and the total and average daily mileage of the trains from the commencement, will be found in the Appendix. Appendix Nos. 2, 10, pp. 42, 54.

2. PROGRESS OF CONSTRUCTION.

During last year, no contracts were entered into for additional railway extensions, but the existing contracts on all the lines were pushed forward as rapidly as possible; and, in accordance with the notice given to the contractors, the penalties have been enforced in all cases where the works have not been completed within contract time. Progress of extensions under contract.

Southern
Line.

On the Southern line, the extension from Gunning to Bowning was opened for traffic on 3rd July, and from Bowning to Binalong on 1st November last; and before the close of the year the permanent-way had been laid to within a few miles of Murrumburrah.* On the length beyond this to Cootamundra considerable progress had been made. The time specified for completion is 30th April 1877. The works on the section from Cootamundra to Wagga Wagga were also well advanced. The date named for completion is 31st December next.

Western
Line.

On the Western line, the length from Kelso to Bathurst was opened on 4th April, and that from Bathurst to Blayney on the 1st November. The time for the completion to Orange was 1st August last.†

Northern
Line.

On the Northern line, no portion of the extension from Murrurundi to Tamworth has yet been opened for traffic. The progress on this contract, from various causes, has been very unsatisfactory. The length to Quirindi, which should have been opened on 31st August last, is still unfinished. The extended time for completion to Tamworth is 30th September next.

3. RAILWAY SURVEYS.

Trial surveys.

Although no contracts for further extensions were entered into during last year, the railway surveyors were actively engaged in examining routes and preparing surveys of new lines to be submitted to Parliament. From information supplied by the Engineering Branch the following is a summary of the work performed:—

Southern Line.

Wagga
Wagga to
Albury.

Of the length from Wagga Wagga to Albury, working plans and sections are completed, and as soon as the necessary funds are provided by Parliament tenders may be invited for the work.‡

Hanging Rock
to Deniliquin.

Plans and sections of the extension from Hanging Rock to Deniliquin *viâ* Urana and Jerilderie, are also ready to be laid before Parliament.

Junee to
Narrandera.

A trial survey of the line from Junee to Narrandera is completed. The junction with the main line is at the crossing of the road from Junee to Wantabadgery, but an amended survey of the first 15 miles is in progress.

Western Line.

Orange to
Dubbo.

Parliamentary plans and sections of the extension from Orange to Wellington and Dubbo are completed.§

Orange to
Wilcannia.

Trial surveys of the line from Orange to Wilcannia, through Parkes towards Condobolin, were commenced in September last, and a considerable portion was levelled before the end of the year.

Wallerawang
to Mudgee.

Of the extension from Wallerawang to Mudgee, the first trial surveys were finished in July last. An amended survey from Wallerawang to Rylestone is now completed, and Parliamentary plans can be prepared if necessary.

* The line was opened to Murrumburrah on 12th March 1877.

† The line to Orange was opened on 19th April 1877.

‡ Plans, sections, and books of reference of the extension from Wagga Wagga to Albury were approved by Parliament on 30th May 1877.

§ Plans, sections, and books of reference of the line Orange to Dubbo, *viâ* Ironbarks, were approved by Parliament on 9th May 1877.

Northern Line.

Trial plans and sections of the extension from Tamworth through Manila, Barraba, and Inverell to Tenterfield, were completed in 1875, and surveys from Tamworth direct to Armidale, in May 1876. A deviation through Uralla, joining the former line near Armidale, and meeting the Inverell and Tenterfield survey near Wellington Vale, has been surveyed, and another from near Uralla, passing about 8 miles to the west of Armidale, and joining the through survey between Armidale and Glen Innes, about 25 miles north of Armidale.

Tamworth to Tenterfield, Armidale, and Glen Innes.

The plans and sections of the coast-line from Iluka to Woodburn, to unite the Clarence and Richmond Rivers, are also completed. The works are light, and the line passes chiefly through Government land.

Iluka to Woodburn.

Of the extension from Werris Creek to Gunnedah trial surveys were commenced in January 1876. The line has since been staked out, and the working plans have been completed.*

Werris Creek to Gunnedah.

Summary of Railway Surveys.

The following amounts were voted by Parliament in 1876 for the undermentioned extensions:—

	Miles.	£
Orange to Wellington and Dubbo	86	610,000
Junee to Narrandera	64	384,000
Tamworth to district of Armidale	75	600,000
Werris Creek to Gunnedah	41	220,000
Total	266	£1,814,000

And different routes have been surveyed of a total length of 1,469 miles, but the approximate length of the lines that may be adopted is only 856 miles, as will appear by the following figures:—

	Approximate length of	
	Probable Extensions.	Alternative Lines.
Wagga Wagga to Albury... ..	82	...
Cootamundra to Gundagai	34	23
Hanging Rock to Deniliquin	124	...
Orange towards Wilcannia	70	...
Wallerawang to Mudgee, <i>via</i> Rylestone... ..	85	...
Deviations, Cherry-tree Hill and Broomlie Gap	63
Tamworth to Tenterfield, <i>via</i> Inverell	222	...
Tamworth to Wellington Vale, <i>via</i> Armidale, and deviation through Uralla, &c.	234
Moleville to Glen Innes	107	...
Deviations, South Grafton, Lawrence, &c.	195
Iluka to Woodburn	24	...
Sydney to Illawarra	67	...
Deviations, Liverpool and Campbelltown, &c.	98
Sydney towards Newcastle	41	...
Total	856	613

* Plans, sections, and books of reference of the line from Werris Creek to Gunnedah were approved by Parliament on 9th May 1877.

Metropolitan extension and suburban railways.

The advisability of removing the Redfern terminus to the business part of the city has, for a considerable time, engaged the attention of the Government. Several trial surveys were made during 1875; and in June 1876 a proposal was submitted to the Assembly for an extension of the line from Redfern through Hyde Park, terminating at the north-west corner, near the Supreme Court, but the proposal was not approved of, and the scheme was abandoned for the time. The subject, however, has since been agitated in connection with a movement for a system of suburban railways, to relieve the streets of Sydney of their superabundant traffic, and to afford the inhabitants of the suburbs greater facilities than now exist for intercourse with the metropolis.*

A sketch-map is appended, showing in thick red lines, railways completed, in thick red dotted lines, railways in course of construction, and in thinner red dotted lines, railways projected,—as required by the Board of Trade,—and diagram sections of the different lines, prepared by the Engineer-in-Chief.

Expenditure for surveys. Appendix No. 8, p. 53.

The total amount expended on trial surveys has been as under :—

To 31st December 1875	£42,824 14 8
During 1876	14,292 15 5
Total to 31st December 1876	<u>57,117 10 1</u>

4. LAND TAKEN FOR RAILWAY PURPOSES.

Land taken for railways.

Appendix No. 3, p. 43.

During last year, 124 additional acres of land were taken, the claims for which amounted to £21,966, but were reduced by the valuers to £11,298, a saving of £10,668, or 48·56 per cent. In the annexed abstract it will be seen that the average rate per mile, including severance, damage to buildings, legal expenses, and cost of conveyance and arbitration, was £408 12s. 8d. The average rate per acre is calculated for the whole land taken; but as no payment was made for Crown lands the average cost for private lands will be so much the greater. The different rates are as under :—

Rate per acre, inclusive and exclusive of Crown lands.

Lines.	Inclusive of Crown lands— per acre.	Exclusive of Crown lands— per acre.
	£ s. d.	£ s. d.
Southern	25 18 6½	45 12 7
Western	16 9 10¼	30 16 9½
Northern	35 9 4	48 7 9½
Average on all Lines	25 2 1¼	42 0 9½

Claims outstanding.

The claims outstanding on 31st December 1875 were reduced by 54 in number, and £7,300 in value. The number outstanding on 31st December last was 275; but as an assistant draftsman has been appointed, it is hoped that the remaining claims will soon be satisfactorily settled.

*On 1st June 1877 the Assembly approved of an Address to the Governor for plans and sections to be made and an estimate of the cost of constructing a system of suburban railways.

5. SUPPLY OF RAILWAY MATERIALS.

In the Appendix will be found a return of the permanent-way and other materials imported from England in 1876, showing the names of contractors, a description of the materials, the invoice price, the freight, and other particulars. In the transport of these materials 32 vessels were employed, and the amount of the disbursements was as follows:—

Supply and cost of railway materials.
Appendix No. 4, p. 44.

For permanent-way materials, being the completion of the indent for the extension from Bathurst to Orange ...	£7,480 4 5
For miscellaneous articles	42,657 10 11
Total Cost	£50,137 15 4

which was thus distributed—

Invoice price	£46,400 12 2
Freight	1,752 7 7
English charges... ..	1,515 15 8
Colonial charges	468 19 11
	£50,137 15 4

6. ROLLING STOCK AND MACHINERY.

During 1876, little was done to remedy the deficiency in engine-power, rolling stock, and machinery, and nothing whatever to improve the insufficient accommodation at the Redfern terminus, complained of as existing in 1875. The stock of locomotives was increased by only one, which was constructed at our own workshops. The passenger-stock was not increased by a single carriage; but considerable additions were made to the goods-stock, partly from the railway workshops, partly from colonial manufacturers, and partly from purchases, at a valuation, from the New Zealand Government, who have substituted the narrow gauge of 3 feet 6 inches for the English standard gauge of 4 feet 8½ inches, which has been adopted in New South Wales, but in none of the other Australian Colonies.

Insufficiency of rolling stock and workshop accommodation.
Additions during 1876. Appendix No. 14, p. 58.

The inconvenience from this want of uniformity in gauge will begin to be felt when our lines reach the borders of the adjacent colonies. In Canada the break of gauge was found so troublesome that on the Grand Trunk Railway 1,400 miles were altered from 5 feet 6 inches to 4 feet 8½ inches, to correspond with the ruling gauge of the United States.*

Inconvenience of break of gauge.

The total number of locomotives and rolling stock at the close of last year was as under:—

List of rolling stock.

	South and West.	North.	Total.
Locomotives	75	26	101
Passenger-stock	242	102	344
Goods-stock	1,734	483	2,217
Total, 31st Dec., 1876 ...	2,051	611	2,662
Total, 31st Dec., 1875 ...	1,455	599	2,054
Increase of vehicles in 1876...	596	12	608

Appendix No. 5, p. 47.

* Higginbotham's Observations on Railways, 1874-5.

Condition of rolling stock. Appendix No. 1, p. 35.

With the exception of four locomotives, of which one is entirely, and three are very nearly, worn out, the whole of the rolling stock has been kept in efficient repair, and the cost, as usual, has been defrayed from the vote for working expenses.

Engines ordered from England.

The 36 engines (18 passenger and 18 goods) manufactured by Beyer, Peacock, & Co., and some of which are now on their way from England, will on arrival here considerably augment our engine-power, so lamentably deficient at present; but an additional supply will be required for the new extensions and the rapidly increasing traffic; and specifications will shortly be prepared for still further increasing our locomotive stock.

Carriages ordered from America.

The passenger-carriages (2 ordinary and 1 sleeping) ordered from America may soon be expected to arrive in Sydney; and tenders will be invited without delay for a supply of first and second-class passenger-carriages, of the English type, which is considered best adapted for through lines, while the American is better suited for suburban traffic and excursion trains. These, with the goods-stock now under construction, and the additional stock for which tenders will soon be invited, will go far to remedy our present deficiency in passenger and goods equipment.

Deficiency of rolling stock in all the Colonies.

Deficiency in rolling stock is not peculiar to New South Wales. It is felt and complained of in all the Australian colonies; and the remedy proposed is the same in all—namely, that the Government should build the whole of the rolling stock in its own workshops.*

Further additions necessary.

I would strongly impress upon the Government that no time should be lost in adding still further to the quantity of our rolling stock, in anticipation of the expansion of the traffic on the opening of new extensions; and in making arrangements for improving the accommodation at the locomotive workshops, which is at present utterly insufficient for the ordinary repairs of the stock. The engines are consequently injured by over-work, and the amount of locomotive expenses unduly increased.†

And increased accommodation at Redfern terminus.

Best type of engine for our lines.

With reference to the best type of engine for our railways, Mr. Higginbotham confesses that he did not go to the States at all prepossessed in favour of American engines; but what he observed there has satisfied him that at all events for light lines of railway they are better adapted than any others. He also thinks that, if they are not entirely imported from the States, the materials should be obtained from that country, and the engines built in the Government workshops.‡ We shall soon have an opportunity of testing their adaptability for our railways, as one has been ordered from America during the present year, and may be expected to arrive in Sydney at an early date.§

Engine ordered from America.

* *Vide* Report of the Commissioner for Railways in Queensland, 25th May 1876; Report of Public Works Department of South Australia, 31st May 1876; and Mr. Higginbotham's interesting observations on railways in all parts of the world during 1874 and 1875.

† During the present year tenders have been invited for 12 passenger and 12 goods-engines, 12 passenger-carriages, and 8 brake-vans; and specifications are in progress for an additional supply of 3 small Bogie engines, 43 first-class carriages, 39 second-class, 15 brake-vans, and 1,000 vehicles for passenger and goods traffic. 8 Bogie Composite Carriages have also been ordered from England, of the pattern used on the Midland Railway.

‡ Observations on railways.

§ The Honorable John Young, Representative Commissioner for the Dominion of Canada, at the complimentary Banquet given to him at the Sydney Exchange, on the 29th May 1877, stated that in Canada, on the "Great Trunk" Railway, the property of English stockholders, English engines were at first imported, but given up because the Canadian and American locomotives were far superior and cheaper.—*Sydney Morning Herald*, 30th May 1877.

Every effort is being made to improve our appliances for preventing the losses occasioned by the escape of sparks from the engines. We have endeavoured to adopt the inventions and profit by the experience of other countries, but up to the present time we have found no appliance so efficient as the wire-screen now in use. Spark-catchers.

Continued attention has been bestowed on the improvement of the brake-power of our rolling stock. The Westinghouse continuous air-brake as far as it has been tried has proved satisfactory, but its further application was postponed till the arrival of the engines from Beyer, Peacock, & Company, which are fitted with the improved automatic arrangement of the inventor. Much diversity of opinion still prevails as to the relative merits of the different inventions. Mr. Higginbotham considers that the Smith vacuum-brake is superior to the Westinghouse, and instances its satisfactory working on the Metropolitan railway, where no derangement took place in 100,000 stoppages.* Other engineers are in favour of Henderson's hydraulic-brake.† After careful experiments recently undertaken at the instance of the Royal Commission on Railway accidents, the Commissioners, without giving a decided preference to any one of the brakes, which were tested, express their opinion that no train can be considered properly equipped, which is not furnished with sufficient brake-power to bring it, at its highest speed, and on any gradient, to an absolute stop within 500 yards. They also think that a large portion of the available brake-power should be under the control of the engine-driver, and that the controlling power may be greatly increased by fitting brakes upon the engines.‡ The result of similar experiments conducted last year at Philadelphia leaves little doubt as to the superiority of the Westinghouse automatic over the vacuum brake, from the shorter distance in which a train fitted with the former can be brought to a stop.§ Improvement in brake-power.

Captain Tyler gives the following as the qualities of an efficient brake. It should be continuous, cheap in construction, simple in action, easily adjusted, not requiring frequent repair, not liable to get out of order, applied at the will of the engine-driver, and available in each part, in the event of a train becoming suddenly divided.|| Capt. Tyler's description of efficient brake.

The importance of efficient brake-power, more particularly on the severe gradients on our lines, in securing greater immunity from accidents cannot be over-estimated, and forms my excuse for drawing particular attention to the subject. Importance of brake-power in preventing accidents.

The total expenditure for rolling stock and machinery from the commencement has been as under :— Cost of rolling stock and machinery. Appendix No. 8, p. 53.

Rolling Stock.	Imported from England.	Manufactured in the Colony.	Total.
	£	£	£
Locomotives	157,537	167,367	324,904
Passenger and Goods Stock	223,666	278,468	502,134
Total, to 31 December, 1876	381,203	445,835	827,038
Machinery, to 31 December, 1876	28,615

* Observations on Railways.
 † Mr. Morris' Observations on Railroads in the United States, 1877.
 ‡ Vide Report of Royal Commission on Railway Accidents, 1877, and "English Mechanic and World of Science," 2nd and 30th March 1877.
 § In the "Railroad Gazette," of 14 April 1876 will be found a detailed account of the experiments, and drawings and description of the automatic brake.
 || Report to Board of Trade for 1874.

7. COST OF CONSTRUCTION.

Total expenditure on capital account.

The expenditure on capital account for the construction of our railways and for rolling stock and machinery, has been as follows:—

Appendix No. 8, p. 53.

		<i>During 1876.</i>					
Trunk line	£17,596
Southern line	304,987
Western line	208,003
Northern line	101,457
Total, Construction							632,043
Rolling stock	91,149
Machinery	787
Trial surveys	14,293
Total, Capital Expenditure during 1876							738,272
Total to 31st December 1875							7,831,788
Total expenditure to 31st December 1876							8,570,060

which was distributed as under:—

		<i>On Open Lines.</i>					
Southern and Western	£6,212,444
Northern	1,778,157
							7,990,601
		<i>On Works in Progress.</i>					
Southern and Western	£368,955
Northern	210,504
							579,459
Total as above							£8,570,060

Cost of construction per mile.
Appendix No. 9, p. 54.

In a table in the Appendix will be found the cost per mile of the different sections of our railways, and the average cost of the whole to the end of last year. This average, which is swelled by the exceptional cost of the Darling Harbour Branch and the line to Parramatta, was £14,008 exclusive, and £15,699 inclusive, of rolling stock and machinery; but this forms no criterion for the cost per mile of the extensions recently finished, or now in progress, which, including earthworks, fencing, sleepers, ballast and laying permanent-way, but exclusive of permanent-way materials, station-buildings, signals, land, and water-supply, is as follows:—

Goulburn to Yass	£3,590 per mile.
Yass to Cootamundra	3,414 "
Cootamundra to Wagga Wagga	3,353 "
Bathurst to Orange	3,584 "
Murrurundi to Tamworth	3,480 "

8. EXPENDITURE.

Appendix Nos. 13, 15, 16, pp. 57, 59, 60.
Working expenses.

The total cost of working during last year, as appears by the detailed statement appended, was £339,406 against £296,174 in 1875, being an increase of £43,232. The largest items of increase were the locomotive charges and repairs to carriages, amounting together to £23,278; but it must be remembered that there was an increase of 16.47 per cent. in mileage, which necessarily involved a proportionate increase in locomotive expenses, as well as in maintenance and traffic charges.

Increased with increase of mileage.

It may be necessary here to explain, that as it is found impossible with any degree of accuracy to separate the working expenses of the Southern and Western lines, they have consequently been treated in this and former reports as one line.

Impossible to separate the expenditure on Southern and Western lines.

The increase in the traffic charges amounted to £10,173 on the Southern and Western lines, and £2,716 on the Northern. The only other item that requires special notice is the cost of the maintenance of way and works, in which there was a decrease of £1,357 on the Northern line, where no additional length was opened, but an increase of £8,246 on the Southern and Western lines, where the length of the lines was increased by 72 miles.

Traffic charges and maintenance.

The report of the Engineer for Existing Lines gives the particulars of the expenditure for maintenance of way and works, repairs and additions to existing buildings, and the condition of the different lines; and furnishes a return of the number of rails that have been turned, renewed, or broken. No such record of the life of the rails was kept on the Northern line, but this omission will be remedied in future. On the Southern and Western lines it appears that from the opening of the railway to Parramatta in 1855, to the 31st December 1876, a period of 21 years, the following was the result:—

Condition of permanent-way. Appendix No. 1, p. 35.

	Length.		Number Turned.	Number Renewed.	Number Broken.	Number of rails turned, renewed, and broken from commencement.
	miles.	ch.				
Southern— To Binalong	208	22	2,574	1,074	120	
Western— To Blayney	158	66	6,627	788	40	
Branch— To Richmond	16	11	458	228	none.	
Total	388	19	9,659	2,090	160	

The percentage proportions of the different heads of working expenses to gross expenditure during 1875 and 1876 were respectively as under:—

Percentage of different heads of expenditure to total expenditure.

	1875.	1876.
	Locomotive charges	36·04
Carriage and waggon repairs	6·64	6·94
Maintenance	22·47	21·64
Traffic charges	29·78	29·78
Compensation—personal... ..	0·53	0·15
Compensation—goods	0·08	0·20
Miscellaneous	4·46	4·14
Total	100·00	100·00

9. REVENUE.

Earnings and expenditure compared with 1875. Appendix Nos. 12, 13, pp. 56, 57.

The gross earnings during 1876 were £693,225 against £614,648 in 1875. The working expenses were £339,406, against £296,174 in 1875. The proportion of expenditure to gross earnings was 48·96 in 1876, against 48·18 in 1875, and the percentage of net earnings to capital was 4·43 in 1876 against 4·39 in 1875.

Increase of traffic in 1876. Appendix No. 11, p. 55.

With the exception of a decrease of 641 in the number of horses, and 1,466 in the number of pigs carried, there was an improvement in every description of traffic during last year, both in quantity and value. There was an increase of 94,472 first-class, and 345,033 second-class passengers; of 1,004 in season-tickets, and a small advance in the number of carriages and dogs. In merchandise traffic there was an increase of 10,424 in the number of horned cattle, of 54,203 in the number of sheep, of 1,582 in the number of bales of wool, of 50,688 in the tonnage of minerals, and 22,089 in the tonnage of general merchandise.

Increase in earnings.

In earnings there was an increase in passenger and coaching traffic of £27,929, while the goods traffic shows an increase of £6,245 in live-stock, of £5,104 in minerals, of £2,093 in wool, and £37,207 in general merchandise. There was an increase of £78,578 in gross earnings, of £43,232 in working expenses, and of £35,346 in net earnings.

Goods carried on Departmental account.

In addition to the amount returned as total tonnage of goods, there were 27,217 tons carried on Railway account, the freight of which amounted to £9,530 12s. 3d., but in accordance with the practice that has prevailed for some years in the department, which would probably be more honored in the breach than the observance, no charge has been made for the carriage. The items for this service were the following:—

	Tonnage.	Amount—Freight.		
	No.	£	s.	d.
Coal for Locomotive purposes—				
Southern and Western... ..	20,395	5,964	18	9
Northern... ..	2,209	755	9	11
Building materials, &c., for Railway purposes—				
Southern and Western... ..	2,926	2,194	7	8
Northern... ..	1,687	615	15	11
Total	27,217	9,530	12	3

Earnings on different lines.

In the earnings from merchandise traffic the Southern and Western lines show an increase in every description of goods, while there was a decrease on the Northern line of £6,950 in general merchandise, and of £91 in minerals, though there was a considerable increase in the tonnage of coal.

Cause of decrease on Northern line.

This is accounted for from the decreased amount of business done at the more distant mines, the dulness of trade during the latter part of the year having induced the owners of some colliers to lay them up for some months, rather than accept the low rate of freight that prevailed. The monthly return

Appendix No. 25, p. 74.

of coal shows that the Greta mine, which sent 5,125 tons to the railway in August, had reduced the quantity to 38 tons in December.

The falling off in merchandise traffic on the Northern line is more apparent than real. The earnings from this source in 1875 were unduly swelled by the large quantity of permanent-way materials conveyed by railway for the Tamworth extension, the freight of which amounted to about £14,000; and the comparatively insignificant quantity of this description of traffic in 1876 will account for the unfavourable comparison with 1875.

Decrease on the Northern line more apparent than real.

The percentage proportion of each head of earnings to gross earnings for 1875 and 1876 will appear from the subjoined table:—

Percentage of heads of earnings to gross earnings.

		1875.	1876.
COACHING.			
Passengers, 1st and 2nd class	27·48	27·63
Season-ticket-holders	0·97	0·98
Horses, carriages, &c.	4·29	4·37
Mails	0·76	0·76
Total Coaching	33·50	33·74
GOODS.			
Live stock	2·21	2·86
Minerals	11·38	10·83
Wool	6·21	5·80
General merchandise	46·70	46·77
Total Goods	66·50	66·26
Gross Earnings	100·00	100·00

The following shows the percentage in number, and the amount received from first and second-class passengers on all lines during 1876:—

Percentage of number and receipts from 1st and 2nd class passengers. Appendix No. 31, p. 78.

		South and West.	North.	Total.
NUMBER.				
First-class	18·72	13·18	17·47
Second-class	81·28	86·82	82·53
		100·00	100·00	100·00
RECEIPTS.				
First-class	37·06	29·83	35·30
Second-class	62·94	70·17	64·70
		100·00	100·00	100·00

It thus appears that on our railways, as on those of other countries, the lower class passengers are the most numerous and remunerative; and I consider that arrangements should be made for increasing their accommodation and comfort, as is being done on some of the leading railways in the mother country.

2nd class passengers most remunerative.

Percentage of expenditure to earnings.

The following table shows the percentage proportion of expenditure to gross earnings during 1875 and 1876:—

	1875.	1876.
Locomotive	17·36	18·19
Carriage repairs	3·19	3·40
Maintenance	10·82	10·59
Traffic charges	14·35	14·58
Compensation—Personal	0·26	0·08
Compensation—Goods	0·05	0·10
Miscellaneous	2·15	2·02
Total	48·18	48·96

Favourable comparison with other railways.

an increase of ·78 per cent. on 1875; but the total 48·96 still contrasts favourably with the percentage on English and other railways.

10. WOOL TRAFFIC.

Increase in the number of sheep in New South Wales and Victoria.

Notwithstanding the protracted drought, the number of sheep in the colony largely increased, and there was no diminution in the quantity of wool carried on our railways. There was a similar increase in Victoria, though not to the same extent. I have not been able to ascertain the comparative results for 1876, but during 1874 and 1875 the numbers in the two colonies were respectively as under:—

	1874.	1875.
New South Wales	22,872,882	24,382,536
Victoria	11,225,206	11,749,532
Difference	11,647,676	12,633,004

Quantity of wool carried by railway in both Colonies.

and yet the quantity of wool carried on both railways, and the freight received, were respectively as follows:—

	1874.		1875.	
	Bales.	Freight.	Bales.	Freight.
	No.	£	No.	£
Victoria	238,152	50,512	279,668	69,340
New South Wales	90,128	28,702	118,815	38,160
Difference	148,024	21,810	160,853	31,180

It thus appears that in 1875, Victoria with 107 per cent. fewer sheep carried by railway 135 per cent. more bales of wool, and received 81 per cent. more freight than New South Wales; but it will be observed that the increase in the number of bales in 1875 was 31·8 per cent. in New South Wales, and only 17·4 per cent. in Victoria.

Percentage of No. of sheep and bales of wool.

A foot-note to the summary in the Statistical Register of that colony for 1875 accounts for this difference in the following terms:—"Since the year 1864 a considerable quantity of wool has each year been imported into Victoria across the Murray from the Riverina district of New South Wales, for transport by the Echuca railway to Melbourne, and shipment thence. No precise record of the quantity so introduced has until recently been kept at the Customs. It has, however, been ascertained that at least 13,000,000 lbs. of wool, valued at £972,000, crossed the Murray into Victoria in the year 1870, and the following amounts in the years named:—19,552,598 lbs., valued at £1,096,772, in 1872; 31,542,913 lbs., valued at £1,745,550, in 1873; 35,332,089 lbs., valued at £1,975,879, in 1874; and 40,535,081 lbs., valued at £2,260,799, in 1875."*

Traffic across the Border.

Large, however, as these amounts appear, they are considerably smaller than those furnished by our own Custom House officers, which include the exports to South Australia and Queensland. No record was kept for 1873, but the quantity returned for 1872 was 27,094,360 lbs., valued at £1,583,704; for 1874 it was 39,679,961 lbs., valued at £2,599,699; and for 1875 it was 47,695,578 lbs., valued at £2,979,590. For the year 1876, it will be found from a return in the Appendix, that the exports across the Border had advanced to 53,725,780 lbs.; but in consequence of the great reduction in the price of wool, the value is estimated at only £2,754,870, or £224,720 less than in 1875, though the quantity carried was 6,030,402 lbs. greater. The following is an abstract of the return:—

Estimated value of Border traffic.

Appendix, No. 22, p. 71.

	1875.	1876.
	£	£
Live stock	1,094,498	1,070,148
Wool	2,979,590	2,754,870
Other exports	45,972	132,962
Total value £	4,120,060	3,957,980

Should the correctness of this estimate be called in question, there is another method of arriving at the value. Mr. Bruce, Chief Inspector of Stock for this Colony, is of opinion that one-half of our wool crosses the Murray to Melbourne, or goes down that river to Adelaide. The number of sheep, the clip of which thus left the Colony in 1875, may safely be reckoned at 12,000,000, and allowing $2\frac{3}{4}$ lbs. of washed wool as an average weight per sheep, or 3 lbs. per sheep, including the Riverina district, where

Another method of arriving at value.

the fleeces are heavier than in most other parts of the Colony, and assuming 1s. 6d. as a fair average price per lb.* we have $12,000,000 \times 3 = 36,000,000$ lbs., which at 1s. 6d. per lb. give £2,700,000 as the value of the wool that crossed the Border in 1875, a close approximation to the value as estimated by our Custom House officers for 1876.

Number of sheep in Border Districts. Appendix, No. 19, p. 68.

The extent to which the Border districts contribute to swell the wool returns in Victoria and South Australia will appear from another table in the Appendix, which shows that in 1875 in twenty-one of these districts there were 12,211,117 sheep (more than the whole number in Victoria), and of this number it is estimated that the clip of two-thirds from Brewarrina, and one-third each from Bourke and Wagga Wagga, making a total of 942,329, remained in New South Wales, while the clip of the remaining 11,268,788 sheep was transported across the Border to the neighbouring colonies.†

Exports proper of Victoria.

If the quantity and value of the wool exported across the Border, as returned in the Statistical Register of Victoria for 1875, were deducted from the wool traffic returns of that colony, the exports of wool from Victoria and New South Wales would be respectively as under:—

	1874.		1875.	
	lbs. No.	Value. £	lbs. No.	Value. £
VICTORIA.				
Total exports	88,662,284	6,373,676	85,064,952	6,096,958
Less Border exports	35,332,089	1,975,879	40,535,081	2,260,799
Exports proper	53,330,195	4,397,797	44,529,871	3,836,159
NEW SOUTH WALES.				
Total exports, including overland ...	75,156,924	5,010,125	87,534,280	5,651,643
Difference	21,826,729	612,328	43,004,409	1,815,484

It will be seen from these figures that in the total exports for 1875 there was a decrease of 3,597,332 lbs., and of £276,718 in value in Victoria, but an increase of 12,377,356 lbs. and £641,518 in value in New South Wales.

Appendix No. 20, p. 69. Wool traffic on different lines in this Colony.

Affected by the drought.

With reference to the wool traffic on the different lines of our railways during 1876, there was an increase of 1803 in the number of bales carried on the Southern and Western lines, and a decrease of 221 bales on the Northern, making a total increase of 1,582 bales. In the amount received for freight there was an increase of £1,160 on the Southern and Western lines, and £933 on the Northern, or £2,093 on all lines. Although this increase is small, it is more than could have been anticipated from the unfavourable state of the weather which prevailed in the pastoral districts. From data furnished by the Government Astronomer, I find that the drought which

* In a paper read before the Royal Society, by Mr. Rolleston, Auditor General, reviewing the progress of the Colony for the ten years preceding 1871, he states that the figures in the Statistical Register for 1862 give an average of over 3 lbs. 6 ozs. per sheep, and a value of 1s. 9d. per lb., while the clip of 1871 gives an average yield of 4 lbs. per sheep (including greasy as well as washed wool), and a value of over 1s. 5d. per lb.

† The figures in this return are taken from the Report for 1875 of the Chief Inspector of Stock for the Colony.

commenced in July 1875 lasted till April 1876, and even then the rainfall was confined to the coast districts. In the western and south-western interior the drought continued throughout the year. In April, transit by teams was stopped in many instances from want of water. There were coast rains in June, and the highest flood on record occurred in the Clarence River in July. August was hot and dry. In September and October there was some rainfall in the southern and coast districts, which did not extend inland. November and December were of a similar character. The drought continued with unabated severity in the western and south-western districts, and thousands of sheep and cattle perished from the want of water and grass.

The following shows the rainfall in several districts of the Colony during 1876:—

	Inches.
Sydney	45·690
Armidale	41·242
Newcastle	40·130
Orange	31·160
Goulburn	23·340
Bathurst	20·520
Deniliquin	13·660

11. COAL TRAFFIC.

In my last report, when referring to the rise in the price of coal at Newcastle, I ventured to state that if coal could be obtained at cheaper rates in other ports, the price would probably have to be reduced here, or our foreign customers would look to England or elsewhere for their supplies. Up to the present time no reduction has taken place in the price at Newcastle; and whether from this cause, or a variety of others that have been suggested—but which it is not my province to investigate—the figures in the subjoined tables, obtained from the Newcastle Custom House returns, show that the shipping and foreign trade of the port have largely decreased, while there has been a considerable increase in its intercolonial trade.

No reduction in price of coal at Newcastle.

Decrease in foreign but increase in intercolonial trade.

The following table shows the decrease in shipping at Newcastle, both inwards and outwards, during 1876:—

Decrease in shipping at Newcastle. Appendix No. 24, p. 73.

	Inwards.		Outwards.	
	No.	Tonnage.	No.	Tonnage.
Coasters—				
1875	1,963	392,146	1,907	336,710
1876	1,594	370,702	1,811	324,881
Decrease	369	21,444	96	11,829
Foreign and Intercolonial—				
1875	1,162	510,902	1,341	573,826
1876	1,023	433,423	1,309	535,738
Decrease	139	77,479	32	38,088

Decrease in coal shipped from Newcastle.

The total quantity and value of coal shipped from the port of Newcastle during the last two years, and the decrease in 1876, in the coasting and intercolonial trade, were as under :—

Appendix No. 24, p. 73.

	Coasters.		Foreign and Intercolonial.	
	Tons.	Value.	Tons.	Value.
	No.	£	No.	£
1875	304,948	207,365	771,143	527,949
1876	246,110	167,355	719,050	495,502
Decrease in 1876	58,838	40,010	52,093	32,447

Appendix Nos. 23, 24, pp. 72, 73.

Being a total decrease in the quantity shipped during 1876 of 110,931 tons, valued at £72,457 ; but the appended returns will show that while there was a falling off to the extent of 72,797 tons in the foreign, and of 58,838 tons in the coasting trade, there was an increase of 20,704 tons in the intercolonial. Under ordinary circumstances this increase would have been much greater ; but there was a decrease of 10,499 tons in the exports to South Australia, in consequence of large consumers there having, from the fall in the price of copper in the English market and other causes, considerably reduced their operations. The falling off in the quantity shipped to that Colony approached 1,500 tons per month during the first half of 1876, and during the last half of the year the demand did not reach the former average consumption. The foreign countries which chiefly contributed to the decrease in exports were San Francisco, Hong Kong, Manila, and Java—the falling off amounting in the aggregate to 59,349 tons.

Increase in quantity carried on Northern Railway.

Appendix No. 28, p. 76.

But this decrease in the foreign trade was counterbalanced by a brisker intercolonial traffic, and a larger home consumption ; for there was an increase in the quantity carried on the Great Northern railway, and in the amount of freight received, as will appear by the following figures :—

Year.	Tonnage.	Freight.	Per ton.	
	No.	£	s.	d.
1875	789,573	41,441	1	0½
1876	812,350	41,956	1	0¼
Increase in 1876	22,777	515		

Appendix Nos. 25, 28, pp. 74, 76.

In the Appendix will be found monthly and yearly details of the quantity carried, and the amount of freight received, from each of the collieries in the Northern district, during 1875 and 1876.

On the Southern and Western lines there was also an increase both in tonnage and freight to the following extent:—

Increase on Southern and Western Railways.

Year.	Tonnage.	Freight.	Per ton.
1875	No. 45,873	£ 18,241	s. d. 7 11½
1876	53,492	19,173	7 1½
Increase in 1876	7,619	932	

Appendix Nos. 26, 27, 29, pp. 75, 76, 77.

The total quantity of coal and shale carried on our railways during 1876 was, according to the return, 865,842 tons, the freight of which was £61,129, an increase of 30,396 tons, and £1,447 in freight; but in addition to this there were 20,395 tons on the Southern and Western lines, and 2,209 tons on the Northern, the total freight on which amounted to £6,720, not included in the return of traffic, as the coal was used for railway purposes. With this addition the total quantity carried on our railways last year was 888,446 tons, the freight of which amounted to £67,849.

Appendix No. 30, p. 77.

Total quantity carried on all lines.

With the exception of the Woodford mine, the whole of the old collieries were in full operation during 1876. The only new mine which has been added to the list is that of the Newcastle Coal mining company, who have purchased the Burwood line and engines, and are now carrying on an increasing business at their mine, situate about 2 miles from the junction with the Great Northern railway. The Australasia coal company have not commenced business, as their line is not yet completed.

Old collieries in full operation.

New Company.

The railway works in connection with the hydraulic cranes on Bullock Island are ready for use; and when the cranes are completed, which will probably be by the end of this year, the facilities for shipping coal at the port of Newcastle will be fully equal to the demand.

Increased facilities for shipment.

12. PUBLIC DEBT FOR RAILWAYS.

From the appended statements prepared at the Treasury it appears that the appropriations by Parliament for railway purposes to the end of 1876 amounted to £11,130,808 18s. 8d. Of this amount debentures had been issued to the extent of £9,087,300, of which £7,110,800 were negotiated at 5 per cent. and £1,976,500 at 4 per cent., but only £8,638,362 had been expended up to 31st December last.

Railway debt.

Appendix Nos. 6, 7, pp. 48, 52.

The interest paid from the Consolidated Revenue Fund last year on the amount expended was as follows:—

Interest paid on loans.

	Expended.	Interest.
Debentures issued at 5 per cent.	£ 7,110,800	£ 355,540
Do. 4 per cent.	1,527,562	61,100
Total	8,638,362	416,640

Excess of interest paid by Government over net earnings.

And as the net earnings for 1876 amounted to £353,819, it follows that the excess of interest paid by the Government during last year over the amount contributed by the railway profits was £62,821. The interest paid from the Consolidated Revenue Fund was equal to 4·82 per cent. on the amount expended by Government, and the net earnings of our railways were equivalent to 4·43 per cent. on the capital expended on lines open for traffic—a deficit of only ·39 per cent.*

Railways not credited for all work performed.

Night mail-train.

Free passes.

But while the net earnings are year by year approaching nearer and nearer to the amount of interest paid from the public funds, the advance would be more rapid if credit were taken for the whole work performed by our railways. We are still running the night mail-train for postal purposes, at a considerable loss of revenue, and receiving for the carriage of Her Majesty's mails less than one-half the amount paid in Victoria, and less than one-third the amount paid in the United Kingdom for a similar service. We also, as is the practice on other Government railways, issue a large number of free passes, which, though they add nothing directly to our earnings, are nevertheless attended with many indirect advantages to the Colony. If the whole work performed were taken into account in estimating the profits of our railways, the result, I believe, would show that they are already almost self-supporting.

13. TARIFF.

Reduction in rates. For Passengers.

Some further reductions were made last year in the fares and rates for passengers and goods. A reduction in the scale of passenger fares was made on the extensions beyond Goulburn, Bathurst, and Murrurundi; and an additional allowance of 50 per cent. per mile on these rates for any number of miles beyond 200. Our passenger-fares are still higher than those in Victoria (which are lower than the average rates on English lines), but it must be remembered that Victoria has abolished, while we have retained, the system of return-tickets at a fare-and-a-half for the double journey, which for long distances will compare favourably with the single-journey-fares of that Colony.

For goods.

Reduction in wool rates.

Appendix No. 21, p. 70.

and wool-packs.

Besides some reductions in several articles of traffic, the following allowances have been made on the existing goods rates, namely, 10 per cent. for every mile beyond 100 miles, 20 per cent. for every mile beyond 150 miles, and 40 per cent. for every mile beyond 200 miles. A reduction has also been made in the rates for the carriage of wool. Before September last, the charge was made according to mileage, per bale, not exceeding 5 cwt., with an addition of 6d. per bale if exceeding that weight. The present charge is from specified stations, at per bale not over 4 cwt., with 15 per cent. per cwt. additional for bales in excess of that weight. An allowance is made on these rates of 15 per cent. for wool properly dumped and hooped with iron. The charge for the carriage of woolpacks has also been reduced from 7d. to 4d. per ton per mile.

Means adopted by Victoria and South Australia to secure Murray River traffic.

From the date of opening its line to the Murray, the Victorian Government has offered a bonus on New South Wales wool river-borne to Echuca; and South Australia has been equally alive to the advantage of securing a portion of the traffic on that river. In his interesting account of

* On the Northern line the interest on capital expended was 5·09 per cent., or ·27 per cent. in excess of the amount paid by Government.

South Australia, Mr. Marcus, referring to the want of safe anchorage at the mouth of the Murray, says—the practical result has been that the produce of the river has been drifting away to Melbourne. And he adds, as if enunciating a self-evident proposition, “Riverina *ought* to send its produce by water-carriage to the mouth of the Murray; but our Victorian neighbours have determined, apparently at any cost, to secure the trade for Hobson’s Bay, and are actually carrying the wool at a loss to the revenue.”* To counterbalance this movement, South Australia proposes to connect the Murray with Port Adelaide by a railway 50 miles in length, from Kapunda to the north bend of the river.

Trade drifting to Melbourne.

No one can blame the sister colonies for taking advantage of their geographical position, and bidding high for the produce of Riverina—the richest of our pastoral districts; but when we find that last year upwards of 53½ million pounds of our wool, valued at upwards of 2½ millions sterling, crossed the borders to the adjacent colonies, we should be blind to our own interests if we did not push our railways as speedily as possible into the south-western interior, and offer inducements to our settlers to send their produce to Sydney, instead of to Melbourne or Adelaide.

Steps should be taken to secure a portion of the traffic of our own Colony.

The cheapness of transit by water, and the length of water-carriage with which our railways will have to compete, are somewhat formidable. The Murray is navigable for 2,000 miles from its mouth at Goolwa; the Darling for 800 miles from Wentworth to Fort Bourke, and occasionally several hundred miles further; and the Murrumbidgee, from its junction with the Murray, for 700 miles to Wagga Wagga. There are 40 steamers and 50 barges employed in the river-trade. At present the larger portion of the upper river traffic is diverted up-stream to Echuca; but as the natural advantages of down-stream navigation are so great, saving £2 or £3 per ton in freight as compared with the railway rates, Mr. Boothby, Government Statist of South Australia, thinks there is little doubt that the bulk of the carrying trade will eventually revert to South Australia. And to secure this desirable object, he informs us that surveys are being made and proceedings taken for opening the Murray mouth to large vessels, along side which the river-boats will then discharge.* Fortified with this, or the Kapunda scheme, South Australia, I presume, hopes effectually to checkmate Victoria and New South Wales in their efforts to secure a portion of the trade of Riverina.

Difficulties to contend with.

Length of water-carriage.

Proposed opening of the mouth of the Murray.

It was anticipated that the reduction in the wool-rates would lead at first to an increase in the quantity carried with a reduction in revenue. Sufficient time has not yet elapsed to test the result of the altered rates, and we have had an unfavourable season to contend with; but last year there was an increase of 1,582 in the number of bales carried, and £2,093 in the amount received for freight; and I believe that the increase in quantity and value will be greater the farther we advance into the south-western interior, till the railway-whistle of our engines is heard on the banks of the Murray, the Murrumbidgee, and the Darling.

Further extensions will probably increase the quantity and the value of wool traffic.

A table is annexed of the wool-rates prior and subsequent to 18th September 1876.

Appendix No. 21, p. 70.

* South Australia: Its History, Resources, and Productions. 1876.

14. EARNINGS AND EXPENDITURE PER MILE OPEN.

Results of
traffic per
mile open.

The gross earnings per mile open during 1876 were £1,507·01 against £1,499·14 in 1875, being an increase of £7·87. The total expenditure was £737·84 in 1876 against £722·38 in 1875, an increase of £15·46; and the net earnings in 1876 were £769·17 against £776·76 in 1875, showing a decrease of £7·59.

Appendix
Nos. 36, 37,
38, pp. 81, 82,
83.

The following table will show the items in detail :—

	Per mile open.		INCREASE.	DECREASE.
	1875.	1876.	1876.	1876.
REVENUE.				
	£	£	£	£
Passengers	411·99	416·39	4·40
Season-tickets	14·49	14·67	0·18
Horses, carriages, &c.	64·36	65·90	1·54
Mails	11·45	11·45
Total coaching	502·29	508·41	6·12
Live stock	33·14	43·11	9·97
Minerals	170·56	163·12	7·44
Wool	93·08	87·51	5·57
General merchandise	700·07	704·86	4·79
Total goods	996·85	998·60	1·75
Gross earnings	1,499·14	1,507·01	7·87
EXPENDITURE.				
Locomotive	260·29	274·16	13·87
Carriage repairs	47·95	51·18	3·23
Maintenance	162·30	159·64	2·66
Traffic charges	215·08	219·72	4·64
Compensation—Personal	3·90	1·12	2·78

Miscellaneous	32·23	30·53	1·70
Total expenditure	722·38	737·84	15·46
Net earnings	776·76	769·17	7·59

15. EARNINGS AND EXPENDITURE PER TRAIN MILE.

In the Appendix will be found detailed statements of the mileage and tonnage of passenger and goods-engines, annual and daily, during last year, and the number of miles run by each engine. There were 29,230 passenger-trains against 25,936 in 1875, and 23,303 goods-trains against 20,832 in 1875, making a total of 52,533 trains in 1876 against 46,768 trains in 1875, an increase of 5,765 trains last year. The number of miles run by passenger-trains was 861,077, against 782,512 in 1875. The mileage of goods-trains was 827,887, against 689,692 in 1875. The total train-mileage was accordingly 1,688,964 in 1876, against 1,472,204 in 1875, being an increase of 216,760 during last year.

Train mileage.
Appendix
Nos. 11, 32,
33, 34, 35, 36,
37, 38, pp. 55,
78, 79, 80, 81,
82, 83.

The gross earnings per train-mile were 98·50d. against 100·20d. in 1875, a decrease of 1·70d. The total working expenses were 48·22d. against 48·28d. in 1875, a slight decrease of ·06d. And the net earnings were 50·28d. against 51·92d. in 1875, a decrease of 1·64d.

Earnings and
expenditure
per train-mile.

The details will be found in the subjoined table :—

	Per Train-Mile.		INCREASE.	DECREASE.
	1875.	1876.	1876.	1876.
EARNINGS.				
Passengers	d. 27·54	d. 27·22	d.	d. 0·32

General merchandize	46·79	46·07	0·72
Total goods	66·62	65·27	1·35
Gross earnings... ..	100·20	98·50	1·70
EXPENDITURE.				
Locomotive	17·40	17·92	0·52
Carriage repairs	3·20	3·35	0·15
Maintenance... ..	10·85	10·43	0·42
Traffic charges	14·38	14·36	0·02
Compensation—Personal	0·26	0·07	0·19
Do. Goods	0·04	0·10	0·06
Miscellaneous	2·15	1·99	0·16
Total expenditure	48·28	48·22	0·06
Net earnings	51·92	50·28	1·64

Annual and daily mileage of Engines.

The following table shows the annual mileage of passenger and goods-engines, and their daily mileage, exclusive of Sundays, in 1875 and 1876.

Appendix No. 35, p. 80.

	1875.		, 1876.	
	Annual.	Daily.	Annual.	Daily.
	Miles.	Miles.	Miles.	Miles.
Passenger-engines	782,512	2,500	861,077	2,751
Goods-engines	689,692	2,204	827,887	2,645
Total Train-miles	1,472,204	4,704	1,688,964	5,396
Shunting, ballasting, &c.	427,642	1,366	471,920	1,508
Total, with shunting, &c.	1,899,846	6,070	2,160,884	6,904
Number of engines	100	101
Average per engine	47·04	53·42
Average do. shunting	13·66	14·93
Total daily average per engine, including shunting, &c.	60·70	68·35

As there was an increase of 216,760 in the train-mileage, and 44,278 in the mileage of shunting and ballasting during 1876, with only one additional engine, for a portion of the year, our locomotives were taxed to the utmost to perform their work.

Mileage of passengers and tons.

From the appended return of the mileage of passengers and of tons of goods and passenger traffic (exclusive of the dead weight of the rolling stock), it appears that the average distance travelled, and the average amount received per mile, were respectively as under :

Appendix No. 39, p. 84.

	Average distance travelled.			Average amount received.		
	Passengers each.	Passenger Traffic, per ton.	Goods.	Passengers each.	Passenger Traffic, per ton.	Goods.
	Miles.	Miles.	Miles.	d.	d.	d.
South and West	12·03	14·58	70·90	1·47	20·26	3·07
North	14·66	18·90	12·37	1·78	23·05	2·22
All Lines	12·49	15·38	29·11	1·54	20·89	2·82

Gross ton weight of vehicles, empty and loaded. Appendix No. 40, p. 85.

In another return are given for the first time the mileage and the gross ton-weight of the engines and the vehicles of transport, empty and loaded. The result shows that the average earnings per ton per mile were ·686d. on the Southern and Western lines, ·597d. on the Northern, and ·662d. on all the lines combined ; while I have ascertained that the average is ·254d. on seven French lines, ·266d. on seven Indian lines, and ·437d. on the Metropolitan line of England.

16. COMPARATIVE RESULTS ON DIFFERENT RAILWAYS.

As the progress and economy of our own railways are best exhibited by comparison with those of other countries, I have, in continuation of the return in my last report, prepared and appended a comparative statement of the cost of construction and working on the railways of the United Kingdom and each of the Australian colonies, for the year 1875, the latest period for which I could find materials. * Subjoined are a few of the chief items :—

Cost of working on different railways.

Appendix No. 44, p. 98.

		United Kingdom. 1875.	New South Wales. 1875.	Victoria. June, 1876.	South Australia. 1875.	Queensland. 1875.
Miles open	No.	16,658	437	620	193½	263
Average cost per mile ...	£	37,883	16,579	21,354	8,486	10,633
Per mile open.						
Earnings	£	3,540	1,499	1,636	910	518
Expenditure	£	1,933	722	822	684	350
Net earnings	£	1,607	777	814	226	168
Per train-mile.						
Earnings	d.	67·56	100·20	104·71	81·05	81·00
Expenditure	d.	36·88	48·28	52·57	60·99	54·73
Net earnings	d.	30·68	51·92	52·14	20·06	26·27
Percentage.						
From passengers	%	44·00	33·50	38·84	36·74	35·28
From goods	%	56·00	66·50	61·16	63·26	64·72
Expenses to earnings	%	54·60	48·18	50·20	75·25	67·57
Net earnings to capital	%	4·25	4·39	3·74	2·65	1·58

It will be seen that in the net earnings per open mile the United Kingdom stands first, Victoria second, and New South Wales third. In net earnings per train-mile Victoria is first, New South Wales second, and the United Kingdom third; but in two of the most important items, namely,—the percentage of expenditure to gross earnings, and the interest which the net earnings bear to capital expended, New South Wales occupies the premier position, being lowest in the former, and highest in the latter. The order of arrangement is as under :—

Comparative results.

Percentage of expenditure to earnings—

1. New South Wales	48·18
2. Victoria	50·20
3. United Kingdom	54·60
4. Queensland	67·57
5. South Australia	75·25

*The figures in the first column are taken from Captain Tyler's Report to the Board of Trade for 1875, and those in the other columns are compiled from the published reports in the different Colonies and revised by the chief officers of the Railway Departments in each.

Interest on capital expended—

1. New South Wales	4.39 p. cent.
2. United Kingdom	4.25 „
3. Victoria	3.74 „
4. South Australia	2.65 „
5. Queensland	1.58 „

Dated 30th Sept., 1865.

Comparative Statements in 1865 and 1875.

In a comparative statement of the earnings and expenditure of the Victorian and New South Wales railways for 1864, annexed to my first report, the percentage of working expenses to gross earnings was 52.82 in Victoria, against 70.24 in New South Wales. In commenting on that return, I stated that while our net receipts were less than 2 per cent. on a capital expenditure of two and a half millions, the Victorian railways were yielding 3½ per cent. on an expenditure of eight millions sterling. I added that this clearly pointed to the advisability of pushing our railways forward with all convenient speed, to enable us to compete more successfully with our Victorian neighbours; and the result of the comparative statement for 1875 affords the best commentary on the policy suggested in 1865.

Railroads in United States.

With reference to the railroads in the United States, Mr. Poor's manual for 1877, so voluminous and minute in other respects, does not afford sufficient data for calculating the receipts and expenditure per train-mile; but it shows that at the close of last year the number of miles opened in that country had increased to an aggregate of 71,759, and the total capital to £958,479,142. The traffic, however, both in goods and passengers had decreased in all the States except the Pacific, to the extent of £3,190,680 in goods, and £389,672 in passenger earnings; but the profit on the Pacific railways created an increase in the dividends of £1,492,030.*

Number of miles opened on all railways, 1875.

Appendix Nos. 45, 46, p. 99.

From Captain Tyler's Report for 1875 we learn that the total number of miles of railway opened in the British empire amounted to 30,205½; while, according to Poor's manual, the number of miles opened on all the railways of the world on 31st December 1875, was 182,690, which the Statesman's year-book for 1877 reduces to 176,963.

Miles open and in progress in the Australian Colonies, 1876.

Appendix No. 47, p. 99.

I have appended a comparative statement of the length of line of railway open, in progress, and projected, in each of the Australian Colonies on 31st December 1876, from which it will be seen that Victoria is considerably in advance of the others in the number of miles open and in course of construction, having 960 miles against 688½ in New South Wales, 454 in Queensland, and 414 in South Australia. But when the number of miles approved by Parliament, or for which money has been voted, are included, the numbers in the different colonies will be as under:—

	Miles.
Victoria	960
New South Wales	954½
South Australia	725
Queensland	454
Total	3,093½

* Poor's manual of the railroads of the United States 1876-77. I have reduced the dollars to sterling at the rate of 4.86 dollars to the pound.

The number of miles of surveys completed to 31st December last, but for the construction of any portion of which Parliamentary sanction has not yet been obtained was as follows :—

					Miles.
New South Wales	1,469*
Victoria	900
South Australia	442
Queensland	287
Total					3,098

At the same date the number of miles open for traffic on private lines in the different Colonies was as under :—

					Miles.
New South Wales	45
South Australia	23
Victoria	19
Total...					87

17. RAILWAY ACCIDENTS.

A return is appended of the number, the nature, and the cause of accidents on our railways during last year. The following is a summary of the return :—

Return of railway accidents.

Lines.	Passengers.				Servants.				Trespassers.	
	Beyond their own control.		Misconduct or want of caution.		Beyond their own control.		Misconduct or want of caution.		Misconduct or want of caution.	
	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.	Killed.	Injured.
Suburban.....	2	...	1	3	...	3	1
Southern	1	...	1	...	1
Western	1	...	2
Northern.....	2	...	1	...	1
Total	3	1	4	5	2	3	2

Appendix No. 41, p. 94.

It will be seen that the accidents to passengers last year were comparatively light. None were killed or injured from causes beyond their own control; but three were injured from want of caution. Of railway servants one was killed from being accidentally pushed from a platform and crushed by the train; and five lost their lives through their own carelessness. Four were injured from causes beyond their own control, and two from their own want of caution. Three trespassers were killed, and two injured from heedlessly exposing themselves to danger, for which the railway officials are not responsible. I have appended a return of the accidents on English and continental railways compared with those on our own lines.

Appendix No. 50, p. 104.

Although, while human fallibility exists, no railways can ever expect entire immunity from accidents, it is the duty of all railway managers to adopt every means possible for their prevention. The Royal Commission on railway accidents, in their voluminous and valuable report, refer to unpun-

Means should be adopted for their prevention.

* Including alternative lines—approximate length to be constructed, 856 miles.

Opinion of Royal Commission on railway accidents.

tuality in the departure and arrival of trains, to insufficiency of accommodation for the traffic, and want of intercommunication between passengers and railway servants, as some of the elements of danger which ought to be provided against. They also state as their decided opinion, that the time has arrived when powers should be given to the Board of Trade to require the adoption of the block system, and of arrangements for the interlocking of points and signals, in all cases where the department considers such a change necessary for safety.

English system of railways superior to Continental.

Under the instructions of the Commissioners, Mr. Langford, C.E., was despatched on a tour of inspection—similar to that undertaken by Mr. Higginbotham, at the instance of the Victorian Government—and after examining the railway systems in Belgium, France, Germany, and Switzerland, he declares as the result of his observations (and Mr. Higginbotham is much of the same opinion), that with respect to the construction of the permanent-way, of signal appliances, and brake-power, England has nothing to learn from foreign railways. He considers that the English system is in every respect superior to the Continental, and that no means for the prevention of accidents are adopted abroad which are neglected at home.

Advisable to adopt suggestions of Commissioners for prevention of accidents.

As we have wisely followed so good a model in the construction of our railways, in our permanent-way and rolling stock, and in the adoption of its gauge, I think we should show equal wisdom in carrying out the suggestions of the Commissioners in the working of our railways, and in using the means and appliances which they consider imperative for the comfort and safety of the travelling public, and of our officers and servants who are chiefly exposed to danger. Our comparatively light bill of mortality last year speaks favourably for the careful management of our officers; but no efforts should be spared on their part, and no reasonable expense on the part of the Government, to introduce such arrangements as will reduce our casualties to a minimum; for it must be evident that some improvement is still required in railway appliances, while one life is lost, or one limb maimed from preventable causes.*

18. MISCELLANEOUS.

Besides the tables referred to in the report, the following will be found in the Appendix:—

Appendix No. 42, p. 95.

1. A tabular synopsis of the cost of constructing and working our railways during 1875 and 1876, and other particulars, showing the increase or decrease on the different items in 1876.

Appendix No. 17, p. 61.

2. A detailed statement of the tonnage, and class, and value of every description of merchandise traffic on our railways during last year.

Appendix No. 18, p. 64.

3. A return of the traffic outwards and inwards at each station, the height of the stations above high water-mark at Sydney and Newcastle, their respective distances from these ports, the number of hands employed, and the number of tickets issued, at each station.

*Since this report went to press, arrangements have been made for the adoption of the Block system for working the increasing traffic on our railways.

4. A return of the number of passengers, the tonnage of goods, the earnings and working expenses, total and per train-mile, the percentage of working expenses to gross earnings, the capital invested on lines open, and the interest thereon, for each year from the opening in 1855, exhibiting at a glance a condensed view of the progress of our railways, and their financial position to the close of last year.

Appendix No. 43, p. 97.
Birds-eye view of progress of our railways from the commencement.

The progress of our railways, as exhibited in this return, has been most satisfactory. In 1855, when 14 miles were open for traffic, the number of passengers was 98,846, the tonnage of goods 140, the capital expended £515,347, the net earnings were £3,290, and the interest on capital was only .638 per cent. In the next decade (1865) 143 miles had been opened for traffic, the number of passengers had increased to 751,587, the tonnage of goods to 416,707, the capital expended to £2,746,373, the net earnings to £57,106, and the interest on capital to 2.079. Another decade brings us to 1875, when the number of miles open had increased to 437, the number of passengers to 1,288,225, the tonnage of goods to 1,171,354, the capital expended to £7,245,379, the net earnings to £318,474, and the interest on capital to 4.396 per cent., the largest percentage of net earnings to capital during any year from 1855 to 1875 inclusive.

Decennial progress of our railways to 31 Dec., 1875.

19. RECAPITULATION.

The transactions to the end of 1876 may be thus summarised. The Government expenditure for construction amounted to £8,638,362, the interest on which was £416,640, or 4.82 per cent. The capital expended on open lines was £7,990,601, and the net earnings were £353,819, or 4.43 per cent. The interest paid by Government was therefore only .39 per cent. in excess of the percentage of net earnings to capital. At the close of the year, 509 miles of railway were open, and 179½ miles under contract to be completed by the end of 1877. The rolling stock consisted of 101 locomotives, 344 passenger-carriages, and 2,217 goods-trucks. The number of railway employes amounted to 2,443, and the wages to £237,176 18s. 10d., an increase over 1875 of £34,104 8s. There were 32 vessels employed in the conveyance of railway materials, the cost of which amounted to £50,137 15s. 4d., and the freight and English charges to £3,268 3s. 3d.

Railway progress during 1876.

Appendix Nos. 48, 49, pp. 100, 104.

During last year, 29,230 passenger-trains and 23,303 goods-trains were run over 1,688,964 miles of railway, the total earnings from which amounted to £693,225, and the cost of working to £339,406, or 48.96 per cent. of the earnings. The number of passengers who travelled was 1,727,730, of whom 301,587 were first-class, and 1,426,143 second-class, or in the ratio of 17.47 per cent. of the former to 82.53 per cent. of the latter, besides 5,680 season-ticket-holders, representing an additional number of 751,216 passenger-journeys. The merchandise traffic consisted of 438,025 live stock, 120,397 bales of wool, and 1,244,131 tons of goods. The average earnings per open mile were £1,507, the average expenditure was £738, and the net earnings were £769. The average earnings per train-mile were 98.50d., the average expenses 48.22d., and the average net earnings 50.28d.

Amount of traffic.

Increase in traffic.

There was an increase of 94,472 in the number of first-class passengers, of 345,033 in the number of second-class passengers, and of 1,004 in the number of season-ticket-holders; an increase of £27,929 in the earnings from passenger traffic, of £50,648 in the earnings from goods, and of £78,578 in gross earnings. The working expenses were increased by £43,232, and the net earnings by £35,346. The interest on capital was different on the different lines. On the South and West there was an increase of .21 per cent., on the North a decrease of .45 per cent., and on all the lines combined a slight increase of .04 per cent.; and as this increase of interest was confined to those lines, on which alone there was any additional mileage, we may reasonably anticipate a further increase with further extensions of our railways, till the net earnings shall equal or exceed the annual amount of interest paid from the Consolidated Revenue Fund. The public debt for railways would then be practically extinguished, and no difficulty should be experienced in procuring the necessary funds for carrying our main trunk lines to the borders of the adjacent colonies, and connecting them by branches with the chief centres of population in the interior, where there is such a total want of water-communication, and in many parts of which the railway is the cheapest, if not the only possible road.

Interest on capital different on different lines.

Advantages of an extension of our railways.

It is by reticulating the country with such a network of railways as is indicated by the routes and surveys on the appended sketch-map, that we may hope to provide means of transit for the produce of our settlers in the pastoral districts, and be enabled to compete successfully with our energetic neighbours for the transport of the staple commodities of our own colony. But the advantages of such an extended system of railroads would not be confined to the mere increase of traffic; for, to adopt the language of His Excellency Sir Hercules Robinson, in his able speech at the opening of the line to Bathurst, "with facilities for regular and constant railway communication with our neighbours, the identity of the interests of adjoining colonies will day by day become more apparent; and petty provincial jealousies and rivalries will give place to those feelings of reciprocal sympathy, which will tend to bind these Anglo-Saxon communities in Australia still more closely to each other, and to unite them in the advancement of the glorious mission of their race—the mission of peaceful commerce and human progress."*

I have the honor to be,

Sir,

Your most obedient servant,

The Honorable James Hoskins,
Secretary for Public Works,
&c., &c., &c.

JOHN RAE.

* *Sydney Morning Herald*, 6 April 1876.

APPENDIX

TO THE

REPORT ON THE RAILWAYS OF NEW SOUTH WALES,

1876.

APPENDIX TO REPORT ON RAILWAYS, 1876.

No. 1.

The Engineer for Existing Lines to The Commissioner for Railways.

Sir,

In compliance with your request to prepare a Report upon the condition of the existing Lines and of the Locomotive Branch for the year ending 31st December 1876, I have the honor to report as follows :—

PERMANENT WAY BRANCH.

GREAT SOUTHERN LINE, INCLUDING SUBURBAN LINE.

	Miles.	chains.
<i>Sydney to Goulburn—Length—Double line</i>	13	16
<i>Single do</i>	121.	4
Total	134	20

The whole of the permanent-way and works, excepting those hereinafter particularized on this length, including the Darling Harbour, Haslem's Creek Cemetery, and Collingwood branches, are in a good average state of repair.

The greater portion of the fencing between Parramatta Junction and Campbelltown is not capable of sound repairs, owing to its decayed state and its having been partially destroyed by white ants; and it is my intention shortly to have it renewed.

The timber bridges and viaducts have all been "screwed up" and undergone the necessary repairs; the whole of the timber superstructure to the Orphan School Creek Viaduct at 19½ miles has been renewed, and several of the brick piers partially rebuilt and strengthened.

A great number of sleepers have been renewed during the year between Liverpool and Picton, and this work is still in progress.

Goulburn to Gunning—Single line—Length, 30¼ miles.

The whole of the works on this length are in good order.

Gunning to Bowning—Single line—Length, 29 miles 26 chains.

This portion of the line was opened for public traffic on the 3rd July 1876. The whole of the works are in good order.

Bowning to Binalong—Single line—Length, 14 miles 42 chains.

This portion of the line was opened for public traffic on the 1st November 1876. The whole of the works are in good order.

The following works have been completed during the year :—

- Brick piers of bridge at 10½ miles repaired.
- Store-room erected in sheeter's shed, Sydney Station.
- Weigh-bridge fixed at Darling Harbour Sidings.
- Waiting-shed erected at Five Dock Platform.
- Platform 200 feet long erected at Guildford.
- Coal stage, Goulburn, extended 70 feet.
- Kitchen erected at Marulan Station.
- 10-ton crane do. do.
- Office fixed in goods-shed, Menangle.
- Gate-house erected at 191 miles 48 chains Burrowa Road Level Crossing.
- Pit constructed in Sydney yard for fixing breaks on carriages.
- Coal stage erected at Bowning.
- Sheep-yard erected at Gunning.
- Do. do. Bowning.
- Enginemen's house, Gunning, removed and re-erected at Bowning.
- Cattle and sheep yards erected at Yass.
- Cattle yard erected at Bowral.
- Two platforms erected at Concord, between Burwood and Homebush Station.
- Goods office, Gunning, removed and refixed at Goulburn.
- Two covered platforms erected in Sydney yard.

Cabramatta Platform lengthened 100 feet.
 Temporary booking-office, waiting-shed, &c., erected at Binalong.
 Goods-shed office erected at Binalong.
 Office erected at Goulburn for Locomotive Inspector.
 Partition built in gentlemen's waiting-room, Sydney Station.
 Enginemen's house, Bowring, removed and re-erected at Binalong.
 House at Braidwood Road Crossing, near Goulburn, repaired and made suitable for a gate-keeper.
 Weighing-machine fixed in goods-shed, Binalong.

The following sidings have been laid in, and permanent-way relaid, during the year :—

<i>New Lines.</i>					
Siding, alongside Iron Wharf, Darling Harbour	1,544 feet.
Through road to do.	393 "
Line A sidings, head of Darling Harbour	2,026 "
Through road to do.	160 "
New siding at Guildford	367 "
Siding at Bowral	303 "
Siding at, 90 miles 40 chains	432 "
Siding at Manna Field	318 "
Siding at Goulburn	538 "
Total	<u>6,081 feet.</u>
<i>Line relaid.</i>					
Main "Up" line, Sydney yard	331 feet.
Main "Down" line, Sydney yard	431 "
Total	<u>762 feet.</u>

GREAT WESTERN RAILWAY.

PARRAMATTA JUNCTION TO KELSO.

Single Line—Length, 129 miles 26 chains.

The whole of the works on this length are in good repair. Between Blacktown and Penrith the renewal of sleepers is still in progress.

KELSO TO BATHURST.

Single Line—Length, 1 mile 35 chains.

This portion of the line was opened for public traffic on the 4th April 1876. The whole of the works are in good repair.

BATHURST TO BLAYNEY.

Single Line—Length, 27 miles 69 chains.

This portion of the line was opened for public traffic on the 1st November 1876. The whole of the works are in good repair.

The following works have been completed during the year :—

Waiting-shed, Kelso, removed and re-erected at Sodwall's platform.
 Stock-yard erected at Macquarie Plains Station.
 Brick-house erected at Penrith for enginemen.
 Sand furnace erected at Bathurst.
 Brick office erected at Penrith for Locomotive Inspector.
 Distance signal erected at Springwood.
 Platform at Blacktown lengthened.
 Distance signal erected at Bathurst Station.
 Ash-pit built at Bathurst Station.
 Coal stages at Bowenfels and Raglan removed and re-erected at Bathurst.
 Loading platform erected at Macquarie Plains Station.
 Brick-house erected at Bathurst for enginemen.
 New gates erected at Penrith Station yard.
 Waiting-shed erected at Lock's platform.
 New kitchen erected at Station-master's house, Rydal.
 Platform, 70 feet long, erected at 51 miles 21 chains.
 Platform and waiting-shed erected at Hartley Vale siding
 House erected at Blayney for enginemen, firemen, and cleaners.
 Office erected in goods-shed, Blayney.

The following additional sidings have been put in, and line relaid :—

<i>Sidings.</i>					
Loop Road, South Creek, extended	234 feet.
Siding at Cross Roads, near Penrith	534 "
New siding to goods-shed, Penrith	964 "
Through road to do.	171 "
Wascoe's siding extended	206 "
Through road, Bathurst station yard	209 "
Total	2,318 feet.

Line renewed between 52 and 54 miles, and relaid with steel rails 7,083 feet.

BRANCH LINE.

BLACKTOWN TO RICHMOND.

Single Line—Length, 16 miles 11 chains.

The whole of the permanent-way and works on this length are in good average repair.

The following works have been completed during the year :—

- Platform at Blacktown lengthened.
- Engine-shed, 60' × 20', erected at Richmond.
- Gate removed and re-erected at Mulgrave siding.
- Cattle-pen, Riverstone, enlarged.
- Office, Mulgrave Station, enlarged.

The following additional sidings have been put in :—

Schofield's siding extended	90 feet.
„ safety block siding	149 "
Mulgrave Loop extended...	234 "
Siding to engine-shed, Richmond	264 "
Total	737 feet.

GREAT NORTHERN RAILWAY.

NEWCASTLE TO MURBURUNDI, INCLUDING BRANCHES TO MORPETH AND BULLOCK ISLAND.

In and near the Newcastle station yard 50 tons of steel rails and 20 sets of steel switches and crossings have been laid in, to replace worn out iron ones, and on other parts of the line 700 sleepers have been renewed.

The woodwork of two over bridges between Newcastle and East Maitland, and of the bridge over Melbourne-street, East Maitland, has been entirely renewed.

At Newcastle the most important work carried out was the erection of a goods-shed for the accommodation of the Sydney and other steamers, and the laying in of the necessary sidings, &c., in connection therewith. The shed is built of hardwood framing, covered with corrugated iron. Its dimensions are 100 feet long, 45 feet wide, and 16 feet high. The other works connected with this shed comprise the laying in of 3 sets of switches, 7 crossings, 14 chains of siding, and 2 turn-tables.

The siding beneath the coal staiths, used for loading timber, has been lengthened 100 yards.

At Hamilton a public level crossing has been constructed, and a neat brick cottage, containing four rooms, erected for the gate-keeper's residence.

At Waratah a new goods-shed has been erected to accommodate the increasing traffic at that station. Its dimensions are 80 feet × 27 feet × 16 feet. It is built of brick and covered with corrugated iron. For the proper working of the above a siding 140 yards in length has been laid in.

At Wallsend junction a 3-roomed brick cottage has been erected for a residence for the pointsman.

At Woodford platform a waiting-shed, built of brick and covered with corrugated iron, measuring 12 feet square, has been erected.

At the Northumberland-street platform, Morpeth, a passenger station has been erected, consisting of a booking-office 18 feet × 12 feet, a general waiting-room, 18 feet × 18 feet, and the necessary closet and urinal accommodation. The whole is built of brick.

At Greta (Farthing's) a goods-siding, 100 yards in length, has been laid in.

At 37 miles 53 chains an over bridge has been erected. The superstructure is of ironbark supported by brick abutments. Its dimensions are, 42 feet long and 20 feet wide.

At Camberwell the station accommodation has been improved by the erection of a closet and urinal.

At Scone a residence has been erected for the station-master. It is built of brick and contains six rooms, one of which measures 14 feet × 14 feet, three 14 feet × 12 feet, and two 10 feet × 8 feet; also a detached kitchen, 14 feet × 14 feet, and other conveniences.

At Blandford the gate-keeper's house has been enlarged by the erection of two additional rooms.

At 115 miles 65 chains a level crossing has been constructed.

Important works have been carried out at Honeysuckle Point and at the Bullock Island junction for the purpose of supplying the hydraulic works on Bullock Island with water, and increasing the supply for the engines at the locomotive works.

At Bullock Island junction a tank of 20,000 gallons capacity has been erected, and a pumping-engine capable of raising and discharging into the tank 6,000 gallons per hour attached. The water will be drawn from the several swamps existing in the locality, a portion of which has been purchased by the Commissioner for the purpose, and from which source it is expected that a sufficient quantity of excellent water for all requirements will be obtained.

A similar tank has been erected at Honeysuckle Point works, which is connected with that at the junction by a cast-iron pipe, through which the water is conveyed from one tank to the other by gravitation. The distance between the tanks is about 1 mile 5 chains. Iron pipes have also been laid from the first-named tank to the hydraulic works at Bullock Island, a distance of 1¼ mile.

At 2½ miles distance from Newcastle a junction has been laid in and a complete set of signals erected for the purpose of connecting the branch line now in course of construction by the Australasia Coal Company.

At Singleton an engine-shed, capable of accommodating four engines, has been erected. Its dimensions are 107 feet long, 40 feet wide, and 18 feet high. It is built of hardwood framing, covered with corrugated iron, and shingled roof.

The Bullock Island Branch, which was commenced in 1875, has been nearly completed. The main line (double) is finished, and the whole of the sidings are laid in for the purpose of standage at the junction with the main line. The greater portion of the sidings on the dyke have also been laid in.

ACCOUNT of Permanent-way Rails turned, renewed, and broken, from the opening of the various Extensions to the 31st December 1876.

GREAT SOUTHERN, WESTERN, AND RICHMOND RAILWAYS.

The following shows the number of men per mile of single line engaged in the maintenance of the Permanent-way.

GREAT SOUTHERN, WESTERN, AND RICHMOND RAILWAYS.

	Men per mile.
Sydney to Parramatta Junction, including Haslem's Creek Cemetery Branch, Darling Harbour Branch, and new sidings, head of Darling Harbour	1.10
Parramatta Junction to Goulburn, including Collingwood Branch	0.76
Goulburn to Binalong	1.13
Parramatta Junction to Bathurst	0.78
Bathurst to Blayney	1.04
Richmond Branch	0.98

GREAT NORTHERN RAILWAY.

Newcastle to Murrurundi, including Morpeth Branch	0.75
---	------

LOCOMOTIVE BRANCH.

GREAT SOUTHERN, WESTERN, AND RICHMOND RAILWAYS.

With the exception of four old engines Nos. 1 to 4 nearly worn out, and several other old goods and passenger engines which require to have the boilers, &c., thoroughly repaired, the locomotives have been maintained in an efficient condition, and the whole of the rolling stock and machinery have been kept in thorough repair.

Considerable progress has been made with the construction of the four engines Nos. 75 to 78, intended to replace Nos. 1 to 4. The first of them, No. 75, commenced to run in August last. The others are in a forward state, and when completed will be practically new engines.

As there has been no extension of the workshops, and only a few additions to our stock of machinery; the difficulties reported as existing last year through the deficiency of locomotives and workshop accommodation have assumed a more serious character. The present want of locomotive power will, however, be shortly relieved, as the new engines ordered from England may be expected to arrive in a few months.

No further application has been made of the Westing-house continuous air breaks, as we are waiting the arrival of an improvement in the shape of an automatic appliance, shortly expected from the patentee.

The new locomotives now being imported are all fitted with the improved Westing-house continuous and automatic air breaks.

No new passenger rolling stock has been received during the year, but one second class and two composite carriages have been converted into first-class carriages. A great want of additional passenger stock has been felt, and tenders are about to be invited for an additional supply.

Considerable additions have been made to our goods rolling stock from Colonial contractors. A number of vehicles of different classes were also purchased from the New Zealand Government.

During 1876 the following vehicles were rebuilt at our workshops:—

- 3 B. waggons.
- 4 D. waggons.
- 1 Composite break-van.
- 1 C. covered goods-van.

GREAT NORTHERN RAILWAY.

The locomotives generally have been maintained in an efficient condition, and the whole of the rolling stock and machinery have been kept in thorough repair.

There has not been any addition made to the locomotives or rolling stock on this line during 1876, but four passenger and six goods engines have been ordered from Messrs. Beyer, Peacock, and Co., and are soon expected to arrive. On the 5th December the boiler of No. 22 engine burst from a defective plate, which almost entirely destroyed the engine.

Appended are returns showing the additions to the rolling stock³ and machinery and pumping engines on all the lines during 1876:—

APPENDIX TO REPORT ON RAILWAYS—1876.

SOUTHERN, WESTERN, AND RICHMOND RAILWAYS.

Particulars of the only locomotive-engine added to our stock during 1876 :—

Number of the engine—75.

Description of engine—passenger and goods, with tender.

Diameter and position of cylinders—16 inch inside.

Diameter of wheels—Leading, 5 feet 6 inches	}	coupled.
Driving, 5 „ 6 „		
Trailing, 3 „ 9 „		

Length of stroke—2 feet.

Makers—Sydney Railway Works.

Commenced to run—August, 1876.

Weight—

	Empty.			Full (in steam).		
	Tons.	cwt.	qrs.	Tons.	cwt.	qrs.
Leading	8	7	0	10	15	0
Driving	12	18	0	13	15	0
Trailing	4	9	1	5	3	0
	25	14	1	29	13	0

Statement of the number and class of Rolling Stock for Goods Traffic, showing the number manufactured by different Contractors during the year 1876.

Description.	From whom received.	When received.	How numbered.	No. of each lot.	Total number received.	Remarks.					
Break vans	Thos. Braid	1876	44 to 47	4							
C. Vans	New Zealand Government	1876	100 to 104	5		Made by Ashbury.					
D. Waggon	Kellaway & Wearne	1876	48, 151, 168, 185, 206, 216, 232, 236, 237, 257, 308, 388, 390, 420, 424, 446, 463, and 474.	18		Numbered to fill vacancies caused by D. waggons being converted to E. waggons in 1875.

Ballast Waggon	New Zealand Government	1876	15 to 28	14		do.					
Do.	do.	1876	29 to 43	15		Made by Ashbury.					

RETURN of Composite and Second Class Carriages converted into First Class during the year 1876 :—

Description since conversion.	From whom received.	When received.	How numbered.	No. of each lot.	Description and number before conversion.
First class carriages	Wright & Son	1855	22	1	Second class, No. 9.
Do.	Russell & Co.	1872	23	1	Composite, No. 19.
Do.	do.	1873	25	1	Composite, No. 25.

LIST of MACHINERY in Workshops added to the stock during the year 1876:—

GREAT SOUTH AND WEST LINES.

- TURNING AND MACHINE SHOP—
 2 10-inch screw cutting lathes.
 1 bolt and nut shaping machine.
 BOILER SHOP—
 1 blast fan.
 BLACKSMITH'S SHOP—
 1 5 cwt. steam hammer.
 CARRIAGE SHOP—
 1 band saw.
 PENRITH—
 1 10-inch screw cutting lathe.
 GENERAL (at Sydney)—
 1 travelling crane.

ENGINES AND PUMPS FOR SUPPLYING WATER.

- 1 6-horse-power engine and two pairs of 7" pumps, with two tubular boilers at Sydney
 1 3½" hand-pump at Duck River.
 1 4-horse power portable engine and boiler, and pair of 5½" pumps, at Liverpool.
 1 wind-mill pump at Liverpool.
 1 6-horse-power engine and boiler and pair of 7" pumps at Menangle.
 1 4-horse-power engine and two boilers, and 7" double acting pump, at Bargo.
 1 4-horse-power (Garrett and Marshall's) pumping engine at Wingecaribee.
 1 4-horse-power engine and boiler, and 4" double acting pump, at Barber's Creek.
 1 of Tangye, Bros., and Holman's universal pumps and vertical boiler at Mulwarree Ponds.
 1 of Tangye, Bros., & Holman's special steam pumps at Yass.
 1 pair 4" hand-pump at Illalong Creek.
 1 4-horse-power (Garrett & Marshall's) pumping engine and vertical boiler at Fish River.
 1 6-horse-power portable engine and boiler, and two pairs of 3½" pumps, at Penrith.
 2 4-horse power (Garrett & Marshall's) pumping engines at Blue Mountain.
 1 4-horse-power engine and boiler, and 4" double-acting pump, at Blackheath.
 1 pair of 3" hand-pumps at Mount Victoria.
 1 2-horse-power engine, vertical boiler, and pair of 3" pumps, at Rydal.
 1 4-horse-power engine and boiler, and 4" double-acting pump, at Tarana.
 1 of Tangye Bros., and Holman's special steam pumps, at Bathurst.
 1 do. do. do. at Blayney.
 1 2-horse-power engine, vertical boiler, and pair of 4" pumps, at Mulgrave.
 1 2-horse-power engine and boiler, and pair of 3½" pumps, at Richmond.

NORTHERN LINE.

RETURNS showing additions to machinery and Pumping Engines during 1876.

MACHINERY, &c.

- 1 self-acting planing machine, 6 ft. long and 3 ft. 6 in. wide.
 1 self-acting vertical drilling machine, to drill holes 2 inches diameter in centre of work, 2 ft. 8 in. diameter.
 1 punching and shearing machine, arranged so that both operations can go on at once, to punch ¾ inch holes in ½ inch plate.
 2 travelling cranes.
 1 fan blast.
 3 crab winches.
 2 grinding stones and frames.

PUMPING ENGINES AND PUMPS.

- 1 Tangye Bros. pumping engine and boiler, at Bullock Island Junction.
 1 do. do. do. at Throsby Creek.
 1 3-horse pumping engine and boiler, at Singleton.

In conclusion I wish to draw the Commissioner's attention to the absolute necessity which exists for providing without delay some extra accommodation for locomotive workshops, engine-sheds, sidings, &c., the present arrangements being quite inadequate for carrying on properly the work of the Department, and this difficulty will be greatly increased on the arrival of the 36 new engines from England, together with the large additions that are now being made to the rolling stock.

W. MASON,
 Engineer for Existing Lines,

21st March, 1877.

No. 2.

DATES of OPENING, and the length in miles of the different sections of Railway Lines, from the commencement to 31 December 1876.

No. 21.

Wool Rates.

INCLUDING CARTAGE IN SYDNEY.

Previous to 18th September 1876.

Wool will be carried at per bale on the following scale:—	Up journey, at per bale, not exceeding 5 cwt. each; over 5 cwt. each, 6d. per bale additional.	Wool rates— <i>continued</i> .	Up journey, at per bale, not exceeding 5 cwt. each; over 5 cwt. each, 6d. per bale additional.
	s. d.		s. d.
185 miles	9 0	80 miles	5 3
165 "	8 6	66 "	5 0
140 "	7 9	53 "	4 3
130 "	7 3	40 "	3 3
115 "	6 9	30 "	2 6
100 "	6 3	20 "	1 9
90 "	6 0	15 "	1 6

The rates to and from washing establishments will be, for distances not exceeding 15 miles, 1s. per bale—exceeding 15 but not exceeding 22 miles, 1s. 3d. per bale.

The wool delivery will commence at 6 a.m., and close at 4.30 p.m., at Redfern Wool-shed; and all wool not accepted within fifteen minutes after same has been tendered at Consignee's stores or offices by the Commissioner, will be stored at owner's risk and expense, and will be liable to charges for re-cartage in addition. The place for delivery must be stated on the delivery order.

From 18th September 1876.

Goods	"	368,052	918,825	1,286,877
Total	"	510,870	950,840	1,461,710

* Of the engines used for goods and passengers, half their number is added to the passenger and half to the goods engines.

† The mileage does not include ballast waggons but merely vehicles used for traffic purposes; and as many of them were in use for only a part of the year, their average number and weight are taken as the factors in the above calculations.

‡ Fifteen passengers are reckoned equivalent to one ton; carriages are estimated at 15 cwt.; horses and horned cattle at 600 lbs.; pigs at 75 lbs.; sheep at 50 lbs.; and dogs at 30 lbs. each.

* Exclusive of 45 miles private company—Moama and Deniliquin. † Exclusive of 19 miles private company—Melbourne and Hobson's Bay United. ‡ Including 17 passenger and 176 goods stock on horse tramways. § Not given but included in number of passengers. In New South Wales the season tickets represent 751,216 passenger-journeys.

No. 45.

STATEMENT of the number of MILES of RAILWAY opened and working in the British Empire at the end of 1875, from Captain Tyler's Report for 1875 :—

United Kingdom			16,658
British Possessions—			
Australasia—			
New South Wales	437		
Victoria	618		
South Australia	258		
Queensland	263		
Total Australia		1,576	
New Zealand	542		
Tasmania	167		
Total Australasia		709	
Total Australasia		2,285	
Other Possessions,—			
British Guiana	21		
Cape of Good Hope	149		
Ceylon	91½		
Dominion of Canada	4,443		
India	6,461		
Jamaica	25½		
Mauritius	66		
Natal	5½		
Total in British Possessions		11,262½	
Total in British Empire			13,547½
Total in British Empire			30,205½

No. 46.

STATEMENT of the number of MILES of RAILWAY open in all Countries on 31st December 1875, from two recognised authorities.

	From Poor's Manual, 1876-7 miles open.	From Statesman's Year Book 1877 miles open.
Europe	88,007	83,864
America	83,910	82,335
Africa	1,538	1,057
Asia	7,087	6,822
Australasia	2,148	2,285
Total number of Miles open	182,690	176,963

As the mileage on railways is constantly changing, such discrepancies are not surprising.

No. 47.

STATEMENT of the number of MILES of RAILWAY open, under contract, and approved, and of surveys completed, but not approved by Parliament, in each of the Australian Colonies, on 31 December 1876.

	New South Wales.	Victoria.	South Australia.	Queensland.
Government Railways—				
Opened for traffic	miles. 509	miles. 762	miles. 304	miles. 298
In course of construction	179½	198	110	156
Money voted, or approved by Parliament...	688½ 266	960 none.	414 311	454 none.
Total open, and approved by Parliament	954½	960	725	454
Surveys completed but not approved	*1,469	900	442	287
Private lines	45	19	23	none.

* Including 613 miles of alternative lines.

No. 48.

STATEMENT of the number and classification of persons employed on the Railways of New South Wales during 1876.

No.	Position.	Rates of Pay—lowest and highest.
HEAD OFFICE.		
1	Commissioner—Duties performed by Under Secretary.....	Without pay.
1	Secretary	£600 per annum.

The figures in the first three columns for English and Continental Railways are taken from the Report of the Royal Commission on Railway Accidents, 1877—from which the figures in the last two columns are deduced.

Private Line.

No. 51.

MOAMA AND DENILQUIN RAILWAY.

Extract from the Report of the Engineer-in-Chief to the Commissioner for Railways, dated 15th November 1876.

THIS Railway, which is a single line throughout, and laid to a gauge of 5' 3", commences at the Echuca Station by a junction with the Victorian Railway from Sandhurst to Echuca, and is carried across the river Murray by a temporary wooden bridge, pending the completion of a permanent bridge now in course of erection over that river, for both road and railway traffic, by the joint action of the Governments of New South Wales and Victoria. After crossing the river and entering New South Wales the line passes through the town and parish of Moama, and crossing Greenwich Plain Reserves, Nos. 91 and 90, enters the parish of Moira. Reserve No. 89 is then crossed on the Home Plain, and passing through the parish of Culpa the line enters the township of Mathoura, where a small station has been erected, called Redbank; then passing through the parishes of Mathoura, Boyes, Talama, and Citcatha, it terminates at South Deniliquin, being a length of 45 miles.

LAND.

The land throughout has been enclosed for a width of 3 chains, giving an area of 24 acres to the mile, with an additional width for stations at Moama, Redbank, and Deniliquin. This area, although twice the width requisite for a double line of railway, is not in excess of the quantity named in the Act of Incorporation.

FENCING.

The fencing consists of red gum posts and top rail, with four wires, No. 8 gauge. The posts are 6' 6" in length, 8" x 3", sunk 2 feet into the ground, and placed 8 feet apart. The top rails, 9 feet long, are 8" x 2".

EARTHWORK.

Nearly the whole of the embankments are formed from side cutting. There are very few cuttings on the entire line, the deepest being about 4 feet, and the greatest height of embankment 8 feet. The formation width of both cuttings and embankments is about 14 feet. The country, however, is of such an even surface, that for many miles the ballast has been laid on the ground, the process of forming being unnecessary.

BRIDGES AND CULVERTS.

The whole of the bridges and culverts are of red gum timber, procured from Mathoura, about half-way between Deniliquin and Moama. The bridges or flood-openings have all the same spans—10 feet in the clear—with two piles in each bay. The piles are connected transversely by walings 9" x 5", notched on the heads of the piles and bolted. The longitudinal girders, two in number, rest upon the piles, and are generally 15" x 12"; upon these girders 3" planking is spiked, and this planking carries the ballast and roadway. The following bridges have been provided for the escape of flood-waters.

The distances are from the bank of the river Murray, on the Moama side.

Miles.	Chains.	No. of Openings.	Span.
1	10	12	10 feet
3	35	4	10 "
5	60	54	10 "
9	77	2	10 "
16	65	2	10 "
22	50	4	10 "
22	70	3	10 "
34	32	2	10 "
35	38	5	10 "
39	7	10	10 "
43	75	6	10 "
44	19	6	10 "

In addition to these openings there are many timber culverts of various dimensions.

BALLAST.

The ballast throughout is a loamy sand, which at the time of my inspection was concreted, forming a very hard substance. In wet weather I think it will disintegrate, and render the maintenance of the line difficult and expensive.

RAILS.

The rails are single-headed and fish-jointed throughout, and weigh 50 lbs. to the yard, and are secured to the sleepers by wrought-iron spikes.

SLEEPERS.

The sleepers 8' 6" long, 9" \times 4½", are all of red gum timber, rectangular in shape, and placed about 2' 6" apart, from centre to centre, except at the joints, where they are 1' 9" apart.

CURVES.

There are only five curves on the whole line, each having a radius of 80 chains.

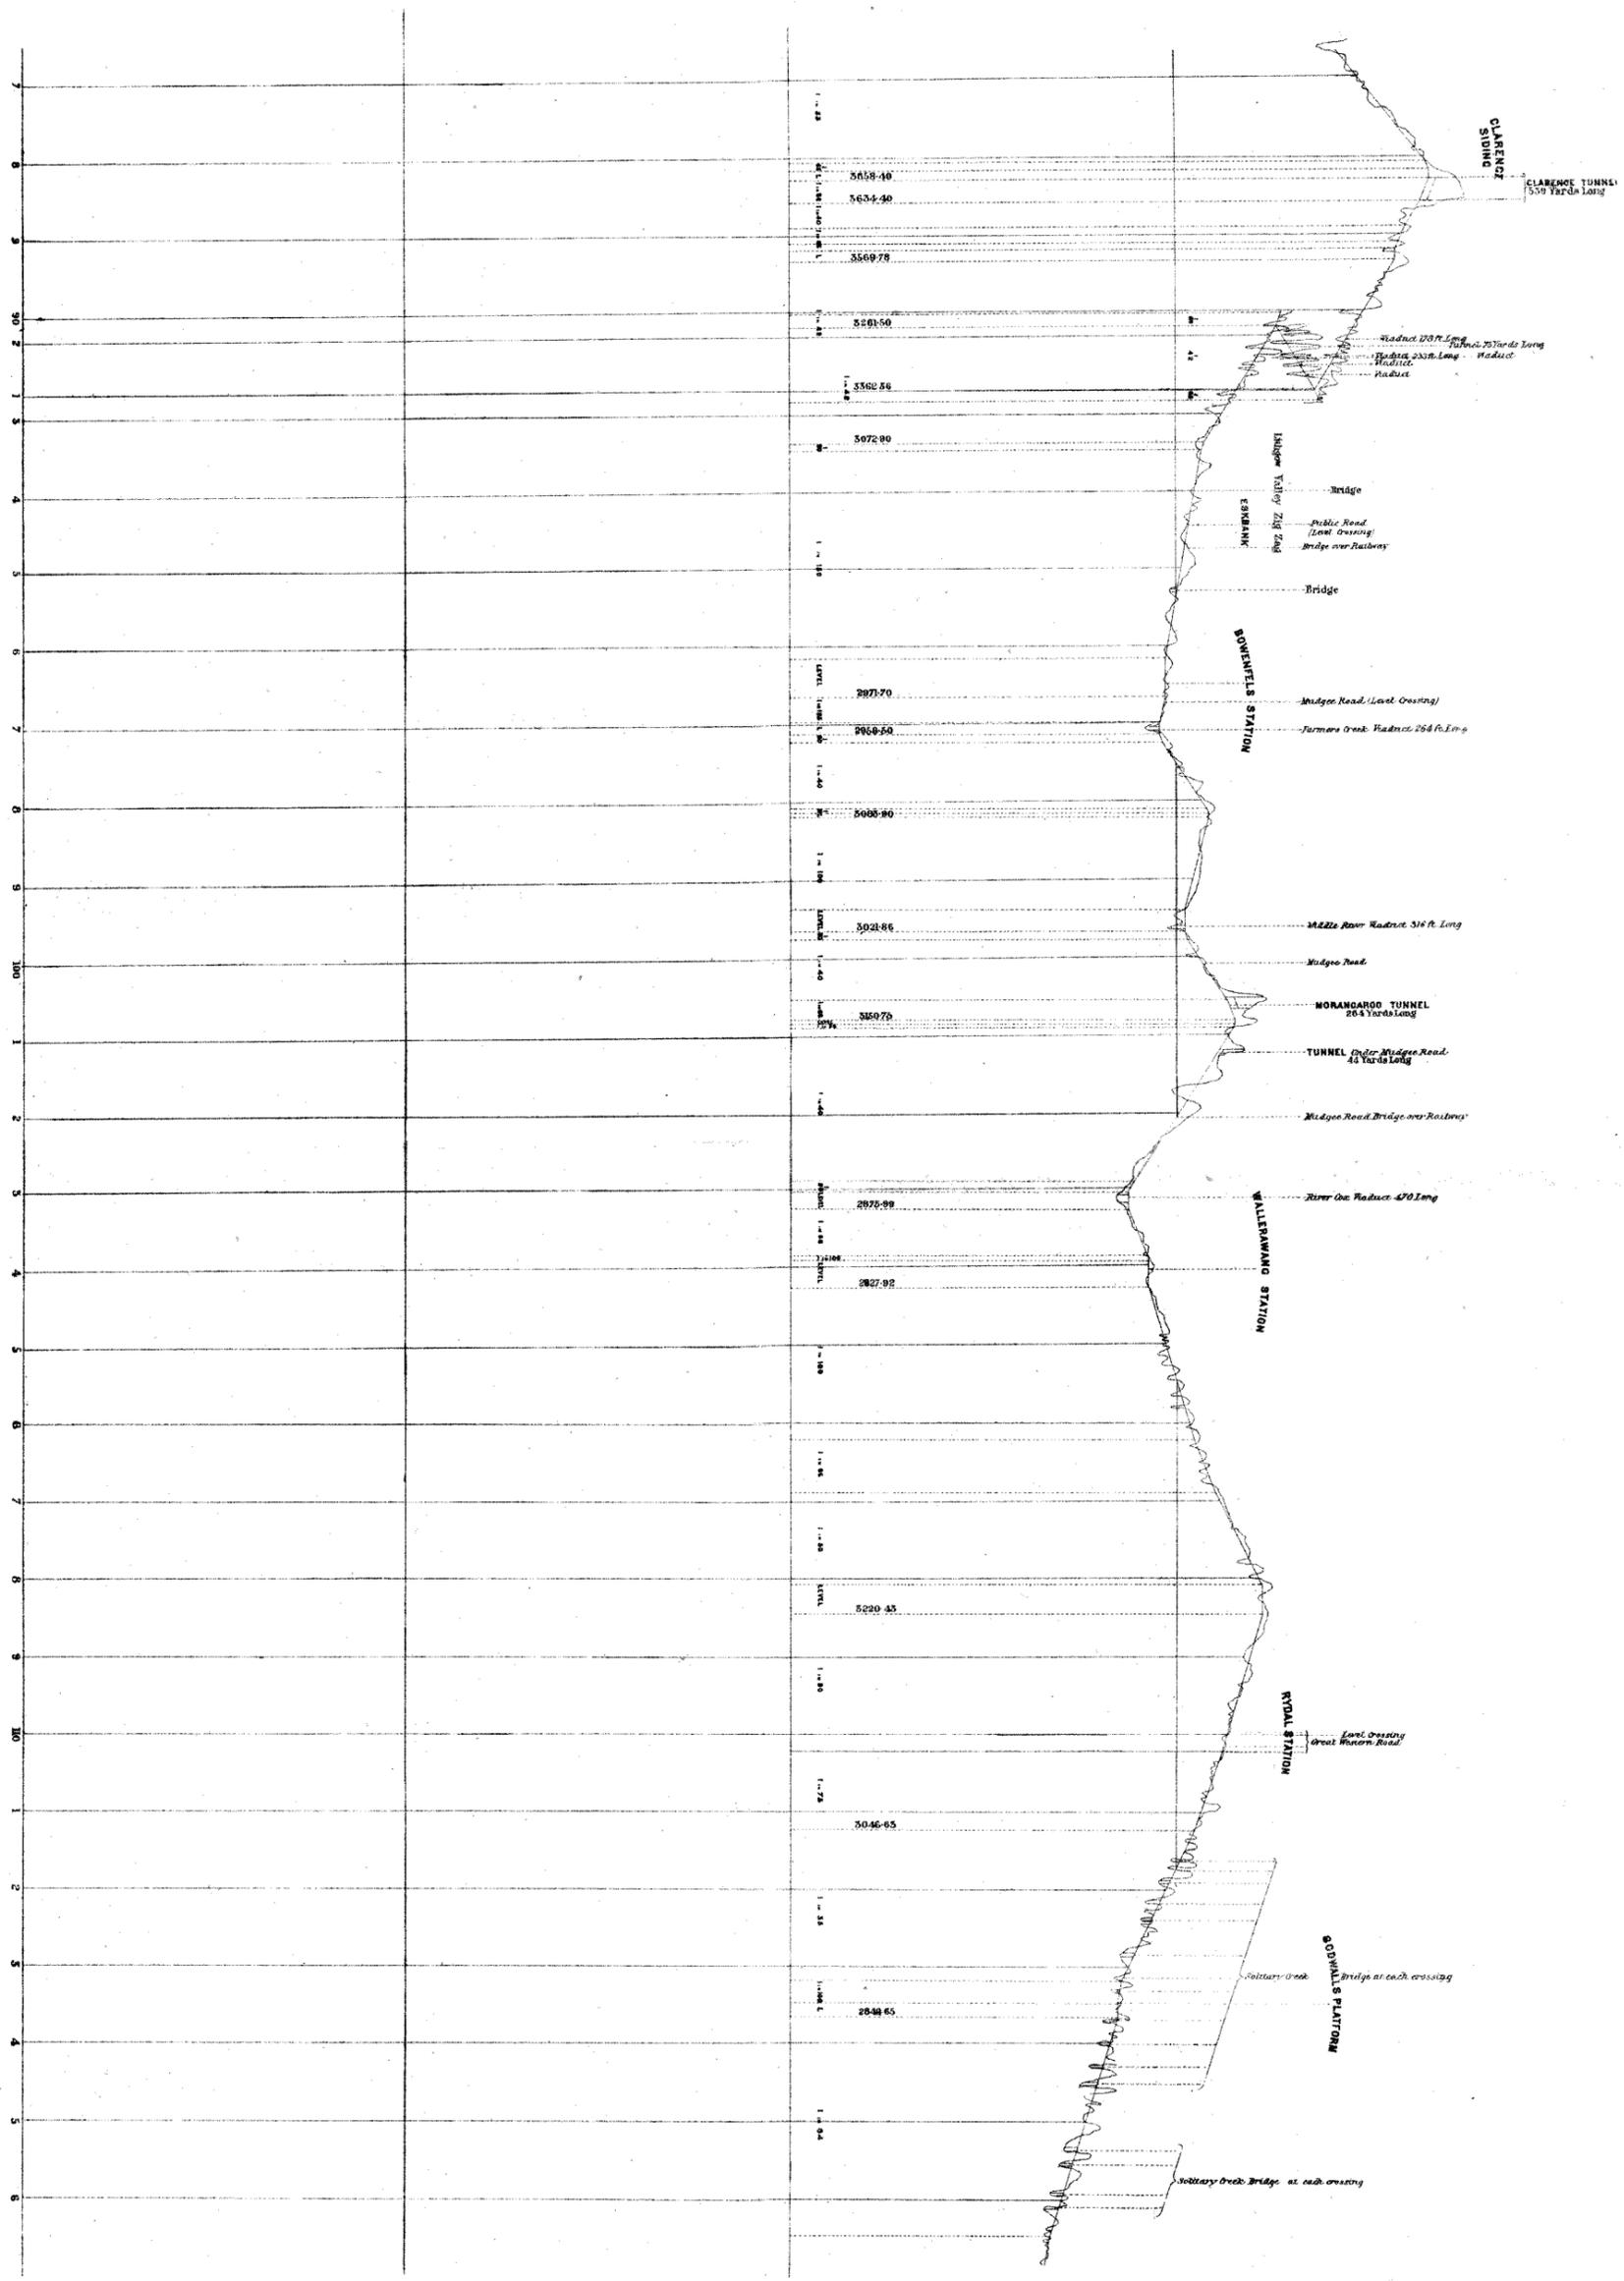

GRADIENTS.

The line may be considered for all practical purposes level throughout, as the rails at Moama Station are only 17 feet above the rails at Deniliquin Station, in a distance of nearly 45 miles, and the highest point between the stations named, which is at Redbank, is only 43 feet above the former station. There is however one short incline which does not appear on the working section of 1 in 98 for a length of 29 chains.

STATIONS.

There are three stations on the line, viz., at Moama, Redbank, and Deniliquin.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

(STATISTICS.)

Ordered by the Legislative Assembly to be printed, 12 December, 1876.

RETURN to *Orders* of the Honorable the Legislative Assembly of New South Wales, dated the 22nd February, 1876, and 7th of March, 1876, the former requiring—That there be laid upon the Table of this House,—

- “(1.) The amount expended for construction of the Western Railway Line to Kelso, giving the number of miles, and the cost per mile.
- “(2.) The amount paid for interest, and the amount of working expenses for the year 1875.
- “(3.) The gross and net receipts for the same period.
- “(4.) The percentage that the profits available to pay the interest on the capital expended bear to that capital.
- “(5.) The like Returns of the Southern and Northern Lines.”

And the latter requiring—That the Return ordered by this House on Tuesday, 22nd February last, be compiled so as to show,—

- “(1.) The amount paid for construction of Line from Sydney to Parramatta, thence to Penrith, thence to Wallerawang, and thence to Kelso; also the cost of the Bridge over the Nepean River, at Penrith.
- “(2.) The Estimate (if any) of the cost per mile of the above portions, as prepared by the Engineer-in-Chief.
- “(3.) The dates of commencement and completion of the above portions of the Lines.
- “(4.) The amount expended for all Surveys of Lines West, North, and South, so far as they were open to general traffic on December 31st, 1875.
- “(5.) Similar Returns for Richmond and Windsor Line.”

(Mr. W. H. Suttor.)

RAILWAYS.

SOUTH, WEST, AND RICHMOND LINE.

	£
The cost for construction of the Line from Sydney to Parramatta Junction, including Branch to Cemetery, Haslem's Creek	742,299
The cost of the length from Parramatta Junction to Penrith	310,787
Do. Penrith to Kelso	1,796,467
The cost of the length from Penrith to Wallerawang cannot be given accurately, and therefore is not inserted.	
The cost for construction of the Line from Sydney to Gunning, including branches Darling Harbour and Haslem's Creek	£ 2,726,319
The cost for construction of Windsor and Richmond Line	84,177
Number of miles open—313.	
Cost per mile	15,711
Estimate of the Engineer-in-Chief of the cost per mile of the extension to Kelso	15,691
Cost of the Nepean Bridge at Penrith, as shown by the books	113,580
The yearly amount due for interest, calculated at 5 per cent. on the capital invested is ...	245,888
The working expenses for the year 1875 amounted to	210,583
The gross earnings for the same period were	431,998
The net do. do.	221,415

Percentage returned on the capital invested was 4·50.

These calculations are independent of the cost of rolling stock and machinery, &c., which, if added, will make the percentage on the capital invested for 1875, 4·03.

The dates of commencement and completion of portions of the line to Kelso :—

	Date of commencement.	Date of completion.
Sydney to Parramatta	12 March, 1851.	26 September, 1855.
Parramatta to Penrith... ..	9 December, 1858.	7 July, 1862.
Penrith to Wallerawang	27 November, 1862.	1 March, 1870.
Wallerawang to Kelso... ..	29 June, 1867.	4 February, 1875.

GREAT NORTHERN LINE.

	£
The cost for construction of the line from Newcastle to Murrurundi, including Morpeth Branch	1,559,033
Number of miles open, 124.	
Cost per mile	12,572
The yearly amount due for interest, calculated at 5 per cent. on the capital invested is ...	77,952
The working expenses for the year 1875 amounted to	85,591
The gross earnings for the same period were	182,649
The net do. do.	97,058

The percentage returned on the capital invested, 6·22.

These calculations are independent of the cost of rolling stock and machinery, &c., which, if added, will make the percentage on the capital invested for 1875, 5·54.

Surveys of Lines North, South, and West.

The amount expended, as shown by the books, on all surveys of Lines, North, South, and West, so far as they were open to general traffic on 31st December, 1875...	£ 48,590

NEW SOUTH WALES.

RAILWAYS.

(CORRESPONDENCE RESPECTING RAILWAY STATION, LITHGOW AND PLATFORM AT BROWN'S.)

Ordered by the Legislative Assembly to be printed, 17 May, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 27 April, 1877, That there be laid upon the Table of this House,—

“Copies of all Correspondence, including Letters, Minutes, Petitions, in reference to Lithgow Valley Siding Platform or Railway Station; also, the same in reference to Platform known as Brown’s.”

(Mr. Hurley, Hartley.)

SCHEDULE.

NO.	PAGE.
1. Letter from Mr. John Hurley, applying for a platform at Lithgow Township. 21 November, 1876.....	2
2. Minute of Secretary for Public Works: Engineer for Existing Lines to report on application. 21 November, 1876. Report of Engineer for Existing Lines thereon. 24 November, 1876	2
3. Letter from Mr. T. Wilton, asking for a deputation to wait upon Secretary Public Works on subject of erection of a platform. 17 January, 1877.....	2
4. Extract from <i>Sydney Morning Herald</i> : Report of deputation. 20 January, 1877	2
5. Letter from Mr. T. Wilton, forwarding resolutions passed at a public meeting. 15 February, 1877.....	3
6. Letter from Mr. T. S. Mort, protesting against the removal of the Eskbank Platform. 21 February, 1877	3
7. Letter from Mr. T. Brown—petition, protesting against the removal of the Eskbank Platform, enclosed. 22 February, 1877.....	4
8. Letter from the Directors of the Vale of Clwydd Coal Co., recommending that Eskbank Platform be converted into a Station and Bowenfells station abolished. 2 March, 1877.....	4
9. Letter from Mr. P. Higgins, proposing that Eskbank Platform be retained, and that another platform be erected, and undertaking to pay cost of erection and removal if position is proved unsuitable. 27 February, 1877	4
10. Minute of Secretary Public Works that Mr. Higgins' offer is accepted. 21 March, 1877	5
11. Letter to Mr. Higgins, accepting his offer. 21 March, 1877.....	5
12. Letter from Mr. Higgins to Engineer, Existing Lines, enclosing guarantee from Mr. W. Gray, giving land for a roadway to platform. 3 April, 1877	5
13. Letter from Mr. Higgins that public will have a road to the platform. 4 April, 1877.....	5
14. Minute of Commissioner, instructing Engineer for Existing Lines to erect the platform. 7 April, 1877	5
15. Letter from Mr. D. Williams, that the site selected is not the best. 3 April, 1877	6
16. Letter from Mr. D. Williams, further reference thereto. 16 and 17 April, 1877	6
17. Minute of Secretary (Railways), that Minister directs that Messrs. Williams and Mort be informed that erection of platform was sanctioned by his predecessor. 1 May, 1877	6
18. Letters to Messrs. Williams and Mort accordingly. 2 May, 1877	7
19. Minute of Secretary (Railways), forwarding papers to Traffic Manager to keep a record of the traffic. 3 May, 1877	7
20. Letter from Mr. Hurley, advising that the erection of the platform be delayed until the papers are printed and decision given. 11 May, 1877	7
21. Letter to Mr. Hurley that erection of platform was sanctioned by former Minister. 12 May, 1877	7

RAILWAYS.

No. 1.

J. Hurley, Esq., M.L.A., to The Secretary for Public Works.

Dear Sir,

Sydney, 21 November, 1876.

On behalf of the inhabitants of Eskbank, I desire to make application for the erection of a platform in the most suitable place near the hotels of Messrs. Gray and Blackford and the stores of Messrs. Burns and Lonergan.

I may here state, a platform erected in this place would be of great benefit to persons visiting any of the following industries, viz.:—Iron Smelting Works, Terra Cotta Works, and also three coal properties now in full work.

The town of Eskbank is midway between Brown's platform and Bowenfells, and to alight at either place necessitates a walk of 2 miles that will be avoided if a platform is erected. The town is increasing, and therefore the necessity of the place requires this accommodation, which I trust you will cause to be entered into as early as possible, thereby conferring a benefit to a number of travellers who go up by excursions on Saturdays as well as on the people themselves. Trusting a favourable answer,

I am, &c.,

JOHN HURLEY.

No. 2.

Minute of The Secretary for Public Works.

Subject:—Platform, Eskbank.

In reference to enclosed application I shall be glad if the Engineer for Existing Lines will report at his earliest convenience as to the necessity for the accommodation applied for by Mr. Hurley on behalf of the residents in the locality. J.L., 21/11/76.

Where the platform is now required is only three-quarters of a mile from the Eskbank platform and would not be so convenient to the majority of the inhabitants as the present (Eskbank) platform; I could not recommend a platform to be placed at the position named in Mr. Hurley's letter, but I can see no objection to the present platform being removed about a quarter of a mile nearer to Bowenfells and close alongside the public road, where perhaps it would be most central for all parties.—W.M., 24/11/76. To Commissioner.

No. 3.

Mr. T. Wilton to The Secretary for Public Works.

Sir,

Sydney, 17 January, 1877.

A deputation from Lithgow Valley is anxious to see you in reference to the platform on the railway at Lithgow Valley, about which you gave some answers the other evening in the Assembly.

The deputation is to arrive here on Friday morning, and it would be a great convenience if you could arrange to see them that day.

If suitable, will you kindly name an hour on Friday when you will receive the deputation; if not will you name any other day. I am, &c.,

THOMAS WILTON.

Will see deputation if other engagements will permit at 12, Friday.—J.L., 17/1/77. Informed Mr. Wilton verbally.—J.R., 17/1/77.

No. 4.

Sydney Morning Herald, Saturday, January 20, 1877.

RAILWAY PLATFORM AT LITHGOW.

YESTERDAY morning a deputation, consisting of Messrs. P. Higgins, W. Gray, T. T. Wilton, J. Lonnergan, T. Crow, E. Ashton, T. Young, and H. Porter, were introduced to the Minister for Works by Mr. Hurley, Member for Hartley, with the view to request him to erect a platform in the town of Lithgow. Mr. Hurley pointed out the growing importance of the town of Lithgow, and the increase of population consequent on the working of the collieries, and the terra cotta and iron works. Several large businesses had been established in the place, and its importance could be gathered from the fact that it yielded the railway a revenue of between £3,000 and £4,000 a year. Yet the people had to go a mile and a half in one way to Bowenfells, and more than a mile in another to Brown's platform, over very bad roads, and at great inconvenience to themselves, before they could avail themselves of railway accommodation. It was not, he believed, the will of petitioners that Brown's platform should be interfered with. Mr. Wilton also pointed out the necessity of the erection of a platform at the centre of business at Lithgow, where the railway came to a level with a road in just such a central position as would suit the banks, stores, and hotels. The gradient was precisely the same as at Eskbank. He maintained that it would be found that a platform at Lithgow, at the spot indicated, would be used more than any other station on the line, except the suburban stations, Wallerawang and Bathurst, and perhaps Mount Victoria. There could be

no

no question that the township would grow around the proposed platform, owing to the favourable formation of the country. Mr. Loneragan and Mr. Gray also spoke of the unfavourable position of the present platforms. Mr. Lackey stated that he should be glad to give the representations made to him every consideration. Of course they were aware that the two platforms, within so very short a distance, made it a matter of some difficulty for the Government to deal with. Although it was stated that the interests of Mr. Brown were not to be interfered with in any way, still it would be for the Government to decide whether there should be one platform at Lithgow or two. He could hardly consider that two were required. However, he would take an opportunity of visiting the place with the Engineer of Existing Lines.

No. 5.

Mr. T. Wilton to The Secretary for Public Works.

Sir,

305, George-street, Sydney, 15 February, 1877.

As chairman of a public meeting, held in the town of Lithgow on Tuesday evening, the 13th instant, I am deputed to forward, for your perusal, the following resolutions, which were each passed by the unanimous vote of the meeting:—

1st Resolution.—Moved by Mr. T. Crow, and seconded by Mr. W. Gray,—

“That the increasing population, steady advancement, and commercial importance of the town of Lithgow, urgently demand greater facilities of communication with the railway than at present exist.”

2nd Resolution.—Moved by Mr. T. Loneragan, and seconded by Mr. E. Ashton,—

“That this meeting protests against the assumption that the removal of the Eskbank platform to the spot lately indicated by the Minister for Works will afford any relief of the disadvantages at present felt by the community, and respectfully urges that access to the railway should be provided in a position more central and convenient to the town.”

3rd Resolution.—Moved by Mr. E. Burns, and seconded by Mr. J. Loneragan,—

“That the progress of Lithgow, and the certainty of its immediate and rapid development, demand the recognition of the Government, and this meeting is of opinion that the erection of a platform in a central position, though affording present relief, will not meet the growing requirements of the town, and that a station, with sidings for the receipt and despatch of goods, is now a public necessity.”

4th Resolution.—Moved by Mr. H. Porter, and seconded by Mr. Breathour,—

“That a copy of the resolutions passed at this meeting be forwarded to the Minister for Works, and that the following gentlemen be appointed a committee to take whatever steps they may deem necessary to carry out the objects of the meeting, namely:—Messrs. James Loneragan, T. Crow, W. Gray, E. Ashton, E. Burns, R. Douglas, John Loneragan, R. Hepple, D. Breathour, J. McNanimy, T. Young, Griffiths, J. Aspinall, J. Moore, G. Brooks, T. Sheedy, T. Loneragan, A. M'Lachlan, J. White, T. Ryan, R. Blackford, W. H. Bogie, P. Higgins, T. T. Wilton, and the mover—three to form a quorum.”

I have, &c.,

THOMAS WILTON.

No. 6.

T. S. Mort, Esq., to The Secretary for Public Works.

Sir,

25, New Pitt-street, 21 February, 1877.

I see by the *Sydney Morning Herald* of the 17th instant that a meeting had been held at Lithgow Valley, where a number of persons representing a particular local interest had passed resolutions favourable to the removal of the platform from its present position at Eskbank to a place midway between that place and the Bowenfells Station.

When it was first proposed to erect a platform at Lithgow the representatives of the Vale of Clwydd Coal Company were very urgent to have it placed nearer to their works; but this, although much more advantageous to my own interest, I objected to, on the ground of its not being central to what must become a large manufacturing area, and I joined in the request to have it placed where it now is. With the same end in view I now respectfully protest against its removal to the position sought by the movers at the meeting referred to, confident as I am that the large area of flat ground, with the abundant and permanent supply of water which the present platform commands, will, in the course of a few years, bring about it a population far in excess of that which will be found in the more westerly portion of the valley. I may state that I have it in contemplation myself, in the course of another year, to erect a fellmongering establishment and a tannery, and already parties are alive to the value of the water and climate for brewing, so that I have little doubt but before very long a brewery will be there; in fact, it will, I am sure, be clear to you, sir, if you will kindly pay a visit to the locality, that manufactories must extend in the vicinity of the present platform rather than further up the Valley. That its coal and iron and shale, to say nothing of its abundance of water and its cool climate, are destined to make it a place of large importance in the future there can be no doubt; thence the greater need for circumspection in placing what must become the nucleus of a great traffic.

Respectfully praying your kind attention to my representations,—

I have, &c.,

THOS. S. MORT.

No. 7.

T. Brown, Esq., to The Secretary for Public Works.

Sir,

Eskbank, 22 February, 1877.

I do myself the honor, at the request of petitioners, to enclose to you the accompanying petition against the removal of the Eskbank Platform; and I must apologize for the dirty state in which it is sent to you—the miners in general have dirty *hands*—235 names are appended. Mr. Mort, Sutherland, Williams, and others would have signed had they been here.

I have, &c.,
THOMAS BROWN.

[Enclosure.]

Petition from T. Brown, Esq., and others to The Secretary for Public Works.

Sir,

Eskbank, February, 1877.

We, the undersigned inhabitants of Lithgow Valley, beg most respectfully to draw your attention to a case of gross injustice that is sought to be done to a large majority of the inhabitants of this place by the removal of the platform at Eskbank to a place situated at the extreme west end of the population, and nearer by 1 mile to the Bowenfells Railway Station, where the Government have laid out so much money for the accommodation of the public.

When the platform at Eskbank was granted it was at the request of T. S. Mort, Esq., and others, who thought it the most central place for all the industries that have been established here. We therefore humbly protest against the removal of the platform for the convenience of the few against the many.

We would also respectfully recommend to your consideration the advisability of erecting a goods station at Brown's Siding, where there is a great deal of loading and unloading takes place, not including the copper-smelting works and the iron works, who unload their ores and reload their refined metal at this siding for the Sydney markets. At this place the station would be most centrally situated, being about 1½ mile from Mr. Mort's and the Vale of Clwydd Company's works, which is situated on the east; also about 1 mile from the Lithgow Valley and Bowenfells Company's works, situated to the west.

Trusting our case to your high sense of honour and justice.
And your petitioners, as in duty bound, will ever pray.

We have, &c.,
THOMAS BROWN,
and 234 others.

No. 8.

The Directors of the Vale of Clwydd Coal Mining Company to The Secretary for Public Works.

Sir,

Bank Chambers, Sydney, 2 March, 1877.

Having been informed that the Department contemplates the removal of the Bowenfells Station on the Great Western Line of Railway, from its present site, and being further informed that a requisition has been laid before you requesting that said station may be removed to Lithgow Valley, near Crow's Hotel, and distant from Sydney about 96 miles,—we, the undersigned, Directors of the Vale of Clwydd Coal Mining Company, have the honor, on behalf of the shareholders of the above Company, and in the interests of its employes and the public, to enter this our protest against the removal of the station to the site above mentioned, and respectfully suggest that the public interest would be far better served by its removal to the position now occupied by the platform at "Eskbank," the property of Thomas Brown, Esq., Lithgow Valley, as being nearer the centre of population and consequently affording more convenience and offering greater advantages to all the inhabitants than could be obtained by its removal to any other site.

While protesting against the removal of the station to any other site than that already mentioned in the foregoing paragraph, we beg to state that we fully concur in the expression of opinion embodied in the third of a series of resolutions passed at a public meeting held at Lithgow on Tuesday, 13th ultimo, which said resolution was as follows:—

"That the progress of Lithgow Valley and the certainty of its immediate and rapid development demand the recognition of the Government, and this meeting is of opinion that the erection of a platform in a central position though affording present relief will not meet the growing requirements, and that a station with sidings for the receipt and delivery of goods is now a public necessity."

We beg respectfully to submit that the only mode of dealing satisfactorily with this matter is by converting Eskbank platform into a station, and abolishing that now existing at Bowenfells, and that this would, while best serving the public interest, meet the views of all those who have spent much of their time and treasure in opening up and developing the mineral and other resources of the valley.

We have, &c.,
THOMAS SAYWELL.
THOS. S. HUTCHINSON.
HORACE WOOLNOUGH.
EDWARD RAMSAY.
RICHARD REDGATE.

No. 9.

Mr. P. Higgins to The Secretary for Public Works.

Sir,

Lithgow, 27 February, 1877.

Referring to the question of the proposed site for the new platform in the Lithgow Valley, and appreciating the difficulty you are under in determining the matter by reason of the conflicting opinions expressed by the parties interested, I have the honor to submit to you the following proposal:—That the Eskbank platform should remain as at present, and that another platform should be erected at a point further west, at or near the place indicated in the resolutions lately presented to you, passed unanimously at a public meeting held at Lithgow.

That

5

That a record should be kept of the business transacted at both platforms for a period (say) of six months, the result to decide which of the two platforms (if not both) it would be to the best interest of the public to retain.

In the event of the experiment proving that the new platform is not in the position most convenient for the majority of the inhabitants and others visiting Lithgow, I hereby undertake to pay the cost of the erection and removal of the said platform.

I have, &c.,

P. HIGGINS.

No. 10.

Minute of The Secretary for Public Works.

THIS seems to me a fair settlement of this question. Mr. Higgins' offer will therefore be accepted; with this condition, however, that whichever site is eventually chosen, sufficient land will be provided by the proprietors for a future station-master's residence—say an acre, at least.

J.L., 21/3/77.

Mr. Higgins informed.—21/3/77. Mr. Mason,—C.A.G., B.C., 23/3/77.

There will be no means of access to this platform for the public without purchasing land for that purpose. Under these circumstances shall I erect the platform?—W.M., 24/3/77. Commissioner.

No. 11.

The Commissioner for Railways to Mr. P. Higgins.

Sir,

Department of Public Works, Railway Branch, Sydney, 21 March, 1877.

Referring to your letter of the 27th ultimo, submitting the following proposal,—“That the Eskbank platform should remain as at present, and that another should be erected at a point further west, at or near the place indicated in the resolutions lately presented to the Secretary for Public Works, its continuance to be dependent upon the use made of it by the public, and guaranteeing, should it be determined to remove it in consequence of its failure, to pay the costs of same, and also of its erection,”—I have the honor to inform you that your proposal appears to the Secretary for Public Works to be a fair settlement of the question, and desires me to accept your offer, with the understanding, however, that should it be ultimately determined to erect the permanent station on the site selected for the platform in question, those interested in the site will provide, free of cost to the Government, 1 acre of land, on which the buildings, &c., required can be erected.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 12.

Mr. P. Higgins to The Engineer for Existing Lines.

Dear Mr. Mason,

“Royal Hotel,” Sydney, 3 April, 1877.

I enclose a guarantee of Gray's, to give land for a roadway from Bell's Line to the proposed platform at Lithgow. I intended to have called upon you to-day on this subject, but find I must go to Penrith.

Hoping you will give the necessary instructions at your earliest convenience for the erection of the platform,

I remain, &c.,

P. HIGGINS.

Commissioner.—W.M., *pro* R.J.S., 6/4/77.

[Enclosure.]

Lithgow, 24 March, 1877.

I HEREBY guarantee to open for public use a road from Bell's line to the proposed site for a railway platform, about 100 feet from the eastern boundary of my paddock in the town of Lithgow, said road not to be less, at any point, than 50 feet wide.

It is to be understood that this land is to revert back to me unless required for access to a platform.

M. GRAY.

No. 13.

Mr. P. Higgins to The Commissioner for Railways.

Sir,

“Royal Hotel,” Sydney, 4 April, 1877.

With reference to your letter of 21st March last, respecting the platform at Lithgow, I have the honor to inform you that immediately on the receipt thereof I entered into negotiations for the opening of a public road from Bell's line of road to the platform in question.

I am happy to say that this has been accomplished, and the public will have access to the platform as soon as erected.

I have, &c.,

P. HIGGINS.

No. 14.

Minute of The Commissioner for Railways.

MR. MASON to have platform erected as early as possible.

J.R., 7/4/77.

The work is now in hand.—W.M., 14/4/77. Commissioner.

No. 15.

No. 15.

Mr. D. Williams to The Secretary for Public Works.

Sir,

"Metropolitan Hotel," King-street, Sydney, 3 April, 1877.

I have the honor to call your attention to a statement, current, that the late Minister for Works has authorized a new platform to be erected at 95 miles 10 chains, Western line, opposite Gray's public-house.

In reference to the above, a deputation a short time since waited on the late Minister for Works, who informed the deputation that he would visit the place before any action was taken. I also called at the office, and was told no definite action would be taken, as a question had been asked in the House. Mr. Lackey, the late Minister, stated in the House, in reply to a question referring to the removal of platform, that before anything would be done he or some qualified officer would visit the spot.

Relying upon the above promise, I have refrained from calling at the office to point out that, in my opinion, the place selected (as report states) is not fit, nor will it meet the wants of the people settled there, as it is at one end of the settlement or township, with no room for goods shed or siding, but is simply a platform or stopping place on the main line, useful only to those at that end, the only approach to it being through a road given subject to certain conditions.

As there is now a large goods trade to the new village of Lithgow, it requires a siding for the delivery of loading or unloading of trucks and goods, all of which traffic now is, by the courtesy of Mr. T. Brown, allowed to be run on to his private siding and approaches to; also by his permission through private ground; and in consequence of the coal and copper trades at his siding, it is of a great inconvenience.

As a siding is necessary for the goods, and as a goods shed will also be required soon, I suggest that the most suitable place for the purpose is at 94 miles 47 chains, or thereabout, near the bridge. There is ample room on the Government property for a station where required; it abuts on to a public road; it is quite close to the proclaimed road leading to Farmer's Creek—the approach to the creek for water one of great importance.

I have been induced to call your attention to the matter as one interested in the Lithgow Valley Iron Company, and as I have, on their behalf, applied for siding, and shown the prepared plan to Mr. Mason, Engineer for Existing Lines, I thought my proposal would lessen the number of stopping places, and give a better provision for the public—more central—on Government ground.

Trusting that the Minister will carefully consider the matter before coming to a decision, I should have much pleasure in explaining my meaning more freely personally, if desired.

I have, &c.,

DANIEL WILLIAMS.

Mr. Mason, for report.—J.R., B.C., 21/4/77. See Mr. Hurley's question (6), and Mr. Lackey's reply, in proceedings of the 11th January last; also my previous report in reference to this subject.—W.M., 26/4/77. Commissioner. Mr. Williams says he refrained from opposing the erection of a platform at the place now conditionally authorized, relying in the faith of a promise made by Mr. Lackey in reply to a question asked in the Assembly, that he would visit the locality or send some competent person to report before anything was done. I cannot find that any such promise was made. The only answer given is that alluded to by Mr. Mason, which contains no such promise.—C.A.G., 30/4/77.

No. 16.

Mr. D. Williams to The Secretary for Public Works.

Sir,

Macleay-street, Sydney, 16 April, 1877.

See No. 6.

Referring to a conversation held at your office on the 13th instant, at which Mr. T. S. Mort was present, I have the honor to enclose for your perusal a copy of letter sent to the late Minister for Works by Mr. Mort, on the subject of removal of Lithgow Valley platform. I also beg to inform you that I wrote to you on the same subject on April 3rd, and I respectfully request that these letters may be considered when the question of platform and siding at Lithgow is brought under your notice.

I have, &c.,

DANIEL WILLIAMS.

[Enclosure.]

Mr. D. Williams to J. Hoskins, Esq., M.L.A.

Dear Sir,

Sydney, 17 April, 1877.

I must apologize for writing to you privately, but I saw Mr. Mason yesterday, who told me that the platform was nearly ready to fix. My ground of complaint is that when Mr. Higgins asked for platform at this spot he did not care about accommodation for the public, but my object is to accommodate the public and make the platform and station and siding central. It appears to me they are hurrying on until they tell you it is too late. I wrote yesterday (last night) enclosing copy of Mort's letter to Mr. Lackey. Mr. Mason said that if it is put where they want it we cannot expect another, as it would be three stops in $\frac{3}{4}$ mile. Mr. Mason agrees with me as to position.

Yours, &c.,

D. WILLIAMS.

No. 17.

Minute of The Secretary for Railways.

I HAVE explained to the Minister how this matter stands, and he directs me to write to the gentlemen interested, pointing out that the platform to be erected on the site proposed by Mr. Higgins was sanctioned by his predecessor on certain terms and conditions, which Mr. Higgins has undertaken to observe, and that therefore it is not in his power to alter existing arrangements, but no permanent building will be erected until it has been ascertained from further experience which site will best meet the interests of the general public.

C.A.G., 1/5/77.

Inform. D. Williams and T. S. Mort informed.—2/5/77.

No. 18.

No. 18.

