On the 29th of November last (five days previous to the alleged burglary), Mr. Levy held a balance of £150 14s. 8d. A memorandum, written by Mr. Levy on the daily account of that day, intimated that he would have to pay out of this amount warrants and money orders to the extent of £45, leaving a surplus balance of at least £100. There is also on this daily account a memo. written by Mr. Levy, "*will remit to-morrow.*"

On the next day, the 30th, Mr. Levy's balance had increased to £141 17s. 11d. On his daily account of that day are the following memoranda by Mr. Levy "Warrants and orders on hand, £40. Warrant filled in for (*name cannot be read*) £90."

It will be observed that these two amounts would nearly absorb the whole of the balance, £141 17s., 11d., and make it appear unnecessary for Mr. Levy to carry out his intention of the day before, viz. "*will remit to-morrow.*"

But, as the sequel will show, the memorandum of Mr. Levy in reference to the item £90 is of such an extremely unsatisfactory character that, under the circumstances surrounding his present position, we are of opinion that as Mr. Levy was deceiving the Head Office, by a statement of fictitious liability, he must have been deficient in his public moneys.

Mr.

Mr. Levy admits that he, in error, used the word "warrant" instead of "notice of withdrawal" in the memo. regarding his liability to meet a warrant for £90 on Government Savings' Bank account; and he also is unable to read his own writing, or inform us what the name of the person is who was going to draw so large a sum as £90 from the funds of the Oxford-street Post Office.

Mr. Levy's account of this transaction is as follows:—

I can't make out the name to "warrants filled in for *£90"; a lady came to my office to give notice of the withdrawal of £90, Sydney account; I handed it (notice of withdrawal form) to her to fill in the number, as she had not her book with her; she said she was going to draw it at our office; in fact, I filled the notice in for her; I could not fill in the number, as it was a Sydney number, and I did not know it; I have filled in many dozens of notices of this description; I can't tell who the lady was, and I can't make out the handwriting.

The regulations of the Department enjoin upon Postmasters very special attention in regard to supplying the form of notice of withdrawal of money, and require them to be fully satisfied that the person applying is really a depositor in the Savings Bank before furnishing this form.

On Mr. Levy's attention being called to this regulation, he was obliged to admit that he had not complied with it, and that he had not satisfied himself that the lady in question was a depositor.

We have ascertained that Mr. Levy has not seen the lady since, nor has any such notice of withdrawal for £90 been received at the Head Office.

On the 1st December Mr. Levy omitted to state on his "daily account," what was the amount of balance then held by him. In explanation of this omission, he says:—"The statement dated the 1st December does not show the balance in hand. It is an oversight—you would not find another such omission in a thousand of my daily statements."

Mr. Levy, however, admits that his balance on that day was about £161.

There are memoranda by Mr. Levy on this "daily account," as follows:—"Warrants and orders on hand £47 10s. Will procure some large notes to-morrow—was too ill to-day.—A.L.L."

The holding of his balance by Mr. Levy merely because he could not send it in in large notes we do not consider probable, more especially as it has been discovered that Mr. Levy visited the City Bank, Oxford-street, on Saturday, the 2nd of December, for the purpose of making a deposit to balance an overdraft on what he termed his public account there, and he could then have procured large notes if he really intended to make a remittance in time for such remittance to be placed to his credit at the Head office on Saturday. This, however, he failed to do, and he has admitted that (presuming a burglary *did* take place on the morning of the 4th December) the amount of the loss would have at least been £100 less if he had not held back his remittance for the purpose of procuring large notes.

The evidence of Mr. F. W. Hill, the Controller of the Government Savings' Banks, decidedly shows that Mr. Levy was not required to remit in large notes, and that small notes or his cheque on the City Bank would have been accepted as a remittance.

Mr. Doak, the Chief Clerk of the Department, moreover states, that he some months ago advised Mr. Levy to remit by his own cheque.

In concluding this portion of our Report, we have only to add that we think it remarkable that Mr. Levy should have preferred to keep a large sum of money in the office when he had an account at the City Bank, situated on the opposite side of the street; and a very suspicious circumstance that on the Saturday before the alleged burglary took place he found it expedient to pay into that Bank £13 10s. to balance an overdraft in his account there.

2. *Presumption of Mr. Levy having met, on the same day that the alleged burglary took place, a promissory-note for £26, which was negotiated under circumstances of extreme suspicion.*

Detective Lyons gave evidence to the effect that he had been informed that on the morning of the alleged burglary (the 4th Dec.), Mr. Jacobs, a money-lender in this city, had received a letter from Mr. Levy, purporting to contain five £5 notes and a £1 note, but that Mr. Jacobs discovered that there were really only four £5 notes enclosed instead of five.

We took the evidence of Mr. Jacobs concerning this transaction, which is as follows (folio 298):—

I am Manager of the Standard Loan Office, 160 Phillip-street; Detective Lyons called on me once or twice; I told him it was not my practice to disclose anything of a private nature until I was called upon to do so; he said, 'If you don't give me the information I can't make you,' and left me; Mr. Fosbery, the Inspector General of Police, sent for me, and asked me what the nature of my business was with Mr. Levy, and I gave him the same reply as I gave Mr. Lyons; afterwards Mr. Fosbery put it in such a way that I told him that I had simply discounted a bill for Mr. Levy in August last; that it would become due on the 6th or 7th December; Mr. Fosbery told me that a letter had been traced to my place containing notes; I told him I *did* receive a letter with a sum of money in it from a Mr. Marriott—the drawer of the bill in favour of Mr. Levy; Mr. Marriott sent the money to me through the post to retire the bill; Mr. Fosbery told me the letter had been traced through the Post Office; when I opened the letter I found it contained only £21 instead of £26, and as I did the business through Mr. Levy I sent my clerk up to Mr. Levy's place to inform him of it.

To the Board: That is the bill, and that is the letter I received the £21 in; it was at my request the second endorsement was put on it; Mr. Levy sent word by my clerk that he would attend to it, and he sent me £5, which paid the bill; Mr. Marriott has not yet called for the bill; I have not got the envelope in which the letter came with the £21; I never saw Marriott in the transaction, only Mr. Levy; the letter requests me to keep the bill until Mr. Marriott calls for it; I did not notice whether the letter containing the £21 was registered or not; I do not know the handwriting of the letter signed "S. Marriott"; I do not know the second indorser; I did not inquire about him, as I decided to discount the bill on Mr. Levy's position alone; I have never seen Mr. or Miss Marriott; Mr. Levy's brother did not ask for the bill—simply paid the £5 to make up the deficiency; the bill was discounted on the 6th of August; perhaps on the 7th; I received the letter on the 4th, the same day I got the £5 balance.

To Mr. Levy: My clerk said, you said it would be attended to as soon as you were able, and your brother brought the £5 in the afternoon.

Mr.

Mr. Levy explains this matter as follows (folio 291) :—

Some months since a letter came to the Oxford-street Post Office, addressed to Mr. Marriott; when he called for it we got into conversation, and I found that he was a man who lived in my employment as cook at my stores at Kiandra Rush; in the course of conversation he told me that he had had a great deal of money and property left him in England, and he was down in Sydney settling his affairs; he told me where he lived, and from letters and documents which he showed me I was quite satisfied he was telling the truth; he told me he required some assistance to prosecute his claim, which eventually wound up by his asking me to advance him some money, which I would willingly have done if I had had it to spare; he asked me if I thought I could get some money on his promissory-note; I told him I did not think it could be done, as I did not keep a banking account; he drew the promissory-note in my favour, and I endorsed it and got it discounted; I tendered it at one of the Banks—the Commercial Bank in Oxford-street, and it was refused on account of the drawer being unknown to them; also, because I had no banking account there; Mr. Marriott called upon me again and I told him the result, and he pointed out an advertisement in the *Herald* of the Standard Loan Office, which spoke of discounting bills; I went to the office totally ignorant that Mr. Jacobs was the Manager or had anything to do with it; a day or two afterwards the bill was returned to me, saying that they did not discount anything without two endorsers; I returned it to Mr. Marriott, and about eight or nine days afterwards he brought it to me with a second endorsement; I then sent it to Mr. Jacobs, who sent me word that it would be discounted; the proceeds were given to Mr. Marriott; about the 1st of December a young lady came to the office whom I had never seen before, and said her father had sent her with the money to pay the amount of the bill; I told her I had not the bill, that Mr. Jacobs had it, and he would be glad to take the money; I gave her the directions and told her that her father could either go or send the money for the bill, as I had no claim upon it; I never sent Mr. Jacobs the money for this bill; she also informed me that her father instructed her to tell me that he had got his money—that all his affairs were settled, and that they were going home to England very shortly—that her father would call on me previous to leaving and give me some small memento for my kindness; on Monday, the 4th, when I was in bed very ill, Mr. Jacobs' clerk came into the room, saying that Mr. Jacobs had received an enclosure from some one for a bill of Mr. Marriott's of £21 instead of £26; I told him that as soon as I got well I would attend to it; it struck me at the time that Mr. Jacobs took advantage of my illness, and that he was trying a dodge on me to get some money—that he might have received £30 instead of £20; I have very little faith in Mr. Jacobs; I said to my brother, "Be chance they serve me with a writ over this—these usurers take every advantage—you had better take £5 up and settle the bill"; I gave him £5 and he took it to Mr. Jacobs.

To the Board: Mr. Marriott may be in Sydney, or left for England for anything I know; this letter is not like the paper in my office; Miss Marriott called on November 30th or December 1st; I never saw her handwriting; it was not for my accommodation; I did the bill out of kindness; I am £5 out of pocket by the transaction; I notice that the watermark on the letter is similar to that on the Post Office paper; I gave Miss Marriott some envelopes, but no paper; I know nothing about the letter; I have not seen Mr. or Miss Marriott since; the same description of paper as that on which the letter is written and that used in the Post Office can be purchased anywhere by private persons.

We leave the evidence concerning this transaction to convey its own impression, and do not deem it needful to offer more than a few remarks upon it, viz. :—

- (1.) That as Mr. Levy was personally liable for the bill, it is not likely that he would have declined to take the money from Miss Marriott when he says it was offered to him on the 1st December.
- (2.) It is improbable that Mr. Levy, if he had not sent the whole amount, should have paid the £5 said to be short without reference to Marriott; and if he had such a bad opinion of Mr. Jacobs, why did he not see that the bill was retired when the £5 deficiency was made up, instead of leaving the bill in Mr. Jacobs' hands?
- (3.) Mr. Levy has failed up to the present time to find Marriott, Miss Marriott, or Flaherty, the second endorser to the bill, and the police have not been able to ascertain their whereabouts.
- (4.) The extraordinary coincidence of the money reaching Mr. Jacobs on the very morning when the alleged burglary at Oxford-street took place.

3. *Necessitous circumstances of Mr. Levy.*

Mr. Levy admitted to the Board that he was paying upwards of 60 *per cent.* on money he had borrowed.

It has come to light that a few days after the alleged burglary a bailiff was put in possession of Mr. Levy's household effects by Mr. Pringle, a money-lender, under an absolute bill of sale. The bailiff remained in the house three or four days, when Mr. Thomas Hardy, a furniture broker (to whom it would appear Mr. Levy is indebted about £36), took up Pringle's bill of sale by the payment of £78 11s.

In connection with Mr. Levy's transactions with Mr. Pringle it has been discovered that on several occasions Mr. Levy has made his monthly payments to Mr. Pringle by money order on the Sydney Head Office, and that instead of using his own name as the remitter he has adopted the fictitious names of A. Scott and Arthur Jones.

The Superintendent of the Money Order Office, in his evidence, states that he considers the use of these fictitious names by Mr. Levy in the returns he furnished to the Head Office as a falsification of his accounts, and that if he (Mr. Hill) had observed money order remittances to money lenders in the name of Mr. Levy himself he would have considered they were suspicious transactions, and should have looked into them.

Mr.

Mr. Levy's explanation of this matter is as follows (folio 400) :—

My payments to Mr. Pringle were made regularly once a month; I always sent the money by money order, either the whole or in part; my object for using money orders was to show that the money was sent; my object in using a false name was, that the Head Office should not see that I was under any obligation to Mr. Pringle; I think I wrote to him saying that I would do so; the name I used was A. Scott; A. Scott is myself—I never go under an *alias*; yes—I adopt an *alias* in this matter; there was no such person as Scott in this transaction; I do not think I used another name; I may have done so; I may have used the name of Arthur Jones; I had no object in deceiving the Superintendent of the Money Order Office, only to prevent the teller or ledger-keeper from knowing of these regular remittances; I should not think that if it came under the notice of the Superintendent that a Postmaster was regularly sending money to a money-lender it would raise any suspicions of wrong; I can't see that I was doing any harm; I have never used fictitious names to any other person than Mr. Pringle—I am quite sure about that.

We have only further to add, concerning these transactions, that on Mr. Levy's "Daily Account" of the 2nd December (which document was found in the Oxford-street Office on the morning of the alleged burglary) there is an entry of the issue of a money order from A. Scott to J. Pringle, amounting to £4 18s. 8d., the money order for which has since been presented by and paid to Mr. Pringle at the Head Office.

4. *Mr. Levy, in a very irregular manner, undertook to keep the private banking account of a person named Sinclair.*

It is obvious that any Postmaster keeping an account of this character could if he chose finesse with his public money balances.

Mr. Levy explains this transaction as follows (folio 331) :—

Two years ago Mr. Sinclair, a depositor of ours, asked me to take charge of his money, as it was so inconvenient for him to go to the Commercial Bank, and allow him to have some whenever he wanted any; the book is not a pass-book, but a memorandum-book; he has left me as much as £150 of his without a receipt; I think he gave me a cheque for £10 on Saturday; I think £17 or £18 was due to him; the money was in the drawer; if the robbers had taken this money I should have had to make his money good; I put the key of the drawer on the top of the pass-books; it was not hidden; I have had a great deal of money and valuables belonging to people in that safe; Sinclair gave me money, and I gave him no receipts; I have had about £2,000 of this man's money without a single receipt; he objected to Banks, because he left his work too late to get to a Bank before closing.

The balance of about £18, due by Mr. Levy to Mr. Sinclair on the date of the alleged burglary, was found in a locked drawer of the safe, the key of which appeared to be hidden in the safe itself.

We consider it remarkable that the valuable private property in the safe, for which Mr. Levy would have been personally responsible, including Sinclair's balance and departmental salary cheques, was not interfered with on the occasion of the alleged burglary.

We have endeavoured in this Report to point out the most striking features of the case.

We do not deem it needful to lengthen our comments by specially alluding to some other features, as the voluminous evidence, extending over 424 folios, contains information concerning them.

We forward for your information three letters which Mr. Levy has addressed to us, as well as numerous testimonials handed to us concerning his good character, and we consider it due to Mr. Levy specially to mention that the Superintendent of the Money Order Office and Controller of the Government Savings' Banks in his evidence stated that Mr. Levy "kept his accounts and furnished his returns in a very satisfactory manner."

We regret however that every endeavour on our part has failed to discover a rational mode of accounting for the circumstances on the supposition that the burglary really did take place on the 4th December last, as described by Mr. Levy; and we feel compelled to express our conviction that his conduct throughout the whole business is of a most suspicious and unsatisfactory character.

We have the honor to be,

Sir,

Your obedient servants,

CHARLES COWPER, Chairman.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

CABLE CONFERENCE.

Ordered by the Legislative Assembly to be printed, 2 February, 1877.

REPORT of the PROCEEDINGS of the Conference on Duplication of the Cable between Australasia and Europe, held in Sydney in January, 1877.

THE Conference on the subject of Duplication of the Telegraph Cable between Australasia and Europe assembled in Sydney, and held their first meeting on the 25th January, 1877.

The whole of the Australasian Colonies were represented, as follows, viz. :—

- New South Wales* : THE HONORABLE JOHN ROBERTSON, Colonial Secretary.
THE HONORABLE ALEXANDER STUART, Colonial Treasurer.
THE HONORABLE J. F. BURNS, Postmaster General.
- New Zealand* : THE HONORABLE G. MCLEAN, Postmaster General and Commissioner of Telegraphs, and Commissioner of Customs.
- Queensland* : THE HONORABLE SAMUEL WALKER GRIFFITH, Q.C., Attorney General and Secretary for Public Instruction.
THE HONORABLE CHARLES STUART MEIN, Postmaster General.
- South Australia* : THE HONORABLE SIR HENRY AYERS, K.C.M.G., Chief Secretary.
THE HONORABLE EBENEZER WARD, Minister of Agriculture and Education.
- Tasmania* : THE HONORABLE JAMES WHYTE, Member of the Executive Council.
- Victoria* : THE HONORABLE R. S. ANDERSON, Commissioner of Customs.
THE HONORABLE R. RAMSAY, Minister of Public Instruction and Postmaster General.
- Western Australia* : THE HONORABLE MALCOLM FRASER, Surveyor General, and Member of the Executive Council.

At the first meeting of the Conference, The Honorable JOHN ROBERTSON was unanimously elected Chairman, and Mr. ALEX. C. BUDGE, Clerk of the Executive Council, was appointed Secretary.

The Conference unanimously agreed to the following Resolution :—

That the Representatives of each Colony shall undertake to recommend to the Governments and Parliaments of the Colonies which they represent the adoption of measures to carry out the Resolutions of the Conference to which they may have given their assent.

The Conference then proceeded to discuss the whole question of duplication of the Cable, and the various routes proposed ; when, after mature deliberation, the following Resolutions were adopted :—

1. That it is desirable to extend and improve the means of Telegraphic Communication between Australia and Europe, by the duplication, where necessary, of the Cables or Lines connecting the same.
2. That any subsidy on Ocean Cables to connect Australia with Europe shall be borne by the several Australian Colonies assenting thereto, in proportion to population.
3. That the loss (if any) on competing Colonial Lines, to connect the Cables with the main telegraphic system of each Colony, should in like manner be borne by all the Colonies concerned.

NOTE.—Tasmania voted against this resolution,—New Zealand, Victoria, and Western Australia did not vote.

4. That inasmuch as it has been decided that it is desirable to extend and improve the means of telegraphic communication between Australia and Europe, by the duplication, where necessary, of the Cables or lines connecting the same, and that the subsidy on Ocean Cables to connect Australia with Europe be borne by the several Colonies assenting thereto in proportion to population :
 - (1.) The several Governments of South Australia, Queensland, and Western Australia be invited to open negotiations for the construction of Cables connecting their several Colonies with Singapore or Ceylon ; and the Government of New Zealand for the construction of a Cable from that Colony to the United States of America.
 - (2.) That in such negotiations the Government of New Zealand enter into communication with the Government of the United States, for the purpose of procuring their consent to contribute to the payment of any subsidy that may be payable in respect of the same ; and further, that in all the negotiations of the several Governments the necessity of procuring a reduction of the present tariff rates be especially kept in view, the maximum rate being six shillings per word.
 - (3.) That in the meantime the South Australian Government be requested, on behalf of the several Colonies, to urge upon the Eastern Extension Telegraph Company the necessity of keeping a repairing steamer between Banjoewangi and Port Darwin, to repair any accident to that portion of Cable.
5. That having in view the serious annoyance and loss occasioned by the mutilation of messages in transmission through Java, the President of this Conference be requested, on behalf of the Australasian Colonies represented, to communicate with the Secretary of State, for the purpose of obtaining permission from the Government of Netherlands-India to employ English operators on the land lines in Java.
6. That the Governments of South Australia and New South Wales be empowered to make arrangements with the Eastern Extension Telegraph Company for a reduction of message tariff to six shillings per word, at a subsidy not exceeding £20,000 per annum, terminable at one year's notice ; and that such subsidy be borne by the respective Colonies in proportion to population—any Colony to be at liberty to withdraw on like notice.

The Colonies of New Zealand, Tasmania, and Western Australia refrained from voting on this resolution.
7. That the several Colonies agree to allow the necessary official telegrams of H.M. Ships to pass over their respective lines free of charge.
8. That the Governments of Queensland and South Australia be requested to circulate among the respective Governments the draft Bills referred to in the Resolutions of the Intercolonial Conference held in Sydney, passed on the 10th February, 1873, for removing the defects in the law relating to the extradition of criminals, and the absconding of debtors, with a view to the same being submitted to the respective Legislatures as early as practicable.

(The following are the resolutions referred to :—

“That the present state of the law in regard to the Extradition of Criminals escaping from one Colony into another is defective. That the Government of Queensland be requested to prepare a Bill on the subject, which the Representatives of the several Colonies undertake—provided it is approved by their respective Law Officers—to endeavour to pass into law.”

“That the present state of the law in regard to remedies to be had against absconding Debtors is defective.”

“That the Government of South Australia be requested to prepare a Bill to remedy the defects, and, subject to the approval of their respective Law Officers, the Members of this Conference will endeavour to procure the passing of a similar Bill in their respective Legislatures.”)
9. That, in the opinion of the Conference, it is desirable that a uniform telegraphic code should be adopted by the several Australasian Colonies.

A motion proposed by the Representatives of Queensland, "That any duplicate system should be by a distinct route throughout from that now in use," was negatived. The Colonies of New Zealand, Tasmania, and Western Australia refrained from voting.

A motion proposed by the Representatives of South Australia, "That this Conference approves of the construction of a duplicate line from Singapore to Banjoewangi," was also negatived,—those in favour of the motion being New South Wales, South Australia, and Victoria.

A motion was also proposed by the Representative of Western Australia, "That any duplicate of the present Cables start from the North-west coast of Western Australia, provided it is shown that by such the best communication with Europe and Asia is secured at a moderate cost as compared with other and alternative routes which have been advanced;" but after some discussion the motion, with the concurrence of the Conference, was withdrawn.

A motion, proposed by the Representatives of Queensland, "That it is desirable that a Submarine Cable should be laid from Singapore to Cape York in Queensland, the Government of that Colony undertaking, in the event of such Cable being laid, to connect their existing land lines therewith," was negatived. Tasmania did not vote.

The Conference discussed several other questions on which no definitive action was taken.

Attention is called to the Appendix of Minutes of Proceedings, Report of Evidence taken, and Documents laid before the Conference.

NEW SOUTH WALES.

CABLE CONFERENCE.

REPORT of the PROCEEDINGS of the Conference on Duplication of the Cable between Australasia and Europe, held in Sydney in January, 1877.

THE Conference on the subject of Duplication of the Telegraph Cable between Australasia and Europe assembled in Sydney, and held their first meeting on the 25th January, 1877.

The whole of the Australasian Colonies were represented, as follows, viz. :—

- New South Wales* : THE HONORABLE JOHN ROBERTSON, Colonial Secretary.
 THE HONORABLE ALEXANDER STUART, Colonial Treasurer.
 THE HONORABLE J. F. BURNS, Postmaster General.
- New Zealand* : THE HONORABLE G. MCLEAN, Postmaster General and Commissioner of Telegraphs, and Commissioner of Customs.
- Queensland* : THE HONORABLE SAMUEL WALKER GRIFFITH, Q.C., Attorney General and Secretary for Public Instruction.
 THE HONORABLE CHARLES STUART MEYN, Postmaster General.
- South Australia* : THE HONORABLE SIR HENRY AYERS, K.C.M.G., Chief Secretary.
 THE HONORABLE EBENEZER WARD, Minister of Agriculture and Education.
- Tasmania* : THE HONORABLE JAMES WHYTE, Member of the Executive Council.
- Victoria* : THE HONORABLE R. S. ANDERSON, Commissioner of Customs.
 THE HONORABLE R. RAMSAY, Minister of Public Instruction and Postmaster General.
- Western Australia* : THE HONORABLE MALCOLM FRASER, Surveyor General, and Member of the Executive Council.

At the first meeting of the Conference, The Honorable JOHN ROBERTSON was unanimously elected Chairman, and Mr. ALEX. C. BUDGE, Clerk of the Executive Council, was appointed Secretary.

The Conference unanimously agreed to the following Resolution :—

That the Representatives of each Colony shall undertake to recommend to the Governments and Parliaments of the Colonies which they represent the adoption of measures to carry out the Resolutions of the Conference to which they may have given their assent.

The

The Conference then proceeded to discuss the whole question of duplication of the Cable, and the various routes proposed ; when, after mature deliberation, the following Resolutions were adopted :—

1. That it is desirable to extend and improve the means of Telegraphic Communication between Australia and Europe, by the duplication, where necessary, of the Cables or Lines connecting the same.
2. That any subsidy on Ocean Cables to connect Australia with Europe shall be borne by the several Australian Colonies assenting thereto, in proportion to population.
3. That the loss (if any) on competing Colonial Lines, to connect the Cables with the main telegraphic system of each Colony, should in like manner be borne by all the Colonies concerned.

NOTE.—Tasmania voted against this resolution,—New Zealand, Victoria, and Western Australia did not vote.

4. That inasmuch as it has been decided that it is desirable to extend and improve the means of telegraphic communication between Australia and Europe, by the duplication, where necessary, of the Cables or lines connecting the same, and that the subsidy on Ocean Cables to connect Australia with Europe be borne by the several Colonies assenting thereto in proportion to population :

(1.) The several Governments of South Australia, Queensland, and Western Australia be invited to open negotiations for the construction of Cables connecting their several Colonies with Singapore or Ceylon ; and the Government of New Zealand for the construction of a Cable from that Colony to the United States of America.

(2.) That in such negotiations the Government of New Zealand enter into communication with the Government of the United States, for the purpose of procuring their consent to contribute to the payment of any subsidy that may be payable in respect of the same ; and further, that in all the negotiations of the several Governments the necessity of procuring a reduction of the present tariff rates be especially kept in view, the maximum rate being six shillings per word.

(3.) That in the meantime the South Australian Government be requested, on behalf of the several Colonies, to urge upon the Eastern Extension Telegraph Company the necessity of keeping a repairing steamer between Banjoewangi and Port Darwin, to repair any accident to that portion of Cable.

5. That having in view the serious annoyance and loss occasioned by the mutilation of messages in transmission through Java, the President of this Conference be requested, on behalf of the Australasian Colonies represented, to communicate with the Secretary of State, for the purpose of obtaining permission from the Government of Netherlands-India to employ English operators on the land lines in Java.
6. That the Governments of South Australia and New South Wales be empowered to make arrangements with the Eastern Extension Telegraph Company for a reduction of message tariff to six shillings per word, at a subsidy not exceeding £20,000 per annum, terminable at one year's notice ; and that such subsidy be borne by the respective Colonies in proportion to population—any Colony to be at liberty to withdraw on like notice.

The Colonies of New Zealand, Tasmania, and Western Australia refrained from voting on this resolution.

7. That the several Colonies agree to allow the necessary official telegrams of H.M. Ships to pass over their respective lines free of charge.
8. That the Governments of Queensland and South Australia be requested to circulate among the respective Governments the draft Bills referred to in the Resolutions of the Intercolonial Conference held in Sydney, passed on the 10th February, 1873, for removing the defects in the law relating to the extradition of criminals, and the absconding of debtors, with a view to the same being submitted to the respective Legislatures as early as practicable.

(The following are the resolutions referred to :—

“That the present state of the law in regard to the Extradition of Criminals escaping from one Colony into another is defective. That the Government of Queensland be requested to prepare a Bill on the subject, which the Representatives of the several Colonies undertake—provided it is approved by their respective Law Officers—to endeavour to pass into law.”

“That the present state of the law in regard to remedies to be had against absconding Debtors is defective.”

“That the Government of South Australia be requested to prepare a Bill to remedy the defects, and, subject to the approval of their respective Law Officers, the Members of this Conference will endeavour to procure the passing of a similar Bill in their respective Legislatures.”)

9. That, in the opinion of the Conference, it is desirable that a uniform telegraphic code should be adopted by the several Australasian Colonies.

A motion proposed by the Representatives of Queensland, "That any duplicate system should be by a distinct route throughout from that now in use," was negatived. The Colonies of New Zealand, Tasmania, and Western Australia refrained from voting.

A motion proposed by the Representatives of South Australia, "That this Conference approves of the construction of a duplicate line from Singapore to Banjoewangi," was also negatived,—those in favour of the motion being New South Wales, South Australia, and Victoria.

A motion was also proposed by the Representative of Western Australia, "That any duplicate of the present Cables start from the North-west coast of Western Australia, provided it is shown that by such the best communication with Europe and Asia is secured at a moderate cost as compared with other and alternative routes which have been advanced;" but after some discussion the motion, with the concurrence of the Conference, was withdrawn.

A motion, proposed by the Representatives of Queensland, "That it is desirable that a Submarine Cable should be laid from Singapore to Cape York in Queensland, the Government of that Colony undertaking, in the event of such Cable being laid, to connect their existing land lines therewith," was negatived. Tasmania did not vote.

The Conference discussed several other questions on which no definitive action was taken.

Attention is called to the Appendix of Minutes of Proceedings, Report of Evidence taken, and Documents laid before the Conference.

JOHN ROBERTSON, ALEX. STUART, J. F. BURNS,	} New South Wales.
GEO. McLEAN,	New Zealand.
S. W. GRIFFITH, CHARLES STUART MEIN,	} Queensland.

ROBERT RAMSAY,	Victoria.
MALCOLM FRASER,	Western Australia.

ALEX. C. BUDGE,
Secretary.

The Treasury, Sydney, 2nd February, 1877.

MINUTES OF THE PROCEEDINGS
OF THE
CABLE CONFERENCE,

HELD IN SYDNEY, IN 1877.

At the Treasury, Sydney.

THURSDAY, 25 JANUARY, 1877.

THE undermentioned gentlemen, Representatives of the Colonies of New South Wales, New Zealand, Queensland, South Australia, Tasmania, and Victoria, were present:—

<i>New South Wales :</i>	THE HONORABLE JOHN ROBERTSON. THE HONORABLE ALEX. STUART. THE HONORABLE J. F. BURNS.
<i>New Zealand :</i>	THE HONORABLE G. McLEAN.
<i>Queensland :</i>	THE HONORABLE SAMUEL WALKER GRIFFITH. THE HONORABLE CHARLES STUART MEIN.
<i>South Australia :</i>	THE HONORABLE SIR HENRY AYERS, K.C.M.G. THE HONORABLE EBENEZER WARD.
<i>Tasmania :</i>	THE HONORABLE JAMES WHITE.
<i>Victoria :</i>	THE HONORABLE R. S. ANDERSON. THE HONORABLE R. RAMSAY.

The Honorable John Robertson was, on the motion of Sir Henry Ayers, seconded by the Honorable R. Anderson, unanimously elected to the Chair.

Mr. Alex. C. Budge was appointed Secretary.

The Honorable SIR HENRY AYERS then proposed,—

“That in the event of any division upon a motion the votes of the Colonies shall be taken in lieu of the individual votes of the Representatives of the said Colonies.”

The Conference agreed to the same.

The Honorable SIR HENRY AYERS also proposed, and the Honorable G. McLEAN seconded, the following motion, which the Conference unanimously adopted:—

“That the proceedings of the Conference, during its sitting, shall not be made public, except with the sanction of the Conference.”

It was then resolved:—

“That the Representatives of each Colony shall undertake to recommend to the Governments and Parliaments of the Colonies which they represent, the adoption of measures to carry out all the resolutions of the Conference to which they may have given their assent.”

It was further resolved:—

“That the Secretary be required to prepare minutes of each day's proceedings, which shall be read over and confirmed at the next sitting previous to any new business being entered upon.”

MR. STUART gave notice of the following Motions:—

- (1.) That it is desirable to extend and improve the means of Telegraphic Communication between Australia and Europe, by the duplication where necessary of the cables or lines connecting the same.
- (2.) That the subsidy on ocean cables, to connect Australia with Europe, be borne by the several Australian Colonies in proportion to population.
- (3.) That the loss (if any) on Colonial lines, to connect the cables with the main telegraphic systems, should, in like manner, be borne by all the Colonies concerned.
- (4.) That if New Zealand contribute to the subsidy and loss referred to in the foregoing Resolutions, the subsidy on the New Zealand Cable should be a common charge to be borne by all in a similar manner.

MR. GRIFFITH gave notice of the following Motions:—

- (1.) That it is, in the opinion of this Conference, essential that a complete duplicate system of telegraphic communication should be forthwith established between Great Britain and the Australian Colonies.
- (2.) That such duplicate system should be entirely independent of the lines of the Eastern Extension Telegraph Company, and of the South Australian line between Port Darwin and Adelaide.
- (3.) That the point of connection between the duplicate Cable line and the Continent of Australia should be Thursday Island, near Cape York, in the Colony of Queensland.
- (4.) That the Colony of Queensland should forthwith proceed with the construction of a line of telegraph to connect their existing lines with Thursday Island.
- (5.) That any subsidy which may be required for the construction or maintenance of the ocean cable lines should be paid and borne by the several Australian Colonies, in amounts proportionate to their population.
- (6.) That the losses (if any) which may be sustained from time to time by the Government of South Australia in maintaining and working the line of telegraph between Port Augusta and Port Darwin, and by the Government of Queensland in maintaining and working the line of telegraph between Cardwell and Kimberley, and between Cardwell and the point of departure of the ocean cable, should be paid and borne by the several Australian Colonies in amounts proportionate to their populations.
- (7.) That, in the event of the Colony of New Zealand uniting with the Colonies of Australia in the agreement embodied in the foregoing resolutions, the subsidy payable in respect of the cable connecting New Zealand and New South Wales shall be paid and borne by the several Australian Colonies, in amounts proportionate to their populations.

The Council then adjourned until Saturday, the 27th instant, at half past 10 o'clock.

JOHN ROBERTSON,
Chairman.

ALEX. C. BUDGE,
Secretary.

At the Treasury, Sydney,

SATURDAY, 27 JANUARY, 1877.

Present :

<i>New South Wales :</i>	THE HONORABLE JOHN ROBERTSON. THE HONORABLE ALEX. STUART. THE HONORABLE J. F. BURNS.
<i>New Zealand :</i>	THE HONORABLE G. McLEAN.
<i>Queensland :</i>	THE HONORABLE SAMUEL WALKER GRIFFITH. THE HONORABLE CHARLES STUART MEIN.
<i>South Australia :</i>	THE HONORABLE SIR HENRY AYERS, K.C.M.G. THE HONORABLE EBENEZER WARD.
<i>Tasmania :</i>	THE HONORABLE JAMES WHYTE.
<i>Victoria :</i>	THE HONORABLE R. S. ANDERSON. THE HONORABLE R. RAMSAY.

The Conference having met at half-past 10 o'clock A.M., the Minutes of the Proceedings on the 25th instant were read and confirmed.

Sir HENRY AYERS then proposed, and the Honorable EBENEZER WARD seconded the following motion, which the Conference unanimously adopted, viz. :—

“That the order of debate be the same as is observed in consideration of questions in a Committee of the Whole House of Parliament, but that the Chairman have the same right as any other member of the Conference to take part in the discussion of all questions.”

The Honorable CHARLES STUART MEIN proposed, and The Honorable JAMES WHYTE seconded, the following motion, which the Conference agreed to, viz. :—

“That in referring to the several Colonies represented in any proceedings of the Conference, the names be placed in alphabetical order.”

The Honorable JOHN ROBERTSON (Chairman) laid before the Conference the undermentioned papers, which were read by the Clerk, and ordered by the Conference to be printed, viz. :—

- (1.) Precis prepared by the Chairman of the correspondence on the subject of a Duplicate Telegraph Cable to connect the Australasian Colonies with the rest of the World.
- (2.) A communication from the Commodore to His Excellency the Governor of New South Wales on the subject of—
 1. Rewards for the arrest of deserters from the Navy.
 2. Free telegraphic messages on Naval service.
- (3.) A Report from the Eastern Extension Australasia and China Telegraph Company, dated 11th October, 1876.
- (4.) A letter from J. E. Stewart, Secretary to the Victorian Humane Society, on the subject of Life-saving Apparatus at Sea.
- (5.) A letter from Captain Audley Coote, dated the 23rd January, and a supplementary letter, dated the 25th January, on the subject of a Duplicate Cable.
- (6.) A letter from Messrs. Knevett and Taylor, on behalf of the Eastern Extension Australasia and China Telegraph Company, notifying that they are prepared to afford the Conference any information required.

The

The Honorable ALEX. STUART then proposed the motions of which notice was given on the 25th instant, and having moved the adoption of No. 1, viz. :—

“(1.) That it is desirable to extend and improve the means of Telegraphic communication between Australia and Europe, by the duplication where necessary of the cables or lines connecting the same”,—

The Honorable SAMUEL WALKER GRIFFITH proposed that all the words after the word “is” in the first line be omitted with a view to the insertion of the following words :—

“(1.) [That it is] in the opinion of this Conference, essential that a complete duplicate system of Telegraphic communication should be forthwith established between Great Britain and the Australian Colonies.”

And the same having been fully discussed, the Chairman put the question,—“That the words proposed to be omitted stand part of the question.”

Ayes.	No.
New South Wales.	Queensland.
New Zealand.	
South Australia.	
Tasmania.	
Victoria.	

The question was then put,—“That the motion proposed by Mr. Stuart be adopted,” which was unanimously agreed to.

SIR HENRY AYERS laid before the Conference two Returns on the subject of—

- (1.) Port Darwin Telegraph Line Interruptions,
- (2.) Cable Interruptions,—

Which were ordered to be printed ; also a chart showing the Telegraph line from Adelaide to Port Darwin, which was ordered to be lithographed and appended to the proceedings.

The Conference, on the motion of the Honorable SAMUEL WALKER GRIFFITH, seconded by the Honorable CHARLES STUART MEIN, directed—

“That the Minutes of the Proceedings of the Conference be printed confidentially, for the use of the Members only, and that each day’s proceedings be printed after being confirmed by the Conference.”

The Conference, shortly after 1 o’clock, adjourned until Monday, the 29th instant, at half-past 10 o’clock.

ALEX. C. BUDGE,
Secretary.

JOHN ROBERTSON,
Chairman.

At the Treasury, Sydney,

MONDAY, 29 JANUARY, 1877.

Present :

<i>New South Wales :</i>	THE HONORABLE JOHN ROBERTSON. THE HONORABLE ALEX. STUART. THE HONORABLE JOHN F. BURNS.
<i>New Zealand :</i>	THE HONORABLE G. McLEAN.
<i>Queensland :</i>	THE HONORABLE SAMUEL WALKER GRIFFITH. THE HONORABLE CHARLES STUART MEIN.
<i>South Australia :</i>	THE HONORABLE SIR HENRY AYERS, K.C.M.G. THE HONORABLE EBENEZER WARD.
<i>Tasmania :</i>	THE HONORABLE JAMES WHITE.
<i>Victoria :</i>	THE HONORABLE R. S. ANDERSON. THE HONORABLE R. RAMSAY.
<i>Western Australia :</i>	THE HONORABLE MALCOLM FRASER.

The Conference having met at half-past 10 o’clock, the Minutes of the Proceedings on the 27th instant were read and confirmed.

The Honorable ALEX. STUART then proposed the following motion :—

“That the subsidy on Ocean cables to connect Australia with Europe, be borne by the several Australian Colonies in proportion to population,” and the same having been discussed by the Conference, and verbally amended, was unanimously adopted.

The motion as passed is as follows :—

“That any subsidy on Ocean cables to connect Australia with Europe, shall be borne by the several Australian Colonies assenting thereto, in proportion to population.”

The Honorable ALEX. STUART then proposed the following motion :—

“That the loss, if any, on Colonial lines, to connect the Cables with the main Telegraphic system of each Colony, shall in like manner be borne by all the Colonies concerned.”

The Honorable R. S. ANDERSON then moved an amendment, that after the word “lines,” the words “that it may be found necessary to construct,” be inserted.

After discussion the Conference unanimously agreed that the further consideration of the motion should be postponed until to-morrow.

The Honorable ALEX. STUART then moved, that the motion (No. 4) on the Paper should stand over until No. 3 shall have been disposed of.

The

The Honorable SAMUEL WALKER GRIFFITH then moved—

“That any duplicate system should be by a distinct route throughout, from that now in use.”

After discussion, the Conference resolved to postpone the further consideration of the subject until the next meeting.

The Honorable EBENEZER WARD then gave notice of the following motion for to-morrow :—

“That this Conference approves of the construction of duplicate cables from Singapore to Bangoe-wangi, and from Banjoewangi to Port Darwin, and that it is advisable offers should be invited from persons or Companies willing to construct and maintain such cables.”

The Honorable MALCOLM FRASER gave notice of the following motion for to-morrow :—

“That any duplication of the present cables start from the north-west coast of Western Australia.”

The Council then adjourned at a quarter to 2 o'clock until next day at half-past 10 o'clock.

JOHN ROBERTSON,
Chairman.

ALEX. C. BUDGE,
Secretary.

At the Treasury, Sydney,

TUESDAY, 30 JANUARY, 1877.

Present :

New South Wales : THE HONORABLE JOHN ROBERTSON.
THE HONORABLE ALEX. STUART.
THE HONORABLE JOHN F. BURNS.

New Zealand : THE HONORABLE G. McLEAN.

Queensland : THE HONORABLE SAMUEL WALKER GRIFFITH.
THE HONORABLE CHARLES STUART MEIN.

South Australia : THE HONORABLE SIR HENRY AYERS, K.C.M.G.
THE HONORABLE EBENEZER WARD.

Tasmania : THE HONORABLE JAMES WHYTE.

Victoria : THE HONORABLE R. S. ANDERSON.
THE HONORABLE R. RAMSAY.

Western Australia : THE HONORABLE MALCOLM FRASER.

The Conference having met at half-past 10 o'clock, the Minutes of the Proceedings on the 29th instant were read and confirmed.

The Honorable JOHN F. BURNS laid before the Conference a Report from the Acting Superintendent of Telegraphs on the subject of a duplicate Cable, which was read by the Secretary.

The consideration of the following resolution, moved by the Honorable SAMUEL WALKER GRIFFITH, was resumed, viz. :—

“That any duplicate system should be by a distinct route throughout from that now in use.”

And after discussion, the Conference, on the motion of the Honorable R. RAMSAY, resolved to examine such of the professional and other gentlemen in attendance, as they might consider to be necessary.

Messrs. Taylor, Knevitt, and Audley Coote were then separately examined. (*For Evidence see Appendix.*)

The Honorable SIR HENRY AYERS, on behalf of The Honorable EBENEZER WARD, moved the resolution of which notice was given yesterday, as an amendment on the resolution of the Honorable SAMUEL WALKER GRIFFITH,—That all the words after the word “That” be omitted with a view to the insertion of the following words :—

“[That] this Conference approves of the construction of duplicate Cables from Singapore to Banjoewangie, and from Banjoewangi to Port Darwin, and that it is advisable offers should be invited from persons or Companies willing to construct and maintain such Cables.”

The Honorable JAMES WHYTE moved as a further amendment,—

“That the further consideration of the resolution and amendment be postponed until resolution No. 3 (moved by the Honorable ALEX. STUART), and the amendment thereon (moved by the Honorable R. S. ANDERSON), shall have been disposed of.”

After discussion, the amendment proposed by the Honorable JAMES WHYTE was put and negatived the following division :—

Ayes.	Noes.
New Zealand.	New South Wales.
Tasmania.	Queensland.
Western Australia.	South Australia.
	Victoria.

The

The question was then put, That the words proposed to be omitted stand part of the question :—

Aye.	Noes.
Queensland.	New South Wales.
	South Australia.
	Victoria.

The Colonies of New Zealand, Tasmania, and Western Australia, did not vote.

The Honorable EBENEZER WARD having obtained leave to amend his original motion, proposed that after the word 'that' the following words be inserted :—

" [That] this Conference approves of the construction of a duplicate line from Singapore to Banjoewangi."

The Conference having fully discussed the subject, the motion was put by the Chairman, and negatived on the following division :—

Ayes.	Noes.
New South Wales.	New Zealand.
South Australia.	Queensland.
Victoria.	Tasmania.
	Western Australia.

The Conference, on the motion of the Honorable SIR HENRY AYERS, adjourned at a quarter past 4 o'clock until next day at half-past 10 a.m.

JOHN ROBERTSON,
Chairman.

ALEX. C. BUDGE,
Secretary.

At the Treasury, Sydney,

WEDNESDAY, 31 JANUARY, 1877.

Present :

<i>New South Wales :</i>	THE HONORABLE JOHN ROBERTSON. THE HONORABLE ALEX. STUART. THE HONORABLE JOHN F. BURNS.
<i>New Zealand :</i>	THE HONORABLE G. MCLEAN.
<i>Queensland :</i>	THE HONORABLE SAMUEL WALKER GRIFFITH. THE HONORABLE CHARLES STUART MEIN.
<i>South Australia :</i>	THE HONORABLE SIR HENRY AYERS, K.C.M.G. THE HONORABLE EBENEZER WARD.
<i>Tasmania :</i>	THE HONORABLE JAMES WHYTE.
<i>Victoria :</i>	THE HONORABLE R. RAMSAY.
<i>Western Australia :</i>	THE HONORABLE MALCOLM FRASER.

The Conference having met at half-past 10 o'clock, the Minutes of the proceedings on the 30th instant were read and confirmed.

The Honorable MALCOLM FRASER then proposed the following Resolution,—That after the word "That" the following words be added, being the motion of which notice was given by him on the 29th instant :—

" [That] any duplicate of the present Cables start from the North-west Coast of Western Australia," and that in addition thereto, the following words be added, " provided it is shown that by such the best communication with Europe and Asia is secured, at a moderate cost as compared with other and alternative routes, which have been advanced."

After discussion, the Honorable MALCOLM FRASER, with the consent of the Conference, withdrew his Resolution.

The Honorable R. RAMSAY laid before the Conference a "Memorandum to Hugh George, Esq., General Manager, of 'the Argus,' on the subject of delays in transmission of Cable Telegrams, &c.," which, having been read, the Conference directed should be printed.

The Chairman also laid before the Conference a telegram from John Pender, Esq., Chairman of the Eastern Extension Telegraph Company, on the subject of a duplicate cable, which was ordered to be printed.

The Honorable S. W. GRIFFITH proposed the insertion of the following words after the word "That,"—"it is desirable that a Submarine Cable should be laid from Singapore to Cape York, in Queensland, the Government of that Colony undertaking, in the event of such cable being made, to connect their existing land lines therewith.

The Chairman then put the question—"That the words proposed to be inserted be so inserted."

The Conference divided.

Ayes.	Noes.
Queensland.	New South Wales.
	New Zealand.
	South Australia.
	Victoria.
	Western Australia.

Tasmania did not vote.

The

The Honorable G. McLEAN then proposed the Resolutions (with certain alterations), of which notice was given yesterday, viz. :—

That inasmuch as it has been decided that it is desirable to extend and improve the means of telegraphic communication between Australia and Europe by the duplication where necessary of the Cables or lines connecting the same, and that the subsidy on Ocean Cables to connect Australia with Europe be borne by the several Colonies assenting thereto in proportion to population,—

- (1.) The several Governments of South Australia, Queensland, and Western Australia be invited to open negotiations for the construction of Cables connecting their several Colonies with Singapore or Ceylon; and the Government of New Zealand for the construction of a Cable from that Colony to the United States of America.
- (2.) That, in negotiating for the construction of the last-mentioned Cable, the Government of New Zealand enter into communication with the Government of the United States for the purpose of procuring their consent to contribute to the payment of any subsidy that may be payable in respect of the same; and further, that in all the negotiations of the several Governments the necessity of procuring a reduction of the present tariff rates be especially kept in view, the maximum rate being 6s. per word.
- (3.) That in the meantime the South Australian Government be requested on behalf of the several Colonies to urge upon the Eastern Extension Telegraph Company the necessity of keeping a repairing steamer between Banjoewangi and Port Darwin, to repair any accident to that portion of Cable.

After discussion it was proposed, and carried on the following division, that the further consideration of the Resolutions be postponed, until the Honorable ALEX. STUART's motion No. 3, and the Honorable R. S. ANDERSON's amendment thereon, postponed on the 29th instant, should be disposed of :—

Ayes.	Noes.
New South Wales.	New Zealand.
Queensland.	Victoria.
South Australia.	Western Australia.
Tasmania.	

The Conference resumed consideration of the motion and amendment referred to.

After discussion the amendment proposed by the Honorable R. S. ANDERSON was put and negatived without division.

The motion to insert the word "competing" after the word "on" in the first line of Mr. Stuart's resolution was then put and carried.

The original motion, as amended, was then put and carried upon the following division :—

Ayes.	No.
New South Wales.	Tasmania.
Queensland.	
South Australia.	

New Zealand, Victoria, and Western Australia did not vote.

The resolution, as amended and passed, will read as follows :—

"That the loss (if any) on competing Colonial lines to connect the Cables with the main Telegraphic system should in like manner be borne by all the Colonies concerned."

The Honorable ALEX. STUART, with permission of the Conference, withdrew motion No. 4.

The Honorable SAMUEL WALKER GRIFFITH, with permission of the Conference, withdrew the several notices of motion given by him on the 27th instant.

The Conference proceeded to the further discussion of the resolutions proposed by the Honorable G. McLEAN, and it having been decided to put them separately—

No. 1 was proposed, as amended, and agreed to.

No. 2 was proposed and agreed to.

No. 3 was proposed, as amended, and agreed to (Western Australia refrained from voting).

The Honorable J. F. BURNS proposed the following resolution, which the Conference unanimously adopted :—

"That the several Colonies agree to allow the necessary official telegrams of H. M. Ships to pass over their respective lines free of charge."

The Honorable R. RAMSAY gave notice of the following resolution :—

"That having in view the serious annoyance and loss occasioned by the mutilation of messages in transmission through Java, the President of this Conference be requested, on behalf of the Australasian Colonies represented, to communicate with the Secretary of State, for the purpose of obtaining permission from the Government of Netherlands-India to employ English operators on the land lines in Java."

The Honorable ALEX. STUART gave notice of the following resolution :—

"That the Governments of South Australia and New South Wales be empowered to make arrangements with the Eastern Extension Telegraph Company for a reduction of Message Tariff to six shillings per word, at a subsidy not exceeding £20,000 per annum, terminable at one year's notice, and that such subsidy be borne by the respective Colonies, in proportion to population—any Colony to be at liberty to withdraw on like notice."

The Honorable EBENEZER WARD gave notice of the following Resolution :—

"That the Conference will proceed to the consideration of the Mail Services between the Colonies and Great Britain, with the view of securing, if possible, united action in future arrangements."

The

The Honorable J. F. BURNS laid before the Conference a letter from Eldred & Company on behalf of the Netherlands-India S. N. Co., offering to run a steamer between Banjoewangi and Port Darwin in the event of a break in cable, which was ordered to be printed.

(The Conference adjourned at a quarter past 1 until 2 o'clock.)

On resuming the Honorable R. RAMSAY proposed the following Resolution:—

“That having in view the serious annoyance and loss occasioned by the mutilation of messages in transmission through Java, the President of this Conference be requested, on behalf of the Australasian Colonies represented, to communicate with the Secretary of State, for the purpose of obtaining permission from the Government of Netherlands-India to employ English operators on the land lines in Java.”

The Conference unanimously agreed to the same.

The Honorable ALEX. STUART proposed the following Resolution:—

“That the Governments of South Australia and New South Wales be empowered to make arrangements with the Eastern Extension Telegraph Company for a reduction of Message Tariff to six shillings per word, at a subsidy not exceeding £20,000 per annum, terminable at one year's notice, and that such subsidy be borne by the respective Colonies in proportion to population—any Colony to be at liberty to withdraw on like notice.”

After discussion, the Conference agreed to the resolution.

The Colonies of New South Wales, Queensland, South Australia, and Victoria voted for.

The Colonies of New Zealand, Tasmania, and Western Australia refrained from voting.

The Honorable EBENEZER WARD proposed the following Resolution:—

“That the Conference will proceed to the consideration of the Mail Services between the Colonies and Great Britain, with the view of securing if possible, united action in future arrangements.”

After discussion, the Honorable CHARLES STUART MEIN proposed that the further consideration of the Resolution be postponed until Friday next, which the Conference agreed to.

The Chairman laid before the Conference a communication from M. Ed. Nutt, Director of the Interior, Noumea, New Caledonia, on the subject of a Mail Service *via* Noumea to San Francisco, which after being read, was ordered to be printed.

The Honorable SIR HENRY AYERS then proposed that the Secretary be instructed to prepare a Draft Report for the consideration of the Conference, which was agreed to.

The Conference adjourned at a quarter to 4 o'clock until Friday next at half-past 10.

JOHN ROBERTSON,
Chairman.

ALEX. C. BUDGE,
Secretary.

At the Treasury, Sydney,
FRIDAY, 2 FEBRUARY, 1877.

PRESENT :

<i>New South Wales :</i>	THE HONORABLE JOHN ROBERTSON. THE HONORABLE ALEX. STUART. THE HONORABLE JOHN F. BURNS.
<i>New Zealand :</i>	THE HONORABLE G. McLEAN.
<i>Queensland :</i>	THE HONORABLE SAMUEL WALKER GRIFFITH. THE HONORABLE CHARLES STUART MEIN.
<i>South Australia :</i>	THE HONORABLE SIR HENRY AYERS, K.C.M.G. THE HONORABLE EBENEZER WARD.
<i>Tasmania :</i>	THE HONORABLE JAMES WHYTE.
<i>Victoria :</i>	THE HONORABLE R. RAMSAY.
<i>Western Australia :</i>	THE HONORABLE MALCOLM FRASER.

The Conference having met at $\frac{1}{2}$ past 10 o'clock the Minutes of the Proceedings on the 31st ultimo were read and confirmed.

The Conference resumed consideration of the motion of the Honorable EBENEZER WARD,—“That the Conference will proceed to the consideration of the Mail Services between the Colonies and Great Britain, with the view of securing if possible united action in future arrangements.”

After considerable discussion, the Honorable EBENEZER WARD, with the consent of the Conference, withdrew his motion.

The Honorable Sir HENRY AYERS, with leave of the Conference, proposed the following resolution, which was unanimously adopted:—

“That the Government of Queensland and South Australia be requested to circulate among the respective Governments the draft Bills referred to in the Resolutions of the Intercolonial Conference held in Sydney, passed on the 10th February, 1873, for removing the defects in the law relating to the extradition of criminals and the absconding of debtors, with a view to the same being submitted to the respective Legislatures as early as practicable.

“The

“The following are the resolutions referred to :—

“That the present state of the law in regard to the extradition of criminals escaping from one Colony into another is defective. That the Government of Queensland be requested to prepare a Bill on the subject, which the Representatives of the several Colonies undertake—provided it is approved by their respective Law Officers—to endeavour to pass into law.

“That the present state of the law in regard to remedies to be had against absconding debtors is defective.

“That the Government of South Australia be requested to prepare a Bill to remedy the defects, and, subject to the approval of their respective Law Officers, the Members of this Conference will endeavour to procure the passing of a similar Bill in their respective Legislatures.”

The Honorable R. RAMSAY, with the consent of the Conference, moved the following resolution, which was unanimously agreed to :—

“That in the opinion of the Conference it is desirable that a uniform Telegraphic Code should be adopted by the several Australasian Colonies.”

The Report of the Proceedings of the Conference having been carefully considered and amended in certain particulars, was finally adopted.

On the motion of the Honorable CHARLES STUART MEIN the following resolutions were unanimously passed by the Conference :—

“1. That the thanks of the Conference be given to the Honorable John Robertson for the valuable services rendered by him as Chairman of the Conference.”

“2. That the Chairman be requested to convey the thanks of the Conference to Alex. C. Budge, Esq., for the efficient services rendered by him as Secretary to the Conference.”

The Conference then adjourned *sine die*.

JOHN ROBERTSON,
Chairman.

ALEX. C. BUDGE,
Secretary.

1877.

NEW SOUTH WALES.

CONFERENCE ON CABLE DUPLICATION.

(PAPERS LAID BEFORE THE CONFERENCE.)

NO.	PAGE.
1. Proposals for a duplicate telegraph cable to connect the Australasian Colonies with the rest of the world.....	18
2. A communication from Commodore Hoskins to His Excellency Sir Hercules Robinson, dated the 23rd January, 1877, on the subject of—	
(1.) Reward for the apprehension of deserters from the Navy	19
(2.) Free telegraph messages on purely Naval Service matters	19
3. A report from the Eastern Extension Australasian and China Telegraph Company, dated 11th October, 1876	19
4. A communication from J. G. Stewart, Secretary to the Victorian Humane Society, on the subject of life-saving apparatus at sea	22
5. A letter from Mr. Audley Coote, dated the 23rd January, and a supplementary letter, dated 25th January, on the subject of a duplicate cable	23
6. A letter from Messrs. Knevett and Taylor, on behalf of the Eastern Extension Australasian and China Telegraph Company, notifying that they are in attendance on the Conference to afford information as to a duplicate cable	23
7. Return showing Port Darwin telegraph line interruptions	24
8. Return showing cable interruptions	25
9. Statement showing the several proposals and suggestions in regard to the duplicate cable to connect Europe with the Australasian Colonies	26
10. A communication from John Pender, Esq., M.P., Chairman of Eastern Extension Australasian and China Telegraph Company, on the subject of proposed additional telegraphic communication between England and Australia ...	27
11. Telegram from John Pender, Esq. M.P., on the subject of duplication of telegraph cables.....	29
12. A memorandum from Eugène C. Ainswick to Hugh George, Esq., General Manager of the <i>Argus</i> , on the subject of—	
(1.) Delay in transmission of cable telegrams.....	29
(2.) Absence of official information as to interruption of lines.....	30
(3.) Mutilation of messages	30
13. Letter from Ed. Nutt, Director of the Interior of New Caledonia, in regard to mail communication to San Francisco <i>via</i> Noumea	31
14. Letter from Eldred & Co., on behalf of Netherlands India Steam Navigation Co., offering to run steamers with despatches between Banjoewangie and Port Darwin, in the event of another break in cable	31
15. Submarine cable between New Zealand and Australia (Agreement).....	32
16. Chart showing Telegraph Line from Adelaide to Port Darwin	

CABLE CONFERENCE.

[Laid before the Conference by the Chairman.]

PROPOSALS for a Duplicate Telegraph Cable to connect the Australasian Colonies with the rest of the World.

- M. 17,605.
18 May. THE Colonial Secretary's letter on this subject was addressed to Victoria, Queensland, Tasmania, New Zealand, and South Australia. The following are the four routes indicated in it:—
1. Sydney to New Zealand, thence by the Sandwich Islands to San Francisco.
 2. From Normanton by cable, the line ultimately taking the same course as 3 and 4.
 3. From Port Darwin by cable, by the side of present cable, passing by land through Sumatra and *via* Malacca, instead of by cable to Singapore.
 4. From Port Darwin by cable, touching at Copang.
76. 3,676.
20 May. The French Consul's letter concerning the co-operation of New Caledonia, was communicated to the same Colonies.
76. 3,966. There is a letter from Mr. Audley Coote, dated June 5, in which he suggests three routes as preferable, for certain reasons, to those above mentioned—two of them by way of North-west Cape (Western Australia) and Singapore; the third by Perth and Ceylon.
76. 4,242.
5 June. This project of taking the line by way of Western Australia is also set forth in a letter from Mr. J. Hogan to the Postmaster General. It also finds favour with Sir Julius Vogel and with the Governments of Western Australia and South Australia.
- 76/4140.
6 June. From all the Colonies replies have been received to Mr. Robertson's letter.
- 76/4694.
24 June. The Chief Secretary of *Victoria* says that the matter shall receive the earnest attention of his Government.
- 76/4350.
16 June. South Australia could not entertain 1 or 2, as too costly. It would be most advantageous to adopt 3 or 4, the selection being left to the Eastern Extension Telegraph Company; but if line be taken through Java the Company must have an independent land wire. But 2, other routes are suggested as worthy of consideration; (a) from North West Cape, or Roeburne, by Java to Singapore; (b) from the west coast direct to Galle. A duplicate cable from Port Darwin would however be the readiest and cheapest. In any circumstances they ought not to be required to contribute to the cable subsidy. The overland telegraph line ought to be regarded as an intercolonial undertaking, and the cost should be borne by the Colonies using it. The E.E. Telegraph Company ought to be required to keep a steamer always near Port Darwin, and a continued interruption for a given time should entail deductions from the subsidy.
- 76/4551. As to *Queensland*, the Postmaster General stated that she was prepared to contribute to a subsidy for a cable from Kimberley (Norman Mouth) to Singapore, contributions being based on population. Telegram of 26 June says that without defined proposition from the other Colonies she cannot at present do anything.
- 76/4546. The Colonial Secretary of *New Zealand* sends copies of a memorandum of the Commissioner of Telegraphs (Sir Julius Vogel). He is in favour of a cable from the West Coast, and proposes three lines, which are the same as those suggested by Mr. Audley Coote. (See above). There are so many details that correspondence will not settle the matter; and for this reason, as well as for the discussion of many questions connected with cable communication, a Conference is desirable. With regard to Mr. Coote, Sir Julius Vogel points out that "his principals were not willing or not able to carry out the arrangements he formerly made."
- 76/3,944. From Tasmania there is only an acknowledgment.
- 76/4,595.
10 June. Western Australia (not addressed by Mr. Robertson) sends a copy of a letter sent to New Zealand (in continuation of correspondence between the two Colonies), enclosing a minute of Executive Council on Sir Julius Vogel's memo. already mentioned. This Colony is favourable to the holding of a Conference, at which it is thought the Government of India ought to be represented. She is in favour of a cable from her west coast to Ceylon by way of the Cocos Islands. 20 July, 1876.
- Later correspondence on this subject is noted below.
- Mr. Cracknell, in his telegram of 9th September, from London, expresses the opinion that the cheapest and only necessary (for the present) duplication is one between Singapore and Banjowangie. He thinks that later a cable might be laid from Banjowangie to North-west Cape. (See his letter of 29th September, 1876.)
- M. 3323/B.
2 June, 1876. The Secretary of State sends a communication from the Chairman of the Eastern Extension Telegraph Company setting forth a proposal for a cable from Penang to Rangoon, as supplementary to the line from Madras to Penang.
- 76-5474.
6922.
8072. Mr. Audley Coote gives the Governments the choice of several projects so far as concerns terms; a guarantee of interest, a subsidy, or the direct purchase of a cable.
- 76-7199.
14 Sep., 1876. The Consul of France sends a letter from the Governor of New Caledonia, with enclosure, setting forth the advantages of a line of telegraph between Australia and America. This is a project which is admitted to be too expensive without the assistance of the United States.
- 76-9098
19 Oct., 1876. The Agent General encloses a communication from the Chairman of the Eastern Extension Telegraph Company. That Company being made aware of the correspondence that had passed in Australia, had considered the subject and now desired to offer certain proposals, which are set forth at length in the printed paper. They have in view two routes—one from Port Darwin to Banjoewangie, the other from North-west Cape to the same place—with a direct cable between Banjoewangie and Singapore. The cost would be for these respective lines £540,000 and £500,000, and on either amount the Company would require a subsidy of 6 per cent., and 3 per cent. for a reserve fund for repairing and replacing the cable. The annual payments would be thus for the respective routes £48,600 and £45,000.

5 January, 1876.

JOHN ROBERTSON.

No. 2.

Commodore Hoskins to His Excellency the Governor, on subject of Rewards for apprehension of Deserters from the Navy and Free Telegraph Messages on Naval Service.

Sir,

H. M. Ship "Wolverene," at Sydney,
23 January, 1877.

The approaching Intercolonial Conference about to assemble here at your suggestion appears to me to afford an opportunity of arriving at an harmonious arrangement respecting two matters affecting our naval interests, and I would ask your Excellency, should you see no objection thereto, to direct the attention of the Conference to them.

The first is the payment of a reward of five pounds by the Governments of the several Colonies for the apprehension of deserters from the Navy, as a stimulus to activity on the part of the Police. The second is the payment for telegrams on purely Naval Service matters.

2. With respect to the first, the Government of New Zealand has for many years made such a payment, and with the best result; and though the practice has been suspended of late in the Australian Colonies, the order to make them appears never to have been rescinded, and I have received from yourself and the Governors of Victoria and Tasmania an intimation that your Governments are willing to renew it.

3. I attach great importance to it, as I have already explained to your Excellency in my letters of the 16th August and 21st November, 1876, as one means of checking the great loss of men by desertion which our ships now suffer on this station, a loss which bears hardly on our resources in men at home, and which must prevent not only an increase to the Force now on the station, but also any hopes of visits from the squadron which is kept up for the purpose of instruction and of periodically visiting our Foreign stations.

4. With respect to the telegraph question, it seems so obvious that the necessary official telegrams of a squadron maintained here for the benefit and protection of the Colonies should pass, like their own official telegrams, free of charge, that I am sure it is only necessary that it should be mentioned for the concession to be made; and I only consider it desirable to bring it forward in order to have the principle authoritatively established and recorded with the general consent of all the Colonies.

I have, &c.,

A. H. HOSKINS,

Commodore.

No. 3.

Report of the Eastern Extension Australasia and China Telegraph Company, Limited.

DIRECTORS.

John Pender, Esq., M.P., *Chairman*.
The Right Honorable W. N. Massey, M.P.,
Vice-Chairman.
Sir James Anderson.
Francis Augustus Bevan, Esq.
Baron Emile D'Erlanger.
Charles William Earle, Esq.

Sir Thomas Fairbairn, Bart.
Lord William Montagu Hay.
The Right Honorable Viscount Monck.
William M'Arthur, Esq., M.P.
George Garden Nicol, Esq.
Philip Rawson, Esq.

MANAGING DIRECTOR.

Colonel T. G. Glover, R.E.

ACTING SECRETARY.

Mr. F. E. Hesse.

The Directors submit the annexed half-yearly report and balance sheet to the 30th June last.

The gross earnings for the half-year have amounted to £98,542 3s. 0d. The working expenses, cost of repairs, payment of income tax, interest on debentures, &c., amount to £43,910 19s. 3d. The sum of £581 3s. 2d. mentioned in the last half-yearly report as the expenses incidental to the issue of debentures and laying of the New Zealand cable has, with a small additional amount of £10 0s. 10d., been charged against the revenue of the half-year under review. The balance of profit amounts to £54,631 3s. 9d.

One interim dividend of $1\frac{1}{4}$ per cent., amounting to £24,968 15s. 0d., has been paid, and another of similar amount is payable on the 16th instant, leaving the sum of £4,693 13s. 9d. to be carried forward.

The Directors regret that the Penang-Madras section of the Company's cables, which broke near the Nicobar Islands on the 27th March last, has not yet been repaired, owing to the continuance of the monsoon since that date. The repairing ship "Agnes" has been almost constantly on the site of the interruption, but the weather has been so severe as to frustrate all attempts at repair. The termination of the monsoon may now be daily expected, when there will be no difficulty in restoring the communication, the fault being in shallow water.

The Port Darwin section of the cable broke on the 24th April, and was repaired on the 7th August by the Company's S.S. "Edinburgh," which left her station for that purpose by permission of the Governments of New Zealand and New South Wales.

The duplicate cable to be laid between Penang and Rangoon, which was sanctioned at an extraordinary general meeting held on the 16th December, 1875, is in course of manufacture, and will be laid early next year.

Out of the total authorized issue of £320,000 6 per cent. Debentures, £278,500 were allotted up to the 30th June last. The balance has since been issued.

The

BALANCE SHEET, 30th June, 1876.

Audited and found correct,

JOHN BALL,
HENRY DEVER, } Auditors.

No. 4.

The Hon. Secretary, Victorian Humane Society, to The Chairman of the
Intercolonial Conference.

On the subject of Life Saving Apparatus at Sea.

Sir,

Victorian Humane Society,
62, Collins-street East, Melbourne, 19 January, 1877.

1. I have the honor to state, for the information of yourself and the members of the Intercolonial Conference, that the Directors of the Victorian Humane Society have lately had under their consideration the subject of Life-saving Apparatus to be used at sea, and the very inadequate law at present in force relating to shipowners providing the same.

2. It is hoped that although the Conference is to be held for a special purpose, yet the great importance of this subject may have sufficient weight with yourself and colleagues, so that consideration may be given to it, with a view to the different Governments in Australia and New Zealand introducing an Act in their respective Legislatures that shall be uniform in its purpose, and by which ship-owners and others may be compelled to provide the most efficient and approved life-saving appliances on board all vessels registered in Australasia and New Zealand.

3. The Directors being sensible of the unsatisfactory state of the law in Victoria relating to this subject, which only requires that a limited number of life-boats and two (2) life-buoys shall be provided, irrespective of the number of passengers or crew, have presented a petition to the Government, praying that the existing law may be amended and a more stringent and comprehensive Act introduced and passed if possible, so that all sea-going vessels may be compelled to carry a supply of life-saving apparatus, in proportion to the number of persons on board.

4. The Premier of Victoria (the Hon. Sir Jas. M'Culloch) has promised that the petition of the Directors shall have the careful consideration of the Government, with a view to legislating on this most important matter during the next session of Parliament.

5. The efforts of the Society, and any legislation arising therefrom, will but imperfectly attain the desired object, unless the whole of the Colonies unite and agree to pass an Act that shall be uniform in its provisions, and which, in the interest of humanity, is so urgently required.

6. The numerous disastrous shipwrecks, accompanied by loss of life, that have occurred in Australian waters have unfortunately "too clearly proved" how very imperfect are the arrangements made for the protection and possible preservation of human life at sea.

7. It is clearly the duty of ship-owners to take every precaution, in order that the lives of those entrusted to their care, are protected by every means that science and ingenuity can devise, and a serious responsibility must rest on those who neglect to do so.

8. The attention of the shipowners in Victoria has been directed to this most important question, and it has been suggested for their consideration that, after the successful experiments made in the English Channel in July last, for the purpose of testing various inventions of life-saving appliances, it is advisable that every steamer and other vessel (especially those carrying passengers) should be provided with a sufficient number of cork life-jackets, to permit the use of one by every person on board in case of accident.

9. It is gratifying to mention that Capt. Wm. Howard Smith, steamship proprietor of this city, has adopted the suggestions of the Directors.

10. In suggesting the use of the life-jacket, the directors are impressed with the fact that it can be hung in every cabin, can be easily adjusted, and ready for use on every emergency.

11. The "Merchant Shipping Acts Amendment Act," passed during the last session of the Imperial Parliament, contains several provisions which might be adopted with advantage by the Colonial Legislatures when dealing with the desired amendment of the existing law relating to shipping passenger accommodation, &c., &c.

12. Any amendment of the present law should be with the object of preventing the over crowding of either passengers or cargo, which not unfrequently occurs at the present time, a practice that is reprehensible in the extreme, and which cannot be too severely condemned and punished if persisted in.

13. The boat accommodation is also very imperfect, requiring stringent regulations respecting the class and capabilities of all boats carried, and the means for lowering the same.

14. As it is impossible that a more favourable opportunity can be desired for having this subject brought under the consideration of the representatives of the various Governments, I respectfully beg that an earnest attention may be given to it, and that a determined course of action may be jointly agreed upon, so that we may hope to have an uniform Act passed with the least possible delay, having for its object the better preservation of life at sea.

I have, &c.,
J. ELLIS STEWART,
Honorary Secretary, V.H.S.

Audley

Audley Coote, Esq., to The Postmaster General, Sydney.

Petty's Hotel, Sydney, 23 January, 1877.

Sir,

Re Duplicate Cable to London.

Permit me to inform you that I reached here on the 19th instant, for the purpose of laying before your Government and the Representatives of the other Australian Governments attending the Duplicate Cable Conference in this City, an offer to connect Australia with London by a complete duplicate telegraph cable and wires.

I have now the honor to submit, on behalf of the Messrs. Siemens Brothers, of London, and of the Indo-Australian Telegraph Company, the following proposals, viz. :—

1st.—By cable to be supplied from Normanton, or some other point in Queensland to be agreed upon, to Banjoewangi, for a subsidy of £40,000 a year for 20 years.

2nd.—By cable from Queensland to Singapore *via* Timor and Sourabaya, for a subsidy of £50,000.

3rd.—By cable from Queensland to False Point in India, touching at Timor, Sourabaya, Singapore, Penang, and Andaman Islands, £65,000. If allowed to go by cable from Penang to Rangoon, *via* Pak-chan River instead of False Point, £60,000.

4th.—By cable to be supplied from a point in Western Australia to be agreed upon, to Singapore, 45,000.

5th.—By cable from Western Australia to Rangoon, *via* Singapore and Penang, £55,000.

6th.—By cable from Western Australia to False Point in India, *via* Singapore, £60,000.

7th.—By cable from Western Australia to Ceylon, *via* Anjer, £60,000.

Permit me also to inform you that I have the above proposals with the subsidies and routes marked and laid down on an Admiralty Chart, which clearly shows each proposal and route; and as I have been in correspondence with all the Australian Governments on this important undertaking, I shall be glad if the Conference will grant me an interview, and so enable me to explain or answer any questions the delegates may think proper to ask.

In conclusion, permit me to add, that in all the proposals I have had the honor of submitting, a complete duplicate system to London is guaranteed.

I have, &c.,

AUDLEY COOTE.

No. 5.

Audley Coote, Esq., to the Postmaster General, Sydney.

Re Duplicate Cable to London.

Sir,

Petty's Hotel, Sydney, 25 January, 1877.

Permit me to confirm my letter to you of the 23rd instant, and allow me to add thereto, and I shall be glad if you will read therewith, in explanation to a point that has been named in the negotiations by the competing Company, viz. :—

“That in the event of a war in Europe the lines of the Company I represent might become interrupted.”

In answer to this, permit me to say that our lines do not pass through Turkey, but traverse far to the north of any likely outbreak of war; and you will please note by the maps that where interruptions might take place, cables duplicating these wires have been laid all through the Persian Gulf, and during the Franco-Prussian war these lines were not interrupted for a single day, and therefore not likely to be interfered with now, making my principals to hope that this is one of the strongest points in their favour. “On the other hand” the competing Company who have raised this point would most assuredly have its cables cut directly war was declared, which could not be repaired for months, and then only to be cut again, which, in my humble opinion, will make it impossible to keep up communication without a complete duplicate line.

I have, &c.,

AUDLEY COOTE.

No. 6.

Messrs. Knevett and Taylor to President of Conference.

Eastern Extension Australasia and China Telegraph Company (Limited),

Sydney, 26 January, 1877.

Sir,

We have the honor most respectfully to state, that the Chairman of this Company has desired us to place ourselves at the disposal of the Australasian Government Delegates in Conference assembled in Sydney.

We have been directed to supply them with any information in our power that may assist them in deciding upon the question of the Duplication of International Cables.

In pursuance thereof we shall have great pleasure in waiting upon the Honorable Delegates; and in the event of any further information being required, we shall be happy to obtain it direct and express from London.

We have, &c.,

SAMUEL KNEVETT,

Agent to the Company.

W. GRIGOR TAYLOR,

Superintendent and Electrician, New Zealand Cable.

CABLE CONFERENCE.

[Laid before the Conference.]

STATEMENT showing the several proposals and suggestions in regard to the Duplicate Cable to connect Europe with the Australasian Colonies.

By whom proposed or suggested.	Route.	Estimated Length.	Estimated Amount of Subsidy per annum.	Remarks.
Sir Julius Vogel.....	<i>Via</i> India and Suez	Miles.	Route would not be through any Foreign country—See memo. of 4th April—fo. 1.
Colonial Secretary, New South Wales	Port Darwin, Malacca, and Sumatra.	See Colonial Secretary's letter of 18th May, 1876—fos. 3 and 4.
	Port Darwin, Copang, Java, &c.	See Colonial Secretary's letter of 18th May, 1876—fos. 3 and 4. Estimated cost £750,000.
Mr. S. W. M'Gowan	Point de Galle and Western Australia.	See memo of 26th May, 1876,—fos. 4 and 5.
Captain Coote	Normantown, Timor, Batavia, India.	£40,000	See letter of 6th June—fo. 6, and letter of 19th June—fos. 6, 7, and 8. Will also reduce rates to £3 per message, and 6s. per word over ten words. In further letter of 18th July—See fos. 8 and 9. Geraldton is suggested as starting point in Western Australia instead of Exmouth Gulf.
	Normantown, Timor, Sourabaya, India.	£55,000	
	Normantown, Penang, Port Blair, India.	£65,000	
	Exmouth Gulf, Western Australia, Banjoewangie, Batavia, India.	£30,000	
	Exmouth Gulf to Anger and India.	£35,000	
	Perth to Ceylon	£55,000	
Eastern Extension Company.....	Establishment of Line between Rangoon and Penang.	See letter and enclosures forwarded with dispatch from Secretary of State, dated 2nd June—fos. 12, 13, 14, and 15.
	Singapore to Australia	6 per cent. on outlay, and 5 per cent. as a reserve fund.	See papers accompanying dispatch from Secretary of State of 7th July—fos. 15, 16, and 17.

CABLE CONFERENCE.

[Laid before the Conference.]

PROPOSED ADDITIONAL TELEGRAPHIC COMMUNICATION BETWEEN ENGLAND AND AUSTRALIA.

The Eastern Extension Australasia and China Telegraph Company (Limited),
66, Old Broad-street, London, E.C.

3 October, 1876.

A CORRESPONDENCE that has taken place between the different Australasian Colonies on the subject of additional Cable Telegraphic Communication having lately been officially published by the Government of South Australia, and the name of this Company having been prominently mentioned as the most fitting body to carry out the views therein expressed, the Directors have had the matter under their most serious consideration, and they offer the following proposals as the result of their deliberations:—

The present amount of traffic and the income derivable from it would not justify this Company in undertaking this large extension, which involves a very considerable outlay of money, without assistance on the part of the Colonies. The number of messages between Australia and all parts of the world during the year 1875 was 11,075, of twenty words each, averaging thirty-two messages daily, the transmission of which does not afford occupation for the present cable for more than two hours a day. There has been no marked growth in the traffic since the opening of the line in 1872; the number of messages in 1873 being 11,047, and in 1874, 11,513, so that there would appear to be no great hope of any large extension in the future. During the year 1875 the income derived by the Company from Australian messages amounted to £62,172, but when from this is deducted the cost of working and of the maintenance and repair of the cable, it will be seen that a very small return remains on the capital of £600,000 which was originally invested in the scheme.

The duplication, as is above shown, not being necessary on account of the traffic, it is evident that if carried out it will be entirely in the interests of the Colonies, as an insurance against interruptions to which submarine cables are from time to time liable. Under these circumstances, it is but right that the Governments should bear the expense involved.

In order to lay down this cable it will be necessary that the money be raised by the Company on the security of its property in the public market. When laying down the New Zealand cable, the Company had to raise money at the rate of 6 per cent., nor does it see any reason for supposing that it will be able to obtain the large sum requisite for this scheme on more favourable terms. The Governments of Australia, however, might, by assisting the Company with a guarantee for the raising of this money, enable them to do so at a more favourable rate, in which case, of course, this advantage would be credited to those Governments. The Company would, therefore, require the Governments to subsidise them to the amount of the interest that would be payable on the capital obtained; and moreover, as cables are of a perishable nature, and it is necessary to renew them from time to time, it becomes imperative, in order to secure permanency of communication, that a reserve fund should be laid by annually, which by its accumulation would enable a new cable to be put down after a certain period. Experience does not exist as to the actual life of a cable, and indeed it must vary according to the surrounding circumstances; but taking into consideration the warm shallow seas in which the greater part of this cable is to be laid, teeming as they do with animal life, which has hitherto proved very destructive to the cables already submerged, it would not be fair in the present instance to estimate it at too long duration.

There will doubtless be other Companies offering to provide a new cable; but this Company cannot see how, in the face of the present traffic, an independent Company could exist. Contractors for their own personal gain may endeavour to get up an opposition cable, but it would only be at a loss to the shareholders who might take the property off their hands. The result, therefore, of another and second independent line would be that there would be two struggling Companies, each trying to procure a livelihood from an insufficient traffic, which would prove so unremunerative that in case of accident to either of them it would become a question with the shareholders whether it would be worth their while to repair the line, by further outlay. The consequence would be that the Colonies would be again reduced to a single line, and the object of the attempted duplication would be defeated.

The only hope of duplication is in the present Company, which already possesses one line, and which, with a subsidy and the amount of its present traffic, would be in a position to maintain the two lines in fair and efficient order.

It may also be noted that the duplication now under consideration extends only as far as Singapore, so that any new Company that might undertake it would have to continue the extension to India, in which case the expense would be so great that any subsidy, unless very large, would be inadequate. This Company however, already possesses one line between Singapore and India, and has entered into a contract for a second, which will be laid down by the end of the present year. The Colonies, therefore, would be in possession of a duplicate line the whole way between India and Australia, should they complete negotiations with this Company.

With regard to the reduction of the tariff which is also mooted, this question is entirely separate from the foregoing.

The present cable derives an income of £62,172 per annum, which, as has already been observed, is very inadequate for the service performed and the risky nature of the property. Should the Colonies require any reduction of the present tariff the Company will be happy to meet their views, but they cannot assent to any proposal that would diminish their present income. The negotiations, therefore, will have to be based upon a calculation which would make up to the Company the sum that they would lose by the reduction of the tariff that might be agreed upon.

While

While on this subject it may, however, be worth observation that the cry against the present tariff is not altogether just. The telegraph is employed almost exclusively for commercial purposes, and every mercantile house possesses a code of its own, which by the use of one word conveys the meaning of a sentence. The Company charges for this one word only; but if the sender of the message were to divide the cost of this word over the words whose meaning it secretly conveys, it would be found that the expense is not so very great. Again, admitting that a reduction may be feasible to the extent of one-half of the present rate, it would still be found that the tariff would be so high that no very great extension of traffic would follow, certainly not in proportion to the ratio of decrease of cost, and the result would consequently be a loss to the Company. At the recent Convention at St. Petersburg it was the unanimous opinion of all Submarine Companies that the expansion of communication was very disappointing, and that at the existing rates the business was not remunerative.

It appears to the Company that the shortest route for the new cable would be the best, as requiring the least expenditure of capital, and therefore the most advantageous to the Colonies.

There are two routes which in this view suggest themselves—the one going from Port Darwin and following the line of the present cable to Banjoewangie, and the other starting from North-west Cape, in Western Australia, and going to the same point. Whichever of these schemes may be adopted, the Company would propose to carry on the communication to Singapore by a cable laid direct between there and Banjoewangie, in place of taking the messages over the lines of the Java Government.

In case of the cable from Port Darwin to Singapore touching at Banjoewangie, the distance would be 2,151 miles, and its cost £540,000; in case of the cable going from North-west Cape, also touching at Banjoewangie, the distance would be 1,973 miles, costing about £500,000.

The Company would require a subsidy of 6 per cent. on these sums, according to whichever route may be adopted. This amount is necessary in order to pay the interest on the capital that would have to be raised in the open market. In addition to this, the Company would require a sum of 3 per cent. to be laid by as a reserve to meet any repairs that might be necessary to the cable, and also to provide a sum for replacing it as it may become worn out. This sum would have to be guaranteed for a term of twenty-two years, in which time it is calculated that if 3 per cent. on any sum is laid by annually and invested at 4 per cent., the original capital will be reproduced. The sums, therefore, required would be, if the cable went from Port Darwin, £48,600, or, if from North-west Cape, £45,000 per annum.

JOHN PENDER, Chairman,
Eastern Extension Australasia and China
Telegraph Company.

CABLE CONFERENCE.

[*Laid before the Conference by the Chairman.*]

Telegram from John Pender, Esq., M.P., on the subject of Duplication of Telegraph Cables.

PRESIDENT Telegraphic Conference, Sydney. The Conference being about to meet, we have instructed our agents, Messrs. Taylor and Knevet, to place themselves at your disposal, and in the event of you wishing to communicate direct with Company our telegraphic system is at your service free of charge. We shall be happy to telegraph you every information you may desire, being anxious to meet wishes and give every facility for carrying out object of Conference. With respect to route for duplicate cable, we find that from North-west Cape to Galle full of danger, repairs in deep water almost impossible on account of prevailing trade-winds.

CABLE CONFERENCE.

[*Laid before the Conference by the Honorable R. Ramsay.*]

Respecting delays in the transmission of Cable Telegrams.
Absence of official information as to interruption on Lines.
Mutilation of Messages.

Memorandum for Hugh George, Esq., General Manager.

"THE ARGUS."

As a conference of representatives from the several Colonies is about to assemble in Sydney for the discussion of Telegraph Cable matters, I accept this as a favourable opportunity of bringing under your notice the various complaints which have from time to time arisen, and continue to arise, in connection with the cable messages received by "*The Argus*" on behalf of the Associated Press. These complaints are principally delays in transmission, the absence of official information as to interruptions on the lines and the mutilation of messages; and with these I propose to deal singly.

"*The Argus*" is the only newspaper receiving press telegrams of public news through the cable, and, as representing the Associated Press, all such messages addressed to "*The Argus*" are distributed, over the whole press in Victoria, New South Wales, South Australia, Queensland, Tasmania, and New Zealand.

DELAYS IN TRANSMISSION.

From some cause, at present not sufficiently traceable, "*The Argus*" messages from Singapore and London have not latterly been transmitted over the lines with that despatch formerly employed, and the consequence is that the messages bearing early dates at either or both of these points of departure seldom reach their destination until a very late hour of the night, which apart from being highly inconvenient causes the loss of valuable news to a large section of the country press in all the Colonies. Not unfrequently we obtain advice of a batch of cable messages "coming," and often have to wait an hour or even two, before they actually arrive. In such case the delay must rest with the Telegraph Department of South Australia.

NOTICE

NOTICE OF INTERRUPTIONS.

We have very frequently had to complain of the absence of all information in regard to interruptions, whether on the cable or land line; and it has very often happened that until the repairs are effected no official information has been given that any interruption has taken place. A number of country stations are nightly kept on hand, in anticipation of cable news, and cannot be released from duty until some notification is received from Adelaide, and therefore early intimation of interruptions on the lines would save much loss of time, trouble, and expense. To the reading public, too, who follow the progress of events in Europe from day to day, some explanation should be afforded for the non-appearance of cable intelligence. If the general rule was followed to give priority to press messages after those of the Government, much inconvenience, I think, would be obviated, and much loss of time saved, as at present, hours are frequently wasted to no purpose. Mr. Todd, in a letter under date 10th January, 1875, and addressed to you, says, "This office (South Australia) shall be advised if there is no message for your newspaper, which advice will be at once repeated to the Melbourne office." This, I regret to say, has not been acted upon.

THE MUTILATION OF MESSAGES.

The messages addressed to the *Argus* are seldom, if ever, correctly interpreted, and the wording is so terribly mutilated in the course of transmission as to render their deciphering an operation of the utmost difficulty. Thus, it often happens that we find different interpretations of the same messages given in all the Colonies, owing, in a great measure, to so much being left to mere guess work. This mutilation is said to have its origin in Java, where the messages pass through the hands of Dutch operators, and this statement is to a great extent confirmed from the fact that nearly all the "repeats of corrections" come from Batavia. The majority of our messages containing general news are sent from Singapore, and it can scarcely be credited that the telegrams could be received in Java from Singapore through only a short line of cable in such a state as we invariably receive them. Although there is some slight difference between the alphabets adopted on the cable and land lines, the errors that would be thereby caused are so simple and few that they could, as a rule, be easily detected. If each newspaper had to find its own interpretation of the originals the results would be simply absurd. The effect of these mutilations is obvious, and as an illustration I append a few specimens of some of the messages received only during the last month, and the sample affords a very fair specimen of the bulk:—

"Singapore, (no date.)

"Depetris declared Italy cannot abandon Treaty Paris. All essays approval, all refrentum. Gratnffs proposal despoleres approving their decisions. Kabinck defered resolution occupation Bulgaria pending reference Queen. Propose 6,000 Belgians occupy. Disraelig Fortress Belgrade fired Australian monitor."

"Singapore, 15th Dec.

"French Ministry remodelled. Simon, Premier. Interior, Martha, Justice. Others remain. This serimous conflict M'Mahon left indeed."

"Singapore, 6th December.

"Kistmaryk Reichstach Russia seekn not great conquests, asks Ris only cooperan conference amelooran Christian's triple alliance subsists, Germany's friendship, England equally traditional, believed difference England and Russia be arranged, Germany's task medcate Powers lokalize war, if efforts fudle, cannot conjecture future."

In other messages "special" was given in place of "speech," at the commencement of a message; "Pow" for population, "collander" for commander, "mountin" for maintain, "revny" for recently; and other errors too numerous to mention.

But such extraordinary contortions often serve to destroy the whole meaning of a sentence. For instance, the word "Costi," in a message relating to the Eastern Question, was quite unintelligible, and had to be omitted. These instances could be multiplied to any extent, and are sometimes most aggravating as well as perplexing. The word "Powers" for "Porte" entirely subverted the whole meaning of a message.

January 15, 1877.

EUGENE C. AMSWICK, R.A.P.

CABLE CONFERENCE.

[*Laid before the Conference by the Chairman.*]*Translation.*

Mr. E. Nutt to The Colonial Secretary.

No. 14.

Noumea, 23 January, 1877.

Sir,

I have the honor to inform you that, from information which has lately reached me, and which appears to have a certain consistency, it would seem that the Austral-American Company which at the present time manages the Sydney, Auckland, and San Francisco line is about to annul its contract, and that communication by the large packet-boats and Fiji will also be suppressed.

Should this information be correct, I shall be very much obliged to you if you will be kind enough to let me know whether a new enterprise going to San Francisco would be disposed to call at Noumea, and in that case to tell me what would be the amount of the subsidy which would be required by the Government for serving our Colony.

I should then have to consider what propositions I could make to the Governor of New Caledonia, in relation to our financial resources.

Accept, sir, the assurance of my high consideration.

ED. NUTT,
Director of the Interior.

CABLE CONFERENCE.

[*Laid before the Conference by the Chairman.*]

Eldred & Co. (on behalf of Netherlands-India Steam Navigation Co.) to The Colonial Secretary.

Offering to run Steamer with Despatches between Banjoewangie and Port Darwin in the event of another break in Cable.

Sir,

Sydney, 29 January, 1877.

We have the honor to inform you, that we are authorized by the Netherlands-India Steam Navigation Company to contract on their behalf with your Government to run one of their fine steamers with telegraphic despatches between Banjoewangie and Port Darwin, in the event of the service again becoming necessary by another break in the Cable.

The Company will undertake to have at Banjoewangie within eight days, or as much sooner after the breakage is known as possible, a steamer to carry telegraphic messages to Port Darwin and back, and keep the vessel (or her substitute) running at a minimum speed of 8 knots between the two Ports, until the cable be repaired, for the sum of £1,200 for each voyage from Banjoewangie to Port Darwin and back; together with exemption from all Port charges at the latter place.

The Company possesses a large fleet of fine steamers, and any contract entered into would be faithfully carried out.

We have, &c.,
ELDRED & CO.

CABLE CONFERENCE.

[Laid before Conference.]

Agreement relating to Submarine Cable between New Zealand and Australia, &c.

ARTICLES OF AGREEMENT entered into this twenty-fourth day of June one thousand eight hundred and seventy-five between His Excellency the Most Honorable George Augustus Constantine Marquis of Normanby Earl of Mulgrave Viscount Normanby and Baron Mulgrave of Mulgrave in the County of York and in the Peerage of the United Kingdom and Baron Mulgrave of New Ross in the County of Wexford in the Peerage of Ireland a Member of Her Majesty's Most Honorable Privy Council and Knight Commander of the most distinguished Order of St. Michael and St. George the Governor and Commander-in-Chief in and over Her Majesty's Colony of New Zealand and its dependencies and Vice-Admiral of the same for and on behalf of the said Colony of the first part His Excellency Sir Hercules Robinson a Knight Commander of the most distinguished Order of St. Michael and St. George the Governor and Commander-in-Chief in and over Her Majesty's Colony of New South Wales and its dependencies and Vice-Admiral of the same for and on behalf of the said Colony of the second part and The Eastern Extension Australasia and China Telegraph Company Limited of the third part Witness that for the considerations herein appearing the said George Augustus Constantine Marquis of Normanby for himself separately and his successors in office Governors and Commanders-in-Chief for the time being in and over the said Colony of New Zealand and its dependencies and not for the said Sir Hercules Robinson and his successors in office. Doth hereby for and on behalf of the same Colony so far as the agreements hereinafter contained are to be observed and performed on the part of the Governor or the Government of New Zealand And the said Sir Hercules Robinson for himself separately and his successors in office Governors and Commanders-in-Chief for the time being in and over the said Colony of New South Wales and not for the said George Augustus Constantine Marquis of Normanby and his successors in office Doth hereby for and on behalf of the same Colony so far as the agreements hereinafter contained are to be observed and performed on the part of the Governor or the Government of New South Wales agree with the said Company their successors and assigns And the said Company for themselves their successors and assigns do hereby so far as the agreements hereinafter contained are to be observed and performed on their part agree with the Governor or the Government of New Zealand and his successors and the Governor or the Government of New South Wales and his successors and also as a separate agreement with each of the said Governors and his successors for and on behalf of the said respective Colonies separately in manner following that is to say

Testatum.

Interpretation.

1. In the construction of these presents the following words and expressions shall mean and include (unless such meaning shall be inconsistent with the context) as follows "The Governor of New Zealand" means the Governor for the time being of that Colony and includes also the Government for the time being of that Colony "The Governor of New South Wales" means the Governor for the time being of that Colony and includes also the Government for the time being of that Colony "The Governors" mean the Governor of New Zealand and the Governor of New South Wales "The Company" means the said Company of the third part their successors and assigns "The said cable" means the cable hereinafter contracted to be laid and any cable or cables which may be laid in substitution thereof or in addition thereto And whenever it is hereinafter agreed that the Governors shall do any act the meaning is hereby declared to be that the Governor of New Zealand shall be required to do such act so far as such act ought to be done in or in respect of or in relation to New Zealand and the Governor of New South Wales shall be required to do such act so far as such act ought to be done in or in respect of or in relation to New South Wales and that the Governor of New Zealand shall not be liable for the not doing of any act which ought to be done in or in respect of or in relation to New South Wales or by the Governor of New South Wales and that the Governor of New South Wales shall not be liable for the not doing of any act which ought to be done in or in respect of or in relation to New Zealand or by the Governor of New Zealand but that each Governor shall be liable only for his own default and not for the default of the other.

Governors to authorize submarine cable to be laid between New Zealand and New South Wales.

Company within fourteen days to obtain contract for construction of cable.

2. The Governors shall permit the Company to lay a submarine telegraph cable between New Zealand and Sydney in the said Colony of New South Wales the terminal point in New Zealand to be on the coast of Blind Bay or Golden Bay and the terminal point at Sydney to be the telegraph station there.

3. The Company shall within fourteen days after the day of the date of these presents or within such further time as shall be approved by the Governors obtain a *bonâ fide* contract to be entered into with them by some competent and responsible person or persons or Company or Companies to make and construct a suitable submarine cable to be laid between the said terminal points according to such a specification pattern or design as shall have been or shall be approved in writing on behalf of the Governors or one of them and shall as soon as shall be practicable produce the said contract to the solicitors in England of the Governors for inspection.

4. On or before the thirtieth day of April one thousand eight hundred and seventy-six the Company shall properly lay the said cable between the said terminal points and erect and provide the stations operators clerks apparatus instruments appliances and materials necessary for the proper and continuous use and effective working of the said cable and shall open and use the said cable for the transmission of messages through the same but if the laying the said cable shall be delayed by causes over which the Company shall have no control the time within which the same is to be laid as aforesaid shall be extended to such further time as the Governors shall in their absolute discretion determine to be just and reasonable.

Company to lay cable with all necessary appliances and to open same for public use before 30th April 1876 or extended time.

5. From time to time and at all times after the said cable shall have been opened for the transmission of messages and while any subsidies or subsidy shall be payable by the said Governments or either of them the Company shall keep open and use the same for such purpose and keep and maintain the same in good working order and condition and properly supplied with all such operators clerks apparatus instruments appliances and materials as shall be requisite or necessary for the proper and regular use and working of the said cable and shall for the purposes in this clause mentioned provide and keep properly equipped and ready for use a suitable steam-vessel which when not in use for the same purposes shall be kept stationed at some port in New Zealand or at some port in Australia not situated nearer to the equator than the Port of Brisbane but if such vessel shall not be in use or required for such purposes the Company shall be at liberty to send the same to repair their Tasmanian cable if necessary.

Company to keep cable &c. in good repair.

And to provide and keep a vessel for such purpose

6. The Governors respectively shall afford to the Company all proper and reasonable facilities to enable the Company to lay the said cable and to keep the same in repair and to acquire any land necessary for their terminal stations in the respective Colonies and in the event of the Governors having at their respective disposal and in possession lands not being land in a town suitable for such purpose the Governors respectively shall and will make a free grant thereof to the Company.

Governors to give facilities for laying cable and land for terminal stations.

7. Before the time hereinbefore appointed for opening the said cable the Governor of New Zealand shall cause to be constructed such land line or lines of telegraph wires as it shall be necessary to construct to enable messages to be transmitted from the said terminal station of the said cable in New Zealand and over the existing system of telegraph wires in that Colony and the Governor of New South Wales shall afford to the Company the necessary facilities for enabling the Company to carry their wires into the Telegraph Station at Sydney and the Governors respectively shall provide such operators clerks apparatus instruments appliances and materials as shall be requisite or necessary for enabling messages which are to be or have been transmitted through the said cable to be transmitted over the telegraph systems of New Zealand and New South Wales respectively.

Governor of New Zealand to construct necessary land lines &c. and Governor of New South Wales to permit line to be carried into Sydney Office.

8. With a view to the more speedy transfer and transmission of messages the Governors respectively shall until the said subsidy shall cease to be payable and for a period of ten years afterwards and for so long thereafter as the tariff shall not be in excess of the charges mentioned in clause No. 11 of these presents give to the Company accommodation in their Telegraph Stations respectively at the terminal points of the said cable which the Company shall use for the transmission of messages through the said cable.

Governors to give to Company the use of a room in the Government Offices at the terminal points.

9. The Governors respectively shall until the said subsidy shall cease to be payable and for a period of ten years afterwards cause the said cable and the telegraph instruments of the Company and all new screws shafts boilers piston-rods or tanks which the Company may send out to the said Colonies respectively for use in the said steam-vessel to be relieved from Custom duties and the said vessel to be exempt from all port dues in the Colonies respectively when engaged solely in carrying out the purposes mentioned in clause No. 5 of these presents and such vessel shall always be on a not less favourable footing than other vessels.

Governors to cause telegraph instruments &c. to be relieved from Custom duties and vessel to be exempt from port dues.

10. The Company shall at all times hereafter give priority in transmission through the said cable to all messages sent by Her Majesty the Queen or the Governors or the Governors of any Australian Colony respectively or any department or official (as such) of the Government of Her Majesty or of the Colony of New Zealand or of any Australian Colony respectively.

Government messages to have priority.

11. The Company shall not during the continuance of the subsidies hereinafter firstly mentioned respectively make any charge for the transmission of messages through the said cable exceeding seven shillings and sixpence for a message not exceeding ten words and ninepence for every additional word (the names and addresses of the sender and addressee being counted as part of the message) and shall reduce the said charge to a charge not exceeding five shillings for every message not exceeding ten words and sixpence for every additional word in either of the following cases that is to say in case during any period of six calendar months the average number of messages delivered or forwarded for transmission through the said cable shall have amounted to two hundred per day excluding Sundays in which case the said reduction shall commence from and after the expiration of such six calendar months but if the average number of messages after having amounted to such an average of two hundred per day as aforesaid shall again fall for a period of six calendar months below such average then the said reduction shall cease until the said average shall be again reached when the said reduction shall again take place and so on from time to time Or in case the Governors or either of them shall at any time or from time to time deliver any notices or notice whereby they or he shall agree to make payment for the period mentioned in such notices or notice to the Company for the number by which the messages actually delivered or forwarded for transmission through the said cable during such period shall fall short of an average number of two hundred messages per day excluding Sundays during the period mentioned in such notices or notice the Company being nevertheless entitled to the full benefit of the moneys received for transmission of messages through the said cable if the average number of messages per day excluding Sundays shall during such period exceed two hundred.

Tariff.

12. The Governors respectively shall during the continuance of the said subsidies respectively cause all messages for transmission between New South Wales and New Zealand and vice versa to be sent through the said cable unless otherwise directed and all messages for transmission beyond the said Colonies not otherwise directed to be sent by the sender to be transmitted over the telegraph system of the Company so far as the same can be used and if the same be in good working order and shall at all times hereafter afford to the Company similar advantages to those (if any) afforded to any other Company of allowing the route of a message to be indicated therein by the words "via Darwin" or like words without any charge for the same.

Undirected messages to be sent over the Company's system.

Governors not to make terminal charge or charges beyond ordinary rates

13. The Governors respectively shall not make any terminal charge or make any charge for any message transmitted over the lines of telegraph belonging to the said Colonies respectively to or from the said cable in excess of the lowest ordinary rates according to the character of the message so long as the said subsidies respectively shall continue to be payable nor after the said subsidies respectively shall have ceased to be payable so long as the Company shall not increase their rates beyond the rates chargeable as hereinbefore mentioned. And so long as the said subsidies respectively shall continue to be payable the Governor of New South Wales shall cause New Zealand messages to or from Darwin to be transmitted from or to Sydney at rates not exceeding the rates charged for messages between Melbourne and Darwin.

Governors to pay subsidies of £7,500 a year.

14. If the Company shall perform their undertaking contained in the 3rd clause of these presents and if the said cable shall be laid and completed and opened for use before the 30th day of April 1876 or within such extended time as aforesaid the Governor of New Zealand shall pay to the Company a subsidy of Five thousand pounds and the Governor of New South Wales shall pay to the Company a subsidy of Two thousand five hundred pounds respectively during a period of ten years to be computed from the day when the said cable shall be completed and shall be actually opened and used for the transmission of messages such subsidies to be respectively payable by equal quarterly payments at the Treasuries of the said Colonies respectively the first quarterly payment whereof respectively shall be made at the expiration of three calendar months after the day from which the said subsidies respectively shall have commenced to be payable the said subsidies respectively nevertheless to be subject to reduction or determination as hereinafter mentioned.

Subsidies to be free of taxes.

15. The Governors respectively shall from time to time pay to the Company in addition to the said subsidies so long as the same shall be payable respectively such sums as will be sufficient to recoup to the Company any taxes parliamentary or otherwise which they shall pay in the said Colonies respectively.

In what case subsidies may be reduced.

16. Provided always that if at any time or from time to time the said cable shall not be in good working order and condition and open for use any day or number of days in excess of an aggregate period of ninety days in any one year computed from the day on which the said subsidies respectively shall commence to be payable as aforesaid the Governors respectively shall and may from time to time deduct from any moneys payable by the Governors respectively to the Company a proportionate part of the said subsidies respectively for and in respect of each and every day so in excess of the said aggregate period of ninety days during which the said cable shall not be in good working order and condition and open for use until the said cable shall be in good working order and condition and open for use or until the said subsidies respectively shall be determined under the next clause of these presents it being nevertheless agreed that if the Company shall be able at any time or from time to time to satisfy the Governors that the repair of the said cable could not have been reasonably effected and completed within the said period of ninety days on account of causes over which the Company shall have had no control the said aggregate of ninety days shall on the occasion in question be extended to such an aggregate period as the Governors shall determine to be just and reasonable. Provided nevertheless that any such extension of time shall not entitle the Company to payment of any subsidy in excess of the said period of ninety days if in consequence of the said cable continuing to be not in good working order and condition and open for use the said subsidies shall cease to be payable as in the next clause of these presents mentioned.

In what case subsidies may be determined.

17. Provided also that if at any time or times the said cable shall not be in good working order and condition and open for use for and during any continuous period of one hundred and eighty-three days or any such extended period as hereinafter mentioned as the case may be it shall be lawful for each or either of the Governors at any time thereafter by notice in writing to be delivered to the Company in London to determine and put an end to the Contract hereby made so far as regards the Colony by whose Governor the notice is given and the subsidy payable by that Colony and the provisions herein contained which are conditional on the subsistence of the Company's right to the same subsidy in which case the said subsidy shall cease to be payable it being hereby agreed and declared that if the Company can satisfy the Chief Justice of either of the said Colonies if both Governors shall so give notice or of the Colony whose Governor shall so give notice that the Company have been and are making all reasonable efforts to repair or replace the said cable without delay and he shall determine that the said period of one hundred and eighty-three days ought under the circumstances to be extended then the said period of one hundred and eighty-three days shall be extended to such a period as the said Chief Justice shall determine and if the Company can satisfy the said Chief Justice that any new cable which the Company may have obtained to replace the said cable has been lost or damaged in transit and the said Chief Justice shall determine that the said period of one hundred and eighty-three days ought in consequence to be further extended then the said period shall be further extended to such a period as the said Chief Justice shall determine. It being nevertheless expressly agreed and declared that the Company shall not be entitled to or allowed under any circumstances any extension of the said period of one hundred and eighty-three days so as to make up in the whole a period in excess of eighteen calendar months. And it being further agreed that in the event of the Contracts hereby made and the said subsidies or either of them being so determined and put an end to as aforesaid the Company shall have and retain their property in New Zealand and New South Wales respectively with all such similar rights of working and using the said cable and repairing the same as they would have had and been entitled to if the Company had laid the said cable with the approval of the Governors without any provision having been made for payment of any subsidy by the Governors or either of them to the Company and that while the Company shall duly observe and perform all the provisions and agreements herein contained on their part to be observed and performed which are not conditional on the subsistence of their right to a subsidy they shall retain all other rights hereby granted to them which are not conditional on the subsistence of their right to a subsidy.

If New Zealand and Australian Governments grant subsidies of £20,000 a year free of income tax existing tariffs to be reduced.

18. The Company shall reduce their charges for messages over their lines and cables as hereinafter mentioned if the Governors and the respective Governors for the time being of the other Australian Colonies or any of them shall enter or be ready and willing and offer to enter into an agreement or agreements with the Company for the payment to the Company in addition to any other subsidy payable under these presents of an aggregate of subsidies amounting to twenty thousand pounds per annum payable quarterly during a period of ten years at the respective Treasuries of the Colonies free of income or property tax (if any payable) in the Colonies respectively such subsidies nevertheless being subject to be reduced (*pro rata* if necessary) by one hundred pounds per annum for or in respect of every one hundred

hundred messages beyond thirty thousand messages which shall be transmitted in any year to be computed from the day from which the said subsidies shall commence to be payable and the said subsidies being also nevertheless subject to suspension or determination as hereinafter mentioned.

19. During the continuance of the subsidies in the last preceding clause mentioned the Company shall not in the event last aforesaid make any charge for the transmission of such messages as hereinafter mentioned in excess of the charges hereinafter mentioned, that is to say—For a message not exceeding ten words to or from Port Darwin from or to London sixty shillings and six shillings for each additional word the names and addresses of the sender and addressee thereof being counted as part of the message For a like message to or from Port Darwin from or to Java twenty shillings and two shillings for each additional word in addition to any terminal or transit charges of the Governments of the respective countries at which the message shall have to be delivered or through which it shall have to be transmitted For a like message to or from Port Darwin from or to Singapore India or Penang thirty shillings and three shillings for each additional word in addition to any such terminal or transit charges as aforesaid And for a like message to or from Port Darwin from or to Hong Kong sixty shillings and six shillings for each additional word in addition to any such terminal or transit charges as aforesaid And in case the rates the Company may have to pay for transmission of a message between Madras and London shall at any time or from time to time be reduced more than one shilling below the rate of one pound seven shillings including the charges made by the Indian Government then during the continuance of such reduction the rate above mentioned for a message to or from Port Darwin from or to London shall be reduced to the extent of such reduction beyond the one shilling and if at any time the rate the Company may have to pay for transmission of a message between Madras and London shall be increased beyond the present rate the Company shall be at liberty to determine and put an end to the arrangement as to reduced rates in this clause mentioned in which case the said subsidies amounting to twenty thousand pounds shall cease to be payable.

20. The Company shall in the event mentioned in clause No. 18 of these presents from time to time and at all times after the said last-mentioned subsidy shall commence to be and so long as the same shall be payable keep open and use for the transmission of messages all the lines of cable or telegraph wire belonging to or worked by them between any of the places in the last preceding clause mentioned except between Singapore and Hong Kong and shall keep and maintain the same in good working order and condition and properly supplied with all such operators clerks apparatus instruments appliances and materials as shall be requisite or necessary for the proper and regular use and working of the same.

21. Provided always that if at any time or from time to time any of the lines of cable or telegraph wire between the places in clause No. 19 of these presents mentioned except between Singapore and Hong Kong shall not be in good working order and condition and open for use so as to enable any of such messages as in the same clause mentioned to be transmitted for any day or number of days in excess of an aggregate period of thirty days in any one year computed from the day on which the said last-mentioned subsidies shall commence to be payable the Governors of the Colonies liable to pay the same or any or either of them shall and may from time to time deduct from any moneys payable by such Governors respectively to the Company a proportionate part of the subsidy payable by such Governors respectively for and in respect of each day or days so in excess of the said aggregate period of thirty days during which any of the same lines of cable or telegraph wire shall not be in good working order and condition and open for use until the said cable shall be in good working order and condition and open for use or until the said subsidy shall be determined under the next clause of these presents.

22. Provided also that if at any time or times any of the said lines of cable or telegraph wire between the places in clause No. 19 of these presents mentioned except between Singapore and Hong Kong shall not be in good working order and condition and open for use so as to enable any of such messages as in the same clause mentioned to be transmitted for and during any continuous period of one hundred and eighty-three days or any such extended period as hereinafter mentioned as the case may be it shall and may be lawful for the Governors or either of them or the Governors of the other Australian Colonies or any of them or any of such Governors at any time thereafter or from time to time by notice in writing delivered to the Company in London to determine and put an end to the agreement for the payment of the said last-mentioned subsidies in which case the same shall cease to be payable it being hereby agreed and declared that if the Company can satisfy the Governors or Governor giving the said last-mentioned notice that all reasonable efforts to repair or replace without delay the line of cable or telegraph wire which shall then be out of repair have been and are being made then the said period of one hundred and eighty-three days shall be extended to such a period as the Governors or Governor respectively giving the said last-mentioned notice shall determine it being nevertheless expressly agreed and declared that the Company shall not be entitled to or be allowed under any circumstances any extension of the said last-mentioned period so as to make up in the whole a period in excess of eighteen calendar months.

23. Any appointment approval inspection notice or act which may have to be given made or done by the Governors or either of them or by or on behalf of the Governor of any of the Australian Colonies for any of the purposes of these presents may be given made or done by any person or persons from time to time authorized by writing under hand to act on behalf of the Governor or Government or by the Colonial Treasurer or Postmaster General for the time being of the Colony in question or by any person or persons authorized for the purpose under the hand of such Colonial Treasurer or Postmaster General or by the Minister for the time being of the Colony in question having charge of telegraphs in that Colony or by any person or persons authorized for the purpose by the same Minister of New Zealand and New South Wales respectively.

24. The Company shall appoint a person in the said Colonies of New Zealand and New South Wales respectively and also a person in each of the other Australian Colonies the Governor or Governors of which shall agree to pay any subsidy to the Company upon whom any notice which may have to be given to the Company and which is hereby not expressly provided to be given to the Company in London may be served and in default of such appointment and of notice thereof being given to the Government of the Colony any such notice may be served on any operator clerk or officer of the Company in the Colony on behalf of the Governor of which the notice may have to be served and any such service as aforesaid shall be deemed to be a good service upon the Company and take effect accordingly except in cases where service on the Company in London is provided for.

Governors not to
be individually
responsible.

25. No individual personal responsibility shall be incurred by the Governors or by the Honorable Sir Julius Vogel a Knight Commander of the said Most Distinguished Order of Saint Michael and Saint George or by Sir Daniel Cooper Baronet by whom on behalf of the Governor of New Zealand and the Governor of New South Wales respectively it is intended that these presents shall be signed or by any Governor of New Zealand or of any of the Australian Colonies in respect of any of the matters aforesaid.

In testimony whereof the said Sir Julius Vogel has signed the same in the name and on behalf of the said George Augustus Constantine Marquis of Normanby and the said Sir Daniel Cooper has signed these presents in the name and on behalf of the said Sir Hercules Robinson and the Company have hereunto affixed their Common Seal.

NORMANBY,

By JULIUS VOGEL,

Postmaster General of New Zealand.

HERCULES ROBINSON,

By DANIEL COOPER.

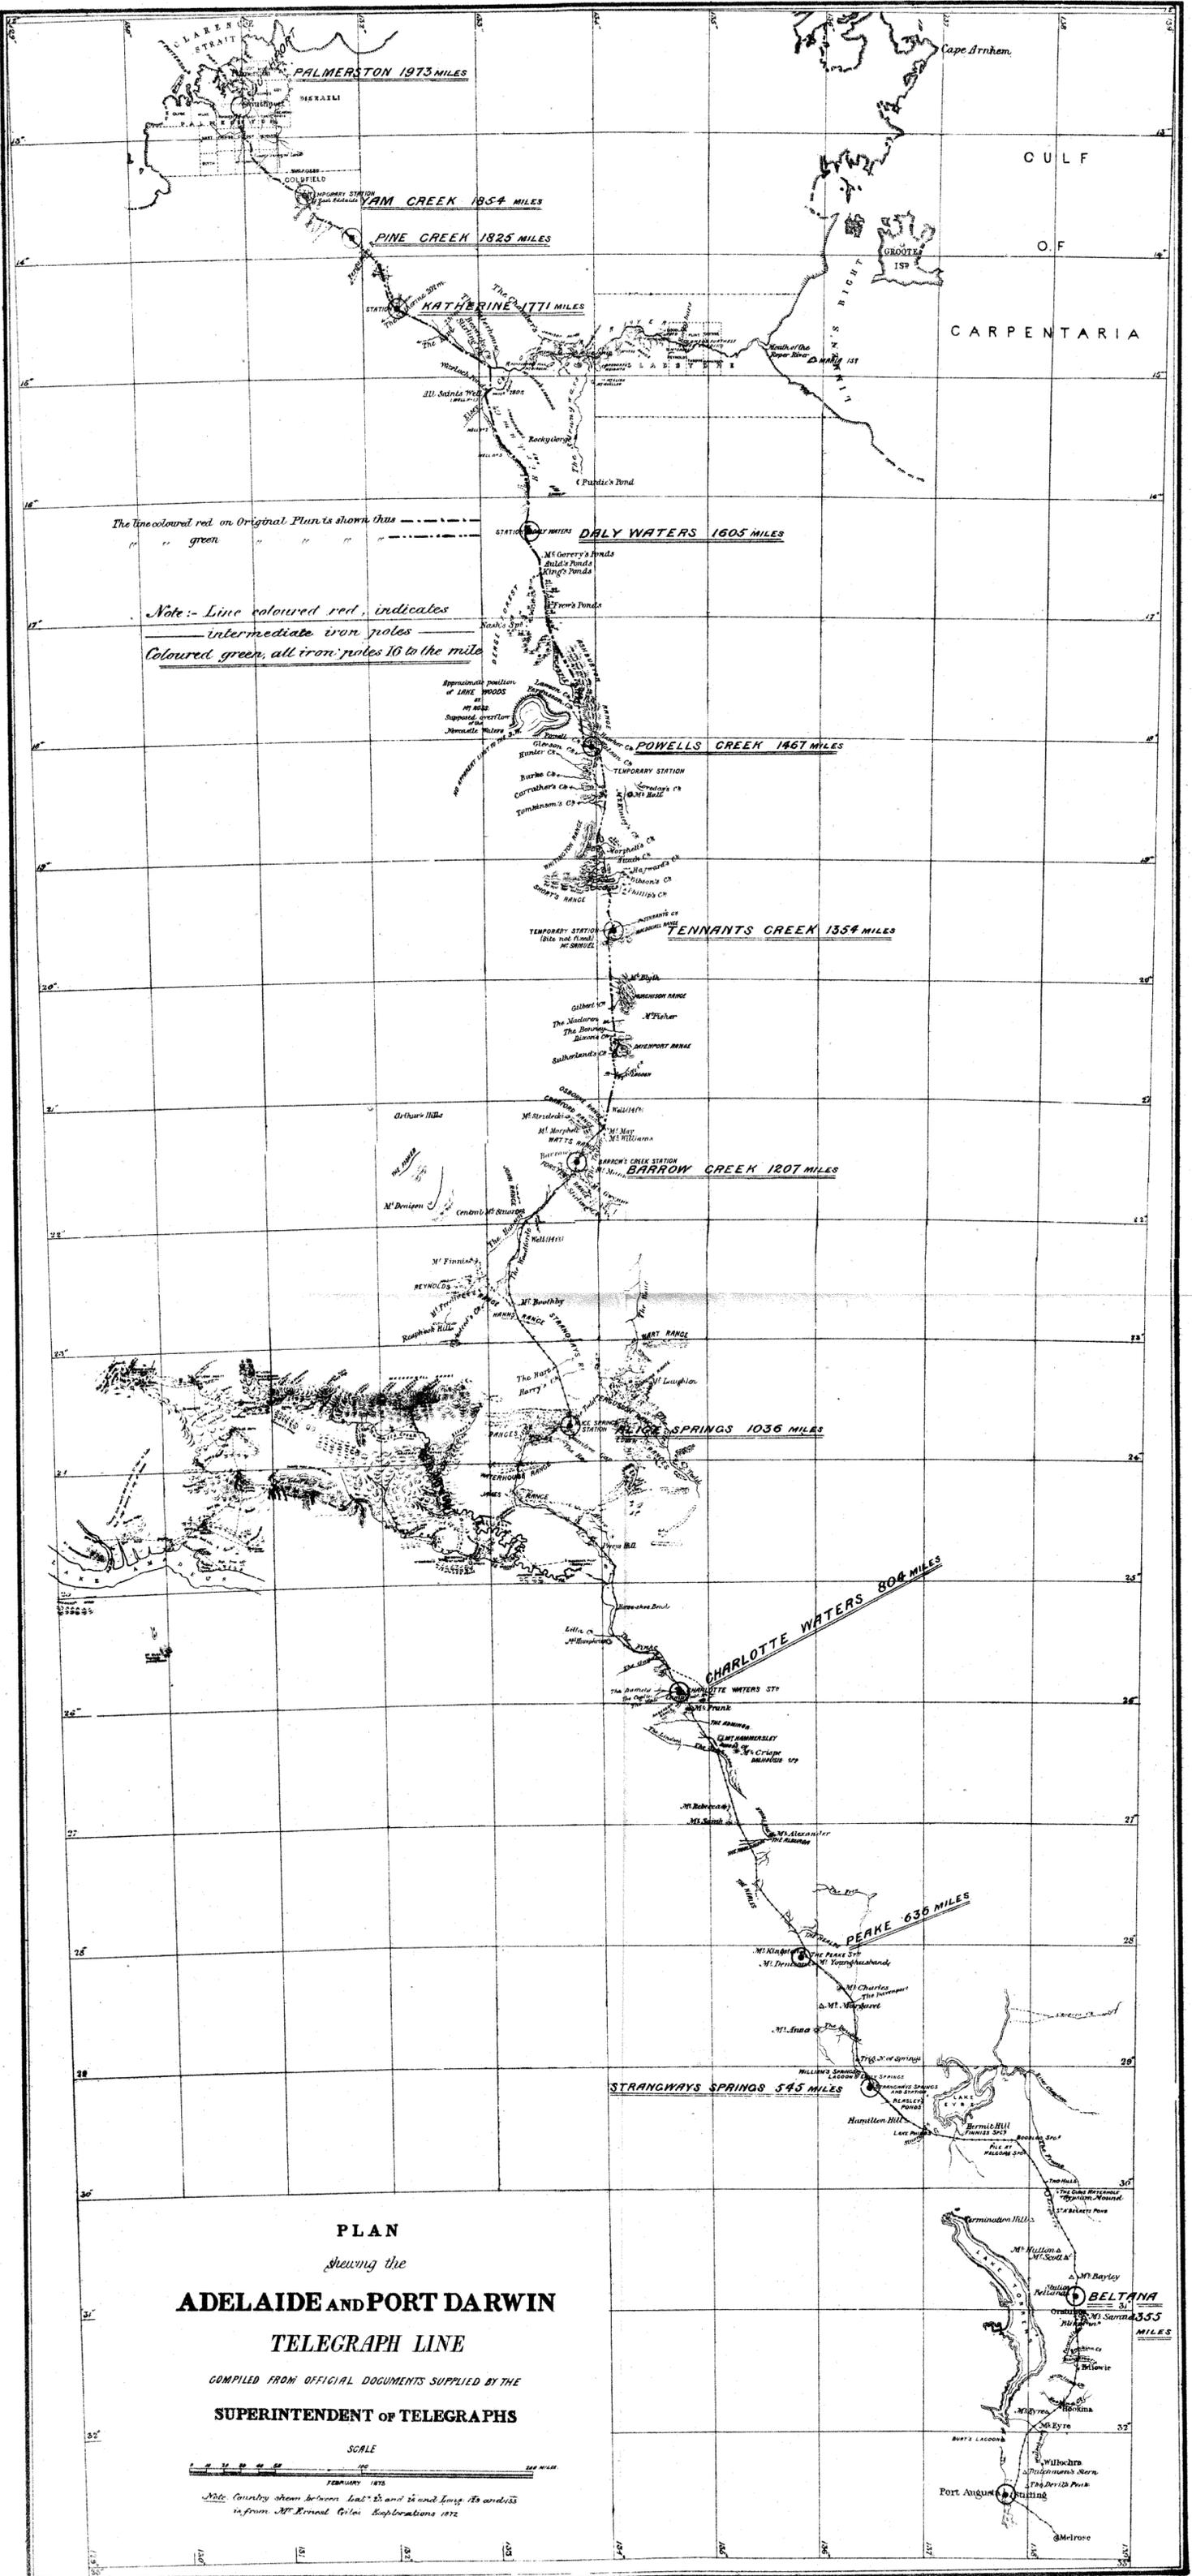

Signed by the above-named George Augustus Constantine Marquis of Normanby by the above-named Sir Julius Vogel and by the above-named Sir Hercules Robinson by Sir Daniel Cooper in the presence of—

JNO. MACKRELL,
Solicitor,

21, Cannon-street.

The Common Seal of the Eastern Extension Australasia and China Telegraph Company was affixed in the presence of—

JOHN PENDER, Director (Chairman).
GEORGE LYONS, Secretary.

CABLE CONFERENCE.

MINUTES OF EVIDENCE.

TUESDAY, 30 JANUARY, 1877.

Present:—

<i>New South Wales</i> :	THE HONORABLE JOHN ROBERTSON. THE HONORABLE ALEX. STUART. THE HONORABLE J. F. BURNS.
<i>New Zealand</i> :	THE HONORABLE G. McLEAN.
<i>Queensland</i> :	THE HONORABLE SAMUEL WALKER GRIFFITH. THE HONORABLE CHARLES STUART MEIN.
<i>South Australia</i> :	THE HONORABLE SIR HENRY AYERS, K.C.M.G. THE HONORABLE EBENEZER WARD.
<i>Tasmania</i> :	THE HONORABLE JAMES WHITE.
<i>Victoria</i> :	THE HONORABLE R. S. ANDERSON. THE HONORABLE R. RAMSAY.
<i>Western Australia</i> :	THE HONORABLE MALCOLM FRASER.

The Honorable JOHN ROBERTSON, Colonial Secretary, New South Wales, in the Chair.

Mr. William Gregor Taylor, Superintendent and Electrician in charge of New Zealand Cable, called in and examined:—

- Sir Henry Ayers.*] Will you have the goodness, Mr. Taylor, to inform the Conference what is your opinion of the relative value of a cable to be laid from Singapore to Thursday Island, near Cape York, and one from Singapore, south of the present line to a point somewhere near Port Darwin? Do you mean that it should pass through the Strait of Sunda?
- My object is to obtain your opinion of the relative value of the two routes, the one coming to Port Darwin by Banjoewangie, and the other to Thursday Island? I should say very strongly that a line coming to Port Darwin would be the most favourable; first, as being shorter, and because the line south of Singapore is now in fair order. There is a fair sea approaching Banjoewangie, and from Banjoewangie to Port Darwin the cable is in good order now. The greater portion of the first section is in deep water, and from Banjoewangie to Port Darwin the sea is well known and has been surveyed; whereas a line from Singapore south of Macassar to Thursday Island would be too long a section to be worked in one piece. The sea to the south of Borneo and Macassar has a very coralline bottom with shallow water, and would be unfavourable for a cable.
- Mr. Burns.*] What would be the difference in point of expense? I am not prepared to answer that now.
- Can you give us the difference in the matter of distance? I suppose about 800 miles.
- Sir Henry Ayers.*] Which line in your opinion would be the best as a duplicate line to Singapore, having regard both to the longevity of the cable and the cost of construction and maintenance? A line from Singapore to Banjoewangie and Port Darwin would be the best of any line that could connect these two points, for the simple reason that any other line in any other direction must be in a coralline sea with shallow water, and through seas imperfectly surveyed.
- Have you any knowledge of the sea between Banjoewangie and the North-west Cape? None whatever. There have never been any surveys there.
- Mr. Fraser.*] The distance from Nicol Bay to Banjoewangie is about 800 knots? I think it is more than that.
- Mr. Mein.*] Have you any practical knowledge of the waters you have referred to? Yes; five years ago I was electrician with the contractors, and was on board their ships while the cable was being laid, and last year I was sent in the steamer "Edinburgh" in charge of the work of repairing the cable by the Eastern Extension Company.
- And you have naturally directed your attention to that route? Yes.
- So that you are not competent to pass an opinion on the other route, not having examined it? I feel that I may form an opinion on the subject from the soundings that are given on the chart, from the surveys that have been made, and from my general knowledge of the nature of the seas among these islands. I have given my opinion from the observations I have made and from my general knowledge.
- Mr. Ramsay.*] I believe you were engaged in repairing a portion of the cable on the occasion of the last break? Yes, we were engaged in repairing it from the 1st April to the 7th August.
- From the experience you have gained during that time, from the improvements effected, and from what you have seen of its working, do you think the present cable is likely to be durable? Yes, I think it is likely to last much longer without interruption than it has hitherto done. It is less likely to be injured

Mr. W. G.
Taylor.

30 Jan., 1877.

- Mr. W. G. Taylor. injured by abrasion from the rocks, which was the cause of the break in April last, which occurred in shallow water. We have now reversed the cable and laid it in the deepest water available, and out of the reach of the coralline reefs. The present cable is a better one than the the last, it is well laid down, and we have taken various soundings which show that it is on a better bottom. I think therefore it will last certainly more than five years before it breaks from abrasion; there may be other sources of injury, but that was the cause of its breakage last time.
- 30 Jan., 1877.
13. In the event of a second cable being laid from Port Darwin, do you think a better line of route than the present could be found? I don't think it is likely that a better route could be found. The line could not vary much—it must in any case be parallel to the present line.
14. Would it not be better to keep to the north of these islands, Timor, Sumba, and Baly? I think not, from the fact that even now changes are frequently occurring among them from subterranean disturbances. Besides, the line would be longer, as it would have to wind through several groups of islands, a number of which are active volcanoes, where the water would be shallow, and there would be greater danger of injury to the cable.
15. I believe you have charge of the New Zealand cable? Yes, of the whole cable.
16. Is that the same quality of cable as that which you would undertake to lay down to Port Darwin? Yes, it is the same weight and make, and capacity of carriage.
17. How long has that cable worked? Eleven months, and it is as sound as when it was laid down, and in better electrical condition.
18. A cable has better carrying capacity in deep water, has it not? Yes.
19. Mr. Burns.] I suppose there are no means of avoiding coralline rocks in these seas? No; the best line for the cable has been selected. There is a coralline sea near the coast of Western Australia, and so little is known of it that it requires to be surveyed.
20. Mr. Anderson.] Does not the quality of the sea for laying down a cable—that is to say, the character of the bottom—improve as you go further westward? I should think it must, because the water is deeper, and there is likely to be a softer bottom.
21. Then no survey of this sea was made before you commenced to lay the Port Darwin cable? Yes; a series of observations had been made as far east as Rotti Island by the Dutch Government, and there were existing Admiralty surveys.
22. Was that done before the contract was taken to lay the cable? I think so; the observations were taken, I believe, when the line was first projected, when the several routes were discussed, but I could not be certain.
23. Mr. Ramsay.] Have you considered the route from Western Australia to the Keeling Islands and thence to Ceylon? Yes; I considered it when I read Mr. Robertson's circular letter.
24. What is your opinion of that route? I think it would be a very long and a very expensive route.
25. Mr. Fraser.] Considering that the coast line from Western Australia would be 200 miles shorter than the other, taking one at 1,099 miles and the other at 900, and taking into consideration the fact that the route starting from Shark's Bay would be in deep water almost immediately from the coast, and would be, as we have every reason to believe, free from obstructing reefs, which line do you consider would be the most economical—that from Western Australia or the line from Banjoewangie to Port Darwin; the only alternative being a line from some point on the north-west coast of Australia to Java and Batavia. Which line do you think would be the most economical in construction, the easiest to maintain in repair, and the most secure? The shortest line, as it would effect a saving of 200 miles, would be more economical, and more easily worked. The maintenance would be the same in each case, as far as the length of cable is concerned. The shortest line would also possess the greatest advantages for communication.
26. But the line from the north-west coast of Australia to Java and Batavia would possess one great advantage—it would do away with all interference from the Dutch line at Java, and there would then be two lines of cable entirely in the hands of London proprietaries: there would be that advantage. I am not aware of the exact distance from the north-west coast of Australia to Batavia; do you know? It is, I believe 1,148 miles.
27. 1,148 miles from the north-west coast of Australia to Batavia, and 1,099 miles from Port Darwin to Banjoewangie? Yes, I believe those are the distances shown on the charts.
28. Mr. Griffith.] Do you know anything of the seas extending from Coepang to the Gulf of Carpentaria and its shores? Yes, from having sailed over them, and from the charts.
29. Have they all been well sounded? Yes, well sounded.
30. What sort of sea is it south of Timor going eastward? From Timor for about 200 miles it contains coral reefs; after that there is a very good bottom, sand and mud all the way.
31. The 200 miles of coralline sea is open to the same objection which applies to the present route? Yes, there is a coral bank along it.
32. And beyond that you think there is a good bottom? Yes.
33. As far as Normanton? Yes.
34. Supposing a line were made from Timor to Copang and to Queensland, then that would be the best route? Yes, that would be the best water for a cable.
35. What is the sea like between Copang and Banjoewangie? For some distance from Timor it would be necessary to go through a series of very small islands, where the bottom is rocky.
36. Is not that route very much the same as that adopted for the present cable? Yes.
37. And the same kind of sea? Yes, except near Copang, where the line would be adjacent to land for some distance off the north-west corner of Timor.
38. Is the difference in the bed of the sea appreciable between that and the present route—I am speaking of the route from Copang to Banjoewangie? No, there is not much difference; if anything it is in favour of the present route; the other would bring the cable into shallower water.
39. Mr. Fraser.] I suppose if a line were laid from the north-west coast of Australia to Ceylon, by way of the Keeling Islands, it would be laid down in two parts; that would be more convenient than the direct route? Yes.
40. Of the two lines—by Banjoewangie to Java, and the direct line from the north-west Cape to Batavia, which do you think would possess the greatest advantages for good working? So little is known of the ocean bed between the north-west coast of Australia and the westerly point of Java that I could hardly tell you.

Mr. W. G.
Taylor.

30 Jan., 1877.

41. I suppose you are aware that the heavy currents on the north-west coast only extend a certain distance from the land, and do not come within the direct line. That would be an advantage, as the cable would be less liable to injury? There would not be much fear of injury to the cable, when it was once laid—on a soft bottom it would be comparatively free from danger.
42. Is there a soft bottom between Port Darwin and Banjoewangie? It is some distance from it. You have the same coral reef bank, then you get into deep water, which lasts until you approach Banjoewangie, when the water shallows again.
43. I see it is said here (*referring to papers*) "With regard to the duration of cables no actual experience exists, nor indeed will it be found uniform, as it must depend upon the surroundings in each individual case. In the experience of the cable between Singapore and Australia, passing as it does through shallow and warm seas teeming with animal life, and judging from the experience we have had of the damage to which our present cable is exposed to attack from insects, it is considered fair to estimate the duration of a cable in these seas at about fifteen years." I merely quote that to ask if you can give any opinion as to whether the conditions of the cable would be better if it were laid further to the westward, away from the coral line reef, which, I am given to understand, is destructive to it? From the appearance of the sea further to the westward, I should say the water was deeper and quieter.
44. I have been informed that the water is much deeper and altogether free from coral reefs. Well, the route from Batavia to North-west Cape would be better for the cable, as it would last longer lying in deep water and on a soft bottom? Yes.
45. *Mr. Stuart.*] That is, if the water is deeper; but you know nothing of it? No.
46. *Mr. Griffith.*] Supposing you proceeded to lay down a duplicate line from Banjoewangie to Port Darwin, how far would that line be from the present cable? About 20 miles south of the present cable.
47. Would that be a sufficient distance to enable you to distinguish between the two lines in case of repairs being necessary? Yes, I think I am safe in saying it would be quite sufficient. There are four cables across the Atlantic joining the same points.
48. Would there not be danger, if there were two lines laid down on the same route, of taking up a sound cable instead of a broken one? No, the lines would be too far apart for that. No such danger is apprehended in connection with these Atlantic Cables all belonging to one Company. There are also two between Malta and Alexandria, two in the Red Sea, besides a duplicate now being laid between Aden and Bombay.
49. Your Company depend upon cables all the way from Australia to London, do they not? Yes, except across Java and India.
50. Supposing one of your cables broke, you have only a single line from Singapore to England? From Bombay to England the line belongs to the Eastern Telegraph Company, who work amicably with us, and the lines are double from Aden to England; the double line is not quite finished from Bombay to Aden.
51. But in the event of interruption is there any other route? Yes, the Indo-European lines are available.
52. *Mr. McLean.*] If your line fail they will send a message for you by arrangement? Yes.
53. Then you have to depend upon other Companies? Yes, Companies with which we have a mutual working arrangement.
54. *Mr. Fraser.*] I understood you then to say that the Eastern Extension Company works co-operatively with the Eastern Company? Yes.
55. And that the Eastern Company work entirely with cables which go from Plymouth, Alexandria, Aden, and Bombay? Yes.
56. And that this Company's cables have been duplicated between Aden and England, and are being doubled between Aden and Bombay? Yes.
57. So that when this line is completed there will be a complete double communication from Singapore to England by cable? Yes, when a line projected from Penang to Rangoon is laid.
58. If it is carried out? Yes.
59. Then the chances of a complete stoppage are very remote? Yes.
60. And supposing a line were brought from Singapore to the N.W. Cape, that would of course effect a communication with the same system of telegraph lines, and there would be two distinct lines of communication right through? Right through from Australia to Europe.
61. *Mr. Griffith.*] Are submarine cables liable to interruption from other causes than abrasion by rocks? Yes, from a small flexible insect, known as teredo, which is said to bore into the gutta-percha.
62. Are they liable to disturbing influences from electric causes—from thunderstorms? No.
63. Or from volcanic influences? No, from nothing of the sort, as far as my experience goes.
64. Has volcanic action in the vicinity of a cable ever been known to affect it? Not that I am aware of.
65. *Mr. Stuart.*] Are you a practical telegraphist? Yes.
66. I mean specially in respect to construction? Yes. I have been engaged in the construction of the Atlantic cable. I was for some years in the service of the construction Company who made the Atlantic and all the Eastern cables, and afterwards was engaged in similar work for the Eastern Company. My position here is that of superintendent in charge of the New Zealand section and of the Eastern Extension Company's cable.
67. *Mr. Ramsay.*] Another route has been mentioned in Melbourne and submitted to the Chamber of Commerce there—from West Australia to the Mauritius; have you considered that route? Yes. I have seen plans of it, but I think it is impracticable; it is too long a section to work with any degree of accuracy; it is about 3,000 miles.
68. *Mr. Anderson.*] That is not longer than some of the American cables? The longest section of American cable is under 2,400 miles, from Brest in France to St. Pierre in the Gulf of St. Lawrence.
69. *Mr. Ramsay.*] Are you aware of any action that has been initiated for the establishment of a line of telegraph between the Mauritius and Aden? I am not. I know it was spoken of some time ago.
70. Is there any immediate probability of its construction? I think not.
71. *Mr. Fraser.*] I have heard that in the Cape Colony a motion has been set on foot to obtain direct communication between the Cape and St. Helena, and Ascension Islands? It was discussed about three years ago, but I have heard nothing of it since. They were anxious for it at that time, and applied to the Home Government to assist them, but that was refused, and the matter fell through.
72. And a further extension from the Cape to the Mauritius was included in the proposal? Yes.

- Mr. W. G. Taylor.
30 Jan., 1877.
73. In such a case a line from West Australia to the Mauritius would secure complete communication to Europe *via* the Cape, apart from the line to these islands? Yes, if that line were constructed.
74. Are you of opinion that it would be practicable to carry out that line? It would be most difficult.
75. It is not longer than from America to England? Yes, it is; 1,800 miles is the greatest length of cable from America to British shores—from Valencia to Trinity Bay Newfoundland.
76. And you are distinctly of opinion that a continuous line of 3,000 miles would be impracticable with present appliances? Not impracticable, but difficult.
77. Mr. Burns.] You would not rely upon the working of a line of that length? No; it would be more difficult to work and more expensive; it would be much better to be interrupted at some point.
78. Mr. McLean.] Have you any knowledge of the working of the present line, from Singapore to Banjoewangie? Yes.
79. Which is the worst portion of that line? The Dutch line from Batavia to Banjoewangie.
80. That would be entirely avoided by laying a cable from Singapore to Banjoewangie? Yes.
81. Do you apprehend any difficulty in laying down a line from those points? No.
82. What appliances have you at present for repairing the cable in case of a break between these points? A vessel fully equipped for cable work is always laying at Singapore when not required elsewhere.
83. Would not the same appliances be more effective for repairs on a double line than on a single line? No, they would be equally available.
84. Would not the shorter distances from point to point render them more effective for repairing? No, because the vessel steams to a certain point marked on the chart where the repair is effected.
85. Mr. Mein.] Would your Company have any difficulty in establishing a line between Sourabaya and Copang and Torres Straits? I presume not; the only difficulty would be that it would be liable to interruption.
86. That difficulty would apply to both sections? Yes.
87. Would there be any difficulty first in constructing and then in maintaining in working order a line between those points? No, I do not see any difficulty.
88. And the appliances you possess for repairs would be as effective and convenient for that line as for any other? Yes, except that there might be more work for one vessel.
89. Mr. Ramsay.] What better provision have you now for keeping the present line in working order than you had when the last breakage occurred? None; we have just the same provision—two vessels.
90. How long was the cable out of use at that time? From April 24th to August 7th, which was a most unfortunate period, as at that time there were three sections of the Company's cables down.
91. I wish to know whether you are in a better position now for keeping the line in good working order than you were then? No; we are exactly in the same position that we were in a year ago when the last break occurred.
92. Then the same thing might occur again at any time, and communication be interrupted for three or four months? Yes; it is possible, certainly.
93. Mr. Griffith.] Do you know how far apart from each other are the Atlantic cables belonging to the same Company? No, I do not.
94. What would be the cost of keeping an extra vessel at Port Darwin, besides the one at Singapore? The "Edinburgh" when in port costs us about £500 a month for crew and port charges, with the cost of additional hands when she goes to sea; and then there is a percentage on the value of the policy of insurance.
95. What is your own opinion—that it would be cheaper to keep a second vessel at Port Darwin, or to subsidize another line? That would depend upon whether the vessel was frequently required at sea. The expenses in port would be £6,000 a year, but it would be more when she went out to sea.
96. What would be the additional cost of each trip? That would depend entirely upon the length of the trip.
97. What would be the cost of a cable from Banjoewangie to Port Darwin? I am not empowered to make any estimate beyond the figures given in our Chairman's circular.
98. The cost of the ship stationed at Singapore, you say, is £500 a month? Yes, about that when lying in port; I cannot give you a very close estimate.

Mr. Samuel Knevett, Agent for Eastern Extension Telegraph Company, called in and examined:—

- Mr. Samuel Knevett.
30 Jan., 1877.
99. Mr. Fraser.] I wish to know, Mr. Knevett, if you can give me any information with reference to a proposition submitted I believe by your Company. Mr. Barlee, who was Colonial Secretary in Western Australia, writing to Governor Robinson says:—"With the Chairman of the Eastern Extension Company, and with Colonel Glover, R.E., the Managing Director, I have had interviews, and I am in a position to say that a scheme in every way beneficial to Western Australia will in the course of a few days be submitted by the Company. That scheme is roughly as follows:—To lay one cable from Singapore to Banjoewangie, and a second from thence to the north-west Cape in Western Australia. These cables to be worked by the present staff of the Company, and with no foreign interference in the transmission of messages. The cost of these cables is estimated at £400,000, and the Company argue with some reason, that as the business transacted by the cables now in operation is not sufficient to keep the staff at work more than two hours a day, and does not *pay*, it is only reasonable that if the Australian Colonies insist on the luxury of a second cable they should contribute towards the cost of it. It is therefore proposed that the interest on £400,000 to be raised in England, should be guaranteed by the Australian Colonies, with such addition as may be needed for a sinking fund for (say) a period of fifteen years. The Company could not raise this money in England (so they say) on their own responsibility under 6 per cent., but I pointed out that if the Colonies are asked to guarantee the interest, that guarantee would ensure the raising the money at 4 per cent. Assume that £30,000 per annum be required. Such sum divided among the several Colonies in proportion to their population would be no heavy burden on any Colony, and would certainly fall lightly on Western Australia. The Company contemplate that the cables could be ready for work at the expiration of one year from the date on which a contract was signed." I have read that letter with the object of asking you whether the Company have accepted the proposition. I want to learn if possible whether this proposal has been put in definite form? I think not. Colonel Glover told me he had seen Mr. Barlee, but I think nothing came of it, except the proposition which the Company had already made to lay down a cable for £540,000.

100. This letter is dated 31st August, 1876? Yes, but since then there has been Mr. Pender's memorandum on the subject. Mr. Samuel Knevet.
101. But nothing further on these two points? Nothing.
102. *Mr. Ward.*] Do you know anything personally of the working of the cable to Singapore? No. 30 Jan., 1877.

Captain Audley Coote, representative of Messrs. Siemens Brothers and of the Indo-Australian Telegraph Company, called in and examined:—

103. *Mr. Mein.*] I believe, Captain Coote, you are the representative of a Company interested in the establishment of telegraphic communication between Europe and the Colonies? Yes, the Indo-Australian Telegraph Company. Captain A. Coote.
104. Have you directed your attention to duplicate telegraph communication between Singapore and the Colonies? I have. 30 Jan., 1877.
105. Have you considered the practicability of the different routes? Yes.
106. What direction have your inquiries taken? Chiefly from the shores of Queensland to Singapore.
107. In what way? In interesting myself in the soundings, and in having always thought it to be the best route to take for a duplicate cable to connect Australia with Europe, provided it did not go up as far as Celebes.
108. Have the seas there been sufficiently explored to enable you to say authoritatively whether a line constructed there would be practicable? Yes.
109. In what direction? Keeping south of Timor, starting from a point in Queensland, either Normanton or Cape York, touching at Timor, and going through this passage (*indicating localities on map*) known as the strait of Lombock to Singapore, between the Island of Borneo and Biliton Island. Captain Nares, of H.M.S. "Challenger," informed me that the line shown on the map as a dotted line would pass over an exceedingly deep and uneven bottom, caused by the waters falling into a deep gutter, and it is chiefly on that account I have suggested that the route south of Timor should be adopted.
110. *The Chairman.*] Supposing a line were taken from Port Darwin it might go south of Timor? Yes.
111. Therefore the same line might be taken from Port Darwin that you would take from Normanton? Just the same.
112. And what difference would there be in the length and value of the cable? About 700 miles. A line starting from Cape York would be about 550 miles longer than from Port Darwin.
113. But what I want to find out is whether, for the purpose of laying down a line, there is anything in favour of Normanton, in Queensland, as against Port Darwin? Yes, there would be this advantage: we should keep away from a well-known coral bank and a well-known current, both of which would be injurious to the cable, and great care would have to be taken to keep to the north of that current in touching at Timor.
114. *Mr. Mein.*] That current is likely to act injuriously to the cable? Yes.
115. *Mr. Griffith.*] And you get a better route by Banjoewangie or Sourabaya, south of Timor? Yes, we keep clear of the well-known coral bank and two well-known currents.
116. *Mr. Mein.*] Would the northern routes be quite out of those currents? Yes.
117. What authority have you from your Company—have you authority to enter into new contracts? Yes.
118. Subject to their approval? I have authority to make a binding contract.
119. *Mr. Griffith.*] Was that letter to Mr. Robertson written in accordance with the instructions of your Company? Yes.
120. And the terms therein specified are the terms for which they are willing to do the work indicated in it? Yes.
121. Would it make any difference whether the cable touched at Banjoewangie or Sourabaya? None.
122. Do you know anything of the seas along that route? We know that starting from the North-west Cape we get into deep water, away from the warm waters in the northern seas, and away from some of the currents; and although it does not appear on this chart, the route we propose would go from the North-west Cape through Lombock Strait and on to Singapore, and not from Batavia to Singapore. The authorities in England would prefer to go this way.
123. Will you point out where this current is? There are two currents (*indicating positions on map*).
124. Your Companies have no cables in the Eastern seas at present, have they? Only in the Persian Gulf.
125. How far does your communication extend from Singapore? It extends to Rangoon, in connection with the Government of India lines.
126. Have you taken any steps to extend that communication? Yes, I hold a contract to construct a double wired line from Tevoi to Singapore.
127. Is that line in course of construction? The surveys are now being made.
128. Under whose control will it be? Messrs. Siemens Brothers.
129. Then you have no repairing ships in those seas at present? We have not; our repairing ship, the "Faraday," is in the Atlantic.
130. In the event of a contract being taken for the line you now propose, would you make it a part of the contract that a repairing ship should be kept in this sea? Yes.
131. For the terms specified? Yes.
132. *Mr. Fraser.*] In your fourth proposition you say "By cable to be supplied, &c." I assume that that means a complete cable entirely separate from the existing communication between Singapore and Batavia? Yes.
133. And you would go from the North-west Cape either through Lombock Strait to Singapore? We have considered that to be the best route; but we should have no objection to go to the right of this line and touch at Batavia.
134. That would be the most direct route? Yes.
135. Would there be any difference in the cost between the line through Lombock Strait and the other line, or would you require an equal subsidy in each case? An equal subsidy.
136. But I understood you to say that the route through Lombock Strait touching at Sourabaya, was the best? That is the opinion held by the authorities in London. 137.

- Captain A. Coote.
30 Jan., 1877.
137. What is the line from Western Australia, *via* Ceylon? It was suggested that the line should go from the North-west Cape to Ceylon, *via* Anjer. There might be some danger to the cable at the Cocos Islands. I have been informed that you can look down from some shelving rocks into an unfathomable ocean. These rocks are not more than 300 yards from the cocoanut trees. It was proposed that the line should go from the North-west Cape to Anjer or Batavia, or thence to Ceylon.
138. *Mr. Frazer.*] False Point, in India, was another alternative line that would touch at Singapore? Yes.
139. That would complete a continuous cable from Australia to India? Yes.
140. That is to say, Australia would have a continuous and independent communication with India, which could not be interfered with by any other country? Yes, we could make 1000-mile connections, all the way from Australia.
141. *Mr. Griffith.*] What is the distance from Copang to Cape York? About 1000 miles. In each of those places there is a complete duplicate system from the time a message is received at any office in Australia until it is received in England.
142. Have you English operators in each country? Yes, right through.
143. Will you state shortly your route, starting from Rangoon? From Rangoon to Calcutta, then to Kurrachee, thence to Teheran to Tifis; but between Kurrachee and Bushire there is a cable laid down to duplicate the land line of the Indo-European Company. From Tifis by the frontiers of Germany to Berlin, and thence to London.
144. Are your principals, the Indo-Australian Telegraph Company, represented there? Yes, we have entered into an agreement with the Indo-European Company to allow us a rebate of 40 per cent. upon all messages from Australia.
145. That is a permanent working arrangement? Yes.
146. *Mr. Mein.*] Are these several proposals which you make in connection with the subsidy dependent upon the present rate of charges, or are you prepared to allow the Colonies to fix their own rate of charges? We would allow the Colonies to fix their own rate of charges.
147. You would prefer to leave the rate of charges to competition between the different Colonies? I would.
148. Fixing a maximum charge, I suppose? Yes, we should be obliged to do that.
149. What maximum charge would you be prepared to fix? 6s. a word for ten words including address, which is the present rate.
150. On the terms you offer? On the terms we offer.
151. *President.*] Your Company has stated that they will lay down a line for from Normanton to Singapore. What will they do it for from Port Darwin—would it be more or less? Less.
152. How much less? We should require a subsidy of £45,000 for a cable from Port Darwin to Singapore.
153. And how much from Normanton or Cape York? £50,000.
154. That would make a difference of £5,000? Yes.
155. *Mr. Mein.*] The line from Cape York would be shorter, would not that make a difference? There would be the difference in the cost of the cable; we should be prepared to allow that in the subsidy.
156. Then I understand you that the line from Cape York would be £48,500? No, £49,000. Of course the subsidies have not been calculated on the cost of that cable.
157. *Sir H. Ayers.*] Are you a professional electrician? I am not.
158. How have you obtained your knowledge of the bottom of the seas you have been describing? I have travelled over a great part of them, and I have obtained the latest information respecting them from Capt. Nares, of H.M.S. "Challenger," who took lately the only soundings ever taken in those seas, showing the depth along this dotted line (*indicating line on map*). We know almost as much of the soundings round and south of Timor as we do of the soundings fifty miles from the Australian coast.
159. Will you state whether this information has been obtained by you, or is derived from your own knowledge? It is not only derived from my own knowledge, but has been collected by me from Captain Nares, the best authority I could obtain from the Admiralty in England, from the latest data, and from the charts giving the actual soundings.
160. But you have not taken soundings on board cable ships yourself? No, I have not actually taken soundings.
161. But you say you know the coral reef along this line? Yes.
162. And you state that there are no coral reefs about Timor? Yes, I know it from the charts made by the Admiralty officer sent down purposely to survey this very spot; from the information that gentleman has given me, and from the soundings actually taken and placed on the charts—
163. You are getting away from my question. You seemed to think there was a coral reef here (*indicating locality on map*), on this line from Port Darwin to Banjoewangie; was that from your own knowledge of the bottom? The soundings are given on the chart, and shew the nature of the bottom. The present cable has been removed from that very coral bank to the sea which I have told you is now clear of coral reefs.
164. *Mr. Anderson.*] The present cable is clear of the coral bank? Yes, I am given to understand that it was on the edge of the coral bank that it was broken, and that it is now quite clear of it.
165. *Mr. McLean.*] Your principals are connected with the cable across the Atlantic from Australia to America? Yes, by the direct United States cable and through America by the Western Union Telegraph system.
166. Have they received any instructions to negotiate for a line by Honolulu? Yes.
167. What is your opinion of it? There is nothing against it except the expense.
168. But supposing all those islands should agree to a subsidy, there would be no objection on the score of expense? None whatever, only the line is considerably longer than many persons in Australia think it is. The actual distance is somewhere about 7,500 miles, and that would require a length of cable over 8,000 miles: the sections would be cut in lengths of 1,000 miles between San Francisco and Honolulu and Fiji.
169. They would not be longer than other existing lines? No, there is nothing against it except commercially; we should get nothing from Honolulu or Fiji.
170. Have these questions been discussed by your Company? Yes. I have at the present moment the particulars of a subsidy for laying down that cable.
171. *Mr. Griffith.*] And what subsidy do you think would be necessary to open that route? Well, it would be at least double the present subsidy.

Captain A.
Coote.
30 Jan., 1877.

172. *Mr. Stuart.*] Are you thinking of starting from Australia? Yes.
173. Why should you start from Australia? Well, the French Government have £8,000 ready as a subsidy for a line from Australia to New Caledonia; and although the outlay would not be very great, we should require a subsidy of £25,000 for that cable alone.
174. *Mr. McLean.*] Well, you should get a subsidy from Honolulu and the other Islands, and I do not see why they should not give it for this line? The Government of Honolulu told me that they would give no subsidy, and the Postmaster General told me the same.
175. But Sir Julius Vogel, who has obtained further information, states that they are very likely to give it? Then there would be no difficulty in constructing the line; you see we should only have to look for through messages from America.
176. It would be to the advantage of your Company, because it would bring a great deal of traffic from New Zealand, as well as the Islands? Yes; that is why we are endeavouring to make arrangements with the Honolulu Government to land the first section on that island.
177. *Mr. Griffith.*] What would be the longest section along that route? From Fiji to Honolulu; we have tried all we could to make these cables in 1000-mile sections, because the cost of laying a cable over 1,000 miles is considerably more than for 1000 miles, and the cable is more expensive.
178. Have you any knowledge of the sea through which the cable would pass along that route? No; the Secretary to the Postal authorities has promised to send me the information. From what we know of it, it is an exceedingly deep sea, and, as far as we could learn from the "Tuscaroora," it is a good bottom, and when they got within about thirty miles of the shores of Queensland they reported that their leads dropped into a hole from 3,000 to 4,000 fathoms deep.
179. And so far as you have ascertained, there is quite as good a bottom there as along the route by Java? Yes, as far as we have had experience of the deep seas, we have generally found a soft bottom.
180. *Mr. McLean.*] Have you any authority to lay a cable along that route? Oh yes, my authority is to obtain the best concessions I can, and to make a route between here and London whichever way you wish it to go.
181. When you were in treaty to make the line from the Colonies to England in 1875, had you proper authority to carry out the agreement? Yes.
182. Because I see there is a letter from Sir Julius Vogel, stating that the arrangement fell through because you were unable to carry out your agreement? That letter never reached us, and there was another letter which was handed in by special messengers to Sir Julius Vogel, which has not appeared in the correspondence.
183. Have you that letter? I have. (*Witness handed in a letter. Vide Appendix A.*)
184. And you have looked over this printed correspondence and see no trace of these letters? No trace whatever.
185. Do you hold full powers of attorney from your principals? Yes, and I have always done so.
186. *Mr. Stuart.*] I should like to know why that contract was not carried out? It was understood that the cable should be put down in a reasonable time—in three months—and it was nearly eighteen months before the three Governments agreed to do it. The instructions were so stringent that not a single concession could be granted, and one afternoon the conditions fell through, for the moment only. In the New Zealand Act, ratifying the agreement, Sir Julius Vogel inserted a clause authorizing the Government of that Colony to consent to a cable direct from New Zealand, and on the following morning we saw for the first time in the newspaper that a contract had been signed for a separate cable to Australia from New Zealand with a different Company. We were surprised to see this in the morning newspaper, having left Sir Julius Vogel overnight without receiving any intimation of it, and having been prepared to lay down the New Zealand cable separately ourselves.
187. But, as I understand it, you entered into a memorandum of agreement to construct a certain line, subject to ratification by the Parliaments of the various Colonies. That ratification was given, and yet the contract with the Company which you represented fell through? Yes.
188. Well, I want to know why it fell through? For this reason, that at the moment the whole of the money was provided for by a large combination of capitalists; but eighteen months afterwards, owing to complications in the money market in England, that money could not be supplied without certain concessions asked for from the representatives of the different Governments, that certain things were to be granted. Their instructions were not to grant them, and the agreement fell through.
189. Then do I understand that the contract which you made on behalf of your principals was what may be called a sort of sporting offer—that is to say, an offer to make a line provided all things remained the same with regard to the money market? No; the money was provided for.
190. But there was nothing in your memorandum of agreement to limit the time to three months? It was understood that the whole thing would be ratified in three months, and that I should have to go to England by the next mail.
191. But where several Governments had to be consulted in respect to the construction of a new line of telegraph it does not appear, to me at all events, reasonable to expect that everything could be settled within three months? Yes; this Parliament was in Session, and it was expected to be done immediately; the Queensland Parliament was in Session also, and Sir Julius Vogel left here with the understanding that it should be done at once.
192. Now I come to the object I have endeavoured to arrive at by these preliminary questions. You now offer to put down a certain cable for an annual subsidy of £50,000, with a limitation of 6s. a word for the tariff of messages. Is that an offer which would be subject to the approval of the various Colonial Parliaments, or is it an offer made in the same way as the last—an offer made with reference to the present cheap rate of money in England, which you might find it impossible to carry out if money became dearer? No, it is not.
193. You see on the last occasion you stated that you had full power to bind your principals, and yet when the different Parliaments had ratified the contract it fell through because the gentlemen who were parties to the agreement were no longer in a position to do what they had offered to do. I wish therefore to know whether this offer is subject to the same contingency, or whether it will stand any reverse in the money market? Yes; I am prepared to sign a binding contract.
194. Was not that the case on the last occasion? It was, but the contract was never signed.
195. Was not the agreement as binding upon you as the contract? Yes, but the agreement was that it should be carried out quickly.

Captain A.
Coote.
30 Jan., 1877.

196. Well I want to know whether this offer is made to be carried out quickly? Yes.
197. What is to be the limit of that quickness? Within twelve months.
198. *Mr. Maclean.*] Then you considered that the non-fulfilment of an agreement by the different Governments within eighteen months was unreasonable? Yes.
199. *Mr. Stuart.*] We are to understand then that on the first occasion you considered three months a reasonable time, and that now you think twelve months reasonable? Yes.
200. You ask a subsidy of £50,000 for this cable? Yes.
201. Has it occurred to you that if the combined Governments paid you this subsidy, they would virtually suppress the other Company? They would get their share.
202. But they would have to work against £50,000? Yes.
203. *President.*] You said the Governments refused you a slight concession on the last contract, but you did not say what that concession was? I am not quite sure of the exact concession asked for, it was merely an alteration of some of the terms of the agreement which was entered into.
204. Then you do not know whether it was a slight one or not? I have always been given to understand that it was a very reasonable request; it was not a question of money at all; it was merely a question of landing cables.

NOTE (*on revision*):—In answering the many questions put to me, I omitted to state that the Messrs. Siemens wished to be allowed to land the cable at Sourabaya, in Java, instead of Celebes, because no business was to be expected from the latter place, and asked the representatives to wait for a few days to allow of a telegram being sent to the Governments interested to allow this slight alteration. This, it was stated, was useless, as their instructions were to keep them to the exact agreement; consequently for the moment negotiations stopped, but when leaving the representatives on that afternoon the Messrs. Siemens told the representatives they were prepared to go on with the New Zealand cable and so allow time to telegraph on.

I arrived in London twelve hours afterwards, when the Messrs. Siemens at once informed me that it was no fault of theirs; that it appeared to them that they had been made a sort of "buffer" between the Eastern Extension Company and the New Zealand representative. And Sir Daniel Cooper also told me he prevented the competing Company from seeing Sir Julius Vogel for a whole day at his private residence. However, it could not be prevented. The Messrs. Siemens knew nothing of this until the announcement was made in the morning papers, as the letters referred to yesterday had in some extraordinary way miscarried.—AUDLEY COOTE.

P.S.—Some copies of the old powers I then held are still in the possession of Mr. Jno. Robertson.—A. C.

APPENDIX A.

Messrs. Siemens Brothers to The Colonial Secretary, Queensland.

Sir,

12, Queen Anne's Gate, London S.W., 24 August, 1876.

In the printed papers relating to Telegraph Cable negotiations headed "1876, New Zealand," which have been forwarded by the Government of New Zealand to the Governments of each of the Australian Colonies, we find under No. 18 the copy of a letter purporting to be addressed to us by the Honorable J. Vogel and Sir D. Cooper, under date of 21st May, 1875, which letter has never reached our hands.

It is obvious from the tone and contents of that communication that we could not have allowed the same to have passed without our protest, had it ever reached us.

On the other hand we find that an important letter addressed by us to the Commissioners and handed by special messenger to each of them, has been omitted from the correspondence.

The following is a copy of the same:—

"Sir,

"Queen Anne's Gate, London S.W., 7 May, 1875.

"We have the honor to hand you herewith printed copy of the memorandum, Articles of Association of the Indo-Australasian Telegraph Company Limited, which has been formed by the several gentlemen who have hitherto acted in concert with us, with a view of establishing a second and independent telegraphic communication between India and Australasia.

We are authorized to say that the promoters of the above Company whose names are affixed to the memorandum Articles of Association (as per enclosed copy) are prepared to enter into negotiations with you and the representatives of New South Wales and Queensland, on the subject of the assistance intended to be granted by the Colonial Governments interested in the furtherance of the undertaking.

"We shall be glad to hear that you are willing to negotiate with the Company on the subject, and any communication you will honor us with we shall have great pleasure in submitting to them.

"The Premier of New Zealand.

"We are, &c.,
"SIEMENS BROTHERS."

We consider it a duty to ourselves to call your attention to the above.

And have, &c.,
SIEMENS BROTHERS.

1876-7.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.

(REPORT FOR 1876.)

Presented to Parliament, pursuant to Act of Incorporation, 14 Vic. No. 31.

REPORT of the University of Sydney, for the year ended 31st December, 1876.

University, 7 February, 1877.

1. In accordance with the provisions of the Act of Incorporation, the Senate of the University has the honor to transmit the Report of its proceedings during the year ended the 31st December, 1876, for the purpose of being submitted to the Governor and the Executive Council.

2. Thirty-six (36) students passed the statutory examination, and were admitted to matriculation. Exemption from attendance on lectures was granted to two undergraduates who had previously passed the special examination as provided by the By-laws.

3. The following honors and prizes were awarded during the year:—"Cooper" Scholarship (for proficiency in Classics), W. Russell, "*proxime accesserunt*," G. B. Allen and E. Debenham; "Barker" Scholarship (for proficiency in Mathematics), G. B. Allen, "*proxime accessit*," E. Debenham; "Deas-Thomson" Scholarship (for proficiency in Natural Science), G. B. Allen; "University" Scholarships (for general proficiency), 1st year, R. Allen and W. L. Moore; 2nd year, J. D. S. M'Lardy and L. Whitfeld; 3rd year, E. Debenham; "Lithgow" Scholarship, for the greatest proficiency in the second year, W. Wilkinson; "Levey" Scholarship, for the third in order of merit in the first year, W. Quaife; "Salting" Exhibition, for a student nominated by the Trustees of the Sydney Grammar School, R. Allen; "Gilchrist" Scholarship, tenable at the University of London by a student who has passed the B.A. examination, W. Chisholm, B.A.; "John Ewan Fraser" Bursary, S. Moore. First class men at the yearly examination.

School of Classics.

W. Russell,
G. B. Allen,
E. Debenham,
E. Russell,
W. Wilkinson,
J. D. S. M'Lardy, } *æq.*
L. Whitfeld,
T. Lloyd.

J. F. Mullins,
J. D. S. M'Lardy,
A. Bowman,
W. Wilkinson,
T. Lloyd,
L. Whitfeld,
H. Kelly.*

School of Natural Science.

G. B. Allen,
W. Russell,
G. J. Renwick,
C. H. Maher.

4. The following degrees were conferred:—

B.A.—T. Butler,† first class honors in Classics and Natural Science, C. E. Forster, first class honors in Classics and Mathematics, E. Barff,† first class honors in Mathematics, R. Roger, second class in Classics, J. Thallon, second class in Mathematics, J. H. Carruthers,† first class in Natural Science, T. M. Kendall, G. L. Lord, E. A. Nathan, O. O'Brien,‡ R. Waugh.

LL.B.—C. Farrell.

M.A.—F. H. King, F. Wentworth, J. Perry, J. T. Dillon, F. H. Freehill, T. Powell, J. L. Watkins, R. Kay, C. Irving, A. Johnston, R. M. Sly, J. Waterhouse, F. Plomley, J. J. Beatty,§ E. Rennie.§

5. The following undergraduates passed the examination for B.A. in Michaelmas Term:—W. Russell,|| G. B. Allen,¶ E. Debenham, E. Russell, J. F. Mullins, C. H. Maher, A. Thom, F. Elder, H. Steel, G. J. Renwick,‡ J. Flynn, F. Bundock, R. Noake.

6. The following graduates passed for higher Degrees, viz.:—

M.A.—M. O'Mara, B.A.

M.D.—S. Morton, M.B.

7. Professor Pell being incapacitated by illness from performing his duties as Professor of Mathematics, the services of the Rev. W. Scott, M.A., Warden of St. Paul's College, were engaged by the Senate

* Who, though not examined simultaneously with the others, attained the standard of a first class.

† "University" prize.

‡ "Belmore" Medal for Agricultural Chemistry.

§ Gold Medal.

|| Gold Medal for Classics and Natural Science.

¶ Gold Medal for Mathematics.

Senate for the first part of the year. In Michaelmas Term, finding that he was no longer able to bear the fatigue of lecturing, he submitted an application to be allowed to retire, which having been brought under careful consideration was assented to on the following conditions:—1. That in accordance with the stipulation made on the appointment of the Professors in England, in 1852, and communicated to them on behalf of the Senate by Sir John Herschell and Professor Airey, a retiring pension be made to him for life, at the rate of half of the present salary, viz., £412 10s., without any allowance for rent or otherwise. 2. That until his successor should enter upon his duties, he perform the work of an Examiner in the University and Public Examinations. Immediate steps were taken to obtain a Professor of Mathematics and Natural Philosophy, and with this view communication was entered into with the Lucasian Professor of Mathematics, Cambridge, Mr. Stokes, to whom, conjointly with Sir Charles Nicholson, formerly Chancellor, was entrusted the task of selecting a suitable person. The Senate has received a notification from those gentlemen of their willingness to act, and there is every reason to believe that the new Professor will arrive before the commencement of the academic year, 1877. Since the retirement of Professor Pell, the office of Lecturer has been (with an interval of a few days during which Mr. Scott lectured) performed by Mr. Thomas Harlin, M.A., late Head Master of the Brisbane Grammar School.

8. On the recommendation of the Professional Board a temporary appointment of a Master of Studies was made, with a salary of £150 per annum, the duties of the office being the preservation of order in the room set apart for the undergraduates during the intervals between the Professor's lectures, and the tuition of backward students of the first and second years.

9. Professor Pell having resigned the office of Dean of the Faculty of Arts, Professor Badham was elected in his room.

10. Professor Badham was also elected Dean of the Faculty of Law, in accordance with the provisions of the By-laws.

11. A vacancy in the Board of Examiners in Medicine having occurred, through the death of Dr. Bedford, H. N. Maclaurin, Esq., M.D., was appointed to that office.

12. The new Code of By-laws for regulating the University, the details of which were communicated to the Government in the Report of 1875, have been assented to by the Governor and Executive Council, and are now in force.

13. The number of superior graduates (100) entitling the University to return a Member to serve in the Legislative Assembly, under the Electoral Act of 22 Vic. No. 20, having been attained, a writ was issued by His Excellency the Governor, on the 24th July. At the nomination of candidates on the 7th September, the following gentlemen were proposed:—William Charles Windeyer, Esq., M.A., and Edmund Barton, Esq., M.A. A show of hands having been called for and declared to be in favour of Mr. Windeyer, whereon a poll was demanded by Mr. Barton. At the poll, on the 8th September, Mr. Windeyer was declared to be duly elected.

14. The Senate has much pleasure in announcing the donation of a prize of £26 by His Excellency the Governor, such prize to be continued for three years, to be proposed for competition by graduates under the standing of M.A. The subject to be—1. A criticism on the plot and characters of one or more of the plays of Shakespeare, selected. 2. A comparison of persons and events as represented by the poet with the same as described in history. 3. The language and literary history of Shakespeare's time, together with the knowledge of the sources of the text, and verbal criticisms thereon.

15. The Senate has further to announce a second instance of the enlightened liberality of Mrs. Hunter Bailey, in the foundation of a Bursary for the Sons of Ministers of Religion; it being provided in all cases that questions as to who were Ministers of Religion should be decided by the Senate.

16. The means at the disposal of the Senate being insufficient for carrying out the objects of the Institution, and for meeting the cost of repairs to the building, an application has been made to the Government for an increased endowment. The Senate would, in the event of it being granted, be enabled to enter into a permanent engagement with the additional Professors and Lecturers whom it is proposed to appoint, and to give an assurance to the public of the permanency of the system. The details of the proposed additions to the present staff are contained in a memorandum appended hereto.

17. The Public Examinations were held in Sydney in November, and simultaneously in the following centres, viz.:—Brisbane, Grafton, Armidale, Bathurst, Singleton, Maitland, Newcastle, Currawang, Goulburn, Shoalhaven, Albury, Adelong, Cooma, and Braidwood. A larger number of candidates came up for the examinations in the country districts than in previous years, and there is a marked indication of increased interest being taken in them throughout the Colony. Several changes, which experience has shown to be desirable, have been made in the rules and regulations, and have met with general approval at the hands of teachers. A copy is appended hereto. The number of candidates who presented themselves is as follows:—

Senior males	34
Senior females	19
Junior males	286
Junior females	76
Civil Service	153

Of these the following passed:—

Seniors	35
Juniors	246
Civil Service	90

17. A Report of the Receipts and Expenditure of the University, duly certified by the Auditor, is appended.

18. This Report was adopted at the monthly meeting of the Senate, held on the February, 1877.

HUGH KENNEDY,
Registrar.

APPENDIX I.

ENDOWMENT OF THE UNIVERSITY.

The following scheme is submitted to the Minister of Justice and Public Instruction, as an approximation to the way in which it is proposed to use the increased Endowment now asked for the University :—

PROFESSORS.

1. Classics, Mental Philosophy.....	£1,000
2. Mathematics, Natural Philosophy	1,000
3. Chemistry—Inorganic, Organic, and Practical.....	1,000
4. Biology, Geology, and Mineralogy	1,000
5. Anatomy, Physiology	1,000

ASSISTANTS, LECTURERS, &C.

1 Master for Junior Classics and Mathematics	£300
1 Assistant in Practical Chemistry and Metallurgy	250
1 Assistant to the Chair of Natural Philosophy as Lecturer on Mechanics and Engineering	250
1 Demonstrator in Practical Anatomy	200
6 Professional Lecturers on Medical Subjects	600
2 Lecturers in Law	400
1 Lecturer in History and English Literature	300
1 Registrar	500
7 Servants, Messengers, &c.	800
	£8,600

The balance of £400, with the fees from lectures, will, it is believed, meet all the other expenses of the Institution, such as those of the Chemical Laboratory, the School of Anatomy and Physiology, Natural History, Mechanics, &c.

By the system above proposed, the University would gain over and above what is at present taught:—1st. Instruction in Mental Philosophy, Law, History, and English Literature; 2nd. All the education necessary for the Medical Profession; 3rd. A complete course of Natural Philosophy, coupled with Mechanics and Engineering; 4th. The addition of Organic Chemistry and Metallurgy to the Chemical School; and 5th. Biology (including Animal and Vegetable Physiology). The Senate would also then be in a position to establish a Faculty of Science, as proposed by Professor Liversidge, on the London University system, giving the Degrees B.Sc. (Bachelor of Science), and D.Sc. (Doctor of Science). Degrees in Medicine also, could then be conferred on those who had received their education on the spot.

Two buildings detached from the main building of the University are absolutely necessary for carrying out the above scheme, one for a chemical laboratory, the other for anatomical purposes. The first, Professor Liversidge thinks, should be a temporary building, costing not more than £1,000, with fittings and apparatus costing another £1,000—£2,000 in all. £1,000 would be ample for a temporary anatomical building; it could be built of iron, and should consist of four rooms:—1. A dissecting room; 2. A room for making preparations, or for physiological investigations; 3. A room for anatomical preparations and a pathological museum; and 4. A class room, which might be used for most of the lectures on medical subjects.

The Government should be asked, therefore, to place on the Estimates the following sums :—

Building and fitting laboratory	£2,000
Building for anatomical purposes	1,000
Annual vote for repairs of buildings	500
	£3,500

*Although the foregoing is the general scheme, showing the way in which it is proposed to appropriate the endowment, if, as now requested, it should be increased to £9,000, it must of course be subject to any change or modification which from time to time may be deemed necessary or expedient by the Senate.

It is proper also to point out that, in order to enable the Senate to enter into a permanent engagement with the additional Professors and Lecturers whom it is proposed to appoint, and to give an assurance to the public of the permanency of the system, it is highly desirable that the increased endowment should, as the original one, be provided for by an Act of the Legislature, and not by annual vote.

Regular accounts of the expenditure should of course be required to be laid annually before Parliament.

APPENDIX II.

BY-LAWS OF THE UNIVERSITY.

[Passed by the Senate on the 2nd day of February, and assented to by the Governor and the Executive Council on 12th February, 1876.]

All By-laws heretofore passed by the Senate, and now in force, are hereby repealed, and in lieu thereof, the following By-laws shall be, and are hereby declared to be, the By-laws under which the University of Sydney shall henceforth be governed: Provided always, that nothing herein contained shall be deemed to revive any By-law previously repealed, or to prejudice any matter already done or commenced under any By-law hitherto in force.

CHANCELLOR.

1. The election to the office of Chancellor shall take place at a duly convened meeting of the Senate, to be held in Lent Term.

2. The Chancellor shall be elected for a period of three years (except as hereinafter provided), to be computed from the date of election, but shall be eligible for re-election.

3. In the event of the office of Chancellor becoming vacant, by death, resignation, or otherwise, before the expiration of the full term of office herein prescribed, the election of a successor shall be proceeded with at the next ensuing regular meeting of the Senate; and the Chancellor so appointed shall hold office until the Lent Term next after the expiration of three years from the date of such election.

VICE-CHANCELLOR.

4. The election of the Vice-Chancellor shall take place at a duly convened meeting of the Senate, to be held in Lent Term, except as in cases otherwise provided for by the Act of Incorporation.

SENATE.

Meetings, and Rules of Procedure.

5. The Senate shall meet on the first Wednesday in every month, or on the nearest convenient day, should such first Wednesday be a public holiday, and may adjourn from time to time to conclude any unfinished business.

6. At any time in the interval between such monthly meetings, it shall be competent for the Chancellor, or, in his absence, the Vice-Chancellor, in any case of emergency, to call a special meeting of the Senate, to be held [as soon as conveniently may be, for the consideration of any business which he may wish to submit to them.

7. Upon the written requisition of any three members, the Chancellor, or, in his absence, the Vice-Chancellor, or in the absence of both, the Registrar, shall convene a special meeting of the Senate, to be held as soon as conveniently may be after the expiration of seven days from the receipt of such requisition.

8. Except in any case of emergency, as aforesaid, no motion initiating a subject for discussion shall be made but in pursuance of notice given at least seven days previously; and every such notice shall be entered in a book, to be kept by the Registrar for that purpose.

9. The Registrar shall issue to each member of the Senate a summons, with a written specification of the various matters to be considered at the next meeting of the Senate, whether such meeting be an ordinary or a special one; and such summons, except in any case of emergency as aforesaid, shall be issued at least three days previously to such meeting.

10. In the event of a quorum of the Senate not being present at any monthly or other meeting, within half an hour after the hour appointed, the meeting shall lapse, but the members then present may adjourn the meeting to any convenient future day, of which at least three days notice shall be given by the Registrar in the usual manner.

11. All the proceedings of the Senate shall be entered in a journal; and, at the opening of each meeting the minutes of the preceding meeting shall be read and confirmed, and the signature of the Chairman then presiding shall be attached thereto.

12. If any Fellow shall, without leave from the Senate, be absent from their meetings for six consecutive calendar months, his fellowship shall *ipso facto* become vacant.

Election to vacancies.

13. At the first meeting of the Senate after the occurrence of a vacancy among the Fellows, a day shall be fixed for a Convocation for the election of a successor, such day to be within sixty days from the date of such Senate meeting, and to be announced at least thirty days previously to such Convocation, by notice posted at the University, and by advertisement in one or more of the daily newspapers. Provided that no Convocation for the election of a Fellow be held during the month of January.

14. No person shall be eligible for election to fill any vacancy among the Fellows unless his name shall have been communicated to the Registrar by some legally qualified voter at least ten clear days before the time of Convocation; and it shall be the duty of that officer to cause the name of such person, and the fact of his candidature, to be forthwith advertised in one or more of the daily papers published in Sydney, and to be posted in a conspicuous place in the University for eight clear days at least before such Convocation.

15. The Convocation for the election of a Fellow shall be held in the University, and shall be presided over in the same manner as if it were a meeting of the Senate. Every candidate submitted for election must be proposed and seconded by legally-qualified voters. If one candidate only be so proposed and seconded, then such candidate shall be declared by the President to be duly elected, but if more than one candidate be so proposed and seconded an election shall be made by ballot. Before proceeding to such ballot, two members of Convocation shall be chosen by the members present to act as scrutineers, and such scrutineers shall report the result of the ballot to the President, who shall declare the candidate having the majority of votes to be duly elected, and in the event of an equality of votes the election shall be decided by the casting vote of the President.

16. At the time fixed for a Convocation for the election of a Fellow, the Registrar shall prepare for the President's use a complete list of all persons entitled to vote under the provisions of the law, and a copy of such list shall be posted in a conspicuous place in the University for two days at least before the time of Convocation.

17. None but legally-qualified voters shall be allowed to be present during the taking of a poll.

Ex-officio members.

(24 Victoria, No. 13.)

18. The Senior Professor of Classics, the Senior Professor of Mathematics, and the Senior Professor of Chemistry and Experimental Physics shall be *ex-officio* members of the Senate, under the provisions of the "Sydney University Incorporation Act Amendment Act of 1861."

SUPERIOR OFFICERS.

(24 Victoria, No. 13.)

19. The Registrar is hereby declared to be a Superior Officer of the University, entitled to the rights and privileges conferred by the "Sydney University Incorporation Act Amendment Act of 1861."

20. The Solicitor to the University is hereby declared to be a Superior Officer of the University, entitled to the rights and privileges conferred by the "Sydney University Incorporation Act Amendment Act of 1861."

REGISTRAR.

21. The Registrar shall keep all necessary records of the proceedings of the University, conduct all necessary correspondence, and keep such registers and books of account as may be required.

22. All fees, fines, or other sums received by the Registrar in his capacity as such, shall be paid into the Bank of the University, in order that the same may be applied, accounted for, and audited in such manner as the Senate may from time to time appoint.

SEAL OF THE UNIVERSITY.

23. The Seal of the University shall be placed in the charge of the Chancellor or Vice-Chancellor, and Registrar, and shall not be affixed to any document except by order of the Senate.

FACULTIES.

24. There shall be three Faculties in the University, viz. :—

1. Arts.
2. Law.
3. Medicine.

LIMITATION OF THE TITLE OF PROFESSOR.

25. The title of Professor shall be distinctive of those Public Teachers in the University upon whom the Senate shall have conferred that title; and no person in or belonging to the University, or any College within it, shall be recognised as Professor, without the express authority of the Senate.

PROCTORIAL BOARD.

26. The Chancellor, the Vice-Chancellor, the Senior Professor of Classics, the Senior Professor of Mathematics, and the Senior Professor of Chemistry and Experimental Physics, shall form a Board, to be called the "Proctorial Board," to which shall be confided the duty of enforcing the observance of order on the part of the undergraduates of the University. This Board shall make such regulations as it may deem expedient for the maintenance of discipline amongst the undergraduates, and shall have the power of inflicting, or authorising to be inflicted, all such academic punishments as are sanctioned by the present usage of British Universities, including fines to an amount not exceeding five pounds (£5) for any one offence: Provided, however, that the Board shall not proceed to the expulsion of any undergraduate, or to his suspension for a period exceeding one term, without the express authority of the Senate.

27. No question shall be decided at any meeting of this Board unless three members at the least shall be present.

28. At meetings of this Board the Chair shall be occupied by the Chancellor, or in his absence by the Vice-Chancellor, or, in the absence of both, by the Dean of the Faculty of Arts; and in the event of an equality of votes at any meeting the Chairman shall have a casting vote. At meetings of this Board the Registrar of the University shall attend and record the proceedings, and it shall be his duty to collect all fines imposed by or under the authority of the Board. It shall be

* The legally-qualified voters are Fellows of the Senate for the time being, Professors, Public Teachers and Examiners in the Schools of the University, Principals of Incorporated Colleges within the University, Superior Officers of the University, declared to be such by By-law, and Graduates who shall have taken any or either of the Degrees of M.A., LL.D., or M.D. in this University.

be the duty of the Registrar to convene the Board, on the requisition of any one of its members, at such time, within seven days from the date of the requisition, as may be directed by the Chancellor, or in his absence by the Vice-Chancellor, on whom it shall be incumbent to give such direction on the Registrar's application. In the event of the absence of the Chancellor and Vice-Chancellor, the time of meeting shall be fixed by the Dean of the Faculty of Arts.

BOARD OF STUDIES.

29. The Chancellor, the Vice-Chancellor, and the Professors of the three several Faculties, shall form a Board, to be called the Board of Studies, for the consideration of all general questions relating to the studies of the University which may be referred to them by the Senate.

DEANS OF FACULTIES.

30. A Dean for each of the Faculties in the University shall be elected by the Senate from time to time for a term of three years.

31. In the event of the office of Dean becoming vacant, by death, resignation, or otherwise, before the expiration of the full term of office herein prescribed, the election of a successor shall be proceeded with at the next ensuing regular meeting of the Senate; and the Dean so appointed shall hold office until the first regular meeting of the Senate in the Term next after the expiration of three years from the date of such election.

TERMS.

32. The Academic Year shall contain three Terms, that is to say:—

Trinity Term—Commencing on the first Monday in June, and terminating with the last Saturday in August.

Michaelmas Term—Commencing on the first Monday in October, and terminating with the third Saturday in December.

Lent Term—Commencing on the first Monday in March, and terminating with the third Saturday in May.

FACULTY OF ARTS.

Subjects of Study.

33. Professors and Lecturers, appointed by the Senate, shall give instruction in the following subjects:—

1. Greek Language and Literature.
2. Latin Language and Literature.
3. Ancient History.
4. Mathematics.
5. Natural Philosophy.
6. Chemistry.
7. Experimental Physics.
8. Geology.
9. Mineralogy.

Board of Examiners.

34. The Professors in the Faculty of Arts, together with such other persons as may from time to time be appointed by the Senate, shall form a Board of Examiners for conducting the Examinations in the Faculty of Arts, and of this Board the Dean of the Faculty, or in his absence, the Professor next in seniority, shall be Chairman.

35. The Board of Examiners shall from time to time, and in accordance with the provisions of the By-laws for the time being, frame rules, and appoint times and places for the several Examinations in the Faculty of Arts.

36. At the conclusion of each Examination the Board shall transmit to the Senate a report of the result, signed by the Chairman, and by at least two other members.

Matriculation.

37. Candidates for Matriculation must make application to the Registrar before the commencement of Trinity Term.

38. The Matriculation Examination shall take place during the first fortnight of Trinity Term, commencing on the second day of that term; but the Examiners, in special cases, with the sanction of the Chancellor or Vice-Chancellor, are authorised to hold such Examinations at such other times as may be deemed expedient.

39. The Examination shall be conducted by means of written or printed papers; but the Examiners shall not be precluded from putting *visd voce* questions.

40. The names of all candidates who have passed the Matriculation Examination shall be arranged alphabetically; but it shall be competent to the Examiners to place in a separate class the names of those who may have specially distinguished themselves.

41. Students who shall have passed the Matriculation Examination, and shall have paid a fee of Two Pounds to the Registrar, may be admitted by the Senate as Members of the University.

42. The Examination for Matriculation shall be in the following subjects:—

- The Greek and Latin Languages.
- English Grammar and Composition.
- *Elementary Chemistry, Physics, or Geology.
- Arithmetic.
- Algebra, to simple equations, inclusive.
- Geometry, first book of Euclid.

Lectures.

43. Lectures shall commence on the first day of Term, excepting in the first or Trinity Term, in which they shall commence on the Monday after the conclusion of the Matriculation and other Examinations hereinafter provided for.

44. Lectures of an hour each shall be given by the Professors in Classics, Mathematics, and Natural Science, at such times and in such order as the Senate may from time to time direct.

45. Before the admission of a student to any course of lectures, he shall pay to the Registrar of the University such fee as shall have been appointed by the Senate.

46. Full and complete tables of lectures and subjects of examinations shall be printed in the Calendars and posted at the University from time to time.

47. Candidates for degrees shall during their first year attend the University lectures on the following subjects:—

1. Greek, except when exempted under clause 72.
2. Latin.
3. Mathematics.
4. Chemistry or Experimental Physics.

48. Candidates for degrees shall during their second year attend the following lectures:—

1. Greek, except when exempted as aforesaid.
2. Latin.
3. Mathematics and Natural Philosophy.
4. Chemistry or Experimental Physics, for two Terms.
5. Geology, for one Term.

49. Lectures shall be given during the third year on the following subjects:—

1. Classics.
2. Mathematics: on the additional subjects required for honors.
3. Practical Chemistry, Geology, and Mineralogy.

Exemption from Lectures.

50. Any undergraduate not holding a Scholarship in the University, nor being a Member of a College established under the provisions of the Act 18 Victoria, No. 37, may be exempted from attendance upon any or all of the above-named lectures, upon producing evidence which shall satisfy the Senate that there are sufficient reasons for such exemption: Provided that no such exemption shall be granted for more than one year at any one time.

51.

51. Any person may be exempted from attendance upon the University lectures, under section 50 of the By-laws, who shall satisfy the Senate that he is prevented from attending by the necessities of his position: Provided always that no application for such exemption shall be entertained until the applicant shall have passed the Matriculation Examination, and the Examiners shall have specially certified to the Senate that his abilities and attainments are such as to enable him, in their opinion, taking into consideration all the circumstances of the case, to keep up with the usual course of study at the University without attendance upon lectures. Undergraduates admitted *ad eundem statum*, and who are not required to pass the Matriculation Examination, shall nevertheless be required to pass a Special Examination to be certified by the Examiners as above, before obtaining exemption from attendance upon lectures.

Yearly Examinations.

52. The yearly examinations shall be held during the first fortnight of Trinity Term, and no undergraduate shall absent himself therefrom except under medical certificate.

53. The undergraduates of the first and second year shall be examined in the subjects of the undergraduate course upon which lectures have been given during the year.

54. No undergraduate not exempted under section 51 from attendance upon lectures shall be admitted to these examinations who, without sufficient cause, shall have absented himself more than three times during any one term from any prescribed course of lectures.

55. Every undergraduate exempted from attendance upon lectures under section 51 shall, before being admitted to any yearly examination, pay to the Registrar a fee of Two Pounds. If any such candidate fail to pass the examination, the fee shall not be returned to him, but he may be admitted again to examination without the payment of any additional fee.

56. Candidates who pass the second yearly examination in the Mathematical School shall not be required to pass any further examination in that school. Those who fail to pass shall be required again to attend the second year course of lectures, and to pass the next succeeding yearly examination in that school.

57. The provisions of the last clause shall apply also to the Natural Science School.

58. Candidates who shall have obtained at least a second-class place at the second yearly examination in the Classical School may elect to be exempted from further attendance upon lectures, and from further examination in that school: Provided always that any candidate so exempted shall during the ensuing year be required either to attend the third year course of lectures, and to pass the consequent examination in the Mathematical School, or to attend the third year course of lectures and to pass the consequent examination in Natural Science.

59. After examination the names of the undergraduates shall be arranged in classes, and in order of merit.

60. Prize books, stamped with the University Arms, shall be given to each student who shall be placed in the first class in each year.

61. Such undergraduates as absent themselves from the examinations, except under medical certificate, or fail to pass them in a satisfactory manner, shall, at the discretion of the Senate; on the report of the Examiners, be required to keep additional terms before proceeding to the B.A. degree.

62. Undergraduates who shall have passed the yearly examinations shall receive certificates to that effect, signed by the Dean of the Faculty of Arts and by the Registrar.

Admission ad eundem statum.

63. Undergraduates who have kept terms at other Universities may, at the discretion of the Senate, be admitted *ad eundem statum* in this University, without examination: Provided always that they shall give to the Registrar, to be submitted to the Senate, sufficient evidence of their alleged *status* and of good conduct.

Bachelor of Arts.

64. The examination for the degree of B.A. shall take place once a year, at the beginning of Trinity Term.

65. No candidate shall be admitted to this examination unless he produce a certificate from the Dean of the Faculty of Arts of having complied with the regulations. This certificate shall be transmitted to the Registrar before the day appointed for the commencement of the examination.

66. The fee for the degree of B.A. shall be Three Pounds. No candidate shall be admitted to the examination unless he have previously paid this fee to the Registrar. If a candidate fail to pass the examination, the fee shall not be returned to him; but he shall be admissible to any subsequent examination for the same degree without the payment of an additional fee.

67. The examination shall be conducted in the first instance by means of printed papers; and at the termination of such examination each candidate shall undergo a *viva voce* examination if the Examiners think fit.

68. To obtain the degree of B.A. candidates shall pass satisfactory examinations in two at least of the following schools:—

1. Classical—The Greek and Latin Languages, and Ancient History.
2. Mathematical—Mathematics and Natural Philosophy.
3. Natural Science—Chemistry, Experimental Physics, Practical Chemistry, Geology, and Mineralogy.

69. All persons who have passed the ordinary examination for B.A. shall be admissible for honors in the Classical, Mathematical, and Natural Science Schools.

70. The candidates in each school shall be arranged in classes, and the first class in order of merit.

71. The most distinguished candidate for honors in each of the aforesaid schools shall, if he possess sufficient merit, receive a prize of Ten Pounds.

Exemption from Greek.

72. Any candidate for Matriculation, or candidate for the degree of B.A., shall, on application to the Senate, be exempted from examination in Greek at any of the examinations provided for in these By-laws, and from attendance on lectures in that subject; but any person so exempted shall be required to show a greater proficiency in Latin, and no such candidate shall be eligible to any scholarship for general proficiency, nor for classical honors at the examination for the degree of B.A. Undergraduates so exempted shall be required during their third year to attend lectures in Latin, Mathematics, and Natural Science, and to pass the examination for the degree of B.A. in those subjects.

Master of Arts.

73. There shall be a yearly examination for the degree of M.A. during Lent Term, or at such other times as the Examiners, with the sanction of the Chancellor or Vice-Chancellor, may appoint.

74. Every candidate for this degree must have previously obtained the degree of B.A., and two years must have elapsed since the time of his examination for such degree. He will also be required to furnish evidence of having completed his twenty-first year.

75. The fee for the degree of M.A. shall be Three Pounds. No candidate shall be admitted to the examination unless he have previously paid this fee to the Registrar. If a candidate fail to pass the examination, the fee shall not be returned to him; but he shall be admissible to any subsequent examination for the same degree, without the payment of an additional fee.

76. Candidates for the degree of M.A. shall elect to be examined in one or more of the following branches of knowledge:—

1. Classical Philology and History.
2. Mathematics and Natural Philosophy.
3. Logic; Moral, Mental, and Political Philosophy.
4. Natural Science.

The candidate most distinguished in each branch at the examination shall, if he possess sufficient merit, receive a gold medal.

77. The Senate may, at their discretion, admit to examination, for the degree of Master of Arts, any person who shall have obtained, at least two years previously, the degree of Bachelor of Arts, or equivalent first degree in Arts, in any other University approved by the Senate. Every candidate for admission under this By-law must make application in writing to the Registrar, and supply satisfactory evidence of his qualification as aforesaid, and that he is a person of good fame and character; and, upon the approval of his application, shall pay to the Registrar a fee of Five Pounds. Every candidate, before he is admitted to his degree, shall be required to furnish evidence of having completed his twenty-first year.

Scholarships.

Scholarships.

78. In addition to such Scholarships as the Senate may from time to time determine to award, the following Foundation Scholarships, tenable for one year, shall be awarded after examination, in the following manner, namely:—

To undergraduates of the *first* year:—

For general proficiency—The *Levy Scholarship*.

To undergraduates of the *second* year:—

For General Proficiency—The *Lithgow Scholarship*, founded in 1864.

To undergraduates of the *third* year:—

1. For proficiency in Classics—the *Cooper Scholarship*, founded in 1857.

2. For proficiency in Mathematics and Natural Philosophy—the *Barker Scholarship*, founded in 1853.

3. For proficiency in Chemistry and Experimental Physics—the *Deas-Thomson Scholarship*, founded in 1854.

79. None of the above Scholarships shall be awarded except to such candidates as exhibit a degree of proficiency which shall be satisfactory to the Examiners.

80. The Examination for Scholarships shall be concurrent with the Matriculation and Yearly Examinations, additional papers and questions being set where required.

FACULTY OF LAWS.*Bachelor of Laws.*

81. Until Professorships are established, there shall be a Board of Examiners appointed by the Senate to test the qualifications of candidates desirous of obtaining a degree in Laws. The Examination for the degree of LL.B. shall take place at such times as the Examiners, with the sanction of the Chancellor or Vice-Chancellor, may appoint.