The Commissioner for Railways to Mr. D. Williams.

Sir,

2 May, 1877.

With reference to your letters of the 3rd and 16th ultimo, relative to the erection of a platform at Lithgow, I have the honor by direction of Mr. Secretary Hoskins to inform you that the platform to be erected on the site proposed by Mr. Higgins was sanctioned by his predecessor on certain terms and conditions which Mr. Higgins has undertaken to observe, and that therefore it is not in his power to alter existing arrangements, but no permanent building will be erected until it has been ascertained from further experience which site will best meet the interests of the general public.

I have, &c.,
JOHN RAE.

The Commissioner for Railways to T. S. Mort, Esq.

Sir,

2 May, 1877.

Referring to the correspondence relative to the erection of a platform at Lithgow, I have the honor, by direction of Mr. Secretary Hoskins, to inform you that the platform to be erected on the site proposed by Mr. Higgins was sanctioned by his predecessor on certain terms and conditions which Mr. Higgins has undertaken to observe, and that therefore it is not in his power to alter existing arrangements, but no permanent building will be erected until it has been ascertained from further experience which site will best meet the interests of the general public.

I have, &c.,
JOHN RAE.

No. 19.

Minute of The Secretary for Railways.

As this platform will shortly be put up the papers are forwarded to Traffic Manager in order that a record may be kept for six months of the number of people who arrive at and depart from this platform, as compared with the number arriving at and departing from Brown's platform.

C.A.G., B.C., 3/5/77.

Noted.—D. VERNON, T.-M., for T. Elliott, 12/5/77. To Secretary.

No. 20.

J. Hurley, Esq., M.L.A., to the Secretary for Public Works.

Sir,

Sydney, 11 May, /77.

You will oblige by causing the papers, &c., moved for by me, in regard to the erection of Station siding, &c., at Lithgow, to be sent up to the House so that they may be laid on the table and be printed for information, and I should advise the delay of erecting of one platform the late Minister of Works agreed to at the place above referred to until the papers are printed, &c., and until a definite decision is given by yourself on the matter, or until the motion is definitely decided by a Committee of the House. I think I am safe in saying the erection of a platform, as the late Minister intended, would have done away with the demand of my motion. I trust you will cause immediate reports to be made in regard to my application for I am more persuaded than ever of the necessity of a siding and station at Lithgow.

I am, &c.,
J. HURLEY.

Commissioner for Railways.—Please have the papers sent to the Legislative Assembly as soon as possible. I shall be glad if you will please have Mr. Hurley, M.P., advised of what has been done in respect to the platform at Lithgow.—J.H., 12/5/77.

Mr. Hurley, M.P., informed that the erection of the temporary platform at Lithgow was sanctioned by Mr. Secretary Lackey on certain terms and conditions which Mr. Higgins has undertaken to observe; and that therefore it is not in Mr. Secretary Hoskins power to alter existing arrangements, but that no permanent building will be erected until it has been ascertained from further experience which site will best meet the interest of the general public.—C.A.G., 12/5/77.

Expedite the preparation of the papers for the House as much as possible.—C.A.G., 12/5 77.
Return herewith.—17/5/77.

No. 21.

The Commissioner for Railways to J. Hurley, Esq., M.P.

Sir,

Department of Public Works, Railway Branch, Sydney, 12 May, 1877.

With reference to your letter of the 11th instant, suggesting that the erection of the platform at Lithgow should be delayed until a decision is given by a Committee of the Legislative Assembly, I have the honor, by direction of Mr. Secretary Hoskins, to inform you, that the platform to be erected on the site proposed by Mr. Higgins was sanctioned by his predecessor on certain terms and conditions, which Mr. Higgins has undertaken to observe, and that therefore it is not in his power to alter existing arrangements; but no permanent building will be erected until it has been ascertained from further experience which site will best meet the interests of the general public.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(REPORT OF TRAFFIC MANAGER RESPECTING THE ERECTION OF A GOODS SHED AT GRETA STATION.)

Ordered by the Legislative Assembly to be printed, 5 June, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 28 May, 1877,—

“ That there be laid upon the Table of this House a Copy of the Report of the Traffic Manager of the Great Northern Railway on the proposed erection of a Goods Shed at Greta Station.”

(*Mr. Burns.*)

Additional Accommodation required at Greta.

SUBMITTED for the Commissioner's information. Additional accommodation for both goods and coaching traffic is much needed at this place.

J. HIGGS, 21/9/76.

Does the platform require to be lengthened? Representations have been made that it is too short. Please report as to district beyond—its mineral character, what are the goods that go to Greta, and where do they come from; what goods are sent from there. Give estimated population, and whether it is of a permanent character. What size goods shed is required.—CH. A. G.

Mr. Higgs, B.C., 25/9/76.

Mr. Higgs' Report.

THE platform most decidedly is insufficient in length and breadth. It is an agricultural district. Apart from its mineral character, the goods sent to this place consist of provisions generally sent from various stations, mostly from Newcastle and West Maitland. Very little goods are sent from this place. Population, about 5,500. I think it is of a permanent character, excepting the mining portion of it. In my opinion the shed should be large enough to contain three or four trucks.

J. HIGGS, 28/9/76.

As the traffic at this place realizes over £3,000 a year, without the coal traffic, and the population is over 5,000, there can be no question as to the necessity of additional accommodation. The Engineer for Existing Lines will please direct additional siding to be put in, a small goods shed erected, and the passenger platform lengthened and widened.—CH. A. G., *pro Comr.*, 6/10/76.

Minute of The Engineer of Existing Lines.

As this matter does not appear to be very urgent, I would suggest that it stand over until I have visited the Northern Line, which I intend to do shortly.

W.M., 7/10/76.

Commissioner.

Approved. Return to Mr. Mason.—CH. A. G., *pro* Comr., 12/10/76.

Mr. Mason's Report.

THE arrangements at this station are of a temporary kind, and altogether insufficient for the ordinary traffic. A new brick and stone building has been erected here, intended, I understand, for post and telegraph offices. It appears to me large enough for station purposes as well, if it could be used for such. If the Commissioner approves, I will communicate with the Traffic Manager and carry out such arrangements at this station as are required.

W.M., 14/12/76.

Minute by The Secretary for Railways.

THE building was erected as a post, telegraph, and railway station; it has been handed over to this department, and the railway officer is in charge of the building—a small portion only being allotted to post and telegraph purposes. The land on which the station is built has been conveyed to Commissioner by Mr. Clift, and the Traffic Manager North has recommended in other papers that it be fenced in. With the other papers (which are sent herewith) will be found a tracing of the land conveyed. It will be seen that the creek at the end of Nelson-street requires to be bridged to afford access to the station. The work required is fencing in of land, and construction of approaches from Anvil Creek side (the Commissioner for Roads will make the approaches from the other side—Greta township), lengthening platform, and erection of small goods shed.

CH. A. G., 18/12/76.

Decision of The Commissioner for Railways.

MR. Mason to make the necessary arrangements with the Traffic Manager to carry out what is necessary.

J.R., 4/1/77.

The Engineer for Existing Lines to The Superintendent of Permanent Way.

THE new building at Greta is intended for a station, post office, and telegraph office. I wish you to do what is necessary to make it suitable for a station; also to erect a good platform at least 100 feet long, and put up a small goods shed, if the Traffic Manager thinks the present traffic will justify the outlay.

I enclose a tracing, showing the land belonging to the Commissioner, which I wish you to have fenced, and to make a road approach to Anvil Creek. The Commissioner for Roads will make the road approach from Greta township. Charge cost to Schedule G.

W.M., 5/1/77.

Report of The Superintendent of Permanent Way.

THE platform, goods siding, road approaches, &c., have been completed; but nothing appears to have been decided about the booking office, &c.; the business is therefore still being done in the small wooden box.

Mr. Higgs does not think it necessary to erect a goods shed at present.

G.B., 15/3/77.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY FROM MURRURUNDI TO TAMWORTH.

(APPLICATION OF CONTRACTOR FOR EXTENSION OF TIME—CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 7 February, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 19th January, 1877, That there be laid upon the Table of this House,—

“Copies of all Papers, Applications, Letters, and Minutes, having reference to any application made by the Contractor of the Great Northern Railway Extension from Murrurundi to Tamworth for an extension of time for the completion of his Contract.”

(Mr. T. G. Dangar.)

SCHEDULE.

NO.		PAGE.
1.	Letter from W. Wakeford, asking for an extension of time. 22 March, 1876	1
2.	Minute of Engineer-in-Chief thereon, recommending that the time be extended. 28 March, 1876.....	2
3.	Approval of Minister for Public Works. 1 April, 1876.....	2
4.	Letter to W. Wakeford, informing him that his request is granted. 4 April, 1876	2
5.	Letter from Crown Solicitor, forwarding Bond for extension of time. 25 May, 1876.....	2

No. 1.

Mr. W. Wakeford to The Commissioner for Railways.

Sir,

Gt. N.R., Murrurundi, 22 March, 1876.

As the time for the completion of Contract No. 1 on the Great Northern Railway from Murrurundi to Tamworth expires on the 31st March, 1876, and my not having been able to complete the works in the time named, which has been caused by the great scarcity of labour, and more particularly of that class suitable for railway construction.

At the commencement of this contract I expected to have been able to have collected a good force of labour from Victoria and Tasmania, having sent to those Colonies for that purpose, and at a very great expense. Those that were sent over from Victoria, I must say were, without exception, about the worst lot of men possible to collect together, with the exception of a few; although I sent a man over especially to collect none but good men, and no sooner had they arrived and had been at work for a couple of days or so, and having supplied them with cash to procure provisions, that numbers of them left to go up the country; the same may be said of some that came over from Tasmania, although, on the whole, they were a better lot, but unfortunately not many came over from that Colony. I also sent to the other Colonies, but not many came, and from South Australia I received a letter, in reply to one sent by me, that it would be of no use in my appointing any one to collect men to send over here, as there were none to be had, and that the country was languishing for the want of labour. In addition to this, I had advertisements inserted in all the principal papers of the Colony, so that it might be thoroughly known that there was plenty of work on this contract.

I may state that numbers of men after having received passes to convey them to Murrurundi for the purpose of procuring work, have not made any application for such, and some of them, I may say a great many, who did make application, only worked about a day or two, and then wanted lighter work, and, not being able to obtain it, left the work altogether. I could illustrate many instances of men that have been sent up here who had no more idea of railway work than an idiot; only to-day two men called for employment; I then told them to go up beyond the Willow-tree, the distance of about 14 miles from here, and they would find plenty of work there immediately; they wanted to know if I could send them on in a conveyance, as they expected I had one for that purpose; of course I declined.

I may further add that I have been carrying on a great part of the work for the past six months by day work instead of piece work, thinking I may procure more men; it has, however, made no difference, although I am paying as high as 9s. (nine shillings) per day labourers. The fact is, that the wages ruling are so high that the men have plenty to spare on pay-day, and very few return to work for a week afterwards, spending their money in that interval in drink.

I therefore beg to make application for an extension of time, so as to enable me to complete this contract, and should feel obliged if you would grant me eighteen months for that purpose.

Trusting you will give this your favourable consideration,—

I am, &c.,

W. WAKEFORD.

Mr. Whitton.—B.C., 24/3/76, J.R.

No. 2.

Minute of Engineer-in-Chief.

I HAVE every reason to believe that Mr. Wakeford has done all in his power to procure labour to carry on his contract, but without success. I have therefore no alternative but to recommend that the extension of time asked for be granted, on the condition that the line to Quirindi be opened for public traffic in August next.—J.W., 28 March, 1876.

To Commissioner.

No. 3.

Approval of Minister for Public Works.

Approved.—J.L., 1/4/76.

Mr. Wakeford informed.—4/4/76. Instructions to Crown Solicitor for Bond.—10/4/76.

Mr. Whitton to see.—B.C., 11/4/76, C.A.G. Seen.—J.W., per W.H.Q., 27/4/76.

No. 4.

The Commissioner for Railways to W. Wakeford, Esq.

Sir, Department of Public Works, Railway Branch, Sydney, 4 April, 1876.

In acknowledging the receipt of your letter of the 22nd ultimo, applying for an extension of time to enable you to complete your contract on the Great Northern Railway Extension, Murrurundi to Tamworth, and explaining the causes which have prevented you from completing this contract within the time specified, I have the honor to inform you that the Honorable the Minister for Public Works, after taking into consideration the explanation given by you, has approved of an extension of eighteen months being allowed you from the date hereof, on the express condition that the line to Quirindi be opened for public traffic in August next.

I have, &c.,

JOHN RAE,
Commissioner for Railways.

No. 5.

The Crown Solicitor to The Commissioner for Railways.

Sir, Crown Solicitor's Office, Sydney, 25 May, 1876.

In compliance with the instructions contained in your Minute Paper B.C. 10/4/76, I have had prepared and forward herewith agreement, duly executed, for extension of time for the completion of Mr. Wm. Wakeford's contract, Great Northern Railway Extension, No. 1, Murrurundi to Tamworth. The agreement should be signed by the Commissioner, and the seal affixed thereto.

I return the original contract and other papers herein.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAYS.

(RUNNING OF PASSENGER TRAINS ON WALLSEND COAL COMPANY'S LINE.)

Ordered by the Legislative Assembly to be printed, 14 February, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 21 July, 1876, That there be laid upon the Table of this House,—

“Copies of all Correspondence and other Papers and Documents in the possession of the Government having reference to the negotiations with the Wallsend Coal Mining Company for the running of Passenger Trains on the Wallsend Line to and from Wallsend.”

(Mr. G. A. Lloyd.)

SCHEDULE.

NO.	PAGE.
1. Minute with reference to having a time fixed for running a coal train with passengers—Wallsend Co. object. 27 November, 1872	3
2. Letter to Secretary, Wallsend Co., asking what are the Coy's views. - 10 December, 1872	3
3. Letter from Wallsend Co., that a goods and passenger train should only be run twice a day. 20 December, 1872 ...	3
4. Minute of Minister as to per centage payable to Wallsend Co. 29 March, 1873	4
5. Letter to Wallsend Co.—to pay 9d. per mile, &c., from 1st May. 5 April, 1873	4
6. Letter from Secretary, Wallsend Co., declining terms offered. 10 April, 1873	5
7. Letter to Secretary, Wallsend Co., as offer is declined trains will cease running after 31st May. 5 May, 1873	5
8. Letter from Secretary, Wallsend Co.—subject not dealt with, there not being a full Board. 8 May, 1873	5
9. Letter from Secretary, Wallsend Co.—further as to proposal. 19 May, 1873	5
10. Letter from Crown Solicitor—Solicitor General Innes is of opinion that Government have no power to run over Coy's line except with Coy's concurrence. 31 May, 1873	6
11. Letter to Secretary, Wallsend Co., asking what mileage rate the Company proposes. 23 May, 1873	6
12. Letter from Secretary, Wallsend Co., in reply thereto. 29 May, 1873	6
13. Minute of Secretary, Public Works, that 1s. per mile is to be paid. 2 June, 1873	7
14. Minute of Secretary, Public Works, approving of time-table. 11 June, 1873	7
15. Letter to Secretary, Wallsend Co., that 1s. per mile is to be paid. 11 June, 1873	7
16. Letter from Secretary, Wallsend Co., hoping arrangement will prove advantageous. 13 June, 1873	7
17. Letter from Secretary, Wallsend Co., asking for statement of monthly receipts. 27 March, 1874	7
18. Return of Earnings. 22 May, 1874	8
19. Letter to Secretary, Wallsend Co., enclosing statement of monthly receipts. 27 May, 1874	8
20. Letter from Secretary, Wallsend Co., wishing to return to proportionate rates. 8 August, 1874	8
21. Letter to Secretary, Wallsend Co., declining proposal and asking what is a fair rate. 4 September, 1874	9

	PAGE.
22. Letter from Secretary, Wallsend Co.—will accept 2s. 6d. per mile. 9 October, 1874	9
23. Return of earnings, 12 months, to 30 June, 1874. 22 October, 1874	10
24. Minute of Secretary (Railways) as to proposal of Wallsend Co. 24 October, 1874	10
25. Letter to Secretary, Wallsend Co.—their proposal is unreasonable. 5 November, 1874	11
26. Letter from Secretary, Wallsend Co., for a division at a rate to be agreed upon. 13 November, 1874	11
27. Minute of Secretary for Public Works as to increasing rate from 1s. to 1s. 6d. per mile. 23 November, 1874	11
28. Letter to Secretary, Wallsend Co., as to increasing rate from 1s. to 1s. 6d. per mile. 8 December, 1874	11
29. Letter from Secretary, Wallsend Co.—Company will erect station, &c., if Government will pay 2s. 6d. per mile. 11 December, 1874	12
30. Letter to Secretary, Wallsend Co., declining Company's proposition. 21 December, 1874	12
31. Letter from Secretary, Wallsend Co.—Company will erect buildings, and leave amount to be paid to arbitration. 31 December, 1874	12
32. Letter to Secretary, Wallsend Co.—no more than 1s. 6d. per mile can be paid, and on condition that land is conveyed for building. 8 January, 1875	12
33. Letter from Secretary, Wallsend Co., claiming 25 per cent., or leave matter to arbitration. 14 January, 1875	12
34. Letter to Secretary, Wallsend Co., declining Company's terms. 27 January, 1875	13
35. Letter from Secretary, Wallsend Co., for a deputation to wait on Minister. 11 February, 1875	13
36. Letter to Secretary, Wallsend Co., appointing 25th February. 18 February, 1875	13
37. Report of Deputation. 25 February, 1875	13
38. Letter from Secretary, Wallsend Co., requiring returns of traffic. 26 February, 1875	14
39. Letter to Secretary, Wallsend Co., forwarding returns of traffic. 8 April, 1875	16
40. Letter from Secretary, Wallsend Co., relative to returns of traffic. 16 April, 1875	16
41. Minute of Secretary (Railways) relative to returns of traffic. 21 April, 1875	17
42. Letter to Secretary, Wallsend Co.—that Company are mistaken in their views of this case. 29 April, 1875	17
43. Letter from Secretary, Wallsend Co., in reply thereto. 6 May, 1875	17
44. Minute of Secretary (Railways) on Company's letter of 6th May. 17 May, 1875	18
45. Minute of Secretary, Public Works—that Company are to be furnished with further information. 28 May, 1875	18
46. Letter to Secretary, Wallsend Co., forwarding further information. 2 June, 1875	18
47. Letter from Secretary, Wallsend Co., for a per centage arrangement. 12 June, 1875	19
48. Minute of Secretary (Railways) on above. 22 June, 1875	19
49. Letter to Secretary, Wallsend Co., declining to pay by per centage. 9 July, 1875	20
50. Letter from Secretary Wallsend Co., giving notice that they decline to permit trains running from the 1st September. 23 July, 1875	21
51. Telegram.—That Deputation from Wallsend inhabitants desire an interview. 23 August, 1875. Deputation waited on 27th August.	21
52. Petition from Inhabitants of Wallsend for the resumption of traffic. 16 September, 1875	21
53. Letter from Commissioner, in reply thereto. 9 October, 1875	22
54. Letter from Wallsend Railway Committee—that a deputation may be received. 13 October, 1875	22
55. Letter from Commissioner, in reply—declining. 18 October, 1875	22
56. Letter from Wallsend Railway Committee, again urging for an interview. 19 October, 1875	22
57. Letter from Commissioner—will receive deputation. 21 October, 1875	23
58. Memorial presented from Railway Committee	23
59. Memorial presented from Railway League for the construction of a railway line by Government. 25 October, 1875	24
60. Report of Deputation. 27 October, 1875	24
61. Letter from Secretary, Wallsend Company—lowering to 22½ per cent. 26 October, 1875	26
62. Minute of Secretary (Railways) on above. 27 October, 1875	26
63. Letter to Secretary, Wallsend Co., declining proposal, &c. 8 November, 1875	27
64. Letter from Secretary, Wallsend Co., as to mileage rate and distance. 11 November, 1875	27
65. Letter to Secretary, Wallsend Co., giving distance. 22 November, 1875	27
66. Letter from Secretary, Wallsend Company, awaiting an answer. 22 November, 1875	27
67. Letter from Secretary, Wallsend Co.—Terms Company propose. 9 Dec, 1875	27
68. Minute of Secretary (Railways) on above	28
69. Letter from Secretary, Wallsend Co.—awaiting reply. 28 December, 1875	28
70. Letter from Secretary, Wallsend Co.—awaiting reply. 1 February, 1876	28
71. Minute of Secretary (Railways) as to modes of settlement. 4 February, 1876	28
72. Letter to Secretary, Wallsend Co., giving proposal of Government. 9 February, 1876	29
73. Letter from Secretary, Wallsend Co., in reply thereto. 24 February, 1876	29
74. Letter to Secretary, Wallsend Co., that Company have made an error in their calculations. 25 February, 1876	31
75. Letter from Secretary, Wallsend Co.—That the reply sent was based on figures furnished. 2 March, 1876	31
76. Minute of Secretary (Railways), on above. 6 March, 1876	31
77. Letter from Secretary, Wallsend Co., awaiting a definite reply to letter of 28th December, 1875. 23 March, 1876	31
78. Letter from Secretary, Wallsend Co.—not having received reply giving notice of trains ceasing to run after 31st July if matter is not settled. 23 June, 1876	32
79. Minute of Secretary, Public Works—That Government will refer matter to Clearing-house. 19 July, 1876	32
80. Letter to Secretary, Wallsend Co.—That Government will refer matter to Clearing-house. 20 July, 1876	32
81. Letter from Secretary, Wallsend Co., declining proposal. 24 July, 1876	32
82. Minute of Secretary (Railways) to Crown Solicitor, for opinion on the case. 25 July, 1876	33
83. Letter from Crown Solicitor—Opinion of Attorney General. 25 July, 1876	33
84. Letter from Secretary, Wallsend Co.—Directors willing to see Minister on subject. 26 July, 1876	34
85. Letter from Secretary, Wallsend Co., consenting that traffic be continued until end of August—disputes to be adjusted in the meantime. 28 July, 1876	34
86. Letter from Secretary, Wallsend Co., wanting to arrange for a further interview. 30 August, 1876	34
87. Letter to Secretary, Wallsend Co., appointing time to receive deputation. 30 August, 1876	34
88. Minute of Minister for Public Works—Propositions for settlement of question. 8 September, 1876	34
89. Minute of Secretary (Railways) as to division of receipts.	34
90. Letter to Secretary, Wallsend Co., making these proposals. 16 September, 1876	35
91. Letter from Secretary, Wallsend Co., agreeing with principle of settlement, but wanting particulars of rolling stock. 21 September, 1876	35
92. List of rolling stock used to conduct Wallsend traffic. 27 September, 1876	36
93. Letter to Secretary, Wallsend Co., giving list of rolling stock, &c. 10 October, 1876	36
94. Letter from Secretary, Wallsend Co., agreeing to proposals. 23 October, 1876	36

RAILWAYS.

No. 1.

Government Railways—Minute Paper.

MR. HIGGS to report whether there would be any objection on the part of the Wallsend Company to have a fixed time once a day for running a coal train with passengers. Complaint is that hour is never known; if it were, people travelling could make arrangements; fixed time to apply to one train only.—C.A.G., B.C., 27/11/72. (*Very urgent.*)

I have seen the Company's Manager (Mr. Neilson); he has a decided objection to have a time fixed for any train. He thinks the Commissioner had better bring the matter under the notice of the Directors.—J. HIGGS, 29/11/72. The Chief Clerk.

Let the question be submitted to the Directors.—J.R., 7/12/72. Write Mr. Binney, 10/12/72.

No. 2.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir,

Department of Public Works, Railway Branch, 10 December, 1872.

I have the honor to request that you will be good enough to submit to your Board of Directors for their consideration the desirability of having a fixed time once a day for running a coal train with passengers, such arrangement to apply to one train only.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

No. 3.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir,

Newcastle Wallsend Coal Company, Sydney, 20 December, 1872.

I have the honor to acknowledge the receipt of your letter of the 10th instant, requesting me to submit to the Directors of this Company the desirability of having a fixed time for running a coal train with passengers, such arrangements to apply to one train only.

Your letter reached me only at 4:45 p.m. on the 12th, too late for my Board on that day. I laid it before my Directors yesterday, and am desired to say that much delay and inconvenience is caused by the stoppage at Wallsend and Newcastle to take up and set down passengers, which at busy times is a serious loss to the Company, and the Directors would suggest in lieu of the proposal made you, that a train for goods and passengers only should be run twice a day from Newcastle to Wallsend, at such fixed times as may be found most convenient.

My Directors think this plan would be much safer for passengers, and would suggest a trial for a few months.

I have, &c.,
F. W. BINNEY,
Secretary.

Traffic Manager, North, for report.—J.R., B.C., 2/1/73. The Traffic Manager has already reported upon this. See his recommendation of 27/12/72 herewith.—C.A.G., 2/1/73.

The present system of conveying passengers to and from Wallsend by the coal trains is very inconvenient as no trains run when the pits are not working, and when they are working no regular time is fixed for the running of the trains.

I would suggest that a booked train, consisting of passengers and goods (not coal), leave Newcastle at 8:15 a.m. and 4:30 p.m., and Wallsend at 9:0 a.m. and 5:15 p.m.; this would do away with the practice of conveying passengers with coal trains. Should this be approved of we ought to get a larger proportion of the earnings than we now have as the train-mileage will be increased nearly 40 miles a day, and it will be necessary to get the Wallsend Company to agree to this alteration as it will in a small degree interfere with the running of their coal trains.—J. HIGGS, 27/12/72.

The Directors of the Wallsend Company might be consulted in the first instance.—J.R., 2/1/73.

See their letter, already in.—C.A.G., 3/1/73.

Ask Mr. Higgs to state what additional proportion of the earnings should be received by the Commissioner.—J.R., 6/1/73.

I think the Commissioner should get 10 per cent. in addition to what we have at present.—J. HIGGS, 7/1/73.

No. 4.

Running Trains to Wallsend.

At present the traffic comes by the coal trains, the Wallsend Company getting 30 per cent. of gross proceeds.

It is proposed to run regular trains and Mr. Higgs thinks that the proportion to Wallsend Company should be reduced to 20 per cent.

The Company must be written to on subject if approved.—C.A.G., 10/1/73. Approved.—J.S., 11/1/73.

Upon considering this matter I do not think we should pay the Company any portion of our proceeds; we should estimate what we cost the Company per train mile run over their line and pay them accordingly. As a matter of justice, as no doubt the Wallsend Company will point out, we should pay them more than 30 per cent. instead of less; if 30 per cent. was the right amount before as now we will be running regular trains over their lines, instead of having a carriage attached to a coal train, and consequently the wear and tear to their line will be greater. I find by Traffic Auditor's return that we have paid the Wallsend Company £565 8s. 4d. for running over their line in 1872. This is an excessive amount. The Co-operative Company pay the Wallsend Company £200 a year for running their coal trains over their line, and I am quite certain that the wear and tear caused by the coal trains passing over the line must be ten times greater than that caused by a passenger carriage attached to a coal train.

If the two trains are run as proposed the mileage will be 5,000 miles per annum; we should not pay more per mile than the cost of maintaining our lines. Mr. Whitton might be asked to say what this amount is; we should in addition pay the salary of the porter in charge at Wallsend.—C.A.G., *pro* Commissioner, 10/3/73. Mr. Whitton.—J.S., 10/3/73.

The cost of maintenance of permanent way for the Great Northern Railway for the year 1872 was 9d. per mile run.—J.W. *pro* W.H.Q., 11/3/73. Commissioner.

Mr. Whitton to say what he considers a fair remuneration to the Wallsend Company would be for running two trains over their line daily (Sundays excepted), and a Saturday night train extra, at per train mile run.—17/3/73.

As the train is run to a great extent for the accommodation of the men employed by the Wallsend Company and as the Commissioner provides the whole of the rolling stock and also the men for working the traffic, I think the Company is only entitled to receive from the Commissioner the cost of the maintenance of the permanent way on its own line, which, assuming the cost to be the same as on the Great Northern Railway, would be 9d. per train mile.

I do not think the Commissioner should allow the Company any per centage of the receipts.—J.W., 27 March, 1873. Commissioner.

Shall the Wallsend Company be informed, in reply to their letter of the 20th December, that the Commissioner is disposed to comply with their recommendation to run two separate trains each way daily, and that it is proposed to abandon the present system of allowing them a per centage of the proceeds, and to pay them a mileage rate for running over their lines; that this mileage rate has been fixed at 9d. per train mile on the report of the Engineer-in-Chief, and that the Commissioner will pay in addition the salary of the porter in charge at Wallsend.—C.A.G., 27/3/73.

To come into operation from the 1st May next. Approved.—J.S., 29/3/73. Secretary, Wallsend Coal Company.—5/4/73.

No. 5.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 5 April, 1873.

In reference to your letter of the 20th December last, stating, by the direction of your Board, that much delay and inconvenience are caused by the stoppage of the coal trains at Wallsend and Newcastle, to take up and set down passengers, entailing at busy times a serious loss to the Company, and suggesting, in lieu of another proposal made by me, that the Government instead of having a passenger carriage attached to the coal trains should run an independent train to and from Newcastle and Wallsend twice a day at such fixed times as may be most convenient,—I have the honor to inform you that this matter has had my close consideration, not only with regard to the advantage which your Company and the travelling public would reap by the adoption of the course suggested, but also with reference to the largely increased expenses which would be incurred thereby, and the consequent necessity of amending the terms upon which the use of your line is at present obtained.

It is considered that under any circumstances those terms must be altered, and other arrangements made more in accordance with the practice which obtains elsewhere when one Company runs over the line of another Company, *viz.*, a fixed price per train mile run and not a proportion of the proceeds as is the case with us at present.

The Engineer-in-Chief has at my request estimated the amount that it would be proper to pay your Company for running the following trains over their line, and informs me that 9d. per train mile run will amply repay your Company for the wear and tear our trains will cause, and give in addition good interest, in proportion, upon the capital invested.

For the present it is proposed to run the following trains:—

Leave Newcastle ...	8:15 a.m., and 4:30 p.m.
„ Wallsend ...	9:0 „ 5:15 „

and the usual Saturday night train to and from Wallsend.

Your Company will be relieved under these terms of the payment of the salary of the Station-master at Wallsend, that being an expense which the Government propose to bear.

I have to request that this matter may receive the early consideration of your Board.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 6.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 10 April, 1873.

I have the honor to acknowledge the receipt of your letter of the 5th instant, in reference to the suggestion made in my letter of the 20th December last, as to separate trains for passengers being run on the Wallsend line.

Also your proposal to substitute a mileage rate in lieu of the present arrangement of a per-centage on the receipts from passengers and goods.

I laid your letter before my Board to-day, and in reply thereto I am desired to say that under the terms proposed the loss of receipts to the Company, after allowing for the payment of the Station-master's salary by the Government, would be very considerable, and further the Directors do not see the comparison with what is customary elsewhere is fair, as the receipts of which this Company gets a per-centage are from persons in the employ of the Company.

I am also desired to say that the Board will be glad to consider any proposal that will not place the Company in a worse position than at present, and give them a fair proportion of the benefit which may be expected from the better accommodation for passengers.

I have, &c.,
F. W. BINNEY.

As the Company decline to accept these reasonable terms I think it will be better to stop running the train from 1st proximo.—J.R., 2/5/73. See letter to J. W. Binney, Esq., 5/5/73. Notice given that from the 31st instant the present terms will cease.

No. 7.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 5 May, 1873.

In reference to your letter of the 10th ultimo, on the subject of the terms proposed by me for the future running of trains over the line of your Company, and stating that your Directors will be prepared to consider any proposal that will not place the Company as regards revenue in a worse position than they are in at present,—I have the honor to inform you that the present terms upon which the trains are run between Newcastle and Wallsend are most unfavourable to the Government and cannot any longer be continued; the principle upon which your Company is remunerated for the service rendered is altogether wrong, and the amount of such remuneration is excessive.

The proper mode of apportioning the remuneration to the service is by a mileage rate, and the proposal made by me of 9d. a mile is an exceedingly liberal one.

I have to request that you will again lay the matter before your Board, and favor me with their decision as early as possible, as upon it will probably depend the cessation or otherwise of the running of trains between Newcastle and Wallsend.

You will have the goodness to consider this a notice that after the 31st instant the present arrangements for running passenger trains over your Company's line will cease and determine. I trust that your Directors may on re-consideration, consent to the terms I have proposed for a continuance of the traffic from and after that date.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

No. 8.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 8 May, 1873.

I beg to acknowledge the receipt of your letter of the 5th instant having further reference to the future running of trains over this Company's line which was duly laid before the Board.

I am instructed to inform you that the subject could not be decided to day in consequence of there not being a full Board.

I have, &c.,
F. W. BINNEY,
Secretary.

No. 9.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 19 May, 1873.

In further reference to your letter of the 5th instant, as to the future running of passenger and goods trains over this Company's line, and the intimation that the present terms upon which the trains are run are most unfavourable to the Government and cannot longer be continued, &c., &c., and stating that the proper mode of remuneration is a mileage rate, and asking me to again place the matter before my Board, I beg to inform you that since my letter to you of the 8th instant, I have again brought the matter before my Board, and am instructed to say that the Directors have given the subject their very careful consideration, but they cannot see that the mileage rate proposed would give the Company a fair share of the profit arising from the passenger and goods traffic on the Company's line, and they must therefore respectfully decline the proposal made by you.

I have, &c.,
F. W. BINNEY,
Secretary.
Department

Department of Public Works, Railway Branch, Sydney.

I HAVE seen the Crown Solicitor in this matter, and he is of opinion that we possess no power to run over the Wallsend Company's line, except by agreement; he suggests that the papers should be forwarded to him to obtain the Solicitor General's opinion in the matter; also, as regards the propriety of a Bill being introduced, taking powers to run over branch lines at rates to be decided by arbitration if no agreement can otherwise be made.

Pending this reference, and as we have given the Wallsend Company notice that the present agreement will terminate at the end of this month, it is suggested that they should be asked to say on what terms they will allow the trains proposed to be run over their line, bearing in mind that the scale of remuneration must be based upon a mileage rate.

C.A.G., 22/5/73.

Approved. Ask the Company what amount of mileage rate they propose, and forward papers to Crown Solicitor as suggested.—J.S., 22/5/73. The Secretary of the Wallsend Coal Company.—23/5/73. Now forwarded to Crown Solicitor.—C.A.G., B.C., 23/5/73.

No. 10.

The Crown Solicitor to Commissioner.

Sir,

Crown Solicitor's Office, Sydney, 31 May, 1873.

I have the honor to return herewith the papers relating to the Newcastle Wallsend Coal Company's Line, and to the right of the Commissioner for Railways to run over it; and to state that I have laid them before Mr. Solicitor General Innes, who has been pleased to write an opinion in the matter, of which the following is a copy:—

"I concur in the view which appears to have been taken of this matter by the Crown Solicitor, viz., that the Government possesses no power to run over the Wallsend Company's line, except with the concurrence of and upon terms agreed upon by the Company. With regard to the open question, viz., the propriety of introducing a Bill, asking for powers to run over branch lines, at rates to be fixed by arbitration, in the absence of mutual agreement, that is a matter to be decided upon by the Minister and the Cabinet."

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

No. 11.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir,

Department of Public Works, Railway Branch, Sydney, 23 May, 1873.

In reference to your letter of the 19th instant, intimating the refusal of your Company to accede to the proposal made by me for running trains over their line, as the rate proposed would not give them a fair share of the profit of the passenger and goods traffic arising therefrom, I have the honor to inform you that it cannot be admitted that the Company is entitled to share either in the profit or loss arising from this traffic. The Government desire to make use of the Company's line for running certain trains over it, and are prepared to remunerate the Company for the service thus obtained. As your Directors have declined the proposal made by me, I have the honor to request that you will ascertain and inform me what rate per train-mile run they are prepared to accept.

I have to request the favour of an early reply as the arrangement under which this traffic is at present conducted will cease on the 31st instant.

I have, &c.,

JOHN RAE,
Commissioner for Railways.

No. 12.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir,

Newcastle Wallsend Coal Company, Sydney, 29 May, 1873.

I have to acknowledge receipt of your letter of the 23rd inst., referring to my letter of the 19th inst., informing you that after careful consideration the Directors of this Company felt themselves compelled respectfully to decline your proposal for the future running of trains over this Company's line, and also stating in your letter that it cannot be admitted that the Company is entitled to share in either the profit or loss arising from this traffic; that the Government desire to make use of this Company's line for running certain trains over it, and are prepared to remunerate the Company for such service, and asking me to ascertain what rate per train mile run the Directors are prepared to accept.

I am desired to state, in reply, that the Board are wishful to do what they can to meet the views of the Government in this matter; but they wish to remind you that this is the only private line over which the Government convey passengers and goods, the other coal companies having, as I am informed, declined to allow passengers to be conveyed over their lines; and also to state, that the receipts from this traffic have not been sufficient to more than compensate the Company for the hindrance to their coal trade caused thereby.

I am, however, desired to say, that in order the experiment may have a fair trial, and that the Government and the Company may be able to judge by results, my Directors will be willing to accept a mileage rate of one shilling (1s.) per train mile run until the end of this year, leaving it at the option of the Government or the Company to terminate the arrangement by giving a month's notice before the 31st December, it being also understood that the Government defray the wages of the station-master, as proposed in your letter of the 5th April.

I have, &c.,

F. W. BINNEY,
Secretary.

No. 13.

No. 13.

Minute of Secretary for Public Works.

Approved, although it is quite clear that 1s. per train mile is an excessive rate to pay. Make arrangements for bringing in the new system of running trains as early as possible. Take Crown Solicitor's opinion about issuing a time-table to run over Company's line.—J.S., 2/6/73.

No. 14.

Government Railways.—Minute Paper.

It has been arranged with the Wallsend Company that we shall run special trains between Newcastle and Wallsend at the times suggested by you, for which the Company is to be paid 1s. per train mile run, the salary of the station-master being paid by this Department. This arrangement is to come into force at the earliest possible period. In what way do you propose to advertise the trains? If by time-table, send on at once.—C.A.G. Mr. Higgs, B.C., 3/5/73. I don't think it necessary to advertise by time-table; it will answer all purposes by inserting it in the papers and printing a few slips for our own use. The enclosed time-table will suit, I think.—J. HIGGS, 6/6/73. Approved.—J.S., 11/6/73.

No. 15.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 11 June, 1873.

In reference to your letter of the 29th ultimo I have the honor to inform you that although 1s. per train-mile is an excessive rate to pay for running trains over your Company's line, the Secretary for Public Works has approved of the adoption of the new system in the terms stated in your communication.

Enclosed is a time-table, in accordance with which trains to and from Wallsend will run till further notice, to come into operation on Monday, the 16th instant.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

No. 16.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 13 June, 1873.

I have the honor to acknowledge receipt of your letter of the 11th instant, informing me that the Secretary for Public Works has approved of the new system in the terms of my letter of the 29th ult., as to the goods and passenger traffic over this Company's line, and enclosing copy of the time-table proposed to be adopted.

In acknowledging your letter I beg to inform you that a copy of the time-table has been sent to this Company's Colliery Manager, and also to express a hope that the arrangement may prove of advantage in facilitating the coal traffic.

I have, &c.,
F. W. BINNEY,
Secretary.

No. 17.

Secretary, Newcastle Wallsend Coal Company, to Secretary for Public Works.

Sir, Newcastle Wallsend Coal Company, Sydney, 27 March, 1874.

Application having been made to this Company in reference to the erection of a station, &c., at Wallsend, I have been instructed by the Directors to ask you to be good enough to furnish them with a return of the monthly receipts from passenger and goods over this Company's line, from the 15th of June last to the present time.

I have, &c.,
F. W. BINNEY,
Secretary.

No. 18.

No. 18.

RETURN showing the monthly earnings (General Merchandise and Coaching) of the Wallsend Branch, from the 15th June, 1873, to 31st March, 1874:—

1873.		£	s.	d.
15th to 30th June	49	1	2

1874.				
January	155	17	1
February	148	15	9
March	184	6	3
		£1,361	12	7

J. SEALE., 22/5/74.

I notice that Mr. Goodchap looked for a reduction upon the amount brought out by himself, and such would have been the case if it were not for the passenger traffic done by H.-Point, Hamilton, and Waratah with Wallsend.—J. SEALE.

Write letter to Secretary. Add that when the working expenses are deducted and also the amount paid the Company for running over their line, the profit to the Government is a very small one, and that the result proves that the first offer of the Comr., viz., 9d. a mile to the Company, was more equitable than the sum (1s.) which the Company demanded.—C.A.G., 27/5/74.

No. 19.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 27 May, 1874.

In compliance with the request made in your letter of the 27th March last, I have the honor to enclose herein a return of the monthly receipts from passenger and goods over the Wallsend Company's Line from the 15th June last to the 31st March last. I may add, that when the working expenses are deducted and also the amount paid to your Company, the profit to the Government is a very small one, and the result shows that the amount first offered to the Company for running over their line, viz., 9d. per train mile, was more equitable than the sum the Company demanded.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

No. 20.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 8 August, 1874.

I am instructed to write you on the subject of the arrangement under which the Government pays this Company a mileage rate for trains conveying passengers and goods over this Company's railway, and am desired to inform you that after a twelve months' trial the Board are not willing to continue the existing arrangement.

Before, however, giving you the agreed notice of one month for the determining of the arrangement, the Board are willing to consider any proposal which would give the Company a fair proportion of the profit derived from the traffic over their railway.

The

The Directors are informed by their Colliery Manager that since March last (the latest date in the return furnished in your letter of the 27th May last) the receipts for traffic have increased considerably.

The minimum receipts in the return were for October, 1873, £121 3s. 9d.; the maximum in March, 1874, was £184 6s. 3d., the payment to the Company in each case being £23 8s.; from this you will see the Company does not participate in the increased earnings.

The payments by the Company for conveyance of goods amount to more than their receipts for use of the line, the cost of maintenance being borne by the Company.

In drawing the attention of the Board to the subject of these trains, the Colliery Manager states that the loss to the Company of one hour's work by detention of coal trains by the passenger trains as sometimes occur, is greater than the month's receipts from the Government.

I am requested to ask you to give this subject your early attention, and to suggest a return to the proportionate rate formerly in use, which gives to the Company a share of an increasing traffic, and at the same time is highly profitable to the Government.

I have, &c.,

F. W. BINNEY,
Secretary.

Inform:—We decline to return to old method of charging proportionate rates. If 1s. not sufficient the Company may be asked to state what they consider a fair rate per mile.—J.R., 27/8/74.

F. W. Binney informed.—4/9/74.

No. 21.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 4 September, 1874.

I have the honor to inform you that I have given your letter of the 8th ultimo, respecting the arrangements under which the Government run trains over your Company's Railway line, my careful consideration. I may state at once, that under no circumstances will the Government revert to the arrangement previously in force, under which the Company were paid a per centage of the gross proceeds; such a system is wrong in principle, and it would be preferable to cease running these trains rather than consent to its reintroduction. I have shown you in my previous communication, that if the Government had consented to the plan of sharing with the Company the net profits to be derived from this traffic the Company would by no means have realized the amount which they have received under the system of payment at present in force; but as it is represented that the rate of 1s. per train mile does not compensate your Company for the inconvenience which these trains put them to, and as the abolition of the running of these trains would be a serious loss to the miners and others resident at Wallsend, I have to request you to say what rate per train mile will compensate your Company for the use of their line.

I have, &c.,

JOHN RAE,
Commissioner for Railways.

The Company not having replied it is presumed that they are satisfied.—C.A.G., 1/10/74.

No. 22.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 9 October, 1874.

In further reference to the question of payment to this Company for goods and passengers conveyed over the Company's line, I am desired to inform you, in reply to the request that the Company would state what rate per train mile will compensate them for the use of their line—

- 1st. That they are willing to accept the sum of (2/6) two shillings and sixpence per train mile run, as payment for the use of the line for passengers and goods traffic, so long as the time fixed for the running of the trains is not found to interfere with the coal traffic, and subject to readjustment, according to increase of traffic.
- 2nd. I am desired to state that the Company do not admit that, if they had shared in the net profit derived from this traffic, they would have received less than the amount paid by the Government under the present mileage rate.
- 3rd. That the system of payment to the Company of a portion of the receipts to be agreed, would be fairer to both the Government and the Company.

I have, &c.,

F. W. BINNEY,
Secretary.

The Traffic Manager is requested to say what the earnings were on the Wallsend line per month for the 12 months ending 30th June last, *i.e.*, Wallsend line from junction to Wallsend—what number of train miles were run on this portion of line for same period?—C.A.G., B.C., 16/10/74. Urgent. To Mr. Seale for information as to earnings of the branch line.—T. R. NEILD, *pro* Traffic Manager, 17/10/74. To be returned. Information herewith.—J. SEALE, T. Manager, B.C., 22/10/74. Return herewith.—J. HIGGS, 22/10/74.

No. 24.

Minute of Secretary of Railways.

Wallsend Coal Company's Line—Commissioner's Traffic over.

See letter from Secretary of Company proposing that Government should pay Company 2s. 6d. per train-mile instead of 1s. as at present.

The exorbitant nature of the demand made is shown by the following statement:—

For the 12 months ending the 30th June last the train-miles run amounted to 5,592. The cost to the Government was as follows (taking Railway statistics of 1873 as a guide):—

Locomotive power	s. d.	per train-mile.
Repair of carriages and waggons	1 3½	"
Traffic charges	0 3	"
Paid Wallsend Company	1 6	"
	1 0	"
	4 0½	per train-mile.
4s. 0½d. for 5,592 miles, equal	£1,124	4 6
The gross earnings for the same period were	1,783	5 0
Net earnings	659	0 6

If we were to pay the Company 2s. 6d. per train-mile the working expenses would be 5s. 6½d. per mile while the gross revenue would amount to 6s. 4½d. per mile, or a net profit of 10½d. per mile, equal to £238 16s. 6d.; that is to say, the Wallsend Company would receive £699 per annum, and the Government £238 16s. 6d.,—whereas at present the Company receive £279 12s. and the Government £659 0s. 6d.

To give the Company 2s. 6d. per train-mile is therefore out of the question; an offer might be made of 1s. 6d. per train-mile, which would give the Company £419 8s., and the Government £519 4s. 6d. This is more than the Company is equitably entitled to, as I am sure the maintenance of their line for our traffic does not cost more than 9d. per train-mile, and their profit would therefore be 100 per cent., while the profit of the Government will amount to scarcely 25 per cent. on the outlay, thus:

The Company will earn 9d. for every 9d. expended.

The Government will earn 1s. 10½d. for every 4s. 6½d. expended.

C.A.G., 24/10/74.

Inform: Do not see sufficient reason to alter the present charge. Their suggestion appears unreasonable.—J.R., 2/11/74. F. W. Binney informed.—5/11/74.

11

No. 25.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 5 November, 1874.

With reference to your letter of the 9th ultimo, relative to the rate paid by the Government to your Company for running trains over its line of railway,—I have the honor to inform you that the rate named by you, viz., 2s. 6d. per train-mile run, is altogether unreasonable, and the Secretary for Public Works does not see that you have afforded sufficient reason to alter the present charge.

I have, &c.,

CHAS. A. GOODCHAP,

Pro Commissioner for Railways.

No. 26.

Secretary, Newcastle Wallsend Coal Company to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 13 November, 1874.

I have the honor to acknowledge the receipt of your letter of the 5th instant, in reply to mine of the 9th ultimo, on the subject of the rate to be charged by the Company for the use of their line.

In reference to the remark in your letter that the rate of 2s. 6d. per train-mile is altogether unreasonable, and that the Secretary for Public Works does not consider that the Company have afforded sufficient reason for altering the present charge, I am desired by the Board respectfully to say, in reference to the opinion expressed by the Secretary for Public Works, that the present rate does not yield the Company so large a return as they derived from the line when the traffic was little more than half what it is at present, and that the average cost of maintenance over the Great Northern Line, with a much lighter traffic, is considerably more than the mileage rate paid to the Company, who maintain their line at their own cost. I am also instructed to remind you that the Board offered, on behalf of the Company, to accept a proportion, to be agreed on, of the gross receipts from the passenger and goods traffic for the use of their line. That it was after you informed them in reply to such offer that the Government would not assent to the arrangement previously in force, under which the Company were paid a percentage of the gross receipts, that it was wrong in principle, and that it would be preferable to cease running these trains, and asking the Company to name a rate per train-mile that would compensate the Company for the use of their line, that the offer now under discussion was made.

That it was after careful consideration, and availing themselves of all accessible information, that the Board determined on the rate asked, which they consider such as would give both to the Government and the Company a fair share of the profit derived from the traffic over the Company's line.

I am also desired to point out that the traffic for passengers and merchandise over the Great Northern Railway is increased materially by its connection with the Wallsend Line, and that as the rate gives the Government a portion of the profit over the Wallsend Line, the Company might fairly claim to participate in the profit realized on the Great Northern Line from the traffic thrown on it from their railway as would be the case in England on lines similarly situated.

I am also instructed to say that the Board are still of opinion that the rate asked is reasonable, and that after the expiration of this year they cannot take less than 2s. 6d. per train-mile.

Reverting to the paragraph in your letter of the 4th September last, as to ceasing to run these trains, I am instructed to say that whilst the Company is willing to allow these trains to be continued so long as they receive a fair proportion of the profit derived therefrom they are not anxious for their continuance, except so far as they are a convenience to the residents of Wallsend, as indirectly they entail considerable loss on the Company.

In conclusion the Board wish me to say they consider the most equitable plan for the working of this traffic is a division at a rate to be agreed on, and they trust on reconsideration you will be willing to agree to this method of payment for the use of the line.

I have, &c.,

F. W. BINNEY,

Secretary.

No. 27.

Minute of Secretary for Public Works.

If the traffic to Wallsend is to continue it will be necessary to erect a goods shed and passenger station at that place. The Government will be prepared to erect suitable buildings and to put in the requisite sidings in connection therewith, if the Wallsend Company will grant sufficient land for the purpose, in consideration of which, and on condition that an agreement is entered into to observe the terms for a period of at least five years, I will consent to increase the rate per train-mile from 1s. to 1s. 6d., as compensation to the Company for running over their line.—J.S., 23/11/74. Secretary, Wallsend Company, informed.—8/12/74.

No. 28.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 8 December, 1874.

Referring to your letter of the 13th ultimo, on the subject of rate to be paid to your Company for running the Government trains over their line, I have the honor, by the direction of the Secretary for Public Works, to state that if the traffic to Wallsend is to be continued it will be necessary to erect a goods shed and passenger station at that place. The Government will be prepared to erect suitable buildings and to put in sidings in connection therewith if the Wallsend Company will grant sufficient land for the purpose, in consideration of which, and on condition that an agreement is entered into to observe the terms for a period of at least five years, the Secretary for Public Works will consent to increase the rate per train-mile from 1s to 1s. 6d., as compensation to the Company for running over their line. I have to request the favour of an early reply, as, if this traffic is to continue, the accommodation which is so loudly called for by the miners and others of Wallsend must be provided without delay.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 29.

No. 29.

Secretary, Newcastle Wallsend Coal Company to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 11 December, 1874.

Your letter of the 8th inst. in reply to mine of the 13th ult., on the subject of the mileage rate to be paid to the Company, was laid before the Board yesterday.

In reply thereto I am desired to inform you that the Company will erect the necessary building for a passenger station, (a goods shed having been erected by them some years ago), on the Government agreeing to pay the Company the mileage rate of 2s. 6d., as asked in my letter of the 13th ult., such rate to be subject to readjustment, and this offer to be without prejudice.

I am desired to add that the Board still adhere to the opinion that payment by a rateable proportion of the receipts is the fairest both to the Government and the Company, and that in the event of the above offer not being accepted by the Secretary for Public Works the Company is quite willing to submit the question to arbitration.

I have, &c.,

F. W. BINNEY,
Secretary.

Decline the proposition to pay 2s. 6d. a mile, and leave the Company to take such further steps as they may desire.—J.R., 15/12/74. Mr. Binney so informed.—21/12/74.

No. 30.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 21 December, 1874.

In acknowledging the receipt of your letter of the 11th inst. on the subject of the mileage rate to be paid by the Government to your Company for running over their line, I have the honor, by the direction of the Secretary for Public Works, to decline the proposition that the Government should pay 2s. 6d. per mile.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 31.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 31 December, 1874.

I beg to acknowledge your letter of the 21st instant, in which you inform me that the Secretary for Public Works declines the proposition that the Government should pay this Company a mileage rate of 2s. 6d. for running over their line.

I am instructed, in reply thereto, to remind you that you have not referred to the offer made by the Company to erect the necessary station buildings, nor the offer (in the event of the Government not agreeing to pay the mileage rate asked) to refer the matter to arbitration.

I am desired again to state that the Company is prepared to erect the necessary station accommodation, and to leave the amount to be paid to the Company for the use of their line to arbitration.

I have, &c.,

F. W. BINNEY,

Secretary.

No more than 1s. 6d. per mile can be offered on condition of land being conveyed for station and goods shed; 5 per cent. would also be allowed on the cost of the buildings if erected by the Company.—J.R., 8/1/75. The Secretary of Wallsend Coal Company so informed.—8/1/75.

No. 32.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 8 January, 1875.

In acknowledging the receipt of your letter of the 31st ultimo, I have the honor to inform you, that no more than 1s. 6d. per mile can be paid by the Government for running their trains over the Wallsend Line, and this upon condition that sufficient land on which to erect a passenger station and goods shed is conveyed to the Commissioner free of charge. The Secretary for Public Works desires me to add that if your Company would prefer to erect these buildings themselves the Government will in addition to the mileage rate of 1s. 6d. per mile pay 5 per cent. per annum upon the cost of the structures alluded to.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 33.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 14 January, 1875.

In acknowledging the receipt of your letter of the 8th instant, in reply to mine of the 31st December last, I am desired to express the regret of the Board at your decision.

In further reference thereto, I am instructed to say that the Board withdraw all offers made as to the charge for the use of the Wallsend line for passengers and goods traffic.

I

13

I am also desired to inform you, that the Company will erect the necessary station accommodation, and that they claim 25 per cent. of the receipts from passenger and goods traffic between Newcastle and Wallsend for the use of their line, or they will accept such proportion of the receipts as may be awarded them on arbitration.

In the event of your not accepting either of the above offers I am desired to say that the Board feel they will have no alternative but to give notice to withdraw the traffic.

As the matter is very urgent I have to ask the favor of an early reply.

I have, &c.,

F. W. BINNEY,

Secretary.

Inform that we decline to pay 25 per cent., or refer the matter to arbitration.—J.R., 19/1/75.
The Secretary informed.—27/1/75.

No. 34.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir,

Department of Public Works, Railway Branch, Sydney, 27 January, 1875.

In reference to your letter of the 14th instant, declining to accept the proposition made by the Government for running their trains over the Wallsend Company's line and claiming on behalf of the Company as compensation for such running 25 per cent. of the receipts from passengers and goods between Newcastle and Wallsend, intimating at the same time that in the event of this not being acceded to, or the matter referred to arbitration, your Board would give notice to withdraw the traffic, I have the honor, by the direction of the Secretary for Public Works, to state that the Government will not consent to pay 25 per cent. of the revenue as proposed, nor will they consent to refer the question to arbitration as it is not one which can fairly be settled by such a reference.

I have to observe that in offering 1s. 6d. per train-mile the Government have doubled their first offer of 9d. per mile, not from any conviction that the Company are equitably entitled to so large an amount of compensation for the accommodation they afford, but from a strong desire to keep open a traffic, the closing of which would be so great a deprivation to the inhabitants of Wallsend. Your Board, however, are so unreasonable in their demands that there appears to be no course open but to accept the alternative with which they threaten to terminate the matter.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 35.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir,

Newcastle Wallsend Coal Company, Sydney, 11 February, 1875.

Your letter of the 27th January, in reply to mine of the 14th ultimo, was considered by the Board to-day.

I am desired by the Board to inform you that as you decline to allow the Company either the 25 per cent. of the receipts from passengers and goods traffic asked, or such amount as might be allowed them under arbitration, the Directors had decided to give you notice for the discontinuance of the passengers and goods traffic over the Company's railway; as however a change has taken place in the head of your department since your letter was written, they are willing that the Government should have the opportunity of further consideration.

In order that the matter may be fully considered, I have the honor to request that you will arrange with the Honorable the Secretary for Public Works to receive a deputation from the Board on the subject, and as the matter is very important I have to ask that an early day may be named.

I have, &c.,

F. W. BINNEY,

Secretary.

Appoint Thursday next, the 25th instant, at 12 a.m.—J.R., 17/2/75. Mr. Binney infd.—18/2/75.

No. 36.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir,

Department of Public Works, Railway Branch, Sydney, 18 February, 1875.

In reply to your letter of the 11th instant, I have the honor to inform you, that Thursday next, the 25th instant, at 12 o'clock a.m., will be a convenient time to receive a deputation from your Company's Board, which proposes to wait upon the Honorable the Minister for Public Works with reference to the charge to be allowed for the carriage of passengers and goods over the Newcastle Wallsend Coal Company's lines.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 37.

Report of Deputation.

Extract from "Sydney Morning Herald," 26 February, 1875.

Passenger and Goods Traffic between Newcastle and Wallsend.

YESTERDAY morning a deputation, consisting of Dr. Garran, Mr. A. A. Smith, Mr. A. Lamb (Directors of the Newcastle and Wallsend Coal Mining Co.), and Mr. F. W. Binney, the Secretary to the Company, waited upon the Minister for Works (the Hon. John Lackey), to submit a claim on behalf of the Company they represented to a fair share in the profits accruing from the passenger and goods traffic on the line of railway constructed by the Company between Wallsend and the Great Northern Railway. The claim was urged by the deputation upon the grounds disclosed in the following statement:—About the year 1866, in order to accommodate the people working at the Wallsend mines, it was arranged that a carriage should be added to the coal train, and that the Company, in consideration of the convenience which

which would be occasioned by this arrangement, should receive 25 per cent. of the fares. In the latter part of the year 1869, though the traffic was still carried by means of the coal trains, it had increased to so large an extent that it was found necessary to appoint an officer at Wallsend to take charge of it. The Company paid the additional expense, and in consideration of this their share of the receipts was increased from 25 to 30 per cent. Subsequently the Company objected to the traffic being carried on in this way, on the ground that it seriously impeded the coal traffic, and they suggested that it would be better for the Government to run independent trains for the transmission of goods and passengers. It was ultimately decided that independent trains should be run and the Company were offered 9d. per train-mile, the Government agreeing to pay the salary of the officer in charge and all other expenses. The Company objected to relinquish any portion of the remuneration they had been receiving, and held out for a time for better terms. It was at length agreed, the Company suggesting the rate, that 1s. per train-mile should be paid to them, and this arrangement has continued up to the present time. The Company, however, feeling that they are not receiving sufficient remuneration for the use of their line, and for the facilities which the use of their line affords the Government traffic, asked that the original rate of remuneration should be reverted to, or that the matter should be submitted to arbitration. Mr. Lackey, in reply, said that after the rate of 1s. per train-mile had been agreed to, application was made to increase the rate to 2s. 6d. per mile, and he had been informed by the officers of the department that that was altogether above what the Government would give. The gross return to the Government was 6s. 4½d. per train-mile, and the working expenses were 3s. 0¼d. per mile. The difference between these two rates, less the Company's proposal of 2s. 6d. per mile, would leave the Government a net profit of 10¼d. per mile, while the Company would receive 2s. 6d. per mile, less the cost of repairing the line for the Government traffic, a cost which would be considerably overestimated if it were put down at 8d. per train-mile. In other words, or in other figures, the Company by expending £106 per annum in keeping their line in order for the proportion of Government traffic over it, would get a net profit of £533, while the Government, by expending £1,380 in working expenses, would receive a net profit of £238. This proposal was of course declined. He found that the Company now desired that the old arrangement, by which they received 25 per cent., should be reverted to, or that the matter should be set at rest by being referred to arbitration. Though willing to meet the wishes of the deputation, it appeared to him, after carefully looking into the matter, that it was very undesirable for the Government to participate in either of the propositions. In one case they would become joint carriers with the Wallsend Coal Company, and in the other they would be handing over an important question for decision by arbitration, which would be a precedent of an inconvenient character in future. Under these circumstances, however willing he might be to fall in with the wishes of the deputation, he did not see how he could do so. As far as he was advised, the amount received by the Company was an equitable proportion to that received by the Government. In answer to a question put by a member of the deputation, Mr. Lackey said he would be happy to cause any information to be supplied to them which would show the exact position in which the Government and the Company stood with regard to each other. The deputation then thanked the Minister, and withdrew.

No. 38.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir,

Newcastle Wallsend Coal Company, Sydney, 26 February, 1875.

Referring to the subject of the interview a deputation of the Board of this Company had with you yesterday, and your promise that the Company should have information as to the amount received for passengers and goods traffic between Newcastle and Wallsend,—I have now the honor respectfully to request that you will be good enough to direct the following information to be furnished to this Company:—

- 1st. The amount received for conveyance of passengers between Newcastle and Wallsend for the year 1874.
- 2nd. The amount received for conveyance of passengers between Wallsend and Newcastle and intermediate stations (distinguishing them) for the year 1874.
- 3rd. The amount received for carriage of goods between Newcastle and Wallsend for the year 1874.
- 4th. The amount received for carriage of goods between Wallsend and Newcastle and intermediate stations (distinguishing them) for the year 1874.

I have, &c.,

F. W. BINNEY, Secretary.

By report in *Herald* it appears that the Minister promised the deputation that they should be supplied with any information they required which would show the exact position in which the Government and the Company stood with regard to each other. The Company now ask for particulars of traffic between Newcastle and Wallsend for 1874; they must mean, I think, all Government traffic over the Wallsend line, for traffic to Wallsend comes from other stations besides Newcastle and intermediate stations; some for instance comes from Maitland; they had better, I think, be supplied (in order that they may have, in terms of the Minister's promise, particulars of the exact position in which the Government and the Company stand), a return of all the Government traffic over the Wallsend line, from whatever station it comes from or goes to.—C.A.G., 1/3/75. Approved.—J.R., 11/3/75. Write memo. to Mr. Higgs asking him to furnish a return of traffic over the Wallsend line, separating passenger and goods, and giving proportion which Wallsend line is entitled to, as distinguished from Government line.—C.A.G., 12/3/75. Memo. to Higgs, 12/3/75.

To Traffic Manager, Newcastle,—Please furnish a return shewing the traffic over the Wallsend line for 1874, separating passengers and goods, and giving proportion which Wallsend line is entitled to, distinguished from the Government lines,—C.A.G., B.C., 12/3/76. This is urgently required. Referred to Mr. Seale for the information.—*Pro* T. Manager, J.R.N., 15/3/75. Herewith.—J. SEALE, 19/3/75. To the Secretary,—*Pro* T. Manager, J. R. NELL, 19/3/75.

GREAT

No. 39.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 8 April, 1875.

In compliance with the request made in your letter of the 26th February last, I am requested by Mr. Secretary Lackey to afford you the following information on the subject of the traffic over the Wallsend lines, applied for on behalf of your Company:—

I have, &c.,
JOHN RAE,
Commissioner for Railways.

No. 40.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 16 April, 1875.

I am instructed by the Board to write to you on the subject of the information given by the Commissioner for Railways in his letter of the 8th inst., in reference to the request made to you in my letter of the 26th February last, for information as to the receipts for traffic between Newcastle and Wallsend, which you were good enough to promise the Directors at their interview with you should be afforded them.

What was asked at such interview, and in my letter of the 26th February, was information as to the receipts for passenger and goods between Newcastle and Wallsend, and Wallsend and Newcastle and intermediate stations, so that the Company and the Government might have sufficient data upon which to arrange fair terms for the use of this Company's railway.

The statement sent is made out as *on account of*, without any information as to how such amounts are arrived at, and the Board are forced to the conclusion that the account, as prepared, does not afford a fair return, for the reason that the summary gives as the return from passenger and goods for the year 1874—

Total coaching	£1,161	8	10
Total goods	756	12	6
	<hr/>		
	£1,918 1 4		

When,

When, for the 12 months ending 31st May, 1873 (the Company then being paid 30 per cent. of the receipts) the amount received by the Company was £591 2s. 7d., showing that the traffic then amounted to £1,970 8s. 7d., such receipts being before regular passenger trains were established, and the Directors are advised by their Colliery Manager that since that time the receipts from passengers and goods have at least doubled.

I am therefore directed respectfully to ask that you will cause the Company to be furnished with the information, as asked in my letter of the 26th February last.

I am also desired to request that you will give instructions that the information may be supplied promptly, as considerable time has already elapsed since the interview with you, and the Board are desirous of having the matter settled.

I have, &c.,
F. W. BINNEY,
Secretary.

No. 41.

Minute of Secretary of Railways.

I THINK it would be difficult to conceive anything more unreasonable than that for which this Company is contending. They wish to base their claim to compensation, not upon the revenue derived from the traffic over their line alone but also upon the traffic over the Government line; either they are ignorant of the principles which always rule in such cases or they discredit our intelligence in the matter.

It would be just as sensible if we were to credit the Morpeth Branch or the Richmond Branch with all the revenue derived from the traffic running over these branches—we send 100 tons of goods from Murrurundi to Morpeth. The main line is 102 miles and the branch 4 miles. If we were to adopt the Wallsend Company's policy we should credit the Morpeth Branch with the whole of the revenue derived from the carriage of this 100 tons. Acting however on the principles of common sense and justice, we credit the main line with $\frac{100}{106}$ of the revenue, and the branch with $\frac{6}{106}$ which is all the latter is entitled to. In the same way we have taken the traffic over the Wallsend line, and have credited the line with its proper proportion of the revenue. It would be something very novel indeed in the way of apportionments of profits if foreign lines were credited with the revenue derived from running over home lines.

C.A.G., 21/4/75.

Inform Secretary of the general reasons for refusing request, or rather say that they are mistaken in the views of this case.—J.R., 27/4/75. Mr. Binney informed, 29/4/75.

No. 42.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir,

Department of Public Works, Railway Branch, Sydney, 29 April, 1875.

In acknowledging the receipt of your letter of the 16th instant, with reference to the information supplied you in my letter of the 8th instant on the subject of the traffic over the Wallsend line, and stating on behalf of your Company that the information given is not in accordance with the promise made to your Directors at their recent interview with Mr. Secretary Lackey, who you state promised you particulars of the traffic between Newcastle and Wallsend,—I have the honor to inform you that you are in error in this matter as Mr. Secretary Lackey made no such promise but only promised to supply your Company with such information as would show the exact position in which the Government and your Company stood in regard to each other.

This information was given, and as it is considered sufficient to show the relative positions of both parties as regards the traffic over your Company's line, I cannot concede to your request to be furnished with any further information.

I may add that the Wallsend line has been credited with its proportion of the traffic precisely in the same way as the Government credit the Windsor line and the Morpeth line with traffic, which runs partly over those lines and partly over the main lines.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

No. 43.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir,

Newcastle Wallsend Coal Company, Sydney, 6 May, 1875.

I am instructed to acknowledge the receipt of your letter of the 29th ult., in reply to mine of the 16th April, addressed to Mr. Secretary Lackey, in reference to the returns of traffic over the Wallsend Railway, in which you state that I am in error in regard to the information promised by Mr. Lackey to the deputation from this Company.

In reply, I am desired respectfully to state that the recollection of the four members of the deputation is distinctly that the information asked from Mr. Secretary Lackey (the question being put by myself from a written memorandum) was, would he (Mr. Lackey) direct the Company to be furnished with information as to the amount of the traffic, passengers, and goods between Newcastle and Wallsend, both ways, which Mr. Lackey promised should be given. I am also desired to say that the information given in your letter of the 8th April is insufficient, inasmuch as it does not state whether the sums given are gross or net receipts, or whether they are for the whole distance between Wallsend and the stations named, or only for the distance run over the Wallsend line. The statement in your letter of the

29th April, that the Wallsend line has been credited with its proportion of traffic precisely in the same way as the Government credit the Windsor line and the Morpeth line with traffic, which runs partly over those lines and partly over main lines, does not afford the required information, because this Company has not access to the accounts shewing the method in which these calculations are made; and I would further submit that the same basis of calculation could scarcely be fair, seeing that the lines mentioned were constructed and are maintained at the cost of the Government, whilst the Wallsend railway was made at the cost of and is maintained by the Company.

I am, therefore, desired again to request that you will furnish the information asked from Mr. Secretary Lackey in the first instance.

I have, &c.,
F. W. BINNEY,
Secretary.

No. 44.

Minute of Secretary of Railways.

Letter from Wallsend Coal Company of May 6th.—*Re* information supplied them as to traffic.

The Secretary says that four members of the deputation distinctly remember that Mr. Lackey promised to furnish them with information as to the amount of the traffic between Newcastle and Wallsend. It is no doubt the fact, as the Secretary states, that Mr. Lackey was asked if he would give this information, but his reply, as given in the *Herald*, was as follows:—"In answer to a question put by a member of the deputation, Mr. Lackey said he would be happy to cause any information to be supplied to them which would show the exact position in which the Government and the Company stood with regard to each other."

The members of the deputation probably took this to be an affirmative answer; but it is far from being so.

The only objection there is to give the Company the information consists in this: That they will base their claim to remuneration on the total amount received, not only on the Wallsend line but on the Government line. If, however, the Minister is willing that the Company should have the information, the use or the abuse they may make of it is of very little importance, as the mere preference of a claim is no evidence of its justice—it will probably lead, however, to a vexatious correspondence.

It may be that more harm will be done by withholding than by granting a compliance with the request made. The Company think they are entitled to a good deal more than they are receiving; and the sooner a proper understanding is arrived at the sooner shall we be able to get carried out at Wallsend the improvements in the shape of a proper passenger station and goods shed, which the increasing traffic is daily calling for.

C.A.G., 17/5/75.

No. 45.

Minute of The Secretary for Public Works.

As the members of the deputation understood Mr. Lackey to promise to furnish the information asked for, and as no harm can arise from complying with their request, probably it would be the best course to furnish the return they require.—J.R., 17/5/75. Approved.—J.L., 28/5/75. F. W. Binney informed.—2/6/75. The opportunity has been taken to draw the attention of the Company to the Commissioner's proposal to pay them 1/6 per train-mile, provided they will convey a site for a new passenger and goods shed which the residents at Wallsend are agitating for.—C.A.G., 2/6/75.

No. 46.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 2 June, 1875.

In reference to your letter of the 6th instant, stating that four members of the deputation, which waited upon Mr. Secretary Lackey on the subject of the traffic over the Wallsend line, distinctly remember that, in response to a question on the subject, he promised that the Company should be furnished with information as to the amount of the traffic, passengers, and goods between Newcastle and Wallsend,—I have the honor to refer you to a report of what transpired at the interview in question, which appeared in the *Sydney Morning Herald* of the 26th February last. It is admitted that you may have put the question in the words you state; but it would appear that Mr. Lackey, in response, stated "he would be happy to cause any information to be supplied which would show the exact position in which the Company and the Government stood with regard to each other." The members of the deputation probably took this to be an affirmative answer, but it was far from being so. The information which you seek will not show the exact position in which the Government and the Company stand; it will on the contrary, if it be used as a basis for calculating the proportion of traffic which the Company may think they are entitled to, prove to be utterly fallacious for such a purpose, inasmuch as it cannot be allowed that the Company are entitled to a fraction of the revenue derived from the traffic after it comes upon the main line. With this explanation, and as the members of the deputation understood Mr. Lackey to promise to furnish the information asked for, there is now no objection to do so; and I have the honor to enclose herewith a statement of the gross earnings derived from the passenger and goods traffic between Newcastle and Wallsend and intermediate stations.

I take this opportunity of reminding you that an offer of 1/6 per mile has been made your Company, on condition that they convey to the Government sufficient land at Wallsend on which can be erected a proper passenger station and goods shed, with necessary sidings, &c. As the residents of Wallsend are agitating for this necessary accommodation I have to request that you will expedite as much as possible the decision of the Company on the matter.

I have, &c.,
JOHN RAE,
Commissioner for Railways.

J.S., pro T. Auditor, 9/4/75.

No. 47.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir,

Newcastle Wallsend Coal Company, Sydney, 12 June, 1875.

I have to acknowledge the receipt of your letter of the 2nd instant, and in reply thereto am desired to say that the deputation as you suppose took Mr. Lackey's reply to be an affirmative. As the information asked has now been given, the Board do not wish to continue the discussion, but express their regret that the information was not furnished earlier.

The offer made in your letter of the 8th December last of $\frac{1}{6}$ per train-mile, on condition that the Company would convey to the Government sufficient land at Wallsend on which the Government could erect the necessary station accommodation, was in effect replied to in my letter of the 11th December, in which the Company offered to erect the necessary buildings if the Government would pay the Company $\frac{2}{6}$ per train-mile. On the Government declining to accept these terms, the offer to take a mileage rate was withdrawn by my letter of the 14th January last, in which I stated the Company would erect the necessary station accommodation, and claimed 25 per cent. of the gross receipts between Newcastle and Wallsend, both ways, or such proportion as might be awarded on arbitration. I am instructed to renew the offer to take 25 per cent. of the gross receipts, or a mileage rate equivalent thereto. But as you state that it cannot be allowed that the Company are entitled to a fraction of the revenue from the traffic after it comes on the main line, I am desired to state (without discussing the point further than to say that the same principle is adopted in England in the cases of lines similarly situated) the Company will be willing to accept the gross amount received from the passenger and goods traffic in proportion to the distance such traffic is conveyed over the Wallsend and Great Northern Railway respectively, and will allow the Government 50 per cent. of such gross receipts for working the traffic, the Government finding the rolling stock, the Company maintaining their railway as at present.

As the traffic runs some longer some shorter distances over the Great Northern and the Wallsend Railway respectively, the Board considered, in the offer to take 25 per cent. of the gross receipts, they met this without the necessity of going into minute calculations. I am desired to say the Board have very carefully considered the subject, and they cannot in fairness to the Company accept less than they have asked. The Directors desire further to submit that the capital expended by the Company in their works and railway throws a large traffic on the Great Northern line, without any outlay by the Government; whilst in other parts of the Colony the Government is being asked to construct the branch railways for miscellaneous traffic at the cost of the Country, and taking this into account the Board think they should be met in a thoroughly equitable spirit.

The matter has now been under discussion for more than six months; and I am desired, in conclusion, to state that the Directors cannot accept less than now asked, and that immediately on the acceptance of their offer by you they are prepared to go on with the erection of the station buildings.

The arrangement to date from the 1st of January this year.

I have, &c.,
F. W. BINNEY,
Secretary.

No. 48.

Minute of Secretary of Railways.

Traffic on the Wallsend Line.—(See Company's letter of 12th June, 1875).

THE new proposal of the Company is, that they should receive the whole of the gross amount derived from the traffic on the Wallsend line, allowing the Government 50 per cent. for working expenses.

From the answers given to Mr. Stuart's questions asked in the House on the 14th May, it will be seen that the Wallsend traffic earns 6s. $3\frac{1}{2}$ d. per train-mile, and that the working expenses are 4s. $2\frac{1}{2}$ d.; as the Company under the new arrangement propose to forego the 1s. per train-mile, we now allow them the working expenses will be reduced to 3s. $2\frac{1}{2}$ d. It will therefore be seen that the Company would earn 3s. $1\frac{1}{2}$ d.

3s. 1½d. per train-mile less the cost of keeping their line in repair for our traffic (which may be fairly estimated at 9d. per train-mile), giving a net profit of 2s. 4¾d., while the net earnings of the Government would amount to nil; in fact they would lose 1d. per train-mile; in other words the Company are to expend 9d. per train-mile with a net profit of 2s. 4¾d.; the Government are to expend 3s. 2½d. per train-mile, with a loss of 1d. per mile.

The Company it is understood are quite aware of the nature of their proposal, but they consider they should have all the profit derived from the traffic over their line, because the Government will not allow them any portion of the proceeds of the traffic after it comes upon the main line—and in laying claim to this profit they wish to draw a parallel between their position in relation to the Government and the position of two rival English Railway Companies running over each others lines.

It is scarcely necessary to point out how different the circumstances are. In the first place the English Companies have been authorized by Parliament to carry passengers and goods under certain restrictions as regards rates of freight, and the payment to the public revenue of a remuneration for this concession in the shape of taxes on the number of passengers carried; each Company is made a public carrier under the Act, and has the necessary equipment in respect of engines, carriages, station buildings, and staff for properly conducting the traffic; when Company A brings the traffic to the junction of Company B's line, the latter Company is prepared with all conveniences for taking it over, and it is only to prevent inconvenience to the travelling public that by mutual agreement they arrange that the vehicles of one Company shall run over the other Company's line, and that the proportion of profit which each is entitled to shall be decided by the London Clearing House. The Wallsend Company however is not in the same relation with the Government. Here the State instead of legalizing carrying Companies has undertaken the duty of providing the railway system; the Wallsend Company's Act provides only for the carriage of their coal to the main line, and gives them no power to carry passengers; besides which, they possess no engines or carriages, and indeed have nothing provided for carrying on a passenger and goods traffic, except a permanent way for running over which the Government have offered to pay a fair remuneration.

The Company however will not listen to this, but wish to become joint carriers with the Government, and to share in the profits. Their demands on this head moreover appear to be made without any accurate calculations; they demand 25 per cent. of the gross proceeds on the whole traffic between Newcastle and Wallsend, or 50 per cent. of the gross proceeds between the junction and Wallsend. What the latter proposal amounts to has already been shown, and their demand of 25 per cent. *is a little more excessive*, as the following statement will shew.

Let us suppose that overlooking all the disabilities the Government have admitted the Wallsend Company into a co-partnership as regards this traffic, and that as the Company suggests should be the case, the profits are to be divided in the same proportion as they would be between two English Railway Companies. In the first place the working expenses would have to be deducted from the gross profits which as they would be 3s. 9¾d. to every 6s. 3½d. earned, would out of every £100 received leave only £39 8s. to be divided; the train miles run on the Wallsend Branch would be 5,716 miles to 8,084 miles run on the main line, entitling the Wallsend Company to £16 6s. per cent., and the Government £23 2s. per cent.; the demand therefore of the Wallsend Company of 25 per cent. is altogether in excess of that which they would be entitled to, even if they were in a position to carry on the traffic from the Wallsend Junction.

These calculations are only useful to shew how utterly baseless are the claims which the Company have preferred. Under the circumstances of the case it is probable that the Government will not alter the mode of remunerating the Company for the privilege of running over their line, viz., a fixed sum per train-mile. An offer to increase the rate from 1s. to 1s. 6d. has been made, not because the Company are entitled to the higher rate, but from a desire to continue the traffic for the benefit of the residents of Wallsend. The Government have also offered to erect station buildings, but the Company appear to be desirous of erecting these buildings themselves in preference to conveying land for the purpose. The Government have offered 5 per cent. interest per annum upon the outlay of these buildings, but this it is submitted might be increased to 8 per cent.

C.A.G., 22/6/75.

The Commissioner declines to pay by per centage, and adheres to the very liberal offer formerly made of 1s. 6d. per train-mile on the conditions then stated.—J.R., 2/7/75. F. W. Binney informed, 9/7/75.

No. 49.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir,

Department of Public Works, Railway Branch, Sydney, 9 July, 1875.

I have the honor to inform you that your letter of the 12th ultimo, intimating the demand of the Newcastle Wallsend Coal Company either to 25 per cent. of the gross proceeds of the traffic between Newcastle and Wallsend, or to 50 per cent. of the traffic between the Junction and Wallsend, has received my best consideration.

I cannot admit the correctness of the parallel which you wish to draw between the position of your Company in relation to the Government and the position of two English Railway Companies running over each other's lines, as the circumstances are altogether different; but even if this position were admitted your Company would not be entitled to anything like the amount of per centage to which they have laid claim.

In once more declining to pay by per centage, I have to state that I adhere to the very liberal offer formerly made, viz., 1s. 6d. per train-mile, on the conditions then stated.

I have, &c.,

JOHN RAE,
Commissioner for Railways.

No. 50.

No. 50.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir,

Newcastle Wallsend Coal Company, Sydney, 23 July, 1875.

I have the honor to acknowledge the receipt of your letter of the 9th instant, received on the 14th instant, in reply to my letter of the 12th ultimo. I was away at Wallsend last week; your letter was therefore only laid before the Board yesterday.

The parallel of which you say you cannot admit the correctness, as to the position of this Company and the Government, was not drawn (as you will see on reference to my letter) between *rival* English Railways but as between two Companies each contributing traffic to the other, and I fail to see in what respect the circumstances in the case of the Great Northern and Wallsend Railway are altogether different, except that the traffic this Company's line throws on the Great Northern results from the expenditure of capital by the Company; neither can I, after the fullest consideration, see that the Company has asked a larger per centage than they are entitled to. In the course of the correspondence you have been informed that the running of these trains is the cause of frequent delay to the Company's coal trade, and that the Board consented to their running out of consideration for the inhabitants of Wallsend.

I am now desired to inform you that the Board must decline the offer renewed in your letter now under reply, and that it is with considerable regret that they find themselves under the necessity of giving you notice that they cannot allow the passenger and goods traffic to be continued over this Company's railway.

The subject has received the most anxious consideration of the Board, and they feel that in justice to the Company's interests they cannot accept other terms for the use of the railway than those submitted in my letter of the 12th June last.

I am desired to repeat that it is with great regret the Directors feel compelled (after correspondence extending over more than six months has failed to obtain what they consider fair terms) to direct me to give you notice, which I now do, that from the 1st day of September next they decline to permit the running of passenger and goods trains over the Wallsend railway.

I have, &c.,

F. W. BINNEY,

Secretary.

Commissioner should advertise at once in the local journals that in consequence of this notice the trains to Wallsend will not run after the 31st August next.—C.A.G., 23/7/75. Approved.—J.R., 27/7/75. Notices issued.

No. 51.

Telegram from Mr. R. Thatcher to Commissioner.

DEPUTATION from Wallsend want to see Minister about continuation trains. Which day this week most convenient? Reply to Wallsend.

I think the Deputation should wait on the Wallsend Company, as the Government can afford no relief under present circumstances.—J.R., 24/8/75.

The deputation waited on the Minister on the 27th inst. Mr. Lackey informed the gentlemen who called that the Government were unable to do anything in the face of the action of the Wallsend Company, but would be glad to resume the traffic if equitable terms were accepted by the Company.—C.A.G., 31/8/75.

No. 52.

Petition from Inhabitants of Wallsend to The Secretary for Public Works.

Sir,

Wallsend, 16 September, 1875.

We are instructed by the Wallsend railway to direct your attention to the great inconvenience and loss which the residents of Wallsend are sustaining by the stoppage of the passenger and goods traffic on the Wallsend Company's line of railway.

The committee have been in daily expectation of your department making some arrangements for the resumption of the traffic, but as there are no indications of these expectations being realized we again direct your attention to the matter.

We have forwarded a memorial to the Wallsend Company, in which we have requested them to accept such terms as your department has offered until Parliament meets, when we hope the question will be justly and finally settled.

We hope that you will take our case into consideration, and offer the Company such terms as will induce them to comply with the request of the memorial alluded to.

Yours, &c., on behalf of the Committee,

DAVID GARDINER, Chairman.

WILLIAM TURNER, Secretary.

Should be informed that the Government are prepared to resume the running of trains on equitable terms; but that as the notice to stop the traffic came from the Wallsend Company, any proposal for its resumption must emanate from them; the Government are very desirous for the continuance of the traffic in the interests of the residents of Wallsend.—J.R., 7/10/76.

Messrs. Gardiner and Wm. Turner inf., 9/10/75.

No. 53.

Commissioner to Messrs. Gardiner and Turner.

Sirs,

Department of Public Works, Railway Branch, Sydney, 9 October, 1875.

In acknowledging the receipt of your letter dated the 16th ultimo, stating that you have been directed by the Wallsend Railway Committee to represent the great inconvenience and loss which the residents of Wallsend are sustaining by the stoppage of the passenger and goods traffic on the Wallsend Coal Company's line, and expressing a hope that the Government will make such terms with that Company as will induce them to allow the Government engines to resume running on the line,—I have the honor to inform you that the Government are prepared to resume the running of trains on equitable terms, but as the notice to stop the traffic came from the Wallsend Coal Company any proposal for its resumption must emanate from them.

Mr. Secretary Lackey requests me to add that the Government are very desirous for the continuance of the traffic in the interests of the residents of Wallsend, but having also the interests of the general public to protect they cannot consent to the resumption of the traffic except on terms which will be equitable to all concerned.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 54.

Hon. Secretary, N. & W.R.T.R. Committee, to The Secretary for Public Works.

Sir,

Newcastle, 13 October, 1875.

I have the honor, by direction of the Newcastle and Wallsend Railway Traffic Resumption Committee, to inform you, that a deputation from Newcastle and the mining towns intends waiting upon you at an early date to present certain memorials in reference to railway communication between this city and Wallsend.

2. I am further directed to request that you will be good enough to name a day and hour after the 17th instant, upon which it will be most convenient for you to receive this deputation.

3. The deputation would be much pleased if your colleagues, the Honorable the Colonial Secretary and the Honorable the Postmaster General, can arrange to be present at the interview.

I have, &c.,

W. A. BURNAGE,

Hon. Sec., N. & W.R.T.R. Committee.

Say that the Minister would not desire to waste the time of the department by acceding to their request for interview, as the Government are unable to take the initiative in this matter. Informed Mr. W. A. Burnage, 18/10/75.

No. 55.

Commissioner to Hon. Secretary, N. & W.R.T.R. Committee.

Sir,

Department of Public Works, Railway Branch, Sydney, 18 October, 1875.

In acknowledging your letter of the 13th instant, in which you state that you are directed by the Newcastle and Wallsend Railway Traffic Resumption Committee to inform the Honorable the Minister for Public Works that a deputation from Newcastle and the mining towns intend to wait upon him to present a memorial in reference to the railway traffic between Newcastle and Wallsend, I have the honor to inform you that the Honorable the Minister for Public Works has already received a deputation on this subject, and informed them that it is impossible for the Government to take any initiative steps in this matter, and he therefore feels that he will be occupying your time unnecessarily by complying with your application for an interview.

He also requests me to add that the Government are very desirous for the continuance of the traffic in the interests of the residents of Wallsend; but having also the interests of the general public to protect they cannot consent to the resumption of the traffic except on terms which will be equitable to all concerned.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 56.

Hon. Secretary and Chairman, N. & W.R.T.R. Committee, to The Secretary for Public Works.

Sir,

Newcastle, 19 October, 1875.

In reply to a letter dated 18th instant, received from your department (Railway Branch), the committee appointed in connection with the Wallsend Railway question desire to express their regret that, for reasons stated in that letter, you have declined to grant them an interview.

They beg to bring under your notice the fact that a public meeting has been held in Newcastle, convened and presided over by the Mayor, at which resolutions were passed in favor of every effort being used to bring about the resumption of the traffic, and also in favor of the construction of a new line.

They desire to state, that having been appointed for the purpose of carrying out the resolutions passed at that meeting, they have obtained the signatures of 1,312 (thirteen hundred and twelve) residents of the City of Newcastle to the petition praying for the resumption of traffic, and 665 signatures in favor of a new line.

They

They also desire to state that it is their intention to seek for an interview with the Directors of the Wallsend Coal Company (prior to waiting upon you), in the hope that some fresh proposal may emanate from them.

They therefore hope that you will be pleased to reconsider your decision, and by giving them an opportunity of presenting their petitions enable them to faithfully discharge the duty imposed upon them by the citizens of Newcastle.

And they would express their wish that the interview will be granted at as early a date as may be convenient.

We have, &c.,

JOHN J. KITTON,
Chairman, N. & W.R.T.R. Committee.
W. A. BURNAGE,
Hon. Sec., N. & W.R.T.R. Committee.

The writer should perhaps be informed that the Secretary for Public Works in suggesting the inutility of the deputation waiting upon him did so in their interests, and to save them the time and expense of coming to Sydney. As however they now represent that they will come to Sydney to wait upon the Wallsend Coal Company, and will therefore be on the spot, the Secretary for Public Works will afford them the interview they seek.—C.A.G., 21/10/75. Approved, Wednesday next at noon.—J.R., 21/10/75. Mr. Burnage informed.—21/10/75.

No. 57.

Commissioner to Hon. Secretary, N. & W.R.T.R. Committee.

Sir, Department of Public Works, Railway Branch, Sydney, 21 October, 1875.

In reference to your letter of the 19th instant, I have the honor to inform you that the Secretary for Public Works in suggesting the inutility of the deputation respecting the Wallsend Railway traffic waiting upon him did so in their interests only and to save them the time and expense of coming to Sydney, which would be involved if he complied with their request for an interview. As however it now appears that the deputation intend coming to Sydney to wait upon the Directors of the Wallsend Coal Company, the Secretary for Public Works has no further objection to offer, and will be glad to afford the deputation the interview they seek.

I have the honor to add that Wednesday next, the 27th instant, at noon, would be a convenient hour for Mr. Secretary Lackey to receive the deputation.

I have, &c.,

JOHN RAE,
Commissioner for Railways.

No. 58.

Memorial presented by Railway Committee.

Resumption of Traffic upon the Wallsend Coal Company's Private Railway Line.

To the Honorable the Minister for Public Works for the Colony of New South Wales,—

Sir,

The undersigned petitioners, residents of the City of Newcastle, respectfully beg to invite your serious attention to the great loss and inconvenience occasioned to the citizens of Newcastle and the inhabitants of the Municipality of Wallsend and neighbourhood, by the cessation of the passenger and goods traffic by rail between those places, and to request that you will be pleased to reconsider your decision in reference thereto, and for the undermentioned reasons endeavour to cause the speedy resumption of such traffic:—

1. That by the cessation of all traffic upon the private Railway Line of the Wallsend Coal Company the inhabitants of Wallsend and neighbourhood are virtually shut out from communication with the sea-board, as there is no road worthy of the name from their town to Newcastle or the nearest railway station, and in consequence thereof they are great sufferers from the increase of freight upon the carriage of goods and the higher charges for the conveyance of passengers that they have now to endure.
2. That in consequence of the cessation of such traffic the citizens of Newcastle suffer through the loss of trade occasioned thereby.
3. That the Directors of the Wallsend Coal Company have expressed themselves willing to favorably consider any reasonable offer that you may be prepared to make for the settlement of the dispute.
4. That in the humble opinion of your Petitioners any arrangement which you can make with the Directors of the Wallsend Coal Company, for the use by the Government of their private railway line, whereby the net profit per mile shall not be below the average net profit per mile upon the Great Northern Railway, should, in the interest of Newcastle and the mining towns, be adopted. Your Petitioners base this opinion upon the assumption that as this district bears its fair proportion of the burden of taxation it is not just for the Government to expect to realize an exceptionally high profit upon its railway traffic.

Your Petitioners therefore respectfully hope that you will favourably consider the subject of this memorial and remove the grievance under which your Petitioners labour, by the speedy resumption of railway traffic between Newcastle and Wallsend.

And your Petitioners, as in duty bound, will ever pray.

W. A. BURNAGE,
JOHN CHARLES BONARING,
GRANVILLE J. BURNAGE,

And thirteen hundred and nine others.

Memorials presented by Railway League.

To the Honorable the Minister for Works for the Colony of New South Wales,—

Sir,

The undersigned Petitioners, residents of Wallsend, Lambton, Waratah, Jesmond, New Lambton, Hamilton, Newcastle, and surrounding district, beg most respectfully to direct your attention to the great want of a branch line from the Great Northern Railway, passing through and near the places abovenamed to Wallsend.

Your Petitioners would especially call your attention to the remarkable fact, that the Municipality of Wallsend, and the residents of the district, numbering many thousands of souls, is destitute of any railway accommodation, and that in consequence, the whole carrying trade of the Municipality of Wallsend and the mining district, both in passengers and goods, has to be done by horses and vehicles.

That the nearest railway station to Wallsend is 5 miles distant, and that there is no properly constructed highway for horses and vehicles to travel on.

That, owing to the want of such a highway the residents of Wallsend and district are obliged to pay a much higher freightage on goods than is just, and also a much higher charge for the conveyance of passengers than the residents of other towns situated on or near a line of railway.

Your Petitioners, believing that the welfare of the State, as a whole, and the constituent elements thereof are objects of care to your Government, urge the following reasons why their petition should be granted:—

- 1st. The receipts of the late passenger and goods traffic on the Wallsend Company's line of railway, viz., £4,329 8s. 10d. per annum, with an annually increasing traffic, would pay a good interest on the capital invested.
- 2nd. That the traffic accruing to this line by being so constructed as to take in Lambton, New Lambton, and other places along its route, would be such as to yield a handsome revenue to the Government.
- 3rd. The mining townships lay considerably to the south of the Great Northern Railway, and as the principal coal deposits of the district lay there the population will continue to increase in the same direction.
- 4th. That the proposed line of railway could ultimately be extended in the direction of Lake Macquarie, as the opening up of the great mineral sources of that district demanded.
- 5th. That the Municipality of Lambton and the adjoining township of New Lambton are both considerably removed from the Great Northern Railway, and do not in consequence reap the full advantages of railway transit.

Your Petitioners, therefore, respectfully hope that the foregoing will be favourably and duly considered by your Government, and that at an early date you will commence the construction of the said line of railway.

And your Petitioners will ever pray, &c.

We remain, sir, yours respectfully,

[1740 signatures have been obtained to the above memorial by the Lambton Committee, including the signatures of three Municipal Councils.]

Lambton, 25 October, 1875.

To the Honorable the Minister for Works for the Colony of New South Wales,—

Sir,

In accordance with instructions from the committee I desire to place before you the following statement:—

This committee, in conjunction with committees organised for a similar purpose in Newcastle and Wallsend, obtained signatures to a memorial to you for the construction of a State railway from Newcastle to Wallsend, with the intention of placing the memorial before you by a deputation from this district. The Mayor of Lambton, on behalf of the committee, sent a telegram to you requesting an interview for the above-mentioned purpose. But this committee, finding that the other committees are determined to make the resumption of traffic, passengers and goods, on the Wallsend Company's Railway, the primary question at the proposed interview, does not feel inclined to take part in the proposed conjoint deputation, and are disposed to allow the question to remain in abeyance until some more convenient season.

I am, &c.,

THOMAS GRIERSON,
Secretary.

Report of Deputation.

Telegram from Thos. Able, Mayor, Lambton, to the Minister for Public Works, Sydney, Oct. 23, 1875.

DEPUTATION from district desire interview to present memorial for State railway from Newcastle to Wallsend. Reply convenient time.

Friday next at noon, the 27/10/75. Inform.—J.R. Informed.

Sydney

Sydney Morning Herald, Thursday, October 28, 1875.

PASSENGER TRAFFIC ON THE WALLSEND RAILWAY.

YESTERDAY morning a deputation, consisting of Mr. G. A. Lloyd, M.L.A.; Mr. C. J. Stevens, M.L.A.; Mr. John Davies, M.L.A.; Mr. W. C. Browne, M.L.A.; Messrs. J. Creer, J. Hills, J. Kittson, Turner, J. Fletcher (Mayor of Wallsend), T. Burmage, W. Smith, J. Cowan, D. Gardiner, and W. Patrick, waited upon the Hon. Minister for Works, at his office, to urge upon the Government the desirableness of at once taking steps to resume the passenger traffic between Newcastle and Wallsend. The Hon. Postmaster General was present with Mr. Lackey during the interview.

The deputation was introduced to the Minister for Works by Mr. G. A. Lloyd, who said he did so in his capacity as representative of Newcastle. The gentlemen present wished to bring under Mr. Lackey's notice some facts in reference to the traffic between Newcastle and Wallsend, and also the very important question of the construction of an additional line of railway to Wallsend. The question of the resumption of the traffic would be first introduced, after which the deputation would go into the question of the new line.

Mr. Joseph Creer said the deputation had been appointed by a public meeting, called by the Mayor of Newcastle, with a view to have, if possible, a resumption of the passenger traffic on the Wallsend line, and he read a memorial on the subject which had been signed by 1,320 persons, including most of the influential gentlemen in the city of Newcastle. The feeling in Newcastle was unanimous upon the subject, and in favour of the resumption of the traffic. Mr. Lackey had already some time ago received a deputation on the subject, and since then the evil had been still more felt. The population of the mining townships, as well as that of Newcastle, was very large, and a large trade had sprung up between those places, but the stoppage of the traffic had interfered very materially with that trade, for there were now no means either for the people of the mining townships to get into Newcastle, or to get their goods out, for the roads were in such a state that it was almost impossible to convey goods along them. If they had never had railway communication they might have had a good road, and the injury now felt would not be so severe. As the Minister was no doubt aware, the deputation had met the Railway Company on the previous day, and the Company had made some concessions, with a view to the matter being settled, and they hoped Mr. Lackey would favourably consider the matter, being one of so much concern to the whole of the district. They approached him with every confidence, believing that the Government were favourable to the opening up and improvement of every means of communication throughout the country. He reminded Mr. Lackey of a speech of his own, in which he stated that railway communication was the best, and tended most to the welfare of the country, and they would take him at his own words. If wet weather were to set in he did not know what would be the consequences to the people of Wallsend. Newcastle was the great market for them, and to stop railway communication was something very serious indeed. He was glad to see that the Government were favourable to the extension of the railway from Redfern into the city of Sydney, but he thought the large and thriving population of Newcastle and the surrounding district ought to be equally considered. The answer already given by the Minister was that the traffic would not pay if they accepted the Wallsend Company's terms; but even if that were the case he thought they were still entitled to the consideration of the Government, and he contended that what the deputation asked for was quite as necessary, and would be as profitable, as the Morpeth or the Windsor lines. Of all the towns or districts in New South Wales where Government money had been spent, none gave a better return than that spent in the district of Newcastle; and for that reason he thought they were entitled to this means of conveyance, even though it were at a loss to the Government. He believed, however, there would be no loss, but that the traffic would increase, and it would pay handsomely. The figures that had been quoted on this part of the subject he did not think would bear the construction that had been placed upon them. The traffic amounted to £4,400 last year. Supposing the offer of the Wallsend Company was accepted, of 22½ per cent., that would make £1,000, which would leave £3,400 for the Government. He thought the expenses had been stated at £1,380, which would leave £2,220 to the good. Surely then no loss could accrue to the Government from running this branch line. A petition would be presented to the Minister in favour of the Government constructing a line of their own through the mining townships, which would doubtless be the best way of settling this question, but in the meantime the injury resulting from the cessation of the traffic was very great indeed. He believed the mining population did more for the progress of New South Wales than any other class of the community, and he hoped the Minister would give these matters his favourable consideration, and see his way clear to accept the terms now offered by the Company, so that this important traffic might be resumed without delay.

Mr. James Hill, in indorsing what had been said by Mr. Creer, pointed out that the population of Wallsend numbered between 6,000 and 7,000, that Wallsend was not a healthy locality, and the occupation of mining was especially unfavourable to health. It was therefore highly expedient, on sanitary grounds, that those people should have easy access to the sea air at Newcastle.

Mr. J. Kittson and Mr. Turner both further enlarged upon the necessity for the resumption of the traffic.

Mr. Lackey said this was not the first time this matter had come before him. One or two deputations had waited upon him upon this subject—one from the Railway Company, and another from the people of Wallsend themselves. Mr. Creer had made pointed allusion to the stoppage of the traffic, but he would point out to the deputation, and to the residents of Wallsend, that this stoppage did not arise from any action on the part of the Government. They had been carrying out an arrangement between the Government and the Wallsend Company, with reference to the running of those trains over their line. The arrangement was that they were to pay the Wallsend Company 1s. per train mile, and after this an application was made to increase the rate to 2s. 6d. per mile, which was a sum altogether beyond what the Government felt they ought to give. The gross return to the Government was 6s. 4½d. per train mile, and the working expenses were 3s. 0¼d. per mile. The difference between these two rates, less the Company's proposal of 2s. 6d. per mile, would leave the Government a net profit of 10¼d. per mile, while the Company would receive 2s. 6d. per mile, less the cost of repairing the line for the Government traffic, a cost which would be considerably over-estimated if it were put down at 8d. per train mile. In other words, or in other figures, the Company, by expending £106 per annum in keeping their line in order for the proportion of Government traffic over it, would get a net profit of £533, while the Government, by expending £1,380 in working expenses, would receive a net profit of £238. These were the

figures presented to him by the Department, and they showed that the Government had not been making a large profit out of this line. At all events the arrangement was being carried out in a proper spirit so far as the Government was concerned, when the Company insisted upon having higher terms. The Government had not been receiving a return equal to their outlay, and he felt he could not make the concession that the Wallsend Company asked for at the time. The deputation were well aware of the result of that action. The question now was whether that communication was to be restored—whether those large interests were to be left without communication between Newcastle and Wallsend, because the Company will not adhere to the terms originally agreed upon. He could assure the deputation that the Government would submit to an injustice rather than that the inhabitants should be put to inconvenience. But it appeared to him that a difference of opinion had arisen between the residents of the mining townships as to the way in which this traffic is to be resumed. He had received a telegram from the Mayor of Lambton asking him to appoint a day to receive a deputation asking for an independent line to be constructed in connection with the Northern line. It would be a matter for the consideration of the Government whether it would not be desirable to construct an altogether independent line for the purposes of traffic through. Another question was how the inconvenience was to be overcome until the new line is constructed. Those were matters which he would bring before his colleagues immediately. Their application should have his recommendation, at all events, for the Government would submit to lose by the obstinacy of the Company, rather than the large bulk of the people be put to inconvenience, and the business people to loss. He should feel it his duty to recommend the Government to accede to the terms of the Company, and resume the traffic over this line. And it was quite possible that the Government might submit to Parliament a proposition for a sum of money to construct an additional line.

Mr. Fletcher said that from the remarks just made by Mr. Lackey their petition seemed to be needless, and he was very glad to hear those remarks, which appeared to him to be in keeping with the intentions of the Government all through. He then read a petition from the inhabitants of Wallsend and surrounding districts, praying for a survey to be made for the construction by the Government of a separate railway line through the mining townships. He might remark that it was rumoured the Government had even now surveyors out surveying a line between Sydney and Lake Macquarie. If that were the case it was quite evident that that railway line would have to be connected with the Great Northern Railway. By constructing the line now asked for, it could be continued so as to take in the line round Lake Macquarie, and give Newcastle its fair share of the trade that would naturally arise from the construction of such a railway. He was not asking for this with a view to prevent any temporary arrangement with the Wallsend Company; but any such arrangement could be only temporary at best, in the absence of an Act of Parliament to compel the Company to carry passengers, for it was evident that from what had already occurred, might occur again, and the people would be put in the same fix as they were in now. He would point out that there was a large tract of land taken up for mining purposes in those localities that would require a railway. He trusted that the Government would favourably receive the prayer of this petition. They only asked to have a survey made, to ascertain the cost. He explained that there had been some mistake with regard to the Lambton people, or they would have been present to support the present petition.

Mr. Lackey said the petition should have every consideration, and he would take the earliest opportunity to place it before the Government. It was quite true that he had a trial survey going on for the Northern Extension that had been alluded to, for it was one of those things that would have to be taken up sooner or later, and he thought it necessary that the people should have full information in the matter.

Some remarks having been made by Mr. Gardiner, Mr. Turner, and other members of the deputation, with reference to the importance of the traffic, the deputation thanked the Minister for the courteous reception he had given them, and the proceedings terminated.

No. 61.

Secretary, Newcastle Wallsend Coal Company, to The Minister for Public Works.

Sir,

Newcastle Wallsend Coal Company, Sydney, 26 October, 1875.

With reference to the railway traffic between Newcastle and Wallsend, I am requested to inform you that the Board has been appealed to by a deputation, representing Newcastle and Wallsend, urging the expediency of the immediate resumption of the traffic.

The deputation were not prepared to say that the demand made by the Company was inequitable, but they strongly represented the inconvenience at present endured.

With a view to accommodate the local residents my Board will be willing to renew the traffic for six or twelve months, at the option of the Government, on condition that the Company receives (22½) twenty-two and a half per cent. of the gross receipts from such traffic, or a mileage rate which shall be equivalent thereto, and that this mode of payment shall date back from the commencement of the present year, or my Board will consent to refer the matter to any competent arbitration.

I have, &c.,

F. W. BINNEY,
Secretary.

No. 62.

Minute of Secretary of Railways.

THE proposal of the Company was that they should receive 25 per cent. of the gross proceeds, not over their line alone but also over the Government line to Newcastle. They now modify this unreasonable proposal by lowering the per centage from 25 to 22½ per cent., the arrangement to be for twelve months only; but even this reduction is more apparent than real, as it is made conditionally that the 22½ per cent. be allowed from the 1st January last.—C.A.G., 27/10/75.

Inform that the Minister declines to pay by per-centage, or to refer the matter to arbitration, but will be prepared to hear the Company's views as to the mileage rate proposed to be charged for the service over the Company's lines.—J.R., 8/11/75. Letter Wallsend Coal Company.—8/11/75.

No. 63.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 8 November, 1875.

In answer to your letter of the 26th ultimo, on the subject of the resumption by the Government of the traffic between Newcastle and the Wallsend Company's property, I have the honor to inform you that the Honorable Minister for Works declines to pay a percentage on the gross receipts from such traffic, or to refer the matter to arbitration; he will, however, be prepared to hear the Company's views as to the amount of mileage rate which they propose to charge for the service over the Company's lines.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 64.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 11 November, 1875.

I beg to acknowledge the receipt of your letter of the 8th instant, in which you inform me that the Honorable the Minister for Works declines to pay the Newcastle Wallsend Company a percentage on the gross receipts from the traffic between Newcastle and Wallsend, or to refer the matter to arbitration, but that he will be prepared to hear the Company's views as to the amount of mileage rate which they propose to charge for the service over the Company's line.

In reply, I am requested to inquire whether in applying the principle of a mileage rate the Government calculates a fraction of a mile as a mile, that is to say, whether the distance from Wallsend Junction to Wallsend Station will be counted as 3 miles and a fraction, or as 4 miles?

I have, &c.,

J. P. PERRY,

for Secretary.

No. 65.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 22 November, 1875.

In acknowledging the receipt of your letter of the 11th instant, inquiring if the Government in calculating the mileage rate to be paid by the Newcastle Wallsend Coal Company intend to calculate a fraction of a mile as one mile, I have the honor to inform you that the distance will be taken as three miles and one quarter ($3\frac{1}{4}$).

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 66.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 25 November, 1875.

I am instructed by the Board respectfully to request a reply to my letter of the 11th instant, in which you were asked in reference to the principle of a mileage rate whether the distance from Wallsend Junction to Wallsend Station would be counted as 3 miles and a fraction or as 4 miles. My Directors have met on two Board days since the enquiry was made, and are waiting your answer in order to reply to your letter of the 8th instant.

I have, &c.,

F. W. BINNEY, Secretary.

The letter informing Company of length of mileage crossed this.—C.A.G., 29/11/75.

No. 67.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 9 December, 1875.

I am instructed by my Board to acknowledge your letter, dated the 22nd, which however did not reach this office until the 26th ultimo, and to reply generally to your letter of the 8th November.

My Board much regret that the Hon. the Minister for Works refuses to arrange the distribution of the receipts on the basis of a percentage, because such a basis is the simplest and most equitable, and is also self adjusting. The claim of the Company is not for a fixed sum for the use of their line but for an equitable share of the profits, and as those profits are variable it is impossible to name a fixed sum, which shall be permanently equitable. With reference to your letter of the 22nd instant, in which you state that the Government will calculate any mileage rate on the basis of $3\frac{1}{4}$ miles for the Wallsend line, I am desired to remind you that from the 14th June, 1873, to the end of 1874 (the whole period for which the Company was paid by a mileage rate), as also for January and February, 1875, the mileage distance was reckoned as 4 miles, and this distance was fixed by the Government without reference to the Company. Although the distance now proposed to be paid for ($3\frac{1}{4}$ miles) is the actual length of the Company's line, I may point out that there are no intermediate stations on the Wallsend line, while there are three between Newcastle and Wallsend junction, and the traffic to and from these intermediate stations passes over the whole of the Wallsend line, but not over the whole of the Great Northern line. As already intimated in my letter of the 26th October last, my Board is willing to accept $22\frac{1}{2}\%$ (per cent.) of the gross receipts for the year 1874; these receipts were £4,329 19s. 5d., $22\frac{1}{2}\%$ of which would have

have amounted to £974 4s. 11d.; to which sum my Board consider the Company was entitled, instead of which the sum of £232 1s. was all the Government allowed. This year, notwithstanding the partial suspension of traffic, the Directors estimate the gross receipts at £5,000, 22½% of which will be £1,125, which sum my Directors are willing to accept as the Company's share of the profits for this year. Put in the form of a mileage rate this will amount to 4s. 11d. per train-mile if the length of the Company's line is estimated according to the new method at 3¼ miles; or 4s. per train-mile if the length of the Company's line is estimated at 4 miles according to the old method. The traffic over the line is increasing so rapidly that my Directors estimate the gross receipts for 1876 at £6,000; 22½% of this amount will be £1,350, which sum they are willing to accept as the Company's share of the profit for 1876. This claim put in the form of a mileage rate will be equivalent to 5s. 10d. per train mile if the length of the Company's line is calculated at 3¼ miles, and 4s. 9d. per mile if the length is calculated at 4 miles. It is to be understood that there are not to be more than two trains a day each way, with one extra train each way on Saturday evening, and the usual special trains on public holidays. I am requested to ask the favour of an early reply to this communication.

I have, &c.,

F. W. BINNEY, Secretary.

No. 68.

Minute of Secretary of Railways.

THE returns show that the earnings of the Wallsend traffic, between Newcastle and Wallsend and intermediate stations, amount to 6s. 3¼d. per train-mile; the working expenses are 3s. 2¼d., leaving a net profit of 3s. 0¾d. If the Company are to be paid their demand of 5s. 10d. per train-mile, the Government will have to work the traffic at a loss from the Wallsend Junction to Wallsend. The number of train-miles run on the Wallsend line in one year was 5,716, and 5s. 10d. per mile on this running would amount to over £500 more than stated by the Company. I desire to point out that, even admitting the claim of the Company to share in the profit of this line, their length of line, compared with our length of line, would not entitle them to 22½ per cent. In the year already quoted 5,716 miles were run on the Company's line, and 8,084 miles on our line for the same traffic, and that, as the net profits were only £39 8s. per cent. of the gross, the relative running gives £16 6s. per cent. to the Company, and £23 2s. per cent. to the Government. If the Company can be got to understand this they would no doubt reduce their demand. If the gross earnings for 1875 were, as they say they will be, £5,000, their proportion would be £815, instead of £1,125; and their proportion of the £6,000 for 1876 would be £978, instead of £1,350.

Put into a mileage rate, and taking the ascertained running of one year as the probable running of each year, the former amount would give (say) 2s. 10d. per mile instead of 5s. 10d., and the latter amount (say) 3s. 5d. per mile, instead of 5s. 10d. The Government appear to have made a great concession in allowing the Company to share in the traffic over the main line, but if they give the Company what they ask they will be giving more still.

C.A.G.

No. 69.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 28 December, 1875.

On the 9th instant I wrote you, by the instructions of my Board, stating the terms upon which they were willing to allow the passenger and goods traffic over the Company's line to be continued. Not having heard from you I am desired to ask the favour of a reply as early as possible.

I have, &c.,

F. W. BINNEY,

Secretary.

No. 70.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 1 February, 1876.

On the 28th December last I wrote you asking for reply to my letter of the 9th of that month, in which I had stated the terms the Board were willing to accept from the Government for the continuance of the goods and passenger traffic over the Company's line.

My Directors have expected as each Board day arrived that I should be able to lay your answer before them, but no reply having been received I have been instructed again to write you on the subject, and to state that unless an early reply is received they will have no alternative (however reluctantly) but to give notice for the immediate stoppage of this traffic.

I have, &c.,

F. W. BINNEY,

Secretary.

No. 71.

Minute of Secretary as to modes of settlement.

Wallsend Traffic, 1874.

Train-miles run, Government line	8,084
" Company's line	5,716

13,800 miles.

Earnings...	£4,330	equal to 6s. 3¼d. per train-mile.
Expenses	2,631	" 3s. 9¼d. "

Net £1,699 equal to 2s. 5½d. per train-mile.

Allowing Company 1s. per train-mile for their expenses, 5,716 = £285 16s., would reduce net profit to £1,413. Taking

Taking the figures of 1874 as a basis for calculation the following results are shewn:—

The Company received, under recent arrangement, 1s. per train-mile, amounting to £285 16s.

On the basis of deducting working expenses, that of Company's included, and allowing the Company a share of the net profits in proportion to its expenditure and that of the Government

The Company would receive 1s. per train-mile expenses	£285 16 0
And proportion of 1s. to 3s. 9½d, on £1,413	293 12 0
				£579 8 0

On the basis of deducting our working expenses and allowing the Company a share in the net profit, in proportion to mile of line used for traffic—

The Company would receive on £1,699 for 2½ chains...	£704 0 0
--	-----	-----	-----	----------

But in all probability they would demand that their working expenses also should be deducted and allowed them, making their remuneration on this basis—

Working expenses	£285 16 0
Proportion 2½ chains on £1,413...	585 16 0
				£871 12 0
Claimed by Company 22½ per cent. on gross proceeds—£4,330	£974 5 0

C.A.G., 4/2/76.

No. 72.

[Let the following letter be written to Wallsend Co. as containing the proposal of the Government in this matter.—J.L., 10/2/76.]

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir,

Department of Public Works, Railway Branch, 9 February, 1876.

I have the honor to inform you that the subject of the remuneration which the Government should pay your Company for running trains over its line has been under consideration for some time, and the delay that has taken place in responding to your communications on the subject has been owing to a desire on Mr. Secretary Lackey's part to arrive at a decision which, while it would be favorable and acceptable to the Company, would not in any undue degree be unfair to the interests of the general public.

It seems to the Secretary for Public Works that your Company in making its demands in this respect has done so without having before it the necessary information to admit of those demands being supported by evidence of their correctness, and he has directed me to state fully to you all the particulars required to make you arrive at a just appreciation of the merits of the case.

In the first place then it must be apparent that no demand for a proportion of the gross proceeds of any undertaking can be satisfactorily made until it has been ascertained what the net proceeds are, and it is clear that your Company in demanding 22½ per cent. of the gross proceeds of the Wallsend traffic have done so in ignorance of the cost of working expenses.

If reference be made to the reply which was given to Mr. Stuart's question asked in the House of Assembly on the 14th May last, it will be seen that the Wallsend traffic earns 6/3¼ per train mile, and as the Government cost of earning amounts to 3/9¾ per train mile on 13,800 miles, and the Company's cost of earning to 1/ per train mile (this being a very liberal estimate) on 5,716 miles, the net profit is reduced to 2/0¼ per train-mile or £32 15s. 7d. out of every £100 received.

These figures are given as those of the year 1874; they will of course vary every year with the amount of earnings and the cost of working expenses.

Without going into the question of whether it is equitable on the part of the Company to seek to share in the profits derived from traffic over the main line, the Government are prepared to concede the claim, and to make a settlement of the matter on the following basis:—To take the actual receipts for the year, and after deducting the ascertained working expenses to the Government and allowing the Company 1s. per train-mile for its working expenses (maintenance of its line for our traffic), to divide the net receipts ratably in proportion to the relative amounts expended by the Government and the Company in working the traffic.

This mode of settlement is at once so easy and (the claim of the Company to share in the profits of the traffic over the main line being conceded) so equitable that the Secretary for Public Works does not anticipate that your Directors will offer any objection to its adoption.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 73.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir,

Newcastle Wallsend Coal Company, Sydney, 24 February, 1876.

I have the honor to acknowledge the receipt of your letter of the 9th instant, informing me that the subject of the remuneration the Government should pay the Company for running trains over its line has been under consideration for some time, and stating that the delay in responding to my communication has arisen from the desire of Mr. Secretary Lackey to arrive at a decision which, while it would be favourable and acceptable to the Company, would not in an undue degree be unfair to the interests of the general public.

I am desired in reply to your letter to state that what the Board has claimed has not been remuneration from the Government for running trains over the Company's line, nor anything unfair to the interests of the general public, but a fair share of the profits derived from the passenger and goods traffic

traffic over such line; and whilst my Directors are willing to give credit to Mr. Secretary Lackey for his intentions, they must remind you that the subject has been under discussion for fifteen months, and that the Government has at last conceded the principle contended for by this Company from the commencement, viz., that it is entitled to a share of the profits.

I am instructed to demur to your remarks that the Company in making its demands had done so without having before it the necessary information. That the Board had pretty good information on the subject is evidenced by the fact that the Company's demand for 22½ per cent. of the gross proceeds for 1874 was equivalent to £974 5s., whilst the demand now is £989 12s. 3d., the latter sum being worked out from the particulars which you state you had been instructed to give "to enable me to arrive at a just appreciation of the merits of the case."

In reference to your proposal to take the actual receipts for the year, and after deducting the ascertained working expenses for the year, and allowing the Company 1s. per train-mile for its working expense (maintenance over its own line for this traffic) to divide the net receipts ratably in proportion to the relative amounts expended by the Government and the Company in working the traffic, I am desired to say that the Board cannot agree with you that this plan of settlement is equitable, because the working expenses do not form a proper basis for division of profits.

They submit that the profits derived from this traffic after payment of working expenses is in the nature of a return for capital invested in the respective railways, and the right of the Company to share in such profits being conceded, that the most equitable plan of distribution is to divide them in proportion to the train-miles run.

I enclose calculations for the year 1874 based on this proposal, which you will find so far as working expenses are concerned agree with those submitted by you, except that in stating the cost of maintenance of the Government line you had calculated it at the total train-miles run 13,800 instead of 8,084, the distance run over the Great Northern Line; the difference 5,716 miles is the distance run over this Company's line and maintained by the Company, the payment for which you have included in the working expenses.

I am desired to add that the Board have given the matter their most earnest consideration, and that they cannot consent to the continuance of the traffic except on these terms.

I have, &c.,

F. W. BINNEY,
Secretary.

[Enclosure.]

	£	s.	d.
TOTAL earnings	4,330	0	0
Working expenses:—			
Locomotive and Traffic 2/9, 3/4; on 13,800 miles 2/9, 3/4	1,941	0	0
Permanent way over Government distance, 8,084	404	0	0
	<u>2,345</u>	<u>0</u>	<u>0</u>
Payment to Company 1s. on 5,716 miles	285	16	0
		<u>2,630</u>	<u>16 0</u>

		<u>2</u>	<u>5½</u>
£1,699 4s., balance of profit, divided according to mileage:—			
To Government for 8,084 miles	£995	7	8¼
To Company for 5,716 „	703	16	3¼
	<u>£1,699</u>	<u>4</u>	<u>0</u>
To Company for maintenance	£285	16	0
„ mileage division.....	703	16	3¼
	<u>£989</u>	<u>12</u>	<u>3¼</u>
Profit £4,330, 22½ per cent. of which amounts to £974 5s.			

No mistake has been made as to charging the working expenses; of course Mr. Binney's statement is incorrect as he has proceeded on a wrong basis, the Board have all the figures, and are in a position to correct the inaccuracy. Draft letter herewith for Commissioner's signature, informing the Secretary of the error he has made.—C.A.G., 25/2/76.

F. W. Binney informed.—25/2/76.

No. 74.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 25 February, 1876.

I have the honor to acknowledge the receipt of your letter of yesterday's date, on the subject of the division of the revenue derived from the Wallsend traffic, and to state that I shall take the earliest opportunity of bringing the views of your Board under the attention of the Secretary for Public Works.

I may however inform you that you are in error in your statement that in giving the cost of maintenance of the Government line (by which you must mean the cost to the Government of maintaining this traffic) I included the cost of the maintenance of your line to the extent of 5,716 miles run over it during 1874. This error of yours of course renders unreliable the calculations which you have favoured me with.

As you have all the information before you to enable you to arrive at a right result as regards the working expenses, it is unnecessary for me to do more than point out the error, which no doubt you will at once correct.

The other matters in your letter will be dealt with hereafter; but previous thereto I shall be glad to receive your corrected statement.

I have, &c.,

JOHN RAE,
Commissioner for Railways.

No. 75.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 2 March, 1876.

I have the honor to acknowledge your letter of the 25th, in reply to mine of the 24th ultimo. In reference to the statement in my letter that, in giving the cost of maintenance of the Great Northern line, the Government had included the cost of maintenance of the Company's line to the extent of 5,716 miles, and your remark that this error of mine renders unreliable the calculations which I had forwarded to you, I would reply that my calculations were based upon figures given by you (though unofficially) to the chairman of this Company.

In this statement the figures given were—	s.	d.	£	s.	d.
Government permanent way, per train-mile ...	1	0			
Locomotive and traffic ...	2	9 $\frac{3}{4}$			
	3	9 $\frac{3}{4}$	=	2,631	0 0
Company for permanent way ...	1	0			
	4	9 $\frac{3}{4}$	=	285	16 0
				£2,916	16 0

The figures as given above, viz., 1/- and 2/9 $\frac{3}{4}$, multiplied by 13,800 train-miles, amount to £2,631; and I concluded that the 1/- per train-mile was calculated for the whole 13,800 miles, as in fact it is. And although the cost at 3/9 $\frac{3}{4}$ per train-mile is less than the cost 4/2 $\frac{3}{4}$, as stated in reply to Mr. Stuart, it was a fair inference that the cost as stated when worked out in detail was the correct cost.

I am desired to say that my Board would be glad to be furnished with the correct statement of cost, if that taken from the figures abovementioned is not correct, as all they wish is their proportion of the actual profit, divided on the plan proposed in my last letter.

I am directed to suggest that the cost of locomotive and traffic expenses only might be charged against the receipts, leaving the Company and the Government to bear the cost of maintaining their respective lines.

I am also desired to say that as the plan of division once settled will probably be acted on for some time, it would be preferable to ascertain the actual cost of working this traffic rather than to take averages calculated over the entire length of the Great Northern Line.

I have, &c.,

F. W. BINNEY,
Secretary.

Minute of Minister for Public Works.

LET Company be informed that we will agree to submit the matter in dispute to arbitration.

J.L., 19/7/76.

I would suggest that a precis of the case be drawn up and referred to the London Clearing House authorities. They are continually dealing with questions of this kind.—C.A.G., 19/7/76.

Mr. Lackey approves of a reference to the Clearing House for the Railways of the United Kingdom.—J.R., 19/7/76.

F. W. Binney informed.—20/7/76.

No. 80.

Commissioner to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 20 July, 1876.
 Referring to the correspondence that has taken place on the subject of the amount to be allowed by the Government to the Wallsend Coal Company for the privilege of taking over their line the passenger and goods traffic for Wallsend, I have the honor to inform you that the Secretary for Public Works is willing to agree to submit the matter in dispute to arbitration, and he directs me to suggest that the most competent tribunal to decide the matter would be the authorities of the London Railway Clearing House.

A *précis* of the case, in the terms of which both sides would concur, can be prepared and submitted to the authorities alluded to, and their decision could be made to take effect from the date on which the traffic to Wallsend was last resumed.

As neither the Government nor your Company can have any other desire than to have this matter settled on an equitable basis, and by the most competent authority, it is confidently anticipated that your Board will consent to the reference suggested.

I have, &c.,
 JOHN RAE,
 Commissioner for Railways.

No. 81.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 24 July, 1876.
 Your letter of the 20th instant, on the subject of the passenger and goods traffic over this Company's line was only delivered after office hours on Friday, the 21st instant, at 4:15 p.m.; to avoid delay I submitted your letter to a special Board to-day.

I am directed, in reply to the first paragraph in your letter, again to state that the Company does not claim an amount for the privilege of taking over their line the passenger and goods traffic to Wallsend but a share of the receipts from such traffic; and as the Government have admitted this the Directors cannot avoid expressing their regret that in your letters you should not submit your proposals on this basis.

In reference to the offer to refer the matter to arbitration, and suggesting the London Railway Clearing House as the most competent tribunal, &c., and that their decision could be made to take effect from the date at which the traffic to Wallsend was resumed,—I am desired to remind you that when the Company proposed, in January, 1875, to submit the question to arbitration, your reply, on the 27th of that month, was "Nor will they (the Government) consent to refer the question to arbitration, as it is not one that can fairly be settled by such reference," which refusal, in reply to a subsequent offer from the Company, was repeated in your letter of the 8th November last.

Since your letters to this effect, the Government having admitted the principle that the Company contended for, the Directors decline to refer the matter to arbitration.

I am desired therefore respectfully to inform you that the Board cannot alter the terms submitted in my letter of October 26th, and repeated in that of December 9th, 1875.

I am also desired to add, that the subject has now been so long under discussion that unless I receive an acceptance of the terms offered before the 29th instant, the Board must give orders for the carrying out of the notice given you on the 23rd June last.

I have, &c.,
 F. W. BINNEY,
 Secretary.

No. 82.

No. 82.

Secretary of Railways to The Crown Solicitor.

Commissioner for Railways and the Wallsend Coal Company.

For some time past a correspondence has been going on between the Company and the Commissioner for Railways with a view to an arrangement under which passengers and goods may be conveyed over the Company's line on payment by the Government of a portion of the receipts. It has been proposed to leave the matter in dispute to the London Railway Clearing-house for decision, but the Company decline to acquiesce in this arrangement, and by letter of 24th instant have intimated that unless their terms are agreed to they will stop the traffic on the 29th instant,—that is to say, so far as allowing the carriage of passengers and goods over their line; they will, however, no doubt continue to require the Government to find the haulage power for their coal trucks.

As the claim of the Company appears to be an unfair one the Minister is unwilling to accede thereto, and is desirous of being advised whether under the 3rd section of the Act 23 Victoria—under which the Wallsend Railway has been formed—the Company can be compelled to allow the Commissioner to run passenger waggons and railway trucks over their line on payment of a toll of 3d. a ton, that section expressly declaring that the railway and locomotives shall be open to the public use on payment of the toll mentioned therein.

And in case of refusal by the Company to allow the Commissioner to exercise this right what steps can be taken to enforce the right.

As this matter is very urgent the Minister would feel obliged by the Crown Solicitor obtaining the Hon. the Attorney General's opinion thereon with as little delay as possible.

C.A.G., 25/7/76.

No. 83.

The Crown Solicitor to Commissioner.

Sir,

Crown Solicitor's Office, Sydney, 25 July, 1876.

I have the honor to return herewith the papers relating to the correspondence between the Wallsend Coal Company and yourself, respecting the carriage of goods and passengers over the Company's private line of railway, and to forward a copy of Mr. Attorney General's opinion upon the question submitted in the memo. of this day's date.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.*In re* Wallsend and Newcastle Coal Company and Commissioner for Railways.

I HAVE perused the correspondence between the Newcastle Wallsend Coal Company and the Department of Public Works, forwarded herewith.

With regard to the notice of 23rd June, given by the Company, that unless matters in dispute between the Government and themselves are settled before the end of July they will not allow the passengers and goods trains to run over their line after the 31st July, I may remark that they are obliged under section 3 of their Act of Incorporation to leave their railway and locomotives open to public use upon payment of a toll to the Company of 3d. per ton per mile. It appears to me that the Company is bound therefore to keep its railway open to public use on this payment being made. It is true there is nothing said in this section about the carriage of passengers, but I am informed that according to the railway practice in England a certain number of passengers are calculated as a ton, and the use of the words trucks or waggons in the latter part of the clause would appear to favor the idea that it was not intended to exclude the carriage of passengers, inasmuch as the word waggon is the generic term under which all kinds of railway carriages are included. One thing is clear that the railway and locomotives of this Company are to be open to the use of the public.

The language of such enactments as this, which invest private persons for their own benefit and profit, with privileges and powers interfering with the property and rights of others, is to be construed more strictly than any other kind of enactment.

The provision in section 3 is one of the conditions upon which the Company obtained its powers. These are not powers conferred on public bodies for essentially public purposes but on a private Company for its private profit; and when doubt arises as to the construction of language which confers exceptional powers upon such companies, the benefit of the doubt is to be given to those who might be prejudiced by the exercise of the powers and against those who claimed to exercise them. As to the second question submitted to me as to the steps which may be taken to assert the right of the Commissioner, on behalf of the public, to use the Company's line, I would suggest that immediate notice be given to the Company of the intention of the Government, notwithstanding the intimation conveyed in the Company's letter of 23rd June, to run over the Company's line, leaving the Company to take such steps as it may be advised to resist such action on the part of the Government. I am informed that the haulage of the Company's trucks is performed by the Government locomotives. As the Commissioner is under no statutory obligation to supply such haulage it may be suggested that a speedy way of bringing matters to a satisfactory settlement would be to intimate to the Company that the Government decline to send an engine over the line unless accompanied by the Government trucks and carriages.

Crown Law Offices,
Sydney, 25 July, 1876.WILLIAM B. DALLEY,
Attorney General.

No. 84.

Secretary, Newcastle Wallsend Coal Company, to The Minister for Public Works.