82. Every candidate for the degree of LL.B. shall lodge with the Registrar satisfactory evidence of having taken the degree of B.A., or some equivalent degree, at least one year previously, in this or in some other University approved by the Senate. Every such candidate shall also furnish satisfactory evidence that he is a person of good fame and character, and that he has completed his twenty-first year.

83. The fee for the degree of LL.B. shall be Ten Pounds. No candidate shall be admitted to the examination unless he have previously paid this fee to the Registrar. If the candidate fail to pass this examination the fee shall not be returned to him, but he shall be admissible to any subsequent examination for the same degree without the payment of an additional fee.

84. Candidates for the degree of LL.B. shall be examined in the following subjects:—

Roman, Civil and International Law.

Constitutional History, and Constitutional Law of England.

General Law of England.

Doctor of Laws.

85. The degree of LL.D. shall not be conferred until after the expiration of seven academic years from the granting of the LL.B. degree. Every candidate shall be required to pass an examination in the Civil Law in the original Latin, with especial reference to such particular works as the Examiners may from time to time determine. The fee for the degree of LL.D. shall be Ten Pounds sterling.

86. The Senate shall have power to admit to examination for the degree of LL.D. any person who shall have obtained, at least two years previously, the degree of LL.B., at any other University approved by the Senate, and who shall also have obtained the degree of Bachelor of Arts, or an equivalent first degree in Arts, at any such University, or shall pass an examination similar to that prescribed for the degree of Bachelor of Arts in this University. Every candidate for admission under this By-law must make application in writing to the Registrar, and supply satisfactory evidence of his qualifications as aforesaid, and that he is a person of good fame and character; and upon the approval of his application, he shall pay to the Registrar a fee of Two Pounds for the entry of his name in the University Books, in addition to the prescribed fee for his degree.

FACULTY OF MEDICINE.*Bachelor of Medicine.*

87. A Professor, appointed by the Senate, shall give Lectures in Chemistry.

88. Until other Professorships in the Faculty of Medicine be constituted in the University, there shall be a Board of Examiners, appointed by the Senate, to test the qualifications of candidates who may apply for medical degrees, to be granted in accordance with the provisions contained in the Act of Incorporation.

89. Such candidates must lodge with the Registrar of the University satisfactory evidence of having taken the degree of B.A., or some equivalent degree, in this or in some other University approved by the Senate. Candidates who have not taken such degree must pass an examination similar to that prescribed for the B.A. degree in this University.

90. The candidate must also furnish evidence that he is of good fame and character, that he is not under twenty-one years of age, and that he has diligently pursued a course of medical studies extending over a period of four years, at some Medical School approved of by the Senate. His certificates must show that he has attended the following eight classes, each for a course of six months—Anatomy, Practical Anatomy, Physiology, Chemistry, Materia Medica, Surgery, Practice of Medicine, Midwifery; and the following five classes, each for a course of three months—Botany, Practical Chemistry, Medical Jurisprudence, Clinical Medicine, and Clinical Surgery; also that he has attended for eighteen months the medical and surgical practice of a hospital containing not fewer than eighty beds; and that he has been engaged for six months in compounding and dispensing medicines.

91. Medical or surgical diplomas from regularly constituted Examining Boards on Europe or America may, at the discretion of the Senate, be accepted as equivalent to the whole or part of the above-mentioned certificates.

92. As soon as the required documents have been declared satisfactory to the Senate, the Registrar shall notify to the candidate the day on which his examination will commence.

93. Before being admitted to examination, the candidate must deposit with the Registrar a fee of Ten Pounds, which will not be returned in the event of the candidate not passing the examination; but such candidate may be admitted to any future examination without any further charge.

94. Upon compliance with the above regulations, and on the report of the Examiners that the candidate has passed a satisfactory professional examination, the Senate shall confer upon him the degree of M.B.

Doctor of Medicine.

95. The degree of M.D. shall not be conferred until after the expiration of two academic years from the granting of the M.B. degree.

96. The candidate must produce evidence that, after having obtained the degree of M.B., he has spent two years in hospital practice, or three years in practice, either private or in the public service. He shall also be required to produce a certificate from the Superintendent of a Public Lunatic Asylum of diligent attendance at such Asylum for three months, such attendance being either before or after his obtaining the degree of M.B. Further, he shall be required to prepare and defend a thesis on some medical subject, to be selected by himself; such thesis shall be in the Latin or English language, and, if approved by the Senate, on the report of the Board of Examiners, may be printed; and he shall be required to pass an examination in Psychological Medicine, provided he has not previously passed such an examination in proceeding to the degree of M.B.

97. The fee for the degree of M.D. shall be Ten Pounds.

98. The Senate shall have power to admit to examination for the degree of Doctor of Medicine any person who shall have obtained, at least two years previously, the degree of Bachelor of Medicine or some corresponding first degree in Medicine at any other University approved by the Senate. Every candidate for admission under this By-law must make application in writing to the Registrar, and supply satisfactory evidence of his qualifications as aforesaid, and also that he is a person of good fame and character. Upon the approval of his application, he shall pay to the Registrar a fee of Two Pounds for the entry of his name in the University Books, in addition to the prescribed fee for his degree. Before the granting of the degree, every passed candidate will be required to furnish evidence of having completed his twenty-third year.

REGISTER

REGISTER OF GRADUATES.

99. A Register of the Graduates of the University shall be kept by the Registrar in such manner as the Senate shall from time to time direct, and such Register shall be conclusive evidence that any person whose name shall appear thereon as holding the degree of Master of Arts, Doctor of Laws, or Doctor of Medicine, at the time of his claiming to vote at a Convocation for the election of a Fellow of the Senate, is so entitled to vote; and that any person whose name shall not appear thereon, at the time of his claiming to vote in Convocation, is not so entitled to vote.

SUBSTITUTES FOR OFFICERS.

100. Any act required by the By-laws to be performed by any officer of the University may, during the absence or other incapacity of such officer, unless otherwise provided, be performed by a person appointed by the Senate to act in his place.

ACADEMIC COSTUME AND DISCIPLINE.

101. The Academic Costume shall be: for—

The Chancellor and the Vice-Chancellor—a robe and cap similar to those worn by the Chancellor of the University of Oxford. In undress, the silk gown worn by other members of the Senate—black velvet cap, and gold tassel.

A Member of the Senate—the habit of his degree, or a black silk gown (of the description worn by civilians holding degrees from Oxford and Cambridge), with tippet of scarlet cloth edged with white fur, and lined with blue silk,—black velvet trencher cap.

Doctor of Laws or Medicine—the gown worn by graduates of the same rank in the University of Oxford,—hood of scarlet cloth lined with blue silk,—black cloth trencher cap.

Master of Arts—the ordinary Master's gown of Oxford or Cambridge, of silk or bombazine, with black silk hood lined with blue silk,—black cloth trencher cap.

Bachelor of Laws or Medicine—the black gown worn by civilians in Oxford or Cambridge holding degrees, with hood of blue silk lined with white fur,—black cloth trencher cap.

An officer not being a graduate—a black silk gown of the description worn by civilians not holding degrees,—black cloth trencher cap.

Bachelor of Arts—a plain black stuff gown, with hood similar to that worn by the B.A. at Cambridge,—black cloth trencher cap.

Undergraduate—a plain black stuff gown,—black cloth trencher cap.

Scholar—the same gown, with a velvet bar on the sleeve,—black cloth trencher cap.

102. Members of the University shall, on all public occasions when convened for academic purposes, appear in their academic costume.

103. The undergraduates shall appear in academic costume when attending lectures, and on all public occasions in the University; and whenever they meet the Fellows, Professors, or other superior Officers of the University, shall respectfully salute them.

104. A journal shall be kept by the Registrar, in which he shall keep a daily record of the lectures delivered by each Professor, the number of students present, and also the names of the students reported by the Professor to be absent. This journal to be laid on the table at the monthly meetings of the Senate.

NON-MATRICULATED STUDENTS.

105. Any person desirous of attending University lectures may do so without Matriculation, upon payment of such fees as the Senate may from time to time direct.

PUBLIC EXAMINATIONS.

106. Two Public Examinations shall be held every year; the one to be called the Junior Public Examination, and the other to be called the Senior Public Examination, and shall be open to all candidates, male or female, who may present themselves.

107. The Public Examinations shall be held at such times and at such places as the Senate may from time to time appoint.

108. The subjects of the Junior Public Examinations shall be the English Language and Literature, History, Geography, the Latin, Greek, French, and German Languages, Arithmetic, Algebra, Geometry, and such other branches of learning as the Senate may from time to time determine.

109. The subjects of the Senior Public Examination shall be those mentioned in the foregoing section, together with Trigonometry, Conic Sections, Natural Philosophy, Chemistry, Experimental Physics, and Geology.

110. Every candidate who shall pass either of these examinations, or such portions of either of them as may be required by the rules or orders of the Senate in force for the time being, shall receive a certificate to that effect, specifying the subjects in which he shall have passed, and signed by the Dean of the Faculty of Arts and by the Registrar.

111. No person shall be admitted to either of the Public Examinations until he shall have paid such fees as may be required by the rules or orders of the Senate in force for the time being.

112. The Professors and Assistant Professors not engaged in tuition, except publicly within the University, together with such other persons as the Senate may from time to time appoint, shall form a Board for conducting the Public Examinations; and of this Board the Dean of the Faculty of Arts, or, in his absence, the Professor next in seniority, shall be Chairman.

113. At the conclusion of each examination, the Board shall transmit to the Senate a report of the result, signed by the Chairman and at least one other member.

114. Subject to these By-laws, the Public Examinations shall be conducted according to such rules or orders as the Senate may from time to time establish.

DIRECTIONS FOR CONDUCTING THE PUBLIC EXAMINATIONS.

1. The Public Examinations shall be held annually at the University, in the month of November, commencing on the first Monday in that month.

2. The fee for admission to the Junior Public Examinations shall be £2, and to the Senior Public Examinations £3. Candidates holding certificates of having passed the Junior Public Examination shall be admitted to the Senior Public Examination upon payment of an additional fee of £1.

3. A candidate holding a certificate of having passed the Junior Examination, and being a candidate for matriculation, shall be admitted to any subsequent junior examination in any of the sections in which he has not already passed, without the payment of any additional fee; and in case of his passing in any such sections he shall receive a certificate to that effect. The same rule shall apply to candidates holding certificates of having passed the senior examination; but no such candidate shall be allowed to compete for honors in any section in which he has already passed. These exemptions shall extend to one additional examination only.

4. Candidates who shall have failed to pass the examination may be admitted to any subsequent examination without the payment of any additional fee, but this exemption shall not extend to more than two examinations.

5. In addition to the regular examination in November, the Board of Examiners are authorized, at their discretion, to hold Junior Public Examinations in Sydney at such other times as they may consider desirable, provided that not more than one such examination shall be held in the same term.

6. No candidate shall be admitted to either of the public examinations unless he shall have notified to the Registrar his intention to become a candidate, specifying the subjects in which he elects to be examined, and shall have paid to the Registrar the required fee, fourteen days before the commencement of the examination.

7. The examination shall be conducted by means of written or printed papers and *visà voce* at the discretion of the Examiners.

8. Public examinations may be held at any place within the Colony where a person, approved by the Senate, can be found to conduct the examination; provided always that the aggregate amount of fees paid by candidates at any such place shall be sufficient to defray the expenses of such examination.

9. Local examinations, as provided for in clause 8, shall be held at the same time as those at the University, and shall be conducted as follows :—

- (a) Copies of the papers to be set at the public examinations at the University, together with such additional papers as the absence of *visá voce* examination may render necessary, shall be transmitted under seal to the person appointed by the Senate to conduct the local examinations.
- (b) Candidates shall write out answers to the questions set, in the presence of the person appointed to conduct the examination, or of some person deputed by him, and in accordance with such detailed instructions as may be furnished by the Chairman of the Board of Examiners.
- (c) The written answers shall be transmitted to the Board of Examiners, who shall examine them, and report thereon to the Senate.
- (d) The person conducting the local examination shall receive such remuneration for his services as the Senate may in each case determine.

10. The Senate may, at their discretion, send an Examiner or Examiners to conduct the local examinations at any place within the Colony.

JUNIOR EXAMINATION.

11. The subjects for the Junior Public Examination shall be those comprised in the following Sections :—

Section I.

Writing from dictation.

The rudiments of English Grammar.

The first four rules of Arithmetic—simple and compound, and the Rule of Three.

Geography.

The outlines of English History since the Conquest ; that is, the succession of Sovereigns, and the chief events of each reign.

All candidates will be required to pass in this Section.

Section II.

English.—Language, Grammar, and Composition.

Book recommended :—Latham's smaller Grammar.

Section III.

Latin.—Passages for translation from *Cæsar's Commentaries*, B. I. Easy passage for translation from some other Latin author. Short sentences for translation into Latin. Questions on historical and other allusions, and parsing.

Section IV.

Mathematics.—Arithmetic, Euclid, B. I, Algebra to simple equations, without surds.

Section V.

Mathematics.—Euclid, B. II, excepting Props., 8, 9, 10, and B. III. Algebra to proportion, including quadratic equations of one or two unknown quantities and surds.

Section VI.

English History.—From the Norman Conquest to the accession of Queen Victoria. An acquaintance with Dr. Smith's smaller History of England, or any similar work, will be sufficient to enable a candidate to pass in this Section.

Section VII.

Geography.—Physical features and political divisions.

Section VIII.

French.—Passages for translation from *Voltaire's Life of Charles XII*, B. I and II, with a further examination similar to that in Latin.

Section IX.

German.—Passages for translation from *Lessing's Fables*, with a further examination similar to that in Latin.

Section X.

Greek.—Passages for translation from *Xenophon, Anabasis*, B. I, with a further examination similar to that in Latin.

Every candidate, in addition to section I, will be required to pass in two at least of the remaining Sections, of which one at least must be II, III, IV, or V ; and in the case of female candidates, II, III, IV, V, or VIII.

SENIOR EXAMINATION.

12. The subjects for the Senior Public Examination shall be those comprised in the following Sections :—

Section I.

The same as for the Junior Examination. All candidates will be required to pass this Section, except those who hold certificates of having passed the Junior Examination.

Section II.

English.—Grammar, Analysis, and Composition.

Book recommended :—Latham's smaller Grammar.

Section III.

Latin.—Passages for translation from *Livy*, B. XXI, and *Horace, Odes*, B. III. Questions on historical and other allusions and grammar. Passages for translation from other Latin works. A passage of English for translation into Latin prose.

Section IV.

Arithmetic and Algebra, including logarithms. A satisfactory knowledge of arithmetic and of algebra to the Binomial Theorem inclusive, shall entitle a candidate to pass in this section.

Section V.

Geometry.—Euc., B. I, B. II, Props. 1-7, 11-14 ; B. III, B. IV, Props. 1-9, 15 ; B. V. Definitions ; B. VI, Props. 1-3, 4-16, 19-21, 23, 33 ; B. XI, Prop. 1-21.

A satisfactory knowledge of the portions required of Books I-IV shall entitle a candidate to pass in this Section.

Section VI.

History.—Political and Constitutional History of England, from the Norman Conquest to the Accession of Queen Victoria.

Section VII.

Geography.—Political, Physical, and Commercial.

Section VIII.

French.—Passages for translation from Guizot's *Histoire de la Révolution d'Angleterre*, and Racine's *Athalie*, with a further examination similar to that in Latin.

Section IX.

German.—Passages for translation from Schiller's *Thirty Years' War*, B. II and III, with a further examination similar to that in Latin.

Section X.

Greek.—Passages for translation from the *Ion* of Euripides, with a further examination similar to that in Latin.

Section XI.

Mathematics.—Trigonometry, Analytical Geometry, Elementary Mechanics. A satisfactory knowledge of either of these three subjects shall entitle a candidate to pass in this section. Books recommended:—Trigonometry, Todhunter's larger work; Analytical Geometry, Todhunter's; Mechanics, Parkinson's.

Section XII.

Chemistry.—Inorganic Chemistry, Organic Chemistry. A satisfactory knowledge of Inorganic Chemistry shall entitle a candidate to pass in this Section.

Section XIII.

Geology.—General description and classification of rocks. Distribution of organic remains.

Every senior candidate, in addition to Section I, will be required to pass in two at least of the remaining Sections, of which one at least shall be II, III, IV, X, or XI; and in the case of female candidates, II, III, IV, VIII, X, or XI, but no candidate will be examined in more than six Sections in addition to the first.

13. The names of those candidates who shall pass the Junior Examination shall be arranged alphabetically.

14. The names of those candidates who pass the Senior Examination shall be arranged in classes, the names in each class being arranged alphabetically. Separate lists shall be made of those who may specially distinguish themselves in either of the following divisions:—English Language and History, and Geography; Classics; Mathematics, including Mechanics; Modern Languages; Experimental Physics and Geology; and in these lists the names shall be arranged in classes and in order of merit.

15. After the name of each candidate in the above lists shall be added the school or other educational establishment (if any) from which he comes to attend the examination, and the name of his schoolmaster or tutor.

16. A separate account shall be kept of all receipts and disbursements on account of the Public Examinations.

17. The fees shall be collected by the Registrar, and paid into the general fund of the University, and shall be appropriated in the first place to the payment of all expenses incurred, including printing, stationery, and fees paid to Examiners, other than the Professors and Assistant Professors. The residue, if any, shall be appropriated amongst the subjects of examination in proportion to the number of candidates for examination in each, the portions so appropriated to be divided amongst the Professors and Assistant Professors who shall have examined in those subjects respectively.

CIVIL SERVICE EXAMINATION.

Colonial Secretary's Office,
Sydney, 6th October, 1871.

His Excellency the Governor, with the advice of the Executive Council, and in accordance with an Address of the Legislative Assembly of the 17th February last, directs it to be notified for general information, that from and after the 1st proximo, all persons seeking appointment to a clerical office in the Public Service of the Colony, must produce a certificate signed by the Dean of the Faculty of Arts and by the Registrar of the Sydney University, showing that they have passed a satisfactory examination in Section I of the subjects appointed by the University of Sydney for the Public Examinations held by the University, viz. :—

Reading aloud a passage from some standard English author.

Writing from dictation.

The rudiments of English Grammar.

The first four rules of Arithmetic, simple and compound, and the Rule of Three.

Geography.

The outlines of English History since the Conquest—that is, the succession of Sovereigns, and the chief events of each reign.

JOHN ROBERTSON.

APPENDIX III.

UNIVERSITY OF SYDNEY.—BY-LAWS.

PUBLIC EXAMINATIONS.

106. Two Public Examinations shall be held every year; the one to be called the Junior Public Examination, and the other to be called the Senior Public Examination, and shall be open to all candidates, male or female, who may present themselves.

107. The Public Examinations shall be held at such times and at such places as the Senate may from time to time appoint.

108. The subjects of the Junior Public Examinations shall be the English Language and Literature, History, Geography, the Latin, Greek, French, and German Languages, Arithmetic, Algebra, Geometry, and such other branches of learning as the Senate may from time to time determine.

109. The subjects of the Senior Public Examination shall be those mentioned in the foregoing Section, together with Trigonometry, Conic Sections, Natural Philosophy, Chemistry, Experimental Physics, and Geology.

110. Every candidate who shall pass either of these examinations, or such portions of either of them as may be required by the Rules or Orders of the Senate in force for the time being, shall receive a certificate to that effect, specifying the subjects in which he shall have passed, and signed by the Dean of the Faculty of Arts and by the Registrar.

111. No person shall be admitted to either of the Public Examinations until he shall have paid such fees as may be required by the Rules or Orders of the Senate in force for the time being.

112. The Professors and Assistant Professors not engaged in tuition, except publicly within the University, together with such other persons as the Senate may from time to time appoint, shall form a Board for conducting the Public Examinations; and of this Board the Dean of the Faculty of Arts, or, in his absence, the Professor next in seniority, shall be Chairman.

113. At the conclusion of each Examination, the Board shall transmit to the Senate a report of the result, signed by the Chairman and at least one other member.

114. Subject to these By-laws, the Public Examinations shall be conducted according to such Rules or Orders as the Senate may from time to time establish.

DIRECTIONS FOR CONDUCTING THE PUBLIC EXAMINATIONS.

1. The Public Examinations shall be held annually at the University, in the month of November, commencing on the first Monday in that month.

2. The fee for admission to the Junior Public Examinations shall be £2, and to the Senior Public Examinations £3. Candidates who have already paid the fee of the Junior Public Examination shall be admitted to the Senior Public Examination upon payment of an additional fee of £1.

3. A candidate holding a certificate of having passed the Junior Examination shall, upon declaring his intention to matriculate, be admitted without the payment of any additional fee to Examination in any of the subjects for matriculation in which he has not already passed. The same rule shall apply to candidates holding certificates of having passed the Senior Examination; but no such candidate shall be allowed to compete for honors in such Section. These exemptions shall extend to one additional Examination only.

4. Candidates who shall have failed to pass the Examination may be admitted to any subsequent Examination without the payment of any additional fee; but this exemption shall not extend to more than two additional Examinations.

5. In addition to the regular Examination in November, the Board of Examiners are authorized, at their discretion, to hold Junior Public Examinations in Sydney at such other times as they may consider desirable, provided that not more than one such Examination shall be held in the same Term.

6. No candidate shall be admitted to either of the Public Examinations unless he shall have notified to the Registrar his intention to become a candidate, specifying the subjects in which he elects to be examined, and shall have paid to the Registrar the required fee, fourteen days before the commencement of the Examination.

7. The Examination shall be conducted by means of written or printed papers and *visà voce* at the discretion of the Examiners.

8. Public Examinations may be held at any place where a person, approved by the Senate, can be found to conduct the Examination; provided always that the aggregate amount of fees paid by candidates at any such place shall be sufficient to defray the expenses of such Examination.

9. Local Examinations, as provided for in clause 8, shall be held at the same time as those at the University, and shall be conducted as follows:—

(a) Copies of the papers to be set at the Public Examinations at the University, together with such additional papers as the absence of *visà voce* Examination may render necessary, shall be transmitted, under seal, to the person appointed by the Senate to conduct the Local Examinations.

(b) Candidates shall write out answers to the questions set, in the presence of the person appointed to conduct the Examination, or of some person deputed by him, and in accordance with such detailed instructions as may be furnished by the Chairman of the Board of Examiners.

(c) The written answers shall be transmitted to the Board of Examiners, who shall examine them, and report thereon to the Senate.

(d) The person conducting the Local Examination shall receive such remuneration for his services as the Senate may in each case determine.

10. The Senate may, at their discretion, send an Examiner or Examiners to conduct Local Examinations.

JUNIOR EXAMINATION.

11. The subjects for the Junior Public Examinations shall be those comprised in the following Sections:—

Section I.

Writing from dictation.

The rudiments of English Composition.

The first four rules of Arithmetic—simple and compound, and the Rule of Three.

All candidates will be required to pass in this Section.

Section II.

English.—Language and Grammar.

Subjects for Examination.—Milton's *Comus*, *Lycidas*, *Allegro* and *Penseroso*.

Section III.

Latin.—Passages for translation from *Cæsar's Commentaries*, B. II. Easy passage for translation from Latin. Short sentences for translation into Latin. Questions on Genders, Numerals, Inflections, &c.

Section IV.

Mathematics.—Arithmetic, Euclid, B. I., Algebra to simple equations, without surds.

Section V.

Mathematics.—Euclid, B. II., excepting props. 8, 9, 10, and B. III. Algebra to proportion, including quadratic equations of one or two unknown quantities and surds.

Section VI.

English History and General Geography.—The English History to date from the Norman Conquest to the Accession of Queen Victoria. An acquaintance with Dr. Smith's smaller History of England, or any similar work, will be sufficient.

The Geography to consist in a knowledge of the physical features of all countries, and the situations of the principal towns.

Section VII.

French.—Passages for translation from *La Fontaine's Fables*, with a further examination similar to that in Latin.

Section VIII.

German.—Passages for translation from *Lessing's Fables*, with a further examination similar to that in Latin. Every Candidate, in addition to Section I, will be required to pass in two others at the least.

Section XI.

Greek.—Passages for translation from *Xenophon, Anabasis*, B. II, with a further examination similar to that in Latin.

SENIOR EXAMINATION.

12. The subjects for the Senior Public Examination shall be those comprised in the following Sections:—

Section I:

The same as for the Junior Examination. All candidates will be required to pass this Section, except those who hold certificates of having passed the Junior Examination.

Section

Section II.

English.—Grammar, Analysis, and Composition. *Subjects:* Language. Both Parts of Henry IV.

Section III.

Latin.—Passages for translation from Livy, B. I, and Horace, Odes, B. II. Questions on Historical and other allusions, and Grammar. A passage of English for translation into Latin prose.

Section IV.

Arithmetic and Algebra, including logarithms. A satisfactory knowledge of Arithmetic and of Algebra to the Binomial Theorem, inclusive, shall entitle a candidate to pass in this Section.

Section V.

Geometry.—Euc., B. I, B. II, Props. 1-7, 11-14; B. III, B. IV, Props. 1-9, 15; B. V, Definitions; B. VI, Props. 1-3, 4-16, 19-21, 23, 33; B. XI, Props. 1-21.

A satisfactory knowledge of the portions required of Books I-IV shall entitle a candidate to pass in this Section.

Section VI.

History of Europe, from the beginning of the Eleventh to the Eighteenth Century; and *Geography*, Physical, Political, and Commercial.

Section VII.

French.—Passages for translation from Voltaire's *Siècle de Louis Quatorze*, and Racine's *Esther*; with a further examination similar to that in Latin.

Section VIII.

German.—Passages for translation from Schiller's *Thirty Years' War*, B. II and III; with a further examination similar to that in Latin.

Section IX.

Greek.—Passages for translation from the first four Books of the *Iliad*; with a further examination similar to that in Latin.

Section X.

Mathematics.—Trigonometry, Analytical Geometry, Elementary Mechanics.

A satisfactory knowledge of any one of these three subjects shall entitle a candidate to pass in this Section.

Books recommended:—Trigonometry, Todhunter's larger work; Analytical Geometry, Todhunter's; Mechanics, Parkinson's.

Section XI.

Chemistry.—Inorganic Chemistry, Organic Chemistry, and Experimental Physics.

Section XII.

Geology.—General description and classification of rocks. Distribution of organic remains.

Every senior candidate, in addition to Section I, will be required to pass in two at least of the remaining Sections.

13. The names of those candidates who shall pass the Junior Examination shall be arranged alphabetically.

14. The names of those candidates who pass the Senior Examination shall be arranged in classes, the names in each class being arranged alphabetically. Separate lists shall be made of those who may specially distinguish themselves in either of the following divisions:—English Language, and History and Geography; Classics; Mathematics, including Mechanics; Modern Languages; Chemistry and Experimental Physics and Geology; and in these lists the names shall be arranged in classes and in order of merit.

15. After the name of each candidate in the above lists shall be added the name of his school or of his private teacher.

16. A separate account shall be kept of all receipts and disbursements on account of the Public Examinations.

17. The fees shall be collected by the Registrar and paid into the general fund of the University, and shall be appropriated in the first place to the payment of all expenses incurred, including printing, stationery, and fees paid to Examiners, other than the Professors and Assistant Professors. The residue, if any, shall be appropriated for payment of the members of the Examining Board.

CIVIL SERVICE EXAMINATION.

Colonial Secretary's Office,
Sydney, 6th October, 1871.

His Excellency the Governor, with the advice of the Executive Council, and in accordance with an Address of the Legislative Assembly of the 17th February last, directs if to be notified for general information that from and after the 1st proximo all persons seeking appointment to a clerical office in the Public Service of the Colony must produce a certificate signed by the Dean of the Faculty of Arts and by the Registrar of the Sydney University, showing that they have passed a satisfactory examination in Section I* of the subjects appointed by the University of Sydney for the Public Examinations held by the University, viz.:—

Reading aloud a passage from some standard English author.

Writing from dictation.

The rudiments of English Grammar.

The first four rules of Arithmetic, simple and compound, and the Rule of Three.

Geography.

The outlines of English History since the Conquest—that is, the succession of Sovereigns, and the chief events of each reign.

JOHN ROBERTSON.

DIRECTIONS TO CANDIDATES FOR THE PUBLIC EXAMINATIONS.

[Candidates are directed to read these Rules carefully and to observe them strictly. They are further required to take notice that, in the event of any violation of the Rules respecting the mode of sending up their papers, by omission to fix the right number, or otherwise, their work will not be looked over until after the declaration of the result of the Examination, nor will their names appear in the published lists.]

No books or manuscripts allowed to be brought into the Examination Room, or into the building where the Examination is held.

No communication, by word or otherwise, between candidates, or any one, except the person presiding and the attendants, is allowed during the Examination.

No candidate to leave his place during the Examination without permission; but if he wishes to leave the room, or to communicate with the person presiding, he may stand up; and in the event of his being allowed to retire for any necessary purpose, he shall remain under sufficient supervision during his absence.

Any candidate violating any of the above regulations is liable to be immediately expelled from the Examination Room.

Each candidate is directed—

To write upon *half sheets* of foolscap paper, and upon *one side* only.

To lay his papers, when finished, close beside him, with the *face downwards*. Any candidate violating this rule, and so enabling his work to be seen by his neighbour, will be liable to be considered as conniving at copying.

To place his distinctive *number* (which will be privately communicated to each candidate before the Examination) at the *head* of every paper which he sends up.

To

* NOTE.—This refers to Section I as it stood in the year 1875; but henceforth the Civil Service Examination will be altogether distinct from the Public Examination; nor will any one who has entered for the Civil Service be exempted from payment of the Public Examination fee if he desires to present himself as a candidate.

To attach to each answer the *letter* corresponding with the question, and *nothing else*.

To write on the *outside* of his papers, when folded up, the name of the subject, his distinctive number, and the *letter S., J., or P.*, according as he is a candidate for the Senior, the Junior, or the Preliminary Examinations.

No candidate to write upon his papers his name or initials, or anything else whatever, except the answers to the questions, and what is directed by these Regulations.

Candidates are forbidden to communicate to *any one* the numbers by which they are distinguished, until the result of the Examination has been publicly declared.

In answer to the mathematical questions, *the whole* of the work must be sent up. No marks will be given for *answers only*.

INSTRUCTIONS TO PERSONS APPOINTED TO CONDUCT PUBLIC EXAMINATIONS IN COUNTRY PLACES.

The person conducting the Examination, or some responsible person appointed by him, to remain in the room with the candidates during the whole time of the Examination.

Arrangements to be made so that in case a candidate is allowed to leave the room for any necessary purpose, there may be security that he remain under sufficient supervision during his absence.

The seal of the envelope containing the Examination Paper for the day to be broken at the appointed hour, and in the presence of the candidates. This regulation is recommended particularly to the notice of those whom it concerns, inasmuch as any deviation from this rule will render the Examinations throughout the Colony null and void.

The printed passages furnished for dictation are to be read *slowly* to the candidates by the person presiding, at any convenient time during the first day's Examination.

Before reading for Dictation, the passage to be read to the candidates, in order that they may understand its meaning.

At the conclusion of the Dictation, the candidates to be allowed a few minutes to read over and correct what they have written.

In the Civil Service Examination, the candidates are required to read aloud a short passage from some standard English author; and the person presiding is requested to transmit to the Examiners his opinion of their performance.

The attention of the person presiding is particularly directed to the rule which provides that candidates, when they have finished their papers, shall turn them with the *face downwards*.

At the conclusion of each day's Examination, the answers sent in by the candidates to be transmitted by post, as a book parcel, to the Chairman of the Board of Examiners, University.

All persons conducting the Examination to furnish *white* foolscap paper and other necessary stationery, and to provide for sufficient table accommodation, so that the candidates may be kept at a reasonable distance from one another. Alphabetical arrangement to be observed, except in the case of members of the same family, who must not be allowed to sit together.

All expenses for telegrams, postage, stationery, hire of tables, &c., to be charged to the University.

No persons except the attendants or the assistants of the person presiding to be allowed access to the Examination Room during the Examination.

A copy of this paper to be posted up in the Examination Room.

A FEW HINTS TO CANDIDATES PREPARING FOR THE JUNIOR PUBLIC EXAMINATION IN SECTION II.

THE subjects pertaining to this Section, on which questions will be asked, may be classed under four heads: 1. Parsing.— In naming the parts of speech, the candidate is not bound to use the same words as are to be found in Dr. Latham's Grammar. Any words employed in other grammars will equally satisfy the Examiners. For instance, if in parsing the sentence, "Seeing is believing," he were to call the first or the last word a participle, this would be marked as a blunder, but he would be free to call it a participial noun, or an infinitive, or by any other *name* which showed that he did not confound it with a participle. In like manner, there are certain words which appear in some grammars as adverbs, and in others as conjunctions; here, also, it would not be imputed as a fault to the candidate if he followed one grammar rather than another; but it will save the student's time to understand that, neither in parsing, nor in answering any other question, will it be necessary for him to know the classes of adjectives, or adverbs, or conjunctions, as given in certain grammars; the ordinary divisions of the noun substantive and the verb are the only ones which will be required of him. With regard to the moods, it will save a student much trouble if he treated the so-called conditional and subjunctive moods as merely artificial uses of the potential, but, if he has been taught otherwise, he can answer as he has been taught, without fear of its being imputed to him as a fault. The errors against which he has to guard, under the head of parsing, will appear in the following examples:—When *like* is used as an adverb, and he calls it an adjective, when *down* is used as a preposition, and he calls it an adverb, or when he treats such words as *that*, *far*, or *half*, or *more*, etc., otherwise than he is warranted by the sentence in which this occurs, or when he confounds the past tense with the past participle, or calls a neuter verb active, or *vice versa*, or when he fails to detect what governs or what is governed.

II. A knowledge of the meaning of words. It is obvious that no student can be entitled to pass in the English Section if he is unable to give a fair explanation of words in common use, or of such as are found in the reading books, or in authors suited to his age. The endeavour of the Examiners has been to select a number of words, not with the hope that they will all be answered, but with the expectation that every diligent student will be able to explain a fair proportion of them. The Examiners have met with answers which showed that the candidate had confounded *ambiguous* with *ambitious* or *ambitious*, *elicit* with *illicit*, *deprecate* with *depreciate*, *valid* with *invalid*, *paramour* with *paramour*. To *eliminate* was interpreted to take the *elements* of; to *invalidate* to *make strong*; to *denounce*, as to *renounce*; to *enervate*, as to *refresh the nerves*; to *imprecate*, as to *emplicate*. A hundred other instances might be added, but these will suffice to put the student on his guard. It is reported that some candidates have wasted their time in reading up the dictionary, as a preparation for answering this class of questions. The only preparation that is of the least value for such a purpose is to mark carefully what is heard or read, and to acquire a definite conception of its meaning. Without attention and thought, nothing can be learnt that is worth the learning.

III. *Etymology*. It would be unfair to expect that the boys who come from schools where neither French nor Latin is taught should be able to give the derivation of English words which are borrowed from those languages. Nevertheless, as there is more than one manual of etymology intended expressly for the use of schools of the above description, and as this branch of knowledge ought to be encouraged, the Examiners will set questions which involve a knowledge of a few of the most obvious Latin roots from which English words in everyday use are derived. On that part of etymology which traces the connection between one English word and another, it is reasonable to expect that candidates should be able to give satisfactory answers.

IV. *Analysis*. Many schemes are published in books of education according to which the learner is expected to place in certain squares, arranged for the purpose, the extensions or limitations of the principal subject, or of the predicate, or of the object, and other contrivances are adopted in order to separate the principal sentence from its subordinate sentences, or to distinguish subordinate from co-ordinate clauses. The Examiners, in setting sentences for analysis, require *no performances of this kind*. Their only drift is to ascertain whether the candidate can distinguish the subject from the predicate, or, in other words, the thing of which the writer or speaker is thinking from that which he has to tell us concerning it. For example, if a candidate is asked to analyse the following sentence: "It is better to trust in the Lord than to have any confidence in princes!" all that the questioner cares to ascertain is, whether the candidate has sufficiently exercised his common sense, and thereby acquired a sufficient reliance upon it, to reason thus: "Something (A) is said to be better than something else (B); I have only to find (A) my subject, and whatever is affirmed of it is (B) my predicate." If this is done in two or three instances, the Examiners will give as full marks for this species of answers as for any of a more elaborate kind.

It is not expected that every candidate should acquire himself equally well in these four divisions: careful parsing, and a fair amount of proficiency in II and III, or II and IV, of the subjects above enumerated, will be sufficient for passing with credit. The advice of the Examiners on this, and on all other subjects, is one that every teacher has to repeat continually to his pupils. It is laziness not to exercise your memory; it is worse laziness to burthen your memory in order to save yourself the trouble of understanding and reflecting on what you learn. Half the battle in an Examination is courage, and courage never fails him who has mastered his subjects by thought.

PUBLIC EXAMINATIONS.

The numbers represent the subjects in which the candidates have passed, viz. :—

II. English.	VII. Geography.
III. Latin.	VIII. French.
IV. Arithmetic and Algebra.	IX. German.
V. Euclid.	X. Greek.
VI. History of England.	XI. Trigonometry.

SENIORS.

General Proficiency.

(The names are in alphabetical order in the classes.)

FIRST CLASS.

A'Beckett, Caroline Agnes (Mrs. Pillars's School), II, IV, VI, VII, VIII.
Dunn, Thomas (St. Patrick's College, Goulburn), II, III, IV, VI, VIII, X.
Whitfeld, Caroline Annie (Mrs. Pillars's School), II, IV, V, VI, VII, VIII.

SECOND CLASS.

Feez, Arthur Henry H. M. (King's School), III, IV, V, VI, XI.
King, George (Sydney Grammar School), III, IV, VI, X, XI.
Lloyd, Charles John (King's School), III, IV, V, VI, X, XI.

THIRD CLASS.

Brennan Francis (St. Patrick's College, Goulburn), III, XI.
Campbell, John (Fort-street School), IV, V, VI.
Clarke, Francis (St. Stanislaus' College), II, III, V, VI.
Colley, James (Kiama Public School), IV, V, VI, VII.
Cullen, Daniel (St. Patrick's College), III, IV, V, VI.
Dalton, Gerald Thomas A. (St. Stanislaus' College), II, III, VI, VIII, X.
Donaldson, Robert Riddle (Grafton Public School), IV, VI.
Dunphy, Michael Joseph (St. Stanislaus' College), II, III, IV, V, VI.
Emanuel, Israel Samuel (Mr. Pentecost), IV, VI, XII.
Fletcher, Charles Robert (Dr. Sly), III, IV, VI.

Forsyth, George James (Fort-street School), IV, V, VI, VII, XI.
Gouett, Marie Henriette G. (Miss Flower), VI, VII, VIII.
Graham, Margaret (Miss Flower), VI, VIII.
Hill, Fanny (Lady Murray), VI, VII, VIII.
Irving, Sydney Richmond (King's School), III, IV, V.
Kemp, Alice Emma (Belmore College), II, VI, VII.
Lander, William Henry (Sydney Grammar School), III, X.
Lang, John Gavin (Sydney Grammar School), III, VI, X.
Locke, James (St. Stanislaus' College), III, VI.
Mackins, James (St. Patrick's College), III, IV, VI.
O'Donnell, Benjamin (St. Patrick's College), III, IV, VI.
O'Donnell, Hugh Aloysius (St. Stanislaus' College), II, III, VI, X.
O'Reilly, Alexander Innes (Sydney Grammar School), II, III, VI, X, XII.
Owen, Henry Percy (Sydney Grammar School), III, IV, X.
Paige, William (Fort-street School), IV, V, VI.
Scobie, Michael (Public School, West Maitland), IV, VI.
Short, George Robert (Kiama Public School), IV, V, VI, VII.
Smith, Wallace Arabin (King's School), III, V.
Solomon, Hannah (Lady Murray), VI, VII, VIII.
Starling, John Thomas (Rev. D. Boyd), IV, V, XI.
Taylor, Arthur Wellesley (Fort-street School), IV, VI.
Thorpe, Frederick Ashley (Fort-street School), IV, V, VI.
Wenholtz, George (Adelong Public School), IV, V.

The University Prize for Junior Males is awarded to Thomas Byrnes, of the Brisbane Grammar School; *proxime accessit*, Alfred Charles Millard, of the Newcastle Grammar School. John George Cribb, of the Brisbane Grammar School, was highly distinguished, but was disqualified by age from competing.

The John Fairfax Prize for Junior Females is awarded to Cornelia Shadler.

The University Prize for Senior Males is awarded to Thomas Dunn.

The John Fairfax Prize for Senior Females is awarded to Caroline Annie Whitfeld; *proxime accessit*, Caroline Agnes A'Beckett.

The John West Medal is awarded to Thomas Dunn.

JUNIORS.

In the following lists the numbers represent the subjects of examination in which the candidates have passed, viz. :—

- II. English.
III. Latin.
IV. Lower Mathematics.
V. Higher Mathematics.
VI. History of England.

Adams, Charles Daniel (Fort-street School), IV, V, VI, VII.
Ainsworth, William Richard (Mr. Bowyer), III, IV, VI, VII.
Angus, William (Sydney Grammar School), II, IV, VI, VII.
Armstrong, William George (Canterbury, England), II, VI, VII.
Armstrong, Thomas Francis (Wollongong Public School), II, IV.
Asher, Fanny (Public School, William-street), II, VI.
Ashworth, William Henry (All Saints' College, Bathurst), II, IV, V, VI, VII.
Bains, James Edward (Ipswich Grammar School), II, IV, VI.
Barlow, John (Lyndhurst), II, VI.
Bell, Amy Edmondstone (Private), II, VI, VII.
Bell, Alexander Crawford (Armidale Grammar School), II, VI.
Bell, Charles (Mr. Hole), II, VI, VII.
Bennett, William Henry H. (Burwood Public School), IV, V, VI, VII.
Bergin, John (Sydney Grammar School), II, III, IV, VII.
Bethel, Christina (Public School, William-street), II, VI.
Biddulph, Phillip James (Newington), II, III, IV, V, VI, VII, VIII.
Bingle, Walter David (Newcastle Grammar School), III, VI, VII.
Blomfield, Harold Arthur (King's School), III, IV, V, VI.
Borton, Mark William (Ipswich Grammar School), II, III, IV, VII.

- VII. Geography.
VIII. French.
IX. German.
X. Greek.

Bradley, John Sherbrooke (Fort-street School), II, IV, V, VII.
Bradridge, Edward Diston (Newington), IV, VI, VII.
Brown, Edwin John (King's School), III, IV, V.
Brownhill, John Duncan (Grafton Grammar School), II, IV, VII.
Bryant, Herbert William (Brisbane Grammar School), II, III, VI, VII.
Buchanan, James (Morpeth Public School), II, IV, V.
Bucknell, Adrian Wentworth (Camden College), II, IV, VI, VII.
Bucknell, D'Arcy Hubert (Sydney Grammar School), II, III, IV, VII.
Bucknell, Theodore Francis (Camden College), II, IV, VI, VII.
Bucknell, William Wentworth (Sydney Grammar School), II, III, IV, VI, VII.
Burke, John Francis (Fort-street School), II, IV, V, VI.
Burrows, Thomas Edward (Fort-street School), II, IV.
Burrows, William (Sydney Grammar School), II, III, IV, V, VI, VII.
Busby, Hannah Jane (Miss Wilkinson), II, VI, VII.
Byrne, William (St. Stanislaus' College), II, III, IV, VI.
Byrnes, Thomas (Brisbane Grammar School), II, III, IV, V, VI, VII, VIII, X.
Cameron, Mary Bowman (Alberto College), II, VI, VII.

Cameron,

- Cameron, Charles (Kiama Public School), II, IV, VI, VII.
 Caswell, Francis Stewart (Goulburn High School), II, IV, VI.
 Cherry, Charles F. (Balmmain Public School), IV, V, VII.
 Clacker, William (Brisbane Grammar School), II, III, IV, V, VI, VII, IX.
 Clarke, Minnie Mary Anne (Goulburn Public School), II, VI.
 Clarke, William (Goulburn Public School), II, IV, VI, VII.
 Clarke, Rupert (Goulburn Public School), II, IV, VI.
 Clark, Ernest (West Maitland Public School), IV, VII.
 Cooke, John Taylor (Sydney Grammar School), II, III, V.
 Connell, Henry (Kiama Public School), II, V.
 Cosgrove, James Christopher (Roman Catholic School, Braidwood), IV, V, VI.
 Cowley, Percy (Albury Grammar School), IV, VI, VII.
 Cox, James (Newcastle Grammar School), III, VI, VII.
 Crawford, Alexander (Burwood Public School), II, IV, V, VI, VII.
 Creer, Edward Thomas (King's School), IV, VII.
 Cribb, John George (Brisbane Grammar School), II, III, IV, V, VI, VII, VIII, X.
 Cullen, Edward Alexander (Brisbane Grammar School), II, III, VI, VII.
 Daly, Annie Mary (Roman Catholic School, Braidwood), II, IV, V, VI.
 Dalton, James Joseph (St. Stanislaus' College), II, IV, VI, VII.
 Dart, George (Newcastle Public School), IV, VI, VII.
 Davis, Charles Frederick (King's School), IV, V, VII.
 Davis, Henry Lethbridge (King's School), II, III, IV, V.
 Dawson, Frank Gerald (Cooma Public School), IV, VII.
 Deane, Edward Tasman (Goulburn Public School), IV, V, VI.
 Deane, Sydney (Goulburn Public School), IV, VII.
 Densley, William (Lambton Public School), II, VI, V, VI.
 Drinan, William (West Maitland Sacred Heart College), II, IV, VI.
 Drysdale, Alexander Miller (Ipswich Grammar School), II, VI.
 Ebsworth, Arthur Charles (Sydney Grammar School), II, III, IV.
 Edwards, Edward Samuel (Fort-street School), IV, V, VI, VII.
 Eld, George Grainger (Sydney Grammar School), II, III, VII.
 Everett, Emily Edith (Miss Everitt), II, VI, VII.
 Firth, Florence Ann (Mrs. Ord), II, VIII.
 Fisher, Emma (Mr. Fache), II, VI, VII, VIII.
 Fitzpatrick, Edward (St. Patrick's College, Goulburn), II, IV, VI.
 Fitzpatrick, Bernard Joseph (Fort-street School), II, IV, VI.
 Fielding, Thomas (Brisbane Grammar School), II, III, IV, VI, VII, VIII, X.

1876-7.

NEW SOUTH WALES.

UNIVERSITY OF SYDNEY.

(BY-LAW.)

Presented to Parliament pursuant to 15th section of the Act 14 Vic. No. 31.

UNIVERSITY OF SYDNEY.

BY-LAW.

THE present Auditor of the University, the Honorable Geoffrey Eagar, is hereby declared to be a Superior Officer of the University, entitled to the rights and privileges conferred by the "Sydney Incorporation Act Amendment Act of 1861."

The Corporate Seal of the University of Sydney was affixed hereto on the seventeenth day of August, one thousand eight hundred and seventy-seven, in pursuance of a resolution of the Senate, of the first day of August,—

HUGH KENNEDY,
Registrar.

(L.S.)

E. DEAS THOMSON,
Chancellor.
HERCULES ROBINSON,
Governor.

1876-7.

NEW SOUTH WALES.

SYDNEY GRAMMAR SCHOOL.

(REPORT FOR 1876.)

Presented to Parliament, pursuant to Act of Incorporation, 18 Victoria.

The Secretary to the Trustees, Sydney Grammar School, to The Minister of Justice and Public Instruction.

Sir,

Sydney Grammar School, 26 February, 1877.

I have the honor, by direction of the Masters of the Sydney Grammar School, to transmit to you, for the purpose of being laid before the Parliament, the following Report of their proceedings and the progress of the School during the year 1876.

Professor Pell and the Honorable George Allen were unanimously re-elected Chairman and Vice-Chairman of the Board for the current year.

Mr. H. C. L. Anderson was appointed Lecturer in Natural Science and Secretary to the Head Master, in the room of Mr. Rennie, resigned, and Mr. Weiss was appointed an Assistant Master.

The Salting Exhibition in the Sydney University being vacant, Mr. Reginald Charles Allen was nominated by the Trustees to the Senate for appointment.

In August Mr. H. S. Hawkins resigned his Assistant Mastership, and on the recommendation of the Head Master Mr. J. G. Davis was appointed an Assistant Master.

In November Mr. Hodge resigned his position as Janitor and Drill Sergeant, and Sergeant-Major Pope was appointed in his stead.

The Trustees were compelled to limit the number of scholars to 400; and for the purpose of providing adequate accommodation for this number the Trustees entered into a contract for the erection of two additional class-rooms at the rear of the present building, for the sum of £945, which rooms the Trustees hope to have finished by March, 1877.

Upon the recommendation of the Head Master the School hours have been fixed as follows, viz.:—Morning lessons, from 9:30 a.m. to 12:30 p.m.; and afternoon lessons, from 1:15 p.m. to 3:15 p.m.; to take effect from the beginning of the year 1877.

The average number of pupils in attendance during the year has been fully up to the limit of 400.

A commencement has been made in the founding of Class-room Libraries, and the Trustees have devoted a sum of money towards that object.

The Trustees have much pleasure in reporting their satisfaction with the state of discipline and efficiency of the School.

It is a gratification to be able to report that all the scholarships in the Sydney University are at present held by ex-students of the Grammar School, and that a former student has lately obtained a scholarship at St. John's College, Cambridge.

The amount of the whole income and expenditure of the School during the year will be found in the annexed Appendix.

I have, &c.,
W. H. CATLETT,
Secretary.

APPENDIX.

RETURN of the Sydney Grammar School for the Year 1876.

NEW SOUTH WALES.

REPORT

OF THE

COUNCIL OF EDUCATION

UPON THE CONDITION

OF THE

PUBLIC SCHOOLS,

FOR

1876.

Presented to both Houses of Parliament, in pursuance of the Act 30 Vic. No. 22, sec. 27.

SYDNEY: CHARLES POTTER, ACTING GOVERNMENT PRINTER.

1877.

THE COUNCIL OF EDUCATION TO HIS EXCELLENCY THE GOVERNOR,

SUBMITTING

REPORT UPON THE CONDITION OF THE PUBLIC SCHOOLS FOR 1876.

To His Excellency SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor-in-Chief of the Colony of New South Wales and its Dependencies, and Vice-Admiral of the same.

MAY IT PLEASE YOUR EXCELLENCY,

We have the honor, in compliance with the requirements of the Public Schools Act, to submit this our Tenth Annual Report upon the condition of Public Schools, being that for the year 1876.

I.—COUNCIL.

To supply the vacancy caused by the retirement of the Honorable Thomas Holt, M.L.C., who, as explained in our previous Report, withdrew from the Council after the close of 1875, the Honorable George Wigram Allen was appointed a member on the 28th April, 1876, for the residue of his term. The Council then consisted of—

The Honorable George Wigram Allen, Speaker of the Legislative Assembly.
 Stephen Campbell Brown, Esquire, M.L.A.
 William Augustine Duncan, Esquire.
 The Honorable John Smith, M.D., LL.D., M.L.C., President.
 The Honorable Sir Alfred Stephen, C.B., K.C.M.G., M.L.C.

The terms for which Mr. Brown and Mr. Allen were appointed expired at the end of 1876. At the beginning of the present year Mr. Allen was re-appointed, and the Honorable John Robertson, M.L.A., was appointed as a member of the Council in place of Mr. Brown.

The Honorable John Smith held the position of President during 1876, and, having for the seventh time been elected to fill the office, will act in that capacity for the current year.

II.—GENERAL STATISTICS.

Ten years have elapsed since the first appointment of the Council of Education, the body to which the administration of the Public Schools Act of 1866 was entrusted. The time therefore seems opportune for reviewing its proceedings, and for ascertaining to what extent the object of that measure has been accomplished. From the nature of the duties imposed by the Act, it is impossible to represent arithmetically the results of much of the work done by the Council; but, as regards those departments of the Council's labours that can be estimated by means of statistics, the following statements will show the amount of progress that has been achieved.

In the ten years—1867 to 1876 inclusive—while the population of the colony increased from 431,412 to 629,776 or 46 per cent. the number of Public Schools has increased from 259 to 503, or 94·2 per cent.

In addition to these, 279 Provisional Schools and 110 Half-Time Schools are now in operation, these classes of schools having been brought into existence for the first time under the Public Schools Act.

The total increase in the number of schools, other than Certified Denominational Schools, is therefore 633, being at the rate of 244 per cent.

On the other hand the number of Certified Denominational Schools has fallen from 310 to 181, or 41 per cent.

The net increase of all schools, from 569 to 1,073, is 88 per cent.

The number of pupils enrolled having been 47,663 in the first quarter of 1867, and 111,269 during the year 1876, has increased by 63,606, or 133 per cent.

The amount of fees has increased (from £30,719 8s. 9d. to £61,545 12s. 7d.) by £30,826 3s. 10d., being at the rate of 100 per cent.

The number of new school-houses erected is 199, to which may be added 61 others in course of erection.

The total number of teachers, assistants, and pupil teachers has increased from 971 to 1,583 (612), or 63 per cent.

The number of teachers who have undergone training and thus obtained classification is 681.

In other branches of the work of administering the Act, the progress made does not admit of being thus represented. It is to be noted, for example, that the system of inspection formerly in existence has been greatly extended and improved; the standard of attainments required from the pupils and the degree of professional skill demanded of teachers have been gradually raised year by year, and the proficiency exhibited by the scholars at examinations has been considerably increased. Thus, while the means of education have been more abundantly provided and diffused, improvement in the quality of the instruction imparted has also been secured.

Schools.—

Schools.—It will be seen from the following table that the total number of schools was increased in 1876 by 43.

Year.	Public.	Provisional.	Half-Time.	Denominational.	Total.
1867	288	31	6	317	642
1868	318	103	38	289	748
1869	336	146	61	264	807
1870	359	164	82	241	846
1871	378	181	96	223	878
1872	396	194	101	211	902
1873	400	216	117	209	942
1874	420	244	122	204	990
1875	461	262	116	191	1,030
1876	503	279	110	181	1,073

The Public Schools show a net increase of forty-two, and Provisional Schools of seventeen; while the Half-Time Schools exhibit a decrease of six, and Certified Denominational Schools of ten. Further explanations on this head will be found in the subsequent portions of this Report relating to the several classes of schools.

Appendix A.

Pupils.—Notwithstanding the many obstacles to school attendance, an increase of 6,813 in the number of pupils enrolled occurred in 1876, as may be seen from the following table:—

Year.	Public.	Provisional.	Half-Time.	Denominational.	Total.
1867	28,434	733	267	35,306	64,740
1868	34,284	3,113	593	35,930	73,920
1869	37,593	4,788	1,242	37,026	80,649
1870	39,731	5,185	1,445	36,460	82,821
1871	43,494	5,633	2,267	35,919	87,313
1872	46,458	6,673	1,792	33,564	88,487
1873	48,831	7,466	2,209	33,512	92,018
1874	53,702	8,002	2,462	36,218	100,384
1875	58,811	8,786	2,350	34,509	104,456
1876	64,414	9,196	2,265	35,394	111,269

Throughout the year, but especially during the early portions, an epidemic of scarlatina prevailed over the whole Colony; large numbers of pupils were kept from school, and many schools were even closed on that account for considerable periods. Judging by the current quarter's experience it seems probable that similar effects will be produced in 1877 from the very general prevalence of ophthalmia. The drought also prevented regular attendance in many parts of the interior. It is gratifying to find, however, that the average regularity of attendance improved to some; although only a small, extent.

Proportion of pupils in average attendance to the average number enrolled:—

Year.	Public Schools.	Certified Denominational Schools.	All Schools.
	Per cent.	Per cent.	Per cent.
1872	69·3	67·5	68·6
1873	67·	65·7	66·
1874	65·7	64·	65·6
1875	64·8	64·	64·5
1876	65·9	64·5	65·4

As is usually the case, the returns for the last quarter of the year exhibit a greater degree of regularity than is evidenced by those for the earlier portions. In Public Schools, for example, the pupils in average attendance formed 67·6 per cent. of those enrolled; and in Denominational Schools 66·8 per cent.; while for all schools the proportion was 67·3.

Fees.—An increase of £5,928 19s. 11d. in the amount of fees paid took place in 1876, the total amount being £61,545 12s. 7d. The number of free scholars was slightly diminished, having been 6,321, while in the preceding year the number was 6,600.

Amount of Fees paid in each year commencing with 1867:—

Year.	Public.	Provisional.	Half-Time.	Denominational.	Totals.
	£ s. d.	£ s. d.	£ s. d.	£ s. d.	£ s. d.
1867	14,404 0 10½	162 12 5	18 9 7½	16,134 5 10	30,719 8 9
1868	17,588 8 11	1,099 14 11	77 15 11	15,398 3 9	34,164 3 6
1869	20,658 19 7	1,981 9 9	174 13 8	16,803 10 11	39,618 13 11
1870	21,113 8 10½	2,077 10 6	234 0 10	16,158 3 2	39,583 3 5
1871	24,324 0 8	2,154 2 3	284 4 3	16,240 14 6	43,503 1 8
1872	27,048 18 11	2,701 4 6	456 9 3	15,787 9 11	45,994 2 7
1873	28,579 15 11	3,430 15 11	529 16 11	16,406 13 0	48,947 5 11
1874	31,656 1 7½	3,670 1 11½	769 13 0	17,440 8 7	53,536 5 2
1875	33,985 12 6½	3,860 14 4½	677 9 9	17,722 15 11	56,246 12 8
1876	37,952 12 1	4,395 18 1	730 5 11	18,466 16 6	61,545 12 7

Some difficulty has recently been experienced in recovering, by legal process, sums owed by persons able, but unwilling, to pay school fees. The intention of that section (18) of the Public Schools Act, which provides for the recovery of fees by summary process, has been sometimes defeated by the decision of the Magistrates before whom cases have been tried. The consequence is, that in such instances, teachers are not only deprived of the fees proved to be due by persons possessed of the means of paying, but are also mulcted in the costs of their suits. A more efficacious and less difficult mode of proceeding, should the Act be amended, would seem to be desirable.

Children not under instruction.—On many occasions of late years questions have been raised as to the number of children in the Colony not receiving instruction. These children have been variously estimated at numbers ranging from 10,000 to 50,000, and the Returns ordered by the Legislative Assembly, on the motion of Mr. W. H. Suttor, have been appealed to in proof of the allegation that not more than 76,000 children were under instruction at one time in the Council's schools. While this latter statement is undoubtedly correct for a very limited period, it will be found that for a more extended term, such as twelve months, the number of children deriving instruction from these schools is considerably larger. If 15 per cent. be allowed for double enrolments of the same children, an estimate which does not err on the side of insufficiency, it will be seen that about 95,000 children obtained some amount of instruction in the Council's schools in the course of the year.

The fluctuation in the attendance which this calculation discloses is a matter of some concern. The following table exhibits, for the quarter ending 31st December, 1876, the number of pupils enrolled, the average attendance, and the relative proportions of these numbers in localities of five different kinds, and in the whole Colony.

Localities.	Number enrolled.	Number in average attendance.	Percentage of average attendance to number enrolled.
Cities and Suburbs.....	27,742	18,359.6	66.1
Large Towns	4,369	2,917.5	66.7
Small Towns	13,397	9,070.3	67.7
Mining Districts.....	7,338	4,875.6	66.4
Rural Districts	24,113	16,634.1	68.9
Total	76,959	51,857.1	67.3

This table exhibits a state of things, as regards regularity of school attendance, which, being contrary to the commonly received opinion, is calculated to excite some surprise. Hitherto it has generally been believed that the greatest irregularity prevailed in rural districts where the circumstances adverse to regular attendance are most numerous. On the other hand, it was considered that in cities, suburbs, and large towns, the conditions were most favourable, and that in such localities the proportion of pupils in average attendance to the number enrolled would be the highest. From the table it is apparent, however, that the facts are entirely the reverse of these assumptions. The regularity is highest in rural or thinly inhabited districts, and lowest where the population is most dense. The mining districts which seem to form an exception to this statement are, in reality, a striking confirmation of its accuracy, inasmuch as they include the schools in the colliery districts where a large population is collected.

As a result so completely opposed to the ordinary belief might have been deduced from Returns relating to a period of exceptional character in relation to school attendance, the Council caused further inquiry to be made and Returns for other periods to be examined. By this test the general correctness of the table was confirmed, and for the past year the principle may be considered as established that, with occasional exceptions, irregularity of attendance varies as the density of the population, the difference however being, at most, less than 3 per cent.

It would be highly desirable to determine the educational status of the whole Colony by direct inquiry, in order to settle definitely the much debated question as to the number of children growing up without instruction; and such inquiry might advantageously be undertaken by the Government, by whom alone it can be carried out. But with respect to the narrower field of the city and suburbs, it seemed to the Council to be within its own power to make the necessary investigation. Arrangements were accordingly made for an educational census which was successfully carried out in December and January last. Of course it was optional with occupiers of houses to give or to withhold the information sought; and as the census was not taken under any Act of the Legislature, and no penalties were attached to non-compliance with the requests of the collectors, there was no guarantee for the truth of the statements made, beyond the good faith of the parties. It is proper to state, however, that very little difficulty was experienced by the collectors in the performance of their task; that a disposition to assist them was generally evinced; and that in two instances only were they met with an absolute refusal. The Council possesses the means of verifying to some extent the correctness of the information supplied by the census collectors. This means of verification having been applied to the census returns, the result is such as to show that they fairly represent the facts. Separate returns were obtained for the several wards of the city of Sydney and for each of the surrounding municipalities. Appendix J.

The results of the census are briefly stated in the following lines:—

Total number of children above four and under four years of age	City.	Suburbs.	Total.
...	20,733	16,257	36,990
Number attending schools under the Council	11,461	8,226	19,687
Number attending private schools	4,119	3,773	7,892
Total attending school	15,580	11,999	27,579
Number not attending school	5,153	4,258	9,411

The number given as not attending school is undoubtedly large, but a closer examination of the returns reveals the fact that, of the 5,153 children in the City of Sydney not attending school, 1,735 are represented as being able to read and write. These are therefore not wholly destitute of education. Again, it is found that of the number remaining, 2,943 are below the age at which many intelligent parents consider that formal instruction of the young should commence. For example: 1,469 are between four and five years of age; 848 between five and six; 404 between six and seven, and 222 have reached the age of seven years. It will thus be seen that only 697 illiterate children between the ages of seven and fourteen years are not receiving instruction.

In verifying the census returns with respect to the number of children within the city boundary, reported to be in attendance at schools under the Council's supervision, it became necessary to compare them with the ordinary quarterly returns furnished by the teachers. The immediate result was to disclose a considerable discrepancy in the numbers obtained from the two sources:—

<i>Number of Children enrolled.</i>			
According to School returns	13,640
According to Census returns	11,461
Difference	2,179

Further inquiry having been made with a view to account for this difference, it was found that during the quarter ending 31st December, 1876, there were enrolled in the city schools 2,311 children who resided beyond the city boundary. Besides these, there were enrolled 324 children above the age of fourteen, and 449 under four years of age. Deducting the sum of these from the total number in attendance, but adding forty-three children, who, though dwelling in the city, attended suburban schools, there will remain 10,599—less by 862 than the number represented in the census returns as being taught in the Council's schools. Assuming that the parents were correct in representing these 862 as usually attending school, their absence at the time the census was taken may, to some extent, be accounted for by special circumstances, such as sickness, holiday-making, home employment, or other temporary causes. Another explanation of the discrepancy may be found in the fact that many parents do not discriminate sufficiently between public schools, in the broad sense, and private schools. Such schools as the Sydney Grammar School, for example, would naturally enough be ranked as a public school, and some of the larger private schools might easily be mistaken for schools of the same character. The children attending the Sydney Ragged School (117) should probably be included in the 862 before referred to.

From the census returns of suburban municipalities, it appears that 16,257 children, of ages varying from four to fourteen years, resided in Alexandria, Balmain, Camperdown, Darlington, Glebe, McDonald Town, Newtown, Paddington, Randwick, Redfern, St. Leonards, St. Leonards East, Waterloo, Waverley, and Woollahra. Of that number, 8,226 are reported as attending Public or Denominational Schools, 3,773 as instructed privately, and 4,258 as attending no school. The school returns for the same municipalities show that, including forty-three who reside in the city, 6,380 children of the specified ages attended the Council's schools, but in addition to these 2,311 others attend schools in the city. This gives a total of 8,648 children *from the suburbs* attending such schools, being 422 more than the number stated in the census returns.

As regards the number (4,258) reported as not in attendance at any school, it is found that 1,223 can read and write. There are therefore 3,035 *uninstructed* children between the ages of four and fourteen years not attending school; but of these, 1,094 are between four and five years, 663 between five and six, 293 between six and seven, and 165 have reached the age of seven years. If seven years be taken as the age at which regular school attendance should be commenced, the number of children who ought to be under instruction, but do not attend school, in the suburban municipalities, is 985.

The total number of children between the ages of seven and fourteen years without instruction in the city and immediate suburbs would therefore appear to be 1,682. If the question be asked whether these children are prevented from attending school by any want of the necessary accommodation, it may be stated in reply that the Council has no reason to believe that such is the case. Allowing 8 square feet for each child, the existing school buildings provide accommodation for 18,000 pupils in average daily attendance. Such an average attendance would, however, represent an enrolment of fully 27,000; and as it would always be practicable, without producing serious inconvenience from overcrowding, to accommodate 20 per cent. more scholars than that average attendance, it follows that the existing buildings are fairly sufficient for a school population of about 33,000. The number enrolled in the last quarter of 1876 was but 20,020. It is true that in some instances the accommodation provided is of an unsuitable description, and the schools are not so conveniently situated as parents might wish; at the same time, however, if they manifested a real interest in the welfare of their children by endeavouring to secure for them a good education, they would not allow school attendance to be interfered with by such obstacles as distance and inferior class-rooms. But the steps taken by the Council to increase and improve the existing school accommodation in the city and suburbs, as described in a subsequent paragraph of this Report, will, by the end of the current year, have rendered any such excuse, if made, for absence from school entirely groundless.

III.—PUBLIC SCHOOLS.

In 1875, forty-seven applications for the establishment of Public Schools were granted, and seventy-one last year; but not more than forty-two new Public Schools were, in 1876, actually opened. This is undoubtedly a slower rate of increase than could be desired, or than seems at first sight attainable; but there are obstacles to the multiplication of schools which are not yet entirely overcome. In the first place, plans and specifications cannot be prepared with sufficient rapidity, and even when this difficulty has been removed, further delay is occasioned by the scarcity of contractors. With a view to provide the necessary plans with the least possible delay, architects have been employed in various parts of the Colony, but on the whole this experiment has not been attended with success. Their employment rarely secured greater despatch; and some of the persons engaged had had no previous experience in work of this description, and they possessed little of the special knowledge requisite to enable them to prepare suitable plans.

But

But the delay caused by the difficulty in procuring plans and tenders is insignificant compared with that arising from the want of school sites. Several cases occurred in which, after plans had been prepared and contracts taken for the erection of school buildings, the works could not be proceeded with, because sites could not be procured. In arranging for the purchase, for school purposes, of land belonging to private individuals, the Council has sometimes been compelled to bring the negotiations to a close on account of the exorbitant prices demanded; and, in other cases, efforts to obtain a site have been completely frustrated by the unwillingness of owners to dispose of land at any price. As regards land for which application has been made to the Government, it may suffice to state that in 141 cases, twenty-six of which are in the Bathurst District alone, school buildings cannot be provided, because sites have not been granted or promised. It is, of course, not probable that schools would have been erected in all these cases, even if, by the appropriation of the lands applied for, the Council had been placed in a position to build; but it is nevertheless true that under such circumstances schools would have been provided more speedily. Appendix K.

In order to remove the site difficulty, a measure was, in 1874, submitted by the Council to the Government in the shape of a proposed Bill to be laid before the Legislature. The Bill was prepared by a member of the Council (Sir Alfred Stephen) on the model, in a great degree, of the School Sites Acts of England; and the reasons in its favour were thus stated in the letter accompanying the draft:— Appendix L.

“The title of the Bill, and the list of sections which is prefixed, will sufficiently indicate its object; which the Council deem of so much importance, and feel to be so urgently required, that they trust the Government will introduce the measure into Parliament, and procure its adoption, if possible, in the now approaching session.

With respect to the proposed selection of Crown lands, the Council would submit that the absolute power of veto, which is reserved by the Bill, will afford ample protection in the hands of the Government against undesirable appropriations. The same suggestion applies equally to the Church and School lands. But the object will be attained, after the expiration of sixty days for purposes of inquiry, of enabling the Council to commence the erection of school buildings on the land selected, without the great delay attendant on a formal survey and the issue of the grant. The existing temporary occupiers, on the other hand, will be compensated for the loss of their holdings, a loss, considering the limited extent of selection asked for, which will rarely be more than nominal.

This principle of compensation, the Council need hardly observe, is carefully preserved throughout the Bill; whether as it respects actual occupiers of the selected land, or reversioners entitled after termination of the existing tenancy, if any. There are numerous cases, especially in the suburbs of Sydney, in which the virtual owners—being tenants in tail, or for life, or under leases originally for 99 years—are quite willing to give or sell a portion of land to the Council; but they can convey their own limited interest only. It is submitted that such persons, if the right of all parties contingently entitled be protected, ought to be enabled to pass the property absolutely to the Council. The Bill transmitted does adequately protect those rights. And this being so, the Council feel persuaded that the interests of public education, for which the Legislature has hitherto so liberally provided, will not be thought less to justify such a measure, although occasionally the alienation may be compulsory, than the demands for railway accommodation. If land may compulsorily be taken for railway purposes, as it may everywhere in this Colony, and almost everywhere in England, subject to compensation, the Council cannot believe that similar provisions for a higher object will encounter opposition.

These observations apply obviously, with equal force, to the taking of land from absolute owners, and of land under mortgage. In every case throughout the Bill every interest has been carefully guarded. The Council may indeed state, generally, that there is no clause in it for which a precedent cannot be found, in substance, in the Railway Act of New South Wales, or the Consolidated Lands' Clauses Act, or Sites for Schools Acts of the Imperial Parliament. If in any matters of detail a difference should be thought to exist, it will be seen merely that preference has been given to a shorter form of enactment, or a more simple course of procedure. The 18th section is new; but its terms and object are too plain to require explanation of any kind.”

In a subsequent letter, addressed to the Honorable the Minister of Justice and Public Instruction, by Sir Alfred Stephen, on behalf of the Council, further explanations of the aim and scope of the Bill are given. The following passages are extracted from that communication:—

“I am to represent to you that without some such legislative measure the Council finds itself daily more and more powerless to carry out the provisions of the ‘Public Schools Act,’ or keep reasonable pace with the increasing wants or demands of the community, in the erection of schools and school buildings. It is a startling fact that there are at this moment upwards of *eighty* applications from the Council to the Government for school sites undisposed of, many of them unanswered, some having so remained for years, and the children in the meantime having grown up or passed with their parents into other localities. It is not by this statement that blame attaches to the officers of the Crown in any department. The explanation usually given is that there are not surveyors sufficiently numerous to measure the ground; but after measurement even considerable delay has not unfrequently occurred in the issue of the grant. Now by the express terms of the schools statute the Council may not expend money on land until vested in the Board. The remedy for this state of things is, I submit to you, the enactment of the measure here advocated; it is surely not too much to expect that—subject to the veto in each case of the appropriate Minister—the Council of Education should for high public ends possess the same or a similar power of selecting, and at once occupying, land to a limited extent, which every man possessing five shillings per acre has vested in him to an extent by comparison almost unlimited, for purposes merely of self-advancement, subject as to the particular area to no veto whatever.

There is another and by no means inconsiderable class of cases in which no remedy can be afforded, except by the Legislature. There are cases in which the land wanted is vested in tenants for life, or tenants in tail, or tenants for some long term of years,—usually ninety-nine;

nine; these persons—substantially the owners—are ordinarily willing to give or sell the ground, but they have not the legal power. The remaining portions of the property, in fact, would be improved in value by the erection of the desired school, but the question of compensation to the reversioners is, of course, equally provided for by the Bill. The same statement and remarks apply with equal force, although the examples are less numerous, to cases of ordinary leasehold property. I believe that there are some of these existing on portions of the Church and School Lands Estate.

A smaller class perhaps than either of those mentioned in the two last previous paragraphs is that of owners of the fee in possession; and the ordinary case here is that of persons willing enough to sell, but only on exorbitant terms. Public elementary education is possibly not a thing indifferent to them; but they desire much more a heavy price for the indispensable bit of ground wanted—knowing now that all the money is to come out of the public purse. Whether for the sake of that education the Council shall be enabled to acquire land so situated at its fair and honest value, or be compelled to purchase it at the public expense at any sum which the owner may demand, is the question to be decided. If we believe that the end sought for is just when the construction of a road is concerned, it will be found difficult to maintain that it is unjust when the interests of education are affected. It is, at all events, no question as to the *expending* of public money by this Board, but solely as to the providing of means by which public money may be *saved*. Schools cannot be erected without sites. The Council of Education is entrusted with certain sums for the purpose of, among other things, erecting schools. It may be necessary for the Council therefore occasionally to purchase sites for schools, and the Council, obviously, will be enabled to build schools more or less in number, in proportion as it shall have to pay more or less for those sites."

The Government of the day however thought the proposition inadmissible, and things have remained therefore as they were.

New School buildings.—New school buildings were completed in 1876 at the undermentioned places:—

Ashfield	Condobolin	Guildford	Narellan
Baulkham Hills	Coogee	Hurstville	Oberon
Bell's Creek	Doughboy Hollow	Inverell	Parramatta South
Bowning	Dungaree	Jerilderie	Peakehurst
Campbelltown	Five Dock	Jindera	Scone
Cassilis	Germanton	Kogarah	Sussex-street
Clarence Town	Gerringong	Laurieton	Urana.
Cobargo	Greghamstown	Markwell	

Besides these, contracts have been taken, and, in most cases, works are in progress for new school buildings at:—

Adelong	Cudgegong	Ilford	O'Connell
Balmain	Dapto	Jamberoo	Pyramul
Bathurst	Downside	Kempsey West	Queanbeyan
Bingera	Eglinton	Kangaroo River	Quirindi
Blacktown	Emu	Lane Cove	Raymond Terrace
Blowering	Forest	Macquarie Plains	Round Swamp
Bourke	Forest Hill	Merriwa	Ryde
Bowra	Freeman's Reach	Milton	Southgate Lower
Breadalbane	Giant's Creek	Minmi	Spring Grove
Broke	Gladstone	Morebringer	Sydney North
Bungowannah	Gosford	Mount Keira	Tamworth
Burrawang	Gosforth	Mudgee	Uarby
Cooyal	Goulburn North	Murrurundi	Watson's Bay
Cootamundra	Grafton South	Newtown	Yarrunga.

Substantial additions have been made or commenced at:—

Armidale	Forbes	Menangle	Rooty Hill
Berkeley	Gocup	Morpeth	Rylstone
Bombala	Grafton	Mullenjandra	Singleton
Botany	Gundagai	Murrumbateman	Smithfield
Brewarrina	Gunnedah	Narrandera	Spring Flat
Bundarra	Hartley	Newcastle South	Sugarloaf
Camden	Hay	Omega Retreat	Thurgoona
Cundletown	Hamilton	Orange	Tumbarumba
Currawang	Lambton	Paddington	Tenterfield
Collector	Leichhardt	Prospect	Tomerong
Crudine	Lismore	Pambula	Walcha
Dubbo	Liverpool	Parkes	Windsor
Dundas	March	Richmond	Wombat
Eden	Maitland West	Robertson	Wyrallah.
Edwardstown	Marshall Mount	Rocky Mouth	

As regards the City of Sydney, spacious schoolrooms, capable of accommodating 1,200 children, have been erected in Sussex-street, and were opened in November. A site has been secured in Pymont, the requisite plans have been approved, and tenders invited; and land has been purchased in Crown-street on which schoolrooms will be erected for the district of Surrey Hills. The Council purposes further to add to the school accommodation of Sydney as occasion may require, and opportunities for obtaining suitable sites may present themselves. In the suburbs, new buildings are in course of erection at Balmain, Balmain West, Newtown, and Watson's Bay; plans have been prepared, and tenders for the erection of schoolrooms

schoolrooms for St. Leonards and Woollahra are about to be procured; and, sites having been purchased for Petersham, Waterloo, and Waverley, and another granted by the Government for Darlington, the necessary steps for providing schoolrooms for these places will at once be taken.

The total number of applications for the establishment of Public Schools in 1876 was 91, of which 71 were granted, 8 declined, and 11 were under consideration at the end of the year.

IV.—PROVISIONAL SCHOOLS.

These schools, as their name implies, can hardly be deemed permanent institutions. They are liable to change with the circumstances of the localities in which they are placed. In prosperous districts, where population increases, such schools usually become transformed into Public Schools. On the other hand, in declining localities where population has a tendency to diminish, a Provisional School is likely to lose a portion of its scholars and become a Half-Time School, and even to dwindle away till it is finally closed on account of the small attendance of children. Thus in 1876, 21 Provisional Schools became Public Schools, and 20 others were discontinued through paucity of scholars. In new localities however 58 Provisional Schools were brought into operation during the same period. The whole number of applications for aid to Provisional Schools received in 1876 was 97, of which 65 were granted, 21 were declined, 3 were withdrawn, and 8 were under consideration at the close of the year.

The following figures exhibit briefly the most important facts in connection with schools of this class:—

Number of Provisional Schools on list for 1875	262
Closed in 1876	20	...	41
Converted into Public Schools, 21	41
					221
Opened in 1875	58
Total on list for 1876	279
Net increase	17

V.—HALF-TIME SCHOOLS.

Like Provisional Schools, these are liable to change with the population, and either to become Provisional Schools, when the attendance increases, or to lose their pupils and cease to exist. In many localities in which Half-Time Schools have been in operation, the residents have latterly evinced a preference for whole-time schools, as affording greater opportunities for the education of their children. This desire, so long as it is kept within reasonable bounds, is to be regarded as a favourable sign, and becomes objectionable only when it is insisted upon in cases where the number of school children is very small.

Number of Half-Time Schools on list for 1875	116
Closed during 1876	18	...	24
Converted into Provisional Schools...	6	24
					92
Opened in 1876	18
Total on list for 1876	110
Net decrease	6

VI.—INSPECTION.

Staff.—We regret that we have to record the death of one of our Inspectors, Mr. E. H. Flannery, whose decease occurred in February, 1876. Mr. Flannery, a zealous and efficient officer, had held the position of Inspector for seven years. To fill his place we appointed Mr. C. Hookins who, besides gaining a first class certificate, had been a teacher in the service of the late Board of National Education and the present Council for twenty-two years, and had been for a long time head master of the Model Public School at Albury. The Council also appointed Mr. F. Bridges, previously head master of the Model Public School in Sydney, to be an Assistant Inspector.

Schools Inspected.—For purposes of inspection the schools in operation in 1876 were arranged in 1,154 departments, of which 1,059 were duly inspected. The following table shows the several Inspectors' districts in which the inspected schools are situated.

Districts.	Number of Schools or Departments existing during the year.	Number fully inspected.	Number not fully or regularly inspected.
Albury.....	65	39	26
Armidale.....	51	44	7
Bathurst.....	107	98	9
Braidwood.....	93	88	5
Camden.....	97	97	0
Cumberland.....	91	87	4
Goulburn.....	97	92	5
Grafton.....	81	73	8
Maitland.....	96	91	5
Mudgee.....	74	69	5
Newcastle.....	110	90	20
Sydney.....	114	114	0
Yass.....	78	77	1
Totals.....	1,154	1,059	95

Of the 95 departments not inspected, 26 belong to the Albury District, and 20 to the Newcastle District. In the former case, the decease of the late Inspector in the early part of the year, and the necessary delay which occurred in the appointment of a successor, occasioned the lapse of a considerable time before the work of inspection could be resumed. As regards the 20 unvisited schools in the Newcastle District the Inspector gives the following explanation:—"Of the 20 schools not visited, 3 were closed in March, 3 were opened only in November, and time did not permit me to reach 14."

Efficiency of Schools.—For the purpose of measuring the progress made generally by schools as regards efficiency, we append the following table which affords material for contrasting the condition of schools in 1871—the earliest time for which the necessary data can be obtained—with their state in the last two years:—

Schools.	Below Standard.			Up to Standard.			Above Standard.		
	1871.	1875.	1876.	1871.	1875.	1876.	1871.	1875.	1876.
Public.....	52.1	31.7	29.	36.8	36.9	36.5	10.9	31.3	34.4
Provisional.....	80.	75.6	65.4	17.	19.6	29.9	2.9	4.6	4.6
Half-Time.....	75.4	54.6	51.6	16.3	32.	35.4	8.1	13.3	12.9
Denominational.....	63.5	47.9	38.2	29.	31.6	34.9	7.3	20.4	26.7
All Schools.....	62.4	46.3	40.9	29.2	31.8	34.6	8.2	21.8	24.3

From this table some striking facts are apparent. Thus, in 1871, more than half the Public Schools (52 per cent.) were below the standard, whereas last year only 29 per cent. were in that undesirable position. Again, in 1871, only 10.9 per cent. of these schools attained a condition above the standard, while in 1876 the proportion was raised to 34.4 per cent.

The improvement in the condition of Certified Denominational Schools is quite as remarkable. In 1871, not less than 63.5 per cent. of these schools were below the standard, and the proportion of those above was only 7.3 per cent. Last year, however, only 38.2 per cent. were below, while 26.7 per cent. ranged above, the standard. As already mentioned, the standard has been gradually raised in each successive year, and therefore the improvement recorded in the table is a decided advance in efficiency.

The following table shows the estimated proficiency of the pupils examined in 1876:—

Subjects.	Estimated proficiency of the Pupils in 1876.				
	Good.	Fair.	Tolerable.	Moderate to Indifferent.	Totals.
<i>Reading—</i>					
Alphabet.....	1,462	2,369	1,407	1,331	6,569

Needlework.....	5,437	5,135	1,942	691	13,205

By comparing the table of proficiency for 1876 with that published in the Report for 1871, it will be found that a considerable improvement has been effected during the last five years. Of the pupils examined, the numbers classed as "good" have increased in that time as follows:—

In Reading,	from 21·2 to 32·5 per cent.
Writing,	" 27·8 to 39·4 "
Arithmetic,	" 15·2 to 20· "
Grammar,	" 16·5 to 26·5 "
Geography,	" 14· to 28· "

The total number examined in 1876 was 52,894, which is equal to an increase of 4,181 upon the number examined in 1875, and of 14,766 upon the number examined in 1871. Further details on this head are contained in the following table, which shows the per centages of pupils that passed the examination in the various grades of proficiency in five subjects for 1871 and for 1876:—

Subjects.	Good.		Fair.		Tolerable.		Moderate to Indifferent.	
	1871.	1876.	1871.	1876.	1871.	1876.	1871.	1876.
	Per cent	Per cent	Per cent	Per cent				
Reading	21·2	32·5	36·1	38·8	25·5	18·	17·	10·5
Writing	27·8	39·4	36·3	36·2	23·1	15·6	12·6	8·6
Arithmetic	15·2	20·	20·7	28·	26·1	24·8	37·8	27·
Grammar	16·5	26·5	28·4	33·3	25·4	19·6	29·5	20·4
Geography	14·	28·	26·2	31·9	28·	21·1	31·7	18·8

In the next table are shown the per centages of pupils passing examination successfully in the different kinds of schools in 1871 and in 1876.

Schools.	Reading.		Writing.		Arithmetic.		Grammar.		Geography.	
	1871.	1876.	1871.	1876.	1871.	1876.	1871.	1876.	1871.	1876.
	Per cent	Per cent	Per cent	Per cent	Per cent	Per cent				
Public	63·9	76·5	69·9	81·9	47·2	52·9	52·4	69·2	47·2	68·
Provisional	33·4	44·5	50·9	55·	20·3	34·	19·4	27·3	15·7	26·2
Half-Time	36·2	57·3	51·1	65·4	30·6	26·2	25·7	23·6	23·6	29·7
Denominational	54·3	70·7	58·	70·5	29·5	43·9	37·5	54·5	33·2	59·1
All	57·3	71·4	64·1	75·7	35·9	48·1	44·9	59·8	40·2	60·

VII.—TEACHERS.

Supply.—The supply of teachers was well maintained during 1876, and it was even found impracticable to present situations with sufficient rapidity to secure early employment for all the candidates that presented themselves. But it should be remarked, on the other hand, that if school sites had been obtainable when required, and new school buildings had thereupon been erected, the supply might have fallen short of the demand. The character of the teachers employed is such, speaking generally, as to warrant the confidence of the Council and of parents, and many are entitled, both on the score of efficiency and propriety of conduct, to the highest praise.

Pupil Teachers.—In a few localities some difficulty was experienced in obtaining suitable candidates for the office of pupil teacher, although there was, on the whole, a large increase in the number of applicants. We purpose instituting inquiry, with the view of ascertaining the cause of the diminution alluded to, and then taking such steps as the circumstances may appear to warrant for securing a constant supply of eligible young persons for the office.

The following statistics afford the means of comparison with the results of previous years:

	1874.	1875.	1876.
Applicants examined	193	135	258
" successful	102	82	152
" unsuccessful	91	53	106
Pupil teachers promoted:—			
From Class IV to Class III	60	90	91
" III " II	61	57	71
" II " I	48	56	57
" I to Training School	34	54	52
Failed to gain promotion	39	41	40

Training School.—During the year there were two sessions of the Training School—the first from 10th January to 26th June, and the second from 10th July to 18th December.

Seventy-nine candidates—47 males and 32 females—were enrolled as students. Of these 1 male and 1 female withdrew after a brief experience of the work of the Training School. One male of weak constitution was allowed to retire after four months training, and was appointed, without examination, to a school; a female retired on finding her health unequal to the required exertion; and one male, on account of sickness, was permitted to leave two months before the end of the session, with liberty to re-enter in the first session of 1877. There were, therefore, 74 students, viz., 44 males and 30 females, that passed through the regular training course.

These were divided into two classes—upper and lower. In the former were placed 25 males and 14 females, and in the latter 19 males and 16 females.

The course of study prescribed was:—

LOWER CLASS.

Reading: Selections in Prose and Poetry from advanced Class Books and from standard authors.
 Writing: Plain and Ornamental Penmanship. Exercises in writing from dictation.
 Grammar: Parsing, Analysis of Sentences, Composition, and Derivation.
 Geography: Descriptive: Australia in outline; New South Wales in full detail; Europe, Asia, Africa, and North America in detail.
 Arithmetic: Simple and Compound Rules, Reduction, Vulgar and Decimal Fractions, Proportion, Square Root.
 School Management: Instruction, Organization and Discipline of Schools.
 Lesson Books: Series I to III inclusive.
 Drawing: Freehand and Perspective.
 Singing: Tonic-sol-fa method.

UPPER CLASS.

Reading: Selections from standard authors.
 Writing: As in lower class.
 Grammar: Parsing, Analysis, Composition, Derivation.
 Geography: As in lower class. Physical—The earth as a part of the solar system; general features of the earth's surface—the high lands of both hemispheres lowland plains and rivers, oceans, winds, tides, currents, distribution of island groups, coralline structures, volcanic phenomena, climate, &c.
 Arithmetic: Higher Arithmetic, including the extraction of roots.
 School Management: Instruction, Organization, and Discipline of Schools; Method.
 Drawing: Freehand and Perspective.
 Singing: Tonic-sol-fa method.
 English Literature: Chambers' English Literature—first five periods—special study of 3rd and 4th periods. Thomson's Seasons—"Summer."
 Euclid: Books I to IV inclusive. Deductions.
 Algebra: Quadratics, including surds.
 Mensuration: Superficies.
 Latin: Smith's Principia Latina, Part I.

French: De Fivas' Grammaire des Grammaires, Ahn's I Reader, Athalie.

Euclid, Algebra, Mensuration, and Latin were studied by males and French by females only. The students of both classes attended one day each week in the Model School, where they observed the methods of teaching employed, and were also themselves required to teach classes.

The physical training consisted of military drill and gymnastic exercises for males, and calisthenics for females.

Special class.—A distinctive feature of the work for this year was the formation of a special class of students.

At the commencement of the second session in July last, six males and nine females who had been in training the previous session, and had obtained Second Class Certificates, were directed to enter upon a second course of training. The course of study prescribed for these students was:—

English Literature and Composition.

History of England.

Mathematical Drawing.

Vocal Music.

Latin: Cæsar, Grammar, Ihne's Latin Syntax.

Euclid: Books V, VI, XI, XII. Deductions.

Algebra: To and inclusive of the Binomial Theorem.

Trigonometry: Analytic, with Solutions of Triangles.

Mechanics: Elementary Course.

French: (For females only)—De Fivas' Grammaire des Grammaires; Ahn's Second Reader; Athalie—advanced studies.

The afternoon of Monday and forenoon of Thursday in each week, were spent by these students in some Public School in or near Sydney, that they might gain additional practical experience in the management of schools, and thus be better prepared to enter on their work.

The students of this class were occasionally withdrawn to supply places in schools rendered temporarily vacant by the absence of the regular teachers. In consequence of this arrangement no student was in attendance for the whole session, and therefore their general progress could not be estimated accurately. There is sufficient evidence, however, to show that the establishment of such a class is calculated to produce a very beneficial effect. The students seemed to appreciate the opportunity thus afforded them of increasing their practical skill, and especially of obtaining instruction in the higher subjects. Even when placed in ordinary country schools such teachers would be certain to raise the character of the instruction so far that the parents, becoming aware of its value, would be anxious to keep their children constantly in attendance. Thus the evil caused by the prevailing irregularity in the attendance would be diminished to a considerable extent.

Results.—In compliance with regulation 61, the classes were examined orally at the end of each month, and at the termination of each session the final examination for classification was held under the superintendence of an Inspector. The results of these final examinations will be seen by the following table, which shows the classification obtained by the students.

				Males.	Females.
Second Class	A ...	6 ...
				B ...	15 ...
Third Class	A ...	8 ...
				B ...	10 ...
				C ...	3 ...
Total...	44	30

Examinations.

Examinations.—In consequence of the alteration in the Regulations by which compulsory examination of teachers once classified was altogether discontinued, few were examined this year but such as voluntarily presented themselves. One consequence of the change is seen in the comparatively small percentage of failures—35·1. In the two preceding years the percentage was 61·1 and 47·2 respectively.

The number of teachers who presented themselves for examination was 111. Their success is shown in the following table:—

Promoted to III C	13
" B	18
" A	19
" to II B	10
" A	11
" to I B	1
	72
Failed to gain promotion	39
	111

Promotions.—The new regulation as to promotion for good service was not rigidly enforced last year. The Council desired to give teachers who possessed reasonable claims under the old regulation, the benefit of their previous service, and awarded promotion to all who would have been entitled to receive it upon the conditions existing prior to the change.

The numbers promoted were—

From III C to III B	3
" III B to III A	3
" III A to II B	19
" II B to II A	10
" II A to I B	3
" I B to I A	1

Total 39

Four of these were special promotions for services which, compared with those usually rendered, might be termed distinguished.

Emoluments.—The remuneration, whether derived from salary or school fees, received by the teachers in the Council's service, has been gradually increased during the ten years of the Council's existence. This result, as regards increased salary, has been obtained partly by the efforts of the teachers themselves to raise their classifications and render their schools more efficient, and partly by the operation of the regulations by which the salaries paid, especially in the lower grades, have been greatly augmented. The total amount paid to teachers in 1876 was £174,601 0s. 3d. This sum is composed of £113,055 9s. 8d. paid by the Council as salaries, and £61,545 12s. 7d. received as school fees. In the aggregate, therefore, teachers received £18,556 14s. 2d. more last year than in 1875. The average amount paid to each teacher was £110 5s. 11d. The following tables, however, exhibit in greater detail and more precisely the emoluments of teachers according to classification and position in the service.

Average rate of emoluments of classified principal teachers in 1875 and in 1876:—

Classification of Teachers.	Salaries.		Fees.		Total.	
	1875.	1876.	1875.	1876.	1875.	1876.
I A	£ 150	£ 156	£ 251	£ 237	£ 401	£ 393
I B	138	144	169	194	307	338
II A	126	132	98	139	224	271
II B	114	120	86	84	200	204
III A	102	108	42	41	144	149
III B	90	102	32	41	122	143
III C	78	96	23	26	101	122

To these rates should be added the annual value of the residences which, in the great majority of cases, are provided for the teachers. The average emoluments of principal teachers (males) in Public and Certified Denominational Schools—taking all cases in which such teachers are in receipt of their classification salary—are

	Salaries.	Fees.	Total.
Public Schools	£111 18 0	+ £63 0 3	= £174 18 3
Cert. Denom. Church of England ...	110 10 9	+ 79 0 10	= 189 11 7
" Roman Catholic ...	107 4 4	+ 70 5 7	= 177 9 11
" Presbyterian ...	113 0 0	+ 84 4 9	= 197 4 9
" Wesleyan ...	114 7 1	+ 90 12 5	= 204 19 6
All Public and Denominational Schools	110 12 0	+ 66 3 5	= 176 15 5

In 1873 the average emoluments of teachers in Public and Certified Denominational Schools were—

Salary.	Fees.	Total.
£84 6 2	+ £53 8 6	= £137 14 8

The fact that Public School teachers receive a smaller remuneration than teachers in other schools may appear to be singular and to require explanation. There will be no difficulty in understanding the matter, however, if it be borne in mind that by section 8 of the Public Schools Act "a Public School may

be established in any locality where, after due inquiry, the Council of Education shall be satisfied that there are at least twenty-five children who will regularly attend such school on its establishment." In accordance with this provision, many Public Schools have been opened in localities where the population is scanty and the school attendance at, or very little above, the minimum. In such schools the amount paid for school fees is often so small as to be merely nominal, and the amount derived from this source forms an insignificant addition to the salary paid by the Council. On the other hand, Certified Denominational Schools, especially of late years, are for the most part confined to thickly-peopled districts where the receipts from school fees exceed the average. The Presbyterian and Wesleyan Schools are so few in number and their circumstances so exceptional, that they might with justice have been omitted from the calculation embodied in the foregoing table.

The rates of emoluments in Half-Time Schools and Provisional Schools are:—

	Salaries.			Fees.			Total.		
	£	s.	d.	£	s.	d.	£	s.	d.
Half-Time Schools ...	78	10	0	+ 13	5	7	= 91	15	7
Provisional Schools ...	57	0	3	+ 16	11	9	= 73	12	0

In the following table the average emoluments of principal teachers (males receiving their classification salary) are exhibited for the several Inspectoral districts:—

Districts.	Salaries.			Fees.			Total.		
	£	s.	d.	£	s.	d.	£	s.	d.
Sydney ...	121	19	0	+ 131	4	3	= 253	3	3
Mudgee ...	110	11	5	+ 79	5	11	= 189	17	4
Armidale ...	111	4	7	+ 70	19	6	= 182	4	1
Albury ...	102	9	4	+ 71	10	6	= 173	19	10
Cumberland ...	110	0	8	+ 63	13	2	= 173	13	10
Yass ...	108	0	0	+ 62	19	9	= 170	19	9
Bathurst ...	106	18	2	+ 62	19	8	= 169	17	10
Braidwood ...	108	0	0	+ 61	7	8	= 169	7	8
Camden ...	111	17	10	+ 49	5	6	= 161	3	4
Maitland ...	110	8	0	+ 50	5	1	= 160	13	1
Newcastle ...	109	4	2	+ 51	6	7	= 160	10	9
Grafton ...	107	7	8	+ 49	7	1	= 156	14	9
Goulburn ...	106	0	0	+ 46	5	3	= 152	5	3

While considerable improvement in the pecuniary position of teachers is manifest from these tables, there are still some circumstances which affect unfavorably their comfort and efficiency, especially in the case of persons engaged in small Public Schools, in Provisional Schools, and in Half-Time Schools—all, in short, who are stationed in sparsely populated districts. In these cases, teachers are often precluded from obtaining proper food, and are compelled to subsist on a coarse and innutritious diet which is detrimental to the health of both body and mind. When to this disadvantage is added the feeling of depression occasioned by the want of suitable society, the entire absence of sympathy on the part of parents, and too frequently the antagonism of the School Board, or influential members of that body, it will be seen that teachers so situated have some real hardships to endure and need effective support. Under such circumstances the work done in these small schools must be held to be of a satisfactory description.

VIII.—LOCAL SUPERVISION.

No material improvement is yet apparent in the character of the local supervision. The Inspectors of the Armidale and Camden Districts alone report that the supervision has been more active; in other districts it is still described as very unsatisfactory with regard to a large majority of the schools. The fact that School Boards are not now required to raise one-third of the amount necessary for buildings and repairs is assigned as the reason for the increased activity in the Armidale and Camden Districts. It is doubtful, however, whether the 73rd regulation and the special instructions issued to Inspectors, requiring them to give notice of their visits to Local Boards, were effectively observed. Those instructions are embraced in the following extracts from the minutes of the Council:—

1. That Inspectors be instructed to give to each Public School Board notice of *one* inspection yearly, to invite the members to be present thereat, and to hold a meeting of the Board some time during the day of inspection.
2. That the question of the material wants of the school should, *inter alia*, be fully considered at such meeting, and that the Inspector should then make himself thoroughly acquainted with the material condition of the school, in order that he may be in a position to report to the Council.
3. That the Board should be informed that their proper course is to bring under the Council's notice the material requirements of the school, and to furnish an estimate of the cost and, if necessary, a plan and specification of the proposed works.

The Council hoped, by these instructions, to have inspired Local Boards with interest in the welfare of the schools under their supervision, and thus to have led them to manifest greater energy and activity in their proceedings. As the Inspectors record but few instances of meetings of the Boards having been held in accordance with the foregoing resolution, the Council is led to the conclusion that, if the instructions were acted upon, the result is the reverse of encouraging.

IX.—FINANCE.

During the year, the Council had at its disposal the sum of £279,186 5s. 8d., which was made up of the following items:—

Balance from 1875 ...	£27,092	8	5
Vote for Public Instruction ...	250,000	0	0
Church and Schools Estates Revenue ...	1,739	6	11
Various items ...	354	10	4
	£279,186	5	8

If to this be added the sum of £61,545 12s. 7d., paid as school fees, the whole amount available for primary instruction is raised to £340,731 18s. 3d. The balance sheet appended hereto shows that the total amount expended from public funds was £240,282 18s., leaving a balance of £38,903 7s. 8d., available in 1877 to meet pledges made on account of buildings.

The principal heads of expenditure are summarised in the subjoined table:—

Office	£7,822 11 2
Inspection	11,140 8 2
Training Department	4,500 7 11
Teachers' salaries	113,055 9 8
Buildings, repairs, &c. (schools)	96,577 4 10
Books, printing, &c.	3,791 19 4

Buildings.—In the various lists of schools contained in Appendices B, D, F, detailed information is given as to the amount expended upon each school under the heads of (1) Salaries, (2) Books and Apparatus, (3) Travelling Expenses and Forage, (4) Buildings, Furniture, &c. The Council, however, in view of the large amount of the Parliamentary vote, has deemed it desirable to give in a separate form the amount expended on new school buildings. This information is exhibited in the following table:—

Paid by Council:—

Supply of School Books.—At a very early period of the Council's existence, the question of providing a series of Reading Books for Schools maintained under the Council was considered. As the books then sanctioned were defective in some points, and were not especially adapted for use in schools situated in the Southern Hemisphere, the Council felt it desirable that another series should be substituted whenever a suitable opportunity presented itself. No practical steps were taken, however, until last year, when Messrs. W. Collins, Sons, & Co., of London, Edinburgh and Glasgow, submitted to the Council their series of "Progressive Readers," which, it appears, are extensively used in primary schools in the Mother Country. After lengthened inquiry and mature deliberation, the Council resolved to adopt these books, provided they were re-cast to such an extent as to fit them for use in Australian Schools. To these conditions Messrs. Collins agreed, and a contract was therefore entered into with that firm for the supply of the revised books for a period of five years. Subsequently the same firm tendered, in common with others, for the supply of school requisites; and, as their tender was the lowest, it was accepted, and the necessary contracts were entered into in the usual form. From the well known character and standing of Messrs. Collins, the Council feels assured that their engagements will be met in the most satisfactory manner.

The use of the new series of reading books which have been designated "The Australian Reading Books," will, no doubt, be very beneficial in improving the instruction given in the Council's schools.

We submit this as our Report upon Public Schools for the year ending 31st December, 1876; and in testimony thereof we have caused our corporate seal to be affixed hereto, this thirtieth day of April, one thousand eight hundred and seventy-seven.

C-448

APPENDIX B.

ATTENDANCE of Children at the Public Schools, as certified by the Public School Boards, for the Quarter ending 31st December, 1876, or for the last Quarter of that year during which the Schools were in operation.

APPENDIX H.

ALBURY DISTRICT.

INSPECTOR'S GENERAL REPORT on the condition of the Schools under the Council of Education, inspected during the year 1876.

DURING the year out of 65 schools in existence in this district 53 have been in operation the whole of the year, viz. : 41 Public, 11 Provisional, 2 Half-time, and 4 Certified Denominational.

Two Public Schools, 4 Provisional Schools, and 1 Certified Denominational School have been open during a portion of the year only.

Owing to my recent appointment, on the death of Mr. Inspector Flannery, 39 schools only have been regularly or fully inspected, 4 have been incidentally visited, and 22 schools have not been visited.

New schools have been brought into operation at Nangus Creek, Tooma, Taramia, and Corec. One school (Moulamein), has been re-opened, and final arrangements have been made for the establishment of schools at Brocklesby West, Long Plain (Redland), Adelong Grove, Berrigigama, Bruceedale, Corowa, and Lacmalac.

New and commodious buildings have been erected at Germanton, Urana, and Morebringer; tenders are accepted for new schoolhouses at Adelong and Bowna; while important improvements and additions have been made to the Public Schools at Gundagai, Jerilderie, Wentworth, and Moulamein.

Preliminary arrangements are being made for the establishment of schools at Umbango Creek, Mathoura, Hovell, Cookardina, Wagra Creek, Downside, and Forest Hill.

If it were not for the difficulties and delays in obtaining a legal transfer of the land for school-sites, several of the schools above mentioned would now be in operation, and the blessings of a sound, moral, and intellectual training enjoyed by hundreds of children now running wild and uncared for.

The material condition of the schools generally may be said to be "very fair." There are few schools now in the district in which comfortable schoolrooms are not provided, while in the Public Schools ample accommodation has been afforded the teacher and his family in the erection of neat residences of 3 or 4 rooms, with kitchen and water supply. In the Provisional Schools, however, the teacher in most cases lodges with one of the neighbouring settlers, or at the nearest bush hotel, the accommodation at the school being in nine cases out of ten unfit for habitation by persons who value health and comfort—mere skillions some 12ft. by 8ft.

It is estimated that the property now vested in the Council for school purposes in this district amounts to £23,247 in value, against £22,000 for the year 1875, and were the delays in acquiring titles to land obviated a more gratifying account of the efforts made for its educational advancement would be exhibited.

The

The property generally is kept in creditable order by the teachers; greater attention is now being paid to the grounds about the schools. The planting of evergreen and umbrageous trees, and the formation of neat flower-beds, although checked by the present and late unfavourable aridity, bid fair in a short time to render them ornaments to the localities in which they are placed, and valuable schools to the young, whose opportunities of seeing "Nature in her loveliest garb" are, in our Western and South-western districts, so few and limited.

The supply of pure water has during the year received serious attention. In the plans of all new schools brick tanks of ample capacity are provided for. In the western parts of this district the heat and aridity of the climate are intense during at least three months of the year, and the absence of means to quench the thirst of children who come 3 or 4 miles to school, often over shelterless plains, seriously interferes with their regular attendance.

The great majority of schools are well provided with school material, which in all cases was used with commendable care and economy.

The condition of the schools of this district, in reference to the number of pupils enrolled and number in average attendance, compared with that of the year 1875, is exhibited in the following table:—

	1875.		1876.		Increase.	
	Rolls.	Average.	Rolls.	Average.	Rolls.	Average.
March.....	3,303	2,110.6	3,502	2,364.6	199	254.0
June.....	3,122	1,982.0	3,510	2,331.9	388	349.9
September.....	3,213	2,118.7	3,525	2,464.0	312	345.3
December.....	3,417	2,355.4	3,474	2,376.0	57	20.6

The very slight increase in the numbers enrolled, and the average attendance for the month of December, 1876, over that for 1875, is due to the great prevalence of blight, and to other temporary causes.

Receiving charge of this district in July last I am unable to institute a comparison between the results obtained during the present year and those for 1875; but the following table will show the condition of the schools in relation to the standard of proficiency.

Above standard.	Up to standard.	Below standard.
33.3 per cent.	35.9 per cent.	30.7 per cent.

At examination, out of a total of 2,086 pupils present 1,979 were examined in reading, 1,897 in writing, 1,754 in arithmetic, 1,270 in grammar, 1,412 in geography, 1,686 in object lessons, 1,058 in vocal music, 857 in drawing, 151 in geometry, 142 in algebra, 581 in needlework, 36 in Latin, and 73 in mensuration, with the following result:—

Subjects.	Good.	Fair.	Tolerable and Indifferent.	Not Taught.	Subjects.	Good.	Fair.	Tolerable and Indifferent.	Not Taught.
Reading	605	960	414	107	Drawing	211	321	276	49
Writing	563	675	659	189	Geometry ...	52	99	0	0
Arithmetic ...	536	712	506	332	Algebra	59	80	3	0
Grammar ...	294	577	399	816	Needlework...	157	312	100	12
Geography ...	345	494	573	674	Latin	6	30	0	0
Object lessons	373	621	447	245	Mensuration..	73	0	0	0
Vocal music	280	379	265	134					

The proportion of "good" and "fair" marks show, I consider, that the teachers have labored during the past year with honest and painstaking zeal.

From the great influx of selectors on to the country, watered by the Yanko and Colombo Creeks, the neighbourhood of Corowa and Howlong, and the country intersected by the Deniliquin and Moama Railway, I anticipate that the aid of the Council, in satisfying the educational wants of these important districts, will be largely called for during the next two years.

A summary of my "special report" on each school of the district visited during the past year is annexed.

Inspector's Office, Albury, February 6th, 1877.

CHARLES HOOKINS,
Inspector, Albury District.

ANNEX A.

SUMMARY of Reports upon Public, Provisional, and Half-time Schools, inspected during the year 1876.

I.—PUBLIC SCHOOLS.

ADELONG :—Regular inspection, 15th and 16th June.

Enrolled :—Boys, 72; girls, 61; total, 133. Present :—Boys, 56; girls, 43; total, 99.

This school is held in temporary premises. The rooms are small and ill-adapted to their purpose; new and commodious buildings are about to be erected that will satisfy every purpose for some years. It is well equipped with working material, but the furniture is now old and unsuitable. The organization is as satisfactory as circumstances will allow. The school has made good progress both in numbers and the attainments of the pupils. The standard is more than satisfied.

ADELONG CROSSING :—Regular inspection, 20th June.

Enrolled :—Boys, 26; girls, 22; total, 48. Present :—Boys, 25; girls, 19; total, 44.

The school building of wood is too small for the increasing attendance; it is shortly to be enlarged. The supply of working material is ample, and the organization very fair. Eleven-twelfths of the pupils are regular, but a few are unpunctual. The discipline is effective and the moral tone of the school good. The instruction is tolerably skilful, and the classification appropriate. The pupils have made fair progress since last inspection.

ALBURY :—

ALBURY (Infants):—Regular inspection, 13th December.

Enrolled :—Boys, 74; girls, 46; total, 120. Present :—Boys, 59; girls, 35; total, 94.

The school is held in a handsome building attached to the Primary Department; it is kept in a neat and becoming condition; the walls however require re-colouring. It is well supplied with all educational necessaries, and the general organization is very fair. The pupils are regular, but an improvement in punctuality is desirable; the discipline is very fair. The instruction is imparted with zeal and industry; the classification is judicious; and satisfactory progress has been made since last inspection. Promotions having caused the removal of the 4th Class to the Primary Department at the beginning of the quarter, the range of attainments was considerably narrowed. General proficiency very fair nearly.

ALBURY (Primary):—Regular inspection, 14th December.

Enrolled :—Boys, 100; girls, 84; total, 184. Present :—Boys, 69; girls, 59; total, 128.

The schoolroom is narrow in proportion to its length, otherwise it is excellently adapted to its purpose; the drainage is defective but is about to be remedied; the walls need re-colouring. The school is well furnished and supplied with all that is needful; a neat and well laid out garden sets off the handsome front of the buildings, and renders them an ornament to the town. The organization is very fair. Two-thirds of the pupils are regular; a few are unpunctual; the pupils' demeanour is pleasing, and the discipline effective. The classification is good; the methods of instruction modern and penetrative; and the general proficiency very fair to good. Time did not permit of the 5th and 4th Classes being examined in the higher subjects, all of which receive considerable attention.

BALRANALD:—Regular inspection, 7th September.

Enrolled :—Boys, 30; girls, 35; total, 65. Present :—Boys, 26; girls, 24; total, 50.

The school buildings recently enlarged are now tolerably suitable; they are kept in becoming order and condition. Two-thirds of the pupils are regular, and all are tolerably punctual. The discipline is weak, and the pupils rather restless and talkative. The teaching is zealous and industrious, and the attainments fairly satisfy the standard.

BLACK RANGE (N.V.):—Regular inspection, 13th July.

Enrolled :—Boys, 17; girls, 17; total, 34. Present :—Boys, 17; girls, 17; total, 34.

The school buildings are tolerably suitable, but the premises are not fenced in, and there are no out-houses. The premises are kept as neat as circumstances will allow. The pupils are irregular and unpunctual; otherwise, the discipline is fair, and the government judicious. Considering the inexperience of the teacher, the school evinces satisfactory progress, and the instruction shows considerable aptitude.

BOWNA:—Regular inspection, 24th July.

Enrolled :—Boys, 24; girls, 22; total, 46. Present :—Boys, 19; girls, 20; total, 39.

The schoolroom (of wood) is now unfit for use. A new and commodious building, however, is shortly to be erected. The premises are unfenced, but the whole property is kept with reasonable care. The internal organization is fair, and the moral tone satisfactory. An increasing attendance exhibits the improved interest the parents take in the school. The discipline is severe but effective; the instruction sound, followed by tolerable to fair results. The classification is appropriate.

COOLAC:—Regular inspection, 20th November.

Enrolled :—Boys, 14; girls, 16; total, 30. Present :—Boys, 8; girls, 12; total, 20.

The school buildings (wood) are tolerably suitable, but the outhouses are dilapidated, and should be done away with. The school premises are partially fenced only, and are kept with reasonable care. The organization is tolerable. A full supply of working material is kept up, and there is sufficient furniture for present use. Two-thirds of the pupils are regular but unpunctual. The discipline is lax and feeble. The instruction wants energy, and the progress of the pupils falls short of the standard. The general proficiency tolerable to fair.

DENILIQWIN:—Regular inspection, 28th and 29th August.

Enrolled :—Boys, 90; girls, 45; total, 135. Present :—Boys, 68; girls, 37; total, 105.

The school buildings generally are in fair repair, but need re-colouring and painting. The premises are kept in becoming order. The discipline is effective. The attainments are nearly fair (5·7), and the general spirit of the school is satisfactory.

EDWARDSTOWN:—Regular inspection, 7th June.

Enrolled :—Boys, 20; girls, 27; total, 47. Present :—Boys, 10; girls, 17; total, 27.

At the time of my visit the school buildings and residence were undergoing important repairs, the ground being fenced and a bridge thrown across a creek for the convenience of the pupils. When completed the organization will be good and the material condition satisfactory. The attendance has increased, but the irregularity and non-punctuality of the pupils still exist. Very fair discipline is kept. The instruction is earnest, and results tolerable. The classification is defective. The teacher is industrious, but lacks experience.

GERMANTON:—Regular inspection, 19th July.

Enrolled :—Boys, 12; girls, 20; total, 32. Present :—Boys, 11; girls, 15; total, 27.

Pending the completion of the new schoolbuildings, the children were being taught in temporary premises, the best obtainable. The furniture and apparatus was old and dilapidated. A fair supply of working material exists, and the aspect of the school as satisfactory as the circumstances would allow. About two-thirds of the pupils are regular, and all are fairly punctual. The discipline is firm and well sustained. The instruction would be much improved if the teacher devoted more time to study. The proficiency of the pupils ranged from moderate to fair.

GOCUF:—General and regular inspection, 24th November.

Enrolled :—Boys, 24; girls, 24; total, 48. Present :—Boys, 21; girls, 21; total, 42.

Since previous inspection a neat and commodious residence has been erected. The premises generally are kept in excellent order. The furniture and apparatus are well suited to the requirements of the school and tastefully arranged. The whole external aspect is pleasing. More than three-fourths of the pupils are regular in attendance, and all are punctual. The discipline is mild but firm, and the children's demeanour self-contained. The instruction was imparted with very fair skill, the classification suitable, and the general proficiency quite up to standard.

GUNDAGAI:—Regular inspection, 2nd and 5th June.

Enrolled :—Boys, 48; girls, 38; total, 86. Present :—Boys, 32; girls, 21; total, 53.

New and important additions have recently been made to this school. The material condition is now good. The organization is satisfactory and the external aspect pleasing. The attendance is far short of what may be expected, and still decreasing, partly from the unpopularity of the teacher and partly from

the opening of a Roman Catholic school in the neighbourhood. The teacher is well trained and skilful, but the results of examination are not commensurate. The discipline is fair, the classification good, and the general proficiency fair to very fair.

HAY :—Regular and general inspection, 14th and 15th September.

Enrolled :—Boys, 90 ; girls, 45 ; total, 135. Present :—Boys, 64 ; girls, 26 ; total, 90.

Important improvements to this school will, when completed, make the material condition all that can be desired. The organization is good, and the premises are kept in becoming order. There is sufficient working material and the furniture is tastefully arranged. Five-sixths of the pupils are regular and nearly all are punctual. The discipline is firm and well-sustained. The instruction is intelligently and earnestly applied, and the results are above standard.

HOPEFIELD :—Regular inspection, 17th August.

Enrolled :—Boys, 14 ; girls, 17 ; total, 31. Present :—Boys, 11 ; girls, 13 ; total, 24.

The schoolbuildings are new and well preserved ; the premises are fenced in. The organization is fair, and the material condition good. The attendance is irregular and unpunctual, chiefly from the neglect of the parents. The attainments, therefore, were only tolerable. The discipline and instruction fair.

JEREELDERIE :—Regular and general inspection, 24th October.

Enrolled :—Boys, 37 ; girls, 18 ; total, 55. Present :—Boys, 36 ; girls, 16 ; total, 52.

The material condition is very fair, organization satisfactory, and working material sufficient. The discipline lax, and the pupils, especially the girls, somewhat indolent. The classification is appropriate, and the attainments range from tolerable to fair.

LAKE ALBERT (N.-V.) :—Regular inspection, 6th November.

Enrolled :—Boys, 11 ; girls, 24 ; total, 35. Present :—Boys, 11 ; girls, 22 ; total, 33.

The school is held in a building temporarily lent for the purpose. New buildings on a more favourable site are shortly to be erected. The material condition is fair, the working material sufficient, and the general organization satisfactory. Nearly all the children are regular and fairly punctual. The discipline is very fair. The instruction also produces fair results.

MENINDIE :—Regular inspection, 29th September.

Enrolled :—Boys, 17 ; girls, 19 ; total, 36. Present :—Boys, 10 ; girls, 12 ; total, 22.

The schoolroom is a neat and commodious structure. There is no residence. The ground is unfenced, but the premises are kept neat and becoming. A sufficient supply of working material was wanting. The general organization is good. Nearly two-thirds of the pupils are regular, and are generally punctual. The discipline is very fair. Satisfactory progress has been made in school work, and the results range from tolerable to fair.

MOAMA :—Regular inspection, 30th August.

Enrolled :—Boys, 34 ; girls, 22 ; total, 56. Present :—Boys, 19 ; girls, 9 ; total, 28.

The present school buildings are too small, and ill-provided with the usual out-buildings. New school buildings of a superior character are about to be built, which will amply satisfy the educational wants of the town for some years. The furniture is old and unsuitable. The supply of working material sufficient, and the general organization as satisfactory as possible under the circumstances. The attendance was much diminished by sickness ; but tolerable regularity and punctuality of attendance exists. The discipline is satisfactory. The instruction is imparted with fair skill, but the general proficiency is low, owing to sickness and irregularity of attendance.

MOULAMEIN :—Regular and general inspection, 5th September.

Enrolled :—Boys, 12 ; girls, 14 ; total, 26. Present :—Boys, 12 ; girls, 14 ; total, 26.

School buildings present a neat and becoming appearance. The fencing is falling to the ground in many places. A tank is much required. The supply of working material is ample, and the organization is reasonably good. The instruction is tolerably effective, the discipline good, and the general proficiency ranges from tolerable to fair.

MOUNT ADRAH :—Regular inspection, 5th December.

Enrolled :—Boys, 17 ; girls, 16 ; total, 33. Present :—Boys, 13 ; girls, 14 ; total, 27.

The present schoolroom is tolerably suitable, but the out-buildings are no longer fit for use. A neat and tasteful garden surrounds the schoolroom, the work of the pupils supervised by the teacher. As soon as the land is conveyed to the Council a new schoolroom will be erected. The attendance equals nine-elevenths of the numbers enrolled. The pupils are tolerably punctual. The instruction is intelligent, and imparted with zeal and energy. The discipline is very satisfactory, and the general proficiency fair to very fair.

MULWALA (N.-V.) :—Regular inspection, 22nd August.

Enrolled :—Boys, 14 ; girls, 19 ; total, 33. Present :—Boys, 12 ; girls, 19 ; total, 31.

The school site is low and wet in winter. The schoolroom tolerably suitable. The furniture and apparatus adapted to their use and working material sufficient. The organization is very fair. Nearly two-thirds of the children are regular, but their punctuality is not so satisfactory, the discipline is very fair, and the pupils were very well behaved. The instruction is tolerably skilful and the attainments nearly fair.

MULLENGANDRA :—Regular inspection, 21st July.

Enrolled :—Boys, 11 ; girls, 14 ; total, 25. Present :—Boys, 9 ; girls, 12 ; total, 21.

Prettily situated on the bank of a creek. The school buildings, when completed, will present a very pleasing appearance. They are suitable, tolerably well supplied with furniture and working material, and the school is fairly organized. The pupils are tolerably regular and punctual, considering their distance from the school. The discipline is judicious, the instruction fairly effective, and the attainments nearly satisfy the standard.

NARANDERA :—Regular and general inspection, 30th October.

Enrolled :—Boys, 23 ; girls, 19 ; total, 42. Present :—Boys, 11 ; girls, 13 ; total, 24.

The new school buildings present a very neat appearance, but a kitchen is required to render this school one of the best of its kind in material condition ; it is well equipped with every school necessary, and is well organized. The presence of scarlatina in the town temporarily reduced the attendance ; the children are generally regular, and their punctuality is satisfactory. The discipline was very fair, the instruction intelligently put, and the results satisfy the requirements of the standard.

TATTAILA :—

TATTAILA :—Regular and general inspection, 31st August.

Enrolled :—Boys, 14 ; girls, 16 ; total, 30. Present :—Boys, 13 ; girls, 16 ; total, 29.

The school buildings recently erected are well and neatly kept, and the teacher's garden is tastefully arranged. The supply of water through a defect in the tank is scanty and unwholesome. The premises are fenced in, and the whole external aspect is becoming. The attendance is characterised by regularity and very fair punctuality. The discipline is very good, and the pupils remarkably neat and well behaved. The classification was suitable. The instruction was painstaking and intelligent, and the attainments rank this as one of the best of the schools of its class. The standard was more than satisfied.

THURGOONA :—Regular inspection, 14th and 17th July.

Enrolled :—Boys, 31 ; girls, 35 ; total, 66. Present :—Boys, 31 ; girls, 35 ; total, 66.

In material condition and equipment this school is one of the best in the district ; a substantial fence surrounds the whole premises ; the garden is tastefully laid out, the drill yard well gravelled by the voluntary labours of the boys, and the whole aspect pleasing. The organization is very good. Nine-tenths of the pupils are regular, and nearly all are punctual. The discipline is very satisfactory, and the demeanour of the pupils becoming. The instruction is characterised by great intelligence, methods are modern, and applied with commendable zeal. The classification is judicious. The attainments were above standard.

TUMUT :—Regular inspection, 20th December.

Enrolled :—Boys, 70 ; girls, 71 ; total, 141. Present :—Boys, 58 ; girls, 61 ; total, 119.

Handsome and commodious buildings, well maintained ; the grounds are fenced in and planted with trees, a few well-arranged flower-beds give a very becoming appearance. The supply of working material is sufficient, and is used with economical care. The discipline is very good, and the moral tone very pleasing. The instructional documents are well drawn up, and carefully arranged. Five-sevenths of the pupils are regular, and all punctual, with few exceptions ; and the whole aspect of the school creditable to the teachers. The instruction was intelligent and penetrative, the methods appropriate, and the general proficiency above standard.

WAGGA WAGGA (Boys) :—Regular inspection, 10th, 13th, and 14th October.

Enrolled :—198. Present :—163.

Both schoolrooms are too small for the increasing attendance. An infant department would render the material condition and organization complete. The school grounds are fenced in, and judiciously planted with umbrageous trees. The whole aspect externally is good. Nearly all the children are regular and punctual, and their demeanour and behaviour are such as firm and well-sustained discipline must needs produce. The results of instruction fully justify the high position of the school in the town and district.

WAGGA WAGGA (Girls) :—Regular inspection, 7th and 8th November.

Enrolled :—148. Present :—119.

As in the boys' department, the schoolroom is scarcely adequate to the present attendance ; but the general condition of the school as regards material for working is good. The pupils are regular and punctual, and the discipline is satisfactory, especially in the upper classes. The attainments ranged from fair to very fair, and in the upper classes, in some subjects, good.

WOOMARGAMA :—Regular inspection, 20th July.

Enrolled :—Boys, 21 ; girls, 5 ; total, 26. Present :—Boys, 21 ; girls, 5 ; total, 26.

A neat well appointed building ; there is no teacher's residence ; it is well supplied with working material, and the general organization is fair. The attendance is irregular and unpunctual, and the teacher was not present on the school ground on the day of inspection till nearly 11 o'clock a.m. The discipline is ill regulated, but the instruction was imparted with tolerable skill. The classification is reasonably good. The attainments ranged from indifferent to fair.

II.—PROVISIONAL SCHOOLS.**COBEE :—Regular inspection, 23rd October.**

Enrolled :—Boys, 8 ; girls, 10 ; total, 18. Present :—Boys, 8 ; girls, 10 ; total, 18.

A new schoolhouse, suitably furnished, except desks. The premises are unfenced, and unprovided with outhouses. The supply of working materials is sufficient. The material condition is reasonably good. All the children of the district attend with tolerable punctuality. The discipline is healthy ; only the ordinary subjects of instruction are taught, but the teaching is earnest and moderately skilful. The general proficiency is tolerable.

CLARENDON :—General and regular inspection, 16th November.

Enrolled :—Boys, 12 ; girls, 5 ; total, 17. Present :—Boys, 6 ; girls, 2 ; total, 8.

The school building (of galvanized iron), when finished, will be fairly suitable. The premises are leased, and fenced in only on two sides. The site is not sufficiently central to secure a fair attendance. The supply of working material is sufficient, and the organization satisfactory under the circumstances. The pupils are unpunctual and irregular, owing to the distance they attend school from, but are quiet and well behaved. The discipline is effective. The instruction is tolerably efficient, the methods moderate, and the classification appropriate. The attainments and general proficiency were below standard.

HILLAS' CREEK :—Regular inspection, 6th December.

Enrolled :—Boys, 16 ; girls, 13 ; total, 29. Present :—Boys, 16 ; girls, 11 ; total, 27.

Since last inspection a new building has been erected. It is neat and very suitable to its purpose ; it is tolerably well equipped with all that is necessary, and the organization is tolerable. The ground is unfenced. The attendance bears a reasonable proportion to the numbers on the rolls, and the punctuality fair, but the discipline is wanting in firmness. The pupils were not as neat in their dress as they should be. The instruction is earnest and tolerably skilful ; the classification satisfactory. The general proficiency ranged from tolerable to fair.

NANGUS CREEK :—Regular inspection, 9th June.

Enrolled :—Boys, 8 ; girls, 11 ; total, 19. Present :—Boys, 8 ; girls, 11 ; total, 19.

A new building of slab and shingles, tolerably suitable to its use. The premises are unfenced, and there are no out-houses. A sufficient supply of working material exists, and the school is well organized so far as the teacher is responsible. The attendance equals nine-tenths of the number on rolls. The pupils are tolerably regular and punctual. They are well disciplined and the tone of the school was exceedingly pleasing. The instruction was effective and imparted zealously ; the teacher may with application become very efficient. The classification is very satisfactory. The attainments exceeded fair.

WANGANILLA :—

WANGANELLA :—Regular inspection, 18th October.

Present :—Boys, 15 ; girls, 13 ; total, 28.

This school is centrally situated, but the school buildings need repair. The discipline is moderate. The attainments amount to moderate only. The teaching is earnest, but wanting in energy and skill.

Inspector's Office,
Albury, 27th January, 1877.

C. HOOKINS,
Inspector of Schools.

ARMIDALE DISTRICT.

INSPECTOR'S General Report for the year 1876.

DURING the year 1876 there have been in operation fifty-one schools, viz. :—Twenty-six Public, twenty-three Provisional, one Church of England, and one Roman Catholic. One new Public School—Doughboy Hollow—and five new Provisional Schools—Black Creek, Dungowan Lower, Goonoo Goonoo Kangaroo Flat, and Swanbrook—have been opened within the year ; and three Provisional Schools, Nowendoc, Wandsworth, and Saumarez Ponds, in operation during part of 1875, have been closed—in the case of Nowendoc and Wandsworth owing to diminished attendance, and in the case of Saumarez Ponds because of the substitution of a Public School in an adjacent locality. Aid was also granted to a Provisional School at Gurranbeen ; but the very indifferent support given to the teacher appointed led to his withdrawal, and the determination on the part of the Council to withhold its support for a time.

All the schools in operation at the time of my regular visitation have been fully inspected, with the exception of Barraba P., Black Creek Prov., and Rock Vale Prov. ; and seven of the schools received the ordinary as well as the regular or general inspection. Four schools, all Provisional, did not receive inspection as they were not open when I was in their neighbourhood. It should be mentioned here that serious illness incapacitated me for work during two months of the year most favourable for travelling, and thus rendered the accomplishment of the work contemplated in my programme of inspection extremely difficult.

Applications for the establishment of Public Schools at Moor Creek (Tamworth) and Rob Roy Gully (Inverell) have been favourably reported upon, and measures have been taken for the erection of the necessary buildings. Steps are also in progress for the establishment of Provisional Schools at Deep Creek, Salisbury, Saumarez Creek, and Stanborough. Taking the district throughout, it may be said that the means of education are very fairly supplied. There are a few places where Provisional Schools are needed, but where no action has been taken locally towards their provision, owing either to indifference on the part of the residents, or to the supposition that funds for the erection of the necessary buildings and furniture will be supplied by the Council.

Within the year much has been done towards the improvement of Public School premises, and the buildings and accommodation are now better than ever before. Votes to the amount of about £1,900 have been made by the Council during the year for various repairs and additions ; and £4,500 has been appropriated for the erection of new school buildings. The principal repairs and additions have been effected in connection with the Public Schools at Armidale, Bundarra, Gunnedah, Nundle, Tenterfield, and Walcha ; and Bingera, Quirindi, and Tamworth are localities in which new buildings are in progress. At Vegetable Creek the want of a good schoolhouse has been most urgently felt for the past three years ; and although the Council has been prepared to undertake its erection, nothing has yet been done owing to the difficulty of obtaining a suitable site. The same remarks, in a measure, apply to Brodie's Plains, near Inverell. A noticeable defect in the material condition of our schools is the almost universal absence of gardens and ornamental or shade trees. In some cases a few gum-trees are found in the playgrounds ; but as a rule the school sites present a most bare and uninviting aspect. In the western portions of the district bush trees are rarely met with in the schoolgrounds, and it is in these parts that shade is most needed.

In their educational aspect the condition of the schools inspected shows some ground for satisfaction. Although, during portion of the year, school attendance has been interrupted by juvenile sickness, this hindrance to progress did not operate so seriously as in the previous year, when a marked falling off in the attainments of the pupils occurred. The results for 1876 are about on a par with those of 1874, as will be seen from the following data :—

1874.....	55	per cent. below standard ;	17	per cent. up to standard ;	28	per cent. above standard.
1875.....	62	"	18	"	20	"
1876.....	55	"	20	"	25	"

In Public Schools, which afford instruction to about 72 per cent. of the entire school population of the district, the general proficiency of the pupils may be regarded as very fair—in 32 per cent. the attainments being below the standard, in 24 per cent. up to the standard, and in 44 per cent. above it. Or, in other words, in this class of school over two-thirds of the pupils show proficiency ranging from fair to good, and the remainder—less than one-third—show an average proficiency below fair, but in most cases approaching that standard. The Public Schools at Bundarra, Gunnedah, and Nundle rank highest in point of attainments ; and for the second time the latter school, in all its aspects, holds the premier position in the district.

The rule of the Council requiring that in the case of Public Schools all repairs and improvements necessary to the premises should be reported on by the Local Boards through the District Inspector has had a beneficial effect. Whenever practicable, meetings of the various Boards have been held during my visits to consider the material requirements and other matters connected with the schools ; and the opportunity has been taken of impressing upon the members the necessity for the full, active, and systematic discharge of the duties they have undertaken to perform. The provision of the Legislature for the erection and repair of Public School buildings without the need of local contributions to the extent of one-third of the cost, has removed perhaps the most distasteful and difficult of the duties formerly devolving upon Public School Boards ; and in no previous year within my experience has the character of the local supervision so nearly reached what it should be. The Public School Boards at Inverell and Tingha are the most active and efficient in the district ; those at Bowling Alley Point, Boggabri, Brodie's Plains, Dundee, Nundle, and Tamworth rank next.

As a body, the teachers maintain the character for respectability and industry given of them in former reports. Without exception my suggestions and directions have been received in a proper spirit, and with an evident desire for improvement. Comparatively few teachers have been examined for promotion during the year, but this is doubtless owing to the fact that those in the lower grades erroneously supposed that they would have been summoned to examination as in former years—that no application for examination on their part was necessary. All the pupil-teachers in the district but one have undergone examination, and with but one exception, have gained promotion. Speaking generally, their duties are very fairly performed ; and in individual cases there is very good promise of future usefulness. The pupil-teacher employed at Nundle Public School deserves special commendation for his industry and efficiency ; and one, admitted to the training school from the Public School at Armidale, was awarded a bonus of £5 by the Council for the satisfactory manner in which his entrance examination was passed.

Briefly

Briefly summarizing the foregoing remarks, it may be said that the supply of schools is very fairly adequate to the wants of the district; that the material condition and organization of the schools shows marked improvement; and that as regards the general proficiency of the pupils, the ground lost during the previous year has been fully recovered. Local supervision, though still defective, is, in the majority of cases, more active and beneficial than formerly.

Summaries of reports on all schools examined during the year are appended.

J. D. BRADLEY.
Inspector of Schools, Armidale District.

ARMIDALE DISTRICT.

ANNEX A.

SUMMARIES of Reports upon Public and Provisional Schools examined during the year 1876.

I.—PUBLIC SCHOOLS.

ARMIDALE (V.) :—General inspection, 7th, 8th, 10th, and 13th November.

Number enrolled :—Boys, 123; girls, 96; total, 219. Number present :—Boys, 108; girls, 85; total, 193.

The buildings have received thorough renovation since last inspection, and some very necessary additions have been made. Steps have been taken for the effective drainage of the premises, and this completed, the material condition will leave little to be desired. The internal equipment of the school is complete, and the organization in other respects good. A steady increase in the attendance is perceptible, and very fair regularity and punctuality are secured. The general results of the discipline are not so satisfactory as those observed at the last inspection, more especially in the case of the senior division of the school. Drill requires far more attention than it appears to receive. The course of instruction is complete and well regulated. On the whole the methods employed are suitable in kind, and applied with intelligence and energy. Better results, however, would be obtained were the discipline more precise and exacting. The average proficiency of the pupils is fair. Local supervision for a long time past has been little better than nominal. Meetings of the Board are of very rare occurrence, and the duty of visiting the school is almost entirely neglected.

BENDEMEEL (V.) :—Regular inspection, 27th September.

Number enrolled :—Boys, 21; girls, 15; total, 36. Number present :—Boys, 18; girls, 13; total, 31.

The schoolroom is small and badly shaped. Generally speaking the organization may be regarded as fair; and there is a sufficiency of all necessary working appliances. The attendance has improved of late, but is still unsatisfactory. The discipline is lax, and many of the younger pupils are restless and talkative, while some of the elder ones show anything but properly subdued and respectful demeanour. All the prescribed subjects are taught, and the various lesson documents are compiled with tolerable judgment. Zeal and industry are shown in the school work, but the teaching is not effective. Under examination the pupils yield but a passive attention, and are with difficulty made to exert themselves. The average proficiency rates at moderate to tolerable. Local supervision is not very active.

BOGGABRI (V.) :—General inspection, 18th October.

Number enrolled :—Boys, 18; girls, 13; total, 31. Number present :—Boys, 14; girls, 10; total, 24.

Repairs to the walls of the teacher's residence, rendered necessary by the subsidence of the foundation, are about to be effected. In other respects the buildings are in good condition. There is a good supply of books and apparatus, and the organization is in general very fair. The attendance has improved under the present teacher, both in point of numbers and in the degree of regularity secured. The discipline is also better than formerly; and the order, general appearance, and demeanour of the pupils are good. School drill, however, requires more attention. All the prescribed subjects but needlework are taught, and the various lesson documents are correctly compiled. The classification is rather defective, and the attainments of the pupils—in the third class especially—are uneven. The methods employed, as far as observed, are of very fair quality, and reasonable progress has been made under the present teacher. The average proficiency of the pupils is nearly fair. Local supervision is fairly beneficial.

BOWLING ALLEY POINT (V.) :—Regular inspection, 27th November.

Number enrolled :—Boys, 27; girls, 27; total, 54. Number present :—Boys, 20; girls, 23; total, 43.

The building is badly in need of painting, and many minor repairs are also required. The stock of working appliances is sufficient, and in very fair condition, and in general the organization is correct. The pupils attend with very fair regularity and punctuality, and the order is, in general, satisfactory, but in many important points the effects of the discipline fall far short of those of last year. The attention of the pupils is weak, and but little willingness to work is shown; and these features are most apparent in the higher grades. The course of instruction is complete, and the lesson programmes and time-table are constructed with very fair judgment. As far as noted, the methods are suitable and applied with fair skill. The average proficiency of the pupils is tolerable to fair. Local supervision is fairly active and efficient.

BRODIE'S PLAINS (N.-V.) :—General inspection, 3rd August.

Number enrolled :—Boys, 23; girls, 26; total, 49. Number present :—Boys, 22; girls, 25; total, 47.

The accommodation is altogether inadequate to the requirements of the place, but steps have been taken for the erection of new and suitable premises. The organization is as good as can be expected under existing circumstances, and the state of the school records, both as regards neatness and accuracy, is very creditable. A fair attendance of pupils is secured, but many children are kept at home owing to the insufficiency of the school accommodation. Of those enrolled a good percentage are regular and punctual. The discipline is healthy, and the order and moral tone are very good. School drill, however, is not properly understood or practised. The course of instruction is complete, and regulated with fair skill. The methods are of fair quality, and the teaching is painstaking, earnest, and, in general, thorough. The average proficiency of the pupils rates at fair to very fair nearly. The members of the Public School Board take fair interest in the school, and visit it as often as the nature of their occupations permits.

BUNDARRA (V.) :—Regular inspection, 14th and 15th August.

Number enrolled :—Boys, 33; girls, 31; total, 64. Number present :—Boys, 29; girls, 27; total, 56.

Additions and repairs of an extensive character have been effected, and the accommodation is now sufficient. Some extra furniture has yet to be provided. The organization, as far as effected by the teacher, is good, and the condition of the school records satisfactory. A very fair attendance of pupils is secured, and with few exceptions the children are regular and punctual. They are clean in appearance and well behaved, and the general order and moral tone of the school are good. The classification of the pupils is effected with very fair judgment, and the course of instruction is complete and well regulated. Very fair methods are employed, and the teaching seems marked by diligence and earnestness. The pupils are steady

steady in their attention under examination, and, as a whole, give evidence of very fair mental training. The results of inspection are fully satisfactory, and higher average proficiency would doubtless have been shown but for general promotions made a short time previous to the inspection. The average proficiency is fair to very fair +. Local supervision devolves almost entirely upon the Honorary Secretary, who visits the school frequently and otherwise shows an active interest in its welfare.

DOUGHBOY HOLLOW (V.) :—General inspection, 4th December.

Number enrolled :—Boys, 37 ; girls, 32 ; total, 69. Number present :—Boys, 29 ; girls, 26 ; total, 55

In view of the temporary character of the population, the school buildings are of a portable description. The supply of furniture is scarcely sufficient, but diminution in the attendance may be expected, as the railway employes move further up the line. There is an ample stock of apparatus and books, and otherwise the organization is good. About 75 per cent. of the pupils enrolled attend regularly, and, with few exceptions, the punctuality is good. Drill is not sufficiently practised, and in this respect the discipline is defective. The government seems firm and consistent ; and, considering that most of the pupils are children of railway labourers, surrounded by an unhealthy home influence in many cases, their general appearance and demeanour are creditable to the teacher. All the prescribed subjects but needlework are taught. The classification is correct, and the instruction well regulated. The teaching is based on good methods, and the results are satisfactory when it is taken into account that very few of the pupils had received any instruction previous to their admission to the school. The average proficiency is fair nearly. Local supervision is merely nominal.

DUNDEE (V.) :—General inspection, 27th March.

Number enrolled :—Boys, 20 ; girls, 9 ; total, 29. Number present :—Boys, 16 ; girls, 9 ; total, 25.

Since last inspection the school has been removed from the temporary premises formerly occupied to the building originally used as a National School. This has been placed in very fair repair, and is sufficient for present requirements. The playground needs fencing, as more than half of the pupils come from distances exceeding 3 miles, and the school paddock is required for the safe keeping of the horses of those that ride. The school furniture is sufficient, but the desks are large and cumbersome. In other respects the organization is very fair, and the school records are kept with creditable neatness and accuracy. The district is very sparsely populated, some of the pupils having to travel 9 miles to school, and, as before stated, less than half live within 3 miles of it. Under these circumstances the character of the attendance both as regards regularity and punctuality is very good. The parents (mostly Germans) appreciate the advantages of education, and the teacher evidently has spared no pains to make the school a success. The general discipline is salutary and the moral tone good. The course of instruction is complete, and regulated with very fair judgment. The methods observed are of fair merit, and the teaching is earnest and, in general, thorough. The pupils are attentive under examination and show very fair mental training, and the average proficiency rates at fair to very fair. Local supervision is fair. (Since the inspection of the school the playground has been securely fenced.)

GLEN INNES (V.) :—Regular inspection, 28th and 29th March.

Number enrolled :—Boys, 71 ; girls, 71 ; total, 142. Number present :—Boys, 51 ; girls, 54 ; total, 105.

In all essential points the material condition and organization of the school continue very satisfactory. The pupils attend with very fair regularity and are punctual, and in other respects the discipline is effective, securing good order and a healthy moral tone. All the prescribed subjects are taught, and the lesson documents are suitable and their provisions duly observed. Good methods of teaching are employed, and their application is marked by zeal and industry. The pupils are very attentive under examination and evince very fair mental training. The average proficiency is fair to very fair. Local supervision is not very active, and from the few visits paid to the school by members of the Board, it would appear that little interest is taken in its welfare.

GUNNEDAH (V.) :—Regular inspection, 16th and 17th October.

Number enrolled :—Boys, 49 ; girls, 56 ; total, 105. Number present :—Boys, 43 ; girls, 49 ; total, 92.

The enlargement of the schoolroom and erection of a weather-shed are pressing wants. In other respects the material condition and general organization are very good. All the school records are kept with commendable neatness and accuracy. Some 30 or more children of the school age in the town and its vicinity are not enrolled, and not a few of these appear to be withheld in consequence of the overcrowded state of the schoolroom. The attendance is good in point of regularity and punctuality. The discipline is vigorous, and the general order and moral tone are very good. The course of instruction is complete and well regulated, and the lesson documents are appropriate and duly observed. The methods are suitable, and the teaching of both principal and assistant is marked by vigour and earnestness. Under examination the pupils give a ready, intelligent attention, and with few exceptions are thoughtful and self-reliant in their general work and answering. Reading and arithmetic are exceptionally well taught. The average proficiency of the pupils is very fair. Local supervision is fairly active and beneficial.

INVERELL (V.) :—General inspection, 1st, 2nd, and 4th August.

Number enrolled :—Boys, 63 ; girls, 66 ; total, 129. Number present :—Boys, 55 ; girls, 62 ; total, 117.

The present premises are far from sufficient for existing requirements, but the new buildings are approaching completion and will be ready for occupation in about two months. The stock of working appliances is barely sufficient, nor can sufficient furniture to accommodate the children be placed in the schoolroom. As far as the teacher is accountable the organization is good, and the condition of the school records is in all respects satisfactory. The character of the attendance is very much improved. The numbers have steadily increased under the present teacher, and with the opening of the new premises a large influx of new pupils may be expected. The degree of regularity secured is good, and making due allowance for the difficulty of attendance in the wet season, the regularity is almost equally satisfactory. The general discipline is sound and free from harshness and severity ; and the order and moral tone are very good. A fourth class has been formed since last inspection. The instructional documents are well arranged, and the teaching is earnest and marked by appropriateness of method. The children are attentive under instruction and examination, and the mental training exhibited is in marked contrast with that of last year. The average proficiency is fair +. The character of the local supervision has very much improved. Regular Board meetings are held, and systematic visitation of the school is practised.

KELLY'S PLAINS (V.) :—General inspection, 13th September.

Number enrolled :—Boys, 19 ; girls, 23 ; total, 42. Number present :—Boys, 15 ; girls, 18 ; total, 33.

The premises are suitable but need repairs. There is a fair supply of books and apparatus, and the various school records are correctly kept. As far as the teacher is accountable for it, the organization is fair. The character of the attendance has improved of late. The discipline is fair in most respects ; but the demeanour of two or three of the elder pupils is unbecoming, and whispering during work is prevalent. All the prescribed subjects but singing are taught, and the instruction is tolerably well regulated. Under examination the pupils give very fair attention, and their average proficiency is tolerable. The Public School Board has recently been enlarged, and more interest in school matters now appears to be taken. Visits to the school are, however, of rare occurrence.

MARYLAND (V.) :—Regular inspection, 13th and 14th March.

Number enrolled :—Boys, 21 ; girls, 26 ; total, 47. Number present :—Boys, 17 ; girls, 21 ; total, 38.

As regards material condition and equipment the school is all that can be desired, and the organization as effected by the teacher is fair. With few exceptions the pupils are regular and punctual. The discipline is rather lax, but in some points the order has improved, and the marching and other simultaneous movements are performed with fair uniformity and precision. The instruction is carefully arranged, and the prescribed course is followed. The teacher possesses very fair natural aptitude, and but for the defective discipline and consequent partial attention of the pupils, would secure correspondingly good results. The average proficiency of the pupils is tolerable. The members of the Public School Board visit the school rarely, but otherwise appear to take an interest in its welfare.

NARRABRI (V.) :—Regular inspection, 20th October.

Number enrolled :—Boys, 40 ; girls, 30 ; total, 70. Number present :—Boys, 31 ; girls, 27 ; total, 58.

The premises generally are in need of urgent and extensive repairs, and some additions are also required. There is a very fair supply of books and apparatus, but most of the wall tablets have been destroyed by silver-fish. In general, the organization is good. Material increase in the attendance has taken place, and very fair regularity is secured. The discipline is effective. The children, as a whole, are neat and clean in appearance and well-behaved, and the moral tone of the school is good. All the prescribed subjects are taught, and the instructional documents are compiled with very fair judgment. The methods, as far as observed, are suitable, and except as regards the teaching of reading in the first class, are attended with reasonably good results. The average proficiency approaches fair. Local supervision has not been very active, but there is reason to hope for improvement.

NUNDLE (V.) :—Regular inspection, 28th and 29th November.

Number enrolled :—Boys, 50 ; girls, 59 ; total, 109. Number present :—Boys, 49 ; girls, 49 ; total, 98.

The premises are urgently in need of enlargement and other improvements, and there is insufficient furniture for the accommodation of the pupils. The stock of apparatus and books is sufficient, and, as far as effected by the teacher, the organization is very good. For the population the attendance of pupils is very gratifying, and many children come from very long distances. About 90 per cent. of those enrolled are regular in their attendance, and, as a rule, none are unpunctual. In its other effects the discipline ranks high, and the excellent attention of the pupils, their ready obedience, self-reliance, and willingness to work, make the examination of the school a pleasure. The course of instruction is complete, and elementary Latin and Algebra are taught in the fourth class. The instruction is well regulated, and the teaching energetic and skilful and productive of creditable results. The average proficiency of the pupils is very fair ; and, for the second time, the school in all its aspects holds the premier position in the Armidale district. Local supervision is reasonably good, and the members of the Board, as a rule, take an active interest in all that concerns the welfare of the school.

ROCKY RIVER (V.) :—Regular inspection, 17th November.

Number enrolled :—Boys, 23 ; girls, 24 ; total, 47. Number present :—Boys, 17 ; girls, 20 ; total, 37.

The premises generally are in very fair repair. The school stock is ample and in good condition, and otherwise the organization is very satisfactory. The pupils attend with very fair regularity and are punctual. The government is very effective, and the general order and moral tone of the school rank considerably above the average. All the prescribed subjects but singing are taught. The classification is correct, and good judgment is shown in the compilation of the lesson documents. The teaching is earnest and, as a rule, thorough ; and the pupils work with a willing energy and self-reliance exceptionally good. The average proficiency rates at fair to very fair. Local supervision is but moderately effective.

SAUMAREZ (V.) :—Regular inspection, 14th September.

Number enrolled :—Boys, 22 ; girls, 31 ; total, 53. Number present :—Boys, 13 ; girls, 25 ; total, 38.

The material condition of the school is very fair in all essential points. There is a sufficiency of working appliances, and in other respects the organization is fair. The attendance of pupils is reasonably satisfactory both as regards regularity and punctuality ; and the discipline is fair and improved. The course of instruction is complete, and the various lesson documents are compiled with fair skill. The methods are not of the most approved kind, but the teaching seems characterized by very fair industry. The attention of the pupils under examination is good, but too little mental activity is shown ; and in most subjects the attainments are yet below the requirements of the standard. The average proficiency is tolerable. The Public School Board appear to take reasonable interest in the school.

TAMWORTH (V.) :—Regular inspection, 22nd and 23rd November.

Number enrolled :—Boys, 72 ; girls, 51 ; total, 123. Number present :—Boys, 50 ; girls, 31 ; total, 81.

As previously reported, the school building is unfit for occupation, but the new premises are approaching completion. Temporary out-offices have recently been provided at the expense of the Public School Board. There is a sufficiency of furniture, apparatus, and books for the present attendance, and, making allowance for the unsuitableness of the building, the organization is very fair. Considering the large population of the town the attendance of pupils is very low. The very indifferent character of the accommodation has much to do with this result, but there are doubtless other causes operating, more difficult, however, to discover or define. The pupils enrolled attend with very fair regularity and punctuality ; in other respects the results of the discipline are less satisfactory. In none of the classes is the attention of the pupils as willing and well-sustained as it should be ; and in many minor points the order is far from precise. In these respects retrogression is perceptible. All the prescribed subjects are taught, and the instruction is well regulated and marked by appropriateness of method. Sufficiently active attention on the part of the pupils is not exacted, and as a whole they are indisposed to exert themselves. The average proficiency is fair to very fair nearly. The members of the Public School Board take a very fair interest in the school, but visits are of comparatively rare occurrence.

TENTERFIELD (V.) :—Regular inspection, 20th, 21st, and 22nd March.

Number enrolled :—Boys, 102 ; girls, 73 ; total, 175. Number present :—Boys, 75 ; girls, 55 ; total, 130.

Certain repairs and additions to the premises are needed. There is a good stock of working appliances, and, as far as the teacher is accountable for it, the general organization of the school is very good. The attendance of pupils is good, both as regards regularity and punctuality ; in its other effects the discipline leaves little room for complaint, the general appearance of the pupils, order, and moral tone being very good. All the prescribed subjects are taught, and the instruction is judiciously regulated. The teaching is marked by zeal and industry, and the methods are appropriate and in general very fairly applied. The attention of the pupils under examination is ready and well sustained, and the degree of mental training evinced is, as a whole, creditable. Recent and extensive promotions have been made in the lower grades of the school which to some extent have affected the standard of attainments. The average proficiency rates from fair to very fair. Hitherto the local supervision has been almost nominal, but there is reason to expect a more effective discharge of duty in future.

TINGHA

TINGHA (N.-V.) :—Regular inspection, 16th August.

Number enrolled :—Boys, 23 ; girls, 20 ; total, 43. Number present :—Boys, 23 ; girls, 17 ; total, 40

The material condition and organization of the school continue very fair. More than ordinary indifference with regard to education appears to exist among the residents. Out of an available school population of over 70 only about 40 are enrolled, and this, notwithstanding the efforts of the teacher and Public School Board, to secure a better state of things. About three-fourths of the pupils enrolled are regular in their attendance, and the punctuality is good. The discipline, as a whole, has improved, but is still not sufficiently firm and vigorous. Singing and needlework are not taught ; otherwise, the prescribed course of instruction is followed. The classification is low, and a third class should be formed. The instruction is carefully regulated and the teaching energetic, and, as far as observed, marked by appropriateness of method. The average proficiency of the pupils rates at fair to very fair. The local supervision is active and efficient ; Board meetings are held monthly, and the systematic visitation of the school is carried out.

URALA (V.) :—Regular inspection, 15th and 16th November.

Number enrolled :—Boys, 50 ; girls, 49 ; total, 99. Number present :—Boys, 42 ; girls, 41 ; total, 83.

A weather-shed is required, and some minor repairs are necessary. The school stock is sufficient and in very fair condition, and the state of the various school records satisfactory. Very fair regularity and punctuality of attendance are secured, and in other respects the general effects of the discipline may be estimated at good. The order is, as a whole, satisfactory, but the marching of the pupils is very loose and irregular. All the prescribed subjects are taught, with the addition of elementary Latin and algebra in the case of the fourth class. The classification is correct, and the time-table and lesson programmes are well constructed. The teaching seems painstaking, and the methods, as far as observed, are appropriate. In the lower grades the results are, as a whole, satisfactory, but in the third and fourth classes comparatively low average attainments are found, and the pupils show much less willingness to work and defective mental training. The average proficiency of the pupils is fair+. Local supervision appears to be less active and efficient than formerly.

VIOLET DALE (V.) :—Regular inspection, 15th September.

Number enrolled :—Boys, 21 ; girls, 17 ; total, 38. Number present :—Boys, 13 ; girls, 11 ; total, 24

The schoolroom is but moderately suitable, being small and not in good repair. The stock of working appliances is sufficient, and generally speaking the material organization is very fair under existing circumstances. The attendance of pupils is not satisfactory either as regards regularity or punctuality, but improvement in the latter respect is perceptible since the ordinary inspection of the school in June last. The government is too easy and indulgent, and closer supervision of the pupils is necessary. All the prescribed subjects but singing are taught. The teaching seems painstaking, but is not effective, and the results, especially in the more important subjects, are below the requirements of the standard. The average proficiency is moderate to tolerable. Local supervision is merely nominal.

WALCHA (V.) :—Regular inspection, 14th December.

Number enrolled :—Boys, 36 ; girls, 29 ; total, 65. Number present :—Boys, 31 ; girls, 25 ; total, 56

The premises have recently been enclosed with a substantial paling fence, and various repairs and additions have been effected, which materially add to the appearance and comfort of the school. The stock of working appliances is sufficient and in very fair condition, and otherwise, the general organization is good. With comparatively few exceptions the pupils are regular and punctual, and the discipline is in general very fairly effective. More attention, however, needs to be paid to the minutiae of order. All the prescribed subjects but singing are taught, and the instructional arrangements are made with very fair skill. The teaching is careful and based on good methods, and generally speaking is attended with very fair results. The average proficiency of the pupils rates at fair to very fair. Local supervision is tolerably effective.

WALLABADAH (N.-V.) :—Regular inspection, 30th November.

Number enrolled :—Boys, 39 ; girls, 36 ; total, 75. Number present :—Boys, 26 ; girls, 29 ; total, 55.

School is conducted in premises used as a C.E. place of worship, but tenders for the erection of suitable vested buildings have been called for. The school stock is sufficient and generally speaking in very fair condition. The general organization is correct. A satisfactory attendance of pupils is secured, only three children of the school age in the locality not being enrolled. Very fair regularity is secured, but many pupils appear to be unpunctual. In other respects also the results of the discipline are not equal to those of last year. All the prescribed subjects are taught, and the lesson documents are framed with very fair skill and appear to be duly observed. The teaching appears to have been less energetic and painstaking than formerly, and the results fall below those obtained at the last inspection. The average proficiency is tolerable to fair. Local supervision is confined almost entirely to the visits of the Honorary Secretary of the Board, who, for many years has taken a very active part in promoting the interests of the school.

WARIALDA (V.) :—Regular inspection, 24th August.

Number enrolled :—Boys, 11 ; girls, 13 ; total, 24. Number present :—Boys, 9 ; girls, 11 ; total, 20.

A water supply is badly required ; otherwise, the material condition is reasonably good. The general organization is fair. About five-sixths of the pupils are regular and punctual in their attendance. The government is fair in most of its features, but the various class movements are not made with the necessary quietness and precision. All the prescribed subjects are taught, and the classification is in general correct. The lesson programmes and time-table are prepared with tolerable judgment and appear to be observed. The teaching is painstaking rather than skilful, and the average proficiency of the pupils is tolerable to fair nearly. Local supervision is merely nominal.

II.—PROVISIONAL SCHOOLS.**BRYAN'S GAP (N.V.)** :—General inspection, 7th March.

Number enrolled :—Boys, 22 ; girls, 20 ; total 42. Number present :—Boys, 16 ; girls, 16 ; total, 32.

Since its opening, about two months ago, the school has been conducted in a barn lent by one of the residents, and the furniture is of a very makeshift and unsuitable kind. A new building erected by local contributions is completed and about to be occupied. The supply of books and apparatus is fairly adequate at present. The attendance has been such as to justify the raising of the school to the rank of Public. Owing mainly to the insufficient accommodation available hitherto, not more than half the children of the school age are enrolled. 80 per cent. of the pupils are regular attendants. The discipline exercised is mild, but firm and effective, and the children are orderly, obedient, and respectful. Singing, drawing, and needlework are omitted from the course of instruction. The time-table and lesson programmes are fairly appropriate, and appear to be observed. The teacher has but a limited knowledge of modern methods, but is very diligent and painstaking, and has done satisfactory work when the disadvantages under which

which he has laboured and the short time the school has been in operation are taken into account. The average proficiency of the pupils is moderate +. No School Board had been formed prior to my visit, but the Local Committee have wrought well in the interests of the school. (This school is now classed as a Public School.)

CARROLL (V.) :—Regular inspection, 11th October.

Number enrolled :—Boys, 13 ; girls, 17 ; total, 30. Number present :—Boys, 12 ; girls, 17 ; total, 29.

The school ground is unfenced, and there is no water supply ; otherwise, the material condition is reasonably good. There is a sufficiency of working appliances ; and the organization, as effected by the teacher, shows some improvement since last inspection. The attendance has improved both as regards the number of pupils enrolled and in the degree of regularity secured. All children of the school age in the locality are now enrolled. The general discipline is still weak, and the pupils, though fairly behaved, have little idea of proper order. All the prescribed subjects but singing and drawing are taught. The classification is tolerably correct, but the instruction is not regulated in accordance with the standard. The teaching, though evidently painstaking, is weak and mechanical ; and the pupils evince but very moderate mental training. The average proficiency is moderate to tolerable. For some time past the Secretary has been the only member of the Board who has taken any interest in the welfare of the school.

COCKBURN RIVER (N.-V.) :—Regular inspection, 28th September.

Number enrolled :—Boys, 13 ; girls, 13 ; total, 26. Number present :—Boys, 13 ; girls, 11 ; tot

The building is suitable and in very fair condition, and there is a sufficient stock of apparatus and books. In other respects the organization is tolerable. Only about two-thirds of the available pupils in the district are enrolled, owing, it would appear, mainly to the unpopularity of the teacher. Of these a very fair percentage are regular and punctual. In its other effects the discipline may be regarded as fair. The prescribed course of instruction is followed, but the teaching is not regulated with proper care. Old lesson programmes are in use with the dates altered ; and for a long time past no register of lessons has been kept. This circumstance, with the comparatively low attainments of the pupils, leads to the inference that the teaching has been neither methodical nor painstaking ; and it is not creditable that, up to the present, no third class has been formed. The average proficiency of the pupils is moderate +. The action of the Local Board has for some time past been adverse rather than conducive to the interests of the school, owing to general dissatisfaction with the Teacher.

DUNGOWAN, LOWER (V.) :—General inspection, 24th November.

Number enrolled :—Boys, 9 ; girls, 19 ; total, 28. Number present :—Boys, 8 ; girls, 9 ; total, 17.

The school building, which cost over £100, has been erected entirely from local contributions on a site the property of the Council of Education. It is a neat and substantial structure, and will prove adequate to all requirements for some time to come. The furniture provided is sufficient and suitable, except that the desks are too long to admit of their proper arrangement ; and there is a very fair supply of apparatus and books. In other points the organization is fair. The ordinary average attendance is 24, but harvest operations have caused a temporary falling off in the numbers. For the class of school, the order and general demeanour of the pupils may be regarded as very fair. All the ordinary subjects but singing and needlework are taught ; and the classification of the pupils, and arrangement of the lesson documents, are effected with fair judgment. The methods in themselves are not of much account, but the teaching is careful. The average proficiency of the pupils is nearly tolerable. A Local Board has yet to be appointed.

DUNGOWAN, UPPER (N.-V.) :—General inspection, 24th November.

Number enrolled :—Boys, 11 ; girls, 10 ; total, 21. Number present :—Boys, 10 ; girls, 7 ; total, 17.

The building is suitable and in good repair, but the furniture is of a very makeshift description—the desks being fixtures to the wall. There is a sufficiency of apparatus, but the books are in a very indifferent condition, and insufficient in quantity for the proper working of the school. The organization otherwise is indifferent. All the available children in the school district attend ; and, with very few exceptions, the pupils are regular and punctual. The government is weak, and little deserving the name of discipline or order is observable. The classification of the pupils is defective, and no time-table or lesson programmes have been prepared. The teacher is ignorant of proper methods, and the attention of the pupils is weak, and their mental training poor. The average proficiency is indifferent. Local supervision is merely nominal.

GLEN MORRISON (V.) :—Regular inspection, 15th December.

Number enrolled :—Boys, 15 ; girls, 16 ; total, 31. Number present :—Boys, 11 ; girls, 12 ; total, 23.

Since last inspection the building has been repaired, and the interior lined with calico—the expense having been borne by the Local Board. Cleanliness and orderly arrangement are features creditable to the teacher. The furniture is sufficient and fairly suitable, and there is an ample supply of books and apparatus, generally speaking in good condition and well preserved. A large number of the parents are very negligent of their children's education, and it is with difficulty that the attendance is kept up to its present standard. The children are quiet and obedient, and in very fair order. The classification of the pupils is, on the whole, correct, but the time-table needs alteration. The methods, as far as noted, are of tolerable quality ; and the teaching seems energetic and careful. The average proficiency of the pupils approaches fair, and in all its features the school shows improvement. The members of the Board take an active interest in the school, and but for their efforts a much smaller attendance would be secured.

GOONOO GOONOO (N.-V.) :—General inspection, 6th December.

Number enrolled :—Boys, 12 ; girls, 15 ; total 27. Number present :—Boys, 8 ; girls, 11 ; total, 19.

The building is of brick—large, comfortable, and in very good repair ; and the supply of furniture, apparatus, and books is fairly sufficient and suitable. The organization is tolerable as far as the teacher is accountable. The attendance is temporarily low on account of harvest and shearing. Usually about 75 per cent. of the pupils enrolled are regular attendants, and very few appear to be unpunctual. The discipline is firm but kind, and the children are quiet, obedient, and respectful, and in very fair order. All the prescribed subjects are taught and the lesson documents are of fair utility. The teaching is energetic and painstaking, and the average proficiency of the pupils exceeds tolerable. Local supervision is fairly beneficial.

GOSTWYCK (N.-V.) :—General inspection, 13th December.

Number enrolled :—Boys, 16 ; girls, 15 ; total, 31. Number present :—Boys, 8 ; girls, 8 ; total, 16.

The buildings are of brick, and are suitable, well furnished, and in very fair repair. There is a fair supply of apparatus, but the books are in bad condition and insufficient in quantity. The records have not been kept with neatness and punctuality. The organization is tolerable. A very fair attendance is maintained usually, but harvest and shearing have caused a temporary falling off. In other respects the effect of the discipline is but tolerably satisfactory, and the order leaves great room for improvement. Singing and needlework are not taught ; otherwise, the prescribed course is followed. Time-table and lesson programmes are tolerably appropriate, but no lesson register has been kept. The average proficiency of the pupils is barely moderate. Local supervision has hitherto been but nominal.

HERDINGYARD CREEK (N.-V.) :—General inspection, 16th March.

Number enrolled :—Boys, 38 ; girls, 33 ; total, 71. Number present :—Boys, 19 ; girls, 19 ; total, 38.

School is held in a building lent by the Messrs. Amos. Furniture of a suitable description has been provided ; and the accommodation and equipment are reasonably adequate to existing requirements. No lesson register has been kept, but otherwise the school records are correctly compiled and posted to date. The attendance of pupils was lower than ordinary on the day of inspection owing to rain. The pupils attend punctually and with fair regularity. In other respects the results of the discipline are very fairly satisfactory. Singing, drawing, and needlework are not taught ; otherwise, the prescribed course is followed. The time-table and lesson programmes are in general suitable ; and the methods of instruction tolerable in themselves and applied with care and industry. The pupils are orderly and attentive under examination, and as a whole show fair mental training. The average proficiency is tolerable +. Local supervision has been hitherto confined to Messrs. Harper and Seaman, who have shown an active interest in the welfare of the school. (Since the inspection the school has been raised to the rank of Public, and is now designated " Amosfield. ")

KANGAROO FLAT (N.-V.) :—General inspection, 5th December.

Number enrolled :—Boys, 16 ; girls, 14 ; total, 30. Number present :—Boys, 12 ; girls, 10 ; total, 22.

The building, which is of slabs and bark, is small and in need of repair ; and no out-offices have been provided. The furniture is sufficient and fairly suitable, but not well arranged. 80 per cent. of the pupils enrolled attend regularly, but a comparatively large number of children of the school age in the locality do not attend. The general discipline and order are but indifferent. Singing, drawing, and needlework are not taught. The classification is tolerably correct, and the lesson programmes are in a general way suitable, but the time-table is badly arranged and of little use. The teaching is mechanical, and the average proficiency of the pupils indifferent. Local supervision is but nominal.

KEEPIT (N.-V.) :—General inspection, 10th October.

Number enrolled :—Boys, 18 ; girls, 16 ; total, 34. Number present :—Boys, 15 ; girls, 14 ; total, 29.

The building is a neat and substantial structure, but serves the double purpose of Church (R. C.) and school. There is a fair supply of furniture and apparatus, but the stock of books is barely sufficient. No water supply has yet been provided, and the want is a pressing one. In most points, for which the teacher is accountable, the organization is fair. Two-thirds of the pupils enrolled are regular in their attendance, and nearly all are punctual. With few exceptions the children are neat and clean in appearance and well behaved. The government is very fair in general, and the moral tone good. Singing and drawing are omitted from the course of instruction. The time-table and lesson programmes are fairly suitable, and, I believe, duly observed. The methods are of tolerable quality, and the teaching energetic and painstaking. The average proficiency is tolerable to fair +. Moderate interest in the school appears to be taken by the members of the Local Board.

KENTUCKY (N.-V.) :—Regular inspection, 20th November.

Number enrolled :—Boys, 10 ; girls, 14 ; total, 24. Number present :—Boys, 6 ; girls, 9 ; total, 15.

New premises will soon be required, as the present schoolhouse—a slab building—is old and out of repair. The supply of furniture, apparatus, and books is sufficient, and generally speaking in very fair condition. The organization, as far as the teacher is concerned, is fair. The attendance is low, and considerable indifference appears to prevail among the parents as to their children's education. Very fair punctuality is secured, and in other respects the discipline is reasonably satisfactory. Singing is not taught, but otherwise the prescribed course of instruction is followed. The lesson documents are fairly compiled and appear to be observed, and the methods are of tolerable quality. The average proficiency of the pupils is tolerable to fair. Local supervision is confined to the occasional visits of the Honorary Secretary of the Board, who lives in the vicinity. Beyond this, little or no interest appears to be taken in the school.

QUIPOLLY (N.-V.) :—Regular inspection, 1st December.

Number enrolled :—Boys, 12 ; girls, 13 ; total, 25. Number present :—Boys, 6 ; girls, 6 ; total, 12.

The building is too small for the comfortable accommodation of the pupils, and the site is objectionable. A public-house is in the immediate vicinity, and the stables belonging to it are within a few feet of the schoolroom. The organization is fair, and a sufficient supply of books and apparatus is provided. The attendance is low on account of harvest. Ordinarily, a very fair percentage of the pupils enrolled are regular and punctual. In its general effects the discipline may be estimated at tolerable. The prescribed course of instruction is followed, and the classification, time-table, and lesson programmes are of tolerable merit. The teaching seems careful, and the average proficiency of the pupils is tolerable. Local supervision is but nominal.

QUIRINDI CREEK (V.) :—Regular inspection, 1st December.

Number enrolled :—Boys, 14 ; girls, 17 ; total, 31. Number present :—Boys, 5 ; girls, 9 ; total, 14.

About one-third of the schoolroom has been enclosed with a calico screen as a residence for the teacher ; and the effective conduct of the school, under the circumstance, is simply impossible. The organization is but moderate, and the teacher has but an imperfect knowledge of the mode of keeping the school records. Harvest operations have caused a temporary falling off in the attendance. Ordinarily the pupils attend with fair regularity and punctuality. They are quiet and obedient ; but, beyond this, the order is only indifferent. No lesson programmes have been prepared, and the provisions of the standard of proficiency have been neglected in determining the instruction. The pupils yield a passive attention under examination, and give otherwise but little evidence of proper mental training. The average proficiency is moderate to tolerable. Little or no local supervision has been exercised for some time past.

SIX-MILE SWAMP (N.-V.) :—Regular inspection, 9th March.

Number enrolled :—Boys, 10 ; girls, 6 ; total, 16. Number present :—Boys, 6 ; girls, 6 ; total, 12.

The building in which school is held is a miserable bark and slab structure with skillion roof and mud floor. The furniture is fairly suitable, but both desks and forms are unsteady owing to the unevenness of the floor. There is a sufficiency of books and apparatus, but in all particulars for which the teacher is accountable the organization is very indifferent. Only about half the available number of children in the school district are enrolled. The discipline exercised in the school is of a poor kind, and though the children are quiet and obedient, there is little to observe worth calling order. The instructional arrangements are very defective. The classification is bad ; no lesson programmes have been prepared, and the teaching seems to have been desultory and inappropriate. The average proficiency of the pupils is very indifferent. No local supervision is exercised. (Since the inspection, aid to the school has been withdrawn.)

VEGETABLE CREEK (N.-V.) :—General inspection, 24th March.

Number enrolled :—Boys, 35 ; girls, 49 ; total, 84. Number present :—Boys, 25 ; girls, 28 ; total, 53.

School is held in a slab building rented by the teacher. The furniture is of a very miserable and makeshift description. There is an adequate supply of books and apparatus, but the organization as effected

effected by the teacher is only indifferent. In consequence of the want of proper accommodation, and of a properly trained teacher to conduct the school, some 70 children in the locality are not attending. The discipline is of poor quality, and much noise and confusion prevail. As a whole, however, the children are obedient and respectful. Nominally all the prescribed subjects are taught, but no programmes have been prepared, nor any lesson registers kept, and the teaching has been desultory and of little effect. The teacher has little acquaintance with appropriate methods, and, in the case of the first class, has employed pupils to conduct the teaching. The average proficiency is very moderate. Local supervision has been merely nominal.

WEE WAA (V.) :—General inspection, 23rd October.

Number enrolled :—Boys, 12 ; girls, 15 ; total, 27. Number present :—Boys, 12 ; girls, 14 ; total, 26.

Fencing and weather-shed are much needed, but will shortly be supplied. The building is in good condition and affords ample accommodation for the pupils, but the teacher's residence is very small and uncomfortable. The general organization is fair. A comparatively large number of children in the school district do not attend. About 80 per cent. of those enrolled are regular in their attendance, and very fair punctuality is also secured. The discipline is healthy, and the order and moral tone of the school are very fair. The classification of the pupils and compilation of the lesson documents are effected with tolerable judgment, and the teaching appears to be earnest and painstaking. The average proficiency exceeds fair. Local supervision is tolerably beneficial.

J. D. BRADLEY,
Inspector of Schools, Armidale District.

BATHURST DISTRICT.

INSPECTOR'S General Report, 1876.

IN accordance with the Council's instructions I took charge of this district on the 1st September last. It had previously been under Mr. Huffer's superintendence ; that gentleman continued to inspect schools therein until the 31st October.

One hundred and seven schools have been in operation during the whole or a portion of the year. Five Provisional, and two Half-time Schools were closed prior to my appointment, and before they were visited for inspection. One, Mundorama (township) has been opened subsequent to the Inspector's visit to the locality ; and one, the Rydal Public School, was, through an inadvertence on my part, also uninspected. Of the ninety-eight schools that have been examined, fifty were inspected by Mr. Huffer, and I have consequently but little acquaintance with the condition of more than a half of the schools in the district. Respecting those inspected by myself, as my visits were of necessity very hurried, I can only state that they have been subjected to the ordinary tests, but of their normal state and actual working I am not in a position to report very fully.

The results of the inspections of the year place the schools in the following order as regards efficiency :—

Below the requirements of the Council's standards.....	39
Fully meeting those requirements	53
In excess of the standards.....	6

The inspections of the year have brought 3,668 children out of an enrolment of 5,706 under examination. As most of the inspections were notified, the above attendance is higher than the ordinary averages would exhibit ; and yet, even so, more than one-third of the pupils enrolled were absent from their respective schools. During the year six schools have been opened, viz. :—Brown's Creek, Cudal, and The Forest Public Schools ; Neila Creek and Mundorama (township) Provisional Schools ; and Gangbenang Half-time School. The Public Schools at Oberon and Trunkey, that had been temporarily closed, have been re-opened. One Public School (Brisbane Valley) has been temporarily closed, and four Provisional Schools—Bartlett's, Burnt Yards, Currajong, and Yarras—have been permanently given up. Eighteen or twenty schools will come into operation during the year 1877. Most of the new schools will lie to the west of Carcoar and Orange, and will, to a large extent, meet the school requirements of the free-selectors in those localities.

A noteworthy point in connection with the schools of this district is the large number in which the average attendances are exceedingly low. To say nothing of the twenty-eight Provisional and Half-time Schools, in which small attendances might reasonably be expected, eighteen of the sixty-three Public Schools have averages that invariably fall below 25, and in thirteen others they seldom reach 30. Many of these schools had formerly respectable attendances, and the assigned cause of decline is the removal of families from the respective localities. This explanation carries considerable force, and in some cases it is the proper one ; but when it can be proved that most of these schools have school populations around them that could give daily averages in excess of 30, it is evident that removals are not more potent than are the ignorance and indifference of parents. One feature of inquiry made by Inspectors relates to the school distribution of children whose ages range from 4 to 14 years. In this district the investigations show that a fourth, and in some localities more than a third, of the children within the ordinary school radius attend no school whatever.

Summaries of the reports upon schools inspected during the year are appended.

2nd January, 1877.

J. W. ALLPASS,
Inspector, Bathurst District.

BATHURST DISTRICT.

DETAILED statement of the condition of Public, Provisional, and Half-time Schools visited during the year 1876. Those marked thus * were inspected by Mr. Huffer.

I.—PUBLIC SCHOOLS.

BATHURST (Boys) :—Regular inspection, 12th, 13th, and 14th December.

Enrolled, 193 ; present, 123 ; ordinary attendance, 145.

The school, pending the erection of proper premises, is conducted in a wooden building. The area of this temporary schoolhouse would, were other things equal, be sufficient, but notwithstanding a goodly number of ventilators the heat of the room is so intense that, weather permitting, a considerable portion of the school has to be taught in the open air. The room is amply furnished, and so far as adverse matters allow the school is well organized. The low attendance is due to the prevailing intense heat. The children present were under good control and they exhibited a smaller amount of restlessness than one might have expected in the circumstances. The classes range from a second to an upper fourth. The business of the school is conducted in an energetic and painstaking manner, and considering the difficulties of the position good work has been done. The class proficiency is as follows :—Second class, tolerable to fair ; third, fair to very fair ; fourth, fair to very fair ; upper fourth, good.

BATHURST

BATHURST (Girls'—N.-V.) :—Regular inspection, 22nd, 23rd, and 24th November.

Enrolled, 168; present, 119; ordinary attendance, 120.

This school has still to be conducted in non-vested premises. The schoolroom is lofty and spacious, but a portion of it has to be given up to the infants. The organization is good in the circumstances, and the school is effectively disciplined. The personal appearance of the pupils, their conduct, and moral tone, are highly pleasing. A full course of instruction is intelligently treated, and the average proficiency of the classes is as follow :—Second, fair to very fair; third, very fair, nearly; fourth, good, nearly.

BATHURST (Infants'—N.-V.) :—Regular inspection, 21st November.

Enrolled :—Boys, 108; girls, 94; total, 202. Present :—Boys, 76; girls, 51; total, 137.

Ordinary attendance, 150.

The room is small, and but indifferently suited to the instruction of infants. A division of the school is perforce taught in the primary schoolroom. There is a full stock of working appliances, and the school is satisfactorily organized. Wet weather reduced the attendance on the day of inspection. The children are neatly dressed, and are under good control. The course of instruction and the methods employed are suited to the capacities of young children. The proficiency averages slightly above fair.

***BLANEY (V.)** :—Regular inspection, 2nd October.

Enrolled :—Boys, 35; girls, 29; total, 64. Present :—Boys, 28; girls, 25; total, 53.

New fencing, closets, lavatories, and playsheds are needed; and the school building should be repaired and improved. The supply of requisites is fairly sufficient. The records are correct, and the property is well kept. At present only one-third of the children in the locality are enrolled at the school; but those enrolled are regular and punctual, and the general discipline is good. The prescribed subjects are taught, the classification is appropriate, and the instruction is properly regulated. The methods are suitable and they are earnestly applied. The general proficiency is very fair. Since the opening of the Railway the population of Blaney has been largely increased. The school is likely to become a very important one.

***BLOOM HILL (N.-V.)** :—Regular inspection, 26th July.

Enrolled :—Boys, 13; girls, 14; total, 27. Present :—Boys, 8; girls, 11; total, 19.

The material condition and organization are tolerable for a Provisional School. Since the date of the inspection the necessary steps have been taken to establish a vested Public School in the locality. The records are correct, and the property is well kept by the teacher. About half the children in the locality are enrolled, and they are fairly regular and punctual. The general discipline is satisfactory. The course of instruction is that prescribed, the classification is fairly appropriate, and the instruction is regulated by the necessary documents. The teaching is carried on with industry and fair intelligence. The general proficiency is about tolerable. [This school is now a Public School.]

***BOWENFELS (V.)** :—Regular inspection, 29th November.

Enrolled :—Boys, 19; girls, 18; total, 37. Present :—Boys, 11; girls, 10; total, 21.

This school is held in an excellent stone building, capable of accommodating fifty children. The attendance is temporarily affected by sickness, but a falling off in the population is the principal cause of the small attendance. If, however, a compulsory clause was in force, the attendance would seldom fall below 30. The children are sedate and orderly; the tone of the school is healthy. The instructional course and the methods of treatment are of approved kind. The classes were found in a fair state of efficiency.

***BROWN'S CREEK (N.-V.)** :—Regular inspection, 2nd October.

Enrolled :—Boys, 17; girls, 33; total, 50. Present :—Boys, 12; girls, 20; total, 32.

This school is being temporarily carried on as a Provisional one; but arrangements have been made for the establishment of a Public School and for the erection of suitable vested buildings. The supply of materials is insufficient for the ordinary attendance. The records are correct and the property is well kept. The pupils are regular and punctual, and the prevailing tone of the school is pleasing. The prescribed subjects are taught with intelligence and industry. The average proficiency ranges from tolerable to fair. [The school is now a Public one.]

***BURKEVILLE (V.)** :—Regular inspection, 19th October.

Enrolled :—Boys, 22; girls, 11; total, 33. Present :—Boys, 13; girls, 5; total, 18.

The material condition and organization are fairly satisfactory, except as regards regularity; the discipline is healthy. The prescribed subjects are taught, singing excepted. The classification is moderately appropriate; the teaching is carried on with industry and moderate skill. The general proficiency ranges from moderate to tolerable.

***CADIA (V.)** :—Regular inspection, 23rd October.

Enrolled :—Boys, 24; girls, 27; total, 51. Present :—Boys, 21; girls, 23; total, 44.

The fencing and buildings are in need of repair, and additional school materials are required. The records are correct, and the property is fairly well kept by the teacher. There are now about 100 children of the school age in the locality, and it is expected that nearly all of them will shortly be enrolled for school attendance. Additional teaching power will be required. The population had but recently returned to the locality, and at the date of inspection only half of the children were enrolled. The prescribed subjects are taught; the classification is only moderately appropriate; the instruction is regulated by the necessary documents, and the teaching is conducted with industry and moderate skill. The average proficiency is a little above moderate.

CANOBOLAS (N.-V.) :—General inspection, 5th September.

Enrolled :—Boys, 20; girls, 21; total, 41. Present :—Boys, 18; girls, 15; total, 33.
Ordinary attendance, 34.

The school is not central in position, but the building in use is of very fair character. The educational appliances are good. A central site has been purchased by the Council, and vested premises will soon be erected. The organization presents fairly satisfactory features. The pupils are reasonably punctual, and are under fair control. There are two classes; these have been instructed in a careful manner. The average proficiency is somewhat in advance of tolerable. There are about 25 children in the locality, who should be attending school, but are not.

***CANOWINDRA (N.-V.)** :—Regular inspection, 17th October.

Enrolled :—Boys, 13; girls, 13; total, 26. Present :—Boys, 11; girls, 10; total, 21.

The buildings are but moderately suitable, and the school is badly furnished. Application has now been made, however, for the establishment of a Public School and for the erection of suitable vested buildings. An excellent site has already been secured. About half the children in the locality are now enrolled, and they are regular and punctual in their attendance. The general discipline is tolerable.

The

The prescribed subjects are taught, singing and drawing excepted. The classification is not appropriate, and the instruction is but moderately well regulated. The school work is carried on with industry, but the methods of teaching are unsuitable. The proficiency is only moderate. [This school was examined as a Provisional one; since the inspection it has been converted into a Public School.]

*CARCOAR (V.) :—Regular inspection, 6th October.

Enrolled :—Boys, 32; girls, 24; total, 56. Present :—Boys, 26; girls, 19; total, 45.

Repairs and improvements to the school premises are necessary. The supply of requisites is sufficient, and the property is fairly well kept. About one-third of the children in the locality are enrolled at this school, one-fourth attend a private R. C. school, and the remainder do not appear to attend any school. The pupils enrolled are tolerably regular and punctual, and the general discipline is fair. The prescribed subjects are taught, the classification is fairly appropriate, the instruction is regulated by the necessary documents, and the teaching is conducted with very fair skill. The general proficiency ranges from fair to very fair.

CARGO (N.-V.) :—Regular inspection, 24th October.

Enrolled :—Boys, 30; girls, 27; total, 57. Present :—Boys, 28; girls, 24; total, 52.
Ordinary attendance, 45.

The school is held in a bark building belonging to the C. E. denomination. The room is of good size, and it is on the whole suitable. The furniture and appliances are sufficient, and the general arrangements are good in the circumstances. I am informed that there are quite 30 children within the school radius who are growing up without education. The average at the Public School should exceed sixty. The appearance of the children, their tone and behaviour, are pleasing. The instruction covers all subjects prescribed, except singing. The teaching is unskilful, and the results in the several classes range from moderate to tolerable only.

*COOERWULL (N.-V.) :—Regular inspection, 26th June.

Enrolled :—Boys, 34; girls, 52; total, 86. Present :—Boys, 11; girls, 21; total, 32.

The school building is a substantial stone structure; but the furniture is unsuitable and there is no lavatory. The supply of requisites is insufficient, the records are correct, and the property is well kept by the teacher. Nearly all the children in the locality are enrolled; and generally the attendance is very fairly regular and punctual. In consequence of sickness and wet weather, the attendance was exceptionally low at the time of inspection. The prevailing tone of the school is healthy. There are three classes, and all the subjects prescribed for them are taught with energy and very fair skill. The average proficiency of the pupils examined was nearly very fair.

*COWRA (V.) :—Regular inspection, 13th and 14th October.

Enrolled :—Boys, 28; girls, 8; total, 36. Present :—Boys, 24; girls, 8; total, 32.

Some repairs and additions to the school premises are needed. The records are correct and the property is fairly well kept. Of the school population in the locality at the date of inspection, about one-fourth attended the Public School; about one-fourth a private R. C. School; the remainder did not appear to attend any school. Since the second quarter of the current year the attendance at the Public School has (from special causes) been exceptionally low, but it is expected that a satisfactory enrolment will be again obtained when the school is re-opened after the Christmas vacation. Until the R. C. School was opened in 1874 all the children of a school age in the locality were enrolled at the Public School. The general discipline is very fair, the instruction is properly regulated, and the teaching is carried on with intelligence and skill. The proficiency is very fair.

CONDOBOLIN (V.) :—General inspection, 30th October.

Enrolled :—Boys, 18; girls, 29; total, 47. Present :—Boys, 15; girls, 23; total, 38.

Ordinary attendance, 35.

New premises have been erected since the previous inspection; they are good, and with the exception of a lavatory-shed and a tank they are complete. In most respects the records and school documents were found in a correct state; in its other details the organization was of passable worth. With the exception of about 10, the enrolment represents the children of the school age in the locality. The pupils present at the inspection were becomingly dressed, but their lounging and restless habits indicate a very lax discipline. Drawing is not taught, but the course includes all other subjects. In the first and second classes the range taken is exceedingly low. The average proficiency in the three classes approaches tolerable, but the school, viewed in all its aspects, is only in a moderate state of efficiency.

CARANGARA (N.-V.) :—Regular inspection, 14th August.

Enrolled :—Boys, 14; girls, 24; total, 38. Present :—Boys, 13; girls, 22; total, 35.

Ordinary attendance, 32.

The premises are of very inferior character, but there is a prospect of the erection of vested buildings. The furniture and appliances meet the requirements; the organization is correct. The pupils are very fairly punctual, and they are under a healthy control. The course of instruction is that prescribed for a school having a third class. The proficiency lies between tolerable and fair.

*COW FLAT (N.-V.) :—Regular inspection, 18th May.

Enrolled :—Boys, 36; girls, 44; total, 80. Present :—Boys, 23; girls, 27; total, 50.

The school is at present carried on in a church building, the property of the Wesleyan denomination, but arrangements are being made for the erection of vested school buildings. The attendance is increasing, and on the whole the discipline is very fair. All the prescribed subjects, up to a third class standard, are taught, and the methods are modern and practised with energy and very fair skill. The general proficiency is nearly very fair, and the pupils are thoughtful and earnest in their work.

CUDAL (N.-V.) :—General inspection, 7th November.

Enrolled :—Boys, 16; girls, 15; total, 31. Present :—Boys, 11; girls, 11; total, 22.

Ordinary attendance, 23.

The school is held, temporarily, in the C. E. Church building. At the date of my visit the school had been recognized by the Council but a few days, and proper arrangements respecting furniture and material had not been effected. Little can be said of the organization, as I found it, but I spent a considerable time in explaining to the teacher—who is but temporarily appointed—what would be expected in the future. The children are under feeble control. As a private school the children have been under the teacher's tuition since July last. I examined them in reading, meanings of words, dictation, and arithmetic. The results were but indifferent.

*DENNIS' ISLAND (V.) :—Regular inspection, 21st August.

Enrolled :—Boys, 12; girls, 6; total, 18. Present :—Boys, 8; girls, 6; total, 14.

The fencing and residence are not good, but it is not advisable to expend money in repairing them, as it is probable that new buildings will have to be erected on a more central site. At the time of

of inspection a new teacher had recently taken charge of the school, and only half of the children in the locality were enrolled. The general discipline is tolerable. The prescribed subjects are taught, singing and drawing excepted; the classification is tolerably appropriate, but the instruction is not regulated by the necessary documents. The general proficiency ranges from moderate to tolerable.

*EGLINGTON (N.-V.) :—Regular inspection, 15th August.

Enrolled :—Boys, 27 ; girls, 23 ; total, 50. Present :—Boys, 27 ; girls, 18 ; total, 45.

The school buildings are unsuitable and in indifferent repair, but arrangements have been made for the erection of suitable vested buildings. The records are correct, and the property is well kept by the Teacher. About five-sevenths of the children in the locality are enrolled, and they are very fairly regular and punctual in attendance. The prevailing tone of the school is healthy. All the prescribed subjects are taught. The classification is fairly appropriate, and the lesson documents are judiciously drawn up. The methods are modern, and they are applied with earnestness and painstaking. The proficiency in the several classes is about tolerable.

*EVANS PLAINS (V.) :—Regular inspection, 16th August.

Enrolled :—Boys, 18 ; girls, 20 ; total, 38. Present :—Boys, 10 ; girls, 11 ; total, 21.

New furniture is needed ; the buildings should be repaired, and the ground should be re-fenced. The records are fairly well kept. The pupils are but moderately regular and punctual ; the general discipline is tolerable. Object lessons and singing have not been taught ; the classification is defective, and the teaching is but moderately skilful. The proficiency in the first and second classes ranges from indifferent to moderate, and in class 3 it is tolerable.

ESK BANK (N.-V.) :—Regular inspection, 16th and 17th October.

Enrolled :—Boys, 43 ; girls, 40 ; total, 83. Present :—Boys, 35 ; girls, 39 ; total, 74.
Ordinary attendance, 55.

The schoolhouse is a good one, but it is too small for the attendance of pupils ; the absence of class-room, weather-shed, and lavatories is seriously felt. In the circumstances the organization is passable. There are very few children in the neighbourhood of the school but are enrolled. The pupils are very fairly regular and punctual in attendance. The order and general discipline are good. All the prescribed subjects are taught, the instruction being methodically and earnestly prosecuted. The proficiency of the pupils reaches very fair.

FORBES (V.) :—Regular inspection, 27th October and 3rd November.

Enrolled :—Boys, 64 ; girls, 33 ; total, 97. Present :—Boys, 49 ; girls, 22 ; total, 71.
Ordinary attendance, 75.

The supply of seats to the weather-sheds and the erection of lavatories will place the school premises in good condition. As regards furniture and working stock the school is well found. The organization is correct. The withdrawal of about 50 Roman Catholic children has reduced the attendance considerably, but if the children who attend no school (said to exceed 20) could be secured for the Public School the average attendance would approach ninety. Most of the pupils are punctual, and all are becomingly dressed. The government is fairly effective, and the tone of the school is healthy. The instruction is regulated by properly devised guides. Its range is full, and the methods employed are of intelligent cast. The work in some of the subjects requires searching revision. The class proficiency is as follows :—First, fair ; second, upper second, and third, very fair ; fourth, very fair to good.

*FIVE ISLANDS (V.) :—Regular inspection, 12th August.

Enrolled :—Boys, 8 ; girls, 10 ; total, 18. Present :—Boys, 4 ; girls, 8 ; total, 12.

The school ground is unfenced and the buildings are in need of repair. The supply of requirements is sufficient, and the records are well kept. Only one-half of the children in the locality are enrolled, and they are but moderately regular and punctual in their attendance. The general discipline is satisfactory. The subjects prescribed for a school of three classes are taught, and the instruction is properly regulated. The general proficiency ranges from tolerable to fair.

FOREST, THE (V.) :—General inspection, 18th August.

Enrolled :—Boys, 13 ; girls, 14 ; total, 27. Present :—Boys, 13 ; girls, 11 ; total, 24.

This school was opened on the 7th August, *i.e.*, nine days before it was visited for inspection. The premises are new and of approved kind. The teacher is effectively organizing the school, and its prospects are healthy. The returns for the quarter ending 30th December have been received ; the enrolment has reached sixty-two, with an average attendance of forty-one.

FISH RIVER CREEK (V.) :—Regular inspection, 22nd September.

Enrolled :—Boys, 14 ; girls, 25 ; total, 39. Present :—Boys, 6 ; girls, 6 ; total, 12.
Ordinary attendance, 23.

The premises are ill-conditioned, but reasonably well furnished. The organization has improved since my last visit to the school, but even so it is far from being satisfactory. The small attendance is due to the flooded state of the creeks, caused by heavy rain on the night previous to the inspection. The children present were attentive and well-behaved. Before I could examine I was compelled to spend some time in classifying the pupils—as the teacher appeared to know nothing of this branch of school management. The children have been taught in a desultory manner. The proficiency does not exceed indifferent.

GREGHAMSTOWN (V.) :—General inspection, 16th August.

Enrolled :—Boys, 17 ; girls, 21 ; total, 38. Present :—Boys, 11 ; girls, 15 ; total, 26.
Ordinary attendance, 24.

The schoolhouse is a new one, but the schoolroom requires ceiling and the teacher's dwelling enlargement. The building should be spouted, and the school provided with a tank. At present, water has to be obtained from a small swamp, to which cattle have constant access. The school is properly furnished and organized, and the children are under effective discipline. In this locality there are children sufficient to afford a firm average of forty daily. Singing is not taught ; otherwise the course is a full one ; the proficiency of the pupils is about tolerable.

GUYONG (V.) :—Regular inspection, 11th August.

Enrolled :—Boys, 29 ; girls, 15 ; total, 44. Present :—Boys, 24 ; girls, 14 ; total, 38.
Ordinary attendance, 34.

The school buildings are in good condition, and in most respects they are well kept. The approaches to the school require to be gravelled. The supply of two forms for the infant children will make the furniture equal to the requirements. In general behaviour the children give satisfaction, but the discipline would be improved by the exercise of genial firmness. All required subjects are taught in a methodical but certainly not a vigorous manner. The results slightly exceed tolerable.

GOSLING

GOSLING CREEK (V.) :—Regular inspection, 20th October.

Enrolled :—Boys, 23 ; girls, 21 ; total, 44. Present :—Boys, 21 ; girls, 21 ; total, 42.
Ordinary attendance, 32.

With the exception that the kitchen to the teacher's dwelling and the fencing of the site are in an unfinished state, the material condition of the school is good. The school is also well found in appliances and properly organized. The children are fairly punctual and they are well-behaved. The discipline generally is good. There are three classes, and the instructional course accords. The average proficiency of the classes approaches fair.

GEBMAN HILL (V.) :—General inspection, 23rd October.

Enrolled :—Boys, 17 ; girls, 12 ; total, 29. Present :—Boys, 14 ; girls, 12 ; total, 26.
Ordinary attendance, 21.

The schoolhouse is a wooden structure, and is, on the whole, suitable. The appliances are reasonably sufficient and good. The teacher has his school properly organized and disciplined. The course of instruction includes all subjects prescribed for a first and second class. The teaching has been carried on in an intelligent and painstaking manner, and the general proficiency of the pupils approaches fair. It appears that there are quite fifty children of the school age, and living within the ordinary radius from the schoolhouse, who do not attend any school.

HARTLEY (V.) :—Regular inspection, 1st December.

Enrolled :—Boys, 18 ; girls, 13 ; total, 31. Present :—Boys, 11 ; girls, 10 ; total, 21.
Ordinary attendance, 23.