Sir, Newcastle Wallsend Coal Company, Sydney, 26 July, 1876.
Having been informed through Mr. H. C. Dangar that you wished an interview with the Chairman or one of the Directors of this Company and myself on the subject of the traffic for passengers and goods over the Wallsend line, I am directed to say that the chairman and myself will be willing to meet you at any time you may appoint either this or to-morrow afternoon.

I have, &c.,
F. W. BINNEY.

No. 85.

Secretary, Newcastle Wallsend Coal Company, to The Minister for Public Works.

Sir, Newcastle Wallsend Coal Company, Sydney, 28 July, 1876.
I am instructed by the Board to inform you that as requested at the interview with you this morning they have consented that the traffic for passengers and goods over the Wallsend line shall be continued until the end of August, on the understanding that in the meantime the matter in dispute will be adjusted.

I have, &c.,
F. W. BINNEY, Secretary.

No. 86.

Secretary, Newcastle Wallsend Coal Company, to The Minister for Public Works.

Sir, Newcastle Wallsend Coal Company, Sydney, 30 August, 1876.
In reference to the traffic over this Company's line, would you please arrange for a further interview on the subject at your earliest convenience; the month in which it was to be considered is about expiring. I am aware that the Session lasted longer than was expected when the Directors met you, but I know they are desirous to have this matter closed, and I have therefore taken the liberty of writing you.

I have, &c.,
F. W. BINNEY, Secretary.

Friday week at half-past 11. Inform.—J.R., 30/8/76.

No. 87.

Commissioner to Secretary, Newcastle Wallsend Company.

Sir, Department of Public Works, Railway Branch, Sydney, 30 August, 1876.
In acknowledging the receipt of your letter of this day's date, I have the honor to state that, as surmised in your letter, the postponement of the prorogation of Parliament, and the pressure of business consequent thereon, have prevented Mr. Secretary Lackey from devoting his attention to the subject of the Wallsend Traffic. The matter will now receive his attention, and he has appointed Friday, the 8th proximo, at half-past 11 a.m., as a convenient time to receive a deputation from your Directors, which you wished should wait on him on the subject.

I have, &c.,
C. A. GOODCHAP,
Pro Commissioner for Railways.

No. 88.

Minute of the Minister for Works.

Traffic over the Wallsend Railway.

At the interview which the Directors of the Company had with me to-day I made the following proposition for the settlement of this question:—

That from the gross earnings should be deducted—

- 1st. The working expenses of the Government for conducting the traffic.
- 2nd. Interest at the rate of 5% per annum upon the capital invested in the rolling stock, &c., used, which for the present should be estimated at £9,000.
- 3rd. The estimated working expenses of the Company, viz., 1s. per train mile for the maintenance of their line, to be paid to Company.

That the balance should be divided between the Government and the Company in proportion to the train-mileage run over each line. The Company to make necessary provision in the shape of Station buildings for conducting the traffic at Wallsend. Now make the proposition to the Company in writing.—J.L., 8/9/76. F. W. Binney informed, 16/9/76.

No. 89.

Minute of Secretary of Railways.

THIS proposal for the division of receipts works out as follows, taking the transactions of 1874 as the basis of calculation:—

	£	s.	d.
Gross earnings	4,330	0	0
Government working expenses	2,631	0	0
	£1,699	0	0
Deduct 1s. per train-mile, due to Company as working expenses, on 5,716 miles	285	16	0
Leaving a balance of	£1,413	4	0

From

From this amount would have to be deducted £450, being 5 per cent. on £9,000 for rolling stock, leaving £963 to be divided between the Government and the Company, of which the Company, for 5,716 miles, would receive £398 17s. 6d., and the Government, for 8,084 miles, £564 2s. 6d.

The Company, under this arrangement, would receive—

Working expenses	£285 16 0
Proportion of net Revenue	398 17 6
	£684 13 6

C.A.G.

No. 90.

Commissioner to Secretary Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, 16 September, 1876.

At the interview which the Directors of the Wallsend Railway Company had with Mr. Secretary Lackey on the 8th instant, with reference to the traffic over their line, he made the following propositions to them with a view to an equitable settlement of the question, and he now desires me to place them before your Company in writing. They are as follows:—

1. From the gross earnings shall be deducted—
 - 1st. The working expenses of the Government for conducting the traffic.
 - 2nd. Interest at the rate of 5% per annum upon the capital invested in the railway stock, &c., used, which for the present should be estimated at £9,000.
 - 3rd. The estimated working expenses of the Company, viz., 1s. per train-mile for the maintenance of their line to be paid to the Company.
2. The balance shall be divided between the Government and the Company, in proportion to the train-mileage run over each line.
3. The Company to make the necessary provision in the shape of station buildings for conducting the traffic at Wallsend.

I have the honor to request that you will lay this matter before your Directors and acquaint me with their decision as soon as may be convenient.

I have, &c.,
 JOHN RAE,
 Commissioner for Railways.

No. 91.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 21 September, 1876.

I have the honor to acknowledge your letter of the 16th instant, stating in writing the proposition made by Mr. Secretary Lackey to the Directors of this Company at their interview with him on the 8th instant, on the subject of the passenger and goods traffic over this Company's line.

I am instructed, in reply, to state, that the Directors agree to the principle of settlement contained in your letter; at the same time I am desired to ask you to furnish me with the particulars of the locomotive and rolling stock employed, and the data upon which the expenses of working such traffic are calculated, both of which Mr. Lackey promised should be furnished, so that the Company should have the opportunity of examining them.

I am desired to say that the Directors would be glad to have the promised particulars at your earliest convenience.

I have, &c.,
 F. W. BINNEY,
 Secretary.

Will Mr. Higgs please state what is a fair average of rolling stock which should be debited to Wallsend Company for the traffic over their line:—

- Engines.
- Breakvans.
- 1st class carriages.
- 2nd class carriages.
- Trucks.
- Covered vans.
- Horse-boxes.
- Carriage trucks.
- Sheets.
- Ropes.

Urgent. C.A.G., B.C., 26/9/76.

Return herewith, shewing particulars of the rolling stock used in conducting the Wallsend traffic. Has anything been decided as regards the responsibility in case of accidents? At present the risks of accidents in my opinion are very great at Wallsend, owing to the want of fencing and proper crossing for the public; in fact the public use the line when walking as much as they do the streets?

J. HIGGS, 27/9/76.

No. 92.

List of Rolling Stock, &c.

Inform that the £9,000 for rolling stock is made up as follows :—

- 1 engine.
- 1 1st class carriage.
- 5 2nd class carriage.
- 1 covered van.
- 8 trucks.
- 2 break-vans.
- 50 sheets, ropes.

Say that the working expenses are based upon the actual return of the working expenses over the whole line at per train-mile for locomotive power.

- do. Permanent way so far as main-line is concerned.
- do. Repair of rolling stock.
- do. Traffic expenses.
- do. Damage and loss of goods.
- do. Personal injury.

Give Traffic Manager's opinion as to the liability of accident at Wallsend through want of fencing and proper crossings and urge attention to this matter.—C.A.G.

F. W. Binney informed, 10/10/76.

No. 93.

Secretary of Railways to Secretary, Newcastle Wallsend Coal Company.

Sir, Department of Public Works, Railway Branch, Sydney, 10 October, 1876.

In reference to your letter of the 21st ultimo, acknowledging the receipt of our letter of the 16th idem, submitting to you in writing the propositions made by Mr. Secretary Lackey to the Directors of the Newcastle Wallsend Coal Company at their interview with him on the 8th, agreeing with the principle of the proposed settlement, and asking to be furnished with particulars of the locomotives and rolling stock to be employed, and the data upon which the expenses of working such traffic are calculated,—I have the honor to inform you that the £9,000 for rolling stock is made up as follows :—1 engine, 1 1st class carriage, 5 2nd class carriages, 1 covered van, 8 trucks, 2 break-vans, 50 sheets, ropes, &c. The working expenses are based upon the actual return of the working expenses over the whole of the line at per train-mile for locomotive power, permanent way (so far as the main line is concerned), repair of rolling stock, traffic expenses, damage and loss of goods, and personal injury. At present the risk of accidents to the public is very great at Wallsend, owing to the want of fencing and proper crossings; this is a matter to which I would suggest your Directors immediate attention should be given and proper precautionary measures taken.

I have, &c.,

C. A. GOODCHAP,
Secretary of Railways.

No. 94.

Secretary, Newcastle Wallsend Coal Company, to Commissioner.

Sir, Newcastle Wallsend Coal Company, Sydney, 23 October, 1876.

I am desired by the Board to acknowledge your letter of the 16th September last, together with that of the 10th instant, and copy figures quoted by Mr. Secretary Lackey at the interview with him on the 8th of September last. I am further desired to inform you that the Board agree to accept the proposal for the settlement of the question as submitted in your letter, viz. :—

No. 1. That from the gross earnings shall be deducted—

- 1st. The working expenses of the Government for conducting the traffic.
- 2nd. Interest at the rate of 5 per cent. per annum upon the capital invested in the rolling stock, &c., used (which for the present is to be estimated at £9,000).
- 3rd. The estimated working expenses of the Company, viz. :—1s. per train-mile for the maintenance of their line to be paid to the Company.

No. 2. The balance shall be divided between the Government and the Company in proportion to the train-mileage run over each line.

No. 3. The Company to make the necessary provision in the shape of station buildings for conducting the traffic at Wallsend.

The Board were only waiting for the settlement of the question to proceed with the erection of a proper station, and I am desired to inform you that the Directors have given the necessary instructions for erecting same immediately.

I am further directed to ask that you will be good enough to direct that a statement be furnished of the amount due to the Company for the year 1875.

I have, &c.,

F. W. BINNEY,
Secretary.

RAILWAY BARS, PLATE IRON FOR LOCOMOTIVES, HYDRAULIC CEMENT.

No. 1.

The Chairman, Fitzroy Iron Company, to The Minister for Works.

Sir,

116, Pitt-street, Sydney, 19 June, 1866.

I have the honor to address you, as Chairman of the Board of Directors of the Fitzroy Iron Works Company.

The Directors, realizing the absence of the required skill to carry out the various departments of an extensive iron works, and the indisposition in this Colony to embark sufficient capital in such an undertaking, have been for some time in correspondence with some influential gentlemen in London, with a view of inducing them to join in the undertaking and supply both the skill and capital necessary to develop the Fitzroy Iron Works. The negotiations are assuming a very favourable and practical shape.

In order to assist the Directors in completing arrangements, they are desirous of obtaining the guarantee of an order from the Government for 10,000 tons of iron rails at £14 per ton, delivered at the nearest station to the works.

The Directors respectfully submit that it is of the utmost importance to any Country to possess the means of converting the ore into merchantable iron, and it is of special importance to New South Wales to obtain a manufactory that will very soon sustain a population of thousands.

The Directors further submit that, owing to the advancing price of iron, rails by the time they are taken to Mittagong will cost the Government about the price named, and that Fitzroy rails will be much superior and more durable, owing to the superiority of the iron, resembling, as they would, steel rails of England.

A reply in time for the out-going mail will much oblige,—

Sir, your most obedient servant,

E. VICKERY,

Chairman.

Submitted.—20/6/66.

No. 2.

Minute of Secretary for Public Works.

I AM of opinion that an offer of £12 12s. per ton may fairly be offered to the Fitzroy Iron Mining Company for rails produced at that establishment, keeping in view the conditions proposed by my predecessors.

J.B., 21/6/66.

E. Vickery, Esq., informed.—22/6/66.

Railways, for information, B.C., 22/6/66.—G.H.

Mr. Whitton,—B.C., 22/6/66. J.W.—23/6/66.

No. 3.

The Under Secretary for Public Works to The Chairman, Fitzroy Iron Company.

Sir,

Department of Public Works, Sydney, 22 June, 1866.

In acknowledging the receipt of your letter of the 19th instant, I am directed by the Honorable the Secretary for Public Works to inform you that the Government will be prepared to enter into a contract with the Fitzroy Iron Company for the supply of 10,000 tons of railway bars, of pattern and quality to be approved by the Engineer-in-Chief, and delivered in such portions of the various extensions as may be required, at twelve pounds twelve shillings per ton, as soon as the Company are in a position to ensure the completion of such contract within a reasonable time.

I have, &c.,

JOHN RAE.

No. 4.

D. Smith, Esq., to The Minister for Public Works.

Sir,

Fitzroy Works, Mittagong, 13 July, 1875.

This Company is desirous to make a contract to supply the Government with twenty thousand (20,000) tons of Bessemer steel rails, same weight and section as the rails last imported, at twelve pounds sterling (£12) per ton, at the Mittagong Station. The rails to be delivered within the next two years, and guaranteed for three years.

I may beg leave to remark that, should you decide to accept this offer, you will very materially benefit the Government, and at the same time enable this Company to firmly establish the iron industry in this Colony.

I have, &c.,

DAVID SMITH.

Mr. Whitton,—B.C., 26/7/75. J.R.

No. 5.

D. Smith, Esq., to The Minister for Public Works.

Sir,

Mittagong, 27 July, 1875.

Since I had the honor of submitting an offer to you for the supply during the next two years of 20,000 tons of Bessemer steel rails, I have received a communication from England relative to the great risk and large amount of capital required to erect a complete Bessemer plant, together with a powerful rolling mill in this Colony, to do this work.

I

I may mention that there is but one class of iron ore that will produce a pig that can be converted into Bessemer steel, and consequently there must be great risk of failure in introducing this industry into a *new Country*, the entire plant for which will cost upwards of £100,000.

It is doubtless of the greatest importance to the welfare of this Colony that the iron trade should be immediately established here, and, while admitting this great fact, the capitalists of this Colony refuse to invest the money to establish this industry.

It is therefore evident the money must be raised at home.

To do this, after the experience I have had in this Colony, after an outlay (as I am informed) of £180,000, we must show a reasonable prospect of a return for the capital necessary to carry out this work.

I would beg to suggest that the Government give me a six months optional contract for 50,000 tons of Bessemer steel rails, at say £12 per ton, at the works. 20,000 tons to be delivered within the first *two years*, and 10,000 *tons per year* for the next *three years*, a three years guarantee given with all the rails, and the whole made in the Colony.

With this optional contract I will go home by the next mail, and I do not doubt that I can induce my friends to subscribe the capital, erect the necessary works, and firmly establish here one of the greatest of the six great trades of the world,—the iron trade.

I have, &c.,
DAVID SMITH.

Mr. Whitton, for report.—J.R., 28/7/75.

No. 6.

Minute of the Engineer-in-Chief.

I ADVISE the Commissioner to decline to give any such guarantee. The Bessemer steel rails are not, in my opinion, the best rails, nor could I recommend their use on any of the lines. Other Companies will no doubt be established, and each would be entitled to similar protection; and as I thoroughly believe in free trade, I cannot advise that any assistance from public funds be given in support of what is called native industry.

I think protection against any competition in the Colony of 20,000 tons of steel rails, Lander, Siemens, Steel Co. process, at £12 a ton, is as much as can be expected, and is nearly equal to the requirements of 200 miles of railway. Probably this Company would be two or three years before starting to roll, and would thus have a monopoly for seven or eight years.

Commissioner, 29/7/75.

J. W., 29/7/75.

No. 7.

Minute of Commissioner.

DECLINE offer for guarantee to any extent beyond the 10,000 tons offered to the old Company.

Mr. D. Smith informed.—5/8/75.

J.R., 4/8/75.

No. 8.

The Commissioner for Railways to D. Smith, Esq.

Sir,

Department of Public Works, Railway Branch, Sydney, 9 August, 1875.

In acknowledging the receipt of your letter of the 27th ultimo, suggesting that the Government should give you a six months optional contract for 50,000 tons of Bessemer steel rails, at £12 per ton, delivered at the works, Mittagong, so that capitalists in England may be induced to invest in the necessary machinery for the making of these rails,—I have the honor to inform you that no guarantee can be given you beyond that given to the Fitzroy Iron Mining Company in the year 1866, viz., to purchase 10,000 tons of railway bars, of pattern and quality to be approved by the Engineer-in-Chief, and delivered on such portions of the various extensions as may be required, at twelve pounds twelve shillings per ton. Copy of letter dated 22nd June, 1866, enclosed.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 9.

Minute of Secretary for Public Works.

Subject—Premium for the manufacture of iron and tin plates from ores the produce of New South Wales.

Premium to be paid to the first colonial manufacturer of 4,000 tons of railway iron rails, from ores the product of New South Wales, equal in quality to the imported article	£ 4,000
Premium to be paid to the second manufacturer of a like quantity	2,500
Premium to be paid to the first colonial manufacturer of 2,000 tons of plate iron for locomotive and ship-building, from ores the product of New South Wales, equal in quality to the imported article	3,000
Premium to be paid to the second manufacturer of a like quantity	1,500
Premium to be paid to the first colonial manufacturer of 1,000 tons of tin plates, from ores the product of New South Wales, equal in quality and price to the imported article	2,000
Premium to be paid to the second colonial manufacturer of a like quantity	1,500
Premium to be paid to the first colonial manufacturer of 1,000 tons of galvanized iron, equal in quality to best imported, and made from the ores of New South Wales	2,000
Premium to be paid to the second colonial manufacturer of a like quantity	1,500

Place on Loan Estimates for 1875 as withdrawn from Additional Estimates for 1874.

JOHN SUTHERLAND.

No. 10.

No. 10.

Minute of Under Secretary for Public Works.

WITH reference to the above, it is considered desirable to mention that a sum of money was placed on the Additional Estimates for 1874 for premiums for the above-mentioned materials, as well as for hydraulic cement, but was taken off in Cabinet, with a view to having it placed on Loan Estimates for 1875. It does not appear that any sum was included in Loan Estimates for 1875.—JOHN RAE, 15/12/76.

No. 11.

Letter from M. Fitzpatrick, Esq., M.P.

Sir,

251, George-street, 14/7/74.

Perhaps it is not too soon to remind you of the correspondence and interview I have had with you with respect to the replacing on the Estimates the bonus previously voted for first 250 tons of hydraulic cement made in the Colony.

You were good enough to inform me in May last that the item was withdrawn from the Supplementary Estimates, to be placed on Estimates-in-Chief for next year.

I have, &c.,

MICHAEL FITZPATRICK.

No. 12.

The Under Secretary for Public Works to M. Fitzpatrick, Esq., M.P.

Sir,

Department of Public Works, Sydney, 24 July, 1874.

In reply to your letter of the 14th instant, I am directed to inform you that the Secretary for Public Works has directed that the sum of £500 be included on the next Estimates as a premium for the first 250 tons of hydraulic cement manufactured in the Colony from colonial materials, equal in quality to the imported article and lower in price.

I have, &c.,

JOHN RAE.

13. Letter to Mason and Co., to the above effect. 5 October, 1876	7
14. Letter from Crown Solicitor, enclosing bond for extension of time. 28 October, 1876	7

RAILWAY EXTENSION.

No. 1.

Messrs. W. Mason & Co. to The Minister for Public Works.

Great Western Railway Extension, Bathurst to Orange.

Sir,

Sydney, 1 August, 1876.

We have the honor to lay before you some facts with reference to our contract for constructing the abovenamed extension from Bathurst to Orange.

1. On the acceptance of our tender by the Government we did not lose a day in making preparation to carry out the works, and up to the present moment have carried on the contract as vigorously and quickly as possible.

2. After our preparations, and the engagement of labour by us, we were prevented going upon certain lands on various points of the line, and were threatened with action at law by the owners in consequence of the Government not having settled or arranged with the said owners.

3. In deference to the wishes of the Department we avoided taking forcible possession, and submitted to a delay of several weeks.

4. This caused many of our men to leave the district, and in addition to delay we were put to great expense and trouble in various ways.

5. According to our contract the rails for the permanent-way were to be delivered to us *free* at Bathurst; they were only delivered at Kelso, as the bridge over the river was not then finished; and as we were anxious to avoid any delay in carrying out our works we undertook to convey the rails to Bathurst at our own expense.

7. Subsequent to the contract being signed additional work was added some time after the contract was in progress,—the item of “boxing-up” the permanent-way with ballast alone occupying the best part of several months.

8. This item of additional labour we reasonably consider entitles us to your consideration.

9. We have never troubled the Department with complaints, but have had great difficulties to contend against in not being able to obtain skilled labour when we required it; also having the works retarded during the severe winter months by heavy falls of rain and snow, which penetrated the ground, making it impossible for the men to work.

10. We have used our best endeavours to complete the line into Blayney at the earliest possible time, in accordance with the expressed wishes of the Government, and to effect this purpose have concentrated the bulk of the labour at our command on that portion of the line, and more men will be put on as fast as they can be procured. This is a difficult matter, as skilled and *suitable* men have been and are still very scarce.

11. We have made such progress in carrying out the requirements of the Government that we hope to have the permanent-way laid to Blayney by the end of September, as requested by the Engineer-in-Chief.

12. We beg to assure you that every exertion has been made by us from the commencement to have the works completed within or as near to the contract time as possible, so as to render the asking for an extension of time unnecessary, but owing to various circumstances, not under our control, some of which we have already named, we have not been able to do so.

13. On the above noted causes of delay, and taking into account the extra work, we respectfully submit that we are fairly entitled to claim an equivalent extension of time, say “three months,” from the 31st December, for the completion of our contract.

We may be here pardoned for mentioning that contracts Nos. 9 and 10, Raglan to Bathurst, including the erection of the Macquarie Bridge, were practically completed *within* the contract time.

And as our works have always given satisfaction till this moment, and we believe our monthly progress has been far greater than on any other line, we humbly seek for your kind consideration and help.

With the promise that every endeavour will be used by us to hand over the works completed with all dispatch,

We have, &c.,

WILLIAM MASON & Co.,

Contractors for G. W. Railway, Bathurst to Orange.

No. 2.

Messrs. W. Mason & Co. to Commissioner.

Railway Extension, Bathurst to Orange.

Sir,

Sydney, 25 August, 1876.

We have the honor to enclose, for your information, and in support of our special claim for an extension of time asked for in our letter of 1st instant, addressed to the Minister for Works, certain original memos. and copies of letters addressed to the District Engineer, and replies, also letters to us from certain parties against our taking possession of lands, &c.

You will note that the extra ballast is estimated 28,160 yards cubic.

We have to ask that the documents now enclosed will be returned to us after being submitted to your Law Officers.

We have, &c.,

WILLIAM MASON & Co.

[Enclosures.]

[Enclosures.]

Mr. W. Mason to District Engineer Wade.

Sir,

Bathurst, 30 October, 1874.

I have the honor to inform you that the men to whom I have let the work of excavation, &c., near Blayney, on the extension Bathurst to Orange, were stopped from commencing the work on the 28th instant by the proprietors of the land through which the railway passes, who told the men they would not allow it to be touched until they were paid for the land, or arrangements made to that effect.

I need hardly state that this will greatly impede the progress of the works now that men and plant are on the ground ready to start.

I beg that you will take such steps as may be necessary to immediately remove this difficulty so that the men may go to work without delay.

I have, &c.,
W. MASON.

Memo. of W. Mason.

Wednesday, 28 October, 1874.

MEN stopped by owners of land beyond Blayney; went and asked Mrs. Clements, Stinson, Marsh, and Burton, in presence of Dr. Flatau, if they refused to allow the men to work on their ground; they all refused to allow the men to work as they said they had received no notice from the Government about the land being taken by the Government for railway purposes; had to stop work in consequence.

W. MASON.

Mr. M. Mumford to Messrs. W. Mason & Co.

Gentlemen,

Vale Road, 2 November, 1874.

I beg to give you notice that in consequence of the Government of New South Wales not furnishing me with the required printed form for compensation, in order that I may lodge my claim for No. 13, as laid down on the survey map of the railway line from Bathurst to Orange, which is £1,200 (twelve hundred pounds) for damages sustained to my land on the Vale Road, that I will not permit you or your men to enter my premises, and that if you persist in so doing without this notice being furnished from the Government I shall summons you for trespass or any men you may have in your employ.

I have already lodged an objection, through Messrs. McIntosh, Pinnock, & Price, to your taking possession of my grounds for railway purposes, according to notice given in the *Government Gazette*, in consequence of no provision being made for egress and ingress to the public highway in front of my premises.

I am, &c.,
M. MUNFORD.

Mr. W. Mason to Mr. W. Wade.

Sir,

Bathurst, 6 Nov., 1874.

I have the honor to enclose you copy of letter I received from Mr. Mumford, stopping me from entering his ground for the purpose of excavating the cuttings.

I have, &c.,
W. MASON.

Mr. W. Mason to Mr. W. Wade.

Sir,

Bathurst, 12 Nov., 1874.

I have the honor to inform you that my men have been stopped from taking fencing timber in the line at Spring Hill.

They were stopped by a man named Seaton.

I have, &c.,
W. MASON.

Memo. made by me, Thursday, 12th November.

Saw M'Kenna at Bathurst; said he came to tell me he had been stopped at Spring Hill by a man named Seaton from putting his fencing timber on the ground. Wrote Mr. Wade, informing him.—W. MASON.

Mr. W. Mason to Mr. W. Wade.

Sir,

Bathurst, 18 Nov., 1874.

Enclosed is copy of notice I received yesterday from John Edwards, stopping me from entering his land.

I have, &c.,
W. MASON.

Mr. J. Edwards to Mr. E. Mason.

Sir,

"Bridge Inn," Vale Road, 18 Nov., 1874.

I hereby give you notice that I will not allow you to cut through my property till I have some satisfactory assurance or proof that the Government will fairly compensate me for shifting buildings, &c., and give me *just value* for the land you propose to cut in two.

I am, &c.,
JOHN EDWARDS.

Great Western Railway Extension, Bathurst to Orange.

Memorandum to W. Mason & Co.

Bathurst, 31 August, 1875.

In reply to your letter of August 21st, respecting straightening rails and boxing-up the road, the Engineer-in-Chief is of opinion that your prices are much too high; he is willing to allow 1s. 6d. per lin. yard. for boxing-up the road, and £25 per mile for straightening the rails.

W. B. WADE.

Sir,

19 October, 1875.

Referring to your memorandum of the 31st August last, we will undertake to do the boxing-up at the price therein offered, viz., 1s. 6d. per lineal yard—that is for all we can procure gravel for out of the bed; we have the tramway too at present and the two beds between Denny's foundry and the Macquarie Bridge, and if any broken stone is required for the boxing-up we will require 2s. per lineal yard for same.

The right to procure gravel from the two beds between Denny's foundry and the Railway Bridge free of charge, to be secured to us.

Regarding rail straightening, we are satisfied to accept the price offered to our Mr. Mason, verbally, by Mr. Whitton, viz., £30 per mile—that is for all rails in Bathurst at the present time.

We have, &c.,
MASON, ELKINGTON, & Co.,
per J. T. W.

Great Western Railway Extension, Bathurst to Orange.

Memorandum to W. Mason & Co.

Bathurst, 5 November, 1875.

THE Engineer-in-Chief will allow 1s. 6d. per lin. yard for boxing-up the line, and £30 per mile for straightening rails as previously offered, but he declines to accept any conditions or alternative arrangements as proposed in your letter of October 19th. Please inform me at your earliest convenience whether you accept or decline the above prices.

W. B. WADE.

Mason,

Mason, Elkington, & Co. to Mr. W. B. Wade.

Sir,

20 November, 1875.

We have the honor to acknowledge receipt of your memo. of the 5th instant, informing us that the Engineer-in-Chief will allow 1s. 6d. per lineal yard for boxing-up the line, and £30 per mile for straightening rails, which terms we accept. At your request we name prices for fixing iron gates at level crossings and supplying the ironbark posts in accordance with your drawing:

14 ft. gates.....	£6 10 0 each.
18 "	6 10 0 "
10 "	6 5 0 "
Small wicket gates	1 10 0 "

We have, &c.,

MASON, ELKINGTON, & Co.

Great Western Railway Extension, Bathurst to Orange.

Memorandum to W. Mason & Co.

Bathurst, 11 December, 1875.

THE Engineer-in-Chief has decided to have the gates for this line made according to the original specification and drawing.

W. B. WADE.

When I started first Wade told me not to make gates according to drawing supplied for this contract, as Mr. Whitton thought of putting up iron gates, and that a drawing would be sent up showing what was required, and I was then to give a price for fixing the iron gates (they finding gates); the drawing was not sent up until last October, when I gave price for fixing them; after waiting for some weeks I received this memo. from Wade, when at the eleventh hour I had to start and make gates.

W. MASON.

No. 3.

Minute of Engineer-in-Chief on Mason & Co.'s application.

Department of Public Works, Railway Branch,
Engineer's Office, Sydney, 21 August, 1876.

Subject—Progress of Works on W. Mason, jun., contract.

Great Western Railway, Bathurst to Orange—47 miles.

WITH reference to the application of Mr. Mason, jun., for an extension of time, I consider that he has in no way shown that he is entitled to it, beyond the fact that other contractors have had an extension granted to them.

He could have completed the works in the contract time had he considered it imperative to do so, but he no doubt was under the impression that if application were made for an extension as a matter of form it would be granted.

The contract time for the completion of the line to Orange expired on the 1st of the present month and not on the 31st December, as might be inferred on reading Mr. Mason's letter of the 1st instant.

See Mr. Wade's report herewith.

JOHN WHITTON.

Memorandum to Mr. Wade.

Government Railways, Engineer-in-Chief's Branch, 17 August, 1876.

A LETTER from Messrs. Wm. Mason and Co., with reference to the extension, Bathurst to Orange, is forwarded herewith for your report.

You will be good enough to make your report on a separate paper.

W. H. QUODLING.

Mr. W. B. Wade's Report on Messrs. Mason and Co.'s letter.

Great Western Railway Extension, Bathurst to Orange.

Contract No. 1.

PARAGRAPH No. 1.—The latter portion is certainly incorrect. For a long time the plant was insufficient and the delay in carrying out the brickwork is quite inexcusable.

Nos. 2 and 3. As far as I am aware the landowners' objecting were all beyond Blayney, and as the rails are now laid only 20 miles from Bathurst I do not see how this can have affected the progress. Any delay from this cause would arise from the earthwork not being ready for the permanent way. At the two cuttings, Nos. 46 and 63, when such delay has taken place no objection was made by landowners.

No. 4. At any time of the two years that the contract has been in hand there has been room for many more men than were employed if the contractor had supplied the necessary plant.

No. 5. I do not know what correspondence has passed on this matter, but it appears to me the only claim would be for cost of haulage from Kelso to Bathurst, not for loss of time.

Nos. 7 and 8. There are now about 13 miles boxed up, or very nearly finished. I think I am correct in stating that the whole of this boxing up has been done at times when the linking in was stopped from causes within the contractor's control. So far from this being a cause of delay it has enabled the contractor to keep men employed at times when he would otherwise have been obliged to discharge them. Any delay from this cause is yet in the future.

Nos. 9 and 10. I believe there has been great difficulty in procuring the skilled labour for such works as brickmaking, splitting timber, and all the branches of permanent way. The winter of 1875 was very unfavourable for work. The present winter was remarkably fine until about a month ago, since which time work has been nearly impossible.

No. 11. I am afraid there is now no chance of the line being completed to Blayney by the end of September.

I see nothing in the contractors' statement to entitle them to demand an extension as a matter of justice, and they have omitted what in my opinion has influenced their rate of progress more than any of the reasons they have adduced, that is, they have always (and more especially after extension of time was granted to contractors in the South and North) taken it for granted that an extension of time would be conceded whenever applied for.

W. B. WADE, 18/8/76.

No. 4.

No. 4.

Minute of The Secretary for Public Works.

In furtherance of decision of Cabinet I herewith forward this case for consideration of Crown Law officers.—J.L. Crown Solicitor.—C.A.G., pro Commissioner, B.C., 21/8/76.

No. 5.

The Crown Solicitor to Commissioner.

Sir,

Crown Solicitor's Office, Sydney, 1 September, 1876.

I have the honor to return herewith the paper relating to Messrs. Mason and Co.'s contract Railway Extension Bathurst to Orange, and to state that I have submitted the same to Mr. Attorney General, whose advising thereon I forward herewith. I have, &c.

JOHN WILLIAMS,
Crown Solicitor.

[Enclosure.]

OPINION OF THE HON. THE ATTORNEY GENERAL RE MASON AND COMPANY'S CONTRACT FOR RAILWAY FROM BATHURST TO ORANGE AND THEIR APPLICATION FOR EXTENSION OF TIME.

I HAVE carefully considered the papers forwarded from the Department of Public Works in connection with the Minute from the Engineer-in-Chief for Railways, of date 21st August, 1876. These papers have been forwarded in furtherance of the decision of the Cabinet that the whole matter should be submitted for my opinion. On equitable grounds I should have had little difficulty in advising my colleagues that the application of the contractors for extension of time should be favourably entertained. I think it is pretty clearly shown that the causes of delay specified in the second paragraph of the letter of the contractors, of date August 1st, really existed; and as these causes originated in the delay of the Government it appears to me that it will be very hard to make the contractors answerable for them, which would practically be the effect of excluding all such causes from consideration in determining such an application as this. It is not denied in the Report of the Engineer of the department in charge of this extension, that the assertion of the contractors, that after their preparations and the engagement of labour by them, they were prevented from going on certain lands on various points of the line in consequence of the Government not having arranged or settled with the owners, has some foundation in fact. And it is idle to attempt an explanation of this fact by any speculations on the part of the scientific officers as to whether this could or could not affect the progress of the work. The contractors allege that the immediate consequence of this delay was the loss of a considerable amount of labour which they could not employ, and that they were subjected to great expense and trouble in various ways. I think the contractors are also entitled to consideration by reason of the delay owing to the non-delivery of rails for the permanent-way at Bathurst. If, as they alleged, they were entitled to have those rails delivered to them free at Bathurst, and owing to the non-completion of the bridge over the river, the rails were only brought to Kelso; and if, as is affirmed, the contractors, anxious to avoid delay, took delivery at Kelso, and conveyed the rails at their own expense to Bathurst, this circumstance ought to be taken into consideration in any application of this kind. I am not quite certain whether the extra work specified in paragraph 7 of the contractor's application was of such a character as to increase the dimension of the works to be done under the contract, or to alter their situation or to vary the materials from any of them. If they were of this character the Engineer had power to direct their execution, and the alteration of the works in no way annulled the contract or extended the time for its completion (see sec. 5 of the General conditions appended to the Articles of Agreement between the contractors and the Commissioner for Railways).

If they were not of this character, and if their performance involved the employment of labour extending over several weeks or months, I think this is a strong ground for fairly considering a claim for extension. It appears from the Report of the Engineer of the line that on the 18th August about 13 miles of this work had been very nearly finished. It is admitted also that the winter of 1875 was very unfavourable for work, and I notice moreover that these contractors have not had any extension granted to them.

Under all the peculiar circumstances of this case, although I am unable to perceive that any strictly legal claim is made out for this extension, I think it is one supported by so many and such various equitable grounds that it would be extremely hard upon these contractors to discard the consideration of them altogether.

Crown Law Offices,
1 September, 1876.

W. B. DALLEY,
Attorney General.

No. 6.

Minute of The Secretary for Public Works.

Railway Contract, Bathurst to Orange.

THE Government have had under their consideration the letter of Messrs. Mason & Co., applying for an extension of time for the performance of their contract, and showing reasons why their application is entitled to favourable consideration. After taking the opinion of the Attorney General on the matter, as well as the report of the Railway Officer, and having given the case very careful consideration, the Government have come to the decision that the time may be extended to the 31st January, 1877; but they feel that they are bound to insist upon the payment of the penalties provided by the articles of agreement, and that such penalties date from the 1st of August last, that being the time at which their contract to Orange had to be completed.

J.L., 6/9/76.

No. 7.

Messrs. W. Mason & Co. to The Secretary for Public Works.

Sir,

Sydney, 6 September, 1876.

We have the honor to ask that, pending the drawing up of the necessary papers in our case, you will authorize the Engineer-in-Chief for Railways to pass our certificate on to the Treasury for payment. We are in urgent need of the money to repay our bankers for an advance of cash to-day for the purpose of paying the men engaged on this line.

We have, &c.,
W. MASON & Co.,
Contractors for Railway, Bathurst to Orange.

No. 8.

Minute of The Secretary for Public Works.

INFORM contractors of the decision of the Government.—J.R., 6/9/76.

On the contractors intimating their readiness to proceed with the works on those terms any certificates due may at once be paid, pending preparation of extension agreement, to facilitate the progress of the works. J.L., 6/9/76.

No. 9.

Commissioner to Messrs. W. Mason & Co.

Gentlemen, Department of Public Works, Railway Branch, Sydney, 6 September, 1876.

I have the honor to inform you that the Government have had under their consideration your letter of 1st ultimo, applying for an extension of time for the performance of your contract for the railway from Bathurst to Orange, and urging reasons why your application is, you consider, entitled to favourable consideration.

After taking the opinion of the Honorable the Attorney General on the matter, as well as the report of the railway officer, and having given the case very careful consideration, the Government have come to the decision that the time for the completion of your contract may be extended to the 31st January, 1877; but they feel that they are bound to insist upon the payment of the penalties provided by the articles of agreement from the 1st August last, that being the date on which the contract to Orange was to have been completed.

I have to refer you to the Crown Solicitor for the execution of the necessary extension agreement.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

P.S.—On your intimating to me, in writing, your intention to comply with these conditions authority will be given for the payment of certificates.—J.R.

No. 10.

Messrs. W. Mason & Co. to Commissioner.

Railway Extension, Bathurst to Orange.

Sir,

Sydney, 7 September, 1876.

We have the honor to acknowledge the receipt of your letter of 6th instant, in reply to our application for an extension of time in carrying out the railway contract, Bathurst to Orange, and note that the Government having carefully considered our claims have been pleased to grant us an extension of time till 31st January, 1877.

We regret to notice however that the Government feel bound to insist upon the payment of the penalties provided by the "Articles of Agreement from the 1st August last." This will come so very hard upon us that we most respectfully protest against its infliction at this juncture, as being undeserved and without precedent, and we pray for its reconsideration.

We are so situated that we must accept the terms stated in your letter but without prejudice to our rights of seeking a remission of penalties, should we be enabled to shew that we have grounds for the Government's consideration.

We will sign the necessary extension documents when prepared by the Crown Solicitor.

We have, &c.,

WILLIAM MASON & Co.

P.S.—We would ask you as a great favor not to deduct any penalty from our August certificate as we are urgently in need of the whole of the money to pay the workmen's wages earned during that month.—W. MASON & Co.

See decision on 76/6896 herewith, as this is a consent to proceed with works, any certificate due may be paid, the fines due up to the end of August to be deducted.—8/9/76. Mr. Whitton.—J.R., B.C. Voucher certified and fines for four weeks (£800) deducted.—W.H.Q., 8/9/76. Commissioner.—J.W., 13/9/76. Forwarded to Crown Solicitor for preparation of agreement for extension to 31st January, 1877; the penalty (£200 per week) is to be enforced from 1st August, 1876—the date of expiry of proper time for completion of contract.—C.A.G., *pro* Commissioner, Crown Solicitor, B.C., 14/9/76

No. 11.

Messrs. W. Mason & Co. to Commissioner.

Railway Extension No. 1—Bathurst to Orange.

Sir,

Sydney, 30 September, 1876.

We have the honor to direct your attention to our letter of 7th instant, in which we pray for the reconsideration of the clause in your letter of 6th, when imposing upon us a penalty of £200 per week for the non-completion of our contract to Orange before 1st August last.

This penalty is without precedent even in cases where a flagrant breach of contract has been made by contractors, and its imposition in our case is, we think, extremely harsh and undeserved, inasmuch as we are prevented at this moment from finishing the line into Blayney, owing to the backward and unfinished state of the stations, both at George's Plains and Blayney.

In addition to the works being impeded as above we have suffered great loss of credit by the extreme measures adopted by the Government towards us and we have great difficulty in paying the workmen's wages, owing to the deduction of £800 per month from our certificate in addition to the 10 per cent. detention money.

We

We have now respectfully to ask that you will solicit the favor of the Government in either remitting the monthly penalty or during its consideration by them you will make us an equivalent allowance off the £19,400 now held by the Department on account of this contract, in order to meet our engagements now falling due, and which will place us in a very unenviable position if not paid.

We have to impress upon you the urgency of our case.

We have, &c.,
WILLIAM MASON & Co.

No. 12.

Minute of The Secretary for Public Works.

THE decision in regard to enforcement of penalties must be adhered to. When, however, the line is opened to Blayney the contractors will fairly become entitled to receive a portion of the retention money, and I shall be prepared to authorize the payment to them of £5,000 on that account. J.L., 4/10/76.

Mason and Elkington informed.—5/10/76. Mr. Whitton to see.—C.A.G., *pro* Commissioner, 5/10/76. The non-completion of the stations at George's Plains and Blayney has nothing to do with Messrs. Mason & Co.'s contract, and it is absurd to say that the laying of the permanent-way has been delayed in consequence; the excuse is bad, and the contractors know it.—J.W., 20/10/76. Commissioner. Seen.—J.R., 25/10/76.

No. 13.

The Secretary for Railways to Messrs. W. Mason & Co.

Gentlemen, Department of Public Works, Railway Branch, Sydney, 5 October, 1876.

I have the honor to inform you that I have laid before the Honorable the Secretary of Public Works your letter of the 30th ultimo, representing the inconvenience to which you are put by the fines for the non-completion of your contract for the Great Northern Line within the prescribed time being deducted from your monthly certificates.

Mr. Secretary Lackey desires me to say that the decision in regard to the enforcement of the penalties must be adhered to. When, however, the line is opened to Blayney you will, he considers, fairly become entitled to receive a portion of the retention-money, and he will be prepared to authorize the payment to you of £5,000 on that account.

I have, &c.,
C. A. GOODCHAP,
Secretary for Railways.

No. 14.

The Crown Solicitor to Commissioner.

Sir, Crown Solicitor's Office, Sydney, 28 October, 1876.

In compliance with the instructions contained in your memo., B.C., 14/9/76, endorsed on letter of 7 September, 1876 (herewith), I have had prepared, and forward herewith, duly executed, the agreement as to extension of time for the completion of Messrs. H. Mason & Co.'s Contract No. 1 Extension, Bathurst to Orange, Great Western Railway.

The original contract and all other papers herein are returned herewith.
The official seal of the Commissioner should be affixed to the agreement in the usual manner.

I have, &c.,
JOHN WILLIAMS,
Crown Solicitor,
Per W. S. HARTE.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY EXTENSION.

(MESSAGE No. 41.)

Ordered by the Legislative Assembly to be printed, 9 July, 1877.

HERCULES ROBINSON,
Governor.

Message No. 41.

In accordance with the provisions contained in the 54th clause of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the propriety of making provision for the completion of the Railway Extension into Bathurst, and to complete the extensions from Bathurst to Orange, from Goulburn to Wagga Wagga, and from Murrurundi to Tamworth.

*Government House,
Sydney, 9th July, 1877.*

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY EXTENSION TO THE QUEENSLAND BORDER.

(PETITION IN FAVOUR OF—RESIDENTS OF ARMIDALE, TAMWORTH, WALCHA, BENDEMEER, URALLA, AND GLENNINES.)

Ordered by the Legislative Assembly to be printed, 20 June, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents of the Districts of Armidale, Tamworth, Walcha, Bendemeer, Uralla, and Glen Innes,—

HUMBLY SHOWETH:—

That your Petitioners, in view of the proposed extension of the Northern Railway to the District of Armidale, respectfully desire to point out to your Honorable House the route which seems to them the best, having regard to the equitable claims of the Northern Districts, as well as viewing such extension as a national undertaking. That an extension of the line from Tamworth, by Uralla, Armidale, and Glen Innes to Tenterfield and the Queensland Border, will, as your Petitioners believe, attain the object proposed in the first paragraph of this petition, for the following reasons, viz. :—

First—That such line will pass through the most populous and settled portions of the New England table-land, as shown by the comparative statement shown as under, viz. :—

POPULATION OF LAST CENSUS, 1871.							
Armidale	9,706
Glen Innes	2,648
							12,354
Deduct Inverell	2,366
							9,988
In favour of Armidale	9,988

Second—That it will bring within easy access to a Railway a larger number of towns than the proposed Railway lines of Barraba or other routes, as shown on a plan forwarded by your Petitioners to the Honorable Secretary for Works, from which it will appear that the Railway will run within 12 miles of Walcha, 20 miles of Bendemeer, through Uralla within 40 miles of Bundarra, through Armidale 40 miles of Inverell, through Glen Innes within 12 miles of Vegetable Creek and other tin mines in its vicinity, through Tenterfield and the proposed extension of the Southern Railway in Queensland to Stranthurpe.

Third—That the proposed line by Armidale will return a larger revenue immediately upon its construction than the line by Barraba to Inverell, will be apparent from the comparative statement shown as under, viz. :—

RETURN OF STOCK, 1875.

	Horses.	Cattle.	Sheep.	Pigs.
Armidale	11,679	117,249	796,579	3,277
Glen Innes	4,656	69,407	225,757	756
	16,335	186,656	1,022,336	4,033
Deduct Inverell	3,161	27,159	200,027	962
Balance in favour of Armidale	13,174	159,497	822,309	3,071

		GOLD, 1875.		£	s.	d.
Rocky River	1,178	0	0

Your Petitioners would also respectfully remind your Honorable House that the proposed Railway by Gunnedah to Walgett will amply open up the Western districts until branch lines are constructed, and that the proposed line, *via* Barraba, would run in close proximity to Gunnedah and Walgett line, as well as run through over sixty miles of barren country.

Your Petitioners therefore humbly pray that your Honorable House will take the premises into your favourable consideration, and grant such redress as in your wisdom may seem just.

And your Petitioners, as in duty bound, will ever pray, &c.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY EXTENSION INTO THE CITY OF SYDNEY.

(PETITION SIGNED BY JOHN MACINTOSH, AS CHAIRMAN OF A PUBLIC MEETING OF CITIZENS AND OTHERS.)

Ordered by the Legislative Assembly to be printed, 16 May, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Chairman of a Meeting of Citizens of Sydney, in public meeting assembled,—

HUMBLY SHOWETH:—

That the following Resolutions were unanimously passed, including a Petition to your Honorable House to be signed and presented:—

1st Resolution.—That this meeting is of opinion that the large population in and around Sydney, amounting to nearly one-third of the people in the Colony, has a just claim to greater railway facilities than are now enjoyed; and, believing that no part of the railway line yet opened will yield such profitable return for the outlay, or contribute so largely to the commercial, social, and sanitary well-being of the community as the extension of the railway through the City of Sydney to Circular Quay, resolves to urge upon Parliament the immediate prosecution of this much needed extension.

2nd Resolution.—That, in the opinion of this meeting, the slow and wasteful mode of conveying wool and produce from the Railway Station at Redfern to the Circular Quay, and of railway and other material from there to the Station, is a source of great national loss and public inconvenience, to remedy which the extension of the railway to the Circular Quay is imperatively demanded.

3rd Resolution.—That the Petition now read be adopted and signed for presentation to Parliament.

Petition as under:—

The Petition of the undersigned citizens and residents of Sydney and suburbs humbly showeth:—

“That, in the opinion of your Petitioners, the present railway accommodation is very inadequate to the growing requirements of our commerce and passenger traffic.

“And they respectfully request that the extension of the railway from Redfern to the Circular Quay may be undertaken.

“Your Petitioners therefore humbly pray that your Honorable House will be pleased to take such steps as may be deemed necessary.

“And your Petitioners, &c., &c.”

Your Petitioner therefore humbly prays that your Honorable House may take above premises into your favourable consideration, with a view to give effect to the same.

And your Petitioner, as in duty bound, will ever pray.

JOHN MACINTOSH,
Chairman.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY EXTENSION TO CIRCULAR QUAY.

(PETITION IN FAVOUR OF—RESIDENTS OF SYDNEY AND SUBURBS.)

Ordered by the Legislative Assembly to be printed, 13 June, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents of Sydney and suburbs,—

HUMBLY SHOWETH:—

That, in the opinion of your Petitioners, the present railway accommodation is very inadequate to the growing requirements of our commerce and passenger traffic.

They therefore respectfully request that the extension of the railway from Redfern to the Circular Quay may be undertaken.

Your Petitioners therefore humbly pray that your Honorable House will be pleased to take such steps as may be deemed necessary.

And your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY EXTENSION TO CIRCULAR QUAY.

(PETITION IN FAVOUR OF—RESIDENTS OF BURWOOD AND VICINITY.)

Ordered by the Legislative Assembly to be printed, 15 June, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents of Burwood and vicinity,—

HUMBLY SHOWETH:—

That, in the opinion of your Petitioners, the present railway accommodation is very inadequate to the growing requirements of our commerce and passenger traffic. They, therefore, respectfully request that the extension of the Railway from Redfern to the Circular Quay may be undertaken.

Your Petitioners, therefore, humbly pray that your Honorable House will be pleased to take such steps as may be deemed necessary; and your Petitioners, as in duty bound, will ever pray.

[Here follow 284 signatures.]

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY EXTENSION TO CIRCULAR QUAY.

(PETITION IN FAVOUR OF—RESIDENTS OF ASHFIELD AND VICINITY.)

Ordered by the Legislative Assembly to be printed, 18 June, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Residents of Ashfield and its vicinity,—

HUMBLY SHOWETH :—

That, in the opinion of your Petitioners, the present railway accommodation is very inadequate to the growing requirements of our commerce and passenger traffic. They, therefore, respectfully request that the extension of the Railway from Redfern to Circular Quay may be undertaken.

Your Petitioners, therefore, humbly pray that your Honorable House may be pleased to take such steps as may be deemed necessary ; and your Petitioners, as in duty bound, will ever pray.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY TRIAL SURVEYS.

(INSTRUCTIONS TO THE ENGINEER-IN-CHIEF, AND ALL PAPERS, LETTERS, MINUTES, AND REPORTS RESPECTING.)

Ordered by the Legislative Assembly to be printed, 1 May, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 16th January, 1877, That there be laid upon the Table of this House,—

“Copies of all Instructions given by the Government or the Secretary for Public Works to the Engineer-in-Chief for Railways or to any other person; also a copy of all Papers, Letters, Minutes and Reports having reference to Trial Surveys for Railways throughout the Colony, which have not already been laid upon the Table of this House; also a Report of the progress made and amount of money expended upon each line.”

(Mr. Nelson.)

SCHEDULE.

NO.	PAGE.
<i>General Reports.</i>	
1. Engineer-in-Chief to Commissioner, forwarding plans and sections of proposed railway extensions, to be laid upon the Table of the House. 7 June, 1876	5
2. Engineer for Trial Surveys to Engineer-in-Chief—arrangements for carrying on certain surveys. 21 August, 1876	5
3. Engineer-in-Chief to Commissioner—progress of trial surveys. 19 September, 1876	5
4. Engineer for Trial Surveys to Engineer-in-Chief—return of trial surveys completed in 1875 and 1876. 13 Dec. 1876	6
5. Engineer-in-Chief to Commissioner—report on trial surveys, Wallerawang to Mudgee, and Orange to Dubbo. 28 December, 1876	7
6. Engineer for Trial Surveys to Engineer-in-Chief—annual report on trial surveys for 1876	7
6A. Engineer-in-Chief to Commissioner—report on railway surveys. 1 March, 1877	9
<i>Juncce to Narrandera.</i>	
7. Mr. Francis to Engineer for Trial Surveys—difficulties of exploration and reporting nature of country. 29 May, 1876	10
8. Engineer for Trial Surveys to Mr. Mayes, urging promptitude in sending plan and section to head office. 6 September, 1876	11
9. Engineer for Trial Surveys to Mr. Francis—the like request. 6 September, 1876	11
10. Engineer for Trial Surveys to Mr. Francis—instructions to make further surveys of first 20 miles, with view to improving same. 15 September, 1876	11
11. Engineer for Trial Surveys to Mr. Francis, enclosing tracing showing centre line and B.M.'s from 284 miles to 286 miles. 25 September, 1876	11
12. Mr. Francis to Engineer for Trial Surveys—result of examination of country between G. S. Railway and the Malebo Range. 25 September, 1876	11
13. Mr. Francis to Engineer for Trial Surveys, informing that a licensed surveyor had measured a block of land across his proposed line. 28 September, 1876	12
14. Mr. Mayes to Engineer for Trial Surveys, pointing out error in County Map. 7 October, 1876	12
15. Mr. Francis to Engineer for Trial Surveys, reporting early completion of survey, and asking for instructions. 7 October, 1876	12
16. Engineer for Trial Surveys to Mr. Francis, supplying instructions asked for. 19 October, 1876	12
17. Mr. Francis to Engineer for Trial Surveys, transmitting 10 miles of second trial line. 21 October, 1876	13
18. Engineer for Trial Surveys to Mr. Francis—forwarding of plan of original trial survey. 24 October, 1876	13
19. Mr. Mayes to Engineer-in-Chief, forwarding section of length completed. 25 October, 1876	13
20. Engineer for Trial Surveys to Mr. Francis—instructions to survey a third trial line. 6 November, 1876	13

NO.	PAGE.
21. Engineer for Trial Surveys to Mr. Francis—mileage of this extension to be commenced as for a branch line. 6 December, 1876.....	13
22. Engineer for Trial Surveys to Mr. Francis, upon instructing Mr. Mason to assist him. 6 December, 1876.....	14
23. Engineer for Trial Surveys to Mr. Francis, requesting level books to be forwarded as work progressed. 12 December, 1876.....	14
24. Engineer for Trial Surveys to Mr. Francis, requesting tracing showing centre line of the permanently staked line. 5 January, 1877.....	14
25. Mr. C. T. Mason to Engineer for Trial Surveys, reporting amount of work done. 10 January, 1877.....	14
26. Engineer for Trial Surveys to Mr. Francis—instructions to let the lockspitting. 20 January, 1877.....	14
27. Mr. Mayes to Engineer for Trial Surveys, forwarding plan and remarks thereon. 27 January, 1877.....	14
28. Engineer for Trial Surveys to Mr. Francis, requesting more complete reference. 30 January, 1877.....	15
28A. Mr. Mayes to Engineer for Trial Surveys—explanation of plan. 6 February, 1877.....	15
28B. Engineer for Trial Surveys to Mr. Francis, asking when plan and section will be completed. 21 August, 1876.....	15
28C. Engineer for Trial Surveys to Mr. Mayes, asking same information. 21 August, 1876.....	15
28D. Engineer for Trial Surveys to Mr. Mayes—instructions to plot the alteration on original plan, and to forward plan and section early. 17 January, 1877.....	15
28E. Mr. Francis to Engineer for Trial Surveys—Mr. Pettiford's tender for lockspitting. 4 February, 1877.....	15
28F. Mr. Francis to Engineer for Trial Surveys—that he had informed Mr. Pettiford his tender had been accepted. 12 February, 1877.....	16

Orange to Dubbo.

29. Mr. Wade to Engineer-in-Chief—route suggested by Mr. Lord. 28 January, 1876.....	16
30. Mr. Cowdery to Engineer-in-Chief—report thereon. 4 February, 1876.....	16
31. Mr. Cowdery to Engineer-in-Chief—further report thereon. 6 June, 1876.....	16
32. Engineer for Trial Surveys to Mr. Wade, requesting return of section. 9 June, 1876.....	17
33. Mr. Cowdery to Engineer-in-Chief—progress report. 29 June, 1876.....	17
34. Engineer for Trial Surveys to Mr. Wade, forwarding tracing of survey, Orange to Wellington, to serve as field plan. 31 August, 1876.....	17
35. Mr. Cowdery to Engineer-in-Chief—progress report. 6 September, 1876.....	17
36. Engineer for Trial Surveys to Mr. Wade, requesting level books to be forwarded. 18 September, 1876.....	17
37. Mr. Wade to Engineer-in-Chief—progress report. 18 October, 1876.....	17
38. Mr. Cowdery to Engineer-in-Chief—progress report. 31 October, 1876.....	18
39. Engineer for Trial Surveys to Mr. Wade, forwarding tracing of a bridge at Wellington. 10 November, 1876.....	18
40. Mr. Wade to Engineer-in-Chief—progress report. 17 November, 1876.....	18
41. Chief Clerk to Mr. Wade, requesting separate reports of trial surveys. 18 November, 1876.....	18
42. Mr. Cowdery to Engineer-in-Chief—progress report. 5 December, 1876.....	18
43. Mr. Wade to Engineer-in-Chief—progress report. 6 December, 1876.....	18
44. Mr. Wade to Engineer-in-Chief—progress report. 26 December, 1876.....	18
45. Mr. Wade to Engineer-in-Chief—progress report. 31 December, 1876.....	19
45A. Mr. Wade to Engineer for Trial Surveys, forwarding plan of part 1 and tracing of deviation near Ironbarks, approved by Engineer-in-Chief. 21 January, 1877.....	19
45B. Mr. Palmer to Mr. Hardy—instructions to plot certain cross sections. 23 February, 1877.....	19
45C. Engineer for Trial Surveys to Mr. Cowdery, forwarding a tracing of Wellington and of 4 miles of trial line. 16 June, 1876.....	19
45D. Engineer for Trial Surveys to Mr. Wade, forwarding tracing of the through section, <i>via</i> Ironbarks. 6 September, 1876.....	20
45E. Engineer for Trial Surveys to Mr. Wade, forwarding tracing of portion of trial survey <i>via</i> Molong. 12 December, 1876.....	20
45F. Engineer for Trial Surveys to Mr. Wade, requesting that working plan and section be forwarded early. 19 January, 1877.....	20
45G. Engineer for Trial Surveys to Mr. Wade, forwarding tracing of the deviation to be made at Ironbarks. 29 January, 1877.....	20
45H. Engineer-in-Chief to Mr. Wade—instructions to have reference taken with all possible speed. 24 February, 1877.....	20
45I. Engineer for Trial Surveys to Mr. Cowdery, forwarding tracing of plan of Molong. 31 March, 1876.....	20

Orange to Wilcannia.

46. Resolution of Assembly respecting this line. 27 June, 1876.....	20
47. Engineer-in-Chief to Commissioner—extract from general report. 19 September, 1876.....	21
48. Mr. Fitzgerald to Engineer for Trial Surveys—progress report. 30 September, 1876.....	21
49. Mr. Townsend to Engineer-in-Chief—progress report. 2 October, 1876.....	21
50. Mr. Wade to Engineer-in-Chief—report on country from Orange to Boree Creek. 18 October, 1876.....	21
51. Mr. Fitzgerald to Engineer for Trial Surveys; 18 October, 1876. Progress report; 31 October, 1876.....	21
52. Mr. Townsend to Mr. Wade—progress report. 2 November, 1876.....	22
53. Engineer-in-Chief to Mr. Wade—instructions to explore country between Molong and Parkes. 8 November, 1876.....	22
54. Mr. Wade to Engineer-in-Chief—report on country between Orange and Parkes. 16 November, 1876.....	22
54A. Mr. Wade to Engineer-in-Chief—progress report. 17 November, 1876.....	23
54B. Mr. Townsend to Mr. Wade—progress report. 1 December, 1876.....	23
54C. Mr. Wade to Engineer-in-Chief—report on five practicable routes. 3 December, 1876.....	23
54D. Mr. Wade to Engineer-in-Chief—progress report. 6 December, 1876.....	24
54E. Mr. Wade to Engineer-in-Chief—annual report. 31 December, 1876.....	24
54F. Mr. Townsend to Mr. Wade—progress report. 2 January, 1877.....	24
54G. Mr. Townsend to Mr. Wade—progress report. 1 March, 1877.....	24

Wallerawang to Mudgee.

55. Engineer for Trial Surveys to Mr. Kennedy—instructions to take up a length on the Rylstone route. 8 March, 1876.....	25
56. Engineer for Trial Surveys to Mr. Jamieson—instructions to assist Mr. Kennedy, and then work to meet Mr. Townsend. 8 March, 1876.....	25
57. Engineer for Trial Surveys to Mr. Hardy—instructions to accompany Mr. Jamieson and assist him. 8 March, 1876.....	25
58. Engineer for Trial Surveys to Mr. Townsend—observations upon B.M. 161. 3 April, 1876.....	25
59. Engineer for Trial Surveys to Mr. Townsend—instructions to show on plan where shortening the radii of curves would materially lessen the earthwork quantities. 3 May, 1876.....	25
60. Engineer for Trial Surveys to Mr. Townsend, requiring plan and section of present line before surveying line towards Ilford. 8 May, 1876.....	25
61. Mr. Townsend to Engineer for Trial Surveys, reporting progress, and remarking upon timber, &c., adjacent to line. 31 May, 1876.....	26
62. Mr. Kennedy to Engineer-in-Chief—progress report. 31 May, 1876.....	26
63. Engineer for Trial Surveys to Mr. Kennedy—instructions to assist Mr. Townsend. 22 June, 1876.....	26
64. Engineer for Trial Surveys to Mr. Kennedy, repeating same instructions. 26 June, 1876.....	26
65. Engineer for Trial Surveys to Mr. Jamieson—instructions to return to office. 28 June, 1876.....	26
66. Engineer for Trial Surveys to Mr. Townsend—instructions to return to office. 1 July, 1876.....	26
67. Engineer for Trial Surveys to Mr. Kennedy—instructions as to staking line. 1 July, 1876.....	26
68. Engineer for Trial Surveys to Mr. Hardy—instructions to return to office. 1 July, 1876.....	27
69. Mr. Kennedy to Engineer for Trial Surveys—statement of progress made by Mr. Townsend. 2 July, 1876.....	27

NO.	PAGE.
69A. Mr. Townsend to Engineer-in-Chief—that he had re-staked 2 miles in preference to showing cross sections. 3 July, 1876	27
70. Engineer for Trial Surveys to Mr. Kennedy—instructions to return to office. 4 July, 1876	27
71. Engineer for Trial Surveys to Mr. Townsend—instructions to return to office. 4 July, 1876	27
72. Engineer for Trial Surveys to Mr. Jamieson—instructions as to dismissal of chainmen. 6 July, 1876	27
73. Mr. Nardin to Mr. Jamieson—report on scarcity of timber. 12 July, 1876	28
74. Mr. Jamieson to Engineer for Trial Surveys, giving particulars of route of trial line. 13 July, 1876	28
75. Engineer for Trial Surveys to Mr. Kennedy, forwarding tracing of Wallerawang Station and remarks thereon. 2 September, 1876	28
76. Engineer for Trial Surveys to Mr. Kennedy, forwarding tracing showing the B.M.'s at Wallerawang Station, and instructions to check levels thereby. 12 September, 1876	28

RAILWAY TRIAL SURVEYS.

No. 1.

Engineer-in-Chief to Commissioner.

7 June, 1876.

PLANS and Sections of proposed Railway Extensions to be laid upon the Table of the House of Assembly.

The undermentioned plans and sections of proposed Railway extensions are forwarded herewith, to be laid upon the Table of the House of Assembly as exhibits only, viz. :—

G.S.R.—Wagga Wagga to Albury. Parliamentary plan and section.

G.N.R.—Werris Creek to Gunnedah. Plan and section. Trial survey.

G.W.R.—Orange to Wellington and Dubbo. Plans only.

JOHN WHITTON.

No. 2.

Engineer for Trial Surveys to Engineer-in-Chief.

Sir,

21 August, 1876.

In accordance with your verbal instructions, I am making arrangements for carrying out the following surveys :—

Permanent staking.

Orange to Dubbo, *via* Ironbarks and Wellington.

Werris Creek to Gunnedah.

Tamworth to District of Armidale.

Junee to Narrandera.

Trial surveys.

Improving original trial survey, Wallerawang to Mudgee, *via* Rylstone.

Continuation of present trial survey, Tamworth to Armidale, to join line surveyed from Tamworth to Tenterfield *via* Inverell.

Orange to Wilcannia, via Parkes.

On the above surveys I propose to distribute the present staff of surveyors and three additional surveyors who have applied for work in this department, in the following order :—

Permanent staking.

Orange to Dubbo: Messrs. Cowdery, Hardy, and Gowan.

Werris Creek to Gunnedah: Messrs. Mountain and Carver.

Tamworth to District of Armidale: Mr. Hotson.

Junee to Narrandera: Messrs. Francis and Mayes (on completion of the trial survey they are now making).

Trial surveys.

Wallerawang to Mudgee: Messrs. Jamieson and Kennedy.

Armidale, towards Glen Innes: Messrs. Vine, Herbert, and Hoyle.

Orange to Wilcannia: Messrs. Townsend and Fitzgerald.

To carry out these arrangements, I have to request that you will recommend the appointment of Messrs. Gowan, Hotson, and Hoyle, if such appointments meet with your approval.

J.W., 12/9/76.

I have, &c.,

HERBERT PALMER.

No. 3.

Engineer-in-Chief to Commissioner.

RAILWAY SURVEYS—SOUTHERN.

Junee to Narrandera.

A TRIAL survey of this extension was commenced in June, 1876, and has been completed within the last few days. The junction with the main line is at a point 286 miles distant from Sydney, at the crossing of the road from Junee to Wantabadgery.

The two surveyors employed on this trial survey are now making an amended survey of the first 15 miles of the original line. The section of this portion is not satisfactory, and it is probable that, to make any considerable improvement, a junction with the main line must be made a few miles to the north of the one already described. On the completion of this amended survey, the permanent staking for contract of this extension will be immediately proceeded with.

WESTERN.

Orange to Dubbo.

Trial surveys from Orange to Wellington *via* Ironbarks and *via* Molong, and from Wellington to Dubbo, have been completed. During the last two months one surveyor has been employed in making amended surveys of portions of the original survey on the Ironbarks route, and three more surveyors were

were last week sent to Orange for the purpose of permanently staking this route, and on its completion they are to proceed with the staking as far as Dubbo. Estimates from trial survey have been prepared of the sections *via* Ironbarks and *via* Molong, and further estimates will be made when the Ironbarks line has been staked.

Orange towards Wilcannia.

Two surveyors have been sent to Orange to commence a trial survey from the neighbourhood of Orange towards Wilcannia. It is proposed to make a junction with the main line at Orange, and to proceed thence in a westerly direction between the townships of Parkes and Forbes towards Condobolin.

The ultimate direction of this survey from the point where the line will leave the Lachlan cannot be decided upon until the trial survey of the first 150 miles has been made.

Wallerawang to Mudgee.

Trial surveys, as already described, have been made between Wallerawang and Mudgee, both in the direction of the main road by Cherry-tree Hill, Aaron's Pass, Bocoble Mountain, and Queen's Pinch, into Mudgee, and also *via* Rylstone, to a point opposite to Mudgee, on the north side of the river Cudgegong. Two surveyors have since been sent to make amended surveys of the heaviest portions of the Rylstone route, and I anticipate being able to show considerable improvement in this section when these amended surveys are completed.

NORTHERN.

Werris Creek to Gunnedah.

Plans and sections of this trial survey have been completed, and two surveyors are now permanently staking the line for contract. The section throughout is very light, and the few alterations requiring to be made before permanently fixing the direction of the line will be made as the staking is advanced.

Tamworth to District of Armidale.

Trial surveys have been completed from Tamworth, *via* Manilla, Barraba, Inverell, and Wellinggrove, to Tenterfield; also from Tamworth *via* Moonbi to Armidale. Trial surveys are now being commenced from Armidale northwards, with a view of joining the line already surveyed to Tenterfield.

Mr. Palmer will visit this district next week, after which I shall be better able to report as to the direction the surveyed line will take beyond Armidale.

TRIAL SURVEYS.

Wallerawang to Mudgee.

TRIAL surveys have been made from Wallerawang, *via* Piper's Flat, Crown Ridge, Cherry-tree Hill, Ilford, Aaron's Pass, Bocoble, Queen's Pinch, to Mudgee, and from a point near Round Swamp to Rylstone, and thence to a point opposite to Mudgee, on the north side of the river Cudgegong.

There are heavy works on both routes; the line *via* Rylstone is now being thoroughly worked up, and in the course of two months I hope to be able to furnish a section of the best line procurable.

The line as surveyed *via* Ilford has the advantage of passing through the town of Mudgee, while the Rylstone line terminates about a mile from the town and on the opposite side of the river.

The distance *via* Ilford from Wallerawang to Mudgee is $82\frac{1}{2}$ miles, and *via* Rylstone the distance is $84\frac{1}{2}$ miles.

Orange to Dubbo.

Trial surveys have been made from Orange to Wellington, *via* Ironbarks and *via* Molong, and from Wellington the survey has been continued to Dubbo.

The Molong route is $8\frac{1}{2}$ miles longer than that by Ironbarks, and the works, gradients, &c., average about the same per mile by either route. The shorter line (*via* Ironbarks) is now being permanently staked, and the section *via* Molong is being worked up in the office to the same scale as the working sections, in order that a comparative estimate between the two routes can be made if required.

The lengths of these surveys are as under:—

	Miles.	Miles.
Orange to Wellington <i>via</i> Ironbarks	55	...
Orange to Wellington <i>via</i> Molong	$63\frac{1}{2}$
Wellington to Dubbo	30	30
Orange to Dubbo <i>via</i> Ironbarks and Wellington	85	...
Orange to Dubbo <i>via</i> Molong and Wellington...	$93\frac{1}{2}$

J.W., 28/12/76.

No. 6.

Engineer for Trial Surveys to Engineer-in-Chief.

Sir,

TRIAL SURVEYS.

I have the honor to submit the following Report on the Railway Trial Surveys completed during the year 1876:—

GREAT SOUTHERN RAILWAY.

Junee to Narrandera.

This trial survey was commenced in June, and the survey, plan, and section of a through line to Narrandera, 64 miles in length, leaving the Great Southern Railway at a point $286\frac{1}{2}$ miles from Sydney, was completed in September; other trial surveys were then made at the Junee end, and improvements made in the original trial line, so that the final staking might be proceeded with. I visited this district in November, and after examining the different lines gave instructions for the permanent staking to be commenced. Three surveyors are now employed on this work, two on the staking and one making alterations on the trial line in advance of the staking.

In a few weeks time the sections of these alterations will be completed, and the Parliamentary plan, section and book of reference will then be immediately proceeded with. The length of this branch line will be about 62 miles.

GREAT WESTERN RAILWAY.

Orange to Dubbo.

A trial survey from Orange through Molong to Wellington was completed in June. Sections of the two routes *via* Ironbarks and *via* Molong were then worked up, and comparative estimates made. It was then decided that the trial line on the Ironbarks route should be again taken up with a view of making all the improvements possible before this extension was finally staked. The permanent staking was commenced in September, and is still in hand. A Parliamentary plan, section, and book of reference from Orange to Dubbo, taking the Ironbarks route between Orange and Wellington, is also being proceeded with.

Orange to Wilcannia.

Trial surveys are now being made between Orange and Parkes, and these will be extended to Wilcannia as circumstances permit.

Wallerawang to Mudgee.

At the commencement of the year four surveyors were employed on this trial survey, and the through surveys of the two routes (described in my Report for 1875) were completed in July.

It was then found that although the works on the Rylstone route were extremely heavy, still this route presented on the whole less difficulties than that *via* Cherry-tree Hill and Queen's Pinch. The Queen's Pinch route terminates in the town of Mudgee, passing at the rear of the newly-erected hospital, while the Rylstone route terminates on the northern side of the river Cudgegong, about a mile distant from the post and telegraph offices.

A trial line was also surveyed to connect these two routes, leaving the Rylstone line near the Broombie Gap, passing through this Gap, thence across the river Cudgegong through Mr. Charles Cox's estate, and parallel to the Sydney Road, to a junction with the Queen's Pinch line.

Two

Two surveyors returned to this district at the end of August, one taking up the length from Wallerawang to Capertee Camp, and the other the length from Capertee Camp to Rylstone.

They are still making improvements on the original trial lines, and thoroughly working up these lengths, and in about two months time I hope to be able to furnish the best section that can be obtained through this difficult country; and on the completion of these trial surveys, the permanent staking, if required, could be rapidly proceeded with before the surveyors leave the neighbourhood. I have lately visited this district, and was much pleased with the thoroughly efficient manner in which the surveyors (Messrs. Jamieson and Kennedy) are carrying out this work.

GREAT NORTHERN RAILWAY.

Tamworth to Armidale, Glen Innes, and Wellington Vale.

Plans and sections of a through trial survey from Tamworth to Inverell, and thence to Tenterfield, were completed in October, 1875. It was then determined that trial surveys should be made from Tamworth to Tenterfield by way of Armidale, and from that date to the present time these surveys have been in hand. The length from Tamworth, *via* Jamieson's Creek, Surveyors Creek, Congi, and Gostwyck, to Armidale, was completed in May. A trial line was then surveyed from a point on the first trial line (not far from the head of Surveyors Creek) to Uralla, and thence to Armidale.

The survey of this line is now being continued from Armidale, *via* Puddledock, to the table-land at the summit of the Devil's Pinch; thence by the Mother of Ducks Lagoon to Ben Lomond and Glen Innes, and from there to a point on the Inverell and Tenterfield survey, about 5 miles north of the Wellington Vale Station and 36 miles to the south of Tenterfield.

Another survey is also being made from Uralla to join the line from Armidale to Glen Innes, at a point near the Mother of Ducks Lagoon. This line passes about 6 miles to the west of the town of Armidale, and will, I think, prove the most favourable ascent to the high table-land between the Devil's Pinch and Ben Lomond. I expect the whole of these surveys to be completed in March.

Diagram, plans, and sections are now being made from Tamworth northwards, and a comparison can soon be made between the two routes *via* Inverell and *via* Armidale.

Werris Creek to Gunnedah.

Various alterations and improvements on this trial survey were in hand up to June, and the permanent staking of this extension was commenced in September.

At Gunnedah there are three trial lines surveyed, one passing through the town, one terminating about 3 miles to the south-west of the town, and heading direct for Narrabri, and a third line connecting this back line with the town line, at a point about a mile to the westward of the centre of the town.

It has now to be decided which of these three routes is to be selected and permanently staked. The back line would be about 3 miles shorter than the town line in the event of an extension to Narrabri, and about 2 miles shorter than the connecting line.

With the exception of a few cuttings at the Werris Creek Gap, the works throughout will be extremely light.

There has been much delay in the permanent staking of this extension, owing chiefly to the excessive heat and want of water, both serious drawbacks to surveying on the Plains.

The worst portion is, however, completed, and I hope to have the contract plans and sections finished in about two months.

Iluka to Woodburn.

This trial survey, commenced at the end of 1875, was completed in February, 1876. The surveyed line is 24 miles in length, and the section throughout is an easy one—the highest point attained where the line crosses the ridge dividing the waters of the Clarence and Richmond Rivers is only 47 feet above high-water-mark.

Sydney towards Newcastle.

I visited the Hawkesbury in January, and examined the river from Broken Bay to its junction with the Colo, with a view of selecting a favourable crossing for the proposed line of railway from Sydney to Newcastle. After this a trial survey was made, leaving the Great Western Railway near the town of Parramatta; thence following the main direction of the road to Wiseman's Ferry to the head of Dalgetty's Creek, a descent of 650 feet is made to the Hawkesbury by following this creek downwards, and the river is crossed about 5 miles below Wiseman's Ferry. The course of the river is then followed upwards on the northern bank to the confluence of Myrtle Creek, and an ascent of 700 feet is then made by following a branch of this creek to its head. At this point the trial survey was discontinued, as there were other and more important surveys urgently required, and the surveyors employed were in consequence withdrawn. The crossing of the Hawkesbury would entail a very large expenditure. At the point where I should propose to cross, the bridge required, including approaches, must be half a mile in length, the main channel of the river being 15 chains in width, and in times of heavy flood nearly 100 feet in depth. The section generally, as far as the survey extends, shows works of the heaviest description, with long and steep inclines. In a length of 9 miles there are eight tunnels—three on the southern, and five on the northern side of the Hawkesbury, amounting in the aggregate to $1\frac{1}{2}$ mile in length, while the earthwork quantities for the length surveyed (42 miles) amount to 1,370,000 cubic yards.

Wollongong to Kiama.

At the date of my last report trial surveys in different directions had been completed between Sydney and Wollongong. One surveyor then remained in this district, and was employed until June in making trial surveys from Wollongong to Kiama.

Several lines were surveyed, one *via* the coast in continuation of the Sydney and Wollongong line, crossing the entrance to the Illawarra Lake, and thence to Shellharbour and Kiama.

Another line left the trial line from Campbelltown to Wollongong, at a point about 2 miles to the north of the latter town, and passing through Fig-tree and Dapto, skirted the western side of the Illawarra Lake, and joined the first line at a point between Shellharbour and Kiama.

Another line was also surveyed, leaving the Sydney and Wollongong line at its terminal point, and joining the last-described line between Fig-tree and Dapto.

CLARENCE AND NEW ENGLAND.

Lawrence to Tenterfield.

The trial surveys in this district were nearly completed at the end of 1875; the last of the surveys was completed in March, 1876, and the surveyors were then withdrawn from the district. The whole of the plans and sections of the different trial lines have since been completed, and quantities taken out. A diagram section has also been prepared, which shows the whole of the lines surveyed on one sheet, and I intend to prepare a diagram plan to accompany the section.

Mileage of surveys.

Appended is a statement of the number of miles of lines permanently staked, and of the trial surveys made during the year 1876.

N.B.—The mileage returned is that of the plans and sections of lines staked out, and on which quantities, &c., have been worked out, and does not include abandoned trial lines, rough traverses, &c., which in many districts are necessary before a final trial line is selected.

No. 6A.

Engineer-in-Chief to Commissioner.

REPORT ON RAILWAY SURVEYS.—1st MARCH, 1877.

GREAT SOUTHERN RAILWAY.

Wagga Wagga to Albury.

Working plans and sections of the Extension from the end of Contract No. 3, near to Wagga Wagga, to Albury, a distance of 82 miles, were completed in September, 1875. The plans are also ready to lay before the Assembly.

Tenders might be invited for the construction of this length in one month from this date.

Hanging Rock to Deniliquin.

Parliamentary plans and sections of the Extension from Hanging Rock, on the Albury line, to Deniliquin, passing through Urana and Jerilderie, a distance of 125 miles, were completed in September, 1875, and are ready to lay before the Assembly.

Junee to Narrandera—62 miles.

Plans, sections, and book of reference of this length will be ready to lay before the Assembly in about ten days. The working plans and sections will be completed ready to invite tenders in about three months.

GREAT WESTERN RAILWAY.

Orange to Wellington and Dubbo.

Trial surveys and sections beyond Orange, *via* Ironbarks, to Wellington, Dubbo, and Narramine, were completed in October, 1875, a distance of 104 miles.

Trial surveys and sections from Orange to Wellington, *via* Molong, were completed about July, 1876.

The permanent staking of the Western line from Orange to Wellington and Dubbo, by Ironbarks, was commenced in September, 1876, and 30 miles are now completed.

Parliamentary plans, sections, &c., of the line by Ironbarks, and also by Molong, will be ready to lay upon the Table of the Assembly in about a fortnight from the present date.

Orange to Wilcannia.

Trial surveys were commenced in September, 1876, from Orange to Wilcannia, by Parkes, and on the 31st December 42 miles had been levelled.

Wallerawang to Mudgee.

The first trial surveys of the line from Wallerawang to Mudgee, 85 miles, were commenced in October, 1875, and finished in July, 1876. Additional trial surveys were continued in August, 1876, by Rylstone, and these are nearly completed.

The Parliamentary plans and sections are being prepared, and will be ready to lay before the Assembly about the end of April next.

GREAT NORTHERN RAILWAY.

Tamworth to Tenterfield.

Trial plans and sections from Tamworth through Manilla, Barraba, Inverell, to Tenterfield, were commenced in January, 1874, and completed in October, 1875, being a distance of 222 miles.

Tamworth to Armidale.

Trial surveys from Tamworth direct to Armidale were commenced in October, 1875, and completed to Armidale in May, 1876. A deviation from this line, commencing at the head of Surveyors Creek, has since been surveyed through Uralla, joining the former line near to Armidale, which has been continued to Glen Innes, joining the Inverell and Tenterfield survey near Wellington Vale, about 36 miles south of Tenterfield.

Another line commencing from the first deviation near to Uralla is being surveyed, passing about 8 miles to the west of Armidale, and joins the through trial survey between Armidale and Glen Innes, about 25 miles north of Armidale.

The whole of these surveys will be completed in about two months.

As these routes are entirely distinct, it will be desirable for the Assembly to determine which route shall be adopted, so as to save the time and expense of preparing plans for both routes, as each through line is about 220 miles in length.

Werris Creek to Gunnedah—42 miles.

The trial survey of this line was commenced in July, 1875, and completed in January, 1876.

This line has since been staked out, and the working section prepared.

Parliamentary plans will be ready to lay before the Assembly in about a fortnight.

Tenders might be invited for this length in about two months.

JOHN WHITTON.

NEW SOUTH WALES RAILWAYS.

<i>Number of Miles of Sections for which Tenders may be called in May, 1877.</i>				<i>Number of Miles of Trial Surveys which will be completed in April, the routes of which are to be approved before final surveys are made for Parliamentary Plans and Sections.</i>

No. 7.

Mr. Francis to Engineer for Trial Surveys.

Sir,

Junee, 29 May, 1876.

I have delayed reporting on the route from Junee to Narrandera up to the present time, in expectation of rain, which would enable me to examine the country more thoroughly than I have been able to do.

The country is destitute of grass, and there is no water, except such as is to be found in tanks, which are not easily found by one unacquainted with the country.

Owing to these drawbacks, I have only been able to give the country a very hasty and partial examination. The large areas of country which are enclosed by wire fencing also make it difficult to travel on or near the direct route. The country is not so easy as I expected to find it, and it will be necessary

11

necessary to deviate from the direct route in order to obtain a practicable line. The difficulties begin at the starting point, which is in a valley bounded on the west side by a pretty steep range.

There is a low place in this range over which the line may be carried, but there will be heavy cuttings and steep gradients. (A better starting point might, I think, be found about a mile back on the line.) After crossing this range, the country undulates for about 15 miles, when another range is reached, and a short distance beyond that again rises the Malebo Range.

This range seems to offer a rather formidable obstruction, but there is a low place in it about a mile south of the direct line, over which I think the line may be carried. I purpose examining this range more thoroughly from my next camp, which will be at an easy distance from it.

The direct line as marked on the map is shaping a little to the south of a high point on the Malebo range, called the Pinnacle.

The country between the Malebo Range and Narrandera is undulating, and there is very little even ground on the route, except about Narrandera. The most difficult country is, however, on the first 30 miles from Junee, and it will not be necessary to deviate much from the route marked by you on the map at the Narrandera end.

I have, &c.,

A. FRANCIS.

H.P.—2/6/76.

No. 8.

Engineer for Trial Surveys to Mr. Mayes.

Mr. Mayes, "Belmore Inn," Deepwater, Wagga Wagga,

6 September, 1876.

On the completion of your plan and section of the length you are now surveying, I wish you to send them to this office *without delay by post*, as I must see these documents before I can send you further instructions, which I will do by telegraph to Wagga Wagga.

HERBERT PALMER.

No. 9.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis, Wagga Wagga,

6 September, 1876.

On the completion of the plan and section of the length you are now surveying, I wish you to send them to this office *without delay by post*.

I will send you further instructions by telegraph to Wagga Wagga as soon as I have seen them.

HERBERT PALMER.

No. 10.

Engineer for Trial Surveys to Mr. Francis.

15 September, 1876.

I have received the plan and section of your surveyed line from Junee towards Narrandera.

Before anything is done in the way of permanently staking this extension, the Engineer-in-Chief requires further surveys to be made with a view of improving the first 20 miles of the section, and I wish you now to examine the ground thoroughly both to the north and south of your present junction with the Southern Railway, and endeavour to survey a more favourable line. When you have made this examination of the country, I should like you to report to me as to the point at which you will leave the main line, and also the point where you will contemplate joining the original trial survey, as I wish to employ Mr. Mayes also on this amended survey.

HERBERT PALMER.

No. 11.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis, Junee,

25 September, 1876.

Enclosed I forward a tracing from the working plan of the Southern Railway, showing the centre line and B.M.'s from 284 miles to 286 miles.

I have instructed Mr. Mayes to proceed to Junee to assist you in making the second trial survey from Junee. You will be good enough to arrange the work so that it may be carried out as expeditiously as possible.

HERBERT PALMER.

No. 12.

Mr. Francis to Engineer for Trial Surveys.

Sir,

Junee, 25 September, 1876.

In accordance with your instructions of the 15th inst., I have completed the examination of the country between the Great Southern Railway and the Malebo range, with the view of improving the first 20 miles of the survey between Junee and Narrandera, and am of opinion that the best line, both for direction and section, is to be obtained by starting from the commencement of the curve at the 285 miles on the Great Southern Railway.

As with the first trial line there is a difficulty at starting, the same range having to be crossed, but there is a favourable opening in the range opposite the 285 miles, which will I think afford a very fair line with a short 20 or 25 feet cutting. After clearing this range the line will run west for about 7 miles over very even country. Crossing the Junee and Wagga Road close by the southern end of the township of

of Junee, there will then be a low range to cross, which intersects the route at right angles, and cannot be avoided. Having passed this range, the country is even until the Pinnacle Range is reached. I have succeeded in finding a low place in this range over which I think the line may be carried with a short cutting of about 15 or 20 feet. After the Pinnacle Range is crossed the line will run over favourable country in a westerly direction, and close on or about the 19 miles on the first trial lines, cutting out the crooked work by Cox's Woolshed. The amended line will be more direct, and consequently shorter than the first line by a mile at least, and the section will be much improved.

There is no better way of crossing the Malebo Range at the 19 miles on first trial line than that already surveyed.

There are but few watercourses to be crossed on this proposed route, and none of much importance, one at the commencement of the line and the Junee Creek being the most important.

I have, &c.,

A. FRANCIS.

H.P., 28/9/76.

No. 13.

Mr. Francis to Engineer for Trial Surveys.

Sir,

Junee, September 28, 1876.

Immediately after I had staked out that portion of the amended trial line from Junee to Narrandera which joins the main line, a licensed surveyor named Cummins commenced and measured a block of land for sale across the line. If the route I have pegged out should be adopted, the land measured by Mr. Cummins will probably be required for station purposes.

I have, &c.,

A. FRANCIS.

Mr. Lackey has requested the Minister for Lands to reserve the land required for railway purposes between Junee and Narrandera. See 76-4,019.—W.H.Q., 5/10/76. H.P., 19/10/76.

No. 14.

Mr. Mayes to Engineer for Trial Surveys.

Junee and Narrandera Railway.

Sir,

Loxton's Dam, near Junee, 7 October, 1876.

I expect to finish this length, ending near 19 miles, about the 17th instant. This (19 miles) part of the trial line is about east of my station, and curve No. 12 at 37 miles. These two portions of the line (viz. 19 and 37 miles) should have been connected by as straight a line as possible, as per tracing of county maps, but there is an error in these maps of about 70 chains in latitude between the Forest Reserve and 37 miles, which I did not fully ascertain until I connected my trial line with Mr. Francis' line. I can probably save 20 chains between 19 and 37 miles by straightening the line as originally intended, continuing my present amended line westward beyond 19 miles. Mr. Francis knows nothing (personally) of this error in the tracing of county maps. I have mentioned it because in the neighbourhood, otherwise I should not have referred to it until the permanent survey was required.

I am, &c.,

CHAS. MAYES.

H.P., 19/10/76.

No. 15.

Mr. Francis to Engineer for Trial Surveys.

Sir,

Junee, 7 October, 1876.

I beg to inform you that unless there are further alterations to be made in the second trial line—from Junee to Narrandera, I shall finish here about the 25th or 26th of the present month. Mr. Mayes arrived here on the 26th of last month, and I divided the work into two lengths, giving him the part between the Pinnacle Range and the Malebo Range, a distance of about 8 miles, reserving a length of about 10 miles for myself. As the country on which Mr. Mayes is engaged is mostly open plains and easy ground, he will probably finish about the same time as myself. Will you be good enough to state whether you wish to have all the work laid down on the same paper, or shall I send my length of plan and section to the office as soon as completed?

I have, &c.,

A. FRANCIS.

Instructions forwarded to Mr. Francis.—H.P., 19/10/76.

No. 16.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis,

19 October, 1876.

With reference to the question in your letter of the 7th instant, I should prefer having the plan and section of the length from the point of departure from the main line to the junction with the original trial line (Junee to Narrandera) plotted continuously. If, however, either Mr. Mayes or yourself have your work already plotted, I do not wish the work to be replotted, and will have it in separate lengths. I shall also require you to collect the necessary information to enable you to compile a book of reference, as the 10-chain plan of the through trial survey will probably be used for a Parliamentary plan.

Forward the plan and section to this office as soon as completed; after which, while waiting for instructions, obtain the information for book of reference.

HERBERT PALMER.

Instruct Mr. Mayes to act similarly as regards the plan, section, and reference of his length.—H.P.

No. 17.

13

No. 17.

Mr. Francis to Engineer for Trial Surveys.

Sir,

Junee, 21 October, 1876.

I transmit by this mail 10 miles 7·49 chains of second trial line from Junee to Narrandera.

I handed this length over to Mr. Mayes for him to plot his length in continuation, but he returned it to me without doing so, preferring to plot his own work on separate paper.

The plan will be ready for transmission about the 25th or 26th instant if Mr. Mayes does not plot his length on it.

I have, &c.,

A. FRANCIS.

Mr. Mayes to explain why he did not plot his work in continuation of Mr. Francis' length.—H.P. 23/10/76. Mr. Mayes, Junee. Recd., 25/10/76.—C.M.

MEMO.—I did not prefer plotting my work on separate paper, as herein stated by Mr. Francis; I was compelled to do so, his section paper being much too short for my work.

This I stated in a note to him, sent with his section, and which he has not sent to you or informed you of.

I posted my section (plotted to Mr. Francis' datum) to the Engineer-in-Chief to day. I trust this explanation will be satisfactory.—CHARLES MAYES, 25/10/76.

H.P., 28/10/76.

No. 18.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis, Junee,

October 24, 1876.

Under separate cover I have forwarded to you tracings of the plan of the original trial survey (Junee to Narrandera) from 19 miles to the end of Mr. Mayes' length at Narrandera. I have also forwarded with the tracings, reference sheets. You will now be able to collect all the requisite information to complete a book of reference, and can arrange to go through the whole length yourself or divide the work with Mr. Mayes.

Inform me by return what arrangements you make in this matter, and what will be your address after leaving Junee.

HERBERT PALMER.

No. 19.

Mr. Mayes to Engineer-in-Chief.

Sir,

Loxton's Dam, Junee, 25 October, 1876.

I send herewith the section of the length I have now completed. Mr. Francis has just sent me his plan of the first 10 miles. I shall forthwith plot my work on same, and send it with the names of the owners, &c., of the land passed through, in a few days.

I have, &c.,

Section received.—H.P., 30/10/76.

CHARLES MAYES.

No. 20.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis,

6 November, 1876.

Attached is a tracing showing both trial lines from the Southern Railway towards Narrandera, also, by a *dotted red line*, the direction of a third line which I wish you to make a trial survey over. The junction of your second line with the main line is not a satisfactory one as regards station arrangement. You are not of course bound to follow exactly the long straight line shown dotted, but to get the best line you can, coming in to the main line at the point shown. I wish you to instruct Mr. Mayes to assist you in making this survey, and to arrange to commence the permanent staking as soon as the first portion of trial survey is approved.

As soon as you send in the plan and section of this last portion of trial survey, arrange your own and Mr. Mayes' camp for the first length of permanent staking.

You can do the staking and plan, and Mr. Mayes the levelling and section.

HERBERT PALMER.

No. 21.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis,

6 December, 1876.

The mileage of the proposed extension to Narrandera may be commenced as for a branch line, at the junction with the Main Southern Railway, that is, at 286 miles, 29 chains, 27 links, you start the Narrandera mileage as 0 miles 0 chains, 0 links.

HERBERT PALMER.

No. 22.

No. 22.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis,

6 December, 1876.

I have instructed Mr. Mason to proceed with his party to Junee, to assist you in the permanent staking of the line to Narrandera. He is to act under your instructions while on this survey, and you will be good enough to arrange the work so that no time may be lost, as a Parliamentary plan and section are urgently required.

Plan and section paper for three 20-mile lengths will be forwarded to you shortly.

HERBERT PALMER.

No. 23.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis,

12 December, 1876.

I have to-day forwarded to you at Junee, per Cobb & Co., a parcel containing three rolls of mounted paper for the working plan of the extension to Narrandera.

The section I will have plotted in this office, and you will therefore be good enough to forward the levelling books as soon as the levels are checked, as the work is proceeded with.

HERBERT PALMER.

No. 24.

Engineer for Trial Surveys to Mr. Francis.

5 January, 1877.

PLEASE send me a tracing (10 ch. scale) showing the centre line of the permanently staked line as far as it is determined, so that I can lay it down accurately on the original trial plan.

Send in the levels of the staked line as they are checked, so that the plotting of the working section may be proceeded with in this office.

HERBERT PALMER.

No. 25.

Mr. C. T. Mason to Engineer for Trial Surveys.

Sir,

Camp, Junee, 10 January, 1877.

I beg to inform you that I have levelled, checked the levels, and cross-levelled for a distance of 8 miles and 60 chains.

I purpose moving camp to-morrow; my address will then be Marror, near Wagga Wagga.

The weather keeps intensely hot, and water is very scarce.

I have, &c.,

CLAYTON T. MASON.

No. 26.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis, Marror, *via* Junee,

20 January, 1877.

When I was at Junee, I spoke to the contractor for the Junee Dam then being constructed, about the lockspitting of the centre line of the Narrandera Extension. He said he would state a price for this work, and now that you have a few miles ready for lockspitting it will be well for you to arrange for its being done, if you have a chance of letting it at a reasonable price.

HERBERT PALMER.

No. 27.

Mr. Mayes to Engineer for Trial Surveys.

Sir,

Narrandera, 27 January, 1877.

I received your memo. of the 17th current, with section paper on the 22nd, and beg to forward you the first sheet of tracing plan.

I was not able to follow the line you proposed; because the original trial line between 26 and 32 miles was not straight as shown. I have run the first 4½ miles of new line over twice, and find the divergence from first trial line in excess of what it should be if straight.

The angle of divergence I ascertained to be 6° from a length of 342 chains, as per memo. on plan. The plan also shows the actual distances square with first trial line and the tangents in pencil of 6° at the same places from 26 to 30 miles.

As this error has merely caused me some slight extra work, I have not gone into details respecting it. I know of no other disadvantage attending it, and regret that I am compelled to refer to it in explanation.

I was forced to abandon the blue line (on plan) or else alter the relative position of the whole of the first survey as shown on tracing plan.

I am glad to be able to state that the whole of the measured deviations between my first and present survey form points in the straight line I have just run ending north of B.M. 24 A.

Allowing for a contraction of about 1 link in each chain, or 80 links per mile, I have been able to use the plan, and have shown by the production of my broken blue line how the first 5 miles may be shown on a new tracing.

I will send you the other plan and section in about a week.

I have, &c.,

CHARLES MAYES.

Utterly unintelligible. Plan returned to Mr. Mayes for further information.—H.P., 30/1/77.

15

No. 28.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis, Marror, *via* Junee,

30 January, 1877.

Under separate cover I return the tracing on which you have shown the staked line. I have put on this tracing the numbers corresponding with the reference of the trial survey, and have also marked in pencil where additional numbers are required.

I wish you to give me a reference for these places, so that I can compile a new reference for Parliamentary plan; also let me have tracing of each additional tangent line as you fix them.

HERBERT PALMER.

No. 28A.

Mr. Mayes to Engineer for Trial Surveys.

Sir,

Narrandera, 6 February, 1877.

I received your letter of the 30th with tracing plan in due course, and find the word "only" is required to make my meaning clear, as explained in my memo. on tracing plan, re-sent herewith, and which omission I trust you will excuse. To prevent further misunderstanding, I send a pencil tracing of the first 6 miles of altered trial line.

I have not run two lines on the ground, but was forced to show the firm blue line in its true position, or else re-plot the whole of my first survey, shown by red lines, &c. Of the two evils I chose the least.

You do not appear to notice the force of the fact mentioned by me in my letter to you of the 27th ultimo, viz., that the whole of the measured deviations between my first and present survey form points in the straight line I have just run ending N. of B.M. 24 A. On referring to the draft of my letter just quoted, I find these words after the above sentence ending with B.M. 24 A, viz., "proving the practical accuracy of the whole of my work in the first long line from 33 miles to 53 miles." I marked these words out in the draft letter, thinking they would read egotistically; I now find I did wrong in doing so.

*I have by me the 14-inch level by Troughton and Simms you recommended me to buy, and also one of Dolland's best 5-inch transit theodolites (with struts), and which is now in excellent adjustment. I shall therefore start the survey of Narrandera (as instructed by Mr. Francis) to-morrow.

Your obedient servant,

CHARLES MAYES.

H.P., 26/2/77.

* Memo.—H.P., 27/2/77.

No. 28B.

Engineer for Trial Surveys to Mr. Francis.

Mr. Francis,

21 August, 1876.

I wish to be informed when you expect to complete the plan and section of your length from Junee to the point where you will connect with Mr. Mayes' line.

HERBERT PALMER.

No. 28c.

Engineer for Trial Surveys to Mr. Mayes.

Mr. Mayes,

21 August, 1876.

I wish to be informed when you expect to be able to forward to me the plan and section of your length from Narrandera to the point where you will connect with Mr. Francis' line.

HERBERT PALMER.

No. 28d.

Engineer for Trial Surveys to Mr. Mayes.

Mr. Mayes, Berembed, Narrandera Road, *via* Wagga Wagga,

17 January, 1877.

Under separate cover I have forwarded to you a length of paper for the section of the alterations made on the Narrandera survey.

You will be able to plot these alterations on the tracing of the original plan, and I wish you to forward the plan and section to this office as early as practicable, as the Parliamentary plan is urgently required.

On receiving these documents, I will send you further instructions by telegraph to Narrandera.

HERBERT PALMER.

No. 28E.

Mr. Francis to Engineer for Trial Surveys.

Sir,

Cox's Station, Marror, *via* Wagga Wagga, 4 February, 1877.

Mr. Pettiford, the contractor for the Junee Dam, called at my camp to-day, and states that he is willing to undertake the nicking of the centre line—Junee to Narrandera—price seven-pence per chain (7d.) He will commence forthwith if you wish it.

The ground is very hard, and the price seems reasonable.

I have, &c.,

A. FRANCIS.

Approved.—J.W., *pr.* W.H.Q., 7 February.

No. 28F.

Mr. Francis to Engineer for Trial Surveys.

Sir, Cox's Station, Marmor, *via* Wagga Wagga, 12 February, 1877.
I have the honor to inform you that I have this day notified to Mr. Pettiford that his price for nicking the centre line, Junee to Narrandera—7d. per chain—is approved of; and I have intimated to him that he can proceed to work at his earliest convenience.

I have, &c.,
A. FRANCIS.

Orange to Dubbo.

No. 29.

Mr. Wade to Engineer-in-Chief.

My dear Sir, Bathurst, 28 January, 1876.
I met Mr. G. Lord at Mt. Victoria on my way home, and I think quite understand his ideas about a route to Molong. He thinks we should follow over Ironbarks route for about a mile from Orange, and follow a ridge that leads to the Bell Run by way of Kangarooobie. I believe it will be very bad country, but will take an early opportunity of examining it, and if at all practicable I suppose Mr. Cowdery had better survey it, or we shall be said to have wilfully neglected a good line.

Yours faithfully,
W. B. WADE.

As Mr. Lord is considered by many people a great authority on this question, the line he suggests should be tried.—J.W., 29/1/76. Mr. Wade.—W.H.Q., 29/1/76.

I saw Mr. Cowdery when in Orange this week; he tells me he received a letter from Dr. Ross, as Secretary of Molong Railway League, introducing two persons as delegates or guides, who, on learning the route Mr. Cowdery was surveying, stated that was precisely the line they came to point out to him; he has now completed 7 miles of this, and I have instructed him to survey the line recommended by Mr. Lord as far as he can reach from camp; you will then have sufficient data to decide which line shall be continued to Molong.—W.B.W., 4/2/76.

No. 30.

Mr. Cowdery to Engineer-in-Chief.

Sir, Camp, Ploughman's Creek, *via* Orange, 4 February, 1876.
I have the honor to report to you that I have carefully traversed and plotted about seven (7) miles of the line from Orange towards Molong, over ground selected by Mr. Wade and self. I cross Ploughman's Creek at 194 miles 50 chains, with a 23 feet embankment, and cutting about the same; Broken Shaft Creek, at 196 miles 30 chains, I cross with an embankment about 20 chains long, averaging about 30 feet deep, with cuttings on either side to match. The Molong Creek, at about 199 miles 10 chains, will be the next to cross. I have run a line down near it, but have not yet crossed: this will be very rough, I do not expect to get over with less than 40 to 50 feet cuttings and banks.

I was nearly ready to shift camp when I met Mr. Wade, on Monday evening, and he instructed me to explore another route through Kangarooobie and across the Bell River to Molong. On Wednesday I rode over to Molong and got two men, Mr. Samuel Beadle and Mr. H. Betts, who volunteered to show me over the ground; they are old residents, one of them over thirty years in the district; they are, I believe, both well known to Mr. Smith and Mr. Lord.

We rode back over the route on Thursday. The Racecourse, about 2 miles out from Molong, would be the best site for a station, from there to Guanna Hill a very good line could be got. From this to the Bell River would be somewhat rough and tortuous; but from the Bell up to the table-land, over the best ground I could see or have pointed out to me, would be something tremendous; in about 1½ mile we rose 490 or 500 feet, and in the next 1½ mile we rose 220 feet more—this brought us on to the top. I am quite satisfied there is no use in trying this direction any further.

The route I have commenced I believe is the best that will be found, and which is approved of by two men sent out by the Molong Railway League to show me the country, it being exactly the ground they were going to point out.

Waiting instructions which line to shift camp to,—

I have, &c.,
GEORGE COWDERY.

This is the route recommended by Mr. G. Lord. I have instructed Mr. Cowdery to run a traverse, and level it from summit at Orange to Bell River.—W.B.W., 5/2/76. To Engineer-in-Chief. Approved,—J.W., 7/2/76. Mr. Wade. W.B.W., 10/2/76.

No. 31.

Mr. Cowdery to Engineer-in-Chief.

Sir, Camp near Springall's, Two-mile Creek, *via* Molong, 6 June, 1876.
I have the honor to inform you that since my last report I have completed 16½ miles more of the line, making in all about 24½ miles from Molong. I am now down on to Miller's Flat.

The whole length so far is very good; there is only about 1½ mile in the last length that is at all rough, with nothing worse than two short 20-foot cuttings, and a few short ones from 5 to 10 feet deep.

Some of the gradients are rather heavy—some 1 in 40, and some very nearly approaching it. I shift camp in a few days to Newrea, or near it (weather permitting). It is raining now.

I have, &c.,
GEORGE COWDERY.

No. 32.

Engineer for Trial Surveys to Mr. Wade.

Mr. Wade,

9 June, 1876.

As it is probable that the sections of the trial survey from Orange to Wellington and Dubbo must be laid on the Table of the House next week, I shall be glad if you will return the original section to this office.

The plans we have here.

HERBERT PALMER.

No. 33.

Mr. Cowdery to Engineer-in-Chief.

Sir,

Wellington, 29 June, 1876.

I have the honor to inform you that I have this day completed the traverse of the above line, the chainage being 254 miles 8 chains 66 links to 152 tangent point, on the Ironbarks line, where it junctions. The last 14 miles is not yet levelled, but it is very good; there will be one cutting from 18 to 20 feet deep, and one from 10 to 15 feet deep; the remainder will be little more than forming. Since my previous report I have altered about 2 miles of the line, which is a little rougher, but the gradient is better, and it leads into better country. I consider the whole line from Molong to Wellington very good. I return to the Black Rock to-morrow, to complete the survey, which I hope to effect in about a fortnight.

I have, &c.,

GEORGE COWDERY.

W.B.W., 1/7/76. Mr. Palmer.—W.H.Q., 5 July. This chainage noted on plan of trial survey by Ironbarks route. The through distance, Orange to Wellington *via* Molong, 8 miles 55 chains longer than by Ironbarks.—H.P., 5/7/76.

No. 34.

Engineer for Trial Surveys to Mr. Wade.

Mr. Wade,

31 August, 1876.

By to-night's train I am forwarding to the Bathurst station a mounted tracing of the through trial survey, Orange to Wellington *via* Ironbarks, which will serve for field plan while the extension is being staked. The section of the same is not quite completed, but will be forwarded to you in a day or two, and Mr. Cowdery can then obtain the information you wrote for on the 27th inst.

HERBERT PALMER.

No. 35.

Mr. Cowdery to Engineer-in-Chief.

Sir,

Ironbarks, 6 September, 1876.

I have the honor to inform you that during the last month I have been engaged endeavouring to improve the line past the Ironbarks by a deviation of from 9 to 10 miles running through the township. I have traversed and levelled it through roughly, and find there will be $1\frac{1}{2}$ mile less of 1 in 40 gradients on it. I do not know as yet that it will have any other advantages, but I am now staking it out, and working it up a little closer.

I have, &c.,

GEORGE COWDERY.

W.B.W., 13/9/76. J.W., 14/9/76.

No. 36.

Engineer for Trial Surveys to Mr. Wade.

18 September, 1876.

Will you please let me have the level books of the trial survey, from Orange to Wellington *via* Molong, as it will be necessary to plot a 4-chain section by this route to make a fair comparison with the line as you will have it staked by Ironbarks.

HERBERT PALMER.

No. 37.

Mr. Wade to Engineer-in-Chief.

Memorandum to Engineer-in-Chief,

Bathurst, 18 October, 1876.

Messrs. Cowdery, Hardy, and Gowan are working together at the staking out, and have nearly completed a length of $8\frac{1}{2}$ miles at their first camp. Mr. Cowdery is running the tangents and setting out the curves. Mr. Gowan follows with the chainage and permanent stakes, and afterwards makes detail survey and plots the plan. Mr. Hardy takes the levels and plots the section. The two latter are instructed that the services of themselves and men are to be available for anything that will forward the work, and whoever has time is to take cross-sections. Mr. Cowdery checks the levels. Mr. Hotson is in advance taking cross-sections for the improvement of the line.

Two small deviations have been made in the first length, cutting out two curves, and saving about 16 chains in length, the works being slightly increased; a number of curves as set out by Mr. Donkin have been altered to an increased radius without affecting the section.

J.W. Mr. Palmer.—W.H.Q., 20/10/76. H.P.—23/10/76.

No. 42.

Mr. Cowdery to Engineer-in-Chief.

Sir,

5 December, 1876.

I have the honor to inform you that I have permanently staked about 16 miles of the line from Orange. I should have been rather more forward only for the bad way Mr. Donkin's work has been done; neither the plan nor the work on the ground is correct. I have to traverse and plot it all over again, however, I will endeavour to keep ahead so as not to hinder the others.

I am sorry to inform you that I have been obliged to stay in camp for the last three days, having injured one of the sinews of my right leg, but I hope soon to get out again.

The men are busy clearing lines and cutting stakes.

I have, &c.,

GEORGE COWDERY.

W.B.W., 6/12/76.

No. 43.

Mr. Wade to Engineer-in-Chief.

Memorandum to Engineer-in-Chief,

Bathurst, 6 December, 1876.

The plan and section are plotted for about 14 miles, and the staking a little more forward. Some of Mr. Donkin's work is very incorrect, and has caused delay, as it can only be detected by some one else re-traversing it.

Men are employed on trial holes. The first 11 miles are very light.

W. B. WADE.

J.W., 7/12/76.

No. 44.

Mr. Wade to Engineer-in-Chief.

Memorandum to Engineer-in-Chief,

Bathurst, 26 December, 1876.

I hope to be able to forward the first sheets of plan and section of a length of 22 miles next week. This work was begun under very unfavourable circumstances; the surveyors came on to the work at different dates, everything in the way of preparation had to be commenced *de novo*, the timber for stakes was scarce, and the weather for two or three weeks was continuous rain or snow, with gales of wind. I think when a length of 40 miles is completed the time occupied will not appear so long. It must be remembered that there will be no extras attaching to this work, the stakes are cut by the men, the lockspitting also is done by the men, and the plan and section will be complete, ready for laying down gradients and widths. At the same time I think three surveyors working together is not quite a satisfactory arrangement. I believe

a better result per man would be obtained by employing an additional surveyor, and dividing the staff into two parties of two each. I should have urged this before, but I hesitated to suggest any additional expenditure while the route remains unsettled, and there is a possibility of the work going for nothing. If the route is definitely settled by the approaching visit of Ministers, I hope you will consider the propriety of appointing a fourth hand.

I think also there is no necessity to print on the plan in ink, or to plot cross sections in the field, as that might be done in the office by a junior hand. I enclose replies from surveyors to your memo.

W. B. WADE.

From the journals enclosed it is quite clear that there are too many engaged in one party. Mr. Hardy employs himself in lockspitting and ringing, and Mr. Cowdery employs himself to fill up his time in doing labourer's work, sharpening saws and putting in axe-handles.

This kind of employment is not intended for surveyors, and must be discontinued. The lockspitting might be let at per chain for about 6d., and putting in axe-handles might be entrusted to a labourer; pegs might also be contracted for, and the men kept to perform the duties for which they were engaged. Another assistant and the forming of another party could only apply to setting out the centre line, curves, &c., as the chainage must be continuous.—J.W., 28/12/76.

Mr. Wade. W.B.W., 8/1/77.

No. 45.

Mr. Wade to Engineer-in-Chief.

Orange to Wellington.—Permanent Survey.—Progress report to December 31st, 1876.

MESSRS Cowdery, Hardy, and Gowan were sent on to the permanent survey of this extension *via* Ironbarks in the second week of September. Mr. Cowdery was able to start running the tangents and curves as soon as he had a supply of stakes prepared, but it was nearly the end of the month before work was fairly organized—Mr. Cowdery running tangents and staking out curves; Mr. Gowan putting in the chainage stakes, making detailed survey, and plotting the plan; Mr. Hardy taking levels and plotting the section, the lockspitting being done by the surveyors' men. In the middle of November a party of men were put on sinking trial-holes.

At the end of the year the surveyors had just moved to their third camp at Shepherd's Creek, 25 miles from Orange. Mr. Cowdery had run the tangents for 25 miles; the staking and levelling were done for about 18 miles, and plotting to same distance, the lockspitting being up with the staking nearly, and trial-holes about 5 miles behind.

W. B. WADE.

No. 45A.

Mr. Wade to Engineer for Trial Surveys.

Memorandum to Mr. Palmer.

Orange, 21 January, 1877.

I have just received the first length of plan and section of this line, and will send it away to-morrow. I also enclose the level and survey books for comparison in the office, as I have to be away on Orange line all the week. You will observe an error of 2 chains in the plan at 198 miles. The work was so far advanced when it was discovered that it would have spoilt the plan to correct it. Care must be taken to allow for it in all copies. I send the cross sections as far as plotted, and the levels for remainder in book. I shall be able to send results of trial shafts on this length in about a fortnight.

I forward a tracing of a deviation near Ironbarks. The Engineer-in-Chief has seen and approved of it. Please make a copy for your Parliamentary plan, and return me the tracing at once, as it will be wanted for permanent staking.

I am not quite certain that we have all the private properties noted. There are no signs of any others on the ground, and we can get no information from residents, but I shall be able to make a final comparison with the District Surveyor when I have some more information.

W. B. WADE.

No. 46.

Resolution of the Legislative Assembly of the 27th June, 1876.

1. That, in the opinion of this House, it is desirable that a Trial Survey of a Railway Line be made from a point on the Western Line at or near Orange, and *via* the valley of the Lachlan, and thence to Wilcannia and Menindie, on the Darling River.
2. That the above Resolution be transmitted by Address to His Excellency the Governor.
 Put and passed.

This survey to be commenced as early as practicable.—J.W., *p.* W.H.Q., 11/8/76. Mr. Palmer.
 Arrangements have been made for sending two surveyors on this trial survey.—H.P., 11/8/76.

21

No. 47.

Engineer-in-Chief to Commissioner.

EXTRACT from Report on Trial Surveys.—Orange towards Wilcannia.

Two surveyors have been sent to Orange to commence a trial survey from the neighbourhood of Orange towards Wilcannia. It is proposed to make a junction with the main line at Orange, and to proceed thence in a westerly direction, between the townships of Parkes and Forbes, towards Condoumlin.

The ultimate direction of this survey from the point when the line will leave the Lachlan cannot be decided upon until the trial survey of the first 150 miles has been made.

Sept. 19th, 1876.

JOHN WHITTON.

Camp near Orange, 30 September, 1876.

STAKED out line from Orange to junction with Mr. Townsend, and partly surveyed 3 miles, 2,600 links.

W. FITZGERALD.

No. 49.

Mr. Townsend to Engineer-in-Chief.

Sir,

Camp near Orange, 2 October, 1876.

I have the honor to inform you that I have rough staked and levelled five and a half miles (5½) from opposite the Canobolas school-house—the starting point given me by Mr. Wade.

I have plotted the survey and have nearly reduced the levels; I shall plot the section to-day.

I shall have enough pegs made by to-night, and I shall get the whole staked and marked early this week; that will be all I can do from this camp.

I have, &c.,

GEO. WM. TOWNSEND.

No. 50.

Mr. Wade to Engineer-in-Chief.

Memorandum to Engineer-in-Chief,

Bathurst, 18 October, 1876.

Mr. Fitzgerald is on a short length of 3½ miles near Orange; there are three possible ways of connecting with the Bathurst and Orange line, so I am keeping him there until he has all necessary work done to enable you to fix the junction. Mr. Townsend has nearly finished a length of about six miles beyond Mr. Fitzgerald's.

I have not been able to make myself acquainted with the country from Orange to Parkes as yet, for I am unable to leave the Blayney extension for many days at a time just now, but I think I now understand the first 20 miles.

I was recommended a route from Orange to the head of Oaky Creek, and from there to Eugowra and Forbes; this looks well on the map, but on crossing from Macquarie to Lachlan waters the whole country falls so rapidly I had to give up the idea and fall back on the Boree route, which is available either for Parkes or Forbes; the line I am now trying will leave the Bathurst and Orange line south of Orange, bear a little south of west for nearly 3 miles, then bear north of west to German's Hill, a spur from the Canobolas dividing the waters of the Macquarie and Lachlan, then bear nearly north-west following the dividing ridge until a good spur occurs leading down to Boree Creek. So far the line is pretty good, excepting two very considerable depressions when it crosses the two main heads of Molong Creek. The descent to Boree Creek will be very severe, but it is inevitable; there are two apparent ways of getting down; I have instructed Mr. Townsend to try the most direct line first, which follows a spur on the left of the Forbes Road and gets down near Keenan's Bridge; if this proves too steep, the line will have to bear a long way north of the right direction, keeping the side-lying ground of the dividing ridge until Boree Creek is reached on the right of Forbes Road. I propose to send Mr. Fitzgerald (when he is ready to move) to the length beyond Boree towards Parkes, and Mr. Hotson, who is now taking cross sections on the Wellington line, had better go to Parkes and work this way over what I believe is level country, until I can get down to him.

W. B. WADE.

No. 52.

No. 52.

Mr. Townsend to Mr. Wade.

Sir,

Camp Cave Creek, Forbes Road, 2 November, 1876.
I have the honor to inform you that I have rough staked and levelled a line to Cave Creek, 5 miles 12 chains, will be $5\frac{1}{2}$ miles when staked.

The crossing is such as you proposed, and will need a high level bridge about 80 feet.

The incline is nearly 1 in 40 the whole way, but excepting the heavy gradient it does not give a bad section. Before I stake the line, I intend examining the country by Cheeseman's Creek.

My camp is on Cavé Creek, about $\frac{3}{4}$ mile above Keenan's; Higgins' Royal Mail Hotel on the Forbes Road is the nearest place; he will show you the way should you come out without seeing me.

I have, &c.,

GEO. WM. TOWNSEND.

No. 53.

Engineer-in-Chief to Mr. Wade.

Mr. Wade,

8 November, 1876.

At your earliest convenience, I wish you to explore the country between Molong and the District of Parkes, with a view to the extension of the railway in that direction, in the event of the Molong route from Orange being adopted by Parliament.

JOHN WHITTON.

Examined this country during week ending December 2nd. I was obliged to return on 2nd instant, to send in monthly pay-sheets, and had not time to thoroughly trace out the green line, but was on the dividing waters and am confident a fair line can be got.—W.B.W., 4/12/76.

J.W., 5/12/76.

I have seen Mr. Wade on this matter, and instructed him to have a survey made of the line shown upon the accompanying tracing in green.—J.W., 11/12/76.

Mr. Palmer to see.—W.H.Q., 13/12/76. H.P., 13/12/76.

No. 54.

Mr. Wade to Engineer-in-Chief.

Bathurst, 16 November, 1876.

Memorandum to Engineer-in-Chief.

In selecting a route from Orange to Molong, it was necessary to keep as low a level as possible, and avoid the spurs from the Canobolas by passing to the north of the town of Orange. To reach Parkes or Forbes it is necessary to cross from Macquarie to Lachlan waters, and so reach the Dividing Range by the higher ground to the south of Orange. Three junctions with the Bathurst and Orange Railway have been surveyed; the best one seems to be a line joining at 191 miles 48 chains, or just outside of the Orange station. The line will bear a little south of west, passing close to M'Kay's homestead, Dalton's farm, and the Orange racecourse, over a fair table-land for about 4 miles, with two very heavy crossings of the heads of Molong Creek, the depth from hill to valley being in each case about 100 feet. The Dividing Range is crossed at the German's Hill, a spur of the Canobolas, about 6 miles from Orange. The ground on the Lachlan slope then falls with great rapidity, so it is necessary to keep close to the watershed for some miles. The next inevitable point is Boree, 20 miles from Orange; at this place the country to the south of Boree Creek rapidly becomes very broken, and on the north a steep range of hills called the Pine Ridge, runs from Boree Creek northwards past Molong; the greatest difficulty on the length from Orange to Parkes is the descent from the dividing ridge to Boree. German's Hill is crossed at a level of 2,950 feet, the line then follows the natural fall of the watershed for nearly 3 miles, falling to 2,750 feet, then a descent of 700 feet has to be made in the next 6 miles. This portion will necessarily be all steep gradient and heavy work, though a great portion of the ground is a smooth sidling very favourable for fixing the position of the line. The Forbes Road is crossed four times, but may be diverted in each case; the last half-mile of this descent is very rough. Cave Creek is reached at a level of 2,040 feet on the bank, with the water over 80 feet below the valley, is about 8 chains wide. After crossing Cave Creek the descent is more moderate, the line will gradually approach the road, running to the south of and parallel to it for about 4 miles, cross the road near Boree Station, cross Boree Creek at the foot of the Pine Ridge, and then traverse a level country for 9 miles, cross Mandagery Creek near the mail station, and follow up Manildra Creek from its junction with the Mandagery for about 7 miles. Boree is 2,750 feet, and the general level varies very little for the next 15 miles. On leaving the valley of Manildra Creek, about 38 miles from Orange, the spurs from Croker's Range commence. The first severe hill on the road is 2,300 feet, but a favourable gap occurs about a mile north of the road, at a level of 2,180 feet, to which a fair ascent can be got from Manildra Creek, then just skirting the head waters of Dulloderry Creek, the main ridge of Croker's Range will be crossed near to the road, at a little over 2,200 feet; the line will then be on the waters of the Parkes, Billabong, and there will be another difficult descent of 500 feet to make after reaching the Billabong water, 2 or 3 miles north of Bunbury, at a level of 1,700 feet. Another difficulty is met with in the Dungeon Range. Hitherto all the mountains and streams have fallen towards the south in the direction of the Lachlan. The Dungeon is a spur from Croker's Range running due north, and diverting the course of the Billabong northwards until it gets through a rough gorge in the spur and runs westwards to Parkes. The road crosses the Dungeon in a tortuous gap with very heavy gradients and works; the railway will keep clear of the range, and just cross its point about half a mile south of the northern bend of the creek. From this point to Parkes the country is very favourable, only falling 400 feet in 16 miles. The line will just skirt the southern portion of the township of Parkes with a good site for station at a level of 1,200 feet, and with a good get-away westward over what is represented to me as a perfectly level country to the Darling.

Between Orange and Parkes there will be about 14 miles of expensive line with heavy gradients and works, 19 miles of fair line about 12,000 cubic yards to the mile, the remainder will be very light work;

work ; the distance is said to be 70 miles, but I believe it is over-estimated. Boree and Mandagery Creeks will require bridges, Cave Creek may require a high level bridge unless there is surplus earthwork there ; the remaining streams are small. Basaltic stone of good quality for ballast is found plentifully throughout ; there is a good deal of box timber fit for fencing, and some inferior ironbark, but nothing fit for bridge girders or piles, and I fear nothing fit for sleepers except the pine at the Parkes end of the line.

With the exception of some 10 miles about Croker's Range, the whole country traversed by this line is of the most superior description. The 30 miles next Orange are closely settled in every direction, and selection is said to be rapidly increasing.

J.W., 21/11/76.

W. B. WADE.

No. 54A.

Mr. Wade to Engineer-in-Chief.

Extract from Mr. Wade's Report on Trial Surveys beyond Orange.
Orange to Parkes.

Messrs. Fitzgerald and Townsend have completed 9 miles. Mr. Townsend has been for nearly a fortnight on a second length, which includes the descent to Boree ; Mr. Fitzgerald moves this week to the length beyond Boree ; Mr. Hotson is at Parkes, working towards Orange.

W. B. WADE, 17/11/76.

No. 54B.

Mr. Townsend to Mr. Wade.

Sir,

Camp, Cave Creek, 1 December, 1876.

I have the honor to inform you that I have staked and levelled 8 miles 76 chains of line, the curves set out in 5-chain chords from this camp, crossing Cave Creek just above Keenan's ; this brings me to nearly a mile past Hughes's.

As this line gives a very heavy section, I have tried a line keeping north of Cave Creek, thus avoiding crossing that creek ; this will give a better section, and being half a mile longer will break the very heavy fall in this length ; this leaves the first-named line at 4 miles 60 chains.

I have staked a mile and a half of the second line, the curves in long chords.

I have, &c.,

W.B.W., 14/12/76.

GEO. WM. TOWNSEND.

No. 54C.

Mr. Wade to Engineer-in-Chief.

Memorandum to Engineer-in-Chief,

Bathurst, 3 December, 1876.

The most obvious connection between Molong and Parkes is by way of Manildra, meeting the proposed Orange and Parkes line near the junction of Manildra and Mandagery Creeks, but this line presents very considerable difficulties. Immediately west of Molong there is a high ridge called the Pine Ridge, running north from Boree ; the road crosses this range by a depression known as Lord's Gap, and I see no other way of getting through it. The connection with the Orange and Molong line would have to be to the north of the township, as the only practicable ascent is up a valley running N.N.E. The ascent and descent of this range are each nearly 400 feet, and the distance in each case about 2 miles ; the only choice of ground is for a considerable distance confined to a narrow gully ; without survey I could not pronounce it practicable for railway gradients. This route is also open to the grand objection that it quite excludes the Boree and Toogong country from railway communication, although after passing the Pine Ridge the country is favourable for railway construction and for agriculture. This route is shown on accompanying diagram by a *blue* line.

Another connection is shown by the *dotted blue* line in diagram, and would give a fair line, with rather a heavy descent to Boree Creek. The very bad direction of this line will, I anticipate, be a final objection in your view.

The connection that appears to me most suitable is to follow the surveyed line to Molong for about 14 miles to the point A, and then branch down Cheeseman's Creek by the line marked in *green* on plan to Boree Creek. This route is about 3 miles shorter to Parkes than the Manildra line ; it keeps clear of the difficulties at the Pine Ridge, and will fairly serve the settlers on the Boree and Toogong country.

I append a table of distances by the various routes to Wellington and Parkes, taken generally from reputed distances, which I generally find to be over-estimated, but as a comparison, absolute accuracy will not affect the question.

W. B. WADE.

TABLE of distances by the different routes between Orange and Wellington and Orange and Parkes.

Description of Route.	Miles of new Railway.	Miles Orange to Wellington.	Miles Orange to Parkes.
Direct line from Orange to Wellington <i>via</i> Ironbarks, and direct line from Orange to Parkes through Boree	125½	55½	70

No. 54D.

Mr. Wade to Engineer-in-Chief.

Memorandum to Engineer-in-Chief,

Bathurst, 6 December, 1876.

The length completed from Orange is only about 9 miles, at which point Mr. Townsend begins his second length; the descent to Boree Creek gets into very rough country at the lower end. Mr. Townsend is now trying a line on the right of road, which promises better. Mr. Fitzgerald is on a length beyond Boree, over easy country. He has none of it complete yet. Mr. Hotson is working from Parkes eastwards. He starts about 2 miles west of Parkes, and has staked to about 7 miles east of the township.

W. B. WADE.

J.W., 7/12/76.

Mr. Palmer,—W.H.Q., 11/12/76.

H.P., 7/12/76.

No. 54E.

Mr. Wade to Engineer-in-Chief.

Progress Report to December 31st, 1876.

Messrs. Townsend and Fitzgerald commenced work in the third week of September; Mr. Fitzgerald starting at Orange from the Bathurst and Orange extension, and Mr. Townsend joining him about 4 miles from Orange, and carrying on the line with a shift of camp to Boree Nyrang, about 19 miles from Orange, beyond which place Mr. Fitzgerald joins him, and has in hand a length of about 15 miles, terminating at Manildra Creek, about half way between Orange and Parkes. At the beginning of November Mr. Hotson, having completed some cross sections on the Wellington line, started work at Parkes, working towards Orange. In the second week of November I explored the whole length from Orange to Parkes, and was able to fix approximately the line to be run, some portions of which present very considerable difficulties.

At the junction with the Bathurst and Orange line four different ways of joining have been tried, two of which were abandoned; plans and sections of the other two junctions are prepared for your approval. For about 9 miles from Orange the line is staked, levelled, and plotted over a table-land with two considerable creeks; beyond this the descent of 900 feet to Boree Creek commences. A line was run crossing Cave Creek, on the left of main road, but the earthworks at the lower end came out so very heavy, it was found necessary to try another line to the right of main road, and keeping to the right of Boree Creek. This line gives an improved section, but the direction is bad. At the end of the year Mr. Townsend had completed the staking, and was taking the section of that portion beyond Mr. Townsend's farthest point at Boree Nyrang. Mr. Fitzgerald first ran a line meeting Mr. Townsend's first line on left of creek, but had afterwards to change it to meet the line on right of creek. About 6 miles was staked and levelled from the first camp, and at the end of the year Mr. Fitzgerald was camped at Mandagery Creek, running a line to Manildra.

At the end of the year Mr. Hotson had staked, levelled, and plotted about 17 miles of easy country eastward from a point 3 miles west of Parkes, and had just got to the intricate Dungeon Range, which will take several trial lines.

The total work done, exclusive of abandoned trials, is about 42 miles staked and levelled and 30 miles plotted.

W. B. WADE.

No. 54F.

Mr. Townsend to Mr. Wade.

Sir,

Camp, Cave Creek, on Fisher's Road, near Orange, 2 January, 1877.

I have the honor to inform you that I have staked and levelled the line as far as Boree Nyrang; a 40 radius curve joins well with Mr. Fitzgerald's route, and gives a good crossing at the creek.

I have rough-staked a line from 206 miles on Molong survey to 207 miles 20 chains on the Wilcannia line; the distance from point to point will be about 3 miles, making the 207½ miles on the Wilcannia line about 209 miles by the Molong route: it will, I think give a good section.

I have, &c.,

GEO. WM. TOWNSEND.

W.B.W., 8/1/77.

No. 54G.

Mr. Townsend to Mr. Wade.

Sir,

Camp, near Simpson's, Parkes Road, 1 March, 1877.

I have the honor to forward herewith my papers.

I have staked the line from about 3 miles this side of Coombes' to Townsend's eastern boundary fence on the Billabong Creek, between 2 and 3 miles from Packham's.

I shall be ready to shift camp in about three weeks.

My eyes are still very weak; I can manage in the field all right, but writing or reading are most painful to me.

I fear my eyes are permanently injured, as I cannot look at anything for long without their becoming so dim that I can neither read or even make out large printing.

I have, &c.,

GEO. WM. TOWNSEND.

Wallerawang

25

Wallerawang to Mudgee.

No. 55.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Ilford, Mudgee Road,

8 March, 1876.

When you complete the plan and section of your present length, I wish you to send them in to this office without delay; I shall then require you to proceed to Rylstone, near which town you will find Mr. Townsend; find out from him all particulars concerning the route he has examined between Rylstone and Mudgee, and fix upon a starting point about 10 miles ahead of Mr. Townsend's present work, and work to meet Mr. Jamieson, whom I have instructed to work from Mudgee towards Rylstone.

HERBERT PALMER.

No. 56.

Engineer for Trial Surveys to Mr. Jamieson.

Mr. Jamieson, Cudgegong, Mudgee Road,

8 March, 1876.

As it appears that you and Mr. Hardy will complete your present work before Mr. Kennedy, I wish you, if this will be the case, when your plan and section is completed, to assist Mr. Kennedy, so that I may have the through plan and section from Wallerawang to Mudgee as early as possible.