The schoolhouse, a wooden structure, is in fair condition. The Council is erecting a residence for the teacher. The school is suitably furnished and organized. The attendance has for some time been low through the withdrawal of some twenty Roman Catholic children, but irrespective of these the school population should give an enrolment of forty, with an average attendance of thirty daily. The children present were orderly and reasonably industrious. The course of instruction laid down for a three-classed school is followed ; the average proficiency reaches fair.

HARTLEY VALE (N.-V.) :—Regular inspection, 30th November.

Enrolled :—Boys, 25 ; girls, 24 ; total, 49. Present :—Boys, 16 ; girls, 9 ; total, 25.
Ordinary attendance, 32.

The building is of very inferior kind, and proper vested premises are much needed. There is a suitable supply of furniture and material. The organization is passable. The attendance has within the past three months sensibly declined. The teacher attributes much of it to sickness. The chief cause, however, is the absence of the harmony that should exist between the teacher and the local managers. This is a school in which the attendance should never fall below forty-five. The three classes were examined in all the prescribed subjects excepting singing, which is not taught. The proficiency ranged between tolerable and fair.

ICELEY (N.-V.) :—Regular inspection, 15th August.

Enrolled :—Boys, 11 ; girls, 15 ; total, 26. Present :—Boys, 9 ; girls, 11 ; total, 20.
Ordinary attendance, 20.

The building, one of wattle, plastered with mud, is in a tolerable state of repair. There are no out-offices, neither is the ground fenced. The School Board state that they are not in a position to remedy these defects. The schoolroom is suitably furnished, and the supply of material is ample. The attendance has seriously declined. This is owing to the stoppage of smelting operations and the consequent removal of families to other locations. The children present were clean, tidy, and orderly. The instruction deals with all usual subjects. The proficiency approaches fair.

KELSO (N.-V.) :—General inspection, 8th August.

Enrolled :—Boys, 32 ; girls, 25 ; total, 57. Present :—Boys, 20 ; girls, 11 ; total, 31.
Ordinary attendance, 36.

The school buildings are of very fair character. Proper out-offices are provided, but they need to be screened from view. There is a plentiful supply of furniture and school requisites. The organization is of authorized kind and the discipline is fairly effective. The methods of instruction intelligently treat the prescribed subjects. The proficiency is as follows :—First class, fair to very fair ; second, tolerable to fair ; third, fair+. Inclement weather and the state of the roads have of late considerably reduced the attendance.

*KIRKCONNELL (V.) :—Regular inspection, 26th August.

Enrolled :—Boys, 11 ; girls, 16 ; total, 27. Present :—Boys, 9 ; girls, 14 ; total, 23.

The buildings are substantial, but some repairs are needed to both school and residence. The supply of materials is sufficient. The records are correct, and the property is kept with care by the teacher. About half the children in the locality are enrolled, and they are very fairly regular and punctual in their attendance. The general discipline is satisfactory. The prescribed subjects are taught, singing excepted. The classification is appropriate, and the instruction is properly regulated. The general proficiency is fair.

LIMEKILNS (V.) :—General inspection, 3rd October.

Enrolled :—Boys, 12 ; girls, 13 ; total, 25. Present :—Boys, 12 ; girls, 13 ; total, 25.
Ordinary attendance, 20.

The building is substantially a good one, but it requires repair and renovation. The schoolroom is suitably furnished and arranged, and no exception can be taken to the organization. The attendance is very unsatisfactory, but for this the teacher is not responsible. If a proper interest in the welfare of the school was manifested by all the members of the Board, I am satisfied that a good attendance could be secured, as there are quite 20 children in the locality who are not attending the Public School. Needlework and singing are not taught ; in other respects the course is of full range. The instruction is imparted in a methodical and careful manner. The proficiency exceeds fair.

LUCKNOW (N.-V.) :—Regular inspection, 21st August.

Enrolled :—Boys, 25 ; girls, 29 ; total, 54. Present :—Boys, 18 ; girls, 24 ; total, 42.
Ordinary attendance, 42.

The school is held in temporary premises in fair condition and suitability. The erection of vested premises is intended. The school is effectively organized and healthily disciplined. The course of instruction is of usual kind. The teaching has been earnestly prosecuted, and averages in result between fair and very fair.

MARCH (V.) :—Regular inspection, 22nd August.

Enrolled :—Boys, 19 ; girls, 22 ; total, 41. Present :—Boys, 16 ; girls, 16 ; total, 32.
Ordinary attendance, 30.

The premises are good and complete. The schoolroom is properly furnished, but the books, &c., are insufficient and in bad condition. In most respects the records have been properly kept, and the school

school is effectively organized. The school attendance has decreased through the removal of several families. The discipline secures very fair order, and a reasonably healthy tone in the school. The highest class is a third, and the course of instruction accords. The class proficiency is as follows :—First, tolerable ; second, moderate to tolerable ; third, fair to very fair.

*MACQUARIE PLAINS (N.-V.) :—Regular inspection, 20th June.

Enrolled :—Boys, 18 ; girls, 24 ; total, 42. Present :—Boys, 16 ; girls, 12 ; total, 28.

This school is being carried on in temporary premises of a rough kind, but arrangements have been made for the erection of suitable buildings. About seven-tenths of the children in the locality are enrolled, and they are fairly regular and punctual. The general discipline is tolerable. The prescribed subjects are taught, singing excepted ; the classification is moderately appropriate ; the teaching is carried on with earnestness and moderate skill. The average proficiency is a little above moderate.

*MEADOW FLAT (V.) :—Regular inspection, 24th June.

Enrolled :—Boys, 21 ; girls, 10 ; total, 31. Present :—Boys, 12 ; girls, 4 ; total, 16.

The material condition and organization are only moderate ; the whole buildings are greatly in need of repair. The supply of materials is sufficient ; the records are correct. Except as regards attendance the discipline is tolerable. The classification and lesson documents are only moderately appropriate. The instruction is carried on with tolerable skill. The general proficiency ranges from moderate to tolerable.

*MITCHELL'S CREEK (V.) :—Regular inspection, 25th August.

Enrolled :—Boys, 27 ; girls, 22 ; total, 49. Present :—Boys, 11 ; girls, 16 ; total, 27.

A new residence and out-offices are needed, and the school building should be thoroughly repaired. The records are correct. About one-half the children in the locality are enrolled, and they are very fairly regular and punctual. The general discipline is healthy. Singing is not taught ; otherwise, the course of instruction is that prescribed. The classification is appropriate ; the lesson documents are fairly satisfactory, and the teaching is conducted with intelligence and skill. The proficiency is about fair. The School Board has promised to take action to obtain a more satisfactory enrolment of pupils.

*MILLAMURRA (N.-V.) :—Regular inspection, 30th August.

Enrolled :—Boys, 19 ; girls, 17 ; total, 36. Present :—Boys, 11 ; girls, 13 ; total, 24.

Since last inspection repairs and additions to the school premises have been carried out at a cost of about £40. Further improvements are needed. The records of attendance are correct, and the property is fairly well kept by the teacher. About seven-ninths of the children in the locality are enrolled, and they are fairly regular and punctual in their attendance. The general discipline is tolerable. The subjects prescribed for three classes are taught with industry, but the lesson documents are incomplete, and the methods of teaching are unsuitable and ineffective. The general proficiency is a little above moderate. [When this school was examined it ranked as a Provisional ; it is now a Public School.]

*MOORIALDA (V.) :—Regular inspection, 11th August.

Enrolled :—Boys, 15 ; girls, 17 ; total, 32. Present :—Boys, 14 ; girls, 15 ; total, 29.

Fencing, new closets, and a lavatory are needed ; but in other respects the material condition is good. The enrolment of pupils is very unsatisfactory, but those enrolled are fairly regular and punctual. The tone of the school is pleasing. The prescribed subjects are taught, singing excepted ; the classification is appropriate, and the instruction is well regulated. The methods are suitable, and they are industriously applied. The general proficiency is about fair. The School Board has promised to take energetic action to secure a more satisfactory enrolment of pupils.

*MOUNT MACQUARIE (V.) :—Regular inspection, 3rd October.

Enrolled :—Boys, 18 ; girls, 20 ; total, 38. Present :—Boys, 13 ; girls, 14 ; total, 27.

The ground needs fencing, and the school buildings should be repaired and limewashed. The supply of materials is fairly sufficient. The records are correct, and the property is well kept by the teacher. About four-sevenths of the children in the locality are enrolled, and they are very fairly punctual in their attendance. As regards regularity, the attendance is but moderate. The general discipline is fair. The instruction is moderately well regulated. The methods are modern, but they are not applied with thoroughness. The general proficiency is a little above moderate.

*MOUNT TARANA (N.-V.) :—Regular inspection, 19th June.

Enrolled :—Boys, 17 ; girls, 26 ; total, 43. Present :—Boys, 11 ; girls, 11 ; total, 22.

The material condition and organization are but moderate, but as soon as a suitable site is obtained steps will be taken towards providing proper school premises. The population of the locality is likely to be permanently increased. The pupils now enrolled are very fairly regular and punctual, and the school has a pleasing tone. The course of instruction is that prescribed ; the classification is tolerably appropriate ; and the lesson documents are carefully drawn up. The methods are modern, and they are applied with industry and tolerable skill. The general proficiency ranges from tolerable to fair.

MOUNT VICTORIA (N.-V.) :—Regular inspection, 2nd August.

Enrolled :—Boys, 29 ; girls, 37 ; total, 66. Present :—Boys, 29 ; girls, 28 ; total, 57.

Ordinary attendance, 50.

The school premises are temporary, ill-conditioned, and far from being suitable. Considerable difficulty has been experienced in the endeavours to obtain a suitable site for a vested building. The school is satisfactorily furnished and organized. A good attendance is secured. Most of the parents are employed in the railway service, and their children are brought to the spot by train gratuitously. The discipline would be effective were it of a more vigorous character. As the school is, of necessity, closed just prior to the departure of the 1.55 trains, the school hours are from 9.30 to 1.30. The usual subjects are taught. The proficiency in the several classes (three) reaches fair.

*MUTTON'S FALLS (N.-V.) :—Regular inspection, 22nd June.

Enrolled :—Boys, 16 ; girls, 16 ; total, 32. Present :—Boys, 10 ; girls, 12 ; total, 22.

The schoolhouse is not sufficiently central, and there is no residence for the teacher. In other respects the material condition and organization are satisfactory. The discipline is good. The prescribed subjects are taught, the classification is appropriate, and the lesson documents are tolerably well drawn up. The methods are suitable, and they are applied with earnestness and very fair skill. The average proficiency is nearly very fair.

*O'CONNELL (N.-V.) :—Regular inspection, 20th June.

Enrolled :—Boys, 20 ; girls, 19 ; total, 39. Present :—Boys, 12 ; girls, 9 ; total, 21.

New vested buildings are now being erected for the school. The building temporarily used is but moderately suitable. When the new building is occupied the number of pupils will probably be increased. Those now enrolled are regular and punctual, and the general discipline is very fair. The course

course of instruction is that prescribed, the classification is fairly appropriate, the lesson documents are carefully drawn up, and the teaching is carried on with industry and tolerable skill. The average proficiency is nearly fair.

OBERON (V.) :—General inspection, 21st September.

Enrolled :—Boys, 23 ; girls, 23 ; total, 46. Present :—Boys, 19 ; girls, 19 ; total, 38.

Ordinary attendance, 34.

The schoolhouse is a new one, but some additions are required. The appliances are ample and the organization is correct. The children are regular, punctual, attentive, and orderly. The enrolment represents three-fourths of the school age children in the locality. The subjects prescribed for a three-classed school are taught in a careful manner, and for the time the school has been under the present teacher (two months) the results are promising. The efficiency, so far as the pupils have been taught, approaches fair.

ORANGE (V.) :—Regular inspection, 23rd and 24th August.

Enrolled :—Boys, 110 ; girls, 92 ; total, 202. Present :—Boys, 85 ; girls, 84 ; total, 169.

Ordinary attendance, 160.

Extensive additions are being made to the school premises. When these are completed the school will have ample accommodation. The school records and documents are creditably kept ; the organization is effective. The discipline is demonstrative, but is defective in vigilance, and hence lounging and talking during lessons is prevalent in some of the classes. The pupils have a pleasing appearance, and with certain drawbacks they are very fairly orderly. The course of instruction covers the subjects prescribed for a school having a fourth class. The proficiency ranges between fair and very fair.

*PEEL (V.) :—Regular inspection, 21st and 25th July.

Enrolled :—Boys, 27 ; girls, 29 ; total, 56. Present :—Boys, 18 ; girls, 22 ; total, 40.

Considerable repairs have recently been carried out, but a play-shed and lavatory, new fencing, and repairs to kitchen and out-offices are still needed. The records are correct. Five-sevenths of the children in the locality are enrolled, and they are tolerably regular and punctual in their attendance. The general discipline is fair. The prescribed subjects are taught, singing excepted ; the classification is fairly appropriate ; the instruction is tolerably well regulated. The methods are fairly suitable, and school work is carried on with zeal and painstaking. The proficiency ranges from tolerable to fair.

*PERTH (V.) :—Regular inspection, 15th June.

Enrolled :—Boys, 19 ; girls, 25 ; total, 44. Present :—Boys, 10 ; girls, 14 ; total, 24.

A garden has been enclosed, and a kitchen has been erected since last inspection. The material condition is good. The attendance is very unsatisfactory, but in other respects the discipline is good. The prescribed subjects are taught with energy and skill ; the lesson documents are well arranged ; the classification is appropriate ; and the prevailing spirit of the school is very pleasing. The general proficiency is very fair.

PARKES (V.) :—General inspection, 28th and 29th August.

Enrolled :—Boys, 61 ; girls, 78 ; total, 139. Present :—Boys, 47 ; girls, 63 ; total, 110.

Ordinary attendance, 100.

The buildings are of excellent character, and the school is well found in appliances, effectively organized, and disciplined. The children are judiciously classified, and they are instructed in an intelligent manner in all the subjects prescribed for a three-classed school. The average proficiency approaches very fair.

*RAGLAN (V.) :—Regular inspection, 14th August.

Enrolled :—Boys, 11 ; girls, 11 ; total, 22. Present :—Boys, 8 ; girls, 7 ; total, 15.

There is no residence for the teacher, and the schoolroom needs lining. The records are correct. When the railway into Bathurst was opened for traffic a large number of residents removed from Raglan, and hence the school attendance is now very low. It is probable, however, that the population of the locality will be permanently increased within the next year. The general discipline is satisfactory. All the prescribed subjects are taught, the classification is tolerably appropriate, the lesson documents are carefully drawn up, and the teaching is carried on with industry and tolerable skill. The proficiency ranges from moderate to tolerable.

ROCKLEY (V.) :—Regular inspection, 19th September.

Enrolled :—Boys, 20 ; girls, 26 ; total, 46. Present :—Boys, 14 ; girls, 15 ; total, 29.

Ordinary attendance, 25.

The site is a good one, but the buildings are out of repair. The proper course would have been to have repaired the premises, whereas, through the action of the Public School Board, they have been sold. New premises will now have to be erected on a very unsuitable site. The pupils attend with marked irregularity ; this is attributed to sickness and home demands. There are some twelve children in the locality who attend no school. The children enrolled are reasonably punctual and fairly orderly. They were examined in two classes ; until recently there was a third class, but the elder children (5) now attend a private school. The teaching deals with all prescribed subjects. The proficiency approaches fair.

SPRING GROVE (N.-V.) :—Regular inspection, 17th August.

Enrolled :—Boys, 17 ; girls, 25 ; total, 42. Present :—Boys, 8 ; girls, 18 ; total, 26.

Ordinary attendance, 32.

The premises in present use are of very inferior kind, but new buildings are in course of erection. The furniture is good, and the supply of material is ample. The records are excellently kept, and no exception can be taken to the organization. The attendance on the day of inspection was affected by the severity of the weather and a heavy fall of snow. I visited the school on the previous day and found thirty-four present. The children who came under inspection were neatly dressed, orderly, and, on the whole, well-behaved. The government is mild but effective, and the tone of the school is healthy. There are three classes, and for these the course of instruction is of full range. The proficiency approaches fair.

*TRUNKY (N.-V.) :—Regular inspection, 20th October.

Enrolled :—Boys, 16 ; girls, 16 ; total, 32. Present :—Boys, 11 ; girls, 12 ; total, 23.

The playground is too small ; otherwise the premises are tolerably suitable for school purposes. The records are correct, and the school property is carefully kept by the teacher. About two-sevenths of the children in the locality are enrolled at this school, and about four-sevenths are in attendance at private schools. The pupils enrolled are regular and punctual, and the general discipline is fairly satisfactory. The prescribed subjects are taught. The instruction is tolerably well regulated, and all school work is carried on with industry and painstaking. The general proficiency ranges from moderate to tolerable.

WALLERAWANG (N.-V.) :—Regular inspection, 3rd August.

Enrolled :—Boys, 26 ; girls, 23 ; total, 49. Present :—Boys, 21 ; girls, 19 ; total, 40.
Ordinary attendance, 40.

The building is a good one, and serves two purposes—that of church and school. The furniture is good, but it occupies too much space. The working stock is ample. The organization was found defective in several of its details ; the children are well behaved, but they are very sluggish and inert when under test. The course of instruction is that prescribed for a three-classed school ; the teaching is wanting in force and impressiveness. The results are from moderate to tolerable.

WATTLE FLAT (V.) :—Regular inspection, 27th September.

Enrolled :—Boys, 40 ; girls, 32 ; total, 72. Present :—Boys, 23 ; girls, 24 ; total, 52. Ordinary attendance, 50.

The schoolhouse is substantially a good one, but some additions are required, and a teacher's residence is much needed. The school is well appointed and organized. A good attendance is secured, although by the recent establishment of a private Roman Catholic school quite 30 pupils have been lost to the Public School. I am informed that within the school radius there are quite 50 children who attend no school. The pupils are very fairly punctual, and they are orderly and well behaved. Singing is not taught ; otherwise the course of instruction is a full one. There is an earnestness pervading the teaching ; the proficiency in the several classes reaches very fair, nearly.

*WHITE ROCK (N.-V.) :—Regular inspection, 28th August.

Enrolled :—Boys, 14 ; girls, 21 ; total 35. Present :—Boys, 10 ; girls, 15 ; total, 25.

New vested premises for a school population of from 40 to 50 are much needed, the buildings temporarily used are incomplete, and otherwise unsuitable. The records are correct. About seven-tenths of the children of the locality are enrolled, and they are fairly regular and punctual. The prevailing tone of the school is good. The prescribed subjects are taught, singing excepted ; the classification is appropriate, and the instruction is regulated by the necessary documents. The methods are suitable, and they are earnestly applied. The general proficiency is about fair.

WYAGDON (V.) :—Regular inspection, 20th July.

Enrolled :—Boys, 17 ; girls, 10 ; total, 27. Present :—Boys, 14 ; girls, 10 ; total, 24. Ordinary attendance, 25.

The schoolhouse is substantially built, and the appliances and organization are of satisfactory character. Compared with the enrolment, the attendance is satisfactory ; but if all the children of the school age attended the school, there would be no difficulty in securing an average of thirty throughout the year. The children present were orderly and becomingly behaved ; under test they were reasonably industrious. The instruction includes all the subjects laid down for a primary school. The methods are earnestly applied ; the proficiency averages very fair.

II.—PROVISIONAL SCHOOLS.

* ANTONIO CREEK :—Regular inspection, 23rd August.

Enrolled :—Boys, 9 ; girls, 20 ; total, 29. Present :—Boys, 6 ; girls, 13 ; total, 19.

The school premises are indifferent, but arrangements are being made for the establishment of a Public School, and the erection of suitable vested buildings. The records are correct, and the property is well kept. About half the children in the locality are enrolled, and they are very fairly regular and punctual. The general discipline is tolerable. The subjects prescribed for two classes are taught—singing excepted. The instruction is tolerably well regulated, and the school-work is carried on with zeal and industry. The proficiency ranges from moderate to tolerable.

* BACK CREEK :—Regular inspection, 13th October.

Enrolled :—Boys, 12 ; girls, 17 ; total, 29. Present :—Boys, 5 ; girls, 11 ; total, 16.

The material condition is the same as at last inspection. The records are correct. The property is well kept. About three-fourths of the children in the locality are enrolled, and they attend with fair regularity and punctuality. The course of instruction is that prescribed ; the lesson documents are tolerably suitable. The teaching is carried on with zeal and painstaking, but the methods are defective. The general proficiency is a little above moderate.

* BARTLETT'S :—Regular inspection, 10th August.

Enrolled :—Boys, 15 ; girls, 16 ; total, 31. Present :—Boys, 8 ; girls, 3 ; total, 11.

This school was aided about a year ago for the temporary accommodation of the children of men employed on the railway works. At the time of inspection the population was removing from the locality. The school premises are but indifferently suitable, and the records are incorrect. The general discipline is unsatisfactory. The school work is carried on without system or order. The proficiency of the children examined was indifferent. The school has since been closed.

* BOX RIDGE :—Regular inspection, 30th August.

Enrolled :—Boys, 16 ; girls, 14 ; total, 30. Present :—Boys, 11 ; girls, 10 ; total, 21.

The buildings now in use are but moderately suitable, and they are in bad repair. Arrangements have been made for the establishment of a Public School, but want of reasonable co-operation amongst the residents in the locality, with respect to the choice of a school site, has hindered the erection of suitable buildings. The prescribed subjects are taught. The classification is moderately appropriate ; the lesson documents are incomplete ; and the teaching is wanting in thoroughness. The proficiency is a little above moderate.

BUDGERABONG :—General inspection, 2nd November.

Enrolled :—Boys, 7 ; girls, 15 ; total, 22. Present :—Boys, 7 ; girls, 14 ; total, 21.
Ordinary attendance, 18.

This school is held in a sapling building, 12 feet by 12 feet in area. The interstices in the walls are partially filled in with mud, but as the gable ends are not so treated the premises cannot be used in wet weather. I have been given to understand that the school committee intends to take steps to procure more suitable premises. The furniture is of rude construction, but it is on the whole suitable. There is a full supply of working materials, and the furniture is arranged in the best way possible. For the number enrolled the attendance is satisfactory. Eight children of the school age, and living at no great distance from the school, are receiving no education. The moral aspect of the school is pleasing, the children being orderly, cheerful, well-behaved, and industrious. There are two classes, and these are taught all prescribed subjects in a careful manner. The proficiency reaches very fair.

*CALOOLA

*CALOOLA :—Regular inspection, 11th August.

Enrolled :—Boys, 11 ; girls, 14 ; total, 25. Present :—Boys, 8 ; girls, 8 ; total, 16.

The schoolroom is too small and it is badly lighted. A black board is much needed. The property is kept with care by the teacher. At the date of inspection about five-eighths of the children in the locality were enrolled. The pupils are not regular in their attendance, but in other respects the discipline is satisfactory. The prescribed branches are taught. Singing (and drawing in the second class) excepted. The school work is carried on with intelligence and industry. The general proficiency ranges from tolerable to fair. The school population of the locality ought to give an average attendance sufficient for a small Public School.

*DARK CORNER :—Regular inspection, 25th August.

Enrolled :—Boys, 16 ; girls, 15 ; total, 31. Present :—Boys, 11 ; girls, 8 ; total, 19.

The material condition is fair ; the records are correct, and the property is well kept by the teacher. Two-thirds of the children in the locality are enrolled, and they are tolerably regular and very fairly punctual in their attendance. The general discipline is fair. The course of instruction is that prescribed, the classification is tolerably appropriate, and the lesson documents are carefully drawn up. The teaching is carried on with industry but with only indifferent skill. The proficiency is moderate.

*EMU VALLEY :—Regular inspection, 23rd June.

Enrolled :—Boys, 14 ; girls, 15 ; total, 29. Present :—Boys, 7 ; girls, 11 ; total, 18.

Out-offices have not been provided ; there is no residence for the teacher, and in other respects the material condition and organization are but moderate. A centrally situated Public School at Mutton's Falls, and two Half-time schools in the Emu Valley locality, would be the most suitable provision of the means of education for the neighbourhood. The pupils enrolled are regular and punctual, and the general discipline is tolerable. The classification is moderately appropriate ; the teaching is carried on with industry and moderate skill. The average proficiency is a little above moderate.

*FITZGERALD VALLEY :—Regular inspection, 28th September.

Enrolled :—Boys, 8 ; girls, 20 ; total, 28. Present :—Boys, 6 ; girls, 12 ; total, 18.

The school-ground is unfenced, and the out-offices are but moderately suitable. The supply of materials is fairly sufficient, the records are correct, and the property is carefully kept by the teacher. About four-fifths of the children in the locality are enrolled, and they are fairly regular and punctual. The prevailing tone of the school is pleasing. The course of instruction is that prescribed, the classification is tolerably appropriate, and the lesson documents are carefully drawn up. The methods are modern and they are applied with tolerable skill. The proficiency ranges from moderate to tolerable.

*LAGOONS :—Regular inspection, 20th July.

Enrolled :—Boys, 10 ; girls, 18 ; total, 28. Present :—Boys, 7 ; girls, 14 ; total, 21.

Two additional desks are needed. In other respects the material condition is tolerable. The records are fairly correct. About two-thirds of the children in the locality are enrolled, and they attend with very fair regularity. The general discipline is tolerable. The prescribed subjects are taught, singing excepted ; the classification is tolerably appropriate ; the teaching is carried on with care and industry, but without skill. The general proficiency is moderate.

UPPER LEWIS PONDS :—General inspection, 15th August.

Enrolled :—Boys, 11 ; girls, 6 ; total, 17. Present :—Boys, 8 ; girls, 5 ; total, 13.

Ordinary attendance, 14.

This school is held in the Wesleyan Chapel. The building is suitable and in very fair condition, but the supply of teaching requisites is inadequate. There are no out-offices, and the ground is unfenced. The children are very unpunctual ; this is attributed to the absence of time-pieces, and to the distances several of the children have to travel. I am informed that there are quite thirty-six children of the school age in the locality, but through the indifference of the parents the greater portion of these children are growing up in complete ignorance. The pupils present were fairly orderly and well-behaved. The subjects taught are—reading, writing, arithmetic, and elementary grammar ; in these branches the two classes were examined. The results were fair.

MANDAGERY :—Regular inspection, 30th August.

Enrolled :—Boys, 29 ; girls, 16 ; total, 45. Present :—Boys, 16 ; girls, 2 ; total, 18.

Ordinary attendance, 24.

The school premises, constructed of wattles, saplings, and mud, consist of a schoolroom, 14 feet by 14 feet, with two rooms and a kitchen for the teacher. The premises are in but moderate condition. The school furniture is reasonably sufficient but is very clumsy. The school documents were found in a defective state, but this arose through ignorance and not neglect, on the teacher's part. The attendance, both that witnessed and that which ordinarily obtains, indicates great neglect on the parents' part. The present excuse for the absence of many enrolled pupils is *lamb tending*. The teacher has his pupils under fair control. The subjects prescribed for a first and second class have been taught in a careful manner. The proficiency averages from fair to very fair.

*MUNDORAMA PONDS :—Regular inspection, 4th October.

Enrolled :—Boys, 16 ; girls, 17 ; total, 33. Present :—Boys, 9 ; girls, 10 ; total, 19.

The ground is unfenced, but in other respects the premises are fairly suitable for a Provisional School. The records are correct, and the property is kept with care. The classification is fairly healthy. Singing is not taught ; otherwise the course of instruction is that prescribed. The discipline is thoroughly appropriate. The teaching is carried on with intelligence and industry, but the work is wanting in thoroughness. The average proficiency is about moderate.

*MACQUARIE PLAINS :—Regular inspection, 26th July.

Enrolled :—Boys, 15 ; girls, 11 ; total, 26. Present :—Boys, 14 ; girls, 10 ; total, 24.

The schoolroom needs re-colouring. The records are correct, and the property is carefully kept by the teacher. Six-sevenths of the children in the locality are enrolled, and they are fairly regular and punctual in their attendance. All the prescribed subjects are taught ; the classification is fairly appropriate, and the lesson documents are carefully drawn up. The teaching is conducted with industry and tolerable skill. The proficiency in class I is moderate, and in classes II and III it ranges from tolerable to fair.

*MALMSBURY :—General inspection, 17th August.

Enrolled :—Boys, 13 ; girls, 17 ; total, 30. Present :—Boys, 11 ; girls, 9 ; total, 20.

The school grounds should be fenced, and a supply of water should be provided. The records are well kept. Five-sixths of the children in the locality are enrolled, and they are very fairly punctual in their attendance. Their regularity is only moderate. The general discipline is satisfactory. The subjects prescribed for two classes are taught with industry and fair skill. The general proficiency is tolerable.

* NATIVE

*NATIVE HOME:—Regular inspection, 15th June.

Enrolled:—Boys, 23; girls, 21; total, 44. Present:—Boys, 14; girls, 12; total, 26.

The school building is a temporary structure, and it is but moderately suitable. The records are correct. About four-fifths of the children in the locality are enrolled. The prevailing tone of the school is healthy. The prescribed subjects are taught, singing excepted; the classification is appropriate, and the lesson documents are carefully arranged. The methods are fairly suitable, and they are applied with industry. The general proficiency ranges from tolerable to fair. When the railway workmen remove from the locality one Public School, properly placed, would accommodate the permanent residents of Native Home and Dennis Island.

PALMER'S OAKLEY:—General inspection, 29th September.

Enrolled:—Boys, 7; girls, 12; total, 19. Present:—Boys, 5; girls, 9; total, 14.

Ordinary attendance, 15.

The school is taught in a substantial wooden building, which is floored, well lighted, and in most respects adequately equipped. The school is suitably organized, and its moral aspect is pleasing. Compared with the enrolment the attendance is good, but there are quite twelve children, who live at no great distance from the schoolhouse, going to no school. The teacher has her pupils under good control, and her teaching is effective. In the three classes the proficiency is in excess of fair.

*NEILA CREEK:—Regular inspection, 11th October.

Enrolled:—Boys, 7; girls, 13; total, 20. Present:—Boys, 2; girls, 8; total, 10.

The ground is unfenced, but in other respects the material condition is tolerably satisfactory. The discipline is fairly healthy. The prescribed subjects are taught—singing excepted; the classification is moderately appropriate, and the lesson documents are drawn up with care. The teaching is carried on with industry. The general proficiency is moderate. At the time of the inspection the attendance was exceptionally low, owing to the children being kept at home to assist in farm work.

*SHAW:—Regular inspection, 3rd October.

Enrolled:—Boys, 12; girls, 14; total, 26. Present:—Boys, 12; girls, 12; total, 24.

Additional furniture is needed, and the school buildings should be enlarged. The records are correct and the property is kept with much care by the teacher. About *half* the children in the locality are enrolled and they attend with punctuality and tolerable regularity. The general discipline is healthy. The prescribed subjects are taught with intelligence and earnestness, and the school work is properly regulated. The general proficiency is very fair.

VITTORIA:—Regular inspection, 10th August.

Enrolled:—Boys, 14; girls, 16; total, 30. Present:—Boys, 11; girls, 14; total, 25.

Ordinary attendance, 23.

The schoolroom, which is also used for church purposes, is in fair condition and suitably furnished. The routine and organization are of passable worth. The attendance is good for the enrolment; there are quite fifty children of the school age in the locality, and if unanimity prevailed a vested Public School could be maintained. The teacher has her children under good control. The usual subjects are taught in a careful manner and the proficiency of the pupils averages between tolerable and fair.

III.—HALF-TIME SCHOOLS.

*CULLEN BULLEN AND FOREST VALE:—Regular inspection, 27th June.

Enrolled:—Boys, 27; girls, 22; total, 49. Present:—Boys, 17; girls, 12; total, 29.

Tolerably suitable buildings have been provided; the supply of requisites is sufficient; the records are correct and the property is well kept. Nearly all the children in the locality are enrolled, and they are regular and punctual in their attendance. Owing to wet weather on the day of inspection, the attendance was considerably below the average. All the subjects prescribed for Half-time Schools are taught, and the teaching is carried on with earnestness and care. *Home* exercises are also properly attended to. The average proficiency is about tolerable.

*VICTORIA CREEK AND TRENDON GRANGE:—Regular inspection, 27th September.

Enrolled:—Boys, 16; girls, 17; total, 33. Present:—Boys, 13; girls, 14; total, 27.

The ground is unfenced, and the buildings and furniture are but moderately suitable. The records are fairly satisfactory, and the property is tolerably well kept. About *half* the children in the locality are enrolled. The pupils are punctual but only moderately regular in attendance. The general discipline is fair. Singing and drawing are not taught, and no register of work has been kept. The methods are modern, but as applied they are only tolerably effective. The average proficiency is about tolerable.

LOWTHER AND OFF FLAT:—Regular inspection, 2nd December.

Enrolled:—Boys, 29; girls, 11; total, 40. Present:—Boys, 24; girls, 10; total, 34. Ordinary attendance, 31.

Lowther.—The premises are vested, the school being formerly a Full-time Public School. The building is in very fair condition; the schoolroom is well furnished and equipped. On the whole a good attendance is secured. The pupils are fairly punctual, tidily dressed, and well-behaved, but they are insufficiently self-reliant, and give an examiner considerable trouble in his attempts to test their proficiency. I am informed that, with the exception of *five*, the enrolment represents the children of the school-age in the neighbourhood. The course of instruction is that laid down for Half-time Schools. The instruction has been of systematic character. The proficiency of the pupils reaches tolerable.

Off Flat.—The building is a slab hut, having an earthen floor. In most respects it is fairly suitable for school purposes. The organization is satisfactory. The children are orderly, attentive, and reasonably eager to answer when questioned. There are two classes, and in both the average proficiency reaches tolerable.

KANIMBLA AND GANGBENANG:—Regular inspection, 4th December.

Enrolled:—Boys, 21; girls, 19; total, 40. Present:—Boys, 18; girls, 11; total, 29. Ordinary attendance, 30.

Kanimbla.—The schoolhouse is a slab building in a fair state of repair. It is suitable, well-furnished, and sufficiently supplied with material. The organization is passable. The enrolment includes all children in the locality of the school age. The course of instruction is suited to the school. There are two classes; the proficiency slightly exceeds fair.

Gangbenang.—The schoolhouse is a small slab building, having an earthen floor. The school committee purpose the remedy of this defect. The furniture and appliances are sufficient and suitable. The children are orderly, well-behaved, and intelligent. The usual half-time course of instruction is followed. The pupils were fairly proficient in what they had been taught.

J. W. ALLPASS,

Inspector, Bathurst District.

January 2, 1877.

BRAIDWOOD

BRAIDWOOD DISTRICT.

INSPECTOR'S General Report for 1876.

DURING the year 1876, there were 93 schools in operation in this district. Of these, 88 were inspected. Of the remaining five, three are small schools, that have only been in existence a few weeks, and two are Half-time schools, that were opened, after I had visited their locality and recommended their establishment. I am acquainted with two or three places, where small schools may possibly be needed during the coming year, but taking the district throughout, it may be said that there is no scarcity of schools. Many schools in fact have been opened, where the population is unable to maintain the minimum average of ten, required by law. The only people, who are so situated as to be incapable of taking advantage of the existing provisions for education, are isolated families living so far from each other, that co-operation for school purposes is impossible. It is not an unusual thing to find a family with three or four children, whose nearest neighbour is 3 or 10 miles away. This neighbour again is often as great a distance in an opposite direction from the next family. Children so situated can at present only be reached by an excessive expenditure of public funds. In all other cases the difficulty of supplying schools and teachers is so trifling that it calls for no serious thought. It is at the worst only a question of a slight increase in the amount of money granted for education.

There is however one weak point in the present system, with which the law gives the Council and its officers no power to grapple. The Council can build schools but it has no means of getting them properly attended. We are no worse off in this respect than other countries, but still it is a fact that the majority of children, who attend no school, are those who live within reach of one. Excluding large towns however, it would surprise a casual observer to learn how few children there are, comparatively speaking, whose names are not found at some time or other on school registers. Irregularity of attendance is practically a greater evil than non-attendance, for it is wider in its action, and so disguises defects as to make remedies appear uncalled for. Classifying them broadly, pupils, so far as attendance is concerned, may be grouped into four sections. Section one, numbering but a choice few, comprises those, who seldom miss a day under any circumstances. Section two includes the children, who are away an occasional day in a week. These two sections, forming together somewhat less than half the enrolled strength of all the schools in the district, contain the whole of the scholars that may fairly be called regular. Section three is composed of pupils, who are absent a week or two in almost every month. These as a rule fall behind their comrades in class and are not fit for promotion with them. They hang on as dead weight to be worked up a second time with the children advanced from the next class below. A few parents understand why children thus attending take twice as long as others to get the same distance, and censure only themselves; but a greater number of fathers and mothers, having but an imperfect knowledge of schools, are slow to attach blame to the right persons. Section four comprises the children who attend a week, at some slack time, and then stay away a month, who attend again perhaps a fortnight, and are then absent six weeks, who come again a day or half-a-day and then disappear for two or three months. Potato picking, shearing, harvesting, lambing and other occupations in their turn take these children away for such long periods. What they are able to learn at school is of course worthless. They form however a large class in the bush, and are a terror to their teacher, for he will be exceptionally fortunate if their parents do not screen themselves from the odium of rearing their children in this way by explaining to all, who care to listen, that though they have sent them four or five years to school yet they have learnt nothing. Sections three and four number rather more than half the pupils enrolled; and their broken attendance, added to the steady attendance of the children in sections one and two, make a daily average of about 65 per cent. Any system of education that aims at universal instruction must not only keep in view the children who never attend school but must keep a tight hand upon the much larger class who, though nominally attending, might almost as well be away.

Referring now to the character of the education given, it may justly be said that with very few exceptions the schools are doing honest, substantial work. Comparing the state of education in this district with what it was even five years ago, there is reasonable cause to feel satisfied with the progress that has been made. Children who attend with ordinary regularity can secure now in most places an education that will be sufficient to enable them to take any position in life, that does not require technical or professional knowledge. At the various examinations, only one Public or Denominational school fell below the prescribed standard, more than one-fourth were above the standard, and all the rest were up to it. Owing to greater irregularity, and in some cases to the inferior skill of the teachers employed, the results for Provisional and Half-time schools are not so satisfactory. Every year however will tend to improve these small schools. The scheme for training candidates for these positions and the new regulation transferring the appointment of Provisional school teachers from local bodies to the Council will produce beneficial effects. When teachers were placed in charge by committees, incompetent persons were frequently appointed, whose sole claim was their helplessness. When Provisional schools now become vacant, they are filled by teachers selected and trained to some extent for the work.

The increase made this year in salaries has had a steady effect on teachers of Provisional Schools. The pay attached to the smallest schools of this class was formerly very low, and the teachers, looking upon their situations as only harbours of refuge, naturally quitted them at the first opportunity.

The increase in the salaries of classified teachers has given general satisfaction, because, though the addition is small, it is an indication of the direction that changes in regard to income must take. Now that there is so general a demand for good and sound teaching, the person upon whom the labour and responsibility of instructing nearly all the children in a township or district fall, must step by step come to be looked upon as a man, who can only be secured by the payment of a liberal salary. The tendency of the age in this respect may be noticed in the difficulty experienced by private families in obtaining qualified tutors and governesses, except at rates of emolument that a few years ago would have been considered excessive. If public education is to be general and of good quality, the country must be prepared to see a steady increase of expenditure in the direction of salaries.

All the pupil teachers have conducted themselves well and have faithfully performed their duties. The condition of each school inspected will be found in the annexed summaries of reports.

J. C. MAYNARD.

Inspector, Braidwood District.

Braidwood, 30th December, 1876.

BRAIDWOOD DISTRICT.

ANNEX A.

SUMMARIES of Reports furnished on Public, Provisional, and Half-time Schools during the year 1876.

Throughout these Summaries the technical words used to indicate general proficiency have the following relative values:—

- | | |
|---------------|-----------------|
| 1. Excellent. | 6. Tolerable. |
| 2. Very good. | 7. Moderate. |
| 3. Good. | 8. Indifferent. |
| 4. Very fair. | 9. Bad. |
| 5. Fair. | 10. Failure. |

I.—

I.—PUBLIC SCHOOLS.

ARALUEN (Boys—V.) :—Regular inspection, 12th May, 1876.

Enrolled, 45 ; present, 32.

1. The building is in a good state of repair. There is sufficient accommodation for three or four times the present attendance. 2. The pupils are attentive and well behaved. 3. The attainments are satisfactory, the general proficiency being very fair.

ARALUEN (Girls—V.) :—Regular inspection, 11th May, 1876.

Enrolled, 42 ; present, 31.

1. The material condition is good. 2. The discipline is satisfactory in all respects. 3. The general proficiency is between fair and very fair.

ARALUEN (Infants—V.) :—Regular inspection, 10th May, 1876.

Enrolled :—Boys, 22 ; girls, 18 ; total, 40. Present :—Boys, 18 ; girls, 11 ; total, 29.

1. Owing to the decrease of population this department is now sufficiently large. 2. The discipline is mild but effective, and the general proficiency is fair.

ARALUEN, WEST (V.) :—Regular inspection, 16th May, 1876.

Enrolled :—Boys, 40 ; girls, 31 ; total, 71. Present :—Boys, 30 ; girls, 24 ; total, 54.

1. The school is in a good state of repair and amply provided with all requisites. 2. The pupils are attentive, obedient and orderly. 3. The attainments are satisfactory, the general proficiency being very fair.

ARALUEN, UPPER (N.-V.) :—Regular inspection, 15th May, 1876.

Enrolled :—Boys, 31 ; girls, 36 ; total, 67. Present :—Boys, 23 ; girls, 33 ; total, 56.

1. The room is somewhat small for the present attendance, but the majority of the children might easily go to the school at Araluen West. 2. The government is mild and somewhat wanting in system. 3. Average progress has been made during the year. The general proficiency is fair.

BATEMAN'S BAY (V.) :—Regular inspection, 6th June, 1876.

Enrolled :—Boys, 35 ; girls, 21 ; total, 56. Present :—Boys, 23 ; girls, 12 ; total, 35.

1. Necessary repairs have been made during the year, and the buildings are now in a satisfactory state. 2. The discipline is sound. 3. All the prescribed subjects are taught except singing. The mark for reading and spelling is beyond the average, that for drawing below, and that for all other subjects well up to the average. The general proficiency is between fair and very fair.

BEGA (V.) :—Regular inspection, 1st and 2nd August, 1876.

Enrolled :—Boys, 68 ; girls, 48 ; total, 116. Present :—Boys, 65 ; girls, 43 ; total, 108.

1. As far as the present building can be made suitable the material condition is now good. There is an ample supply of furniture, apparatus and working stock. 2. The discipline has improved, but there is still room for increased firmness and activity in the government. 3. All the prescribed subjects are taught and all with average success. The general proficiency is fair.

BELL'S CREEK (V.) :—Regular inspection, 23rd October, 1876.

Enrolled :—Boys, 17 ; girls, 10 ; total, 27. Present :—Boys, 16 ; girls, 10 ; total, 26.

1. New buildings have been erected and there is a good supply of all requisites. 2. More energy and determination are required in the government. 3. The young children in this school have always been exceptionally well taught. The elder pupils bring down the total marks by their weakness in arithmetic, grammar and geography. The general proficiency is between fair and very fair.

BERGALIA (V.) :—Regular inspection, 25th May, 1876.

Enrolled :—Boys, 19 ; girls, 24 ; total, 43. Present :—Boys, 14 ; girls, 14 ; total, 28.

1. Since last inspection, the school and the residence have been put into a good state of repair. 2. The discipline on the whole is sound. 3. Writing and spelling are taught unusually well ; the mark for reading and Scripture is also above the average. The general proficiency is very fair.

BODALLA (N.-V.) :—Regular inspection, 26th May, 1876.

Enrolled :—Boys, 32 ; girls, 40 ; total, 72. Present :—Boys, 24 ; girls, 27 ; total, 51.

1. The building is small but not otherwise unsuitable ; steps have been taken to provide greater accommodation. 2. The discipline has improved, but there is still room for increased firmness. 3. The mark for reading and Scripture is above the average, and that for all other subjects up to the average. The general proficiency is fair.

BOMBALA (V.) :—Regular inspection, 17th and 21st February, 1876.

Enrolled :—Boys, 86 ; girls, 55 ; total, 141. Present :—Boys, 68 ; girls, 37 ; total, 105.

1. The existing schoolroom is too small, but a new one is nearly completed. 2. The discipline of classes I and II is capable of much improvement, that of classes III and IV is satisfactory. 3. In no subject are the attainments above the average. The general proficiency is fair.

BRAIDWOOD (V.) :—Regular inspection, 28th August, 1876.

Enrolled :—Boys, 40 ; girls, 35 ; total, 75. Present :—Boys, 34 ; girls, 25 ; total, 59.

1. Necessary repairs have been made since last inspection, and the buildings are now in good condition. 2. The government is mild but systematic, and the general tone of the school is healthy. 3. All the prescribed subjects are taught, and all with more than average success. The proficiency is between very fair and good.

CANDELO (V.) :—Regular inspection, 19th September, 1876.

Enrolled :—Boys, 40 ; girls, 27 ; total, 67. Present :—Boys, 34 ; girls, 22 ; total, 56.

1. The material condition is satisfactory. 2. Not more than half the pupils are regular. They are attentive, obedient, and orderly. 3. In class I the attainments are good in all subjects ; in the other classes the proficiency is between fair and very fair.

COBARGO (V.) :—Regular inspection, 27th July, 1876.

Enrolled :—Boys, 11 ; girls, 26 ; total, 37. Present :—Boys, 9 ; girls, 24 ; total, 33.

1. New school buildings have been put up, and the material condition is now good. 2. The children copy greatly, and the discipline generally is wanting in system. 3. The first class is well taught but the other classes are managed with much less efficiency. The average proficiency is between tolerable and fair.

COOMA (V.) :—Regular inspection, 13th March, 1876.

Enrolled :—Boys, 53 ; girls, 47 ; total, 100. Present :—Boys, 45 ; girls, 36 ; total, 81.

1. The material condition is good in all respects. 2. There is still room for improvement in the discipline. The pupils attend spasmodically when roused up by reprimands, but they have not been trained to give as a matter of habit a sustained and willing attention to their teachers. 3. All the prescribed subjects are taught and with very even success. The general proficiency is between fair and very fair.

EDEN (V.) :—Regular inspection, 22nd September, 1876.

Enrolled :—Boys, 28 ; girls, 15 ; total, 43. Present :—Boys, 25 ; girls, 11 ; total, 36.

1. No alteration has been made in the material condition since last inspection. 2. The discipline is sound in all respects. 3. The mark for every subject is above the average. The general proficiency is good.

JEMBAICUMBENE (V.) :—Regular inspection, 11th April, 1876.

Enrolled :—Boys, 21 ; girls, 13 ; total, 34. Present :—Boys, 14 ; girls, 7 ; total, 21.

1. The building is in a good state of repair and is amply provided with furniture, apparatus and materials. 2. The children are attentive, obedient and well under control. 3. Arithmetic and writing are weak subjects, but in all others average progress has been made. The general proficiency is between tolerable and fair.

KIOBA (N.-V.) :—Regular inspection, 31st May, 1876.

Enrolled :—Boys, 21 ; girls, 20 ; total, 41. Present :—Boys, 19 ; girls, 19 ; total, 38.

1. No alteration has been made in regard to the material condition, but a site being now available steps have been taken to erect new buildings. 2. The discipline is good. 3. All the prescribed subjects are taught ; the mark for arithmetic and geography is somewhat low, but that for all other subjects is high. The general proficiency is very fair.

LITTLE RIVER (V.) :—Regular inspection, 25th October, 1876.

Enrolled :—Boys, 25 ; girls, 31 ; total, 56. Present :—Boys, 20 ; girls, 30 ; total, 50.

1. The buildings have been repaired since last inspection, and are now in fair condition. The outfit of furniture and apparatus is ample. 2. The discipline is fair. 3. All the prescribed subjects are taught except singing. The mark for arithmetic, grammar and drawing is below the average. The general proficiency is between tolerable and fair.

MAJOR'S CREEK (V.) :—Regular inspection, 9th November, 1876.

Enrolled :—Boys, 38 ; girls, 47 ; total, 85. Present :—Boys, 29 ; girls, 34 ; total, 63.

1. The schoolroom is in a fair state of repair and is well supplied with all requisites. 2. Not more than half the pupils are regular. They are attentive, obedient and orderly. 3. The attainments are reasonably satisfactory, the general proficiency being between fair and very fair.

MERIMBULA (V.) :—Regular inspection, 2nd October, 1876.

Enrolled :—Boys, 24 ; girls, 18 ; total 42. Present :—Boys, 22 ; girls, 16 ; total 38.

1. When the ground is fenced, and provision made for a supply of water, the material condition will be in all respects good. 2. The discipline has much improved since last inspection. 3. There is a want of solidity in the attainments. The general proficiency is between tolerable and fair.

MONKITTEE (N.-V.) :—Regular inspection, 18th April, 1876.

Enrolled :—Boys, 18 ; girls, 12 ; total 30. Present :—Boys, 15 ; girls, 11 ; total, 26.

1. The building is in a tolerable state of repair and is well stocked with all necessaries. 2. The children have been conspicuously irregular in attendance. Partly owing to this circumstance, and partly to a want of tact in the management, the attainments are still very low. The general proficiency is between moderate and tolerable. Since the inspection there has been a change of teachers.

NELLIGEN (V.) :—Regular inspection, 12th June, 1876.

Enrolled :—Boys, 30 ; girls, 20 ; total 50. Present :—Boys, 24 ; girls, 20 ; total 44.

1. Since last inspection the residence has been enlarged and a play-shed built. The condition of the buildings is now reasonably good. 2. The discipline is very fair. 3. All the prescribed subjects are taught, except singing. 4. The mark for reading and dictation is above the average ; that for writing, arithmetic, Scripture and object lessons up to the average ; and that for grammar and drawing below. The general proficiency is fair.

NERRIGUNDAH (N.-V.) :—Regular inspection, 25th July, 1876.

Enrolled :—Boys, 21 ; girls, 18 ; total 39. Present :—Boys, 17 ; girls, 17 ; total 34.

1. The building is suitable and is amply supplied with all requisites. 2. The government is somewhat too easy ; and the children are therefore talkative and inattentive. 3. All the prescribed subjects are taught and all with average success. The general proficiency is between tolerable and fair.

PAMBULA (V.) :—Regular inspection, 21st September, 1876.

Enrolled :—Boys, 17 ; girls, 29 ; total, 46. Present :—Boys, 15 ; girls, 26 ; total, 41.

1. The building is in a good state of repair and is well supplied with all requisites. 2. Half the pupils are regular. The discipline has improved and is now very fair. 3. Arithmetic is a weak subject throughout the school. The marks obtained for other subjects are of an average character. The general proficiency is fair.

TANTAWANGLO (V.) :—Regular inspection, 18th September, 1876.

Enrolled :—Boys, 8 ; girls, 23 ; total, 31. Present :—Boys, 7 ; girls, 22 ; total, 29.

1. The building is in a good state of repair and has a suitable outfit of furniture apparatus and working stock. 2. Two-thirds of the pupils attend with ordinary regularity, but there are several children in the neighbourhood, who attend no school. Too much talking is permitted, but in other respects the discipline is fair. 3. All the prescribed subjects are taught. The general proficiency is between fair and very fair.

WOLUMLA SOUTH (V.) :—Regular inspection, 20th September, 1876.

Enrolled :—Boys, 24 ; girls, 24 ; total, 48. Present :—Boys, 16 ; girls, 18 ; total, 34.

1. The material condition is satisfactory. 2. Not more than half the children are regular in their attendance. 3. The mark for drawing and arithmetic is somewhat low, but that for all other subjects is above the average. The general proficiency is between very fair and good.

II.—PROVISIONAL SCHOOLS.

ADAMINIBY (N.-V.) :—Regular inspection, 7th March, 1876.

Enrolled :—Boys, 9 ; girls, 14 ; total, 23. Present :—Boys, 6 ; girls, 9 ; total, 15.

1. The schoolroom is tolerably suitable, and there is a sufficient supply of all necessary stock.
2. Only half attend with ordinary regularity. They are attentive, quiet and well under control.
3. The attainments in all subjects are low, the general proficiency being but moderate.

BETTOWYND (N.-V.) :—Regular inspection, 17th May, 1876.

Enrolled :—Boys, 15 ; girls, 14 ; total, 29. Present :—Boys, 6 ; girls, 13 ; total, 19.

1. The material condition is satisfactory in all respects.
2. The pupils are attentive and orderly.
3. The mark for reading, spelling, writing and arithmetic is beyond the average, that for dictation and grammar up to the average, and that for other subjects, below. The general proficiency is between tolerable and fair.

BROWN MOUNT (N.-V.) :—Regular inspection, 9th May, 1876.

Enrolled :—Boys, 22 ; girls, 15 ; total, 37. Present :—Boys, 21 ; girls, 13 ; total, 34.

1. The school is in a tolerable state of repair and has a fair supply of all requisites.
2. Three-fourths are regular. The pupils are attentive and on the whole orderly.
3. All subjects are taught except singing. The attainments are of an average character, the general proficiency being fair.

CATHCART (N.-V.) :—General inspection, 18th February, 1876.

Enrolled :—Boys, 17 ; girls, 20 ; total, 37. Present :—Boys, 15 ; girls, 17 ; total, 32.

1. The room in which school is held is small and out of repair. Steps have been taken, however, to put up a new building.
2. The government is mild but systematic, and the discipline on the whole is fair.
3. The school has only recently been conducted full-time. The general proficiency is tolerable.

CORROWONG (N.-V.) :—Regular inspection, 23rd February, 1876.

Enrolled :—Boys, 7 ; girls, 16 ; total, 23. Present :—Boys, 7 ; girls, 15 ; total, 22.

1. The school is in a fair state of repair, and there is a sufficient supply of all requisites.
2. The government is too easy, and the attainments suffer in consequence.
3. The general proficiency is moderate.

DANCELONG (V.) :—Regular inspection, 14th February, 1876.

Enrolled :—Boys, 14 ; girls, 15 ; total, 29. Present :—Boys, 10 ; girls, 7 ; total, 17.

1. The building is in a fair state of repair and is well supplied with requisite furniture and materials.
2. The government is ineffective and the general state of the school unsatisfactory.
3. The proficiency is moderate. Since the inspection a new teacher has been appointed.

DUKE'S SPRINGS (N.-V.) :—Regular inspection, 29th February, 1876.

Enrolled :—Boys, 10 ; girls, 12 ; total, 22. Present :—Boys, 9 ; girls, 12 ; total, 21.

1. The material condition is the same this year as last.
2. There is a want of firmness and system in the government.
3. The general proficiency is between tolerable and fair. The present teacher has only lately been appointed.

GUNDILLION (N.-V.) :—Regular inspection, 8th November, 1876.

Enrolled :—Boys, 16 ; girls, 11 ; total, 27. Present :—Boys, 16 ; girls, 11 ; total, 27.

1. For the present attendance the school is too small, but should the existing average be maintained it will be easy to enlarge the building. There is a reasonable amount of furniture and materials.
2. The pupils are orderly and attentive.
3. The general proficiency is tolerable.

KIANDRA (N.-V.) :—Regular inspection, 8th March, 1876.

Enrolled :—Boys, 13 ; girls, 12 ; total, 25. Present :—Boys, 11 ; girls, 10 ; total, 21.

1. Everything about this school is unsatisfactory. The building is bad. Discipline of any effective kind can scarcely be said to exist, and the attainments are wretched.

MOGO (N.-V.) :—Regular inspection, 5th June, 1876.

Enrolled :—Boys, 12 ; girls, 7 ; total, 19. Present :—Boys, 5 ; girls, 6 ; total, 11.

1. The building is in a tolerable state of repair and is well provided with all requisites.
2. Not more than half the pupils attend with ordinary regularity. The discipline is fair.
3. The mark for reading, writing and dictation is above the average, but that for all other subjects below. The general proficiency is between tolerable and fair.

MUDMELONG (N.-V.) :—Regular inspection, 18th May, 1876.

Enrolled :—Boys, 13 ; girls, 19 ; total, 32. Present :—Boys, 13 ; girls, 17 ; total, 30.

1. The school is in a fair state of repair and is reasonably well supplied with all necessaries.
2. The discipline is very fair. The general proficiency is between moderate and tolerable.

NERRIGA (V.) :—Regular inspection, 31st October, 1876.

Enrolled :—Boys, 12 ; girls, 18 ; total, 30. Present :—Boys, 7 ; girls, 16 ; total, 23.

1. The building is rough but it meets all present requirements. The school-ground needs fencing.
2. During the year this neighbourhood has suffered greatly from sickness, and the attendance at school has in consequence been much broken. The discipline is fair.
3. Reading and writing are taught with ordinary success, but the school is weak in all other subjects. The general proficiency is between moderate and tolerable.

NEWSTEAD (V.) :—Regular inspection, 30th May, 1876.

Enrolled :—Boys, 11 ; girls, 10 ; total, 21. Present :—Boys, 11 ; girls, 8 ; total, 19.

1. The schoolroom is in a tolerable state of repair and is provided with a sufficient quantity of furniture, though of a rough kind.
2. The discipline is satisfactory.
3. All the prescribed subjects are taught, except singing and drawing. The mark for reading, dictation, grammar and Scripture is above the average, and that for all other subjects is up to the average. The general proficiency is between fair and very fair.

NIMITYBELLE (N.-V.) :—Regular inspection, 15th February, 1876.

Enrolled :—Boys, 13 ; girls, 13 ; total, 26. Present :—Boys, 10 ; girls, 11 ; total, 21.

1. No alteration has been made in the material condition since last inspection.
2. The discipline is good.
3. The attendance is very irregular, but notwithstanding this circumstance ordinary progress has been made. The general proficiency is between tolerable and fair.

RUNNYMEDE (V.) :—Regular inspection, 8th June, 1876.

Enrolled :—Boys, 11 ; girls, 7 ; total, 18. Present :—Boys, 8 ; girls, 7 ; total, 15.

1. The building is rough, but it meets all present requirements reasonably well.
2. Two-thirds of the pupils are regular, and the discipline is tolerable.
3. Reading, writing and Scripture are taught with average success, but the attainments of the children in other subjects are poor. The general proficiency is moderate.

SPRING

SPRING VALE (N.-V.) :—Regular inspection, 5th October, 1876.

Enrolled :—Boys, 10 ; girls, 12 ; total, 22. Present :—Boys, 9 ; girls, 12 ; total, 21.

1. The school is held temporarily in a room lent by one of the residents. It is too small and but poorly fitted up with desks and forms. There is a sufficient supply of working stock. 2. During the short time the school has been open, the children have made fair progress.

WANDELLA (N.-V.) :—Regular inspection, 28th July, 1876.

Enrolled :—Boys, 12 ; girls, 12 ; total, 24. Present :—Boys, 12 ; girls, 12 ; total, 24.

1. The school is in a tolerable state of repair, and is sufficiently well provided with all necessaries. 2. Two-thirds of the pupils are regular ; they are attentive and orderly. 3. All subjects are taught, with average success, the general proficiency being fair.

III.—HALF-TIME SCHOOLS.

BACK CREEK (N.-V.) :—Regular inspection, 2nd November, 1876.

Enrolled :—Boys, 5 ; girls, 3 ; total, 8. Present :—Boys, 5 ; girls, 2 ; total, 7.

1. This school is worked with that at Charleyong, and is in all respects in about the same condition.

BOMBAY (N.-V.) :—Regular inspection, 26th October, 1876.

Enrolled :—Boys, 10 ; girls, 8 ; total, 18. Present :—Boys, 8 ; girls, 8 ; total, 16.

1. School is held in a very rough and uncomfortable hut. As a school here is not likely to be permanently required, unnecessary expense has been avoided. 2. The children are attentive and orderly. 3. The attainments are reasonably satisfactory, the general proficiency being between tolerable and fair.

BORO UPPER (N.-V.) :—Regular inspection, 15th November, 1876.

Enrolled :—Boys, 11 ; girls, 7 ; total, 18. Present :—Boys, 9 ; girls, 5 ; total, 14.

1. The school is in a fair state of repair and is well supplied with furniture, apparatus and materials. 2. The government is too easy. The children could and would do far more work, if the teacher would make them. The general proficiency is between moderate and tolerable.

BORO LOWER (N.-V.) :—Regular inspection, 15th November, 1876.

Enrolled :—Boys, 5 ; girls, 8 ; total, 13. Present :—Boys, 5 ; girls, 4 ; total, 9.

1. The school is a rough slab building, but it meets all requirements reasonably well. 2. The school is worked with that at Upper Boro, and the general management is marked by the same ineffectiveness.

BURRAGATE (V.) :—Regular inspection, 25th September, 1876.

Enrolled :—Boys, 6 ; girls, 3 ; total, 9. Present :—Boys, 6 ; girls, 3 ; total, 9.

1. There is sufficient accommodation to provide for three or four times the present attendance. All the children in the neighbourhood are enrolled, but they are not enough to maintain the minimum average. The general proficiency is indifferent.

BOCONNOC (N.-V.) :—Regular inspection, 9th March, 1876.

Enrolled :—Boys, 3 ; girl, 1 ; total, 4. Present :—Boys, 3 ; girl, 1 ; total, 4.

No alteration has been made in the material condition. The population being insufficient to maintain the school, it was closed from the day of inspection. The attainments of the few pupils remaining were only moderate.

CHARLEYONG (N.-V.) :—Regular inspection, 2nd November, 1876.

Enrolled :—Boys, 6 ; girls, 11 ; total, 17. Present :—Boys, 3 ; girls, 8 ; total, 11.

1. The building is in a tolerable state of repair and is well provided with all necessaries. 2. The discipline is good. 3. Notwithstanding the irregularity of attendance, the attainments are satisfactory. The general proficiency is very fair.

COLUMBO (N.-V.) :—Regular inspection, 26th October, 1876.

Enrolled :—Boys, 11 ; girls, 7 ; total, 18. Present :—Boys, 9 ; girls, 5 ; total, 14.

1. The school is in a tolerable state of repair and is supplied with sufficient requisites. 2. The discipline is satisfactory in all respects. 3. The mark for reading and writing is above the average, and that for other subjects up to the average. The general proficiency is between fair and very fair.

DELEGATE (N.-V.) :—Regular inspection, 22nd February, 1876.

Enrolled :—Boys, 12 ; girls, 7 ; total, 19. Present :—Boys, 6 ; girls, 7 ; total, 13.

1. No alteration has been made in the material condition since last inspection. 2. The attendance is excessively irregular, and the attainments are therefore necessarily low. 3. The general proficiency is between moderate and tolerable.

DENNIS FLAT (N.-V.) :—Regular inspection, 1st November, 1876.

Enrolled :—Boys, 4 ; girls, 7 ; total, 11. Present :—Boys, 4 ; girls, 7 ; total, 11.

1. School is held in a small hut, that is rather barely fitted up with desks and forms. As however it is not likely that a school can permanently be maintained here, all unnecessary expense has been avoided. 2. The discipline is satisfactory. The mark for general proficiency is between tolerable and fair.

DURRAN-DURRAH (N.-V.) :—Regular inspection, 27th November, 1876.

Enrolled :—Boys, 3 ; girls, 11 ; total, 14. Present :—Boys, 2 ; girls, 8 ; total, 10.

1. The building is in a tolerable state of repair and is sufficiently well provided with requisites. 2. The government is weak. 3. This school is worked with that at Six-mile Flat, but owing mainly to greater regularity of attendance it is in much better condition. The general proficiency is between tolerable and fair.

FARRINGTON (N.-V.) :—Regular inspection, 6th November, 1876.

Enrolled :—Boys, 11 ; girls, 5 ; total, 16. Present :—Boys, 8 ; girls, 5 ; total, 13.

1. The school is in a tolerable state of repair and is sufficiently well provided with materials. 2. There is a want of force and activity in the government. The children are lazy, but they would do far more work, if the teacher would make them. 3. The general proficiency is between tolerable and fair.

GINNABROTHERS

GINNABROTHERS (N.-V.) :—Regular inspection, 29th February, 1876.

Enrolled :—Boys, 13 ; girls, 10 ; total, 23. Present :—Boys, 9 ; girls, 10 ; total, 19.

1. The schoolroom is in a fair state of repair and is sufficiently well provided with requisites.
2. The pupils are attentive, orderly and well under control. The school has but recently been re-opened. Under the present teacher average progress is made.

GOOD-GOOD (N.-V.) :—Regular inspection, 9th February, 1876.

Enrolled :—Boys, 6 ; girls, 6 ; total, 12. Present :—Boys, 3 ; girls, 3 ; total, 6.

1. School is held in a small hut that is but poorly provided with requisites.
2. The school has been in operation but a short time, and the attainments are moderate.

HAROLD'S CROSS (N.-V.) :—Regular inspection, 6th November, 1876.

Enrolled :—Boys, 6 ; girls, 6 ; total, 12. Present :—Boys, 6 ; girls, 6 ; total, 12.

1. This school is worked with that at Farringdon and is in about the same condition.

JELLAT JELLAT (N.-V.) :—Regular inspection, 4th October, 1876.

Enrolled :—Boys, 7 ; girls, 13 ; total, 20. Present :—Boys, 3 ; girls, 12 ; total, 15.

1. The accommodation is sufficient.
2. The school is worked with that at Warragubra, and its prospects and condition are about the same—barely tolerable.

LARBERT (N.-V.) :—Regular inspection, 14th November, 1876.

Enrolled :—Boys, 13 ; girls, 8 ; total, 21. Present :—Boys, 7 ; girls, 8 ; total, 15.

1. The school accommodation is good in all respects.
2. The pupils are attentive and orderly.
3. The attainments are satisfactory, the mark for all subjects being up to the average. The general proficiency is between fair and very fair.

LAREY'S POINT (N.-V.) :—Regular inspection, 23rd May, 1876.

Enrolled :—Boys, 6 ; girls, 10 ; total, 16. Present :—Boys, 6 ; girls, 9 ; total, 15.

1. No alteration has been made in the material condition.
2. The children are orderly and attentive.
3. The general proficiency is tolerable.

LIMEKILNS (N.-V.) :—Regular inspection, 14th November, 1876.

Enrolled :—Boys, 10 ; girls, 6 ; total, 16. Present :—Boys, 7 ; girls, 3 ; total, 10.

1. The schoolroom is sufficiently good for existing requirements and is well supplied with requisites.
2. The school is worked with that at Larbert, and is in about the same condition in regard to discipline and attainments.

LOCHIEL (N.-V.) :—General inspection, 27th September, 1876.

Enrolled :—Boys, 8 ; girls, 7 ; total, 15. Present :—Boys, 8 ; girls, 7 ; total, 15.

1. The school is a dilapidated slab hut, lent by one of the residents. There are sufficient desks, forms and working materials.
2. The pupils are attentive and quiet, and the government is firm.
3. Average progress has been made during the nine months the school has been open. The proficiency is between tolerable and fair.

MERINGLO (N.-V.) :—Regular inspection, 8th August, 1876.

Enrolled :—Boys, 12 ; girls, 19 ; total, 31. Present :—Boys, 12 ; girls, 19 ; total, 31.

1. The schoolroom is too small for the present attendance. The majority of the children have been at school but a short time and are very backward.
2. Both in regard to attainments and discipline the general condition is indifferent. This is now conducted as a Provisional School.

MOUNT ITALY (N.-V.) :—Regular inspection, 8th November, 1876.

Enrolled :—Boys, 6 ; girls, 7 ; total, 13. Present :—Boys, 6 ; girls, 6 ; total, 12.

1. The material condition is satisfactory.
2. The discipline is very fair.
3. The school has only lately been re-opened. The pupils are making ordinary progress.

MYALLA (N.-V.) :—Regular inspection, 1st March, 1876.

Enrolled :—Boys, 11 ; girls, 7 ; total, 18. Present :—Boys, 8 ; girls, 7 ; total, 15.

1. The material condition is satisfactory.
2. The discipline is good.
3. The general proficiency is tolerable.

ORANMEIE (N.-V.) :—Regular inspection, 7th November, 1876.

Enrolled :—Boys, 9 ; girls, 9 ; total, 18. Present :—Boys, 6 ; girls, 8 ; total, 14.

1. The material condition is satisfactory.
2. Under the present teacher the discipline has much improved, and there is far greater effectiveness in the teaching. The general proficiency is between tolerable and fair.

POWER'S CORNER (N.-V.) :—Inspected, 24th February, 1876.

1. This school had been closed for some weeks when I visited it, all the children being away harvesting. The few families in the neighbourhood find it impossible to maintain the minimum average attendance.

ROCKY HALL (N.-V.) :—General inspection, 26th September, 1876.

Enrolled :—Boys, 12 ; girls, 5 ; total, 17. Present :—Boys, 11 ; girls, 4 ; total, 15.

1. The site is not at present central, but arrangements have been made to remove the building. There is sufficient accommodation and an ordinary supply of furniture, apparatus and working stock.
2. The school has only been established a short time, so that the attainments are but moderate.

SIX-MILE FLAT (V.) :—Regular inspection, 16th November, 1876.

Enrolled :—Boys, 11 ; girls, 11 ; total, 22. Present :—Boys, 8 ; girls, 7 ; total, 15.

1. The schoolroom is a comfortless place but is well supplied with all necessaries.
2. None of the pupils attend with even ordinary regularity.
3. The children are feebly governed, and the general proficiency is indifferent.

SNAPHOOK (N.-V.) :—Regular inspection, 22nd May, 1876.

Enrolled :—Boys, 10 ; girls, 13 ; total, 23. Present :—Boys, 10 ; girls, 10 ; total, 20.

1. The whole place is rough but it meets present requirements.
2. The discipline is satisfactory.
3. The general proficiency is between tolerable and fair.

STONY CREEK (V.) :—Regular inspection, 4th August, 1876.

Enrolled :—Boys, 9 ; girls, 12 ; total, 21. Present :—Boys, 7 ; girls, 8 ; total, 15.

1. The building is in a good state of repair and is well provided with furniture, apparatus and materials. 2. The discipline is satisfactory. 3. The mark for reading is above the average, and that for all other subjects, except geography, up to the average. The general proficiency is fair.

TARRAGANDAH (N.-V.) :—Regular inspection, 4th August, 1876.

Enrolled :—Boys, 5 ; girls, 8 ; total, 13. Present :—Boys, 5 ; girls, 8 ; total, 13.

1. The building is in a good state of repair, and there is an ample supply of all requisites. 2. The discipline is very fair. 3. All the prescribed subjects are taught except drawing. The general proficiency is fair.

TOMBOYE (N.-V.) :—Regular inspection, 1st November, 1876.

Enrolled :—Boys, 8 ; girls, 4 ; total, 12. Present :—Boys, 8 ; girls, 4 ; total, 12.

1. The building is sufficiently good and is well supplied with necessaries. 2. The school is worked with that at Dennis's Flat, and in regard to discipline and attainments is in the same condition.

WARRAGUBRA (N.-V.) :—Regular inspection, 4th October, 1876.

Enrolled :—Boys, 8 ; girls, 10 ; total, 18. Present :—Boys, 8 ; girls, 10 ; total, 18.

1. The building is in a fair state of repair, and there is a sufficient outfit of furniture and apparatus. 2. A new teacher has lately been placed in charge ; under his management the school is likely to improve both in discipline and attainments. The general proficiency is between moderate and tolerable.

WHINSTONE VALLEY (N.-V.) :—Regular inspection, 9th February, 1876.

Enrolled :—Boys, 7 ; girls, 10 ; total, 17. Present :—Boys, 7 ; girls, 3 ; total, 10.

1. The schoolroom is a comfortless slab hut, very roughly fitted up with requisites. 2. This school is worked with that at Good-Good, and is in about the same condition.

WOLUMLA, NORTH (V.) :—Inspected, 31st July, 1876.

1. The building is in good condition, but is now useless for want of population. The school has been closed, as the minimum attendance could not be maintained.

WYNDHAM (V.) :—Regular inspection, 26th September, 1876.

Enrolled :—Boys, 11 ; girls, 16 ; total, 27. Present :—Boys, 7 ; girls, 12 ; total, 19.

1. The school is in a good state of repair and amply provided with all necessaries. 2. The discipline has greatly improved and is now very fair in all respects. 3. Average progress has been made in reading, spelling, writing and dictation ; but the children are weak in arithmetic, grammar and geography. The general proficiency is tolerable.

J. C. MAYNARD,
Inspector, Braidwood District.

CAMDEN DISTRICT.

INSPECTOR'S General Report for 1876.

I HAVE the honor to submit my General Report for the year 1876. The information contained therein relates to the adequacy of the means of education in the district, as regards amount and distribution ; the material condition, organization, and general discipline of the schools ; the subjects and methods of instruction, moral training, and progress of the pupils in learning.

Distribution of means of Education.

At the close of the year there were 96 schools in the district, attended by 5,302 scholars. The following statement shows the number of schools of each class, and the attendance of pupils :—

48 Public Schools, attended by 3,115 pupils ; average for each School	65.
17 Provisional	505
6 Half-time	139
11 Church of England	812
12 Roman Catholic	628
1 Presbyterian	42
1 Wesleyan	61

The total number of scholars who attended the schools of the district in the year was 6,697, and the average attendance 3,379. For the last quarter of the year the enrolment was 5,302, and the average 3,553. Of the 4,878 pupils enrolled at the time of inspection, 3,991 were present at examination. The following statement gives the number of free scholars enrolled for the last quarter of the year :—

Public Schools.....	329
Provisional	173
Half-time.....	24
Church of England	70
Roman Catholic	61
Presbyterian	0
Wesleyan.....	2

Total..... 659

As regards the supply of the means of education in the district, there are very few places where schools are needed, and these places are sparsely settled localities where there would be considerable difficulty in maintaining the attendance of pupils required for either Provisional or Half-time Schools. In some places, notwithstanding the progress that has been made during the last few years to remedy the evil, the number of schools is still in excess of the wants of the people ; but in considering this matter it should be remembered that the Public Schools Act makes no provision for closing unnecessary schools, so long as the required number of thirty pupils is maintained at each ; and that fresh legislation on this point is urgently needed in order to economize the public funds and render the existing schools more efficient. At Camden, Liverpool, Wollongong, Kogarah, and Jamberoo there are still three schools at each place ; and at Dapto, Bulli, Bankstown, Menangle, and Charcoal Creek there are two schools at each place. One school in each of these localities would be quite sufficient to meet the educational requirements of the people, and therefore fifteen of the schools at these places are unnecessary. In June last, the Provisional Schools at the Dairy and Brownlow Hill were closed, being unnecessary, and arrangements are in progress for closing the C.E. School at Jamberoo and the Presbyterian School at Charcoal Creek, in accordance with the wishes of the people. During the year applications for Public Schools were received from Jasper's Brush and Holdsworthy, and for a Provisional

Provisional School from Woodhill. These applications were granted, excepting Jasper's Brush, which was declined, being considered too near existing schools. With the exception of a few thinly settled localities where Half-time Schools could perhaps be maintained, I am not aware of any place in the Camden District where additional schools are required.

Condition of the Schools inspected.

The inspection of the schools was tolerably rigid. The examination of each school generally occupied from five to eight hours; but in the cases of large schools two and sometimes three days were occupied. In every instance I endeavoured to ascertain if the Council's fundamental regulations were complied with. I noted the suitability of the site, the character of the school buildings and furniture, and if the time-tables, programmes of lessons, and occupations of the pupils were suitable, and in accordance with the requirements of the Public Schools Act and Council's Regulations. I inquired into the classification of the scholars; inspected the school library, the mode of keeping the school records, and the books in the hands of the children. As regards the discipline, I noted the punctuality, regularity, cleanliness, order, conduct, and manners of the pupils. I examined every class, noted the subjects taught; the proficiency of the scholars; the rate of school fee; the professional skill and usefulness of the teachers, and the efficiency of the local supervision. At the close of each inspection I made such suggestions to the teacher and to the School Board as I concluded would improve the schools and benefit the public. As regards the material condition of the Public Schools, they are improving rapidly. With very few exceptions, all the Vested Schools are in good repair, and steps are now being taken for making all necessary improvements. During the year buildings have been completed at Gerringong, Campbelltown, Liverpool, Ashfield, Kogarah, and Hurstville, and new schools are in course of erection at Jamberoo, Dapto, Narellan, Mount Keira, Broughton Vale, Peakhurst, and Holdsworth. Important repairs have been made to the schools at Appin, Berkeley, Avondale, Bundywalla, Westbrook, and Violet Hill; and improvements are in progress at Omega Retreat, Kiama, Rose Valley, Brandon Hill, Marshall Mount, Camden, Wollongong, Menangle, and Gerringong. Generally speaking, the schoolrooms are clean and well ventilated. In almost every instance there are suitable playgrounds, out-buildings, a supply of water, and a comfortable residence for the teacher. Of the 48 Public Schools in the district, 14 are non-vested. In the majority of the localities where non-vested schools are in operation measures have been taken, where sites are available, for the erection of vested buildings. All the Public Schools are well furnished, and the supplies of apparatus and books are sufficient. The majority of the Provisional Schools are in passable repair, and well supplied with apparatus and books, but the furniture is sometimes of a bad description. The playgrounds are often not enclosed, closets are sometimes wanting, and generally there is no residence for the teacher. The same remarks apply to the Half-time Schools. As regards Denominational Schools, four are held in churches. In some instances the local Boards decline to make any further material improvements until Parliament has settled the education question. The Denominational Schools, however, are fairly furnished, well supplied with school requisites, and their material condition is fairly satisfactory. Time-tables for regulating the time devoted to each branch of instruction, and programmes showing the course of lessons prescribed for each class for the quarter, are in use in almost every school, but in some cases they are not prepared with much skill, nor adhered to with sufficient strictness; but in general the instruction of the school is carried out in a progressive and systematic manner, and the daily work is recorded in the register of lessons. In nearly all the schools the classification of the pupils is judicious, and the school records are kept with considerable neatness and care. In some cases I found the promotions of the scholars and the quarter of enrolment not recorded at the proper time, nor the class roll duly closed at the end of the quarter; but, on the whole, the school accounts are carefully and correctly kept.

I fully inspected all the schools in the district during the year, and made incidental visits to a large number. So far as I have been able to ascertain, the fundamental regulations of the Council are faithfully observed, and as regards the moral tone of the schools, the character and extent of the instruction imparted, the order, cleanliness, and general discipline maintained, the proficiency of the pupils in the subjects taught, and the general management, the following statement may be taken as a just classification of the schools inspected:—

Condition of the Schools.

Schools.	Tolerable to Moderate, or below Standard.	Fair, or up to Standard.	Very Fair and Good, or above Standard.
Public	6	12	30
Provisional	8	10	0
Half-Time	2	2	2
Church of England	2	4	5
Roman Catholic	6	3	3
Presbyterian	0	1	0
Wesleyan	1	0	0
All Schools	25	32	40

This statement shows considerable improvement for the year. Last year there were 32 schools below the standard of proficiency and 32 above it; but for this year there are only 25 schools below the standard, and the number above it has increased to 40. The 3,991 children examined were classified as follows:—

First Class	1,851.
Second Class	1,176.
Third Class	835.
Fourth Class	129.

Of the 1,851 children in the first class, 362 were learning the alphabet, 1,489 reading and writing monosyllables, learning the mere elements of arithmetic, such as notation to three places, simple addition, sums on slates, and mental operations involving results up to sixty. They are also taught object lessons on domestic animals and common things, and in some of the Public and Denominational Schools to sing melodies. In some schools the younger children are not taught with sufficient care, and too much time is occupied in learning to read. The children in the second class read easy narrative, write on paper from copies, and on slates from dictation and memory. They learn the topography of the school district, the common geographical terms, the uses of a map, the simple rules of arithmetic, to define the parts of speech, and to distinguish them in their reading lessons. They also learn to draw rectilineal figures, and in some schools to sing melodies by ear, or by the tonic-sol-fa method. The course of instruction for the third and fourth classes includes reading, writing, and spelling, ordinary prose, English grammar, analysis of sentences, composition, the geography of the continents and oceans in detail, arithmetic as far as including fractions, and mental calculations, with object lessons on animals, vegetables, minerals, manufactures, common things, and mechanics. Singing, drawing, and Scripture, are also taught in a considerable number of the schools, and in some, the elements of algebra, geometry, and Latin. In the majority of the schools in charge of married teachers, the needlework is creditably taught, but there are a few where it does not receive sufficient attention.

Of the 3,991 children examined, the attainments of 629 are good.
 1,885 very fair.
 1,050 fair.
 329 tolerable.
 98 moderate.

This is in advance of the results of last year. Generally speaking, the pupils in the third and fourth classes read with considerable ease and intelligence, and with few exceptions the writing is creditable. In some schools the pupils are still backward in arithmetic; the chief defects are in notation and the want of sufficient practice to secure accuracy. The theory of English grammar is fairly taught; but in few schools are the children trained with sufficient care to accuracy of expression, which is one of the great objects of studying the subject. There are few schools where the junior classes are not fairly acquainted with the outlines of the map of the world, and the advanced pupils have added to this a considerable knowledge of the physical and political geography of New South Wales, Australia, and the other Continents. Instruction in Scripture history is given in all the Public and in some of the Provisional and Half-time schools. The teachers competent to give instructions in singing and drawing are on the increase. In a number of the schools the children can sing part songs in a pleasing manner; but the theory is not well understood. In about one-third of the schools drawing is creditably taught; but in several cases the teachers do not adhere with sufficient strictness to the course prescribed by the Council. Object lessons are given in all the schools; but in many cases their design and the method of giving them are not well understood, the improvement of the intellectual powers and the cultivation of the habit of observation being overlooked. In nearly all the schools inspected there is some progress to note, either as regards organization, discipline, or instruction, and retrogression as regards efficiency is found in few. The apathy of some teachers, the removal or resignation of others, and the difficulty of securing competent persons for the office in the small and for the more important schools, frequently retard the progress of education.

Children not attending School.

When I inspected each school, and in the course of my travels, I made careful inquiry as to the number of children of the educable ages not under school instruction, and I found that there are about 900 children in the Camden District not attending school. These children are, however, not all growing up wholly uneducated. Some had left school, and others were receiving instruction at home. The average number of children enrolled in all the schools for the year was about 5,100, and with the children not attending, there are about 6,000 children of school ages in the Camden District. The average attendance at school is about 66 days per cent. It appears, therefore, that about one-seventh of the children of the educable ages in the district are not at school, and that the scholars enrolled are absent thirty-four days per cent., or one-third of the school time. This irregularity and non-attendance are very injurious and objectionable for many reasons. The irregular scholars make little or no progress. The country pays for a good education for them and they get but little to fit them for the duties of life. The progress of the regular pupils is much retarded, the public funds are largely wasted, the work of education is hindered, the discipline is injuriously affected and the teachers are embarrassed and discouraged in their efforts. There is no doubt that non-attendance and irregularity should be prevented to a certain extent, and although ability to read and write is said to add 25 per cent. to the wages of the working classes, no man ought to keep any one in ignorance for the sake of cheap labour. Throughout the world intelligent nations are coming to the front, and the uneducated are falling behind in the march of progress. An ignorant community never thrives. The two nations that have made the most rapid progress during the last thirty years are said to be Germany and America, and they are proverbially the best educated people in modern times. While these nations were sowing the seeds of knowledge broadcast among their subjects, England was leaving the children of the people to the mercy of individual and voluntary effort, but recently her eyes have been opened, she now sees her deplorable condition, and in no civilised country in modern times has primary education made such progress as in England during the last five years. In the emphatic words of Horace Mann there is little doubt in a self-governing community, but "ignorance is a crime," and it is universally admitted that education lessens crime. The compulsory law of Scotland came into operation in 1872 and some idea of the difference between compulsory and voluntary school attendance may be gathered from the fact that in two years the attendance of scholars was increased by 42 per cent.; while in Ireland, where there is no compulsory law, the attendance of scholars increased in four years only 8½ per cent. In 1875 the average attendance of scholars in Ireland was 1 in 14 of the population, while in Scotland it was 1 in 11. In the year before permissive compulsion began to operate in England the attendance of day scholars was 1 in 19 of the population; now the attendance is 1 in 13—an increase of 60 per cent. in the five years. It is now considered as an established fact that no agency short of a compulsory law can bring Ireland on a level with England and Scotland as regards the education of the people. In Germany school attendance has been obligatory since 1819, and the result is that illiterates are almost unknown. Scarcely one in a hundred persons is found uneducated, and the actual school attendance between the ages of six and fourteen years is 98 per cent. of the number enrolled. In Germany the compulsory education of the last generation is the voluntary education of the present. During a recent year it was not found necessary to inflict the penalty of the law in more than seven cases, whereas in London above 115 persons are fined every week for neglecting the education of their children. In Birmingham the number of prosecutions is about thirty-six per week; but nothing short of compulsion will bring the children of the masses to school. The proportion of illiteracy in America is still great, and although much attention is paid to the education of the people of Belgium, there is no compulsory law, and half the population can neither write nor read. This is also the case in France: half the population is uneducated, and what the result of this ignorance has been to France may be gathered from the following statement of M. Emile De Laveleye, who says:—"It is an indisputable fact that ignorance combined with universal suffrage was the immediate cause of the recent reverses of France." Education prospers in proportion to the watchfulness of the Government of a nation, and I think most persons who have studied the subject carefully will admit that compulsory education is necessary to a certain extent; but no obligatory law could easily bring all the educable children of the colony under instruction, or prevent all the irregularities of school attendance; but it would be very useful no doubt in compelling some children to attend school who receive no education under present arrangements, and it could secure a more regular attendance of the number enrolled. It is evident no law could compel children to attend school when suffering from sickness, in times of floods, or where there are no schools within a reasonable distance, and compulsory laws are powerless to secure the attendance at school of children destitute, or limited in the means of subsistence. In 1875 the 989 private schools of the Colony were attended by 18,427 scholars, in the Orphan and Industrial Schools there were 1,348 scholars, in the Public Schools 58,811, in the Provisional Schools 8,786, in Half-time schools 2,350, and in Church of England schools 17,771; in Roman Catholic schools 13,941, in Presbyterian schools 1,051, in Wesleyan schools 1,560, and in the Hebrew School 186, making a total of 124,756 scholars at all the Public, Denominational, and other schools of the Colony for the year. Now the estimated population of the Colony for 1875 was 606,652, so that from this statement it follows that about one in five of the population was under instruction within the year. Of the 124,756 children, 104,456 are educated in the schools under the Council of Education; but the average attendance being about 66 days per cent., it follows that the scholars are absent about one-third of the school days. It is an erroneous calculation to reckon that the average attendance of pupils gives the correct number of children at school. The number of children enrolled is the number under instruction and they attend about seventy-three days in the half-year, whereas, in Victoria, only sixty days in the half-year are compulsory, and no compulsory law is likely to compel children to attend school.

school more than 66 days per cent., and there is no ground therefore to complain of the administration of the Public Schools Act in this respect. The chief evil is that there are perhaps 25,000 children in the Colony not attending school; but there is no doubt many of these receive private tuition at home. To assert, as is frequently done, that there are about 40,000 children in the Colony not attending school is, I think, not quite correct, on the ground that on an average all the scholars in the schools under the Council of Education attend school for two-thirds of the time they are enrolled, and no child's name is allowed to remain on the roll unless it is present at the beginning of the quarter. In Sydney, and some other parts of the Colony where schools are numerous, there is no doubt but double enrolments of the same children exaggerate the school attendance for the year by some thousands; but for any particular quarter of a year the number is small. During the year the double enrolments in the Camden District were about 560; but for the last quarter they did not exceed 150. I am inclined to the opinion that there cannot be many more than one-sixth of the children of the educable ages in the Colony not attending school, and careful inquiry would show that some of these have been at school and others are receiving private tuition on the squatting stations and other thinly-settled localities. A compulsory law would perhaps without much pressure increase the number of scholars about 15,000, and raise the average attendance to 75 days per cent., and then 10,000 children would be growing up uneducated to a large extent.

Teachers.

There were employed in the district at the close of the year ninety-six principal teachers, six assistants, sixteen pupil teachers, and two sewing mistresses. They are classified as follows:—Two first-class, twenty-nine second-class, thirty-seven third-class, and thirty-five probationers. Fourteen of the principal teachers were promoted during the year to higher grades of classification for good service. Of the sixteen pupil teachers, four are in the second class, three in the third class, and nine in the fourth. Four were promoted during the year, but two failed to pass the required examination. Of ten applicant pupil teachers two were unsuccessful. The probationary teachers are chiefly employed in the Provisional and Half-time Schools, where the average attendance is below twenty-five and in some cases not more than half that number. Generally speaking, the teachers are industrious and exemplary in their conduct, anxious for improvement, and painstaking in the performance of their duties. It must be admitted that the office of teacher is one of great responsibility and importance. The labours of the teachers are arduous, and as promotion depends upon the condition of the schools, the shortness of the school period and the irregularity of the attendance of the scholars are much against their success. The art of teaching, although founded on principles which elevate it to the rank of a most important science and one of the highest arts of civilized life, is not so carefully studied and practised as it should be. In Prussia the art of teaching is perhaps more fully recognized than in any other country. As a profession it occupies the foremost place, and the day has passed away in which it was thought that any person who possessed a smattering of elementary knowledge, was good enough for the teacher of a primary school.

Concluding Remarks.

All the schools in the district were fully inspected during the year, and a considerable number received incidental visits. The number of schools is increasing, and fourteen of the teachers have been promoted for good service. The resolution of the Assembly to the effect that all Public Schools are in future to be built at the public cost is doing much to promote education among the people, and the character of the school buildings and material condition of the Public Schools are improving rapidly. In some cases the schoolgrounds have been laid out and planted and the Council assists in defraying the cost. The organization has improved, and the general discipline is effective. The cleanliness is generally satisfactory. The number of pupil teachers is increasing, but the pupils in many schools are still irregular, and compulsory attendance is urgently needed. The instruction of the schools has improved during the year, and the unnecessary schools found in some localities are being gradually closed. Since the collection of local contributions for school purposes has ceased I am of opinion that the local supervision is more active. The future prospects of the schools in the district are encouraging. A summary of my reports on the schools inspected is hereunto appended.

Inspector's Office, Sydney,
30th December, 1876.

W. M'INTYRE,
Inspector, Camden District.

CAMDEN DISTRICT.

SUMMARY of Reports for 1876.

THE following remarks are abridged statements of my detailed reports upon the condition of the Public, Provisional, and Half-time Schools inspected by me during the year 1876. The remarks chiefly relate to the material condition and organization of the schools, the general discipline and moral training, the subjects and methods of instruction, and the progress of the pupils in learning.

PUBLIC SCHOOLS.

APPIN:—Regular inspection, 8th November.

Enrolled:—Boys, 21; girls, 20; total, 41. Present:—Boys, 16; girls, 17; total, 33.

The painting, repairs, and lavatory reported as necessary at last inspection have been completed, and the material condition of the school is good. The schoolroom is clean and well ventilated and the scholars are punctual, clean, orderly, and attentive. Singing is not taught, but the methods of tuition are modern and applied with zeal and industry. The average attendance of the pupils is about 65 days per cent. There are ten free scholars. It appears there are no children of the school ages in the locality not under instruction. 68 per cent. of the questions asked at the examination were answered, and the general management of the school is nearly very fair.

ASHFIELD (Infants, V.):—General inspection, 22nd November.

Enrolled:—Boys, 43; girls, 35; total, 78. Present:—Boys, 32; girls, 27; total, 59.

The schoolroom is a new and commodious building, constructed of brick and dressed freestone. The ventilation is good, but the desks and forms are unsuitable, being too high for infant children. The porch is used for a hat-room, but it is too small. There is no playshed to protect the pupils from sun and rain, and the supply of working materials is not quite complete. The usual subjects are taught, and the methods of tuition are modern, and applied with zeal and industry. About 76 per cent. of the scholars are regular, and nearly all punctual. They are clean, and the order, attention, and progress of the pupils in learning are satisfactory for the few weeks the school has been in operation.

ASHFIELD (Primary, V.):—General inspection, 23rd and 24th November.

Enrolled:—Boys, 69; girls, 53; total, 122. Present:—Boys, 55; girls, 46; total, 101.

The schoolroom is a new and commodious building, constructed of brick and dressed freestone. The porch is used for a hat-room, but it is too small, and there is no playshed to protect the pupils from sun and rain. Another book-press, and a second door in the classroom to admit of egress to the playground, are required, but, otherwise, the material condition of the school is good. All the prescribed subjects are taught,

taught, the classification and instruction of the pupils are appropriate, and the methods of tuition are intelligent. The average attendance of the pupils enrolled is 75 days per cent. There are only two free scholars. It appears there are no children of the educable ages in the locality not under instruction. The general discipline and progress of the pupils in learning are satisfactory for the few weeks the school has been in operation.

AVONDALE (V.) :—Regular inspection, 24th October.

Enrolled :—Boys, 24 ; girls, 22 ; total, 46. Present :—Boys, 21 ; girls, 15 ; total, 36.

The buildings have recently been reshingled, painted, and otherwise repaired ; the stock of furniture, apparatus, and books is sufficient, and the material condition of the school is good. About 66 days per cent. is the average attendance of the pupils enrolled, and they are attentive, clean, and orderly, but not all sufficiently punctual. All the prescribed subjects are taught except singing, and the methods of tuition are intelligent. There are eleven free scholars, and it appears there are only three children of the school ages in the locality not under instruction. The Public School at Dapto does not interfere with this school, being about 3 miles distant. About 70 per cent. of the questions asked at the examination were answered, and the proficiency is very fair.

ALBION PARK (V.) :—Regular inspection, 27th September.

Enrolled :—Boys, 42 ; girls, 32 ; total, 74. Present :—Boys, 34 ; girls, 24 ; total, 58.

The buildings need painting, the closets require drainage, and a portion of the roof of the residence is leaky, but otherwise the material condition of the school is good. All the prescribed subjects of instruction are taught except singing, and the methods of tuition are intelligent. The average attendance of the pupils enrolled is about 72 per cent. There are eight free scholars. It appears upon inquiry there are no children of the educable ages in the locality not under instruction. The schoolroom is clean and well ventilated, and the general discipline is satisfactory. About 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

BANKSTOWN (N.-V.) :—Regular inspection, 27th April.

Enrolled :—Boys, 20 ; girls, 21 ; total, 41. Present :—Boys, 15 ; girls, 19 ; total, 34.

This school is held in temporary premises. Two additional desks are required, but otherwise the material condition of the school is good. Public School buildings are required. All the prescribed subjects are taught except singing, and the general discipline is passable. About 70 per cent. of the pupils enrolled are regular, and nearly all punctual in their attendance. About 56 per cent. of the questions asked at the examination were answered ; the proficiency of the pupils is above tolerable. There are fourteen free scholars, and the teacher reports that seven children of the educable ages in the locality are not under instruction. The needlework is taught by Mrs. Targett.

BERKELEY (V.) :—Regular inspection, 30th August.

Enrolled :—Boys, 22 ; girls, 20 ; total, 42. Present :—Boys, 19 ; girls, 19 ; total, 38.

The buildings have recently been re-shingled and painted and otherwise repaired ; new fencing, out-buildings, and a lavatory have been erected, and the material condition is now good. All the prescribed subjects are taught, and the teaching is intelligent. The average attendance is about 70 days per cent., and the order, attention, and cleanliness are fairly satisfactory. There are no free scholars, and the teacher is not aware of any children of the school ages in the locality not under instruction. About 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair, but they are not sufficiently punctual.

BOOLONG (N.-V.) :—Regular inspection, 13th March.

Enrolled :—Boys, 21 ; girls, 20 ; total, 41. Present :—Boys, 20 ; girls, 18 ; total, 38.

A new residence for the teacher, a lavatory, a playshed, a book-press, and fencing are required. The pupils are clean, orderly, and nearly all punctual. All the usual subjects of instruction are taught, except singing, but the programmes of lessons are not well arranged. The average attendance of the pupils enrolled is about 50 days per cent. The schoolroom is clean and well ventilated. There are ten free scholars, and the teacher reports that seven children of the educable ages in the neighbourhood are not under instruction. About 56 per cent. of the questions asked at the examination were answered, and the proficiency is between tolerable and fair. This is a place where Public School buildings are required, but a site cannot be secured on Mr. Berry's estate.

BRANDON HILL (V.) :—General inspection, 7th September.

Enrolled :—Boys, 29 ; girls, 23 ; total, 52. Present :—Boys, 28 ; girls, 21 ; total, 49.