When these plans are sent in, I wish you and Mr. Hardy to return to Mudgee to work to meet Mr. Townsend from Rylstone. One line may be tried by the Broombie Gap to join your first line into Mudgee, and a second line may be kept on the northern side of the Cudgegong, terminating at some point opposite to Mudgee, from which a favourable direction may be obtained for the continuation of the line northwards towards Gulgong.

HERBERT PALMER.

I have written to Mr. Hardy, instructing him to assist you on the length from Mudgee towards Rylstone. You may divide the work as you think best.—H.P.

No. 57.

Engineer for Trial Surveys to Mr. Hardy.

Mr. Hardy, Cudgegong, Mudgee Road,

8 March, 1876.

I have instructed Mr. Jamieson to return to Mudgee when the plans of the through line are sent in, to work to meet Mr. Townsend from Rylstone. I wish you to accompany Mr. Jamieson to assist on this work.

HERBERT PALMER.

No. 58.

Engineer for Trial Surveys to Mr. Townsend.

Mr. Townsend,

3 April, 1876.

The through levels of the section from Wallerawang to Mudgee are of course carried forward from your starting point at Wallerawang.

I see from your books that this starting point is B.M. 161 on the main line to Bathurst. You appear to have had some doubts about this B.M., as I see a note in your book, "*believed to be* B.M. 161." The level as carried forward to your point of junction with main line does not agree with the level of this point as shown on the working section by rather more than 3 feet, consequently, I conclude that you did not take the level of the original B.M. Let me know what you remember about this point, as I wish to have the through levels to Mudgee carried forward correctly.

HERBERT PALMER.

No. 59.

Engineer for Trial Surveys to Mr. Townsend.

Mr. Townsend, Ilford,

3 May, 1876.

With reference to the extremely heavy section, from 134 miles to 143 miles (Wallerawang to Mudgee, *via* Rylstone), I wish you to show, on your finished plan, cross sections reduced to true datum, in all places where shortening the radii of the curves from 15 chains to 12 or 10 chains would materially lessen the earthwork quantities.

I also wish to be informed when you expect to finish the field work of your trial survey to the commencement of Mr. Kennedy's length at Rylstone.

HERBERT PALMER.

No. 60.

Engineer for Trial Surveys to Mr. Townsend.

Mr. Townsend, Ilford, Mudgee Road,

8 May, 1876.

I shall require a plan and section of the line you are now staking to the point where you will close with Mr. Kennedy's line at Rylstone, before you commence the survey of the line to join Mr. Kennedy's work at Ilford.

There is no occasion for you to carry forward the through levels to Rylstone until your line is definitely staked.

HERBERT PALMER.

No. 61.

Mr. Townsend to Engineer for Trial Surveys.

Sir,

Camp near Ilford, 31 May, 1876.

I have the honor to inform you that I have staked and marked the line to 147 miles 40 chains, making 43 miles 40 chains from Wallerawang.

We have had, and still have, very stormy weather that prevents work being pushed on quickly.

The timber on the last 6 miles is poor; coarse sandstone can be had in many places along the line, and in Rylstone I noticed one or two houses built with a hard ferruginous sandstone that splits off in thin beds, similar to a stone that is largely used in Adelaide, S.A., for buildings of all descriptions in the form of coursed rubble; it is very durable, and, when lime is plentiful, very cheap.

I think clay for bricks can be had on the flats in limited quantity.

There is very little sand fit for building purposes.

H.P., 2/6/76.

I have, &c.,

GEO. WM. TOWNSEND.

No. 62.

Mr. Kennedy to Engineer-in-Chief.

Sir,

Camp, Dungaree, 31 May, 1876.

I have the honor to inform you that I have the trial line from Rylstone to Mudgee staked out for a distance of 15 miles, on the first 8 miles of which the necessary surveys and other field work is completed.

The curves and gradients are good; with the exception of two cuttings (short ones) of about 25 ft. there will probably not be any heavier than from 10 to 15 feet.

If there is a plan of the township of Dungaree in the office, will you please to have it forwarded to me to Dungaree, for the purpose of having it in position on 10-chain plan.

I have, &c.,

THOMAS KENNEDY.

Tracing of village plan of Dungaree forwarded to Mr. Kennedy.—H.P., 3/6/76.

No. 63.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Dungaree, *via* Rylstone,

22 June, 1876.

Herewith I forward to you six reference sheets. By same post I have written to Mr. Townsend, instructing him to inform me when his field work will be completed.

If you do not hear from me to the contrary, I shall require you to proceed to assist Mr. Townsend as soon as you complete the plan and section of your present length.

The plans and section of the deviation through Rylstone are urgently required.

HERBERT PALMER.

No. 64.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Dungaree, *via* Rylstone,

26 June, 1876.

Mr. Townsend informs me that he cannot complete his field work until the 15th of July.

I wish you to see Mr. Townsend as early as practicable, and to assist him in any way you may consider most necessary for the advancement of this work.

HERBERT PALMER.

No. 65.

Engineer for Trial Surveys to Mr. Jamieson.

Mr. Jamieson, Mudgee,

28 June, 1876.

On the completion of the trial survey upon which you are now engaged between Rylstone and Mudgee, I wish you to return to this office, to work up the section, take out quantities, &c.

HERBERT PALMER.

No. 66.

Engineer for Trial Surveys to Mr. Townsend.

Mr. Townsend, Ilford,

1 July, 1876.

On the completion of the field work of your present length of trial survey to your junction with Mr. Kennedy, I wish you to return to this office, to finish the plotting of all plans and sections and take out quantities, &c., in connection with this extension.

HERBERT PALMER.

No. 67.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Rylstone,

1 July, 1876.

You may stake the continuation of your survey from Rylstone to join Mr. Townsend in a similar manner to your previous work, and plot the same on your finished plan and section.

Engineer for Trial Surveys to Mr. Hardy.

Mr. Hardy, Mudgee,

1 July, 1876.

On the completion of the trial survey upon which you are now engaged, I wish you to return to this office, to assist in taking out quantities.

HERBERT PALMER.

No. 69.

Mr. Kennedy to Engineer for Trial Surveys

Sir,

Camp, Rylstone, 2 July, 1876.

With reference to Mr. Townsend's work, I beg to say there are about 7 or 8 miles to stake out. I have about 3 miles rough staked, and Mr. Townsend is going to remove his camp and work to meet me.

He informs me that his plan and section have to be plotted yet; after the field work is completed he will come to my camp, and I will assist as much as possible to get them finished. I cannot say how long it will take to make the plan and section, but if he will plot it I will soon get it drawn. I probably will have about 5 miles out of 7 or 8 mentioned staked out and levelled this week.

Will you please send three chainman's pay sheets.

I have, &c.,

THOMAS KENNEDY.

Mr. Kennedy and Mr. Townsend instructed to return to this office immediately they complete the staking of the trial survey, to plot plan and section here.—H.P., 4/7/76.

No. 69A.

Mr. Townsend to Engineer-in-Chief.

Sir,

Camp, near Ilford, 3 July, 1876.

I have the honor to inform you that I have restaked a portion of the line from 140 miles to 138 miles, using curves of 10 and 12 chain radii. I have not removed the original staking. I did this as I had received instructions from Mr. Palmer to put cross sections in such portions of the line as would be improved by using smaller curves than those I originally used. The country is so rough and uneven that the number of cross sections needed would take longer to make than the restaking has done, and would, unless very close together, not be so intelligible when made.

There are still two places, one at 138 miles 20 chains and one at 140 miles 30 chains, which need altering. These I will send cross sections of.

I should like to go back to 136 miles and alter some of the work there; it would make very little difference to the through chainage, but a great deal to the section.

I have, &c.,

GEO. WM. TOWNSEND.

I consider Mr. Townsend has neglected to carry out my instructions by re-staking his line instead of showing cross sections on his plan, as I instructed him on the 3rd of May. Mr. Townsend will make no further alterations in his staked line, but return to this office as soon as he connects his work with Mr. Kennedy's.—H.P., 5/7/76.

No. 70.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Rylstone,

4 July, 1876.

I shall require you to return to this office immediately on the completion of the staking to your junction with Mr. Townsend. The plotting of both plan and section can be finished here.

HERBERT PALMER.

No. 71.

Engineer for Trial Surveys to Mr. Townsend.

Mr. Townsend, Ilford,

4 July, 1876.

I hear from Mr. Kennedy that you purpose removing to his camp, to plot the plan and section of your present length of trial survey.

It will not be necessary for you to do this, as I shall require you to return to this office immediately on your closing with Mr. Kennedy's line from Rylstone, to plot all plans and sections here.

HERBERT PALMER.

No. 72.

Engineer for Trial Surveys to Mr. Jamieson.

Mr. Jamieson, Mudgee,

6 July, 1876.

I cannot at present inform you when or in what direction your services will next be required in the field. You can, however, safely promise your chainmen that you will be in a position to re-employ them in the course of a few weeks, but their wages must be discontinued during the time you will be employed in this office.

HERBERT PALMER.

No. 73.

No. 73.

Mr. Nardin to Mr. Jamieson.

My dear Sir,

Mudgee, 12 July, 1876.

The timber of the Mudgee bridge was brought chiefly from near Reedy Creek, 32 miles from here, on the road from Cassilis to Mudgee; the remainder was from Tallawang and Goodunan Ranges, 30 miles away, in the Dubbo direction, from which locality all the timber for the Slasher's Flat Bridge was also obtained. All the timber is either slaty gum or ironbark, and I know of no other place around here where good timber of such sizes can be had. There is stringy-bark between Ilford and Rylstone. I don't like the former, and the latter does not attain a sufficient size for large bridges.

Down the road it is more difficult still to get suitable timber. There is some at Wolgan, but the railway bridge work would have to be supplied from the coast.

In great haste, faithfully yours,

ERNEST A. NARDIN.

H.P., 15/7/76.

No. 74.

Mr. Jamieson to Engineer for Trial Surveys.

Sir,

Camp, Havilah, 13 July, 1876.

I have the honor to transmit herewith, under separate cover, plan and sections of the proposed line from near Dungaree to Mudgee, a distance of about 20 miles.

The line as surveyed and levelled from Mr. Kennedy's ending, and my commencement at or near Dungaree, follows generally the direction of the Rylstone Road for about $1\frac{1}{2}$ mile. Thence in a westerly direction for 4 miles, crossing small watercourses (see plan), and crosses the Rylstone Road, leaving "Havilah," the head station of Mr. N. P. Bayley, about 36 chains north. From this point onwards the line skirts round the foot of the spurs of the high range dividing the watersheds of Cudgegong River and Lawson's Creek, until Broomby Gap is reached.

I beg to state that from near Havilah to Broomby Gap the line becomes circuitous, and in places rough, as I have had to use a number of small curves of 20 chains radii, in order to avoid crossing of Lawson's Creek, yet the earthworks on the whole will be tolerably light.

From Broomby Gap onwards the line then crosses Cudgegong River, near Broomby House, the residence of C. C. Cox, Esq., trending westward to the main road leading from Wallerawang to Mudgee; thence following said road for some $3\frac{1}{2}$ miles, and crossing same about 1 mile east of Mudgee, and joins the line *via* Queen's Pinch, near the new hospital; thence crossing several unimportant streets, town of Mudgee, and terminates at a point about $1\frac{1}{2}$ mile westerly from the above junction in a good direction for continuation towards Gulgong if necessary.

The line shown in red on plan from Broomby Gap, at station No. 25, follows the north bank of Cudgegong River for some $2\frac{1}{2}$ miles; thence crossing Rylstone Road, Lawson's Creek, and on to Bumberra Hill, and crossing Maitland Road about 1 mile north of Mudgee. At this point a suitable station could be erected if found hereafter to be more direct for future extension, thence on to a point marked D on plan.

I beg to inform you that the country over which this line traverses is, I must say, very soft and spongy, but nothing very heavy as to earthworks; there will be long straights and large curves.

I may here mention that a bridge over Lawson's Creek will be nearly as expensive as over Cudgegong River.

The green line, as shown on plan, commences at Δ No. 7, and crosses Rylstone Road and Lawson's Creek; thence skirting the spurs of high range just above flood waters, and crosses Maitland Road, Gulgong Road, and on to a point marked B on plan, and in a good direction for continuation towards Gulgong.

I think a good and suitable place could be got for a station (if required) at the crossing of Maitland Road.

It will be useless for me to offer at present any suggestions as to which will be the best line to adopt, as I am quite in the dark as to where the line is to be taken to hereafter.

I have, however, as you will see, made a complete and extended survey, as it looks like another North Yass business to me; but when the earthwork quantities are taken out, and an estimate of each line, you will be in a better position to decide which of the surveyed routes shall be adopted.

I beg to enclose a note from Mr. Nardin, Road Superintendent, Mudgee, as to timber, &c., &c.

I have, &c.,

GEO. JAMIESON.

Mr. Palmer.—W.H.Q., 15/7/76. H.P., 15/7/76.

No. 75.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Wallerawang,

2 September, 1876.

Herewith I enclose a tracing of the Wallerawang Station arrangement, with the through mileage from Sydney shown. From this you will be able to carry on the correct mileage towards Mudgee.

I presume you took with you the levels of the B.M.'s about Wallerawang which will enable you to carry forward the through levels.

HERBERT PALMER.

No. 76.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Wallerawang,

12 September, 1876.

Attached is a tracing showing several B.M.'s and their reduced levels, on each side of the Wallerawang Station. To check the correctness of your starting point, take a height on the rails opposite the passenger platform, which should read 3,027-95.

HERBERT PALMER.

No. 77.

29

No. 77.

Mr. Jamieson to Engineer for Trial Surveys.

Sir,

Camp, Round Swamp, Mudgee Road, 30 September, 1876.

I notice by Mr. Townsend's plan that he has used a good many 10-chain curves on the Rylstone side of Tumut. Can I use same on this side?

I beg to inform you that I have re-staked the original line and levelled it, but my levels do not agree with former levels, *in fact nothing will agree*. I will check my levels when I have amended line set out.

I have cross-levelled about 4 miles of this work, and from what I can see at present I shall, I think, be able to reduce the works by say one-half.

The original line has not by any means been well selected, for instance, see section at 135 miles, where tunnel is shown, there is no necessity for a tunnel here.

I need not say more at present until I have the survey of this side completed.

Please inform me as soon as convenient if I can use 10-chain curves on this side, or shall I stick to 12? Of course you are well aware what a difference 10-chain will make in section in this place.

I beg also to inform you that this is a very rough and broken part of the country, and will necessarily take some time to work up properly.

I have, &c.,

GEO. JAMIESON.

Telegram to Mr. Palmer, 5/10/76.

Instructions forwarded to Mr. Jamieson.—H.P., 19/10/76.

No. 78.

Mr. Kennedy to Engineer for Trial Surveys.

Sir,

Camp, Wallerawang, 2 October, 1876.

I have the honor to inform you that I have completed the staking and levelling of line from Wallerawang Station to near Hunt's Creek, about $9\frac{1}{2}$ miles. I cross-levelled nearly the whole of this length. I have a good deal of surveying done, but there is a considerable amount to do yet, as there is a great deal of detail on the first 5 miles from Wallerawang. I have not reduced my levels, but I can tell by comparing from B.M. to B.M. with Mr. Townsend's levels that they agree fairly.

I have, &c.,

THOMAS KENNEDY.

H.P., 11/10/76.

No. 79.

Engineer for Trial Surveys to Mr. Jamieson.

19 October, 1876.

HAVING been absent from Sydney, I have been unable to answer your letter of the 30th of September. If you have not already set out any 10-chain curves, I should prefer your using nothing less than 12-chain curves on either side of the tunnel. The cross sections which you will show on your finished plan will enable me to determine how far the earthworks could be reduced by using curves of 10 chains radius.

I have instructed Mr. Kennedy to plot his plan and section to the 4-chain scale, and I also wish you to do the same. If you have not a sufficient supply of plan and section paper for this purpose, let me know what length of each you will require.

HERBERT PALMER.

No. 80.

Mr. Kennedy to Engineer for Trial Surveys.

Sir,

Camp, Cullen Bullen, Jews Creek, 30 November, 1876.

With reference to the state of the work I am employed on, I beg to inform you that I have staked and levelled to 123 miles, that is opposite Patterson's, at the Crown. I have also check-levelled my work up to the same point.

The 4-chain section is plotted up to 123 miles, and the plan is drawn up to 113 miles. I have cross-levelled about 3 miles of my second length; it will all require cross-levelling.

It will probably be three weeks yet before I have plan and section completed up to Patterson's. I have followed the line as staked out by Mr. Townsend from the road crossing on the Mudgee side of Jews Creek, to 123 miles.

I have not seen anything of country beyond the Crown Ridge yet, but will spend some time in examining it before I shift camp.

As the paper I got for plan was intended for 10-ch. scale, it is used up. Will you be good enough to send me 50 feet of cartridge paper 2 ft. 6 in. wide. I shall require a good deal of this for rough plottings.

I have, &c.,

THOMAS KENNEDY.

No. 81.

Engineer for Trial Surveys to Mr. Jamieson.

5 December, 1876.

UNDER separate cover, I return the plan and section of your rough plottings.

The survey of the line from point B. may be continued as you recommend to Capertee Camp.

I will come up and go through all this work as soon as I can, but am not certain if I can manage to do this before Christmas.

HERBERT PALMER.

No. 82.

No. 82.

Mr. Jamieson to Engineer-in-Chief.

Sir,

Camp, Round Swamp, Mudgee Road, 21 December, 1876.

I have the honor to forward, under separate cover, rough plan and section of trial survey from Capertee Camp to 138 $\frac{1}{2}$ miles on original survey.

I beg to inform you that I have examined and tried the country very carefully from Capertee to the Rylstone side of tunnel, and have gone to a considerable amount of trouble in trying to improve the original line with a view of getting through "Vincent's Mountain" with a shorter tunnel, and I am now positive there is no other way it can be accomplished unless by adopting one or other of the lines as shown on rough plan, viz., either by leaving the original line near 136 miles, and running along the face of the mountain, thence through Carlow's Gap, and keeping the eastern side of range as shown on plan in blue line and joining the old line at 138 miles. This line would form an ugly shape, and some 3 $\frac{1}{2}$ miles longer than the original, but would shorten tunnel say 30 chains.

In my opinion the line marked No. 1 on rough plan would be the better line to take, viz., commencing at Capertee Camp, thence on to Δ 106, from this point onwards take line marked No. 3, as far as Δ 82. Of course it would be some 20 chains longer than line No. 1, but the section would, I think, be better with lighter works, and good sweeping curves of large radii; thence crossing Freeman's Creek and through Carlow's Gap (see plan).

These lines are as you can see only in a very crude state, but are capable of much improvement; and have written on in pencil where improvements can be effected.

I was in hopes when I commenced this line that I would have made it shorter, but such is not the case—it will be some $\frac{1}{2}$ of a mile longer when straightened up.

As you have the rough plottings of plan and section, as also the original, you will be better able to decide if it will be necessary for me to stake out and work up my new line from Capertee Camp to the point above referred to.

I may just mention that this line would shorten the tunnel 30 chains, also improve the get-away to Dividing Range on the Rylstone side, consequently my impression is that it would be well worth the extra expense to complete up this survey from Capertee Camp to 138 miles, after which reliable quantities could be taken out and the best line adopted afterwards.

I beg to inform you that in doing this work I have had to make a temporary camp, and have had to leave my main camp back 5 miles; I have also had to draw water for camp use from Round Swamp, distance 5 miles, as there is no water that I can get at fit for use nearer, and being anxious to push on the survey, I found it necessary to employ an extra man, which I hope you will allow me to charge on my pay sheet, and also allow me to keep on until I reach the Dividing Range.

This is a very difficult piece of work to get at, and it is impossible even to get a pack-horse over the range, all supplies must be carried from main camp to temporary one; I have made ladders to get over the precipice 160 feet down to get at Rylstone side of tunnel, to avoid going round the range.

I hope you will not object to this extra man for a couple of months, or until I get to the dividing range.

I am aware I should have obtained your sanction for this, but found myself completely crippled, having to send men away for rations, water, &c., but if you do not approve I will pay him myself up to end of month.

Please send me instructions as soon as practicable with reference to my future movements.

I have, &c.,

GEO. JAMIESON.

Extra man approved,—J.W., 22/12/76.

No. 83.

Engineer for Trial Surveys to Mr. Jamieson.

22 December, 1876.

UNDER separate cover I return the rough plottings of plan and section of your trial lines from Capertee Camp. You may now work up and stake the line you suggest, that is the line marked No. 1, and line No. 3, between Δ s 106 and 82.

The Engineer-in-Chief approves of your employing an extra man until you reach the Dividing Range.

I hope to be able to come up and go over the different lines you have surveyed during the first week in January.

HERBERT PALMER.

No. 84.

Engineer for Trial Surveys to Mr. Kennedy.

4 January, 1877.

WORK up and get the best line possible in the direction of the line you have rough staked.

When you have done this, I shall require you to work up Mr. Townsend's original line. I will examine both these routes if possible next week.

HERBERT PALMER.

Seen.—T.K., 5/1/77.

No. 84A.

Mr. Kennedy to Engineer for Trial Surveys.

Sir,

Camp, Crown Ridge, Mudgee Road, 14 February, 1877.

I beg to inform you that I forward this evening, per Cobb & Co.'s coach, the 4-chain plan and section of line from Wallerawang to Capertee, also 10-chain plan and section of the same work.

Reference sheets will be found inside plan. I have also sent down a lot of old field plans which are now of no use. I have plotted the 10-chain plan with as much care as if there were no other plan of the work.

I

31

I intend shifting camp in the morning to Ilford, and on to my new work. My address will be Ilford.

With reference to some dotted lines on 4-chain plan between the Dividing Range and Hunt's Creek, I put them on as near as I could from county map. I could not get any person to point them out on the ground to me, they are only approximately correct, and I did not number or include them in the reference sheets.

The property belongs to the heirs of the late Captain Russell, and occupied by Mr. Hunt, the same as the other property.

Will you kindly forward me some tracing paper, I find I am almost out of it; if you send it to Ilford by return post I will get it going through.

I have, &c.,

THOMAS KENNEDY.

I have plotted 4-chain section so that it can be joined; I did not like to make a bad joint of it.—
T.K. Received.—H.P., 26/2/77.

No. 84B.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Ilford,

2 March, 1877.

As you have not any cross sections taken at the Crown Ridge, it will not be necessary for you to return these at present, but it will do if you take them when your present work is finished as you return to Sydney.

I will send you a tracing of your 4-chain plan of this portion when you require it.

HERBERT PALMER.

No. 84c.

Engineer for Trial Surveys to Mr. Townsend.

Mr. Townsend,

19 April, 1876.

Please forward to me, as early as possible, a tracing of the first portion of the Rylstone deviation, as I wish to see what is the nature of the best section you have been able to obtain.

HERBERT PALMER.

No. 84d.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Dungaree, *via* Rylstone,

3 June, 1876.

Under separate cover I forward to you a tracing of the plan of village of Dungaree, to be returned when transferred to your 10-chain plan of trial survey.

I wish to be informed when you are likely to close with Mr. Jamieson's work, and when your plans and sections will be ready to forward to this office.

HERBERT PALMER.

No. 84E.

Engineer for Trial Surveys to Mr. Townsend.

Mr. Townsend,

22 June, 1876.

I wish to be informed by return of post when the field work of the through trial survey from Wallerawang to your junction with Mr. Kennedy's length will be completed.

HERBERT PALMER.

No. 84F.

Mr. Kennedy to Engineer for Trial Surveys.

H. Palmer, Esq.

Sir,

Camp, Wallerawang, 29 September, 1876.

When you were at Wallerawang a few days ago you said the level of platform at passenger station was inserted on tracing. I find it has been omitted. The level of rails I have got, but they are not very level.

I think you told me the platform at back is 3 ft. 9 in. above level of rails, and 3 ft. 6 in. just over the rails.

If you will send me by return of post the reduced level of platform, I will reduce my levels from it.

I have, &c.,

THOS. KENNEDY.

Reduced level of platform—at back, 2,930.95; at kerb, 2,930.70. These are correct heights above h.w. spring tides.

Mr. Kennedy.—W.H.Q., 11/10/76. Seen.—T.K., 12/10/76.

No. 84G.

Engineer for Trial Surveys to Mr. Jamieson:

Mr. Jamieson, Round Swamp, Mudgee Road,

9 December, 1876.

Enclosed are tracings of Mr. Townsend's plan and section of original trial survey from 124 miles to 131 miles.

No. 84H.

Engineer for Trial Surveys to Mr. Kennedy.

Mr. Kennedy, Ilford, Mudgee Road,

28 February, 1877.

How is it that you have not plotted on your 4-chain plan the cross sections taken between the road and the cliffs where you run round the Crown Ridge?

I want these particularly before laying the gradients on the section.

Can you send me the necessary information to put the cross sections on the plan in this office, otherwise I must return the plan to you.

HERBERT PALMER.

Tamworth to Armidale.

No. 85.

Engineer for Trial Surveys to Mr. Hoyle.

Mr. Hoyle, Tenterfield,

22 February, 1876.

On the completion of the survey upon which you are now engaged, I wish you to return to this office with as little delay as possible, to assist in completing the earthwork quantities, &c., of the through sections of the trial surveys made from the Clarence District to New England.

HERBERT PALMER.

No. 86.

Engineer for Trial Surveys to Mr. Vine.

Mr. Vine, Bendemeer,

23 February, 1876.

I have received the plan and section to your amended trial survey to Gostwyck.

You may now stake this line throughout from the head of Jamieson's Creek to Gostwyck, and there connect with Mr. Fitzgerald's work.

HERBERT PALMER.

No. 87.

Engineer for Trial Surveys to Mr. Herbert.

Mr. Herbert, Bendemeer,

19 April, 1876.

Should Jamieson's Creek be flooded while your survey is in progress, you will please note the highest flood level attained at all crossings of the creek.

HERBERT PALMER.

No. 88.

Engineer for Trial Surveys to Mr. Vine.

Mr. Vine, Uralla,

8 June, 1876.

When you have the plan and section of your present survey completed, I wish you to forward them to this office.

You may then proceed with a trial survey through Uralla to Armidale; and to enable you to show clearly on the new plan and section the point of diversion, you should keep a tracing of that portion of your present plan and section.

You may also mark (in pencil) on your present plan and section where you propose to make this diversion.

HERBERT PALMER.

I have instructed Mr. Herbert to start at Armidale and work to meet you. It will be well for you to go together over this route and fix approximately where you will join.—H.P.

No. 89.

Engineer for Trial Surveys to Mr. Herbert.

Mr. Herbert, Bendemeer,

8 June, 1876.

When you have the plan and section of your present survey completed, I wish you to forward them to this office.

You may then proceed to Armidale and take up a length of trial survey from Armidale towards Uralla, to join a length which will be started about same time by Mr. Vine, from the neighbourhood of Gostwyck towards Uralla and Armidale.

I will forward to you in a few days a tracing of the town of Armidale, with Mr. Fitzgerald's trial survey shown, which you will transfer upon your new plan.

It will be necessary for you to examine the country around Armidale, especially on its western side, and to fix your starting point in such a position that the line may be extended towards Glen Innes.

You are in no way bound to join Mr. Fitzgerald's line at Armidale, but must close on one of his B.M.'s there.

HERBERT PALMER.

No. 90.

No. 90.

Mr. Vine to Engineer for Trial Surveys.

Sir,

Camp, near Uralla, 16 June, 1876.

I beg to inform you that I expect to have the plan and section of this length completed about the end of next week, which I will forward to the office as soon as completed. The length of this portion of work is 27 miles 74 chains 23 links, joining on to Mr. Fitzgerald's station point No. 22, at Gostwyck. The stations are all numbered and trenched; the trees are all blazed and painted.

As soon as this is all completed, I shall commence the work towards Uralla, as per memo. of the 8th instant, No. 76-312.

I have, &c.,

ALFRED VINE.

H.P., 20/6/76.

No. 91.

Mr. Herbert to Engineer for Trial Surveys.

Dear Sir,

Uralla, 30 June, 1876.

Herewith I forward you my returns for this month, and have to state that, in compliance with instructions contained in your circular, No. 76/311, of the 8th instant, I have examined the country between Uralla and Armidale, and find that I can get a most inexpensive and direct line; and will junction with Mr. Fitzgerald's line at a point within about $1\frac{1}{2}$ mile of Armidale, and then follow his line into his starting point on the eastern side of the township.

Mr. Vine and I have decided on a point of junction at Uralla.

I have my camp within 3 miles of this town, as I intend working from this end towards Armidale. As from the levelness of the country there is no occasion of my surveying it, as I had to do on Jamieson's Creek.

Please forward me six level books, one field book, some tracing paper, and tracing of Armidale with Mr. Fitzgerald's line on it.

When I move to my upper camp, next Armidale, I will explore the country towards Glen Innes, and fix my point in the most suitable place.

I am, &c.,

MICHAEL HERBERT.

Books and tracing of Mr. Fitzgerald's plan of Armidale and of trial survey forwarded to Mr. Herbert.—H.P., 3/7/76.

No. 92.

Mr. Vine to Engineer for Trial Surveys.

Sir,

Camp, near Uralla, 10 July, 1876.

I beg to inform you that I have this day completed the plan and section of the length between the head of Jamieson's Creek and Gostwyck, a length of 27 miles 74 chains 23 links; the plan and section will be forwarded by to-morrow's post.

I shall remove my camp to-morrow back to St. Helena, and starting my next length near the present crossing of the Main Dividing Range for the direction of Uralla.

I have, &c.,

ALFRED VINE.

Plan and section received, and joined to through plan and section Tamworth to Armidale.—H.P., 13/7/76.

No. 93.

Engineer for Trial Surveys to Mr. Herbert.

Mr. Herbert, Armidale,

6 September, 1876.

On the completion of the plan and section of the length you are now surveying, I wish you to send them without delay to this office.

You may then take up the first length of a trial survey from Armidale to join the trial survey from Inverell to Tenterfield, at a point probably in the neighbourhood of Wellingrove. Mr. Hoyle is now examining the country between Armidale and Wellingrove, and in the meantime you may commence this survey, starting at the end of your present length, and make the most careful surveys to determine the most favourable direction for the extension of this trial survey from Armidale northwards.

HERBERT PALMER.

No. 94.

Engineer for Trial Surveys to Mr. Herbert.

21 September, 1876.

I HAVE received the plan, section, and level book of your length into Armidale.

I perceive from the level book and plan that you formed a junction with Mr. Fitzgerald's previously surveyed line, nearly 3 miles from the end of his trial line, and that you wasted time by re-surveying these 3 miles, that you re-numbered his traverse stations and established new bench marks.

You must have been aware that all it was necessary for you to do was to show clearly your junction with Mr. Fitzgerald's work, and to close on the nearest B.M. to the junction. I wish you to show particularly in your journal the time taken up in re-surveying and re-levelling this work.

HERBERT PALMER.

34

No. 95.

Engineer for Trial Surveys to Mr. Quodling.

28 September, 1876.

I LEAVE Sydney to-night for Newcastle, Murrurundi, and Werris Creek, to examine the trial line from Werris Creek to Gunnedah, and arrange for the permanent staking of that extension. From Gunnedah I shall proceed to Armidale and examine the country to the north of Armidale, and arrange the lengths of a trial survey in continuation of the present survey from Tamworth to Armidale, towards Wellington or other point of junction with the Inverell and Tenterfield survey.

All communications I should like to be addressed to me at Armidale until I acquaint you with my movement beyond Armidale.

HERBERT PALMER.

No. 96.

Mr. Herbert to Engineer for Trial Surveys.

Sir,

Armidale, 29 September, 1876.

I have the honor to forward herewith my returns for the present month, and to acknowledge receipt of the level books and forms.

In reply to your memo., No. 76/511, of the 21st instant, I beg leave to say that I left Mr. Fitzgerald's numbers intact, and simply placing my own by the side of them on a shingle peg, so that both numbers can be read. That the time occupied in traversing and levelling that $2\frac{1}{2}$ miles was three days (and in my opinion it was time well spent, being the simplest way of arriving at the through chainage and reduced level in the event of the line by Uralla being adopted).

I have, &c.,

MICHAEL HERBERT.

H.P., 19/10/76.

No. 97.

Engineer for Trial Surveys to Mr. Vine.

19 December, 1876.

ATTACHED is a tracing from county map, showing approximately the position of the trial survey, *via* Inverell, through Wellington Vale, also the line you have surveyed from Glen Innes towards Wellington Vale.

I wish you to show on this tracing (and then return it) the direction your survey will take from the point marked A (which is the end of the first experimental line you sent to me) to the point where you propose to join the surveyed line near Wellington Vale.

It appears from the tracing that the best point to join, as far as direction is concerned, is at about 367 miles, that is Δ 59 on your late work.

HERBERT PALMER.

No. 98.

Engineer for Trial Surveys to Mr. Vine.

Mr. Vine, Glen Innes,

17 January, 1877.

Enclosed is a tracing of portion of the plan of trial survey, Inverell to Tenterfield. As the line you are now surveying from Glen Innes northwards will probably join the former survey at some point on the length shown on enclosed tracing, I wish you to show accurately on your new plan the point of junction, and to transfer from the tracing as much as will come on your plan; also be sure to close on one of the B.M.'s shown on tracing.

Armidale to Glen Innes.

No. 98F.

Resolutions.

[Presented by S. H. Terry, Esq., M.P., 1/8/76.]

At public meeting held in the Town Hall, on Friday, 21st July, His Worship the Mayor in the Chair, the following resolutions were carried unanimously:—

1. That this meeting desires to express its resentment that, while every contemplated line of railway has been surveyed, the main Northern extension has been almost neglected, while undue preference has been given to its extension round by Inverell, by surveying a line there first, with the obvious purpose of diverting its course off the table-land.

2. That, in the next session of Parliament, while it is proposed to sanction the extension of the Northern line, not a moiety of it will have been surveyed; and the continued neglect of the Government in this respect, and its tardiness in pushing forward the survey to Armidale and its extension to Glen Innes, by placing an adequate staff of surveyors thereon, demonstrate the superiority of the route over the Inverell line, is alike vexatious and unsatisfactory to the inhabitants of the district, and this meeting desires to express its displeasure thereat.

3. That this meeting is of opinion that the best and shortest line to Inverell should junction with the main trunk line near Uralla, and is of opinion that if the Government is desirous of connecting Inverell and the Gwydir by railway, it should at once survey a line *via* Bundarra to that town and district.

4. That it is the opinion of this meeting the people of Glen Innes should be waited upon to cooperate with Armidale and Uralla for the speedy extension of the Northern Railway to Glen Innes *via* Armidale.

5. That, in order to give the foregoing resolutions a practical form, His Worship the Mayor be requested to convey the opinion of this meeting to the Minister for Works, and draw his attention to the injury the district is suffering for the want of railway communication.

On behalf of the meeting,—

Armidale, July 22, 1876.

JAS. E. SALMON,

Mayor.

Mr. Terry and Mr. R. Forster, M.P.'s, to be informed that petition has been received, and that its contents will receive due consideration by the Government.—J.L., 3/8/76.

Inform.—3/8/76, J.R. S. H. Terry and R. M. Forster informed.—5/8/76.

No. 98G.

The Commissioner for Railways to S. H. Terry, Esq., M.L.A.

Sir,

Department of Public Works, Railway Branch, 5 August, 1876.

I have the honor to inform you that I am instructed by the Honorable the Minister for Public Works to acknowledge the receipt of the Petition presented by you from the inhabitants of Armidale, on the subject of the extension of the Great Northern Railway, and to add that its contents will have due consideration by the Government.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

The Commissioner for Railways to R. M. Forster, Esq., M.L.A.

Sir,

Department of Public Works, Railway Branch, 5 August, 1876.

I have the honor to inform you that I am instructed by the Honorable the Minister for Public Works to acknowledge the receipt of a Petition from the inhabitants of Armidale on the subject of the extension of the Great Northern Railway, and to add that its contents will have due consideration by the Government.

I have, &c.,

JOHN RAE,

Commissioner for Railways.

No. 98H.

No. 98H.

Mr. T. J. Lane to The Secretary for Public Works.

Sir,

Tingha, Cope's Creek, 5/10/76.

I see by the local papers that surveyors are at the present time trying to find the best route for a railway from Armidale to Glen Innes.

I beg to submit a few remarks for your information on the foregoing subject.

It may not be generally known that a line starting from Gostwyck Station, and crossing the Northern Road, about a mile from Saumarez Creek Bridge; this at this point is the Great Dividing Range; following the Main Range, and keeping Saumarez Creek on the east for a distance of 15 miles from the Northern Road, a spot is reached called Little Duval. This is the highest point, and is level with the Devil's Pinch, and about 1,000 feet higher than Armidale. This is the table-land from Gostwyck to Little Duval, about 25 miles. The rise is scarcely perceptible. This line would cross the Inverell and Armidale Road on the Main Range, about 11 miles from Armidale, and near the line that divides the runs known as Eversleigh, Boorolong, and Tilbuster.

In conclusion, I beg to inform you that I am perfectly disinterested in the matter, as I do not at present hold any property anywhere excepting a mineral lease at Tingha. This is 65 miles from Armidale. Being a resident at Armidale nearly twenty years, I know this particular part very well.

I am, &c.,

THOMAS J. LANE.

N.B.—The line from Gostwyck to the Devil's Pinch, 25 miles. From Gostwyck to Uralla, 8 miles; Uralla to Armidale, 15 miles; Armidale to Devil's Pinch, 12 miles—35 miles. This latter route strongly advocated. The works going into and leaving the town of Armidale would be heavy.—T.J.L.

Mr. Whitton.—B.C., 16/10/76. Mr. Palmer.—W.H.Q., 17/10/76. I have already given directions for a trial survey to be made, following the Dividing Range from the neighbourhood of Uralla, and in Saumarez Creek, Little Duval, and the Devil's Pinch to the Mother of Ducks Lagoon; thence to Glen Innes and Wellington Vale.—H.P., 19/10/76. Commissioner.—J.W., *pro* W.H.Q., 25/10/76. Inform.—J.R., 30/10/76. T. J. Lane informed.—1/11/76.

No. 98r.

Commissioner for Railways to T. J. Lane, Esq.

Sir,

Department of Public Works, Railway Branch, Sydney, 1 November, 1876.

In acknowledging the receipt of your letter of the 5th ultimo, containing suggestions for the best route for a railway from Armidale to Glen Innes, I have the honor to inform you that directions have already been given for a trial survey to be made following the Dividing Range from the neighbourhood of Uralla, *via* Saumarez Creek, Little Duval, and the Devil's Pinch, to the Mother of Ducks Lagoon, and thence to Glen Innes and Wellington Vale.

I have, &c.,

CHAS. A. GOODCHAP,
pro Commissioner for Railways.

No. 99.

Mr. Vine to Engineer for Trial Surveys.

Sir,

Survey Camp, Glen Innes, 1 November, 1876.

I beg to inform you since my arrival in Glen Innes that I have examined the country between the latter place and Wellington Vale. The country from Glen Innes I think will afford a tolerable good line throughout, but rather circuitous for the first part from Glen Innes to the Severn River. I expect to have the experimental line carried for about 10 miles by the end of next week, when I will send you the result. In the meantime I would like to be informed if I should carry the experimental line throughout from Glen Innes to the proposed junction of the two lines near Wellington Vale, before commencing pegging out from the beginning at Glen Innes.

I am encamped on the Yarrowford River, about 5 miles from Glen Innes.

I am not able to forward my last month's returns, in consequence of not having the necessary supply of forms, but will do so as soon as I get them from Sydney.

I have, &c.,

ALFRED VINE.

Plan and section paper, levelling books and forms, have been forwarded to you to-day. Stake out each length as you proceed with the survey. Too much time is lost in frequent shifts of camp.—H.P., 15/11/76. Mr. Vine, Glen Innes.

Paper and books received. Returned.—A.V., 22/11/76.

No. 100.

37

No. 100.

Engineer for Trial Surveys to Mr. Macarthy.

15 November, 1876.

I HAVE received your plan, section, and field books, also your reports of the 9th and 11th instant.

A description such as you forwarded with your plan and section is necessary, and you have acted in this matter quite in accordance with what is required by the department. A monthly progress report is at all times required.

I enclose a rough tracing showing the point at which I wish you to connect your trial line with that being surveyed from Armidale to Glen Innes.

The heights shown are taken by a barometer, assuming Armidale to be 3,000 feet. From this tracing you will observe that you have to rise 1,000 feet from the crossing of Saumarez Creek to the Mother of Ducks Lagoon, and you must consequently gain as much height as possible after crossing Saumarez Creek. Let me know the reduced level of your crossing of Saumarez Creek as soon as you can.

HERBERT PALMER.

No. 101.

Mr. Vine to Engineer for Trial Surveys.

Sir,

Glen Innes, 16 November, 1876.

I beg to inform you that since I commenced this work from Glen Innes towards Tenterfield I have an experimental line run and levelled to a distance of $12\frac{1}{2}$ miles. The works on this part will not be very heavy; the latter $1\frac{1}{2}$ mile is not so good as I should like, but I think improvement can be effected. This is on the fall to the Severn River. The highest point will be only about 80 feet above the starting point at Glen Innes, a distance of $9\frac{1}{2}$ miles. The heaviest works on this length will be the bridging of the Beardy, 6 miles from Glen Innes, and the Severn River; the distance is longer than I anticipated at first. I purpose running an alternate line which will shorten the distance by a mile; the alternate line will be about 4 miles.

I would have made a plan and section of this portion and forwarded to you, but I am out of paper for plan and section, also levelling books. I made application for a supply of these on the 24th October.

I have, &c.,

ALFRED VINE.

Paper and books have been forwarded to Mr. Vine. See 76/4,254.—H.P., 28/11/76.

No. 102.

Engineer for Trial Surveys to Mr. Herbert.

16 November, 1876.

MR. STEPHENS leaves Sydney on Monday next, and will arrive in Armidale by coach on the following Wednesday.

I wish you to meet him there, and arrange to go together over the entire length of the proposed route from Armidale to the Mother of Ducks Lagoon. You will also be good enough to hand over to Mr. Stephens all plans, paper, books, &c., belonging to the department, and to give him all the information in your power as to the work he is to complete.

I shall not be able to come up with Mr. Stephens as I at first intended.

HERBERT PALMER.

No. 103.

Engineer for Trial Surveys to Mr. Vine.

5 December, 1876.

I HAVE received the plan and section of the trial lines you have run to the north of Glen Innes. In staking out you may adopt the shorter line of the two, that is the alternate line. I wish you to stake this with the utmost despatch, and to push forward then and let me have the section throughout to the junction with the other trial line near Wellington Vale as early as possible.

HERBERT PALMER.

No. 104.

Mr. Vine to Engineer for Trial Surveys.

Sir,

Glen Innes, 6 December, 1876.

I herewith forward a tracing of improvement of section of experimental line from station 59 to station 80a. This section is the best that can be got, the distance is a little longer from station 80a to the junction near Wellington Vale, the country is tolerably good. I purpose pegging this improvement out should I not hear anything to the contrary.

I have, &c.,

ALFRED VINE.

Show cross sections on your finished plan from $\triangle 60a$ to $\triangle 77a$, so that I can judge how the earthwork would be increased by using curves of larger radius than 12 chains. Stake the 12-chain curves as shown on tracing.—H.P., 12/12/76. Mr. Vine.

Read and returned.—A.V., 16/12/76.

No. 105.

Mr. Vine to Engineer for Trial Surveys.

Sir,

Glen Innes, 16 December, 1876.

I beg to inform you that I have 10 miles of this length pegged out, and expect to have the levelling completed about the end of next week. I am staking out the alternate line agreeably to your instructions of the 5th instant.

H.P., 12/12/76.

I have, &c.,

ALFRED VINE.

No. 106.

Engineer for Trial Surveys to Mr. Hoyle.

Mr. Hoyle,

19 December, 1876.

I wish you to inform me when you expect to be able to send me the plan and section of the trial survey you are now engaged upon, from the Mother of Ducks Lagoon to Glen Innes.

No comparison can be made with the Inverell route until your survey is completed, and the plan and section are urgently required.

HERBERT PALMER.

No. 107.

Engineer for Trial Surveys to Mr. Stephens.

19 December, 1876.

UNDER separate cover I have forwarded to you the tracing paper you require.

I wish you to inform me when you consider you will be able to send me a plan and section of the length of trial survey you now have in hand, that is including the length surveyed by Mr. Herbert to your point of junction with Mr. Hoyle's length.

HERBERT PALMER.

No. 108.

Engineer for Trial Surveys to Mr. Macarthy.

Mr. Macarthy, Armidale,

9 January, 1877.

I wish you to make your plan and section continuous from your commencing point near Uralla to your junction near the Mother of Ducks Lagoon with the line now being surveyed by Mr. Stephens from Armidale to that locality.

I shall also wish to be informed where you will next be encamped, with directions how your camp can be most easily reached from Armidale, as I hope to visit your district within the next few weeks.

HERBERT PALMER.

No. 109.

Engineer for Trial Surveys to Mr. Stephens.

Mr. Stephens, Puddledock, near Armidale,

9 January, 1877.

Mr. Herbert having obtained permission to withdraw his resignation, proceeds by to-night's mail to Armidale.

The length upon which you are engaged is urgently required, and I have instructed Mr. Herbert to assist you. You will therefore be good enough to arrange for Mr. Herbert's working with you on this length and to give him all the necessary instructions.

HERBERT PALMER.

No. 110.

Engineer for Trial Surveys to Mr. Stephens.

Mr. Stephens, Spring Mount, Armidale,

31 January, 1877.

The shortest of the two lines, near the commencement of your length, is the one I shall adopt for an estimate of this extension, so wish you to carry on the through mileage on both plan and section by that line.

Your tracing is sufficiently neat to send in with progress report.

HERBERT PALMER.

No. 111.

Mr. Herbert to Engineer for Trial Surveys.

'Camp, Mother of Ducks Lagoon,

26 miles north of Armidale,

Sir,

31 January, 1877.

I do myself the honor to forward herewith my returns for this month, and to report that (at the suggestion of Mr. Stephens) I commenced at the junction with Mr. Hoyle to work backwards to meet Mr. Stephens.

I have one mile staked, and three miles ready for staking, which I could have staked were it not for the state of the weather.

Mr. Mountain, Quipolly, *via* Willow-tree,

6 March, 1876.

The permanent staking of the proposed extension from Werris Creek to Gunnedah is not to be proceeded with at present.

Enclosed is a tracing of that portion of the trial line at the Werris Creek Gap.

I now wish you to plot so much as is shown on the tracing to a 4-chain scale, and to take cross sections, and plot the same on the 4-chain plotting, so that I may be able to lay out the most favourable line on this portion. I wish you next to make further trial surveys with a view of shortening the line. Under separate cover I forward to you the district plan, upon which you have laid down your trial line, and on this plan I show the parts over which I wish you to make trial surveys; from A to B, C to D, in red letters on plan. This line would avoid the purchased property in the towns of Breeza and Gunnedah.

HERBERT PALMER.

No. 115.

Engineer for Trial Surveys to Mr. Mountain.

Mr. Mountain, Quipolly, *via* Willow-tree,

11 March, 1876.

The cross sections I require at the Werris Creek Gap are in all instances to be taken at right angles to the chords on your trial line, as shown on the tracing forwarded with my last memo.

If your centre line has been well staked, there will be no occasion to permanently stake the cross sections.

All heights on the 4-chain plotting to be reduced to the same datum as the B.M.'s on the permanently staked line to Tamworth.

HERBERT PALMER.

No. 116.

Engineer for Trial Surveys to Mr. Mountain.

Mr. Mountain, Breeza,

2 May, 1876.

You may send in the plan and section of the amended portion of trial survey in the neighbourhood of Breeza as soon as it is completed, and then proceed to Gunnedah to make the proposed alterations there.

HERBERT PALMER.

No. 117.

Engineer for Trial Surveys to Engineer-in-Chief.

THIS trial survey, 42 miles in length, was commenced at the end of July, 1875, and was completed in January, 1876.

One surveyor was employed on this work, and since the completion of the first through survey to Gunnedah, he has been engaged in making amended surveys at the Werris Creek Gap, where the first surveyed line has been considerably improved; also, in making additional trial surveys with a view of straightening the line by keeping to the west of Breeza and Gunnedah.

HERBERT PALMER.

19/5/76.

No. 118.

No. 118.

Mr. Mountain to Engineer for Trial Surveys.

Camp, Gunnedah, 20 June, 1876.

THE amended line in the neighbourhood of Gunnedah is now completed, and I hope to have the plan and section of same finished and forwarded by next post (starting from here next Thursday night), by which date I shall be awaiting instructions as to my future movements.

I may state that this amended line runs through a part of "Town Common," and I understand that instructions have been issued to the licensed surveyor of this district to divide the common into farms for auction sale; this of course would alienate land that, in the event of the line ever being taken in this direction, would require to be resumed in part. I therefore deem it my duty to make you acquainted with this fact, in case the Engineer-in-Chief might desire to take any action in the matter.

ADRIEN C. MOUNTAIN.

No. 119.

Engineer for Trial Surveys to Mr. Mountain.

Mr. Mountain, Quipolly, *via* Willow-tree, Northern Road,

13 September, 1876.

Under separate cover I have forwarded to you one field book and six level books of the trial survey from Werris Creek to Gunnedah, which are to be returned to this office with the books of the permanent staking when completed.

On no account are your men to undertake the lockspitting of the centre line, at any rate until the whole of the staking is completed. On a level country like that through which you are staking, and in which the centre line should be staked very expeditiously, you will find ample employment for your men in cutting the rings round the chain-pegs and tangent points, and placing men on the lockspitting must delay the work.

HERBERT PALMER.

No. 120.

Engineer for Trial Surveys to Mr. Mountain.

Mr. Mountain, Quipolly, *via* Willow-tree,

23 September, 1876.

You may let contracts for both the lockspitting of the centre line and for making pegs. The price for lockspitting not to exceed 8d. per chain, and you must not exceed 12s. per hundred for pegs.

HERBERT PALMER.

No. 121.

Engineer for Trial Surveys to Mr. Mountain.

23 September, 1876.

You may stake the straight line from the Werris Creek Gap to the crossing of the Mooki at Breeza. I expect to leave Sydney for the north about the 23th instant, and shall probably be at Werris Creek in two or three days after that date. I will then go through the whole length of the trial survey to Gunnedah.

HERBERT PALMER.

No. 122.

Mr. Carver to Engineer for Trial Surveys.

Sir,

Camp, Breeza, 31 October, 1876.

I have the honor to report having completed the following work during this month :—

Levelling :—Longitudinal section completed 4 miles.

Do. not yet checked, $2\frac{1}{2}$ miles.

Cross sections occupied a good deal of time.

Surveying :—Permanently set out and staked, $2\frac{1}{4}$ miles.

Do. setting out, 1 mile.

Through a timbered country.

During last week I regret having lost the services of one of my men in consequence of an accident whilst falling a tree, which I fear will lay the man up for some time; and up to the present I have been unable to get another man to take his place.

I have, &c.,

N. P. CARVER.

H.P., 11/12/76.

No. 123.

Mr. Carver to Engineer for Trial Surveys.

Sir,

Camp, Breeza, 30 November, 1876.

I have the honor to report having completed the following work during this month :—

Levelling :—Longitudinal section levelled and checked, 9 miles.

Cross sections taken fill five sheets.

Office work :—Working section plotted to date.

Cross section, fifteen sheets plotted.

Up to the 16th of the month I had not one uninterrupted day's work, as I found that but little wind on the Breeza Plain caused the suspension of levelling operations. Atmospheric changes here are frequent and sudden, on one occasion the barometer falling nearly 4-10 and thermometer 40° in twelve hours; refraction is therefore considerable. I have, however, taken every precaution to obtain satisfactory results in my levels.

Office

41

Office work during the month has been a good deal impeded, in fact inking in during the day is nearly impossible, in consequence of swarms of flies of a painfully irritating nature.

Until to-day I have been unable to replace the man that met with an accident last month.

Part No. 1 of working section I will complete and forward to you during the coming month.

H.P., 11/12/76.

I have, &c.,

N. P. CARVER.

No. 124.

Engineer for Trial Surveys to Mr. Mountain.

21 December, 1876.

I WISH you to proceed without delay to make a survey of the proposed alteration at Gunnedah, from the back line to the Brickkiln, and to send me a plan and section of the same as early as practicable.

In the event of this proposed line being found unsatisfactory, it is probable that the original trial line through the town of Gunnedah may be adopted, and in that case it would not be necessary to permanently stake any portion of the back line.

You may arrange with Mr. Carver to carry on the staking of the line during your absence as far as the point of deviation of the two lines at about 30 miles from the Werris Creek junction.

HERBERT PALMER.

No. 125.

Engineer for Trial Surveys to Mr. Mountain.

29 December, 1876.

Now that I have the first part of the working plan of the extension to Gunnedah, and have read your reply to my memo., 76/643, I find that you have, as a matter of fact, done nearly the whole of the work, and have worked well. I can only blame you for not making a better division of the work with Mr. Carver.

I instructed you when I went over the trial survey to arrange the work between you so that there should be no loss of time; instead of which, you appear to have done all the staking out, the through chainage, referencing, and the working plan, while Mr. Carver has only taken a few cross sections, and levelled over your pegs; and plot the section, which I have not yet received.

HERBERT PALMER.

No. 126.

Engineer for Trial Surveys to Mr. Mountain.

29 December, 1876.

UNDER separate cover I have forwarded to you some plan, section, and tracing paper, also lithographs of the town of Gunnedah and the county of Buckland.

The county of Pottinger is not lithographed, so I will send you a tracing from the original as soon as I can get it done. I have not sent you a copy of the county of Parry, as you request, as none of your work lies in that county.

HERBERT PALMER.

No. 127.

Mr. Carver to Engineer for Trial Surveys.

Sir,

Camp, Breeza, 31 December, 1876.

I have the honor to report having completed the following work during this month:—

Levelling—Longitudinal section levelled and checked, $5\frac{1}{2}$ miles. Cross sections contained in two sheets.

Also 2 miles of line prepared for permanent staking.

Office work—Completed part No. 1 of working section. Plotted 2 sheets, and inked in 17 sheets of cross section.

For some time past office work in a tent has of necessity been a slow and difficult process, and would have become impossible had not a decided change in the weather taken place on the 16th of the month.

I have &c.,

N. P. CARVER.

H.P., 6/1/77.

No. 128.

Mr. Mountain to Engineer for Trial Surveys.

Sir,

Camp, Gunnedah, 3 January, 1877.

I have the honor to report that during the month of December I have been principally occupied in office work, as after despatching the working plan, Part No. 1, I assisted Mr. Carver with the section, which had then a considerable amount of work remaining to be done before it was finished. In accordance with your instructions, I then broke up camp and came on to Gunnedah, in order to carry out the trial line you have indicated, which work is now fairly under way. During the time I am engaged on this work I have arranged for Mr. Carver to carry on the permanent work as far as possible, completing everything as he proceeds.

I am duly in receipt of your memo. 76/669, but the parcel of paper and lithographs has not yet arrived, though I have made repeated inquiries after it.

296—F

I

I am at present short-handed, as my cook, who has been with me two years, was compelled to go to Sydney for medical advice, the recent excessive heat having seriously injured his health. Should he shortly recover, I believe he will return to me, in which case I should feel obliged if the Engineer-in-Chief will grant him the necessary pass for the railway.

I have at last succeeded in letting the lockspitting to a man named John Poulton, who undertakes the work at 8d. per chain, and commences on the long straight across Breeza Plain, that being the worst ground to work should wet weather set in. Please instruct as to the form in which vouchers for this work should be forwarded to the office.

H.P., 6/1/77.

I have, &c.,

ADRIEN C. MOUNTAIN.

No. 129.

Engineer for Trial Surveys to Mr. Mountain.

9 January, 1877.

Mr. Carver has been instructed to hand over to you all books, plans, papers, &c., belonging to the Commissioner.

You will therefore be good enough to meet him for this purpose, and to deposit in Breeza or elsewhere these documents until you resume the permanent staking from the point where Mr. Carver leaves it.

HERBERT PALMER.

No. 130.

Mr. Mountain to Engineer for Trial Surveys.

Sir,

Gunnedah, 15 January, 1877.

I have the honor to report that, in accordance with instructions contained in your memo. 77/9, I proceeded to Breeza and received from Mr. Carver,—

- One roll working section paper, Part 2.
- Spare sheets (cross section paper).
- Tracing of section.
- Trial survey to Gunnedah.
- Level books relative to ditto.
- Two spare level books.

Pending further instructions I have left them in the custody of Mr. Wm. Clift of Breeza, who kindly consented to take charge of the same.

I learn from Mr. Carver that he has ranged and cleared about four (4) miles of line on Part 2, and has carried the through chainage along two miles of that distance; the ringing being finished for 1 mile and 30 chains.

I hope to forward by next post (Thursday night) plan and section of the trial line I am at present engaged on, when I will remove my camp in order to resume the permanent staking.

I have, &c.,

ADRIEN C. MOUNTAIN.

No. 131.

Engineer-in-Chief to Commissioner.

25 January, 1877.

I FORWARD herewith a plan showing alternative lines in the neighbourhood of the township of Gunnedah, for the proposed extension of the Great Northern Railway from Werris Creek towards Narrabri, and request an early decision as to which route is to be adopted, in order to prevent delay in staking out the line and preparing the plans for Parliament.

In an engineering point of view there is very little difference between the three lines, the chief consideration being the increased length by the route indicated by line No. 2 or No. 3, should the railway to the north-western territory be continued *via* Narrabri.

Description of Lines.

Line marked No. 1 gives the best direction for extension *via* Narrabri, but the nearest point to the town of Gunnedah is 3 miles.

Line marked No. 2 passed through the town of Gunnedah, and would lengthen an extension *via* Narrabri 3 miles.

Line marked No. 3 will give a station ground $1\frac{1}{4}$ mile from the centre of Gunnedah, and is one mile shorter than line No. 2, that is if the extension *via* Narrabri be considered.

W. H. QUODLING,

(For the Engineer-in-Chief).

Parliament having sanctioned the construction of a railway from Werris Creek to Gunnedah, line No. 2, to the town of Gunnedah, to be adopted.—J.L., 9 Feb., 1877.

Telegram sent to Mr. Mountain, noon, 9/2/77.—W.H.Q.

No. 132.

Chief Clerk to Mr. Mountain.

Mr. Mountain,

9 February, 1877.

I telegraphed to you to-day to "stake out the line, *via* Mildew Hill and Deanbundi, through the town of Gunnedah."

I now forward you a tracing showing the direction of the line to be staked.

W. H. QUODLING.

No. 133.

No. 133.

Mr. Mountain to Engineer-in-Chief.

Sir,

Camp, near Gunnedah, 14 February, 1877.

I have the honor to acknowledge the receipt on Monday last, 12th instant, of your instructions, conveyed through Mr. W. H. Quodling (comprising memo. 77/51, telegram, and tracing of portion of Trial Surveys to Gunnedah), and beg to inform you that I am staking the permanent line in accordance therewith.

I have, &c.,

J.W.—20/2/77.

ADRIEN C. MOUNTAIN.

No. 134.

Engineer for Trial Surveys to Mr. Mountain.

Mr. Mountain, Gunnedah.

31 January, 1877.

In taking the reference you have merely considered what the centre line passes through. I have had to remember the working plan throughout. I enclose a tracing of portion of 10-ch. plan, which is numbered similarly to the working plan, on which I have shown some of the new numbers, and for which I require the reference.

I have been able to collect a reference for the remainder of the new numbers.

The last number of Part No. 1 working plan is now 141, not 122 as you sent it in; the first number therefore on Part No. 2 will be 142.

HERBERT PALMER.

No. 135.

Mr. Mountain to Engineer for Trial Surveys.

Sir,

Camp, near Gunnedah; 1 February, 1877.

I have the honor, in reporting progress for the last month, to state that during the early part of January I executed a trial survey of amended line near the town of Gunnedah, and forwarded plan and section of same to the office as instructed by you, and on the 22nd ultimo I resumed the permanent staking of this line.

I found that during my absence 2 miles of staking (1 mile and 30 chains of which was "rung") had been carried out by Mr. Carver, bringing the through chainage up to 178 miles, from which point I took up the staking. In addition to this, I may mention that Mr. Carver had ranged and cleared about 68 chains of line. I beg to inform you that the work is now completed as far as 182½ miles, and that I am using all possible energy to carry through the work as speedily as possible. I hope by the end of this month to be very close to Gunnedah. I shall be very shortly awaiting instructions as to which of the two lines I am to proceed with, the point of departure of the alternative routes being only about two miles from where I have now pegged to.

I have, &c.,

ADRIEN C. MOUNTAIN.

No. 135A.

Mr. Mountain to Engineer for Trial Surveys.

Sir,

Camp, near Gunnedah, 7 February, 1877.

I have the honor to enclose the references you required in your memo. 77/42, and regret that the information rendered in the first instance was not sufficiently complete.

I have just wired you for instructions as to the line I shall now proceed with, having staked up to the point of bifurcation.

I have, &c.,

H.P., 26/2/77.

ADRIEN C. MOUNTAIN.

No. 135B.

Engineer for Trial Surveys to Mr. Mountain.

Mr. Mountain, Gunnedah,

2 March, 1877.

The reference from the end of working plan Part No. 1, into Gunnedah, is urgently required. I must request you to obtain all the necessary information as quickly as possible. You can show the boundaries of properties on your 10-ch. tracing from the original trial surveys, and send it to me as soon as complete.

Your reference may terminate at the point where the centre line will intersect the western boundary of the town.

HERBERT PALMER.

Sydney towards Newcastle.

No. 136.

Mr. C. T. Mason to Engineer for Trial Surveys.

Sir,

Camp, near Wiseman's Ferry, 31 March, 1876.

I beg to inform you that since my arrival here I have been engaged on the north side of the river. Starting from a point opposite Dalgetty's Creek, I have surveyed and levelled along the river to Myrtle Creek. I have also run a traverse immediately under the cliffs and levelled same.

Myrtle

Myrtle Creek, after running through a succession of flats for nearly a mile, branches off into three distinct arms, which again have numerous other creeks and gullies running into them.

I have surveyed all the flats and the left arm of this creek to the table-land near which it takes its rise. From here to the nearest point on the Wollombi Road is 60 chains as the crow flies.

The general direction of the left arm is good, but it would be impossible to get round all the flats to it, using reasonable curves, without having at least one long tunnel.

The middle arm of Myrtle Creek runs generally in the same direction, but a short distance from where it leaves the flat it branches into two large gullies; and it is, I think, on the spur between these the best line is to be obtained from this point to the table-land.

I have surveyed Rose's Flat and Creek to its source at the Wollombi Road at 7 miles 55 chains from Wiseman's Ferry. The country is very rough, as instanced by the fact that although from the river to the head of Rose's Creek is only a few chains more than 6 miles, I had 120 traverse stations. I have surveyed the river together with flats as far as Wiseman's Ferry, connecting with Mr. Stephens' work at that place.

By Mr. Stephens' instructions I have also surveyed the Wollombi Road, a distance of $8\frac{1}{2}$ miles from Wiseman's Ferry, with a view of tying in the Rose's Creek traverse.

I am just commencing the centre line, which I propose only to stake roughly, so as to fit curves approximately.

I have little doubt of being able to get a fair line, taking the very rough nature of the country into consideration.

H.P., 6/4/76.

I have, &c.,

CLAYTON T. MASON.

No. 137.

Mr. Stephens to Engineer for Trial Surveys.

Sydney and Newcastle Trial Survey—Monthly Report.

Sir,

Pitt Town, near Windsor, 5 June, 1876.

For the last eighteen days I have been camped at the crossing of Dalgetty's Creek, by the Parramatta Road. I have nothing much of importance to report beyond this,—that I am very glad to be able to inform you that I have finished with the roughest portion of the work—it certainly was very rough and trying.

Since my arrival here I have surveyed and levelled over $8\frac{3}{4}$ miles of the main ridge towards Parramatta from here, and I am inclined to think that from this point on there will not be any very great difficulty.

It all requires careful surveying and a good deal of preliminary work in order to obtain the best line, but still I believe with care a fair average line may be obtained. This is speaking from this point *on*, for from this point *back* towards the Hawkesbury the line cannot be commended for its smoothness.

I have also laid out $2\frac{1}{2}$ miles of the preliminary rough trial line (N.B.—These are in the Mason's Creek watershed), and as far as I have gone I believe I have been tolerably successful, *i.e.*, for this style of country.

From my journal you will perceive that the weather has been much against us—continuous wet weather, which proved very annoying when we were shifting.

H.P., 9/6/76.

I have, &c.,

R. D. STEPHENS.

No. 138.

Engineer for Trial Surveys to Mr. Stephens.

Mr. Stephens, Dural, near Parramatta,

4 August, 1876.

I am anxious to have, as early as practicable, the finished plan and section of the trial survey from your junction with the Great Southern or Western Railway to the summit of the high land on the northern side of the river Hawkesbury.

You will please instruct Mr. Mason to assist you in the staking, &c., on the southern side of the river, if he is the first to complete his portion on the northern side.

I also wish you to inform me when you think you will be able to send me this plan and section.

HERBERT PALMER.

No. 139.

Engineer for Trial Surveys to Mr. Stephens.

28 September, 1876.

THE mileage of your plan and section should be commenced from the point of junction with the main line. It can then be carried through to the end of Mr. Mason's length on the northern side of the Hawkesbury.

HERBERT PALMER.

No. 140.

Engineer for Trial Surveys to Mr. Stephens.

28 September, 1876.

ON the completion of the length upon which you are now engaged I wish you to return to this office, and there to join the plans and sections from your junction with the main line to the end of Mr. Mason's length on the northern side of the Hawkesbury.

You may then lay down the gradients on the section, take out quantities, and prepare an estimate of that portion of the trial survey.

I wish you also to inform Mr. Mason that he is at the same time to return to this office and assist you in the office work.

HERBERT PALMER.

No. 141.

45

No. 141.

Mr. C. T. Mason to Engineer for Trial Surveys.

Sir,

Railway Survey Camp, Dural, near Parramatta, 28 September, 1876.

I beg to inform you that I expect to have my work here completed, and plan and section ready to hand over to Mr. Stephens by the 5th or 6th proximo.

As the field level books and traverse sheets of my former length and this one are rather bulky for the post, I will deliver them to the office on my return to Sydney.

The heavy gale of the 11th instant caused much havoc in my camp, tearing every fly but one into ribbons, and doing much damage to all the tents.

Awaiting your instructions,—

I have, &c.,

CLAYTON T. MASON.

Herbert Palmer, Esq. Sir, I have this day forwarded to Mr. Mason the instructions contained in your letter of the 28th inst.—I have, &c., R. D. STEPHENS. H.P., 11/10/76.

Sydney to Illawarra.

No. 142.

Mr. Carver to Engineer for Trial Surveys.

Railway Trial Survey—Wollongong to Kiama.

Sir,

Camp, near Kiama, 20 May, 1876.

I have the honor to inform you that with moderate fair weather I shall have completed the coast line to Kiama at the end of this month. In selecting the remaining portion of the route through a somewhat broken country it became necessary to be guided in a great measure by the country for some distance south of Kiama, which makes it desirable that the line should pass a short distance to the west of the township.

In my last month's report I informed you of having connected at a convenient point the line west of Lake Illawarra with that *via* the coast, in order to avoid the broken country between Albion Park and Jamberoo, with however the disadvantage of not being suited to serve the traffic of the Jamberoo District; and as I find this objection cannot well be remedied along the remaining course of the coast line, it appears to me desirable, in order to make the surveys complete, and to more fully carry out the object of the inland line, to continue that line on through Jamberoo to Kiama. The time required to survey it would not exceed one month. You would then have every practicable line surveyed that could influence the selection of a final route between Wollongong and Kiama.

I have the honor to request you will forward me instructions for my future guidance.

I may here mention that the country south of Kiama, for a distance of 5 or 6 miles, permits of a very limited choice in the selection of a route through it, consisting as it does of a high secondary range nearly parallel and at places close to the coast. At right angles to this range run numerous short steep spurs, terminating for the most part abruptly into the sea. The south coast road traverses these spurs, and at a point $4\frac{1}{2}$ miles south of Kiama attains an elevation of about 300 feet; the road from that point rapidly falls to the level of the plain, below which apparently extends without interruption a very considerable distance down the coast.

I have, &c.,

N. P. CARVER.

H.P., 22/5/76.

Mr. Carver instructed to return to Sydney as soon as his present surveyed line is completed into Kiama, and not to proceed with the survey he proposes to make through Jamberoo.—H.P., 29/5/76.

No. 143.

Engineer for Trial Surveys to Mr. Carver:

Mr. Carver, Kiama,

29 May, 1876.

The line you propose to survey by Jamberoo is not required at present; you will therefore be good enough to return to this office as soon as the field work of your present surveyed line into Kiama is completed, so that you may finish all plans and sections, &c., in connection with this work.

HERBERT PALMER.

No. 144.

Engineer for Trial Surveys to Mr. Carver.

Mr. Carver, Shellharbour,

13 May, 1876.

Under separate cover I forward to you a tracing of plan of the township of Kiama, also a level book as requested.

I wish to be informed as early as practicable when your field work will be completed, as I shall require you to return to this office to plot your plans and sections.

HERBERT PALMER.

No. 145.

No. 145.

Engineer-in-Chief to Commissioner.

30 May, 1876.

I FORWARD herewith the *original plan* of the projected line of railway from Sydney to Wollongong, to be laid upon the Table of the House of Assembly as an *exhibit* only.

W. A. QUODLING,
(For the Engineer-in-Chief).

North Shore to Manly.

No. 146.

Colonial Treasurer to Engineer-in-Chief.

APPLICATION respecting leave to lay down a tramway on North Shore Military Road, and thence to Manly *via* The Spit.

THE Government are urged to permit this. It appears to me that it can only be permitted under a special Act of Parliament, but as a prelude to any sanction or approval of such Act it would be well that the Chief Engineer, if he conveniently could, order a rough running survey of the chief difficulties on the line, for if the Spit offer insuperable objections it would be useless to give it any further encouragement.—A.S., 8/12/76.

Mr. Whitton, B.C., 8/12/76.—J.R. Instructions given to Mr. Palmer to have a trial survey taken from Kurraba Point in the Sydney Harbour to Manly.—J.W., 4/12/76.

Murrumburrah to Pooncaira.

No. 147.

Mr. Townsend to Engineer-in-Chief.

Supplement to report on Line from Murrumburra to Pooncaira. * Inadvertently omitted from Reports on Railway Trial Surveys of 18 November, 1875.

THE earthwork will generally be of an unimportant character, and will offer no obstacle to a straight line being run, unless in the undermentioned places, viz. :—From starting point on the Great Southern line to the level country, about 12 miles; a rather high bank over the Bland Swamps; through the low ranges on the Narraburra and Wallandilly Creeks about 12 miles; through the ironbark range between Nos. 2 & 3, with cutting and filling on each side, about 3 miles; near the Rocky Water-holes, where about 2 miles is undulating country.

From foot of Mount Binga for about 18 miles the country is more or less intersected by low ranges.

Thence to the Lachlan is level, with the exception of a few low sandhills near No. 12. Heavy works may be avoided in all these places by careful survey.

There is as yet no boat traffic on the Lachlan, but I should say it would be advisable, in designing approaches to that river, to allow roadway enough for team traffic at high-flood level.

From the Lachlan to the Darling the country is level, excepting through the belts of mallee before mentioned, which will be alternate cutting and filling, through the sandhills, the deepest cutting in which cannot exceed 20 feet, and can only reach that depth for a short distance. Generally they will be about 10 to 12 feet cutting and 8 to 10 filling. I do not apprehend any great difficulty from drift sand covering the line, as I am informed by persons who have had fences put across these sandhills that the sand is seldom more than a foot deep, and underlying it is a strong clay, sometimes of a cemented sandy nature.

The bridges needed will be—a viaduct over a portion of the Bland Swamps, the Narraburra and Wallandilly Creeks, both of which appear to flood heavily; one over the Mirrool, down which large floods must come at great speed, with several small openings where the line will cross tributaries of that creek.

Several small openings between Mount Binga and No. 11, where small tributaries of the Mirrool will be passed.

A considerable opening will be needed for the creek that forms the lake at Sinnett's home station, and another where the line will again cross the same creek, about 4 miles from Booligal.

The Lachlan can be crossed by one 80-foot girder, but, judging from the rapidity of the current in the river when low, there must be a considerable scour over a large extent of flooded country, for the general fall of the country seems to be the same as that of the bed of the river. I should therefore recommend a tolerably wide opening on each side of the central one, besides a long approach on each side by viaduct, but of course this can only be definitely decided when the section and cross section are completed.

From Booligal towards the Darling at 2 miles is a small creek; at 21 miles the Morowie Creek, down which a large quantity of water must come in flood; at 27 miles another creek.

Then nothing of importance until the Willandra Billabong is reached, which the line will cross somewhere Golgol and Pooncaira.

It

It is quite impossible to give any idea of the sized openings needed for any of these last-mentioned creeks without ascertaining the general fall of the country, and therefrom the probable speed at which the flood-water will travel.

The Darling will need, I should say, three 80-foot openings, with a long viaduct on the n.w. side of the river, in case it should be thought advisable to cross the river, and, like the Lachlan roadway, must be left for steam traffic at high-flood level.

The foundation, so far as I could gain information by examining wells, will all be in a good stiff clayey soil, which appears to underlie the whole country for a sufficient depth to give secure foundations.

I have, &c.,

GEORGE W. TOWNSEND.

Iluka to Woodburn.

No. 148.

Mr. Gasgow to The Minister for Public Works.

Sir,

Lismore, Richmond River, 22 July, 1876.

I do myself the honor to draw your attention to the following resolution passed unanimously at a general meeting of delegates of the Richmond and Tweed Rivers League held at Lismore yesterday, and which I have been instructed by that meeting to place before you.

"A public notification having appeared in the Press that the Government proposed to construct a railway between Iluka, on the Clarence River, and Woodburn, on the Richmond River, at a cost of £162,000, this meeting considers it incumbent on them to declare that the proposed railway is not calculated to promote the interest of this district, and would be a great waste of public money.

"This meeting further declares that such an undertaking is not desired, and has not been requested by the electors of the Richmond River."

Moved by Mr. James Stocks, and seconded by Mr. John Perry.

I beg to inform you that there were present delegates from Ballina, Alstonville (the big scrub), Wyrallah, Casino, and Lismore, and other delegates who had left home for the purpose were unable to attend in consequence of the impassable state of the roads.

I beg further to inform you that an overwhelming majority, that is, all except the few who may be personally interested in the construction of this line, are unanimously opposed to such a scheme.

I have, &c.,

J. E. GASGOW,

General Secretary.

Mr. Whitton to see.—J.R., 8/8/76.
W.H.Q., 11/8/76.

Seen.—J.W., 11/8/76.

Commissioner.—J.W. per

No. 149.

T. Bawden, Esq., M.P., to The Minister for Public Works.

Sir,

Grafton, 31 August, 1876.

I do myself the honor to forward herewith a Petition from 106 residents of Woodburn and its neighbourhood, in the district of Richmond River, in favour of the proposal of the Government to connect Iluka, on the Clarence River, with Woodburn, on the Richmond River by railway.

Requesting that the prayer of the Petition may receive your most favourable attention,—

I have, &c.,

T. BAWDEN.

[Enclosure.]

To the Honorable the Minister for Works, New South Wales.

The Petition of the undersigned residents in the district of the Richmond River,—

HUMBLY SHOWETH:—

That your Petitioners having been long subjected to great disadvantage and much loss through the want of a more rapid and sure means of conveyance to and from the Sydney markets of their outgoing productions and incoming supplies, hear with great satisfaction of the proposal of the Government to connect this river with the Clarence, at Iluka, by a railway.

That the means of rapid transit between this river and the metropolitan markets being thus obtained, and confidence consequently restored,—your Petitioners believe the population would rapidly increase in this district, whereby its productions—mineral, agricultural, and pastoral—would soon be developed, and its prosperity secured.

That the position of the whole population of the Richmond River District, but especially of the planters and the farmers, would be greatly enhanced and their success ensured by the facilities thus given, and your Petitioners would enjoy a fair share of the advantages to be derived from a judicious expenditure of the public moneys.

Your Petitioners therefore humbly pray that you will take these premises into favourable consideration, and use every means to expedite the construction of a railway from Iluka, at the Clarence River Heads, to Woodburn, on the Richmond River.

And your Petitioners, as in duty bound, will ever pray.

[Signed by William Gollar and Robert Rogers, and 104 others.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY TO NEW ENGLAND.

(PETITION OF RESIDENTS OF LIVERPOOL PLAINS, &c., IN FAVOUR OF.)

Ordered by the Legislative Assembly to be printed, 27 February, 1877.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents in the district of the Liverpool Plains,—

RESPECTFULLY AND HUMBL Y SHOWETH :—

That your Petitioners desire to submit the following reasons in support of the leading Northern Railway trunk line being taken from Tamworth via Barraba and Inverell, instead of via Armidale, as affording greater scope for utility in opening up the country, and in being better calculated to develop the vast resources of the northern portion of the Colony.

That the great and crowning object in the speedy extension of the northern line consists not only in opening up the country for the purpose of attracting a resident population, but in striking the Queensland frontier, in order that in the event of foreign aggression the two capitals Sydney and Brisbane should have railway communication with each other to render assistance at the least possible notice ; and this it needs scarcely be said should be accomplished in the most expeditious manner, and in the interest of the public purse by the cheapest and shortest route ; and in comparison it will be found that in these essentials the Barraba route is more in harmony with the public opinion and with common sense which is the genius of all public opinion ; recommended as it is too by the unvarnished and disinterested report of Mr. Wade, one of the ablest railway engineers in the Colony.

That compared with the Armidale route it is the cheaper, as being less exposed to engineering difficulties and in consequence easier of construction. The country between Barraba and Tamworth, a distance of sixty (60) miles, is almost a perfect level, and that between Barraba and Inverell may merit a similar description, with the exception of some slight interruption in its physical character at the crossing of the Nundewar Range near Barraba and in the valley of the Gwydir. There are no ascents or descents which rank above moderate—combined with this are favourable circumstances which will render a railway most remunerative. The resources of the country in an agricultural and pastoral point of view will constitute it a suitable abode for a large and thriving population ; and when mention is made of the undeveloped mineral wealth of Cope's Creek and Vegetable Creek, which will in course of time, in the product of tin alone, form a source of industry capable of giving more employment to a railway than all the collected products of the table-land. your Petitioners have some assurance that your Honorable House will so act that the more deserving, the more productive of good to the greatest number, i.e. the Barraba route, will have your first and favourable consideration. The idea indeed of connecting the capitals by the Armidale route in less than fifty years, if ever, is a chimerical one indulged in by the sanguine only—visionary and impracticable.

That your Petitioners in memorializing have no desire to embarrass, but simply to direct attention to the stubborn fact that the lower country is more adapted to a railway, better calculated to make a railway pay than the table-land on account of its agricultural and mineral resources—that it has less impediments in the way of construction, and that its direction along the plain would be more productive of general benefit. In fact, the difficulties in the Armidale route are of too complex a character to allude to in detail—suffice it to say that the country is barren and that the rock is of the worst granitic character.

That while, in conclusion, it would be a matter for congratulation to see a branch line constructed to Armidale of which that city should be the terminus, your Petitioners respectfully pray that the main arterial line should in the first instance be formed via Barraba and Inverell, as tending more to the northern public benefit and to the national prosperity.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 203 signatures.]

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY TO NEW ENGLAND.

(PETITION OF INHABITANTS OF NEW ENGLAND AND GWYDIR IN FAVOUR OF, *via* INVERELL.)*Ordered by the Legislative Assembly to be printed, 26 April, 1877.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned residents of the Western New England and Gwydir Districts,—

HUMBLY SHOWETH:—

1. That your Petitioners being deeply concerned in the proposed extension of the main Northern Trunk Line of Railway towards Queensland, respectfully beg to express their regret that the line surveyed, reported on, and strongly recommended by the Government Engineer, Mr. Wade, viz.,—*via* Manilla, Barraba, Bundarra, and Inverell, was not at once accepted by your Honorable House when lately under discussion.

2. That the proposed line would throw open for settlement a large area of first-class agricultural land, it being computed that no less than three and a-half millions of acres of unalienated land would be within a distance of 20 miles of the line, nearly the whole of which would be immediately settled upon, and that the increased value of the public estate resulting therefrom would in a very few years materially help to pay off the debt due on the work, besides leading to the establishment of a large producing population which, in its turn, would assist to augment the general revenue, and contribute towards increasing the profits derivable from such an extension.

3. That your Petitioners do not believe the same conditions would produce the same result if the line be carried over and along a (for the most part) rugged mountain range which, although of admittedly great value in seasons of severe drought, does not possess the elements necessary to sustain a large permanent population, as the experience of thirty years and the statistical extracts herein amply testify.

4. That of the comparative merits of the various lines surveyed and reported on, so far as regards difficulty and cost of construction, your Honorable House is doubtless aware, and being so your Petitioners respectfully desire to lay before you their reasons for believing that the railway should follow the course above pointed out, assuming that the most important points to be considered are the nature and extent of the country opened for settlement, the number who would be benefited by the extension, the cost of construction and maintenance, and the capability of the line to pay interest on the outlay. As regards the extent of country opened, your Petitioners have already stated that three and a-half millions of acres remain unsold, and that it is of a character far superior to that on any other line towards Queensland. The following extracts from Government returns clearly show:—

YIELD of wheat in bushels, per acre, in the districts through which proposed line would pass compared with returns from the Armidale and Table-land districts.

Year ending March 31st.	1873.	1874.	1875.	1876.	Average for 4 years.
Tamworth	22·5	20·9	19·8	19·3	20·63
Inverell	25·6	12·9	20·0	19·0	19·38
Warialda	15·0	21·7	18·3	19·0	18·5
Armidale*	20·7	14·0	15·4	15·7	16·45
Electorate of New England
Armidale	12·6	14·8	7·9	7·6	10·72

* The returns given in the Register under the heading "Armidale" are collected in a way that does an injustice to the Inverell District. For instance "Armidale" is credited with all the live stock and produce raised at Bundarra and Cope's Creek, the latter place being 70 miles from Armidale and 12 from Inverell. The same may be said of the encroachment of the Gwydir Registry District on the west, the boundary being less than 10 miles from Inverell and more than 30 miles from Warialda.

5. That as a means of conferring the benefits of railway communication upon the greatest number the Inverell proposed route is the best, and also the most calculated to serve the whole Northern portion of the Colony. For if the railway be carried to Armidale the only centres of population that would reap advantage would be Walcha, Uralla, and Armidale, and perhaps Bendemeer. No point on such a line would be within 60 miles of Inverell, Glen Innes, or any of the tin producing districts. On the other hand, if your Honorable House see fit to adopt the Inverell line, it will give communication to Armidale and Uralla, within 50 miles *via* a point near Bundarra; Bingera, Warialda, and Glen Innes will be within 40 miles. Bundarra and the rich tin district of Cope's Creek would be intersected by it, and at Inverell it would command the extensive and valuable tin fields of Vegetable Creek. But apart from the consideration of other towns, your Petitioners believe that there exists a larger population within a radius of 20 miles around Inverell than in the same area about Armidale, and offer the following figures in support of that opinion:—

TABLE of population in the Tenterfield, Gwydir, and New England districts, according to the Census of 1871, with the population in 1876, deducted from the number of electors in each district, according to returns published in the latter year.

[NOTE.—Cope's Creek is within 12 miles of Inverell; notwithstanding this the large mining population on this Creek and its tributaries are included on the returns for the New England Electorate.]

Electorate.	1871.		1876.		Increase General Population.	Decrease General Population.
	Electors.	General Population.	Electors.	General Population.		
Tenterfield	1,738	7,363	4,217	17,864	10,501	
Gwydir	1,904	6,687	3,024	10,620	3,933	
New England.....	2,650	9,706	2,446	8,958		784

NOTE.—The proportion of the above number of inhabitants that the Inverell district is entitled to makes it the most populous and important north of Tamworth. Your Petitioners beg particularly to draw your attention to the rapid increase of population in their district as contrasted with the falling off in Armidale.

6. That your Petitioners firmly believe that the cost of construction on this proposed line will not exceed the average, but will nevertheless cost much less to make and maintain than any railway which will be required to ascend the main range from the direction of Tamworth easterly. With respect, however, to the question of cost, your Petitioners rely upon the information that will be furnished to your Honorable House by disinterested and skilful Government officers practically acquainted with the subject.

7. That your Petitioners believe that in the present time these districts can furnish sufficient traffic to pay fair interest on the outlay for construction and maintenance of a railway, and that the various interests are more important, and the resources far more capable of making the undertaking a payable one in the country through which the proposed line would pass, than in the other, in confirmation of which your Petitioners respectfully submit the following extracts, which, in conjunction with the other tables, indicate the existence of a larger population, greater commercial activity; and superior producing power in favour of Inverell as against Armidale.

TABLE showing number and value of Telegrams.

	1872.	1873.	1874.	1875.	Total.	Value.
Armidale	4,338	4,069	5,534	6,729	20,660	£ 2,242
Inverell	5,851	3,330	4,121	4,775	18,077	2,447

TABLE showing value of Money Orders issued and paid.

	1872.	1873.	1874.	1875.	Total.
Armidale	7,024	6,958	7,269	6,523	£ 27,774
Inverell	18,008	8,763	7,313	6,769	40,851

TABLE

TABLE of value of produce raised for one year, with present value of cattle and sheep added:—

[NOTE.—No cattle are at any time fattened for market in the Armidale district; the pasture of the Gwydir and McIntyre supply all New England, in addition to the many heavy drafts carried west and south.]

For year ending March 31st, 1876.	Armidale.*	Inverell.
Grain and root crops	30,771	20,494
Wine	"	7,708
Wool	26,445	30,004
Minerals— <i>a.</i> gold, <i>b.</i> tin ore	26,394	55,542
Total annual value.....	63,610	113,854

For year ending 31st March, 1876.	Armidale.	Inverell.
Value of cattle and sheep depastured	£ 214,088	£ 235,808
General total	277,968	349,662

* This does not include Uralla, Bundarra, Bendemeer, nor Walcha. The figures for Inverell are seen to be largely in excess of those for Armidale, and if to the traffic resulting from this annual production be added that which would naturally flow towards the railway from Tenterfield to Glen Innes and Vegetable Creek the receipts therefrom would be much increased. No less than 4,600 tons of tin ore were raised last year at Tenterfield and Vegetable Creek, a large portion of which found its way through Queensland, and this will continue to be an outlet for those places until a railway is brought within easy reach.

8. That, viewing the work as a national one, the proposed line is the best to connect our railway system with that of Queensland, as it embraces the largest area of good land, contains a greater population, exports more produce, imports more merchandise, is a country highly favourable for railway construction, owing to its almost level nature, and must, by reason of its superior position, climate, and natural advantages, become in very few years the seat of a large and thriving population.

9. That the construction of any line of railway towards Queensland which shall not follow generally the route before-mentioned, namely, *via* Manilla, Barraba, Bundarra, and Inverell, will grievously hamper the operations of your Petitioners, and strongly militate against the future welfare and prosperity of the northern portion of the Colony.

10. That, having respectfully stated their wants and grievances, and submitted such information as may acquaint your Honorable House with the justice of their requests, your Petitioners humbly pray that the premises may be taken into favourable consideration, and such relief granted as your Honorable House may in its wisdom deem just and expedient.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 490 signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EAST MAITLAND RAILWAY STATION.

(PETITION OF RESIDENTS, FOR INCREASED ACCOMMODATION.)

Ordered by the Legislative Assembly to be printed, 25 April, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Inhabitants of the District of Maitland,—

HUMBLY SHOWETH:—

That your Petitioners suffer great inconvenience from the inadequate accommodation now provided at the East Maitland and Morpeth Junction Railway Station.

That your Petitioners humbly pray that some immediate action be taken to afford relief to the public from the inconveniences that now arise.

And your Petitioners, as in duty bound, will ever pray.

[*Here follow 610 signatures.*]

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY TO GUNNEDAH.

(PETITION FROM INHABITANTS OF GUNNEDAH.)

Ordered by the Legislative Assembly to be printed, 14 February, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of the undersigned inhabitants of Gunnedah and neighbourhood,—

HUMBLY SHOWETH :—

That your Petitioners have observed with great satisfaction that a vote has been passed by your Honorable House authorizing the Executive to borrow money for the construction of a railway from Werris Creek to Gunnedah, and are gratified by the rapid progress made in the now permanent survey.

That your Petitioners desire to represent to your Honorable House the great importance of the town of Gunnedah, the entrepôt for the stock and wool traffic arising from the countries watered by the north-western branches of the Darling and for the most valuable pastoral properties in the district of Liverpool Plains, which is rapidly rising into the position of a first-class provincial town. The population steadily increasing is now something over 600, and its position at the junction of the Mooki River with the Namoi market is the natural centre for the traffic of these wealthy districts.

Your Petitioners have become aware that the exact route which the proposed railway should follow is still undecided, that the engineers employed in the trial survey have marked out two separate lines, one which shall pass through the town of Gunnedah and another which shall leave that town a mile to the east.

Your Petitioners are not in a position to meet the engineering arguments which may be produced in favour of the last-named line, but they would urge upon your Honorable House the following considerations.

That the most westerly of the proposed lines appears to offer no engineering advantages which can for a moment be weighed against the disadvantages to the town of Gunnedah itself, and indeed it is known to your Petitioners that the western branch which bifurcates at about 10 miles from Gunnedah passes through a much rougher country than the eastern fork and would render many culverts necessary, so that the expense of constructing one line would be as great as the other, with no corresponding advantages, but on the contrary great disadvantages to the town of Gunnedah and the large population which has invested in properties and industry there.

That your Petitioners represent the wealth and established productive industries of Gunnedah and the neighbourhood, and would respectfully urge that no engineering considerations other than insurmountable difficulties should be permitted to influence your Honorable House in determining on a permanent railroad which would involve loss to or hinder the development of the resources of the people of Gunnedah.

Your Petitioners therefore humbly pray that the railroad from Werris Creek to Gunnedah may be constructed with the least possible delay, and that it may pass through the town of Gunnedah.

And your Petitioners, as in duty bound, will ever pray, &c., &c.

[Here follow 1,138 signatures.]

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAY CONTRACT, BATHURST TO ORANGE.

(PETITION OF WM. MASON & Co.)

Ordered by the Legislative Assembly to be printed, 1 August, 1877.

To the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.
The humble Petition of W. Mason & Co., of Bathurst and Sydney, in the Colony of New South Wales,
Railway Contractors,—

SHOWETH:—

1. That your Petitioners entered into a certain Railway contract with the Commissioner for Railways on the first day of August, one thousand eight hundred and seventy-four, to construct the Railway line from Bathurst to Orange, to be completed on the first day of August, one thousand eight hundred and seventy-six.

2. That your Petitioners used all their endeavours to complete the said contract within or as near contract time as possible, but in consequence of many delays, not the fault of your Petitioners, severe weather, and difficulties in procuring skilled labour at required periods, they were unable to hand over the said line on the first day of August, one thousand eight hundred and seventy-six.

3. That extensions of time for completion of contemporary Railway contracts on the Southern and Northern lines were granted to the contractors therefor for periods extending over twelve months without penalty on their assigning similar reasons to those set forth by your Petitioners.

4. That your Petitioners have not shown neglect of work, or committed any act which should deprive them of the consideration which has been accorded to all other Railway contractors in this Country.

5. That your Petitioners have opened for traffic forty-eight miles of Railway through difficult country within eight months of original contract time after encountering and enduring all the delays and troubles which have gained for the contemporary contractors liberal extensions of time without penalty being enforced.

6. That your Petitioners did not ask or make an application for an extension of time for the completion of their said contract until the first day of August, one thousand eight hundred and seventy-six, when your Petitioners were threatened with having the works taken out of their hands because of their non-completion on the said first day of August, one thousand eight hundred and seventy-six, the contract time, notwithstanding that your Petitioners had performed and executed over one hundred and forty thousand pounds (£140,000) worth of work and labor to an estimated amount when they obtained the contract for one hundred and seventy-one thousand pounds.

7. That your Petitioners were compelled in order to prevent their utter ruin to comply with a demand of the Commissioner for Railways made upon them whereby your Petitioners entered into a bond with him agreeing to pay a penalty of two hundred pounds per week in consideration of your Petitioners being allowed an extension of the time for completing their said contract to Orange.

8. That your Petitioners, in a letter to the said Commissioner for Railways, dated the seventh day of September, one thousand eight hundred and seventy-six, and previous to signing the said bond, protested against the infliction of the said penalty, which has however been rigidly enforced until the nineteenth day of April last, whereby your Petitioners have been deprived of the sum of seven thousand eight hundred pounds and suffered much hardship thereby.

9. That your Petitioners handed over to the Commissioner for Railways twenty-seven miles of Railway completed to Blayney on the first day of November, one thousand eight hundred and seventy-six.

10. That on opening the said line to Blayney your Petitioners conferred a public benefit.

11. That your Petitioners by this act were delayed in completing the said line to Orange and for which public service they have been fined in the full penalty of two hundred pounds per week.

12. That your Petitioners hope they have shown your Honorable House sufficient grounds to entitle your Petitioners to a remission of the penalties imposed upon them.

Your Petitioners therefore humbly pray that your Honorable House will take into consideration their case in order that substantial justice may be done them in the premises.

And your Petitioners, as in duty bound, will ever pray.

WM. MASON & Co.

Dated this 31st day of July, in the year of our Lord one thousand eight hundred and seventy-seven.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

RAILWAYS.

PETITION OF RESIDENTS OF WAGGA WAGGA AGAINST THE RAILWAY FROM JUNEES TO NARRANDERA.)

Ordered by the Legislative Assembly to be printed, 4 May, 1877.

To the Honorable the Legislative Assembly of New South Wales.

This the Petition of Residents in the Wagga Wagga and surrounding districts,—

HUMBLY SHOWETH:—

That the proposed Branch Railway from Junee on the Southern line to Narrandera, to be connected by steamboat communication on the Murrumbidgee River with a second line from Nap Nap to Pooncaira, is not calculated to effect the object in view, viz., the interception of the Darling trade with Victoria.

Your Petitioners would respectfully point out to your Honorable House that in ordinary seasons the river Murrumbidgee is not navigable to Narrandera for the greater part of the year, during which period the line from the latter township to Junee would only serve the purposes of an insignificant local traffic, the returns for which would be vastly disproportionate to the working expenses. Practically an extension from any point on the Southern line to Narrandera would be idle for months during the year. Then again, a line from Pooncaira to Nap Nap would serve as the most effectual feeder of the Victorian railways; the rivers Murrumbidgee and Murray being navigable from Nap Nap to Echuca, except for a very brief interval during the driest seasons.

The expenditure contemplated for the completion of this scheme is a heavy one; and your Petitioners would respectfully point out that not only would it fail in its ends, but would prove signally advantageous to the operations of Victoria merchants on the Riverina territory.

Further, the attention of your Honorable House may be drawn to the fact that the proposed line from Junee to Narrandera would pass through country unfitted for agriculture and very sparsely populated, while it would in no way conduce to settlement; nor would the line prove instrumental in the opening up of any new country in the neighbourhood supposed to be served; portion of the country through which it would run is covered with a dense scrub, and the greater part is wholly unwatered.

In conclusion, your Petitioners would respectfully submit that the interception of the Darling traffic would be better accomplished by the originally projected line from Cootamundra *via* Booligal to Pooncaira, by an extension of the Western line from Blayney, or by an extension from Dubbo. In either of the last-named cases, the desired objects might be more efficiently served by the line meeting the Darling at a higher point than Pooncaira.

Your Petitioners therefore humbly pray that so important a matter may receive the attention of your Honorable House.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 144 signatures.]

RAILWAY WORKSHOPS.

(RULES AND REGULATIONS.)

Ordered by the Legislative Assembly to be printed, 28 February, 1877.

[Laid on the Table of the Legislative Assembly, in pursuance of answer given to Question No. 5 on the Business Paper of 19th December, 1876.]

RULES AND REGULATIONS TO BE OBSERVED BY THE WORKMEN EMPLOYED IN THE GOVERNMENT
RAILWAY WORKSHOPS.

1. From the 1st September to the 31st March the bell will be rung at 6 o'clock A.M. for the commencement of work; at 8.15 o'clock for breakfast, at 9 o'clock for resuming work; at 1 o'clock for dinner, at 2 o'clock for resuming work; and at 4 P.M. for leaving off work, except on Saturdays, when the works will be closed at 1.30 P.M.; and from the 1st April to 31st August the bell will be rung at 7 o'clock A.M. for the commencement of work; at 8.15 o'clock for breakfast, at 9 o'clock for resuming work; at 1.15 o'clock for dinner, at 2 o'clock for resuming work; and at 5 P.M. for leaving off work, except on Saturdays, when the works will be closed at 1.15 P.M.
2. It is specially forbidden that any workman leave his work to prepare for going from the shop until the bell has actually commenced to sound for leaving off work.
3. All workmen must be ready to commence work at the times stated, and immediately the bell has rung for that purpose.
4. Every person employed in the Department is strictly forbidden to bring or cause to be brought any wine, beer, or spirituous liquors into the Railway premises; every instance of such offence will be severely dealt with, and no case of intoxication will be overlooked.
5. Every workman on entering the Works in the morning, or after meals, will be required to give his number to the Timekeeper, and if he neglects to do so will be considered as absent.
6. Smoking is strictly prohibited on any part of the Railway premises.
7. Any workman known to strike, molest, or threaten to strike any person on the premises will be discharged; and any person using improper language, or cursing and swearing while on duty, will be liable to instant dismissal.
8. No workman will be allowed to alter any of the standard tools without having received directions to do so from one of his superior officers.
9. Any workman having occasion to take tools away from the premises for the execution of his duty must give an account of them to the Foreman.
10. Any workman losing or abusing any tools belonging to the Government will be charged with cost of the same.
11. When work of any kind is found to be bad, and has to be done over again, the workman employed upon it will, for the first offence, be fined the cost of the extra work thus occasioned; and for the second offence be considered as incompetent, and be discharged.
12. No workman is to be away from his work without leave.
13. No workman will be permitted to absent himself from duty without the permission of the Engineer. In case of unavoidable absence through sickness, a medical certificate will be required.
14. Any workman having obtained leave of absence must, before leaving the Works, inform the Timekeeper to that effect. For any breach of this rule a fine will be inflicted.
15. Any workman will be liable to be suspended and dismissed at once for disobedience of orders, negligence, misconduct, or incompetency, and to dismissal without cause assigned at a week's notice; and any workman leaving the Service without giving a week's notice shall forfeit all wages due to him.
16. The pay of any workman will be forfeited during the time he is *suspended*, provided the Engineer considers it justifiable; and workmen discharged will be paid only for the time they actually worked.

17. Should any person think himself aggrieved, he may memorialize the Commissioner ; but in any such case the memorial must be sent through the Officer in charge of the Works.

18. Every person employed on the Works must leave his address with the Foreman.

19. Any workman required to work overtime will be paid at the rate of time and a quarter for the first two hours, and after that time, until morning, time and a half ; and also time and a half for Sundays.

20. The workmen are not allowed to introduce strangers into the Works without permission.

21. *Every person employed on the Works will be considered as holding his situation subject to these conditions.*

22. The Shop Foreman in each branch will be held responsible for the above Rules being strictly carried out.

23. For any breach of these Rules the Engineer will decide the penalties to be inflicted in each case where not specially provided for.

Department of Public Works, Railway Branch,
January, 1877.

JOHN RAE,
Commissioner for Railways.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RAILWAY WORKSHOPS.
(PURCHASE OF SITE FOR—CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 13 March, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 7th February, 1877, That there be laid upon the Table of this House,—

“Copies of all letters, contracts, minutes, memoranda, official or other Reports, and all other papers and documents connected with the purchase by the Government of the land situate near Parramatta Junction Station as a site for Railway Workshops.”

(Mr. Cohen.)

SCHEDULE.

NO.	PAGE.
1. Locomotive Overseer calling attention to want of workshop accommodation at Redfern. 8 October, 1875	2
2. Minute of Engineer-in-Chief proposing to remove workshops to a site beyond the Redfern Tunnel. 22 November, 1875	2
3. Locomotive Overseer again calling attention to want of shops, &c. 10 December, 1875	3
4. Do. do. awkward position of store, &c. 10 December, 1875	3
5. Traffic Manager do. insufficient accommodation, &c. 17 December, 1875	4
6. Locomotive Overseer do. do. 21 February, 1876	4
7. Do. do. do. 20 April, 1876	4
8. Minute of Commissioner do. do. 27 April, 1876	4
9. Locomotive Overseer do. do. 18 July, 1876	5
10. Engineer-in-Chief do. do. 7 August, 1876	5
11. Minute of Secretary for Public Works—It is decided to purchase land at Duck River, and erect permanent workshops. 14 September, 1876	5
12. Letter from Mr. S. Smith, enclosing contract of sale of land. 5 October, 1876	5
13. Letter from Crown Solicitor, forwarding certificate of title. 6 October, 1876	5
14. Land Valuer's Report. 17 October, 1876	6
15. Letter from Crown Solicitor, forwarding transfer. 24 October, 1876	6
16. Land Valuer's Report of the survey of land. 6 November, 1876	6
17. Minute of Secretary (Railways) to Accountant, to forward voucher for payment to Treasury. 23 November, 1876	6
18. Letter from Crown Solicitor, that money may be paid. 27 November, 1876	6
19. Letter from W. Badcock, applying for certain information as to the purchase of the land. 30 November, 1876	6
20. Letter from Crown Solicitor, reporting on Mr. Badcock's letter. 14 December, 1876	7
21. Letter to W. Badcock, in reply. 22 December, 1876	7
22. Notice of <i>caveat</i> . 14 December, 1876	7
23. Letter from Crown Solicitor that <i>caveat</i> is withdrawn. 4 January, 1877	7

RAILWAY WORKSHOPS.

No. 1.

Locomotive Foreman to Engineer-in-Chief.

I BEG respectfully to call your attention to the fact that our workshops have not the requisite accommodation for the increasing work of repairing locomotives, &c. I would strongly urge the necessity for providing workshops on a larger scale as early as possible, otherwise it will not be possible to keep pace with the work. It is a serious matter to be both short of engines and also of accommodation to carry out the required repairs. At present I am erecting one of the new engines (to replace one of the 1 to 4 class) outside, under a tarpaulin without a pit, having no room inside the shops. This is building engines under great disadvantages.

The boiler for the second engine of the above class is in a forward state; but those for the third and fourth engines are only just put together, in which state they have been lying since August last year, when the men were taken off to put together new engines, since which they have been employed on heavy repairs to the old goods engines, No. 17 class, and latterly to the old bogie engines, No. 23 class; so that it has not been possible to keep many men on the new engines. Five of the latter (bogies) yet remain to be renewed in the fire-boxes, cylinders, &c.

I have in hand, for fixing on No. 23 engine, the Westinghouse dee breaks, and I have also commenced with the American chimneys for spark-catching, in both of which jobs there is a great deal of boiler-makers' and other work.

W. SCOTT, 8/10/75.

Additional accommodation will be recommended in a short time.—J.W., 13/10/75. Mr. Scott,—
To be returned. Seen.—W. Scott, 18/10/75.

No. 2.

Engineer-in-Chief to Commissioner.

Subject: Proposed Improvements, Sydney Station.

Department of Public Works, Railway Branch, Engineer's Office, Sydney, 22 November, 1875.

I FORWARD, for the consideration of the Commissioner, three plans on one sheet, shewing proposed arrangements for goods warehouses and workshops at the Redfern terminus of the Southern and Western Railways, and the removal of the locomotive shops to a site beyond the tunnel at Redfern, upon land belonging to Mrs. Chisholm.

Plan No. 1 shows existing arrangements of locomotive, carriage, and goods sheds at Redfern, also proposed goods shed in Prince Alfred Park and extension of the present locomotive shops.

Plan No. 2 shows proposed goods arrangements at Redfern, without encroaching upon Prince Alfred Park, should the removal of the present locomotive shops be sanctioned.

Plan No. 3 shows re-arrangement of locomotive shops on land belonging to Mrs. Chisholm, if removed from the present station yard.

After having given this matter the greatest consideration I am forced to the conclusion that the present Redfern station yard is much too small even for the existing traffic, and the only way in which this yard can be made to accommodate the existing and prospective traffic will be by removing the whole of the locomotive, carriage, and waggon repairing and painting shops to the position shown on plan No. 3.

Plan No. 1. Upon this plan is shown a proposal to construct a second tunnel under Botany-street, and to carry the junction of the goods line from the north end of the Botany-street tunnel up to Wells-street, so as to enable the shunting in the station yard to be carried on without blocking the main line, as at present. Also the erection of a new goods warehouse and the construction of the necessary sidings in Prince Alfred Park, and the removal of the Exhibition building. The enlargement of the existing running-shed, machine-shop, coal stage, and the construction of an erecting shop and all necessary roads in connection therewith. A new carriage-shed is also shown, and a new store, tarpaulin store, and permanent-way workshops.

On looking over this plan it is abundantly clear that the yard is much too small for the future of the locomotive department, as the proposed enlargement of the running shed would only give accommodation for eight engines in addition to the old shed, which provides for sixteen, making twenty-four engines altogether. The total number of engines now on the Southern, Western, and Richmond Railways is 74, and as the number will soon be increased to 100 it is absolutely necessary that accommodation far exceeding that which can be given in the Redfern yard must be provided.

Plan No. 2 shows an arrangement for goods warehouses, sidings, &c., with the locomotive buildings removed, and the encroachment upon Prince Alfred Park shown on plan No. 1 abandoned. This arrangement would give the following accommodation for goods traffic:—

One shed, 400 feet by 103, with two outside platforms—one 450 feet by 15 feet—and a second one 200 feet by 20 feet.

Two goods sheds, each 350 feet by 48 feet.

One " 300 feet by 117 feet.

One " 350 feet by 50 feet, with two lines of way through for wool traffic.

There is also a small shunting engine-shed and carriage-shed, with all the necessary sidings complete.

A tarpaulin-shed, 200 feet by 40, and the permanent-way workshops are also provided for in this arrangement.

Plan

Plan No. 3. This plan shows an arrangement for the locomotive department only, including—

Engine running-shed, 350 x 128 feet, to hold 56 engines.

Shed for tenders, 300 x 40 feet.

Engine painting shop, 200 x 40 feet.

Carriage painting shop, 200 x 40 feet.

Carriage and waggon repairing shop, 220 x 68 feet.

Engine erecting shops, one 200 x 55 feet, and a second shop 340 x 55 feet.

Engine lifting shop, 150 x 55 feet.

Two machine shops, each 200 x 50 feet, with engine and boiler house between them.

Blacksmiths' shops, iron foundry, copper-smiths, brass foundry, and boiler shop, stores, &c.

There are also two coal stages, one 250 x 25, the other 200 x 25, with sheds for storing wheels, offices, &c.

The goods arrangement shown on plan No. 2 will not all be required for many years; but I am satisfied they will eventually be demanded by the great increase in traffic which will take place on the completion of the different extensions South and West, and the proposal now made will, I think, be sufficiently extensive for many years.

Additional land must be had near to Sydney, even should the locomotive shops not be immediately removed, as it is only a question of time when the Government must have sufficient accommodation for building all rolling-stock required for the railways, engines, carriages, and waggons.

The cost of carrying out this proposal will, no doubt, be great, but it must be done; if not now, in the course of a very few years, and the cost will be considerably increased by delay.

The land alone will not cost less than £30,000, and the new buildings, tunnel, sidings, &c., will cost about £170,000. This expenditure might extend over several years, as a portion of the buildings only will be at once required, and the additions can be made as they are demanded by the traffic.

JOHN WHITTON.

No. 3.

Locomotive Overseer to Engineer-in-Chief.

I BEG respectfully to call your most serious attention to my reports of July 22nd, 1874, M.P. 74/2,138, and October 10th last, M.P. 75/3,663, respecting the deficiency of workshop accommodation at Sydney. The work of repairing rolling-stock is rapidly increasing, not only in proportion to the additions to our rolling-stock and increase of mileage run, which is very considerable, but also in consequence of many of our engines and other rolling-stock, which have now been a long time in use, requiring to undergo very extensive repairs and renewals of a much heavier character than they have hitherto required.

The above causes, combined with the introduction of the eight-hour system, make it impossible to prevent the work of repairs to engines and other rolling-stock from falling into arrears, so much so that unless I am able to employ more hands, through being provided with increased shop-room, I feel that I cannot much longer be answerable for supplying in safe running order the requisite engines and vehicles for working the traffic. In addition to the impossibility of maintaining the rolling-stock in an efficient condition from the want of workshop space, I should also call attention to the fact that the work of nearly all the branches of the department is carried on at very great disadvantage and loss to the Commissioner through the same cause.

The promised new machine-shop, and a repairing shop for locomotives, are equally urgently required. The former is wanted to afford room for additional lathes and other machines, and also to give space required to work the present machines to advantage. The latter is required to enable the work of repairing engines to be carried on conveniently, and to afford the necessary accommodation for the requisite number of engines to be lifted at one time, which is impossible at present. Our appliances for lifting engines are to a great extent of a temporary character, and were designed for engines, and other mechanical work of a superior nature have now to be carried on exposed to all the weather, or under temporary canvas covers, in consequence of want of room inside the building, which, of course, is working under great obstacles. There is also a great deal of labour and inconvenience involved in shunting engines, which would be altogether obviated were more space available under cover. At present a large number of engines have to remain outside, exposed to the weather and the effects of dust and grit, with which they become smothered, and consequently damaged to a considerable extent.

An additional wagon repairing-shop is also badly required at present; the work, to a great extent, has to be carried on under great inconveniences and loss, owing to its having to be done in the open air.

The additional accommodation for lathes and for lifting engines is, however, the most urgently required, and I trust that steps will at once be taken to provide the same. I should be glad if the Minister could spare time to come and inspect the works with you.

W. SCOTT, 17/12/75.

I quite agree with Mr. Scott, that additional accommodation is required for the locomotive and carriage branches, and I desire to call the Commissioner's serious attention to my proposal to remove the above branches to the south of the Redfern tunnel.—J.W., 14/12/75. The Commissioner.

No. 4.

Locomotive Overseer to Engineer-in-Chief.

Government Railways, Engineer-in-Chief's Branch, 10 December, 1875.

I BEG respectfully to call attention to the great degree of inconvenience and danger occasioned by the awkward position of the railway store relatively to the workshops, it being commonly necessary to pass under or over a half-dozen lines of waggons in passing from one to the other, and causing sometimes a great loss of time.

This morning, as Edward M'Grath and striker (of permanent-way blacksmith's-shop) were coming across with a bar of iron, the engine moved the waggons under which they were passing the bar. The iron

iron was bent greatly, and the men had a narrow escape. This, however, is not altogether an unusual occurrence, and I may say that there are many narrow escapes, some happening every week, as all the heavy and awkward boiler-plate castings, &c., have to be transported across the lines.

W. SCOTT.

I hope the Commissioner will take into his serious consideration, at the earliest possible time, my proposal to remove the locomotive shops from the Sydney yard.—J.W., 14/12/75. Memo.—75/627 of 22/11/75. To Commissioner.

No. 5.

Minute of Traffic Manager.

THE attention of the Minister was drawn, I perceive, by *Sydney Morning Herald* of 16/12/75, and to complaints made respecting irregularities in delivery of wool from Redfern Station.

I am not aware to what cases Mr. Stuart refers, but it is quite possible that it is to certain balances of consignments which get buried upon the shed being packed. It cannot be avoided, unless consignees were prepared to take delivery as fast as the wool comes down, and release contractors' drays, &c., within reasonable time. If we cannot get rid of it as fast as it comes the shed soon becomes blocked up, and there is no getting at odd bales and small consignments.

We have of course no platform accommodation, and cannot therefore pretend to sort brands.

I am now pushing the delivery faster than is agreeable to the consignees, and in addition to the shed being full have over 150 trucks not yet unloaded.

Our facilities in the way of shed and platform accommodation are utterly absurd for so large a traffic. All our general merchandise has to be taken in and delivered in *the open yard*, and it is a matter of serious moment that we should be provided with something like the means of carrying on the rapidly increasing work of this department.

Being unable to release the larger number of loaded trucks before mentioned from want of shed and platform, I am unable to supply the demand of stations for either trucks or sheets. Traffic is impeded, revenue lost, and disappointment and loss entailed upon our customers.

Commissioner for Railways.

D.V., 17/12/75.

Mr. Whitton,—Can anything be done to remedy this inconvenience?—J.R., 22/12/75. See my report, 75/627, of 22nd November, with reference to the removal of the locomotive shops from the station yard, and suggesting increased facilities for the traffic branch.—J.W., 22/12/75. Commissioner.

No. 6.

Locomotive Overseer to Engineer-in-Chief.

Government Railways, Engineer-in-Chief's Branch, 21 February, 1876.

I BEG respectfully to call your serious attention to my previous reports respecting the deficiency of work-shop accommodation at Sydney.

I find the work of maintaining the rolling stock to be increasing so rapidly that it has become absolutely necessary for carrying on the work to have additional engine pits and appliances for lifting engines. The new machine-shop also, that was promised a long time ago to be erected, is still remaining in abeyance, although so badly required.

As before stated, an additional carriage and waggon and repairing shop is urgently required.

I sincerely trust that no time will be suffered to elapse before the erection of new shops is taken in hand.

W. SCOTT.

I quite agree with Mr. Scott as to the necessity for increased accommodation for the Locomotive Department, and desire to call the Commissioner's attention to my memo., dated 22nd November, 1875 (75/627).—J.W., 24/2/76. The Commissioner.

No. 7.

Locomotive Overseer to Engineer-in-Chief.

Government Railways, Engineer-in-Chief's Branch, 20 April, 1876.

I BEG again to call your most serious attention to the want of room in our repairing shops, for taking in all the engines requiring repairs. When the new engines arrive space will also be required for putting them together.

Unless something is done in this matter at once I cannot be held responsible for supplying sufficient engine power for working the traffic.

W. SCOTT.

I again call the Commissioner's attention to my minute, No. 627, of 22nd November, 1875, with reference to the increased accommodation so urgently required at the Sydney Station. Urgent and important.—J.W., 21/4/76. Commissioner.

No. 8.

Minute of Commissioner.

I CAN do no more than urge on the Minister the necessity for an immediate settlement of this question. If a lease of the premises offered by Messrs. P. N. Russell and Co. were taken for one or a series of years, with the option of purchase, we could relieve the locomotive shops and at once commence the manufacture of passenger carriages and other stock so much wanted.

J.R., 27/4/76.

No. 9.

Locomotive Overseer to Engineer-in-Chief.

Government Railways, Engineer-in-Chief's Branch, 18 July, 1876.

I BEG respectfully to again call your serious attention to the imperative necessity for the proposed new workshops. The train mileage is being increased both by the opening of new extensions and increased number of trains, and still the long promised increased workshop accommodation, with additional machines, are not being provided. The way our shop is crowded with machines is excessively inconvenient, and entails very great expense, and considerable danger in shifting heavy pieces of machinery in and out of the shop. I may cite the case of the cylinders (to replace the cracked ones in No. 50 engine) being planed by Shaw at the time of the accident, reported yesterday, which weigh $2\frac{1}{2}$ tons, and for which our planing machine is too small and ill-adapted—involving the necessity of taking out all the screws and feeding gear to allow the cylinders to pass between the standards and cross-bridge.

I trust that something will be done in this matter at once, as it will not admit of much further delay.

W. SCOTT.

No. 10.

Minute of Engineer-in-Chief.

I HAVE repeatedly called the Commissioner's attention to the necessity of providing additional accommodation at Sydney both for Locomotive and Traffic Branches.

J.W., 7 August, 1876.

Commissioner.

No. 11.

Minute of Secretary for Public Works.

Removal of Workshops, Redfern.

I HAVE brought the urgent recommendations of the different officers of the Railway Department, that further accommodation be provided for the Railway Works in conjunction with the Great Southern and Western Railway, under the notice of the Cabinet; also, the plans, &c., contained in proposal of the Engineer-in-Chief, Mr. Whitton; and after full consideration of the matters it has been determined to purchase the land at Duck River, under offer to the Government, containing about 90 acres, for the purpose of erecting permanent workshops on, and provision will be made for the necessary sum for carrying out the works required.

J.L., 14/9/76.

No. 12.

S. Smith, Esq., to The Secretary for Public Works.

Dear Sir,

Sydney, 5 October, 1876,

I enclose contract of sale and purchase *re* land at Duck Creek. I have requested Mr. Bowden to send abstract of title to the Crown Solicitor as requested. As it is a simple certificate, and I am prepared to sign transfer at once, I presume a few hours may settle it? Please sign within, and return me.

Yours, &c.,

SHEPHERD SMITH.

I HEREBY agree to purchase, on behalf of the Government, from Mr. Shepherd Smith, all those (83) eighty-three acres of land, more or less, at Duck Creek, comprised in his certificate of title under the Real Property Act, for the sum of forty pounds (£40) per acre cash.

JOHN LACKEY.

And I agree to sell as above.

SHEPHERD SMITH,

5 Oct., /76.

No. 13.

Crown Solicitor to Commissioner.

Sir,

Crown Solicitor's Office, Sydney, 6 October, 1876.

I have to-day received the accompanying certificate of title under the Real Property Act, in favour of Mr. Shepherd Smith, from whom the Government has, as I am informed, purchased the land described in such certificate as a site for Railway works, at £40 per acre.

If I am to do anything in the matter you will please return the certificate with your instructions.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

Land valuer will make the necessary preparation for Crown Solicitor in order that conveyance may be prepared.—J.L., 12/10/76.

This land must be purchased in the name of the Commissioner for Railways in terms of the Act 22 Victoria, No. 19.

Land valuer, for certificate of identity, &c.—C.A.G., B.C., 14/10/76.

Submit also schedule for Executive Council. 16/10/76.

No. 14.

No. 14.

Land Valuer's Report.

Government Railways—Land Claims Branch.

Report on M.P. No. 76/7,950.

MR. SHEPHERD SMITH claims £40 per acre for 77a. 2r. 4p. of pasture land, No. 129a. on plan of Great Southern Railway. The land is situate on eastern side of Duck River, and bounded on the north by the Parramatta Road.

The price of the land (£40 per acre) as per agreement, signed by the Minister for Works, dated 5/10/76, will be as follows:—77a. 2r. 4p., pasture land, £3,101.—H.R., 17/10/76.

Amount claimed, £3,101; recommended payment, £3,101.—H.R., 17/10/76. Instructions to Crown Solicitor, 24/10/76.

No. 15.

Crown Solicitor to Commissioner.

Sir,

Crown Solicitor's Office, Sydney, 24 October, 1876.

I have the honor to acknowledge the receipt this day of your instructions in this matter and to forward herewith, for completion in the usual manner, a memo. of transfer under the Real Property Act. I shall be glad to receive this memo. from you with a plan of the 77a. 2r. 4p., now to be conveyed, drawn upon it and duly sealed.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

Land Valuer.—C.A.G., B.C., 25/10/76.

No. 16.

Land Valuer's Report.

In accordance with the wishes of the Minister I had this property surveyed and plotted as per plan herewith, and find the quantity of land contained within the boundary, shown on the certificate of title, is 85a. 2r. 31p., exclusive of the land taken for the Great Southern and Western Railway, being somewhat in excess of the quantity stated in the certificate referred to.—J.B., 6/11/76.

85a. 2r. 31p., at £40 per acre, equals £3,427 15s. Will land valuer please re-schedule for Executive Council?—C.A.G., B.C., 13/11/76. Schedule herewith.—J.B., 14/11/76.

No. 17.

Secretary for Railways to Accountant.

Government Railways—Minute Paper.

Subject:—Shepherd Smith to Commissioner for Railways. Conveyance of land purchased for Railway purposes.

85 ACRES 2 roods 38 perches, at Duck River, in the district of Liberty Plains, county of Cumberland. £40 per acre. Amount, £3,429 10s.

The Crown Solicitor verbally states that the transfer is lodged, and as the Minister on the voucher has directed the money shall be paid, with a knowledge of the facts, he does not feel justified in advising that the payment should be delayed for the usual certificate from him.

Accountant will therefore pass voucher through books and forward to Treasurer for payment.

C.A.G.,

pro Commissioner, 23/11/76.

Entered voucher.—F.W., 27/11/76.

No. 18.

Crown Solicitor to Commissioner.

Sir,

Crown Solicitor's Office, Sydney, 27 November, 1876.

I have the honor to inform you that upon calling this morning at the Registrar General's Office I was informed by the Deputy Registrar General that the transfer has been accepted as of the larger quantity of land, and that the certificate of title in your favour is in course of preparation and will probably be ready for delivery to-morrow.

I therefore think that the purchase money may be paid to Mr. Smith.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

No. 19.

Mr. W. Badcock to The Secretary for Public Works.

Sir,

Carcoar, 30 November, 1876.

A short time since it was reported in the Sydney journals that the Government of the Colony had purchased a portion of land near Parramatta, for railway purposes, consisting of 83 acres of land, known as Wright's grant, on behalf of Samuel Wright, a resident of this district, who is a son of the original Wright (from whom the piece of land is named). I beg to ask you,—

1. Whether the statement which appeared in the papers is correct?—And
2. From whom did the Government make the purchase?

If

S. Smith to
Commissioner
for Railways.Shepherd Smith
to Commissioner
for Railways.

7

If you will kindly furnish me at your earliest convenience with this information you will greatly oblige

Yours, &c.,

W. BADCOCK, Auctioneer, &c., &c.,
Agent for Samuel Wright.

The papers herewith do not show that the land purchased was formerly Wright's grant; I believe it formed a portion of such grant. Perhaps the Crown Solicitor can say from documents in his possession; it is presumed that the information asked for may be given.—C.A.G., *pro* Commissioner, B.C., 8/12/76.

No. 20.

The Crown Solicitor to Commissioner.

Sir,

Crown Solicitor's Office, Sydney, 14 December, 1876.

I have the honor to return the papers forwarded to me with Mr. Wm. Badcock's letter of date 30th November last, respecting the land recently purchased from Mr. Shepherd Smith, and to state that I think Mr. Badcock should be informed that the Crown has purchased land originally granted to James Wright.

That the land was purchased from Mr. Shepherd Smith, the manager of the Bank of New South Wales, who held a certificate of title for same; that a transfer has been made to the Commissioner for Railways, who now holds a certificate of title for same, which is entered at Registrar General's Office, Sydney, in Register Book, vol. 274, folio 85.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

Mr. Badcock informed.—20/12/76.

No. 21.

Commissioner to Mr. Badcock.

Sir,

Department of Public Works, Railway Branch, Sydney, 22 December, 1876.

In reply to your letter of the 30th ultimo, asking whether it is true that the Government have purchased a portion of land near Parramatta, for railway purposes, known as Wright's grant, and, if so, from whom did the Government make the purchase, I have the honor to inform you,—

1st. That the Crown has purchased land originally granted to James Wright.

2nd. That the land was purchased from Mr. Shepherd Smith, the manager of the Bank of New South Wales, who held a certificate of title for same; and that a transfer has been made to the Commissioner for Railways, who now holds a certificate of title for same, which is entered at the Registrar General's Office, Sydney, in Register Book, vol. 274, folio 85.

I have, &c.,

JOHN RAE,
Commissioner for Railways.

No. 22.

The Deputy Registrar General to Commissioner.

Notice of Caveat forbidding any Dealing.

Sir,

Land Titles Office, Sydney, 14 December, 1876.

I have to notify to you, in terms of the 82nd section of the Real Property Act, that a caveat has been lodged by Shepherd Smith, forbidding registration of any dealing by you, with reference to the land comprised in certificate of title, No. 172, folio 122, until after the lapse of fourteen days' notice to be given to such caveator, that you have applied for the registration of any transfer or other dealing. I have also the honor to submit, for your guidance, the following information:—

1. Any caveator may be summoned to show cause why the caveat should not be removed before the Supreme Court, or a Judge, who may make such order as such Court or Judge may deem fit. (Sec. 82 of Real Property Act.)
2. A caveat may be withdrawn at any time by a caveator, (See sec. 81.)
3. Sec. 84 provides that any person lodging any caveat with the Registrar General without reasonable cause shall be liable to make to any person who may have sustained damage thereby, such compensation as may be just and such compensation shall be recoverable in an action at law by the person who has sustained damage from the person who lodged the caveat.

I am, &c.,

C. G. MUDDLE,
Deputy Registrar General.

Will land valuer please ascertain what land here is alluded to?—C.A.G., B.C., 22/12/76. This paper must refer to the land purchased by the Commissioner at Duck River, near the Junction, which has been finally disposed of.—J.B., 27/12/76. Crown Solicitor, B.C., 28/12/76.—C.A.G., *pro* Commissioner.

No. 23.

Crown Solicitor to Commissioner.

Sir,

Crown Solicitor's Office, Sydney, 4 January, 1877.

I have the honor to return the papers relating to the caveat lodged with the Registrar General by Mr. Shepherd Smith against the land recently purchased by you from him being dealt with, and to state that I find upon inquiry that same was lodged by Messrs. Allen, Bowden, & Allen, on account of delay at the Treasury in payment of the purchase money, and I find that the caveat was withdrawn on 29th December last.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

VICTORIAN RAILWAYS.

(REPORT OF THOMAS HIGINBOTHAM, ENGINEER-IN-CHIEF.)

Ordered by the Legislative Assembly to be printed, 18 January, 1877.

REPORT of Mr. Thomas Higinbotham, Engineer-in-Chief of Railways, Victoria, of
Observations on Railways generally, during a recent tour.

Laid upon the Table of the Legislative Assembly of New South Wales (with the consent of the Government of Victoria) in answer to question asked by the Honorable Member for the Tumut, on the 20th December, 1876.

REPORT.

Sir, Railway Department, Engineer-in-Chief's Office, Melbourne, 26th July, 1876.

I have the honor to report that, towards the end of the year 1873, the Honorable Mr. Gillies, who was then Commissioner of Railways, informed me that the Government considered it desirable I should visit Europe and America for the purpose of inspecting the various important works which have been constructed of late years in those parts of the world, in order that it might have the advantage of the information which it believed I should be able to obtain in the course of such a visit. Having received instructions, and made the arrangements which were necessary for carrying on the business of the Engineer-in-Chief's branch of the Railway Department during my absence from Victoria, I left Melbourne on the 10th March, 1874, to proceed to England by way of the United States and Canada.

The introductions with which I was furnished gave me the best opportunities of becoming acquainted not only with the Railway systems of the countries which I visited, but with works for water supply, sanitary purposes, reclamation of land, &c.; I propose, however, to confine this Report to the subject of Railways, which naturally occupied most of my attention.

I arrived at San Francisco on the 14th April, 1874, and did not leave there to go eastward till the 5th May. In the interval I had seen many of the sights of the city and neighborhood, more particularly the Yosemite Valley. I booked through from San Francisco to New York, not taking, however, the usual and shortest route, as I wished to see the territory of Colorado, and the narrow gauge railroad which had been made there from Denver to Pueblo. I also wished to visit St. Louis, one of the finest cities in the Union. The first place at which I stopped was Sacramento, where the workshops of the Central Pacific Railroad are situated. This line, which is one of the links in the great chain of railway communication between the east and west sides of the continent, included, at the time I speak of, with its various branches, 1,600 miles of railroad, the main line from San Francisco to Ogden, where it joins the Union Pacific Railroad, being 882 miles long. In the construction of this railroad there are, as might be expected, many marks of great haste observable; and very inferior and perishable materials have in numerous instances been used. It would be a great mistake, however, to suppose that American engineers of good professional position defend such construction on any other ground than that of necessity. It is admitted that it cannot be defended on the ground of economy, as reconstruction after a few years becomes imperative. The grand object both on this and the Union Pacific Railroad was to get the track laid through as quickly as possible; and, in the case of such enormous distances as these lines cover, it was necessary, in order to do this, to make use of any material which was at hand. The workshops of the Central Pacific Railroad at Sacramento are very extensive and complete; the buildings are for the most part of brick, and cover about 20 acres, and the roads, sidings, &c., about 20 acres more. I was furnished with full particulars of the engines and rolling-stock employed in working the line, and the cost of working and repairs. The latter tables may be valuable for reference; but it is unnecessary to include them in this Report, and they would interest very few persons only. All the engines have bogie trucks, which carry, according to the class, from 30 to 40 per cent. of the whole weight of the engine. The passenger engines weigh, with steam up, and in running order, from 72,000 to 74,000 lbs. They have 17-inch cylinders, with 24-inch stroke,

stroke, and have four driving-wheels, coupled, of from 4 feet 8 inches to 5 feet diameter. The goods engines are about the same weight as the passenger, but have six driving wheels, of 4 feet 6 inches diameter, coupled. All the engines have tenders, which weigh in running order 25 tons. Some of the earlier built engines are lighter than these, but cannot do the work on the heavy gradients of 1 in 50. The original iron rails, weighing 56 lbs. to the yard, were being rapidly replaced at the time I speak of by steel rails weighing 60 lbs. to the yard, in order that the road might carry the heavier engines. The greatest weight on a driving-wheel is about 5 tons. Three of the lighter engines were required to take a passenger train of nine or ten carriages over the Sierra Nevada, increasing greatly the working expenses. The ordinary passenger cars are 45 feet long, and have bogie trucks with four wheels at each end; they weigh 39,250 lbs., and of this total weight 26,750 lbs. is the weight of the car body, and 12,500 lbs. the weight of the trucks. The number of passengers which the car can seat is 52, and the dead weight moved for each passenger is 754 lbs. when the car is full. The wheels are 33 inches in diameter, and weigh 540 lbs. each. The ordinary box freight car, corresponding with our high-sided covered goods waggon, is 28 feet long, and is carried on two bogie trucks, each having four wheels. It weighs 19,860 lbs., and of this weight 11,360 lbs. is in the body, and 8,500 lbs. in the trucks. The wheels are 33 inches diameter, and weigh 540 lbs. This car carries a load of 20,000 lbs. In California a ton is 2,000 lbs.; the dead weight therefore moved for each ton is 1,980 lbs. The ordinary flat freight car is 30 feet long, and is carried on two bogie trucks, the same in all respects as those used for the box car; it weighs 16,000 lbs., the body weighing 7,500 lbs., and the trucks 8,500 lbs.; it carries 20,000 lbs. or 10 tons, and the dead weight moved for each ton carried is 1,600 lbs.

I rode on an engine for some hours when crossing the Sierra Nevada; there were three engines attached to the train; the road was rough, and the speed at times on falling gradients very great, but the drivers appeared to have perfect confidence in their engines that they would not leave the road. I had opportunities of speaking to several drivers, Englishmen, who had driven in England; they all preferred the American to the English engine, which they said could not keep on such roads as are commonly to be found in the Western States. The bogie, or "track-feeler" as it is sometimes called, they consider the great source of safety. The Central Pacific Railroad between Sacramento and Ogden crosses the Sierra Nevada, but except the snow sheds, which extend for miles, and some high timber framings, where valleys are crossed, there are no works of great magnitude. The scenery is no doubt very wild and grand, but unfortunately the train by which I travelled passed through the best of it at night, and I understood that even in the daytime only glimpses can be had, as the train is so frequently in the snow sheds. The summit of the line is 7,000 feet above the sea. The line, as I have already said, was laid with 56 lbs. iron rails, and these are being replaced with 60 lbs. steel rails. The pattern of the rail used on this line, and all but universally in the States and Canada, is that known in England as the Vignoles, and the rail is fastened to the sleepers by dog spikes. The sleepers are of various sizes; they would average 8 feet long and 8 inches by 6 inches in section. The ballasting is very imperfect; indeed in many places there is scarcely a trace of any. The Miller platform and coupling, which, though they add much weight to the cars, add also to their strength, and are a great security against telescoping when one train runs into another, have been adopted for all passenger cars on the Central Pacific road, and also the Westinghouse brake, which is very highly spoken of by the master mechanic of the line.

The main line of the Central Pacific Railroad ends at Ogden, and I travelled from there to Salt Lake City, over a railroad 38 miles long, which was made by Brigham Young, and is owned and worked by him. There is nothing either on this line or on the part of the Union Pacific Railroad which I travelled over from Ogden to Cheyenne to call for particular remark; in their construction and rolling-stock these lines differ very little from the Central Pacific Railroad. From Cheyenne I went south 106 miles to Denver, the point at which the Denver and Rio Grande line begins. At the time I speak of this line was opened from Denver to Pueblo, a distance of 120 miles; it was partially opened in 1872, and was completed to Pueblo in January, 1873. It is proposed to carry it beyond this point to El Paso, on the Mexican frontier, a distance of 875 miles from Denver. The gauge of this line is 3 feet, and it has been described as the pioneer of the new movement towards narrow gauge lines in the United States. It is carried at the foot of the Rocky Mountains, from Denver to Pueblo. I travelled twice over the whole length of the line. The maximum gradient is 75 feet per mile. There is one short curve of 478 feet radius, but generally the curves are not unfavorable. The rails are of iron, and weigh 30 lbs. to the yard; they are of the Vignoles pattern, and are fastened by dog spikes to sleepers about 6 feet 6 inches long and 8 inches by 8 inches section, spaced about 2 feet 6 inches from centre to centre; both the size and spacing of the sleepers are, however, very irregular. The formation width varies; it is about 12 feet 6 inches in cuttings, and in embankments just wide enough to carry the sleepers. There is no ballast, but a road bed is formed of earth, which is rounded so as to throw off water. As the line is from 5,000 to 7,000 feet above the sea, the road bed is frozen hard during the winter, and no repairs to it are then attempted. The line is not fenced; the bridges and culverts are all of timber, and of the lightest possible construction. The average speed of the trains between stations is $17\frac{1}{2}$ miles per hour for passenger, and 12 miles per hour for freight trains; but engine-drivers are warned to reduce these speeds to 12 miles and 8 miles respectively when passing over any tressel bridge which is more than 8 feet high. I was told that the line had cost, up to the time at which I saw it, 14,000 dollars per mile (say £2,880, taking £1 sterling as equal to 4.86 dollars), but a great deal of money was then being spent on it; no dividend was paid, and all earnings above expenses were laid out in improving the line. The 30 lb. iron rails on this line are evidently too light, and were wearing out very fast when I saw them, about two years after it had been opened; they are said to have been of bad quality. There is one passenger train each way daily between Denver and Pueblo. The passenger fares are exceptionally high, $8\frac{1}{2}$ cents ($4\frac{1}{2}$ d.) per mile; and the rates for merchandise vary according to the class, from 15 cents ($7\frac{1}{2}$ d.) to 7 cents ($3\frac{1}{2}$ d.) per ton per mile; lumber and firewood are of course carried at lower rates. A large mineral traffic from the Rocky Mountains is anticipated, and the gauge of 3 feet was adopted, not only from motives of economy, but because this gauge will, it is believed, be found suitable for the numerous branch lines which are expected to be made to the various mines. If the ordinary gauge of the United States railroads, 4 feet $8\frac{1}{2}$ inches, had been adopted for the main line, there would have been a break of gauge at every junction with a mineral line; as it is, there is but one break of gauge, namely, that at Denver. The cost of transshipment at this place from one gauge to the other was 10 cents (5d.) per ton for coal, iron, lumber, &c., and 15 cents ($7\frac{1}{2}$ d.) per ton for miscellaneous merchandise; labour was two dollars a day, and it was anticipated that, as the traffic on the line increased and special facilities were provided to facilitate the transfer, the cost of it could be reduced 33 per cent. The

The following are the weights and the dimensions of the engines and rolling-stock on this line:—

ENGINES.—Passenger.—Cylinders 9 inches diameter, stroke 16 inches; driving wheels, two pairs coupled, 36 to 40 inches diameter; wheels of truck, 24 inches; total wheel base, 11 feet 11 inches; rigid base, 6 feet 3 inches. The weight of the engine in running order is 25,000lbs.; of this, 20,000lbs. are on the four drivers, and 5,000lbs. on the truck. The tender carries 500 gallons, and all the engines on the line, except a Fairlie engine, have tenders.

Freight.—Cylinders 11 inches diameter, stroke 16 inches; driving wheels, three pairs coupled, 36 inches diameter; wheels of truck, 24 inches diameter. The weight of the engine in running order is 35,000lbs.; of this, 31,000lbs. are on the six drivers, and 4,000lbs. on the truck. The tender carries 750 gallons.

ROLLING-STOCK.—Passenger Cars.—These are 40 feet long and 7 feet 9 inches wide, outside dimensions. They weigh 12,000lbs. and carry 33 passengers = 363·63lbs. per passenger. The special chair cars, which correspond with the drawing-room cars on other lines, weigh 12,000lbs., and carry 20 passengers = 600lbs. per passenger.

Freight Cars.—The eight-wheeled coal cars average 24 feet long, weigh 7,500lbs., and carry 8 to 9 tons. The eight-wheeled flat cars average 24 feet long, weigh 6,000lbs., and carry from 8 to 9 tons = 2·6 to 3 tons per ton of dead weight. The eight-wheeled box cars average 24 feet long, weigh 8,000lbs., and carry 8 tons = 2 tons per ton of dead weight.

The Westinghouse brake is used for all passenger trains, and is highly commended. Each passenger train carries a conductor, whose position resembles that of a guard on English lines, a breaksman, and an express baggage man; and each freight train has a conductor and two breaksmen. Every passenger car has a break independent of the Westinghouse, and each freight car is also furnished with one.

I learned that it was intended to increase the width, and therefore the weight of all cars, both passenger and goods, giving them increased capacity, but increasing also the overhang. It is admitted that the line could be worked with much greater economy if more powerful engines could be used on it; but this would be impossible without heavier rails.

There was one Fairlie engine on this railroad when I visited it. No complaints were made of its working; but it was not considered suitable to the line on account of its weight and unwieldiness, and I was informed that there was no intention of ordering any more engines of its class.

The Colorado Central Railroad lies west of Denver, and has been constructed by the Union Pacific Railroad Company. As far as Golden City, which is 15 miles from Denver, the gauge of this line is 4 feet 8½ inches, the same as that of the Union Pacific; but beyond this point to Floyd's Hill, which is 32 miles from Denver, the gauge is 3 feet only. The narrow gauge is used through the mountain gorge known as Clear Creek Cañon, which is steep and tortuous. The scenery is very grand. There is a gradient on this part of the line of 1 in 25 extending over half a mile; but with this exception the gradients do not exceed 1 in 45. The sharpest curve is 440 feet. There are retaining walls in many places, and some bridges over the creek, but no works of magnitude. The rails are of iron, and weigh 35 lbs. to the yard, and the construction of the line generally is superior to that of the Denver and Rio Grande line; but the cost has been twice as great, namely, 28,000 dollars (£5,760) per mile for the 17 miles of 3 feet gauge line. The engines and rolling-stock are substantially the same as those which I have described on the Rio Grande line. The train by which I travelled did not exceed a speed of 10 miles an hour. This line had been opened for about a year and a half, and had not paid a dividend.

I left Denver on the 22nd May, 1874, for Kansas City by the Kansas Pacific Railroad. The distance from Denver to Kansas City is 613 miles, and the train travelled at the rate of 18 miles an hour, including stoppages. The line is laid on the 4 feet 8½ inches gauge; there are no works on it of any importance, as it is on the surface of the prairie for hundreds of miles. It has been open for about four years. The rails are of iron, and weigh about 56 lbs. to the yard; they are badly worn, and the track is very rough; there is no ballast; the sleepers are laid on earth, rounded to throw off the water; there are no station buildings till the line approaches Kansas, and no fencing. There were seven vehicles in the train by which I travelled, namely, two Pullman sleeping cars, two passenger cars, a baggage van, a mail van, and a Wells and Fargo Express van. The men employed on the train were—a general conductor, a Pullman conductor, two porters for the Pullman cars, two breaksmen, two van porters, and a mailman, making nine in all; of these, five were servants of the railroad company, and three of Pullman; the mailman was in the employment of the Government. There were only five passengers in the two Pullman cars, which must have weighed about 60 tons. At the season of the year, however, of which I am speaking, the "travel," as it is called in the States, is westward, and these cars would probably be well filled on the return journey to Denver. I remained at Kansas City for three days, and saw the railroads in the neighbourhood, which do not call for particular notice. There is a fine bridge over the Missouri at Kansas, which carries both railroad and road traffic on the same floor; the main spans cover a length of about 1,300 feet, and the bridge, including the footway, is 25 feet wide. The Howe truss is used, and the widest span is about 250 feet. The part of the bridge which opens is on a centre pier, the span on each side of it being 130 feet. The railroad trains pass over this bridge at a slow pace, about 6 miles an hour, when it is of course closed for ordinary traffic.

From Kansas to St. Louis I travelled by the Missouri Pacific Railroad. The distance is 282 miles, and was run in 12½ hours. The road was very rough, and the rails much worn; there was no ballast, but over a great part of the road the sleepers were close together. The change from the prairie to a cultivated country, which commences some distance west of Kansas City, is very striking. The Missouri Pacific Railroad passes through rich and cultivated country all the way to St. Louis. There are wooden fences along the line, and in many places live fences are planted.

St. Louis, which is one of the finest towns in the United States, and is on the direct route from east to west, has a population of between four and five hundred thousand people. It is the seat of an immense trade, which is carried on the Mississippi. The railroads on each bank of the river were connected by steam ferries only before the completion of the magnificent bridge which now carries both the road and railroad traffic over the Mississippi. A very full memoir of this bridge, illustrated by drawings, has been published, and it would be useless therefore to attempt to describe it here. It has cost, including the tunnel under the city, by which the railroads reach it, 11,000,000 dollars, and may be taken as a proof of the vast importance which in the States is attached to an unbroken line of communication.

I travelled by steamboat on the Mississippi from St. Louis to Quincey, and thence to Chicago, a distance of 260 miles, by the Chicago, Burlington, and Quincey Railroad, which, with its various branches, extends over 1,260 miles. The average speed was 20 miles an hour, including stoppages. Between Quincey and Chicago this line passes through the State of Illinois, a level and highly cultivated country; it is fenced throughout, and the permanent way is a marked improvement on the lines in the West over which I travelled. The rails used in laying this road were iron, weighing 56 lbs. to the yard; in relaying it, steel rails, weighing 60 lbs. to the yard, are used. The sleepers are 9 feet 6 inches long, and 8 inches by 5 inches section; they are laid 2 feet apart from centre to centre.

A great deal of attention has been given in the United States to the subject of railroad station accommodation in the cities and large towns. The growth of railroad traffic has been so rapid that in the older towns the stations have become quite inadequate to accommodate it. At St. Louis a remodelling of the stations was to take place, on the completion of the new bridge over the Mississippi. At Chicago, which is more modern than St. Louis, the railroads have been carried into the heart of the city, and spacious sites admirably situated have been secured for the stations, some of which have very handsome buildings. Two of the sites have areas of 120 and 80 acres respectively. Branch lines are carried to the banks of the river at different points, to the canals, and to all parts of the stock-yards. All the lines which enter Chicago are connected by a line called the Central Railroad.

At Boston the insufficiency of the accommodation for passenger traffic at the stations has been much felt. A joint commission of Railroad and Harbour Commissioners reported, in 1871, on the subject of "Terminal Accommodation for Passengers," as follows:—

"In proposing any new plan for terminal stations in the city of Boston for the several railroads, it should be the object of this commission to suggest one which will afford all necessary accommodations for a long term of time; not one which will need additions and improvements almost as soon as it is completed. Railroads are no longer experiments; their growth in the past is a matter of record, and the increase of business upon them for the future may be reckoned with some degree of probability. The several corporations have already made large expenditures for terminal stations, but the size and arrangement of the stations were based upon the business then existing. The future was not even glanced at with the eye of faith, and consequently the arrangements then made have not sufficed even for twenty years, and now the public find themselves 'cabinéd, cribbed, confined' within limits altogether too narrow for comfort. The Eastern Railroad made its entrance into the city proper in 1853, and the present station building was completed in 1864. The present Lowell railroad station was completed in 1857. The Fitchburg station building was built in 1847, and was remodelled in 1864. It is unnecessary to say that all of these are evidently too small for the existing business, and of course cannot accommodate the increase certainly to be expected. The Maine railroad station was built in 1846, and, having received sundry additions in the meantime, has been entirely remodelled within the last two years. This may answer its objects for the next ten years without much inconvenience to the public, but in all probability by that time it will be evident that still greater accommodation is needed.

"Before suggesting any plan of improvement, several questions naturally present themselves, viz.:—What is the present number of passengers using these stations? What has been the increase in the past, and what may reasonably be expected to be the increase for the future? How many trains are required for the accommodation of these passengers, and at what hours? After obtaining answers to these questions, we can estimate with some accuracy the extent of space which should be provided for the accommodation of the public, not merely of the present time but of generations to come."

After various calculations and tables, the report proceeds as follows:—

"We have then, at the present time, about 28,000 passengers per day coming to or going from Boston on these four roads; and, at the average rate of increase of the last three years, this number will be doubled in eight and a half years; and in fifty years, if they continue to increase at the same rate, will be sixty-four times as many as they now are, or 1,790,000. Two-thirds of these passengers will probably want to use the stations in the early part of the forenoon and the latter part of the afternoon. Tables have also been prepared showing the number of passenger trains on each road and the hours of arrival and departure, with the number for early forenoon, for midday, and for late afternoon. * * * Probably most travellers have already experienced the inconvenience of having sometimes to wait a few minutes to enter a depôt when the train just before them was a little late, and this inconvenience will rapidly increase with the increasing number of trains required by the growth of the business. Occasionally, but more seldom, there is some delay in the departing trains, in consequence of their not being made up and placed in position at the appointed time, this again being probably owing to the non-arrival on time of the incoming trains. And on some exceptional days it is also necessary to increase very considerably the number of trains, to send them out very near each other during certain parts of the day, and receive them again in quick succession at another part of the day. These circumstances, as well as the promised increase of travel, indicate very plainly the necessity of having two tracks and two platforms for arrival, and two more of each for departure for each road. The width of these platforms should average about 20 feet each. Some roads may prefer to distribute this width not exactly equally, but that should be the average of all; and, according to the accompanying sketch, this will give a width of 123 feet, or say 125 feet, required for the station of each road. It would be entirely out of the question to have the same tracks and platforms answer for two or more roads. The changes and crossings of so many trains close to the station would soon lead to inextricable confusion and accidents. All the roads also want to start trains at the same hours. Each road must have its own tracks all the way, and they must not be allowed to cross each other. Now, as each road is to have 125 feet of width, the question immediately arises whether it is best to put two or more roads into one building. Several disadvantages are at once apparent. With different lines in one building, many passengers would get hopelessly confused as to which line of cars they should take, notwithstanding the presence of civil attendants. Then 125 feet is a sufficient width to light at once; and it would seem necessary to have intervals at this space for the purpose of throwing light in from the sides, lighting from the top being open to several objections. Passage-ways, or streets running lengthwise with the building would be desirable also as often as at these intervals. The advantages of bringing several lines into one building are not apparent; at least none but such as may be easily provided for otherwise, as will hereafter be shown.

"It may be urged as a reason why we should bring several lines into one building, that this is the course pursued on many great lines of railway leading to the West, and that in New York city itself three great lines of railway are soon to have a Union Passenger railway. On the lines of travel leading to the West the greater number of passengers at each of these large stations are intending to go farther, and it is no doubt a convenience and accommodation to the greatest number to make their changes of trains under one roof. Here, in Boston, the passenger travel is of a different character, and, as will be shown hereafter, probably not more than one-fifth of the whole are through passengers. The accommodation of those to whom Boston is the objective point is therefore first to be regarded, though we shall hope to see hereafter a plan devised which shall save the through passengers the inconveniences of the present mode of transfer between the roads. The three roads entering New York city, which are to be brought into a union depôt, in the year 1869 carried into and brought out from New York about half as many passengers as these four northern roads brought into and carried from Boston, viz., 4,125,440, New York; 8,098,456, Boston. Two of them occupy the same line for 11 miles, and do not carry many more New York passengers than the other single line, which is to be diverted from its natural approach and entrance into the city, and brought round to a union station with the other roads; probably more from the supposed economy to the proprietors of the several roads than from a regard to the convenience of the general public. Because it is possible to bring several roads into one building, it does not follow as a necessary conclusion that this will afford the greatest convenience to the public. That may or may not be the result depending upon other attending circumstances.

"Having thus arrived at the width desirable for a passenger station, the next question would be as to its length. The passenger cars now in use will not average 50 feet in length, those of the latest build are a little longer than that, and Pullman cars average about 60 feet. A 30-foot car will seat forty passengers, and a 50-foot car sixty-eight passengers. A train of nine passenger cars, and one baggage car, may be reckoned then as occupying about 500 feet of length, and able to carry comfortably five hundred passengers, and this would seem to be as long as it is desirable to make a passenger train. Ordinary engines on ordinary roads can handle a train of ten cars well, and this length is quite as great as that of the platforms to meet it at most of the way stations. When the influx of passengers at any particular hour of the day seems to require more cars in a train than

than this, it will probably be better economy to put on another train and divide the passengers between the two. The length of the platforms and tracks in the building may be put then at 500 feet. (We do not propose to have engines enter the stations.)

"There is still another part of the station to be considered, and that is the waiting-rooms. Where there is only one platform to arrive at or to depart from, the waiting-rooms are best placed at the side and about midway of the length of the platform. But where there are more platforms than one, the waiting-rooms should be placed at the head of the building, equally convenient to all the tracks and platforms. In this manner, also, some control can be had of the passengers before they enter the cars, and every one required to procure his ticket before passing the gate, as is the rule already with some of our roads. The practice is unquestionably a good one, and will become more and more a necessity as the business increases. For these waiting-rooms and adjacent passages it is best to allow 100 feet more length of building, making a total of 600 feet. Some roads would like to have one or more additional tracks provided as standing tracks for cars; but additional width is not so easily obtained as extra length of sidings, and these extra tracks had best be made a short distance off after the tracks leaving the station building have been brought nearer together, and the four tracks condensed into two. It may, however, be well, considering the tendency to increase the length of cars, to add another 100 feet to the length, making 700 feet in all.

"We have now four stations, each 700 feet long by 125 feet wide. There should be streets between and adjoining them not less than 60 feet each in width. Where are we to look for the necessary space for this purpose? The first reply is, north of Causeway-street. The Lowell road and the Eastern (if the latter were in its proper position) might perhaps find sufficient space for passenger stations north of Causeway-street, but the Eastern wants room in the city proper for freight as well as for passengers, and can find none where it is. The Maine has no more room north of Causeway-street than it needs for freight, and has a good passenger station at Haymarket square. The Fitchburg, in their present location (which is not the right one for them), would hardly have room enough this side of the draw to make the necessary branching of the tracks before entering the station. The space north of Causeway-street can be better used for freight purposes if room can be found elsewhere for passengers.

"We will pause here for a moment to consider the size of the stations as they now stand, and see how they compare with what we have indicated above as the proper dimensions. That of the Maine road is 500 feet long, 80 feet wide for 200 feet, and 135 feet wide for the remainder. The Fitchburg is about 300 feet long by 90 feet wide, and its trains, for nearly half their length, stand outside of the building, both on arrival and for departure, partially protected by sheds. The Eastern and the Lowell are each about 300 feet long (including head-house), by 50 feet wide, and each road has been obliged to add sheds to cover the increasing length of the trains. On the other side of the city, the Providence depot is about 300 feet long by 80 feet wide, and on some of its trains many cars stand outside of the building on Church-street and the other side of it. This refers to the arriving trains; the departing trains, being made up on two tracks, need not stand across the street. The Albany Station building is about 300 feet long by 130 wide, and its trains are standing across Kneeland-street many hours in the day. By using two tracks in making up the departing trains, they generally avoid putting more than one car in the street for these trains; but on the arrival side, after an engine and three baggage cars have entered the station, most of the passengers on the long trains are still outside of the building. The Old Colony Station is 600 feet long by about 100 feet wide, and, though not quite a model, has many merits about it: it is nearer what should be than any other. The Hartford and Erie is about 250 feet long by 60 feet wide, and answers fairly for its present business; but when this road is completed it will require as large a station as any other. After thus looking over the several stations we may well conclude that, excepting the Maine, the Old Colony, and the Hartford and Erie, which afford pretty fair accommodation for their present business, the railroad stations in the city of Boston are miserably insufficient for the objects they pretend to accomplish."

It will be seen from these extracts that the Joint Commission proposed that four separate passenger stations, each 700 feet long by 125 feet wide, with streets between and adjoining them not less than 60 feet each in width, should be provided for the passenger traffic which centres in Boston, the population of which, in 1874, was about 325,000. At the time the Commissioners reported, the number of passengers coming to or going from the city by railroad daily was 28,000; and the proposed stations were designed to accommodate, not this number of passengers only, but the increased number which experience had shown might be counted on with certainty in the future.

The average number of passengers coming to or going from Melbourne daily by the Melbourne and Hobson's Bay Railway in the year 1875 was 22,359, and the average number of passengers coming to or going from Melbourne daily by the Government railways in the same year was 6,010. There was therefore in that year an average number of 28,369 passengers arriving in or departing from Melbourne daily by railway, or very nearly the same number as in Boston at the date of the report from which I have just quoted. If the passenger traffic of the Melbourne and Hobson's Bay Railway continue to increase at the same rate that it has done in the last three years, it will double itself in twelve and a half years; and if the passenger traffic on the Government lines continue to increase as it has done in the same period, it will double itself in nine years.

It has been proposed that the whole of the great and rapidly increasing passenger traffic, both of the Melbourne and Hobson's Bay and the Government railways, should be concentrated at the station at the end of Elizabeth-street; the available space there, if the goods shed were cleared away, would be 880 feet by 295 feet, and there is a street on one side only, which is 99 feet wide, and is already crowded with traffic. This station, however it might be arranged, must have the "changes and crossings of many trains," which the Boston Commissioners condemn as "leading to inextricable confusion and accidents." It would be a terminal station for some trains and a through station for others, which always increases greatly the difficulty of working the traffic. The booking offices must be placed fronting Princes Bridge, there being no other site for them, and passengers to reach the station would have to descend a flight of steps. Lastly, the site is so shut in by the river, by Flinders-street and the approach to Princes Bridge, that no greater area than that of which I have given the dimensions above could be made practically available, and the growth of traffic in the future must, therefore, remain unprovided for. If anyone who thinks that this site could be made available as a passenger station for both the Melbourne and Hobson's Bay Railway and the Government railways would visit it during the busy hours of the day, I think that he would be convinced of his mistake, and that he could not fail to see how difficult it is to conduct even the present traffic on so limited a space, and that a hopeless block must be the inevitable consequence if the passenger traffic of upwards of 1,100 miles of railway were taken there in addition to the existing traffic.

Before I left Melbourne I had advised the Government that the site of the Elizabeth-street Station was unfit for the Melbourne terminus of the Government Railways, and all that I have seen and heard since then in the United States, England, and Europe has confirmed me in this opinion.

I left Chicago on the 14th June, and travelled by the Michigan Central Railroad, the Great Western Railroad of Canada, and the Erie Railroad to New York. I did not make any stay in Canada, as I intended to return there after spending some time in New York.

The railroads in the Eastern States are very superior to those in the Western; but the general principles of construction are the same in both. The Vignoles pattern of rail is used everywhere, and the rail is fastened to the sleeper, which is always placed transversely by dog spikes; the joints of the rails are fished, but instead of being suspended, as on English lines, they are placed on the sleepers, and American engineers are, as a rule, strongly in favour of this method of laying the road. English engineers keep the joints opposite to each other; but in America the practice of breaking joint is common, and finds many

many advocates, who contend that it is safer the engine should not meet with two joints (the joint being usually the weak place in the road) at the same moment. But, though the same principles of construction can be easily recognized everywhere, the railroads of the Eastern States have in many instances been renewed with great care. Steel rails are common, and will soon be universal, and their weight is from 60 to 65 lbs. per yard; the road bed is of ballast instead of earth, and the sleepers are carefully spaced and are of sufficient size; heavier fish plates are used, and the joints are good. Wooden bridges have been replaced with iron, and the station buildings are complete and, in many cases, handsome. Raised platforms at stations are coming into general use, and in everything except the rolling-stock the best lines in the East approximate to the best English lines. The speed is not so high as on English lines; but the express trains on the New York Central are run between New York and Albany at an average speed of 35 miles an hour, and on many parts of the line this rate is greatly exceeded. The permanent way of the best of the railroads of the Eastern States is not, in my opinion, equal to that of the best lines in England; the road bed is not so good, nor the drainage so complete, and dog spikes do not make so good a fastening as screw bolts; but screw bolts could not be used in any of the Northern States, where the road bed is frozen so hard in winter that it cannot be touched, and the only means of adjusting the rails is by inserting slips of hardwood between the rail and the sleeper, a process which is known as "shimming."

I left New York on the 21st July by the New York Central and Hudson River Railroad for Saratoga, and travelled thence by way of Lakes George and Champlain to Montreal; from there to Ottawa by the Ottawa River, and thence by the Ottawa and Prescott and Grand Trunk Railroad to Toronto. In the neighbourhood of this town two railroads had been constructed on the 3 feet 6 inches gauge, and as these lines were frequently referred to in the discussion which took place here some years ago on the question of break of gauge, I thought that it was desirable I should see them. The two lines are the Toronto and Nipissing, which is 88 miles long, and the Toronto, Grey, and Bruce line, which extends, with its branches, over 190 miles. I travelled on both these lines, but as they were constructed by the same engineer, and on the same principles, it will be sufficient for me to describe one of them. The Toronto and Nipissing Railway had been open for about a year and a half when I visited it. It is a well constructed line of its kind, has a good road bed of gravel ballast, and iron rails, Vignoles pattern, weighing 40 lbs. to the yard, laid on transverse sleepers. There are no works of any importance, the line being kept on the surface of the country. The line is fenced throughout, but at level crossings there are no gates or other protection. The ruling gradient is 105 feet per mile, and the greatest length of this gradient is 4,650 feet. There is one short curve of 400 feet radius, but the ruling curve is 600 feet radius; even this is complained of as causing serious additional expense in working the line, more particularly when it occurs on a steep gradient. The station buildings are very small and incomplete, and have no cranes or other similar appliances for facilitating the traffic on the line, such as are considered essential in Victoria. Engine-drivers are ordered not to run over any mile of the line with a passenger train at a higher speed than twenty miles an hour, or with a freight train than twelve miles an hour. This railroad has cost 18,000 dollars (£3,700) per mile, including land, stations, rolling-stock, and engineering. About one-fourth of the whole capital was contributed by the counties through which the line passes and the provincial Government (Ontario). The contribution of the latter was 2,250 dollars (£463) per mile, but this was accompanied by certain conditions as to the rates to be charged for the carriage of grain and other traffic, more particularly firewood, and these rates were fixed so low that it is probable the railroad company would have been in a better position if it had declined to receive the contributions with such conditions attached to it. Grain, lumber, and firewood are the principal items of freight, and in the year ending 30th June, 1873, 82,000 passengers had been carried. In the same year the gross receipts had amounted to between £8 and £9 per mile per week, and the working expenses were about 56 per cent. of the gross receipts. At the time when I saw the line the traffic was improving, and it was estimated that the net earnings would be sufficient to pay 7 per cent. on the bonds and shares, which formed three-fourths of the capital expended, the remaining one-fourth, contributed by the provincial Government and the counties, not receiving any dividend. It was admitted to me by all those connected with the management and working of the narrow gauge railroads in Canada that a false economy was adopted in constructing them, and this admission was made by gentlemen who had been the most earnest advocates for a gauge of 3 feet 6 inches, for steep gradients and numerous and sharp curves wherever expense could be saved by using them, and also for light rails, engines, and rolling-stock. The experience of a year and half's working of the line had completely changed their opinions. The 40 lbs. iron rails, with which the lines were laid, were wearing out, and steel rails of 56 lbs. to the yard were used to replace them; the light engines could not haul profitable loads, and the sharp curves greatly reduced their efficiency. I was told that it would have paid well to have spent more money on earthworks, and by doing so avoided the sharp curves and shortened the line; and that it was bad economy to use any curve of less radius than 1,000 feet, even with a gauge of 3 feet 6 inches. As to this gauge there was also a complete change of opinion. The saving which had been effected by using it had not been found to compensate for the evils of the break of gauge with the Grand Trunk Railroad of Canada, with which both the Toronto and Nipissing, and the Toronto, Gray, and Bruce Railroads interchange traffic. I was assured there was every probability that both lines would be altered to the gauge of the Grand Trunk, which is now 4 feet 8½ inches; and the Victoria Railroad, a new line in connection with the Toronto and Nipissing line, the works of which had just been commenced at the time I was at Toronto, was to be made on this gauge. It appeared to be a settled opinion in Canada that no more railroads on the 3 feet 6 inches gauge would be made there; not because lines on this gauge could not, with suitable rails and engines, carry the traffic of the districts through which they pass, but because the expense and other evils of a break of gauge more than outweighed any economy which could be effected by using the narrow gauge.

The two lines to which I have referred were stocked at first with engines, carriages, and waggons built in England, which proved complete failures, and have been replaced by American engines and passenger and freight cars; these are found to work well. The rigid wheel base of the English rolling-stock, the small wheels, only 2 feet in diameter, and the radial axle-boxes on the engines had been tried and condemned. Wheels 30 inches in diameter are now used for all passenger and freight cars. The original rolling-stock was of light construction. An accident occurred on the Toronto and Nipissing line not long after it was opened, when a train left the track and was "ditched," to use the term applied in the States and Canada to a complete overthrow. I was informed that after the accident nothing was left of the rolling-stock except the wheels. The rolling-stock now used is as strong as that on a road of 4 feet 8½

inches

inches gauge, and it is found to be much more economical than the light stock. The master mechanic, who is an Englishman, told me that he greatly preferred American to English engines and rolling-stock for railroads in Canada. There is one Fairlie engine on the Nipissing Railroad, and it is well spoken of. I was told that the repairs of this engine were not heavy, the consumption of fuel was light, and the loads taken compared favourably with other engines of English make. I have already mentioned the account which I received of this class of engine on the Denver and Rio Grande narrow gauge railroad. With these two exceptions, the opinions which I heard from those who had experience of the Fairlie engine were most unfavourable. I did not anywhere see one of these engines at work.

The Toronto and Nipissing Railroad was worked, at the time I speak of, by 12 engines—of these, 7 were passenger and 5 were freight engines. All the engines had bogie trucks carrying the usual proportion of the weight. The weight on the driving-wheels was insufficient to allow of profitable loads being carried, and there was a great deal of slipping in bad weather. The following are some of the principal dimensions of the engines, and their weight in running order:—

7 PASSENGER ENGINES.					
Weight. lbs.	Size of Cylinders. inches.	No.	Driving-wheels. Diameter, inches.		
33,600	11 x 18	4	39		
2 FREIGHT ENGINES.					
44,800	11½ x 18	6	39		
2 FREIGHT ENGINES.					
56,000	14 x 20	6	39		
1 FAIRLIE ENGINE.					
89,600	11½ x 18	12	39		

All the engines, except the Fairlie engine, have tenders, and the weights of these vary from 18,000 to 40,000 lbs. in running order.

The following are the principal dimensions, the weights, and capacities of the cars of the American pattern which are now used on this railroad:—

LARGE PASSENGER CARS.

Length over all, including platforms	ft.	in.
Length of body	45	0
Width of body outside	8	8
" inside	8	0
Height of platform from rail	2	9
Height of car from platform to edge of roof	7	2
" to top of lantern roof	8	10
Diameter of wheels	2	6
Width of seats to hold two passengers	3	0
Width of passage	1	10
Capacity, seats for 49 passengers.		
Weight, 26,400 lbs. = 539 lbs. per passenger.		

BOX FREIGHT CARS.

Length over all	ft.	in.
Length	28	0
Width	8	0
Length inside	27	2
Width	7	2
Height from rail to floor	3	3½
" from floor to eaves	6	0
" " to centre	6	5
Platform, 2 inches thick; wheels, 30 inches diameter; No. of wheels, 8 (four in each truck).		
Capacity for load, 20,000 lbs.		
Weight of car, 14,500 lbs. = 1,450 lbs. per ton of 2,000 lbs. carried.		

FLAT FREIGHT CARS.

Length over all	ft.	in.
Length	30	0
Width	8	0
Height of floor from rail	3	4
There are 8 wheels in two trucks; the wheels are 30 inches diameter.		
Capacity for load, 20,000 lbs.		
Weight of car, 11,500 lbs. = 1,150 lbs. per ton of 2,000 lbs. carried.		

The bodies of all vehicles are of pine, and the framing is of oak timber.

I went from Toronto to Niagara, and after spending some days there and seeing the International bridge at Buffalo, I returned to Montreal by way of Lake Ontario and the River St. Lawrence.

The Grand Trunk Railroad system of Canada is about 1,400 miles long. The original gauge was 5 feet 6 inches; but the difficulties and losses arising from the break of gauge with the New York Central and other lines in the United States were found to be so serious that the gauge over the whole length of the Grand Trunk has been altered to 4 feet 8½ inches. All the numerous plans for transferring freight from the cars of one gauge to those of the other had been tried, and also the inventions for lifting the bodies of the cars off the bogie trucks and transferring them with their freight; but these various schemes were found to be mitigations only of a great evil, and, as I have already said, it was determined to alter the gauge from 5 feet 6 inches to 4 feet 8½ inches. When I was in Canada, about 850 miles had been altered, and 550 remained to be done. The cost of the alteration of these 550 miles was estimated at £40,000, and, in addition, the alteration of each engine cost £620, and of each car £25. The loss of traffic during the alteration was of course very heavy. The Grand Trunk was originally laid with iron rails, weighing 60 lbs. to the yard; these have been found too light, and renewals are made with steel rails, weighing 65 lbs. to the yard, which give very satisfactory results. The parts of the line which had been relaid were in very fair order, but the part from Quebec to Richmond was very rough when I travelled over it. The rails are of the Vignoles pattern, and are fastened to transverse sleepers by dog spikes: the intense frost in winter makes the use of any other kind of fastening impossible. The whole

of the engines and rolling-stock first put on the line were built in England; but the engines were constantly getting off the road, and engines and cars of every class are now of the same kind as those in the States. The cast-iron wheels under the rolling-stock had not given satisfaction, and an experiment was being made with 600 pairs of wrought-iron wheels with steel tyres, which had so far given satisfactory results. It was believed that these wheels would be found in the end to be more economical than the cast-iron, though the first cost was much higher. The objections which are made to cast-iron wheels are, that it is very difficult to get them cast so uniformly as to be perfectly balanced, and that they are not truly cylindrical: from these causes they have a very injurious effect on the permanent way. Many of these wheels break every winter, but no serious accident has occurred in consequence; the four-wheeled truck being, no doubt, a great source of safety. The difficulty in the use of wheels with wrought-iron centres and steel tyres is, that in winter the intense cold loosens the tyres; these wheels answer admirably in summer. I have learned that experiments will be made with cast-iron centres and cast-steel tyres, and also with wheels made entirely of cast steel, in the hope of finding a wheel which will not be affected by the climate, and which will at the same time be free from the objections which are urged, with much reason it appears to me, against wheels made entirely of cast iron.

When returning to New York from Canada, I went to the White Mountains, and travelled on the Mount Washington Railroad. This line, which is the steepest in the world, is used exclusively for pleasure traffic, and is open for about three months only in the year. The Summit of Mount Washington is 6,250 feet above the sea, and the railroad starts from its base, at a level of 3,625 feet above the sea. The length of the line is 3 miles, and the average rate of ascent is 1 in 4. The steepest gradient is 1,980 feet in a mile, or $13\frac{1}{2}$ inches in 3 feet. The line is the property of a private company. There are four engines employed in the traffic, each weighing 9 tons, and four passenger cars, each of which can seat forty passengers. A train consists of an engine and one car; the engine is behind the car when going up the mountain, and in front of it when coming down. The gauge of the line is 4 feet $8\frac{1}{2}$ inches. The journey each way takes an hour and a half. There is a rack laid between the rails into which a pinion on the engine works, and in this way the means of propulsion are obtained; the rails serve only to take the rolling friction. There is an elaborate and perfect system of breaks, and the train is under complete control: no accident has ever occurred on this line. The Americans claim to have been the inventors of this kind of railroad; but this is denied, and they are said to have borrowed the idea from Europe. It is admitted, however, that they were the first to apply it: the Mount Washington Railroad had been in operation before that on the Rigi, in Switzerland. The principle is the same on both lines, but the Rigi line is constructed more substantially. A return ticket on the Mount Washington line costs 4 dollars, which is at the rate of 2s. 8d. per mile. There is no probability that a railroad of this class will be required in this colony, at all events for many years to come.

I travelled from the White Mountains to Boston by the Boston, Concord, and Montreal Railroad, which does not call for any particular remark.

The passenger traffic on the lines in the Eastern States is enormous in the autumn months, every seat in a train of nine or ten carriages, each holding from fifty to sixty people, being occupied.

At Boston there is a railroad which encircles the city, made at the joint expense of the various railroad companies which have termini there, for the purpose of connecting their lines. The rails are laid along the streets, and the city authorities allow the line to be used for freight cars only, which in the day are drawn by horses, locomotive engines being used only at night.

When I was at Boston, which in many respects is in advance of any other city in the Union, I had every opportunity given to me, by the kindness of the authorities, to obtain information on the subject of the great reclamation works which have been carried out there with so much success, and to see the abattoirs, which are most perfect in their arrangements, not only for slaughtering, but for disposing of the offal and refuse.

I went from Boston to New York, stopping on the way at Springfield, Massachusetts, to see the United States armoury and the Wason car-building works.

Locomotive engines and rolling-stock are substantially the same everywhere in the States on railroads of the 4 feet $8\frac{1}{2}$ inches gauge, the fore part of the engine, and each end of every passenger and freight car, being carried on a truck or bogie with cast-iron wheels. On some lines the rolling-stock is heavier than on others, and for several years there has been a constant tendency to increase the weight of the stock. This tendency seems now, however, to have reached its limits, and there appears to be a strong feeling on the part of railway companies that the dead weight carried is excessive; on the other hand the public demands heavy cars as a security in case of collision.

The weights of the rolling-stock vary on different lines. I believe that the following dimensions, weights, and capacities, which I obtained from the best authorities, represent fairly the rolling-stock on lines in the Eastern States:—

FIRST-CLASS DAY PASSENGER CAR FOR THE NEW YORK AND BOSTON EXPRESS LINE *via* SPRINGFIELD.

Body, framed, 50 feet 6 inches long, 9 feet 3 inches wide; Miller platforms; Baker and Smith's heating apparatus.
Two trucks, each with 4 double-plate wheels; diameter of wheels 33 inches, weight 540 lbs. each; spread of wheels from centre to centre, 7 feet; hammered axles, 345 lbs. each.

The body of this car, complete, weighs 36,620 lbs.

The trucks, complete, weigh 14,160 "

Total weight of car 50,780 lbs.

= 705 lbs. per passenger. This class of car seats 72 passengers. It is run in the "Lightning express trains" between New York and Boston, and is stronger and heavier than cars for slower trains.

FIRST-CLASS DAY PASSENGER CAR FOR CENTRAL RAILROAD OF NEW JERSEY.

Body, framed, 48 feet long, 9 feet 5 inches wide; 16 windows each side; common platforms; no heater.

Two trucks, each with 4 double-plate wheels of 33 inches diameter, weighing 540 lbs. each; spread of wheels from centre to centre, 6 feet; hammered axles.

The body of this car, complete, weighs 26,150 lbs.

The trucks, complete, weigh 13,450 "

Total weight of car..... 39,600 lbs.

= 618 lbs. per passenger. This car seats 64 passengers.

FIRST-CLASS DAY PASSENGER CAR FOR SYRACUSE NORTHERN RAILROAD.

Body, framed, 45 feet long, 9 feet 5 inches wide; 15 windows each side; Miller platform; no heater.
 Trucks, two, each with 4 double-plate wheels of 33 inches diameter, each wheel weighing 540 lbs.; spread of wheels from centre to centre, 6 feet; master car builders' standard; hammered axles.
 The body of this car, complete, weighs 26,130 lbs.
 The trucks, complete, weigh 13,970 ,,
 Total weight of car 40,100 lbs.
 = 668 lbs. per passenger. This car seats 60 passengers.

FIRST-CLASS DAY PASSENGER CAR FOR NEW YORK CENTRAL AND HUDSON RIVER RAILROAD.

Body, framed, 54 feet long, 9 feet 6 inches wide; 18 windows each side; Miller platform; Baker and Smith's heaters.
 Trucks, two, 4-wheeled, of the master car builders' standard pattern; spread of wheels from centre to centre, 7 feet.
 The body of this car, complete, weighs 35,515 lbs.
 The trucks, complete, weigh 15,250 ,,
 Total weight of car 50,765 lbs.
 = 705 lbs. per passenger. This car seats 72 passengers.

FIRST-CLASS DAY PASSENGER CAR FOR GALVESTON, HARRISBURG, AND SAN ANTONIO RAILROAD OF TEXAS.

Body, framed, 45 feet long, 9 feet 4 inches wide; 15 windows each side; Miller platforms; no heaters.
 Two trucks, each with 4 double-plate wheels, 33 inches, each wheel weighing 540 lbs.; spread of wheels from centre to centre, 6 feet; hammered axles.
 The body of this car, complete, weighs 25,300 lbs.
 The trucks, complete, weigh 12,950 ,,
 Total weight of car 38,250 lbs.
 = 637 lbs. per passenger. This car seats 60 passengers.

All the cars described above are for a gauge of 4 feet 8½ inches. The lengths given do not include the platform at each end. All have elevated roof and elliptical finish; iron ends to seats. The seats spread 34 inches from centre to centre.

The Boston and Albany Company had built a passenger car, at the time that I was in the States which had 19 windows on each side; the spread of the seats was 32½ inches from centre to centre; no heaters; Miller platforms. Two trucks with 4 wheels each—the master car builders' pattern.

The body of this car, complete, weighs 28,450 lbs.
 The trucks, complete, weigh 15,000 ,,
 Total weight of car 43,450 lbs.
 = 572 lbs. per passenger. This car seats 76 passengers.

The drawing-room and sleeping cars are, of course, of exceptional weight per passenger carried, and are most complete and luxurious in their fittings. The following are some of the dimensions and weights of a drawing-room car running in the "Lightning express train" on the New York and Boston line:—

Body, framed, 50 feet 6 inches long, 9 feet 3 inches wide; Miller platforms; Baker, Smith, and Co.'s heating apparatus, which weighs about 1,800 lbs.
 Two trucks, each with 4 double-plate wheels; diameter of wheels 33 inches, weight 540 lbs. each; hammered axles, 345 lbs. each.
 The body of this car, complete, weighs 37,540 lbs.
 The trucks, complete, weigh 14,160 ,,
 Total weight 51,700 lbs.

The Pullman sleeping cars have separate sleeping accommodation for twenty-six persons, but two persons sometimes occupy the same berth. These cars weigh from 30 to 33 tons. They never have less than twelve and sometimes they have sixteen wheels, eight at each end of the car.

There is a medium first-class car in general use on railroads with heavy gradients which carries sixty passengers and weighs 18½ tons.

The following are the weights of the trucks (bogies), of which there are two to each car:—

The heaviest class of 6-wheel trucks, 10 feet 4 inches between centres, fully equipped with steel and rubber springs, weigh, per pair, 8 tons.
 A lighter class of 6-wheel trucks, 9 feet between the centres, and in more general use than the last, weigh, per pair, 7 tons.
 Four-wheel trucks, with 6 feet between the centres, in use on some lines for passenger cars carrying sixty persons, weigh 5½ tons.

FREIGHT CARS.

The following are the weights and loads of cars on the principal lines:—

BAGGAGE AND MAIL EXPRESS.	
Weight of car body	23,850 lbs.
Weight of trucks	12,500 ,,
Total weight	36,350 lbs.
Load	22,400 ,,
Proportion of weight to load	1 to 0.61
BOX CAR, 28 FEET LONG.	
Weight of car body	11,300 lbs.
Weight of trucks	8,500 ,,
Total weight	19,800 lbs.
Load	22,400 ,,
Proportion of weight to load	1 to 1.13
FLAT CAR, 30 FEET LONG.	
Weight of car body	7,500 lbs.
Weight of trucks	8,500 ,,
Total weight	16,000 lbs.
Load	22,400 ,,
Proportion of weight to load	1 to 1.40

The following information on the weight and capacity of freight cars was supplied to me; but it is not, I think, so reliable as that which I have already given, as it was not taken from cars in actual use. The weight given for each car is less and the load is greater than I found to be the case in practice:—

COVERED (BOX) FREIGHT CAR, 30 FEET LONG AND 8 FEET 6 INCHES WIDE.	
Weight	17,920 lbs.
Load	26,880 „
PLATFORM (FLAT) FREIGHT CAR, 30 FEET LONG.	
Weight	14,560 lbs.
Load	26,880 „
BAGGAGE CAR, 42 FEET LONG, 9 FEET WIDE, ON 4-WHEELED TRUCKS.	
Weight	22,400 lbs.

As a general conclusion, I think it may be said that an ordinary passenger-car in the United States weighs 630 lbs. for every passenger which it can seat; that a box freight car, covered, when fully loaded, carries $1\frac{1}{2}$ times its own weight; and that a flat or platform car carries $1\frac{2}{3}$ times its own weight.

The bogie truck and cast-iron wheels are two of the most important features of American engines and rolling-stock, and both of these appear to me to have been adopted in consequence of the very imperfect permanent way and the great severity of the climate in winter, when the road bed, which is frequently formed of earth only, is exposed alternately to intense frost and sudden thaws, which completely distort the track. Only bogie engines and rolling-stock could live on such roads, as was proved in the case of the Grand Trunk Railroad of Canada, where, neglecting the experience which had been gained in the States, and relying also, no doubt, on a better and more carefully laid road than was to be found there, English engines and rolling-stock were tried, but had to be abandoned, and the American type adopted. Very recently the same mistake was made on the narrow gauge railroads in Canada, and with the same result. The use of cast-iron wheels may be traced to the same causes which led to the adoption of the bogie. No nice adjustment of the rails, such as is practised on English railways, where the outer rail on curves is always elevated, would have been practicable on American railroads; even now on the best lines it is not attempted. This want of adjustment throws a great deal of work on the leading wheels of the bogie or track feeler, which rapidly wears out even steel tyres; but chilled cast-iron wheels stand well. These wheels are also safer in severe frosts than those with wrought-iron centres and steel tyres, because they are in one piece, and the difficulty of keeping the tyres fast on the wheels, which is so serious in the case of wrought-iron wheels, does not exist.

I have already mentioned the experience lately gained in Canada in some experiments which have been made there with wheels with wrought-iron centres and steel tyres, which gave results in summer much more favorable than the cast-iron chilled wheels, but in winter proved most troublesome and expensive, in consequence of the tyres becoming loose; it is well known that in England some of the worst railway accidents have occurred from wheel tyres breaking in frosty weather. In the climate of Victoria no accident from this cause is ever likely to arise; the permanent way is maintained here with as much care as that in England; the outer rail on curves is always elevated, and the same wear is not therefore thrown on leading wheels. I do not think that anything would be gained by adopting cast-iron wheels here, but the contrary. An objection, and a very serious one, to these wheels is, their small diameter—33 inches only—and there are difficulties in casting them of larger size; though the manufacture has been brought to great perfection, it is urged against them, as I have already mentioned, and I think with great reason, that they are never either perfectly balanced or truly cylindrical. There has always been a distrust of cast-iron wheels in England; they are believed to be much more liable to break than those made of wrought-iron, and this is no doubt the case when the common cast-iron is used; but it is impossible to resist the testimony in favor of the safety of the cast-iron disc wheel which is used in the States. The iron used in the best of these wheels is cold blast charcoal iron, made from the red hematite ores, and great care is taken in casting them. I feel convinced that the best of these wheels are as safe as the best wrought-iron wheels in any climate, and that they are safer than wrought-iron wheels with steel tyres in countries subject to severe frosts.

The bogie truck having been adopted, the very large cars which are used both for passenger and freight traffic in the States seem to follow as a matter of course. If two four-wheeled bogie trucks were put under an ordinary English railway carriage or waggon, the dead weight carried per passenger or per ton of goods would be very largely increased. The trucks alone of passenger cars in the States weigh from $5\frac{1}{2}$ to 9 tons, and the total weight of an English first-class carriage for twenty-four persons is about $8\frac{1}{2}$ tons. Again, the trucks alone of an ordinary freight car in the States weigh about 4 tons, and English goods waggons weigh, according to their class, from $4\frac{1}{2}$ to 6 tons. The use of very large and cumbersome vehicles seems to me, therefore, inseparable from the use of bogie trucks, unless an enormous amount of dead weight is carried. When the passenger and freight cars are full, the results are not unsatisfactory (though on English lines the profitable load in goods trains bears a larger proportion to the gross load than in the States), but when they are partly empty the proportion of dead weight carried is excessive, and accounts to a large extent for the greater expense of working American than English railways. I do not think, for these reasons, that American rolling-stock is at all suitable for railways in this country; and, so far as I can learn, the experience in working the two carriages imported here from the States has led others to the same conclusion.

On this subject of dead weight, I extract the following from the report of the Board of Railroad Commissioners for the State of Massachusetts for the year 1874, published at Boston:—

“There are few questions connected with the economy of railroad operations in regard to which it is more desirable to reach some reliable conclusion than as to the proportion which the weight of rolling-stock bears to the number of passengers or the tons of freight carried. The average number of passengers to each train during the last year was 71, and the average number of tons of freight was 64. According to the returns for the last year, it would seem that for each passenger they carry the Massachusetts Corporations have to move 1.70 tons in rolling-stock, and for each ton of freight over 2.9 tons of rolling-stock. The returns both for last year and the year previous would seem to indicate that some 3 tons of machinery are moved on our railroads to each ton of merchandise. Considerable doubt must, however, exist as to the substantial accuracy of these averages in view of the fact that such roads as the Boston and Lowell, the Boston and Maine, and the Old Colony claim to move between 1.90 and 2 tons only to each freight car they run, or an average of less than 50 tons to a train of twenty-five cars.”

As to comfort, I do not think that the ordinary American passenger cars can compare with English carriages, more especially in long journeys. The want of support for the shoulders and head is much felt, and the head-rests which have been added to the seats on some lines in the States supply the want very imperfectly. The inconvenience of having two doors only, which are used both for entrance and exit, is very great; it gives rise to delays at stations, and the steps at each end encourage the dangerous habit, which is common in the States, of entering and leaving a car while it is in motion. Draughts are much worse in American than in English carriages, from the number of windows and the absence of partitions; one open window at the forward end of a car sends a chill through fifty or sixty passengers. The opportunity which the construction of American cars gives for passing from one car to another along the greater part of the length of a train is much valued by some persons, and by others is looked upon as a nuisance. Newsboys and hawkers are continually passing up and down, and on many lines the doors at each end of the carriage are opened and shut almost without ceasing. On the other hand, the means of passing along the train gives great facilities to the conductors to examine and collect tickets, and saves delay at stations; it also enables the admirable system by which passengers are relieved of all trouble and anxiety about their luggage on arriving at their destination, to be carried out without any delay to the train. In case of accident or outrage in a part of the train, it is evident that a means of passing from end to end of it must be of great importance.

Whatever difference of opinion may be entertained as to the merits of American passenger cars as compared with English, there can be no question as to the admirable materials, workmanship, and finish of the two American cars which have been imported from the States. In all these respects they form a striking contrast to the rolling-stock which has been built here by contract for some years past. Railway carriage building in this country has not advanced; on the contrary, the carriages which are built now are very much inferior to those which were built fifteen or sixteen years ago. It is easy to account for this state of things. There is no stock of seasoned wood fit for carriage building, nor would it pay timber merchants to keep it. Railway carriage building works are on a very limited scale and show no sign of development; indeed there is no room for development, for there is no chance of the other Colonies coming here for the rolling-stock which they require, and our own wants are too small to hold out any inducement to the investment of the necessary capital. If there were any prospect of this industry becoming established here, it might be felt to be desirable, even at a considerable sacrifice, to encourage it, but after many years' trial there is not only no improvement in the manufacture, but a distinct falling off. The matter is one which, I think, deserves the most serious attention of the Government, for I believe that it is getting, under the present system, thoroughly bad rolling-stock, built of unseasoned wood, and of very inferior workmanship, and at a cost at which the best of everything might be procured. This must affect working expenses very heavily after a few years, and is no doubt doing so to some extent already. I cannot see any prospect of improvement so long as the present system is continued. The remedy which I beg to suggest for your consideration is, that the Government should import seasoned woods of the best quality, and build the whole of the rolling-stock which it requires in its own shops. If this were done, and the best designs were obtained and adopted as standards, a great improvement would be effected. Nothing is more strongly insisted upon by master mechanics in the States than the importance of uniformity both in engines and rolling stock. Their object is to arrive at what they believe to be the best design for each class of engine and car required to work the traffic of any railroad, and to adhere to it, obtaining by this means uniformity and interchangeability of parts, a matter of the greatest economical importance. It is stated on the best authority that on the Pennsylvania railroad, whilst 112 patterns are required for one engine, only 187 are required for all the seven classes of engines which are used in working that most extensive and successful system of railroads. The best practice in this respect, both in the United States and other countries, is not being followed here, where the types both of engines and carriages are being multiplied, making interchangeability of parts impossible, and increasing necessarily the number of articles which must be kept in store. I do not think that there is any occasion for this, as the general features of construction, both of the older lines in Victoria and of those which have been lately made on the light system, are well defined, and the types of engines required to work them might and ought to be limited to a small number. I did not go to the States at all prepossessed in favour of American engines; but what I observed there has satisfied me that, at all events for the light lines of railway in this country, they are better adapted than any others. It is now, I think, generally admitted that a desire for economy has been pushed too far in the construction of these lines, and that the 50-lbs. iron rail which has been used is a serious and costly mistake. The additional annual cost of working and maintaining lines of such light construction exceeds the annual interest of the additional sum which it would have been necessary to spend to make them fit to carry engines which could have worked the traffic economically. There is, therefore, no saving of money, while the slow speeds, both for passenger and goods traffic on the light lines, is a public inconvenience. The question now is how to work them as economically as possible, and I believe that this will be accomplished by using locomotive engines of the American type. The engines which have been designed and built here to work the light lines are condemned by every one connected with the maintenance of the permanent way; the effect which they produce on the road is most injurious; and an engine which damages the road necessarily damages itself. A passenger and a goods engine were obtained from England as patterns, and they are a vast improvement on the engines which were designed and built here; but they want the bogie truck, which combines a long wheel base with a short rigid base, saving both the road and the engine itself. This, I understand, it is proposed to supply, and to build a number of engines by contract here. I am of opinion, as I have already reported to you, that it would be a wiser course either to obtain engines from the States, or, if this be objected to, to get pattern engines of the best construction from there, and the materials necessary for as many more as will be required, building them, not by contract, but in the Government shops. What I have said on the subject of building railway carriages here by contract applies even more strongly to locomotive engines. There is a nominal, but no real and effective competition; and the result is that the Government obtains inferior engines at a price largely in excess of that for which it could get the best. The very high protective duties in the States shut out foreign engines; but the vast railway system there, extending over 70,000 miles, has led to the establishment of great works with the most perfect machinery for the manufacture of locomotives, and the competition between these works secures first-class engines at moderate prices. There is no such state of things here, nor is any advance being made towards it. A very limited number of persons indeed are benefited by the present system, while the public pays an extravagant price for an

inferior

inferior article. Almost all the materials for building locomotive engines here must be imported. If it be decided that engines are not to be imported, I venture to hope that in future those which the Government requires will be made in its own workshops; it may then get good engines, which I feel sure that it has not got, and has no chance of getting under the present system.

The Westinghouse break is in use on about 57 per cent. of the miles of railroad in operation in the States. It is applied to passenger trains only. It is also largely used in Canada. It has not hitherto been applied to freight trains, in which each car has a separate break, worked by hand. Every passenger car is also furnished with a hand break, but this is only used when the Westinghouse or other continuous break is not acting. The Westinghouse break is applied from the engine, and can be put in action by the driver at any instant, by a turn of his hand. The engine-driver, as a rule, is the first to see danger, and by means of this break he can take steps to avoid it, without the delay which takes place on English railways, where the driver has to whistle to the guard to put on the break. The Westinghouse break has not yet been applied to engines and tenders—for these, in America, the break on the tender is used, as on English lines—but there seems to be no good reason why it should not be, and also to all freight trains; and I understood that such an extension of its use would probably be made before long. The Westinghouse break is worked by compressed air, which is pumped into a cylinder placed at the back of the tender by an air-pump fixed on the engine. The compressed air, when released from this cylinder, acts on pistons working in cylinders attached to the cars, and the movement of the pistons applies the breaks. I may mention here that the break shoes universally used in the States and Canada are not of wood, but of cast iron; they last much longer than wood, and effect therefore a large saving in labour.

There is so much misapprehension in this country on the subject of railway construction in America that I think it may be useful to give here an extract from the report of Mr. Montague, the Chief Engineer of the Central Pacific Railroad, which is published in the Annual Report of the Board of Directors of that line for the year ending 31st December, 1872. The report for the year 1873 had not been published when I was at San Francisco. In reading this extract it should be borne in mind that the line referred to is at the furthest point of the "far west" of the United States; that it has no gradient worse than 1 in 50 (the ruling gradient in Victoria), even in crossing the Sierra Nevada, and that the line is laid with iron rails weighing 56 lbs. to the yard, that being the minimum weight of rail which the United States Government will allow to be used on any of the railroads which it subsidises, and in the construction of which it claims therefore to exercise control. Mr. Montague's report is dated 1st July, 1873, and the line had been opened in May, 1869. Referring to the rails, he says:—

"In consequence of the heavy grades and sharp curves on the mountain divisions, the life of the iron on that part of your road must always be much less than on the lighter grades of the valleys, and the renewal of some portions of the mountain track has already been found necessary. During the past year there have been received two thousand and fourteen tons of steel rails, weighing sixty pounds per yard, sufficient for twenty-one and a half miles of track, most of which has already been laid on the mountain division. The superiority of this over iron rail, especially where exposed to the heavy service of your main lines, both on the mountains and in the valleys, cannot be questioned. Its use on eastern roads is highly commended wherever it has been tried, and that the truest economy will always be found in the use of the best procurable materials, not only in track but all railroad structures, cannot be doubted.

"As a matter both of utility and experiment a small amount of this steel rail has been laid on Oakland wharf and in the yard at San Francisco, at points exposed to excessive wear, and the result has been very satisfactory. In one locality they have already outlasted three sets of iron rails, and the wear on the steel rail is almost imperceptible. I would recommend to your Board the propriety and economy of providing steel rails, not only for the mountain track but for the whole of your main lines, as rapidly as the renewal of the rail may be necessary.

"The rapidity with which the track will require renewal will of course depend largely upon the amount of tonnage carried over it, and the speed with which it is moved; and, as before mentioned, I would most earnestly recommend that, whenever renewals of any kind become necessary, they be made with the best and most durable materials. Though not always practicable in the first construction, permanent structures are in the end the most economical; and the amount of business that may reasonably be anticipated for your road will certainly warrant their adoption in the future."

While I am on this subject I shall make some extracts from the "Circular of Instructions for the Examination of Railroads issued by the Department of the Interior, Washington, D.C., April, 1871." The instructions apply to all roads "where the United States has reserved the right, or shall reserve it, to appoint directors, engineers, commissioners, or other agents to examine said roads." Under the heading "Grades and Curves" are the following instructions:—

"While the law makes the grades and curves adopted on the Baltimore and Ohio Railroad a standard on the Union Pacific, this is only to be considered as a limit to be adopted in mountain districts. To introduce grades of one hundred and sixteen feet per mile, or curves as sharp as four hundred feet radius on other parts of the road, would manifestly violate the spirit and intent of the law.

"Embankments over five feet high should be fourteen feet wide at grade (bottom of ballast); under five feet high, twelve feet wide at grade. This is where there is good ballast to be put on, or where the soil will make a good road-bed. Excavations to be of such slope and widths as to give twenty feet clear of all obstructions at grade, except in rock excavations, which should not be less than sixteen feet wide.

"Mechanical structures, culverts, and abutments for bridges and drains, should be of stone, whenever a durable article can be obtained within a reasonable distance, say from five to eight miles, depending upon circumstances. Whenever it is not possible to obtain stone of good quality within a short distance of the road for bridges and culverts, pile bridges or pile culverts may be used." "In case of lack of stone for abutments and piers to bridges over streams requiring more clear waterway than is afforded by pile bridges, pile abutments or piers may be used until the road or track is completed to the point, or beyond, to stone quarries on the line, or to connecting roads from which dimension stone can be obtained; then the temporary piers and abutments shall be replaced with stone.

"*Ballasting.*—A railroad cannot be considered complete until it is well ballasted. If composed of gravel or broken stone, it should be from 12 to 24 inches thick, depending on the lower material. In view of the settling of new embankments, which require time and rains before ballasting can be properly placed, and in view of the number of miles required by the law to be constructed annually, the perfect finish of the road-bed in this respect must be progressive and the work of time.

"*Cross-ties.*—There should be at least 2,640 ties to the mile. They should be 8 feet long, 6 inches thick, and, if hewn, 6 inches on the face.

"*Rails* should be of the best quality, and weigh 56 lbs. to the yard.

"While these instructions recognize the necessity for a railroad company to sometimes erect temporary structures, and to ballast the track after the cars are running, yet it is clearly to be understood that such temporary structures are to be replaced with permanent ones, and the track ballasted before the final completion and acceptance of the road."

The standard gauge of the railroads in the United States is 4 feet 8½ inches. In Canada the principal railroads have been altered from the exceptional gauges adopted there to the 4 feet 8½ inches gauge, to bring them into correspondence with the lines in the States; and there can be no doubt that in

a very few years there will be only one gauge in the Dominion. In the States various gauges have been tried, from 6 feet down to 3 feet. Some of the roads have a gauge of 4 feet 10 inches; others, of 5 feet and 4 feet 9 inches; these are, however, exceptional, and the English gauge is recognized as the standard. The exceptional gauges have given rise to a class of cars which are called "compromise;" they have wheels with broad flanges, and when the difference in the gauge is only an inch or an inch and a half, they meet the difficulty of a break of gauge; when the difference is greater, various expedients are resorted to, such as adjusting the wheels of the rolling-stock to fit more than one gauge, lifting the bodies of the cars with their loads from the trucks built for one gauge to those built for another, &c. In practice, however, all these attempts to escape the evils of break of gauge have proved troublesome and costly failures, and the conviction is now all but universal in the States that there ought to be but one gauge, and that it should be 4 feet 8½ inches.

The use of steel rails in relaying roads which had been laid with iron rails in the first instance is becoming general, both in the States and Canada, and I have no doubt will soon be universal, as the economy of these rails is admitted. The Vignoles section of rail is adopted almost everywhere, with a greater depth and a narrower base than is used in England. In this respect American practice is more nearly in accord with that of the continent of Europe than with that of England. The weights of the iron and steel rails used vary considerably, but, speaking generally, they are lighter than those in England or European countries. A weight of 56 lbs. per yard is common in the Western States, and 60 and 65 lbs. rails are frequently used. Although steel is so far superior to iron as a material for rails, it is not now the practice, either in the States or elsewhere, to reduce the weight of the rail when steel is used instead of iron. In the States, indeed, where very light iron rails were so generally used, the steel rails are usually heavier than the iron rails which they replace.

Level crossings for carriage roads were formerly used everywhere on railroads in the United States, and in the West and the country districts of the East they are so still: they are unprotected by gates, but large notice boards are fixed at each crossing with the words "Look out for the train when the bell rings" painted conspicuously on them. In some towns the rails are carried along a street with houses built on each side, between which the train rushes. In the great towns, however, all this is being changed, and the railroad companies are compelled to build bridges to carry the road traffic over the lines. This is notably the case in New York in the extension of the New York Central Railroad; at St. Louis, where, at vast expense, an approach has been made by tunnelling to the new bridge over the Mississippi; and at Chicago, where several costly bridges have been built over the railroads to replace level crossings. In this last town I was told that the loss of life every year at level crossings is still very great. All American locomotive engines have bells, which are rung as signals of approaching danger; they are usually rung by a cord to which the fireman gives a sharp pull, the bell being so hung that when set going it continues to ring for some time. Sometimes the bell is worked by the engine, and rings continuously. The noise in a busy railroad station, such as Albany (New York), or Springfield (Massachusetts), is almost deafening. In the Eastern States the railroads are almost everywhere fenced; but in the West fencing is an exception. There can be no doubt, however, that as the country becomes settled fencing must be erected. I was told that even in districts only partially settled it pays a railroad company to fence its line rather than incur the risks and accidents which are inseparable from unfenced lines.

It was repeatedly stated here, some years since, when the Government was urged to adopt economy in railway construction, that in the United States there were no platforms at railway stations; but there is only a show of truth in this statement; platforms are to be found at every station of any importance in all parts of the States. In the West they are seldom raised above the ground, but a much larger area of platform is used than is common in England or here; the material is generally wood. In the Eastern States the raised platform is coming into use, and its great comfort, the security it gives against accidents, especially in the case of women, children, and invalids, and the facilities which it affords to passengers for entering and leaving the cars quickly, are fully recognized.

The railroad station buildings in the Eastern States are good, and some of those which have been built of late years are very fine. Ample space is provided in the yards, and is recognized as essential to economy in working. I found the refreshment-rooms everywhere, both in the East and West, very spacious and well provided. In crossing the continent, the provision made for passengers at the refreshment stations is most complete; even in the great American desert there is an abundant supply, not only of good food, but of milk, fruit, ice, &c., and the prices charged are not unreasonable.

There is no system of signals on American railroads like that in England; the lines, the great majority of which are single, are worked by telegraph, and at stations by hand signal, or indicators attached to the points. An officer, who is known as the "Train Despatcher," has absolute control of the running of the trains of a section of railroad varying from 100 to 200 miles; he regulates the working by means of a diagram, on which is shown the position of every train on the section which he controls. If a breakdown or other accident occur to interrupt the ordinary working, he is able, by means of the diagram before him, to re-arrange the running of the trains to meet the difficulty. The staff system, the use of which is insisted upon by the Government in England for working single lines of rail, is never, I believe, used in the States or Canada.

The iron bridges in the United States are among the most remarkable of its engineering works, and they differ in many respects from English bridges. In the former much greater care is taken in the selection of the iron than in the latter, and they are therefore lighter; pin connections are used invariably instead of rivets for all main parts, and all the fittings are engine-turned and planed. A greater depth of girder in proportion to the span is used in the States than in England; a depth of one-ninth to one-twelfth of the span is common in England, and one-fifth in the States. The bridge work is completely fitted before leaving the shops where it is made, and can therefore be erected with great rapidity and with unskilled labour; and being divided into a number of parts, is easily and economically transported. The differences in the two systems have arisen, no doubt, to a very great extent from the different conditions under which bridges are built in the two countries. In the United States very much larger spans are required as a rule than in England; the quality of the iron is superior to that in England, and economy in transport when distances are vast is of great importance. There can be no doubt that American engineers adapt their bridge designs to the conditions with which they have to deal with admirable skill; but it is questionable if these designs would be suitable either in England or here, where the conditions under which bridges are built are so different from those in the States.

The

The passenger fares in the States are almost invariably three cents ($1\frac{1}{2}$ d.) per mile. The New York Central and Hudson River Railroad is an exception, the fares on that line being only two cents (1d.) per mile. This rate was fixed by the Legislature of the State of New York, and made a condition of its assent to the amalgamation of the New York Central and Hudson River Railroads in 1869. Great efforts have been made since that time to obtain the sanction of the Legislature to the higher rate of three cents per mile, but hitherto without success. The additional fare charged for travelling by the sleeping and drawing-room cars, which are commonly known as Pullman's, is about one-third of a penny per mile in English money. These cars, which cost about £3,000 each, are not the property of the railroad companies on whose lines they run, but are built and owned by Pullman and others who have engaged in this business. As I have already stated, they are of enormous weight; they are hauled by the companies, who also maintain them in all respects at their own charge, except the furniture, carpets, bedding, &c., which are maintained by the owners, who also supply at their own cost the attendants, namely, a Pullman conductor for each train in which these cars are run, and a negro servant for each car. The owners of these cars take the whole of the extra fares, the railroad companies getting nothing for the expenses they incur, except the use of the cars. However profitable the system may be to the owners, there can be no doubt that the Pullman cars are a very heavy drain on the resources of the railroad companies. The American public, however, demands luxurious accommodation when travelling, and the competition between the various companies is so great that they are obliged to furnish it. The Express Parcels Companies also absorb a very important and profitable part of the business of the railroads, and hitherto have proved too powerful to be shaken off by the railroad companies.

The following information is taken from Poor's Manual of the Railroads of the United States, 1874-5, which is the recognized authority on the subject. It may be interesting to those who have not an opportunity of referring to the manual itself, and will serve to show how incorrect the statements are which have been made with great confidence, both here and elsewhere, as to the small cost at which railroads in the United States have been constructed.

The total length of railroads in the United States at the end of 1873 was 70,651 miles, distributed as follows:—

New England States	Miles. 5,314
Middle States	14,019
Western States	33,772
Southern States	15,353
Pacific States	2,193
Total miles.....	70,651

The length of the railroads which were in operation throughout the year 1873, and of which statistical information is given in the manual for 1874-5, was 66,237 miles; and the aggregate cost of these roads was 3,784,543,034 dollars, giving an average cost per mile of 57,134 dollars. In 1872 the average cost was 55,116 dollars, and in 1871, 59,726 dollars. Taking 4·86 dollars to be equal to £1 sterling, the average cost of the railroads which were in operation in the United States throughout the year 1873 was £11,756 sterling per mile. Of the whole 66,237 miles, not much more than one-fourth are to be found in the New England and Middle States, where the lines are well constructed. The railroads which make up the rest of the mileage are all single lines; they are, for the most part, without fences, ballast, and signals; the stations are few and far between; and the price paid for land, when it has been necessary to buy any, has been inconsiderable. The physical features of the States are decidedly favourable to economy in construction. The railroads are almost everywhere on the surface, the only great works being bridges over the large rivers, and on three-fourths of the whole mileage these are of wood.

I am well aware of the fallacy of comparing the cost of railroads in one country with that of another, and also that the cost of the lines in the States has been affected by the depreciated currency; but the information which I have extracted from Poor's Manual will, I hope, serve to correct some of the extravagant misconceptions which have prevailed here on the subject of the low cost of railroads in the United States.

The current operating expenses on 66,237 miles in 1873 amounted to 65·1 per cent. of the gross earnings, and the net earnings were therefore 34·9 per cent. of the gross. The net earnings were sufficient to pay a dividend of 4·96 per cent. on the total capital in bonds and shares which had been expended on the lines. The share capital received 3·45 per cent. only. The gross earnings per head of the population of the States were 12·80 dollars in 1873, against 11·63 dollars in 1872, and 9·80 dollars in 1871. In 1873 there was 1 mile of railroad to every 582 inhabitants of the States. In the United Kingdom in the same year there was a mile of railway to about every 2,000 inhabitants. These figures do not, of course, at all express the relative accommodation afforded by the railroads of the two countries; it is much more complete in the United Kingdom than it is in the States, though the proportion of mileage to population is much higher in the latter than it is in the former. In the New England States there is 1 mile of railroad to every 685 inhabitants; in the Middle States 1 mile to 772; both of these groups of States are comparatively old and settled, and contain very large cities. In the Southern States there is 1 mile of railroad to every 735 inhabitants. The Western group of States has 1 mile of railroad to every 406 inhabitants, and the Pacific States, with a thin and widely scattered population, 1 mile to every 389 inhabitants.

In this country there are now in operation 618 miles of railway, or 1 mile of railway to every 1,335 inhabitants*; and there are 338 miles in course of construction, which will make the ratio of mileage to population 1 to 863. Again, about 900 miles have been surveyed, and the Government is urged to construct the whole of this additional mileage; if this were done within the next five years the ratio would become 1 mile to every 502 inhabitants, allowing for the increase of population during the same period. Comparing these figures with those which I have extracted from Poor's Manual, I think they will suggest the conclusion that the demands for such a large additional mileage in this small and compact province, with a slowly increasing population, are excessive, and would probably lead to serious embarrassments.

It is admitted, in the United States, that for the present railway construction has reached its limits, and that the progress in the future must necessarily be very slow and gradual as compared with the past. Among the Rocky Mountains and in similar districts there will possibly be extensions of mineral lines on a gauge of 3 feet or 3 feet 6 inches; but the construction of railroads for general traffic is at an end for the present, and

* The total population to 31st March last was, as estimated by the Government Statist, 825,557.

and probably for some time to come. The too rapid construction of railroads during the last few years has admittedly been a principal cause of the great depression from which all interests in the States have been and are suffering.

During the time that I was in the States a bitter war was going on between the Western farmers, who are known as Grangers, and the railroad companies. The opinion was freely expressed that, as the railroads monopolized to a very great extent the carrying trade of the country, they ought to be in the hands of the Government. The principle appeared to be admitted to be sound in itself, but impossible of application from the corruption to which it would give rise. It is well known that in England many persons advocate the purchase of the railways by the State. In Prussia the Government has determined that the whole of the railways which are in the hands of private companies shall be purchased, and shall become the property of the State, and be worked by it. A proof of the growth of opinion as to the necessity for public control of monopolies is shown by the course which the corporations of the great English towns are taking in purchasing the works for the supply of water and gas. The results of these operations have been very satisfactory in every case which I heard of; either a large reduction in the rates which had been previously charged having been effected, or a handsome addition made to the revenues of the corporations.

I extract the following from an able discussion of this subject in the Railroad Commissioners' Report (Massachusetts), published at Boston, January, 1874. It shows the difficulties which have arisen under a system of railway policy as widely different as possible from that which has been adopted here, and the objections which may be urged to it; and may help to reconcile some persons to the shortcomings which are so constantly charged to Government management:—

"It may now be taken as very generally conceded that railroads are, and from the very nature of things must always remain, practical monopolies; that the operation of the law of competition as affecting supply and demand can exercise a very limited control over them, and that even this limited control is rather of a disturbing than of an equalizing character. The supply of competing railroads is not, and cannot be, indefinite; nor does the increase in their number tend to diminish the cost of transportation; nor, when unprofitable in one place, can they be moved to another; nor can any excess of capital invested in them be released at will and otherwise used; nor can they be made to feel the influence of competition equally at all points which they serve. Competition is however made up of these very elements here wanting; it is their presence which supplies its effective regulating force to the operation of the natural laws of supply and demand. The popular mind has been slow to realize that they were here wanting; but once the obvious fact is conceded, it follows that all the dealings of railroads with the community must either be unregulated, except by the intermittent action of a disturbing force, or else they must be carried on under a greater or less degree of Governmental interference. Very naturally, therefore, the character and degree of this Governmental interference are most actively discussed in those countries which originally organized their railroad systems upon the assumption that no such interference was necessary. Of these countries, America was that one which carried its reliance upon economical laws the furthest. It is in America, consequently, that the work of re-adjustment is accompanied with the greatest amount of difficulty.

"As yet, human ingenuity has devised but four methods of establishing the relations in which the railroads of any country shall stand towards its Government. Left wholly in the hands of private individuals or of corporations, they may be independent of all Government control, standing on the same footing as cotton mills or iron foundries; or they may be subjected to the operation of special municipal laws, establishing their obligations, regulating their charges, and limiting their profits; or, still remaining the property and under the control of private parties, they may be subjected to an executive supervision and control; or finally, in whole or part, they may be owned and operated by the State. In fact, a species of natural law of political evolution governing transportation by rail may now be formulated. In all countries, the political systems of which are based upon the principle of non-interference in industrial enterprises, railroads are first organized on the theory of their sufficient regulation by natural laws. From this incipient stage they develop through an attempted regulation by legislative enactment into a state of practical executive supervision, the whole process tending, with a greater or less degree of friction, towards the final result, in which the work of transportation by rail must apparently be recognized as one of the functions of Government. This process of evolution may now be studied, in different civilized countries, in each of its several stages. In certain parts of America non-interference is developing into an attempt at legislative regulation; in other parts of the country and in England, legislative regulation is passing gradually into the phase of executive supervision, which may be studied in France as a perfected system approximating to State-ownership; which final condition again is in its turn matter of warm discussion both in America and in England, while in Belgium it is already in full development. The gradual and inevitable evolution in this process of development has perhaps been more clearly illustrated in the experience of America than in that of any other single country. For in theory, though not in law, the railroad corporations of America originally enjoyed an independence of Government control common to all general industrial enterprises; they were ordinarily likened to associations for purposes of improved boot-making or baking, and left in their operations to be controlled by the same economical laws. In practice they have been subject to all sorts of special legislation, intended to regulate them in their relations to the community. The analogy of the turnpike and bridge corporation, supplemented by the law of common carriers, has been followed; and for over forty years the attempt on the part of legislative bodies to frame statutes in the nature of usury laws, which would be of some binding force when applied to transportation by rail, has been no less incessant than futile. With the greatly increased knowledge on the subject now generally diffused, it is sufficiently apparent, not only why such efforts always have proved futile, but why also they always must prove so. As regards fares and freights, for example, the favorite subject for legislation, the framing of a practical railroad tariff, one which will even fairly conform to local and economical requirements, is the most difficult and perplexing task to which the more enlightened and experienced railroad managers are called upon to address themselves. It continually, also, becomes more perplexing and more difficult just as the system grows complex. Yet, until very recently, the idea among legislators has been almost universal that it required only the passage of some simple law, limited to a few sections, which almost anyone could draw up after an hour's consideration, to regulate the whole subject on a wise, just, cheap, and permanent basis. Accordingly the Statute-books of all the States contain examples of enactments passed in this spirit of confident ignorance. Upon these this Board has had frequent occasion to comment in its previous reports, and their futility is now generally conceded.

"In this Country, therefore, the relations of the railroad system to the political system may be considered as having now passed through two phases of discussion and attempted settlement—corresponding to two stages in the process of evolution—and to be entering upon a third. It has passed through the non-interference phase and the legislative phase. During the last year it has, in the State of Illinois, entered upon what may be called the phase of executive supervision; while in Massachusetts the discussion has advanced yet further, and has fairly touched its utmost possible limit in the agitation of a measure looking to partial State-ownership."

During the time that I was in the United States I obtained for the Library in the Engineer-in-Chief's office the most valuable of the works on Engineering which have been published there, and also a complete set of drawings copied from the working plans of the International Bridge at Buffalo. Public documents and reports on a variety of subjects were furnished to me everywhere, with the greatest liberality and courtesy.

I left New York on the 16th September, 1874, and arrived at Liverpool on the 27th.

I was at Glasgow in November of the same year, and saw the great locomotive engine-works of Messrs. Neilson and Messrs. Dübs and Co. I was also afforded opportunities of seeing very thoroughly the works of the Clyde Navigation. I crossed from Glasgow to Belfast, and travelled over many of the principal lines of railway in Ireland, the Dublin and Belfast, the Dublin and Drogheda, the Irish North-Western, the Great Southern and Western, and the Midland. The bridge rail was used in the first instance

instance on a great number of Irish lines, and was fastened to transverse sleepers; it is, however, now condemned on account of the difficulty of getting good joints with it, and, except on the Dublin and Drogheda Railway, I did not find that it was used anywhere in re-laying the road. On that line it appears to be approved of; an iron rail of the bridge pattern weighing 85 lbs. to the yard is used in re-laying. The Midland Great Western Railway of Ireland is now using a steel rail of the Vignoles pattern which weighs 80 lbs. to the yard; it is laid on transverse sleepers, and makes a very fine road. The Great Southern and Western Railway was laid originally with iron rails of the bridge pattern, but it is being relaid with steel rails weighing 73 lbs. to the yard. I found that it was all but universally admitted by Irish engineers and railway managers that steel rails are in the end much more economical than iron, and I was told that nothing but the poverty of some of the Irish railway companies prevented their being adopted everywhere for renewals.

The amount of traffic on the Irish railways is comparatively small. The two principal lines are the Great Southern and Western and the Midland Great Western. The gross receipts per mile per week last year on the former were about £29, and on the latter £22. The gradients of both lines are very easy, yet it is found economical to use steel rails of 75 and 80 lbs. to the yard. On the Victorian Railways the gross receipts per mile per week for the year 1874-5 were rather more than £30; the gradients are very heavy, and iron rails weighing only 50 lbs. and 60 lbs. to the yard are being used. Experience, not only in Ireland, but in all other countries where railways have been made, condemns Victorian practice in this respect.

I returned to England in January, 1875, and soon afterwards went down to South Wales, where large quantities of rails were being rolled for the Government of Victoria, at the Blenavon and Dowlais works. The great lock-out in South Wales occurred immediately after my visit to Dowlais, and the works at Blenavon were stopped from the same cause when I visited them.

The Great Western Railway and the lines in connection with it in the south-west of England and in South Wales were, as is generally known, originally laid to the gauge of 7 feet. There is now a mixed gauge between Paddington and Swindon; and from this latter point, through Gloucester, Chepstow, Cardiff, and the whole of South Wales, the gauge has been altered from 7 feet to 4 feet 8½ inches, for the purpose of connecting the railways belonging to the Great Western Railway Company with those of the rest of the kingdom without break of gauge. It has been decided to alter the gauge from Swindon to Bath and Bristol, and over the Bristol and Exeter Railway, and when this is done the mixed gauge between Swindon and London can be got rid of. I was told at Cardiff that the traffic of the Great Western Railway with that place had doubled as soon as the gauge was altered. When I was in South Wales I had an opportunity of seeing the lines which are known as the Llynvi Valley and Ogmore Railways; they are about 40 miles in extent, and consist of several short lines in branch valleys connecting with the main line of the South Wales Railway. Up to the time when I saw these lines they had been used for mineral traffic only, but they were then about to be opened for passenger traffic also; they are leased and worked by the Great Western Railway. The rail used is iron, and of the double-head pattern; it weighs 72 lbs. to the yard; the sleepers are half round, and are of Baltic timber creosoted; the intermediate bearings are 3 feet, and at the joints 2 feet. These lines are all single, and the gradients are heavy (1 in 50 and 1 in 40). There are some curves of 10 chains radius. Bogie engines were tried, but were abandoned on the ground that the whole weight of the engine was required for adhesion. The Mogul type of engine, by which this objection is met in the United States, had not been tried. The lines are worked by heavy tank engines, with six wheels of 3 feet 9 inches and 4 feet diameter, coupled. The coal waggons in use on these lines weigh 5 tons, and carry a load of 10 tons, or twice their own weight. On these, as on nearly all the lines in England, side or safety chains to waggons are dispensed with, having been found useless, or worse than useless, when the drawbar gave way. If this can be done on lines with such steep gradients as those which I am describing, it might be done on the Victorian Railways, and a considerable saving be thereby effected.

I spent a day at Cardiff, and saw the docks and other objects of interest there, and on my way back to London I visited the workshops of the Great Western Railway at Swindon. The locomotive and carriage shops, and also the rolling-mills, are at this place. The Great Western Railway Company rolls the rails which it requires for renewals, and works up the old rails and scrap in doing so. The standard rail of the Great Western Railway at present is double-headed and reversible; it weighs 80 lbs. to the yard, and is laid in chairs which weigh 35 lbs. each, and are fastened by two ¾-inch bolts passing through a cast-iron washer known as the "Armstrong," and secured with a wrought-iron nut. The sleepers for the 4 feet 8½ inches gauge are of Baltic timber, creosoted, and measure 9 feet by 10 inches by 5 inches. The intermediate sleepers are 3 feet from centre to centre, and the joints 2 feet. The express trains on the 7 feet gauge are run at an average speed of from 35 to 40 miles an hour by engines having only a single pair of driving-wheels of 8 feet diameter; the narrow-gauge express engines have wheels of 7 feet diameter. On the broad gauge the greatest weight on a pair of express engine wheels is 15 tons, and on the narrow gauge, 14 tons. The goods engines have six wheels, coupled, the diameter of the wheels varying from 5 feet on the main line to 3 feet 9 inches on such branch lines as those which I have described in South Wales. Steel tyres are used on all engine, carriage, and waggon wheels. The engines are all of the inside-cylinder class, and wrought iron is used exclusively in the crank axles. The fire-boxes are of copper, but the tubes are all of wrought iron. The boiler-plates are ⅝-inch thick, and the pressure is 130 lbs. to the square inch.

A disc wheel, with the Mansell continuous fastening of the tyre, is now coming into general use on the Great Western Railway for carriage wheels, and is preferred to the wrought-iron spoke wheel. The disc wheel has a cast-iron boss, and the rest of the wheel is made of teak wood. The carriage and waggon frames, which are very strong, are of oak; Honduras mahogany is used in the panels. On the Great Western Railway, as a rule, the low-sided and medium waggons carry a load equal to twice their weight; and the load of the covered waggons is one and a half times their weight.

I had been instructed by the Honorable Mr. Gillies, who was at the time Minister of Railways, to report on the merits of the Westinghouse break, which is in extensive use in the United States, and had made careful inquiries on the subject when I was there and in Canada. I found that this break was everywhere highly spoken of in the States; but that in Canada, on the Grand Trunk Railway, where it had been applied to all the passenger cars, it was superseded by the Smith vacuum break, the invention of an Englishman residing in the States, which was considered so far superior to the Westinghouse as to justify

justify the expense of substituting it for the latter. I learned afterwards that in the States also the new break is making way.

The Smith vacuum break was adopted on the Grand Trunk Railway of Canada instead of the Westinghouse pressure break for the following reasons principally:—

First.—Economy of maintenance, consequent to simplicity of construction. The Westinghouse break, from its complication of valves and auxiliary engine, is very liable to derangement, which cannot be said of the vacuum break, which is simplicity itself.

Second.—The release of the break, in the case of the vacuum break, is instantaneous; but this is not the case with the pressure break, because in it the whole weight of gearing, levers, &c., acts against the pressure of the atmosphere after the compressed air is withdrawn.

Third.—Tight couplings between the cars are necessary when the Westinghouse break is used, but are not so with the Smith vacuum, because with it the last car in the train is the first to feel the action of the break, and the whole train is kept in tension. With the Westinghouse, if the couplings are slack, the slack is taken up by the cars following one another, and when they come together an unpleasant jerking and tremor are felt.

I was told in Canada that the first cost of applying the Westinghouse break did not differ very materially from that of the Smith vacuum, the cost of the latter being about £50 per engine against £65 for the former, and the cost per car being about the same for both, viz., £20. I found that in London the Westinghouse break was in use on the Metropolitan District Railway, and the Smith vacuum on the Metropolitan, both lines being commonly known as the underground railway, though they belong to separate companies. I had a long conversation with the engineer of the Metropolitan Railway, who told me that the Smith vacuum break had been in operation on that line for upwards of six months. Previously to adopting it the ordinary van breaks were used, and these are still retained in every train, in case of an accident occurring to the vacuum break. It had given the greatest satisfaction, not a single accident or any derangement of the break having occurred, though one hundred thousand stoppages had been made with it during the time it had been in operation; and it had effected a very considerable saving in the expense of maintaining the wheels, as the tyres did not require to be turned up so often as when the breaks were applied by hand. Economy in first cost and great simplicity are the merits of the Smith vacuum break, and in both respects it is decidedly superior to the Westinghouse. The latter requires an air-pump, which is expensive, and liable to get out of order, while the Smith vacuum is worked by an ejector on the engine; the one acts by pressure in cylinders, the other by exhausting the air from vessels, which close like an accordion, and in doing so apply the breaks. The cost of the vacuum break, as applied on the Metropolitan Railway, is £48 per engine, and £14 per carriage. It is more exposed to malicious injury than the Westinghouse, but this does not appear to me to outweigh its great advantages in other respects. It had been decided to give the vacuum break a trial here by using it on the Wilhamstown line, where there are numerous stoppages which it is important to make in as short a time as possible; but just then the Royal Commission appointed in England to report on railway accidents commenced to make a series of experiments, not with these two breaks only, but with several others also which had been brought under their notice, and I thought that it would be prudent to await their report before deciding on the continuous break to be used on the Victorian Railways, and advised Mr. Gillies accordingly. The report will in all probability be presented to the English Parliament during its present session. I rode on the engine on the St. John's Wood branch of the Metropolitan Railway for the purpose of seeing the vacuum break applied, and nothing could be more simple and effectual than its action. On short lines, where the stations are numerous, the break is applied to every carriage; but on longer lines, where the stations are fewer, sufficient power would be obtained by applying the break to two-thirds of the carriages in a train.

The following particulars of the Metropolitan Railway in London may as well be recorded here, although many, if not all of them, are already known to professional men, and there is no probability of a similar line being constructed in this country. For a great part of its route the line is in tunnel, and the exhaust steam is then turned into tanks which are carried on the engines, and which are emptied at the end of each trip, when a fresh supply of cold water is taken in. The coal consumed is South Wales smokeless coal. The carriages are lighted with gas, which is carried in an indiarubber bag or sack which lies along the whole length of the roof of each carriage, and is weighted to give the required pressure. The bag is enclosed in a wooden case, and a fresh supply of gas is taken from the main each trip. Lighting by gas appears to have been adopted because it can be done so readily and so certainly. The Silber lamp was tried, but although the light was good, the lamp was found to be troublesome, and to require an amount of time and labour which it was impossible to give on a line where the traffic is of so urgent a kind. None of the products of combustion from the gas lamps can escape into the carriages, but the heat from the globes is very disagreeable in warm weather, and my experience of the effects of lighting railway carriages by gas in the under-ground railways in London and the Mont Cenis Tunnel in Italy convinced me that this plan of lighting would not be suitable for this country. The rail at first used was of the Vignoles pattern, of steel, and weighed 86lbs. to the yard; but the rail which is being substituted for this is what is known as the "bull-head"; this rail is also of steel, and weighs 86lbs. per yard; it has a double table, but is not reversible, the upper table being very much larger than the lower; it rests in chairs, which weigh 36 lbs. each, and have a base of 13 inches by 6 inches. The chairs are fastened to transverse sleepers. One great advantage of this kind of rail on lines like the Metropolitan and the main line of the London and North Western, where also it is used, is that a worn rail can be taken out and replaced with so little loss of time. When trains follow one another at short intervals, this is of great importance. The chairs which are used on the main line of the London and North-Western Railway are even heavier than those on the Metropolitan line; they weigh 42 lbs. each, and measure 14 inches by 8½ inches on the base. The large base is found to be necessary, to prevent the chairs from being driven into the sleepers by the heavy traffic. Baltic timber, creosoted, is now used almost everywhere in England for sleepers.

I visited the locomotive workshops of the London and North-Western Railway at Crewe, which are probably the most complete in the World. Iron is manufactured from the pig; steel is made by the Bessemer process; rails, bars, and plates are rolled; wheels and tyres are manufactured; and, except for a supply of iron in the shape of pig, these great works are independent of all assistance from outside. Bessemer steel is largely used in the manufacture of locomotive engines, being employed for the frames, boilers, fire-boxes, crank axles, and wheel tyres; for all of which purposes the locomotive engineer of the

company believes it to be well suited. His practice in this respect is no doubt new, and, as might be expected, opinions differ upon it, on many railways crucible steel being used in crank axles and tyres. There is unquestionably a tendency, both in England and the States, to use steel both for fire-boxes and boilers. The latest class of passenger engine on the London and North-Western Railway has two pairs of coupled drivers, 6 feet 6 inches diameter. The wheel base is 15 feet 8 inches, the cylinders are 17 inches diameter and have 24 inches stroke, and the weight of the engine is $32\frac{1}{2}$ tons, in running order, exclusive of tender, each pair of drivers carrying $11\frac{1}{4}$ tons. The tube surface is 980 square feet, and the fire-box 103.5 square feet. The fastest trains, the "Flying Scotchman," and the "Wild Irishman," are drawn by these engines, and average 40 miles an hour, including stoppages. The newest class of goods engine has three pairs of coupled wheels, 4 feet 3 inches in diameter; the diameter of the cylinders is 17 inches, and the stroke 24 inches. The total weight is 30 tons, exclusive of tender, and the wheel base is 15 feet 6 inches.

In coming to England from the States one is struck with the want of uniformity in the class of locomotive engine which is employed to do a particular work. There are various types of engines in the States, but the same type is as a rule found doing the same work; this is not so in England. The London and North-Western and the Great Northern Railways both have the 4 feet $8\frac{1}{2}$ inches gauge; the Great Northern is much the heavier line of the two to work, the ruling gradient of its main line being 1 in 200, while the ruling gradient of the London and North-Western is 1 in 330; but on the heavier line the express trains are drawn by engines having a single pair of drivers 8 feet 1 inch diameter, while the express trains of the lighter line are run with engines having two pairs of coupled driving-wheels which are only 6 feet 6 inches diameter; and many very fast trains are drawn by engines with 5 feet 6 inches drivers. The practice on the London and North-Western has admittedly been influenced by that of the United States in this respect, and corresponds with it. American engineers condemn large driving-wheels, because they cannot be properly balanced, and experience has proved that the highest speed which is practicable can be obtained with wheels of moderate size; but, on the other hand, they are not guilty of the folly of using driving-wheels of very small diameter.

I have mentioned above the differences in the locomotive engines used on two of the great English railway lines to run express trains; the case, however, is an extreme one. It is true that there are many and needless varieties of design, which harass builders of locomotive engines, and increase the cost; but the engines which prevail in England are very similar to those which were designed for the Victorian Railways, many years ago, by Sir Daniel Gooch and Mr. Sturrock. Inside cylinders are the rule in England, as outside cylinders are in the United States. All English engines have six wheels, and the great majority have two pairs of coupled drivers for passenger engines and three pairs for goods engines.

In the United States and Canada continuous breaks are the rule, and they are used whenever it is required to stop a train. In England they are still the exception, and even when they are applied to trains they are not always used. The London and North-Western Railway has applied Clark's friction break, or a modification of it, to its principal express and suburban trains; but the rules of the company provide that it shall be used only in cases of emergency, and not for ordinary stoppages; for these the van and tender breaks are used.

I had not time to go to the north of Scotland, to see the railways which have been made there by the Duke of Sutherland; but I was furnished by the resident engineer with particulars, which I think will be found interesting. These lines have been constructed under the best advice, and with a scrupulous regard to true economy.

The Highland railway system proper terminates in the North at Bonar Bridge. The Sutherland Railway, made by His Grace the Duke of Sutherland, and a few other proprietors, assisted by the Highland Company, extends from Bonar Bridge to Golspie, a distance of $26\frac{1}{2}$ miles.

The Duke of Sutherland Railway, made entirely by His Grace, extends from Golspie to Helmsdale, $17\frac{1}{2}$ miles.

The Sutherland Caithness Railway, made by the Duke, the Highland Railway Company, and a few of the proprietors and farmers in Caithness, extends from Helmsdale to Wick; it has a branch of $6\frac{1}{2}$ miles to Thurso, and is in length $66\frac{1}{2}$ miles.

The Highland Railway and the three lines mentioned above form a continuous line from Perth to the extreme north of Scotland. The whole length is worked by the Highland Company. All the lines are single, with passing places, and are of the 4 feet $8\frac{1}{2}$ inches gauge.

The "Sutherland" Railway is laid for one-half its length with a 70 lbs. double-headed iron rail, 24 lbs. chairs, and transverse sleepers, 9 feet by 9 inches by $4\frac{1}{2}$ inches, which average 3 feet apart from centre to centre. The other half of the line is laid with Seaton's patent saddle rail, 65 lbs. per yard, resting on longitudinal triangular sleepers, with cross ties 8 inches by 4 inches, at about 9 feet apart, all secured with wood cut screws. The road laid with the double-headed rail has proved an excellent one; but the saddle-rail-road, although it cost £200 per mile more than the other, has proved a failure. The works of this line were costly, on account of heavy rock cuttings and a long and high viaduct, with girders of 230 feet span.

The "Duke of Sutherland" Railway was made in 1870, when prices for materials of all kinds were very low. The rails were supplied at £5 17s. 6d. per ton, delivered on the seashore close to the line. They are of iron, of the Vignoles pattern; the base is 5 inches and the depth $4\frac{1}{2}$ inches; they weigh 75 lbs. to the yard, and are laid on common fir sleepers, grown on the Duke's estate. The sleepers average 2 feet 8 inches apart from centre to centre. The general character of the works is easy. There are three stations on the line, besides the private station at Dunrobin. The station buildings are of stone, and comprise ticket office, ladies' room, and agent's house. The works were let in small contracts under the immediate supervision of the Duke's engineer, the contractors being supplied with earth waggons, temporary rails, and other plant. The cost of the line, which was made under exceptionally favorable circumstances, was £3,700 per mile, including stations, but exclusive of engines and rolling-stock.

The Sutherland Caithness Railway is laid with rails of the Vignoles pattern, with a base of 5 inches and a depth of $4\frac{3}{8}$ inches; these rails weigh 70 lbs. to the yard; they are laid on sleepers of Scotch fir and Baltic red wood, 9 feet by 9 inches by $4\frac{1}{2}$ inches, and the average space from centre to centre of sleepers is 2 feet 8 inches. There are three small stations in Sutherlandshire, and the line in that county cost about £5,000 per mile, exclusive of engines and rolling-stock. In Caithness there are six small stations, besides a junction and two terminal stations—Wick and Thurso. This portion of the line cost

£5,300

£5,300 per mile, exclusive of engines and rolling-stock. The cost of the land in both counties was very trifling. This railway was constructed when prices of labour and materials had risen from the very low level at which they stood in 1870. The ruling gradient on the lines which I have described is 1 in 60.

The Dingwall and Skye Railway is 53 miles long, the ruling gradient is 1 in 50, and the construction very nearly the same as the lines which have been already described; it cost £5,000 per mile, exclusive of engines and rolling-stock.

These railways, as I have already said, are worked by the Highland Railway Company. The following are the weights and dimensions of the bogie engines of this Company:—Cylinders, 18 inches diameter, 24 inches stroke; tractive force, 12,720 lbs.; weight on bogie (Adams' patent), 14 tons 10 cwt.; diameter of bogie wheels, 3 feet 7½ inches; weight on driving-wheels, 13 tons 10 cwt.; diameter, 6 feet 1½ inch; weight on trailing-wheels, 13 tons; diameter, 6 feet 1½ inch; weight of tender (with coal and water), 27 tons; diameter of wheels, 3 feet 7½ inches; total weight of engine with tender, 68 tons; heating surface—tubes, 1,128 square feet; fire-box, 98½ square feet; fire-grate area, 16¼ square feet; boiler pressure, 140 lbs. per square inch; tender carries 1,800 gallons of water, 4 tons of coal.

The carriages and waggons are the same as those in other parts of the United Kingdom.

I paid a visit to the Wootton Tramway, which was laid down by the Duke of Buckingham for the accommodation of the farms on his estate in Buckinghamshire. It has often been referred to on account of its cheapness. It is 7 miles long, and some branch lines which were in progress at the time that I saw it will increase the length to about 10 miles. The tramway commences at a station called Quainton-road, on the Buckinghamshire line, which now forms a part of the London and North-Western Railway system. The junction of the tramway with the railway was made when I was there by means of a turntable, the waggons of the London and North-Western passing to and from the tramway, which is on the 4 feet 8½ inches gauge; but I was told that a junction line of the ordinary kind was about to be laid in to avoid the expense and loss of time which the use of the turn-table involved. For the first 4½ miles from Quainton-road the tramway is on the surface, and for the last 2½ miles it rises 170 feet; for about 12 chains of this distance there is a gradient of 1 in 44. On this part of the line there is an embankment, but not of considerable size; as a rule, the line is on the surface; there are no bridges, and only a very few culverts of small size. The line is single, and, with a very trifling exception, is everywhere on the Duke of Buckingham's property; it is fenced in the pasture lands only, and these extend over about half its length. The fence is a very light one, and was in a dilapidated condition when I saw it. At level crossings there are small gates, which are kept closed across the tramway. There is a gatekeeper at each public road crossing, but these are infrequent, as the tramway, for a great part of its length, runs parallel with a public road. The formation width is 12 feet, and where the line is on the surface the distance between the fences is 15 feet. The depth of ballast is about 9 inches, and it is composed partly of burnt clay and partly of gravel. The rail used is of iron, of the bridge pattern; it weighs 25 lbs. to the yard, and is laid on longitudinal timbers (fir) 6 inches square. On the straight parts of the tramway there are transomes 4 inches by 6 inches with a ½ inch bolt at every 12 feet; on curves the transomes are only 6 feet apart.

This tramway was made for the improvement of His Grace's property, and to accommodate his tenants. It is worked in connection with the London and North-Western Railway, and there are through rates for the traffic to every part of the kingdom. The passenger traffic, which is of comparatively small importance, is carried in an ordinary tramway car, which holds twenty persons, and is drawn by a horse at a rate limited to six miles an hour. There are two trips each way in the day, and a horse makes one double trip, or fourteen miles. The passenger fare is about 1½d. per mile. There are a driver and a boy on the car. The goods traffic is carried in the waggons of the London and North-Western Railway. It was intended originally that these should be drawn by horses; but, after a sufficient trial, this mode of traction was abandoned, having been found very expensive, and two of Aveling and Porter's traction engines were purchased to do the work. These engines, which are on four wheels, weigh about 8 tons each, having therefore 2 tons on each wheel, while the London and North-Western waggons, which they draw, have from 3½ to 4 tons on each wheel when loaded to their full capacity. The worst gradient on the line between Quainton Road and Wootton, is 1 in 78, and the traction engine has taken 90 tons gross load up this gradient. On the down journey the train is divided at Wootton, and under very favourable circumstances of weather the engine has taken 30 tons gross load up the incline of 1 in 44 between Wootton and Brill. Under ordinary circumstances she can take only 20 tons. The average speed of the goods trains over the whole length of the tramway is 4 miles an hour. The engine makes two double trips, or 28 miles, in the day. There are two men on the engine. The Wootton Tramway has been open for about four years, and has more than fulfilled the expectations which were formed of it. It takes the farmers' produce to the nearest station of the London and North-Western Railway, whence it can be conveyed to any part of the kingdom, and it brings back coal, lime, manures, draining tiles, and stores of all kinds to the farms and villages; but it is admitted that the rails are much too light, and that they ought to be not less than 50 lbs. or 55 lbs. weight to the yard, to allow of the line being worked to advantage with a locomotive engine. A branch line was being made when I was there, and the rails used on it were old double-headed rails of the London and North-Western Railway; the original weight of the rails was 75 lbs. to the yard. There are three stopping places between Quainton road and Brill, the terminus, but there are no station buildings or appliances for carrying on the traffic, except a short siding at each stopping place. The farmers' waggons draw up alongside the railway waggons, and load from them or into them, as the case may be. There was no land to be purchased for the line, and an Act of Parliament was not required. There are two tramway cars and two of Aveling and Porter's traction engines. The cost of the line is believed to have been about £1,400 per mile. The rails were bought very cheap.

It is now universally acknowledged that a light permanent way for railways in a hilly country, where steep gradients must be used in order to keep down the cost of construction, is a mistake, from an economical point of view. It was plausibly argued at one time that the interest of the money saved by constructing light instead of substantial works would be sufficient to renew them when they required it, and this may possibly be true of certain works, as for instance, bridges, which, under certain circumstances, it may be economical to build of wood instead of stone or iron; but with the permanent way the case is different, for, if this be of light construction, light engines must necessarily be employed, and on steep gradients they can only draw light loads; consequently a greater number of trains must be run, and hence a great increase in the cost of working and maintenance. In a level country a light permanent way may be

In arriving at an approximation to the average dead weight per seat in carriages on the railways of the United Kingdom, for the purpose of comparing it with a corresponding weight on railways in the United States it is necessary to bear in mind that in the States there is practically only one class of carriage, and that in the United Kingdom there are three classes; also, that in the latter country the great majority of railway travellers use the third class. The statistics of passenger traffic in the United Kingdom for five years, ending with 1874, show that in every 1,000 passengers, 90 travel by the first-class, 183 by the second-class, and 727 by the third-class carriages. Applying these figures to the average weight of each class of carriage, taken from the tables which I have given, the result obtained shows that the average dead weight per seat in railway carriages in the United Kingdom is not quite 450 lbs.; the dead weight per seat in carriages in the United States may, as I have already mentioned, be taken at 630 lbs. English railway carriage stock, therefore, compares favourably with that of the States in this respect, and a reference to the tables will show that the same may be said of the waggon stock.

The following tables show the weights, loads, and other particulars of the rolling-stock on the Victorian Railways:—

There is very little that is new in railway construction in England, and I think I may say that there is nothing which is not well known here. The most important improvements have been in the general adoption of Bessemer steel instead of iron for rails, and the block system combined with the interlocking of points and signals. I was authorized by the Honorable Mr. Gillies to have schemes and estimates prepared for interlocking the points and signals at the junction of the North-Eastern Railway with the main line at North Melbourne, and at the lines for the goods station at Batman's Hill; this was attended to during the time that I was in London, and the work is now being carried out here. The Railway Department of the Board of Trade in England insists on interlocking on all new lines; even the least important branch lines are obliged to adopt the system. The object of interlocking is to secure that the switches through which a train is to pass cannot be placed in the required position until the line over which the train is to move has been protected by danger signals on all other lines, and that the signal for the trains to advance cannot be given until the switches have been placed in their proper position; in other words, before a pointsman can place the switches for a particular road in a position for the train to pass through them, he must block with danger signals all the other roads which approach to that particular one, and before he can give the signal to a train to advance on that particular road he must have placed the switches in their proper position. The system of interlocking is undoubtedly a source of safety, and though the first cost is considerable, it effects, under certain circumstances, a saving in the number of pointsmen, by bringing a large number of switches under the control of one man. The system was first adopted here by the Melbourne and Hobson's Bay Railway Company at the junction at Richmond, and its adoption on the Government railways, at the points which I have mentioned, has been, I believe, a wise step. I did not meet with the interlocking system anywhere in the United States or on the continent of Europe.

The locking bar, which is another very important improvement, has the effect of greatly reducing the danger of facing points.

In London, and indeed in all the great towns of England and Scotland, extraordinary efforts have been made to secure central positions for railway stations. An inspection of a map of London will show to what an extent these have been successful in the metropolis; and in Liverpool, Manchester, Birmingham, Glasgow, and other towns the same policy has been pursued and with equal success. The connection of all the lines which converge towards the great towns is another noticeable feature, and it would be difficult to over-estimate the importance of this in facilitating the interchange of traffic.

I left London for the Continent on the 19th April, 1875, travelling by way of Dover and Calais to Paris.

There is a line of railway round Paris, the Chemin de fer de Ceinture, which is twenty-three miles long, and serves to give access to the suburbs, and to unite the whole of the railways which centre in Paris; it follows the line of the fortifications, keeping just inside them. This line is double, and is very well and substantially constructed. I saw on it, for the first time, railway carriages with two stories. These are second class, and have an upper tier of seats on the roof, which are open at the sides but covered on top. These upper seats appear to be liked in fine weather, as they afford an excellent view of the country, but they are quite unsuited to wet or cold weather. The roofs are very low, and passengers are warned neither to move from their seats nor to lean out at the side when the train is in motion. The upper tier of seats is reached by a ladder placed at each end of the carriage. The bodies of French carriages overhang the frames more than those made in England; and four first-class and five second-class passengers are seated on each side, instead of three first-class and four second-class as in England. The French gauge is 4 feet 8 $\frac{1}{2}$ inches. The second-class carriages in France are very comfortable, both the seats and backs being cushioned, instead of the seats only, as in England. The suburban trains at Paris consist ordinarily of about eight vehicles, two of which are four-wheeled break vans, fitted with Newell's break; the guard applies it not only to his van but to the carriage next to it. These trains are drawn by six-wheeled tank engines, with two pairs of coupled drivers about five feet in diameter; there are breaks on the engine wheels. The couplings of the carriages are similar to those in England, but goods waggons are all furnished with screw couplings; and safety chains, which have been discarded in England, are in general use in France. The railway stations in Paris are very fine, and have ample accommodation for the traffic; they are numerous, but, except in one instance—that of St. Lazare—have not been carried so far into the heart of the city as those in London. Complete intercommunication is provided by means of the Ceinture Railway.

I visited the workshops of the Northern Railway of France, which are situated about two miles from Paris. There are various classes of engines used on this line, and some are of a type long since discarded in England. There are several Crampton engines, but they are quite out of favour, and no more of this class are now built. The goods engines are very large, heavy, and cumbersome-looking; they have four pairs of wheels of 4 feet 6 inches diameter, coupled, and weigh in running order, without the tender, 45 tons. The class of engine which appears now to be most approved of in France for passenger traffic is that with six wheels, two pairs being used as drivers; the diameter of these varies from 5 feet to 6 feet 6 inches, the latter size being used for express engines. Both inside and outside cylinder engines are

are used on the Northern and other railways in France. I found that the screw reversing gear was being used on all new engines, and that breaks were very commonly put on the engine wheels. I did not see either the American continuous break or a bogie engine on any of the lines I travelled on in France. I did not, however, travel over a great length of railway there.

French engines have a very heavy and clumsy appearance compared with those of either England or America. In many of them the eccentrics are outside the wheels; but this practice is being abandoned. The wheels of the rolling-stock are similar to those in England, and the tyres, for which steel is now coming into general use, are fastened with rivets. I found that the disc wheel, with Mansell's fastening for the tyre, was approved of and likely to be used to a considerable extent. Some of the passenger carriages are on six wheels and some on four; but in France, as in England, four-wheeled carriages form the great majority. The six-wheeled carriages appear to be used principally in express trains which run long distances. French carriages do not differ materially from those of England; the bodies (as already mentioned) overhang the frames more than English carriages: both frame and body are very strong. These second-class carriages are certainly more comfortable than the English, and the linings of the first-class are more elaborate. The goods waggons are almost identical with those used in England. The medium and low-sided waggons carry twice their own weight, and the high-sided covered about 1.60 times. First-class carriages only are run in express trains in France; the average speed of these trains is 35 miles an hour, exclusive of stoppages. On Sundays and holidays fifty per cent. is added to the ordinary railway fares on French lines. There are about 19,000 kilometres of railway in France (11,875 miles). Of these only about 5,000 kilometres return a profit; in the case of some of the lines this is very large; but of the remaining lines some do not even pay working expenses.

I travelled over the main line of the Paris, Lyons, and Mediterranean Railway, from Paris to Nice. This great line, which has a total length, with its branches, of 3,020 miles, extends to the Italian frontier, about a mile beyond Mentone. It appears to be admirably constructed throughout, and has very fine and commodious station buildings. More than one kind of permanent way is in use on this line; but I observed that where re-laying was going on the Vignoles rail was used. The rails appeared to be of steel, and to weigh about 75 or 80 lbs. to the yard. These rails are deep, and have a narrow base, and correspond more nearly to the American than to the English pattern; the joints are fished, and are always placed on a sleeper. The sleepers are placed about 3 feet apart, and have a plate of wrought-iron let into them for the rail to sit on. The rails are fastened to the sleepers by a bolt or spike through the inside flange, and a dog spike on the outside—one bolt and one dog spike in each sleeper.

On the Paris and Orleans Railway I found that steel rails, weighing about 80 lbs. to the yard, were used in renewals; on this line the double-headed rail is still largely employed, a great advantage being found to arise from turning the rail. When rails of the Vignoles pattern are used they are always fastened to the sleepers with dog spikes.

The following tables contain particulars of the engines and rolling-stock of latest manufacture on the Paris and Orleans Railway, which may be said to represent fairly French engines and rolling-stock:—

From Nice I travelled by way of Genoa, Turin, Milan, and the Italian Lakes to Venice, turning aside at Turin to visit the Mont Cenis tunnel. The line of railway across the north of Italy, which is known as the Alta Italia, is the property of a French Company, which owns also the line from Venice through Styria to Vienna.

There is no novelty of any importance to be noticed in the railways in the north of Italy. In construction they follow the French railways, but the quality of the work is not so good, and the lines are not well maintained. The station buildings in the greater towns, such as Turin and Milan, are very fine, and the municipal authorities have contributed large sums to secure ornamental buildings; but intermediate stations, though large, are dirty and ill-arranged; the condition of the rolling-stock is also very inferior to that on the great French lines.

I proceeded from Venice to Trieste, and thence by railway over the Semmering Alp to Vienna. At the summit of the Semmering I spent some time in seeing the great works by means of which the railway has been carried over the pass. These consist of numerous tunnels and very lofty viaducts, some of which have a double tier of arches. The ruling gradient is 1 in 40, and the radius of the sharpest curve 625 feet.

The Austrian Government at a time of great financial pressure, some years since, disposed of its interest in the State railways to French companies for terms of years, varying from fifty to ninety years, at the expiration of which the railways will again become the property of the State. One of these lines is the South Austrian Railway, from Vienna to Trieste, which is now in the hands of the same French Company which owns the Alta Italia Railway; the two lines forming one great combination, extending over 3,443 miles. The group of railways known as the State Railways, which extend to Hungary, and also to the north-west of Austria, have a length of about 1,400 miles, and these and the North Railway pay very well; but the South Austrian and Alta Italia lines have not been profitable for some time past. Engines and carriages of the American type were used on the Austrian railways some years since to a very considerable extent. The engines have been broken up, as they were found to be too light to work profitably the heavy gradients of the South Austrian Railways; and the carriages were not approved of; some of them are still running, but no new ones are built. I saw some of these carriages, which are composite, and are used for second and third class passengers only. They are objected to on account of their great weight, which is 11½ tons, and also because they cause serious delay at stations, as they fill and empty slowly; they can seat fifty passengers, and, when full, the dead weight per passenger is not excessive, but when only partially filled it becomes so. Cast-iron wheels of the American pattern, but not made in America, have been used to a large extent both on the South Austrian and the State Railways; but on these lines they have been given up, having been found to wear irregularly and to injure the road. Another objection made to these wheels is, that there is great difficulty in casting them of a larger diameter than 32 inches. On the North Railway I did not find cast-iron wheels condemned so unhesitatingly as on the other lines which I have mentioned; but, on the whole, opinion was unfavourable to them, and there appeared to be every probability that wrought-iron wheels with steel tyres, or a disc wheel with steel tyres and Mansell's fastenings, would supersede them. The standard type of carriage now used on the Austrian railways is the same as the English four-wheeled carriage. Three first-class, four second-class, and five third-class compartments are put on a frame. There are some composite carriages, first and second class, on six wheels; they weigh 232 cwt., and carry thirty-six passengers, the weight per passenger being nearly 6½ cwt. All the carriages which I saw had wrought-iron sides, with very strong wood framing. Sheet-iron is used for panels, and is found to answer very well. The buffers have spiral springs. The linings and internal arrangements are very complete.

In first-class carriages the cushions are covered with cotton velvet on one side and morocco leather on the other, which is intended for summer use; in second-class carriages cotton velvet only is used. There are seats for three first and four second class passengers on a side. The gauge of the Austrian railways is 4 feet 8½ inches.

The rolling-stock generally is fully as strong and heavy as on English lines. The following are the weights and loads of the different classes of vehicles for passenger and goods traffic:—

PASSENGER CARRIAGES.

First class	4 wheels,	weight 143 cwts.,	load 18 passengers = 7.94 cwt. (890 lbs.)	per passenger.
Composite, 1st and 2nd	" "	173 cwts.,	" 25 "	= 6.92 cwt. (775 lbs.)
Second class	" "	138 cwts.,	" 32 "	= 4.31 cwt. (483 lbs.)
Third class	" "	128 cwts.,	" 50 "	= 2.56 cwt. (287 lbs.)
Composite, 1st and 2nd ...	6 "	232 cwts.,	" 36 "	= 6.44 cwt. (722 lbs.)

GOODS WAGGONS.

Low-sided	weight 82 cwts.,	load 196 cwts. = 2.39 cwts. per cwt. of dead weight.
Medium	" 86 cwts.,	" 196 cwts. = 2.27 cwts. "
High-sided, covered	" 102 cwts.,	" 165 cwts. = 1.62 cwts. "

In North Italy and Austria a very large proportion of the passenger carriages, and all, or nearly all, the goods waggons, have breaks of the English pattern, each vehicle having a seat provided for a breaksman. The number of breaksmen to each train is, of course, regulated by the weight of the train and the character of the gradients on the line. The express train in which I travelled across the Semmering consisted of four carriages and two break vans; there were two guards and one breaksman on a carriage. The ruling gradient on this line is, as I have already mentioned, 1 in 40. Wood is generally used for break-blocks, but the cast-iron shoe, which is universal in the United States, is coming into use, and is found to effect a very considerable saving; it is not found to injure the steel tyres of the wheels.

Outside cylinder engines are used, almost universally, in Austria. The express trains which cross the Semmering are drawn by engines which have two pairs of 5-foot wheels, coupled, as drivers, and a bogie in front. The bogie is not used in engines for either slow passenger or goods trains, because it is desired to have the whole weight of the engine for adhesion. The goods engines which work this line have eight wheels, coupled, and weigh 50 tons in running order, without the tender; the engine wheels are about 3 feet 9 inches in diameter. The cylinders are 18 and 19 inches in diameter, and have 24 inches stroke. In some of the Austrian, as in the French engines, the eccentrics are outside the wheels; this practice is now abandoned for all engines which run at a high speed, as it was found that so much overhanging weight was objectionable.

Steel fire-boxes and boilers have been tried on the State Railways, but the experiment was not on the whole successful, though for some time it appeared to promise very good results. Corrugated copper fire-boxes are now being tried, and the report about them is satisfactory.

The inferior quality of the fuel in Austria is a serious difficulty to engineers; 1 lb. weight of the best Austrian coal will not evaporate more than 6 lbs. of water, and the same weight of inferior coal will not evaporate more than 3 lbs. This makes very large fire-boxes and long boilers necessary. The fuel is indeed more like lignite than coal. An attempt was made to use it in the shape of *briquettes* like those which are made in France from refuse coal, but the drivers, who all work on premiums for economy in the consumption of fuel, prefer to use it in its natural state.

The railways in Austria are double or single, according to the requirements of the traffic. The South Austrian Railway from Vienna to Trieste, which is the great port of the empire, is a double line throughout, but other lines of less importance are single; everywhere the works are thoroughly good and substantial. The rails are all of the Vignoles pattern, and are fastened to cross-sleepers by dog spikes; they weigh from 75 to 80 lbs. to the yard lineal. Steel rails are always used for renewals, and of the same weight as the iron rails which they replace. An attempt was made to reduce the weight of the rail when steel was substituted for iron, but it was found not to answer, and has been abandoned. The stations in Austria are large and convenient, and in the principal towns the buildings are very handsome. The platforms are everywhere low, as in France. Before leaving Vienna I visited the Kalenberg Mountain and its railway, which has been made both for pleasure purposes and to afford easy communication to the beautiful sites for residences with which the mountain abounds. This railway was made at the time of the speculative mania in Vienna some years since: the objects of its promoters have not hitherto been realized. The gradients on it are not so steep as those of either the Mount Washington or the Rigi Railway, and it is not so exclusively a pleasure line as these lines are.

I stayed at Dresden for some days on my way to Berlin.

On the Leipzig and Dresden Railway composite carriages are largely used. The following are the weights of the passenger carriages and goods waggons on this line, which are all of the English type:—

PASSENGER CARRIAGES.

<i>First and Second class Composite.</i> —One first and three second class compartments, on four wheels; carries 30 passengers; weight, 183 cwts. = 6.10 cwt. (683 lbs.) per passenger.
<i>Second and Third class Composite.</i> —Two second and two third class compartments, on four wheels; carries 32 passengers; weight, 162 cwts. = 5.06 cwts. (567 lbs.) per passenger.
<i>Second class Carriage.</i> —Five compartments, on six wheels; carries 40 passengers; weight, 231 cwts. = 5.77 cwts. (646 lbs.) per passenger.
<i>Third class Carriage.</i> —Six compartment, on six wheels; carries 48 passengers; weight, 202 cwts. = 4.21 cwts. (471 lbs.) per passenger.

GOODS WAGGONS.

<i>Low-sided.</i> —Weight, 76 cwts.; load, 196 cwts. = 2.58 cwts. per cwt. of dead weight.
<i>Medium.</i> —Weight, 99 cwts.; load, 196 cwts. = 1.98 cwt. per cwt. of dead weight.
<i>High-sided Covered.</i> —Weight, 124 cwts.; load, 196 cwts. = 1.58 cwt. per cwt. of dead weight.

In Prussia proper the total length of railways in operation at the end of 1873 was 8,573 miles. The gauge is 4 feet 8½ inches. The following table has been compiled from official information:—

PRUSSIAN RAILWAYS AT END OF 1873.

Description of Railways.	Number of separate lines.	Length of Railways.		Total cost per mile (average.)	Gross Receipts per mile for the year 1873.			Net Profit per mile.	Net Profit per cent. on total cost.
		Total.	Double included in total length.		Passengers.	Goods.	Total from all sources.		
State Railways	9	2,504	1,285	18,545	795	2,015	3,034	997	5·4
Private railways administered by the State	10	1,470	509	22,582	727	2,780	3,759	1,178	5·2
Private railways administered by Boards of Directors	30	4,599	1,532	18,267	729	1,651	2,545	944	5·2
Total	49	8,573	3,326

In Prussia, in 1873, there was 1 mile of railway to every 3,570 inhabitants.

On the earlier railways rails were sometimes used which weighed less than 64 lbs. to the yard, but these are rapidly disappearing, and new lines are laid and old lines renewed with rails weighing from 64·5 to 74·5 lbs. per yard, the large majority being of the latter weight.

Steel has almost entirely displaced iron as the material for rails. In the year 1873 the number of miles of new railway opened was 650, and on this length 147,210 tons of steel rails, and only 21,383 tons of iron rails, were used.

The total number of passenger carriages of all classes on the Prussian railways at the end of 1873 was 7,816; of these, 4,205 had four wheels, and 3,611 six wheels. The average weight of the carriages per axle—which is the mode of computation ordinarily adopted in Prussia—was 3·8 tons, and the average weight per passenger's space 451 lbs.

The average weight of all classes of goods waggons per axle was 2·8 tons, and the average load capacity per axle 4·5 tons.

The average cost of the goods waggons of all classes per axle was £74.

The number of passengers carried on the Prussian railways in 1873, exclusive of holders of season tickets, was 99,629,719. Of these eleven were killed and 127 wounded. Of officials and others employed on the lines, 385 were killed and 949 were wounded during the year.

The following table gives the dimensions of some of the newest locomotive engines on the Prussian railways:—

DIMENSIONS OF SOME ENGINES INTRODUCED IN 1873 BY—

	State Railways.			Private Railways administered by the State.			Private Railways administered by Board of Directors.		
	No. 1.	No. 2.	No. 26.	No. 29.	No. 39.	No. 43.	No. 95.	No. 107.	No. 117.

Diameter of cylinder	1·4	1·4	1·5	1·5	1·4	1·5	1·5	1·4	1·6
Length of stroke of cylinder	1·9	2·1	1·8	2·1	2·0	2·1	2·1	1·7	2·0
Diameter of boiler	4·2	4·2	4·2	4·2	4·2	4·6	4·3	4·1	4·5
Length of boiler	11·9	13·8	11·4	13·2	12·5	14·1	13·6	14·6	13·7
Firing surface	1,008	1,126	1,088	1,145	1,042	1,227	1,148	1,340	1,392
Number of all wheels	6	6	6	6	6	6	6	6	6
Number of driving-wheels	4	6	4	6	4	6	6	4	6
Diameter of driving-wheels	5·7	4·5	6·0	4·6	5·0	4·2	4·1	6·5	4·3
Diameter of leading-wheels	3·6	...	3·5	...	3·2	4·0	...
Rigid base	14·5	11·5	14·0	10·9	16·4	10·1	11·1	18·8	10·5
Weight without water and coals	31·4	31·2	33·7	33·5	30·4	31·8	29·8	35·3	35·8
Weight with water and coals	34·9	35·7	37·6	37·7	34·5	36·7	34·3	40·2	40·1
Total cost of engine	£ 2,100	2,265	2,040	3,080	2,173	2,175	2,310	2,725	2,325
Maximum pressure per square inch allowed by law	142·5	142·5	147·2	142·5	142·5	142·5	122·2	142·5	128·25

During the year 1873 900 new engines were put on the Prussian railways. Of these, nine have a single pair of drivers; all the rest are coupled engines. With one exception, all these engines have outside cylinders. The following data for these engines were supplied to me:—

Mean firing surface	1,101 sq. feet.
Mean horse-power	292
Mean firing surface per horse-power	3·76 sq. feet.
Maximum firing surface	1,509 "
Minimum	358 "
Weight of largest engines in running order	44·1 tons.
Average cost of engine without tender	£2,256.
" per horse-power	£7·7.
" per cwt.	£3·6.

The average horse-power of the locomotives in 1865 was 250 against 292 in 1873.

The following may be taken as representing fairly the weights and capacities of the rolling-stock in Northern Germany:—

STATE RAILWAY FROM BERLIN TO THE RUSSIAN FRONTIER.

PASSENGER CARRIAGES.

First class, on four wrought-iron disc wheels, one metre diameter (3' 3¼"). This is a *voiture de luxe*, and carries ten first class and two second-class passengers (servants), and weighs 287 cwt. = 23·91 cwt. (2,679 lbs.) per passenger. The frame is entirely of wrought iron, and is very strong; the panels are of sheet iron. This carriage is lighted with gas, the gasometer being placed below the carriage.