An additional room to the residence and a supply of water are required, and the buildings are in much need of painting. The schoolroom is clean and well ventilated, but rather small. Measures have been taken for making the improvements necessary. All the prescribed subjects are taught, except singing, and the methods of tuition are intelligent. The average attendance of the pupils enrolled is 66 days per cent., and they are nearly all punctual. The cleanliness, order, and attention are satisfactory. There are four free scholars, and six children of the school ages in the locality not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments are very fair.

BROUGHTON CREEK (N.-V.) :—Regular inspection, 10th March.

Enrolled :—Boys, 40 ; girls, 43 ; total, 83. Present :—Boys, 32 ; girls, 39 ; total, 71.

A lavatory, a playshed, a class-room, and a bell are required, and the closets are in bad repair. The buildings are in much need of painting. All the prescribed subjects are taught, the lesson documents are well arranged, and the teaching is conducted with considerable skill and ability. The average attendance of the scholars enrolled is 62 days per cent., but they are not sufficiently punctual. There are eight free scholars, and about forty children of the educable ages in the locality not attending the school. About 73 per cent. of the questions asked at the examination were answered. This is a place where Public School buildings are required, but a site cannot be secured on Mr. Berry's estate.

BROUGHTON VILLAGE (V.) :—Regular inspection, 25th February.

Enrolled :—Boys, 28 ; girls, 30 ; total, 58. Present :—Boys, 25 ; girls, 26 ; total, 51.

A classroom would be useful, but in all other respects the material condition of the school is good. The usual subjects are taught and the general discipline is satisfactory. The average attendance of the scholars enrolled is about 80 days per cent. There are five free scholars, but the teacher is not aware of any children of the educable ages in the locality not under instruction. About 80 per cent. of the questions asked at the examination were answered, and the management of the school is good.

BUNDYWALLA (V.) :—General inspection, 8th March.

Enrolled :—Boys, 12 ; girls, 19 ; total, 31. Present :—Boys, 11 ; girls, 18 ; total, 29.

A bell has been supplied since the last inspection, but a clock, a water-tank, a playshed, and a lavatory are still required. The stock of furniture and working materials is sufficient. All the prescribed

scribed subjects are taught except singing, and the teaching is carried on with industry and care. The general discipline is satisfactory. The average attendance of the pupils enrolled is about 80 days per cent. There are ten free scholars, and seven children of the educable ages in the neighbourhood not attending school. 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

BULLI (V.) :—Regular inspection, 22nd August.

Enrolled :—Boys, 53 ; girls, 47 ; total, 100. Present :—Boys, 44 ; girls, 40 ; total, 84.

The buildings require painting and some small repairs, but otherwise the material condition of the school is good. All the prescribed subjects are taught except singing. The average attendance of the pupils is about 68 days per cent., and nearly all punctual, but the order and attention admit of considerable improvement. There are six free scholars, and about fifteen children of the educable ages in the place not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

BULLI NORTH (V.) :—Regular inspection, 24th August.

Enrolled :—Boys, 8 ; girls, 11 ; total, 19. Present :—Boys, 6 ; girls, 11 ; total, 17.

The buildings require painting and some small repairs, but the stock of furniture, apparatus, and books is sufficient. The population has not increased during the year. All the prescribed subjects are taught except singing. The instruction is appropriate, and the methods of tuition are intelligent. The average attendance is about 65 days per cent., and the general discipline is satisfactory. There are no free scholars, but four children of the educable ages in the locality are not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

CAMDEN (V.) :—Regular inspection, 4th May.

Enrolled :—Boys, 20 ; girls, 21 ; total, 41. Present :—Boys, 16 ; girls, 9 ; total, 25.

Extensive alterations and improvements to the buildings are in progress. The schoolroom has been re-shingled, and the residence is to be considerably enlarged. All the prescribed subjects are taught, and the methods of tuition are intelligent. The average attendance is about 55 days per cent. There are five free scholars and three children of the educable ages in the locality not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

CAMPBELLTOWN (V.) :—General inspection, 20th July.

Enrolled :—Boys, 55 ; girls, 34 ; total, 89. Present :—Boys, 47 ; girls, 26 ; total, 73.

The buildings are new, built of brick, substantial and good. The area of the site is 5 acres, all enclosed with a good paling fence. There is a comfortable residence for the teacher, and the material condition of the school is complete, excepting that playsheds, another closet, and gravel for the walks are needed. All the prescribed subjects are taught with skill and intelligence. The pupils are clean, orderly, and attentive. The average attendance is about 75 days per cent. The schoolroom is clean and well ventilated, and the boys have made some progress in squad drill. There are six free scholars, and about thirty children of the educable ages in the locality not at present enrolled who will attend school shortly. The elder boys are learning algebra, geometry, and Latin. The attainments of the scholars are good for the short time the school has been in operation.

CAWDOR (N.-V.) :—Regular inspection, 5th June.

Enrolled :—Boys, 25 ; girls, 25 ; total, 50. Present :—Boys, 11 ; girls, 17 ; total, 28.

This school is held in the Wesleyan Chapel, and vested schoolbuildings are much needed, but a site cannot be secured. A bell, a playshed, and a lavatory are still wanting, but otherwise the material condition of the school is passable. All the usual subjects are taught except singing, and the methods of tuition are skilful. The pupils are clean, orderly, and attentive to their lessons. The average attendance is about 66 days per cent. There are twenty-four free scholars, and the teacher reports that the parents of these children have not the means to pay fees. There are about sixteen children of the educable ages in the neighbourhood not attending school. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are very fair. The small attendance recently has been caused by drought and scarlet fever.

COOLANGATTA (N.-V.) :—General inspection, 14th March.

Enrolled :—Boys, 17 ; girls, 26 ; total, 43. Present :—Boys, 16 ; girls, 25 ; total, 41.

This school is held in temporary premises. A lavatory and a playshed are required ; but otherwise, the material condition of the school is passable. Vested schoolbuildings are required, but a site cannot be secured on Mr. Berrv's estate. All the prescribed subjects are taught except singing, and the instruction is well regulated. The methods of tuition are intelligent. The average attendance is about 75 days per cent., and the discipline is satisfactory. There are nine free scholars and six children of the educable ages in the locality not under instruction. About 68 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is nearly very fair.

DAPTO (N.-V.) :—Regular inspection, 31st August.

Enrolled :—Boys, 24 ; girls, 25 ; total, 49. Present :—Boys, 21 ; girls, 24 ; total, 45.

This school is held in temporary premises, but the new buildings are approaching completion. All the prescribed subjects are taught, the methods of tuition are intelligent, and the discipline is effective. The average attendance of the pupils enrolled is 75 days per cent. There are eight free scholars, and six children of the educable ages in the locality not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are very fair.

FAIRY MEADOW (V.) :—Regular inspection, 17th August.

Enrolled :—Boys, 30 ; girls, 27 ; total, 57. Present :—Boys, 26 ; girls, 23 ; total, 49.

The material condition of the school is good. The pupils are clean, orderly, and attentive. All the prescribed subjects are taught but singing, and the methods of tuition are intelligent and skilful. The average attendance of the pupils enrolled is 69 per cent. There are only two free scholars, but owing to sickness and other causes twenty-seven children of the educable ages in the locality are not under instruction. About 80 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is good.

GERRINGONG (V.) :—General inspection, 14th September.

Enrolled :—Boys, 37 ; girls, 36 ; total, 73. Present :—Boys, 26 ; girls, 30 ; total, 56.

The buildings are new, constructed of rubble masonry, and rather small. The residence requires to be enlarged ; there is no water supply, and lavatories and fencing are required. The working materials are sufficient. Singing is not taught, but the methods of tuition are effective, and the general discipline is satisfactory. The average attendance of the scholars is 75 days per cent. There are nine free scholars and sixteen children of the school ages in the locality not under instruction. 74 per cent. of the questions asked at the examination were answered, and the proficiency is above very fair. Arrangements have been made for making the material improvements required.

GLEDSDWOOD

GLEDSWOOD (V.) :—Regular inspection, 12th April.

Enrolled :—Boys, 12 ; girls, 13 ; total, 25. Present :—Boys, 6 ; girls, 4 ; total, 10.

The buildings still need some repairs. The small attendance of pupils was caused by the prevalence of scarlet fever in the district. All the prescribed subjects are taught but singing and drawing. The average attendance of the pupils enrolled is 70 days per cent. There are three free scholars, and five children of the school ages in the locality not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are very fair.

GLENMORE (V.) :—Regular inspection, 12th May.

Enrolled :—Boys, 18 ; girls, 12 ; total, 30. Present :—Boys, 16 ; girls, 10 ; total, 26.

Some small repairs to the pumps are required, but otherwise the material condition of the school is good. All the usual subjects are taught, and the methods of tuition are fairly intelligent. The average attendance of the scholars is about 79 days per cent., and nearly all punctual. They are clean, orderly, and attentive, and the schoolroom is clean and well ventilated. There are three free scholars and four children of the educable ages in the neighbourhood not attending school. 63 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is about fair. So far as I can ascertain, the population of children in this locality is on the decrease.

HURSTVILLE (V.) :—General inspection, 27th November.

Enrolled :—Boys, 24 ; girls, 14 ; total, 38. Present :—Boys, 17 ; girls, 13 ; total, 30.

The schoolroom is an excellent building, of hewn freestone, just completed and properly furnished, excepting that the desks and forms for the younger children are too high. A bell, a clock, two chairs, a lavatory for the boys, and the inscription "Public School" are required. All the prescribed subjects are taught except singing. The average attendance of the scholars is about 70 days per cent. There are no free scholars, but fifty children of the educable ages in the locality are not under instruction. The school has been only a few days in operation, and the proficiency of the pupils is about tolerable.

JEBBARA (V.) :—Regular inspection, 8th September.

Enrolled :—Boys, 25 ; girls, 20 ; total, 45. Present :—Boys, 23 ; girls, 19 ; total, 42.

Arrangements are in progress for making repairs and improvements to the school premises. All the prescribed subjects are taught except singing ; the instruction is properly regulated, and the teaching is efficacious. The average attendance of the scholars is about 75 days per cent., and the general discipline is satisfactory. There are no free scholars, and the teacher is not aware of any children of the school ages in the locality not under instruction. About 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

KIAMA (V.) :—Regular inspection, 18th, 19th, and 20th October.

Enrolled :—Boys, 140 ; girls, 89 ; total, 229. Present :—Boys, 124 ; girls, 84 ; total, 208.

Arrangements are in progress for the erection of a separate room for the younger children, for making a ground water tank, and other improvements. All the usual subjects are taught, and the elder boys are well advanced in the elements of algebra, geometry, and Latin. The general discipline is satisfactory. The teachers are very industrious, most energetic in the performance of their duties, and the school is managed with success and efficiency. The average attendance of the pupils enrolled is about 70 days per cent. There are fourteen free scholars, and about twenty children of the school ages in the town and vicinity not under school instruction. The writing and needlework are excellent, and a number of the boys passed the University Public Examination. About 90 per cent. of the questions asked at the inspection were answered. The general management of the school is very good.

KOGARAH (N.-V.) :—Regular inspection, 2nd February.

Enrolled :—Boys, 28 ; girls, 28 ; total, 56. Present :—Boys, 21 ; girls, 20 ; total, 41.

The school is held in temporary premises ; but new buildings are approaching completion. All the prescribed subjects are taught with considerable industry and care. The pupils are tolerably orderly, clean, and attentive to their work. The average attendance of the scholars is about 68 days per cent. There are no free pupils, but it appears there are fifteen children of the school ages in the locality not attending school. About 60 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are fair.

LIVERPOOL (V.) :—Regular inspection, 16th June.

Enrolled :—Boys, 51 ; girls, 39 ; total, 90. Present :—Boys, 40 ; girls, 28 ; total, 68.

A new residence for the teacher has been recently erected, and the material condition of the school is now complete, excepting that a lavatory and some repairs to the pump are required. The paling fence needs painting. All the prescribed subjects are taught, and the methods of tuition are skilful. The average attendance of the pupils enrolled is about 64 days per cent. The schoolroom is clean and well ventilated ; the pupils are clean, orderly, and attentive, and the elder boys are well advanced in squad drill. There are five free scholars, and ten children of the educable ages in the locality not under instruction. 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

MARSHALL MOUNT (V.) :—General inspection, 27th October.

Enrolled :—Boys, 28 ; girls, 25 ; total, 53. Present :—Boys, 28 ; girls, 24 ; total, 52.

Arrangements have been made for re-shingling and painting the buildings, erecting a bell, ceiling the schoolroom, and repairing the teacher's residence. The supply of furniture, apparatus, and books is sufficient. All the prescribed subjects are taught except singing, and the instruction and classification of the pupils are appropriate. The writing has been improved since last inspection. About 68 per cent. of the scholars enrolled are regular and nearly all punctual. The cleanliness and order are satisfactory. There are only five free scholars, but it appears there are fully forty children of the school ages in the locality not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are very fair.

MEROO (N.-V.) :—General inspection, 9th March.

Enrolled :—Boys, 13 ; girls, 14 ; total, 27. Present :—Boys, 11 ; girls, 12 ; total, 23.

This school is held in temporary premises. A playshed and a lavatory would be useful, but otherwise the material condition of the school is passable. The stock of furniture and apparatus is sufficient, but more books are needed. Vested buildings are much required, but a site cannot be secured on Mr. Berry's estate. Singing is not taught, but the reading has been improved since last inspection, and the methods of tuition are effective. The average attendance of the scholars enrolled is 70 days per cent. ; the general discipline is satisfactory, and the schoolroom is clean and well ventilated. There are no free scholars, but twenty children of the educable ages in the locality are not under instruction. About 70 per cent. of the questions asked at the examination were answered, and the attainments of the scholars are very fair.

MENANGLE (V.) :—Regular inspection, 9th May.

Enrolled :—Boys, 15 ; girls, 22 ; total, 37. Present :—Boys, 7 ; girls, 8 ; total, 15.

A kitchen, a lavatory, and some other improvements are in progress, and when completed, the material condition of the school will be satisfactory. Singing is not taught, but the instruction in the other branches is carefully arranged, and the programmes are neatly prepared. The average attendance of the pupils enrolled is about 61 days per cent., and the general discipline is passable. The schoolroom is clean and well ventilated, and the working materials are sufficient. There are no free scholars, but five children of the school ages in the locality are not under instruction. About 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

MOUNT KEIRA (N.-V.) :—Regular inspection, 29th August.

Enrolled :—Boys, 42 ; girls, 29 ; total, 71. Present :—Boys, 38 ; girls, 26 ; total, 64.

The schoolroom and residence are of an inferior character, but new buildings are in progress. The working materials are sufficient. All the usual subjects are taught, the instruction is well regulated, and the methods of tuition are intelligent, and applied with skill and industry. The average attendance of the pupils enrolled is 68 days per cent., and the discipline is satisfactory. There are four free scholars, but the teacher is not aware of any children of the educable ages in the neighbourhood not under instruction. About 75 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are above very fair.

MULGOA FOREST (N.-V.) :—Regular inspection, 2nd June.

Enrolled :—Boys, 16 ; girls, 13 ; total, 29. Present :—Boys, 15 ; girls, 9 ; total, 24.

This school is held in temporary premises. The schoolroom and residence are gradually falling into disrepair, and the desks and forms are old and worn, but the stock of apparatus and books is sufficient. This is a place where vested buildings are required, but there is some delay in securing a proper site. Singing and drawing are not taught. The writing is still careless ; the second class is backward in arithmetic, and the third class is below the standard of proficiency in all the subjects. The average attendance of the pupils enrolled is about 72 days per cent., and the discipline is passable. The small attendance is caused in some measure by the unwillingness of some of the parents to pay fees. There are twenty-three free pupils, and fifteen children of the educable ages in the locality not under instruction. About 56 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is not fully up to fair.

NARELLAN (N.-V.) :—Regular inspection, 13th April.

Enrolled :—Boys, 18 ; girls, 22 ; total, 40. Present :—Boys, 13 ; girls, 12 ; total, 25.

This school is held in temporary premises, but new buildings are approaching completion. All the prescribed subjects are taught except singing ; and the general discipline is fairly satisfactory. The average attendance of the pupils enrolled is about 60 days per cent. There are three free scholars, and ten children of the educable ages in the locality not under instruction. About 65 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are above fair.

OMEGA RETREAT (V.) :—Regular inspection, 3rd March.

Enrolled :—Boys, 26 ; girls, 18 ; total, 44. Present :—Boys, 11 ; girls, 7 ; total, 18.

General repairs and improvements are in progress, and the residence is to be enlarged. The furniture is old and worn, but the stock of apparatus and books is sufficient. Singing is not taught ; but the instruction is well arranged, and the teaching is conducted with industry and care. The small attendance was caused by the prevalence of scarlet fever in the locality. About 70 per cent. of the pupils enrolled are regular and nearly all punctual, and the general discipline is satisfactory. There are nine free scholars, and ten children of the educable ages in the neighbourhood not under instruction. 75 per cent. of the questions were answered, and the attainments of the pupils are above very fair.

PEAKHURST (N.-V.) :—Regular inspection, 28th April.

Enrolled :—Boys, 28 ; girls, 19 ; total, 47. Present :—Boys, 25 ; girls, 15 ; total, 40.

This school is held in temporary premises, but new vested buildings are in course of erection. Singing and drawing are not taught, but the teaching of the other branches is conducted with industry and earnestness. About 60 per cent. of the pupils are regular and punctual in attendance. The schoolroom is clean and well ventilated, and the children are orderly and attentive to their lessons. There are no free scholars, but the number of children of the educable ages in the locality not under instruction is estimated at forty. About 67 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is above fair.

PICTON (V.) :—General inspection, 27th July.

Enrolled :—Boys, 71 ; girls, 45 ; total, 116. Present :—Boys, 65 ; girls, 41 ; total, 106.

A lavatory for the girls and some gravel on the walks are all that appear necessary at present. The material condition of the school is good. All the prescribed subjects are taught, the instruction is well arranged, the classification is appropriate, and the methods of tuition are intelligent and efficacious. The average attendance is 66 days per cent. ; and the boys are well advanced in squad-drill. The schoolroom is properly ventilated, and the cleanliness, order, and attention of the pupils are satisfactory. There are twenty-two free scholars, and about forty educable children in the locality not under instruction. About 84 per cent. of the questions asked at the examination were answered, and the attainments of the pupils are good.

PETERBOROUGH (N.-V.) :—General inspection, 18th February.

Enrolled :—Boys, 40 ; girls, 38 ; total, 78. Present :—Boys, 36 ; girls, 36 ; total, 72.

This school is held in temporary premises on the estate of Mr. G. L. Fuller, near Kiama. Vested buildings are much needed, but there is some difficulty in securing a sufficient area of land for a site. The supply of furniture, apparatus, and books is sufficient. All the usual subjects are taught except singing, and the general discipline is good. The average attendance is about 68 days per cent. There are two free scholars, and about twelve children of the educable ages in the locality not under instruction. 70 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is very fair.

ROSE VALLEY (V.) :—General inspection, 16th February.

Enrolled :—Boys, 12 ; girls, 11 ; total, 23. Present :—Boys, 10 ; girls, 8 ; total, 18.

Painting, repairs, and other improvements to the buildings are in progress, and the stock of apparatus and books is sufficient. All the usual subjects are taught, except singing, and the general discipline is passable. The average attendance of the pupils enrolled is about 70 days per cent. There are five free scholars, but the teacher is not aware of any children of the educable ages in the locality not under instruction. The attainments of the pupils are tolerable. About 50 per cent. of the questions asked at the examination were answered.

SHELLHARBOUR (V.) :—Regular inspection, 17th February.

Enrolled :—Boys, 39 ; girls, 54 ; total, 93. Present :—Boys, 35 ; girls, 47 ; total, 82.

The material condition of the school is good, but the buildings and paling fence need painting. The pupils are clean, orderly, and attentive, but not all sufficiently punctual. All the subjects of instruction prescribed by the Council are taught, and the teacher is industrious and attentive to his duty. The average attendance of the scholars is 68 days per cent. There are six free scholars, and about ten children of the school ages in the locality not under instruction. About 69 per cent. of the questions asked at the examination were answered ; and the attainments are nearly very fair.

TOOLEFOOA (N.-V.) :—Regular inspection, 24th February.

Enrolled :—Boys, 41 ; girls, 47 ; total, 88. Present :—Boys, 20 ; girls, 25 ; total, 45.

This school is held in temporary premises. A lavatory is required, but otherwise the material condition of the institution is good, and there is an ample supply of furniture, apparatus, and books. The pupils are clean, orderly, attentive, and nearly all punctual. All the subjects of instruction prescribed by the Council are taught, and the teaching is conducted with considerable skill and ability. The average attendance of the pupils is 76 days per cent. There are three free scholars, and ten children of the educable ages in the locality not under instruction. About 75 per cent. of the questions asked at the examination were answered ; and the proficiency of the pupils is above very fair.

VIOLET HILL (V.) :—Regular inspection, 2nd November.

Enrolled :—Boys, 25 ; girls, 22 ; total, 47. Present :—Boys, 23 ; girls, 22 ; total, 45.

An underground watertank is in course of construction, and the material condition of the school is satisfactory. The pupils are clean, orderly, and attentive, and the schoolroom is well ventilated. Singing and drawing are not included in the course of instruction, but the other subjects are taught with industry and care. The average attendance is 73 days per cent. The second class is backward in writing from dictation. There are five free scholars, and about 20 children of the school ages in the locality not under instruction. About 64 per cent. of the questions asked at the examination were answered ; and the attainments of the pupils are fair.

WESTBROOK (V.) :—Regular inspection, 10th May.

Enrolled :—Boys, 19 ; girls, 17 ; total, 36. Present :—Boys, 17 ; girls, 17 ; total, 34.

A kitchen and some small repairs to the buildings are required, but otherwise the material condition of the school is fairly satisfactory. The pupils are clean and decently clothed, but they are restless and talkative. All the prescribed subjects are taught except singing, and the methods of tuition are fairly intelligent. 75 per cent. of the pupils are regular and nearly all punctual in their attendance. There are seven free scholars, and two children of the educable ages in the locality not under instruction. About 60 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is fair.

WILTON (V.) :—Regular inspection, 9th November.

Enrolled :—Boys, 23 ; girls, 28 ; total, 51. Present :—Boys, 16 ; girls, 22 ; total, 38.

A lavatory, a watertank, a book-press, a bell, gates, and a small verandah to the residence are required. All the prescribed subjects are taught except singing. The average attendance of the pupils is very low, being only about fifty days per cent., but otherwise the discipline is passable, and the schoolroom is clean and well ventilated. There are twenty-five free scholars whose parents are considered unable to pay fees, but no children of the school ages in the locality not under instruction. The reading of the second class is wanting in fluency, but the average proficiency of the pupils is fair. The School Board has taken measures for making the material improvements required.

WOLLONGONG (Boys, V.) :—General inspection, 9th August.

Enrolled :—Boys, 54. Present :—Boys, 48.

A weathershed and a lavatory have been recently built, and arrangements are in progress for cementing the walls and painting the woodwork of the school building. There is an ample supply of school materials, the general discipline is satisfactory, and all the prescribed subjects are taught with skill and intelligence. The average attendance of the scholars is about seventy-three days per cent. There is only one free scholar. The teacher is not aware of any children of the educable ages in the town or vicinity not attending school. The elder boys are learning the elements of algebra, geometry, and Latin. The average proficiency of the pupils is good.

WOLLONGONG (Girls, V.) :—Regular inspection, 10th August.

Enrolled :—Girls, 47. Present :—Girls, 44.

A weathershed and a lavatory have been recently supplied, and arrangements have been made for cementing the walls and painting the school building. The general discipline is satisfactory, and all the prescribed subjects are taught. The average attendance of the pupils is sixty-four days per cent. There are four free scholars. The teacher is not aware of any girls of the educable ages in the town or vicinity not under instruction. The methods of tuition are effective, and the attainments of the pupils are very good.

WOLLONGONG (Infants, V.) :—Regular inspection, 8th August.

Enrolled :—Boys, 29 ; girls, 32 ; total, 61. Present :—Boys, 29 ; girls, 31 ; total, 60.

A lavatory and playshed have been supplied and some additional furniture since last inspection, and arrangements have been made for cementing the walls and painting the woodwork of the schoolroom. All the prescribed subjects are taught with industry and care, and the general discipline is satisfactory. The average attendance of the scholars is sixty-eight days per cent. There are six free scholars, and the teacher reports that there are above fifteen infant children fit for school in the town and vicinity not under instruction. The proficiency of the pupils is very fair.

WOODSTOCK (N.-V.) :—Regular inspection, 13th September.

Enrolled :—Boys, 35 ; girls, 37 ; total, 72. Present :—Boys, 24 ; girls, 25 ; total, 49.

This school is held in temporary premises, but new buildings are in progress. All the prescribed subjects are taught with skill and intelligence, and the general discipline is satisfactory. The average attendance of the scholars is about 70 days per cent. There are twelve free scholars, and about forty children of the educable ages in the locality not under instruction. About 80 per cent. of the questions asked at the examination were answered, and the management of the school is good.

PROVISIONAL SCHOOLS.

BARGO :—Regular inspection, 12th June.

Enrolled :—Boys, 14 ; girls, 12 ; total, 26. Present :—Boys, 12 ; girls, 11 ; total, 23.

A new schoolroom has been erected in a more central position and well furnished since last inspection. The stock of apparatus and books is sufficient, and the records are correctly kept. The pupils are tolerably clean and orderly, the schoolroom is well ventilated, and the average attendance is about 66 days

days per cent. Singing and drawing are not taught, but the instruction is progressively arranged in the other branches. There are twelve free scholars, and six children of the school ages in the locality not under instruction. The proficiency of the pupils is fair.

BELLAWONGARAH :—Regular inspection, 7th March.

Enrolled :—Boys, 17 ; girls, 10 ; total, 27. Present :—Boys, 15 ; girls, 9 ; total, 23.

Playsheds and lavatories have been supplied since last inspection, and the stock of furniture, apparatus, and books is sufficient, but the lesson register was not quite complete. The children are clean and orderly, and the schoolroom is well ventilated. The average attendance is about 68 days per cent. All the prescribed subjects are taught, except drawing. There are ten free scholars, and seven children of the educable ages in the locality not under instruction. The attainments of the pupils are fair.

BROWNLOW HILL :—Regular inspection, 6th June.

Enrolled :—Boys, 19 ; girls, 20 ; total, 39. Present :—Boys, 4 ; girls, 10 ; total, 14.

The material condition of this school is not quite complete, but the working materials are sufficient. The children are clean, orderly, and attentive, and the average attendance of the scholars enrolled is about 73 per cent. The small number present at the examination was caused by the wet morning. Singing and drawing are not taught. There are seven free pupils, but no children of the school ages in the locality growing up without education. About 60 per cent. of the questions asked at the examination were answered, and the proficiency is fair. This school has recently been closed, having been found unnecessary. All the pupils are able to attend at Theresa Park.

BLACKGOLEER :—General inspection, 30th November.

Enrolled :—Boys, 10 ; girls, 7 ; total, 17. Present :—Boys, 7 ; girls, 6 ; total, 13.

This school is not quite central, and the furniture is of a bad description, but the working materials are sufficient for present requirements. The records are not quite complete. The general discipline is passable. The average attendance of the pupils enrolled is about 75 days per cent. The children are learning the mere elements of reading, writing, and arithmetic, and the progress is tolerably satisfactory. There are no free scholars, but five children of the educable ages in the locality are not under instruction. The Local Board has promised to erect and furnish a suitable schoolroom in a central position.

BROOK'S POINT :—General inspection, 10th November.

Enrolled :—Boys, 22 ; girls, 10 ; total, 32. Present :—Boys, 18 ; girls, 7 ; total, 25.

A clock, hat-pegs, a table, and a chair are still required. The apparatus and books are sufficient, but the records are not quite complete. Singing, drawing, and needlework are not taught. The pupils are tolerably clean and orderly ; they are nearly all punctual, and the average attendance is about 66 days per cent. There are sixteen free scholars, and five children of the school ages in the locality not under instruction. The methods of tuition are promising, and the attainments of the scholars are fair.

BULLI MOUNTAIN :—Regular inspection, 25th August.

Enrolled :—Boys, 15 ; girls, 21 ; total, 36. Present :—Boys, 13 ; girls, 20 ; total, 33.

Fencing and outbuildings are required, but the furniture, apparatus, and books are sufficient, and the records are correct. The pupils are clean, orderly, and attentive, and about 67 per cent. attend regularly. All the prescribed subjects, except singing, are taught with fair success. There are twenty free scholars, but only two children of the educable ages in the neighbourhood not under instruction. The attendance of pupils has been recently increasing considerably, and it is expected that the number will soon be sufficient for a Public School. The proficiency of the pupils is fair.

CORDEAUX RIVER :—Regular inspection, 3rd November.

Enrolled :—Boys, 15 ; girls, 20 ; total, 35. Present :—Boys, 14 ; girls, 18 ; total, 32.

Fencing, a kitchen for the teacher, closets, a bell, a book-press, and hat-pegs are required, but the working materials are sufficient, and the records are correct. The cleanliness, order, and attention are passable, and the average attendance of the pupils enrolled is about 66 days per cent. There are ten free scholars, and five children of the school ages in the neighbourhood not under instruction. Singing, drawing, and needlework are not taught, but the proficiency of the pupils in the other branches is tolerable.

MOORFIELDS :—Regular inspection, 30th March.

Enrolled :—Boys, 24 ; girls, 11 ; total, 35. Present :—Boys, 21 ; girls, 11 ; total, 32.

This school is held in the Wesleyan Chapel. A clock, a bell, a shed, and a lavatory are still required, but the furniture, apparatus, and books are sufficient, and the records are correct. The general discipline is fairly effective, and the average attendance of the scholars is about 63 days per cent. All the prescribed subjects are taught except singing. There are two free scholars and five children of the educable ages in the locality not under instruction. The proficiency of the pupils is fair. It is expected that the population of this place will shortly be sufficient to support a Public School.

NEW RUN :—Regular inspection, 29th May.

Enrolled :—Boys, 7 ; girls, 7 ; total, 14. Present :—Boys, 7 ; girls, 6 ; total, 13.

New desks have been supplied recently, but closets, hat-pegs, a book-press, and windows for the schoolroom are still required. The supply of apparatus and books is sufficient, and the records are correct. Drawing and singing are not taught. The discipline is not fully satisfactory. The small attendance recently has been chiefly caused by the drought, the elder children having to drive cattle about for feed and water. There are ten free scholars, and eleven children of the school ages in the locality not under instruction. The Local Board has been informed that unless an average of fifteen pupils is maintained the Council's aid is likely to be withdrawn. The proficiency of the pupils is tolerable.

OAKDALE :—Regular inspection, 25th May.

Enrolled :—Boys, 6 ; girls, 13 ; total, 19. Present :—Boys, 5 ; girls, 8 ; total, 13.

A lavatory, hat-pegs, windows for the schoolroom, and a supply of water are still required, but the stock of apparatus and books are sufficient. Singing and drawing are not taught. The average attendance of the scholars is about half-time. There are seventeen free pupils, and seven children of the educable ages in the locality not under instruction. The small attendance recently has been chiefly caused by the drought, sickness, and the poverty of some of the settlers. The pupils are unpunctual, and the writing from dictation is unsatisfactory. The proficiency in the other subjects is tolerable.

SAGGART FIELD :—Regular inspection, 9th June.

Enrolled :—Boys, 12 ; girls, 14 ; total, 26. Present :—Boys, 10 ; girls, 9 ; total, 19.

A play-ground, a bell, a clock, and a small lavatory are required ; but the working materials are sufficient. The average attendance of the pupils enrolled is about 67 days per cent. Singing and drawing are not taught, but the methods are tolerably efficient. The children are clean and orderly, and the schoolroom is well ventilated. There are six free scholars, and five children of the educable ages in the locality not under instruction. The small attendance recently has been chiefly caused by sickness afflicting the children. The proficiency is tolerable.

St.

ST. JOSEPH'S :—General inspection, 31st May.

Enrolled :—Boys, 13 ; girls, 16 ; total, 29. Present :—Boys, 11 ; girls, 12 ; total, 23.

Hat-pegs, a book-press, closets, and a clock are required ; but the stock of furniture, apparatus, and books, is sufficient, and the records are correct. The children are clean and orderly, and the average attendance is about 70 days per cent. Singing is not taught, but the methods of tuition are intelligent. All the educable children in the locality are under instruction, and there is only one free scholar. The proficiency of the pupils is fair.

SUGARLOAF HILL :—Regular inspection, 8th June.

Enrolled :—Boys, 23 ; girls, 7 ; total, 30. Present :—Boys, 11 ; girls, 4 ; total, 15.

The school buildings are in fair repair, and the stock of working materials is sufficient. The children are clean and tolerably orderly and attentive. The average attendance is about half-time. The small and irregular attendance lately has been chiefly caused by the drought and scarlet fever. Singing and drawing are not taught, but the teaching of the other branches is conducted with industry and care. There are three free pupils, and six children of the educable ages in the locality not under instruction. The proficiency of the pupils is above tolerable.

THERESA PARK :—General inspection, 6th June.

Enrolled :—Boys, 12 ; girls, 14 ; total, 26. Present :—Boys, 4 ; girls, 10 ; total, 14.

The material condition of this school is passable, and the supply of furniture, apparatus, and books is sufficient. The pupils are clean and orderly, and the average attendance is about 54 days per cent. The small number of pupils present was caused by the wet morning. Singing and drawing are not taught, but otherwise the instruction is well arranged, and the methods of tuition are intelligent. There are no free scholars, but seven children of the school ages in the locality are not under instruction. The proficiency of the pupils is fair. This school is sufficient to meet the requirements of the district within a radius of two miles.

TONGARRA :—Regular inspection, 25th September.

Enrolled :—Boys, 15 ; girls, 14 ; total, 29. Present :—Boys, 10 ; girls, 13 ; total, 23.

The building is in fair repair, and the working materials are sufficient. The children are clean, orderly, and attentive to their lessons, and the average attendance is about 54 days per cent. All the prescribed subjects are taught, and the methods of tuition are intelligent. There are seven free scholars, and twenty-one children of the school ages in the locality not under instruction. The attainments of the pupils are nearly fair.

WEROMBI :—Regular inspection, 7th June.

Enrolled :—Boys, 12 ; girls, 14 ; total, 26. Present :—Boys, 10 ; girls, 14 ; total, 24.

A lavatory, a clock, and a bell are needed, but the stock of furniture and working materials is sufficient. The general discipline is passable, and about 70 per cent. of the children enrolled are regular in attendance and nearly all punctual. Singing and drawing are not taught. No children of the educable ages in the locality are growing up without education, but there are fifteen free scholars. The second class is backward at writing from dictation, but the average attainments are tolerable.

WERRIBERRI :—Regular inspection, 13th July.

Enrolled :—Boys, 13 ; girls, 13 ; total, 26. Present :—Boys, 9 ; girls, 11 ; total, 20.

The material condition of this school is satisfactory. The children are clean, orderly, and attentive, and the schoolroom is well ventilated. The average attendance of the scholars enrolled is 70 days per cent. and they are nearly all punctual. Singing and drawing are not taught, but the methods of tuition are intelligent and efficacious. There are four free scholars, and twelve children of the educable ages in the locality not under instruction. The proficiency of the pupils is fair.

WOODHILL :—General inspection, 15th September.

Enrolled :—Boys, 13 ; girls, 20 ; total, 33. Present :—Boys, 10 ; girls, 19 ; total, 29.

This schoolhouse is built of studs, weatherboards, and shingles, and in good repair. The supply of furniture, apparatus, and books is sufficient, and the records are correct. The discipline is satisfactory, and the average attendance of the pupils enrolled is about 70 days per cent. Singing is not taught. There are six free scholars, and five children of the school ages in the neighbourhood not under instruction. The progress of the pupils in reading, writing, and arithmetic is fair for the short time the school has been in operation.

HALF-TIME SCHOOLS.**BELMORE :—Regular inspection, 29th March.**

Enrolled :—Boys, 16 ; girls, 13 ; total, 29. Present :—Boys, 14 ; girls, 7 ; total, 21.

The furniture, apparatus, and books are sufficient, but a lavatory, a bell, and a book-press are required. About 65 per cent. of the scholars enrolled are regular in attendance, and punctual. They are clean and orderly. All the prescribed subjects are taught except singing, and the teaching is conducted with industry and earnestness. There are seven free scholars, and eight children of the educable ages in the neighbourhood not under instruction. The proficiency of the pupils is very fair.

ESSEX HILL :—Regular inspection, 29th March.

Enrolled :—Boys, 9 ; girls, 9 ; total, 18. Present :—Boys, 5 ; girls, 9 ; total, 14.

A lavatory, a bell, a clock, and a book-press are required, but otherwise the material condition of the school is good. About 65 per cent. of the scholars are regular and punctual in attendance, and they are clean, orderly, and attentive. Singing is not taught, but the instruction in the other branches is well regulated. There are six free scholars, and four children of the school ages in the place not under instruction. The attainments of the scholars are very fair.

BIMLOW :—General inspection, 25th May.

Enrolled :—Boys, 15 ; girls, 4 ; total, 19. Present :—Boys, 11 ; girls, 4 ; total, 15.

The material condition of the school needs some improvements, but the working materials are sufficient. The average attendance of the scholars is 73 days per cent. Singing and drawing are not taught. There are four free scholars, but no children of the educable ages in the neighbourhood not attending school. The proficiency of the pupils is tolerable. The Local Board has promised to make the material improvements required.

MALUNDI :—General inspection, 26th May.

Enrolled :—Boys, 4 ; girls, 2 ; total, 6. Present :—Boys, 4 ; girls, 2 ; total, 6.

The school is not sufficiently central for some of the settlers, and steps are to be taken for its removal to a better site. The furniture, apparatus, and books are sufficient. The small attendance has been chiefly caused by a disagreement among some of the residents. There are no free scholars, but ten children of the educable ages in the district are not under instruction. The proficiency of the pupils is tolerable.

CLIFTON

CLIFTON HILL :—General inspection, 30th May.

Enrolled :—Boys, 8 ; girls, 14 ; total, 22. Present :—Boys, 8 ; girls, 12 ; total, 20.

Hat-pegs, a book-press, closets, a bell, a clock, and windows for the schoolroom are needed. The working materials are sufficient. The average attendance of the scholars is about 75 per cent., and the general discipline is passable. Singing is not taught, but the instruction in the other branches is properly arranged, and the methods of tuition are fairly effective. All the educable children in the locality are attending school. There are three free scholars. The proficiency of the pupils is fair. The Local Board has promised to make the material improvements required.

TOONULLI :—General inspection, 30th May.

Enrolled :—Boys, 8 ; girls, 6 ; total, 14. Present :—Boys, 8 ; girls, 6 ; total, 14.

A lavatory, two new desks and forms, a book-press, a bell, and a clock are required ; but the stock of apparatus and books is sufficient. The average attendance of the scholars enrolled is 66 days per cent., and they are nearly all punctual. The general discipline is passable, singing is not taught, but otherwise the instruction is well arranged, and the methods of tuition are intelligent. There are three free scholars, but no children of the educable ages in the locality not under instruction. The proficiency of the pupils is fair.

Inspector's Office, Sydney,
30th December, 1876.

W. M'INTYRE,
Inspector, Camden District.

CUMBERLAND DISTRICT.

INSPECTOR'S General Report for 1876.

EIGHTY schools were in constant operation throughout the year in this district, and eleven were open during a portion thereof, some of which were permanently closed through their amalgamation with others. There were, therefore, ninety-one schools on the Council's list belonging to this district for 1876. In addition to these however, the Parramatta Protestant and Roman Catholic Orphan Schools—containing six departments—are practically, so far as inspection is concerned, attached to the district. There were really thus ninety-seven schools requiring inspection and supervision, and they were distributed in the following manner, according to their various classes, viz. :—

Public Schools.....	47
Provisional Schools.....	11
Half-time Schools.....	6
Church of England Schools.....	15
Roman Catholic Schools.....	11
Wesleyan School.....	1
Protestant and Roman Catholic Orphan Schools.....	6
Totals	97

At the beginning of the year, the Pitt Town and South Creek Church of England Schools merged into Public ones, and the Grono Park and St. Mary's Public Schools were closed in connection with their establishment, the four schools being thus replaced by two. On the opening of the Parramatta South Public School in the new premises, that of Parramatta Junction was shut, and similar action took place with reference to the Dobroyde Public School, when that at Ashfield, in the Camden District, came into operation in the recently erected buildings. It will thus be seen that six schools—two Denominational and four Public—have been closed in consequence of the establishment of new Public Schools. One Provisional School (Woodford Bay) has been added to the list during the year, and an Infant Department has been joined to the Parramatta South Public School. Aid has been promised to another Provisional School at Buttsworth's Swamp, which is expected to be opened early in 1877. The Mulgoa Forest Mountain Provisional School was not re-opened during the year, but arrangements were completed for starting it as a Half-time School in conjunction with another at Charleville. The Greendale Provisional School was converted into a Public one, and action of a definite character has been taken to supersede the Provisional Schools at Blacktown, Sackville Reach, and Guildford by Public ones. At the latter place the premises are ready for occupation.

Tenders have been called for, or contracts entered into, for the erection of School buildings at Baukham Hills, Blacktown, Emu, Five Dock, Guildford, Lane Cove, Parramatta South, Ryde, South Creek, and St. Albans, and at nine other places steps have been taken for a similar purpose. Fifteen Schools have undergone repairs or considerable improvements. The establishment of a Public School has been determined upon at Castle Hill, but at that place and Kellyville, in the same neighbourhood, the erection of suitable premises is delayed by reason of the difficulty of obtaining sites. It is obvious, from this condensed statement, that much has been effected, and more is proposed to be done to raise the material condition of schools to a higher standard. Of the Public Schools open during the year, thirty-one were of the vested, and sixteen of the non-vested kind. The four closed were all of the latter character. The Public School premises at Richmond are now the property of the Council, and the erection of a teacher's residence is in contemplation.

All schools that were in operation at the time of visiting the localities in which they are situated were examined and reported upon within the year. Those at Barranjoey, Dobroyde, Grono Park, and Sackville Reach having been closed, and not afterwards re-opened, were the only ones that did not undergo inspection. In all, ninety-three reports on schools within the district were forwarded to the Council, two of which were furnished by the Inspectors of the Sydney District. There were eighteen General and seventy-five Regular Inspections, and the numbers of pupils examined were 4,344, as against 4,093 in 1875.

For the purpose of comparison, the following table is submitted, from which the numbers enrolled, as well as the averages and percentages of pupils in attendance, for the last three years, may be seen :—

Quarters.	1874.			1875.			1876.		
	Enrolments.	Averages.	Per centages.	Enrolments.	Averages.	Per centages.	Enrolments.	Averages.	Per centages.
March	5,806	3,764.58	64.8	5,804	3,429.5	59.1	6,034	4,141.4	68.6
June	5,806	3,825.29	67.0	5,780	3,685.3	63.7	5,985	3,775.4	63.0
September....	5,794	3,906.0	67.4	5,838	4,014.5	68.7	5,728	3,833.0	66.9
December ...	5,821	4,001.46	68.7	5,819	4,033.1	69.3	5,798	3,986.7	68.7
The mean for each year being	5,807	3,891.8	67.0	5,810	3,790.6	65.2	5,886	3,934.1	66.8

Sickness

Sickness continued to interfere with the regularity as in 1875, the attendance for the quarter ending June having been especially affected thereby. The percentage of attendance was higher than that of 1875 by 1.6 per cent., but it has barely reached that for 1874. The average attendance for the last three years has been 66.3 per cent. of the enrolment. So that only about two-thirds of the scholars may be considered regular, the remaining third going to swell the ranks of the badly educated citizens of the next generation.

As regards the means of education, it may be remarked that they are rather redundant than defective in this district. The early settlement of population and occupation of the land have left small scope for free selection; and this, combined with the absence of mining, affords little room for such increase of schools as may be necessary in other districts where these influences are in operation.

All the teachers in Public Denominational and Half-Time Schools are classified, except six probationers, some of whom in charge of small schools have been examined, but failed to pass. As a body, the teachers are conscientious in the performance of their duties and exemplary in their conduct. Very few inquiries have been necessary in regard to charges against teachers, and none have been preferred of an immoral character.

The results of inspection for the year may be tabulated as under for the leading subjects :—

Subjects.	Fair to good.	Bad to Tolerable.	Subjects.	Fair to good.	Bad to tolerable.
Reading	55 per cent.	45 per cent.	Geography	56 per cent.	44 per cent.
Writing	63 "	37 "	Object Lessons..	52 "	48 "
Arithmetic ...	31 "	69 "	Drawing	60 "	40 "
Grammar	44 "	56 "	Music	62 "	38 "

With reference to the relation of schools to the standard, it may be stated that 53 per cent. of Public Schools, 33 per cent. of Denominational and Half-Time Schools, and 41 per cent. of all Schools examined were "up to" or "beyond" the standard. The large majority of schools do not go beyond the standard requirements for a third class, so that but a small percentage of the pupils receives instructions in the higher stages of the ordinary school subjects. Only fifteen schools have fourth classes, the pupils of which are taught geometry, and in ten of these fifteen schools instruction is given in elementary algebra.

The instruction, as guided by the "Standard of Proficiency" and the other prescribed teaching documents is systematic, and, generally speaking, it is fairly intelligent. Unsatisfactory results are oftener to be attributed to weak disciplinary power than to the want of industry or intelligent teaching. The discipline is, as a rule, mild, but in many schools it is not sufficiently pervasive, stimulating, and vigilantly observant. The pupil should be constantly sensible that the teacher's eye is upon him, and that the slightest inattention on his part is noted, though perhaps not checked at the moment. The eye should be the most potent auxiliary to the teacher in the matter of discipline. On this point the following quotation from a recent treatise on "Teaching" may be of use to some :—"The power of the eye is the primary source of the teacher's influence. Only let the pupils feel that the eye of the teacher runs swifter to the mark than words fly to the ear, and his power will be felt. The conduct which is to be regulated must be observed. To the extent to which this is possible everything done in the school must be under the eye of the teacher. To forget this, or to become indifferent to the need for it, is a serious mistake. As a pre-requisite, it is of consequence to have the scholars so placed that observation is easy. Any arrangement of seats which makes it difficult involves a wilful surrender of a large part of a teacher's power, and at the same time of the children's benefit. The eye is much more the expression of all that the teacher is than the best chosen words can be. The scholars can understand it more quickly than they can understand words, and there is nothing for which the eye is more available than the expression of satisfaction or dissatisfaction with what is seen. The eye is hardly misinterpreted by one who observes its play. In addition, it is the most quick and silent of messengers. Without the slightest interruption to school work the eye conveys more encouragement, warning, and rebuke than there could be time to utter. * * * * * If children while within school only be conscious that the eye of the teacher runs everywhere, they become insensibly convinced of his power, and yield to it without a thought of opposition."

The large majority of Public Schools are well equipped with suitable furniture, properly arranged, and of good quality. The desks, in all the more recently erected schoolrooms, are mounted on platforms, a great advantage in the matter of discipline. In Denominational Schools, the furniture is, generally speaking, of inferior quality, but superior to that found in the Provisional and Half-Time Schools, though in this respect these schools are improving. In three Denominational Schools only are the desks placed on platforms. No such arrangement exists in any of the Roman Catholic Schools in the districts. In the large majority of schools there is a sufficient stock of apparatus and working materials.

In some instances, the local supervision is intelligent, active, and beneficial, but as regards the majority of schools it can only be characterized as apathetic and remiss. In a good many cases, some one or two members of a Board perform their duties well, but the large majority of the members of Boards take little interest in the success of the school, and do less to promote it. Generally speaking the oversight of Denominational Schools is left to the Chairman of the Local Board, that is, the Clergyman.

The following may be stated in conclusion, as the prominent educational features of the year. The material condition of schools has been greatly improved, and action taken for its still further improvement in 1877; the regularity of the pupils, compared with that of 1875, has slightly increased, but has scarcely reached that of 1874, the mean average for the three years being only about two-thirds of the enrolment; and the average proficiency, chiefly if not altogether from sickness, has decreased in comparison with 1875. Looking to the future, it is probable that the improved material organization, and the higher training which candidates now undergo, may co-operate to the attainment of higher educational results.

The usual summaries of Reports on Schools are hereto annexed.

J. McCREDIE,
Inspector, Cumberland District.

PUBLIC SCHOOLS.

BAULKHAM HILLS (N.-V.) :—Regular inspection, 9th August.

Enrolled :—Boys, 21; girls, 25; total, 46. Present :—Boys, 19; girls, 22; total, 41.

The school is conducted in temporary premises, but new vested buildings are approaching completion. It is fairly furnished and provided with necessary working materials. Sickness has affected the regularity and progress. The discipline is mild, but prompt and firm, and produces very fair order and attention. The teaching is marked by industry and energy; the prevailing tone of the school is healthy; and the average attainments approach fair.

BURWOOD

BURWOOD (Infants, V.) :—Regular inspection, 13th June.

Enrolled :—Boys, 59 ; girls, 27 ; total, 86. Present :—Boys, 34 ; girls, 22 ; total, 56.

The schoolroom is sufficiently commodious, well lighted and ventilated. It is suitably furnished, and all needful educational appliances are provided. Sickness has slightly reduced the attendance. The pupils are very fairly regular and punctual, neat and becoming in appearance, tolerably subdued in demeanour, and fairly behaved. The government is gentle and fairly effectual. The following is the proficiency of the several classes :—First, fair ; second, fair ; third, fair +. The teacher is earnest and hardworking.

BURWOOD (Primary—V.) :—Regular inspection, 13th and 14th June.

Enrolled :—Boys, 149 ; girls, 78 ; total, 227. Present :—Boys, 116 ; girls, 67 ; total, 183.

In all material points the organization is as complete and correct as possible. The pupils are clean and tidy. Under ordinary circumstances they attend with reasonable regularity and punctuality, but for some time the scarlet fever has caused slight irregularity. The government is judicious, and the moral tone of the school very satisfactory ; the discipline as a whole may be pronounced excellent. The instruction covers the whole range prescribed up to the standard for a fourth class, with the addition of algebra. The classification is appropriate ; the methods are skilful, and are earnestly and effectively applied. The proficiency of the various classes is as follows :—Lower second, very fair + ; upper second, good ; third, very fair to good ; fourth, very fair ; fourth (upper), good +.

CASTLEREAGH (N.-V.) :—Regular inspection, 12th April.

Enrolled :—Boys, 30 ; girls, 32 ; total, 62. Present :—Boys, 15 ; girls, 12 ; total, 27.

Except as regards furniture and the provision of teaching requisites, the material condition is bad. The buildings are wretched and urgently require replacing, for which decisive action has at last been taken. The government is mild but firm, and establishes fair order and attention. The classification is judicious, the methods are suitable, and the teaching is careful and industrious, but wanting in animation and energy. The pupils show fair self-reliance and accuracy under examination, and the average proficiency is from tolerable to fair.

COLYTON (V.) :—Regular inspection, 5th April.

Enrolled :—Boys, 27 ; girls, 22 ; total, 49. Present :—Boys, 18 ; girls, 18 ; total, 36.

The premises are in need of various repairs, for which action has been taken by the Board. The supply of furniture and educational appliances is fairly sufficient. The children are fairly clean, and tolerably orderly and attentive. The government is slack. The course of instruction embraces all prescribed subjects but singing ; the teaching is defective in vigour, and the average proficiency slightly exceeds moderate.

DURAL (N.-V.) :—Regular inspection, 3rd November.

Enrolled :—Boys, 19 ; girls, 26 ; total, 45. Present :—Boys, 10 ; girls, 19 ; total, 29.

The erection of a detached kitchen and some repairs and improvements to the premises are desirable. The pupils are tolerably regular and punctual, as well as orderly and attentive. The government is mild, but needs greater promptness. The subjects do not include singing ; the teaching is tolerably careful and industrious, but lacks vigour, and the results are nearly tolerable.

DUNDAS (V.) :—Regular inspection, 18th and 21st August.

Enrolled :—Boys, 46 ; girls, 35 ; total, 81. Present :—Boys, 34 ; girls, 30 ; total, 64.

Various repairs and improvements are requisite, for which action has been taken by the Board, otherwise the material condition is good. The children are clean, and fairly orderly and attentive. The course of instruction embraces all prescribed subjects. The instruction is guided by the usual documents ; the teaching is industrious, but is defective in force, and the average proficiency is from tolerable to fair. When under examination the pupils do not exhibit sufficient spirit, nor do they apply themselves with hearty vigour.

FIVE DOCK (N.-V.) :—Regular inspection, 18th October.

Enrolled :—Boys, 40 ; girls, 22 ; total, 62. Present :—Boys, 29 ; girls, 13 ; total, 42.

There is no residence, and the general material organization is only tolerable. Excellent premises are nearly finished. The pupils are clean and fairly orderly, but only tolerably regular and punctual. The government is mild but wanting in energy ; the teaching is industrious but defective in animation, point, and force, and the average attainments are from tolerable to fair.

GREENDALE (N.-V.) :—Regular inspection, 16th March.

Enrolled :—Boys, 13 ; girls, 30 ; total, 43. Present :—Boys, 14 ; girls, 12 ; total, 26.

The premises are constructed of slab and bark. The schoolroom is tolerably suitable, and is provided with sufficient furniture and a tolerable supply of teaching materials. The discipline is mild, but needs greater energy. The pupils are fairly clean and tolerably orderly and attentive. The lesson documents show moderate skill ; the teaching is industrious, but lacks vigour. This school was converted during the year from a Provisional to a Public one.

HASLEM'S CREEK (N.-V.) :—General inspection, 27th October.

Enrolled :—Boys, 16 ; girls, 15 ; total, 31. Present :—Boys, 16 ; girls, 15 ; total, 31.

The building is tolerably suitable for the numbers, and it has been improved by the erection of a porch, and by painting, since last inspection ; it is fairly furnished and provided with working materials. The children are tolerably regular, orderly, and attentive. The government needs greater vigilance and promptness. The subjects do not comprise singing and drawing. The teaching is industrious and moderately effective. The average proficiency is nearly tolerable. The attendance has increased under the present teacher.

HORNSBY (V.) :—Regular inspection, 24th August.

Enrolled :—Boys, 16 ; girls, 18 ; total, 34. Present :—Boys, 14 ; girls, 13 ; total, 27.

The material condition is, on the whole, reasonably satisfactory. Sickness has affected the regularity and progress of the pupils, who are fairly orderly and attentive. Singing is temporarily omitted from the subjects of instruction, which is fairly regulated by the prescribed documents. The teaching is careful and tolerably effective, the average proficiency being nearly tolerable.

HUNTER'S HILL (V.) :—Regular inspection, 25th October.

Enrolled :—Boys, 46 ; girls, 18 ; total, 64. Present :—Boys, 37 ; girls, 14 ; total, 51.

The material organization is satisfactory. The school is well furnished and supplied with needful teaching appliances. The discipline is mild, but secures fair order and attention. The course of instruction includes all subjects prescribed for the classification. The teaching is marked by care and industry, but needs greater penetrative force. The following is the proficiency for the several classes :—First, fair to very fair ; second, fair + ; third and fourth, tolerable to fair.

KELLYVILLE

KELLYVILLE (N.-V.) :—Regular inspection, 10th August.

Enrolled :—Boys, 15 ; girls, 19 ; total, 34. Present :—Boys, 15 ; girls, 14 ; total, 29.

The building is constructed of slab and bark, and there is no residence. The school is fairly furnished and provided with necessary working materials. The erection of vested premises is desirable, but no site has yet been obtained. The government is tolerably effective. The pupils are fairly clean and attentive. All subjects prescribed for the classification are taught ; the instruction is tolerably regulated ; and the teaching is fairly industrious and productive of tolerable results.

KURRAJONG SOUTH (V.) :—Regular inspection, 19th June.

Enrolled :—Boys, 20 ; girls, 23 ; total 43. Present :—Boys, 16 ; girls, 18 ; total, 34.

The material condition of the school building is not satisfactory, but steps are being taken for the erection of new premises. The school is fairly supplied with necessary furniture and educational requisites. The government is kindly and secures fair attention on the part of the pupils. The subjects do not include drawing ; the classification is appropriate ; and the teaching is painstaking and tolerably effective. The average proficiency is about tolerable.

LANE COVE (N.-V.) :—Regular inspection, 25th August.

Enrolled :—Boys, 30 ; girls, 23 ; total, 53. Present :—Boys, 26 ; girls, 23 ; total, 49.

The material condition is only tolerable, but tenders have been accepted for the erection of vested premises. The discipline secures very fair order and attention, and the pupils manifest an earnest working spirit. The full course of instruction for the classification is carried out ; the lesson documents are properly drawn up ; and the teaching is industrious and careful. The average results fairly satisfy the standard.

LEICHHARDT (V.) :—Regular inspection, 13th and 14th December.

Enrolled :—Boys, 77 ; girls, 72 ; total, 149. Present :—Boys, 63 ; girls, 51 ; total, 114.

A class-room with gallery, and an excellent weathershed have been erected since last inspection. Other improvements and repairs were being carried out at the date of inspection. The pupils are clean and fairly orderly and attentive. The discipline is mild and genial, but needs greater promptness and power to induce vigorous working habits. The subjects embrace all prescribed for the classification, which is judicious. The teaching is industrious, earnest, and careful, and the average attainments fairly satisfy the standard. The attendance has largely increased under the present teacher.

LLANDEILO (N.-V.) :—General inspection, 20th August.

Enrolled :—Boys, 17 ; girls, 15 ; total, 32. Present :—Boys, 16 ; girls, 14 ; total, 30.

The buildings, which are of slab and bark, are in a fair state of repair, and the school is fairly equipped with necessary teaching requisites. The records are not well kept. The pupils are clean, and tolerably orderly and attentive. The government needs firmness and sustained vigilance. The subjects embrace all prescribed but singing. The instructional documents are of little value ; the teaching is of a mechanical character ; and the average proficiency is about moderate.

LOWER PORTLAND (V.) :—Regular inspection, 22nd September.

Enrolled :—Boys, 16 ; girls, 26 ; total, 42. Present :—Boys, 10 ; girls, 17 ; total, 27.

The ground is unfenced, and no provision has been made for water ; otherwise the material condition is good, and the records are very neatly and correctly kept. The discipline is mild but effective, and secures very fair order and attention. The instruction is well regulated and registered ; the teaching is industrious and careful, and the average proficiency is nearly very fair.

LUDDENHAM (V.) :—Regular inspection, 15th March.

Enrolled :—Boys, 29 ; girls, 30 ; total, 59. Present :—Boys, 27 ; girls, 25 ; total, 52.

A substantial shed with lavatory arrangements has been erected, and other improvements effected since last inspection. Some furniture and slight repairs are necessary for which action has been taken. The pupils are clean, and very fairly orderly and attentive. The government is quiet but firm. The subjects are those prescribed, the classification is suitable, and the teaching is careful and industrious, rather than animated or energetic. The average proficiency is nearly fair.

M'DONALD CENTRAL (V.) :—General inspection, 20th September.

Enrolled :—Boys, 19 ; girls, 13 ; total, 32. Present :—Boys, 19 ; girls, 13 ; total, 32.

Some of the windows need replacing, the frames being quite rotten, and the erection of a verandah is desirable. The children are fairly orderly and tolerably attentive. The government is kindly, but fairly firm. The subjects do not include drawing and singing. The instruction is tolerably regulated ; the teaching is earnest, industrious, and careful, and the average proficiency is nearly tolerable.

M'DONALD LOWER (V.) :—General inspection, 21st September.

Enrolled :—Boys, 15 ; girls, 13 ; total, 28. Present :—Boys, 14 ; girls, 11 ; total, 25.

Two rooms have been added to the residence, and some improvements effected to the schoolroom since last inspection. The pupils are clean and fairly orderly and attentive. The government is watchful and firm. The classification is, for the present, judicious ; the methods are suitable, and the teaching is animated and fairly intelligent. The average proficiency is from tolerable to fair.

MULGOA (N.-V.) :—Regular inspection, 22nd March.

Enrolled :—Boys, 27 ; girls, 25 ; total, 52. Present :—Boys, 20 ; girls, 19 ; total, 39.

The premises need some repair. The schoolroom is tolerably suitable, and is fairly equipped with furniture and apparatus. The government is mild, but fairly firm and watchful, and produces very fair order and attention. The course of instruction embraces all subjects prescribed, but singing. The lesson documents are fairly drawn up ; the methods are appropriate, and the teaching is painstaking, and produces average results of from tolerable to fair.

NORTH RICHMOND (V.) :—Regular inspection, 20th June.

Enrolled :—Boys, 33 ; girls, 30 ; total, 63. Present :—Boys, 21 ; girls, 19 ; total, 40.

The material organization of the school is good. There is a profuse supply of apparatus, and the school is well furnished and provided with necessary working stock. Two rooms and a verandah have been added to the teacher's residence. Sickness has affected the attendance and progress. The pupils are clean and fairly orderly and attentive. The government is mild but wants vigour. The subjects embrace all prescribed for a fourth class, except drawing. The instruction is guided by the usual documents. The teaching is industrious, but fails to produce satisfactory results in most subjects. The average proficiency is about tolerable. The pupils need producing to greater mental effort and earnest sustained attention to work.

PARRAMATTA (Primary V.) :—General inspection, 16th and 17th November.

Enrolled :—Boys, 94 ; girls, 61 ; total, 155. Present :—Boys, 70 ; girls, 39 ; total, 109.

There is still no residence, but steps are being taken to procure one. The playground accommodation is very defective. It consists of a mere yard, which very much needs gravelling. The government is prompt and vigorous, and the order and attention are good. The subjects embrace all prescribed for a fourth class ; the classification is judicious, and the teaching is earnest and intelligent. The average proficiency is very fair.

PARRAMATTA (Infants V.) :—Regular inspection, 15th November.

Enrolled :—Boys, 70 ; girls, 56 ; total, 126. Present :—Boys, 53 ; girls, 39 ; total, 92.

Some additional furniture is necessary, but otherwise the material condition is, in the circumstances, satisfactory. The pupils are clean, orderly, and attentive. The discipline is prompt, vigorous, and very effective. The classification and methods are appropriate. The teaching is earnest and intelligent, and the average results are satisfactory. The following is the proficiency of the several classes :—First, fair ; second, very fair ; third, good ; fourth, good to very good.

PARRAMATTA JUNCTION (N.-V.) :—Regular inspection, 25th July.

Enrolled :—Boys, 19 ; girls, 30 ; total, 49. Present :—Boys, 18 ; girls, 24 ; total, 42.

The schoolroom is the property of the teacher. It is only tolerably suitable, but is fairly furnished and provided with requisite teaching materials. The government is mild, but tolerably firm, and the pupils are fairly clean, but only moderately orderly and attentive. The subjects do not include drawing. The instruction is moderately arranged ; the teaching is industrious, but only moderately skilful ; and the average results are about moderate. This school has been closed since the end of September.

PARRAMATTA SOUTH (Infants V.) :—General inspection, 20th November.

Enrolled :—Boys, 36 ; girls, 29 ; total, 65. Present :—Boys, 25 ; girls, 21 ; total, 46.

The schoolroom is new, suitable, and commodious. It is well furnished and equipped with needful educational appliances. The government is watchful and firm, and good order and attention have been established among the pupils. The full course of instruction for infant schools is carried out ; the teaching is intelligent and systematic, and the attainments satisfy the standard. The school has been open only a few weeks.

PARRAMATTA SOUTH (Primary V.) :—General inspection, 20th and 21st November.

Enrolled :—Boys, 40 ; girls, 39 ; total, 79. Present :—Boys, 33 ; girls, 35 ; total, 68.

The material organization is very good. The schoolroom is well furnished and provided with requisite teaching stock. The pupils are orderly and very fairly attentive. The discipline is mild and promises to be effective, but the school has been only a few weeks in operation. The usual course of instruction is properly regulated, and the teaching is marked by industry and care. The results are satisfactory for the time.

PENNANT HILLS (V.) :—Regular inspection, 22nd and 24th August.

Enrolled :—Boys, 35 ; girls, 41 ; total, 76. Present :—Boys, 25 ; girls, 36 ; total, 61.

The premises are suitable and in good condition, and the school is equipped with needful apparatus. The pupils are clean, and fairly orderly and attentive. The government is mild, but lacks vigor. The subjects embrace all prescribed. The methods are appropriate and the teaching is careful, but wanting in penetrative force. The average proficiency is from tolerable to fair. The attendance and attainments have been affected by sickness.

PENRITH (V.) :—Regular inspection, 29th and 30th March.

Enrolled :—Boys, 97 ; girls, 95 ; total, 192. Present :—Boys, 90 ; girls, 87 ; total, 177.

The premises are in good condition, and are carefully kept. Weathersheds and some articles of furniture are necessary. The attendance has largely increased since last inspection. The government secures good order and attention, and the prevailing spirit of the school is pleasing. The subjects embrace the full course of instruction for a fourth class. The lesson documents are properly drawn up ; the methods are judicious, and the teaching is intelligent and vigorous. The average proficiency is from fair to very fair, and probably higher results would have been attained but for the influx of new pupils.

PITT TOWN (N.-V.) :—General inspection, 22nd and 23rd June.

Enrolled :—Boys, 56 ; girls, 38 ; total, 94. Present :—Boys, 41 ; girls, 22 ; total, 63.

The school is conducted temporarily in the Church of England premises, leased to the Council. It is properly supplied with furniture and necessary materials. The teacher's residence is an uncomfortable one. The records are correctly and neatly kept. The pupils are clean, orderly, and attentive. The government is firm and watchful, and the prevailing tone is healthy. The instruction is well regulated ; the teaching is earnest and careful ; and the average proficiency exceeds fair. Considering its previous state, this school must be looked upon as in a thriving and promising condition.

PROSPECT (V.) :—Regular inspection, 26th July.

Enrolled :—Boys, 22 ; girls, 11 ; total, 33. Present :—Boys, 20 ; girls, 8 ; total, 28.

Since last inspection the residence has been enlarged by the erection of a room and kitchen. The general material condition is of a satisfactory character. The government is mild, but firm, and produces very fair order and attention. The subjects accord with the classification, which is appropriate. The teaching is painstaking and earnest, and the average proficiency is about fair.

REGENTVILLE (N.-V.) :—Regular inspection, 21st March.

Enrolled :—Boys, 29 ; girls, 26 ; total, 55. Present :—Boys, 24 ; girls, 22 ; total, 46.

The school is conducted in a small wooden building of indifferent character. There is no residence. Steps have been taken since the date of inspection for the erection of new premises. Fair order and attention prevail, and the government is mild, but firm and vigilant. The subjects embrace those of a third class ; the lesson documents are fairly suitable ; and the teaching is careful and productive of tolerable results.

RICHMOND (N.-V.) :—Regular inspection, 12th and 13th June.

Enrolled :—Boys, 88 ; girls, 76 ; total, 164. Present :—Boys, 56 ; girls, 48 ; total, 104.

There is no residence, and the class-room is too small ; otherwise the material condition is good. Since the date of inspection these premises have been purchased by the Council, and steps are being taken to provide a residence. The children are orderly and attentive, and the prevailing spirit of the school is pleasing. The discipline is vigorous and effective. The methods are intelligent ; the teaching is animated and forcible, and the attainments range from fair to very fair.

ROOBY HILL (V.) :—Regular inspection, 28th July.

Enrolled :—Boys, 16 ; girls, 13 ; total, 29. Present :—Boys, 16 ; girls, 11 ; total, 27.

The material condition of the premises has been improved by the addition of a room and verandah to the residence, and the erection of a weathershed. A five-acre paddock adjoining the school has been granted for the use of the teacher by Mr. Lamb. The school is fairly equipped. The government is mild, and the pupils are fairly clean, orderly, and attentive. The subjects comprise all enjoined but singing. The instruction is fairly regulated ; the teaching is careful and industrious ; and the average results are about tolerable.

ROUSE HILL (N.-V.) :—General inspection, 11th May.

Enrolled :—Boys, 25 ; girls, 24 ; total, 49. Present :—Boys, 21 ; girls, 22 ; total, 43.

The closet is in need of repair, but, otherwise, the material condition is fairly satisfactory. The discipline is firm and watchful, and the pupils are very fairly orderly and attentive. The classification is judicious ; the instruction is fairly regulated, and the teaching is industrious and careful. The average proficiency is nearly fair.

RYDE (Infants—V.) :—Regular inspection, 28th November.

Enrolled :—Boys, 42 ; girls, 42 ; total, 84. Present :—Boys, 37 ; girls, 37 ; total, 74.

The schoolroom is only tolerably suitable, but a new and suitable one is in course of erection. It is supplied with needful requisites. The children are clean, orderly, and very fairly attentive. The government is genial, but firm, and the tone of the school is healthy. The usual Infant School course is followed ; the teaching is energetic and painstaking ; and the average proficiency is very fair.

RYDE (Primary V.) :—Regular inspection, 28th and 29th November.

Enrolled :—Boys, 73 ; girls, 44 ; total, 117. Present :—Boys, 64 ; girls, 39 ; total, 103.

The schoolroom is only tolerably suitable, but excellent new premises are in course of construction. There is a sufficient stock of apparatus and working materials. The government is mild, but watchful and firm, and a healthy working spirit pervades the school. The instruction is properly regulated ; the teaching is careful and earnest ; and the average proficiency is nearly very fair.

SMITHFIELD (V.) :—Regular inspection, 24th February.

Enrolled :—Boys, 38 ; girls, 25 ; total, 63. Present :—Boys, 26 ; girls, 11 ; total, 37.

Various improvements and repairs had been sanctioned, and were about to be carried into effect at the date of inspection. The discipline is vigorous and firm, and the pupils are clean, orderly, and attentive. The classification is judicious. The instruction is properly regulated ; the teaching is industrious, intelligent, and energetic ; and the average proficiency is nearly very fair.

SOUTH CREEK (V.) :—Regular inspection, 4th April.

Enrolled :—Boys, 81 ; girls, 79 ; total, 160. Present :—Boys, 74 ; girls, 68 ; total, 142.

The schoolroom is not sufficiently large for the attendance, and is otherwise unsuitable, but new buildings are to be erected of a proper kind. Some new desks are necessary to form another group. The discipline is effective in producing order and attention, and the pervading spirit of the school is pleasing. The classification is for the present judicious. The lesson documents are suitable, and very neatly drawn up ; the teaching is earnest and intelligent ; and the average proficiency is very fair.

ST. ALBANS (N.-V.) :—Regular inspection, 19th September.

Enrolled :—Boys, 25 ; girls, 16 ; total, 41. Present :—Boys, 19 ; girls, 14 ; total, 33.

The school is temporarily conducted in two rooms of a cottage belonging to one of the members of the Board, but tenders have been called for the erection of suitable premises. The discipline secures fair order and attention. The subjects accord with the classification ; the instruction is tolerably regulated ; and the teaching is industrious and marked by considerable energy. The average proficiency is tolerable.

WALLGROVE (V.) :—General inspection, 6th April.

Enrolled :—Boys, 23 ; girls, 19 ; total, 42. Present :—Boys, 20 ; girls, 16 ; total, 36.

Some further provision is needed for water, and the residence is about to be improved by the erection of a kitchen. The school is fairly equipped and supplied with working stock. The government is mild, but firm and fairly watchful, and a healthy spirit pervades the school. The instruction is regulated by the usual guides ; the teaching displays fair skill ; and the average results are about fair.

WINDSOR (Infants—V.) :—Regular inspection, 31st May.

Enrolled :—Boys, 41 ; girls, 32 ; total, 73. Present :—Boys, 24 ; girls, 34 ; total, 58.

The schoolroom is too small, but a new and suitable one has been erected since the date of inspection. A book-press is necessary, but otherwise the school is properly organized. The children are orderly and attentive, and the government is mild, but firm. The subjects embrace all prescribed for Infant Schools. The teaching is earnest and animated ; the instruction properly regulated ; and the average proficiency is very fair.

WINDSOR (Primary—V.) :—Regular inspection, 1st and 2nd June.

Enrolled :—Boys, 71 ; girls, 55 ; total, 126. Present :—Boys, 52 ; girls, 37 ; total, 89.

Since the school was visited, the teacher's residence has been enlarged, and other improvements effected on the premises. The school is well furnished and provided with needful educational appliances. The pupils are clean, orderly, and attentive. The discipline is very fairly effective. The instruction is properly regulated ; the teaching is painstaking ; and the average proficiency fairly satisfies the standard.

YARRAMUNDI (N.-V.) :—Regular inspection, 21st June.

Enrolled :—Boys, 25 ; girls, 12 ; total, 37. Present :—Boys, 18 ; girls, 9 ; total, 27.

The school is conducted in rented premises, which are only tolerably suitable. It is provided with necessary furniture and apparatus. Steps have been taken towards the erection of vested premises, but the attendance has fallen away much since the school was visited. The pupils are very fairly orderly and attentive, and the government is firm. The classification is appropriate ; the instruction regulated by the usual guides ; and the teaching is fairly intelligent and vigorous. The average proficiency is fully fair.

PROVISIONAL SCHOOLS.

BLACKTOWN :—Regular inspection, 10th April.

Enrolled :—Boys, 13 ; girls, 19 ; total, 32. Present :—Boys, 13 ; girls, 18 ; total, 31.

The material organization of the school is tolerably satisfactory. The discipline is mild, but slack, producing only moderate order and attention among the pupils, who evince but little self-reliance or steady vigorous application to work. The teaching is wanting in thoroughness and penetrative force, and the average results are much below the standard. A Public School is now in course of erection.

GUILDFORD :—Regular inspection, 23rd February.

Enrolled :—Boys, 12 ; girls, 17 ; total, 29. Present :—Boys, 9 ; girls, 14 ; total, 23.

There is a tolerable supply of necessary teaching materials and furniture. The government is mild, but wanting in energy, and the pupils are tolerably orderly and attentive, but show little promptness or accuracy in their answering. The teaching lacks point and force, and the average results are barely moderate. This school is about to merge into a Public one.

KEMP'S CREEK :—Regular inspection, 10th March.

Enrolled :—Boys, 11 ; girls, 13 ; total, 24. Present :—Boys, 8 ; girls, 9 ; total, 17.

The premises, constructed of slab and bark, are in a fair state of repair, and there is a reasonable supply of needful educational appliances. The regularity of attendance is remarkably high for a country school. The government is tolerably effective in securing order and attention among the pupils. The subjects do not embrace singing or drawing ; the teaching is industrious, and the average proficiency ranges from moderate to tolerable.

LOWER HAWKESBURY :—Regular inspection, 12th September.

Enrolled :—Boys, 14 ; girls, 11 ; total, 25. Present :—Boys, 12 ; girls, 8 ; total, 20.

The schoolroom is fairly suitable, and is kept in good repair. A tolerable supply of necessary teaching appliances are provided. The discipline is kindly but firm, and induces habits of fair order and attention. The teaching is careful and earnest, and the pupils exhibit a healthy working spirit. The average proficiency approaches fair.

MCDONALD RIVER :—General inspection, 18th September.

Enrolled :—Boys, 16 ; girls, 14 ; total, 30. Present :—Boys, 10 ; girls, 10 ; total, 20.

The supply of furniture is still insufficient, and the premises need repairs and improvements to render them suitable. The government is too lax, and the instruction requires more careful regulation. The pupils are talkative and inattentive ; the teaching needs greater vigor, and the average proficiency is indifferent to moderate.

NORTH ROCKS :—General inspection, 5th August.

Enrolled :—Boys, 9 ; girls, 13 ; total, 22. Present :—Boys, 7 ; girls, 11 ; total, 18.

The material condition, as regards the building, is tolerable, but the supply of teaching requisites is scanty. The records require correction in some particulars. The government is mild and moderately effective. The subjects do not include singing or drawing. The lesson guides need attention ; the teaching is defective in intelligence and vigor, and the results approach an average of moderate.

PORTLAND HEAD :—Regular inspection, 4th August.

Enrolled :—Boys, 12 ; girls, 11 ; total, 23. Present :—Boys, 8 ; girls, 11 ; total, 19.

The material organization of the school is passable. The pupils are fairly regular and punctual. They are clean, moderately orderly, and tolerably attentive. Singing and drawing are omitted from the prescribed subjects. The government is slack, and the teaching is productive of moderate results.

THE VINEYARD :—Regular inspection, 10th May.

Enrolled :—Boys, 16 ; girls, 20 ; total, 36. Present :—Boys, 12 ; girls, 14 ; total, 26.

The schoolroom is in tolerable repair, but the closet needs roofing, and some furniture is required, especially a book-press and table. The pupils are clean, and tolerably attentive and orderly. The government needs greater vigilance ; the teaching is earnest and industrious, but only moderately skilful, and the average proficiency is nearly moderate.

WOODFORD BAY :—General inspection, 20th October.

Enrolled :—Boys, 14 ; girls, 11 ; total, 25. Present :—Boys, 14 ; girls, 11 ; total, 25.

The building is not suited for school purposes, except during the summer months. It is without chimney or proper windows, and more furniture is needed. The pupils are clean, and very fairly regular. The government is mild, but watchful and firm, and the order and attention are fair. The teaching is careful and earnest, and the proficiency exceeds tolerable.

HALF-TIME SCHOOLS.

AUSTRALIAN FARM :—Regular inspection, 23rd September.

Enrolled :—Boys, 18 ; girls, 10 ; total, 28. Present :—Boys, 14 ; girls, 9 ; total, 23.

The building is in want of repair, and additional furniture is necessary. The school is tolerably supplied with needful requisites. The pupils are clean, tolerably orderly, and fairly attentive. The government and teaching need greater energy. The average general proficiency is about tolerable.

BAR POINT :—Regular inspection, 13th September.

Enrolled :—Boys, 2 ; girls, 9 ; total, 11. Present :—Boys, 2 ; girls, 8 ; total, 10.

The material condition of the school is moderate. The records are correctly kept, and there is a tolerable supply of teaching appliances. The pupils are very regular and punctual, and fairly orderly and attentive. The government is firm, and the general tone of the school is healthy. The teaching produces, on an average, tolerable results.

PEAT'S FERRY :—Regular inspection, 13th September.

Enrolled :—Boys, 5 ; girls, 6 ; total, 11. Present :—Boys, 5 ; girls, 5 ; total, 10.

The building is in need of repair. It is tolerably supplied with necessary teaching appliances. The discipline is fairly effective, the teaching is industrious, and the average proficiency slightly exceeds tolerable.

UPPER

UPPER COLO :—General inspection, 4th December.

Enrolled :—Boys, 11 ; girls, 8 ; total, 19. Present :—Boys, 10 ; girls, 7 ; total, 17.

The schoolroom is tolerably suitable, and the general material condition is fairly satisfactory. The government is mild but reasonably firm, and the tone of the school is healthy. Fair indicates the quality of the teaching which gives similar results.

WHEENEY CREEK :—General inspection, 4th December.

Enrolled :—Boys, 14 ; girls, 6 ; total, 20. Present :—Boys, 12 ; girls, 5 ; total, 17.

The schoolroom is small but sufficient for the attendance. There is no closet, and the material organization is only moderately suitable. The pupils are regular and punctual, and fair order is produced by the discipline. The classification is correct, the teaching is of fair effect, and the results give an average proficiency of fair.

WISEMAN'S FERRY :—Regular inspection, 15th September.

Enrolled :—Boys, 7 ; girls, 5 ; total, 12. Present :—Boys, 6 ; girls, 5 ; total, 11.

There is a tolerably supply of furniture and apparatus, and the schoolroom is commodious. The government secures tolerable order and attention, and the teaching is industrious, but needs greater animation and vigour. The average proficiency slightly exceeds moderate.

GOULBURN DISTRICT.

INSPECTOR'S General Report for the year 1876.

I.—MEANS OF EDUCATION.

At the end of 1875 there were in operation in the district thirty-seven Public Schools, twenty-five Provisional Schools, eight Half-time Schools, and eleven Denominational Schools, total eighty-one schools. During 1876 there have been in operation ninety-seven schools. The increase of sixteen does not consist altogether of new schools. At the commencement of the year the district gained five (5) schools—Kangaroo Valley and Cambewarra, Public ; and Barrengarry, Bomaderry, and Wattamolla, Provisional—by transference from the Camden District ; and lost two—Gunning Public and Fullerton Provisional—by removal to the Yass District. There have thus been thirteen schools either established or resuscitated during the year. These are :—

Burrill, Provisional (now Public)	}	Newly established.
Broken Bridge (Murrumbuah), Provisional		
Cullarin,		
Manchester Square,		
Mimosa Park,		
Tarlo Gap,		
Waggallalah,		
Jellone, Half-time		
Mandemar,		
Mullengullenga, Provisional (formerly Half-time).....		
Shaw's Creek,		
Waterland,		
Windellama,		
Windellama, (formerly Half-time).....		

Though no school has during the year been brought into existence as a Public School, four, viz., Bredalbane (late Muttbilly), Burrill, Carrick, and Cottawalla have been added to the list of Public Schools by conversion from Provisional Schools. A similar change will be made in the Bundanoon Provisional School at the commencement of 1877. Also, there are thirteen (13) localities in which the Council has agreed to establish Public Schools, viz. :—

Burrawang	}	Application acceded to in 1875.		
Burrawang, East				
Jerrara (East Argyle).....				
Milton				
Nowra Hill				
Woodhouselee				
Yarrunga				
Kangaroo River			}	Application acceded to in 1876.
North Goulburn				
Terrara				
Green Gully				
Bendeela				
Sutton Forest				

The educational wants of eight (8) of these thirteen (13) localities are more or less inefficiently met by existing schools, which will, in all probability, lapse on the opening of the promised schools. The other five (5) localities are altogether desitute of educational provisions. In six (6) out of the thirteen (13) localities definite progress has been made towards the establishment of the required schools. A Provisional School will be brought into existence at Summerlee (between Taralga and Bunnaby) as soon as the people provide and furnish a Schoolhouse ; and a Half-time School at Myanga Creek when a locality for the second school can be found. Application has also been received for the re-establishment of schools at Bamarang and Carrarawell, and for the establishment of a Public School at Yatteyattah.

Much has been done in the way of increasing and improving the material provisions in connection with the Public Schools already in existence. Necessary additions, repairs, &c., have been executed to many of the schools ; and measures are in progress for providing new buildings for several others. Some of the more promising Provisional Schools have shared to an extent in these advantages.

Of the localities enumerated in my last Report, which had a school population sufficient to maintain a school, but no school, and the inhabitants of which had not taken the steps necessary to the establishment of a school, Murrumbah is the only one that has been provided for during the year. The following have now fallen into the same predicament as the remaining places on the list :—

Tarlo—School closed on account of the wretched material provisions.

Windellama—School closed in consequence of low attendance.

Pyree—The promised school not yet having been placed in the Council's hands.

The schools at Myrtleville and Rock View have lapsed in consequence of the removal of families from the localities.

The fact that four (4) schools have been resuscitated, and that one of them (Windellama) has again lapsed, is evidence that the smaller schools are still subject to interruptions, which in a settled community ought not to occur. For years past there has been a school population in each of the four localities

localities sufficient to keep a school in continuous operation, and yet in three of them a school has existed only for about as many months. The want of proper school accommodation has been a serious drawback in two of the three places, and in all three the indifference of parents has been a main cause of the defect. It must be noted, however, that the evil in question is on the decline, as is evidenced by the facts:—

1. That, leaving out of account those that lapsed as already described, the schools of the district have, with one exception, kept in continuous operation this year.
2. That three (3) of the four (4) resuscitated schools are keeping up well, and afford every prospect of continuing to do so.

The continued working of the scheme for providing teachers for small schools has been so far successful that the number of applicants is in excess of the demand. During the year eight (8) of the best of the applicants underwent a course of preliminary training. The service is by this means being recruited by young, intelligent, and useful persons, some of whom have already fulfilled their proper career by having successfully conducted a small country school for three years and then gained admission to the Council's Training School in Sydney; while others have obtained classification without passing through the Training School. The number of applicants for the office of pupil-teacher is also in excess of the requirements; and duly classified teachers are readily found for the more important vacancies.

II. INSPECTION.—CONDITION OF SCHOOLS INSPECTED.

Ninety-two out of the ninety-seven schools were fully inspected. The remaining five are:—

Myrtleville, Public ...	Closed early in the year before I had an opportunity of visiting it.
Cullarin, Provisional ...	} Opened too late in the year to allow of inspection.
Tarlo Gap, Provisional...	
Middle Arm, Provisional...	} Not in operation when I visited the locality.
Mandemar, Half-time ...	

3,988 pupils were enrolled at the ninety-two inspected schools at the time of inspection, of whom 3,147 attended and underwent examination. Of the ninety-two schools inspected, forty-six, or just 50 per cent. were found to be below the standard; thirty-three to be up to the standard, and thirteen to be above the standard. So that this year 50 per cent. against 51·8 per cent. last year satisfied the standard. The falling off is to be accounted for by the fact that the thirteen new schools are all small. The following table exhibits the state of the schools at the time of inspection:—

Schools.	Pupils enrolled.	Average enrolment per school.
46 below standard ...	1,663; or 41·7 per cent. of total enrolment	... 36·3
33 up to standard ...	1,134	
13 above standard ...	1,191 } or 58·3 per cent. of total enrolment	... 54

It thus appears that the 50 per cent. of the schools that failed to satisfy the standard represent only 41·7 per cent. of the total enrolment, and that the quality of the education is higher in the larger than in the smaller schools.

The following averages show the educational condition of the schools inspected. The general efficiency takes cognizance of the organization of the schools, and the extent to which the educational wants of the places are met, as well as the discipline and instruction in the schools; and thus represents the value not only of the teacher's work, but also that of the other state provisions, and that of the action of the parents and School Boards.

General discipline—fair to very fair ...	6·6
Instructional results—tolerable to fair ...	5·4
General efficiency—tolerable to fair ...	5·5

A summary of my Report upon each school inspected is appended to this Report.

The remarks made in my Reports for 1874 and 1875, relative to the non-enforcement of the scale of fees in several out-lying localities, still apply. It is to be added that the returns of school fees from small country schools frequently represent not cash, but produce taken at the parents' valuation.

The general terms used in former years to describe the local supervision of the schools may still be employed. A few School Boards have manifested commendable vigour and liberality. Those of Goulburn, Berrima, Bowral, Robertson, Tarago, and Waggallalah may be specified.

The school population of the District cannot be satisfactorily ascertained by such means as it is in my power to employ. As a consequence, it is impossible to institute an exact comparison between what has been done, and what remains undone in the way of meeting educational wants.

SUMMARY.

1. Thirteen (13) schools have been opened. Still, the proportion of educationally destitute children has not been materially reduced. The Council has resolved, however, on applications made during 1875 and 1876, to establish no less than thirteen new Public Schools.
2. A reasonable proportion of Provisional Schools have developed into Public Schools.
3. Considerable improvements have been effected to the premises of many schools by the Council.
4. There are several localities in which, in consequence of the indifference of parents, necessary schools either cannot be established, or cannot be maintained when established.
5. No difficulty is experienced in keeping up a supply of teachers.
6. In consequence mainly of the establishment of a number of small bush schools, and none of a larger kind as a counterpoise, the number of schools which satisfied the standard of inspection shows a slight decline. One-half of the schools inspected were below the standard, but they comprised only 41·7 per cent. of the children enrolled at the time of inspection.
7. The educational requirements of the localities in which schools are established may be said to be on the whole fairly well met.
8. The year 1876 has not witnessed any marked improvement in the actual educational condition of the District; but it has, nevertheless, provided the conditions under which progress may possibly be unusually rapid and substantial. Such progress will mainly depend upon the extent to which it will be practicable to bring early into existence the schools which the Council has resolved to establish.

D. S. HICKS,
Inspector, Goulburn District.

GOULBURN DISTRICT.

SUMMARIES of Reports on Schools inspected during the year 1876.

I.—PUBLIC SCHOOLS.

BERRIMA (V.) :—Regular inspection, 20th and 21st September.

Enrolled:—Boys, 42; Girls, 43; total, 85. Present:—Boys, 33; Girls, 36; total 69. Additions and repairs to the premises are in progress. The organization and general discipline are good. The instruction produces results in excess of fair. The general efficiency has been somewhat affected by interruptions caused by prevalent sickness. All things considered, it may be regarded as approaching very fair.

BOWBALL :—

BOWBALL (V.) :—Regular inspection, 19th September.

Enrolled :—Boys, 38 ; girls, 28 ; total, 66. Present :—Boys, 29 ; girls, 15 ; total, 44.

Repairs to the premises are required. Additional playground has been secured. The internal organization is very fair. The discipline has improved, and is now fair. Results from fair to very fair are produced in connection with the instruction. The school is in a fair (full) state of efficiency.

BREADALBANE :—Regular inspection, 25th April.

Enrolled :—Boys, 20 ; girls, 13 ; total, 33. Present :—Boys, 16 ; girls, 12 ; total, 28.

Measures are in progress for providing new and suitable premises. The internal organization is tolerably satisfactory under the circumstances. The general discipline is very fair. The teaching produces tolerable + results. The general condition and results, as far as the teacher can fairly be held responsible, exceed tolerable, but the legitimate educational wants of the place are only moderately met.

BURRIER (N.-V.) :—Regular inspection, 17th August.

Enrolled ;—Boys, 23 ; girls, 19 ; total, 42. Present :—Boys, 22 ; girls, 17 ; total, 39.

The material provisions are quite unsatisfactory, and progress towards superseding them is very slow. The internal organization and general discipline are fair. Results of instruction, tolerable.

BURRILL (N.-V.) :—General inspection, 31st August.

Enrolled :—Boys, 18 ; girls, 22 ; total, 40. Present :—Boys, 11 ; girls, 13 ; total, 24.

The school building is new and suitable. The internal organization and the general discipline are about tolerable. The instruction is not very skilfully carried on, and produces only moderate to tolerable results. At the time of and for some time prior to the inspection the numbers were affected by epidemics. General efficiency, moderate to tolerable.

CAMBEWAERA (V.) :—Regular inspection, 2nd and 3rd August.

Enrolled :—Boys, 29 ; girls, 24 ; total, 53. Present :—Boys, 29 ; girls, 24 ; total, 53.

The material condition is about to be rendered satisfactory. The internal organization is very fair. The general discipline is good. The instruction is carefully carried on, and its results are nearly very fair. Elementary geometry is included in the course. The school is in a very fair (full) state of efficiency.

CARRICK (V.) :—Regular inspection, 29th February.

Enrolled :—Boys, 14 ; girls, 22 ; total, 36. Present :—Boys, 14 ; girls, 19 ; total, 33.

The material provisions meet existing requirements fairly. Internally the school is correctly organized. As a whole the discipline may be rated fair. The instruction produces results above tolerable. The general efficiency of the school is nearly fair.

CHATSBURY (V.) :—Regular inspection, 19th May.

Enrolled :—Boys, 17 ; girls, 15 ; total, 32. Present :—Boys, 15 ; girls, 15 ; total, 30.

The organization is correct, excepting a defect in the classification of the pupils. The general discipline is very fair. The instruction is zealously prosecuted and is productive of results from tolerable to fair. The school is gradually improving and gaining ground. The general results approach fair.

COLLECTOR (V.) :—General inspection, 21st April.

Enrolled :—Boys, 25 ; girls, 21 ; total, 46. Present :—Boys, 19 ; girls, 18 ; total, 37.

The material condition is excellent. The only fault in the material organization is in the arrangement of the desks. The internal organization and also the general discipline may be rated fair. The instructional results are only from moderate to tolerable. Only about three-fourths of the school population belong to the school. The internal condition of the school is incommensurate with the expense incurred in respect of the premises, and with the educational wants of the place.

COTTAWALLA (V.) :—Regular inspection, 6th June.

Enrolled :—Boys, 20 ; girls, 14 ; total, 34. Present :—Boys, 15 ; girls, 10 ; total, 25.

The material provisions are unchanged. The enrolment, the average attendance, and the amount of school fees paid are all very low compared with the circumstances of the locality. The internal organization is fair. The general discipline is about tolerable. The instructional results show a decline ; they are now barely moderate. The general efficiency is only moderate.

CROOBYAR (V.) :—Regular inspection, 28th and 29th August.

Enrolled :—Boys, 55 ; girls, 47 ; total, 102. Present :—Boys, 48 ; girls, 44 ; total, 92.

The premises have fallen into disrepair. The internal organization and the general discipline are good. The results of instruction approach very fair. Considering the drawbacks arising from the very faulty material organization, and the late interference to the school business caused by epidemics, the general results, as far as the teacher can be held responsible, may be rated very fair +.

CROOKWELL (V.) :—Regular inspection, 7th June.

Enrolled :—Boys, 24 ; girls, 25 ; total, 49. Present :—Boys, 15 ; girls, 12 ; total, 27.

The material provisions are very good. The internal organization is fair. The general discipline is also fairly satisfactory on the whole. The enrolment and attendance are relatively to the school population very low, and the latter is irregular. The results of instruction are tolerable. The school meets the legitimate educational wants of the locality but indifferently. This is to a considerable extent the fault of parents.

CURRAWANG (V.) :—Regular inspection, 19th April.

Enrolled :—Boys, 44 ; girls, 35 ; total, 79. Present :—Boys, 31 ; girls, 22 ; total, 53.

The material provisions are being improved. The internal organization is fair. The general discipline is good. The instructional results are only moderate in the first class (taught by the assistant), but approach very fair in the second, third, and fourth, taught by the master. The general efficiency may be rated fair to very fair. Elementary algebra and Latin are taught in the fourth class.

ELING FOREST (V.) :—Regular inspection, 14th November.

Enrolled :—Boys, 11 ; girls, 20 ; total, 31. Present :—Boys, 9 ; girls, 16 ; total, 25.

The organization is good. The general discipline is very fair. The results of instruction are fair to very fair. The general efficiency has considerably improved, and now approaches very fair.

GOULBURN (Boys—V.) :—Regular inspection 6th to 12th December.

Enrolled :—112. Present :—82.

Various improvements have been effected to the school premises and others are in contemplation. The internal organization is very fair. The general discipline is very good. The results of instruction all round reach good. The course includes the first three books of Euclid's elements, algebra to quadratics, and elementary Latin, in addition to the subjects prescribed for a fourth class. The numbers have not yet permanently recovered. There are some matters connected with the general management which have not received sufficient attention.

GOULBURN

GOULBURN—(Girls—V.) :—Regular inspection, 30th November to 5th December.

Enrolled :—108. Present—81.

The school is well organized. The general discipline is excellent. The instruction produces good results. Decided general improvement has been effected. The department is in a very good state of efficiency, and has been placed high in public estimation.

GOULBURN (Infants—V.) :—Regular inspection.

Enrolled :—Boys, 112 ; girls, 89 ; total, 201. Present :—Boys, 79 ; girls, 64 ; total, 143.

General organization, good. Discipline, very fair. Instructional results, very fair +. During the year the department has been subjected to several drawbacks, but the numbers and general efficiency have been maintained. All things considered, the general results approach good.

GULLEN—(V.) :—Regular inspection, 4th May.

Enrolled :—Boys, 25 ; girls, 29 ; total, 54. Present :—Boys, 14 ; girls, 24 ; total, 38.

A well, in addition to improvements in progress, would render the material condition satisfactory. The internal organization is tolerable. From causes for the most part beyond the Council's and the teacher's control, the enrolment and the attendance are very low in comparison with the school population. The attendance is extremely irregular. The discipline, as far as the teacher can make it, is good. The children do not attend school sufficiently either to reach a satisfactory standard of attainments or to become proficient in the instruction given. The actual results of the instruction are from moderate to tolerable. In view of the legitimate requirements of the school population of the locality, the general efficiency of the school is only barely moderate.

KANGALOO—(N.-V.) :—Regular inspection, 11th February.

Enrolled :—Boys, 21 ; girls, 24 ; total, 45. Present :—Boys, 20 ; girls, 21 ; total, 41.

New vested premises are required. The internal organization is correct, and the general discipline is good. Defects of detail occur in connection with the instruction, which, however, on the whole, produces results approaching fair. The school is in a fair state of efficiency.

KANGALOO WEST (V.) :—Regular inspection, 23rd February.

Enrolled :—Boys, 19 ; girls, 18 ; total, 37. Present :—Boys, 18 ; girls, 17 ; total, 35.

A few minor improvements would complete the material organization. Internally the school is correctly organized in the main. The general discipline is fair. The instructional results approach tolerable.

KANGAROO VALLEY (V.) :—Regular inspection, 26th July.

Enrolled :—Boys, 15 ; girls, 27 ; total, 42. Present :—Boys, 13 ; girls, 22 ; total, 35.