First

First and Second Class Composite.—One first-class and three second-class compartments on four wheels. This carriage is of the ordinary English type; it weighs 214 cwts., and carries 29 passengers = 7.38 cwts. (826 lbs.) per passenger. It is lighted with gas. There is a small closet for first-class passengers.

First and Second Class Composite.—Four compartments—two of each class—on four disc wheels. This carriage weighs 210 cwts., and carries 28 passengers = 7.50 cwts. (840 lbs.) per passenger. It has no closet, and is not lighted with gas.

Third-class.—Five compartments, on four disc wheels; breaks on all the wheels; no closet; and not lighted with gas. This carriage weighs 200 cwts., and carries 50 passengers = 4 cwts. (448 lbs.) per passenger.

Fourth-class.—On four wheels. This carriage has neither partitions nor seats; it weighs 182 cwts., and carries as many passengers as can be crowded into it.

Mann's Boudoir Sleeping Car is on six disc wheels. It has a very strong wrought-iron frame; it has no breaks; it weighs 370 cwts., and carries 14 passengers = 26.42 cwts. (2,960 lbs.) per passenger.

The luggage and break vans of the newest pattern are on six wrought-iron disc wheels; they weigh 238 cwts.; all the framing is of wrought-iron and very strong; the bodies are of wood; there is a break to each wheel, and the break-blocks are of wood.

GOODS WAGGONS.

High-sided Covered Waggon, built in 1874. This waggon weighs 140 cwts. and carries 196 cwts. = 1.40 cwt. per cwt. dead weight. It has four cast-steel wheels; the whole of the framing is of wrought-iron, and the sides are of wood. Another waggon of the same class, but not so lately built, weighs 112 cwts. and carries 196 cwts.; the area of the floor is 185 square feet.

Medium Waggon, of the latest build, has four wheels, wrought iron frame, and wooden sides; it weighs 124 cwts., and carries 216 cwts. = 1.74 cwt. per cwt. dead weight. The area of the floor is 193.68 square feet.

Low-sided Waggon of the latest build, has four wheels; wrought-iron frame. It weighs 98 cwts., and carries 211 cwts. = 2.15 cwts. per cwt. dead weight.

The rolling-stock in North Germany, speaking generally, is of very strong construction, and the useful load carried by waggons bears a good proportion to the gross load. The more recent vehicles have frames of wrought iron, and steel disc wheels are very generally used; they can be made as cheaply as the wrought-iron wheel, with steel tyre, and have the advantage of being in one piece like the American cast-iron wheel: the objection is that breaks cannot be applied to them, as they would be likely to fly in pieces from unequal expansion. The standard diameter of the wheels of rolling-stock is one metre, or $39\frac{3}{8}$ inches.

I observed that a large proportion of the latest-built passenger carriages in Prussia have six wheels, and that the proportion of six-wheeled to four-wheeled carriages is much larger there than in England. In Austria four-wheeled carriages are used almost exclusively; there, however, it is of more importance to keep down the weight of the rolling-stock than in Northern Germany, where, as a rule, the country is very level.

I crossed from Stralsund to Malmo, in Sweden, and travelled thence to Stockholm by the State railway, a distance of about 320 English miles. Trains are not frequent on the Swedish railways, and the highest speed is 25 miles an hour, including stoppages. The standard gauge is the same as the English, 4 feet $8\frac{1}{2}$ inches, and though some exceptional gauges were at one time used, as 3 feet and even less than this, they are now prohibited, and all lines, whether made by the Government or private companies, must be of the standard gauge. The length of the Government railways at the end of 1873, the latest period to which the returns have been made up, was 870 English miles, and the average total cost per English mile was nearly £8,200. The country for the greater part is an easy one for the construction of railways, only the northern portion, to which railways have not yet penetrated, being mountainous. The southern provinces consist principally of plains with very numerous lakes and hills. In the central provinces there are large areas of table-land. No steeper gradient than 1 in 150 is allowed on the Government lines, and no sharper curve than 1,000 feet radius. The permanent way is good. The steel rails, which are used on the Government railways, weigh $60\frac{1}{2}$ lbs. to the yard, and the iron rails 63 lbs. Steel is used in relaying the older lines.

The engines are almost all of English make, Messrs. Beyer, Peacock, and Co. having supplied much the greater number of them. They have inside cylinders, and are nearly identical with the engines which I have already described as being the ordinary English type. The carriages are spacious, and differ from English ones principally in the internal arrangements, which are less favorable than in English carriages for economising room.

The following are some particulars of the rolling-stock of latest construction on the Swedish Government railways:—

PASSENGER CARRIAGES.

	First-class.	Second-class.	Third-class.
Weight	7 tons	7 tons	8 tons
Number of wheels	4	4	4
Number of passengers	19	26	46
Weight per passenger carried	825 lbs.	603 lbs.	390 lbs.

Side girders and buffer planks are of iron; horizontal braces are of oak; the panels of the carriages are of sheet iron.

GOODS WAGGONS.

	High-sided Covered.		Medium.		Low-sided.	
	Tons	cwt.	Tons	cwt.	Tons	cwt.
Weight	5	$12\frac{1}{2}$	4	$7\frac{1}{2}$	4	5
Load	7	10	6	$13\frac{1}{2}$	10	$8\frac{1}{2}$
Weight of load carried per ton of dead weight	1.33 tons		1.52 tons		2.45 tons	
No. of wheels	4		4		4	

The side-girders and buffer planks are of iron; the horizontal braces are of oak; the bodies of the waggons are of wood.

The whole of the public debt of Sweden has been contracted for the construction of railways; and they return 5 per cent. per annum on the cost of construction after payment of all charges for maintenance and working expenses.

There were 444 miles of railway belonging to private companies in Sweden at the end of the year 1873. Several of these lines are on the standard gauge, and among the rest there are lines of various gauges, as 4 feet, 3 feet 6 inches, and one line, about 6 miles long, has a gauge of only 2 feet 7 inches. As I have already said, the construction of railways on any other than the standard gauge is now prohibited. The cost of the private lines varies from about £1,500 to £7,000 per mile.

I went from Stockholm by way of Gothenburg to Christiania, for the purpose of seeing the narrow-gauge railways which have been constructed by Mr. Carl Phil for the Norwegian Government. I was very kindly furnished with full information about these railways, which have attracted a great deal of attention. There are only two lines in Norway on the gauge of 4 feet 8½ inches; all the others which are in operation are on the 3 feet 6 inches gauge, and it is intended to adopt the same gauge for all new lines. The two railways on the wider gauge are the line from Lillestrom to Grændsen (71 English miles long), on the Swedish frontier, where a junction is made with the line to Stockholm; and the line from Christiania to Eidsvold (42 miles long, and which is the property of an English company). The introduction of the gauge of 3 feet 6 inches involves therefore a break of gauge at one point only, namely, Eidsvold, and it is proposed to lay a third rail from there to Christiania to meet that difficulty. On the Christiania and Eidsvold line the steepest gradient is 1 in 40; the weight of the rail used varies on different parts of the line from 60 to 72 lbs. per yard. This railway, which was opened in 1854, has cost £11,750 per English mile. The railway from Lillestrom to Grændsen passes through an easier country than that from Christiania to Eidsvold; the weight of the rails is 62 lbs. per yard, and the cost was £5,827 per mile.

At the time when I was in Norway, 194 miles of railway, on the 3 feet 6 inches gauge, were in operation, about the same length was in course of construction, and 170 miles were projected, all on the same gauge.

The following particulars of the lines which are in operation may be found interesting:—

HAMAR-AAMODT RAILWAY.

Gauge	3 feet 6 inches	Highest point of line above the sea ...	887 feet
Weight of rail	37 lbs. per yard	Radius of sharpest curve	1,030 feet
Steepest gradient...	1 in 70	Length of line	40 miles

Cost per Mile.

Land and compensation	£79	Rolling-stock	£291
Fencing	78	Telegraphs	21
Rock, earthwork, and culverts	747	Sundry works	42
Bridges and viaducts	146	Engineering and supervision	174
Deviation of roads	26		
Permanent way and ballast	842	Total cost per mile	£2,772
Stations and sidings	326		

TRONDHJEM STOREN RAILWAY.

Gauge	3 feet 6 inches	Highest point of line above the sea ...	462 feet
Weight of rail	37 lbs. and 41 lbs.	Radius of sharpest curve	772 feet
Steepest gradient...	1 in 42	Length of line	30 miles

Cost per Mile.

Land and compensation	£290	Rolling-stock	355
Fencing	75	Telegraphs	20
Rock, earthwork, and culverts	1,936	Sundry works	39
Bridges and viaducts	631	Engineering and supervision	460
Deviation of roads	51		
Permanent way and ballast	940	Total cost per mile	£5,346
Stations and sidings	549		

DRAMMEN-RANSEFJORD RAILWAY.

Gauge	3 feet 6 inches.	Highest point of line above the sea ...	659 feet
Weight of rail	40 lbs.	Radius of sharpest curve	927 feet
Steepest gradient...	1 in 60	Length of line	59 miles

Cost per Mile.

Land and compensation	£450	Rolling-stock	434
Fencing	76	Telegraphs	17
Rock, earthwork, and culverts	1,402	Sundry works	84
Bridges and viaducts	362	Engineering and supervision	276
Deviation of roads	82		
Permanent way and ballast	845	Total cost per mile	£4,461
Stations and sidings	433		

HAUGSUND-KONGSBERG RAILWAY.

Gauge	3 feet 6 inches	Highest point of line above the sea ...	566 feet
Weight of rail	40 lbs.	Radius of sharpest curve	1,030 feet
Steepest gradient...	1 in 60	Length of line	17½ miles

Cost per Mile.

Land and compensation	£205	Rolling-stock	598
Fencing	71	Telegraphs	24
Rock, earthwork, and culverts	935	Sundry works	60
Bridges and viaducts	26	Engineering and supervision	177
Deviation of roads	107		
Permanent way and ballast	884	Total cost per mile	£3,430
Stations and sidings	343		

VIKERSUND-KRODEREN RAILWAY.

Gauge	3 feet 6 inches	Highest point of line above sea... ..	623 feet
Weight of rail	35 lbs and 40 lbs.	Radius of sharpest curve	618 feet
Steepest gradient...	1 in 45	Length of line	15 miles

Cost per Mile.

Land and Compensation... ..	£173	Rolling-stock	289
Fencing	74	Telegraphs	16
Rock, earthwork, and culverts	839	Sundry works	64
Bridges and viaducts	13	Engineering and supervision	130
Deviation of roads	95		
Permanent way and ballast	727	Total cost per mile	£2,598
Stations and sidings	178		

CHRISTIANIA.

CHRISTIANIA-DRAMMEN RAILWAY.

Gauge	3 feet 6 inches.	Highest point of line above the sea ...	455 feet
Weight of rail	40 lbs.	Radius of sharpest curve	772 feet
Steepest gradient	1 in 70	Length of line	32 miles
<i>Cost per Mile.</i>			
Land and compensation	£1,298	Rolling-stock	621
Fencing	78	Telegraphs	39
Rock, earthwork, and culverts	2,181	Sundry works	83
Bridges and viaducts	504	Engineering and supervision	407
Deviation of roads	207		
Permanent way and ballast	883	Total cost per mile	£6,901
Stations and sidings	600		

The Norwegian narrow-gauge railways are well constructed lines of their class, and appear to be sufficient for the light traffic of the country. The ordinary formation width is about 13 feet. The ballast is good and sufficient in quantity for a light traffic, carried at low speeds (from 10 to 12 miles an hour). The lines are fenced throughout, and there are gates at all public roads and farm crossings. The culverts are built of stone; the bridges of large span are of stone and iron, but the small spans are of wood, and these constitute the great majority. The station buildings are usually of wood, but at the more important towns, as Christiania and Drammen, durable materials have been used in constructing them. They are all neat, and many of them pretty buildings.

The rails are laid on transverse half-round sleepers, 6 feet 6 inches long by 9 inches by $4\frac{1}{2}$ inches. The Vignoles pattern of rail is used; the 40 lbs. rail has a base of $3\frac{1}{4}$ inches and a depth of $3\frac{1}{8}$ inches; the joints are fished, and are suspended between two sleepers, which are spaced 18 inches from centre to centre; the sleepers next to these are 2 feet from centre to centre, and the next again 2 feet 6 inches. In the middle of the rail there are two bearings 2 feet 9 inches apart from centre to centre. The rail is fastened to the sleepers by dog-spikes 5 inches long by $\frac{1}{2}$ inch by $\frac{1}{16}$ inch. There are two spikes in each sleeper.

Tank engines, with outside cylinders, are used for working the lines. There are two classes of those engines, a heavier and a lighter class; but the former are superseding the latter. All the engines have six wheels—two pairs of drivers, coupled, and one pair of leading wheels with Bissell bogie.

The following are particulars of the engines:—

LIGHTER ENGINE.

Diameter of cylinders	9 inches	Diameter of driving-wheels	3 feet 9 inches
Stroke	15 inches	Weight on each pair of driving-wheels..	4 tons
Heating surface in tubes	240 sq. feet	Total weight of engine, empty	8·9 tons
Ditto ditto in fire-box	29 sq. feet	Ditto ditto, in running order	10·6 tons
Total heating surface	269 sq. feet	Contents of water-tanks... ..	34·9 cu. feet
Area of fire-grate	4·9 sq. feet	Ditto of coal bunkers	6 cwts.
Water evaporated per hour	38·4 cu. feet	Price of engine	£1,050

HEAVIER ENGINE.

Diameter of cylinders	11 inches	Diameter of driving-wheels	3 ft. 9 inches
Stroke	18 inches	Weight on each pair of driving-wheels...	6·42 tons
Heating surface in tubes	376 sq. feet	Total weight of engine, empty	14·8 tons
Ditto in fire-box	40 sq. feet	Ditto ditto, in running order	17 tons
Total heating surface	416 sq. feet	Contents of water-tank	49 cu. feet
Area of fire-grate	7·3 sq. feet	Ditto of coal bunkers	11·5 cwts.
Water evaporated per hour	59·4 cu. feet	Price of engine	£1,300

The following are the official particulars of the rolling-stock:—

FIRST-CLASS CARRIAGE.

Outside length	23 feet 6 inches	Number of passengers carried	32
Outside width	6 feet 10 inches	Weight per passenger	3·3 cwts. (364lbs.)
Wheel base	11 feet 6 inches	Total cost... ..	£311
Total weight, empty	5·2 tons		

COMPOSITE CARRIAGE.

Outside length	20 feet 6 inches	Number of passengers	32
Outside width	6 feet 10 inches	Weight per passenger	2·9 cwts. (322lbs.)
Wheel base	10 feet 6 inches	Total cost	£230
Total weight, empty	4·6 tons		

SECOND-CLASS CARRIAGE.

Outside length	20 feet 6 inches	Number of passengers	28 to 32
Outside width	6 feet 10 inches	Weight per passenger	2·4 cwts. (273lbs.)
Wheel base	10 feet 6 inches	Total cost... ..	£131
Total weight, empty	3·9 tons		

GOODS WAGGONS.

Covered Waggon.

Outside length	18 ft. 6 inches	Load	5 to 6 tons
Outside width	6 feet 7 inches	Load carried per ton of dead weight ...	1·4 to 1·6 tons
Wheel base	10 feet 6 inches	Total cost... ..	£89
Total weight, empty	3·7 tons		

High-sided Goods Waggon Uncovered.

Outside length	18 feet 6 inches	Load	5 to 6 tons
Outside width	6 feet 7 inches	Load carried per ton of dead weight ...	1·4 to 1·7 tons
Wheel base	10 feet 6 inches	Total cost... ..	£68
Total weight, empty	3·6 tons		

Low-sided Goods Waggon.

Outside length	18 feet 6 inches	Load	5 to 6 tons
Outside width	6 feet 7 inches	Load carried per ton of dead weight ...	1·4 to 1·7 tons
Wheel base	10 feet 6 inches	Total cost... ..	£65
Total weight, empty	3·5 tons		

Timber Waggon.

Outside length	18 feet 6 inches	Load	5 to 7 tons
Outside width	6 feet 6½ inches	Load carried per ton of dead weight ...	1·6 to 2·3 tons
Wheel base	10 feet 6 inches	Total cost... ..	£62
Total weight, empty	3·1 tons		

The diameter of the wheels of all the rolling-stock is 2 feet 6 inches.

It will be observed that the dead weight per passenger carried is low as compared with that of lines on the 4 feet 8½ inches gauge; but, on the other hand, the space which is given in the narrow-gauge carriages in Norway is very small, and the accommodation afforded inferior in every respect to that on lines of the broader gauge. These carriages would indeed be quite unsuitable for long journeys, though probably well adapted to the circumstances in which they are used.

An examination of the loads carried by the narrow-gauge goods waggons on the Norwegian railways will show conclusively that the assertion so persistently made by the advocates of the narrow gauge, that less dead weight is carried on it than on the 4 feet 8½ inches gauge, is contradicted by the facts.

The following table shows the proportion of weight to load on the Austrian, North German, Swedish, and Norwegian railways respectively:—

Description of Waggon.	Austrian Railways. Gauge, 4 feet 8½ inches.	North German Railways. Gauge, 4 feet 8½ inches.	Swedish Railways. Gauge, 4 feet 8½ inches.	Norwegian Railways. Gauge, 3 feet 6 inches.
	Proportion of the weight of the waggon to its load.	Proportion of the weight of the waggon to its load.	Proportion of the weight of the waggon to its load.	Proportion of the weight of the waggon to its load.
High-sided covered	1 to 1·62	1 to 1·40 and 1·58	1 to 1·33	1 to 1·4 and 1·6
Medium	1 to 2·27	1 to 1·74 and 1·98	1 to 1·52	1 to 1·4 and 1·7
Low-sided	1 to 2·39	1 to 2·15 and 2·58	1 to 2·45	1 to 1·4 and 1·7

I have not included in this comparison the loads carried on either the Canadian narrow-gauge railroads or the Denver and Rio Grande railroad, because the construction of the freight cars on these lines is different from that of goods waggons in Europe. On the Rio Grande line the rolling-stock is admittedly too light. On the Canadian lines the dead weight carried is greater than on lines of the 4 feet 8½ inches gauge in Europe.

In Norway the great mistake of using very small wheels for the rolling-stock of narrow gauge railways has been avoided. The diameter of the wheels of all classes of stock is 2 feet 6 inches.

The railway from Christiania to Eidsvoll, to which I have referred as being the only line in Norway which belongs to a private company, pays a dividend of 5½ per cent. The railways which belong to the Government do not pay; but this is attributable to the fact that the rates for the carriage of both passengers and goods are very low—too low to be remunerative. The small farmers form a majority of the members of the Storting, and are deeply interested in keeping the railway rates as low as possible. The railways are not looked to as a source of revenue, the great bulk of which is derived from Customs duties on imported articles, of which the farmers, who produce themselves almost all which they require, are very small consumers. In May, 1875, an increase, averaging about 10 per cent. was made to the rates which had previously been charged on the Government railways for carriage of passengers and goods. The reason for making this increase was that both wages and the cost of materials had risen so considerably as to render it necessary.

The following are the rates for passengers and goods on the Christiania-Drammen and Drammen-Randsfjord Railways, as fixed in May, 1875:—

FOR PASSENGERS.

First class.—1·1d. per English mile + 0·9d., independent of distance.

Second class.—0·64d. per English mile + 0·9d., independent of distance.

FOR GOODS.

Rate per centner (= 110 English lbs.)

First class (Finer manufactures, colonial produce, foreign fruits, wine, &c.)—0·7d. per English mile + 2d., independent of distance.

Second class.—(Cotton, wool, flax, native fruits, grain, flour, cheese, butter, milk, &c.)—0·11d. per English mile + 1·55d., independent of distance.

Third class.—(Pig iron, iron bars and chains, machinery, coal, lime, slates, cement, beer, &c.)—0·8d. per English mile + 1·11d., independent of distance.

NOTE.—All fares are made up of a charge proportionate to the distance travelled and a charge independent of that distance. The fares are therefore proportionately higher for short distances than for longer ones.

From Norway I went to Denmark. The railways there are all on the gauge of 4 feet 8½ inches, and are so like the Swedish lines in all respects that it would be a useless repetition to describe them. The country is very favorable for the construction of railways.

From Denmark I crossed to Kiel, and travelled by way of Hamburg and Bremen to Essen, where I saw the great works of Messrs. Krupp & Co., which cover four hundred acres of ground, eighty acres being covered with buildings. There are twenty miles of railway on these works, which are employed almost exclusively in the manufacture of steel—both crucible and Bessemer—and of the articles made from it. Bessemer steel is used for rails only; guns, crank axles, disc wheels, and tyres being all made of crucible steel. The largest steel ingot which has been cast at these works is 55 tons. Bessemer steel rails are made in large quantities, and of a great variety of sections. The lightest steel rail which is now rolled is for Russia, and weighs 57 lbs. to the lineal yard. Steel rails, I was informed, are used invariably in renewals on German railways.

The whole length of railways in operation in Belgium at the end of 1873 was 1,878 miles; of this length, 985 miles were in the hands of the State, which had constructed a considerable part, purchased a part from railway companies, and worked the whole. The length of line in the hands of companies was 893 miles. About 130 miles of railway were in course of construction at the end of 1873.

All the principal lines in Belgium are double, and the gauge is 4 feet 8½ inches. The country, as a rule, is an easy one for the construction of railways, but there are some steep gradients; that at Liège, with an inclination of 1 in 30, is well known. The rail ordinarily weighs 75 lbs. to the yard; steel rails were introduced in 1871, and are extensively used. There is 1 mile of railway in Belgium to every 2,300 inhabitants.

The following tables give some particulars of the engines, carriages, and waggons of the latest construction on the Belgian railways:—

GOODS ENGINES.

Number of Wheels.	Diameter of Wheels.	Weight of Engines.		Remarks.
		When Empty.	In Running Order.	
No.	feet in.	tons cwt. qrs. lbs.	tons cwt. qrs. lbs.	
6	4 9	29 16 1 16	33 19 0 24	Ordinary goods engines. The tender carries 1,650 gallons of water; 6 wheels coupled. Tank engine for steep gradients; 8 wheels coupled.
8	3 5¼	38 15 1 0	50 6 0 0	

PASSENGER ENGINES.

Ditto, with guard box and break	5 8 1 3	9 16 3 14	1 to 1.81	

From

From Belgium I went by way of the Rhine to Switzerland. The construction of the railways there does not differ from that in other parts of the Continent; but there are differences in the rolling-stock, the passenger carriages being built to allow the guards to pass from end to end of a train. Some of the carriages are of the American pattern, with bogies; but many others, though having the central passage, are much shorter than these, and are on four wheels like English carriages.

It will be evident that a right of passage along a train from one carriage to another must be limited to the guards, except where there is only one class of carriages, as in the United States; in Switzerland passengers are not allowed to go from one carriage to another, or even from one compartment to another. The carriages for third-class passengers are open from end to end; but the others are divided into compartments, with a door in each compartment, through which the guards can pass at any time, and passengers can pass in entering or leaving the carriage, but at no other time.

During the season of the year when Switzerland is full of tourists, the long carriages on the American pattern with bogies are found to be very useful; they can then be filled, and the dead weight carried does not bear an undue proportion to the useful load; the advantage, too, of a short wheel base is felt on the Swiss railways, where curves of 1,000 feet radius are common; but when the slack season comes, the long carriages are laid aside on account of their weight, and the four-wheeled carriages come into use. The Swiss passenger carriages do not run on foreign lines; they are prohibited by the French authorities, and though the rule in Germany is not so rigid they do not, as a matter of fact, run on German lines; so that although the gauge in Switzerland is the same as in France and Germany, the difference in the construction of the carriages has the effect, so far as passenger traffic is concerned, of a break of gauge. The limited space allowed to each passenger in order to keep down the dead weight is very objectionable. In the first-class carriages the backs of the seats are made high to give support to the head; but this is not done in the second and third classes. Some of the latest built first-class carriages are lofty and spacious; they are on four wheels like English carriages, and are divided into compartments and have a passage along the centre. The weight of these carriages is, however, very great, being 1,320 lbs., or nearly $11\frac{1}{4}$ cwt. dead weight per seat. A second-class carriage, of the same build generally, but less spacious, weighed 588 lbs., or $5\frac{1}{4}$ cwt., per seat. The delay and inconvenience in entering and leaving the carriages by a single door at each end are much felt on Swiss railways.

The goods waggons are constructed on the same pattern as those in North Germany, and they run over the French and German lines. If an accident happen to a foreign waggon on a German railway, the whole loss falls on the owners of the waggon, unless it is built to the German standard.

The wheels and axles both of carriages and waggons recently built are of one standard size. The diameter of the wheels is one metre = 3 feet $3\frac{3}{16}$ inches; the journals have a diameter of $3\frac{3}{16}$ inches, and a length of rather more than 6 inches. The diameter of the axle is $5\frac{1}{16}$ inches.

The fast trains are run with engines having four coupled wheels, and a tender also on four wheels, so connected with the engine that the advantages of a long wheel base are combined with those of a short rigid base; this arrangement is a valuable one in a country where there are numerous curves; these engines have inside cylinders. There are other classes of passenger engines more nearly of the English type, but with outside cylinders. The goods engines have outside cylinders; they are heavy, and have three pairs of wheels, coupled. Iron tubes are used in the engine boilers, with copper or brass ends next the fire-box and smoke-box; these tubes are found to be more durable than those made of brass or copper. The fuel used is coal. Cast iron is coming into general use for break-blocks, and is found to effect an important economy, saving labor, and also the tyres of the wheels.

Cast-iron wheels of the American pattern, but not made in America, were tried on the Swiss lines, and have been abandoned; they were found to wear badly. Crucible steel is used for crank-axles and the tyres of engine wheels, and Bessemer steel for the tyres of carriage and waggon wheels, and for rails.

Rails weighing 56 lbs. to the yard were used for some time on the Swiss railways, but they were found to be too light; and the weight of the rails now used is 71 lbs. per yard. Steel rails of this weight are used on the steep gradients and sharp curves, but on other parts of the lines the rails are of iron; gradients of 1 in 50, and even 1 in 40 are used. The Zurich See and the Jura lines have gradients of 1 in 33, and the ruling gradient of the St. Gothard line will be 1 in 40. No curve of less than 1,000 feet radius is allowed to be used except at stations, where the limit is 700 feet.

In the mountains of Switzerland there are some isolated lines on the metre gauge; but all railways which make connections with other lines must, by law, be built on the standard gauge. The whole length of railway on this gauge which was open in Switzerland in 1875 was about 1,250 miles; and a considerable length of new line was being constructed.

Two of the Swiss railways pay very well—the Swiss Central and the North-Eastern of Switzerland. The first of these was 250 miles long in 1875, and was being extended; it was paying 9 per cent. per annum. The latter was 184 miles long, and paid 8 per cent. Other lines were much less profitable, and some did not give any return for the capital invested.

In the following tables will be found particulars of the engines and rolling-stock of the latest construction on the Swiss railways, and also a comparison between passenger carriages in use there, built on the English and American systems:—

The line of railway from Vitznau (on the Lake of Lucerne) to the summit of the Rigi Mountain has been made to facilitate the ascent, which, till the end of May, 1871, had been made either on foot or on horseback. This line, like that to the summit of Mount Washington, in the United States, is used almost exclusively by tourists. The gauge of the main line, which is about $4\frac{1}{2}$ miles long, is 4 feet $8\frac{1}{2}$ inches, and the greatest inclination is 1 in 4; this extends over about one-third of the whole length; the inclinations in other parts vary from 1 in 4 to 1 in 6. The rack and pinion system of working is adopted on the main line; but there are branches on the metre gauge where the inclination to be overcome is not great, and these are worked by light engines of the ordinary construction.

The Americans claim priority of invention for this kind of railway; but there is, I believe, little doubt that M. Riggenbach, a Swiss engineer, and the manager of the railway workshops at Olten, was the inventor. He patented his invention in France in 1863, but no steps were taken to carry out the works till nearly the end of 1869. The line on Mount Washington was made in 1868, and, in principles of construction, it may be said to be the same as the Rigi line. The speed on this line is about three miles per hour; the fare is about one shilling per mile for the ascent and sixpence per mile for the descent.

The line has proved a highly profitable speculation, though it is open for about one-half the year only. A very full and complete description of the Rigi railway is to be found in a paper by Dr. Pole, F.R.S., which was read at the Institution of Civil Engineers, London, on 29th April, 1873, and is published in the minutes of the proceedings of the institution, session 1872-3.

The average fares for passengers by first, second, and third class carriages, on Continental railways, are about $1\frac{1}{2}$ d., $1\frac{1}{3}$ d., and $\frac{2}{3}$ d. respectively per English mile. On most lines from 20 to 50 lbs. weight of luggage is carried free for each passenger, in addition to what is carried in the hand; but in Italy all luggage which is put into the guard's van must be paid for according to weight. The speed of the passenger trains seldom exceeds twenty-five miles per hour.

The following information as to the rates at which return tickets are issued is given in Bradshaw's Continental Railway Guide:—

"Return tickets are issued in Baden, Bavaria, Denmark, Holland, and Wurtemberg, at a fare and a half for the double journey (*i.e.*, a reduction of 25 per cent. off the double fare). In Belgium and Switzerland a return ticket is given at a reduction of 20 per cent., or at the rate of $1\frac{1}{2}$ fares; in Saxony, generally, at $1\frac{1}{2}$ fares; in North Germany at a rate varying from $1\frac{1}{2}$ to $1\frac{3}{4}$ fares. In Austria return tickets are not yet general, but are sometimes issued. In France the rates are as follows:—On the Nord Railway, $1\frac{1}{2}$ fares ($1\frac{1}{5}$ fares for third class); on the Ouest line, $1\frac{1}{2}$ to $1\frac{1}{4}$ fares (though occasionally lower); on the Paris, Lyons, and Mediterranean line, $1\frac{1}{2}$ to $1\frac{1}{4}$ fares (issued only on special occasions, and to large towns); on the Est, $1\frac{1}{2}$ fares (except out of Paris, which is $1\frac{1}{2}$ fares and more); on the Orleans and Southern Midi lines return tickets are only issued to and from a few stations. In Italy return tickets (one day only) are issued at an average rate of a fare and two-thirds."

I endeavoured, both in the United States and on the Continent of Europe, to obtain information as to the rates charged for goods traffic, but I found it impossible to arrive at anything satisfactory and definite. Special rates and terminal charges affect the published rates so much that these form no real guide. I had a conversation on the subject with the president of one of the principal railways in the United States, who told me that he had spent many months in England inquiring into the rates charged for goods traffic on the various lines, and, though he was furnished with a vast number of tariffs, he found at the end of his inquiry that he had made no real progress towards his object. I thought it was possible that the Railway Department of the Board of Trade, in London, might have information on the subject which would be useful, and when I returned to London from the Continent I made inquiries, but found that it had none.

The delivery of goods by railway in the United Kingdom is much more rapid than in other countries. I extract the following from a paper on the working of railways by Mr. Geo. Finlay, which was read at the Institution of Civil Engineers, London, on 23rd February, 1875:—

"All railway companies are now common carriers. Originally this business was conducted over the various railways by the old canal and road carriers; but in a few years it became evident that it was necessary, in order to enable the railway companies to cope with the increasing demands of the public, that it should be managed wholly by themselves, the carriers being appointed as the cartage agents in principal towns. This was a radical change, and contrary to the intention of the original promoters of railways; but, while the result has been of great advantage to the community, some persons think that the companies would have been benefited to a greater extent had they continued as toll-takers instead of becoming carriers. However this may be, the organization and method with which this great trade is conducted by all the companies is indeed surprising. The staff of men and horses engaged in the collection and delivery of goods in London, by the London and North-Western Company alone, exceeds the number that was necessary to work all the coaches and carriers' vans that ran in the old days to and from the north. They have, altogether, sixteen hundred men and one thousand horses engaged in the goods business in London.

"The speed with which the business is carried on is remarkable. The collection, transit, and delivery of goods between all the important towns in England is accomplished within the day of twenty-four hours; and between England and Scotland and the ports of Ireland within two days, or forty-eight hours; whilst for corresponding services in France, the following statement shows the time allowed by law. Nothing can more forcibly illustrate the pace at which business is managed in this country than such a comparison:—

"For goods in classes 1 and 2 (4th and 5th classes of English railway clearing-house classification) the French companies are allowed one day of twenty-four hours for each 124 miles or fraction thereof on the main line.

"For goods in other classes on the main line, and also for first and second class on branch lines, twenty-four hours for the first 93 miles, and twenty-four hours for each additional 78 miles.

"The companies have one clear day for loading, &c.; and the day on which they receive the goods and that on which they deliver them are not reckoned.

"One day extra is allowed at junctions with other companies."

The system, which is universal in the United States, of having closets in the carriages for the convenience of passengers has been tried on the Continent, and to a great extent abandoned, as it was found offensive. It is frequently so in the States in the ordinary cars, but the Pullman cars are so carefully attended to that no nuisance is experienced in them. To many of the express trains in France, and to nearly all trains in some parts of Germany, a waggon containing closets is attached, and this is probably the best solution of the difficulty.

The passenger carriages of all classes, but especially the second class, are exceedingly good on the Continent; they are spacious and lofty, well cushioned and lined. The cushion in first-class carriages has commonly two sides, one covered with cloth or cotton velvet for winter use, and the other with morocco leather for summer: the miserable material known as American cloth, which is often used here, is unknown elsewhere, so far as I had opportunities of observing. In England, as on the Continent, great improvements have been made of late years in the carriages for passenger traffic, which are much more spacious and comfortable than they used to be. The goods waggons, both on the Continent and in England, are very strongly built, and their carrying capacity has been largely increased.

In Belgium, Germany, Switzerland, and Italy the fares are legibly printed on the tickets which are given to passengers; the same thing is done in England, though not universally. The plan is a protection to travellers against overcharges, and I think that it might be adopted here with advantage. The ticket offices on many lines on the Continent are opened an hour before the time for the departure of a train, and closed five minutes before it.

The subject of locking the doors of railway carriages is one that has been much discussed, and it may perhaps be thought desirable that I should mention here the practice which is followed in the countries which I visited. In the United States the doors are not locked. In England the door on the "off" side is locked, and that on the "near" side is left unlocked on double lines. On the Continent the doors are not locked, but in addition to the ordinary bolt which is opened by the door handle, there is a latch like a common door-latch which is placed lower down than the door-handle, and usually only just within reach of a man's arm. In the United States the unlocked doors and the steps, which reach nearly to the ground at each side of the ends of the cars, give facilities for entering and leaving them; but the single door at each end, and the narrow passage which leads to it, coupled with the large number of passengers in each car, make ingress and egress more difficult in these than in any other railway carriages. It is a common practice in the States to enter or leave a car while it is in motion, and the unlocked doors and the steps encourage this very dangerous practice. When a collision occurs on an American railroad the probability is that the door at each end of the car is jammed, and the passengers cannot escape. To guard against this danger the "Miller platform," which is very strongly framed, is used on many lines to protect the ends of the cars, but it adds seriously to their weight and cost. The great popularity of the Pullman cars is due, not only to their superior comfort but to their enormous strength and weight, which enable them to resist the effects of a collision.

The system of locking one door only, which is pursued in England on double lines, protects passengers from getting out or falling out of the carriage on the side where they would be exposed to the risk of being run over by a train passing on the second line. It also protects the railway companies against attempts to travel without a ticket, and in this respect it is no doubt of very great value. In the United States tickets are examined and collected by the conductor while the train is in motion, and this is the case in Switzerland also. The construction of the carriages in both of these countries allows the guard or conductor as he is called in the States to pass from end to end of the train without danger. On the Continent it would be possible for a passenger without a ticket, by lifting the latch and turning the handle of the carriage-door to get out on the "off" side and perhaps escape detection; special precautions are therefore taken to prevent persons travelling without tickets. The precautions are of two kinds: In France and some other countries passengers only are allowed on the platforms, and they are obliged to go into a waiting-room, which they are not allowed to enter without producing their tickets, and they must remain there till just before the train leaves, when the door of the waiting-room leading to the platform is opened; again, on leaving a station, the tickets are collected from the passengers as they pass out one by one. This system is open to many objections, and would certainly be quite unsuitable to the habits of the people of this country. In Belgium, where it was tried, it had to be abandoned, as the Belgians would not submit to the restrictions, and to be refused admission to the railway platforms to take leave of their friends. Another plan is therefore adopted there, passengers' tickets being examined and collected by the guard while the train is in motion. In order to do this he is obliged to pass along the footboard of the carriages in all weathers, night and day, and whatever may be the speed at which the train is travelling, and to hold on to the carriage rail with one hand while he uses the other in examining tickets. As might be expected, many lives are lost in carrying out this system, the number of guards killed annually on the Belgian railways being from twenty-five to thirty. Several plans have been proposed for giving protection to guards when passing along a train, and one by M. Maquet was under discussion when I was in Brussels; but no steps had been taken at that time to test it practically.

It will be seen, I think, from these remarks, that the question of unlocking the doors of railway carriages is not so simple a matter as many persons suppose. Even if it were granted that railway travellers would be safer if the doors of the carriages were left unlocked (and many persons are to be found who deny that this would be the case), precautions must be taken to protect the railway revenue against fraud; and it remains to be seen how far the public of this country, which is accustomed to free access to the stations and platforms, would tolerate them. In England, where almost all the railways are double, and the stations are effectually enclosed, the difficulty is not felt as it would be in this country. If the Government should determine to leave the doors of railway carriages unlocked, very considerable expense will have to be incurred in enclosing the stations more securely than is done at present, and a complete revision of the system of collecting tickets will become necessary.

I returned to England on the 18th August, 1875, and left there again on the 14th October for Bombay, where I arrived on the 10th November following.

It is well known that the principal lines of railway in India have been constructed by English engineers and contractors employed by English companies, which undertook the works under a guarantee from the Government of India. The ironwork for the large bridges, the rails, the engines, and the rolling-stock were all taken to India from England; and therefore I did not expect to meet with any novelties in engineering there; nor are there any, except the introduction of a new gauge, called the metre gauge, equal to 3 feet 3 $\frac{3}{8}$ inches, which has been adopted in some parts of India, but more particularly in Rajpootana, on lines which the Government is constructing without the intervention of companies, the Government having abandoned the guarantee system.

In the report of Mr. Juland Danvers to the Secretary of State for India, dated 15th June, 1875, the length of railways open in India at the end of 1874 is stated as 6,273 miles; of these, 727 were double, and 5,546 single; 5,686 miles were constructed on the 5 feet 6 inches gauge, and 587 miles on the metre gauge.

The adoption of so wide a gauge as 5 feet 6 inches for the lines of railway which were first made in India was certainly unfortunate. If the 4 feet 8 $\frac{1}{2}$ inches gauge had been used, the metre gauge would probably never have been introduced, and all the evils of break of gauge, which already begin to be very sensibly felt, would have been avoided. The earlier lines, having been made under the extravagant system of a guarantee by the Government of 5 per cent. on the amount which the companies expended, were, as might have been expected, very costly. This system is condemned, and has been abandoned; but though it was undoubtedly the principal cause of the excessive cost of the earlier lines, it was not admitted to be

so; this was attributed to the gauge; the result being that, in spite of remonstrances from the highest authorities on the subject in England, the metre gauge, with all the inconvenience and extravagance which are inseparable from a break of gauge, has been introduced into India.

In Canada I had found that the evils of break of gauge were fully recognized. The gauge of the Grand Trunk Railway, extending over 1,400 miles, had been altered at great expense from 5 feet 6 inches to 4 feet 8½ inches to bring it into correspondence with the railways of the United States; and those who had been the warmest advocates for a gauge of 3 feet 6 inches admitted the mistake which they had made in adopting it, and anticipated an alteration which would give uniformity of gauge over the whole of Canada and the United States. The experience, however, which had been gained in Canada was either not known to those who control the railway policy of India, or had been ignored by them; for not only is break of gauge to be found there, but all the mistakes in the construction of the engines and rolling-stock of the narrow gauge lines in Canada, which have been corrected at great expense, are being repeated on the metre gauge railways in India.

The first railway on which I travelled in India was the Great Indian Peninsula; I went from Bombay to Poonah, a distance of about 120 miles. This part of the line passes over the Bhore Ghaut, and the works are probably the most interesting in India; the greatest elevation which is reached is 2,000 feet above the sea, and the changing station is about 1,800 feet above it; at this station a fresh ascent by a zig-zag is commenced. There is one changing station on the Bhore Ghaut and one on the Thull Ghaut, over which the Great Indian Peninsula Railway is carried on the route to Jubbulpoor, where it joins the East Indian Railway. The railway to Poonah over the Bhore Ghaut forms part of the line which connects Bombay with Madras. The Great Indian Peninsula railway system extends over about 1,300 miles, and the gauge throughout is 5 feet 6 inches. The rail first used was of iron, of the double-head pattern, and weighed 75 lbs. to the yard; renewals are now made with steel rails, which weigh 65 lbs. to the yard. Iron pot sleepers are largely used in renewals, and, though the first cost of these is greater than that of wooden sleepers, they are found to be more economical in the end, as the latter are destroyed by white ants; these do not work in the sleepers in the road, as the passage of the trains disturb them, but they quickly destroy them when they are in stacks. The wooden keys by which the rail is fastened in the chair have been found to be destroyed in the same way, and steel is now coming into general use for keys. The iron pot sleeper is used both with broken stone ballast and with sand and gravel; the road laid on these sleepers does not run so smoothly as on wood. The heaviest gradient in crossing the Ghauts is 1 in 37, and 1 in 40 is common; the sharpest curve is 10 chains. The engines which are used to work these inclines are of the tank class, with four pairs of coupled wheels of 4 feet diameter; they weigh 50 tons in running order. The length of line on the Bhore Ghaut is 17 miles; the speed both up and down is limited to 12 miles an hour. The engines have breaks, and there is a break-van on four wheels, and weighing 10 tons to every three vehicles in a passenger train. There are three catch sidings on the Bhore Ghaut, and the same number on the Thull Ghaut. These sidings have a gradient of 1 in 10 opposed to the gradient of the main line; all trains descending the Ghauts have to pull up at the points of each catch siding, which are foul to the main line. If the train should get beyond control it runs into the siding, which is of sufficient length to stop it at any possible speed. A frightful accident which occurred some years since, when a train descending the Ghaut got beyond control, and having run through the changing station tumbled down a precipice at the end of it, led to the adoption of the catch sidings, which appear to provide effectually against the recurrence of such an accident. The changing stations have long and numerous sidings laid on the level, for the purpose of shunting and re-arranging the trains before proceeding in an opposite direction to that of their arrival.

There are four classes of carriages on Indian railways of the standard gauge, namely, first, second, intermediate, and third-class. The intermediate class was introduced to accommodate natives of the higher castes; but it is found that they do not use it, but prefer the cheaper third-class. The first and second class carriages are used almost exclusively by Europeans. The first-class are all arranged on the saloon plan, and to each carriage is attached a closet with conveniences for washing, &c. Water is carried in a tank on the roof of the carriage. The linings are all of green morocco leather, and the floors are covered with oilcloth. There are glass windows and venetians, and, in addition, a hood which is carried along the whole length of each side of the carriage, projecting from it about 15 inches. These hoods are a most valuable protection against the sun, and might be adopted in this country with great advantage. All travellers must have experienced the distressing effect of the sun on the glass windows of the railway carriages in summer. The curtains, being inside, do not keep the sun off the glass, and venetians are constantly sticking and getting out of order. The hood is a cheaper and much more effectual protection against the sun than any other plan which I have seen. It can be arranged to unship in winter if it be found to make the carriages too dark; when properly adjusted, with reference to the level of the seats, it does not obstruct the view. The locomotive superintendent was good enough, at my request, to fit up a carriage with these hoods, and I understand that the expense was trifling; it must certainly be much less than that of venetians and curtains. I have heard, since I came back to Melbourne, that the railway carriages in New South Wales are fitted with hoods.

In the hot season in India the railway carriages are cooled, as houses are there, by means of tatties, which are kept wet by water taken from the tank on the roof of the carriage. While the train is in motion the relief obtained by this means is very great; but when it stops the heat becomes intolerable, and deaths from heat apoplexy are by no means uncommon on Indian railways.

The second-class carriages have neither cushions nor linings of any kind; they are on the saloon plan, like the first-class and are protected from the sun in the same way. The intermediate and the third-class carriages are nearly the same, the principal difference being that the former have glass windows and the latter shutters; they are arranged in compartments, like an English carriage, but the partitions are frequently made of bars, to allow a circulation of air.

The first and second class carriages are painted either white or a light cream color, for the sake of coolness. In England it is now common to paint the upper parts of carriage bodies in the same way, and for the same reason; and I think that we should do well to follow the example here. The light-colored paint is found to last quite as well as if not better than darker colors, and the carriages are sensibly cooler in summer.

The climate of India makes it necessary to give much more space to Europeans than is given to railway passengers in more temperate countries, but the natives are packed closely in the third-class carriages. The holder of a first or second class ticket can claim sufficient space to lie down at night at full length;

length; but this is not the case with the holders of intermediate and third-class tickets. Many of the first-class carriages have an upper tier of berths. On the Great Indian Peninsula Railway the first-class carriages have sleeping accommodation for 12 passengers and weigh 186 cwts. = 15.50 cwts. per passenger. The second-class carriages have sleeping accommodation for 10 passengers, and weigh 160 cwts. = 16.00 cwts. per passenger. The third-class seat 40 passengers, and weigh 135 cwts. = 3.37 cwts. per passenger.

On the Scinde, Punjab, and Delhi Railway the standard first-class carriage weighs 158 cwts., and has sleeping accommodation for 8 passengers. The second-class weighs the same, and has sleeping room for 16. The third-class weighs 114 cwts., and has seats for 40 passengers. Some double-story carriages were built to carry natives, but they gave offence, and have been abandoned.

The goods waggons on Indian railways are not, for the most part, to the best patterns; many of them are old, and the axles and journals are not of sufficient diameter to carry the loads which are put into waggons of more modern construction. The old waggons of the covered class weigh about 117 cwts., and carry 120 cwts. = 1.02 cwt. per cwt. dead weight. The modern waggons of the same class, which are replacing the old ones, weigh 130 cwts., and carry 200 cwts. = 1.54 cwt. per cwt. dead weight. The axles of these waggons are from 4 3/4 inches to 5 inches diameter, and the journals are 3 1/2 inches diameter and 9 inches long.

Both inside and outside cylinder engines are to be found in India, and on the same line of railway; but some lines, as for instance, the Scinde, Punjab, and Delhi, have inside cylinder engines only. This line passes through a level country, has but few curves (and these of large radius), and has easy gradients. The goods and passenger engines have six wheels, and in each class there are two pairs of coupled drivers. The goods engines have about 14 tons on each pair of driving-wheels, and the passenger engines from 12 to 13 tons on a pair. The line is laid with a double-headed iron rail, which weighs 75 lbs. to the yard.

The Oude and Rohilkunde system of railways was made under a guarantee from the Indian Government; the length of line open at the end of 1874 was 539 miles. These lines are on the 5 feet 6 inches gauge, but are of lighter construction than the great trunk lines. The average cost per mile of the whole system, when finished, is estimated at about £8,600 per mile. In addition to 539 miles already opened, there were, at the end of 1874, 156 miles to be opened to complete the authorized mileage. I travelled from Cawnpore to Lucknow, and from Lucknow to Benares, on the Oude and Rohilkunde railways. The speed is very slow, the passenger train by which I travelled took nearly fifteen hours to go from Lucknow to Benares, a distance of 200 miles. There is a common impression in India that these railways would be unsafe at any but the most moderate speeds; but so far as I could judge from riding over the lines in a carriage there is no sufficient ground for this opinion. The rails weigh about 60 lbs. to the yard; and the engines, all of which have six wheels with two pairs coupled drivers, have a weight of about 10 tons on each pair of drivers. The passenger fares are low; the rate for the upper class, as it is called, being 1 1/4 d. per mile, and for the lower 1/4 d. per mile.

It is stated in Mr. Juland Danver's Report for 1874 that the whole passenger traffic in India is divided as follows:—97.01 per cent. lowest class, 2.21 per cent. second class, and 0.78 per cent. first class. The following table is to be found in the same report:—

FARES AND RATES IN USE ON THE INDIAN RAILWAYS.

Railway.	Passengers.					Goods.					
	Fare for travelling 1 mile.					Rate for conveying 1 ton 1 mile.					
	First Class.	Second Class.	Intermediate Class.	Third Class.	Fourth or Coolie Class.	Of First or Lowest Class.	Of Second Class.	Of Third Class.	Of Fourth Class.	Of Fifth or Highest Class.	Special.
GUARANTEED.

* 8 pies = 1d.

The construction of the metre gauge railways is the same in all parts of India where they have been introduced. The greatest length of lines hitherto made on this gauge is in Rajpootana; and I went there to see them. The length of line open at the time of my visit was 378 miles, out of about 850 miles authorized, and further extensions were contemplated which would bring the length of the whole system up to about 1,500 miles. A break of gauge will occur at three points, namely, Agra, Delhi, and Ahmedabad. The oldest portion of the lines, when I saw them, had been open about twenty months. The average cost of the 378 miles of line open was £6,000 per mile, including land, stations, rolling-stock, and engineering. The cost of land had been very trifling. It was not intended at first to fence the lines, but it was found afterwards that it would be necessary to do so; and the cost of fencing the lines and completing the workshops would, I was informed, bring the total average cost up to £6,400 per mile. The country through which the lines pass is very easy; the ruling gradient being 1 in 150, which is sufficient to keep them everywhere on the surface; there is no necessity for using sharp curves, and I did not see a single over-bridge. The under-bridges, however, are numerous, and all constructed, in a most substantial manner, of stone or iron. The cost of the great bridge over the Jumna at Agra—which will amount to £180,000, and serve both as a road and railway bridge and for the 5 feet 6 inches as well as for the metre gauge—is included in the average cost per mile which I have given. The level crossings are numerous and at each one there are gates and a gatekeeper. The lines are fenced by a bank of earth on each side of the gates for a length of about a quarter of a mile, but in other parts they were unfenced when I saw them. The engines on these, as on many other lines in India, are provided with cow-catchers, like those in the United States.

Iron rails weighing 40 lbs. to the yard are used for the permanent way, and parts of the line are laid with steel rails which weigh 35 lbs. to the yard. The rails are of the Vignoles pattern, and are laid on sleepers of Saal or Deodar timber 6 feet long by 8 inches by 4½ inches section. The sleepers are spaced 2 feet 9 inches apart from centre to centre. The joints of the rails are suspended, and over the greater part of the lines are fished in the usual way; but on a part of the line near Agra, Deering's clip has been used for the joints; it does not answer. The rails are fastened by fang bolts to the sleepers next to the joints, and to the other sleepers by dog spikes.

The receipts on the metre gauge railways in Rajpootana were at the rate of £13 per mile per week at the end of last year; they had been a good deal lower, but the traffic was developing rapidly. The working expenses in 1874 had been 80½ per cent. of the gross receipts.

The engines and rolling-stock are the same on all the metre gauge railways in India. I obtained the following information from an official source:—

PASSENGER CARRIAGES.

Class.	Weight.			Capacity.
	Tons	cwts.	qrs.	
First	4	13	3	9 seats (or 4 sleeping berths) = 1,167 lbs. (or 2,625 lbs.) per passenger.
Second	4	15	2	18 seats (or 12 sleeping berths) = 594 lbs. (or 891 lbs.) per passenger.
Third	3	14	1	36 seats = 231.00 lbs. per passenger.

GOODS WAGGONS.

Class.	Weight.			Load.	Proportion of Weight of the Waggon to its Load.
	Tons	cwts.	qrs.		
High-sided covered	3	3	0	5	1 to 1.59
High-sided open	3	1	1	5	1 to 1.63
Low sided	2	13	0	5	1 to 1.88
Cattle Truck	3	1	1
Break Van	4	10	0

The carriage and waggon wheels are all 2 feet diameter on the metre gauge. It is admitted that a grave mistake has been made in using such small wheels.

The metre gauge engines are of six classes, A, B, C, D, E, and F. The first three are tank engines, with cylinders of 10 inches, 11 inches, and 13½ inches diameter respectively, taking gross loads, exclusive of engine, on the ruling gradient of 1 in 150 of 180, 240, and 330 tons respectively at 15 miles an hour. The D, E, and F engines have cylinders of 11 inches, 11½ inches, and 13½ inches respectively, and take gross loads, exclusive of the engine, of 260, 280, and 320 tons on the ruling gradient. These are tender engines. The goods engines have three pairs of wheels coupled; the diameter of the wheels is 3 feet. The passenger engines have six wheels, two pairs coupled, 3 feet 6 inches diameter. It is admitted that the engine wheels are too small. The greatest weight on any pair of engine wheels is 6 tons, and the longest rigid wheel base is 10 feet.

Having seen the railways in Rajpootana, I went to Lahore, and travelled over the North Punjab State Railway, which extends from there to Wusserabad, a distance of 60 miles. The standard gauge of 5 feet 6 inches is carried as far as Lahore, and it was intended to break the gauge there, and to construct the line to the frontier at Peshawur on the metre gauge. The first section 60 miles long, to Wusserabad, had been made on this gauge and opened for traffic, when the Government became alive to the evils of a break of gauge on a line of railway to the north-west frontier, and gave orders for the construction of a line on the standard gauge. The works for this new line were in progress, at the time of my visit, alongside the metre gauge line, on which I travelled, the construction of which is identical with that of the lines in Rajpootana, already described.

There

There are some very large bridges in this part of India; that over the Chenaub is $1\frac{1}{4}$ mile long; it is said to be the longest bridge in the world. The bridges over the Jhelum and the Ravee are also very large works. All these bridges have iron girders and stone or brick piers. The foundations are a great difficulty, and are obtained by means of brick wells; in the Chenaub bridge these have been carried to a depth of 60 feet below the bed of the river.

I had an opportunity of seeing goods transferred from the metre to the standard gauge at Agra; this is done across a platform about 50 feet wide, on one side of which the metre gauge waggons are drawn up, and the standard gauge waggons on the other. The cost for labour in transferring ordinary freight, such as cotton and salt, is about $1\frac{1}{2}$ d. per ton, wages being about 16s. per month.

I heard the metre gauge strongly condemned by many persons in India, and it appeared to me to find but few to defend it. The following, which I extract from an article in the *Times* of the 3rd of April last on Indian finance, expresses an opinion which is very generally entertained:—

“The construction of branch lines which do not pay is a mistake; but what is to be said of the construction of branches which not only do not pay but are also made of a different gauge from the main lines, so that there is a necessary transshipment at the connections? The effect in one striking case has been that almost as soon as the extension was opened a new line on the broader gauge was commenced by the side of it and is now in active progress, the intention being to abandon the existing narrow line as soon as the other is completed. We believe that this is but a sample of the experience which lies before us with respect to the rest. They are in process of construction, at a great expense, to be superseded when the inconvenience of working them comes to be felt. It is to meet the cost of such projects that the Finance Minister of India is called on to provide so many millions annually, which he raises by loans, the burden of which is thrown on posterity.”

Screw couplings are generally used in India for waggons, and I believe that it would be very desirable to introduce them here, more especially in mixed trains of goods and passengers. It is a barbarous practice to run goods waggons with loose couplings in a train with passenger carriages and at passenger-train speeds, and the effect on the permanent way, of the light lines more especially, is very injurious.

Various experiments have been made in fences for railways in India. On the Oude and Rohilcunde Railway the fence consists of a bank of earth; but it is very imperfect, being easily broken down by cattle or washed down by heavy rains. The cactus has been tried as a live fence, and in some places it grows very well; but it is said to be uncertain, and subject to die down without apparent cause. A fence of five wires, with either iron standards or stone posts, is most approved, and is very commonly used.

Many of the railway stations in India on the lines over which I travelled are large and commodious buildings, and in the principal towns attempts have been made at architectural effect; but like almost all the efforts of this kind made by Englishmen in India, the result is not satisfactory. The stations at Lahore, Delhi, Gazceabad, Agra, Cawnpore, Allahabad, and Jubbulpore are all very spacious and substantial, and appear to be well adapted for the work which they have to do. The refreshment-rooms are, as a rule, good, but expensive; they are used by Europeans exclusively, and as their number is small the rates charged are necessarily high. The natives are supplied with sweetmeats and other refreshments by hawkers, who are to be met with at every station. The natives are great travellers in their own country, and the crowds of them at the various stations form one of the most striking features of Indian railway travelling.

The greatest works on Indian railways are the bridges over rivers. They are almost all iron girder bridges of large spans. Many of the rivers are subject to violent floods, and scarcely a year passes in which they do not produce disastrous effects on the railway works.

I left Bombay on the 11th of December, 1875, and arrived in Melbourne on 11 January, 1876.

I desire, in concluding this Report, to acknowledge the great obligations which I am under to the authorities in the various countries which I visited, to private persons, and to members of my own profession, for the courtesy and liberality with which they furnished me with information, and the interest which they showed and the assistance they rendered in forwarding the objects of my journey.

I have the honor to be,

Sir,

Your obedient servant,

T. HIGINBOTHAM,

Engineer-in-Chief.

The Honorable Joseph Jones, M.P.,
Commissioner of Railways and Roads.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

DENILIQVIN AND MOAMA RAILWAY.
(REPORT OF ENGINEER-IN-CHIEF.)

Ordered by the Legislative Assembly to be printed, 20 December, 1876.

Department of Public Works, Railway Branch,
Engineer's Office, Sydney, 15 November, 1876.

MINUTE PAPER.

Subject—Deniliquin and Moama Railway.

Engineer-in-Chief to Commissioner.

I SUBMIT for the information of the Minister for Works the following Report on the construction of the Railway from Deniliquin to Moama.

THIS railway, which is a single line throughout, and laid to a gauge of 5' 3", commences at the Echuca Station by a junction with the Victorian Railway from Sandhurst to Echuca, and is carried across the river Murray by a temporary wooden bridge, pending the completion of a permanent bridge now in course of erection over that river, for both road and railway traffic, by the joint action of the Governments of New South Wales and Victoria. After crossing the river and entering New South Wales, the line passes through the town and parish of Moama, and crossing Greenwich Plain Reserves Nos. 91 and 90, enters the parish of Moira. Reserve No. 89 is then crossed on the Home Plain, and passing through the parish of Culpa, the line enters the township of Mathoura, where a small station has been erected, called Redbank; then passing through the parishes of Mathoura, Boyes, Talama, and Citcatha, it terminates at South Deniliquin, being a length of 45 miles.

LAND.

The land throughout has been enclosed for a width of 3 chains, giving an area of 24 acres to the mile, with an additional width for stations at Moama, Redbank, and Deniliquin. This area, although twice the width requisite for a double line of railway, is not in excess of the quantity named in the Act of Incorporation.

FENCING.

The fencing consists of red gum posts and top rail, with four wires, No. 8 gauge. The posts are 6' 6" in length, 8" x 3", sunk 2 feet into the ground, and placed 8 feet apart. The top rails, 9 feet long, are 8" x 2".

EARTHWORK.

Nearly the whole of the embankments are formed from side cutting. There are very few cuttings on the entire line, the deepest being about 4 feet, and the greatest height of embankment 8 feet. The formation width of both cuttings and embankments is about 14 feet. The country, however, is of such an even surface that for many miles the ballast has been laid on the ground, the process of forming being unnecessary.

BRIDGES AND CULVERTS.

The whole of the bridges and culverts are of red gum timber, procured from Mathoura, about half way between Deniliquin and Moama. The bridges or flood openings have all the same spans—10 feet in the clear, with two piles in each bay. The piles are connected transversely by walings 9" x 5", notched on the heads of the piles and bolted. The longitudinal girders, two in number, rest upon the piles, and are generally 15" x 12"; upon these girders 3-in. planking is spiked, and this planking carries the ballast and roadway. The following bridges have been provided for the escape of flood waters.

The

The distances are from the bank of the river Murray, on the Moama side.

Miles.	Chains.	No. of Openings.	Span.
1	10	12	10 feet
3	35	4	10 "
5	60	54	10 "
9	77	2	10 "
16	65	2	10 "
22	50	4	10 "
22	70	3	10 "
34	32	2	10 "
35	38	5	10 "
39	7	10	10 "
43	75	6	10 "
44	19	6	10 "

In addition to these openings there are many timber culverts of various dimensions.

BALLAST.

The ballast throughout is a loamy sand, which, at the time of my inspection was concreted, forming a very hard substance. In wet weather I think it will disintegrate, and render the maintenance of the line difficult and expensive.

RAILS.

The rails are single-headed and fish-jointed throughout, and weigh 50 lbs. to the yard, and are secured to the sleepers by wrought-iron spikes.

SLEEPERS.

The sleepers, 8' 6" long, 9" \times 4½", are all of red gum timber, rectangular in shape, and placed about 2' 6" apart, from centre to centre, except at the joints, where they are 1' 9" apart.

CURVES.

There are only five curves on the whole line, each having a radius of 80 chains.

GRADIENTS.

The line may be considered for all practical purposes level throughout, as the rails at Moama Station are only 17 feet above the rails at Deniliquin Station, in a distance of nearly 45 miles, and the highest point between the stations named, which is at Redbank, is only 43 feet above the former station. There is, however, one short incline, which does not appear on the working section, of 1 in 98 for a length of 29 chains.

STATIONS.

There are three stations on the line, viz. at Moama, Redbank, and Deniliquin.

From the Deniliquin and Moama Railway Company's Act, 37 Victoria, clause 150, I extract the following:—

Construction of Railways.

"150. Upon the completion of the Railway and Works authorized by this Act to the satisfaction of the Engineer-in-Chief for Railways it shall be lawful for the Governor with the advice of the Executive Council to grant to the Company in fee simple the portion of land herein more particularly described and containing by admeasurement 1,100 acres more or less, that is to say, &c."

Although this line will be perfectly safe for public traffic so long as it is properly maintained, I regret that I am unable to certify that it has been completed to my satisfaction, and for the following reasons:—

Rails.—The rails weighing 50 lbs. to the yard are too light for the heavy rolling stock now running over them.

Ballast.—The ballast is not of a quality to merit my approval, and I do not think a good road can be maintained with it during wet weather.

Bridges.—No care appears to have been taken in selecting the timber for the bridges, as many of the beams in almost every structure are very much split, and have large dead knots, worm holes, and gum veins in them. The driving of the piles has been most erratic; they are leaning in all directions, and are rarely driven throughout any bridge at equal distances from the centre line of roadway. The carpentry generally is of the roughest possible kind.

The line has not been set out in a satisfactory manner. Those portions which should be straight are in most cases crooked, and some of them to a very considerable extent.

I desire to take this opportunity to thank the Directors and officers of the Company for their attention to me during my visit to Deniliquin, and also for the obliging manner in which they furnished me with all the information I required.

JOHN WHITTON.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SUBORDINATE ROADS UNDER TRUSTEES.

(SHOWING PROPOSED DISTRIBUTION OF VOTE ON ESTIMATES.)

Ordered by the Legislative Assembly to be printed, 28 February, 1877.

6. Letter from Roads Department, refusing grant. M. 76/207	3

OLD LAKE ROAD, PORT MACQUARIE.

No. 1.

Petition for Grant to repair Old Lake Road.

(M. 75/722.)

To The Honorable The Minister for Works,—
Sir,

The undersigned Petitioners of the Town and District of Port Macquarie would most respectfully beg to call your attention to a want long felt by them, viz., the completion of repairs on the Old Lake Road, leading to and from the town of Port Macquarie. One hundred and fifty pounds sterling (£150) would be about the sum necessary to the completion of the said road.

We respectfully offer the following reasons in support of our claim to such an expenditure of public money :—

- 1st. That a sum of money has already been expended on the approach to one end of the Old Lake Road.
- 2nd. That in the event of the bridge on the New England Road falling in (which it is likely to do at no distant date, as each flood continues to carry away portions of the stone-work foundation from it) the Old Lake Road would still provide as short if not a shorter route in continuation of the New England Road.
- 3rd. That some considerable amount of land has been bought and improved on the line of the Old Lake Road during the last few years, and could access be had to it more, no doubt, would be purchased.

And your Petitioners will ever pray.

THOS. PLATT,
J. A. BRANCH,
J. STEWART, J.P.,
H. HASSACK,
T. PALMER, J.P.,

And seventy-three (73) other signatures.

Mr. Duffy, for report, more particularly with reference to bridge on New England Road, referred to.—W.C.B., 12/11/75.

No. 2.

Local Officer's Report.

(M. 75/722.)

Sir,

Survey Camp, Pee Dee, 27 November, 1875.

In reference to the petition from the Town and District of Port Macquarie to the Hon. the Minister for Public Works, praying that a sum of £150 be granted for the repairs of what is termed the Old Lake Road, I have the honor to inform you that some few years ago a similar petition was forwarded to the Minister for Works for the same object. I then forwarded tracing showing position of road, and section and cross-sections of embankment across the inlet from Port Macquarie Harbour, which the Petitioners designate a bridge.

The Old Lake Road makes with the New England Road a kind of half-circle, passing through some of the Port Macquarie vineyards (see sketch, page 3). In case the embankment across the inlet was washed away the Old Lake Road would answer all the purpose of the present road until it could be repaired. The only danger is during a heavy flood, when the water rises at the back of embankment to a very great height, and remaining so for several days, until the only outlet, a small bridge 16 feet span, discharges the surplus water. Taking into consideration that, in case of an accident to the embankment, the Old Lake Road would be made use of in case of emergency, I am of opinion the petition ought to receive favorable consideration.

I have, &c.,

JAMES J. DUFFY.

I cannot recommend grant; it would be no use whatever.—W.C.B., 4/12/75. Under Secretary, B.C. Inform.—J.L., 16/12/75. R. B. Smith, Esq., M.P., 18/12/75.

Mr. R. B. Smith, M.P.; made application to-day for a copy of Mr. Duffy's report in this case. I cannot recommend that the request be complied with, as I do not think the local officer's reports, which are of a confidential nature, should be furnished, more especially in this case, as I differed with the report, and made a contrary recommendation.—W.C.B., 1/2/76. Under Sec., B.C. Appd.—J.L., 24/2/76. Might perhaps be put by until further application is made.

No. 3.

The Under Secretary for Public Works to R. B. Smith, Esq., M.P.

(M. 75/722.)

Sir,

Department of Public Works (Roads under Trustees), 18 Dec., 1875.

In reference to a petition forwarded by you to this office on the 12th ultimo, from residents of Town and District of Port Macquarie, praying that a sum of £150 be granted for repair of the Old Lake Road, I am now directed to inform you that, from a report which has been received from the local officer, it appears that the traffic does not warrant the expenditure asked for, and the Secretary for Public Works cannot therefore in this case accede to prayer of the Petitioners.

I have, &c.,

JOHN RAE,

Under Secretary.

No. 4.

No. 4.

Second Petition for Grant to repair Road.

(76/297.)

The Honorable The Minister for Works,—

Sir,

The undersigned Petitioners and occupiers of land situated on the line of Glebe and Old Lake Road, and leading from the town of Port Macquarie, would most respectfully beg that a sum of money be granted—about £150 sterling—or sufficient to repair the bridge and culverts on the above-mentioned line of road, as since the late rain it has become utterly impassable, and unfit for traffic of any description.

Your Petitioners would also respectfully draw your attention to the fact that should the above necessary repairs be undertaken at once it will be the means of saving a larger expenditure of the public funds in the future.

THOMAS PLATT.

REV. F. R. KEMP.

No. 5.

Minute of The Local Officer.

OLD LAKE ROAD.

(M. 76/297.)

EXTRACT of a letter of Mr. R. B. Smith's, M.P., dated Sydney, 10 May, 1876.

* * * * *

Petition from Port Macquarie for a grant to repair the Old Lake Road.

Mr. Duffy has this paper, I think.—W.C.B.

The paper herewith. I have nothing to add to my former report. The advantage of subsidising this road, that in case of accident to the "dam" the traffic would not be interrupted, a sum sufficient to place this road in passable repair might be granted, £100.—J. J. DUFFY, 6/6/76.

I do not think the sum should be given; the only reason is that the road may be available in case of accident to the "dam," of which I have no fear.—W.C.B., 10/6/76. Under Sec., B.C. Inform.—J.L. R. B. Smith, Esq., M.P., 12/8/76.

No. 6.

The Under Secretary for Public Works to R. B. Smith, Esq., M.P.

(M. 76/297.)

Sir,

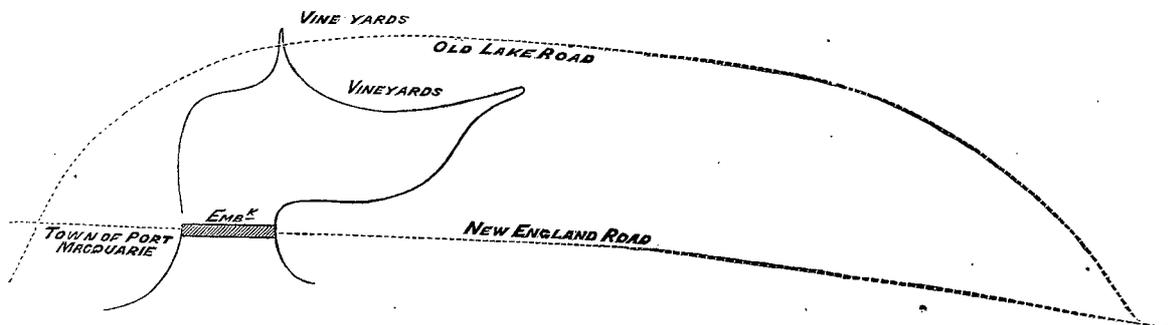

Department of Public Works (Roads under Trustees), 12 August, 1876.

In reference to your letter of the 10th of May last, forwarding a petition from the inhabitants of Port Macquarie, praying for a grant of £150 to repair the Old Lake Road, I am now directed to inform you that it appears the only advantage to be derived from subsidising this road is that the traffic would not be interrupted in case of accident to the dam, of which there is no probability. Under these circumstances the Secretary for Public Works cannot authorize a compliance with the prayer of the petition.

I have, &c.,

JOHN RAE,

Under Secretary.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROADS.

(ROAD TO HARTLEY *via* BROWN'S GAP—CORRESPONDENCE, &c.)

Ordered by the Legislative Assembly to be printed, 25 April, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 25 April, 1877, That there be laid upon the Table of this House,—

“Copies of all Letters, Petitions, and Minutes in regard to Road *via*
“Brown's Gap to Hartley.”

(*Mr. Taylor, on behalf of Mr. Hurley—Hartley.*)

ROADS.

J. Hurley, Esq., M.P., to The Secretary for Public Works.

Dear Sir,

Sydney, 16 August, 1876.

On behalf and at the request of a large number of my constituents, I desire to make application for a certain sum of money to be placed on next Estimates for a road from Hartley, through Brown's Gap, to Eskbank or Brown's Platform. I enclose a memo. sent me in reference to it which will aid in showing the place where the work is required.

There is no doubt that this will benefit a large number of people of Hartley and Lithgow Valley, and the place is increasing in population every week, so that the want of this road will be the more felt. I trust, therefore, you will cause an inspection and report to be made.

I am, &c.,

JOHN HURLEY.

Commissioner for Roads for report.—J.L., 23/8/76.

[Enclosure.]

THE undersigned Petitioners beg leave to call your attention to a road granted and surveyed at the instance of Mr. Thomas Brown, to directly connect Hartley and district with the Lithgow Valley, the distance being about 5 miles.

The road in question is across Brown's Gap, and at present can only be travelled by foot or horse. It would be necessary to cut a road along the siding of Brown's Gap, a distance of about 1 mile, and this hill is the only impediment we have to any traffic. This road would also be a great boon to parties travelling by rail to the metropolis, Bathurst, or elsewhere, as it would afford short and easy communication to Brown's Platform, Eskbank.

The cost of making such road is estimated at £300.

We therefore humbly pray you to use your influence in having an amount placed on the Estimates for the above road.

Mr. Road Superintendent Nardin's Report.

THE inquiries I have made confirm me in the opinion that the traffic between these places is not sufficient to warrant such an expenditure. As the petition is not signed, I would suggest that it be referred to the local Bench of Magistrates, which also constitutes the Road Board of the district. Since the Court of Petty Sessions has been established at Lithgow I should say there must be less communication than ever between that place and Hartley; and the railway stations used by the people of Hartley are Mount Victoria and Bowenfells.

E. A. NARDIN, 25/9/76.

Noted. Should not Mr. Hurley be asked to nominate trustees?—J.G.L. A letter might be written to the Bench, asking their opinion in this case.—W.C.B., 27/9/76. Under Secretary, B.C.

The Under Secretary for Public Works to The Bench of Magistrates, Hartley.

Gentlemen,

Department of Public Works, Sydney, 28 September, 1876.

I am directed by the Secretary for Public Works to inform you that a communication has been received representing the necessity for a road to connect Hartley and the surrounding district with Lithgow Valley by Brown's Gap, at a cost of about £300, and I am to request that you will have the goodness to favour me with the opinion on the desirability and importance or otherwise of the proposed road, to enable Mr. Lackey to arrive at a decision in the matter.

I have, &c.,

GERALD HALLIGAN,
(For the Under Secretary).

T. H. Neale, Esq., to The Under Secretary for Public Works.

Sir,

Court House, Hartley, 3 October, 1876.

In reply to your letter, dated 28th September ultimo (No. 76/4,712), respecting the proposed road to connect Hartley and surrounding district with Lithgow Valley, I have the honor to inform you that I am requested by the Bench of Magistrates at Hartley to report, for the information of the Honorable the Minister for Public Works, that a road by Brown's Gap would be a very great public convenience, the increasing population and traffic to and from Lithgow Valley rendering it desirable that a better and easier means of access thereto should be made.

I have, &c.,

THOMAS H. NEALE.

Commissioner for Roads.—G.H. for U.S., B.C., 7/10/76. Will Mr. Nardin now give his opinion as to length and class?—W.C.B., 9/10/76. Mr. Nardin, B.C. Third class, 5 miles at £15 = £75. Description: Hartley, *via* Brown's Gap, to Lithgow.—E. A. NARDIN, 16/10/76. Mr. G. Lackey, for schedule.—W.C.B., 18/10/76.

The Bench of Magistrates, Hartley, to The Commissioner and Engineer for Roads.

Sir,

Coerwell, 11 November, 1876.

Having been informed that a letter, purporting to be from the Bench of Magistrates at Hartley, has been addressed to your department, urging the necessity of a grant of money being made for the road from Hartley to Lithgow, *via* Brown's Gap, and finding, on inquiry of Mr. Nardin, the

the Road Superintendent, that such is the case, we, the undersigned members of that Bench, beg to state that we have never given our sanction to an application of which we entirely disapprove. We consider that the outlay recommended is totally unnecessary, the road being of no public importance.

We have, &c.,

A. BROWN.
THOS. BROWN.
C. G. NORRIS.

Re-submit with papers.—W.C.B., 13/11/76. Might send copy of this letter to Mr. Neale, and request him to state who the Magistrates were that desired him to write, approving of the road being placed on Schedule.—W.C.B., 14/11/76. Under Secretary, B.C. Yes.—J.R., 20/11/76. T. Neale, Esq., with copy.—23/11/76.

The Under Secretary for Public Works to T. H. Neale, Esq.

(76/617.)

Sir,

Department of Public Works, Roads under Trustees, 23 November, 1876.
I am directed by the Secretary for Public Works to transmit herewith a copy of a letter from the Bench of Magistrates, Hartley, respecting the application made by you on behalf of the said Bench, to have the road from Hartley to Lithgow Valley placed on Schedule of Minor Roads, and to request that you will be good enough to furnish me with the names of the Magistrates at whose instigation the application was made.

I have, &c.,

JOHN RAE,
Under Secretary.

T. H. Neale, Esq., to The Under Secretary for Public Works.

Sir,

Court House, Hartley, 27 November, 1876.
In reply to your letter of the 23rd instant (No. 76/617), requesting to be furnished with the names of the Magistrates at whose instigation an application was made to have the road from Hartley to Lithgow Valley placed on Schedule of Minor Roads, I have the honor to inform you that after consulting with Mr. Thomas Brown, J.P., respecting your letter to the Bench of Magistrates, dated 28th September last (No. 76/4,712), Mr. Thomas Brown requested me then to write, recommending the line of road from Lithgow Valley over Brown's Gap should be made.

The reason why Mr. Andrew Brown, J.P., was not consulted in the matter was because that gentleman being away at his stations in the country, and of whose return I was not aware at the time.

I have, &c.,

THOMAS H. NEALE.

Copy of this letter might now be sent to Mr. T. Brown.—W.C.B., 28/12/76. Yes.—J.R., 29/12/76. T. Brown, Esq.—4/1/77.

The Commissioner for Roads to T. Brown, Esq.

Sir,

Department of Public Works, Roads under Trustees, 4 January, 1876.
I am directed by the Secretary for Public Works to transmit herewith for your perusal a copy of a letter from T. H. Neale, Esq., relative to the application made by the Bench of Magistrates at Hartley for the repair of road from Hartley to Lithgow Valley.

I have, &c.,

WILLIAM C. BENNETT,
Commissioner for Roads.

From Votes and Proceedings No. 37 of 28 February, 1877.

(7.) Road to Hartley, *via* Brown's Gap:—Mr. Hurley (*Hartley*) asked the Secretary for Public Works, pursuant to Notice,—

(1.) Is the application, dated in letter dated August 16th, for road to Hartley, *via* Brown's Gap, likely to be complied with?

(2.) What is the cause of delay in replying to the application, made over five months since?

Mr. Lackey answered,—

(1.) Yes, the road has been provided for on Schedule for current year.

(2.) Provision having been made, the letter advising the action taken was overlooked.

J. Hurley, Esq., M.P., to The Commissioner for Roads.

Sir,

Botany-street, 23 March, 1877.
I beg to recommend Mr. William Wilson and Mr. David Mackie, both of Lithgow, for trustees for the expenditure of money voted or to be, for road over Brown's Gap.

I am, &c.,

J. HURLEY.

Mr. Hurley might be asked if this Mr. Wilson is the same who was trustee of some roads in the vicinity of Oberon; if so, that he cannot be appointed, and that as there is now an officer in the locality the road had better be put in his charge.—W.C.B., 28/3/11. Under Secretary, B.C. Approved.—J.H., 2/4/77. John Hurley, Esq., M.P., 4/4/77.

The Under Secretary for Public Works to J. Hurley, Esq., M.P.

Sir, Department of Public Works, Roads under Trustees, Sydney, 4 April, 1877.

In reference to your letter of the 23rd ultimo, nominating trustees for the road from Hartley *via* Brown's Gap to Lithgow, I am directed to request that you will be good enough to intimate to me if the Mr. Wilson named therein is the same person who was trustee for the roads named in the margin; if so, he cannot be appointed. As an officer of this department is now stationed in the locality it is desirable that the road should be placed under his supervision.

Oberon to Swatchfield, Gurkin to Fish River Creek and Hartley Road.

I have, &c.,
JOHN RAE,
Under Secretary.

J. Hurley, Esq., M.P., to The Commissioner for Roads.

Hartley *via* Brown's Gap to Lithgow.

Sir,

In reply to your letter of the 6th instant, I desire to say, the Mr. Wilson recommended to the trust for road over Brown's Gap from Hartley is not the Mr. Wilson, of Fish River. The Wilson recommended is the Manager of the Vale of Clwydd Coal Mine, Lithgow, and accepts the position at the request of the proprietors of the mine.

Botany-street, 14 April, 1877.

I am, &c.,

JOHN HURLEY.

Might be appointed at once.—W.C.B., 16/4/77. Under Secretary, B.C. Approved.—J.R., 21/4/77. Treasury Trustees.—J. Hurley, Esq., M.P., 25/4/77.

Circular.

(Roads under Trustees.)

Sir,

Roads Department, Sydney, 25 April, 1877.

I am directed by the Secretary for Public Works to request that you will be good enough to cause the sum of £75 to be placed to the credit of William Wilson, David Mackie, in the Bank of New South Wales, for repairs to road from Hartley, *via* Brown's Gap, to Lithgow.

£75.

No. 165.

2. This expense will be charged against the Vote for Minor Road on Trustees' Schedule, 1877.

I have, &c.,

The Under Secretary for Finance and Trade.

Circular.

Gentlemen, Department of Public Works, Roads under Trustees, Sydney, 25 April, 1877.

I am directed by the Secretary for Public Works to apprise you that the Under Secretary for Finance and Trade has been requested to cause the sum of £75 to be placed to your credit in the Bank of New South Wales for repairs to road from Hartley, *via* Brown's Gap, to Lithgow.

£75.

2. You will be duly advised by the Treasury Department when the credit has been completed at the Bank, and you will at the same time be supplied with the necessary forms, cheque-book, &c.

3. In order to avoid the frequent correspondence and reference of accounts back to trustees special attention is directed to the necessity of supplying full particulars in the statement of payments as to locality and nature of work, and also dimensions, &c.

4. Statement of payments must be sent by trustees direct to this office to be checked; they will then be forwarded on in due course to the Audit Office.

5. The usual limit of six months allowed for expenditure does not apply to this grant, which will remain at the disposal of the trustees until the 31st December next, when the balance then remaining will be finally written off and withdrawn from the Bank,—excepting only in cases where contracts may have been entered into which cannot be completed by end of year, when credit will be kept open until the 31st of the following March; but this will only be allowed where written notice has been duly given to this office not later than the middle of December, that such contracts have been entered into and remain unfinished.

6. No further moneys will be placed at the disposal of trustees on account of this work until vouchers in adjustment of the above amount have been received and passed at this office.

7. It is particularly requested that in the expenditure of this sum the trustees will adhere as closely as possible to the terms of the Circular of Instructions issued for their guidance.

I have, &c.,

Messrs. W. Wilson and D. Mackie.

Under Secretary.

Circular.

Sir,

Department of Roads and Bridges, Sydney, 25 April, 1877.

I am directed to inform you that in accordance with your recommendation of the 23rd ultimo the Secretary for Public Works has approved of the appointment of the parties named in the margin as trustees for the expenditure of the sum of £75 for the repair of road from Hartley, *via* Brown's Gap, to Lithgow, and that the Under Secretary for Finance and Trade has been requested to cause the money to be placed to the credit of those parties in the Bank of New South Wales accordingly.

Messrs. Wm. Wilson, D. Mackie.

I have, &c.,

J. Hurley, Esq., M.P., Sydney.

Under Secretary.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROAD, WALGETT TO NUGAL.
(REPORT FROM SURVEYOR GENERAL RESPECTING OPENING OF.)

Ordered by the Legislative Assembly to be printed, 22 June, 1877.

Road, Walgett to Nugal.

THERE has been no delay in the Survey Department with reference to this road ; it has been preliminarily notified in the *Government Gazette* of the 12th instant and cannot be opened until the provisions under the Act 4th William IV No. 11 are carried out, involving a period of thirty days for receipt of objections—time for consideration of any (if made)—possible further reference on them to a Surveyor and if not considered of sufficient importance to bar confirmation, submission of such a recommendation to the Secretary for Lands—submission to two meetings of the Executive Council—forty days for receipt of claims for compensation—reference to Secretary for Lands for consideration of such claims (if made) and authority to open—instruction to Surveyor to open after due notice to owners and occupiers,—and finally insertion of notice of such opening in the *Government Gazette*.

The periods as above specified do not include the time occupied by the necessary various transmissions of plans and papers from one Department to another.

ROB. D. FITZGERALD,
(For Sur. Genl.), 15th June, 1877.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROAD FROM BUNGENDORE TO GOULBURN, *via* CURRAWANG
AND BANGALORE.

(PETITION FROM INHABITANTS OF ARGYLE AND GOULBURN.)

Ordered by the Legislative Assembly to be printed, 19 September, 1877.

To the Honorable House of Assembly of New South Wales, in Parliament assembled.

This Petition of the Inhabitants of the Electorates of Argyle and the City of Goulburn,—
HUMBLY SHOWETH :—

That the public have had an uninterrupted and undisputed use of a road, leading to and from Bungendore and Goulburn, *via* Currawang and Bangalore, for a period of fifty years.

That a deviation, solely in the interests of Mr. Faithfull, has been projected by local surveyors; and notwithstanding the most strenuous efforts of the people against such deviation, it has been confirmed by the authorities.

That such deviation, in addition to being much longer, rougher, and more unsound than the old road, will also deprive the public of the only water to which they have the right of access for 28 miles.

That while the old road is sound, good, and nearly level, requiring little or no expenditure of money to keep it in repair, the deviation requires (on the authority of Mr. Chauncey) an expenditure of at least £1,000 (one thousand pounds) to prepare it for traffic, and a corresponding sum to keep it so.

That the increased difficulty of transit by means of such deviation will inflict serious injury upon farmers and settlers using the road, and also upon the Currawang Copper Mine, a most important but struggling industry, by which many are making a good livelihood.

The prayer of your Petitioners is, that your Honorable House, after due inquiry as to the truth of these premises, will take such steps as shall prevent the expenditure of public money to consummate an act of public injustice for the benefit of a private individual.

And your Petitioners, as in duty bound, will ever pray, &c.

[Here follow 78 signatures.]

This Petition of the inhabitants of the Electorates of Argyle and the City of Goulburn,—
HUMBLY SHOWETH :—

That the public have had uninterrupted and undisputed use of a road leading to and from Goulburn and Bungendore, *via* Currawang and Bangalore, for a period of fifty years.

That a deviation, solely in the interest of Mr. Faithfull, has been projected by local surveyors, and notwithstanding the most strenuous efforts by the people against such deviation it has been confirmed by the authorities.

That such deviation, in addition to being much longer, rougher, and more unsound than the old road, will also deprive the public of the only water to which they have the right of access for a distance of 28 miles along this road.

That while the old road is sound, good, and nearly level, requiring little or no expenditure of money to keep it in repair, the deviation (on the authority of Mr. Chauncey) requires an expenditure of at least £1,000 (one thousand pounds) to prepare it for traffic, and a corresponding sum to keep it in repair.

That the increased difficulty of transit by means of such deviation will inflict serious injury upon many farmers and settlers using the road, and also upon the Currawang Copper Mine, a most important but struggling industry, by which many families are obtaining a livelihood.

The prayer of your Petitioners therefore is, that your Honorable House, after due inquiry as to the truth of these premises, will refuse to sanction any expenditure of public money to consummate an act of public injustice for the benefit of a private individual.

And your Petitioners, as in duty bound, will ever pray, &c.

[*Here follow 100 signatures.*]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ROAD FROM PARKESBOURNE TO BREADALBANE PLATFORM.
(PETITION OF CERTAIN RESIDENTS FOR.)*Ordered by the Legislative Assembly to be printed, 26 June, 1877.*

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition,—

RESPECTFULLY SHOWETH:—

The great need there is for a road from Parkesbourne to the Breadalbane platform on the Great Southern Railway.

Your humble Petitioners beg to say that a former petition was sent to the late Minister for Lands (Mr. Garrett) on this subject, in the month of October last year, but nothing definite was heard of the matter till after the formation of the present Ministry, when a letter was sent to the present Minister for Lands on the subject. A reply was received from the Lands Department stating that the Minister for Lands could not sanction the opening of a road, owing to reasons stated by the district surveyor, namely, that the amount of traffic would not warrant the injury that would be inflicted on private property by the opening of the same.

Your humble Petitioners are of opinion that rather than inflict an injury it would enhance the value of properties adjoining.

Your humble Petitioners also beg to say that the road applied for in the former petition would run through Crown land, with the exception of a piece adjoining the railway line some few chains in extent.

Your humble Petitioners beg to call the attention of the Honorable House to the fact that we have no passable or practical road to the said platform. The only road we have at present runs a considerable distance down a very bad creek on a boggy plain, and at this season of the year is altogether impassable; it also necessitates a journey of about six miles, whereas the road in question would only be two miles. The inhabitants of the adjoining neighbourhoods of Mummel and Merrilla have no other road to the Breadalbane platform but through Parkesbourne. And your humble Petitioners think that the immense population of this and the adjoining localities, requiring the road, would be a sufficient guarantee to warrant the Government in opening a road in the most direct route.

Your humble Petitioners also beg to say that we have no thoroughfare from Parkesbourne, Mummel, or Merrilla to the neighbouring towns of Gunning or Collector, and the road in question would be the most direct and easiest of access that we could have, and therefore would answer every purpose, and the cost of making the same would be but trifling. For these and many other reasons that could be adduced, we pray that the Honorable House of Assembly will take into their kind considerations our urgent need and request, and grant us the same.

And, as in duty bound, we will ever pray.

[Here follow 49 signatures.]

NEW SOUTH WALES.

DUNMORE, PITNACREE, AND BELMORE BRIDGES.

(COST OF CONSTRUCTING AND PAINTING, AND NET AMOUNT RECEIVED FOR RENT.)

Ordered by the Legislative Assembly to be printed, 14 June, 1877.

RETURN to an Order of the Honorable the Legislative Assembly of New South Wales, dated 17th May, 1877, That there be laid upon the Table of this House, a Return showing—

- “ (1.) The cost of Dunmore, Pitnacree, and Belmore Bridges.
- “ (2.) The cost of painting and repairs of same.
- “ (3.) The net amount received by the Government for rent since they were built.”

(Mr. Byrnes, on behalf of Mr. Clarke.)

RETURN showing—

- 1. The cost of Dunmore, Pitnacree, and Belmore Bridges.
- 2. The cost of painting and repairs of same.
- 3. The net amount received by the Government for rent since they were built.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BRIDGE OVER THE WILLIAMS RIVER.

(CORRESPONDENCE, REPORTS, &c.)

Ordered by the Legislative Assembly to be printed, 24 July, 1877.

RETURN of all Correspondence, Reports, Minutes, and other documents relating to the erection of a Bridge over the Williams River, at Clarence Town.

W. Johnston, Esq., M.P., to The Minister for Public Works.

Sir,

Clarence Town, 2 April, 1877.
I have the honor, in behalf not only of the Electorate of "The Williams" but of other Electorates, including the whole of the Hunter, the Hastings, &c., &c., to request that you will send an officer from the department to choose a site to take the levels, make the necessary estimate of cost, for the construction of a high level bridge over the Williams River, at or near Clarence Town.

When such bridge is built it will complete the through traffic between Maitland and the Hastings as well as New England, by what is called the Company's line.

Commencing at Maitland with Belmore Bridge across the Hunter, then the bridge at Dunmore over the Paterson, then the proposed bridge at Clarence Town across the Williams, then the bridge at Booral across the Karuah now in course of construction, then a bridge to be erected over Avon Creek on road from Stroud to Gloucester, for the construction of which a sum of money is on the Estimates for 1877.

The bridge I am asking you to get the preliminary work done, the want of which is the only serious break on the whole of the line; many valuable lives would have been saved and much distress and misery in times of flood would have been averted and prevented if it had been there.

I had placed on the Business Paper of the House a sum not exceeding £5,000 for the construction of this bridge, which I withdraw just now in the hope you will accede to my request as stated above.

I have, &c.,

WM. JOHNSTON.

Roads Office, 77/1,583, 5/4. Public Works, 77/1,418, 3/4. The Commissioner for Roads, B.C., 4 April, 1877.—J.R. Mr. Meldrum, for section and an accurate report as to the nature of the soil, comments on floods, &c., and if the river is a navigable one.—W.C.B., 5/4/77. Mr. Meldrum.—B.C. Noted. I will take the section the first available opportunity, and report as directed by the Commissioner.—J. B. MELDRUM, 6/4/77. The Commissioner for Roads.—B.C. Mr. Johnston might be so informed.—W.C.B., 7/4/77. Under Secretary.—B.C. Informed, 9/4/77.—J.R. Roads, B.C., 12/4/77.—J.R. File.—W.C.B., 12/4/77.

Telegram from Commissioner for Roads to Road Superintendent, East Maitland.

31 May, 1877.
WHAT is probable width of river Williams where bridge would be put; height of flood, and nature of bottom? Telegraph reply.

For Commissioner for Roads,

GEO. E. EAMES.

Telegram from Road Superintendent, East Maitland, to Commissioner for Roads.

31 May, 1877.
THE Williams at site of proposed bridge not less than five hundred or five fifty feet; fifteen inches deep at low-water, six or seven feet at high-water, at flood level, twenty-five or six feet; shingle bed, but below the falls reef generally stretching across the bed.

J. B. MELDRUM.

The Road Superintendent, East Maitland, to The Commissioner for Roads.

Sir,

East Maitland, 18 July, 1877.

I forward herewith the section and ground plan of a site for the proposed bridge at Clarence

* See Appendix. Town.*

After careful examination I selected the narrowest part of the bed of the river in the vicinity of the town, which possesses the advantage of having a solid reef on the west bank and little or no current at any time of the tide. The depth, however, is more than I had anticipated, viz., 16 ft. 6 in two places; but as the reef extends across the river, there will be no difficulty in securing a good foundation for the cylinders of the two piers. I was very particular in ascertaining the depth at the distances marked on ground plan, and tested the bottom with an iron rod.

I have shown a sketch of the river below the site, but want of time and the continued heavy rain which fell during the two days I was taking the section prevented my making the survey more comprehensive; the sketch, however, will enable you to identify the site on a plan of the township.

I have marked on section the detail for proposed bridge, viz.:—One span of 45 feet at the west abutment, two of 90, one of 70, and two of 50 on the east side, which I think will suffice. The arrangement for the two river piers could be the same as that adopted for the Gostwycke Bridge.

I was informed that the highest known flood was that of 1875, the level of which I have shown on section.

The ground on the west side (Gagin's Paddock) is rather rough, there being a deep ravine between my line and the reserve shown on plan; but by cutting through the bank at abutment, and putting in a small bridge, say of 25 feet span, the expense of forming the approach to the corner of Durham-street would not be great.

A more careful examination of the bed of the river, say 1 or 1½ chain below my site, might result in finding a less depth of water, but it would not reduce the length of bridge; and it must not be overlooked that the nearer the approach to the present falls or ford the greater the velocity of current at half and ebb tides, together with additional width in bed of river.

The actual difference of depth of water between low and ebb tide and the highest flood level is about 25 feet. I had surmised it to be 26 feet. The width of ford including alluvial flat cannot be less than 9 or 10 chains, or much more than I thought it was; and although depth of water is only some 1' 3" at low-water, yet this advantage is more than counterbalanced by its extreme width.

I have, &c.,

J. B. MELDRUM.

Mr. Wells knows this locality; will he please state what the advantages are to be derived from the construction of a bridge here.—W.C.B., 19/7/77.

The only advantage I can recognise from the erection of a bridge here as a matter of through communication, is confined principally to the easy and uninterrupted access this route would then afford from Maitland to the Port Stephens district as far north as Stroud, and in time of flood (when punts lower down as Seaham and Nelson's Plains cannot work across the Williams) as far south as the northern shores of the Hunter.

Further north than Stroud the transit will be undoubtedly by way of the Paterson and Dungog Bridges.

A bridge here will also be of service to the residents and farmers on the eastern bank of the Williams, now partially accommodated by the low level bridge at Thalaba, some eight or ten miles higher up, and to some extent to the purchasers and settlers on the southern portion of the Church and School Estate, which has of late been alienated.

I do not consider there is urgent present necessity for this bridge, as there is a capital ford, and tidal delay is only for two or three hours; flood delay is not very important to the interests involved; but I am acquainted with many sites in the Colony where in view of future requirements bridges have been erected in special cases with less warranty and present utility. This bridge will eventually be of great utility.—F. WELLS, Asst. Eng. for Roads, 19/7/77.

I now forward Mr. Wells's report. This bridge will no doubt be of advantage in opening up the country between this and Port Stephens. There will be no necessity for a swing bridge, so the £5,000 will be ample.—W.C.B., 19/7/77.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BRIDGE AT GREENHILLS.

(PETITION FROM CERTAIN INHABITANTS OF NOWRA AND SHOALHAVEN.)

Ordered by the Legislative Assembly to be printed, 3 July, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Inhabitants of the Municipal District of Nowra, and of the Police District of Shoalhaven,—

HUMBLY SHOWETH :—

That the Public Works Department has recently erected a pile bridge at Greenhills, on the main road from Kiama, Broughton Creek, &c., to Ulladulla and the south coast.

That the said bridge (and the approaches thereto) is extremely dangerous on account of its unnecessary height.

That the approaches are unprotected embankments, which are rapidly sinking and excessively dangerous.

That unless remedied soon, all traffic will be impracticable.

That the Council of the Municipal District of Nowra has declined to take the said bridge under its control, care, and management, on account of its present unsafe condition and the dangerous embankments.

That the Works Department will take no heed to the remonstrances of the Municipal Council or of the Member of the Electorate.

That your Petitioners now respectfully pray your Honorable House to take the case into consideration, and adopt such measures as will secure to them the necessary relief in the premises as to your Honorable House may seem meet.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 134 signatures.]

MEMO.

Laid on Table and ordered to be printed in substitution for similar Paper (Sig. 388) ordered to be printed on 13th June, 1877.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

TOLLS ON PUBLIC ROADS AND BRIDGES.

(ABOLITION OF—OPINION OF ATTORNEY GENERAL.)

Ordered by the Legislative Assembly to be printed, 3 July, 1877.

Opinion of Attorney General.

With reference to the question whether it is necessary that an Act of Parliament should be passed to give effect to the Resolution of the Assembly of the 1st of May, 1877, affirming the expediency of abolishing all Tolls on Roads and Bridges throughout the Colony, I have to report for the information of the Cabinet as follows:—

1. Tolls are collected under the authority of various Acts of the Legislature. The oldest of these, 2nd William IV, No. 12, is the Act by which authority is given to the Government to establish and collect tolls. By virtue of its authority a large number of the tolls now established throughout the Colony are collected; and such tolls, where collected by officers appointed by the Government, may be abolished at once by the withdrawal of such officers.

In many instances, however, under the authority of the same Act of Parliament, the tolls have been leased. From a return furnished me by the Minister of Works, it appears that these leases all terminate at the end of the present year. The Government may therefore at the termination of the present leases abolish these tolls also, by simply ceasing to exercise the power of collection given by the Act 2nd William IV, No. 12.

2. There are other tolls the authority to collect which has been vested in different bodies of trustees, who cannot be interfered with in the exercise of the powers given them by Act of Parliament, except by express legislation.

The Acts authorizing the collection of these tolls are—The Cumberland Roads Act, 6 William IV, No. 11; The Parish Roads Act, 4 Vic. No. 12; The Trusts—Sydney and Suburban Roads Act, 11 Vic. No. 49; The Cumberland, &c., Roads Act, 13 Vic. No. 41; The Maitland Roads Trusts, 17 Vic. No. 16; The Botany, Randwick, and Coogee Roads Act, 18 Vic. No. 14; The Botany, Randwick, and Coogee Roads Act, 31 Vic. No. 21; The Botany, Randwick, and Coogee Roads Act, 32 Vic. No. 9; The Windsor and Richmond Roads-Act, 18 Vic. No. 16.

These several Boards of trustees have authority given them to mortgage the tolls that they have authority to collect. This power has I believe been exercised by some of the Road Trusts. If the Government determine to abolish by Act of Parliament the tolls established by these Road Trusts, provision must be made for taking over all the liabilities of such trusts; and it may become a question whether it is desirable to continue the existence of such trusts, if all power to collect tolls and to spend the money on the roads under their care is taken from them.

3. In addition to the tolls established by Road Trusts under the Acts mentioned, tolls have been established; I have been informed, by various Municipalities, under the authority of the 179th section of the Municipalities Act of 1868. If it is intended to abolish such tolls, this section of the Municipalities Act must be repealed, and if repealed, claims may be made upon the Government by the various Municipalities which have expended money on the maintenance of roads, expecting to be recouped such expenditure by the tolls which the Municipalities Act authorized them to collect.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BEACH-STREET, COOGEE BAY.

(REPORT OF MR. LICENSED-SURVEYOR J. F. MANN RESPECTING.)

Ordered by the Legislative Assembly to be printed 25 May, 1877.

Mr. Licensed-Surveyor J. F. Mann to The Surveyor General.

St. Leonards, 22 March, 1877.

I HAVE the honor to enclose a plan showing the present road from Beach-street to Whale-street, Village of Coogee, in reply to your B.C. letter of the 13th November last (No. 76/107), accompanying a request from the Trustees of the Coogee Reserves that a sum of £175 should be granted for repairs for same.

From inspection and survey I find that the road between these two points for some distance passes close along the top of the high bank of Coogee Bay, the point of a low sand-hill having been cut away to allow the road to pass. On account of encroachment by the sea this road is in a bad and dangerous state; at one point in particular there is hardly room for a cart to pass between the top of the bank and foot of the sand-hill. The proposal now is to cut further into this hill and to form a new roadway.

The soil is light and sandy, and as such a road would require ballasting and metalling, &c., no doubt the sum asked for would be absorbed in the work, but this new road would still be subject to damage by the sea and could not be made permanent without the protection of a sea-wall, which would necessarily be a very expensive affair. I am inclined therefore to recommend that a small sum (say £25) be now expended as a temporary measure in making the road safe; and that as Arden-street must be formed eventually, the frontage having been sold in allotments, that a sum of money be expended for that purpose.

I estimate that the formation of roads in this locality will cost from 15/ to 20/ per yard.

I have, &c.,

JOHN F. MANN,
L. S.

1876-7.

EXTENSION OF ELIZABETH-STREET TO BOURKE-STREET, WATERLOO,
AND BOTANY ROAD.

No. 1.

Mr. T. Buckland to The Secretary for Lands.

Sir,

Waterloo Warehouse, Sydney, 8 April, 1874.

We have the honor to forward herewith a copy of a public dedication made by us of the prolongation of Bourke and Elizabeth streets, through the Mount Lachlan and the Waterloo Estates, to the Botany Road.

We also forward descriptions of the said streets as surveyed and pegged out, prepared by Mr. Surveyor Reuss.

The said dedication was published in the *Sydney Morning Herald* of 22nd and 24th June, 1867, and also exhibited at the Waterloo Municipal Council Chambers.

The said streets are now in use by the public, and have been partially formed and fenced at our cost.

We have the honor therefore to request that you will cause the said streets to be proclaimed and aligned in accordance with the descriptions forwarded herewith.

We have, &c.,

THOMAS BUCKLAND.
DANIEL COOPER.

By his Attorney,—THOMAS BUCKLAND.

The Surveyor General.—A.O.M., B.C., 9/4/74. This letter might be referred to the Waterloo Municipal authorities, with a view of ascertaining whether they desire that the streets be aligned in accordance with the application herein made.—R. D. FITZGERALD (for the Sur. General), 23 June, 1874. Refer accordingly.—24/6/74. Informed.—7 July, 1874.

[Enclosures to No. 1.]

NOTICE—PUBLIC DEDICATION OF STREETS AND ROADS.

WE the undersigned, Sir Daniel Cooper, Bart., and Thomas Buckland, the trustees under the will of the late Daniel Cooper, Esq., of London, and I the said Sir Daniel Cooper, also, as residuary legatee under the said will, do hereby dedicate to the public the streets and roads hereinafter mentioned. The surveyor's descriptions of the said streets and roads, as dedicated by us, can be seen at the Council Chambers, Waterloo, or at the Waterloo Warehouse, corner of George and Market streets.

Elizabeth-street, South.—To run from the south side of Wellington-street, through the Mount Lachlan and Waterloo Estates to join the Botany Road, opposite the factory of Messrs. Biddell Brothers, confectioners.

Bourke-street.—To run from the south end of Bourke-street, Surry Hills, at the corner of Mr. John Baptist's estate, past Mr. A. Forsyth's rope manufactory, until it joins Elizabeth-street, running into the Botany Road.

DANIEL COOPER.

By his Attorney—THOMAS BUCKLAND.
THOMAS BUCKLAND.

Witness—GERARD PHILLIPS.

Description—Bourke-street, Mount Lachlan and Waterloo Estates.

ALL that piece or parcel of land, situate, lying, and being in the parish of Alexandria, in the county of Cumberland, Colony of New South Wales, and being all that portion of land 1 chain wide, intended to be dedicated as a street to be known as Bourke-street, and whose centre line commences on the northern boundary of the Mount Lachlan Estate, at its junction with the centre of Bourke-street, Surry Hills, and bears south 27 degrees west 27 chains 80 links to the continuation of the southern side of M'Evoy-street; thence south 33 degrees west 14 chains 60 links to the southern boundary of the Mount Lachlan Estate; and thence on the Waterloo Estate in continuation, 2 chains 40 links and south 47 degrees west 10 chains 10 links to its junction with the continuation of the eastern side of Elizabeth-street, and containing by admeasurement 5 acres 1 rood and 39 perches, be the said several dimensions more or less.

F. H. REUSS,

Surveyor.

Description—Elizabeth-street, south.

ALL that piece or parcel of land situate and lying in the parish of Alexandria, in the county of Cumberland, Colony of New South Wales, and be the hereinafter mentioned dimensions all more or less, and being that portion of the Waterloo and Mount Lachlan Estates, lying to the eastward and south-eastward of the several lines as hereinafter described, and being of a uniform width of 1 chain: Commencing at a point on the south side of Wellington-street, at its intersection with the west side of Elizabeth-street, and bearing south 10 degrees 30 minutes east 3 chains 84 links; south 1 degree east 6 chains 70 links; south 3 degrees west 22 chains 28 links; and south 47 degrees west 11 chains 50 links to the Botany parish road.

F. H. REUSS,

Architect and Surveyor.

Sydney, 142, Pitt-street, 12th day of June, 1867.

No. 2.

The Council Clerk, Waterloo, to The Secretary for Lands.

Proposed alignment of Bourke and Elizabeth streets to the Botany Road.

Sir,

Council Chambers, Waterloo, 25 July, 1874.

I have the honor to acknowledge your communication of the 7th instant, which was laid before the Council at its ordinary sitting on the 22nd, and I am now instructed by the Mayor to convey to you the resolution of the Council touching the matter referred to, and at the same time also transmit a copy of by-law on which the resolution was founded. With due respect, I have, &c.,

CHARLES HARRIS,
Council Clerk.

Copy

Copy of resolution, 22 July, 1874.

It was moved by Alderman Cains, seconded by Alderman Powell, and carried,—“That the Council cannot consent to the application unless the parties applying comply with the by-law.”

Memos. on above paper.

It is recommended that Mr. Buckland be informed that as the Borough Council of Waterloo “cannot assent to the application unless the parties applying comply with the by-law No. 2, part 4,” the survey and proclamation of the street named will not be made.—ROB. D. FITZGERALD, (For the Surveyor General.)

Informed.—5 August, 1874.

Upon re-consideration of this application, although it is considered as more judicious not to align streets within a Municipality without the approval of the Borough Council, an exception might be made in this case so far as Elizabeth-street is concerned, inasmuch as a part of that street had been *erroneously aligned*, and under that alignment has been virtually in charge of the Borough Council prior to the passing of the by-law; Mr. Buckland and the Borough Council might be informed. The attention of the Honorable the Minister for Lands should be drawn to the by-law referred to, which gives the Council the power of refusing to take under their charge any street that may be hereafter aligned by this Department.—ROB. D. FITZGERALD (For the Surveyor General.)

Approved.—J.S.F., 28/8/74.

The by-law does not alter the position of the Council, who might with or without a by-law refuse to undertake any of the duties or obligations imposed by law and are responsible to the ratepayers.

Approved.—J.S.F.

The Council Clerk, Waterloo, informed, 29 September, 1874. Mr. Buckland, 3 October, 1874.

By-law No. 2, part 4.

“It shall not be eligible for this Council to take charge of or expend money on any road, street, lane, thoroughfare, or other place that has not had money voted for it, or that was not proclaimed at the time of passing these by-laws, unless the said road, street, lane, thoroughfare, or other place is first proclaimed and properly formed, ballasted, and blinded, at the expense of the owner or owners of the land through which the said road, street, lane, thoroughfare, or other place is carried, and in no case must the said road, street, lane, thoroughfare, or other place be less than 24 feet in width.”

No. 3.

T. Buckland, Esq., to The Secretary for Lands.

Sir,

Waterloo Warehouse, Sydney, 19 September, 1874.

Referring to my interview with you last month about the proclamation of Elizabeth and Bourke streets leading from Sydney through Waterloo to Botany, and at which interview you informed me that you would proclaim Elizabeth-street in accordance with the original dedication thereof, because an error had been made in the first Proclamation, but that consequent upon a letter received from the Waterloo Municipal Council referring to certain by-laws, further consideration must be given to the matter before you would cause the Proclamation of Bourke-street to issue, I have the honor to bring the following under your notice :—

21st March, 1872, The by-laws referred to came into force on the 21st March, 1872.

Herewith I forward the following papers :—

Re Elizabeth-street.

19th April, 1871. Copy of agreement between the Waterloo Council and the Elizabeth-street Association, by which the Council, in consideration of certain payments, agree to form, ballast, and blind Elizabeth-street to its junction with the Botany Road.

6th Sept., 1873. Advertisement by the Council, published in the daily papers, calling for tenders for the work.
2nd Oct., 1873, Council accepted a tender from contractor named Corrie, who made default.

Re Bourke-street.

8th April, 1869. Copy agreement by the Waterloo Council for the expenditure of £460 in forming and ballasting Bourke-street, of which sum the Council agreed to give £70, the balance, £390, being contributed through the Bourke-street Association. This £460 was duly expended by the Council on the street, in accordance with agreement. The road has been open for traffic from date of said agreement, and with Elizabeth-street forms the only direct communication between East Sydney and the Botany Road, Waterloo.

These documents show that the Council had agreed to form and make these streets previous to passing the by-law referred to.—T.B.

These roads are of vital importance to the districts of Botany and Mudbank; they give direct communication between East Sydney and those districts by one-third less distance than by any other route.

It is not in the power, nor should it be permitted, to any intermediate Municipality to prevent communication between districts lying on each side of it, more especially in such a case as the present, where the proprietors offer the land free, and in conjunction with other proprietors contribute largely to the cost of making the roads.

The objection raised in the Waterloo Council is an interested one by proprietors of property on the Botany Road (*via* Chippendale and Redfern). A glance at the map will show that the route from the Supreme Court, Darlinghurst, by the existing road describes three-fourths of a circle, whereas by Bourke-street is almost a straight line.

In conclusion, I assert that except as a matter of courtesy there is no cause for reference by the Government to the Council of Waterloo at all; the matter lies between the Government, the proprietors of the land, and the inhabitants of Sydney and Botany, who have formed themselves into an Association for

for that purpose, and have subscribed towards a fund to defray the cost, and to whom I am, on behalf of the proprietors of the Waterloo Estate, pledged to dedicate these streets as public roads from Sydney to Botany. I seek only from the Government the usual official sanction, which I believe is rarely refused where public convenience is promoted, as it will be by the Proclamation of these roads.

I have, &c.,

THOMAS BUCKLAND.

Bourke-street to be proclaimed under the Act 4 Will. 4, No. 11.—J.S.F., 6/10/74.
For the Surveyor General.—O.R. (for U.S.), B.C., 8 Oct., /74.

Mr. Surveyor Woolrych is requested to survey for alignment that part of Elizabeth-street, and for Proclamation under the Act 4 Wm. 4, No. 11, that part of Bourke-street herein applied for, and to inform Mr. Gerard Phillips, of the Waterloo Stores, corner of George and Market streets, when he will be ready to undertake the work, and that gentleman will instruct their surveyor to accompany him and point out the road as dedicated in the Waterloo Estate.—R. D. FITZGERALD (for the Sur. General), 22 Oct., /74.

[Enclosures to No. 3.]

Copies of papers referred to in Mr. Buckland's letter.

The Council Clerk, Waterloo, to G. Phillips, Esq.

Sir,

Municipal Chambers, Waterloo, 8 April, 1869.
The Municipal Council of Waterloo passed the following motion, proposed by Alderman William Moon, at its meeting last night, viz. :—

That this Council agrees to form, ballast, and blind Bourke-street 20 feet wide (the ballast to be 10 inches thick in the centre and 8 on the side), commencing at the northern boundary of Waterloo, on condition that the Bourke-street Association subscribes £95, and the trustees of the Waterloo Estate and Sir Daniel Cooper subscribe £165, making £260, this Council subscribing £70, and the endowment (on the said £260) £130, making altogether £460. The money to be expended from the said northern boundary until the whole amount of £460 is expended. The trustees of the Waterloo Estate advancing on a certificate from the Mayor the fortnightly expenditure on the said street. And if the Association and the trustees of the Estate agree to these conditions the Mayor be empowered to proceed with the works at once, subject to the re-payment of the money as referred to in the proposed arrangements laid on the table of the Council.

I have, &c.,

T. M. SLATTERY,
Council Clerk.

Copy of agreement between the Mayor and Aldermen of Waterloo and the Elizabeth-street Association.

AGREEMENT made between the Mayor and Aldermen of Waterloo and the Elizabeth-street Association: Whereas that portion of Elizabeth-street running from the Redfern boundary to the Botany Road is in impassable state for vehicles, the Council of Waterloo and the said Association are desirous that the same should be forthwith formed, ballasted, and blinded throughout its entire length; and whereas the joint honorary secretaries of the said Association addressed a letter, dated the 29th November, 1870, to the Mayor of Waterloo, making a certain proposal, and offering to advance certain sums of money out of the funds of the said Association, provided the Council would grant a sum of £50 in addition to the sum of £150 previously voted by the Council, say in all £200, for the work: And whereas by a letter, dated 28th March, 1871, from the Council Clerk, addressed to the said joint secretaries, they are informed that the Council, by a resolution, had agreed to the terms and conditions of the said letter of the 29th November, 1870, and had decided that the work should proceed at once: It is therefore agreed between the said Council and the said Association that a sum of £915 shall be expended in forming Elizabeth-street its whole width (of 66 feet) and length in Waterloo, that is from Redfern to the Botany Road, and in ballasting and blinding a width of say 20 feet along the centre thereof, and also in building two bridges and embankments in the line of the street, the first near the junction of Pitt-street, and the other over the canal, near the Botany Road, the said sum of £915 to be made up as follows:—The Association to contribute £572, the Council £200, and the endowment to be received from the Government on account of the Association contribution, £143. It is agreed that out of the said sum of £915 there should be apportioned and expended the following sums: On that portion of the street between the Redfern boundary and the south side of Wellington-street, a sum not exceeding £143 15s.; on that portion from Wellington-street to the junction of Pitt-street (to include the bridge) a sum not exceeding £481 5s.; on that portion of the street from the junction of Pitt-street to the Botany Road (to include the bridge) a sum not exceeding £290. It is also agreed that a proper plan and specification, showing the levels of the cuttings and fillings, is to be submitted for the approval of the Association, and also in like manner a plan showing the elevations of the bridges proposed to be erected, and which plans and specifications are to be approved by the Association before tenders are called for and the work commenced, and that the Council in carrying out the work shall consult the said joint honorary secretaries, or such person as they may appoint, with a view to economy in the cost and the efficiency of the means employed to accomplish the undertaking.

Dated Waterloo, 19th day of April, 1871, for and on behalf of the Municipal Council of Waterloo.

Witness—T. M. SLATTERY.

EBENEZER OLIVE,

Mayor.

In reference to the foregoing agreement the said Association is to pay to the Council their proportionate part of the cost upon the weekly or fortnightly payments made by the Council, as per pay sheets, to be produced on the Mayor's warrant.

Borough of Waterloo.

6 September, 1873.

TENDERS for forming, ballasting, and blinding Elizabeth-street, from Wellington-street to the Botany Road (about 43 chains in length) and for the erection of two bridges in same street will be received up to 7 o'clock p.m. on Monday, 22nd September. Plans and specifications may be seen and all information obtained from Mr. Miller, Overseer of Works.

T. M. SLATTERY,
Council Clerk.

No. 4.

The Council Clerk, Waterloo, to The Secretary for Lands.

Sir,

Council Chambers, Waterloo, 2 October, 1874.

I have the honor to acknowledge your communication of the 29th ultimo, with reference to the alignment of Elizabeth-street, considered to have been virtually in charge of the Council before the passing of the by-law (putting upon owners the responsibility in the first instance of improving their own property), referred to in my communication of the 25th July. I regret to say the Council are not able to depart from the position they at present occupy, nor can they in their present circumstances accept further responsibilities. I therefore am instructed to say, "the Council cannot consent to the alignment of Elizabeth-street beyond the point originally defined, and which, if extended to the Botany Road, would be much beyond it."

I have, &c.,

CHARLES HARRIS,
Council Clerk.

No. 5.

No. 5.

T. Buckland, Esq., to The Secretary for Lands.

Sir,

Waterloo Warehouse, Sydney, 7 October, 1874.

I have the honor to acknowledge receipt of your letter of the 3rd instant (No. 74-1,066.)

I do not quite understand from this letter whether directions have been given to align Elizabeth and Bourke streets, or Elizabeth-street alone.

By-laws dated
21st March, 1872.

If the latter only, I beg again to bring under your notice that portion of my letter of 19th September relating to Bourke-street, in which I prove that in the year 1869 (three years before the passing of the by-laws referred to) the Waterloo Council agreed to form and ballast Bourke-street, and did expend the sum of £460 (principally contributed by the Bourke-street Association), in partly carrying that agreement. The street has been fenced and in the possession of the Council ever since. The Council has also on several occasions repaired the street at the request of ratepayers residing on it; and to all intents and purposes it is a public road under the control of the Waterloo Council, and was so three years before these by-laws were passed.

I beg that the map of the district may be looked at, to show the actual convenience which will be afforded for direct intercourse between East Sydney and Botany by this road, and on public grounds I am of opinion that the uncalled-for opposition to the proclamation of this street should be set aside and the alignment made.

I have, &c.,

THOMAS BUCKLAND.

Instructions to survey Bourke and Elizabeth streets issued to Mr. Surveyor Woolrych on 1,446/74.—A.J.S., 23 Oct., /74.

No. 6.

Mr. Surveyor Woolwich to The Surveyor General.

Sir,

38, Cumberland-street, 20 May, 1875.

I have the honor of transmitting herewith, in accordance with your B.C. instructions of the 22nd October, 1874, No. 15, a plan showing the proposed alignment of parts of Bourke and Elizabeth streets, within the Municipality of Waterloo.

I have, &c.,

FRANCIS B. W. WOOLRYCH.

Appendix.

No. 7.

T. Buckland, Esq., to The Surveyor General.

Roads, Streets, and Bridges, 685-6-75.

Sir,

Waterloo Warehouse, Sydney, 21 June, 1875.

Having inspected the map marked as above, I, on behalf of Sir Daniel Cooper and Mr. William Cooper, consent to the encroachment on their land at the intersection of * * * * * and offer no objection to the alignment thereby shown for the proclamation of Elizabeth, Bourke, and * * * streets, Borough of Waterloo.

Yours, &c.,

THOS. BUCKLAND,

(Per D. COOPER and W. COOPER.)

No. 8.

T. Buckland, Esq., to The Secretary for Lands.

Realignment of Elizabeth and Bourke Streets.

Sir,

Sydney, 18 August, 1875.

Referring to previous correspondence on this subject, I have the honor to bring under your notice the great loss and delay which has been occasioned to the proprietors of land in this neighbourhood by the delay of the Lands Department to rectify the mistake made by the Government surveyor in aligning Elizabeth-street contrary to the dedication by the proprietor (Sir D. Cooper); also to bring under your notice that the promise made to have the streets proclaimed according to the original dedication has not been fulfilled. *By letter, dated 5th October, 1874, I was informed that the necessary instructions for the alignment had been given.

I have, &c.,

THOMAS BUCKLAND.

The Executive Council advise that the intended formation of the several streets herein specified be notified in the manner prescribed by the Act 4 Wm. 4 No. 11.—ALEX. C. BUDGE, Clerk of the Council. Min. 75-49, 11/10/75. Confirmed, 10/10/75.

Approved.—H.R., 11/10/75.

The Bench of Magistrates at C. P. Office, Sydney, forwarding plan and book of reference, 27 Oct., /75. Notified, 26 Nov., 1875. The Clerk of the Executive Council, 30 Nov., 1875.

No. 11.

The Council Clerk, Waterloo, to The Secretary for Lands.

Sir,

Council Chambers, Waterloo, 21 October, 1875.

It was resolved by the Council of this Borough at its last sitting,—“That Bourke-street, from the Redfern junction to the Botany Road, be aligned at once, and that application for that purpose be made to the Government.” And I have now the honor, by direction of the Mayor, respectfully to request that you will be pleased to give the required directions for that purpose.

I have, &c.,

CHARLES HARRIS,
Council Clerk.

It is recommended that the Borough Council of Waterloo be informed, that the proclamation of that part of Bourke-street herein applied for will be made in the Government Gazette in the course of a few days.—R. D. FITZGERALD (For Surveyor General).

Approved.—T.G., 13/11/75.

The Council Clerk, Waterloo, informed, 22 Nov., 1875.

No. 12.

The Mayor, Waterloo, to The Secretary for Lands.

Sir,

Council Chamber, Waterloo, 22 December, 1875.

I have the honor, by direction of the Council, respectfully to enter its protest against the proclamation and alignment of Elizabeth-street, as the Council are not in a position to take upon them the responsibilities that its proclamation and alignment would entail upon them.

Bourke-street being partly made and comparatively level, does not, in view of the Council, present the same obstacles as the prolongation of Elizabeth-street would do.

I have, &c.,

Pro THOMAS MOON,
Mayor.

C. HARRIS,
Council Clerk.

Minute for the Executive Council.

Elizabeth-street, Waterloo.

Department of Public Works, Sydney, 30 August, 1876.

FOR the reasons disclosed in the accompanying Minute of the Commissioner for Roads, the Secretary for Public Works submits, for the approval of His Excellency the Governor and the Executive Council, a Draft Proclamation, to bring under the operation of the "Main Roads Amendment Act" that portion of the road from Sydney to Botany passing through Elizabeth-street, from Wellington-street to the Mudbank Road, in the Municipality of Waterloo.

JOHN LACKEY.

Approved.—H.R. Proclamation—Gazette of 5/9/77.

No. 20.

Memo. from The Commissioner of Roads to The Under Secretary for Lands.

21 August, 1876.

ELIZABETH-STREET, Redfern, having been aligned and proclaimed by the Survey Department, notwithstanding the protest of the Municipal Council of Waterloo, that body still refuses to carry out their agreement with the proprietors of the Cooper estate to form the street though Sir Daniel Cooper and Mr. William Cooper are willing to contribute at once £600 towards the work. This refusal, in addition to being a breach of a signed agreement, inflicts great hardship on the proprietors who have given up the land for the street, and are prepared to form it; it absolutely prevents the increase of the Municipal income, and limits the extension of the city in that direction, thereby scattering the population and rendering all sanitary and other measures more expensive. There is no remedy in the Municipalities Act, and the work will not be done unless carried out by the Government. We have no power to enter or execute such works, except under the "Main Roads Act"; such a course would be unusual, but as the Council is so obstructive, and several concessions have been made with respect to roads by the proprietors, who have also promised their co-operation in carrying out the proposed sewage works, this might be made an exceptional case, and the road proclaimed under the "Main Roads Amendment Act," as "that portion of the main road, Sydney to Botany, passing through Elizabeth-street from Wellington-street to Mudbank Road." To do this it will be necessary, as is usual, to re-proclaim the whole schedule of main roads with the above addition.

WILLIAM C. BENNETT,
Commissioner for Roads.

Under Secretary, B.C., 21/8/76.

No. 21.

Memo. from The Surveyor General to The Under Secretary for Lands.

THE accompanying plan and schedule of Bourke * * * streets, in the Municipality of Waterloo, are forwarded with the view to the alignment of the streets in accordance with the Act of Council, 2nd Victoria No. 2, the same having already been confirmed under the Act of Council, 4th William 4, No. 11.

Alignment of * and Bourke streets was asked for by the Borough Council of Waterloo.

Sir, Department of Public Works, Sydney, 16 September, 1876.
Referring to your letter of the 8th instant, I am directed by the Secretary for Public Works to request that you will have the goodness to pay the sum of £600 as a contribution towards the cost of works in Elizabeth-street, Waterloo, to the Colonial Treasurer, for the execution of works in question.

I have, &c.,
JOHN RAE.

No. 25.

Mr. G. Eames to Mr. G. Phillips.

Department of Roads and Bridges, Sydney, 6 October, 1876.
MEMO.—On the 16th ultimo a communication was forwarded to Sir Daniel Cooper, requesting that £600, promised by him for the formation of Elizabeth-street, Waterloo, might be paid to the Treasury, in order that it might be expended with the Government subsidy for this purpose. On inquiry being made at the Treasury, on the 4th instant, it appears the money has not been so paid, and the attention of Mr. Phillips is directed thereto.

G. E. EAMES,
Chief Clerk.

Department of Public Works.—No. 76/4,819. Treasury, 9 October, /76. The sum of six hundred pounds (£600) has been this day paid into the Treasury by Sir Daniel Cooper.—W.N., 7 Oct., /76. The Under Secretary for Public Works.—F.R. (for U.S.), B.C., 7 Oct., /76. Commissioner for Roads in reference to other papers.—G.H., B.C., 10/10/76.

No. 26.

Mr. G. Eames to The Under Secretary for Public Works.

Road Construction—Elizabeth-street, Waterloo.

MINUTE PAPER.

HEREWITH is forwarded for the approval of the Honorable Secretary for Public Works and for insertion in the Gazette and local papers, an advertisement inviting tenders for the construction of Elizabeth-street, Waterloo.

Tenders to be opened on Tuesday, the 19th December next. Estimated cost, £768—to be defrayed from amount contributed by Sir Daniel Cooper towards the formation of the street.

GEO. E. EAMES,
For Commissioner and Engineer for Roads.

Notice to Gazette, 27/11/76.—A.E. Roads, for information.—J.R., B.C., 2/12/76. Under Secretary.—B.C., 27/11/76.

No. 27.

Memo. of Mr. F. Franklin to The Commissioner and Engineer for Roads.

Sir, I requested Mr. Dyson to ascertain the nature of ground at site of this bridge. He reports as follows:—"Got no bottom at 12 feet; in fact after the first 4 feet in all cases we came into quicksand and water. I would suggest to excavate for foundations say 3 feet, then put in 6 to 1 concrete 2 feet thick and build on it."

The bridge has already been got out with 12" footings, but if Commissioner approves the provision for concrete can be made.

F. A. FRANKLIN,
2/12/76.

Concrete, cub. yds., 36 @ 32s.	£57 12 0
Ashlar, 588 cub. ft., @ 2s.	58 16 0
Rubble, 28 cub. yds., @ 26s.	36 8 0
Timber	80 0 0
Total bridge...	£232 16 0
Excavation, 3,175 cub. yds., @ 1s. 9d.	277 16 0
Metal, 924 cub. yds., @ 10s.	462 0 0
Blinding, 124 cub. yds., @ 3s.	18 12 0
	£991 4 0

If the formation is sand, will not sandstone ballast be required in addition to white metal?—F.A.F., 11/12/76.

Let ballast be 3 inches; clay if required to be an extra.—W.C.B., 13/12/76.

No. 28.

Mr. A. Lee to The Commissioner for Roads.

Sir, 130, Pitt-street, Sydney, 18 December, 1876.
I have the honor to inform you that I perceive by the *Sydney Morning Herald* that the Government are calling for tenders for the construction of Elizabeth-street, in a southerly direction from Wellington-street, crossing Kellick-street. I have therefore to notify to you that I am the proprietor of a strip

strip of land 722 feet in length and 1 foot 9 inches in width, running across Kellick-street, the same having been reserved by the party (one Kellick) who subdivided the land, and has been conveyed to me by the Official Assignee of the Insolvent Estate of John Kellick.

I have to protest against the proposed street being carried across my land, or any person trespassing on the same.

I forward herewith a sketch of the subdivision by Mr. Surveyor Reuss, junior, showing the reserved piece before referred to, and I have in my possession, as being the last purchaser, the original plan by which Kellick sold, which may be seen by any of your officers at a convenient time.

You will please to accept this letter as a notice not to cross my land.

I have, &c.,
ALFRED G. LEE.

I think this letter should at once be sent to Lands, with an intimation that if nothing to the contrary is intimated before a week it will be concluded that this objection is invalid, and the tenders will be accepted on the presumption that it is a street.—W.C.B., 20/12/76.

Under Secy.—B.C. Under Secretary for Lands.—J.R., B.C., 21/12/76.

It is recommended that the Commissioner be informed that Elizabeth-street was aligned under 2nd Victoria, No. 2, on the 15th January, 1866, folio 227. Recently a re-survey and proclamation has been made with a view of setting aside the alignment referred to by Act of Parliament. This has not yet been done, but the alteration in Elizabeth-street at the point referred to in Mr. Lee's letter is very trifling.—ROBT. D. FITZGERALD (for Sur. Genl.), 2 Jan., /77.

Forwarded to the Lands. Secretary for Public Works, for information.—W.W.S., B.C., 4 Jan., /77.
Return. Returned to Lands.—J.R., B.C., 4/1/77. The Surveyor General, 12.

No. 29.

Mr. J. Young to The Under Secretary for Public Works.