Some improvements to the premises are required. The internal organization is very fair, the chief defect being in connection with the records. The general discipline is fair ; punctuality is the weak point. Only about three-fourths of the school population are enrolled. The instruction is of incomplete course and produces only moderate to tolerable results.

MARULAN (N.-V.) :—Regular inspection, 25th February.

Enrolled :—Boys, 12 ; girls, 14 ; total, 26. Present :—Boys, 12 ; girls, 13 ; total, 25.

The aspect of the premises is not pleasing, but they will serve for the time during which the school is likely to continue. There are various defects connected with the internal organization, which must be rated below moderate. The general discipline is tolerably satisfactory. The instructional results exceed moderate. The school is in a moderate state of efficiency.

MERRILLA (V.) :—Regular inspection, 2nd May.

Enrolled :—Boys, 12 ; girls, 18 ; total, 30. Present :—Boys, 10 ; girls, 14 ; total, 24.

The material organization has been completed. The internal organization is correct in the main. The general discipline continues good. The effects of irregular attendance are observable in the instructional results, which now average fair.

MITTAGONG LOWER (V.) :—Regular inspection, 8th November.

Enrolled :—Boys, 15 ; girls, 18 ; total, 33. Present :—Boys, 13 ; girls, 17 ; total, 30.

A few minor repairs to the premises are required. The internal organization is tolerable ; faulty classification being the chief defect. The discipline is fair on the whole. Tolerable instructional results are produced. The numbers are slowly recovering. The school is in a tolerable state of efficiency.

MITTAGONG UPPER (N.-V.) :—Regular inspection, 24th February.

Enrolled :—Boys, 29 ; girls, 20 ; total, 49. Present :—Boys, 14 ; girls, 10 ; total, 24.

A few minor improvements would render the material condition satisfactory. The internal organization and general discipline may be rated very fair. The instruction produces results approaching tolerable. The results as a whole are indicative of improvement.

MOOROOWOOLLEN (V.) :—Regular inspection, 16th June.

Enrolled :—Boys, 32 ; girls, 22 ; total, 54. Present :—Boys, 25 ; girls, 19 ; total, 44.

The school is fairly well organized. The general discipline is about tolerable. The instructional results are tolerable. The school is in a tolerable state of efficiency.

MOSS VALE (V.) :—Regular inspection, 22nd June.

Enrolled :—Boys, 31 ; girls, 33 ; total, 64. Present :—Boys, 21 ; girls, 23 ; total, 44.

Recent improvements have rendered the material organization fairly adequate to present requirements. The school is well organized internally. The general discipline is very fair. The instruction produces about fair results. The general efficiency exceeds fair.

MUMMELL (N.-V.) :—Regular inspection, 9th May.

Enrolled :—Boys, 14 ; girls, 14 ; total, 28. Present :—Boys, 5 ; girls, 8 ; total, 13.

The material provisions are passable. Some defects of detail occur in connection with the internal organization. Excepting as regards the regularity and punctuality of the pupils attendance, the discipline is very fair. The course of instruction is incomplete. The results of the instruction are below tolerable. The general results are little above moderate.

NEW SHEFFIELD (N.-V.) :—Regular inspection, 18th July.

Enrolled :—Boys, 28 ; girls, 26 ; total, 54. Present :—Boys, 22 ; girls, 19 ; total, 41.

The organization is quite inadequate to the wants of the locality as regards both material provisions and teaching power. Discipline, tolerably satisfactory on the whole. Instructional results moderate to tolerable. The educational requirements of the place are but indifferently met.

NORWOOD

NORWOOD (N.-V.) :—Regular inspection, 15th June.

Enrolled :—Boys, 25 ; girls, 13 ; total, 38. Present :—Boys, 19 ; girls, 10 ; total, 29.

Several material improvements are required. The internal organization is correct, the general discipline fully fair. The instruction produces fair results. The school is in a fair state of efficiency.

NOWRA (V.) :—Regular inspection, 8th and 9th August.

Enrolled :—Boys, 56 ; girls, 33 ; total, 89. Present :—Boys, 49 ; girls, 32 ; total, 81.

A few improvements will render the material organization satisfactory. The internal organization and general discipline are good. The results of instruction approach very fair. The numbers are stationary. The results compare favourably with last year's. Elementary algebra is an extra.

PARKESBOURNE (V.) :—Regular inspection, 1st May.

Enrolled :—Boys, 13 ; girls, 20 ; total, 33. Present :—Boys, 13 ; girls, 20 ; total, 33.

The organization is very fair, a defect in the classification lowering the mark. The general discipline and moral tone are good. Teaching is zealously and intelligently carried on, and produces very fair (nearly) results. The school is in a very fair state of efficiency.

ROBERTSON (V.) :—Regular inspection, 9th February.

Enrolled :—Boys, 26 ; girls, 27 ; total, 53. Present :—Boys, 25 ; girls, 23 ; total, 48.

Organization and general discipline good. The instruction is well regulated and skilfully imparted. Its results are very fair. The past year has been one of change and trial, but the school has become larger and more efficient.

ROSLYN (V.) :—Regular inspection, 30th May.

Enrolled :—Boys, 16 ; girls, 14 ; total, 30. Present :—Boys, 14 ; girls, 12 ; total, 26.

Measures are in progress for making good the defects in the premises. The internal organization and the general discipline are about tolerable. The results of instruction are tolerable. The school is in a tolerable state of efficiency.

TARAGO (N.-V.) :—Regular inspection, 13th April.

Enrolled :—Boys, 17 ; girls, 13 ; total, 30. Present :—Boys, 14 ; girls, 11 ; total, 25.

Thanks to the liberality of Mr. J. Cropper, measures are in progress for providing new and properly organized premises to be vested in the Council. The internal organization is correct. The general discipline is very good and the moral tone high. The instruction produces fair results. The school is in a very fair state of efficiency.

TARALGA (V.) :—Regular inspection, 26th May.

Enrolled :—Boys, 26 ; girls, 20 ; total, 46. Present :—Boys, 16 ; girls, 17 ; total, 33.

The material organization is being completed. Internally the school is correctly organized. The general discipline is very fair. The attainments and general proficiency of the pupils are between fair and very fair. The general efficiency approaches very fair.

TYRANNA (N.-V.) :—Regular inspection, 10th April.

Enrolled :—Boys, 21 ; girl, 7 ; total, 28. Present :—Boys, 17 ; girls, 7 ; total, 24.

Considering the present school population of the locality, no fault need be found with the material provisions. The internal organization is correct in the main. The general discipline is very fair. The instruction is of full course and compass, and produces results above tolerable. The general efficiency is about fair.

TOMERONG (V.) :—Regular inspection, 6th September.

Enrolled :—Boys, 27 ; girls, 16 ; total, 43. Present :—Boys, 25 ; girls, 15 ; total, 40.

The material organization is about to be completed. Internal organization, fair. General discipline, tolerable. Instructional results, tolerable. General efficiency improved, tolerable.

TOWRANG (N.-V.) :—Regular inspection, 1st March.

Enrolled :—Boys, 21 ; girls, 11 ; total, 32. Present :—Boys, 15 ; girls, 11 ; total, 26.

Material condition unchanged ; necessary improvements are in contemplation. Internal organization nearly fair on the whole. General discipline, very fair ; moral tone, healthy. The instruction is zealously carried on and is productive of fair + results. The school is in a fair state of efficiency.

ULLADULLA (N.-V.) :—Regular inspection, 24th August.

Enrolled :—Boys, 32 ; girls, 15 ; total, 47. Present :—Boys, 28 ; girls, 12 ; total, 40.

Makeshift material provisions have been tolerated long enough. It is high time the necessary local action was taken to obtain properly organized vested school buildings. The internal organization and the general discipline are tolerable. The results of the instruction slightly exceed tolerable. The general results may be rated tolerable.

WORRAGEE (N.-V.) :—Regular inspection, 15th August.

Enrolled :—Boys, 15 ; girls, 15 ; total, 30. Present :—Boys, 15 ; girls, 15 ; total, 30.

The material provisions are but indifferent. The internal organization and the general discipline are about tolerable. The results of instruction are from tolerable to fair.

II.—PROVISIONAL SCHOOLS.

BARRENGARRY :—Regular inspection, 25th July.

Enrolled :—Boys, 13 ; girls, 14 ; total, 27. Present :—Boys, 11 ; girls, 12 ; total, 23.

The premises are but moderately suitable. Internally the school is tolerably well organized. The general discipline is fair. The instruction produces results from moderate to tolerable.

BOMADERY (N.-V.) :—Regular inspection, 4th August.

Enrolled :—Boys, 7 ; girls, 17 ; total, 24. Present :—Boys, 6 ; girls, 15 ; total, 21.

The material provisions are tolerably satisfactory. Some defects occur in the keeping of the records and wall documents ; otherwise the internal organisation is generally correct. The general discipline is good. The instruction is carried on in a sensible and earnest way, and produces fair results.

BROKEN BRIDGE :—General inspection, 15th November.

Enrolled :—Boys, 9 ; girls, 11 ; total, 20. Present :—Boys, 7 ; girls, 10 ; total, 17.

Tolerably suitable material provisions have been made. The internal organization is fair. The general discipline is very fair. The instruction produces tolerable results. Owing to the removal of children from the locality it is doubtful whether the school can be maintained as a Provisional School.

BUNDANOON (N.-V.) :—Regular inspection, 20th June.

Enrolled :—Boys, 20 ; girls, 22 ; total, 42. Present :—Boys, 20 ; girls, 14 ; total, 34.

The premises are unchanged. The internal organization and general discipline are fair. The instruction produces moderate to tolerable results. The school is in a moderate to tolerable state of efficiency. Progress towards the required establishment of a Public School is very slow.

BUNGONIA (N.-V.) :—Regular inspection, 2nd February.

Enrolled :—Boys, 10 ; girls, 12 ; total, 22. Present :—Boys, 5 ; girls, 9 ; total, 14.

As regards numbers the school keeps in a very low state. Its internal efficiency has improved somewhat. The organization is tolerable, the general discipline fair, the results of instruction moderate+.

BURBAGOWANG :—Regular inspection, 21st June.

Enrolled :—Boys, 15 ; girls, 11 ; total, 26. Present :—Boys, 14 ; girls, 11 ; total, 25.

The material provisions are unchanged. Increased attention should be given to the school stock. The internal organization is only moderate, the classification is unnecessarily minute, and there are other defects. The general discipline is about tolerable. The instruction is not skilfully carried on, and produces results little above indifferent.

CONGOLA (N.-V.) :—Regular inspection, 4th September.

Enrolled :—Boys, 17 ; girls, 12 ; total, 29. Present :—Boys, 16 ; girls, 11 ; total, 27.

The material provisions are bad and should be superseded as soon as possible. The internal organization, the general discipline and moral tone, and the progress of the pupils, are all good.

FRANKFIELD (N.-V.) :—Regular inspection, 26th April.

Enrolled :—Boys, 21 ; girls, 14 ; total, 35. Present :—Boys, 16 ; girls, 9 ; total, 25.

The material provisions meet the requirements tolerably well. The internal organization is tolerable ; there are defects of detail. The general discipline is very fair, and the moral tone is healthy. The results of the instruction are fair. The general efficiency is about fair.

GREENWELL POINT (N.-V.) :—Regular inspection, 16th August.

Enrolled :—Boys, 15 ; girls, 19 ; total, 34. Present :—Boys, 13 ; girls, 16 ; total, 29.

The premises are in the condition last reported. The internal organization, the general discipline, and the results of the instruction all rank about tolerable. The school is in a tolerable state of efficiency.

GUBBRUNDAH (N.-V.) :—Regular inspection, 27th April.

Enrolled :—Boys, 13 ; girls, 15 ; total, 28. Present :—Boys, 13 ; girls, 13 ; total, 26.

Several improvements to the premises are required. The school is tolerably well organized ; otherwise the general discipline has much improved, and is fairly satisfactory. Irregularity of attendance has prevented a corresponding improvement in the attainments and proficiency of the pupils. The results of instruction are only moderate. The general efficiency approaches tolerable.

HIGH RANGE :—Regular inspection, 26th September.

Enrolled :—Boys, 13 ; girls, 7 ; total, 20. Present :—Boys, 12 ; girls, 4 ; total, 16.

General organization and discipline, fair. Instructional results, tolerable+. General efficiency, tolerable to fair.

JACQUA (N.-V.) :—Regular inspection, 1st February.

Enrolled :—Boys, 16 ; girls, 12 ; total, 28. Present :—Boys, 13 ; girls, 9 ; total, 22.

The school has been about four months in operation ; it has been successfully and properly organized. The general discipline is very fair. The results of instruction are from moderate to tolerable. General efficiency, tolerable.

JANNUNG (V.) :—Regular inspection, 5th September.

Enrolled :—Boys, 13 ; girls, 14 ; total, 27. Present :—Boys, 11 ; girls, 13 ; total, 24.

Improvements to the premises are required. The internal organization is correct ; the general discipline, good. The instruction produces results above fair. The general efficiency approaches very fair.

JANUGARRAH (N.-V.) :—Regular inspection, 1st September.

Enrolled :—Boys, 13 ; girls, 3 ; total, 16. Present :—Boys, 12 ; girls, 3 ; total, 15.

Nine children of school age in the locality do not attend—the result of the neglect or the prejudice of the parents. The material organization is unchanged. The internal organization is fair. The general discipline is good. The instructional results are about fair.

KIRKDALE (N.-V.) :—Regular inspection, 24th April.

Enrolled :—Boys, 21 ; girls, 9 ; total, 30. Present :—Boys, 17 ; girls, 6 ; total, 23.

The school is very fairly organized. The general discipline ranks very fair also. The results of instruction approach fair. The school is in a fair state of efficiency. The results were affected by recent promotions, but gave evidence of careful and intelligent work.

LAGGAN (N.-V.) :—Regular inspection, 1st June.

Enrolled :—Boys, 12 ; girls, 16 ; total, 28. Present :—Boys, 11 ; girls, 15 ; total, 26.

The material provisions are bad, but are to be superseded. The internal organization is indifferent ; the general discipline barely moderate. The instructional results are about moderate. The general management gives evidence of weakness in all its branches. The legitimate educational wants of the locality are badly met, owing, to a considerable extent, to the persistent neglect of parents.

MANCHESTER SQUARE :—General inspection, 13th November.

Enrolled :—Boys, 11 ; girls, 11 ; total, 22. Present :—Boys, 10 ; girls, 9 ; total, 19.

The school has but just commenced. The people have provided fair premises on a suitable piece of Crown land. The internal organization has not yet been completed. The discipline may be rated fair. At present the mental powers and attainments of the pupils are only from indifferent to moderate ; but the teaching is likely to prove tolerably effective.

MAXTON (N.-V.) :—Regular inspection, 10th May.

Enrolled :—Boys, 9 ; girls, 16 ; total, 25. Present :—Boys, 7 ; girls, 16 ; total, 23.

The material provisions are barely tolerable, even as a makeshift. Defects in the records and documents reduce the mark for the internal organization to tolerable. The discipline is fairly satisfactory. The instruction is of a very elementary character. Its results are from moderate to tolerable. Existing arrangements should be superseded by the establishment of a Public School at Green Gully.

MIMOSA PARK (N.-V.) :—General inspection, 30th August.

Enrolled :—Boys, 11 ; girls, 9 ; total, 20. Present :—Boys, 10 ; girls, 9 ; total, 19.

This is a new school near the Pigeon-house Mountain, and provides the means of education for some 25 children in that locality. It is at present conducted in temporary premises on the Woodburn Station. Defects arising from the teacher's inexperience and want of training exist in connection with each branch of the general management. The internal organization is very imperfect, the discipline is but moderate, and the instruction is of very limited course. The proficiency of the pupils falls below moderate.

MOUNT MURRAY :—Regular inspection, 10th February.

Enrolled :—Boys, 11 ; girls, 20 ; total, 31. Present :—Boys, 10 ; girls, 19 ; total, 29.

The organization is correct in the main. The general discipline is very fair. The teaching produces results approaching fair. The school is in a fair state of efficiency.

MULLENGULENGA (N.-V.) :—General inspection, 12th April.

Enrolled :—Boys, 7 ; girls, 5 ; total, 12. Present :—Boys, 6 ; girls, 2 ; total, 8.

Tolerably suitable material provisions have been made. The school is well organized and disciplined by the teacher, but the majority of the parents are prejudiced against him, and, by keeping their children away, render the immediate success of the school impossible. The teaching has produced fair results.

NOTE.—All children of school age in the locality have since been sent, and the school is thriving.

PEJAR (N.-V.) :—Regular inspection, 8th June.

Enrolled :—Boys, 14 ; girls, 9 ; total, 23. Present :—Boys, 12 ; girls, 8 ; total, 20.

New premises in a more central and convenient place are required. The internal organization and the general discipline are fair. The instructional results reach about tolerable. The general efficiency is tolerable.

POMEROY (N.-V.) :—Regular inspection, 13th June.

Enrolled :—Boys, 20 ; girls, 14 ; total, 34. Present :—Boys, 15 ; girls, 8 ; total, 23.

The material organization and condition are unchanged. The internal organization is correct in the main. The general discipline is very fair. The instruction is systematically carried on by suitable methods, and produces tolerable to fair results. Through a change of teachers the general management has been placed on a proper basis, and the general efficiency has been considerably improved. The general results approach fair.

REDGROUND (V.) :—Regular inspection, 31st May.

Enrolled :—Boys, 13 ; girls, 14 ; total, 27. Present :—Boys, 8 ; girls, 12 ; total, 20.

The material provisions require superseding. The keeping of the records and documents and the regulation of the instruction are defective ; and, the school stock is insufficient. The pupils require to be thoroughly trained to proper school habits and movements. Some of them are not sufficiently clean and tidy. The results of the teaching approach moderate. The general efficiency is from indifferent to moderate. The teacher has been but a short time appointed. When she took charge of the school it was in a disorganized state ; hence, to some extent, the defects now noted.

SHAW'S CREEK :—General inspection, 21st November.

Enrolled :—Boys, 20 ; girls, 12 ; total, 32. Present :—Boys, 8 ; girls, 9 ; total, 17.

The material provisions meet requirements moderately. The internal organization is defective in several particulars. The discipline is tolerably satisfactory on the whole. The instruction has not been attended to with sufficient care, and produces but indifferent results. The general management is lax. The general efficiency is only indifferent.

TARLO (N.-V.) :—Regular inspection, 18th May.

Enrolled :—Boys, 9 ; girls, 10 ; total, 19. Present :—Boys, 8 ; girls, 10 ; total, 18.

The material provisions are wretchedly bad. The internal organization and general discipline are fair. The numbers are low, principally from causes beyond the teacher's control. The instruction is of incomplete course and very limited range, and is productive of results below moderate. The general and continued indifference of the parents and the state of the premises have had a discouraging influence on the teacher, as indeed they well might. The general efficiency has declined, and is now from indifferent to moderate.

NOTE.—The teacher has since resigned, and the school is closed until decent premises are provided.

WAGGALLALAH :—General inspection, 24th November.

Enrolled :—Boys, 11 ; girls, 15 ; total, 26. Present :—Boys, 10 ; girls, 13 ; total, 23.

This is a new school. On a suitable piece of Crown land the people have put up a very fair building and have suitably furnished it. All children of school age in the locality have been enrolled, and the school has been fairly well organized throughout by the teacher. The general discipline is very fair. The instruction is diligently imparted, and produces fair+ results. The general efficiency exceeds fair.

WATERLAND (N.-V.) :—General inspection, 23rd November.

Enrolled :—Boys, 18 ; girls, 18 ; total, 36. Present :—Boys, 15 ; girls, 15 ; total, 30.

The material provisions are fair. The internal organization is tolerable, a faulty arrangement of the furniture and a want of tidiness in the keeping of the schoolroom being the chief defects. The general discipline is fair. The instructional results are also fair. The range of the pupils' attainments is considerably below their average age, which is to be accounted for by the fact that for several years past educational means have existed in the locality only for about as many months.

WATTAMULLA (N.-V.) :—Regular inspection, 27th July.

Enrolled :—Boys, 11 ; girls, 10 ; total, 21. Present :—Boys, 10 ; girls, 10 ; total, 20.

Neat and commodious premises are provided, the general aspect of which is pleasing. The organization and general discipline are very fair. The attainments of the pupils are uneven, but average from tolerable to fair. As far as the teacher can be held responsible, the results are fair. There are some fifteen children of school age in the locality who are not sent to school.

WINDELLAMA

WINDELLAMA (N.-V.) :—General inspection, 22nd November.

Enrolled :—Boys, 10 ; girls, 3 ; total, 13. Present :—Boys, 8 ; girl, 1 ; total, 9.

Tolerably suitable temporary material provisions are made. The internal organization is correct. The general discipline is very fair. The instruction produces fair results. The locality is a field for a small Provisional School, but the people will not send their children.

NOTE.—The school has since been closed.

NARRUNGA :—Regular inspection, 7th February.

Enrolled :—Boys, 15 ; girls, 14 ; total, 29. Present :—Boys, 13 ; girls, 13 ; total, 26.

A small room for the teacher's use has been added to the building. Some minor defects occur in the records ; in other respects the internal organization is fair. The general discipline is fair. The instructional results are from tolerable to fair. General efficiency tolerable to fair.

III.—HALF-TIME SCHOOLS.

JELLORE :—General inspection, 27th September.

Enrolled :—Boys, 7 ; girls, 5 ; total, 12. Present :—Boys, 7 ; girls, 4 ; total, 11.

This school was established early in the year, to be worked in conjunction with Mandemar H.-T., but owing to disputes with the teacher the Mandemar people withdrew their children. The material provisions meet the requirements tolerably well. The records are in a very defective state, and the lesson programmes are of but little value. The discipline can only be regarded as moderately satisfactory. The government lacks both energy and cheerfulness. The instruction is of very incomplete course and narrow range. The teaching is unskilful. The results are indifferent. The teacher is senile, and unfit any longer to perform the duties required of him.

NOTE.—The teacher has since left the service.

LONG REACH (V.) :—Regular inspection, 28th February.

Enrolled :—Boys, 9 ; girls, 5 ; total, 14. Present :—Boys, 9 ; girls, 5 ; total, 14.

Material improvements applied for will meet existing wants. Internally the school is properly organized. Owing to the neglect of parents, the enrolment includes about only two-thirds of the available children of school age. The general discipline is fair. The instruction produces tolerable results. The general efficiency slightly exceeds tolerable.

ROCKVIEW (V.) :—Regular inspection, 28th February.

Enrolled :—Boys, 10 ; girls, 4 ; total, 14. Present :—Boys, 8 ; girls, 3 ; total, 11.

The organization is correct in the main. The general discipline is very fair. The instruction produces nearly tolerable results. The general efficiency has improved somewhat and now ranks above tolerable.

NEW BRISTOL (V.) :—Regular inspection, 7th September.

Enrolled :—Boys, 9 ; girls, 10 ; total, 19. Present :—Boys, 6 ; girls, 9 ; total, 15.

The school is correctly organized in the main. The pupils are tolerably well disciplined, and have attained to a more than moderate degree of proficiency in most of the prescribed subjects. The results as a whole exceed moderate.

NORTH HUSKISSON (N.-V.) :—Regular inspection, 8th September.

Enrolled :—Boys, 3 ; girls, 10 ; total, 13. Present :—Boys, 3 ; girls, 9 ; total, 12.

The material provisions are still defective. The internal organization is fair, and the general discipline tolerable. The results of instruction are from moderate to tolerable. The general condition and results exceed moderate.

QUIALEGO (N.-V.) :—Regular inspection, 11th April.

Enrolled :—Boy, 1 ; girls, 7 ; total, 8. Present :—Girls, 7.

There has been no change in the material provision. There are not sufficient children in the locality to maintain the prescribed minimum attendance. The internal organization may be regarded as fairly satisfactory. The general discipline also is fair. The results of the instruction are barely moderate. The school is in a moderate state of efficiency.

SPRINGFIELD (N.-V.) :—Regular inspection, 18th April.

Enrolled :—Boys, 8 ; girls, 9 ; total, 17. Present :—Boys, 6 ; girls, 6 ; total, 12.

The material provisions are fair. The internal organization and general discipline are fair also. The results of instruction are only from indifferent to moderate. General efficiency about moderate.

RICHLANDS (N.-V.) :—Regular inspection, 25th May.

Enrolled :—Boys, 7 ; girls, 9 ; total, 16. Present :—Boys, 4 ; girls, 5 ; total, 9.

The material condition remains as last reported. The internal organization is correct in the main. The general discipline is good, the instructional results fair. The general efficiency indicates very fair general progress. The school is, as far as the teacher can be held responsible, in a fair state of efficiency, but it is not appreciated as it should be by the people generally.

YELBRAITH (N.-V.) :—Regular inspection, 25th May.

Enrolled :—Boys, 6 ; girls, 5 ; total, 11. Present :—Boys, 5 ; girls, 5 ; total, 10.

The schoolhouse has been floored and repaired. Internally the school is correctly organized. The general discipline is good. The results of instruction approach fair. Considering the school population of the locality the school should be permanently maintained, but in view of the culpable indifference of some of the parents it is questionable whether it will be.

D. S. HICKS,
Inspector, Goulburn District.

GRAFTON DISTRICT.

INSPECTOR'S General Report for 1876.

At the close of 1875 there were in operation in the Grafton District 39 Public Schools and Departments, 18 Provisional, 4 Half-time, and 6 Denominational ; in all, 67 schools and departments.

During 1876 non-vested Public Schools were opened at Nambucca and Woodford Park ; and the following Provisional were converted into Public Schools, viz. :—

Ennis,	Tweed Junction,
Harwood Island,	Wardell,
Lawrence,	Wombah.

Early

Early in the year the non-vested Public School at Solferino was reduced to the rank of a Provisional, as the required average for a Public School could not be maintained.

The following Provisional Schools were also recognized in 1876, viz. :—

Blackman's Point,	Noncome,
Carangula,	Perseverance,
Circular Reach,	Point Danger,
Combury Park,	Raleigh,
Huntingdon,	Rawdon Island,
Kangaroo Creek,	Turner's Flat.

The Kangaroo Creek School had to be closed soon after its recognition for want of local support. In consequence of the continued diminution of the attendance at the Dondingalong Half-time School it was finally closed on 31st December. Sherwood, which was worked in conjunction with Dondingalong, is likely to become a Provisional School.

An application for a Public School at Tacking Point, Macleay River, is still under consideration. Applications for a Public School at Emigrant Creek, and for Provisional Schools at Long Flat, Macleay Heads, and Yamba were declined, the circumstances of each locality not warranting the establishment of such schools therein.

Except Belmore Upper, Buccarumbi, Busby's Flat, and Iluka, no centre of population in this district is now without the means of instruction, even where only small groups of children are met with. An application for a small school at Buccarumbi is at present awaiting my report.

The new vested Public School at Laurieton, on the Camden Haven River, was added to the list of schools in this district in October.

The Provisional Schools at Coaldale and Perseverance were closed in August and December respectively, the numbers in each case being under the required minimum without a prospect of an increased attendance.

For the whole year 41 Public, 13 Provisional, 4 Half-time, and 6 Denominational Schools were in operation; and for a portion of that period 6 Public and 11 Provisional.

The number of schools fully inspected is 73. The Public Schools at Ennis and Murwillumbah were closed at the time of my visit to these localities; that at Woodford Park was not in operation when I was in the neighbourhood. The Provisional Schools at Beechwood and Rawdon Island had no recognized teachers when I was on the Hastings, and the school at Turner's Flat was opened only a few weeks before the end of the year. A violent hailstorm prevented the children of the Tatham Half-time School from attending on the day of inspection.

As regards the distribution of the means of instruction, I am of opinion that in the majority of places it is adequate to the educational wants of the people. In a few localities the number of schools is in excess of the requirements; and there is a tendency on the part of applicants for Provisional Schools to attempt to increase unnecessarily the number of such schools. To account for this is difficult; but local jealousy and disputes as to sites are the main causes.

Except Bowra, Harwood Island, Lawrence, Ramornie, and South Arm, all the Public Schools inspected are vested buildings. Three are built of brick, viz. :—Grafton, Rocky Mouth, and Swan Creek; the others are wooden structures. Nearly all are in very fair repair, a considerable amount of money having been spent during the year in effecting improvements to schools and residences.

The Provisional Schools are all built of wood; they are in a passable state of repair, and tolerably well found in all requisites.

Since last inspection the Kempsey Certified Denominational Presbyterian School has undergone repairs. With this exception, the material condition of the Denominational Schools is the same as that described in last year's report.

Respecting the efficiency of the schools inspected it may be stated that 16 Public, 13 Provisional, 1 Half-time, and 4 Denominational fell below the standard; 15 Public, 7 Provisional, 1 Half-time, and 2 Denominational met its requirements; and 13 Public and 1 Half-time exceeded them. In other words, 46 per cent. of the inspected schools were below the standard; and 54 per cent. met and exceeded this test.

Last year 53 per cent. of the schools examined failed to meet the standard, and 37 per cent. succeeded in satisfying and exceeding it. Thus, although many schools were inspected under disadvantages arising from sickness and floods, there has been a decided improvement in their general efficiency.

The discipline of the majority of the 73 schools examined shows improvement. This is most perceptible in schools which were formerly conducted by careless and incompetent persons; but which have been, for the past two years, under the control of better trained and more intelligent men. The remarks made in last year's report regarding irregularity of attendance, and the order of the schools still apply, but not to the same extent. The greater number of teachers are alive to the importance of securing regular attendance in their schools; and where irregularity exists it is owing to causes beyond their control. More attention has been also devoted to improving the order of the schools; but *drill*, so useful an agent in promoting "good order," has not received that amount of care its importance demands. Even in the few schools in which it is practised, the different movements are executed in a rather loose manner; and thus, an exercise bearing so closely on good order becomes, as far as order is concerned, almost a waste of time.

Except in schools conducted by single men, and by teachers unable to give instruction in singing and drawing, the course of instruction is complete. In a few Provisional Schools object lessons and Scripture are omitted from the prescribed range of subjects.

In the undermentioned schools instruction is also given in elementary algebra and geometry, viz. :—Ballina, Public; Grafton, Public; Casino, Public; Chatsworth Island, Public; Port Macquarie, Public; Ramornie, Public; Ulmarra, Public; and Woodford Dale, Public.

In reading nearly 60 per cent. did fairly in an exercise involving the pronunciation of each word, and also an examination into the meanings of the words read. At the present time in England considerable attention seems to be given to an exercise called "Repetition," or Recitation, in the upper classes of elementary schools. This exercise, judiciously used, is highly calculated to improve the quality of the reading generally, and to develop the children's taste and imagination.

Writing is taught with very fair success, 73 per cent. having passed as good and fair. In some schools dirty books and careless writing were met with.

Arithmetic is still a weak subject; 32 per cent. did fairly in the simple rules; 24 per cent. met the standard in the compound, and 43 per cent. passed satisfactorily in the higher portions of the subject.

In grammar and geography ordinary proficiency was shown.

The answering in Scripture was above the average. Dictation receives due attention. On the whole, the results are better than those of last year, and more skill and trouble seem to have been given to the subject by the great bulk of the teachers. Only in a few schools, however, has the use of paper been introduced in the higher classes.

In object lessons and needlework fair progress was made.

Of the 46 examined in geometry 41 passed as fair and 5 as tolerable. In algebra 10 passed as good, 28 as fair, 3 as tolerable, and 5 as moderate.

Drawing and singing continue to beneficially influence all schools in which they are intelligently taught.

The local supervision is, speaking generally, the same as that described in my General Report for 1875.

The

The teachers continue to discharge their duties satisfactorily. Very few complaints were made during the year, and none of serious character.

Four teachers succeeded in raising their classification by examination; and one was promoted under article 39 of the Regulations. Although four is a small number out of so many still it proves that the habit of study has not wholly died out among them. Now that the Council acts so liberally in aiding teachers in the purchase of text books, and in the formation of libraries, it rests with the teachers themselves, especially the young men of the profession, whether they will aspire to the higher grades of classification, or continue in the third class until rendered unfit by age to study at all.

The prospects of primary education in this district give every reason for gratification. The number of schools has increased from 67 to 81 in a year; and there has been a corresponding augmentation in the number of children attending. Several new Public Schools of a superior class are in course of erection, while there is scarcely a locality, except the four noted, at present without the means of instruction. The quality of the instruction is also better, and the teachers evince a desire to improve in skill and knowledge.

Summaries of the reports on the schools inspected are transmitted herewith.

Inspector's Office, Grafton, 1st February, 1877. T. DWYER,
Inspector, Grafton District.

SUMMARY of Reports upon Public Schools inspected in 1876.

ALDAVILLA (V.) :—Regular inspection, 14th August.

Numbers enrolled :—Boys, 24; girls, 17; total, 41. Numbers present :—Boys, 18; girls, 16; total, 34.

1. The material condition and general organization are satisfactory, and the premises are neatly kept. There is an adequate supply of all needful requisites. 2. Three-fifths of the pupils are regular, and two-thirds punctual; other features of the discipline are reasonably satisfactory. 3. Except singing, the range of instruction is that prescribed. The classification is appropriate. The lesson documents are not carefully drawn up. The teaching needs to be marked by increased vigour and thoroughness. The average proficiency is tolerable in the first, and fair in the second and third classes.

ALSTONVILLE (V.) :—Regular inspection, 15th December.

Numbers enrolled :—Boys, 14; girls, 18; total, 32. Numbers present :—Boys, 8; girls, 8; total, 16.

1. A verandah is much needed; the play-ground is still unfenced, and only partially cleared. The school has a fair supply of apparatus and books, and is tolerably well organized. 2. Eleventh-sixteenths of the numbers enrolled attend regularly; all punctually. The government is firm, and the tone of the school is improved. 3. Singing and needlework are omitted from the course of instruction. No fault can be found with the classification and the occupation of the pupils. The methods are mechanical, but applied with a fair degree of zeal. The average proficiency is from tolerable to fair.

ALUMNY CREEK (V.) :—Regular inspection, 29th June.

Numbers enrolled :—Boys, 22; girls, 8; total, 30. Numbers present :—Boys, 22; girls, 8; total, 30.

1. The organization is satisfactory, and the stock of requisites ample. The premises are neatly kept. 2. Two-thirds of the pupils are regular; their punctuality is very good. Sickness reduced the attendance on the day of inspection. 3. The course of instruction is complete. A suitable classification obtains; and the instruction is fully regulated. Modern methods are practised. The average proficiency is from fair to very fair.

BALLINA (V.) :—Regular inspection, 30th November.

Numbers enrolled :—Boys, 35; girls, 27; total, 62. Numbers present :—Boys, 22; girls, 18; total, 40.

1. The premises are old, and very much injured by the white ants. The desk accommodation is inadequate. There is a good supply of apparatus and books. 2. Two-thirds of the children on roll are regular; all are punctual. The government is reasonably judicious. Matters of detail might advantageously receive more attention. 3. Except singing, all the prescribed subjects are taught. Instruction in algebra and geometry is given to the boys of the third class. The classification is appropriate, and the lesson documents are drawn up with tolerable care. The methods are of average merit. The general proficiency is fair.

BELLENGER (V.) :—General inspection, 5th September.

Numbers enrolled :—Boys, 22; girls, 19; total, 41. Numbers present :—Boys, 21; girls, 17; total, 38.

1. Important repairs have been effected since last inspection. The material condition is now satisfactory, and the school is well organized and adequately found in all requisites. 2. The pupils, for the most part, are regular and punctual. The discipline in other respects is fair. 3. The range of instruction is complete; the classification is appropriate; and the lesson documents are drawn up with fair skill. The teaching is painstaking, and produces fair results.

BELMORE RIVER (V.) :—Regular inspection, 21st August.

Numbers enrolled :—Boys, 23; girls, 15; total, 38. Numbers present :—Boys, 15; girls, 11; total, 26.

1. The general aspect of this school is pleasing. It is well found in all requisites. 2. Four-sevenths of the pupils are regular; all attend punctually. Periodically, the elder ones are kept away to work. The discipline needs to be stricter in matters of detail. 3. Except singing, all the prescribed subjects are taught. The classification is correct, and the instruction is well regulated. Modern methods are used, but the teaching lacks thoroughness. The average proficiency is tolerable.

BOWRA (N.-V.) :—General inspection, 8th September.

Numbers enrolled :—Boys, 21; girls, 12; total, 33. Numbers present :—Boys, 20; girls, 12; total, 32.

1. The building is totally unfit for school purposes. New vested premises are in course of erection. 2. Five-ninths of the numbers are regular; their punctuality is unsatisfactory. In other respects the discipline is tolerably effective. 3. All the prescribed subjects are taught, except singing. The classification is suitable, and the lesson documents are of passable merit. The methods are mechanical. The average proficiency is nearly tolerable.

CASINO (V.) :—Regular inspection, 13th and 14th November.

Numbers enrolled :—Boys, 51; girls, 40; total, 91. Numbers present :—Boys, 42; girls, 36; total, 78.

1. A verandah and a weather-shed are in course of erection. The premises are clean, and the school is amply found in educational requisites. 2. The character of the regularity and punctuality of the pupils is satisfactory. The government is judicious, and the tone of the school is healthy and improved. 3. The range of instruction is complete. Euclid has been introduced in the third class. The classification is appropriate, and the instruction is well regulated. The methods are modern and zealously applied. The average proficiency is from fair to very fair.

CHATSWORTH

CHATSWORTH ISLAND (V.) :—Regular inspection, 8th and 9th May.

Numbers enrolled :—Boys, 57 ; girls, 47 ; total, 104. Present :—Boys, 48 ; girls, 29 ; total, 77.

1. The school has undergone important repairs since last inspection. The material condition is very fair, and there is a good supply of educational requisites. 2. Seven-tenths of the pupils are regular and nine-tenths punctual. In the first class the order is not satisfactory. 3. All the prescribed subjects are taught. Instruction is also given in algebra and geometry to the boys of the third class. The pupils are properly classified, and the usual lesson guides are well drawn up. Modern methods are practised. The proficiency of each class is as follows, viz. :—First and second, fair nearly ; third, very fair.

CORAKI (V.) :—Regular inspection, 27th November.

Numbers enrolled :—Boys, 24 ; girls, 22 ; total, 46. Numbers present :—Boys, 21 ; girls, 21 ; total, 42.

1. The school is well furnished and supplied with all needful appliances. The organization is satisfactory. Improvements have been effected to the residence since last inspection. 2. Three-fourths of the numbers enrolled are regular ; all are punctual. In other respects the discipline is effective. 3. The course of instruction is that prescribed. The classification is suitable, and the lesson guides are carefully drawn up. The teaching is earnest ; the average proficiency is fair.

COWPEE (V.) :—Regular inspection, 12th May.

Numbers enrolled :—Boys, 41 ; girls, 31 ; total, 72. Numbers present :—Boys, 32 ; girls, 21 ; total, 53.

1. This school is centrally situated, very fairly organized, and adequately furnished. A portion of the play-ground is still unfenced. 2. Five-eighths of the pupils are regular and all punctual. Other features of the discipline are satisfactory. 3. Singing excepted, all the prescribed subjects are taught. The classification is appropriate ; and the instruction is neatly and skilfully regulated. The methods are modern, the average proficiency is fair.

EUROKA (V.) :—Regular inspection, 16th August.

Numbers enrolled :—Boys, 22 ; girls, 20 ; total, 42. Numbers present :—Boys, 21 ; girls, 19 ; total, 40.

1. The premises are in very fair repair and neatly kept. The organization is satisfactory, and the general aspect is pleasing. 2. Two-thirds are regular ; all attend punctually. The regularity has been injuriously affected by sickness for several months. The discipline is on the whole effective. 3. All the prescribed subjects except singing are taught. The classification is appropriate, and the instruction is well regulated. The teaching is earnest and intelligent. The average proficiency exceeds fair.

FERNMOUNT (V.) :—Regular inspection, 4th September.

Numbers enrolled :—Boys, 15 ; girls, 21 ; total, 36. Numbers present :—Boys, 11 ; girls, 12 ; total, 23.

1. The site is high and central. The premises are in fair repair and adequately found in working appliances. 2. Three-fifths of the pupils are regular, and three-fourths punctual. The discipline is in other respects tolerably effective. Except singing, all the prescribed subjects are taught. The classification is suitable ; the programmes are of passable worth. The methods are intelligent though mechanical. The average proficiency is tolerable.

GRAFTON (Primary—V.) :—Regular inspection, 22nd, 23rd, 27th, 28th June.

Numbers enrolled :—Boys, 140 ; girls, 142 ; total, 282. Numbers present :—Boys, 96 ; girls, 106 ; total, 202.

1. The accommodation is insufficient for the present attendance. The material condition is very good, and school has an ample supply of educational requisites. The records are correctly kept. 2. Five-sevenths of the numbers enrolled are regular ; nearly all are punctual. The order has improved since last inspection ; the marching and class movements still admit of improvement. 3. All the prescribed subjects are taught. In addition, instruction is given in algebra and geometry to the third and fourth classes. The pupils are appropriately classified, and the lesson documents are carefully drawn up. Modern methods are in use. The following is the proficiency of the different classes, viz. :—First, fair to very fair ; second, very fair ; upper second, very fair ; third, very fair + ; fourth, good +. This school continues to send successful candidates to the University Public Examinations.

GRAFTON (Infants—V.) :—General inspection, 20th and 22nd June.

Numbers enrolled :—Boys, 104 ; girls, 113 ; total, 217. Numbers present :—Boys, 78 ; girls, 64 ; total, 142.

1. The building at present used as an infant school is totally unfit for the purpose. New premises are in course of erection. Under existing circumstances the organization is satisfactory, and except form colour and geographical charts, the supply of apparatus is sufficient. 2. Two-thirds of the numbers enrolled are regular ; all are punctual. Other features of the discipline are satisfactory and improved. 3. The course of instruction is complete, the classification is appropriate, and the lesson guides are carefully constructed. The methods are modern, skilful, and zealously applied. The proficiency of the school may be described as follows, viz. :—First class, fair + ; second, fair ; third, fair to very fair.

GUNDURIMBA (V.) :—Regular inspection, 22nd November.

Numbers enrolled :—Boys, 17 ; girls, 19 ; total, 36. Numbers present :—Boys, 17 ; girls, 18 ; total, 35.

1. The premises are clean ; the school is well found in furniture and apparatus ; the stock of books is insufficient. The organization is fairly satisfactory ; the records are correctly kept. 2. Five-sevenths of the pupils are regular ; all attend punctually. The government is firm and mild. 3. Singing and needlework are omitted from the course of instruction. The classification and occupation are suitable. The methods are of modern cast, and applied with tolerable zeal. The average proficiency is from tolerable to fair.

HARWOOD ISLAND (N.-V.) :—Regular inspection, 4th May.

Numbers enrolled :—Boys, 21 ; girls, 27 ; total, 48. Numbers present :—Boys, 18 ; girls, 22 ; total, 40.

1. The playground is far too small. The desk accommodation is inadequate ; the records are correctly kept. 2. Two-thirds of the pupils are regular, and all are punctual. Other features of the discipline are reasonably satisfactory. 3. All the prescribed subjects are taught. The classification is appropriate, and the instruction is regulated in the usual way. The teaching is zealous, and produces fair results.

KEMPSEY WEST (V.) :—Regular inspection, 10th and 11th August.

Numbers enrolled :—Boys, 44 ; girls, 43 ; total, 87. Numbers present :—Boys, 42 ; girls, 37 ; total, 79.

1. The premises are old and unsuitable. Arrangements for the erection of a new school and a teacher's residence are complete. There is a sufficient stock of school requisites ; the records are correctly kept. 2. Five-sevenths of the pupils are regular, and nine-tenths punctual. The discipline is, on the whole, satisfactory. 3. All the prescribed subjects are taught. The classification is appropriate. In consequence of the withdrawal of the elder children there was no material for a fourth class left. The instruction is regulated in the usual way. Modern methods are practised. The average proficiency is fair.

KINCHELA

KINCHELA CREEK (V.) :—Regular inspection, 25th August.

Numbers enrolled :—Boys, 10 ; girls, 15 ; total, 25. [Numbers present :—Boys, 9 ; girls, 14 ; total, 23.

1. This is a substantial slab structure, in good repair, and well found in appliances. The present teacher has formed a neat garden in front of the residence, where, prior to his arrival, rank weeds grew. 2. Four-sevenths of the pupils are regular ; all attend punctually. The discipline, in other respects, is satisfactory. 3. All the prescribed subjects are taught ; singing by ear only. The classification is suitable ; the instruction is regulated with fair skill. The teaching is conducted with pleasing vigour ; the average proficiency is from tolerable to fair.

LAWRENCE (N.-V.) :—Regular inspection, 18th May.

Numbers enrolled :—Boys, 29 ; girls, 36 ; total, 65. Numbers present :—Boys, 22 ; girls, 29 ; total, 51.

1. The school is held in a cottage belong to Mr. S. G. Davison. The accommodation is utterly inadequate. Arrangements for the erection of new vested buildings are in progress. 2. Two-thirds of the pupils are regular, and nearly all punctual. The government is reasonably judicious. 3. Except singing, all the prescribed subjects are taught. The classification is suitable, and the instruction is regulated with fair judgment. The methods are of modern cast ; the average proficiency is fair.

LISMORE (V.) :—General inspection, 16th November.

Numbers enrolled :—Boys, 35 ; girls, 43 ; total, 78. Numbers present :—Boys, 33 ; girls, 36 ; total, 69.

1. Important alterations and repairs have been effected since last inspection. The schoolroom now affords adequate accommodation, its material condition is very good, and the supply of working appliances is adequate. 2. The attendance is marked by regularity and punctuality. The government is judicious, and the tone of the school is healthy and improved. 3. The course of instruction is that prescribed. The classification is appropriate, and the instruction is skilfully regulated. Modern methods are practised, and the teaching is marked by zeal, cheerfulness, and success. The average proficiency is very fair and improved.

NAMBUCCA (N.-V.) :—General inspection, 2nd September.

Numbers enrolled :—Boys, 14 ; girls, 20 ; total, 34. Numbers present :—Boys, 12 ; girls, 20 ; total, 32.

1. The school is held in temporary premises. The desk accommodation is insufficient, and the stock of first-class reading books is inadequate. 2. The attendance is regular and punctual. In other respects the discipline is satisfactory. 3. Except needlework, all the prescribed subjects are taught. The classification and occupation are appropriate. Considering the time this school has been in operation reasonably good progress has been made. The average proficiency exceeds tolerable.

PALMER'S ISLAND (V.) :—Regular inspection, 2nd May.

Numbers enrolled :—Boys, 29 ; girls, 19 ; total, 48. Numbers present :—Boys, 22 ; girls, 12 ; total, 34.

1. The site is healthy and pleasant. The desk accommodation is not sufficient. The records are correctly kept. 2. Three-fourths of the pupils are regular ; all attend punctually. The discipline is effective. 3. Singing excepted the course of instruction is complete. The classification is appropriate, and the lesson guides are neatly drawn up. Modern methods are practised. The average proficiency exceeds fair.

PORT MACQUARIE (V.) :—General inspection, 15th and 16th September.

Numbers enrolled :—Boys, 76 ; girls, 70 ; total, 146. Numbers present :—Boys, 47 ; girls, 43 ; total, 90.

1. The material condition is unsatisfactory, and the desk accommodation is inadequate. Additional reading books are also needed. The records are correctly kept. 2. Only three-fifths of the pupils attend regularly. All are punctual. Other features of the discipline are satisfactory and improved. 3. All the prescribed subjects are taught. In addition instruction is given in algebra and geometry to the fourth class. The classification is correct, and the programmes are carefully constructed. Intelligent methods are in use. The average proficiency may be exhibited as follows, viz. :—First, tolerable + ; second, fair + ; third, tolerable to fair ; fourth, very fair to good.

RAINBOW REACH (V.) :—Regular inspection, 24th August.

Numbers enrolled :—Boys, 22 ; girls, 27 ; total, 49. Numbers present :—Boys, 9 ; girls, 10 ; total, 19.

1. The site is neither pleasant nor healthy. The premises are in a clean condition. There is a sufficient supply of all requisites. The records are correctly kept. 2. Three-fifths of the pupils are regular, and three-fourths punctual. The discipline in other matters is tolerable. 3. All the prescribed subjects are taught. The classification and occupation are tolerably appropriate. The methods are mechanical. The teaching is painstaking and improved. The average proficiency is from tolerable to fair.

ROCKY MOUTH (V.) :—Regular inspection, 1st May.

Numbers enrolled :—Boys, 41 ; girls, 34 ; total, 75. Numbers present :—Boys, 22 ; girls, 17 ; total, 39.

1. The position, material condition, and organization are satisfactory, and the records are correct. 2. Two-thirds are regular and nine-tenths punctual. The order, though improved, is still the weakest feature of the discipline. 3. Except singing, all the prescribed subjects are taught. The classification is suitable, and the instruction is neatly regulated. The methods are reasonably intelligent and zealously applied. The average proficiency is nearly fair.

RAMORNIE (N.-V.) :—Regular inspection, 16th May.

Numbers enrolled :—Boys, 30 ; girls, 35 ; total, 65. Numbers present :—Boys, 16 ; girls, 27 ; total, 43.

1. The supply of furniture is inadequate. The records are correctly kept. 2. About two-thirds of the pupils are regular. Nearly all are punctual. The discipline, in other respects, shows improvement since last inspection. 3. All the subjects of instruction are taught ; singing by ear only. The classification is suitable, and the usual lesson guides exist. Modern methods are practised. The average proficiency is fair +.

SEVEN OAKS (V.) :—Regular inspection, 22nd August.

Numbers enrolled :—Boys, 34 ; girls, 21 ; total, 55. Numbers present :—Boys, 21 ; girls, 15 ; total, 36.

1. The building is old and in disrepair. A new one is in course of erection. The school is adequately found in all appliances. 2. The attendance is regular, only when farming operations interfere. Nearly all are punctual. 3. The course of instruction embraces all the subjects in the standard. The classification and occupation are tolerably appropriate. Modern methods are used ; the teaching is wanting in penetrativeness. The average proficiency is from tolerable to fair.

SOUTH ARM (N.-V.) :—General inspection, 31st May.

Numbers enrolled :—Boys, 34 ; girls, 20 ; total, 54. Numbers present :—Boys, 12 ; girls, 6 ; total, 18.

1. The premises are old and not roomy enough. There is not a good supply of requisites ; the records are correctly kept. 2. The regularity and punctuality are satisfactory. In other respects the discipline is fair. 3. All the prescribed subjects are taught. The classification is correct, and the instruction is regulated with fair skill. The methods are suitable, and applied with tolerable zeal ; the average proficiency is nearly fair.

SOUTHGATE

SOUTHGATE (V.) :—Regular inspection, 25th May.

Numbers enrolled :—Boys, 39 ; girls, 35 ; total, 74. Numbers present :—Boys, 16 ; girls, 18 ; total, 34.

1. The site is too low, and the desk accommodation is insufficient. Otherwise the school is well equipped. 2. Three-fourths of the pupils are regular, and all attend punctually. The government is judicious and the tone of the school healthy. 3. Except singing, the course of instruction is of full range. The classification is appropriate, and the usual guides to instruction exist. The methods, though somewhat old-fashioned, are effective, being applied with zeal. The average proficiency is from fair to very fair.

SMITH'S FLAT (V.) :—Regular inspection, 3rd November.

Numbers enrolled :—Boys, 28 ; girls, 25 ; total, 53. Numbers present :—Boys, 24 ; girls, 24 ; total, 48.

1. The school premises and grounds are kept with great care and neatness. There is a full supply of apparatus and books. The organization is very satisfactory. 2. Two-thirds of the pupils are regular and three-fourths punctual. The government is judicious, and the tone of the school is healthy. 3. All the prescribed subjects are taught. The classification is suitable, and the lesson guides are constructed with skill and unusual neatness. The methods are modern and diligently applied ; the average proficiency is fair to very fair. In point of neatness and of attention to detail this school is the first in the district.

STRONTIAN PARK (V.) :—General inspection, 14th June.

Numbers enrolled :—Boys, 19 ; girls, 30 ; total, 49. Numbers present :—Boys, 12 ; girls, 24 ; total, 36.

1. The premises are new, and the organization is satisfactory. Except maps, the school is well found in all requisites ; the records are correctly kept. 2. Two-thirds of the pupils are regular and attend punctually. The government is vigilant. 3. The range of instruction is complete ; the pupils are correctly classified ; the lesson documents are of fair worth. The methods are of modern cast ; the average proficiency is fair+.

SUMMERLAND (V.) :—Regular inspection, 23rd August.

Numbers enrolled :—Boys, 21 ; girls, 31 ; total, 52. Numbers present :—Boys, 14 ; girls, 22 ; total, 36.

1. The school and residence have been repaired since last inspection. There is an adequate supply of furniture and appliances ; the records are correctly kept. 2. The regularity of attendance is unsatisfactory, but nearly all are punctual. There is too much noise made in the class movements and in the distribution of the materials. 3. All the subjects prescribed are taught. The classification and occupation are tolerably suitable. The methods are more intelligent than formerly ; but the teaching is wanting in thoroughness. The average proficiency is tolerable+.

SWAN CREEK (V.) :—Regular inspection, 13th June.

Numbers enrolled :—Boys, 42 ; girls, 26 ; total, 68. Numbers present :—Boys, 29 ; girls, 16 ; total, 45.

1. The school is well organized, and fully equipped in all respects. The premises are neatly kept ; the records are correct. 2. The pupils are regular and punctual ; other features of the discipline are satisfactory. The government is judicious. 3. The course of instruction is that prescribed. The classification is appropriate, and the lesson documents are drawn up with skill and neatness. The methods are modern, and the teaching is zealously conducted. The average proficiency is fair to very fair.

TALOUMBI (V.) :—Regular inspection, 3rd May.

Numbers enrolled :—Boys, 31 ; girls, 24 ; total, 55. Numbers present :—Boys, 26 ; girls, 24 ; total, 50.

1. The school has a fair supply of appliances, and is well organized. The records are correctly kept. 2. Three-fourths of the pupils attend regularly and punctually. The government is strict but fitful ; the tone is tolerable and improved. 3. The course of instruction is that prescribed. The classification is suitable, and the occupation of the pupils is well regulated. The methods are of an elementary character ; the teaching is energetic, but wanting in effectiveness ; the average proficiency is tolerable+.

TIRANNIA CREEK (V.) :—General inspection, 20th November.

Numbers enrolled :—Boys, 23 ; girls, 21 ; total, 44. Numbers present :—Boys, 20 ; girls, 17 ; total, 37.

1. This is a new school ; the premises are well looked after by the present teacher. His residence is, however, too small. Additional desks are also needed. 2. Two-thirds of the numbers are regular, and all punctual. The discipline in other respects is tolerably satisfactory. 3. The course of instruction is that prescribed. The classification is suitable ; and the lesson documents are carefully compiled. The methods are mechanical ; but the teaching is earnest and tolerably effective. The average proficiency approaches tolerable.

TWEED JUNCTION (N.-V.) :—General inspection, 11th December.

Numbers enrolled :—Boys, 10 ; girls, 12 ; total, 22. Numbers present :—Boys, 6 ; girls, 3 ; total, 9.

1. The premises are old and unsuitable, and the supply of furniture, apparatus, and books is inadequate ; the records are correct. New vested buildings are about being erected. 2. Three-fourths are punctual and regular in attendance. Sickness—scarlet fever—reduced the numbers on the day of inspection. The government is lax. 3. All the prescribed subjects, except singing and drawing, are taught. The pupils are properly classified ; the lesson documents are of moderate worth, which is also the measure of the methods in use. The average proficiency exceeds moderate.

ULMARRA (V.) :—Regular inspection, 6th June.

Numbers enrolled :—Boys, 62 ; girls, 53 ; total, 115. Numbers present :—Boys, 30 ; girls, 20 ; total, 50.

1. The premises are old, unsuitable, and badly ventilated. The school is well found in all requisites, and is well organized. The records are correct. 2. Six-elevenths of the pupils are regular, and all punctual. In other respects the discipline is satisfactory and improved. 3. All the prescribed subjects are taught, as also algebra and geometry to the fourth class. The classification is suitable, and the occupation well regulated. Intelligent and effective methods are in use. The following is the proficiency of the classes, viz. :—First and second, fair to very fair ; third, very fair ; fourth, very fair to good.

WARDELL (V.) :—General inspection, 29th November.

Numbers enrolled :—Boys, 23 ; girls, 13 ; total, 36. Numbers present :—Boys, 16 ; girls, 9 ; total, 25.

1. The school is in very bad repair, ill furnished, and insufficiently found in requisites. The records are correct. New vested buildings are about being erected. 2. The character of the attendance is unsatisfactory, both as regards regularity and punctuality. The government is lax. 3. Drawing, needlework, and singing are omitted from the course of instruction. The classification and occupation are moderately suitable. The teacher is untrained and has little idea of method, but he works honestly ; the average proficiency is from moderate to tolerable.

WOMBARR

WOMBAH (V.) :—General inspection, 9th May.

Numbers enrolled :—Boys, 18 ; girls, 14 ; total, 32. Numbers present :—Boys, 16 ; girls, 12 ; total, 28.

1. The supply of maps is inadequate ; otherwise, the school has a fair stock of appliances. The records are correct. 2. Two-thirds are regular ; nearly all are punctual. The government is feeble ; and the majority of the pupils are disorderly, inattentive, and idle. 3. Except singing and needlework, all the prescribed subjects are taught. The classification is tolerably suitable. The methods are elementary and only moderately effective ; the average proficiency is from moderate to tolerable.

WOODBURN (V.) :—General inspection, 28th November.

Numbers enrolled :—Boys, 17 ; girls, 15 ; total, 32. Numbers present :—Boys, 15 ; girls, 13 ; total, 28.

1. The school is well furnished and supplied with apparatus and books ; the records are correctly kept. 2. Three-fourths of the pupils are regular and all punctual ; the government is rather lax. 3. All the prescribed subjects are taught. The pupils are suitably classified, and the instruction is reasonably well regulated. The methods are mechanical ; the average proficiency is tolerable.

WOODFORD DALE (V.) :—Regular inspection, 17th May.

Numbers enrolled :—Boys, 17 ; girls, 23 ; total, 40. Numbers present :—Boys, 14 ; girls, 22 ; total, 36.

1. The school is well organized, and fully supplied with all needful requisites. The records are correct. 2. Three-fourths of the pupils are regular, and all punctual. The government is judicious, and the tone of the school is healthy. 3. All the prescribed subjects are taught. The classification is appropriate, and the instruction is carefully regulated. The teaching is painstaking and fairly effective. The average proficiency is fair +.

WOODFORD LEIGH (V.) :—Regular inspection, 16th May.

Numbers enrolled :—Boys, 30 ; girls, 35 ; total, 65. Numbers present :—Boys, 16 ; girls, 27 ; total, 43.

1. The supply of furniture is inadequate ; otherwise the organization is fairly satisfactory. The records are correctly kept. 2. Two-thirds of the numbers are regular, and a larger proportion punctual. The discipline has improved since last inspection, and the tone of the school is healthy. 3. The course of instruction is that prescribed. A suitable classification obtains, and the school-work is regulated by the usual guides. The methods are intelligent ; the average proficiency is fair +.

WYRALAH (V.) :—General inspection, 23rd November.

Numbers enrolled :—Boys, 24 ; girls, 26 ; total, 50. Numbers present :—Boys, 16 ; girls, 26 ; total, 42.

1. The school has a good supply of working materials, and is well organized. The records are correctly kept. 2. Five-sevenths of the pupils are regular, and all punctual. The government is judicious, and the tone of the school is healthy and improved. 3. All the prescribed subjects are taught. The study of algebra has also been recently introduced. The classification and occupation are suitable. The methods are modern, and the teaching is zealously conducted. The average proficiency is fair and promising.

PROVISIONAL SCHOOLS.

BROMBIN :—Regular inspection, 21st September.

Numbers enrolled :—Boys, 10 ; girls, 17 ; total, 27. Numbers present :—Boys, 9 ; girls, 17 ; total, 26.

1. Since last inspection out-offices have been erected. There is a sufficient supply of appliances. The records are correctly kept. 2. Five-sevenths are regular ; all punctual. 3. Needlework, drawing, and singing are omitted from the course of instruction. The classification and occupation are appropriate, the methods are mechanical ; the average proficiency exceeds tolerable.

CAMDEN HAVEN :—Regular inspection, 18th September.

Numbers enrolled :—Boys, 10 ; girls, 17 ; total, 27. Numbers present :—Boys, 2 ; girls, 9 ; total, 11.

1. The building is a rough slab structure with a bark roof. It is tolerably well found in appliances. 2. Five-eighths are regular ; all punctual. The small attendance on the day of inspection was owing to the fact that a portion of the roof had been blown off by a heavy gale on 16th September. The government is lax. 3. Except drawing and singing, all the usual subjects are taught. The classification is passable ; the methods are mechanical and feeble ; the average proficiency is moderate.

CASINO SOUTH (V.) :—Regular inspection, 14th November.

Numbers enrolled :—Boys, 17 ; girls, 14 ; total, 31. Numbers present :—Boys, 16 ; girls, 7 ; total, 23.

1. The premises are tolerably suitable. Except books, there is a sufficient supply of requisites. 2. The character of the attendance is satisfactory. The government, though improved, is still rather lax. 3. Needlework excepted, all the prescribed subjects are taught. The classification is appropriate, and the instruction is regulated with tolerable skill. Mechanical methods are used ; but the teaching is painstaking. The average proficiency is tolerable.

CIRCULAR REACH :—General inspection, 28th November.

Numbers enrolled :—Boys, 10 ; girls, 20 ; total, 30. Numbers present :—Boys, 9 ; girls, 15 ; total, 24.

The building is constructed of sawn pine ; it is tolerably suitable. The stock of furniture and appliances is adequate. The records are correct. 2. The pupils are regular and punctual. Other features of the discipline are unsatisfactory. 3. Drawing and singing excepted, all the prescribed subjects are taught. The classification and occupation are moderately suitable ; the methods are very mechanical ; the average proficiency is barely moderate.

CLIFDEN :—General inspection, 2nd November.

Numbers enrolled :—Boys, 11 ; girls, 11 ; total, 22. Present :—Boys, 10 ; girls, 7 ; total, 17.

1. The schoolroom is clean and tidy and well supplied with suitable furniture. The records are correct. 2. Four-fifths are regular ; all attend punctually. The government is mild ; the tone of the school is promising. 3. Except drawing and needlework, all the prescribed subjects are taught. The classification is suitable, and the instruction is neatly regulated. The teaching is zealous and reasonably successful ; the average proficiency is tolerable +.

COLDSTREAM (Lower) :—Regular inspection, 30th May.

Numbers enrolled :—Boys, 16 ; girls, 16 ; total, 32. Present :—Boys, 14 ; girls, 14 ; total, 28.

1. New water-closets have been erected since last inspection ; the school is tolerably well furnished and supplied with apparatus and books. 2. Two-thirds are regular and punctual. The government is reasonably suitable. 3. Singing, drawing, and needlework are omitted from the course of instruction. The work of the school is conducted in an appropriate manner ; the average proficiency is from tolerable to fair.

COLDSTREAM

COLDSTREAM (Upper) :—Regular inspection, 8th June.

Numbers enrolled :—Boys, 11 ; girls, 19 ; total, 30. Present :—Boys, 9 ; girls, 16 ; total, 25.

1. The desk accommodation is barely adequate ; otherwise the school is well found in all requisites. 2. The attendance is marked by regularity and punctuality. The government is tolerably judicious. 3. Except singing, all the prescribed subjects are taught. The classification is appropriate. The methods are modern ; the average proficiency is tolerable+.

CORNBURY PARK :—General inspection, 26th September.

Numbers enrolled :—Boys, 12 ; girls, 11 ; total, 23. Present :—Boys, 10 ; girls, 9 ; total, 19.

1. The building is unsuitable, and badly furnished. The records are not correctly kept. 2. The attendance is regular and punctual. The discipline is not satisfactory. 3. Except singing and needlework all the prescribed subjects are taught. The classification and occupation are passable. The methods are only moderately effective.

HUNTINGDON :—General inspection, 21st September.

Numbers enrolled :—Boys, 10 ; girls, 13 ; total, 23. Present :—Boys, 6 ; girls, 13 ; total, 19.

1. The premises are tolerably suitable ; the records are correct. 2. Seven-elevenths are regular and all punctual. The government is feeble. 3. Needlework is omitted from the course of instruction. The classification is suitable ; the programmes are of moderate worth. The teaching is wanting in vigour ; the average proficiency exceeds moderate.

NOUCOME :—General inspection, 27th November.

Numbers enrolled :—Boys, 18 ; girls, 14 ; total, 32. Present :—Boys, 9 ; girls, 11 ; total, 20.

1. The schoolroom is a substantial weatherboard building. There is no suitable furniture ; and the supply of requisites is insufficient. 2. Two-thirds are regular ; all punctual. The government is mild. 3. Except drawing, all the prescribed subjects are taught. The classification is suitable. There are no lesson documents. The methods are elementary. The average proficiency is from moderate to tolerable.

PERSEVERANCE :—General inspection, 7th November.

Numbers enrolled :—Boys, 5 ; girls, 5 ; total, 10. Present :—Boys, 5 ; girls, 2 ; total, 7.

1. The building is unsuitable, in bad repair, and almost destitute of furniture and appliances. 2. All are regular and punctual. The government is lax. 3. Singing, drawing, and needlework are omitted from the course of instruction. The classification is appropriate ; the instruction is badly regulated. The methods are mechanical ; the average proficiency is moderate.

POINT DANGER :—General inspection, 12th December.

Numbers enrolled :—Boys, 7 ; girls, 6 ; total, 13. Present :—Boys, 5 ; girls, 6 ; total, 11.

1. The building is too narrow to admit of a proper arrangement of the furniture. There are no out offices. 2. The discipline is lax. 3. The classification is not judicious. There are no programmes. The methods are tolerably intelligent ; the average proficiency exceeds moderate.

RALEIGH :—General inspection, 4th September.

Numbers enrolled :—Boys, 13 ; girls, 8 ; total, 21. Numbers present :—Boys, 10 ; girls, 7 ; total, 17.

1. There are no out-offices, and the desk accommodation is inadequate. 2. The attendance is regular and punctual. The government is mild. 3. Except singing and drawing, all the prescribed subjects are taught. The classification is suitable. There are no lesson documents. The methods are elementary, but intelligent ; the average proficiency is tolerable.

SOLFERINO :—General inspection, 6th November.

Numbers enrolled :—Boys, 9 ; girls, 9 ; total, 18. Numbers present :—Boys, 7 ; girls, 7 ; total, 14.

1. The premises are tolerably suitable, and sufficiently well found in furniture and apparatus. The organization is unsatisfactory. 2. Three-fourths are regular ; all punctual. In other respects, the discipline is unsatisfactory. 3. Singing, drawing, needlework, and object lessons are omitted from the course of instruction. The classification is suitable. There are no programmes. The methods are of small worth. The average proficiency is moderate.

TUCKI-TUCKI :—General inspection, 23rd November.

Numbers enrolled :—Boys, 7 ; girls, 12 ; total, 19. Numbers present :—Boys, 7 ; girls, 12 ; total, 19.

1. New flooring is needed. There is a sufficient stock of all requisites. 2. Three-fourths of the pupils are regular ; their punctuality is unsatisfactory. In other respects the discipline is satisfactory. 3. All the prescribed subjects are taught. The classification and occupation are suitable. The teaching is earnest. The pupils are mentally active. Their average proficiency is from tolerable to fair.

UNSTALL :—General inspection, 15th November.

Numbers enrolled :—Boys, 9 ; girls, 20 ; total, 29. Numbers present :—Boys, 8 ; girls, 20 ; total, 28.

1. The school is sufficiently found in all requisites. The records are correct. 2. Two-thirds are regular ; all punctual. The government is judicious. 3. Singing and needlework are omitted from the course of instruction. The classification is appropriate. The programmes are of passable worth. The methods are zealously applied. The average proficiency is from tolerable to fair.

TYNE DALE :—Regular inspection, 1st June.

Numbers enrolled :—Boys, 11 ; girls, 15 ; total, 26. Numbers present :—Boys, 5 ; girls, 9 ; total, 14.

1. New forms have been procured since last inspection. The supply of books and forms is barely adequate. 2. Two-thirds attend regularly, and all punctually. The order is not satisfactory. 3. Singing and needlework are omitted from the course of instruction. The classification is tolerably appropriate. There are no lesson documents. The methods are not modern, but the teaching seems painstaking. The average proficiency ranges from moderate to tolerable.

WAUCHOPE :—Regular inspection, 20th September.

Numbers enrolled :—Boys, 16 ; girls, 17 ; total, 33. Numbers present :—Boys, 14 ; girls, 16 ; total, 30.

1. There is an ample supply of all needful appliances. The records are correctly kept. 2. The character of the attendance is satisfactory. The tone of the school is tolerable and improved. 3. All subjects except drawing and singing are taught. The classification is tolerable. Elementary methods are practised. The average proficiency exceeds tolerable.

WOODLAWN :—

WOODLAWN :—General inspection, 21st November.

Numbers enrolled :—Boys, 20 ; girls, 13 ; total, 33. Numbers present :—Boys, 18 ; girls, 11 ; total, 29

1. The arrangement of the furniture is unsuitable. The supply of apparatus is inadequate. The records are correctly kept. 2. Five-sevenths are regular ; all punctual. The government is lax. 3. Drawing, singing, and needlework are omitted from the course of instruction. The classification and occupation are tolerably suitable. The methods are elementary ; the proficiency is moderate+.

WOLLONGBAR :—Regular inspection, 15th December.

Numbers enrolled :—Boys, 9 ; girls, 8 ; total, 17. Numbers present :—Boys, 8 ; girls, 7 ; total, 15.

1. The desk accommodation is insufficient. The organization is not satisfactory ; the records are correct. 2. The children are all regular and punctual. The government is mild. 3. All the prescribed subjects are taught except drawing and singing. The classification and occupation are moderately suitable. The methods are mechanical. The average proficiency is moderate.

HALF-TIME SCHOOLS.

DONDINGALLONG :—Regular inspection, 17th August.

Numbers enrolled :—Boys, 5 ; girls, 3 ; total, 8. Numbers present :—Boys, 5 ; girls, 3 ; total, 8.

1. The premises are well found in all requisites of an educational kind ; the records are correctly kept. 2. Nearly all attend regularly and punctually. The discipline is effective. 3. Except singing all the prescribed subjects are taught. The classification and occupation are appropriate. The methods are intelligent and modern, and produce fair results.

PELICAN CREEK :—Regular inspection, 24th November.

Numbers enrolled :—Boys, 4 ; girls, 9 ; total, 13. Numbers present :—Boys, 4 ; girls, 9 ; total, 13.

1. The schoolroom is a slab structure, badly furnished ; the organization is unsatisfactory ; the records are correct. 2. Nine-thirteenths are regular, all punctual ; the government is lax. 3. Singing, object lessons, and needlework are omitted from the course of instruction. The classification is appropriate ; the lesson documents are of moderate worth. The methods are elementary ; the teaching is painstaking ; the average proficiency is about moderate.

SHERWOOD (V.) :—Regular inspection, 17th August.

Numbers enrolled :—Boys, 5 ; girls, 7 ; total, 12. Numbers present :—Boys, 4 ; girls, 6 ; total, 10.

1. The material condition is fair ; the supply of furniture and apparatus is ample ; the records are correctly kept. 2. The majority of the children are regular and punctual. In other respects the discipline is very satisfactory. 3. This school is worked in conjunction with Dondingallong. The general proficiency approaches very fair.

MAITLAND DISTRICT.

INSPECTOR'S General Report upon Schools inspected in 1876.

THE year 1876 has been one of gratifying activity both in furthering the establishment of schools throughout the district, and in improving the material condition of existing schools, Public and Denominational ; and the actual and provisional extension of the means of education is at present of such a character as to warrant the expectation, that in a year or two the adequacy of the means of education will be fully met. Early in the year was adopted the self-suggested plan of inserting in the *Maitland Mercury* a temporary advertisement, inviting persons interested in the promotion of education to furnish me with information as to where children of school age could be collected in groups of ten, fifteen, or twenty-five, such numbers being the fixed minimum rates of average attendance for Half-time, Provisional, and Public Schools. The plan has turned out very successful, and has had the wholesome effect of stimulating the public desire for schools, of eliciting information about remote centres of population, and of impressing upon bush people that the educational interests of their children are not overlooked. In addition to this, close inquiries have been instituted as to the educational requirements of the few remaining places from which, as was expected, applications for schools have not been received. During the year thirty-six applications have been under consideration, six of which were received late last year. Of these one has temporarily lapsed, because of local inertness ; four have been declined as being unnecessary and inimical to the interests of neighbouring schools ; ten have been favourably entertained ; eleven have been consummated in the establishment of the required schools ; and the rest are awaiting further inquiry. Most of the applications have been made for small schools, chiefly Provisional ; and they have not unfrequently been based upon the assumption that the schools would be built, furnished, and officered without expense to the promoters ; for often among bush people, all Government schools are regarded as alike, except in point of attendance, and are looked upon in the same light as Government roads and post offices, as things to be provided and maintained at the Government expense. The distinction between the conditions upon which Public Schools and Provisional Schools are respectively established is unknown to many such people ; and when it is explained to them, they not unfrequently denounce it as unjust or illiberal, declare themselves unable to provide the necessary school buildings and furniture, and for a time sink into a hopeless state of educational lethargy, unless either some liberal and well-to-do neighbour proffers to satisfy the requirements, or some active clergyman succeeds in getting a building erected both for church and school purposes, frequently without regard to the personal needs of the teacher as to residence. Hence the difficulties and delays in establishing small schools and of providing them with suitable teachers ; and hence, also, the fact that one is not unfrequently impelled in the interests of hapless ignorant children to pass, as suitable, buildings and furniture that under more favourable circumstances would be discarded as inferior and unsuitable. It is to be hoped, therefore, that where these small schools are located in permanently settled agricultural districts at least, they will soon be placed on a better footing in regard to school buildings and furniture ; for, small as they are, they are capable of effecting a great amount of good both moral and intellectual.

The following tables present a view of what has been done and is still to be done in the way of school extension.

I. Schools brought into operation during the year :—

Muswellbrook P.	Lower Goorangoola Prov.
Scone P.	Moonan Flat Prov.
Ballington Prov.	Stony Creek H.-T.
Belltrees Prov.	Tanilbah H.-T.
Eccleston Prov.	Ravensworth H.-T.
Watagon Prov.	Chilcot Plain H.-T.

II.

II. Applications granted but not consummated for schools at :—

Giant's Creek P.	Carrow Creek Prov.
Owen's Gap Prov.	Broke P.
Sandy Creek Prov.	Mount View Prov.
Glendon Brook P.	Rainbow Creek P.
Eldersleigh P.	Big Creek H.-T.
Woollarubba H.T.	

III. Applications received but not finally considered for schools at :—

Glen Dhu H.-T.	Martin's Creek Prov.
Back Creek H.-T.	Bulga P.
Quarry Reserve Prov.	Mount Shamrock Prov.
Murray's Run Prov.	Dalwood Prov.
Stockyard Creek Prov.	Iona P.

IV. Applications declined :—

Lower Big Creek Prov.	Worondi Prov.
Hall's Creek Prov.	Halton Prov.

V. Applications temporarily withdrawn or suspended :—

Rock Hill Prov.

VI. Places from which applications are expected to be received in 1877 :—

Box Tree.	St. Clair.
Elliston.	Upper Falbrook.
Limestone Creek.	Upper Dartbrook.
Bowman's Creek.	Oakhampton.
Dann's Gully.	

The number of school departments in operation at the close of last year was 88, viz. :—Public, 34; Provisional, 28; Half-time, 6; Church of England, 10; Roman Catholic, 10. Since then eleven new schools have been added to the list; the Scone C.E., the Phoenix Park, R.C., and the Stockyard Provisional Schools have been closed; the Half-time School at Dairy Arm has lapsed, and that associated with it has been changed to a Provisional School; and the late Provisional School at Falbrook has regained its rank as a Public School. During the year, ninety-six (96) school departments have been in operation, a few of which have been closed short periods for want of teachers; and the number now (30th December) existing is ninety-five (95), viz. :—Public, 37; Provisional, 32; Half-time, 8; Church of England, 9; and Roman Catholic, 9. All have been visited and all but five fully inspected; one of which, Scone C.E., at the time of visitation had lapsed in favour of Scone P., and the other four had been temporarily closed. In the eleven cases of newly established schools, the inspection has been that technically termed general, which implies a fuller inquiry into the condition of a school than that known as regular, to which the rest have been submitted. Whenever practicable, also, schools have received incidental inspections; and, compared with other years, this year has afforded fewer opportunities for such inspections in consequence of the unusual increase in the number of applications for new schools and in the labour attached to them. The examinations of the pupils have been of an individual and class character in all the prescribed subjects of instruction, but more particularly individual in reading, writing, dictation, arithmetic, composition, and drawing; and in measuring the results by the usual high standard of efficiency, due regard has been paid not only to the general proficiency of the pupils in the subjects taught them, but also to the attention, personal effort, and mental culture they evinced in their examinations. It should be noted also in contrast to the system of payments by results adopted in England and elsewhere, that in forming an estimate of the efficiency of a school due regard has been paid to the tone and quality of its disciplinary condition as far as the teacher can be held responsible for it; for it must ever be recognized and enforced as a fundamental principle of primary education, that to cultivate the minds of children to the neglect of their moral capacities is both unwise and unscientific.

As previously observed, the material condition of the schools, chiefly public, has been greatly improved during the year. The Public Schools of Scone and Singleton, and the Church of England school of Muswellbrook have been provided with superior brick buildings; similar ones are in course of erection for the Public Schools of Broke and Murrurundi, and provision has been made for the erection of Public School buildings at Aberdeen, Bishop's Bridge, Gosforth, Cessnock, Greta, and Paterson, and of an infant school and teacher's residence at West Maitland. The Public School of Morpeth has been very much improved by the erection of infant school, teacher's residence, weathersheds, lavatories, and out-offices; that of Ellalong has been rebuilt, and those of Aberglasslyn, Branxton, Dunmore, Laguna, Falbrook, Fishery Creek, Millfield, Roughit, and Wallalong, have received additions and repairs of more or less importance. The material condition of Provisional, Half-Time, and Denominational Schools has changed but little, except in four or five instances for the better. In consequence also of the difficulties of securing suitable school sites, the erection of the much needed school premises at Lochinvar, Paterson, and Bishop's Bridge, have been delayed greatly to the disadvantage of both teachers and pupils. With very few exceptions, the school houses of all classes afford sufficient accommodation for all the children of school age living within two or three miles of them, but the ventilation of many of them is imperfect. Most of the Public Schools and Denominational Schools also are reasonably well found in appropriate furniture, but in Provisional and Half-time Schools the supply is limited to a few desks, forms, and hat-pegs, the presence of such requisites as clock, bookpress, chair and table, being of somewhat rare occurrence. Again, as regards being supplied with books, maps, etc., in sufficient quantities to meet their respective requirements, the schools in general are pretty well to do; but as to their exterior appointments, their condition is not as good as it should be in the possession of such requisites as weathersheds, water tanks, lavatories, bells, &c., in respect to which particulars, however, Public Schools are better off and improving. What appears to me, moreover, a marked imperfection in the material organization of our schools, is the entire absence of even the simplest forms of gymnasia, which are of undoubted utility in developing in boys courage, bodily strength, and agility, and the consequently national importance of which is duly recognized by our Victorian brethren; for they not only make special grants to their teachers for instructing scholars in drill and gymnastics, but also provide for the physical training of the teachers themselves.

Summary as to the material condition of the schools :—

Public Schools :	very fair and steadily improving.
Provisional } :	reasonably tolerable, but little improved.
Half-time }	
Denominational :	very fair.

With regard to the character of the attendance, which still continues to be the least satisfactory feature of the schools, may be educed the following facts, in the collection of which not a little pains has been taken :—

I. (a) Numbers enrolled on the days of inspection	5,415
(b) Average quarterly enrolment	5,500
II. (a) Numbers presented for examination	3,879
(b) Average weekly attendances.....	3,677

III.

III. Numbers within reach of existing schools, but not enrolled therein.....	1,813
IV. Numbers living beyond the reach of existing schools	850
V. Numbers presented for examination :—	
1st class	1,742
2nd class.....	1,191
3rd and 4th classes	946
VI. Numbers presented for examination in 1st and 2nd classes, the ages of whom exceeded 9 years	751
VII. Do. do. 3rd and 4th classes, do. 12 years	329

These facts speak for themselves; and they become the more significant when considered in relation to the fact that the majority of the children do not come up to the standards' requirements in their examinations—requirements that can be met by teachers of ordinary tact, vigour, industry, and intelligence, when they labour under favourable circumstances of punctuality and regularity of attendance. As to the punctuality of attendance, I cannot write as authoritatively as I could wish; for it is not always that one can reach outlying schools in time to see the scholars assemble; but to the best of my knowledge, it is in most of the schools reasonably satisfactory, those of West Maitland being somewhat conspicuous among the exceptional cases. The irregularity of attendance, however, is an obvious fact, the evil consequences of which both to society and to the individual it is not difficult to forecast. It is equally plain also, that a large percentage of children in the district either receive no instruction at all, or so little indeed, that it will prove of little permanent and practical good to its recipients in after life. Truancy, that evidence of juvenile selfwill and parental weakness or negligence, is beginning to show its head in our midst, and, if not met timely and resolutely, may in the course of years and by the force of bad example become, comparatively speaking, as rampant as it is in New York. Again, it is clear that but a small percentage (6) of children remain at school after they become twelve years of age, in which particular we compare very unfavourably with England, where the like percentage, calculated for a period of nineteen years, is 11.6. But what is of greater significance than this contrast between New South Wales and England is that 94 out of every 100 children enrolled are withdrawn from school at the dawn of that period of school life (twelve to sixteen years), when as every experienced teacher knows, they begin to feel their mental powers, to turn them to good account, and to reflect upon the advantages of school instruction in regard to future social relations. Now, as far as I have observed and acquired information on the matter, the facts I have given in regard to the attendance are traceable partly to sickness and to poverty, which is here and there accompanied with pride, in great measure to parental negligence and weakness, and in the greatest degree both to the demands for juvenile labour caused by the frequent difficulty of obtaining that of adults; and also to the difference of opinion the working classes entertain as to when their children should begin to earn their living or to assist their parents in the house, the shop, the dairy, or the field.

In reporting upon the disciplinary condition of the schools it is expedient to make the preliminary remark, that one-third of them are in the hands of untrained teachers, very few of whom have made a study of the principles of education, or have acquired an insight into our Public School system beyond what they have obtained through the medium of an Inspector, or of printed instructional documents, in the application of the knowledge derived wherefrom some of them have evinced creditable common sense and industry. The disciplinary condition of the schools in general still continues to be their best feature, and is moreover, steadily improving both in tone and efficiency. In two-thirds of them it meets or exceeds the standard requirements; in twenty-five cases it is as good as can be expected under existing circumstances; and in the rest it is either feeble and inferior, or below what is expected of the teachers in terms of their grades of classification. In most of them the government is of a genial and intelligent character; but in comparatively few cases is it as vigorous, stimulating, and thoroughly exacting in regard to all particulars of school work as it ought to be. Not a small amount of moral inertia has still to be overcome, especially in small country schools, and also in some of the larger schools—town and country—of higher pretensions. It is not sufficient to maintain quietness, order, and cleanliness of appearances, or that the pupils should appear to be docile and subdued in demeanour, characteristics of rather a passive nature. There is yet much eminently useful work to be effected by most of the teachers as regards training their pupils to acquire effectually the habit of manifesting in their actions personal effort, promptitude, precision, and force of character; for the success of such pupils will depend more upon the exercise of these moral attributes, combined with honesty of purpose, than upon any external advantages of learning or fortune. To be brief in the matter, most of the teachers require to be more practically alive to the fact that their schools are places not only for advancing children in learning, but also for promoting the development of good, efficient characters; and, as bearing upon the matter, I may be permitted to quote the following dictum of Mr. Herbert Spencer:—"The superstition that good behaviour is to be forthwith produced by lessons learnt out of school books, which was long ago statistically disproved"—by Joseph Fletcher, Esq., one of Her Majesty's Inspectors of Schools, in his Summary of the Moral Statistics of England and Wales, "would but for preconception be utterly dissipated by observing to what a slight extent *knowledge* effects *conduct*, by observing that the dishonesty implied in the adulterations of tradesmen and manufacturers, in fraudulent bankruptcies, in bubble companies, in 'cooking' of railway accounts and financial prospectuses—differs only in form, and not in amount, from the dishonesty of the uneducated."

During the year a tolerably satisfactory improvement has been effected in the character of the instruction, more particularly so in the Public Schools; but in two-thirds of the schools (60), one-half of which are Provisional and Half-time, the results of the examinations have been more or less below the prescribed standard requirements. In Public Schools and Denominational Schools the observed course of instruction accords with the Regulations, except a few cases (10) in which the teachers declare themselves unable to teach singing, and in others (6) where sewing is not taught, because of the teachers being unmarried; but in Provisional and Half-time Schools the instruction is more elementary and more or less marked by the absence of object lessons (4), drawing (10), singing (26), and sewing (30) especially, and of Scripture lessons (14), in most of which last cases third classes have not been formed. In the schools, Public and Denominational, the documents, programmes of lessons and time-tables, framed by the teachers, range in general from fair to good in point of merit, whilst in the Provisional Schools they are very seldom better than moderate or tolerable, in consequence of the limited views and knowledge of principles the framers of them have as to their usefulness and construction; and it becomes an open question whether the untrained teachers of such schools should not be provided with appropriately-framed printed forms of such documents for their guidance. But there is room for improving the programmes of lessons even in the better class schools, for here and there they are not framed as fully and as systematically as they should be, particularly under such heads as reading, arithmetic, grammar, and object lessons. It would be well if teachers framed them oftener in view of an approved text-book on each subject, but with particular regard to the suitability of the methods to be employed, for were this done there would be more completeness and connectedness in the instruction than what sometimes manifests itself in the examinations. In reading, the upper classes require to become more practically acquainted with at least the elementary principles of elocution, and to be occasionally exercised in recitations, the matter of which could be turned to good account in more ways than one in the form of silent lessons. In arithmetic, which shows to the least advantage in the examinations, there is still greater scope for improvement. Most of the teachers adhere too strictly to stereotyped scientific treatises on the subject, or regard the prescribed standards of proficiency as the maximum degrees of work expected of them. Moreover, the classes are too exclusively distinguished from each other by the kinds of arithmetical operations to be formed than by the magnitude of the quantities to be dealt with; which

is so unlike what is authoritatively enforced in the German elementary schools that I may be allowed to quote the following passage bearing upon the matter from Dr. Paterson's esteemed report upon the German Elementary Schools:—"Setting sums to work in abstract number is to be done as little as possible; in the lower class altogether avoided. The examples should always be in concrete number. This latter rule is deduced from the principle of concentration of teaching, which is further carried through in the requirements, that the four operations shall not be taught as separate processes each governed by its separate rule, but in their mutual connection; nor fractions be made a distinct branch. The true division, which is to separate the lower from the upper class in arithmetic, is the magnitude of the quantities to be dealt with. Thus a child is carried through all the operations, fractional and unitarian, in the tens before it advances to the hundreds, and so on." With regard to grammar, the programmes of lessons are marked by one or more of the following defects: 1. The terms used to express the weekly extent of work to be done are often too indefinite. 2. Exclusive attention is too often given to parsing to the neglect of accidence and analysis. 3. There is seldom any provision made for graduated lessons in synthesis or composition throughout the classes. Finally, with regard to object lessons, it has been remarked that they are not always as typically well defined, and as real, local, and practical as they could be made; and that they not infrequently betray a lack of originality in the selection of the subjects.

In reference to the classification of the pupils, the following facts may be adduced:—In most of the schools there are three classes, the first or lowest of which is usually though at times unnecessarily divided into two sections. In sixteen schools (two Public and fourteen Provisional and Half-time) the number of classes is only two; and in seven others (six of which are Public) fourth classes have been formed in consequence of large attendance and consequent increases in the teaching staffs. As a rule, the children are reasonably well classified in regard to their average proficiency and intelligence; but in many cases their progress from class to class is not as rapid as it should be, which defect is attributable to the irregularity of their attendance, and not unfrequently to a lack of vigour in their instruction. To the same causes also may be ascribed the large preponderance of children in the lower classes, the centesimal proportions of which are the following: First class, forty-five; second class, thirty; thus leaving only a per centage of twenty-five for the third and fourth classes.

The methods of instruction employed in the schools in general are of a mixed character, and are marked by different degrees of intelligence and efficiency in regard to the manifestation of which qualities the schools stand thus in order of merit: Public, Denominational, Provisional, and Half-time,—the technical estimates due to them being respectively—tolerable to good, tolerable to fair, and moderate to tolerable. In most of the schools the teaching is earnest, painstaking, and diligent; but in only two-fifths of them, chiefly Public, is it satisfactorily vigorous and effective. In the rest it is more or less stiff, feeble, and mechanical, and a few cases have occurred in which it has been so reprehensively inferior and negligent as to necessitate the removal of the teachers, in the interest of the pupils and their parents, some of which latter are so lamentably careless and ignorant as to have but little knowledge of their children's progress in learning. The following defects in the teaching may be noted in addition to those pointed out in the preceding paragraph in the lesson documents, and they obtain more or less in all the schools:—

1. The scholars are not sufficiently exercised in committing to memory appropriate extracts from their lesson books or other sources.
2. Their perceptive faculties, common sense, and faculty of expression are insufficiently exercised in regard to elementary matters of practical importance and local interest.
3. Sufficient prominence is not given to the reproduction of lessons.
4. The patient and formal examinations of the classes require to be more regular and frequent, and the results registered.
5. The examinations of the written exercises of the scholars are not sufficiently patient, regular, and critical.
6. The supervision and direct instruction of the lower classes are inadequate.
7. Sufficient use is not made of the blackboard or of the simultaneous methods.

The efficiency of the teaching, as disclosed by the results of the examinations in the different subjects of instruction, is exhibited in the following per centages of pupils who succeeded in reaching or exceeding the prescribed standards of proficiency; and a comparison of such numbers with those given in last year's report will prove to be reasonably favourable, except in regard to geography, Euclid, Algebra, and Latin:—Reading, 65; writing 80; dictation, 37; arithmetic, 25; grammar, 36; geography, 25½; object lessons, 47; singing, 60; drawing, 86; Scripture lessons, 70; sewing, 84; Euclid, 71; algebra, 27½; mensuration, 100; Latin —.

With regard to the last four special subjects of instruction it should be explained that they are taught to the boys of fourth classes only, of which there are but seven in the district. It should be explained also that the somewhat large decrease in the results of the examination in geography is due to the opening of new schools.

During the year several changes have been made in the staff of teachers, most of which have been for the better in regard to discipline and instruction, and four of which have been cases of dismissal on grounds of incompetency. Viewed as a whole the teachers are worthy and respectable, persevering and attentive to their duties, and generally well esteemed in their respective districts. In most instances their labours are marked by cheerful earnestness and diligence, and in not a few by superior vigour, intelligence, and efficiency. The teachers of the small schools, Provisional and Half-time, most of whom have received no special training for their work, continue to perform useful services, notwithstanding the unenviable circumstances of their positions, social and domestic, and pecuniary; and among them are a few who, by dint of industry, perseverance, and the exercise of vigour and common sense, have qualified themselves for admission to the Training School. It may be useful to remark on these small schools also, that were they made more attractive with regard to the teachers' domestic and pecuniary necessities they would become very useful auxiliaries of the Training Schools. Several female teachers are in charge of small schools, and are producing reasonably satisfactory results, particularly as regards the moral training of their pupils, for which they appear to be better adapted than their male brethren similarly circumstanced; and there is reason to believe that were it not for the difficulties often experienced in providing them with suitable lodgings they would become more numerous. The pupil teachers in general are respectable and intelligent, painstaking and diligent, but among them are a few who are not as vigorous and effective in their teaching as they should be. Most of them, however, are doing useful work, and are in a promising way of becoming fair class teachers.

The character of the local supervision of the schools has not materially improved. In a few instances it is highly satisfactory, fairly so in one half of the schools, and negligent in the rest. In most of the Denominational Schools it is confined to the clergy, many of whom continue to manifest a pleasing interest in the well being of their schools.

Summing up:—The year has been marked by more than ordinary progress in regard to school extension and material improvements, actual and provisionary; the adequacy of the means of education is reasonably satisfactory and nearing completion; the schools are well distributed, except in three or four places where they are unnecessarily numerous and conflicting; the educational prospects of the district are cheering; the disciplinary condition of the schools is healthy, improved, and between fair and very fair in point of average merit; in three-fourths of the schools the instruction is improved, and reasonably satisfactory, and the teachers as a body are worthy and respectable, earnest, persevering, and attentive to their duties; but the attendance is so irregular, and the number of non-attendant children of school age living within reach of existing schools is so large, as to necessitate the early enactment of a law of compulsory education.

Summaries of reports upon the inspection of the schools are appended.

J. S. JONES,

East Maitland,
27th March, 1877.

Inspector of Schools,
Maitland District.
MAITLAND

MAITLAND DISTRICT.

SUMMARY of Reports upon Public Schools inspected in 1876.

ABERDEEN (N.-V.) :—Regular inspection, 23rd August.

Numbers enrolled :—Boys, 21 ; girls, 22 ; total, 43. Numbers present :—Boys, 20 ; girls, 22 ; total, 42.

1. School held in a church ; water-tank, lavatory, weather-shed, and better furniture needed ; new buildings about to be erected. Supply of school requisites fair. General aspect not satisfactorily neat and clean. 2. Regularity of attendance, 32-50ths ; punctuality very fair ; government mild and fairly intelligent ; younger pupils too talkative, and free and easy. 3. Prescribed subjects taught, except singing and sewing ; occupation of pupils fairly well regulated ; teaching fairly intelligent and painstaking ; examinations not sufficiently frequent and searching. 4. Average proficiency of pupils, tolerable to fair ; spelling, arithmetic, geography, and object lessons, moderate +.

ABERGLASSLYN (V.) :—Regular inspection, 8th June.

Numbers enrolled :—Boys, 21 ; girls, 17 ; total, 38. Numbers present :—Boys, 12 ; girls, 6 ; total, 18.

1. Material condition improved and fair ; supply of furniture and other requisites adequate. 2. Discipline feeble, lax, and unsatisfactory ; attendance, unpunctual and irregular (50 per cent.) 3. Instruction elementary, ill-regulated, feeble, and mechanical. 4. Average proficiency and progress of pupils indifferent.

BISHOP'S BRIDGE (N.-V.) :—Regular inspection, 7th June.

Numbers enrolled :—Boys, 30 ; girls, 19 ; total, 49. Numbers present :—Boys, 22 ; girls, 18 ; total, 40.

1. School premises unsatisfactory ; new buildings about to be erected ; supply of furniture and other school requisites reasonably sufficient. 2. Punctuality of attendance very fair, and rate of regularity 36-53rds ; appearances reasonably neat and clean ; very fair order maintained ; disciplinary condition healthy, improved, and very fair. 3. Singing not taught ; course of instruction otherwise complete, of third class range, and fairly well regulated ; teaching of fair and improved merit ; examinations not sufficiently frequent and patient. 4. Average proficiency of pupils fair and improved ; geography and object lessons, moderate +.

BRANXTON (V.) :—Regular inspections, 29th March and 2nd November.

Numbers enrolled :—Boys, 47 ; girls, 55 ; total, 102. Numbers present :—Boys, 41 ; girls, 37 ; total, 78.

1. Lavatory and weathershed needed ; material condition otherwise improved and satisfactory ; supply of appliances ample ; general aspect, clean and respectable. 2. Increase of attendance, 50 per cent. ; teaching staff inadequate ; rate of regularity for the year, 45-71sts ; government judicious and disciplinary ; condition healthy and good. 3. Instruction appropriate, of third-class range, and well regulated ; occupation of pupils reasonably well supervised ; teaching zealous, painstaking, and intelligent. 4. Average proficiency of pupils very fair ; arithmetic fair.

BROKENBACK (V.) :—Regular inspection, 17th February.

Numbers enrolled :—Boys, 23 ; girls, 31 ; total, 54. Numbers present :—Boys, 14 ; girls, 19 ; total, 33.