Sir,

430, Riley-street, Sydney, 15 January, 1877.

When about to sign the bonds for the construction of Elizabeth-street, Waterloo, this morning, I found that I had made a mistake in adding up the schedule prices of £100. You will see that it is a clerical error by looking at the tender, and as the prices in the schedule are the lowest, I could manage to do the work, for I would be £100 out, and I being a poor man have not so much money that I can afford to lose.

Will you kindly look over my tender and let me know if I am to commence work at the schedule prices, as I have made all arrangements for starting the work.

I am very sorry to be the cause of giving you and the Roads Department so much trouble, but I think it is better to see about it now than not to be able to complete the contract.

I am, &c.,
J. J. YOUNG.

£100 noted in journal.—P.H.F., 19/2/77. Roads with reference to previous papers, and for report.—G.H. (for U.S.), B.C., 16/1/77.

The total shows that the bulk sum is £100 less than it ought to be. As the tender even with this addition is still the lowest I recommend acceptance. The matter is an urgent one, and should be attended to at once.—W.C.B., 16/1/77.

Under Secretary, B.C.—Let the tender be accepted, and the work carried out without delay.—J.L., 17/1/77. Accepted, 17/1/77.

Instruct Mr. Young to meet Mr. Wells here to-morrow morning, at 9 o'clock. Mr. Wells to take Dyson out and give him charge.—W.C.B., 17/1/77. Mr. Young.—The Auditor General informed, 17/1/77. Prepare fresh bonds herewith, 18/1/77. Bonds signed—file—19/1/77.

No. 30.

Mr. Assistant Engineer Wells to The Commissioner for Roads.

Extension of Elizabeth-street South.

I HAVE to point out that there are some little alterations that should be made in the specification, &c., for this work, before the contractor signs his bond.

The slopes of cuttings are specified to be 1 to 1; it will be impossible to excavate this, the material to be excavated being fine dry white sand.

Mr. Young, the contractor, agrees to effect the necessary alteration in this respect without extra charge, although it will increase the quantities.

The slopes, both cutting and embankment, should also be roughly sodded, as there is plenty of turf at hand. Mr. Young will preserve the sods from road formation and rough turf as above, for £15 extra. I think it should be done.

The bridge should also be built on the skew, as no extra material is involved. Mr. Young consents to this alteration without extra charge.

It will, I think, be advisable to ballast the formation with sandstone; the metal might, if funds are inadequate, be omitted for a while.

Mr. Young agrees to supply good Pymont ballast at 5s. 6d. per cubic yard, hand-packed and broken into place. Blinding is already arranged for, and I think Mr. Young's price should be accepted.

FREDK. WELLS,
Assistant Engineer.

No. 31.

Mr. Assistant Engineer Wells to The Commissioner for Roads.

Road, Sydney to Botany—Extension of Elizabeth-street.

It having been represented by the Rev. Wm. Cunningham that his access to the back premises of Mount Carmel Presbytery has been much impaired by the works now being carried out in Elizabeth-street,— I have examined the position as directed, and beg to report as follows:—

Very imperfect access was until our work impeded available at the point marked A on accompanying tracing; our cutting and turfed slope has cut this off, and although with some little trouble packages, &c., can be handed up, still it would be to the destruction of the work we have done. Under these circumstances, I think some little injury has been done to the church property, but inevitably if the formation of Elizabeth-street had in any way been carried out.

To remedy this there are three alternatives, the last of which I recommend to your judgment as the best, although dependent upon the consent of Sir Daniel Cooper for the use of a portion of his unalienated land to widen Elizabeth-street for a short distance.

The first palliative to the injury would be to ballast a reserved road that ascends from Wellington-street to Kellick-street in the alignment of the front of Mount Carmel Church.

The road is 30 feet wide, a gradient of about 1 in 7 may be obtained, and the length to be ballasted to make fair junction with Kellick-street say 90 yards. It would not, however, entirely remedy the case, as the lower portion of the Presbytery premises fronting Elizabeth-street would still remain inaccessible for any vehicle, and everything in shape of supplies for stable, fuel, &c., would have to be taken through the verandah of the house which is now the only entrance for Mr. Cunningham's horse.

The second would be to ballast the continuation of Kellick-street to Pitt-street, which, with cutting, would give better gradient, but owing to the depth of sand cutting the width of roadway would be too narrow to be of use. That part of Kellick-street also has not been dedicated, and the same objection as to non-accessibility of the back premises remains as in the case of the first possible remedy. I therefore do not entertain this alternative for an instant.

The third, and, in my opinion, the most thorough course to adopt would be to construct a narrow roadway at a gradient (say) of 1 in 10 or 12 (dependent on the length of the strip of ground Sir Daniel Cooper would allow to be used) parallel, or nearly so, to the work we are now doing from Wellington-street to Kellick-street. I show on accompanying tracing what I propose, whereby it will be seen that none of the frontage width of Sir Daniel's allotment would have to be taken. By making this road to effect access with Kellick-street the value of the frontage to that street would be doubled. As a *quid pro quo* for the concession of the strip of ground above named, I think the Roman Catholic Church should give a similar strip, say 20 feet wide, to continue parallel to the present alignment to Elizabeth-street, which would afford access by means of an easy spiral road to the summit of the mount, and thereby render the whole mount more saleable, as it would virtually restore their available frontage to the roadway of Elizabeth-street, and in some future time when the road from point $\frac{1}{2}$ to the summit is made would yield easy access for vehicles to the front of the church. I scarcely anticipate any objection or claim for compensation on the part of the church proprietary. In the event of the full scheme as I propose, it being agreed to by the respective parties concerned, viz., Sir Daniel Cooper and the church proprietary, I should recommend that the Government undertake the formation and ballasting of the roadway as proposed from Wellington to Kellick-street, and as a large proportion of the work will be embanked it should be decided on at once before the contractor for the present work makes progress that may render its execution more costly. In the event of the scheme falling through, I should recommend the ballasting of the street detailed in the first scheme.

The relative cost of each would be—

First Scheme,—

Ballasting street from Wellington to Kellick-street and blinding, say 20 feet wide, 90 lineal yards, at 7s. 6d. per lineal yard, £33 15s.

Third Scheme,—

As recommended by me, forming, embanking, and ballasting new road (widening Elizabeth-street), say 18 feet wide, 80 lineal yards, at 12s., £48.

As the continuation of the road through the foot of the church property to the summit would probably remain in *nubibus* for years, I do not think it need immediately be opened, but the preliminary sanction or otherwise might be obtained.

10/4/77.

F. WELLS,
Assistant Engineer.

Before making any representation to the Minister on this, Mr. Wells had better see Mr. Buckland as to what he would be disposed to do.—W.C.B., 12/4/77.

I have seen Mr. Buckland. He is inclined to view the project I recommend with favour. Would like to have fuller particulars in writing with sketch.—F. WELLS, Asst. Eng., 14/4/77.

No. 32.

The Commissioner for Roads to T. Buckland, Esq.

Sir,

Department of Roads and Bridges, Sydney, 19 April, 1877.

The Rev. Mr. Cunningham, of Mount Carmel Church, having reported that the excavation in Elizabeth-street, now in progress, has cut him off from access to his premises, it is found that the best means of restoring his approach will be by an incline from Wellington-street, for which it will be necessary to get the piece of land, coloured red in accompanying tracing. This will not in any way decrease frontage of lot to Wellington-street, and will improve the portion of frontage in Kellick-street. You having intimated to Mr. Wells, of this Department, your approval of this proposal, may I request that you will be good enough to intimate the same in writing in order that it may be put on record. On receipt of such approval the necessary work will be proceeded with without delay.

I have, &c.,
WILLIAM C. BENNETT,
Commissioner for Roads.

No. 33.

No. 33.

T. Buckland, Esq., to The Commissioner for Roads.

Sir, Waterloo Warehouse, Sydney, 21 April, 1877.

Re Elizabeth-street. Yours of 19th instant to hand with sketch map of proposed road giving access to the grounds of Mount Carmel Church.

On behalf of Sir Daniel Cooper, I agree to the proposal to make use of a part of his land as shown on the sketch above mentioned.

I note on the map a part of the Mount Carmel Church land is marked "A." I understand that the proposed new road is to be continued across the said land to its southern boundary. Is it so intended?

I have, &c.,

THOS. BUCKLAND.

Inform Mr. Buckland the letter "A" should not have been on tracing sent him—that it was a mere reference letter of Mr. Wells's, showing where the present imperfect access existed.—W.C.B., 23/4/77. T. Buckland, Esq., informed, 23/4/77.

No. 34.

The Commissioner for Roads to T. Buckland, Esq.

Sir, Department of Roads and Bridges, Sydney, 23 April, 1877.

Referring to your letter of the 21st instant, agreeing on behalf of Sir Daniel Cooper to the proposal to make use of part of his land for a road to Mount Carmel Church, I have the honor to inform you that the letter "A" alluded to by you therein should not have been on the tracing sent you, such letter being simply a mere reference of Mr. Wells's showing where the present imperfect access existed.

I have, &c.,

WILLIAM C. BENNETT,
Commissioner for Roads.

No. 35.

Mr. A. Bayley to The Commissioner for Roads.

Sir, Burwood, May 16, 1877.

I have to inform you I have pointed out the place for obtaining the blinding for Elizabeth-street to the contractor, and he is to commence blinding the street this day with seven carts.

I have, &c.,

A. C. BAYLEY.

No. 36.

Mr. A. Bayley to The Commissioner for Roads.

Sir, Burwood, 10 July, 1877.

Herewith I forward you estimate for extension of Elizabeth-street South to the Botany Road. The culvert over the race from the wool-washing establishment will be rather expensive, on account of the acute angle of the race to centre line of street.

	*Estimate.	£	s.	d.
Skew bridge, 20' span	200	0	0
Formation, 30' wide, 275 yds., at 2/6	34	7	6
Ballast, 412 c. yds., at 8/6	175	6	3
Blinding, 275 c. yds., at 1/	13	15	0
		£423	8	9

I have, &c.,

A. C. BAYLEY.

I think these prices excessively high. If they are the present contractor's prices he had better not touch this work. Would not a double 2-foot pipe answer at the mill-race? A 20-foot span is absurd. Mr. Bayley evinces very little judgment in dealing with such questions.—W.C.B., 11/7/77.

Mr. Bayley.—B.C.

I took into consideration the advisability of putting two 24" drain pipes, and did not recommend their adoption, for the following reasons:—Firstly, from the race being more than 5 feet in depth. Secondly, the water from the dam would require to be drawn off before they could be fixed, and the foundations for pipes would be expensive. Thirdly, it would interfere with supply of water from the upper dam to the lower, besides possibly leading to litigation. The price for ballast and blinding is the same as for the other portion of Elizabeth-street, but not the price for formation. I did not suggest the contractor for the first portion of street should have this. I would recommend that tenders be invited for this work.—A. C. BAYLEY, 11/7/77.

* As amended by Commissioner :—	£	s.	d.
Timber culvert.....	40	0	0
Formation	34	7	6
Ballast, 412 c. yds., at 5/	103	0	0
Blinding	13	15	0
	£191	2	6

NEW SOUTH WALES.

TWENTY-SECOND ANNUAL REPORT

OF THE

POSTMASTER GENERAL,

ON THE DEPARTMENTS UNDER HIS MINISTERIAL CONTROL,

BEING THAT FOR THE YEAR

1876.

Presented to Parliament, by Command.

SYDNEY: CHARLES POTTER, ACTING GOVERNMENT PRINTER.

1877.

THE POSTMASTER GENERAL TO HIS EXCELLENCY THE GOVERNOR,
 TRANSMITTING THE
 ANNUAL REPORT FOR THE YEAR 1876, ON THE POST OFFICE, MONEY ORDER,
 GOVERNMENT SAVINGS' BANK, AND ELECTRIC TELEGRAPH DEPARTMENTS.

SIR,

I have the honor to transmit to your Excellency the Twenty-second Annual Report on the Departments under the Ministerial control of the Postmaster General.

I.—POST OFFICE DEPARTMENT.

INLAND SERVICE.

941 miles of new postal routes were opened during the year 1876, embracing the following lines,
 viz. :—

Western Roads.

- From Lake Cudgellico to Rankin's Springs, once a week.
- „ Oberon to Gingkin, once a week.
- „ Teapot Swamp to Teesdale, once a week.
- „ Grenfell to Brundah Creek, once a week.
- „ Canowindra to Cargo, three times a week.
- „ Morangarell to Wyalong, once a week.
- „ O'Connell to Essington, once a week.
- „ Lowther to Hartley, once a week.
- „ Hill End to Ullamalah, twice a week.
- „ Obley to Dandaloo (re-established), once a week.
- „ Dandaloo to Cannonbar (re-established), once a week.
- „ Railway Station to Post Office, Kelso, twelve times a week.

Southern Roads.

- „ Coolac to Coramundra, *vid* Muttama Reef, twice a week.
- „ Long Reach to Greenwich Park, three times a week.
- „ Breadalbane Platform to Gurrundah, once a week.
- „ Tooma to Khancoban, once a week.
- „ Coramundra to Temora, once a week.
- „ Wagga Wagga to Marrar, once a week.
- „ Jugiong to North Gobarralong, twice a week.
- „ Yass Railway Station to Post Office, Yass, twelve times a week.
- „ Railway Station to Post Office, Gunning, six or seven times a week.

Northern Roads.

- „ Garah to Mungindie, twice a week.
- „ Branxton to Rothbury, three times a week.
- „ Coolah to Mundooran, once a week.
- „ Wee Waa to Baradine, once a week.
- „ Coonabarabran to Tambar Springs, once a week.
- „ Branxton to Elderslie, twice a week.
- „ Hexham to Minmi, six times a week.
- „ Barrington to Back Creek, twice a week.
- „ Dingo Creek to Wherrol Flat, twice a week.
- „ Lambton to Winding Creek, three times a week.

It was found necessary to abolish 193 miles of postal route, viz. :—

Western Road.

Between Obley and Willeroon, twice a week.

Southern Roads.

- „ Yass and Taemas, twice a week.
- „ Bungonia and Jacqua, twice a week.

Northern

Northern Roads.

- Between Maryland and Ruby Creek, twice a week.
 „ Bonshaw and Yetman, once a week.
 „ Falconer, Oban, and Paddy's Gully, once a week.
 „ Moree and Mungindie, once a week.

The extent of postal route traversed in the Colony on the 31st December, 1876, was 18,418 $\frac{3}{4}$ miles, viz. :—

On horseback	12,684 miles.
By coach	5,182 $\frac{3}{4}$ „
By railway	552 „

The railway extension from Kelso to Blayney (29 miles) in the west, and from Gunning to Binalong (43 miles) in the south, as well as the opening of the private railway between Deniliquin and Moama (45 miles) enabled the Department in the year 1876 to effect some important acceleration in the transit of mails.

The following increased accommodation on existing lines was afforded during the year 1876, viz. :—

Western Roads.

- Between Peel and Limekilns, from once to twice a week.
 „ Crudine and Ilford, from once to twice a week.
 „ Wood's Flat and Milburn Creek, from twice to three times a week.
 „ Carcoar and Cowra, from three to six times a week.
 „ Cowra and Grenfell, from three to six times a week.
 „ Baulkham Hills and Dural, from three to six times a week.
 „ Mount Victoria and Hartley, from six to seven times a week.
 „ Meadow Flat and Mitchell's Creek, from twice to three times a week.
 „ Gongolgon and Brewarrina, from once to twice a week.
 „ Warren and Wammerawa, from once to twice a week.

Southern Roads.

- „ Taralga and Bannaby, from once to twice a week.
 „ Delegate and Corrowong, from twice to three times a week.
 „ Bungonia and Windellama, from once to twice a week.
 „ Urana and Narrandera, from once to twice a week.
 „ Queanbeyan and Cooma, from three to six times a week.
 „ Cooma and Bombala, from twice to four times a week.

Northern Roads.

- „ Armidale and Paddy's Gully, from once to twice a week.
 „ Moree and Meroe, from once to twice a week.
 „ Kempsey and Frederickton, from twice to three times a week.
 „ Narrabri and Walgett, from twice to three times a week.

The number of miles travelled in the year 1876 was 3,891,906, being an increase of 104,149 miles on that of the year 1875.

At Manly on the 1st March, at Waverley on the 1st July, and at Hunter's Hill on the 1st August, official offices (*i.e.* in charge of persons unconnected with private business) were established for the more efficient transaction of the postal, telegraphic, money order, and Government Savings Bank business.

At two of the official offices, viz., at Singleton and at the Oxford Street Branch in Sydney, the postmasters were dismissed from the Service for being short in their public moneys under extraordinary circumstances. In the first case it was alleged that the money was destroyed by fire, and in the second that it was stolen by burglars.

The number of Post Offices established during the year 1876 was 39, viz. :—

Burruga	Gingkin	Milburn Creek
Bukkulla	Greenwich Park	North Gobarralong
Binnaway	Gurrundah	Ravensthorpe
Brundah Creek	George's Plains	Rothbury
Back Creek	Gungah	Sedgefield
Bunnan	Harrington	The Valley
Buddabuddah	Hungerford's	Upper Manilla
Carnsdale	Iluka	Ullamalah
Cooperbrook	Khancoban	Wherrol Flat
Daysdale	Lowesdale	Winding Creek
Elderslie	Marlee	Wollongbar
Essington	Mandurama	Wyalong
Five-Dock	Muttama Reef	Yarra Mundi.

The number re-established was 5, viz. :—

Gulargambone	Muttons Falls
Lowther	Teesdale
Tomerong :	

The number discontinued was 14, viz. :—

Bartlett's Camp, G.W.R.	McGuigan's
Collarenebri	Native Home
Corang	Paddy's Gully,
Grass-tree	Raglan.
Heifer Station	Ruby Creek
Jacqua	Toorale
Kimberley	Taemas :

making an actual increase of 30 in the number of Post Offices. In the Appendix will be found a list of Appendix A. the 782 Post Offices in the Colony on the 31st December, 1876.

Receiving offices were established at the following places, viz. :—

Bolaro	Narrawa
Boolambayte	Redmire,
Broadwater	Rocky Hall
Darlington Point	The Springs
Heifer Station	Waterloo
Irvinstone	Wood's Flat.

The receiving office at Wood's Flat was discontinued. A list of the receiving offices in the Colony Appendix B. is given in the Appendix, showing the number to be 18.

131 changes of Postmasters took place during the year. These frequent changes do not tend to improve the performance of the postal work at the offices where they take place, but they are unavoidable.

The names of the undermentioned Post Offices were changed, viz. :—

- Five Dock to Iron Cove Bridge.
- Haslem's Creek to Rookwood.
- One-tree Hill to Mount Victoria.
- Noucome to Swan Bay.

In the Appendix is given a return showing in what parts of the Colony the Government possess Appendix C. buildings for the transaction of the Postal, Money Order, Savings Bank, and Telegraph business, as well as the places where premises are rented for the purpose.

Large iron letter-receivers were erected at the following places, viz. :—

In Sydney at the corner of Bourke and Little Arthur Streets, and at Burro'wa on a site near the old Post Office.

It was found needful to remove four letter-receivers, viz. :—One from *Mercury* Office, West Maitland, to a new site near the Telegraph Office in the same township; one from Lindsay-street, East Maitland, to the site of the old Post Office, East Maitland; one from George and Howick Streets, Bathurst, to a new site in Havannah Street, Milltown, Bathurst; and one from Rossi and Cooma Streets, North Yass, to a new site in front of "James's Hotel," North Yass.

38 small iron letter-receivers were placed as follows :—

- 1 Lavender Bay, St. Leonards.
- 1 Five Dock Platform.
- 1 Near Public School, Ashfield.
- 1 Near St. John's Church, do.
- 1 Albemarle-street, Kingston.
- 1 Crescent-street, and Abattoir Road.
- 1 Junction of Canterbury and Parramatta Roads.
- 1 Glebe Store, Newcastle.
- 1 Hill and March Streets, Orange.
- 1 Railway Station, Parramatta.
- 1 Clarendon, Richmond Road.
- 1 Junction of Vaucluse and New South Head Road.
- 1 Australia and Eaton Streets, Camperdown.
- 1 Missenden Road, and Grose-street, do.
- 1 Illawarra and Marrickville Roads.

- 1 Cheltenham and Victoria Streets, Burwood.
- 1 Burwood and Parramatta Roads, do.
- 1 Intersection of Stewart and Durham Streets, Bathurst.
- 1 „ Rankin and Piper Streets, do.
- 1 „ Peel and Russell Streets, do.
- 1 Rocket and George Streets, do.
- 1 Passengers Railway Station, do.
- 1 Victoria, Cowper, and Leichhardt Streets, Charing Cross, Waverley.
- 1 Waverley and Wellington Streets, Bondi.
- 1 Windsor Road and Board Street, Parramatta.
- 1 Kissing Point Road, opposite Mr. Forsaith's premises.
- 1 East and Marius Streets, Tamworth.
- 1 Anvil Creek (Dr. Williams' surgery).
- 1 Junction of St. Mary's Road and Woolloomooloo-street.
- 1 Council Chambers, Petersham.
- 1 North Deniliquin.
- 1 End-street, Deniliquin.
- 1 Cressy-street, do.
- 1 Newtown Railway Station.
- 1 Petersham do.
- 1 Burwood do.
- 1 Parramatta Junction do.
- 1 Fairfield do.

On the 31st December the number of iron letter-receivers erected in the Colony (including both large and small size) was 136; the number of other kind of receiving-boxes, 4; and the number of newspaper-receivers, 8.

At Ashfield, Bathurst, Deniliquin, Newtown, Orange, St. Leonards, and Wagga Wagga, the letter-receivers are cleared by special messengers, who are respectively paid an annual sum for the performance of this work; at other places this duty is fulfilled by persons regularly attached to the staff of the Department.

Appendix D.

Forty-two additional licenses were issued for the sale of postage-stamps to persons other than postmasters or receiving-office-keepers. A return is given in the Appendix of the number of persons holding these licenses throughout the Colony.

There were five additional letter-carriers employed during the year 1876 in Sydney and its suburbs. The distribution of the letter-carriers throughout the Colony was as follows:—

Sydney and Suburbs	61
Albury	1
Armidale	1
Bathurst	2
Deniliquin	1
East Maitland	1
Goulburn	1
Grafton	2
Hill End	1
Morpeth	1
Mudgee	1
Newcastle	3
Orange	1
Parramatta	3
Parramatta Suburbs	1
Singleton	1
Tamworth	1
Wagga Wagga	1
Wallsend	1
West Maitland	2
Wickham and Hamilton	1
Windsor	1

In

In addition to the above-mentioned places, a free delivery of correspondence is afforded in the following localities, viz. :—Anvil Creek, Ashfield, Burwood, Lambton, Leichhardt, Manly, Petersham, and Waratah. No regular staff letter-carriers are appointed at these places; an annual sum being paid in each case for the performance of the work, generally to some local person who devotes only part of his time to delivering correspondence.

The following is a statement of the number of persons employed in connection with the Postal Department, exclusive of Mail Contractors :—

Postmaster General	1
Secretary	1
Accountant	1
Superintendent, Mail Branch	1
Chief Clerk, Post Office	1
Cashier	1
Clerks	58
Probationary Clerks	12
Postal Inspectors	3
Mail Guards	8
Railway Mail Sorters	7
Stampers, Letter-carriers, &c.	150
Country Postmasters	782
Assistant do.	49
Clearing-receivers and delivering letters	15
Total	1,090

The following comparative return will afford some idea of the sanitary condition of officers of the department :—

No. of Officers absent.			Aggregate period of absence.		Average period of absence for each officer.	
1875.	1876.		Days.		Days.	
			1875.	1876.	1875.	1876.
36	33	Clerks	408	496	11	15
15	12	Sorters	360	102	24	8
27	26	Letter-carriers	320	209	12	8
18	15	Messengers, Guards, Grooms, &c.....	246	130	14	9

The Postal Inspectors travelled over and inspected 11,466 miles of mail route, and visited the undermentioned post offices :—

Adelong	Billabong	Breadalbane
Adelong Crossing-place	Binalong	Bredbo
Albion Park	Bingera	Broughton's Creek

27 days are allowed under the Pacific Mail Steamship Company's Contract for the conveyance of mails to and from Sydney and San Francisco.

Average number of days occupied in the conveyance of mails to and from Sydney and London *via* San Francisco:—

Inward.

London to Sydney 49½ days.

Homeward.

Sydney to London 47 days.

It is due to the Pacific Mail Steamship Company to record that, considering the difficulties that had to be overcome, especially in regard to the navigation of the New Zealand coast with large steamships, the contract has been satisfactorily performed.

The performance of the service *via* Melbourne and Point de Galle will be seen by the following return, viz. :—

Arrival at Sydney.				Departure from Sydney.			
Name of Vessel.	Actual date.	Actual number of days.		Name of Vessel.	Actual date.	Actual number of days.	
		<i>Via</i> Brindisi.	<i>Via</i> South-ampton.			<i>Via</i> Brindisi.	<i>Via</i> South-ampton.

NOTE.—In each instance the connection between Melbourne and Sydney has been made by an intercolonial steamer, the mail packet remaining at Melbourne. In some instances the letter portion of the mail has been brought overland from Melbourne to Sydney, and supplementary mails have been sent from Sydney to Melbourne by the overland route.

Average number of days occupied in the conveyance of the mails to and from Sydney and London *via* Galle and Melbourne :—

Inward, <i>via</i> Brindisi	47
Do. Southampton	55 $\frac{1}{4}$
Homeward, <i>via</i> Brindisi	49 $\frac{3}{8}$
Do. Southampton	58

The performance of the service *via* Brisbane and Torres Straits may be ascertained from the following statement of the time occupied in the transmission of mails by this route between Sydney and London, viz. :—

Arrival at Sydney.				Departure from Sydney.			
Name of Vessel.	Actual date.	Actual number of days.		Name of Vessel. *	Actual date.	Actual number of days.	
		<i>Via</i> Brindisi.	<i>Via</i> South-ampton.			<i>Via</i> Brindisi.	<i>Via</i> South-ampton.

Average number of days occupied in the conveyance of the mails to and from Sydney and London *viâ* Brisbane and Torres Straits :—

Inward, <i>viâ</i> Brindisi	53
Do. Southampton	62
Homeward, <i>viâ</i> Brindisi	59
Do. Southampton	68

On the extension of the railway to Gunning the Department conveyed the letter portion of the English mails *viâ* Galle *overland* between Melbourne and Sydney. The first mail conveyed in this manner was that which reached Melbourne on the 19th February. The mail on that occasion was brought overland and delivered in about forty-four hours. This, although an improvement upon the transit by sea, was of course not so advantageous a change in point of speed as that which the Department was enabled to effect on the further extension of the railway to Bowning in July, 1876. The English letters have in some instances, since the opening of the Railway to Bowning, been conveyed from Melbourne and delivered in Sydney in about forty hours.

Mails are now daily transmitted overland between Sydney and Melbourne, and the bulk of correspondence between the two Colonies is forwarded in this manner.

During the year, arrangements were entered into with the Imperial Government by which a reduction of postage was effected on letters, newspapers, packets, and patterns addressed to the United Kingdom forwarded by the Brindisi route—on letters addressed to Belgium and Montenegro, forwarded *viâ* Italy; on correspondence to the continent of Europe, sent by way of Trieste; on letters addressed to the Cape of Good Hope, Natal, St. Helena, and Ascension, *viâ* the United Kingdom; and on correspondence for countries transmitted by way of Alexandria and Marseilles, and by way of Italy and France.

An arrangement was agreed to between the Colonies of New South Wales, Victoria, and South Australia, under which postal cards, bearing a one penny stamp in addition to the penny stamp printed on each card, can be transmitted from one Colony to the other.

A reciprocal agreement was also made between Hongkong and China and this Colony, by which letters and packets can be re-directed, and those posted deficiently stamped but bearing a single rate can be sent from one country to the other—the rate for re-directing and the deficient postage, with fine, being collected on delivery of the correspondence and retained by the Post Office that collects.

• LETTERS, NEWSPAPERS, PACKETS, AND POSTAL CARDS POSTED THROUGHOUT THE COLONY.

The following is an estimated return of the number of Letters, Newspapers, Packets, and Postal Cards posted in the Colony during the year 1876, as compared with the number posted in the preceding year, viz. :—

	1875.	1876.
LETTERS.		
Posted for town delivery.....	2,457,900	2,628,500
„ country delivery	9,540,900	9,986,000
„ foreign despatch	844,000	906,700
Total number of Letters posted.....	12,842,800	13,521,200
NEWSPAPERS.		
Posted for country delivery.....	4,876,700	5,408,900
„ foreign despatch.....	856,300	913,300
Total number of Newspapers posted.....	5,733,000	6,322,200
PARCELS, &c.		
Posted for country delivery	274,700	304,000
„ foreign despatch	30,900	32,600
Total number of Parcels, &c., posted.....	305,600	336,600
Total number of Postal Cards posted	128,786	109,664

The increase during 1876 in the number of letters posted is at the rate of about $5\frac{1}{4}$ per cent., on the number of newspapers about 10 per cent., and on the number of packets about 10 per cent. It will be noticed that the novelty of the postal card system having ceased, the number posted has somewhat diminished. It should however be mentioned that these returns are only estimated, and that considerable difficulty is experienced in arriving at very accurate information.

The average number of letters posted in 1876 in proportion to the population of the Colony is estimated at twenty-one to each person.

The

The following returns show the number of letters despatched and received by the mail packets on the respective routes *via* San Francisco, *via* Melbourne and Suez, and *via* Torres Straits and Suez.

* The term "Intercolonial" applies to Australian and New Zealand correspondence.

† The term "Foreign" in this return applies to all correspondence other than that for the Australian Colonies and New Zealand.

DEAD LETTER BRANCH.

Year.	Number of Letters returned to writers as unclaimed.					Number of registered letters returned as unclaimed.	Number of letters unregistered but containing articles of value returned as unclaimed.	Letters received from and returned to the following places as being unclaimed.				Number of letters returned as unstamped
	Originally addressed to places within the Colony.	Originally addressed to the neighbouring Colonies.	Originally addressed to the United Kingdom.	Originally addressed to other places not mentioned in the preceding columns.	Total.			Neighbouring Colonies.	United Kingdom.	Other places not mentioned in preceding columns.	Total.	
1875.....	75,631	7,634	1,597	524	85,376	874	615	9,589	4,473	705	16,256	18,459
1876.....	82,932	7,408	2,423	661	93,474	835	613	10,143	4,478	603	16,673	21,392
Increase	7,351	826	137	8,098	554	5	417	2,933
Decrease	226	39	2	102

In 613 unregistered letters, which it was requisite to open in the Dead Letter Branch during the year 1876, there was found an amount of money equal to £20,011 11s. 9d. This circumstance is mentioned to illustrate the want of caution displayed by the public in reference to the transmission of money through the Post.

The number of letters, &c., delivered by the letter-carriers attached to the head office during the year 1876 was as follows:—

Unregistered letters	3,007,806
Registered letters	23,302
Books	33,445
Newspapers	412,114

The above figures do not include letters, &c., for Newtown, Balmain, or St. Leonards, as correspondence for those places is enclosed in direct mails and sent to the Newtown, Balmain, and St. Leonards Post Offices for delivery by letter-carriers.

It is estimated that there are about 22,900 houses in Sydney and the Municipalities immediately adjacent thereto.

REGISTRATION BRANCH.

Year.	Number of Registered Letters which passed through the General Post Office.	Number of Ounces of Gold which passed through the General Post Office.
1875.....	129,374	4,878½
1876.....	144,501	6,669
Increase	15,127	1,790½

NUMBER OF MAILS RECEIVED AND DESPATCHED.

The following return shows the number of Mails received at and despatched from the General Post Office during the years 1875 and 1876:—

Year.	Received.		Despatched.		Total number of Mails which passed through the Office.
	Inland.	Foreign.	Inland.	Foreign.	
1875	60,434	5,964	66,693	5,005	138,096
1876	64,286	6,620	66,171	5,777	142,854
Increase	3,852	656	772	4,758
Decrease	522

The number of written communications received from the public during 1876, intimating changes of address or requesting letters, &c., to be forwarded, was 7,633, against 6,394 in 1875.

The number of communications addressed to the Secretary of the Post Office relating to the extension and improvement of the Service, to irregularities connected with the performance of mail contracts, and to the transit of letters, &c., through the Post, and recorded in the year 1876, was 18,290, against 16,995 in 1875.

It is satisfactory to observe that the complaints of missing money letters during the year 1876 were considerably decreased. This, no doubt, has been owing to the active measures taken by the Department to frustrate the operation of that percentage of dishonesty which is unfortunately found to exist in all departments where large numbers of men are employed. Seeing that no less than 1,090 persons (exclusive of mail contractors) are engaged in conducting the postal business, the loss of money in transit through the Post may be considered small.

REVENUE AND EXPENDITURE.

The following statement shows the revenue and its resources for the year 1876:—

Revenue.

The Revenue collected in the Colony for the year 1876 was obtained as under, viz.:—

Sale of Postage Stamps	£115,433 16 10
Fees for private boxes	323 3 6
Postage on unpaid letters	1,831 16 11

Total collected in the Colony £117,588 17 3

To which add—

Amount due by Colonies for use of San Francisco Mail Line.

One-half of £3,929 14s. 2d., or ... £1,964 17 2

Amount due by United Kingdom for Mail

Matter received in Colony by the San

Francisco, Galle, and Torres Straits Lines 9,086 14 7

11,051 11 9

Total £128,640 9 0

In 1875 the amount of the revenue was £117,270 2s. 1d., showing an increase for the year 1876 of £11,370 6s. 11d.

The amount due by the non-contracting Colonies for the use of the San Francisco Mail Line during the year 1876 is as under:—

Victoria	£2,562 6 1
Queensland	748 7 3
Tasmania	190 18 5
South Australia	391 10 2
Western Australia	36 12 4

Total £3,929 14 2

One-half New South Wales £1,964 17 1

One-half New Zealand 1,964 17 1

REVENUE

			£110,095 8 10	£120,525 5 8

On the 1st April a new postage stamp, of the value of one shilling, was issued in substitution for the one previously current.

The description of the new stamp is as follows:—Profile of Queen Victoria to left, on plain tinted ground, enclosed in solid band parallel at sides, arch at top, inverted arch at bottom, on which is inscribed in white block letters, "New South Wales" at top, "One Shilling" at bottom, and "Postage" on each side, outer space filled in with white spray on solid ground; 120 stamps on a sheet; water-mark, a crown, and the letters "N.S.W." The colour of the stamp was green when first issued, a few weeks afterwards, however, it was altered to *black*.

The following comparative return will show to what extent the revenue of the Postal Department has been affected by the reduction of the postage on intercolonial letters at various times:—

Year.	No. of Letters posted.	At per ½-oz.	Revenue.
1869	305,000	6d.	£ 8,387
1870	303,800	6d.	8,354
1871	334,000	3d.	4,592
1872	380,500	3d.	5,225
1873	419,500	3d.	5,768
1874	488,600	2d.	4,479
1875	537,200	2d.	4,924
1876	583,600	2d.	5,350

The

The expenditure of the Department for 1876, compared with that of the year 1875, is as follows:—

	1875.	1876.
Salaries	£50,291 16 2	£57,079 16 11
Contingencies	7,164 5 7	9,771 2 6
Conveyance of Mails	138,911 14 1	140,050 3 9
	<u>£196,367 15 10</u>	<u>£206,901 3 2</u>

Showing an increased expenditure of £10,533 7s. 4d.

The expenditure for conveyance of mails in 1876 is divided as follows, viz:—

Mails <i>via</i> San Francisco	£46,403 4 10
„ „ Torres Straits and Suez	2,042 7 1
„ „ Melbourne and Suez	9,971 2 11
„ by horse, stage, and rail	73,786 12 9
„ by steam and sailing vessels	6,268 17 4
„ to and from Railway Stations, and portorage	1,577 18 10
	<u>£140,050 3 9</u>

The cost of the Ocean Mail Services *via* San Francisco, *via* Torres Straits and Suez, and *via* Melbourne and Suez, was as follows:—

San Francisco—	
Subsidies	£45,915 8 0
Premiums	805 0 0
Demurrage, A.S.N. Co.	214 5 9
Telegrams	112 11 1
	<u>47,047 4 10</u>
Less penalties recovered	644 0 0
	<u>46,403 4 10</u>
Torres Straits and Suez—	
Amount paid to Queensland	2,042 7 1
Melbourne and Suez—	
Amount paid to Victoria	8,920 6 11
Cost of overlanding mails by special trains, and Agent's expenses in Melbourne	532 16 0
Gratuities to P. and O. Co., for conveyance of letters between Sydney and Melbourne	518 0 0
	<u>9,971 2 11</u>
	<u>£58,416 14 10</u>

Cost to the Colony on account of Ocean Mail Services will be seen by the statements below, under the head of each mail line:—

	1876.
San Francisco—	
Paid as subsidies and premiums, &c.	£47,047 4 10
Less recovered in penalties	644 0 0
	<u>46,403 4 10</u>
<i>Cr.</i>	
By postage on outward mails	£8,137 9 10
„ „ inward mails	5,576 2 5
„ half share of amount due by non-contracting Colonies	1,964 17 1
	<u>15,678 9 4</u>
Actual loss to New South Wales	<u>£30,724 15 6</u>

Torres

Torres Straits and Suez—

								£2,754	6 6
Actual loss to New South Wales									

In the year 1876 the average cost per mile of the inland mail conveyance was about 4 $\frac{3}{4}$ d. against 4 $\frac{1}{4}$ d., the price per mile paid in the year 1875, being for the most part due to the increased price of contracts, occasioned by the free carriage of newspapers. The particulars as to the Mail Contracts for the inland mail conveyance of the year 1876 will be found in the Appendix.

Appendix E.

It is gratifying to observe that while the expenditure of the department has been necessarily increased by the sum of £10,533 7s. 4d. in affording increased postal facilities, the augmentation of revenue to the extent of £11,370 6s. 11d. more than covers the additional outlay of the year 1876.

II.—MONEY ORDER OFFICE.

The following return shows the increase in the number and amount of Money Order transactions during 1876, as compared with the year 1875:—

Year.	Number of Offices.	Orders Issued.		Orders Paid.		Total Transactions.	
		Number.	Amount.	Number.	Amount.	Number.	Amount.
1875	238	100,293	£ 419,622 9 8	89,572	£ 380,293 7 11	189,865	£ 799,915 17 7
1876	260	112,684	465,770 10 11	101,492	421,161 15 8	214,176	886,932 6 7
Increase	22	12,391	46,148 1 3	11,920	40,868 7 9	24,311	87,016 9 0

The new agencies established during the year were at the following places, viz. :—

Booligal	Hillston	Quirindi
Brushgrove	Ilford	Rankin's Springs
Cadia	Jordan's Crossing	St. Mary's
Cape Hawke	Manilla	Somerton
Carroll	Minmi	South Grafton
Chatsworth Island	Mount Victoria	Tamber Springs
Currabubula	North Wardell	Wallabadah.
Forest Reef	Pambula	

The agency at M'Guigan's was abolished.

In

In the Appendix is given a detailed return showing the number and amount of Money Orders issued and paid at each office in the Colony during the year. Appendix F.

The following returns are given for the purpose of showing the relative amount of business transacted between this Colony and the United Kingdom, and between this Colony and the various Australasian Colonies, viz. :—

RETURN showing the number and amount of Money Orders issued in New South Wales and made payable in the United Kingdom and the adjacent Colonies, during the year 1876, compared with the year 1875.

Where payable.	Issued in 1876.			Issued in 1875.			Increase, 1876.			Decrease, 1876.

The amount of revenue, in the shape of commission received on Money Orders, for the year 1876, was £4,688 6s.

The expenditure for salaries was £2,670, for contingencies £2,017 6s. 8d.

III.—GOVERNMENT SAVINGS' BANKS.

The following return will show the progress of the business of Government Savings' Bank system for the year 1876, compared with the transactions of the year 1875, viz. :—

Year.	Number of Government Savings' Banks in the Colony.	Number of Accounts opened.	Number of Accounts closed.	Number of Accounts remaining open on 31st Dec.	Total Deposits, including Interest.		Total Withdrawals.		Balance at credit of Depositors on 31st Dec.
					Number	Amount.	Number	Amount.	
1875	140	6,379	3,856	10,799	34,043	£ 280,147 1 11	11,532	£ 228,831 1 11	£ 354,429 2 11
1876	140	6,996	4,534	13,270	38,592	£ 298,403 17 1	14,729	£ 251,535 8 3	£ 401,297 11 9
Increase.....	9	617	678	2,471	4,549	£ 18,256 15 2	3,197	£ 22,704 6 4	£ 46,868 8 10

The amount of interest added to depositors' accounts was £13,364 5s. 1d.

The average amount of each deposit is about £7 14s. 7½d., and of each withdrawal £17 1s. 6½d.

The average amount at the credit of each depositor's account at the close of the year was £30 4s. 9¾d.

During the year 1876 the system was extended to the following places, viz. :—

Hay
Minmi
Moss Vale
Mount Victoria
North Wardell
Newcastle, at the Shipping Master's Office
Sydney, at the Shipping Master's Office
St. Mary's
Waverley

The branch office at M'Guigan's was discontinued.

A detailed return, showing the business transacted at each branch in the Colony, will be found in Appendix G & H. the Appendix, as also a statement of the Liabilities and Assets, with the Auditor General's certificate thereon.

For the purpose of showing the progress of this Department, a return of its business for each year since its organization is given in the Appendix.

IV.—ELECTRIC TELEGRAPH DEPARTMENT.

The following return shows the extent of and the business transacted on the Electric Telegraph Lines of this Colony during the year 1876, as compared with the year 1875 :—

Year.	Extent of Electric Telegraph Line Wire in actual use on 31st December.	Number of Electric Telegraph Stations on 31st December.	Number of Messages transmitted during the Year.	Total Revenue of Electric Telegraph Department.	Total Expenditure of Electric Telegraph Department, exclusive of Interest on cost of construction of Lines.
	Miles ch.			£ s. d.	£ s. d.
1875	7,972 51	139	718,512	48,657 18 2	60,754 12 4
1876	8,472 5	154	854,204	59,348 11 6	69,229 4 9
Increase.....	499 34	15	135,692	10,690 13 4	8,464 12 5

The

The lines of Electric Telegraphs in this Colony completed during the year 1876 were:—

	Distance.			Cost.		
	Miles	chains	links	£	s.	d.
St. Leonards to Manly Beach.....	7	0	0	524	18	9
Dubbo to Warren.....	69	73	0	2,279	0	10

St. Leonards to Hunter's Hill.....	7	0	0	114	15	0
Moama to Deniliquin.....	45	20	0	1,283	9	7
Total number of Miles.....	499	34	37			
Total Cost.....				£ 19,782	17	7

The total cost of the whole extent of Telegraphic communication in the Colony on 31st December, 1876, viz., 8,472 miles 5 chains, was £297,526 2s. 2d.

The following Telegraph Stations were opened during the year 1876:—

Hunter's Hill	Manly
Warren	Murrumburrah
Jerry's Plains	Goondawindi
Narrendera	Greenwell Point
Bateman's Bay	Molong
Waverley	Deepwater
La Perouse	South Creek.
Bodalla	

The following lines were in course of construction in 1876:—

Uralla to Walcha	Bourke to Rutherford's
Glen Innes to Vegetable Creek	Young to Morangarell
Glen Innes to Grafton	Brewarrina to Gadooga
Dungog to Seal Rocks	Yass to Queanbeyan
West Kempsey to Grafton	To connect Moree
Bourke to Wentworth	Hay to Booligal.

RETURN showing the number and value of Telegrams sent from each Station in the Colony, in the year 1876.

An important feature of the telegraphic progress of the year was the laying of Submarine Cable between this Colony and New Zealand, and the opening of communication on the 20th February.

The Submarine Cable between Port Darwin and Java having broken, it was deemed prudent to charter the steamer "Ly-ee-Moon" for the conveyance of telegrams between Port Darwin and Bangoe-wangie (in Java), connecting in this manner the Australian telegraph lines with those to Europe during the

the period the Cable was under repair. The "Ly-ee-Moon" left Sydney on the 5th July, made two round trips between Port Darwin and Banjoewangie, and returned to Sydney on the 13th September. Mr. Wm. Wilson, an officer of the New South Wales Telegraph Department, accompanied the vessel in charge of the Government business.

I have only to add, in conclusion, that it is gratifying to observe the general prosperity of the Colony manifested in the improved condition of all the departments whose progress during the year 1876 has been under review.

I have the honor to be

&c., &c., &c.,

SAUL SAMUEL,

Postmaster General.

General Post Office,
Sydney, 31 July, 1877.

APPENDIX.

A.

LIST of Post Offices on 31st December, 1876.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

POSTAL.

(MINUTE OF POSTMASTER GENERAL RESPECTING ALLEGED LATE DELIVERY OF LETTERS.)

Ordered by the Legislative Assembly to be printed, 6 June, 1877.

Minute of The Postmaster General.

Alleged Late Delivery of Letters in the City.

AFTER inquiry, made in consequence of the complaints of the late delivery of letters in some parts of the City, I am of opinion that, with a proper arrangement of the letter-carriers' "beats," and if ordinary expeditions were used by the carriers, the morning delivery could be completed, even in the remote parts of the City, by 11 o'clock.

In Brickfield Hill and Macquarie-street letters ought to be delivered by 10, or a quarter past at latest.

To complete a delivery much earlier than at present would necessitate the employment of a large number of extra carriers, and the result would be that, although the deliveries would be effected in a very short time, the carriers would not be fully employed; indeed, to divide the City into such a number of beats as could be traversed by the men so as to enable each of the three deliveries to be completed in an hour's time, would result in each carrier being employed for less than five hours a day.

An 8 o'clock delivery would require an entire re-arrangement of the railway time-tables, and oblige the residents of many of our principal country towns to post their letters for Sydney at least an hour earlier than they do at present. It is also considered, in view of the fact that the principal business houses do not open until 9 o'clock, whether a delivery at an earlier hour would be of service to them. Beyond these, no objections exist to an immediate adoption of the 8 o'clock delivery, if desired.

Pending a decision, however, on this point, I have this morning arranged that the delivery shall in future start from the head office at 8:45 A.M., excepting on those days on which the Suez mails arrive overland.

An earlier start than 8:45 A.M. from the General Post Office, unless preceded by an alteration of the railway trains, and despatches from the country, as before explained, would be impossible, as the country mails do not reach this office until about half-past 7 A.M. With a despatch from the head office at 8:45 A.M. sharp, the letter-carriers, if they use ordinary activity, ought to be able to complete the morning delivery by half-past 10, whilst the principal business portions of the City ought to be served by a quarter past 9, or half-past at the latest.

Mr. Cameron, I find, is mistaken in stating that there are not sufficient stampers and sorters. The number of these officials appear to be ample for present requirements.

Mr. Macintosh is also under a misapprehension in supposing that we have either not enough carriers, or that they have too much to do. The number of carriers employed, when the few extra ones applied for on the Estimates, to meet the usual gradual increase of work, are appointed, will also be ample under the present arrangements; and if more were employed they would not have sufficient work to do.

I am about issuing a circular, advising the public to have letter-boxes placed in their doors, and have directed that the receipts for registered letters be taken in coloured pencil (the pencil to be carried about by the carrier), instead of by pen and ink, supplied by the addressees, which detains the carriers.

With these arrangements I do not think there need be any reasonable ground for complaint, even if it be decided not to adopt the 8 o'clock delivery.

I contemplate the establishment of a fourth delivery of letters in the City. This will provide more employment for the men, and enable a larger number to be employed, by which means the beats will be shortened and the delivery of letters expedited. In order to carry out this arrangement Parliament would have to be asked to provide for the salaries of an extra number of men.

I may add, that the carriers who deliver in the more remote parts of the City, and in the suburbs, are conveyed by omnibus, at the cost of the Department, to the points at which their beats commence.

General Post Office, Sydney,

5th June, 1877.

SAUL SAMUEL.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MAIL CONVEYANCE BETWEEN SAN FRANCISCO AND
THE COLONIES.

(CLAIM BY AUSTRALASIAN STEAM NAVIGATION COMPANY FOR DEMURRAGE.)

*Ordered by the Legislative Assembly to be printed, 20 March, 1877.*Statement of the Postmaster General in reference to the claim of the Australasian
Steam Navigation Company for demurrage through their Steamers arriving at
San Francisco before their due dates.

IN December 1874, after repeated interviews and negotiations with the late Postmaster General (Mr. Samuel) and the Directors and Manager of the Australasian Steam Navigation Company, the following letter was addressed by the Company to the Postmaster General:—

“Australasian Steam Navigation Company,
“Sydney, 23 December, 1874.

“Sir,

“Referring to the verbal understanding arrived at between us for the continuance of the temporary Pacific Mail Service, I am instructed by my Board to place on record the terms of the arrangements, as they conceive them to exist.

“1st. Conditional on our being able to secure the steamers ‘Cyphrenes,’ ‘Mikado,’ and ‘Macgregor,’ for which an offer has been made to the owners by wire, we undertake to perform the service for a period of six months, at the rate of four thousand pounds per trip each way, payable on advice of arrival of steamer at San Francisco and return here, respectively.

“2nd. That we undertake to despatch a steamer from this port every 28th day from 16th January next, and otherwise to comply with the time-table agreed upon, copy of which is annexed, with the exception that in case of accident to ship or machinery, we are not to be bound to sail according to time-table from San Francisco. See Appendix A.

“3rd. As the ‘Macgregor’ cannot arrive here in time to be despatched on the 16th January, we propose to commence the service with the steamship ‘City of Melbourne’ on that date, and continue the same with the boats named in the time-table.

“4th. In the event of any of these boats being unable from any cause whatever to perform the work allotted to them, we will provide others of equal capacity, if procurable, or despatch steamers from our own fleet in lieu thereof.

“5th. The Company will perform the service with the boats named with the utmost despatch, but do not propose to be bound to time in performance of the voyages.

“6th. It is understood that the Government will concede to the Company the free use of the dock and machinery at Cockatoo, together with the usual privileges of port dues, &c., in this port and in New Zealand.

“7th. Should the steamers be detained at San Francisco beyond the stipulated time by the Government, it is agreed that they shall reimburse the Company the exact cost of such detention.

“I have, &c.,

“FRED. H. TROUTON.”

The time-table provided for the detention of the steamers at San Francisco for eleven days, and it will be observed from the above letter that the only stipulation made by the Company up to this period having any relation to demurrage was, that in the event of the steamers being detained by the Government beyond the stipulated time of departure from San Francisco, the Company were to be reimbursed the actual cost of such detention. To the letter of 23rd December from the Company the following reply was sent:—

“General Post Office,
“Sydney, 24 December, 1874.

“Sir,

“In reply to your letter of yesterday’s date, I am directed to inform you that the Postmaster General agrees to the terms and conditions therein proposed, with the following exceptions:—

- “1. That in lieu of the second condition proposed by you, the Company shall convey the mails under a time-table to be fixed by the Postmaster General, the Postmaster General agreeing, however, that any time-table he may fix shall not provide for a longer detention of the steamer than twelve days at San Francisco. “2.

* error—should be "seventh."

"2. In lieu of the *second** condition proposed by you, that in the event of a longer detention than "twelve days being on any occasion necessary by reason of the non-arrival of the English mails at San Francisco, or otherwise, at the instance of the Postmaster General, the Company shall be paid for such detention at the rate of £3,000 per lunar month.

"With reference to these exceptions, the Postmaster General directs me to state that, should any time-table be fixed by him providing for a *less* stoppage at San Francisco than twelve days, he is willing to agree that the Company shall be at liberty, if they require it on any occasion, to remain the full period of twelve days.

"With reference to the sixth condition proposed by you, Mr. Samuel is unable to answer for New Zealand in the matter of port dues, &c., but so far as this Colony is concerned he agrees to the condition.

"I have, &c.,

"S. H. LAMBTON."

To this letter the following reply was received:—

"The Manager, Australasian Steam Navigation Company, to The Postmaster General, Sydney.

"Australasian Steam Navigation Company,

"Sydney, 24 December, 1874.

"Sir,

"I have had the honor to receive your letter of this day's date, respecting a continuance of the San Francisco Mail Service, under the modifications contained therein, and in reply beg to say that on behalf of the Company I agree to the same.

"I have, &c.,

"FRED. H. TROUTON."

Attention is drawn to three important facts bearing upon the question now at issue; first, that up to this period the Company expressed to the Government no intention of claiming demurrage, unless the steamers were detained by *reason of the non-arrival of the English mails* at San Francisco, or otherwise, at the instance of the Postmaster General; secondly, that it was only in the event of a detention beyond the twelve days being necessary *in consequence of the non-arrival of the English mails*, or otherwise, at the Postmaster General's instance, demurrage was to be claimed; and thirdly, that no demurrage claimed by the Company for detention under such circumstances, viz., the non-arrival of the English mails, has been disputed by the Postmaster General. There has been no detention at the instance of the Postmaster General beyond the dates specified in the time-table, otherwise than owing to the non-arrival of the English mail.

Appendix B.

The Crown Solicitor prepared an agreement based upon the above correspondence, and appended is the time-table approved by the Postmaster General in terms thereof.

The foregoing facts and the dates mentioned in the time-table for the steamer's arrival at San Francisco call for special consideration. There is no doubt that the Company's claim hinges on the interpretation of the 4th and 11th clauses of the contract, *i.e.*, whether the Company are entitled to claim demurrage for the arrival of their steamers at San Francisco before the stipulated dates, or, in other words, whether they are to receive premiums for early arrivals. I am informed that penalties and premiums were proposed by Mr. Samuel, but that they were objected to by the Company, and therefore no provision was made in the contract for one or the other.

Appendix C.

The agreement itself is appended.

Appendix D.

Appended is also a statement giving particulars of the Company's claims for demurrage in respect of those vessels in connection with which any dispute has arisen, showing the amounts claimed by the Company, the amounts admitted, and the sum in dispute, the latter amounting to £1,392 17s. 2d.

In order to illustrate the nature of the Company's claim, the first case—that of "City of Melbourne"—will suffice, and may be briefly stated as follows:—

This vessel was due at San Francisco under the time-table on 18th February, and, according to time-table should have left there on the 1st March, being a detention of eleven days, but she actually arrived on the 14th, being four days in advance of time, and was "detained for mails" until 3rd March, being a "detention by reason of the non-arrival of the English mail" of one day in excess of the twelve days specified in the contract. For this one day payment has been offered to the Company, but they claim four days additional for their arrivals at San Francisco before time, and they make their claim under the 11th clause of the contract, which is as follows:—

"11. If at any time during the continuance of this contract a mail steamer shall be detained at the Port of San Francisco by the Postmaster so acting for mails beyond the period of twelve days from the time of her arrival in the said Port of San Francisco, the Company shall be paid for such detention beyond the period of twelve days at and after the rate of £3,000 per lunar month."

So far as regards the case above alluded to, and the claim in connection with the trips of the "Mikado," it is admitted that the clause is not altogether free from doubt as to the correct interpretation, and hence it is submitted that it should be read in connection not only with the 4th clause of the contract (*see note below*) but with the correspondence showing the understanding on both sides, and which correspondence was intended by both parties as the foundation of the contract.

The Company appear to think that under this clause, viz., the 11th, they are entitled to claim demurrage for *whatever period* in excess of twelve days may intervene between the *actual* date of the steamers' departure and the date of their arrival at the Port of San Francisco.

NOTE.—4. That upon arrival at the Port of San Francisco, on her voyage from Sydney as aforesaid, each of the said steamships shall remain at the said port for such time as the said Postmaster General of the said Colony of New South Wales shall have appointed in that behalf in and by the said time-table, not exceeding twelve clear days, and shall apply to the Postmaster at the Port of San Francisco, and shall receive from him, on board the said steamship, all mails required to be sent to the said Ports of Sydney, Honolulu, and Auckland, at any time before the day fixed by the said Postmaster General of the Colony of New South Wales and the Postmaster General of the Colony of New Zealand, in and by the said time-table, for the departure of each of the said steamships, on her return voyage by way of Honolulu to the Port of Auckland and Port of Sydney as aforesaid, and shall carry and convey in and on board the said steamship all the mails for Honolulu to Honolulu, and the mails for Auckland to Auckland, and all the mails for the Port of Sydney to the said Port of Sydney, and shall well and safely deliver the same to the Postmaster at each of the said ports, or to other the person by law entitled to receive the same, upon their arrival in the said respective ports: Provided that, if they shall think fit, it shall be lawful for the Company in case of need to keep any or all of the said steamers at the Port of San Francisco for the full period of twelve days, as herein-after mentioned.

steamers' arrival and the *actual date* of their departure, but it is urged by the Department that payment for detention of the steamers can only count from the expiration of twelve days from the *specified date* of arrival. A detention of one day is admitted by the Department in the case of the "City of Melbourne's" first trip, and of four days in the case of the "Mikado's" first trip. In the case of the "Mikado's" second trip there was a detention of one day beyond the time-table departure date, but such detention only made up the twelve days from the specified date of arrival as provided in the contract.

In the case of the "City of Melbourne's" second trip, she left San Francisco on the specified date, and in this case in particular it is contended that the Company have no claim. Under the 11th clause there must, in order to justify a claim for extra payment by the Company, have been a detention "at the Port of San Francisco by the Postmaster so acting for mails," whereas, in the case of the "City of Melbourne's" second trip there was no detention whatever; the 4th clause provides that the mails shall be carried under a time-table, to be fixed by the Postmaster General; this time-table fixed the 21st June as the date of departure from San Francisco, the steamer left on the 21st June, and when a steamer leaves on the appointed day there can be no detention. In the other three cases there was a detention for mails, and as before stated, the Department has paid, or is prepared to pay, for such detention, that is for all detentions in excess of twelve days from the dates fixed in the time-table for the steamer's arrival.

Copy of the correspondence with the Company is appended. It will be seen therefrom that the Company alleged that it was understood between themselves and the late Postmaster General, Mr. Samuel, that the extra payment of £3,000 per lunar month was to count from the date of the actual arrival of the steamers, and that this was purposely intended as an incentive to quick passages, but Mr. Samuel, on being referred to, denied this in the following statement:—

* * * * *

"I considered, and still consider, that the twelve days allowed for detention at San Francisco were those provided for in the time-table, and I am confirmed in this belief by the fact that I perfectly recollect that the Company refused to submit to any penalties for late arrivals, and I consequently refused to allow any premiums for arrivals before time to be inserted in the agreement, stipulating that the voyage should be performed with the utmost despatch possible.

"I can only look upon the claim made by the Company as one for premiums for early arrivals, to which I consider they are not entitled."

Sydney, 5th May, 1876.

J. F. BURNS.

APPENDIX C.

MAIL CONVEYANCE BETWEEN SAN FRANCISCO AND THE COLONIES.

(Agreement between the Postmasters General of the Colonies of New South Wales and New Zealand and the Australasian Steam Navigation Company for seven voyages commencing in January, 1875.)

ARTICLES OF AGREEMENT, made and entered into this ninth day of February, in the year of our Lord one thousand eight hundred and seventy-five, between the Australasian Steam Navigation Company (incorporated by Act of Parliament of New South Wales, passed in the fifteenth year of the reign of Her Majesty Queen Victoria), hereinafter designated and referred to as "The Company" of the first part,—the Honorable Saul Samuel, the Postmaster General of the Colony of New South Wales, as such Postmaster General, and acting herein for and on behalf of the Government of the said Colony, of the second part,—and the Honorable Julius Vogel, the Postmaster General of the Colony of New Zealand, as such Postmaster General, and acting for and on behalf of the Government of the same Colony, of the third part :

WITNESS that the Company hereby covenants with the said Postmaster General of the Colony of New South Wales and his successors, and with the said Postmaster General of the Colony of New Zealand and his successors, and as a separate covenant with each of the said Postmasters General and his successors,—

1. That the Company shall and will carry and convey all and every Her Majesty's Mails which the Postmaster General of the Colony of New South Wales shall be desirous of sending from Sydney to Auckland, Honolulu, and San Francisco respectively; and all mails which the Postmaster at the port of San Francisco shall be desirous of having conveyed to Honolulu, Auckland, and Sydney, respectively; and the Postmaster at Honolulu shall be desirous of having conveyed to Auckland and Sydney respectively on the return voyage; and also all mails which the Postmaster General of New Zealand shall be desirous of having conveyed from Auckland to Honolulu and San Francisco, and which the Postmaster at San Francisco and Honolulu shall desire to be conveyed to Auckland on the return voyage from San Francisco; and all mails from Auckland on the return voyage to Sydney, for seven voyages from Sydney to San Francisco by the way of and calling at Auckland and Honolulu; and for seven return voyages from San Francisco to Sydney by the way of and calling at Honolulu and Auckland, upon the days and times, and by the steamships, and in manner as hereinafter mentioned, and shall and will perform the said voyages within the times hereinafter mentioned, that is to say—the first voyage under this agreement having commenced by the departure of the steamship "City of Melbourne" on the sixteenth day of January last with the month's mails, to Auckland, Honolulu, and San Francisco.

2. The Company shall and will have each and every of the steamships the "Macgregor," the "Mikado," the "Cyphrenes," and the "City of Melbourne" properly furnished and provided with all engines, apparel, furniture, stores, tackle, boats, fuel, lamps, oil, and all other stores, charts, chronometers, nautical instruments, and whatever else may be requisite for the equipment of the said ships for a voyage from the Port of Sydney to the Port of Auckland, and thence to the Port of San Francisco, by way of and calling at Honolulu, and for a return voyage from the Port of San Francisco to the Port of Auckland by way of and calling at Honolulu, and from Auckland aforesaid to the Port of Sydney aforesaid, and also manned and provided with a competent and duly qualified master and other officers and with a sufficient number of engineers and a sufficient crew of able seamen and other men, and prepared and ready in all things to leave their moorings in the Port of Sydney, and proceed on the voyage from the said Port to the Port of Auckland and thence to the Port of San Francisco by way of and calling at Honolulu upon the days and times following, that is to say:—That one of such vessels so approved, equipped, and manned as aforesaid, shall, during the continuance of this contract, leave the Port of Sydney every four weeks, according to a time-table to be fixed and agreed upon by the Postmaster General of New South Wales, either solely or in conjunction with the Postmaster General of New Zealand.

3. That one of the said steamships, the "Macgregor," the "Mikado," the "Cyphrenes," and the "City of Melbourne," so equipped and manned as aforesaid, shall receive and take on board at Sydney all and every Her Majesty's Mails which the Postmaster General of the Colony of New South Wales shall on the said several days appointed in and by the said time-table for the departure from the said Port of Sydney of the said several steamships, place on board the said steamships to be conveyed from the Port of Sydney aforesaid, to the several ports of Auckland, Honolulu, and San Francisco aforesaid, and shall proceed on her said voyage from the said Port of Sydney to Auckland, and thence to San Francisco, by way of and calling at Honolulu at the day and at the hour appointed in the said time-table for the departure of a mailship upon the said voyage, and upon arrival at Auckland shall deliver the mails placed on board to be carried to Auckland to the Postmaster there, and shall receive and take on board at Auckland all and every Her Majesty's Mails which the Postmaster General of the Colony of New Zealand shall place on board to be carried and conveyed to Honolulu and San Francisco respectively, and that the master of each of the said steamships shall, on arrival at the Port of Auckland upon each and every of the said voyages, immediately land the mails intended to be landed there, and shall with all possible dispatch, upon receipt of the mails to be placed on board the said steamship at Auckland aforesaid, proceed on the voyage from Auckland aforesaid: Provided that it shall be lawful for the Postmaster General of New Zealand to detain any of the said steamships for any time not exceeding twenty-four hours after notice of its arrival shall have been given to the Postmaster at Auckland, to enable him to make up and place on board the said steamship the mails intended to be carried and conveyed from Auckland aforesaid on the said voyage; and that each and every of the said steamships, upon arrival at the Port of Honolulu upon any of the said voyages, shall remain a sufficient and reasonable time to allow the mails intended to be conveyed thence to San Francisco to be made up and placed on board the said steamship, and shall receive and take on board at Honolulu all mails intended to be carried thence to San Francisco.

4. That, upon arrival at the Port of San Francisco, on her voyage from Sydney as aforesaid, each of the said steamships shall remain at the said port for such time as the said Postmaster General of the said Colony of New South Wales shall have appointed in that behalf in and by the said time-table, not exceeding twelve clear days, and shall apply to the Postmaster as the Port of San Francisco, and shall receive from him, on board the said steamship, all mails required to be sent to the said Ports of Sydney, Honolulu, and Auckland, at any time before the day fixed by the said Postmaster General of the Colony of New South Wales and the Postmaster General of the Colony of New Zealand, in and by the said time-table, for the departure of each of the said steamships, on her return voyage by way of Honolulu to the Port of Auckland and Port of Sydney as aforesaid, and shall carry and convey in and on board the said steamship all the mails for Honolulu to Honolulu, and the mails for Auckland to Auckland, and all the mails for the Port of Sydney to the said Port of Sydney, and shall well and safely deliver the same to the Postmaster at each of the said ports, or to other the person by law entitled to receive the same, upon their arrival in the said respective ports: Provided that, if they shall think fit, it shall be lawful for the Company in case of need to keep any or all of the said steamers at the Port of San Francisco for the full period of twelve days, as hereinafter mentioned.

5. In the term "mails," to be carried on the said voyages as aforesaid, all boxes, bags, or parcels of letters, newspapers, books, or printed papers, and all other articles transmissible by the post, without regard to the place or places in which they may originate, and all empty bags, empty boxes, and other stores and articles used or to be used in connection with the said mails, shall be considered to be comprehended.

6. That the said steamships shall make each of the said voyages from the Port of Sydney to the Port of San Francisco with the utmost despatch, and as nearly as may be within seven hundred and ninety-two hours, including all stoppages and detention, and so that all mails put on board the said steamships at the respective ports of Sydney, Auckland, and Honolulu aforesaid by the said several steamships, shall be delivered at the Post Office at the Port of San Francisco within as nearly as may be seven hundred and ninety-two hours, including detention and stoppage at Auckland and Honolulu from the time of the said steamship's departure from the Port of Sydney on the said voyage; nevertheless, should such voyages be prosecuted with due diligence payments will be made as hereinafter provided, notwithstanding the provision as to the voyages being made within a specified time; and shall make each and every of the said return voyages from San Francisco to the port of Sydney aforesaid within as nearly as may be the like period of seven hundred and ninety-two hours, including detention and stoppage at Honolulu and Auckland, so that the mails put on board the said several steamships on their respective voyages from the Port of San Francisco, to be carried to the Port of Sydney, shall be carried and delivered at the General Post Office, in the City of Sydney, within seven hundred and ninety-two hours, including detention and stoppage at Honolulu and Auckland from the time of the said steamship's departure from the Port of San Francisco on the said voyages.

7. On each of the said voyages to San Francisco the Postmaster General of the Colony of New South Wales will deliver the mails to be carried from the Port of Sydney; the Postmaster General of the Colony of New Zealand, the mails to be carried from the Port of Auckland; and the Postmaster of Honolulu, the mails to be carried from Honolulu into the charge and custody of the master of the steamship by which the said mails are to be conveyed on board his vessel; and the said

said master shall without any charge other than that herein provided to be paid to the Company, take charge and care of, and the Company shall be responsible for the receipt, safe custody, and due delivery at the respective times at which they are intended to be delivered, of all and every the mails so placed on board of each of the said steamships as aforesaid, as the case may require. And the said master shall take the usual declaration required upon the delivery of a mail to the master of a vessel, and furnish such returns and perform such services in relation thereto as the Postmaster General of the Colony of New South Wales shall require in respect of mails sent from or received at the Port of Sydney, and as the Postmaster General of the Colony of New Zealand shall require in respect of mails sent from the Port of Auckland. And the master of each of the said steamships immediately upon its arrival at the Ports of Auckland, Honolulu, and San Francisco respectively, upon any of the voyages aforesaid, shall deliver from the ship's side all the mails to be delivered at the said ports respectively to the Postmaster of the said respective ports, or to such other person as each of them the said Postmasters respectively shall in respect of the mails to be delivered to him duly authorize to receive the same. And in the like manner upon each of the return voyages from San Francisco, calling at Honolulu and Auckland as aforesaid, the master of each of the said steamships shall receive on board the said steamship from the Postmaster at San Francisco, and take charge and custody of all mails required to be forwarded from San Francisco to the respective ports of Honolulu, Auckland, and Sydney, and shall receive and take on board at Honolulu all mails intended so to be sent from thence to the Ports of Auckland and Sydney respectively. And shall also receive and take on board at Auckland all mails intended to be sent from thence to the Port of Sydney; and shall safely carry and convey all and every the said mails to the several ports at which they are to be delivered; and shall, upon arrival at each of the said respective ports, immediately deliver from the ship's side to the Postmaster, or other person authorized by him to receive the same, the mails intended to be delivered at such port. And shall duly make all declarations and sign all receipts for the mails as may be required by law, or by the custom of the place at which the same shall be put on board the said steamship, or delivered therefrom. And "the Company" shall be responsible for the receipt, safe custody, and carriage of all mails put on board each of the said steamships on each of the said return voyages from the Port of San Francisco to the Ports of Honolulu, Auckland, and Sydney, and for the due delivery at each of the said ports of the mails to be carried and conveyed, and delivered at each of the said ports. The act of God, the Queen's enemies, pirates, fire, and all perils of the sea excepted.

8. If the Company are unable to despatch upon any of the said voyages any one of the said steamships, the "Macgregor," the "Mikado," the "Cyphrenes," or the "City of Melbourne," "the Company" shall instead despatch another steam-vessel of equal capacity, if such a vessel can be procured by "the Company" on reasonable terms; and if such a vessel cannot be so procured, "the Company" may despatch one of their own steamships, the steam-vessel so to be despatched to be approved of by the Postmaster General of New South Wales in that behalf, in which event all and every these presents shall be read and considered as if the name of the steamship which may be substituted as aforesaid had been written in place of the vessel in place of which it is substituted. It being, however, hereby expressly declared that the foregoing proviso is not to be read or considered in any way as giving "the Company" the option of sending at their own will and pleasure any steamship in the place and stead of either of the said steamships, the "Macgregor," the "Mikado," the "Cyphrenes," or the "City of Melbourne," but only that "the Company" may do so if absolutely prevented from dispatching any one of the said steamships, the "Macgregor," the "Mikado," the "Cyphrenes," or the "City of Melbourne," on any voyage upon which one of such steamships should have been despatched under the agreement, by causes over which the Company have no control.

9. And in consideration of the due and faithful performance by the Company of all the services hereby agreed to be by the said Company performed, the said Postmaster General of the Colony of New South Wales, and the said Postmaster General of the Colony of New Zealand, do, and each of them doth, for and on behalf of himself respectively, as such Postmaster General and his successors respectively, and of the Government of the Colony for which he is now respectively the Postmaster General, but so far only as the agreements herein contained are to be observed by or are applicable to the Governments of the said Colonies respectively, or as to payments to be made by the Government of the Colony for which he is the Postmaster General, doth hereby covenant with the Company that there shall be paid by the Postmaster General of the Colony of New South Wales to the Company for the Mail Services to be rendered by the Company in carrying to and from the ports of departure and the ports of call beforementioned, on each and every of the said voyages, from Sydney to San Francisco, and from San Francisco to Sydney, calling at the said intermediate ports as hereinbefore mentioned, the sum of £4,000 for each voyage. And that such payment shall be made as follows, that is to say:—For the voyage from Sydney, calling at Auckland and Honolulu, to San Francisco, upon proof of the due arrival of the vessel at San Francisco being received by the said Postmaster General of New South Wales. And that the payment for the voyages from San Francisco to Auckland and Sydney, by way of Honolulu, shall be made upon the arrival of the said steamship at the Port of Sydney upon her return voyage from San Francisco, calling at Honolulu and Auckland as aforesaid.

10. If in the time-table to be fixed and determined by the Postmaster General of New South Wales, as hereinbefore mentioned, the time for the mail steamer remaining at San Francisco shall be less than twelve days from the day of her arrival thereat, the Company shall be at liberty, if it is absolutely necessary, but not otherwise, to detain such steamer for a period of time equal to twelve days from the day at which the said steamship on that voyage to San Francisco should in accordance with the said time-table have arrived in the said Port of San Francisco.

11. If at any time during the continuance of this contract a mail steamer shall be detained at the Port of San Francisco by the Postmaster so acting for mails beyond the period of twelve days from the time of her arrival in the said Port of San Francisco, the Company shall be paid for such detention beyond the period of twelve days at and after the rate of £3,000 per lunar month.

12. That so long as this Contract shall be faithfully carried out by the Company, no charge for pilotage, tonnage, light-house or harbour dues shall be made in New South Wales or New Zealand for any of the steam-vessels employed in carrying out this Contract. And "the Company" shall be at liberty to have the free use of the Fitz Roy Dock and workshops and machinery at Cockatoo Island, at Sydney, if not otherwise occupied, for a period not to exceed five days, on the completion of each voyage from San Francisco to Sydney.

13. And it is hereby further declared that the payments hereby mentioned to be paid to "the Company" shall be received by the "Company" in full compensation for all services rendered by the "Company" in respect of the matters aforesaid, and for all costs and expenses which it may incur or be put unto by reason or on account of all and singular the services in and about the carrying out, or in any way arising out of or rendered in carrying out, the services hereby contracted to be performed, whether such services shall or shall not be herein particularly mentioned.

In witness whereof, the Australasian Steam Navigation Company has caused its common seal to be hereunto affixed, and the said Saul Samuel, as such Postmaster General, on behalf of himself and his successors as Postmasters General of the said Colony, and of the Government of the said Colony, and the said Julius Vogel as such Postmaster General of the Colony of New Zealand, and his successors as Postmasters General of the Colony of New Zealand, and of the Government of the said Colony of New Zealand, have respectively hereunto set their hands and seals, the day and year first before written.

The common seal of the Australasian Steam Navigation Company was duly affixed hereto by the Board of Directors, in the presence of,— (L.S.)

FRED. A. PHILLIPS.
F. H. TROUTON.

And—

Signed, sealed, and delivered by the said Saul Samuel, in the presence of,— SAUL SAMUEL.
S. H. LAMBTON. } As Postmaster General for the Colony of New South Wales. (L.S.)

Signed, sealed, and delivered by the Honorable Saul Samuel, acting for the Postmaster General of the Government of New Zealand, under authority of letter of date 24th, 1874, in the presence of,— THOMAS RUSSELL.
S. H. LAMBTON. } Acting for the Postmaster General of the Government of New Zealand. By SAUL SAMUEL. (L.S.)

APPENDIX D.

STATEMENT showing the amount claimed by the Australasian Steam Navigation Company as demurrage, and the amount admitted as due by the Department,—the balance giving the amount in dispute.

Ship.	Total amount claimed by the A. S. N. Co.	Amount admitted as due.	Balance in dispute.
"City of Melbourne" Arrived San Francisco 14th February, due under time-table 18th February, left San Francisco 3rd March, ought to have left under time-table 1st March. Company claims five days. Government admit one day.	£ s. d. 535 14 3	£ s. d. 107 2 10	£ s. d. 428 11 5
"Mikado"..... Arrived San Francisco 11th April, due under time-table 16th April, left San Francisco 1st May, ought to have left under time-table 25th April. Company claims eight days. Government admit four days.	857 2 10	428 11 5	428 11 5

	£ 1,928 11 5	535 14 3	1,392 17 2

Total amount in dispute—£1,392 17s. 2d.

APPENDIX E.

SCHEDULE.

1. Australasian Steam Navigation Company, Sydney, to the Secretary, General Post Office, Sydney, dated 7th July, 1875.
2. Australasian Steam Navigation Company, Sydney, to the Colonial Treasurer, Sydney, dated 23rd July, 1875, and enclosing a statement of account for demurrage.
3. Australasian Steam Navigation Company, Sydney, to the Secretary, General Post Office, Sydney, dated 14th October, 1875.
4. Australasian Steam Navigation Company, Sydney, to the Secretary, General Post Office, Sydney, dated 13th December, 1875.
5. Secretary, General Post Office, Sydney, to the Honorable Saul Samuel, C.M.G., M.L.C., Sydney, dated 8th December, 1875.
6. Honorable Saul Samuel, C.M.G., M.L.C., to the Secretary, General Post Office, Sydney, dated 17th December, 1875.
7. Australasian Steam Navigation Company, Sydney, to the Postmaster General, Sydney, dated 12th January, 1876.
8. Secretary, General Post Office, Sydney, to Australasian Steam Navigation Company, Sydney, dated 11th February, 1876.
9. Australasian Steam Navigation Company, Sydney, to the Postmaster General, Sydney, dated 10th February, 1876.
10. Secretary, General Post Office, Sydney, to the Australasian Steam Navigation Company, Sydney, dated 19th February, 1876.
11. Australasian Steam Navigation Company, Sydney, to the Postmaster General, dated 23rd February, 1876.
12. Secretary, General Post Office, Sydney, to the Manager, Australasian Steam Navigation Company, dated 8th March, 1876.

(1.)

The Secretary, Australasian Steam Navigation Company, to The Secretary, General Post Office, Sydney.

Australasian Steam Navigation Company,
Sydney, 7 July, 1875.

Sir,

Referring to the accounts due to this Company for premium for detention of steamers at San Francisco in connection with Mail Service, I do myself the honor to inform you that the Board of Directors are prepared to leave the question in dispute to the sole arbitration of Mr. Alexander Stuart, if the Honorable the Postmaster General be willing to adopt that course, and that in the meantime we are agreeable to take as a payment on account such sum as the Postmaster General admits to be due to the Company.

I have, &c.,
FRED. PHILLIPS,
Secretary.

(2.)

The Manager, Australasian Steam Navigation Company, Sydney, to The Colonial Treasurer, Sydney.

Australasian Steam Navigation Company,
Sydney, 23 July, 1875.

Sir,

I shall feel obliged by your paying the bearer, Mr. J. U. C. Colyer, the sum of £535 14s. 3d., being the amount admitted by the Government as due to this Company in respect to the detention of the "City of Melbourne," March last, at San Francisco, £107 2s. 10d., and of the "Mikado" at same port in April last, £428 11s. 5d., leaving for future settlement the difference between the amounts now stated and those claimed by the Company, viz.: £535 14s. 3d., and £857 2s. 10d. respectively.

Yours, &c.,
FREDK. H. TROUTON,
Manager.

Demurrage for detention at San Francisco.

	£ s. d.	£ s. d.
<i>City of Melbourne</i> .—Arrived at San Francisco on 14th February, due date as per time-table 18th February, left San Francisco on 3rd March, ought to have left as per time-table 1st March.

(3.)

The Secretary, Australasian Steam Navigation Company, Sydney, to The Secretary, General Post Office, Sydney.
Australasian Steam Navigation Company,
Sydney, 14 October, 1875.

Sir,

Referring to the claim of this Company upon the Government for premiums earned by vessels engaged in the San Francisco Mail Service, I do myself the honor, under instructions from the Directors, to inquire whether the Honorable the Postmaster General is willing to proceed to arbitration, and if so, when it will suit his convenience.

I am also to add, that the Company is willing to leave the matters in question to the sole arbitration of Alexander Stuart, Esq.

I have, &c.,
FREDK. PHILLIPS,
Secretary.

(4.)

The Secretary, Australasian Steam Navigation Company, Sydney, to The Secretary, General Post Office, Sydney.
Australasian Steam Navigation Company,
Sydney, 13 December, 1875.

Sir,

With reference to the claim which this Company have upon the Government for premiums in connection with the San Francisco Mail Service, I have the honor, at the instance of my Directors, to request the favour of a reply to my communications on the subject, under date of 7th July and 14th October, copies of which are enclosed herein, and to say that the Board will feel much obliged by the Honorable the Postmaster General's early decision thereon.

I have, &c.,
FREDK. PHILLIPS,
Secretary.

(5.)

The Secretary, General Post Office, Sydney, to The Honorable Saul Samuel, C.M.G., M.L.C., Sydney.
General Post Office,
Sydney, 6 December, 1875.

Sir,

I am directed to inform you that the Directors of the Australasian Steam Navigation Company are urging the settlement of a claim they have made under the 11th clause of the agreement entered into by them on the 9th February, 1875, copy of which I enclose, for demurrage on all occasions when it has happened that the mail packet has been detained at San Francisco a longer period than twelve days, calculated from the respective dates of arrival of the packets at that place, notwithstanding that such dates of arrival have been before the dates stipulated in the time-table approved for the regulation of the Mail Service.

Mr. Burns desires me to state that the 11th clause of the agreement in question does not appear to him to be open to the construction put upon it by the Australasian Steam Navigation Company, and that he is not disposed to sanction the payment of this claim,—but as it has been represented by the Company that the right to demand demurrage in the manner now claimed was a subject matter of discussion with you as Postmaster General, when the contract was negotiated, and that you specially pointed out to the Company that an incentive to the making of quick passages would be afforded by the operation of the 11th clause permitting a claim to be made for demurrage for the period that intervened between the time of the actual arrival and the time of the arrival specified in the time-table, Mr. Burns will be glad if you will, at your earliest convenience, kindly inform him whether these representations are correct.

I have, &c.,
S. H. LAMBTON,
Secretary.

(6)

The Honorable Saul Samuel, C.M.G., M.L.C., Sydney, to The Secretary, General Post Office, Sydney.
Sydney, 17 December, 1875.

Sir,

I have the honor to acknowledge receipt of your letter, dated the 6th December, and in reply request you will be good enough to inform the Postmaster General that I conceive it is scarcely within my province to express an opinion as to the precise legal bearing of the written agreement made with the Australasian Steam Navigation Company for the temporary Mail Service between this Colony and San Francisco. The document having been prepared in the Crown Law Department, the legal interpretation of clause 11 can, I think, be better ascertained by its being referred to the Crown Law Officers for their opinion. I beg, however, to state that the agreement in question was arrived at after numerous interviews and much discussion between the Manager, one of the Directors of the Australasian Steam Navigation Company, and myself, and that I am quite unconscious of any such understanding with regard to the demurrage being calculated as stated to you by the Australasian Steam Navigation Company. I considered and still consider that the twelve days allowed for detention at San Francisco were those provided for in the time-table, and I am confirmed in this belief by the fact that I perfectly recollect that the Company refused to submit to any penalties for late arrivals, and I consequently refused to allow any premiums for arrival before time to be inserted in the agreement, stipulating that the voyage should be performed with the utmost despatch possible.

I can only look upon the claim made by the Company as one for premiums for early arrivals, to which I consider they are not entitled.

I am, &c.,
SAUL SAMUEL.

(7.)

The Manager of the Australasian Steam Navigation Company to The Postmaster General, Sydney.
Australasian Steam Navigation Company,
Sydney, 12 January, 1876.

Sir,

As several communications to your department respecting this Company's claim for premiums in connection with the San Francisco Mail Service remain unanswered, I do myself the honor, under instructions from my Board, respectfully to beg the favour of a reply thereto as early as possible.

I have, &c.,
FREDK. H. TROUTON,
Manager.

(8.)

(8.)

The Secretary, General Post Office, Sydney, to The Manager of the Australasian Steam Navigation Company, Sydney.
General Post Office,
Sydney, 11 February, 1876.

Sir,

I am directed to acknowledge the receipt of your letter on the subject, dated the 12th ultimo, and to state that the Postmaster General cannot accede to the claim of your Board for demurrage in respect of the detention of the Company's vessels at San Francisco, while under contract for the conveyance of mails, excepting for the time the vessels were detained for mails beyond the period of twelve days from the specified date of arrival at San Francisco.

I have, &c.,
S. H. LAMBTON,
Secretary.

(9.)

The Assistant Manager of the Australasian Steam Navigation Company, Sydney, to The Postmaster General, Sydney.
Australasian Steam Navigation Company,
Sydney, 10 February, 1876.

Sir,

As all the Company's efforts to effect an amicable settlement of the claim which it has upon the Government for demurrage at San Francisco of the steamers "Mikado" and "City of Melbourne" have proved unavailing, I am directed most respectfully to request permission to sue the Government therefor; at the same time, however, I am to assure you that this course would be extremely distasteful to the Directors, who are still prepared to abide by the sole arbitration of any gentleman whom the Government and this Company may select, and with this view my Directors would be glad if the Government would nominate some person for the purpose.

I have, &c.,
WM. WILLIAMS,
Assistant Manager.

(10.)

The Secretary, General Post Office, Sydney, to The Manager of the Australasian Steam Navigation Company, Sydney.
General Post Office,
Sydney, 19 February, 1876.

Sir,

I am directed to acknowledge the receipt of your letter dated 10th instant, further on the subject of the claim of your Company for demurrage in respect of the detention at San Francisco of the steamers "Mikado" and "City of Melbourne," while under contract for the conveyance of mails to and from that port.

In reply, I am to inform you that the Postmaster General considers that the least objectionable course to be pursued is to submit the case to arbitration in the usual manner. I am to state, however, that in consenting to the proposal for arbitration, the Government must distinctly exclude the inference that the claim which has been made is in any way admitted.

I have, &c.,
S. H. LAMBTON,
Secretary.

(11.)

The Manager of the Australasian Steam Navigation Company, Sydney, to The Postmaster General, Sydney.
Australasian Steam Navigation Company,
Sydney, 23 February, 1876.

Sir,

I have had the honor to receive your letter of the 19th instant, and beg to thank you for your acquiescence in the submission to arbitration of the Company's claim for demurrage of the steamers "City of Melbourne" and "Mikado."

I am encouraged to suggest that the agency of the Chamber of Commerce be employed in this matter, as their decisions are favourably viewed by the mercantile public, and from the arbitrators being chosen by their own body there can be no possibility of favour being shown.

I have, &c.,
FREDK. H. TROUTON,
Manager.

(12.)

The Secretary, General Post Office, Sydney, to The Manager of the Australasian Steam Navigation Company, Sydney.
General Post Office,
Sydney, 8 March, 1876.

Sir,

I am directed to acknowledge the receipt of your letter of the 23rd ultimo, and in reply to inform you that the Postmaster General has approved of your claim for demurrage of the "City of Melbourne" and "Mikado" being referred for arbitration in the manner proposed in your letter above quoted.

I have, &c.,
S. H. LAMBTON,
Secretary.

MEMO.—The award of the arbitrators was taken up by the Australasian Steam Navigation Company, and proved favourable to the Post Office Department.

1876-7.

SAN FRANCISCO MAIL SERVICE.

No. 1.

Messrs. Gilchrist, Watt, & Co., Sydney, to The Postmaster General.

Sir,

Sydney, 29 May, 1876.

We have the honor, on behalf of the Pacific Mail Steamship Co., to make application to you that the route, adopted under the contract of 23rd July, 1875, be changed to a direct route from Sydney to Bay of Islands, Honolulu, San Francisco, and *vice versa*, and in making the application we beg respectfully to bring under your notice the following points in favour of the proposed change, which the experience of working the service during the past six months has fully demonstrated:—

1. The contractors in complying with their agreement that vessels of "not less gross registered tonnage than 2,500 tons each" should be employed, have constructed and placed in the service the "Cities of San Francisco," "New York," and "Sydney," "Australia," and "Zealandia," steamships, unequalled in power, strength, and magnificence of accommodation by any ever previously seen in the Colonies.
2. The calling at Fiji has proved a serious disadvantage to the service, inasmuch as the meeting of three vessels in the Pacific Ocean at one point, many thousand miles distant from the three different points they have started from, cannot but be attended with an uncertainty fatal to a Mail service, even with the best equipped vessels in the world.
3. The navigation of the Fiji Group is liable to great risk from low islands, coral reefs, and unknown currents, and, as the Fiji Government have not placed lights on harbours and channels known to be dangerous, much delay is caused to the Mail steamers by the necessity for their awaiting daylight to enter, or of making long detours to avoid such passages.
4. The Fiji Government contribute nothing to the service, nor are there any benefits attending the calling at Kandavau to compensate for the disadvantage and risks to life.
5. The avoidance of transshipment at Kandavau, a process under the present contract causing great discomfort in that tropical climate, will prove an immense convenience to passengers, in enabling them to retain their accommodation from their starting point to final destination, while it will result in establishing a large interchange of commodities between California and the Colonies, but for which, under the present system of transshipment, the service is practically useless.
6. Although the distance by the direct route proposed is somewhat greater, the time occupied in the voyages from Sydney to San Francisco and *vice versa* would not be materially increased, as the above stated causes of delay, at present existing, would be partially removed.
7. In proposing to refrain from conducting the coastal service of New Zealand, the contractors are actuated by the knowledge that their large and magnificent ships are somewhat unfitted for coasting trade of the nature contemplated. This trade can be more safely and satisfactorily carried on by the fine local steamers New Zealand now possesses, commanded as they are by seamen thoroughly acquainted with the coast, and the contractors are undesirous of interfering with this trade.
8. The depth of water at some of the New Zealand ports is so limited that it will be highly dangerous and at times quite impossible for the vessels we name, if fully loaded, to enter and leave.
9. The Bay of Islands is well situated as a port of call *en route*. It is free from all thick weather and outlying dangers, has a splendid climate and an excellent harbour, and will no doubt be connected with the rest of New Zealand and Australia by telegraph wire.
10. Owing to the interruption of cable communication with New York, we are unable to obtain such explicit instructions as will enable us at present to make any new contract, but we are aware that the contractors are willing to make the change we propose, and we respectfully beg your favourable consideration of the application, as we are confident the direct route named will result in greater regularity as a Mail service, and be attended with additional advantages to the travellers and commerce of the Colonies.
11. We have addressed to the Postmaster General of New Zealand a similar proposal to the foregoing.

We have, &c.,

GILCHRIST, WATT, & Co.,

General Agents for the Contractors, San Francisco Mail Service.

No. 2.

Telegram from Sir Julius Vogel, N.Z., to The Colonial Secretary, N.S.W.

2 June, 1876.

NEVER received answer from you respecting change of route. Agents now ask us negotiate. Following are our views which would like communicated to them if you do not object:—We are willing negotiate change terms contract, provided clearly understood that arrangement proposed be subject approval Parliament. Agents should make distinct proposals, or send some one empowered act, with knowledge of your views; we are agreeable dispense with Fiji, which consider unnecessary, dangerous, and productive delays. Question altering coastal service is one about which we uncertain of views our Parliaments. Agents might state their views, and amount subsidy they propose deduct by making Zealand mere calling place for Indian main boats. You gain immense advantage as sole terminus. Should you insist retaining Fiji route we would be inclined recommend Parliament following plan branch boat Chalmers and Fiji and back not less than 2,000 tons; better probably use one present boats. Our share present payment to be reduced by £20,000; you would have main boat both ways, and might see way to pay £5,000 more than present; we should have mere branch.

No. 3.

3

No. 3.

Telegram from Sir Julius Vogel, N.Z., to The Postmaster General, N.S.W.

3 July, 1876.

THE Government will be much indebted if to-day or to-morrow you will let them know your views about changes Californian service. Have no reply to repeated request same kind. The captains say service will not be continued as at present, and that contractors will throw up. If you wish such result let us know. People here would not much regret—they are so tired of irregularities. If you wish it to proceed surely better state your views. We propose to move for Select Committee to report upon changes if any desirable. If we know your views shall soon be able to say if we are willing or not to meet them. At present service is continued source of annoyance.

25 July, 1876.

RECEIVED letter from Watt, San Francisco, June 17th. He states, changes in Directory—Pacific Mail Company likely improve management, and there is no chance service being allowed to drop. States on authority, President Central Pacific Railway, that Company will take up service if Pacific wishes to drop, or their sureties be not willing to carry on. Watt was about proceeding New York to see Directors Pacific, from whence he will write to us.

No. 8.

Messrs. Gilchrist, Watt, & Co., Sydney, to The Postmaster General, N.S.W.

Sydney, 21 August, 1876.

Sir,

We have the honor to advise having received notice of the following cablegram having been sent to us by the Pacific Mail Steamship Company of New York on 13th July last, viz. :—

"Negotiate change of route of *viâ* Honolulu. Auckland time to latter, 574. Honolulu Bay Island time, 562. Sydney 672, ten knot. Schedule impossible. No coast service. Subsidy £80,000, as steamships employed exceed in power and capacity contract stipulation. Experience shows fixed monthly date sailing be most advantageous to correspondents, and passengers hence ask monthly trips.—HOUSTON."

We have to request your consideration of the foregoing; and trust that the proposals of the Company may meet your approval.

We have, &c.,
GILCHRIST, WATT, & Co.,
General Agents for the Contractors, Californian Mail Service.

MINUTE of the Secretary to the Post Office, Sydney, on Messrs. Gilchrist, Watt, & Co.'s letter of the 22nd August, 1876.

THE following would appear to be the proposition now submitted by contractors:—The route to be to and from Sydney and San Francisco *viâ* Auckland and Honolulu (omitting Fiji), or to and from the same places *viâ* Bay of Islands and Honolulu (omitting Fiji). The New Zealand coasting service between Auckland and Port Chalmers to be discontinued.

The

The time to and from Sydney to be 672 hours in lieu of the times specified in Schedule A of the contract, which are 648 hours for an 11-knot voyage, 678 hours for a $10\frac{1}{2}$ -knot voyage, and 708 hours for a 10-knot voyage.

The time between San Francisco and Auckland to be 574 hours, or between San Francisco and Bay of Islands 562 hours, in lieu of the times in Schedule A of the contract, which are 591 hours for an 11-knot voyage, 617 hours for a $10\frac{1}{2}$ -knot voyage, and 645 hours for a 10-knot voyage.

With regard to the last paragraph of the contractors' proposal, conveying a suggestion that the service should be *calendar* monthly instead of *lunar* monthly, thus reducing the communication from thirteen to twelve mails per annum, I think it is doubtful whether the London Postal authorities, who have adopted generally the system of despatching mails every week, fortnight, or four weeks, as the case may be, will consent to make an exception in the case of the Australian mails *via* San Francisco, and as there is a decided objection on their part to despatch foreign mails either on Saturday or Sunday, I do not very well see how the calendar monthly scheme would be practicable, and, moreover, anything like a regular alternation with the Suez line, which appears to be much desired, would be impossible under the proposed system. If, however, it should be adopted, I presume the contractors would be prepared to reduce the subsidy by a thirteenth part.

S.H.L., 22/8/76.

28 August, 1876.

APART from cost, which obviously if (is?) excessive, can you give me your views respecting offer Pacific Company—especially say do you approve calendar month service? Please reply early.

No. 10.

Telegram from The Colonial Secretary, N.S.W., to The Colonial Secretary, N.Z.

1 September, 1876.

COULD not agree for several reasons—amongst others feeling sure English Postal authorities would not concur in proposal for calendar months. We are inclined to view favourably calling Bay Islands and Honolulu, discontinuing New Zealand coastal service. Think £80,000 excessive for this service, but that whatever reduction is made in amount of existing contract should, less reasonable allowance for your coastal service, be divided equally; also, that Fijian correspondence be delivered Bay of Islands for postage only.

No. 11.

Messrs. Gilchrist, Watt, & Co., Sydney, to The Postmaster General, N.S.W.

Sir,

Sydney, 15 September, 1876.

With reference to our application dated 29th May last, and our respects dated 21st August, we have the honor to inform you that we have to-day received confirmation by letter from the Pacific Mail Steamship Company of New York, dated 8th August, of the cablegram advised in the latter, viz., "Negotiate change of route. If *via* Honolulu, Auckland time to latter, 570 hours; Sydney, 674; Honolulu Bay Islands, time 562; Sydney, 670; if 10-knot schedule impossible. No coastal service subsidy should be £80,000, as steamers employed exceed in power and capacity contract stipulation. Experience shows fixed monthly date sailings to be most advantageous to correspondents and passengers. Hence ask monthly trips."

We have also received instructions from the President and 2nd Vice-President of the Pacific Mail Steamship Company to respectfully request that you will come to some early decision in the matter, inasmuch as the contractors having entered upon the performance of a service which has proved impracticable and which is so regarded by underwriters and the best informed mercantile men of our Colonies, and condemned as unsafe by the naval officers and seamen of America, and our own Country, have only the following alternatives presented to them, viz., 1. A modification of the route to what is called the C route, or *via* Bay of Islands, thus avoiding the difficulties and risks of the New Zealand Coastal Service, and the dangerous navigation and stoppages at the Fijis; or 2. An abandonment of the service.

The President, Mr. W. P. Clyde, a gentleman of great ability and many years experience in steam shipping, informs us that when he and his recently elected colleagues were appointed to the management of the Pacific Mail S.-S. Co., there was a strong disposition to discontinue the Australian service at once, as the loss of the Company had been so severe, and the conditions of the contract into which they had been drawn without any local knowledge were so impracticable, but actuated by a desire to meet the Colonial Governments honourably and fairly, and in the hope of establishing a permanent and prominent connection between Australia, America, and the United Kingdom, he was induced by the representations of Mr. Watt, and a sense of the importance of fostering interests which might eventually prove advantageous, to oppose the disposition to withdraw from the contract, and decided to give the service a further trial, but as it is evident that in order to accomplish this successfully the service must be as far as possible both safe to the travelling public and the vessels employed, and reasonably remunerative to the contractors, the interests of the Pacific Mail Steamship Company compel them to make an early decision as to which of the two alternatives shall be adopted.

Consideration for the safety of life and property it would seem should alone have the necessary influence to induce an immediate change in the route, apart from the expressions of approbation of such change which are so universal among all who have considered the matter.

Under these circumstances we have the honor to request that the privileges of the C route or *via* Bay of Islands may be immediately granted, and the steamers permitted to avoid Fiji and the New Zealand Coastal Service, pending such action as the Colonial Parliaments may deem necessary; and as the longer absence of any replies may result in an abandonment of the service by the Pacific Mail Steamship Company, a contingency which would prove a great disadvantage to the Colony, we have the honor to request an early reply that we may communicate with the contractors in New York your decision.

We

We have the honor to enclose copy of a letter from the commander of the "City of Sydney," dated 4th September, at Kandavau, and would beg your special attention to the delay and danger caused to the mail steamers by the frequent thick weather and strong currents in that locality. In this case a loss of twenty-four hours time was occasioned and the vessel drifting utterly helpless in a fog.

We have, &c.,
GILCHRIST, WATT, & Co.,
General Agents for the Contractors, San Francisco Mail Service.

[Enclosure.]

Captain John M. Dow to Messrs. Gilchrist, Watt, & Co.

P. M. S. S. "City of Sydney,"

Kandavau, Fiji, 4 September, 1876.

Dear Sirs,

We discharged pilot at Sydney Heads at 3:50 p.m. on the 25th ultimo. On the passage to this port we experienced good weather, until the night previous to our arrival in sight of Kandavau Island, at noon of the 31st ultimo, when the sky became overcast, and the wind veered to eastward. Our first day's run (20 hours), was 218 miles; the second, 301 miles; third, 279 miles; fourth, 290 miles; fifth, 286 miles; sixth, 279 miles, with the port of Kandavau distant 38 miles (at noon 31st), this latter named distance would have been accomplished by 3:30 p.m. had it not been for the weather, which allowed us to sight the opening through the reef to the port at 2:30 p.m., when the rains set in so thick as to shut out all objects a hundred yards distant. I was therefore compelled, from prudential motives, to slow the engine, and to turn the ship's head off shore. The weather continued thick and rainy throughout the remainder of the day and through the night, and a current during the time set me so far to the S.E. that it was not until 3 p.m. the following day that we made fast to the "Zealandia," which arrived that morning (September 1st), at 9 o'clock. We are now (3 p.m.) waiting the arrival of the "City of San Francisco," due this morning, but not yet in sight, when we shall continue our voyage to New Zealand.

JOHN M. DOW, Captain.

No. 12.

The Secretary, General Post Office, Sydney, to Messrs. Gilchrist, Watt, & Co., Sydney.

Gentlemen,

General Post Office, Sydney, 21 September, 1876.

I am directed to state, in reply to your letter dated the 15th instant, that the Postmaster General is disposed to give due consideration to the representations of the Directors of the Pacific Mail Steamship Co., and that he has placed himself in communication with the Government of New Zealand in reference to the proposals of the Directors, and hopes to be in a position to inform you definitely, before the departure of the next mail, the intentions of this Government in relation thereto.

I have, &c.,

S. H. LAMBTON,
Secretary.

No. 13.

Messrs. Gilchrist, Watt, & Co., Sydney, to The Postmaster General, Sydney.

Sir,

Sydney, 9 October, 1876.

With reference to our respects, dated 15th, and your reply of 21st ultimo, we have again the honor to ask your permission to adopt a direct service *via* Auckland or Bay of Islands, omitting Fiji, inasmuch as we have to-day received the following telegram from the Pacific Mail Company, dated New York, 28th September:—

"Return San Francisco—immediately to 'Frisco—stopping Honolulu. Urge Governments allow steamers perform direct service until Parliament meets. Answer."

This instruction we look upon as a confirmation of their determination to abandon the service wholly rather than encounter the enormous risk to life and property which a continuance of the coastal service of New Zealand with these large steamers entails.

By the mail from New Zealand we have received a copy of the Select Committee's Report on the Californian Mail Service, and enclose same. You will observe that their first recommendation is, "that the service should be direct from San Francisco to Sydney, calling at Honolulu and at the Bay of Islands or Auckland."

We make a similar request to the New Zealand Government as we make now to you, viz., that pending the approval or disapproval of Parliament the mail steamers may be allowed to adopt the direct service; and we have asked the New Zealand Government to communicate with you on the subject, as prompt action is necessary to avoid a break-up of the service.

We have, &c.,

GILCHRIST, WATT, & Co.,
General Agents for the Contractors, Cal. Mail Service.

[Enclosure in above.]

Copy of Select Committee's Report on Californian Mail Service.

THE Select Committee to whom it was referred to consider and report to the House what alterations or modifications (if any) it is desirable to make in the contract for the Californian Mail Service, have agreed to the following resolutions:—That it is expedient that the existing contract be modified as follows, viz.:—

1. That the service be direct from San Francisco to Sydney, calling at Honolulu and at the Bay of Islands or Auckland.
2. That the coastal service be performed by the Company by 10-knot boats, to be approved of by the Government.
3. That the share of New Zealand's contribution to the subsidy be reduced by £10,000.

The Committee having also had under their consideration the offer of Mr. Cunningham, one of the sureties of the Hall Forbes Contract, to pay the sum of £10,000 in discharge of his liabilities, resolved to recommend that the offer be accepted.

F. WHITTAKER,
Chairman.

IF you wish our co-operation you had better seek alternative permission. Auckland is twelve hours longer. Most objectionable.

No. 17.

Telegram from The Postmaster General, N.Z., to The Colonial Secretary, N.S.W.

14 October, 1876.

THE question of modifying existing San Francisco Service discussed in House of Representatives last night; appended resolutions carried by large majority. It will be observed that it has been left to the contractor to determine port of call. Presume this will meet objections your Government. The modified service must be a four-weekly one, as there are fatal objections to calendar monthly trips. Hope the resolutions may be acceptable to your Government and to contractors, and that question may be now settled without further delay. Government regret being unable to obtain Parliamentary sanction at an earlier period. Will you please furnish Gilchrist with copy this telegram.

Resolutions referred to:—

Resolved,—That in the event of the contractors for the San Francisco Mail Service being desirous of modifying conditions of their contract, and in the event of the Government of New South Wales deeming it expedient that the contract should be modified, this House would consent to such modification on the following terms:—

1. That the service be direct from San Francisco to Sydney, calling at Honolulu and at Auckland or Bay of Islands, at option of the contractors.
2. That coastal service be performed by the Company by 10-knot boats, to be approved of by the Government.
3. That the share of New Zealand contribution to subsidy be reduced by seven thousand five hundred pounds (£7,500) if calling at Auckland, or ten thousand pounds (£10,000) if calling at the Bay of Islands.

No. 18.

Telegram from The Colonial Secretary, N.Z., to The Colonial Secretary, N.S.W.

17 October, 1876.

HAS Gilchrist power to negotiate modification? If not, as Vogel goes to England, *via* New York, we propose he should negotiate with Pacific Company to make a formal offer for approval of two Governments, but without binding either on the basis of New Zealand resolutions. Do you agree?

No. 19.

17 October, 1866.

IN answer to your telegram of this date Gilchrist has authority to negotiate.

No. 20.

Telegram from The Colonial Secretary, N.S.W., to The Colonial Secretary, N.Z.

17 October, 1876.

YOUR Parliament's conditions, as communicated to us on the 14th instant, would render continuance of service by Pacific Company impossible. The Company have telegraphed Gilchrist that they will forfeit penalty and withdraw entirely rather than run your coastal service, or undertake any responsibility in connection with it. Again, this Colony will not be content with longer postal time without sharing in savings on subsidy, which by your proposal you claim entirely, nor is it clear that there would be £10,000 saving, for if the Company were to run coastal service the reduction from present subsidy would be small. The only principle likely to be approved by our Parliament is that whatever saving be effected should be shared equally by both Colonies. We recommend re-consideration, and that the two Colonies offer to the Company £75,000, Frisco, Honolulu, Bay of Islands, Sydney, thirteen trips a year. Separate tenders for the coastal service to be called and jointly approved, the cost thereof to be joint and equal between our respective Governments. The whole to be subject to the approval of Parliament; meantime the service might be performed by proposed new route.

7

No. 21.

Telegrams from The Colonial Secretary, N.Z., to The Colonial Secretary, N.S.W.

1st Telegram.

18 October, 1876.

WE did not propose to take all savings effected by alteration of contract, but to divide them with you. Our proposal was to take originally proposed "C" service for £75,000, and therefore limited our payments to one-half, namely, £37,500. We think that Company should make some deductions from £75,000, their former offer, in consideration of being relieved from our coastal service. Will they do this, or are we to consider present proposal final, and ask Parliament to say yes or no? Hope you will assent to Auckland instead of Bay, as it will be great convenience to us in distribution of mails to places not provided for by arrangements with you, and will cost much less.

2nd Telegram.

18 October, 1876.

Have made careful inquiries as to cost of distributing mails. Probable cost from Auckland *via* West Coast about £5,000—from Bay more than double, as East Coast of New Zealand has no ports between Auckland and Wellington suitable for mail steamers, and most of traffic on West Coast. As you will get whole benefit of terminus we think you should not insist on additional expense and inconvenience for the sake of twelve hours at most.

No. 22.

Telegram from The Colonial Secretary, N.S.W., to The Colonial Secretary, N.Z.

20 October, 1876.

WITH reference to your first telegram of the 18th instant, we are with you that the saving on any new arrangement for the Pacific Mail Service shall be equally divided between our respective Colonies. You say in effect in your second telegram of same date, that while £5,000 would be sufficient for your coastal service if the mails be landed at Auckland, it would require more than £10,000 if they were delivered at Bay of Islands. We are unable to understand why you cannot arrange for the mails being carried from Bay of Islands to Auckland, which would place them in the position which you seem to desire, which we believe could be done for an annual subsidy of £1,000. You are already aware that the contractors will rather forfeit penalty than do coastal service. Pending our negotiation, Pacific Mail Service, Gilchrist asks permission, in accordance with the concluding paragraph of our telegram of the 17th instant, to perform service by way of Honolulu, Bay of Islands, and Sydney—do you consent? Reply promptly, as Gilchrist urgently desires to send instructions to Fiji by "Australia," leaving Auckland to-morrow.

No. 23.

Telegram from The Postmaster General, N.Z., to The Colonial Secretary, N.S.W.

21 October, 1876.

As temporary arrangement, pending negotiations, we consent to your proposal in telegram 17th October, substituting Auckland for Bay of Islands; could not be otherwise for present, as only one small coastal steamer, unsuitable for Frisco passengers, runs between Auckland and Bay, and no suitable steamer could be got to take up service pending negotiation only. If you arranged with Gilchrist, please telegraph that we may arrange for temporary coastal service.

No. 24.

Telegram from The Colonial Secretary, N.S.W., to The Colonial Secretary, N.Z.

23 October, 1876.

WE cannot consent to substitute Auckland for Bay of Islands.

No. 25.

The Colonial Secretary, N.Z., to The Colonial Secretary, N.S.W.

(Received on the 25th Oct.)

Sir, New Zealand, Colonial Secretary's Office, Wellington, 14 October, 1876.

With reference to previous communications relating to the proposed modifications of the route for the San Francisco Mail Service, I have the honor to inform you that the question having been brought under the consideration of the House of Representatives of this Colony, the House has agreed to the following resolution:—

"That in the event of the contractors for the San Francisco Mail Service being desirous of modifying the conditions of their contract, and in the event of the Government of New South Wales deeming it expedient that the contract should be modified, this House agrees to its modification on the following terms:—That such service be direct from San Francisco to Sydney, calling at Honolulu and at Auckland, or the Bay of Islands, at the option of the contractors; that the coastal service be performed by 10-knot boats, to be approved of by the Government; that the share of the New Zealand contributions to the subsidy be reduced by £7,500 if calling at Auckland, or £10,000 if calling at the Bay of Islands."

2. I have by this mail communicated a copy of this resolution to the agents in Sydney of the Pacific Mail Company, informing them that subject to the concurrence of the Government of New South Wales this Government would be prepared to agree to a modification of the contract on the terms stated in the resolution.

3.

3. You will perceive that, in deference to the views of your Government, an alternative authority has been obtained, to make the Bay of Islands the New Zealand port of call; it has, however, been impossible to do this without stipulating for some pecuniary concession, to meet the extra expenditure which would thereby be entailed upon this Government. The abandonment of Auckland would save so little time in the voyage to Sydney, while it would be so inconvenient to New Zealand, and in all probability so disadvantageous to the Company, that I trust, upon re-consideration, your Government may not think it necessary to insist upon this condition.

4. I shall be glad to receive at your early convenience any information which you may be able to communicate on the subject of this service.

5. My colleague, the Postmaster General, transmitted to you by telegraph this morning, a copy of the above resolution, requesting you to be good enough to communicate a copy of the same to Messrs. Gilchrist, Watt, & Co.

6. I enclose a copy of that telegram.

I have, &c.,
DANIEL POLLEN.

[Enclosure—Copy of telegram of the 14th October, 1875, see No. 17, page 6.]

No. 26.

The Colonial Secretary, N.S.W., to The Colonial Secretary, N.Z.

Sir,

Colonial Secretary's Office, Sydney, 25 October, 1876.
I have the honor to acknowledge the receipt of your letter of the 14th instant, forwarding resolutions with reference to modification of the San Francisco Mail Service.

HENRY HALLORAN.

No. 27.

Telegram from The Postmaster General, N.Z., to The Postmaster General, N.S.W.

28 October, 1876.

SAN FRANCISCO service again under consideration by Parliament, and resolutions passed, affirming my telegram of 14th October to Colonial Secretary, but authorizing omission of Honolulu, and adding that in the event of contractors electing to call at Auckland, and desiring to discontinue coastal service, they may be permitted to do so on making further deduction of five thousand pounds from subsidy payable to them,—the two Colonies in such case undertaking to provide for that service at their joint expense; this will give contractors £75,000 if they perform coastal service, and £70,000 if that service is taken off their hands by Colonies,—all savings and expense being shared equally by two Colonies. Please communicate decision without delay, as we must at once make arrangements for mails if San Francisco service be discontinued. Please let Gilchrist have copy.

No. 28.

Messrs. Gilchrist, Watt, & Co., Sydney, to The Postmaster General, Sydney.

Sir,

Sydney, 30 October, 1876.

We have the honor to acknowledge receipt of a copy of a telegram, addressed by the Postmaster General, Wellington, to yourself, under date 28th instant, viz. :—

“San Francisco service again under consideration by Parliament, and resolutions passed, affirming my telegram of 14th October to Colonial Secretary, but authorizing omission of Honolulu, and adding that *in the event* of contractors electing to call at Auckland and desiring to discontinue coastal service, they may be permitted to do so on making a further deduction of £5,000 from subsidy payable to them, the two Colonies in such case undertaking to provide for that service at their joint expense; this will give contractors £75,000 if they perform coastal service, and £70,000 if that service taken off their hands by Colonies, all savings and expenses being shared equally by two Colonies. Please communicate decision without delay, as we must at once make arrangements for mails if San Francisco service be discontinued. Please let Gilchrist have copy.”

The New Zealand Government now appears to be willing to divide all savings and expenses equally with this Government, and to relieve the contractors of the coastal service; but the latter permission is clogged with the condition that the subsidy shall be reduced to £70,000 if *via* Auckland.

We venture respectfully to refer you to our letter of 15th September, containing the offer of the contractors to change the route. The subsidy they name is £80,000—a very large reduction on the present rate paid; and we contend that in view of the magnificent vessels placed in the service, and the satisfactory manner in which the time schedule is being carried out, the Governments should not seek to force upon the contractors so heavy a reduction.

The interpretation of the telegram from New Zealand is not very clear, but as we read it we think they intend that only £65,000 shall be paid to the contractors if they go by the Bay of Islands and the Governments undertake the cost of the coastal service.

This sum would be a reduction of £25,000 on the amount the contractors earn under the present contract, and £15,000 less than the contractors propose for the change of route in their offer of 8th August, as conveyed to you by us on the 15th September, and we feel confident that they cannot assent to the proposals of New Zealand, and that it is useless for us to telegraph any such offers.

I have, &c.,
GILCHRIST, WATT, & Co.,
Agents for the Contractors, San Francisco Mail Service.

No. 29.

No. 29.

Telegrams from The Colonial Secretary, N.S.W., to The Postmaster General, N.Z.

First Telegram.

30 October, 1876.

Your telegram to us not very clear as received. However, Gilchrist says, as Company names £80,000, Bay of Islands or Auckland and no coastal service, it would be almost useless to telegraph your offer to Company of £65,000 for Bay of Islands, or £70,000 for Auckland, also without coastal service; which he with us interprets your telegram to mean.

Second Telegram.

30 October, 1876.

We are willing to submit to our Parliament the following, which Gilchrist thinks Company might accept:—Frisco, Honolulu (option of Company), Bay of Islands, Sydney and back, thirteen trips each year, for £75,000. Each Government dividing savings of £15,000 from contractors, but from it to pay your East Coast coastal service from Bay of Islands.

On your approving, we would give consent for immediate temporary adoption of route.

No. 30.

Telegram from The Postmaster General, N.Z., to The Colonial Secretary, N.S.W.

1 November, 1876.

SAN FRANCISCO service, after investigation by a Committee and several discussions, Parliament (now prorogued) has decided as follows, that present contract may be annulled, substituting any one of three alternatives:—

1st.—C. Service, as tendered for by contractors, omitting Honolulu if desired.

2nd.—Service from San Francisco to Sydney, calling at Auckland or Bay of Islands, at the option of contractors, they performing coastal service subsidy, £75,000.

3rd.—Service from San Francisco to Sydney, calling at Auckland or Bay of Islands, two Colonies providing coastal service at joint expense, deduction to be made from subsidy of £75,000; if Auckland port of call, £5,000, and if Bay of Islands port of call, £10,000; if either above services agreed to it may be temporarily commenced at once. Pending final arrangement please inform Gilchrist.

No. 31.

Telegram from The Colonial Secretary, N.S.W., to The Postmaster General, N.Z.

1 November, 1876.

PLEASE repeat the third of your propositions of this day. As received unintelligible.

No. 32.

Telegram from The Postmaster General, N.Z., to The Colonial Secretary, N.S.W.

2 November, 1876.

I REPEAT third proposal of yesterday. 3rd. Service from San Francisco to Sydney, calling at Auckland or Bay of Islands, two Colonies providing coastal service at joint expense, deduction to be made from subsidy of £75,000; if Auckland port of call, £5,000—and if Bay of Islands port of call, £10,000. We mean by this to relieve contractors from coastal service, leaving port of call to be settled by you with contractors, we requiring a deduction from subsidy of £75,000 to cover cost of coastal service as follows:—If Auckland port of call £5,000; if Bay, £10,000, leaving contractors to receive in one case £70,000, and in the other £65,000, saving on contract to be shared equally between Colonies, and actual cost of coastal service paid in equal shares.

No. 33.

Messrs. Gilchrist, Watt, & Co., Sydney, to The Colonial Secretary, Sydney.

Sir,

Sydney, 10 November, 1876.

We have the honor to acknowledge receipt of copies of telegrams from the Postmaster General of New Zealand, dated 1st and 2nd November, to yourself, stating the decisions arrived at in Wellington regarding the San Francisco service, after investigation by a Committee and several discussions in Parliament, and offering three alternatives as substitutes for the present contract.

In considering these alternatives we would respectfully point out that Nos. 1 and 2 cannot be acceptable to the contractors, inasmuch as their chief object in seeking for a change in the present contract route is to be relieved of the New Zealand coastal service which has proved so dangerous and impracticable to their large ships, but which can be performed satisfactorily by local steamers under the control of owners on the spot—a supervision and responsibility which the contractors in New York could not efficiently undertake.

The third alternative proposes to relieve the contractors from the coastal service at a reduction of £5,000 from £75,000 if Auckland be made the port of call, or £10,000 from £75,000 if Bay of Islands be made the port of call, so that in the former case the contractors would thus receive a net subsidy of £70,000, and in the latter case a net subsidy of £65,000.

We are at a loss to understand why the sum of £75,000 is named as the offer made by the contractors to run the proposed new service *via* Auckland or the Bay of Islands, omitting Fiji and Honolulu (the latter at their option), and being relieved of all expenses and responsibility of New Zealand coastal service, is £80,000 per annum, and we respectfully submit that it would be unreasonable to expect them to come to the terms named, seeing that in the one case they amount to a reduction of £25,000 per annum, and in the other £20,000 per annum on the present subsidy under the contract.

The

The comparative rates for calling at Bay of Islands or Auckland, named by the New Zealand Government, appear to us out of all proportion, seeing that the two ports are only about 120 miles apart, and the same rate of subsidy is named by the contractors for delivering the mails at either of the two; but as they do not express any preference for either, it remains for this Government and New Zealand to decide which they prefer, and we are of opinion that the calling at Auckland would be much more advantageous to New Zealand passengers, and conduce greatly to the increase of trade between New Zealand and this Colony, as well as afford other advantages which will more than compensate for the short additional time in postal service.

The Bay of Islands, though well situated and a good harbour, has no wharfage accommodation, and there are no lights on that part of the coast. The population is limited to some 150 souls, so that all supplies in the way of meat, vegetables, &c., would have to be brought from Auckland, and as there is no white labour available any help required in the way of discharging or loading cargo would also have to be imported from Auckland, as the natives are of no use.

Moreover, we understand that a coastal service from Bay of Islands would be more expensive, as the East Coast trade of the North Island has always been unremunerative, while from Auckland the mails can be economically and speedily distributed from the Manukau, and as the New Zealand Government share the subsidy it appears but equitable that one of their leading cities should be a port of call for the steamers to afford some fair equivalent for the advantages this Colony derives from the trade the mail service opens up with America.

The comparative distances are as follows:—

From Sydney, <i>viâ</i> Bay of Islands, to San 'Frisco	7,008 miles.
Do. <i>viâ</i> Auckland do.	7,201 "

or a difference in time of about 17 hours at 11 knots; but in view of the delay attending the calling at Bay of Islands, from the disadvantages already set forth, the additional facilities and despatch the vessels would obtain in Auckland would in a great measure compensate for the time lost by the detour; and as communication by wire is now-a-days so general, regularity with our mail service and comfort of passengers are of more importance to the community than a few hours saving in time.

We therefore respectfully venture to hope that early permission may be granted to change the route to a direct voyage *viâ* Auckland, and that the Governments may arrange to accept the offer of the contractors to perform this service at a reduction of £10,000 per annum on the present rate, or £30,000 per annum.

We have, &c.,

GILCHRIST, WATT, & Co.,

General Agents for the Contractors, San Francisco Mail Service.

No. 34.

The Colonial Secretary, N.S.W., to The Colonial Secretary, New Zealand.

Sir,

Colonial Secretary's Office, Sydney, 16 November, 1876.

With reference to recent telegraphic correspondence concerning proposed modification of the contract for the San Francisco Mail Service, I have the honor to transmit to you, for the information of the Government of New Zealand, the enclosed copy of a letter on that subject from Messrs. Gilchrist, Watt, and Company, the general agents at Sydney for the contractors.

I have, &c.,

ALEX. STUART.

[Enclosure, see No. 33.]

No. 35.

Messrs. Gilchrist, Watt, & Co., to The Colonial Secretary, Sydney.

Sir,

Sydney, 22 November, 1876.

With reference to our respects, dated 10th instant, addressed to the Colonial Secretary, we have the honor to advise having received the following telegram from the Pacific Mail S.S. Co., New York, dated 6 November, and we respectfully beg your favorable consideration of the same:—"Advantage New Zealand business and local traffic Auckland to Sydney make Auckland preferable—induce Government to yield. Utmost importance commence direct service December. Have calling Honolulu—left optional Hawaiian Government—acting unfairly. Answer."

We have also the honor to advise that by the last mail we received advices from Mr. Watt in London, and he states that he had had several communications with Mr. Russell of New Zealand, and other colonists much interested in the question, on the subject of the proposed change of route, and it appears to be the general opinion that the simplest settlement of the contract would be as follows: New Zealand to receive her mails at Auckland, and from that port take all cost and risk of their distribution in that Colony by coastal service, and the mails of this continent to be brought on here, and (in consideration of the extra distance travelled on account of New South Wales, besides the expense New Zealand will be put to for her coastal service) that the New South Wales share of the subsidy paid to contractors should be some £5,000 in excess of New Zealand's contribution.

We venture to offer this suggestion as it appears to us fair as between the Governments, and it will relieve this Government of any responsibility in settlements with New Zealand for coastal service, and each Government thus contributes a fair proportion for the services respectively rendered to it.

We have, &c.,

GILCHRIST, WATT, & Co.,

General Agents for the Contractors, San Francisco Mail Service.

No. 36.

The Colonial Secretary, N.S.W., to The Colonial Secretary, N.Z.

Sir,

Colonial Secretary's Office, Sydney, 29 November, 1876.

I have the honor to enclose, for the consideration of your Government, copies of two letters from Messrs. Gilchrist, Watt, & Co., agent for the contractors, on the subject of the Pacific Mail Service. 2-10 & 22
November, 1876.

2. This Government has delayed the dealing with your proposals and those of Messrs. Gilchrist, Watt, & Company until now, in consequence of its reluctance to comply with the conditions which you seek to make imperative at the peril of the total discontinuance of the service.

3. We are unwilling to assent to the extra delay to the mail service of this Colony that would be involved in the making of Auckland the port of call in New Zealand, and we fear that the conditions which you seek to impose on the company if the Bay of Islands be made the place of call, are such as will lead to the breaking up of the service, for the agents assure us that the Company will not undertake the service either for £70,000 to Auckland, or for £65,000 to the Bay of Islands.

4. The only solution which appears to us to be open is this: That the Company receive £75,000 for the route by way of the Bay of Islands; that this Colony pay £40,000 of that subsidy, and New Zealand £35,000, the reason for allotting to New South Wales the larger share being that it is this Colony that chiefly uses the service for the extra distance from New Zealand to Sydney.

5. New South Wales would thus save £5,000 on its present share of subsidy in consideration of the prolonging of its mail service; and New Zealand would obtain a quicker service by reason of the not calling at Fiji, and would have £10,000 applicable to the performance of its coasting service, the cost of which would probably not be more than £5,000 or at most £6,000.

6. This plan would leave New Zealand free to make any arrangement that might suit her for her own coasting service, and quite untrammelled by having to submit her negotiations to this Colony.

7. In submitting this proposition we must be understood to do so subject to the approval of our Parliament, which meets next month.

I have, &c.,

JOHN ROBERTSON.

[Enclosures see Nos. 33 and 35.]

No. 37.

Messrs. Gilchrist, Watt, & Co., Sydney, to The Colonial Secretary, Sydney.

Sir,

Sydney, 7 December, 1876.

We have the honor to wait upon you with copy of a letter received yesterday from Mr. W. P. Clyde, President of the Pacific Mail Steamship Company, dated New York, 31st October, and we beg your favourable consideration of the same in order that the proposed change in the Californian Mail Service route may be brought about as early as possible.

We have, &c.,

GILCHRIST, WATT, & Co.,

General Agents for the Contractors, Cal. Mail Service.

[Enclosure to No. 37.]

President, Pacific Mail Steamship Co., to Messrs. Gilchrist, Watt, & Co.

Office of Pacific Mail Steamship Co.,

No. 6, Bowling Green, New York, 31 October, 1876.

Gents,

I have had a very full conference with Sir Daniel Cooper upon the matter of the change of contract, and also with Captain Dow, whom I ordered here on his arrival at San Francisco, and am pleased to learn from both of them the favourable disposition in your Colonies, which is manifested toward the route *via* San Francisco.

From their statements from your leading newspapers and *from your cablegrams it would seem that all recognize the necessity of a change to the direct service *via* Auckland in order to continue the route.† *The difficulty seems to lie in the adjustment of the share of the subsidy which shall be contributed by each of the two Colonies.* New Zealand having succeeded in getting the Company to accept an impracticable contract, appears while most favourably disposed toward the Company to hesitate to make the necessary changes without exacting concessions, which of themselves would destroy the entire profit of the service to the Company. As I wrote you before, I have influenced the direction of the Company to continue the service, notwithstanding its unprofitableness and the great risk incurred in the coastal service along New Zealand, until sufficient time had elapsed for proper negotiations in regard to the matter; I feel that I cannot longer under any circumstances advise the continuance of the coastal service, and unless I see reason to change, shall have telegraphed you long before this reaches you that we cannot continue the coastal service, and that the steamer of January 3rd will commence the C. Service. If it is impracticable by negotiation and an appeal to their sense of right to get the consent of the New Zealand Government to the change, we must, out of regard for the safety of the ships, and in order to continue the service at all without involving the Company in a loss too serious to be willingly encountered, elect what seems to us the least of two evils. It has been my hope that we should not be forced to take any step which would be regarded unfavourably in New Zealand, as it is the wish of the Company that they should have the earnest and hearty co-operation of the Governments and people of both Colonies in establishing this important route; the only modification of the C. Service which Captain Dow suggests, would be the change of the calling port in New Zealand from the Bay of Islands to Auckland, in order to give the steamers the advantage of a portion of the valuable trade which he represents is now done by a small steamer between Auckland and Sydney, and which if the Bay of Islands was used as the calling port in New Zealand instead of Auckland the steamers could not take.

Being upon the spot you will be able to estimate the value of this trade; as Captain Dow presents it it seems to me quite sufficient to lead to a selection of Auckland in place of the Bay of Islands.

The Company rely much upon your valuable influence in adjusting this matter, and are by no means without hope of the object being accomplished without resorting to means other than negotiation; but the long time involved, especially now, as I understand the Parliament of New Zealand is in Session, calls for positive action upon the part of the Company in relation to the matter.

Very respectfully,

WM. P. CLYDE,

President, Sayers.

No. 38.

* We have not in any way favoured *via* Auckland but the contrary.—JOHN R.

† The difficulty of adjustment of cost is by no means the principal money difficulty. New Zealand proposes that the United Colonies should pay £65,000 for the service *via* the Bay of Islands, or £70,000 *via* Auckland, while the only sum raised for either by the Company is £80,000.—JOHN R.

No. 38.

Mr. J. L. Sinclair, Wellington, N.Z., to The Colonial Secretary, N.S.W.

Sir,

Taita, Wellington, New Zealand, 21 October, 1876.

I beg to enclose some extracts from a letter written by me to the Premier of New Zealand in favour of the Bay of Islands as the terminus in this Colony for the San Francisco Mail Service.

The Bay, as you know, is an excellent harbour—it would save time on the whole service; it is connected by telegraph with the rest of the Colony, and there is an unlimited supply of coal in the immediate neighbourhood. The suggestion made to-day in the General Assembly that the "Hinemoa" (a small Government steamer) might be employed to distribute the mails coastwise is a very good one if the boat mentioned be not too small for passengers—if there were any number.

I enclose also a note of proceedings in the House to-day, but I may add that in a Committee of the whole House on Friday, the 13th, the Hon. Mr. Stafford himself moved an amendment to the effect "That the service be direct from San Francisco to Sydney, calling at Honolulu and at Auckland, or the Bay of Islands, at the option of the contractors," &c.

I have, &c.,

J. L. SINCLAIR.

[Enclosure No. 1.]

COPY of Letter J. L. Sinclair to the Hon. the Premier of New Zealand.

Sir,

Taita, Wellington, 30 September, 1876.

I am sorry to trespass on your time, but a paragraph in the *Argus* last night, throwing cold water on the modification of the San Francisco mail contract in the manner indicated by the Select Committee on the subject, has induced me to trouble you with a few words of comment.

Having the Bay as a port of call, the commercial interests of the States might lead the great Republic to subsidise that line. Particular stores might be sent from America for the whalers that resort to the Bay, and sperm in casks might be shipped from thence to Britain, Australia, and America. A spermaceti manufactory might be erected at the Bay, and the American ships saved the long round to Newhaven and New Bedford by the Horn. The steamers could never run short of coal at Russell (Bay of Islands), and the saving of time would be great on the whole service, but the Aucklanders would need to have a good connecting line between the Bay and Auckland.

I have, &c.,

J.L.S.

[Enclosure No. 2.]

SOME further papers on the San Francisco Service have been laid on the table. The Colonial Secretary of New South Wales telegraphed on the 17th that the conditions of modification agreed to by our House rendered the continuation of the service impossible, as the Company would rather forfeit the penalty and give up the service than undertake any responsibility as to the coastal service. He also claims for New South Wales half of any saving in the subsidy, and recommends a service Frisco to Sydney, *via* Honolulu and Bay of Islands, thirteen trips a year, at £75,000. Dr. Pollen replies that the Government propose to divide the saving with the sister Colony, but think the sum should be less than £75,000, and that Auckland should be substituted for Bay of Islands. The Colonial Secretary of New South Wales replied yesterday, urging an immediate reply to whether the Colony would agree to the Bay of Islands. The Postmaster General to-day proposed to agree to the proposed new route as a temporary arrangement until permanent arrangements could be made. The coastal carriage of the mails would have to be provided for at the joint expense of New South Wales and New Zealand. Sir R. Douglas suggested the employment of the "Hinemoa" for the purpose. Mr. Burns advised the Government to consider the propriety of a direct line by the Cape, as he was convinced that the San Francisco Service would never be a satisfactory one. Mr. Larnach asked whether the Colony could get out of its contract as easily as the contractors. Mr. Stafford thought the unreasonable demands of New South Wales should be resisted. The Postmaster General said the Government would consult the House before making any permanent arrangement. The motion was then agreed to.—*E. Argus*, 21/10/76.

[Enclosure No. 3.]

THE outward San Francisco mail per s.s. "Australia," which left yesterday, consisted of:—For England: 3,725 letters, 2,983 newspapers, and 290 books. For America: 325 letters, 189 newspapers, and 51 books.—*E. Argus*, 21/10/76.

Telegram from The Colonial Secretary, N.S.W., to The Colonial Secretary, N.Z.

18 November, 1876.

LETTER by post, dated 16th instant, forwarding a copy of letter from contractors, as to proposed modifications of the San Francisco Mail Service.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SAN FRANCISCO MAIL SERVICE.

(PROPOSED MODIFICATION OF CONTRACT—FURTHER PAPERS.)

Ordered by the Legislative Assembly to be printed, 17 January, 1877.

No. 1.

The Colonial Secretary, N.Z., to The Colonial Secretary, N.S.W.

Sir,

Colonial Secretary's Office, Wellington, 19 December, 1876.

I have the honor to acknowledge receipt of your letter of November 29th, respecting the San Francisco Service, and of the enclosed copy of a letter dated November 22nd, addressed to you by Messrs. Gilchrist, Watt, and Co.

2. I have to state that, whilst desirous to meet as far as possible the wishes of your Government, this Government cannot consent to any payment on account of the Service which is in excess of the authority given, after very careful consideration of the whole subject, by the House of Representatives.

- (1.) That the C Service as tendered for by the contractors may be adopted, calling at Honolulu being omitted if the contractors so desire.
- (2.) That the boats run from San Francisco to the Bay of Islands, or to Auckland, and from the New Zealand port of call to Sydney; the contractors to decide the port of call, to perform the coastal service, and to receive seventy-five thousand pounds per annum subsidy. £75,000.
- (3.) The boats to run as in No. 2, but the coastal service to be arranged for by the two Colonies. If Auckland be the port of call, five thousand pounds to be deducted from the subsidy of £5,000. seventy-five thousand pounds; if the Bay of Islands, ten thousand pounds to be deducted; £75,000. any saving on the present contract to be divided equally between the Colonies, and each to pay half the actual cost of the coastal service. £10,000.
- (4.) This Government reciprocates the desire expressed by you not to do anything which will lead to the breaking up of the service; but I must point out to you how very much worse for this Colony, than those contemplated by the House of Representatives, are the conditions which you state seem to offer the only solution of the existing difficulty. You suggest that the Bay of Islands shall be our port of call, although the contractors themselves, by their telegram of November 6th to Messrs. Gilchrist, Watt, and Co., recognize that very valid reasons make Auckland the preferable port. You suggest further, that for this Service—San Francisco to Bay of Islands and Sydney—New Zealand should pay thirty-five thousand pounds towards a subsidy of seventy-five thousand pounds, and should pay the whole cost of its coastal service. You will see that under these conditions the contractors would receive ten thousand pounds a year more, and that New Zealand would pay seven thousand five hundred pounds a year more, than was considered by the House of Representatives to be reasonable under such arrangements. It has been before explained to you why it is felt that a coastal service from the Bay of Islands cannot be efficiently performed for a less subsidy than ten thousand pounds; and, therefore, in addition to the consequences just stated, New Zealand would, under your proposals, have to pay five thousand pounds a year for the service in excess of New South Wales payment. £35,000. £75,000. £10,000. £7,500.
- (5.) The arrangement suggested to you would, in other ways than that stated, be most disadvantageous to New Zealand, not only as compared with New South Wales but as compared with what was originally contracted for. New Zealand has now her coastal service performed by the main line boats; passengers from or to the Colony are conveyed by them with the least inconvenience consistent with a "fork service," and the possibilities of trade with the United States are not checked by the existence of bad shipping arrangements. Under your proposals passengers would be inconvenienced, wharf accommodation would have to be provided at the Bay of Islands, and the coastal service to and from that Port would cost about double the sum for which with the same class of boats it could be worked with Auckland as the port of call. New Zealand now shares the advantages of having a terminal port for the service; but the plan proposed by you would give those advantages wholly to New South Wales. £10,000. £5,000.

- (6.) For these reasons your proposal would be inadmissible, even had the House of Representatives not so carefully defined the limits within which the liability of the Colony is to be kept. It must be remembered that modification of the service was sought in the interest of the contractors and in view of all the negotiations and Parliamentary discussions on the subject, we are, while very desirous to see a service by way of San Francisco maintained, compelled to repeat that no arrangements which are less favourable than those specified by the House of Representatives can be accepted by this Government. We would, should you so desire, undertake to arrange and pay for the coastal service, provided that Auckland be the port of call, and New Zealand's contribution to the subsidy be not more than thirty-two thousand five hundred pounds. This with the cost of a coastal service to and from Auckland, which is estimated at five thousand pounds, would make New Zealand's total payment thirty-seven thousand five hundred pounds, and that is the limit fixed by our Parliament.

I have, &c.,

H. A. ATKINSON.

£22,500.

£5,000.

£37,500.

No. 2.

Messrs. Gilchrist, Watt, & Co., N.S.W., to The Colonial Secretary, N.S.W.

Sir,

Sydney, 30 December, 1876.

We have the honor to advise the receipt by us this day of the following telegram from New York, 25th December:—

“If necessary compromise Auckland till Bay Islands now impracticable is lightered (? lighted), and transfer facilitie (? facilities) provided; will make same time by either route; immediate change necessary.”

We have also received, under same date, a telegram from the head office, in reply to ours, asking the cost of direct service, which says—

“Expense of Sydney service practical (? practically) same as *via* New Zealand.”

We have, &c.,

GILCHRIST, WATT, & Co.,

General Agents for the Contractors, San Francisco Mail Service.

No. 3.

Messrs. Gilchrist, Watt, & Co., N.S.W., to The Colonial Secretary, N.S.W.

Sir,

Sydney, 9 January, 1877.

With reference to our interview and the discussion as to the difference in time between the route *via* Auckland and Bay of Islands, we have the honor to refer you to our respects, dated 30th ultimo, in which we advise receipt of a cablegram from New York containing the following words:—

“Will make same time by either route.”

We have, &c.,

GILCHRIST, WATT, & Co.,

Agents for the Contractors, Californian Mail Service.

No. 4.

The Principal Under Secretary, N.S.W., to Messrs. Gilchrist, Watt, & Co., N.S.W.

Gentlemen,

Colonial Secretary's Office, Sydney, 10 January, 1877.

With reference to your letters of the 10th and 22nd November last, and later communications, concerning proposed modifications of the Pacific Mail Service, I am now directed by the Colonial Secretary to transmit to you the enclosed copy of a letter which he has received from the Colonial Secretary of New Zealand in answer to a letter addressed to him on that subject on the 29th of November.

2. With regard to this matter the Colonial Secretary desires me to state that this Government is willing, subject to the approval of Parliament, to contribute £40,000 to the subsidy for a service by way of Auckland, provided the contractors undertake to make up the 20 hours difference in time between the service by way of Auckland and that by way of the Bay of Islands, this Government being free from any contributions in respect of the New Zealand coasting service.

3. In view however of the large concession which this Government is thus prepared to make, it is suggested that the term be reduced to three years.

I have, &c.,

HENRY HALLORAN.

No. 5.

Messrs. Gilchrist, Watt, & Co., N.S.W., to The Colonial Secretary, N.S.W.

Sir,

Sydney, 11 January, 1877.

We have the honor to acknowledge receipt of your letter of yesterday's date, handing copy of letter received from the Colonial Secretary of New Zealand, in reply to your letter of 29th November, regarding the proposed modification in the Pacific Mail Service, and also stating the terms on which you are willing to assent to the said modification.

We have cabled to the Pacific Mail Steamship Company the purport of the above letters, and on receiving their reply we shall at once communicate with you.

We have, &c.,

GILCHRIST, WATT, & Co.,

General Agents for the Contractors, Cal. Mail Service.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SAN FRANCISCO MAIL SERVICE.

(PROPOSED MODIFICATION OF CONTRACT—FURTHER PAPER.)

Ordered by the Legislative Assembly to be printed, 23 January, 1877.

Gilchrist, Watt, & Co. to The Colonial Secretary.

Sir,

Spring-street, Sydney, 20 January, 1877.

With reference to your letter (77/144), dated 10th instant, we have the honor to advise that we telegraphed at once to the Pacific Mail Steamship Company, New York, to the following effect, viz. :—

“ From Gilchrist, Watt, & Co., Sydney, to the Pacific Mail Steamship Company, New York.

“ Service Frisco., Honolulu, optional Auckland, and *vice versa*. New Zealand Government willing pay thirty-two thousand five hundred pounds, that Government receiving mails Auckland and undertaking distribution and Coastal Service thence. This Government willing, subject approval Parliament, contribute forty thousand pounds, provided contractors undertake to make up the twenty hours difference in time between service by Auckland and Bay Islands. Shall we accept on your behalf? Answer. Government suggests reducing term of contract to three years. Answer.”

And have, this morning, received the following answer from Clyde, President, New York:—

“ Accept 72,500, if cannot obtain 75,000. Do not reduce term of contract. Obtain permission to commence direct sea [? C.] service immediately.”

We have the honor to request that the above may have your early consideration, in order that the direct “C.” service may be commenced without delay from both ends.

We have, &c.,

GILCHRIST, WATT, & Co.,

General Agents for the Contractors, Cal. Mail Service.

The Colonial Secretary, Sydney, to the Colonial Secretary, Wellington, N.Z.

[Immediate.]

Sir,

Colonial Secretary's Office, Sydney, 22 January, 1877.

With reference to your letter of the 19th ultimo respecting proposed modifications of the Pacific Mail Service, I have the honor to transmit herewith for your information, copies of communications on the subject that have passed between this Office and Messrs. Gilchrist, Watt, and Company, the General Agents for the Contractors for the San Francisco Mail Service.

10 January, 1877
20 January, 1877

I have, &c.,

JOHN ROBERTSON.

Telegram from the Colonial Secretary, Sydney, to the Colonial Secretary, N.Z., dated the 15th February, 1877.

WE are awaiting your reply to letter of twenty-second January, forwarding for your information copies of correspondence with Messrs. Gilchrist, Watt, & Co., respecting Pacific Mail Service.

Telegram from the Postmaster General, N.Z., to the Colonial Secretary, N.S.W., dated the 16th February, 1877.

TERMS accepted by contractors agree with those proposed in letter nineteenth December, namely, that we pay £32,500 and take risk of Coastal Service, Auckland being port of call.

SAN FRANCISCO MAIL SERVICE.

No. 1.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir, Sydney, 2 January, 1877.
 We have the honor to advise receipt of the following telegrams from Auckland, dated 30th December, 1876:—

“‘Australia’ and ‘City of Sydney’ arrived Auckland this morning. ‘Australia’ quarantined, one case small-pox, died yesterday. No communication between ships.”

To which we replied, after consultation with the Hon. the Colonial Treasurer and Dr. Alleyne:—

“Fumigate and tranship mails only. Send ‘City of Sydney’ here immediately with Australian mails. Obtain and send with her a certificate from Health Officer that no other communication has been allowed with ‘Australia,’ and that ‘City of Sydney’s’ crew have clean bill of health. Arrange fumigation and distribution New Zealand mails according Government regulations by local steamers as cheaply and expeditiously as possible.”

Later telegrams from Auckland inform us that the “City of Sydney” was to leave on 31st ultimo for Sydney direct, a clean ship, and that the ‘Australia’ would follow forthwith with Australian mails and passengers (the New Zealand passengers having probably been landed in quarantine in Auckland and the mails distributed).

As under these circumstances the “Australia” will in all probability be delayed in quarantine some time here, and our having withdrawn the “City of Sydney” from the service along the New Zealand coast this month (to take the mails from here on 13th January, 1877) will deprive us of a steamer for the Coastal Service of New Zealand and to run direct from Auckland to Fiji to junction with the Sydney boat, as hitherto, we have the honor to request that you will grant permission to us to send her *viâ* Auckland (instead of Fiji) to Honolulu and San Francisco on 13th instant.

Your early reply will be esteemed a favour, inasmuch as we have not much time at our disposal, and we shall have to telegraph to New Zealand to arrange the conveyance of this month’s mails and passengers from the Southern ports to Auckland to meet the “City of Sydney” there.

We have, &c.,
GILCHRIST, WATT, & CO.,
 General Agents for the Contractors San Francisco Mail Service.

No. 2.

Cabinet Minute.

UNDER the peculiar circumstances of emergency in this case, the Government consents to the “City of Sydney” making this month’s trip *viâ* Auckland, but cannot consent to leaving Fiji out of the route.

A.S., 2/1/77.

No. 3.

The Secretary to the Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 2 January, 1877.

In reply to the application preferred in your letter of this day’s date, for permission to send “the ‘City of Sydney’ *viâ* Auckland (instead of Fiji) to Honolulu and San Francisco on 13th instant,” I am directed to inform you that, under the peculiar circumstances of urgency in this case, the Government consents to the “City of Sydney” making this month’s trip *viâ* Auckland, but cannot consent to leaving Fiji out of the route.

I have, &c.,
S. H. LAMBTON,
 Secretary.

No. 4.

Messrs. Gilchrist, Watt, & Co., to The Postmaster General.

Sir,

Sydney, 3 January, 1877.

We have the honor to acknowledge receipt of your letter of 2nd instant (in reply to ours of same date), intimating that the Government consents to the “City of Sydney” making this month’s trip *viâ* Auckland, *Kandavu*, and Honolulu to San Francisco, and to thank you for such permission.

In our letter above referred to, the date (13th) is incorrectly quoted, we having followed the printed Time-table in which that date is inserted in error.

We therefore beg you to note that the “City of Sydney” will be despatched on Friday, 12th instant, at 3 p.m., in accordance with your letter, dated 2nd December, 1876.

We have, &c.,
GILCHRIST, WATT, & CO.,
 General Agents for the Contractors San Francisco Mail Service.

Seen.—A.S., 3/1/77.

No. 5.

3

No. 5.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir,

Sydney, 15 January, 1877.

We have the honor to request permission to despatch the next mail steamer leaving on 9th February for San Francisco by Auckland.

We beg that early permission may be granted, in order that satisfactory arrangements may be made for conveyance of mails down the New Zealand coast from Auckland on arrival of "City of New York" there on 26th instant, and again up the coast to meet the outgoing steamer about 13th February, pending such other modification of the contract as may be made.

In making this application, we beg to point out that the necessity arises from no fault of the contractors, but owing to the unfortunate quarantine of the "Australia"; and the possibility of further delays with steamers arriving from San Francisco in terms of recent proclamations renders it imperative for us to make timely arrangements for the proper conduct of the service.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents for the Contractors Californian Mail Service.

Submitted.—JAS. D., 16/1/77. Leave can be granted, subject to the concurrence of Government of New Zealand; but the steamer must call at Kandavu for mails.—J.F.B., 17/1/77.

No. 6.

The Secretary to the Post Office to Messrs Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 18 January, 1877.

In reply to the request contained in your letter, dated the 15th instant, I am directed to inform you that, subject to the concurrence of the Government of New Zealand, the Postmaster General is willing to grant permission for the mail steamer leaving on the 9th proximo for San Francisco to be despatched *via* Auckland, provided that the vessel calls at Kandavu to receive and deliver mails.

I have, &c.,

S. H. LAMBTON,
Secretary.

No. 7.

Telegram from Postmaster General, New South Wales, to Postmaster General, New Zealand.

18 January, 1877.

CONTRACTORS' agents have applied for permission to send steamer leaving here for 'Frisco on ninth proximo *via* Auckland. Have given permission, subject to your concurrence, provided steamer also proceeds *via* Kandavu. The reason given is the quarantining of the "Australia" and the possibility of further delays with steamers arriving from 'Frisco in terms of recent proclamations.

No. 8.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir,

18 January, 1877.

We have the honor to acknowledge receipt of your letter of to-day's date, and to state that we have telegraphed to the Postmaster General of New Zealand asking his concurrence to the steamers taking the route sanctioned by you.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents for the Contractors San Francisco Mail Service.

Read.—J.F.B., 20/1/77.

No. 9.

Telegram from Postmaster General, New Zealand, to Postmaster General, New South Wales.

20 January, 1877.

To meet the difficulties of the case, we consent to next month's outward steamer going *via* Auckland and Kandavau, but will not be prepared to grant further concessions until question of modification of contract settled.

No. 10.

The Secretary to Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 23 January, 1877.

Adverting to previous correspondence on the subject, I am directed to inform you that the authorities of New Zealand have been communicated with in regard to the next outgoing mail steamer proceeding *via* Auckland and Kandavau, and that, under the circumstances, they concur in sanctioning the adoption of this route for the mail steamer in question.

I have, &c.,

S. H. LAMBTON,
Secretary.

No. 11.

No. 11.

The Secretary to the Post Office, Sydney, to The Secretary General Post Office,
New Zealand.

Sir,

General Post Office, Sydney, 8 February, 1877.

I am directed to forward herewith, for your information, copies of the printed papers recently laid before the Parliament of this Colony, relating to the proposed modification of the contract for the Mail Service *via* San Francisco.

I have, &c.,

S. H. LAMBTON,
Secretary.

No. 12.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir,

Sydney, 15 February, 1877.

We have the honor to request that, pending the adoption of such resolution as may be brought before the Assembly regarding the arranged change of route, the next steamer, "City of New York," sailing on 9th March, 1877, may be permitted to proceed to San Francisco *via* Auckland. We beg the favour of an early reply, as arrangements for receipt and despatch of mails, &c., along the New Zealand coast have necessarily to be made.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents for the Contractors Californian Mail Service.

No. 13.

Telegram from Colonial Secretary, New Zealand, to Colonial Secretary, New South
Wales.

19 February, 1877.

AGREE to outgoing mail steamer for 'Frisko going *via* Auckland.

Postmaster General.—JOHN R., 20/2/77.
Approved.—J.F.B., 21/2/77.

The Secretary to the Post Office, B.C., 20/2/77.—H.H.

No. 14.

Messrs. Gilchrist, Watt, & Co. to The Colonial Secretary.

Sir,

Sydney, 20 February, 1877.

Referring to our letter of 15th February, the Hon. the Postmaster General (as per copy enclosed), asking permission to send the steamer of 9th March *via* Auckland, we hand copy of telegram received from New Zealand, and will be glad of an early reply.

We observe that the "Ly-ee-Moon," under contract with New South Wales and Fiji Governments, is to leave for Levuka on 9th March; and we shall be glad to learn whether it is necessary that the "City of New York" (leaving here same date) and following steamers should go *via* Kandavau.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents for the Contractors San Francisco Mail Service.

[Enclosures.]

Sir,

Sydney, 15 February, 1877.

We have the honor to request that, pending the adoption of such resolution as may be brought before the Assembly regarding the arranged change of route, the next steamer, "City of New York," sailing on 9th March, 1877, may be permitted to proceed to San Francisco *via* Auckland.

We beg the favour of an early reply, as arrangements for receipt and despatch of mails, &c., along the New Zealand coast have necessarily to be made.

We have, &c.,

GILCHRIST, WATT, & CO.,

Telegram from Wellington to Gilchrist, Sydney.

19 February, 1877.

Your Colonial Secretary informed that this Government agrees to outgoing San Francisco mail steamer proceeding *via* Auckland.

W. GRAY.

I think this has been dealt with; if so, may go with papers.—JOHN R., 27/2/77.

Place with other papers (minute Principal Under Secretary).

The Secretary to the Post Office.—B.C., 10/3/77.—H.H.

Papers can be put away.—J.F.B., 17/3/77.

No. 15.

The Secretary to the Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 23 February, 1877.

In reply to the request contained in your letter, dated the 15th instant, I am directed to inform you that, subject to the concurrence of the Government of New Zealand, the Postmaster General is willing to grant permission for the mail steamer, leaving on the 9th proximo for San Francisco, to be despatched *via* Auckland, provided that the vessel calls at Kandavu to receive and deliver mails.

I have, &c.,

S. H. LAMBTON,
Secretary.

No. 16.

No. 16.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir,

Sydney, 26 February, 1877.

We have the honor to acknowledge receipt of your letter of 23rd instant, intimating that the Government consents to the mail steamer (leaving here 9th March) making this trip *viâ* Auckland, Kandavu, and Honolulu to San Francisco, and to thank you for such permission.

We have received a telegram from the Postmaster General of New Zealand signifying his concurrence in the above.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors San Francisco Mail Service.

I notice that the telegram from New Zealand to the Honorable the Colonial Secretary makes no mention of the outgoing steamer going *viâ* Kandavu. I informed contractors in similar terms as previous permission was given, namely, that the steamer was to go *viâ* Fiji as well as *viâ* Auckland. Will it be desirable to ask the New Zealand Government whether they understand this to be the route?—S.H.L., 28/2/77. Yes.—J.F.B., 1/3/77.

No. 17.

Telegram from Postmaster General, New South Wales, to Postmaster General, New Zealand.

1 March, 1877.

With reference to telegram of 19th ultimo from your Government to Colonial Secretary of this Colony, it is presumed it is understood by you that the packet sailing hence on the 9th instant will proceed *viâ* Kandavu as well as Auckland.

No. 18.

Telegram from Postmaster General, New Zealand, to Postmaster General, New South Wales.

Wellington, 2 March, 1877.

We understand that until modified contract executed, steamers should call at Kandavu. It is understood modified contract will not provide for steamer proceeding *viâ* Kandavu.

Read.—J.F.B., 3/3/77.

No. 19.

Messrs. Gilchrist, Watt, & Co., to The Postmaster General.

Sir,

Sydney, 8 March, 1877.

We have the honor to request permission to despatch the next mail steamer, leaving on 6th April for San Francisco, by Auckland.

We beg that early permission may be granted, in order that we may be enabled to make the necessary arrangements for the conveyance of the mails, &c., along the New Zealand coast.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

Submitted.—S.H.L., 9/3/77. For my successor.—J.F.B., 17/3/77.

No. 20.

Telegram from Postmaster General, New Zealand, to Postmaster General, New South Wales.

Wellington, 19 March, 1877.

Re Frisco Service. Government advised that under altered terms of Contract, sureties should be parties to alterations. What have you done to keep alive the liability of sureties? It will be necessary to consider amount of subsidy to be paid for service as now performed. What chance is there of early decision of your Parliament?

No. 21.

Telegram from Postmaster General, New South Wales, to Postmaster General, New Zealand.

Sydney, 20 March, 1877.

We have done nothing to vitiate the original contract, which, of course, still remains intact. We can do no more in the matter of the proposed modification, as we only hold office till our successors are appointed.

No. 22.

Telegram from Postmaster General, New Zealand, to Postmaster General, New South Wales.

Wellington, 23 March, 1877.

Would be glad if Government gave early consideration to my telegram of 19th addressed to your predecessors.

No. 23.

No. 23.

Telegram from Postmaster General, New South Wales, to Postmaster General, New Zealand.

24 March, 1877.

THE whole question of the Pacific Mail Service is now under our consideration, and I am conferring with the Crown Law Officers. Will communicate with you further as early as possible.

No. 24.

The Secretary to the Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 3 April, 1877.

With reference to the question of the mail steamers between Sydney and San Francisco proceeding *via* Auckland, the Contractors arranging for the conveyance of the New Zealand mails along the New Zealand coast to Auckland, I am directed to state that the Postmaster General has no objection to the deviation from the original route, if you will procure the assent, under seal, of the Contractors' sureties to such an alteration of the Contract, with a continuance of their suretyship notwithstanding.

I have, &c.,

S. H. LAMBTON,

Secretary.

P.S.—It is of course understood that the outgoing steamer will call at Kandavau.

No. 25.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir,

Sydney, 4 April, 1877.

We have the honor to acknowledge receipt of your letter of 3rd instant, and while thanking you for the permission therein contained, beg to state that we have cabled the purport to the Contractors and to their sureties, and on receipt of reply will at once advise you.

We are sending this steamer by Kandavau.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

Seen.—S.S., 4/4/77.

No. 26.

Telegram from Postmaster General, New South Wales, to Postmaster General, New Zealand.

5 April, 1877.

REFERRING to your telegram of 23rd and my reply of 24th, Contractors' agents applied to my predecessors for permission to send the outgoing steamer *via* Auckland, they arranging as before to convey the New Zealand coast mails to Auckland. This application was undetermined when your telegram of 19th arrived, stating your Government were advised that under altered terms of Contract sureties should be parties to alterations, and asking what had been done to keep alive liability of sureties. After consultation with Law Officers, and in view of the action of our predecessors in their arrangements with you, we are prepared to assent to the proposed deviation from original route, and we have so informed agents, on the condition that they procure assent of sureties under seal to such an alteration of Contract, with a continuance of their suretyship notwithstanding. This I think is all that can be done. The document can scarcely be procured before the departure of the steamer, and I presume there is no alternative but to let her go *via* Auckland as before. I purpose recommending to my Colleagues that Agent General be instructed to see to preparation of necessary instrument, which would hold good until new Contract executed, as will of course be necessary if Parliament approve of modification.

No. 27.

Telegram from Postmaster General, New Zealand, to Postmaster General, New South Wales.

6 April, 1877.

WE were very unwilling to press you for decision as to the course you were to take in bringing before and recommending to your Parliament the proposed alteration of Contract, knowing that with the change you must have many questions of no small importance to consider; but if you refer to schedule to Contract as to the larger subsidy paid while Contractors doing only modified service, and probable disputes likely to arise as to payment of bonuses, and how this all weighs on New Zealand, you will, I hope, understand our impatience, and press the matter on your Parliament for final decision within a few days.

No. 28.

Telegram from Postmaster General, New South Wales, to Postmaster General, New Zealand.

9 April, 1877.

QUITE understand your position. My predecessor appears to have considered it unnecessary to propose any change in amount of payments pending Parliamentary approval of modification, because it was supposed the route *via* Auckland and Fiji and Contractors doing your coastal service, was about equal to original for fork service. I purpose consulting Colleagues at earliest possible moment with regard to the whole matter, including modification. Our Parliament does not meet until 24th instant.

No. 29.

No. 29.

Messrs. Gilchrist, Watt, & Co., to The Postmaster General.

Sir,

Sydney, 10 April, 1877.

We have the honor to forward, for your information, the following copies of correspondence:—Kandavau, 20th March, 1877,—Letter from our agent and pilot (D. T. Rich) to us (extract); and, same date,—Copy of letter from same to the Colonial Secretary, Fiji.

From these you will gather the following facts:—Mr. Rich, upon leaving the s.s. "City of New York" at his destination, was placed in quarantine, although the above steamer was in possession of a clean bill of health from this port and from Auckland, and he handed a certificate to that effect to the Authorities there.

You will also perceive that our agent and pilot will probably be detained for some weeks in quarantine, and it is uncertain for how long a time the mail steamers may be deprived of his services.

As this is the most dangerous period of the year in those latitudes, and as the above proceedings will result in even greater risks than usual to these large steamers, we have the honor to request that in our future instructions to the commanders of the steamers, we may direct them to omit altogether the calling at Fiji, and thus relieve the steamers of a very serious risk:

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

[Enclosures.]

Mr. D. T. Rich, Kandavau, to The Colonial Secretary, Levuka.

Sir,

Quarantine Station, Galoa Bay, Kandavau, 20 March, 1877.

I have the honor to inform you that, upon the arrival of the "City of New York" at Auckland, I had a conversation with Mr. Maudsley, who told me that Lady Gordon and family intended to arrive here per mail steamer of next month (April), and requested me to write such information regarding the Mail Service as I had given him, viz., that the "Ly-ee-moon," after being placed on the berth for Levuka, was withdrawn, on account of the Ministry of New South Wales being defeated, and the fact of the continuance of the Pacific-Mail Co.'s contract as hitherto performed until arrangements are completed.

There being but few passengers on board the "City of New York," and little or no cargo, the captain decided upon not entering the harbour of Galoa, and to send them ashore in the pilot boat with the mails, being also anxious to be clear of the group, as his barometer was falling, and this is the worst hurricane month.

After placing the mails and passengers in my boat and receiving from the surgeon of the ship a health certificate, I came in and stood for this place, there to await the coming of the Health Officer, when I was hailed by the police boat and told to anchor near the shore until the doctor came, which he soon did; and we were at once placed in quarantine, although the ship had clean bills of health from both Sydney and Auckland, and I had given to the Health Officer the certificate before referred to.

Knowing your authority and the high position which you fill, I have to request that you will be as lenient as possible with an old sailor who had no intention of breaking the law and was quite ignorant of the new ordinance which has been passed during my absence in Sydney, and am so ignorant at the present writing.

I have, &c.,

D. T. RICH,

Agent and Pilot P.M.S.S. Co.

D. T. Rich, Esq., Kandavau, Fiji, to Messrs. Gilchrist, Watt, & Co., Sydney.

Gentlemen,

Quarantine Station, Galoa Bay, Kandavau, 20 March, 1877.

I have the honor to inform you that the "City of New York" arrived off this port at 5.30 a.m. yesterday, the 19th instant, and was then boarded by the Company's pilot boat, which took off all mails, passengers, and cargo for this place; the steamer then proceeded on her voyage, as per instructions.

On the arrival of the pilot boat inside the harbour she was hailed by the police boat, and I was told to anchor and await the coming of the Health Officer. Upon his arrival, I gave him a health certificate handed me by the surgeon of the "New York," which the latter said would admit my boat to pratique, but, after reading the document, the Health Officer peremptorily ordered the boat and occupants into quarantine, saying that there had been a new ordinance passed regarding vessels calling here from Sydney; and also informed me that I was likely to be fined £100 for holding communication with the pilot boat before he had given the steamer pratique; but I cannot tell what truth there may be in that until I am relieved from quarantine, which may be twenty-one days from 19th.

I told him the captain's reasons for not coming into the port—that this being the worst hurricane month he was desirous of getting out of the group with all despatch.

D. T. RICH.

Submitted.—S.H.L., 11/4/77.

No. 30.

Telegram from Postmaster General, New Zealand, to Postmaster General, New South Wales.

Government Buildings Station, 17 April, 1877.

Will be glad to learn if you have instructed sureties, as you proposed, to lodge their consent with Agent General, so that the outgoing steamer commence modified service and accept the subsidy of £72,500, on our undertaking Coastal Service. Should your Parliament decide against the alteration, we should be compelled to insist on Company at once performing service as at present contracted for.

No. 31.

Telegram from Colonial Secretary, New South Wales, to Agent General, London.

Sydney, 18 April, 1877.

CHANGE of Ministry necessarily delayed decision on proposed modification 'Frisko Contract. Contractors apply to go *via* Auckland pending decision. No objection as a temporary arrangement if sureties assent under seal to alteration. Please procure such assent, and telegraph when document executed.

No. 32.

No. 32.

Messrs. Gilchrist, Watt, & Co., to The Postmaster General.

Sir,

Sydney, 19 April, 1877.

Referring to your letter of 3rd instant, we have the honor to advise the despatch by us of the following cablegram to London and New York on the 4th instant:—

“New Ministry refuse permission further deviation from original contract pending approval Parliament, unless assent under seal of Contractors’ sureties to such alteration of contract with continuance of suretyship notwithstanding, be procured. Answer immediate.”

And the receipt by us of the following reply thereto, dated London, 17th April:—

“Sureties consent (consent?) Government wish. Posting formal sanction. M’Gregor been absent.”

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

No. 33.

Telegram from Postmaster General, New South Wales, to Postmaster General, New Zealand.

19 April, 1877.

REFERRING to your last telegram, Gilchrist, Watt, & Co. telegraphed to contractors for assent of sureties to temporary deviation from contract, and have just received following reply:—“Sureties consent Government wish—Posting formal sanction—M’Gregor been absent.” We also telegraphed to Agent General to procure proper document.—Matter of modification as arranged by predecessors still under consideration of Cabinet. Understood assent we proposed to procure from sureties was to cover past and any further temporary concessions of a like character. No arrangement yet has been entered into for payment of reduced subsidy named by you; this will involve fresh negotiations, doubtless. If Fiji is dropt, and you do your own coastal service, contractors will take reduced subsidy; if we assent to this, it can only be pending decision of Government and Parliament upon modification.

No. 34.

The Secretary to the Post Office to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 21 April, 1877.

Referring to the negotiations for a modification of the existing Pacific Mail Contract that have taken place between yourselves, as agents for the contractors, and the late Administration, I am directed by the Postmaster General to inquire for what amount would the Pacific Mail Company be willing to undertake a direct service between Sydney and San Francisco, *via* Kandavau, with the present sized vessels; and I am also to ask for what amount they would be disposed to perform a branch service between Kandavau and the New Zealand ports with vessels of—say from fifteen hundred to two thousand tons.

Mr. Samuel will be glad if you will obtain the information he requires by cable, with as little delay as possible.

I have, &c.,

JAS. DALGARNO,

For Secretary.

No. 35.

Messrs. Gilchrist, Watt, & Co., to The Postmaster General.

Sir,

Sydney, 25 April, 1877.

We have the honor to acknowledge receipt of your letter of 21st inst., and to state that we have telegraphed to the Pacific Mail Company for the desired information (as per copy of telegram enclosed), and their reply shall be promptly communicated to you upon receipt.

We enclose memorandum of the cost of this telegram, which we submit for your approval.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

[Enclosure.]

Telegram from Messrs. Gilchrist, Watt, & Co., Sydney, to Pacific Mail Company, New York.

Ramentosus.—Government ask what will you do direct service for between Sydney and San Francisco *via* Kandavau, with present boats. Also state amount for branch service between Kandavau and New Zealand ports, with boat about 2,000 tons. Think performance latter by local boats would be popular in New Zealand.

No. 36.

Telegram from Postmaster General, New Zealand, to Postmaster General, New South Wales.

Wellington, N.Z., 25 April, 1877.

It would be very desirable proposed modified service should be commenced by the outgoing steamer, now that the consent of sureties has been secured, and that they should be paid reduced subsidy. We quite understand this is subject to the assent of your Parliament. We trust the seeking of such decision will not be longer delayed. We would suggest, in negotiating, you stipulate that any penalties and bonuses that may be agreed upon should be receivable and payable on termination of voyage at Sydney and San Francisco, and be equally shared or paid by both Colonies. In your negotiations nothing should be agreed to which would release contractors and sureties from their liabilities under existing contract, which should have legal effect until modified contract executed. Consent of sureties understood to be to the proposal made by contractors for modifying service.

No. 38.

The Postmaster General to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

Sydney, 2 May, 1877.

I have the honor to inform you, in reply to the request contained in your letter of the 10th ultimo, and in reference to conversations on the subject with your Mr. Gilchrist, that I consent to the steamers of the Pacific Mail Company going by way of Auckland, and omitting Fiji; in fact, temporarily adopting the plan of the modified service as arranged between the late Administration, the Government of New Zealand, and the Contractors, the New Zealand Government undertaking its own coastal service, and the Contractors to be paid from this date at the rate of £72,500 per annum, of which amount £40,000 to be contributed by New South Wales, and £32,500 by New Zealand.

It is, however, to be distinctly understood that this arrangement is only assented to as a temporary measure pending the decision of the New South Wales Government and Parliament as to the question of a modification of the San Francisco Mail Service, and that this assent is in no way to prejudice the existing contract should it hereafter be decided to be inexpedient to agree to the permanent modification of the service.

I have, &c.,

SAUL SAMUEL.

No. 39.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir,

Sydney, 3 May, 1877.

We have the honor to acknowledge receipt of your letter of 2nd May, consenting to the mail steamers going by way of Auckland and omitting Fiji, on the understanding that this assent is of a temporary nature, pending the decision of Parliament as to the question of modification of route.

We thank you for the consent as above contained, and

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

No. 40.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir,

Sydney, 3 May, 1877.

With reference to your letter of yesterday's date, we have the honor to request that you will inform us if it is your wish that the next steamer leaving San Francisco should adopt the route *via* Honolulu and Auckland (omitting Fiji); also, if we shall telegraph instructions to that effect to San Francisco.

We have the honor to request the favour of an early reply.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

The next vessel leaves San F'co about 23 May.

Submitted. I think the letter of 2nd answers this question. All vessels starting on a voyage after the 2nd instant, come under the new *temporary* arrangement both as regards route and subsidy.—S.H.L., 4/5/77.

Certainly, this must be placed beyond all doubt. Messrs. Gilchrist, Watt, & Co. should be informed that the conditions stated in our letter of the 2nd instant applies to the service until the Government and Parliament shall decide whether any and what alteration shall be made in the present contract. Let draft of letter be submitted to me.—S.S., 4/5/77.

No. 41.

Telegram from Postmaster General, New South Wales, to Postmaster General, New Zealand.

REFERENCE to your telegram of the 25th ultimo, I have now to state that on 2nd instant I wrote Gilchrist, Watt, as follows:—

"I have the honor to inform you, in reply to the request contained in your letter of the 10th ultimo, and in reference to conversations on the subject with your Mr. Gilchrist, that I consent to the steamers of the Pacific Mail Company going by way of Auckland, and omitting Fiji; in fact temporarily adopting the plan of the modified service as arranged between the late Administration, the Government of

of New Zealand, and the Contractors, the New Zealand Government undertaking its own coastal service, and the Contractors to be paid from this date at the rate of £72,500 per annum, of which amount £40,000 to be contributed by New South Wales, and £32,500 by New Zealand.

"It is, however, to be distinctly understood that this arrangement is only assented to as a temporary measure pending the decision of the New South Wales Government and Parliament as to the question of a modification of the San Francisco Mail Service, and that this assent is in no way to prejudice the existing contract should it hereafter be decided to be inexpedient to agree to the permanent modification of the service."

Gilchrist yesterday acknowledged this letter as follows:—"We have the honor to acknowledge receipt of your letter of 2nd May, consenting to the mail steamers going by way of Auckland, and omitting Fiji, on the understanding that this assent is of a temporary nature pending the decision of Parliament as to the question of modification of route. We thank you for the consent as above contained."

Trust this will be satisfactory as temporary arrangement, pending recovery of Premier from severe illness, when permanent arrangement of the service will be considered in Cabinet.—4/5/77.

No. 42.

The Postmaster General to Messrs. Gilchrist, Watt, & Co.

Gentlemen,

General Post Office, Sydney, 5 May, 1877.

With reference to your letter, dated the 3rd instant, inquiring if it is my wish that the next steamer leaving San Francisco should adopt the route *via* Honolulu and Auckland (omitting Fiji), and if you should telegraph instructions to that effect to San Francisco, I beg to refer to my letter, dated the 2nd idem, which intimated that all vessels starting on a voyage after the 2nd May would come under the temporary arrangement, both as regards route and subsidy, until the Government and Parliament shall decide whether any and what alteration shall be made in the present contract.

I have, &c.,
SAUL SAMUEL.

No. 43.

Minute of the Postmaster General.

In view of the present position of the Pacific Mail Service, I recommend that the following telegram be sent to the Agent General:—

Have now arranged with Gilchrist pending decision regarding permanent modification of contract. The service is in future to be performed *via* Auckland (omitting Fiji), New Zealand arranging her own coastal service. Subsidy to be forty thousand from us, thirty-two thousand five hundred from New Zealand. In all other respects contract to remain as before. Get deed executed, securing assent of sureties to the above temporary arrangement.—S.S., 7/5/77.

The Principal Under Secretary, B.C., 8/5/77.—S.H.L.

Telegram sent to Agent General on 23 May, 1877. The Secretary to the Post Office.—B.C., 23/5/77.

No. 44.

Messrs. Gilchrist, Watt, & Co., to The Postmaster General.

Sir,

Sydney, 8 May, 1877.

We have the honor to acknowledge receipt of your letter of 5th May, and to advise that in accordance therewith, we have cabled to the Contractors to send steamers in future *via* Honolulu and Auckland, omitting Kandavau.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents for the Contractors, San Francisco Mail Service.

Submitted.—S.H.L., 10/5/77.

No. 45.

Telegram from Postmaster General, New Zealand, to Postmaster General, New South Wales.

Wellington, 12 May, 1877.

We are satisfied with arrangement, but are very anxious for permanent settlement of question; we therefore hope you will urge it forward as soon as possible. The Imperial Government have undertaken the delivery of mails across the Atlantic, and we think that a representation as to the present unsatisfactory service ought to be sufficient, without our supplementing contribution. On final adoption of modified service, a re-arrangement of the Time-table will be necessary, to insure regularity.

No. 46.

Messrs. Gilchrist, Watt, & Co. to The Postmaster General.

Sir,

Sydney, 15 May, 1877.

We have the honor to advise the receipt of the following telegram from the Pacific Mail Steamship Co., in reply to our message of 21st April:—

"New

“ New York, 10 May.
 “ Flink [think] reducion [reduction] revenue ommitting [omitting] Auckland would more than
 offset reducion [reduction] expense present line present subsidy direct service including
 Auckland small as line can be properly maintained upon.
 “ Would run proposed branch line for fair cost maintenance, prefer present service.
 “ Does Government really desire us to continue or is embarassment [sic] object of delty [delay]
 confirming mortifacure cabled [cable] Government views and your opinion situation,
 expense branch line, fixed policy and co-operation necessary to success of route.

W. P. CLYDE.”

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

Submitted.—S.H.L., 15/5/77.

No. 47.

Minute of the Postmaster General.

THE following are the principal conditions of the Contract with the Pacific Mail Company, as arranged in England in 1875, by Sir Daniel Cooper and Mr. Russell, Representatives for New South Wales and New Zealand:—

Subsidy—£89,950 per annum.

Period—eight years.

Steamers of 2,500 tons.

Route—From San Francisco to Sydney direct, and from New Zealand to San Francisco direct, the mails to New Zealand being transhipped at and forwarded from Kandavau, and the mails from Sydney being forwarded to and transhipped at Kandavau.

Time—between Sydney and San Francisco, 648 hours.

The expense of the Contract to be shared jointly by the New South Wales and New Zealand Governments.

This Contract was dated 23rd July, and was duly ratified by the Parliament of New South Wales on 29th July, 1875, and by the Legislature of New Zealand on the 11th October, 1875; but the ratification by the New Zealand Parliament was coupled with the following Resolution:—

“ That, in the opinion of this House, the annual charge imposed on the revenue of New Zealand for the Mail Steam Service ought not to exceed £40,000; and that it is the duty of the Government immediately to enter into negotiations to procure such modification of the terms and conditions of the Contract as, subject to future ratification by the House, will effect that object.”

A modification was accordingly mooted at the Telegraphic Conference held in January, 1876, between the Colonial Secretary and the Postmaster General of New South Wales and Sir Julius Vogel of New Zealand.

Sir Julius Vogel then suggested that a direct Service between Sydney and San Francisco *via* Fiji would probably be acceptable to the New Zealand Government, with a branch service from Fiji to Port Chalmers; and again, in a telegram of the 2nd June, he stated, “ Should you insist on retaining the Fiji route, we would be inclined to recommend Parliament following plan:—Branch boat Chalmers and Fiji and back, not less than 2,000 tons. Our share of present payment to be reduced by £20,000; you would have main boat both ways, and might see way to pay £5,000 more than at present; we should have mere branch.”

The Contractors, shortly after commencing the Service, complained of certain conditions of the Contract, more especially of the performance of the New Zealand Coastal Service by such large boats, and of the difficulties attending the navigation of the Fiji Group.

And although their first written application for a modification was dated 29th May, no definite proposals were received from them until the 21st August. Their offer then submitted was to run between Sydney and San Francisco *via* Auckland and Honolulu, and to be relieved of the New Zealand Coastal Service—subsidy to be £80,000 per annum.

Negotiations of a lengthy character then commenced between the two Governments, the Contractors, and their agents, which appear to have extended up to February last, in the course of which it transpired that if the present Forked Service were insisted upon the Contractors would forfeit the penalty of the bond and throw up the Contract.

During the progress of the negotiations the matter appears to have again come before the New Zealand Parliament, about October, 1876, when it was decided that the New Zealand subsidy should be reduced to £37,500 if calling at Auckland, and £35,000 if calling at Bay of Islands.

These negotiations resulted in the late Postmaster General giving notice of the following Resolutions in the Legislative Assembly, as having been agreed to by the various parties concerned:—

(1.) That, inasmuch as the Pacific Mail Steamship Company have intimated that they cannot carry out the Contract commonly called the “ Forked Service,” entered into between them and this Government and that of the Colony of New Zealand; and inasmuch as the Colony of New Zealand has expressed through its Government and Parliament that it will not consent to the Bay of Islands as the port of call without an additional payment of £5,000 by this Colony; and inasmuch as the Contractors have agreed that the service *via* Auckland shall be performed within the same time as it would have been *via* the Bay of Islands,—it is expedient, in the opinion of this House, that this Colony should consent to the change of the route of the Pacific Mail Service to the following, *viz.*:—To and from Sydney and San Francisco *via* Auckland and Honolulu.

(2.) That the annual subsidy for the Service be reduced from £89,950 to £72,500, of which amount £40,000 shall be contributed by New South Wales, and £32,500 by New Zealand; the Coastal Service, the cost of which is now included in the £89,950, being borne by New Zealand only.

After,

After giving the matter full consideration, I still entertain the same opinion I held when the Service was first established in 1873, namely, that the direct route *via* Fiji is the one most calculated to advance the interests of this Colony; and it is to be regretted that when Sir Julius Vogel intimated, at the Conference held in January, 1876, and again in his telegram of the 2nd June following, that the New Zealand Government were disposed to negotiate for a direct route, with a branch service for New Zealand, the late Government did not adopt more decisive measures to secure a modification of the Contract on that basis, instead of arranging for the steamers to and from Sydney and San Francisco making the detour *via* Auckland.

Feeling very strongly the desirability of establishing a direct service, I caused, with a view, if possible, to open fresh negotiations, inquiries to be made of the Contractors, through their agents, as to the terms on which they would perform a direct service between San Francisco, Honolulu, and Sydney, with a branch service to Port Chalmers, New Zealand.

The telegraphic reply received from Contractors at New York evidently manifests an indisposition on their part to take up the direct service, while they ask for its performance as large a subsidy as it is proposed to pay for the route *via* Auckland, and this would be exclusive of the cost (which they do not state) of a branch service from Fiji to Port Chalmers, which would necessarily be more expensive than a branch service from Auckland to Port Chalmers, and would involve the re-opening of the whole question with New Zealand.

Although I believe a direct service would be the more beneficial one for this Colony, yet, looking at the complications that now surround the question, and to the danger of the Service falling through entirely if we were to insist upon the Contractors reverting to their original Contract and performing the Forked Service, I recommend my colleagues, I confess reluctantly, to adopt the arrangement agreed to by the late Government, the Government of New Zealand, and the Contractors, as detailed in the Resolutions intended to have been moved by my predecessor.

Should this view be concurred in by the Cabinet, it will be necessary for this Government to submit for the approval of Parliament Resolutions for the modification of Service as arranged.

I have only to add, that under temporary arrangements the Pacific Company are now conducting the Service by the Auckland route. This change was brought about in consequence of the Contractors, in January last, not having sufficient steamers to carry on the Service, through one of their boats being placed in quarantine on account of small-pox; and this disturbance of the Service led the late Government to sanction the adoption of the route *via* Auckland and Kandavau on three occasions, and the same route was followed a fourth time. But it being apparent that the deviation to Kandavau was prejudicial to the Service, and that a less subsidy was required for the more direct service *via* Auckland (avoiding the detour from Auckland to Kandavau), I, with the consent of the Cabinet, temporarily arranged for the performance of the modified service on the distinct understanding that in the event of its not being permanently agreed to the Forked Service should be reverted to.

28/5/77.

SAUL SAMUEL.

No. 48.

Messrs. Gilchrist, Watt, & Co., to The Postmaster General.

Sir,

Sydney, 7 June, 1877.

We have the honor to advise the receipt by us of the following cablegram from New York dated 5th instant.

"Answer last cable.—Houston proposes coming to Sydney next steamer with Seal full powers.
CLYDE."

The next steamer leaves San Francisco on 20th instant, and we have the honor to request the favour of a reply to the last cablegram referred to above, in order that we may communicate with the Head office previous to the departure of Mr. Houston.

We have, &c.,

GILCHRIST, WATT, & CO.,
General Agents for the Contractors, San Francisco Mail Service.

If the cablegram of 10th May herewith is the one referred to, they ought to be informed that their offer for a direct service *via* Fiji being so high, it has been determined not to entertain it.

S.S., 8/6/77.

No. 51.

Messrs. Gilchrist, Watt, & Co., to The Postmaster General.

Sir,

Sydney, 25 June, 1877.

Referring to your letter dated 3rd April last, we have the honor to enclose herein original document signed under seal conveying the assent of the sureties to the deviation from the original contract.

We have, &c.,

GILCHRIST, WATT, & CO.,

General Agents for the Contractors, San Francisco Mail Service.

Seen,—S.S., 28/6/77.

[Enclosure.]

London, 17 April, 1877.

WE, John Elder & Co. and Donald Robert Macgregor, sureties for the Pacific Mail Steam Ship Co., of New York, for the due performance by them of their contract with the Government of New South Wales and the Government of New Zealand, for conveyance of mails between these Colonies and San Francisco, do hereby consent to the variation of the route temporary or permanent, as has been already arranged, and that without in any way invalidating our suretyship.

We further agree to sign such documents as may be deemed necessary to carry out this arrangement.

In witness whereof we have hereto set our hands and seals at London, this seventeenth day of April, eighteen hundred and seventy-seven, in the presence of these witnesses—John Bell, merchant, 5 East India Avenue, and John Robert Dawthwaite, clerk at same address.

JOHN ELDER & CO. (L.S.)

34. Minute of Postmaster General, dated 2 August, 1877	12

* NOTE.—Papers Nos. 1 to 6 are in addition to those ordered by the House.

LAND ADJOINING THE GENERAL POST OFFICE.

No. 1.

Minute of Postmaster General.

WRITE to the Works Department that Mr. Henry A. Perkins, son of Mr. Perkins, the owner of the property in George-street, occupied by Messrs. Thompson & Giles, joining the Post Office, called upon me to say that his father was prepared to sell this property to the Government. I would suggest that the Secretary for Works give instructions that a letter should be written to Mr. Perkins, asking him on what terms he will dispose of the property.

S.S.,
25/11/74.

No. 2.

The Secretary to the Post Office to The Under Secretary for Public Works.

General Post Office,

Sydney, 27 November, 1874.

Sir,

I am directed to inform you that Mr. Henry A. Perkins, son of the owner of the property in George-street, occupied by Messrs. Thompson & Giles, and adjoining the proposed new street on the north side of this office, has represented to the Postmaster General that Mr. Perkins, senr., is prepared to sell the property in question to the Government.

Mr. Samuel would therefore suggest that the Secretary for Public Works might see fit to give instructions for a letter to be addressed to Mr. Perkins, senior, inquiring on what terms he is willing to dispose of the property referred to.

I have, &c.,

S. H. LAMBTON.

No. 3.

The Secretary for Public Works to Thomas Perkins, Esq.

Sir,

Department of Public Works, Sydney, 2 December, 1874.

It having been represented to the Government that you are disposed to treat for the sale of the premises and land at present occupied by Messrs. Thompson, Giles, and Company, in George-street, Sydney, I have the honor to request that you will inform me the terms upon which you are prepared to dispose of the property referred to.

I have, &c.,

JOHN SUTHERLAND.

No. 4.

Thomas Perkins, Esq., to The Secretary for Public Works.

Dear Sir,

Balmain, 14 December, 1874.

I am in receipt of your favour of the 2nd instant, asking me if I am disposed to sell my property in George-street, at present leased to Messrs. Thompson & Giles.

I am very unwilling to part with it, as every year enhances its value, and I hope to leave it an heirloom to my family. Mr. Stubbs came to negotiate with me several times; for whom he came I know not, but the last time he came he pressed me to name a price. I told him that in 1862, Mr. Giles told me he charged his co-partners at the rate of £1,800 per annum; he agreed with me, that if I sold I was entitled to a premium over that, as the position of the property is unequalled in the Colony, and that I would expect £2,000 per annum in the Government Funded Stocks, and I now add on £50,000. I also possess a right of way from my property through Mr. Holt's property into Pitt-street; this of course, if I sold, goes with the property.

I believe there is a plan in the office of the Colonial Architect that suggests taking 6 feet of my property. If this is done, it will compel me to rebuild the premises altogether, and I am willing to give this, provided I get sufficient compensation to do so, and I obtain the consent of the lessees, who must be consulted in the matter.

If the Government decide to leave the street the present width, will they give me permission to ornament my southern wall facing the new Post Office?

I remain, &c.,

THOMAS PERKINS.

No. 5.

3

No. 5.

The Secretary to the Post Office to The Under Secretary for Public Works.

Sir,

General Post Office, Sydney, 22 January, 1875.

Adverting to my letter, dated the 27th November last, informing you that Mr. Henry A. Perkins had represented to the Postmaster General that Mr. Perkins, senr., is prepared to sell the property in George-street occupied by Messrs. Thompson & Giles, and adjoining the proposed new street on the north side of this office, and conveying Mr. Samuel's suggestion that the Secretary for Public Works might see fit to cause inquiry to be made as to the terms on which it would be disposed of,—I am directed to state that the Postmaster General will be glad to know if any steps have been taken in the matter.

I have, &c.,

S. H. LAMBTON.

No. 6.

Minute for the Cabinet.

New Street, Northern front of New Post Office.

To enable the Government to take steps towards opening for traffic the street leading from George to Pitt Street along the northern front of the New General Post Office, and acting upon the suggestion of the Postmaster General, I caused inquiries to be made of the owner of the premises, at present occupied by Messrs. Thompson & Giles, namely, Mr. Thomas Perkins, as to the terms upon which he would be prepared to dispose of the land, &c., required for widening the street in question; and I herewith enclose Mr. Perkins's reply, for consideration by the Cabinet.

JOHN SUTHERLAND,

25/1/75.

The Cabinet have not sufficient time now to consider this subject; these papers may be brought under the notice of our successors.—J. SUTHERLAND, 29/1/75. Submitted.—1/3/75.

No. 7.

W. P. Woolcott, Esq., to The Postmaster General.

Dear Sir,

Bell's Chambers, Pitt-street, Sydney, 17 April, 1875.

Referring to our late interview on the subject of securing the land necessary for the formation, completion, and opening of the intended new street adjoining the Post Office, I have the honor to put the matter fully before you as you desired, for the consideration of the Government.

It must be admitted that, in its present state, it is not only unsightly but inconvenient to the Post Office officials and to the public generally; and I can show that by the unnecessary delay which has already taken place in getting this matter settled, new interests have been created which may be made costly to deal with, and that they are likely to increase rather than diminish by further delay.

By the Colonial Architect's plan (to make this street wider than George-street) 6 feet more land is required in George-street (Mr. Perkins's property), and 14 feet to Pitt-street (Mr. Holt's).

I have arranged with Mr. Holt for a ninety-nine years lease of a very large portion of his land in Pitt-street (including said 14 feet), for a purpose that will greatly improve this part of the city, and which, as I have already explained it to several Members of the Government, it is not necessary to refer to it further here beyond giving it as my reason for taking so much interest in seeing this matter completed. This is a valuable lease, but I offer no obstacle to the formation of the street if the plan I respectfully suggest is adopted, and which I think you will see is the most expeditious, economical, and beneficial for the public interest.

Messrs. Giles & Co. have a fourteen years lease of the George-street frontage. This would be a large item for the Government to deal with, but as my plans suit these gentlemen's purpose, I believe I can, if not overcome it, at least make it easy. I would suggest that the Government allow me to negotiate for the lands required for the new street, ascertain the terms upon which they can be secured, to be submitted to them for their approval.

I confidently say I can arrange with Mr. Holt for the 14 feet to Pitt-street required, at a *fair price*. With Mr. Perkins, the owner of the George-street frontage, there will be greater difficulty; he is old and infirm, and does not care to alter the present arrangement of his property; but further, he has been *much annoyed* by an agent having been sent to treat with him by a Member of the late Government without first advising him, and without official authority, (I was so informed at a meeting I attended of the late Government on this subject.) The Member referred to was not present, and it has so nettled him that I have not thought it prudent to go near him.

But if the Government would formally authorize me, and advise him of it, I think he may yet be brought to terms, especially as I can show him how he can increase his revenue from the said property by so doing, and further that I can deal with his tenants where he cannot.

At all events no harm can arise from my being authorized to make the trial; and if I fail, the Government will have made the attempt, and justify their resorting to the extreme measure of introducing a short Act to take by arbitration.

I submit that I am in the best position to deal with this matter, and best likely to bring it to a speedy and favourable issue.

Yours truly,

W. P. WOOLCOTT.

Forward the papers in reference to this matter to the Hon. the Minister for Public Works.—J.F.B., 14/6/75. Papers herewith,—Jas. D., for Secy., B.C., 14/6/75. The Under Secretary, Public Works. Previous papers.—J.R., 15/6/75. Mr. Perkins to be written to to ascertain the amount required for this property in order that the work may be completed without delay.—J.L., 16/6/75.

No. 8.

No. 8.

EXTRACT from the Votes and Proceedings of the Legislative Assembly, 28th April, 1875.

QUESTIONS.

1. LAND ADJOINING GENERAL POST OFFICE :—Mr. Macintosh asked the Postmaster General, pursuant to Notice,—

(1.) Has the Government had any correspondence, direct or otherwise, with the proprietors or leaseholders of the land abutting upon the proposed street to the north of the New Post Office, with the object of purchasing their interest in the said land?

(2.) If so, will he be pleased to state the purport of such correspondence.

Mr. Burns answered,—A proposal in reference to this matter has recently been made in writing by one of the parties interested in the land abutting upon the proposed street to the north of the General Post Office, and is now under the consideration of the Government. It is not deemed expedient to make public, at present, the nature of the proposal.

No. 9.

Messrs. Holdsworth & Brown to The Secretary for Public Works.

Sir,

69, Pitt-street, 20 May, 1876.

We have been requested by Messrs. Thompson & Giles to write you with respect to their business premises in George-street, near the site of the Post Office. Rumours have from time to time reached their ears that the Government have it in contemplation to purchase the property for the purpose of widening the street intended to run from George-street to Pitt-street, but no official intimation of the fact has ever been conveyed to them. For some time past they have intended making considerable alterations in and additions to their premises, and the plans have been prepared for some months, and they can no longer delay the work. As an act of courtesy, however, to the Government, they think it right to inform them of their intentions, because the alterations and additions they intend making will involve a considerable outlay, and if the Government do hereafter purchase the property, the cost of this outlay will necessarily fall upon them, as forming a portion of the value of the premises when appraised.

We have therefore the honor to request that, if it is the intention of the Government to purchase the property in question, our clients may be furnished with an official intimation to that effect within one week from this date, coupled with an assurance that the purchase will be completed within a reasonable time. In default of such intimation and assurance, Messrs. Thompson & Giles will feel themselves at liberty to advertise for contracts for the work they intend having done, without considering the Government further in the matter.

We have, &c.,

HOLDSWORTH & BROWN.

Colonial Secretary.—J.L., 6/6/76. Principal Under Secretary.—B.C., 7/6/76, J.R.

If either of these gentlemen, or if their attorney, or either of them, will call upon me, I shall be glad to negotiate. In the meantime ascertain what money (if any) is applicable to the purpose.—JOHN R., 12/6/76.

No. 10.

The Principal Under Secretary to Messrs. Holdsworth & Brown, Sydney.

Gentlemen,

Colonial Secretary's Office, Sydney, 12 June, 1876.

In acknowledging the receipt of your letter of the 20th ultimo, addressed to the Minister for Works, stating that you have been requested by Messrs. Thompson & Giles to write respecting their business premises in George-street, near the site of the Post Office, I am directed to state that if either of the above-named gentlemen, or if their solicitors, or either of them, will call upon the Colonial Secretary, Mr. Robertson will be glad to negotiate the matter to which you refer.

I have, &c.,

HENRY HALLORAN.

The Under Secretary for Public Works, with reference to the latter part of the Colonial Secretary's minute of this date.—H.H., B.C., 12 June, /76. *Very urgent.*—To be returned. Colonial Architect, for report.—J.R., B.C., 13/6/76.

There is £1,000 balance of vote for completion of the Post Office available, and there is also £3,000 on the Loan Estimates for this year for which there does not seem to be any special necessity, and which I presume could be devoted to the purchase of land.—J.B., 15 June, /76. Principal Under Secretary.—B.C., 19/6/76, J.R.

£4,000 would appear to be available. The papers do not show whether Messrs. Holdsworth & Brown called upon the Colonial Secretary as desired. Submitted for instructions, 18/9/76.

I ascertained that Mr. Perkins could not be induced to sell.—JOHN R., 19/9/76. Put carefully by for the present. Note Register, 19/9/76.

No. 11.

Minute of Secretary for Public Works.

Post Office Improvements.

I DESIRE to bring under the notice of my honorable colleague, the Postmaster General, the necessity of completing the projected alterations and improvements connected with the New Post Office, more especially that part which will necessitate the opening up of the thoroughfare between George and Pitt Streets. I am sure it only requires to be called to the notice of Mr. Burns, to at once secure his active attention to what has been permitted to remain neglected during the last eighteen months, during which time it has been a positive eyesore to that portion of the city in which it is. I may add that the proprietor of the adjoining property—that occupied by Mr. Giles—is anxious to know what the Government intend doing in the case.—JOHN LACEY, 10/6/75.

No. 12.

No. 12.

The Under Secretary for Public Works to Thomas Perkins, Esq.

Sir,

Department of Public Works, Sydney, 18 June, 1875.

I am directed by the Secretary for Public Works to request that you will inform me upon what terms you are prepared to treat with the Government for the sale of the land and premises, your property, at present occupied by Messrs. Thompson & Giles, in George-street, Sydney, near the New General Post Office.

I have, &c.,
JOHN RAE.

No. 13.

Thomas Perkins, Esq., to The Under Secretary for Public Works.

Sir,

Menevia, Balmain, 21 June, 1875.

I am in receipt of your letter of the 18th instant, asking me upon what terms I am prepared to treat with the Government for the disposal of my property in George-street, at present occupied by Messrs. Thompson & Giles, near the New General Post Office.

In reply, I beg to refer you to the answer I forwarded to Mr. Sutherland, relative to the same question, in December last.

I have, &c.,
THOS. PERKINS.

Mr. Cowlshaw will be requested to inspect and report approximate value of Mr. Perkins's property.—J.L., 29/6/75. Railways, B.C., 29/6/75, G.H., Mr. Cowlshaw, B.C. Report herewith.—T.C., 29/7/75. The Under Secretary. Submitted, 30/7/75.—J.R.

I HAVE examined the property of Mr. Perkins, in George-street, now in the occupation of Messrs. Thompson & Giles, and submit the following estimate of value:—

For 65 feet 6 inches frontage to George-street, by an average depth of about 174 feet	£16,375 0 0
For buildings erected thereon	3,000 0 0
	<hr/>
	£19,375 0 0
If a forced sale, 10 per cent. should be added	1,937 10 0
	<hr/>
Total... ..	£21,312 10 0

In this amount no consideration has been made for right of passage way into Pitt-street through what is known as Lyons' Buildings (now Holt's), which I am informed Mr. Perkins has secured.

I have waited on Messrs. Thompson & Giles to learn what was their position in this property, and they inform me they have a lease of the premises, 12½ years of which is unexpired, and their rent is £1,500 per year. I endeavoured to ascertain what were their views with regard to their removal from the premises, but their reply, after several days' consideration, was that they would thwart the action of the Government.

T.C., 29/7/75.

Colonial Architect, for plan and report—B.C., 12/10/75., J.R.

I forward a tracing* showing the Post Office land, the present street, and the land adjoining. The strip coloured red being part of Mr. Perkins's property in George-street, having 6 feet 6 inches frontage to that street, which is required to increase the new street to the desired width: For this narrow strip I consider the valuable frontage to the new street of the remainder of the land would be ample compensation. Mr. Perkins expresses his willingness to give up this portion, but seems to expect further compensation than the increased value which his property would derive. The additional frontage he would obtain will be 174 feet to a street of equal value for business purposes to George-street itself. As regards the alternative of purchasing the whole of Mr. Perkins's property, I consider the price asked by him to be exorbitant; the frontage to George-street being 65 feet 6 inches by a depth of 174 feet, the sum named (£50,000) is at the rate of about £762 per foot of frontage, with apparently the additional necessity of compensating the present lessees. Mr. Cowlshaw's valuation, £21,312, or about £324 per foot frontage, I consider a liberal one. The proprietors of the property in the rear have expressed their willingness to give up the necessary portion of their land for widening the street, accepting the frontage to that street as compensation for the land surrendered. As it does not seem likely that Mr. Perkins will be induced to accept reasonable terms, I would suggest that the Government procure an Act of Parliament to enable them to resume the quantity of land required. In this connection I should observe that it has been suggested that the whole of the land from the Post Office up to Wynyard-street, should be resumed for formation of an open space.—J.B., 29 Oct., /75.

*Appendix A;

No. 14.

Captain R. F. Pockley to The Postmaster General.

Sir,

77, Pitt-street, 17 October, 1876.

I do myself the honor of informing you that, as agent for the proprietor of the land in Pitt-street, adjoining the southern boundary of the Post Office land fronting that street, I am authorized to sell the land; and believing as I do that it would be a valuable block to the Government for any contemplated addition to the Post Office, I respectfully beg to ask whether you are disposed to purchase the said land if I place it under offer to you at the reserved price, viz., £200 per foot frontage to Pitt-street.

I remain, &c.,
ROBT. F. POCKLEY.

Refer to the Colonial Architect, per Works Department.—J.F.B., 26/10/76. Should any reply be sent to Mr. Pockley at present?—S.H.L., 1/11/76. (Minute of the Postmaster General)—No.

No. 15.

No. 15.

The Secretary to the Post Office to The Under Secretary for Public Works.

Sir, General Post Office, Sydney, 31 October, 1876.
I am directed to inform you that an offer has been made to this department to sell, at the rate of £200 per foot, the land on the southern side adjoining the Post Office frontage to Pitt-street. As it is stated that the block of land in question would be very valuable in view of any contemplated addition to this building, or for stabling purposes, the Postmaster General would be glad to have the opinion of the Colonial Architect in the matter.

I have, &c.,
S. H. LAMBTON.

The Colonial Architect.—B.C., 1/11/76, J.R.
The price asked, £200 per foot, seems to me excessive: the adjoining land was purchased by the Government for £80 per foot; the City Bank paid £100 per foot for their land with buildings upon it; and the land opposite was sold for £50 per foot. In my opinion, an Act of Parliament should be obtained for purchasing the land required, and the price be fixed by valuation in the usual way.—J.B., 9 Jan., 1877. Submitted.—JAS. D., 15/1/77.
This matter can be brought under the notice of my successor.—J.F.B., 16/3/77.

No. 16.

The Hon. Alex. Campbell, M.L.C., to The Postmaster General.

Sir, Rosemount, Woollahra, 29 January, 1877.
On examining the deeds and ground plan of the piece of land I recently purchased in Pitt-street, adjoining the site on which I understand it is intended to build the extension of the Post Office into that street, I find that a portion of the western boundary of my land has been enclosed with a stone wall and fence by your department, and added to the Post Office premises.

My present object is to call your attention to this encroachment with a view to its removal; and, as I am now about to dispose of the land for building purposes on ninety-nine years leases, I shall esteem it a great favour if you will give your early attention to this matter to enable me to complete my arrangements.

I have, &c.,
ALEX. CAMPBELL.

Forward to the Works Department.—J.F.B., 31/1/77. Under Secretary for Works, B.C., 1/2/77.—S.H.L. Col. Architect, B.C., 3/2/77.—J.R.

*Appendix B.

I forward a tracing* showing the encroachment complained of; it is on reclaimed land on the bank of the Tank Stream, and is at the back of the Post Office out-offices; it was enclosed to prevent it becoming a nuisance, which seemed probable at the time. I recommended the purchase of the land, of which this forms a part, as far back as 1869, and it is quite as desirable now that it should be purchased if possible.—J.B., 13 Feby., /77.

Before replying to Mr. Campbell, I would suggest that the Surveyor General be instructed to define accurately the boundaries of the land.—J.B., 13 Feb., 77.

Under Secretary for Lands. Very urgent, B.C., 19/2/77.—J.R. Surveyor General, 27/2/77.
Deputy Surveyor General. Probably Mr. Surveyor Woolrych might be instructed to make this survey, in which case it might with advantage be connected with his recent measurement, shown by P. 37-574 and to show G.P.O. buildings.—10 April, 1877.

Mr. Woolrych is requested to make the survey as suggested.—J. H. FITZGERALD, 10 April, 1877.

No. 17.

EXTRACT from the Votes and Proceedings of the Legislative Assembly, 31st January, 1877.

- (2.) New Street fronting the Post Office.—*Mr. Davies*, on behalf of Mr. Macintosh, asked the Colonial Secretary, pursuant to Notice,—Is it the intention of the Government to submit a Bill to the Assembly during the present Session making provision to empower the Government to deal with the proprietors of the land abutting on the north side of the new street fronting the Post Office, so that the street could be made available for the public during the present year?
Mr. Robertson answered—Some time ago I had the honor of an interview with the lessee and proprietor of this land, and I endeavoured and hoped at the time we should be able to purchase this land without compulsion. That hope has waned away, and I have very little hope now. I think it exceedingly desirable that the Government should have the land, but the natural unwillingness of a Government to take perforce any land from a citizen has held us back in the meantime, and therefore nothing has been done.

EXTRACT from the Votes and Proceedings of the Legislative Assembly, 11th May, 1877.

- (7.) New Street fronting the Post Office.—*Mr. Davies*, on behalf of Mr. Macintosh, asked the Colonial Secretary, pursuant to Notice,—
(1.) When will the Government take active measures to cause the street in front of the Post Office to be opened for public convenience?
(2.) Is it the intention of the Government to extend the Post Office buildings eastward to Pitt-street?
Mr. Parkes answered,—A sum of money will be amongst the sums asked to be re-voted in the Estimates for this purpose. The attention of the Government will be given to the improvement at once.

No. 18.

A. H. M'Culloch, Esq., to The Postmaster General.

Sir,

165, Pitt-street, Sydney, 21 May, 1877.

I have the honor to inform you that Messrs. Paling, Beyers, and myself, have become the owners of the property adjoining the site purchased by the Government for the extension of the General Post Office into Pitt-street (upon a small portion of which there is already an encroachment of the present Post Office buildings). It is our intention to erect buildings on the land at once; but as I have been informed that another portion of our land will be required to carry out the design of the Government, I think it as well to give you the opportunity of making arrangements with us for the purchase of such land as will be required before the extra expense of building is incurred.

I have, &c.,

A. H. M'CULLOCH.

Submitted.—S.H.L., 22/5/77.

This matter seems to me to require immediate attention if we are to secure this piece of land at a reasonable price.—S.S., 28/5/77. The Secretary for Works.

Under Secretary for Works.—B.C., 28/5/77, S.H.L.

The Secretary to the Post Office is requested to return the previous papers.—J.R., B.C., 29/5/77.

Herewith.—S.H.L., B.C., 31/5/77.

The Under Secretary for Works will please have a letter written to Mr. M'Culloch asking the price which would be required from the Government for any of the land indicated in this letter for an extension of the Post Office.—J.H., 7/6/77.

No. 19.

J. Macintosh, Esq., M.P., to The Postmaster General.

My dear Sir,

1 June, 1877.

A few days ago I received an answer to a question, to the effect that the Government contemplate extending the New Post Office eastwards to Pitt-street. I am of opinion that the extension should take place, and would now beg most respectfully to draw your attention to the fact that the land fronting Pitt-street, belonging to Mr. A. Campbell, is being now dealt with by him, and, I think, it would be necessary to resume a portion of his land so as the allotment on which the Post Office now stands could be carried out straight to Pitt-street.

I would not take the liberty of writing to you on this subject only that I am aware that he is dealing with his land, and that it is highly necessary it should be resumed for the requirements of extending the Post Office, and the matter urgent.

I remain, &c.,

Submitted.—S.H.L., 2/6/77.

JOHN MACINTOSH.

No. 20.

Minute of Secretary for Public Works.

[Urgent.]

Proposed extension of the Post Office to Pitt-street.

THE Cabinet wish to be informed as soon as possible of the frontage to Pitt-street, and area of land which the Crown would require to purchase if they considered it desirable to extend the present building used as a Post Office, from George-street to Pitt-street.—J.H., 7/6/77.

Colonial Architect, B.C., 7/6/77.—J.R.

To carry out the accompanying plan* of the Post Office it will be necessary to purchase 67 feet of additional frontage to Pitt-street.—J.B., 8 June, 1877. Seen.—J.H., 14/6/77.

* Sketch plan for extension of Post Office.

No. 21.

The Under Secretary for Public Works to A. H. M'Culloch, Esq.

Sir,

Department of Public Works, Sydney, 8 June, 1877.

Referring to your letter of the 21st ultimo on the subject of certain land in Pitt-street, adjoining the site of the New General Post Office, I am directed by the Secretary for Public Works to request that you will inform me of the price required by the owners for the whole or portion of the land in question.

I have, &c.,

JOHN RAE.

No. 22.

A. H. M'Culloch, Esq., to The Secretary for Public Works.

Sir,

165, Pitt-street, Sydney, 16 June, 1877.

I have the honor to inform you that my ownership of the land in Pitt-street is not such that I can name any price at which I will sell the property.

My interest is substantially a freehold—being leasehold for ninety-nine years, with a right to convert it into freehold at the end of that term at a price named in my lease.

The property is divided into two blocks—one being vacant land adjoining the Post Office site, and having 35 feet frontage to Pitt-street, on which the ground rent is £600 per annum. I have accepted tenders for erecting buildings on this land for £5,000, which will produce a rental of at least £2,132 per annum, and after all deductions I shall have a clear profit of £920 per annum, for which I shall require to be compensated if the land be resumed.

I do not desire to part with the property at all, but as I heard that the Government would require this part of my purchase, and as on inspection I saw that at all events part of it would be necessary to carry out the design for the extension of the Post Office into Pitt-street, I thought it best to draw the attention of the Government to the fact that I intended to build.

My ground rent amounts to such a large sum that it will not pay me to keep the land vacant; and I have therefore, as I have already stated, accepted contracts for the erection of buildings upon it. The calculations upon which I base my statement, that I shall make a clear profit of £920 per annum out of the property, are shown on the paper attached hereto.

I am of course aware that the Government can at any time get an Act passed which would enable them to take what land they require, and there can be no advantage to me in occasioning that delay and trouble. I am therefore prepared to give up my interest in the property upon payment of fair compensation for my loss, but until some arrangement be made I must proceed with my building.

I have, &c.,
A. H. M'ULLOCH.

S. H. LAMBTON.

No. 25.

No. 25.

Minute of Postmaster General.

21 June, 1877.

HAVING ascertained that the Government have the power, under the deeds of grant, to resume the land in Pitt-street, recently purchased by the Honorable Alexander Campbell, M.L.C., and also the land in Pitt-street belonging to the Honorable Thomas Holt, M.L.C., at the rear of the premises occupied by Messrs. Thompson & Giles, of George-street, upon payment of the value of the land—such value to be determined by arbitration, I recommend to my colleagues that the Crown Solicitor be at once instructed to give notice of the intention of the Government, and to take the necessary steps to resume such quantities of the land belonging now to Mr. Campbell as may be required for the extension and completion of the present Post Office, and for the whole of the land belonging to Mr. Holt, in order to complete the projected design for opening and forming a new street, to connect George and Pitt Streets.

And I further recommend that a Bill be introduced into Parliament, at the earliest possible period, for taking possession of the land now in the occupation of Messrs. Thompson & Giles for a like purpose.

SAUL SAMUEL.

Inform the Works Department of the action I have taken in this matter, and request they will take no further steps without communicating with me.—S.S., 29/6/77.

Submitted to Cabinet and approved. Resolution to be submitted to Parliament.—H.P., 11/7/77.

No. 26.

The Colonial Architect to The Under Secretary for Public Works.

Sir,

Colonial Architect's Office, 22 June, 1877.

I do myself the honor to forward herewith a plan* and description, prepared at request of the Postmaster General, of land in Pitt-street, required for extension of the Post Office building. The land in question is a portion of grant to Inch. I am informed this grant contains a clause enabling the Government to resume if it think proper, and I would recommend that the whole of this land be resumed, as although not required for present extension, the unused portion will be available for future purposes, and in the meantime can be rented for mercantile uses.

* Appendix C.

I have, &c.,

JAMES BARNET,
Colonial Architect.

These papers should be sent to the Postmaster General.—J.H., 27/6/77. The Secretary to the Post Office. B.C., 27/6/77.—J.R.

No. 27.

The Crown Solicitor to The Secretary to the Post Office.

Sir,

Crown Solicitor's Office, 28 June, 1877.

With reference to the instructions forwarded to me to take the necessary steps to resume, for public purposes, a portion of the land in Pitt-street granted to Joseph Inch, I have the honor to forward herewith notice in duplicate, which will have to be signed by His Excellency the Governor.

It will be necessary to publish a copy of this notice in the Government Gazette; and as the lessee of the land persists in going on with the buildings, notwithstanding he has been informed of the intention of the Government to take a portion of the land, it is desirable that this notice should appear in the Gazette of Friday, 29th instant.

May I therefore request that you will be pleased to give the matter your early attention.

I have, &c.,

JOHN WILLIAMS,
Crown Solicitor.

I shall feel obliged if the Colonial Secretary will procure His Excellency's signature to the notice in duplicate sent herewith, as the matter is urgent, and it should appear in the Government Gazette to-morrow.—S.S., 28/6/77.

The Principal Under Secretary, B.C., 28/6/77.—S.H.L.

[Enclosure.]

NOTICE referred to which was published in the New South Wales Government Gazette on Tuesday, 3 July, 1877.

NEW SOUTH WALES, to wit. { His Excellency SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies, and Vice-Admiral of the same.

To the Honorable Alexander Campbell, of Rosemont, Woollahra, near the city of Sydney, in the Colony of New South Wales, a Member of the Legislative Council of the said Colony, and all others whom it may concern:

GREETING:

WHEREAS by a certain deed poll or grant, in writing, bearing date the fifth day of August, in the year of our Lord one thousand eight hundred and thirty-five, under the hand of His Excellency Major-General Sir RICHARD BOURKE, Commander of the Most Honorable Military Order of the Bath, then Captain-General and Governor-in-Chief in and over the territory of New South Wales, and under the seal of the said

said territory, the said Sir RICHARD BOURKE, in pursuance of the powers by His Majesty the King vested in him as Governor of the said territory, did grant unto Joseph Inch all that parcel of land containing by admeasurement one rood and thirty-six and a half perches, and situated in the town of Sydney, parish of St. James, County of Cumberland, allotment number seventeen of section number thirty-seven: Bounded on the east by Pitt-street bearing north four degrees fifteen minutes west one hundred and ninety-two and a half links; on the north by allotment number eighteen bearing west thirty minutes south two hundred and sixty-seven and a half links; on the west by the stream of the Tanks bearing south five degrees east fifty-seven links, then south thirty-nine degrees fifteen minutes east seventy-three links, then south thirteen degrees thirty minutes east thirty-eight links, then south two degrees east fifty-two links; and on the south by allotment number sixteen bearing east three degrees thirty minutes north two hundred and twenty-seven links; to have and to hold the said piece or parcel of land unto the said Joseph Inch, his heirs and assigns for ever, as and in the said deed poll mentioned: And in and by the said deed poll is provided and declared (*inter alia*) that the said grant is made upon condition and that it shall be lawful at all times for the Governor of the said territory for the time-being to resume the whole or any part of the said land which may be required at any time for the improvement of the said town or for any other public purpose, on giving twelve calendar months notice thereof, and paying for the fee-simple of the land so resumed, and for such buildings as may be then standing thereon, at a valuation thereof to be fixed by two indifferent arbitrators, in the manner therein specified, that is to say,—in every case of arbitration which may arise at any time upon the premises therein alluded to, one arbitrator shall be chosen on either side in the customary manner, with power to elect a third as umpire in the event of their disagreeing; but if the proprietor of the said land shall refuse or neglect to appoint an arbitrator on his part within one calendar month after being required to do so by public advertisement or otherwise, then both the said arbitrators shall be appointed by the Government of the said territory for the time being: And whereas the land described in the Schedule hereinafter written being a portion of the land described in the said grant, is required by the Government of the said territory for the purpose of erecting thereon additions to the General Post Office; and whereas you, the said Alexander Campbell, claim to be the legal proprietor of the said land in the said Schedule mentioned: Now therefore, I, the said Sir HERCULES GEORGE ROBERT ROBINSON, as such Governor as aforesaid, under and in pursuance of the said proviso and condition in the said grant, do hereby give you notice that I intend, for the purpose of additions being made to the said General Post Office, upon the expiration of twelve calendar months from the service of this notice upon you, to resume the said land set out in the said Schedule in the terms and on the conditions in the said deed poll set forth: And I hereby call upon and require you, the said Alexander Campbell, as the owner in fee-simple of the said land, to nominate and appoint a person on your part and behalf to join in the valuation of the said buildings and of the fee-simple of and in the said land set out in the said Schedule.

In testimony whereof, I, the said SIR HERCULES GEORGE ROBERT ROBINSON, as such Governor as aforesaid, have hereunto set my hand, at Government House, Sydney, in New South Wales aforesaid, this second day of July, in the year of our Lord one thousand eight hundred and seventy-seven.

HERCULES ROBINSON.

Schedule hereinbefore referred to.

All that piece of land, portion of the grant hereinbefore mentioned, situated on the west side of Pitt-street; bounded on the east by the western side of that street bearing southerly, commencing from the south-east corner of General Post Office site, a distance of seventy-four feet or thereabouts, to a point at the south-east corner of new shops in said street; thence on the south by southern boundary of said shops and a line bearing westerly a distance of one hundred and forty-seven feet or thereabouts, to the Tank Stream; thence on the west by the Tank Stream, bearing northerly a distance of eighty-five feet or thereabouts, to a point being the inner middle boundary of General Post Office site, at the Tank Stream; thence on the north by a line bearing easterly a distance of one hundred and seventy-six feet six inches or thereabouts, to the point of commencement.

HERCULES ROBINSON.

No. 28.

The Secretary to Post Office to The Under Secretary for Public Works.

Sir,

General Post Office, Sydney, 29 June, 1877.

I am directed to acknowledge the receipt of the papers forwarded by you, under blank cover, dated the 27th instant, having reference to the resumption by the Government of the land in Pitt-street, adjoining and required for the extension of the General Post Office, and to inform you that a proclamation has been inserted in the Government Gazette of this day, notifying the intention of the Government to resume the land in question, as provided for in the original deed of grant.

The proprietors of the land have also been specially informed, through the Crown Solicitor, of this intention.

I am to add, that the Postmaster General will be glad if no further steps are taken without your first communicating with him on the matter.

I have, &c.,
S. H. LAMBTON.

No. 29.

EXTRACT from the Votes and Proceedings of the Legislative Assembly, 3 July, 1877.

- (2.) Land behind General Post Office:—Mr. Hill asked the Colonial Secretary, pursuant to Notice,—
- (1.) If the land now about to be resumed at the rear of the General Post Office was at any time offered for sale to the late Government: and if so, when?
 - (2.) By whom was it offered, and at what price?
 - (3.) What reply was given?

Sir

Sir Henry Parkes answered,—

(1.) The land in question was offered to the Government on the 17th October, 1876, by letter to the late Postmaster General.

(2.) The offer was made by Captain R. F. Pockley, as agent for the proprietor, at £200 per foot.

(3.) The offer was submitted to the Works Department, which referred it to the Colonial Architect, and he reported, on the 9th January, that the price asked was excessive, and that, in his opinion, an Act of Parliament should be obtained for purchasing the land required—the price to be fixed by valuation in the usual way. So far as the papers show, nothing was done until the 16th of March, 1877, when the following minute was made by the late Postmaster General:—"This matter can be brought under the notice of my successor.—J.F.B., 16/3/77."

No. 30.

Minute of Postmaster General.

WRITE to the Crown Solicitor and say that, as it appears Mr. Alexander Campbell, who owns the fee simple of the land in Pitt-street, has leased the same to Mr. McCulloch, Mr. Paling, and Mr. Beyers, on a building lease for ninety-nine years, I shall be glad if he will take the opinion of the Attorney General as to the manner in which the respective interests of the lessor and lessees are to be dealt with in the proposed reference to arbitration of this matter. S.S., 9/7/77.

No. 31.

The Secretary to the Post Office to The Crown Solicitor.

Sir,

General Post Office, Sydney, 10 July, 1877.

Adverting to my letter dated the 21st ultimo, relative to the resumption by the Government of the land in Pitt-street, adjoining and required for the extension of the General Post Office, I am directed to state that, as it appears that the Honorable Alexander Campbell, who owns the fee simple of the land in question, has leased it to Mr. McCulloch, Mr. Paling, and Mr. Beyers, on a building lease for ninety-nine years, the Postmaster General will be glad if you will take the opinion of the Attorney General as to the manner in which the respective interests of the lessor and lessees are to be dealt with in the proposed reference to arbitration of this matter.

I have, &c.,

S. H. LAMBTON.

No. 32.

The Crown Solicitor to The Secretary to the Post Office.

Sir,

Crown Solicitor's Office, Sydney, 20 July, 1877.

I have the honor to forward herewith a letter I have this day received from Mr. A. H. McCulloch, respecting his claim in respect of the land in Pitt-street, proposed to be taken from the Honorable A. Campbell for the Post Office.

I have, &c.,

JOHN WILLIAMS,

Crown Solicitor.

[Enclosure.]

A. H. McCulloch, Esq., to The Crown Solicitor.

Dear Sir,

165 Pitt-street, Sydney, 18 July, 1877.

Referring to our interview of yesterday on the subject of the Pitt-street resumption for Post Office and other purposes, I have to submit a proposition for settlement of the matter which I think will meet the wishes of the Government, and render any litigation or differences unnecessary.

In the first place I must inform you that, although in my communications with you I have put myself forward as the sole person interested, I am in fact acting in concert with Mr. W. H. Paling and Mr. H. L. Beyers, the leases of the property being granted to them and myself.

I enclose you a plan* of the entire property. That coloured red and yellow is included in one lease, * Appendix D. and that coloured blue in another, and for convenience I will hereafter refer to them as the red and yellow lease, and the blue lease.

The term in each case is ninety-nine years, and the rentals are £1,400 and £600 per annum, respectively.

I do not wish to conceal from you that on taking the leases I was aware of the resumption clause in the grant; but I considered and still consider and am advised that its operation as against myself and co-lessees is, to say the least of very doubtful application.

Apart from this power however, I saw the probable necessity for Post Office extension, and of course contemplated the possibility of legislation supplying the defects, if any, in the powers of resumption.

Acting on this impression, I, on the 21st May, formally addressed the Postmaster General on the subject and intimated my intention to build, as it will be obvious to your mind that we could not long sit under a charge of £600 per annum without securing improved rental.

During the whole of the negotiation of this venture and the process of its development, it never once occurred to us or the superior landlord (as we believe) that the Government would require more than that portion of the blue lease north of the dotted line on the plan, or at most, the whole of the blue lease, and the extent of the Government resumption has entirely upset our plans and filled us with consternation. We have heard that a larger portion of the land has been included in the notice to Mr. Campbell than is actually required for Post Office purposes, the surplus portion being intended to be used for stables for the Electric Telegraph Department. We submit that it is straining the alleged power to a very extended limit, and dealing very harshly with us to deprive us of so valuable a property for such a purpose;

purpose ; and it would hardly be right that we should refrain, if only on the ground of contiguous ownership, from protesting against the erection of stables in a place so unsuited for the purpose, and calculated to inflict such a nuisance on the neighbouring property.

We sincerely hope that the Government may see their way to confine their resumption (which for the sake of negotiation may be admitted provisionally to exist) to the land comprised in the blue lease.

As an inducement to the Government to reduce the resumption to this limited area, and surrender their claims to the red and yellow lease, we are prepared to make a great sacrifice and to make the following proposition :—

Let the Government take our position with reference to the blue lease, settle with the contractors for the buildings and refund our outlay, and pay us £500 apiece to represent their improved value in the premises substantially ; this will amount to about £2,500.

If this proposition is acceded to, I shall be prepared to assist you as far as possible in arranging with the contractors.

By the arrangement above proposed we can easily show that the resumption of the blue lease will disappoint us of a certain profit of £7,500, at the very lowest calculation, as you will see upon reference to my letter of the 10th ultimo to the Under Secretary for Works, that I show a clear yearly profit of £920 per annum upon the venture, but we are prepared to make this great sacrifice in order to save intact the red and yellow lease. Of course the offer is made without prejudice.

An early reply will oblige,—

Yours truly,
A. H. M'CULLOCH.

No. 33.

The Colonial Architect to The Under Secretary for Public Works.

Department of Public Works, Colonial Architect's Office,
Sydney, 27 July, 1877.

Sir,

Having been requested by the Postmaster General to prepare sketches for buildings to be erected opposite the Post Office, on the northern side of the new street from George to Pitt Streets, I do myself the honor to forward two designs*—one showing a range of three-story buildings extending from George to Pitt Streets, and having shops with arcade over footpath, the carriage-way at each end to be stopped, and the space between the buildings forming a place or piazza ; the other plan is for a row of three-story shops without arcade from Pitt to George Streets, the street to be open for carriage traffic.

I have, &c.,

JAMES BARNET,

Colonial Architect.

Secretary to the Post Office, B.C., 30/7/77.—G.H., for U.S.

No. 34.

Minute of the Postmaster General to the Secretary for Public Works.

THE land in Pitt-street, immediately at the rear of the General Post Office, is required for the extension of that building into Pitt-street. This land is the property of the Hon. Alexander Campbell, M.L.C., and is leased to Messrs. M'Culloch, Paling, & Beyers. A notice has been given to these gentlemen that Government intend to resume possession of it, under a provision in the original deed of grant from the Crown, which provides that whenever the land shall be required by the Government it may be resumed, and a valuation arrived at by arbitration in the usual manner.

The land in George-street, at present belonging to Mr. Perkins, and leased to Messrs. Thompson & Giles, together with the land in Pitt-street, belonging to the Hon. Thomas Holt, M.L.C., is required to complete a new street, which it is proposed to form from George-street into Pitt-street—not only as an improvement to the city, but for the convenience of the public.

In the deed of grant of the land belonging to the Hon. Thomas Holt, there is the same power to resume possession by the Government as that contained in the deed of grant of the land belonging to the Hon. Alexander Campbell, but there is no such provision in the deed of grant of the land belonging to Mr. Perkins ; although there is a provision that that land might be taken for the purpose of widening George-street. Therefore, an Act of Parliament will be necessary to enable the Government to get possession of this land, unless the parties concerned will consent to go to arbitration without it.

If this land on the north side of the present Post Office be purchased by Government, it will give sufficient to complete a street through to Pitt-street, and leave a considerable quantity of land fronting that street on the north side, to be sold for the purpose of erecting buildings on an architectural design to be approved by the Government.

I send herewith plans which have been prepared by the Colonial Architect from designs which I have suggested, with a view to show the character of the buildings which might be erected, so as to ensure for the new street not only a handsome appearance, but a class of buildings likely to render the land saleable at a fair price. The designs are for a street for traffic of vehicles, and an alternative one for foot-passengers only. I strongly recommend the latter.

It is possible an arrangement may be made with Messrs. Thompson & Giles to sell to them, without competition, a portion of the land on which their present premises are situated, to erect new buildings, in accordance with the Colonial Architect's designs, and thus get rid of their claim for compensation for the good-will of their business, which need not be interrupted, as they might be allowed to erect a temporary building on the present vacant land.

The proceeds from the sale of the remainder of the land will, in my opinion, nearly if not quite recoup the Government for what they may have to pay for the whole.

SAUL SAMUEL,
2 Aug., 1877.

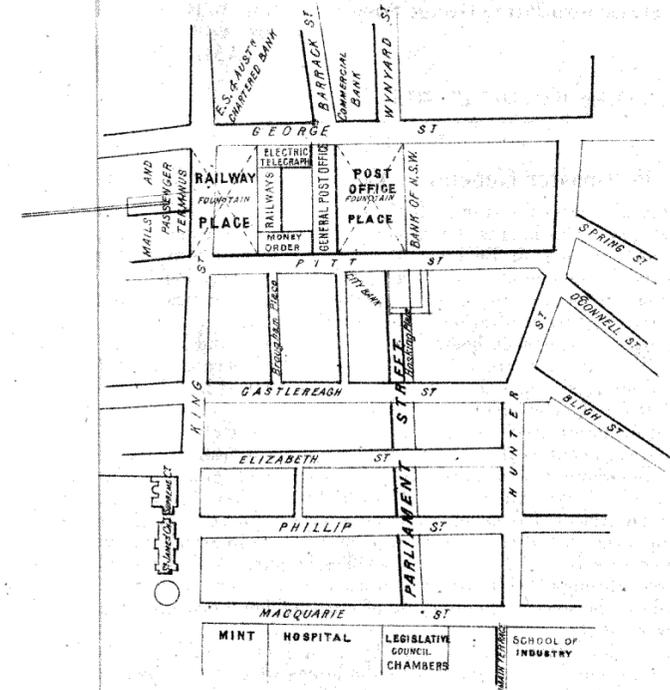

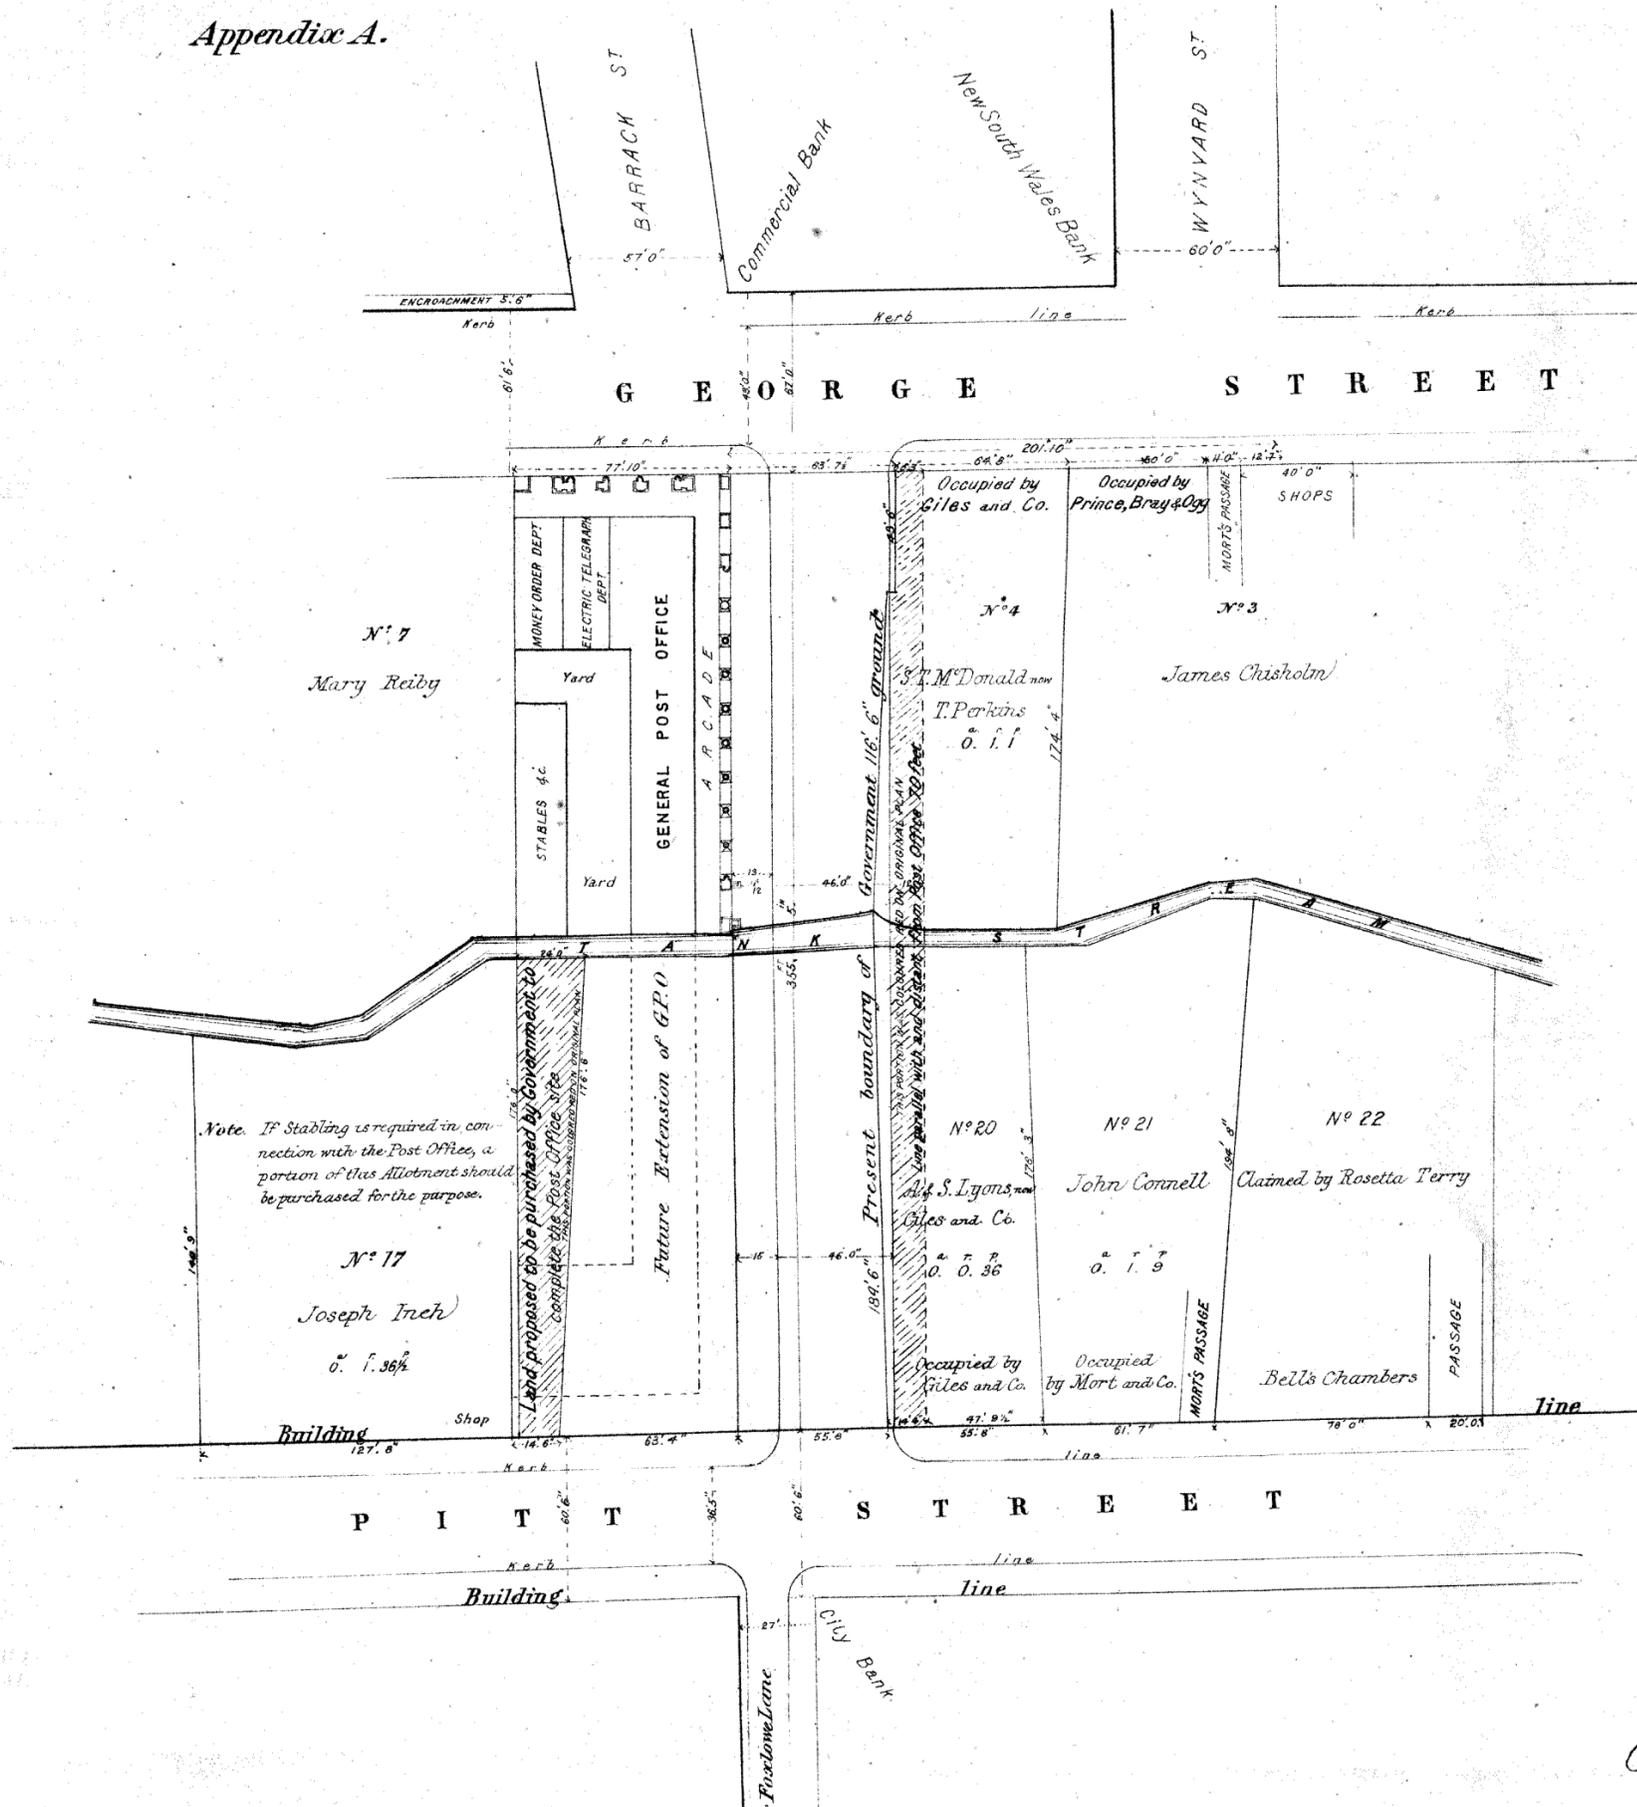

[Six plans.]

Appendix A.

GENERAL POST OFFICE, Sydney.

PLAN

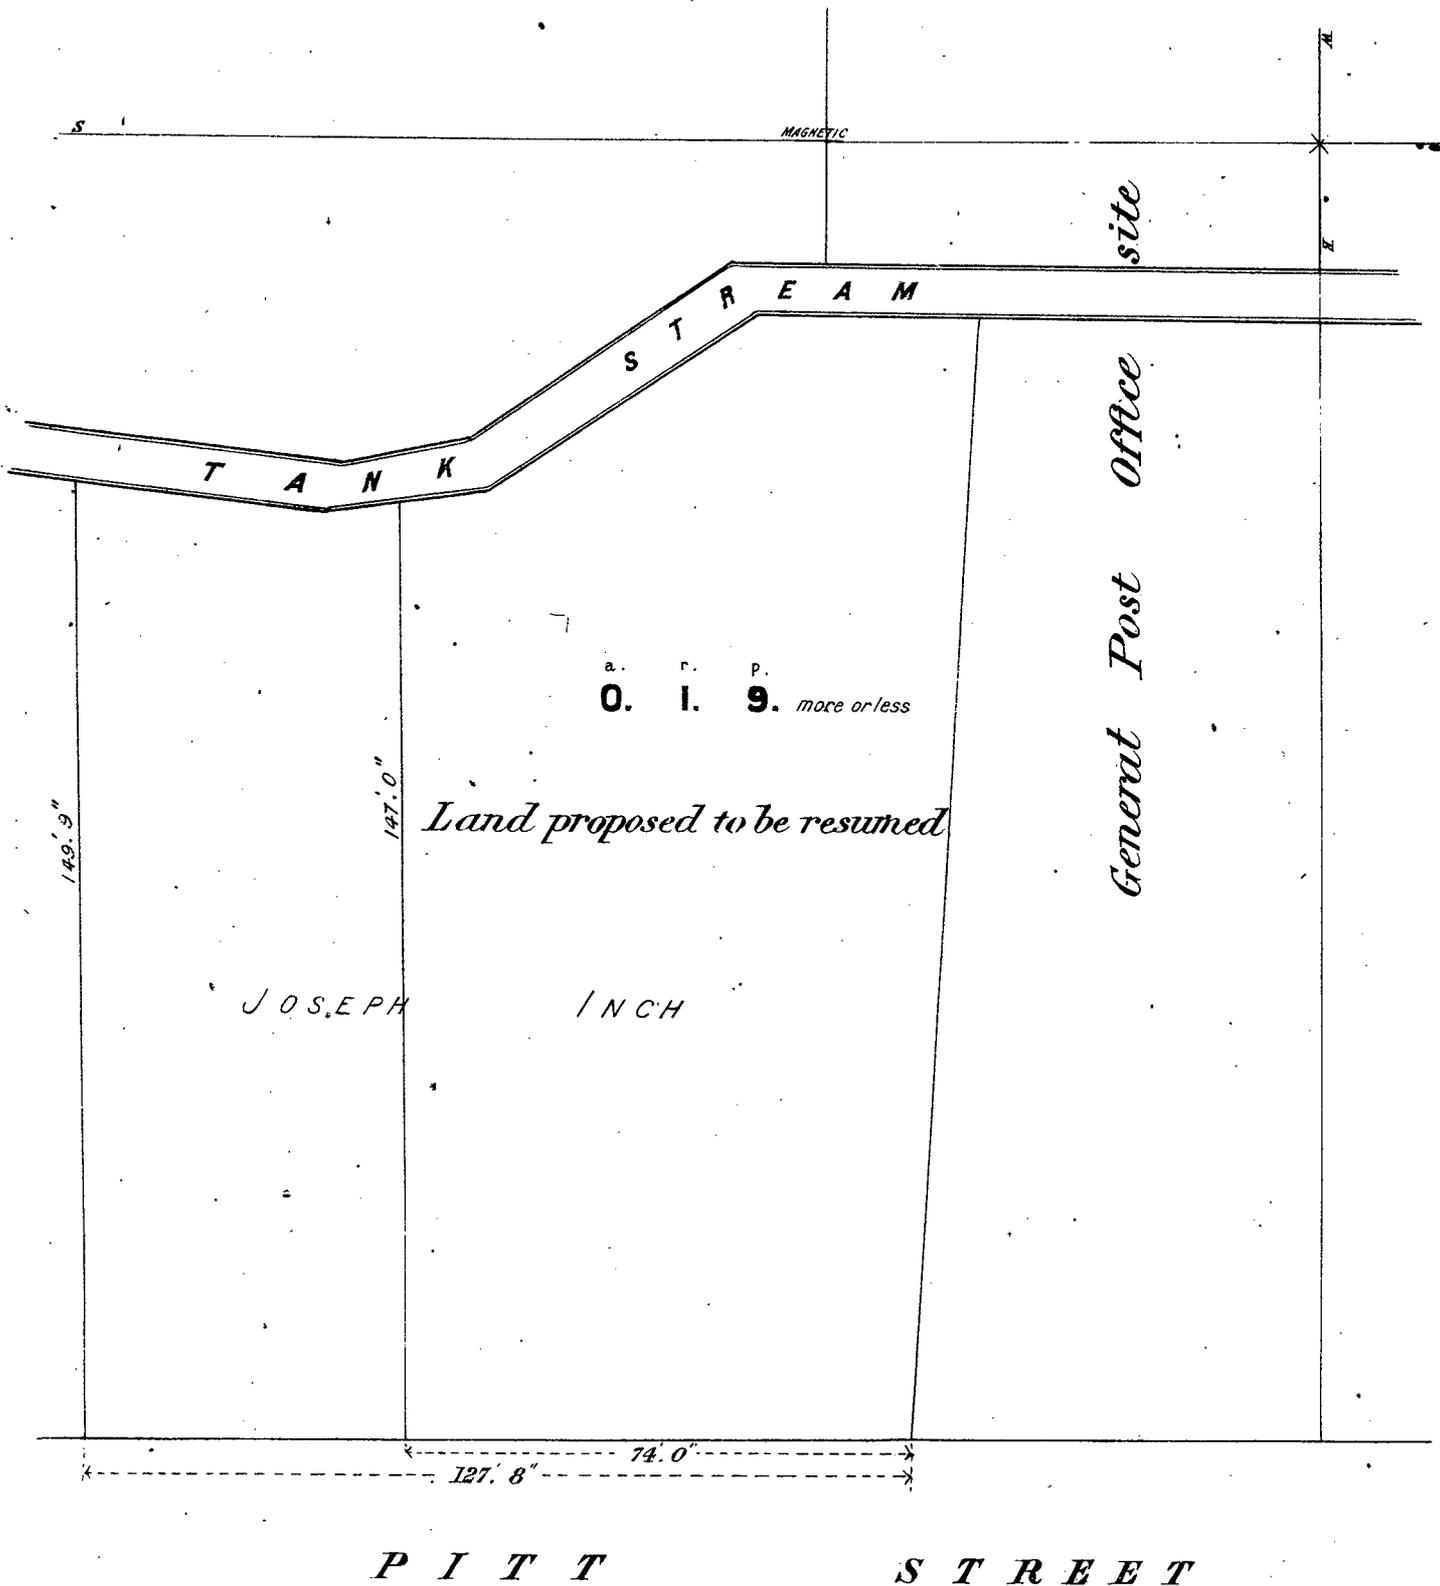

Showing land proposed to be purchased to complete
New Street and Post Office site.

James Barnett
Col. Archd.
 29th Oct. 75.

(Sig. 498)

That piece of land situated on the west side of Pitt-street, bounded on the east by the western side of that street bearing southerly, commencing from the south-east corner of General Post Office site, a distance of 74 ft. or thereabouts, to a point at the south-east corner of new shops in said street; thence on the south by the southern boundary of said shops and a line bearing westerly, a distance of 147 ft. or thereabouts, to the Tank Stream; thence on the west by the Tank Stream bearing northerly, a distance of 85 ft. or thereabouts, to a point being the inner middle boundary of General Post Office site at the Tank Stream; thence on the north by a line bearing easterly, a distance of 176 ft. 6 in. or thereabouts, to the point of commencement.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

ALLEGED BURGLARY IN OXFORD-STREET.

(REPORT FROM BOARD OF INQUIRY TO POSTMASTER GENERAL.)

Ordered by the Legislative Assembly to be printed, 30 January, 1877.

REPORT of the Board appointed to inquire into the alleged burglary at the Oxford-street Branch Post, Telegraph, Money Order, and Government Savings' Bank Office, on the morning of the 4th December, 1876.

The Board of Inquiry to The Postmaster General.

Sir,

Sydney, 10 January, 1877.

We do ourselves the honor to report that, on the 14th of December, in pursuance of instructions, we commenced the inquiry into the circumstances connected with the burglary alleged to have occurred on the morning of the 4th of December last, at the Oxford-street Branch Post, Telegraph, Money Order, and Government Savings' Bank Office; and having completed the required investigation, submit herewith, for your information, the evidence of thirty-seven persons we have examined, together with a memorandum showing the names of the witnesses and the time occupied in the inquiry.

Before alluding especially to Mr. Levy's account of the burglary, as contained in his evidence, it will be convenient for us to mention that we personally inspected the Oxford-street Post Office premises, and required Mr. Levy, the Postmaster, to point out particularly the positions of himself and the burglars during the scuffle alleged to have taken place.

In order that the evidence may be better comprehended, we forward herewith a plan of that portion of the premises where Mr. Levy says that he received his injuries.

According to the statement of Mr. Levy and his family, the burglars entered by a window (marked 3 on the plan) in the kitchen. This window is some 7 feet from the ground, and under it were found—immediately after the burglary—a stool and some boxes, which could indicate nothing else than use for the purpose of entering by that window.

It will be seen from the evidence of Sub-inspector Waters (folios 214 and 224), Mr. Moyse (243), Mr. W. J. Davies (257), Detective Lyons (273), Inspector Wager (306), and Detective Hogan (338), that no marks or trace of entry by this window could be found beyond the stool and boxes alluded to, the dust on the window-sill being undisturbed. A cup imbedded in grease and a nail standing up $1\frac{1}{2}$ inch were, moreover, on this sill at such distances as to preclude the possibility of any one getting in there without injury from the nail or knocking over the cup.

The only fastening on the premises that has been forcibly dealt with is the lock of the door marked 6 on the plan, the key of which Mr. Levy states he took up to his room, when he went to bed on the evening of the 3rd of December. One screw of the box of this lock has been withdrawn, and in this manner it is said entrance into the office (marked 7 on plan) from the parlour (marked 8 on plan) was effected.

We could not perceive any trace of damage to Mr. Levy's own furniture. The drawers shown to us, from which were taken silver spoons and forks belonging to Mr. Levy, did not display any such leverage marks as would indicate a forcible opening. The evidence of Detective Lyons on this point (vide folio 279) is very explicit. The damage to a small testimonial cup, of no great intrinsic value, presented to Mr. Levy some years ago, we found to be comparatively trifling. The inscription on the cup is not injured. We are of opinion that at a very small cost the testimonial cup could be repaired, while we fail to discover a reason for burglars devoting so much careful attention to the breakage of this trifling article, and then leaving it behind them.

We have ascertained from Mr. Levy and members of his family that the loss sustained by the occurrence is as follows :—

Government money.

£295 17s. 3d. in bank notes and coin.

Mr. Levy's property.

1 gold watch and seal.
1 pair silver solitaires.
1 doz. chased silver teaspoons.
1 doz. sterling silver tablespoons.
1 silver gravy spoon.
1 silver ladle.
9 silver fruit knives and forks.
1 small link gold chain.
5 or 6 linen sheets.

A quantity of strawberries and a quantity of lamb, supposed to have been eaten by the burglars.

The evidence we have taken as to the proceedings of Mr. Levy and the burglars on the occasion in question, differs materially in some essential particulars. As, however, Mr. Levy himself was the only *eye-witness* of these proceedings, we give the following as his deliberate testimony of what took place :—

I am Postmaster of the Oxford-street Branch Post Office, Sydney ; on the 3rd of December instant, or on the morning of the 4th, about 1 o'clock, as near as I can guess, I was awakened by a smell or smoke, as of fire ; I lit a candle and came down-stairs to see what was the matter ; I came as far as the first landing, and there I saw a small blue light burning which I took to be an escape of gas, as the gas pipe runs under there ; I endeavoured to extinguish it by throwing something over it ; I don't know what it was, but I know it was a cloth of some kind ; a strong vapour then arose from it, which rather staggered me ; I went down-stairs to the ground-floor and approached the sitting-room door* ; I closed that door when I went to bed and turned the key in it ; when I went to bed I secured the front door of the office,† and saw that it was locked ; I placed one of the black-boards under the lock in a slanting direction to secure the door, as it has always been insecurely fastened ever since I have been here ; I then turned the office gas out ; I then closed the back door‡ of the office and locked it, and took the key with me ; I then turned the gas off in the sitting-room ; I then shut the sitting-room door and turned the key in it ; I then looked to the back door and saw that *that* was secured—I mean that I bolted and locked it ; I went into the kitchen and saw that the §window was down ; I pulled the ||door to, which leads from the kitchen into the lobby ; it was not my practice to see that the kitchen window and door were fastened, only to see them closed against cats ; I considered the place was securely fastened ; I saw that the ¶gate into the street was fastened ; I then went up-stairs into my bed-room and took a book and read for an hour at least ; it must have been about 11 o'clock when I went up-stairs ; when I came down-stairs I put my candle on the hall table ; when I looked in the sitting-room I saw a small light on the table like a taper, a very small dismal light ; I cast my eyes round the room and saw a dark man sitting on the sofa tying up something bulky in a bundle ; while I was looking at him some one threw a rope round my neck which nearly choked me, and pulled and slewed me through the hall right down the steps leading into the yard ; the rope must have been put over my head ; I was not standing within the sitting-room, but on the threshold ; I resisted and struggled and when I turned towards the bottom of the steps I saw the man whom I had seen in the room standing facing me ; he must have passed me on the way ; he appeared as if waiting for orders from the other man ; I seized his beard ; the other man then struck me on the arm with something, and my arm fell to my side, useless as it were ; I was making a strange noise all the time, from the effects of the rope round my neck. The man who shoved me down must have grazed the wall as he shoved me ; his clothes must have been dirty ; the man with the black beard said "Baptise the bugger" ; I then felt a burning sensation all over my face as if it was in flames ; it was the man who shoved me that threw the acid over me ; I distinctly saw the dark man go out of the gate leading into the lane (Crown-street) at the back ; the other man gave me a kick in the loins, and I fell on to the coal heap, then he went away ; I then went up-stairs ; I don't know how I got there ; I either knocked at or went into my son's room ; he said "Good God, pa, what's the matter?" I never lost my senses during the whole time ; I took a candle with me from my bed-room when I first went down-stairs and placed it on the table in the hall ; when I came up from the yard the candle was still where I placed it on the table ; I took the candle with me to Alfred's room ; I made an indistinct sound, such as "Robbers" or "Burglars," and my son went and called his sister and the servant ; they all, that is, my son, my daughter, and the servant girl, came into my room ; this was my eldest son ; the youngest was in bed with me ; my eldest son tried to cut the rope, but he could scarcely get his fingers between the rope and my neck ; he had my pen-knife, which was very blunt ; he was some time cutting the rope away ; directly he got the rope off I fell on the floor ; my daughter assisted me to rise, and I bathed my face in water in the washbasin ; the children were all so timid that they would not move out of the room unless I went with them ; I went down-stairs with them and lay on the sofa in the sitting-room ; I sent my son for the doctor, and my daughter and youngest son went for the police ; I remained alone on the sofa ; I don't know whether the doctor or the police came first ; I lay in frightful agony crying for the doctor to come ; Dr. Sparke came to me ; he attended to me ; after my face was dressed one of Mr. Sloper's young men came in and I was taken up to bed ; * * * my spectacles were on the corner of the mantelpiece close to the head of my bed ; it is my invariable custom to put on my spectacles immediately on getting up

up—I always do it; I had my day shirt on; I never wear a night shirt; I had also my trousers and slippers on; * * * I had not the slightest idea that it was a burglary going on; * * * on getting up I did not feel for my waistcoat, nor did I feel for the key; I usually kept the key of the safe in the waistcoat pocket under my pillow, when I went to bed; it was there on this occasion; * * * only my family were in the house after sundown that evening; * * * when I returned from the yard after the assault I knew it was a burglary; I did not look into or go into the office; * * * the man who kicked me could not have had a heavy boot on; he left no mark but a swelling, from which I am suffering now; * * * The marks on my face are from the acid thrown over me; there was a mark from the rope on my neck; * * * the man with the yellow beard was short and stout,—he appeared like a sailor; his hands smelt of tar, and he had a sac coat on; the other man was taller; both were dressed in dark clothes, and both wore felt hats; *** I can't account for a man on my left striking me on the inside of my left arm; the hatstand and table were in the hall in the same position as they occupy now; he slewed me suddenly round; I did not knock against anything; * * * the vapour from the light which I extinguished was like sulphur; ** my face was very wet with the large amount of acid; * * * the man I saw in the sitting-room said "Baptize the bugger," but he did not do anything to me; it was the man who held the rope who struck me; the same man kicked me; ** such a thing as a burglary never entered into my mind on these premises; a burglary was committed at Green's and Geohagan's, in this street (see folios 1, &c., and 183, &c.); I saw them go through the gateway at the back—I saw both of them go; I did not go and bolt them out after they had gone (folio 187).

We shall now proceed to offer some observations concerning what appear to us to be peculiar features in Mr. Levy's account of the affair:—

1. It is not probable that burglars would have used lighted sulphur; the well known effect of the fumes of this chemical is to waken a person rather than intensify a sleep; its introduction, therefore, as a part of the proceedings on the 4th December, seems like an attempt to add to the otherwise sensational character of this burglary, if the sulphur was not actually used by Mr. Levy for the purpose of waking the members of his family and bringing them down-stairs to discover him in a state of strangulation!
2. Considering that Mr. Levy was awakened by "a smell or smoke as of fire," we think it an unnatural and unlikely proceeding that he should have got up and partially dressed himself, and then have gone down-stairs without arousing his son Walter, who occupied the same bed with him; or the other members of his family, who slept in adjoining rooms on the same floor; then, when Mr. Levy reached the first floor landing, and discovered so extraordinary a circumstance as the tin of burning sulphur, he must have become aware that something unusual was likely to be going on, and have naturally procured some weapon, or the assistance of his family, before proceeding any further.
3. When Mr. Levy reached the *hall on the ground floor, and saw the dim light in the sitting-room, he placed the lighted candle he had brought from his bed-room on a table *in the lobby*, and then went to the door of the sitting-room, where he saw the burglar tying something in a bundle, and where he had the ligature placed round his neck. We may remark on this point, that had Mr. Levy held the candle in his hand, it would, no doubt, in the scuffle which ensued, have been thrown down, and have created a disturbance. After the burglars had left, Mr. Levy found this candle alight on the table where he had himself placed it, and he was thus enabled to light himself in a state of strangulation up two flights of stairs to the second floor of the house, and rouse his son Alfred. * Marked 12 on plan.
4. We consider it hardly probable that Mr. Levy could have been swung round and dragged through the lobby in the manner he states he was without creating a noise by coming into contact with something.
5. We question the probability of one and the same man choking Mr. Levy with the rope, dragging him down the steps into the yard, pouring acid over him, striking him on the arm with some hard implement, and kicking him, in the time and under the circumstances very minutely described by Mr. Levy, even to the smelling of tar upon the hands of the burglar. Apart from the belief that burglars would not resort to any unnecessary barbarity in the accomplishment of their purposes, we do not think it likely that a burglar would run the risk of damage to himself by carrying strong acid while engaged in a scuffle. Then the fact of this burglar having acid of a similar kind to that kept in the office for telegraph purposes, apparently in anticipation of an encounter with Mr. Levy (for the man never entered the office to get acid after Mr. Levy came down-stairs), is a statement in our opinion displaying much more of the sensational character than the real.
6. We do not consider that the burglars would run the great risk of capture by such a scuffle as is alleged to have taken place in the yard with Mr. Levy, it being a moonlight night and the locality only a few feet from Crown-street, which is regularly traversed by the police, while only a thin wooden partition in the shape of a fence divides the yard from the main street, and the gate is so openly constructed that any passer-by hearing a scuffle could look through and witness it. It would seem by the circumstances related by Mr. Levy that the two burglars might have easily and quietly disposed of him *inside* the house.
7. It is hard to credit Mr. Levy's statement as to the severe character of the strangulation, in view of the fact that he was able to get up to his son Alfred's room on the second floor and wait until Alfred cut the rope. We view the fact of his *falling down* on the floor only after his family had assembled and the rope had been cut off, as suspicious and sensational. We also have grave doubts as to the genuineness of his conduct, seeing that Mr. Levy was able to walk down-stairs with his children, but had to be assisted up-stairs when the police came.

We

We may incidentally remark on this point, that Mr. Levy for a day or two appeared before us heavily bandaged and plastered about the head and face. He groaned frequently with pain in his side, while his voice was so lachrymose as to indicate an immense shock to the whole system. But when Dr. Sparke, in reply to our questions, stated that he did not consider it at all needful to wear the bandages, Mr. Levy at once threw them off, and in the course of a very short time he presented a marked bodily improvement, while his voice almost instantly resumed its natural tone. We were not favourably impressed with this conduct of Mr. Levy.

The evidence of Dr. Sparke as to the non-severity of the injuries to Mr. Levy was of a very decided character. He states—"There was nothing about him that would lead me to suppose or believe that he had been so nearly choked, and suffering from so much nervous excitement as it was represented to me that he had been. I thought at the time that it was remarkable, if the rope had been drawn so tight as to turn his face black and make his eyes protrude; I should have expected to see more signs of it than I did." He further stated that the blow on the arm could have been inflicted by Mr. Levy himself.

Dr. Egan, who appears to have attended as physician to the Levy family, saw Mr. Levy some short time after Dr. Sparke, and he (Dr. Egan) states that "Mr. Levy was lying on the bed, seemingly suffering from a shock," * * * that his system seems to have been affected ever since. I cannot say whether there was a shock to the mind or injury to the body. It might have been caused by a combination of causes." * * * "Whenever I saw him he seemed to be completely unnerved and weakened, and suffering severe pain." In reference to the blow on the arm, Dr. Egan stated, that "it could have been self-inflicted if the man who did it had sufficient nerve to do it. He (*Mr. Levy*) told me he had been kicked on the loins, but I could find no marks; he complained bitterly of pain; there was no swelling; he said he had been nearly strangled with a rope; there was a discoloration on the right side of the neck, which could have been caused by a rope; the mark is not there now. * * The tightening of a rope round the neck sufficient to cause the eyes to protrude and the tongue to turn black would have made a greater mark. Yes, if there was a difficulty in introducing the knife to cut the rope. The mark was not more than an inch and a half in length." Dr. Egan further stated that he "did not advise him (*Mr. Levy*), to stay in bed; he seemed weak enough to require the bed; I may have told him to keep quiet; * * the pain may have been sufficient to incapacitate him for business; I have seen men apparently more injured than Mr. Levy go about their business."

Mr. Levy admits that he made no attempt after the alleged occurrence to ascertain the state of the case as regards what the burglars had taken, but left this to be discovered by the officers of the Postmaster General. We do not view Mr. Levy's conduct in this respect as either natural or satisfactory.

There are some other features in the case which have to some extent impressed us as suspicious, such as the obtaining of the keys of the safe from a waistcoat under the pillow upon which Mr. Levy was sleeping, without waking him—the knowledge that the key was kept under the pillow—the finding of the sulphuric acid in the office (presuming that the office sulphuric acid was the acid used), amongst a number of similar bottles, some containing ink—no label indicating the sulphuric acid; the stuffing up an opening in the front door with Mr. Levy's office-coat, with the evident intention of preventing passers in Oxford-street seeing into the office; the finding of Mr. Levy's screw-driver (usually kept in the press in the office) on the floor of the parlour behind the office, not far from the box of the lock from which a screw had been withdrawn, and the discovery that the back gate through which Mr. Levy states he saw the burglars make their exit, was bolted, notwithstanding that Mr. Levy did not fasten it before he went upstairs in a strangled condition.

We do not, however, deem it necessary to comment specially upon these features, as the evidence of the Levy family regarding some of them is not conclusive, and in the case of others they may not be so improbable, presuming that a burglary really did take place.

When it became apparent to us that the circumstances connected with the burglary were of such a doubtful and unsatisfactory character, we considered it expedient to discover, if possible, whether any motive, such as the escape from the pressure of pecuniary or other obligation of burden, existed on the part of Mr. Levy, for the concoction of this burglary, and our labours in this direction have resulted in the following disclosures:—

1. *Neglect on the part of Mr. Levy to remit in due course to the Superintendent of the Money Order Office and Controller of the Government Savings Bank the surplus balance in his possession, as required by the Regulations for the guidance of Postmasters authorized to transact Government Savings Bank and Money Order business.*

The Postmaster in Oxford-street, in common with all other Postmasters authorized to transact this kind of business, was required to furnish the Head Office with daily statements of account.