1. Material condition and organization reasonably satisfactory ; additions and repairs in course of execution ; supply of school requisites adequate ; interior aspect of school unexceptionally neat and clean. 2. Attendance reasonably punctual, but very irregular (33-67ths) ; government healthy and intelligent ; very fair order maintained ; pupils docile and well behaved, but not sufficiently smart and active ; disciplinary condition very fair. 3. Course of instruction, omitting singing, complete, well regulated, and of third-class range ; teaching painstaking and intelligent, but enfeebled by irregularity of attendance. 4. Average proficiency of pupils fair and reasonably satisfactory ; Scripture lessons indifferent ; writing and drawing very fair to good.

CAMPSIE (V.) :—Regular inspection, 16th March.

Numbers enrolled :—Boys, 24 ; girls, 13 ; total 37. Numbers present :—Boys, 17 ; girls, 9 ; total, 26.

1. Material condition, aspect, and supply of school requisites reasonably satisfactory ; water-tank and bell needed. 2. Attendance tolerably punctual but irregular (22-37ths) ; school fees low and badly paid ; government judicious and intelligent ; pupils clean, orderly, and well behaved, but not sufficiently smart and active ; disciplinary condition reasonably satisfactory. 3. Instruction appropriate, well regulated, and of third-class range ; occupation of pupils apparently well supervised ; teaching zealous and tolerably skilful, but examination not sufficiently patient and frequent. 4. Average proficiency of pupils tolerable and reasonably satisfactory ; spelling and Scripture lessons moderate ; writing fair +.

CESSNOCK (N.-V.) :—Regular inspection, 6th June.

Numbers enrolled :—Boys, 24 ; girls, 26 ; total, 50. Numbers present :—Boys, 10 ; girls, 14 ; total, 24.

1. Accommodation inadequate, and furniture unsuitable ; material organization poor ; properly equipped and suitable school premises in course of provision. 2. Punctuality of attendance partially satisfactory ; school bell needed ; rate of regular attendance, 35-55ths ; government healthy and very fairly intelligent ; appearances reasonably neat and clean ; very fair order maintained ; pupils deficient in spirited energy ; disciplinary condition improved and reasonably very fair. 3. Singing not taught, and sewing somewhat neglected ; course of instruction otherwise appropriate, of third-class range, and fairly well regulated ; teaching of fair merit ; examinations not sufficiently effective. 4. Attainments of pupils nearly fair ; geography moderate ; reading very fair.

DUNMORE (V.) :—Regular inspection, 9th August.

Numbers enrolled :—Boys, 33 ; girls, 30 ; total, 63. Numbers present :—Boys, 22 ; girls, 29 ; total, 51.

1. Fencing, lavatory, and weathershed needed, and about to be provided ; teacher's residence inferior ; school-building superior and well found in material appliances ; aspect clean and respectable. 2. Punctuality of attendance good ; regularity, 46-80ths ; considerable increase of scholars since inspection ; government smart, active, and intelligent ; disciplinary condition, good. 3. Instruction appropriate, well-regulated, and of 3rd class range ; singing not taught ; supervision and direct instruction of younger scholars inadequate ; teaching zealous, painstaking, and intelligent. 4. Average proficiency of pupils, fair + ; progress of pupils retarded by irregular attendance ; general condition healthy, improved, and promising.

ELLALONG P. (V.) :—Regular inspection, 23th February.

Numbers enrolled :—Boys, 13 ; girls, 25 ; total, 38. Numbers present :—Boys, 10 ; girls, 21 ; total, 31.

1. Material character of school premises greatly improved, and now fairly satisfactory ; supply of furniture unsuitable and inadequate ; new desks and forms about to be provided ; schoolroom untidy ; school records carelessly kept. 2. Discipline negligent and unsatisfactory. Attendance tolerably punctual ; rate of regularity, 29-35ths ; moral tone feeble. 3. Instruction complete for three classes ; observance of time-table and programmes of lessons very lax ; profitable occupation of pupils feebly maintained ; teaching moderately diligent, painstaking, and intelligent. 4. Average proficiency and progress of pupils indifferent. School now temporarily closed pending appointment of a competent teacher.

FISHERY

FISHERY CREEK (V.) :—Regular inspection, 25th April.

Numbers enrolled :—Boys, 15 ; girls, 23 ; total, 38. Numbers present :—Boys, 11 ; girls, 19 ; total, 30.

1. Material condition improved, and reasonably satisfactory ; supply of school requisites adequate ; appearances neat and clean. 2. Attendance below the prescribed minimum, but steadily increasing and fairly punctual ; rate of regularity, ($\frac{2}{3}$) ; government healthy and intelligent ; very fair order maintained ; pupils clean, docile, and well-behaved, but not sufficiently smart, active, and self-reliant. 3. Instruction appropriate, and fairly well-regulated for three classes ; lesson documents of fair merit ; methods of instruction tolerably intelligent ; teaching earnest and painstaking. 4. Average proficiency of pupils improved and tolerable + ; writing good ; geography and arithmetic moderate.

GOSFORTH (V.) :—Regular inspection, 7th December.

Numbers enrolled :—Boys, 34 ; girls, 32 ; total, 66. Numbers present :—Boys, 30 ; girls, 29 ; total, 59.

1. Accommodation inadequate ; teacher's residence very inferior ; lavatory, weather-shed, and additional furniture needed ; suitable premises and appointments about to be provided. 2. Attendance increased 20 per cent., reasonably punctual and fairly regular, ($\frac{3}{4}$) ; the government sound and intelligent, and the disciplinary condition of the school of very fair merit. 3. Course of instruction complete, well-regulated, and of 3rd class range ; profitable occupation of pupils very fairly maintained ; teaching zealous, painstaking, and satisfactory. 4. Progress of pupils satisfactory, average proficiency improved, and about very fair ; writing very good ; geography fair.

HINTON (V.) :—Regular inspection, 11th and 12th May.

Numbers enrolled :—Boys, 61 ; girls, 40 ; total, 101. Numbers present :—Boys, 46 ; girls, 27 ; total, 73.

1. Accommodation inadequate, and ventilation defective ; buildings old, and foundation here and there giving way ; supply of furniture and other requisites very fair ; aspect neat and clean. 2. Attendance increasing, reasonably punctual, and fairly regular ($\frac{1}{2}$) ; government healthy and intelligent ; pupils clean, orderly, and well-behaved ; disciplinary condition good. 3. Course of instruction appropriate, well-regulated, and of 3rd class range ; methods of very fair merit, and teaching earnest and painstaking, but not adequately impressive and examinatory.

FALBROOK (V.) :—Regular inspection, 22nd August.

Numbers enrolled :—Boys, 11 ; girls, 14 ; total, 25. Numbers present :—Boys, 10 ; girls, 14 ; total, 24.

1. Material condition fair ; sundry repairs needed ; supply of furniture and apparatus tolerable. 2. Attendance tolerably punctual and regular ($\frac{2}{3}$) ; school bell needed ; disciplinary condition tolerable. 3. Prescribed subjects taught except singing ; classification appropriate ; lesson documents of tolerable merit ; supervision of younger scholars lax ; teaching earnest and tolerably intelligent ; examination of classes irregular. 4. Average proficiency of pupils barely tolerable ; writing fair + ; grammar and geography moderate.

GRETA (V.) :—Regular inspection, 31st May and 1st June.

Numbers enrolled :—Boys, 98 ; girls, 90 ; total, 188. Numbers present :—Boys, 52 ; girls, 46 ; total, 98.

1. Material condition and organization good, but accommodation far too inadequate ; teacher's residence too small. 2. Attendance greatly in excess of accommodation ; punctuality very fair ; regularity unsatisfactory ($\frac{1}{2}$) ; government mild, firm, and intelligent ; appearances neat and clean ; good order maintained ; most of the scholars docile and well-behaved ; infants somewhat talkative and restless ; disciplinary condition healthy and good. 3. Course of instruction complete and well regulated ; classification low, there being only three classes ; teaching zealous, painstaking, and intelligent. 4. Average proficiency of pupils fair + and reasonably satisfactory. 5. Average proficiency, fair ; reading and writing, very fair ; arithmetic, moderate.

LAGUNA (V.) :—Regular inspection, 23rd and 24th February.

Numbers enrolled :—Boys, 24 ; girls, 19 ; total, 43. Numbers present :—Boys, 19 ; girls, 15 ; total, 34.

1. Material condition improved and fairly satisfactory ; supply of furniture and other requisites adequate ; general aspect very neat and clean. 2. Attendance punctual, but partial and irregular ($\frac{2}{3}$) ; government mild and intelligent ; very fair order maintained ; pupils docile and well-behaved, but awkward in demeanour and deficient in self-reliance and animation. 3. Course of instruction complete, of third class range, and very fairly well regulated ; supervision and examination of silent work inadequate ; teaching earnest, animated, and tolerably intelligent ; examinations insufficiently frequent and critical. 4. Average proficiency of pupils fair ; singing moderate.

LOCHINVAR (N.-V.) :—Regular inspection, 16th March.

Numbers enrolled :—Boys, 33 ; girls, 27 ; total, 60. Numbers present :—Boys, 20 ; girls, 11 ; total, 31.

1. Material condition and organization far from satisfactory ; erection of new premises on a central site urgently needed ; books in bad order ; school records not carefully kept ; discipline slack, and a failure as regards securing order and attention ; scholars noisy in their movements, given to talking, and generally speaking wanting in self-control ; classification low, there being but two classes ; instruction badly regulated ; programme of lessons of little value, and the work done very imperfectly registered ; teaching wanting in animation and force, and pupils in promptness and power of application ; attainments much below the standards ; average proficiency only about moderate ; material, disciplinary, and instructional aspect of the school unsatisfactory.

EAST MAITLAND (V.) :—Regular inspection, 28th, 29th September, and 2nd October.

Numbers enrolled :—Boys, 90 ; girls, 77 ; total, 167. Numbers present :—Boys, 57 ; girls, 60 ; total, 117.

1. Water-tank, lavatories, and sundry repairs needed ; material organization otherwise superior, and supply of working materials ample ; appearances not uniformly and satisfactorily neat and clean. 2. Character of attendance unsatisfactory in point of numbers and punctuality ; decrease of scholars 20 per cent. ; yearly rate of regularity, ($\frac{1}{3}$) ; government mild and fairly intelligent, and fair order and industry maintained ; supervision of playground lax ; class movements partially satisfactory ; disciplinary condition less satisfactory than last year. 3. Course of instruction complete for four classes, except in singing ; lesson documents of very fair merit ; teaching earnest, painstaking, and fairly intelligent, but not satisfactorily vigorous in the upper classes. 4. Average proficiency of pupils fair +.

WEST MAITLAND, (Boys' V.) :—Regular inspection, 4th, 5th, and 11th December.

Numbers enrolled :—Boys, 191. Numbers present :—Boys, 131.

1. Material organization of superior merit and supply of appliances adequate ; cleanliness and care of the school property partially satisfactory. 2. Attendance decreasing ; rate of regularity for the year, ($\frac{2}{3}$) ; punctuality of attendance very unsatisfactory ; government not adequately smart, watchful, intelligent, and effective ; general supervision lax and insufficient ; and disciplinary condition in point of tone and efficiency two degrees less satisfactory than in 1874 and 1875. 3. Course of instruction complete for four classes ; classification and lesson documents of very fair merit ; supervision and examination of lower classes inadequate ; teaching throughout earnest, painstaking, and very fairly intelligent, but not sufficiently impressive, examinatory, and profitable. 4. Average proficiency :—First class, tolerable ; second class, fair to very fair ; third class, fair to very fair ; fourth class, fair ; writing, good ; spelling, arithmetic, and geography tolerable.

WEST MAITLAND (Girls' V.) :—Regular inspection, 28th, 29th, and 30th December.

Numbers enrolled :—Girls, 133. Numbers present :—Girls, 92.

1. Material organization superior, and supply of educational appliances ample. 2. Attendance steadily maintained, but somewhat unpunctual and irregular ($\frac{2}{3}$); government mild, firm, watchful, and intelligent; general appearance, demeanour, and conduct of pupils satisfactory, and disciplinary condition healthy, promising, and good. 3. Course of instruction complete, well regulated, and of fourth-class range; occupation of pupils well supervised; teaching zealous, painstaking, and very fairly intelligent; examination of lower classes not sufficiently frequent. 4. Average proficiency of pupils very fair to good; instruction in arithmetic not sufficiently profitable.

WEST MAITLAND, (Infants' V.) :—Regular inspection, 30th November and 1st December.

Numbers enrolled :—Boys, 85; girls, 65; total, 150. Numbers present :—Boys, 57; girls, 39; total, 96.

1. Accommodation and supply of furniture inadequate, and material organization otherwise defective; suitable premises and appliances about to be provided; supply of working materials reasonably sufficient. 2. Increase in attendance, 10 per cent.; and rate of regularity of attendance improved, and $\frac{1}{2}$; government mild and judicious; order reasonably satisfactory, and pupils clean and cheerful, docile, diligent, and well behaved; moral tone healthy and pleasing. 3. Instruction appropriate and well regulated; occupation of pupils well sustained; teaching zealous, painstaking, and intelligent. 4. Average proficiency of pupils improved and good.

MILLFIELD (V.) :—Regular inspection, 25th February.

Numbers enrolled :—Boys, 15; girls, 24; total, 39. Numbers present :—Boys, 12; girls, 19; total, 31.

1. Material condition and aspect greatly improved; supply of furniture adequate, and of other requisites fairly so. 2. Punctuality of attendance fair, and rate of regularity ($\frac{3}{4}$); government judicious; very fair order maintained; general appearance, demeanour, and conduct of pupils of very fair merit; moral tone of school in most respects healthy and very fair. 3. Prescribed subjects taught, except singing and sewing; classification of pupils appropriate; lesson documents and methods of instruction of fair merit; teaching painstaking and fairly skilful. 4. Average proficiency of pupils tolerable.

MORPETH (V.) :—Regular inspection, 6th, 8th, and 18th December.

Numbers enrolled :—Boys, 112; girls, 86; total, 198. Numbers present :—Boys, 82; girls, 65; total, 147.

1. Material condition improved and highly satisfactory; supply of furniture and working materials ample and well arranged; general aspect of school property, clean and respectable. 2. Gross and ordinary attendances 12 per cent. higher than those of last year; punctuality of attendance highly satisfactory; rate of regularity, ($\frac{3}{4}$); very good order maintained; appearances very neat and clean; general appearance, demeanour, and conduct of pupils pleasing; disciplinary condition healthy and very good. 3. Prescribed subjects taught, including geometry, algebra, and mensuration; instruction well regulated and supervised; teaching painstaking, vigorous, and intelligent. 4. Average proficiency of pupils good; general condition of school pleasing.

MUSWELLBROOK (N.-V.) :—Regular inspection, 12th December.

Numbers enrolled :—Boys, 26; girls, 22; total, 48. Numbers present :—Boys, 23; girls, 18; total, 41.

1. Material condition and supply of furniture and other requisites reasonably satisfactory. 2. Attendance increasing, punctual, and fairly regular ($\frac{3}{4}$); government mild and intelligent; appearances neat and clean; disciplinary condition healthy, promising, and very fair. 3. Course of instruction complete, well regulated, and of third class range; teaching painstaking and intelligent. 4. Average proficiency of pupils moderate to tolerable. School but recently established.

MURRURUNDI (V.) :—Regular inspection, 16th and 17th November.

Numbers enrolled :—Boys, 57; girls, 37; total, 94. Numbers present :—Boys, 31; girls, 22; total, 53.

1. Material condition unsatisfactory; superior school buildings in course of erection; supply of working materials fairly sufficient. 2. Attendance comparatively low; punctuality partially satisfactory; rate of regular attendance, ($\frac{2}{3}$); teaching staff inadequate; discipline improved and fair in tone and quality. 3. Prescribed subjects taught, except singing; classification and lesson documents of very fair merit; teaching earnest, painstaking, and fairly intelligent. 4. Average proficiency of pupils fair; drawing and writing good; geography and arithmetic tolerable; school work enfeebled by faulty organization.

MUSWELL CREEK (N.-V.) :—Regular inspection, 25th August.

Numbers enrolled :—Boys, 24; girls, 8; total, 32. Numbers present :—Boys, 20; girls, 7; total, 27.

1. Material condition unsatisfactory; new school premises needed; also, bell, out-offices, and water tank; supply of working materials adequate; general aspect clean, but otherwise discreditable. 2. Gross attendance rather low for the district; punctuality and regularity ($\frac{2}{3}$) of attendance unsatisfactory; government mild and tolerably intelligent; fair order maintained; pupils docile and reasonably well behaved, but only moderately smart, active, and intelligent. 3. Prescribed subjects taught, except singing; classification and lesson documents of tolerable merit; teaching earnest and moderately skilful, but not satisfactorily profitable. 4. Average proficiency of pupils moderate, writing fair, arithmetic, grammar, and geography indifferent. Results injuriously affected by irregularity of attendance.

OSWALD (N.-V.) :—Regular inspection, 30th May.

Numbers enrolled :—Boys, 28; girls, 21; total, 49. Numbers present :—Boys, 18; girls, 13; total, 31.

1. Schoolhouse old, small, ill ventilated, and unsuitable; exterior appointments inadequate; desks unsuitable; supply of apparatus fair. 2. Attendance low and irregular; government mild and intelligent; appearances reasonably neat and clean; very fair order maintained; pupils subdued in demeanour, but insufficiently smart, active, and diligent. Material deficiencies duly considered disciplinary condition very fair. 3. Prescribed subjects taught, except Scripture lessons; classification appropriate; time-table partially satisfactory; too much time ($\frac{1}{2}$) apparently given to singing; teaching fairly intelligent, but not satisfactorily impressive and profitable. 4. Average proficiency of pupils barely tolerable; arithmetic and singing moderate.

PATERSON (N.-V.) :—Regular inspection, 13th and 14th March.

Numbers enrolled :—Boys, 48; girls, 39; total, 87. Numbers present :—Boys, 42; girls, 30; total, 72.

1. Schoolhouse rented; too small and badly ventilated; furniture sufficient but inferior, supply of apparatus ample, but proper arrangement of maps and diagrams impracticable. 2. Attendance very fairly punctual. School bell needed; rate of regular attendance ($\frac{3}{4}$); government mild, firm, and intelligent; pupils clean, orderly, and well behaved, but deficient in spirited energy; arrangement of maps and diagrams somewhat irregular; disciplinary condition healthy and good under existing circumstances. 3. Course of instruction complete, well regulated, and of 3rd class range; classification rather too minute; teaching zealous, painstaking, and intelligent. 4. Average proficiency of pupils, fair+. Oral answering of pupils somewhat feeble and partial.

ROUGHIT

ROUGHIT (V.) :—Regular inspection, 20th June.

Numbers enrolled :—Boys, 40 ; girls, 32 ; total, 72. Numbers present :—Boys, 38 ; girls, 27 ; total, 65.

1. Material condition improved and satisfactory ; accommodation insufficient, removal of partition needed ; supply of furniture and apparatus adequate and well arranged. 2. Increase in attendance, 50 per cent. ; punctuality very fair ; rate of regular attendance, ($\frac{3}{4}$) ; government mild and very fairly intelligent ; appearances neat, clean, and comfortable ; very fair order maintained ; pupils clean, docile, and reasonably well behaved, but only moderately smart and active. Disciplinary condition improved, promising, and very fair. 3. Course of instruction complete for three classes and appropriately regulated, but 1st class too isolated ; teaching zealous and fairly intelligent, but not sufficiently energising and profitable. 4. Average proficiency of pupils barely tolerable ; results reduced by the presence of new scholars.

SCORE (V.) :—General inspection, 13th and 14th November.

Numbers enrolled :—Boys, 79 ; girls, 68 ; total, 147. Numbers present :—Boys, 71 ; girls, 46 ; total, 117.

1. Material organization good, and supply of furniture and apparatus adequate ; lavatory and weathershed needed and to be provided. 2. Gross and ordinary attendances, 147 and 103 respectively ; punctuality good ; character and efficiency of the discipline healthy and good. 3. Course of instruction complete, well regulated, and 4th class range ; numbers in lower classes disproportionately large ; teaching zealous and intelligent. 4. Average proficiency of the pupils very fair. Algebra and geometry reasonably satisfactory.

SINGLETON (V.) :—Regular inspection, 12th, 13th, and 14th June.

Numbers enrolled :—Boys, 62 ; girls, 65 ; total, 127. Numbers present :—Boys, 51 ; girls, 49 ; total, 100.

1. Character of new schoolbuildings and appointments highly satisfactory. 2. Increase in attendance now (28th December) 50 per cent. ; pupils punctual and two-thirds of them regular ; government healthy, vigorous, and intelligent ; appearances neat and clean ; pupils in general clean, cheerful, and well behaved ; class movements insufficiently quiet and orderly ; general tone and quality of the discipline good. 3. Prescribed subjects taught, including geometry and algebra ; classification and lesson documents appropriate ; teaching zealous, painstaking, and intelligent ; occupation of pupils well sustained ; examination of lower classes not sufficiently frequent. 4. Average proficiency of pupils very fair. Results in spelling, arithmetic, and grammar barely up to standard requirements.

SINGLETON (V.) :—Regular inspection, 19th June.

Numbers enrolled :—Boys, 64 ; girls, 46 ; total, 110. Numbers present :—Boys, 46 ; girls, 34 ; total, 80.

1. Material organization improved and good ; supply of working materials adequate. 2. Attendance punctual, regular ($\frac{2}{3}$), and increased 57 per cent. since last inspection, thereby necessitating an increase in the teaching staff ; tone and quality of the discipline of superior merit ; pupils clean, cheerful, and industrious, orderly and well behaved ; appearances neat, clean, and wholesome. 3. Course of instruction complete, well regulated, and appropriate ; teaching animating, painstaking, and intelligent, impressive and profitable. 4. Average proficiency of pupils good. Progress of pupils satisfactory.

STANHOPE (V.) :—Regular inspection, 24th and 27th March.

Numbers enrolled :—Boys, 37 ; girls, 25 ; total, 62. Numbers present :—Boys, 31 ; girls, 24 ; total, 55.

1. School premises, old slab structure ; schoolroom tolerably suitable ; teacher's residence unfit for habitation ; supply of furniture and apparatus adequate ; lavatory needed. 2. Attendance declining because of local family removals ; punctuality very fair ; rate of regularity, ($\frac{2}{3}$) ; government healthy and intelligent ; appearances neat and clean ; pupils clean, cheerful, orderly, and well behaved ; class movements not sufficiently exact ; disciplinary condition in general good. 3. Prescribed subjects taught except sewing ; occupation of pupils well regulated and sustained ; teaching zealous, painstaking, and very fairly intelligent. 4. Average proficiency of pupils very fair ; writing and drawing good ; geography tolerable.

SUGARLOAF (V.) :—Regular inspection, 16th February.

Numbers enrolled :—Boys, 29 ; girls, 28 ; total, 57. Numbers present :—Boys, 23 ; girls, 22 ; total, 45.

1. Lavatory, weathershed, water-tank, and teacher's residence needed and to be provided ; material condition otherwise fairly satisfactory. 2. Increase in attendance 25 per cent., and rate of regularity ($\frac{3}{4}$) ; government firm and intelligent ; appearances neat and clean ; pupils punctual and subdued in demeanour, but not satisfactorily smart and active. Moral tone fair and promising. 3. Prescribed subjects taught ; classification rather low in point of age ; lesson documents of very fair merit ; teaching earnest and fairly intelligent and stimulating. 4. Average proficiency and progress of pupils, tolerable.

VACY (N.-V.) :—Regular inspection, 15th March.

Numbers enrolled :—Boys, 22 ; girls, 27 ; total, 49. Numbers present :—Boys, 12 ; girls, 18 ; total, 30.

1. School premises, humble slab structures, tolerably commodious, but otherwise unsuitable ; appointments imperfect ; supply of apparatus fairly sufficient ; maps, old and worn. 2. Three-fifths of the pupils regular and fairly punctual ; government fairly intelligent ; appearances reasonably neat and clean ; pupils docile and well behaved, but insufficiently smart and active. Moral tone fair. 3. Prescribed subjects professedly taught ; time-table not strictly followed in regard to singing, drawing, and object-lessons ; classification and lesson documents of tolerable merit ; teaching tolerably intelligent and painstaking ; younger pupils somewhat overlooked. 4. Average proficiency of pupils tolerable ; arithmetic, grammar, and geography moderate ; progress of the pupils partially satisfactory.

WALLALONG (V.) :—Regular inspection, 10th August.

Numbers enrolled :—Boys, 22 ; girls, 32 ; total, 54. Numbers present :—Boys, 20 ; girls, 26 ; total, 46.

1. Material condition improved and satisfactory, clean and respectable ; supply of school requisites adequate. 2. Attendance steady, very fairly punctual, and regular, ($\frac{3}{4}$) ; government strict and intelligent ; good order maintained ; appearances neat and clean ; pupils docile, diligent and well behaved, but wanting in self-reliance and animation. Disciplinary condition healthy and very fair. 3. Course of instruction complete, appropriately regulated, and of 3rd class range ; classification of fair merit ; teaching zealous, animating, and fairly intelligent ; examinations partial and younger pupils somewhat overlooked. 4. Average proficiency and progress of pupils fairly satisfactory.

WARKWORTH (V.) :—Regular inspection, 27th July.

Numbers enrolled :—Boys, 21 ; girls, 22 ; total, 43. Numbers present :—Boys, 18 ; girls, 19 ; total, 37.

1. Sundry repairs and additions needed ; material organization, otherwise, of superior merit ; general aspect, clean and respectable. 2. Increase in attendance, 23 per cent. ; punctuality very fair ; rate of regularity ($\frac{3}{4}$) comparatively low ; tone and efficiency of the discipline very fair. 3. Prescribed subjects taught ; lessons documents of very fair merit ; classification appropriate ; teaching earnest, animated, and fairly effective ; examinations and the supervision of the younger pupils insufficient. 4. Average proficiency and progress of pupils of barely fair merit. Writing and Scripture lessons very fair. Spelling moderate.

WOLLOMBI (V.) :—Regular inspection, 21st and 22nd February.

Numbers enrolled :—Boys, 32 ; girls, 28 ; total, 60. Numbers present :—Boys, 30 ; girls, 24 ; total, 54.

1. Lavatory and sundry repairs needed ; material condition otherwise of fair merit ; supply of furniture and apparatus adequate ; general aspect of property clean and comfortable. 2. Attendance steady and punctual, but irregular ($\frac{3}{4}$) ; tone and quality of the discipline healthy and very good. 3. Prescribed subjects taught, including geometry ; classification and lesson documents appropriate ; teaching painstaking and very fairly effective. 4. Average proficiency of pupils, very fair.

PROVISIONAL SCHOOLS.

BAERAMIE CREEK (N.-V.) :—Regular inspection, 30th August.

Numbers enrolled :—Boys, 15 ; girls, 4 ; total, 19. Numbers present :—Boys, 12 ; girls, 4 ; total, 16.

1. Material condition and appointments reasonably fair ; appearances clean and comfortable. 2. Decrease in attendance, 25 per cent. ; punctuality of fair merit ; alleged rate of regularity ($\frac{1}{2}$) ; government not sufficiently stimulating and exacting ; pupils clean and fairly orderly and well behaved, but not satisfactorily smart, active, and painstaking. Moral tone tolerable. 3. Instruction elementary and rather desultory ; teaching moderately intelligent and profitable. 4. Average proficiency and progress of pupils unsatisfactory.

BALLINGTON (N.-V.) :—General inspection, 20th December.

Numbers enrolled :—Boys, 11 ; girls, 9 ; total, 20. Numbers present :—Boys, 6 ; girls, 7 ; total, 13.

1. Book-press, hat-pegs, and out-offices needed ; material requirements otherwise tolerably well met. 2. Attendance low and irregular ; government tolerably intelligent ; pupils clean, docile, and subdued in demeanour, but diffident and awkward ; disciplinary condition tolerable and promising. 3. Prescribed subjects taught, except singing ; classification low and appropriate ; teaching, moderately skilful and vigorous. 4. Average proficiency barely moderate. School but recently formed.

BELLEVUE (N.-V.) :—Regular inspection, 27th October.

Numbers enrolled :—Boys, 20 ; girls, 21 ; total, 41. Numbers present :—Boys, 8 ; girls, 7 ; total, 15.

1. Schoolhouse and teacher's residence suitable ; additional furniture needed ; supply of working materials tolerable ; class roll entries inaccurate. 2. Attendance low and irregular ; government feeble ; and disciplinary condition moderately satisfactory. 3. Instruction elementary and ill-regulated ; progress of pupils unsatisfactory. 4. Average proficiency of pupils moderate ; arithmetic, grammar, and geography, indifferent.

BULGA (N.-V.) :—Regular inspection, 26th July.

Numbers enrolled :—Boys, 12 ; girls, 13 ; total, 25. Numbers present :—Boys, 6 ; girls, 9 ; total, 15.

1. Sundry repairs and improved ventilation needed ; material condition and appointments fair. 2. Attendance tolerably punctual, but comparatively low and irregular ($\frac{3}{4}$) ; government healthy and fairly intelligent ; pupils clean, docile, and well-behaved, tolerably smart and industrious ; disciplinary condition tolerably satisfactory. 3. Instruction appropriate and tolerably well regulated ; teaching painstaking and tolerably skilful, but deficient in vigour ; examinations feeble and partial. 4. Average proficiency and progress of pupils tolerable ; arithmetic, geography, and object lessons moderate.

BELLTREES (N.-V.) :—General inspection, 23rd November.

Numbers enrolled :—Boys, 17 ; girls, 11 ; total, 28. Numbers present :—Boys, 14 ; girls, 9 ; total, 23.

1. Larger schoolroom and additional furniture needed ; supply of working materials adequate. 2. Attendance reasonably punctual and regular ($\frac{3}{4}$) ; government, healthy and fairly intelligent ; appearances neat and clean ; pupils clean, docile, and subdued in demeanour ; moral tone promising. 3. Instruction appropriate but elementary and moderately well regulated ; teaching animated and tolerably intelligent ; answering of pupils feeble and partial. 4. Average proficiency of pupils moderate and promising ; school but recently established.

CAERGURLE (N.-V.) :—Regular inspection, 21st March.

Numbers enrolled :—Boys, 14 ; girls, 16 ; total, 30. Numbers present :—Boys, 10 ; girls, 11 ; total, 21.

1. Desks badly arranged and clock needed, material condition otherwise tolerable. 2. Attendance fairly punctual but partial and irregular ($\frac{3}{4}$) ; government healthy and tolerable intelligent ; appearances neat and clean ; pupils docile and tolerably orderly but low in mental culture. Disciplinary condition barely tolerable, but promising. 3. Instruction elementary and ill-regulated ; time-table and programme of lessons needed ; teaching feeble and mechanical. 4. Average proficiency and progress of pupils unsatisfactory. Present teacher but recently appointed.

CUAN (N.-V.) :—Regular inspection, 25th October.

Numbers enrolled :—Boys, 13 ; girls, 10 ; total, 23. Numbers present :—Boys, 13 ; girls, 9 ; total, 22.

1. Schoolhouse small and unsuitable, bark roof in bad repair ; supply of furniture and apparatus tolerably sufficient. 2. Attendance steady and fairly punctual ; rate of regularity ($\frac{2}{3}$) ; tone and quality of discipline improved and tolerably satisfactory, but impaired by defects in the school building. 3. Prescribed subjects taught except singing, sewing, and object lessons ; lesson documents and classification of tolerable merit ; teaching painstaking and tolerably skilful. 4. Average proficiency of pupils improved and tolerable.

DOYLE'S CREEK (N.-V.) :—Regular inspection, 31st July.

Numbers enrolled :—Boys, 13 ; girls, 16 ; total, 29. Numbers present :—Boys, 11 ; girls, 13 ; total, 24.

1. Book-press and repairs to windows needed, ventilation bad, material condition and appointments otherwise reasonably satisfactory. 2. Attendance steady and tolerably punctual but irregular ($\frac{2}{3}$) ; tone and efficiency of the discipline improved and fair ; pupils deficient in force of character. 3. Singing and drawing not taught ; course of instruction otherwise complete and fairly well regulated for three classes ; tone and quality of the teaching tolerable ; examinations to be more patient and frequent. 4. Average proficiency and progress of pupils tolerable and reasonably satisfactory. Arithmetic and geography moderate.

ECCLESTON (N.-V.) :—Regular inspection, 14th December.

Numbers enrolled :—Boys, 15 ; girls, 11 ; total, 26. Numbers present :—Boys, 7 ; girls, 7 ; total, 14.

1. Book-press, water-tank, and out-offices needed ; material condition and appointments otherwise tolerable. 2. Attendance comparatively low ; rate of regularity ($\frac{1}{2}$) ; tone and efficiency of the discipline fair ; pupils deficient in smartness and self-reliance. 3. Prescribed subjects taught except singing and sewing ; instruction tolerably well regulated ; teaching earnest and tolerably intelligent. 4. Average proficiency of pupils tolerable. Grammar and object lessons moderate.

GOORANGoola

GOORANGOOLA (N.-V.) :—Regular inspection, 19th August.

Numbers enrolled :—Boys, 9 ; girls, 16 ; total, 25. Numbers present :—Boys, 7 ; girls, 13 ; total, 20.

1. Schoolroom small, drafty, and unsuitable ; out-offices and water-tank needed ; furniture inferior and insufficient ; supply of working materials tolerable and adequate ; interior aspect clean and humble. 2. Attendance comparatively low but tolerably punctual regular ($\frac{1}{2}$); government mild and tolerably intelligent ; classwork feeble and irregular ; character of pupils promising ; disciplinary condition barely tolerable. 3. Instruction elementary and ill-regulated ; teaching painstaking and moderately skilful. 4. Average proficiency of pupils moderate and promising.

LOWER GOORANGOOLA (N.-V.) :—General inspection, 13th December.

Numbers enrolled :—Boys, 11 ; girls, 11 ; total, 22. Numbers present :—Boys, 9 ; girls, 10 ; total, 19.

1. Schoolhouse tolerably suitable but not centrally situated ; furniture inadequate and unsuitable ; out-offices and water-tank needed. 2. Attendance comparatively low ; rate of regularity ($\frac{1}{2}$); tone and efficiency of the discipline unsatisfactory. 3. Instruction very elementary, desultory, and feeble. 4. Average proficiency and mental culture of the pupils indifferent. Arithmetic failure.

GRESFORD (N.-V.) :—Regular inspection, 21st March.

Numbers enrolled :—Boys, 21 ; girls, 22 ; total, 43. Numbers present :—Boys, 15 ; girls, 16 ; total, 31.

1. Material condition and appointments of fair merit ; arrangement of desks objectionable. 2. Attendance steady, very fairly punctual but irregular ($\frac{3}{4}$); tone and efficiency of discipline healthy and fair ; appearances very neat and clean ; classwork somewhat feeble. 3. Prescribed subjects taught except singing ; classification judicious ; lesson documents of moderate merit and not strictly followed ; teaching tolerably intelligent but not vigorous enough ; examinations feeble and partial. 4. Average proficiency and progress of pupils moderate.

HOWES VALLEY (V.) :—Regular inspection, 3rd August.

Numbers enrolled :—Boys, 7 ; girls, 19 ; total, 26. Numbers present :—Boys, 6 ; girls, 16 ; total, 22.

1. Material condition and appointments improved and reasonably satisfactory ; schoolroom very untidy. 2. Attendance steady and tolerably regular ($\frac{3}{4}$); tone and efficiency of the discipline unsatisfactory. 3. Instruction elementary, mechanical, and feeble. 4. Average proficiency of pupils low and unsatisfactory. Teacher since dismissed for negligence and incompetency.

KAYUGA (N.-V.) :—Regular Inspection, 15th September.

Numbers enrolled :—Boys, 19 ; girls, 15 ; total, 34. Numbers present :—Boys, 15 ; girls, 12 ; total, 27.

1. Material condition and appointment of tolerable merit ; water-tank and repairs to out-offices needed. 2. Attendance tolerably punctual, but low and irregular ($\frac{3}{4}$); government feeble ; pupils untidy and disorderly ; disciplinary condition in most respects moderately satisfactory. 3. Instruction very elementary and feeble. 4. Average proficiency of the pupils indifferent. Teacher since dismissed.

KNOCKFLYN (N.-V.) :—Regular inspection, 28th March.

Numbers enrolled :—Boys, 11 ; girls, 11 ; total, 22. Numbers present :—Boys, 10 ; girls, 10 ; total, 20.

1. Sundry repairs needed. Material condition and appointments otherwise reasonably fair ; interior aspect untidy. 2. Attendance comparatively low and irregular ($\frac{1}{2}$); the number of children of school age not enrolled being from 25 to 30 ; tone and efficiency of the discipline barely tolerable ; school work moderately satisfactory in point of regularity and vigour. 3. Instruction elementary and moderately stimulating and skilful. 4. Average proficiency, progress, and mental culture of the pupils moderate.

MIDDLE CREEK (N.-V.) :—Regular inspection, 26th October.

Numbers enrolled :—Boys, 21 ; girls, 12 ; total, 33. Numbers present :—Boys, 10 ; girls, 9 ; total 19.

1. Material condition and appointments in most respects reasonably satisfactory. Water-tank and book-press needed ; appearances very neat and clean. 2. Discipline healthy, creditable, and very fair. 3. Prescribed subjects taught, except singing ; lesson documents of fair merit ; classification advanced and judicious ; teaching zealous, painstaking, and tolerably intelligent. 4. Average proficiency and progress of pupils tolerable + ; general condition sound and satisfactory.

MOONAN BROOK (N.-V.) :—Regular inspection, 22nd November.

Numbers enrolled :—Boys, 20 ; girls, 15 ; total, 35. Numbers present :—Boys, 20 ; girls, 13 ; total, 33.

1. Material condition and supply of furniture tolerably satisfactory. Desks unsuitable in form and arrangement ; out-offices and book-presses needed. 2. Attendance well-maintained, punctuality fair and rate of regularity ($\frac{3}{4}$); government mild and firm ; appearances neat and clean ; reasonably fair order maintained ; pupils clean, docile, and well-behaved, but not sufficiently cheerful and active ; disciplinary condition healthy and tolerable. 3. Instruction elementary ; classification too minute ; lesson documents of moderate utility ; teaching painstaking and diligent, but only moderately skilful in general. 4. Average proficiency of pupils tolerable. Writing good ; grammar, geography, and object lessons indifferent.

MOONAN FLAT (N.-V.) :—General inspection, 22nd November.

Numbers enrolled :—Boys, 12 ; girls, 9 ; total, 21. Numbers present :—Boys, 19 ; girls, 9 ; total 21.

1. Schoolhouse tolerably commodious, but defectively lighted ; earthen floor and newspapered walls unsightly ; schoolroom untidy ; supply of furniture adequate and suitable, and of working materials tolerably so. 2. Attendance well-maintained, tolerably punctual, and fairly regular ($\frac{1}{2}$); government empirical and moderately satisfactory in point of order, cleanliness, regularity, and industry ; moral tone moderate and promising. 3. Prescribed subjects taught, except, singing, sewing, and drawing ; classification too minute ; lesson documents unsuitable ; teaching apparently earnest and tolerably intelligent, but wanting in precision and vigour. 4. Average proficiency of pupils, moderate ; geography and grammar indifferent ; arithmetic small. School not long established.

MOUNT RIVERS (N.-V.) :—Regular inspection, 22nd March.

Numbers enrolled :—Boys, 9 ; girls, 15 ; total, 24. Numbers present :—Boys, 8 ; girls, 11 ; total, 19.

1. Water-tank and out-office needed, material condition, and appointments otherwise reasonably satisfactory. 2. Attendance partial and tolerably punctual. Rate of regularity ($\frac{1}{2}$); mild, firm, and empirical ; appearances neat and clean ; pupils docile and well-behaved, but slow, awkward, and diffident ; moral tone moderate, improved, and promising. 3. Instruction elementary ; classification low and appropriate ; lesson documents of tolerable merit. Teaching painstaking and moderately skilful, but feeble in vigour. 4. Average proficiency of pupils, moderate. Grammar and arithmetic, indifferent.

MOUNT

MOUNT THORLEY (N.-V.) :—Regular inspection, 1st August.

Numbers enrolled :—Boys, 12; girls, 12; total, 24. Numbers present :—Boys, 8; girls, 7; total, 15.

1. Repairs to out-offices and schoolroom floor needed, material condition and appointments—otherwise reasonably satisfactory; class-roll entries partially satisfactory; schoolroom untidy. 2. Attendance partial and irregular ($\frac{2}{3}$), but tolerably punctual; tone and efficiency of the discipline tolerable. 3. Prescribed subjects taught except singing; classification judicious; instruction moderately well regulated; teaching empirical and painstaking. 4. Average proficiency of pupils reasonably tolerable.

MOUNT WILLS (N.-V.) :—Regular inspection, 5th June.

Numbers enrolled :—Boys, 11; girls, 17; total, 28. Numbers present :—Boys, 7; girls, 14; total, 21.

1. Schoolhouse clean and suitable; supply of furniture deficient in book-press; working materials adequate; out-offices needed. 2. Attendance low and irregular ($\frac{1}{2}$); government healthy and fairly intelligent; pupils clean, fairly orderly, and well behaved; disciplinary condition fair. 3. Course of instruction appropriate for three classes, and fairly well regulated; teaching animating, painstaking, and tolerably intelligent. 4. Average proficiency and progress of pupils reasonably tolerable. Grammar indifferent.

PARK (N.-V.) :—Regular inspection, 19th October.

Numbers enrolled :—Boys, 13; girls, 15; total, 28. Numbers present :—Boys, 9; girls, 12; total, 21.

1. Material condition and appointments reasonably satisfactory; arrangement of desks objectionable. 2. Attendance steady, punctual, and tolerably regular ($\frac{3}{4}$); discipline fair and improved; appearances neat and clean. 3. Prescribed subjects taught except singing; instruction tolerably well regulated; teaching painstaking and tolerably intelligent, but not sufficiently vigorous; examinations not sufficiently effective. 4. Average proficiency of pupils barely tolerable. Arithmetic and geography indifferent.

QUORROBOLONG (N.-V.) :—Regular inspection, 18th February.

Numbers enrolled :—Boys, 11; girls, 25; total, 36. Numbers present :—Boys, 13; girls, 14; total, 27.

1. Material condition and appointments improved and reasonably satisfactory. 2. Attendance partial and tolerably punctual; rate of regularity ($\frac{3}{4}$); government empirical and tolerably effective in general; appearances neat and clean; pupils docile and well behaved, but only moderately smart and self-reliant; moral tone reasonably tolerable. 3. Instruction elementary, and classification too ambitious; lesson documents of tolerable merit; class work feeble; teaching apparently earnest and diligent, but mechanical and moderately profitable. 4. Average proficiency and progress of pupils moderately satisfactory. Grammar failure.

ROUCHELL BROOK (N.-V.) :—Regular inspection, 24th November.

Numbers enrolled :—Boys, 11; girls, 12; total, 23. Numbers present :—Boys, 9; girls, 10; total, 19.

1. Material condition satisfactory; supply of school requisites adequate; water-tank greatly needed. 2. Attendance of very fair merit; rate of regularity ($\frac{2}{3}$); government healthy and effective; appearances very neat and clean; pupils docile and well behaved, but deficient in cheerfulness and force of character; moral tone fair. 3. Prescribed subjects taught except singing and sewing; classification low and appropriate; lesson documents of fair merit; teaching zealous, painstaking, and tolerably intelligent. 4. Average proficiency and progress of pupils fair and satisfactory.

SEDFIELD (N.-V.) :—Regular inspection, 23rd June.

Numbers enrolled :—Boys, 23; girls, 11; total, 34. Numbers present :—Boys, 10; girls, 2; total, 12.

1. Material condition and appointments reasonably satisfactory. 2. Attendance fairly punctual, but very low in consequence of local disagreements; rate of regularity for past twelve months ($\frac{1}{2}$); disciplinary condition healthy and fair. 3. Prescribed subjects taught except singing and sewing; instruction fairly well regulated, painstaking, and promising skill. 4. Average proficiency and progress of pupils tolerable and reasonably satisfactory. Writing very fair, arithmetic moderate.

SUMMERHILL (N.-V.) :—Regular inspection, 20th March.

Numbers enrolled :—Boys, 11; girls, 20; total, 31. Numbers present :—Boys, 9; girls, 13; total, 22.

1. Material condition and appointments improved and reasonably satisfactory; aspect clean and comfortable. 2. Attendance steady and tolerably punctual; rate of regularity ($\frac{3}{4}$); discipline improved, healthy, and fairly intelligent and effective. 3. Course of instruction complete for three classes and fairly well regulated; teaching painstaking and tolerably vigorous and intelligent; home lessons not enforced. 4. Average proficiency and progress of pupils tolerable. Instruction in arithmetic, grammar, and geography rather weak.

VERE (N.-V.) :—Regular inspection, 24th July.

Numbers enrolled :—Boys, 22; girls, 14; total, 36. Numbers present :—Boys, 16; girls, 11; total, 27.

1. Material condition improved and fair; book-press, additional desks, and repairs to out-offices needed; supply of working materials adequate. 2. Increase in attendance 50 per cent.; several false entries of attendance in class roll; rate of regularity according to the school returns ($\frac{2}{3}$), unreliable; tone, quality, and efficiency of the discipline barely tolerable; school-work moderately regular and vigorous. 3. Instruction elementary and moderately well regulated; no programmes of lessons in use; registration of lessons irregular; teaching empirical and not satisfactorily diligent and painstaking. 4. Average proficiency and progress of pupils unsatisfactory; arithmetic indifferent; grammar and geography small.

WATAGON CREEK (N.-V.) :—Regular inspection, 23rd February.

Numbers enrolled :—Boys, 7; girls, 10; total, 17. Numbers present :—Boys, 7; girls, 10; total, 17.

1. Schoolhouse inferior and unsuitable; out-offices and water-tank needed; supply of furniture tolerable; stock of working materials insufficient. 2. Attendance partial and irregular; government mild and moderately intelligent; pupils docile and tolerably well-behaved, but untidy in appearance and awkward in demeanour; disciplinary condition; present teacher but one day in office. 3. Instruction elementary; classification low in point of age; lesson documents in abeyance; teaching earnest and moderately intelligent. 4. Average proficiency of pupils indifferent.

WAVERLEY (N.-V.) :—Regular inspection, 21st November.

Numbers enrolled :—Boys, 12; girls, 14; total, 26. Numbers present :—Boys, 7; girls, 5; total, 12.

1. Material condition and appointments improved and reasonably satisfactory; out-offices and water-tank needed. 2. Attendance steady and fairly punctual but irregular ($\frac{1}{2}$); discipline healthy and tolerably intelligent. 3. Prescribed subjects taught, except singing, sewing, object lessons, and Scripture lessons; classification twofold and appropriate; lesson documents of fair merit; teaching empirical, but earnest and painstaking; examinations insufficiently regular and effective. 4. Average proficiency of pupils improved and moderate; writing and drawing, fair; arithmetic and grammar, indifferent.

WEBBER'S CREEK (N.-V.) :—Regular inspection, 23rd March.

Numbers enrolled :—Boys, 21 ; girls, 22 ; total, 43. Numbers present :—Boys, 17 ; girls, 17 ; total, 34.

1. Material condition tolerable ; schoolroom fitted up as a chapel ; accommodation insufficient, additional desks needed ; appearances untidy. 2. Attendance partial and irregular ($\frac{3}{4}$) ; discipline fairly intelligent but not sufficiently watchful and exacting ; pupils fairly well-behaved, but not sufficiently clean and tidy in appearance, and well regulated in demeanour ; moral tone tolerable, or one degree in decline. 3. Course of instruction complete for three classes, and fairly well regulated ; lesson documents not strictly observed ; teaching animated and fairly intelligent. 4. Average proficiency of pupils tolerable + ; geography and Scripture lessons moderate ; writing, good.

WINGEN (N.-V.) :—Regular inspection, 20th October.

Numbers enrolled :—Boys, 14 ; girls, 18 ; total, 32. Numbers present :—Boys, 10 ; girls, 14 ; total, 24.

1. Material condition and supply of school appliances improved and fairly satisfactory ; book-press and water-tank needed ; aspect clean and comfortable. 2. Attendance steady, punctual, and tolerably regular ($\frac{2}{3}$) ; government healthy and fairly intelligent ; pupils clean, docile, and well-behaved ; moral tone reasonably fair. 3. Course of instruction complete, except singing, of third class range and tolerably well-regulated ; teaching somewhat spiritless but painstaking and tolerably intelligent. 4. Average proficiency and progress of pupils tolerably satisfactory ; writing very fair ; grammar, geography, and Scripture lessons moderate.

WYBONG (N.-V.) :—Regular inspection, 31st August.

Numbers enrolled :—Boys, 11 ; girls, 15 ; total, 26. Numbers present :—Boys, 6 ; girls, 12 ; total, 18.

1. Material aspect and condition respectable and highly satisfactory ; supply of furniture and other requisites adequate. 2. Attendance very fairly punctual and tolerably regular ($\frac{1}{2}$) but partial, ten children in non-attendance. 3. Prescribed subjects taught except singing and sewing ; classification and lesson documents of fair merit, latter not strictly followed ; teaching zealous, painstaking, and tolerably intelligent. 4. Average proficiency and progress of pupils tolerable ; writing very good.

HALF-TIME SCHOOLS.

JUNCTION CREEK (N.-V.) SPARKES' CREEK (N.-V.)

WHEN visited for inspection these schools were not in operation in consequence of the unceremonious departure of the teacher from office.

1. Material condition and appointments tolerably satisfactory. 2. Attendance of Junction Creek H.-T. reduced by removals from the district ; gross attendance for both schools twenty-one (21) ; numbers insufficient to maintain the prescribed minimum average of twenty.

MERANNIE (N.-V.) :—Regular inspection, 22nd June.

Numbers enrolled :—Boys, 9 ; girls, 11 ; total, 20. Numbers present :—Boys, 6 ; girls, 10 ; total, 16.

1. Material condition and appointments tolerable ; schoolroom drafty ; book-press and hat-pegs needed. 2. Discipline healthy, fair, and improved ; pupils too inanimate and awkward in demeanour. 3. Instruction appropriate and fairly well regulated ; teaching fairly intelligent and vigorous, but not sufficiently stimulating and catachetical. 4. Average proficiency of pupils, tolerable + ; writing fair ; geography moderate.

WOODBURN (N.-V.) :—Regular inspection, 21st June.

Numbers enrolled :—Boys, 10 ; girls, 13 ; total 23. Numbers present :—Boys, 9 ; girls, 11 ; total, 20.

1. Schoolroom drafty, and book-press needed ; material condition and supply of appointments tolerable. 3. Discipline healthy, fair, and improved. 3. Instruction appropriate, fairly well-regulated, earnest, and fairly intelligent, but not sufficiently impressive and effective. 4. Average proficiency of pupils tolerable ; geography moderate.

RAVENSWORTH, CHILCOT PLAIN (N.-V.) :—Incidental inspection, 13th December.

Numbers enrolled :—Boys, 16 ; girls, 12 ; total, 28.

1. Material condition reasonably tolerable, and supply of school requisites tolerably sufficient. 2. Attendance not satisfactorily regular. 3. No examination of the pupils for want of opportunity.

STONY CREEK (N.-V.) :—Regular inspection, 14th December.

Numbers enrolled :—Boys, 5 ; girls, 4 ; total, 9. Numbers present :—Boys, 5 ; girls, 4 ; total, 9.

1. Schoolhouse tolerably suitable, but inadequately furnished. 2. Attendance reasonably punctual and regular, but below the required minimum ; government empirical, but mild and firm ; disciplinary condition healthy, moderate, and promising. 3. Instruction elementary and desultory, but promising. 4. Average proficiency of pupils small ; school requisites not yet received ; school recently established.

TANILBAH (N.-V.) :—Regular inspection, 14th December.

Numbers enrolled :—Boys, 3 ; girls, 6 ; total, 9. Numbers present :—Boys, 3 ; girls, 6 ; total, 9.

1. Schoolhouse tolerably suitable, supply of furniture tolerable, school requisites not yet received. 2. Attendance reasonably punctual, but below the minimum of ten ; government mild and firm, but only moderately intelligent ; disciplinary condition moderate and promising. 3. Instruction earnest and painstaking, but elementary, mechanical, and desultory ; lesson documents about to be framed. 4. Average proficiency of pupils small. School but very recently established.

MUDGEES DISTRICT.

INSPECTOR'S General Report on the condition of the Schools for the year 1876.

I HAVE the honor to submit for the information of the Council of Education my Report on the condition of the primary schools in the Mudgee District during the year 1876.

Seventy-four schools were in operation during the whole or part of the year. Of these forty-one were Public, twenty-four Provisional, two Half-Time, two Church of England, and four Roman Catholic Schools.

The following new Provisional Schools were opened, viz., Belarbagill, Belarah, Eurunderee, Denison Town, Upper Pipeclay, and Mount Morris. These, of course, were not in operation during the entire year. The schools at Coonamble, Lawson's Creek, Ponto, Goolma, and Merrendee were vacant for short periods, owing to the resignation of the teachers. The schools at Sally's Flat and Dick's Camp were permanently closed for want of sufficient attendance. It will thus appear, that of the seventy-four schools, sixty-three were at work throughout the year, and that eleven, through various causes, did not do the whole year's work.

Five schools, although visited, were not examined. Three of these were temporarily closed at the time of my visit, and the other two were only opened in November. Besides the regular inspections, the majority of the schools were incidentally visited, three and four times in the year. These incidental visits, though hurried, and paid without notice, are very useful in revealing the manner in which the school is ordinarily conducted. By a glance at what each class is doing, and observing the demeanour of the children thus suddenly visited, and noting how far the work accords with the routine entered on the Time Table, an Inspector can arrive at a tolerably accurate judgment of efficiency of the discipline and the usefulness of the school.

New Public School premises are nearly finished at Cooyal and Round Swamp. Schools have been provided by private effort at Michell's Creek, Baker's Swamp, Shepherd's Creek, and Gum Flat. I expect all these will be in operation by 1st February.

Application for a certificate for a R. C. Denominational School at Dubbo was received and declined. Application for aid to a Provisional School at Wollamin was declined on account of the wretched hut proposed for a schoolhouse. However, aid has been promised when a suitable building is provided.

It will be seen from the foregoing remarks that considerable activity in establishing schools was shown during the year. In every place where fifteen or twenty children can be mustered a school is now in existence, or steps have been taken to open one, so that the present and immediate wants of the district may be regarded as very fairly met. However, it must not be understood that the number of schools already established, with those about to be opened, approach the permanent limit necessary for supplying the educational wants of this part of the Colony. Through the operation of "free selection" there are many localities where there are ten or twelve children, and where the settlement of another family or two will render a school necessary. In this way, within the limits of the Mudgee District, eight or ten new schools may be necessary every year. There is such a continuous flow of population, and the resources of this part of the country are so great that there is no telling how many schools will be required a few years hence. It will be wise to secure sites for future schools in all localities before the land is alienated.

In several places contracts for new school premises to supersede old and unsightly ones were entered into, and some of these have been completed. At various places extensive repairs and improvements were effected or authorized. Several applications of a similar nature are still under consideration. Since the abolition of local contributions it is interesting to notice how liberal people have become in their views regarding school accommodation and repairs. I venture to say that this matter will soon force itself forward as a great difficulty in the administration of the department.

I regret to have to report a falling off in the regularity of the attendance during the year. This falling off is fully accounted for by the prevalence of measles and scarlatina in the early part of the year, and by the great scarcity of labour towards the end, or harvest time. In the farming localities during the month of December, every child able to raise a hook might be seen in the wheat fields, and only the mere infants were left at school. Ophthalmia was also prevalent during the hot months, and this too had its effect in causing irregularity.

As might be expected from the foregoing remarks, I am unable to report any decided advance in the attainments of the pupils in the district, taken as a whole. It is, however, only fair to say that in nearly all the schools in the more important townships, where the attendance has been tolerably regular, substantial and satisfactory progress has been made.

G. O'BYRNE,
Inspector.

Mudgee, January 15th, 1877.

DETAILED Statement of the condition of Schools in the Mudgee District examined during the year 1876.
I.—PUBLIC SCHOOLS.

BOURKE (N.-V.) :—Regular inspection, 16th November.

Numbers enrolled :—Boys, 31 ; girls, 19 ; total, 50. Numbers present :—Boys, 14 ; girls, 7 ; total, 21.

The school is conducted in an old store which is in every respect unsuitable, it is in a very dirty condition. The furniture and working materials are sufficient. The discipline is fair. The prescribed subjects are taught. The instruction is well regulated, and the methods are good, but the work has not been carried on with much vigour. The average proficiency is nearly tolerable.

BREWARRINA (V.) :—Regular inspection, 14th November.

Numbers enrolled :—Boys, 33 ; girls, 20 ; total, 53. Numbers present :—Boys, 27 ; girls, 18 ; total, 45.

Owing to the growing importance of this town it has been found necessary to increase and otherwise improve the accommodation afforded in this school. So far as the material condition has been provided it is very good. The school is well equipped with all necessary working appliances. Regularity and punctuality are very satisfactory. Cleanliness, order, and attention are good. The prescribed subjects are taught, and the instruction is well regulated. The methods are intelligent and industriously applied. The average proficiency is between fair and very fair.

BURRUNDULLA (N.-V.) :—Regular inspection, 8th May.

Numbers enrolled :—Boys, 14 ; girls, 13 ; total, 27. Numbers present :—Boys, 8 ; girls, 9 ; total, 17.

The school requires repairing, it is fairly supplied with furniture and working materials. The attendance, which is generally regular, was low on the day of examination, in consequence of heavy rain. Cleanliness is satisfactory. The discipline is fair. The full course of instruction prescribed is not taught, nor is the instruction well regulated. The average proficiency is moderate.

CASSILIS (N.-V.) :—Regular inspection, 18th April.

Numbers enrolled :—Boys, 23 ; girls, 21 ; total, 44. Numbers present :—Boys, 21 ; girls, 19 ; total, 40.

The school is conducted in the English Church ; the accommodation afforded is very fair, and it is well supplied with working appliances. A new vested school is in course of erection. Cleanliness is satisfactory, and the pupils attend with commendable regularity and punctuality. The discipline secures very fair order and attention. The instruction is properly regulated, and the teaching is industrious. The average proficiency is scarcely tolerable.

COONABARRABRAN (V.) :—Regular inspection, 2nd November.

Numbers enrolled :—Boys, 25 ; girls, 32 ; total, 57. Numbers present :—Boys, 18 ; girls, 28 ; total, 46.

Some repairs are needed to the premises ; in other respects the material condition and organization are good. The attendance is not so large as it ought to be. The order in the first class is not satisfactory. In the other classes it is fair. The proficiency exceeds moderate.

COOLAH (V.) :—Regular inspection, 20th April.

Numbers enrolled :—Boys, 21 ; girls, 12 ; total, 33. Numbers present :—Boys, 17 ; girls, 6 ; total, 23.

The schoolroom is only divided from the residence by a canvas partition ; the organization is, therefore, unsuitable. A new residence is required. About five-sixths of the pupils attend regularly. The general discipline is fair. The instruction is properly regulated, and the teaching is painstaking. The proficiency ranges from tolerable to fair.

CRUDINE

CRUDINE (V.) :—Regular inspection, 19th May.

Numbers enrolled :—Boys, 15 ; girls, 13 ; total, 28. Numbers present :—Boys, 13 ; girls, 5 ; total, 18.

The school has been repaired, and some important improvements made to the building. The condition and organization are now good. The supply of working materials is sufficient ; cleanliness, order, and attention, are fair. The classification is suitable, and the instruction fairly regulated. When the school was examined, the attendance was low, owing to the prevalence of scarlet fever. The methods are only tolerable in merit, but they are industriously applied. The average proficiency is tolerable.

CUDGEGONG (N.-V.) :—Regular inspection, 16th May.

Numbers enrolled :—Boys, 22 ; girls, 17 ; total, 39. Numbers present :—Boys, 19 ; girls 15 ; total, 34.

The school is still conducted in the church. The material condition and organization are very fair. Cleanliness is satisfactory, and the discipline reasonably effective. The prescribed subjects are taught with average skill and much care. The average proficiency is between tolerable and fair.

CULLENBONE (N.-V.) :—Regular inspection, 20th July.

Numbers enrolled :—Boys, 27 ; girls, 27 ; total, 54. Numbers present :—Boys, 14 ; girls, 13 ; total, 27.

The material condition of this school is bad ; there are no out-offices. The records are not well kept. The prescribed subjects are attempted, but the methods are wanting in skill and effect. The discipline is unsatisfactory, and the attainments are scarcely moderate.

DUBBO (V.) :—Regular inspection, 25th and 26th September.

Numbers enrolled :—Boys, 95 ; girls, 65 ; total, 160. Numbers present :—Boys, 69 ; girls, 37 ; total, 106.

The material condition and organization are very good. The full course of instruction prescribed by the Council is given. About three-fifths of the pupils attend regularly ; they are, as a rule, clean and tidy in appearance. The classification is pretty good, and the instruction is properly regulated. The methods are of very fair merit, and they are industriously applied. The average proficiency exceeds fair.

DUNGAREE (V.) :—Regular inspection, 10th May.

Numbers enrolled :—Boys, 18 ; girls, 19 ; total, 37. Numbers present :—Boys, 15 ; girls, 15 ; total, 30.

The material condition and organization are bad, but a new schoolhouse is now ready for occupation. The supply of working materials is adequate. The discipline secures good order. The instruction is carefully regulated, and the teaching is very painstaking. The average proficiency is very fair.

GOODRICH (N.-V.) :—Regular inspection, 20th June.

Numbers enrolled :—Boys, 21 ; girls, 32 ; total, 53. Numbers present :—Boys, 14 ; girls, 18 ; total, 32.

The schoolroom is suitable, but it requires repairing and whitewashing. There is no residence for the teacher. The supply of furniture is rather scanty. Cleanliness is satisfactory. The government is mild, and tolerably effective. The instruction is well regulated, and the work of the schools is conducted with industry. Owing to the fluctuating population at the mines, the attendance is not regular ; however, both the attendance and the attainments have improved under the teacher now in charge. The proficiency, as measured by the two lower standards, ranges between moderate and tolerable.

GULGONG (Primary—V.) :—Regular inspection, 7th and 8th September.

Numbers enrolled :—Boys, 74 ; girls, 50 ; total, 124. Numbers present :—Boys, 57 ; girls, 37 ; total, 94.

Owing to the falling off in the population, it was found desirable to merge the boys' and girls' department into one primary school. The organization is very good, and the school is well equipped with working materials. The pupils are fairly regular and punctual. The discipline is effective. All the prescribed subjects are very fairly taught. The average proficiency is fair.

GULGONG (Infants—V.) :—Regular inspection, 6th September.

Numbers enrolled :—Boys, 35 ; girls, 33 ; total, 68. Numbers present :—Boys, 17 ; girls, 21 ; total, 38.

The organization of the school is good. Cleanliness is satisfactory. The order is not good, and the mistress now in charge does not appear well fitted for an infant school. The classification is appropriate, and the prescribed subjects are taught. The average proficiency is about tolerable.

GUNTAWANG (V.) :—Regular inspection, 21st March.

Numbers enrolled :—Boys, 21 ; girls, 36 ; total, 57. Numbers present :—Boys, 17 ; girls, 24 ; total, 41.

Excepting that a few minor repairs are needed, the condition and organization may be regarded as good. The personal cleanliness of the pupils should be more strictly enforced. The discipline secures fair order and attention. The pupils, however, do not show much self reliance. The attendance has improved, but still it is not as large as it ought to be. The instruction is carefully regulated, and the teaching appears industrious. The average proficiency is barely tolerable.

HARGREAVES (V.) :—Regular inspection, 17th March.

Numbers enrolled :—Boys, 16 ; girls, 30 ; total, 46. Numbers present :—Boys, 11 ; girls, 6 ; total, 17.

Lavatories and a better supply of water are needed ; in other respects the organization is good. Nearly three-fourths of the pupils attend regularly, but on the day of examination the attendance was small, on account of races in the neighbourhood. The classification is appropriate, and the instruction well regulated. The discipline is very fair. The average proficiency is nearly fair.

HILL END (Boys—V.) :—Regular inspection, 16th and 19th August.

Number enrolled :—112. Number present :—81.

The organization and equipment of the school are very good. Cleanliness is satisfactory, and the whole discipline is vigorous and thoroughly effective. The full range of subjects on the standards are taught. The methods are good, and are applied with vigour and effect. The proficiency ranges from very fair to good.

HILL END (Girls—V.) :—Regular inspection, 17th August.

Number enrolled :—93. Number present :—70.

This school is well organized, and well supplied with working materials. The pupils present a neat and tidy appearance. The discipline is mild, firm, and effective, and the tone of the school is very pleasing. The prescribed subjects are taught, and the instruction is well regulated. The methods are intelligent, and industriously applied. The proficiency ranges from fair to very fair.

HILL

HILL END (Infants-V.) :—Regular inspection, 18th August.

Numbers enrolled :—Boys, 70 ; girls, 62 ; total, 132. Numbers present :—Boys, 56 ; girls, 42 ; total, 98.

The accommodation afforded is too limited for the number of children in attendance. Cleanliness is fairly satisfactory, but the order is not good. The over-crowding of the school renders good discipline difficult. The subjects prescribed for infant schools are taught. The methods are of fair merit, and the average proficiency is tolerable.

ILFORD (N.-V.) :—Regular inspection, 17th May.

Numbers enrolled :—Boys, 12 ; girls, 10 ; total, 22. Numbers present :—Boys, 9 ; girls, 9 ; total, 18.

The schoolhouse is a bad one, and badly situated. The organization is very indifferent. A contract for the erection of a new school has been entered into. The teacher has become unpopular, and a marked falling off in the attendance has taken place. Except singing the prescribed subjects are taught, and the school routine is fairly regulated. The teaching is painstaking but not skilful. The average proficiency is only moderate.

IRONBARKS (V.) :—Regular inspection, 23rd June.

Numbers enrolled :—Boys, 29 ; girls, 24 ; total, 53. Numbers present :—Boys, 22 ; girls, 17 ; total, 39.

The defects in the material condition mentioned last year still exist. The whole discipline is satisfactory. The prescribed subjects are taught, and the school routine is judiciously regulated. The teaching is industrious and effective. The average proficiency approaches very fair.

LAWSON'S CREEK (V.) :—Regular inspection, 19th July.

Numbers enrolled :—Boys, 18 ; girls, 11 ; total, 29. Numbers present :—Boys, 16 ; girls, 8 ; total, 24.

The material condition of the premises is very unsatisfactory. The supply of working materials is sufficient. The discipline is good. The methods are very fair in skill and effect. The school has improved very much under the present teacher. The average proficiency ranges from fair to very fair on the two lower standards.

MERRIWA (V.) :—Regular inspection, 14th September.

Numbers enrolled :—Boys, 32 ; girls, 28 ; total, 60. Numbers present :—Boys, 25 ; girls, 19 ; total, 44.

The material condition and organization of this school are as bad as they can be. A contract for the erection of a new school has been entered into. The supply of working materials is sufficient. The discipline secures very fair order, excepting in the first class where too much talking is allowed. The instruction is sensibly regulated, and the teaching is industrious. The average proficiency ranges from tolerable to fair.

MOBELLAH (N.-V.) :—Regular inspection, 2nd June.

Numbers enrolled :—Boys, 55 ; girls, 47 ; total, 102. Numbers present :—Boys, 31 ; girls, 28 ; total, 59.

The material condition and organization of this school are indifferent. The supply of furniture and working materials is sufficient. The personal cleanliness of the pupils should be more strictly enforced. Order and attention are very fair. The prescribed subjects are taught with intelligence and industry. The attendance is not regular, and hence it is difficult to produce good results. The average proficiency approaches fair.

MOLONG (V.) :—Regular inspection, 24th March.

Numbers enrolled :—Boys, 53 ; girls, 32 ; total, 85. Numbers present :—Boys, 37 ; girls, 22 ; total, 59

The material condition of the school is passable ; it is well furnished and properly supplied with working materials. The pupils attend regularly and punctually, and nearly all are clean and tidy. The discipline secures good order. The prescribed subjects are taught with very fair intelligence and much zeal and industry. Good progress has been made during the year. The proficiency ranges from very fair to good.

MUDGE (Boys—V.) :—Regular inspection, 27th July.

Number enrolled :—Boys, 69. Number present :—Boys, 61.

The material condition and organization of this department is reasonably good ; it is well equipped with working appliances. The whole discipline is good. The work of the school is conducted with energy and zeal. The average proficiency exceeds very fair.

MUDGE (Girls—V.) :—Regular inspection, 3rd and 4th August.

Number enrolled :—78. Number present :—58.

No alteration has taken place in the material condition of the school ; it is very unsuitable. It is well furnished and properly supplied with working materials. The attendance is regular and punctual. The pupils are clean, orderly, and attentive. The prescribed subjects are taught, and the methods are intelligent and carefully applied. The average proficiency is very fair.

MUDGE (Infants—V.) :—Regular inspection, 1st August.

Numbers enrolled :—Boys, 96 ; girls, 78 ; total, 174. Numbers present :—Boys, 81 ; girls, 70 ; total, 150.

The rooms used for the infant department are over-crowded, and in other respects unsuitable. The pupils are clean, orderly, regular, and punctual. The classification is appropriate and the instruction well regulated. The methods are intelligent, and vigorously applied. The average proficiency exceeds very fair.

PIPECLAY CREEK (V.) :—Regular inspection, 11th August.

Numbers enrolled :—Boys, 19 ; girls, 24 ; total, 43. Numbers present :—Boys, 15 ; girls, 12 ; total, 27.

The material condition and organization are good. The pupils are somewhat irregular and unpunctual. The government secures very fair order and attention. Cleanliness is satisfactory. The instruction is properly regulated, and the methods evince fair skill. The proficiency ranges from tolerable to fair.

PONTO (V.) :—Regular inspection, 29th March.

Numbers enrolled :—Boys, 13 ; girls, 13 ; total, 26. Numbers present :—Boys, 5 ; girls, 7 ; total, 12.

The material condition and organization of this school are not satisfactory ; the whole premises need thoroughly repairing. The attendance has diminished greatly of late, and the few who do attend are neither regular nor punctual. Cleanliness, order, and attention are fairly satisfactory. The methods are not skilful, nor are they industriously applied. The proficiency on the two lower standards is very little better than indifferent.

PYRAMUL (V.) :—Regular inspection, 4th March.

Numbers enrolled :—Boys, 21 ; girls, 26 ; total, 47. Numbers present :—Boys, 10 ; girls, 14 ; total, 24.

The material organization is very bad. A new school is about to be erected. The work of the school has been conducted very irregularly, and no progress has been made during the year. The proficiency ranges from indifferent to moderate.

RYLSTONE (V.) :—Regular inspection, 12th May.

Numbers enrolled :—Boys, 28 ; girls, 29 ; total, 57. Numbers present :—Boys, 24 ; girls, 20 ; total, 44.

The objectionable features in the material organization were pointed out in previous reports, and they are now about to be remedied. The attendance is small considering the number of children in the locality. Cleanliness is fairly satisfactory. The methods are of average merit, and the results have improved since last inspection. The average proficiency exceeds fair.

SPRING FLAT (V.) :—Regular inspection, 19th December.

Numbers enrolled :—Boys, 18 ; girls, 21 ; total, 39. Numbers present :—Boys, 3 ; girls, 7 ; total, 10.

Since last inspection the grounds have been securely fenced and a neat residence built. The schoolhouse is in need of some repairs. The furniture is scarcely sufficient. The usual attendance is about twenty-five, but owing to harvesting only a few of the younger children were present. Cleanliness is satisfactory. The government is weak and the order not good. Singing is not taught. The teaching is spiritless and very much wanting in thoroughness. The proficiency is barely moderate.

TAMBAROORA (V.) :—Regular inspection, 1st and 2nd March.

Numbers enrolled :—Boys, 40 ; girls, 42 ; total, 82. Numbers present :—Boys, 29 ; girls, 30 ; total, 59.

Excepting that the accommodation is not sufficiently large for the attendance, the school is fairly organized. A better supply of working materials is needed. The prescribed subjects, singing excepted, are taught. The instruction is fairly regulated. The methods are of average merit, but the results are not satisfactory. The average proficiency approaches tolerable.

TURON, UPPER (V.) :—Regular inspection, 23rd August.

Numbers enrolled :—

Numbers present :—Boys, 11 ; girls, 12 ; total, 23.

The material organization of this school is fair. The premises are well kept. Owing to the prevalence of scarlet fever great irregularity had existed up to the time of examination. This lowered the results considerably. Except singing the prescribed subjects are taught. The work is industriously done, but it wants spirit and thoroughness. The average proficiency is only moderate.

UARBRY (N.-V.) :—Regular inspection, 21st April.

Numbers enrolled :—Boys, 19 ; girls, 15 ; total, 34. Numbers present :—Boys, 8 ; girls, 9 ; total, 17.

The present site of the school is damp and unsuitable. A new school on drier ground has since been built. The attendance is low and irregular. The discipline secures fair order and attention. Cleanliness is reasonably good. The course of instruction is properly regulated, and the teaching is industrious, but it lacks vigour and thoroughness. The proficiency on the two lower standards is tolerable.

WARREN (V.) :—Regular inspection, 22nd and 23rd November.

Numbers enrolled :—Boys, 25 ; girls, 22 ; total, 47. Numbers present :—Boys, 21 ; girls, 16 ; total, 37.

The schoolroom is too narrow, but in other respects the material condition is good. The supply of working materials is sufficient. Cleanliness is satisfactory, and the government secures very fair order and attention. The instruction is tolerably well regulated, and the teaching is painstaking, but not very thorough. The average proficiency exceeds tolerable.

WELLINGTON (V.) :—Regular inspection, 16th and 17th June.

Numbers enrolled :—Boys, 98 ; girls, 60 ; total, 158. Numbers present :—Boys, 82 ; girls, 41 ; total, 123.

The principal defect in the organization is the want of lavatories ; some repairs are also needed to the fences. In other respects the material condition is very good. The discipline is thoroughly effective, and the tone of the school pleasing. The teaching is skilful, well sustained, and effective. The standards for four classes were fully met. The proficiency ranges from very fair to good.

WILBERTREE (V.) :—Regular inspection, 12th April.

Numbers enrolled :—Boys, 18 ; girls, 16 ; total, 34. Numbers present :—Boys, 15 ; girls, 12 ; total, 27.

The material condition remained unaltered during the year ; it is very fair. Not quite three-fourths of the pupils attend regularly. Cleanliness requires more attention. The classification is not judicious. The instruction is regulated by the usual documents. Singing, drawing, and sewing are not taught. The methods are intelligent, but they need to be applied with more care and industry. The average proficiency is barely moderate.

WINDEYER (V.) :—Regular inspection, 29th February.

Numbers enrolled :—Boys, 18 ; girls, 18 ; total, 36. Numbers present :—Boys, 13 ; girls, 10 ; total, 23.

The school has been repaired, and a supply of water provided, since last inspection ; the material condition and organization are now very fair. Except singing, the prescribed subjects are attempted. The instruction is poorly regulated, and the methods are of an inferior type. Only the two lower standards were applied, and the proficiency on these were barely moderate.

II.—PROVISIONAL SCHOOLS.

BARADINE (N.-V.) :—General inspection, 3rd November.

Numbers enrolled :—Boys, 10 ; girls, 11 ; total, 21. Numbers present :—Boys, 8 ; girls, 10 ; total, 18.

The schoolhouse is an old slab hut, unsuitable in every respect. The furniture is very short in supply, and badly constructed. A supply of working materials is very much wanted. The pupils are clean, orderly, and attentive. Although the teaching does not strictly accord with the prescribed course, yet the results produced are reasonably satisfactory. The proficiency is tolerable.

BELARBAGILL (N.-V.) :—General inspection.

Numbers enrolled :—Boys, 15 ; girls, 20 ; total, 35. Numbers present :—Boys, 8 ; girls, 9 ; total, 17.

Excepting that there are no out-offices, this school (which is a new one) is well suited to meet the requirements of the locality ; it is very fairly furnished, and well supplied with working materials. About two-thirds of the pupils attend regularly. Punctuality and cleanliness are pretty good. The discipline is fair. The instructional documents are not well compiled, and the methods do not evince much skill. The proficiency on the two lower standards is about moderate.

CAMBOON (N.-V.) :—Regular inspection, 13th October.

Numbers enrolled :—Boys, 14 ; girls, 11 ; total, 25. Numbers present :—Boys, 9 ; girls, 9 ; total, 18.

The material condition and organization are bad. A new school is promised. The pupils attend pretty regularly, excepting in harvest time. The records and instructional documents are not well understood, and some important mistakes had to be corrected. The discipline is effective, and the children conduct themselves nicely. The classificational is too individual. The teaching is carried on with earnestness and care. The average proficiency is tolerable.

COOMBER (N.-V.) :—Regular inspection, 11th May.

Numbers enrolled :—Boys, 15 ; girls, 13 ; total, 28. Numbers present :—Boys, 11 ; girls, 9 ; total, 20.

The schoolhouse is a slab one, roofed with bark ; it affords tolerable accommodation for the children in the locality. The supply of furniture and working materials is short. Except singing, the prescribed subjects for two classes are taught. The instruction is fairly regulated, and the teaching is painstaking, though not skilful. The discipline is fair. The proficiency exceeds tolerable on the two lower standards.

CANNONBAR (N.-V.) :—General inspection, 10th November.

Numbers enrolled :—Boys, 12 ; girls, 9 ; total, 21. Numbers present :—Boys, 7 ; girls, 7 ; total, 14.

The schoolhouse is a dilapidated old store ; it is neither clean nor suitable, and it is only poorly furnished. A new school is badly wanted in this township. The supply of working materials is sufficient. The pupils are not regular, and the ordinary attendance ought to be larger. The records are not well kept. The discipline secures fair order. The classification is objectionable. The teaching is neither systematic nor effective. The proficiency is between indifferent and moderate.

EURUNDEREE (V.) :—General inspection, 19th December.

Numbers enrolled :—Boys, 32 ; girls, 21 ; total, 53. Numbers present :—Boys, 11 ; girls, 4 ; total, 15.

The schoolhouse is a new one—walls and roof of bark, but it is pretty substantial of the kind. It is roomy, and well ventilated ; it affords fair accommodation for present requirements. It is well supplied with furniture and working materials. Owing to a very busy harvest time, the attendance had suddenly fallen off, but the ordinary number under instruction is about thirty. The discipline is very fair, and the routine of work is properly regulated. The teaching is carefully conducted, and the methods are of tolerable merit. The proficiency exceeds moderate. The school was only a few months in operation.

GONGOLGON (N.-V.) :—Regular inspection, 13th November.

Numbers enrolled :—Boys, 13 ; girls, 13 ; total, 26. Numbers present :—Boys, 13 ; girls, 13 ; total, 26.

The school is still conducted in an old stable at the rear of a public-house. It is dirty, and wholly unsuitable. The supply of working appliances is not sufficient. The pupils are very regular. The discipline is fair. The classification is more judicious than it was last year, and the teaching is more systematic. The average proficiency is tolerable.

GUNDY (N.-V.) :—Regular inspection, 22nd September.

Numbers enrolled :—Boys, 15 ; girls, 13 ; total, 28. Numbers present :—Boys, 12 ; girls, 11 ; total, 23.

The material condition and organization are satisfactory in nearly every respect. Cleanliness is very fair, and the discipline is pretty good. The programmes do not well define the course of work, and the methods, though intelligent, partake too much of lecturing. The school has, however, improved since last inspection. The average proficiency is nearly tolerable.

GOOLMA (N.-V.) :—General inspection, 8th March.

Numbers enrolled :—Boys, 17 ; girls, 9 ; total, 26. Numbers present :—Boys, 13 ; girls, 8 ; total, 21.

This is a new school ; the building is roomy and well adapted for the purpose ; it is occasionally used as a church. The furniture is sufficient in quantity, but indifferent in construction. The pupils are fairly regular and punctual ; they are clean and orderly. Singing and drawing are not taught. The teaching is industrious and tolerably skilful. The proficiency on the two lower standards is moderate.

LIMESTONE FLAT (N.-V.) :—Regular inspection, 15th May.

Numbers enrolled :—Boys, 9 ; girls, 10 ; total, 19. Numbers present :—Boys, 6 ; girls, 4 ; total, 10.

The school building is an inferior one, much in want of repairs. The furniture and working appliances are insufficient. The teacher is very noisy when at work, and he lacks governing power. Several of the children have recently been withdrawn from school. The classification is not judicious, and the teaching is not skilful. The average proficiency is indifferent.

MERRENDEE (V.) :—Regular inspection, 22nd and 23rd December.

Numbers enrolled :—Boys, 21 ; girls, 10 ; total, 31. Numbers present :—Boys, 16 ; girls, 10 ; total, 26.

The material condition and organization of this school has been improved ; it is now very fair. The supply of furniture is sufficient. Regularity and punctuality is satisfactory. The discipline is fair, and the work of the school is industriously done. The average proficiency is between tolerable and fair.

MOUNT MORRIS (V.) :—General inspection, 11th October.

Numbers enrolled :—Boys, 9 ; girls, 5 ; total, 14. Numbers present :—Boys, 9 ; girls, 4 ; total, 13.

This is a new school. The building is an humble one, but it is fairly suited to the wants of the locality. More furniture is required ; the supply of working materials is sufficient. The attendance is pretty regular, but the number of children in the locality is small, and it is doubtful if the school can be kept in operation for any lengthened time. The discipline is very fair. The instruction is properly regulated, and the teaching is marked by fair intelligence. The proficiency is about tolerable.

NARRANGO (N.-V.) :—Regular inspection, 12th October.

Numbers enrolled :—Boys, 11 ; girls, 9 ; total, 20. Numbers present :—Boys, 8 ; girls, 8 ; total, 16.

The material condition and organization of this school are fairly satisfactory. The attendance is pretty regular and punctual. The instruction is tolerably regulated, and the methods are of fair merit. The average proficiency is between tolerable and fair. There are only two classes.

NEWREA (N.-V.) :—Regular inspection, 27th March.

Numbers enrolled :—Boys, 17 ; girls, 16 ; total, 33. Numbers present :—Boys, 11 ; girls, 7 ; total, 18.

This is a new schoolhouse recently built by the inhabitants. Excepting that there are no out-offices, the material condition and organization are good. The pupils attend with fair regularity ; punctuality needs to be more strictly enforced. The government is fairly effective. The teaching reasonably intelligent. The average proficiency is between tolerable and fair.

OBLEY (N.-V.) :—Regular inspection, 21st June.

Numbers enrolled :—Boys, 16 ; girls, 7 ; total, 23. Numbers present :—

The school is conducted in a good roomy building used as a church ; it is poorly furnished, but the supply of other school requisites is sufficient. There are no out-offices. The whole discipline is fair, and the work is energetically done. The proficiency on the two lower standards is tolerable.

PIPECLAY, UPPER (N.-V.) :—General inspection, 5th September.

Numbers enrolled :—Boys, 19 ; girls, 7 ; total, 26. Numbers present :—Boys, 15 ; girls, 7 ; total, 22.

The school is a slab building roofed with bark, the floor is not boarded. The school is tolerably well furnished. The accommodation is reasonably suitable. The instruction is not well regulated, nor is the teaching skilful. The proficiency is small, but the school was only opened a few months before the examination.

SALLY'S FLAT (N.-V.) :—Regular inspection, 2nd March.

Numbers enrolled :—Boys, 11 ; girls, 15 ; total, 26. Numbers present :—Boys, 4 ; girls, 4 ; total, 8.

Some of the families have removed from the locality, and hence the attendance fell so low. The school has since been closed. The proficiency exceeds tolerable on the lower standard.

SPRINGFIELD (V.) :—Regular inspection, 20th October.

Numbers enrolled :—Boys, 13 ; girls, 18 ; total, 31. Numbers present :—Boys, 7 ; girls, 12 ; total, 19.

The building is too small. The schoolroom is suitable and in fair repair. The supply of working materials is insufficient. About two-thirds of the pupils attend regularly and punctually ; cleanliness, order, and attention, are fair. The course of instruction does not embrace singing and drawing. The teaching is painstaking but spiritless. The average proficiency is moderate.

TARA (V.) :—Regular inspection, 10th October.

Numbers enrolled :—Boys, 15 ; girls, 14 ; total, 29. Numbers present :—Boys, 9 ; girls, 12 ; total, 21.

The material organization of this school is fair. The discipline has greatly improved, and the teaching is now conducted with system and industry. The attendance is somewhat irregular. The prescribed subjects are taught, and the instruction is properly regulated. The proficiency is moderate.

TREE CREEK (N.-V.) :—Regular inspection, 19th April.

Numbers enrolled :—Boys, 10 ; girls, 15 ; total, 25. Numbers present :—Boys, 10 ; girls, 11 ; total, 21.

The schoolhouse is in need of some repairs. The furniture is getting old and rickety. The supply of working materials is sufficient. The pupils attend with fair regularity ; cleanliness is reasonably good, and the discipline secures fair order and attention. The teaching is vigorous and painstaking, but not skilful. The average proficiency is nearly tolerable ; only the two lower standards were applied.

WOLLAR (N.-V.) :—Regular inspection, 13th September.

Numbers enrolled :—Boys, 20 ; girls, 17 ; total, 37. Numbers present :—Boys, 12 ; girls, 12 ; total, 24.

The school is conducted in the R.C. church ; the building is fairly suitable in all respects. The furniture is short in supply and of indifferent construction. The school is supplied adequately with working appliances. The instruction is well regulated ; the methods are fair, and industriously applied. The average proficiency is tolerable.

III.—HALF-TIME SCHOOLS.

BERI CREEK (V.) :—Regular inspection, 5th December.

Numbers enrolled :—Boys, 7 ; girls, 12 ; total, 19. Numbers present :—Boys, 6 ; girls, 10 ; total, 16.

The condition and organization of the school are very fair. The premises are kept with neatness and care. The attendance is regular and punctual. The instruction is properly regulated, and the methods are fair, and very industriously applied. The proficiency on the two lower standards ranges between fair and very fair.

NUBBYGLYN (N.-V.) :—Regular inspection, 22nd June.

Numbers enrolled :—Boys, 4 ; girls, 8 ; total, 12. Numbers present :—Boys, 4 ; girls, 6 ; total, 10.

The material condition of this school is unchanged. The school is fairly furnished, and well supplied with working appliances. The discipline is very fair ; the methods are intelligent and vigorously applied. The general proficiency exceeds tolerable.

G. O'BYRNE,

Mudgee, 6th January, 1876.

Inspector of Schools, Mudgee District.

NEWCASTLE DISTRICT.

GENERAL Report for the year 1876.

Conformably with the instructions contained in your memo. No. 76-19,019, dated 1st December, ultimo, I beg to submit for the information of the Council of Education my general Report upon the schools inspected during the year 1876.

At the close of 1875, 104 schools of all kinds were in operation in the district ; at the end of 1876 the number was 110 ; they are classed as follows :—

Public	61
Provisional	18
Half-time	13
Church of England.....	9
Roman Catholic	9

This table shows an increase of 5 Public, 2 Provisional, and 2 Roman Catholic Schools, and a decrease of 3 Half-time Schools, of which one was closed by the conversion of that with which it was conjoined into a Public School, another through the removal of families from the locality, and a third on account of the unsuitableness of the accommodation provided.

Two or three applications are still under consideration for schools in places not yet adequately supplied ; and from a few others, similarly circumstanced, applications may soon be expected ; but in general, it may be safely asserted, that there are few villages or settlements throughout the length and breadth of the district, having in each case nine or ten children of school age, without their respective schools ; and so, both the amount and distribution of the means of instruction, as administered by the Council, may be regarded as reasonably, if not fully, satisfactory. The Kincumber Roman Catholic School, from which the certificate was withdrawn, from the 31st ultimo, on account of small attendance, is included in the table given above.

The

The demand for building aid during the year kept pace pretty well with my anticipations. Material improvements were effected in numerous instances, and entirely new buildings authorized in others. These provide much more liberally for the convenience and comfort of children and teachers than could have been done formerly, when local contributions were required. At the same rate of progress, a few years will bring about a marked change for the better, in the appearance and material of vested schools.

In the ninety schools examined, 7,026 children were enrolled, and 5,186, or nearly 74 per cent. were present on the days of inspection. Of the twenty schools not visited, three were closed in March, three were opened only in November; and time did not permit me to reach upon fourteen.

With regard to the condition of the schools inspected, a brief notice of the state of each, in point of material organization, discipline, instruction, and general efficiency, will be found appended to this report. The character of all, under these several aspects, may be summarized as follows:—The material condition and moral tone are very fair; the instruction is, in general, careful, passably intelligent, impressive, and beneficial; and the results may be set down as from tolerable to fair. These average estimates are satisfactory, and serve to show that primary education is making reasonable progress, and exercising, it is to be hoped, a steady, salutary, and elevating influence upon the characters of all subject to its operation.

Before concluding, a few remarks respecting children who are believed to attend no school may not be out of place. I find from inquiries made during inspection that a total of 787 such children is furnished from forty-one different localities; but by far the greater portion (587) of them belong to Newcastle, Wallsend, Hamilton, and Stockton. In these places while, as a rule, the parents are not absolutely negligent of their children's welfare, still, owing partly to a variety of circumstances, but chiefly to the ease with which good wages can be earned, and I dare say, also, to the natural desire of securing as soon as possible some eligible and remunerative employment, the children are withdrawn from school at a comparatively early age. I find that in several cases in which the teacher is really efficient, and the school popular, there are no permanent absentees; but, on the other hand, when teachers give way to laxity and remissness in the performance of their duties, the children are withdrawn soonest, and kept longest away. In these cases cause and effect appear to maintain their natural relations. There are others in which certain inhabitants conceive or contract a dislike to a teacher from some cause entirely separable from his or her character as such; in these too the children are frequently withdrawn, and the obnoxious teacher is compelled to seek a more congenial atmosphere. The inferences which I draw from these facts are:—

1. That the numbers of children of school age reported as permanently absent from school are not in all cases to be regarded as thoroughly *bonâ fide*, nor likely to swell the ranks of juvenile criminality solely through ignorance.

2. That as the schools become really efficient, the number of permanent absentees will be reduced to a minimum.

3. That so desirable a consummation is to be effected mainly through the instrumentality of the teachers, who should be not only competent to instruct, but capable of thoroughly understanding and appreciating their positions with regard to the society and circumstances in which they live.

It is satisfactory to be able to state that these conditions obtain in the majority of the schools of the district, and that in consequence their future prospects inspire every confidence in their reasonable progress and efficiency.

WM. DWYER,
Inspector.

Newcastle, 24 January, 1877.

DETAILED statement showing the condition of the Public, Provisional, and Half-Time Schools inspected in 1876, as regards—

1. Their material condition.
2. Their moral character.
3. The subjects and methods of instruction.
4. The proficiency of the pupils.

PUBLIC SCHOOLS.

BANDON GROVE:—Regular inspection, 31st August.

Present at examination:—Boys, 16; girls, 16; total, 32.

1. The condition of the premises is only moderate, but the general organization of the school is fair. 2. The moral tone of the school is good. 3. The occupation is suitable and arranged with fair skill; the instruction fairly intelligent, judicious, and effective. 4. The average proficiency exceeds fair.

BARRINGTON:—Regular inspection, 14th September.

Present at examination:—Boys, 16; girls, 12; total, 28.

1. The ground is unfenced and unprovided with out-offices; and the building is old and unsuitable, but tolerably well organized. 2. The moral tone of the school is very fair. 3. The occupation is fairly appropriate and passably arranged; the instruction reasonably intelligent and effective. 4. The average proficiency exceeds tolerable.

BOORAL:—Regular inspection, 26th September.

Present at examination:—Boys, 19; girls, 14; total, 33.

1. The premises are suitable, in good condition, and well appointed; and the general organization of the school is effective. 2. The moral tone of the school is good. 3. The occupation is suitable and properly regulated; the instruction careful, fairly judicious, and effective. 4. The average proficiency varies from tolerable to fair, but the general character of the school is nearly very fair.

CLARENCE TOWN:—Regular inspection, 21st and 22nd August.

Present at examination:—Boys, 49; girls, 46; total, 95.

1. The buildings are very old, dilapidated, and unsuitable, but new premises are in course of erection; under the circumstances, the organization is fairly effective. 2. The moral tone of the school is very fair. 3. The classification is, in some instances, injudicious, but the occupation is appropriate and suitably arranged; the instruction is intelligent, but not satisfactorily impressive. 4. The average proficiency is fair.

CUNDLETON:—Regular inspection, 26th October.

Present at examination:—Boys, 20; girls, 31; total, 51.

1. Since last inspection extensive improvements have been effected in the premises, which are now in good condition, and the school is effectively organized. 2. The moral tone of the school is very fair. 3. The subjects are appropriate, and suitably arranged; the methods earnest and fairly effective. 4. The average proficiency is fair.

CROFT:—

CROKI :—Regular inspection, 31st October.

Present at examination :—Boys, 44 ; girls, 32 ; total, 76.

1. The premises are in very fair condition, sufficient, and suitable ; the school is fairly equipped, and its general organization effective. 2. The moral tone of the school is good. 3. The occupation is suitable, and skilfully conducted ; the instruction earnest, intelligent, and effective. 4. The average proficiency varies from fair to very fair, but the general character of the school exceeds very fair.

CROOM PARK :—Regular inspection, 6th September.

Present at examination :—Boys, 11 ; girls, 10 : total, 21.

1. The premises are in tolerable condition, and reasonably suitable, and the school is fairly organized. 2. The moral tone of the school is very fair. 3. The occupation is correct, and regulated with fair care and skill ; the instruction is careful, earnest, and passably effective. 4. The average proficiency exceeds tolerable, and the general character of the school is fair.

CAFE HAWKE :—Regular inspection, 29th November.

Present at examination :—Boys, 10 ; girls, 16 ; total, 26.

1. The schoolroom is suitable and fairly organized, but the teacher's dwelling is very temporary and uncomfortable, and there are no proper out-offices. 2. The moral tone of the school is very fair. 3. The occupation is fairly appropriate, and suitably arranged ; the instruction careful, intelligent, and effective. 4. The average proficiency is nearly fair.

DINGO CREEK :—General inspection, 9th November.

Present at examination :—Boys, 12 ; girls, 16 ; total, 28.

1. The premises are fairly suitable and effective, and the schoolroom is reasonably well provided with furniture and other requisites. 2. The moral tone of the school is good. 3. The subjects are appropriate and skilfully arranged ; the methods intelligent, earnest, and effective. 4. The average proficiency of the pupils and general character of the school are fair.

DUMABESQ ISLAND :—General inspection, 15th November.

Present at examination :—Boys, 24 ; girls, 17 ; total, 41.

1. The fences are old, but otherwise the premises are in good condition and suitable, and the school is very fairly organized. 2. The moral tone of the school is fair. 3. The instruction is appropriate, and suitably regulated ; imparted with fair intelligence and judgment. 4. The average proficiency is tolerable. The school was only a week in operation, after a suspension of duties for about two months.

DUNGOG :—General inspection, 25th August.

Present at examination :—Boys, 31 ; girls, 17 ; total, 48.

1. The premises are in good condition, and the schoolroom is fairly provided with furniture and appliances, and, in general, effectively organized. 2. The moral tone of the school is good. 3. The instruction is appropriate, judiciously arranged, and fairly effective. 4. The average proficiency of the pupils and the general character of the school are very fair.

EAGLETON :—Regular inspection, 4th August.

Present at examination :—Boys, 14 ; girls, 12 ; total, 26.

1. Repairs and improvements are needed, but the premises are essentially in fair condition, and the schoolroom is adequately provided with furniture and other requisites. 2. The moral tone of the school is fair. 3. Only the ordinary subjects are taught ; the lesson guides are suitable, but the methods, though intelligent, are wanting in energy. 4. The average proficiency is nearly tolerable.

GHINNI GHINNI :—Regular inspection, 27th October.

Present at examination :—Boys, 15 ; girls, 9 ; total, 24.

1. The condition of the premises and the organization of the school are satisfactory. 2. The moral tone of the school is fair. 3. The subjects are suitable, and arranged with passable care and skill ; the methods tolerably intelligent and judicious. 4. The average proficiency is moderate, and the general character of the school tolerable.

GLENWILLIAM :—Regular inspection, 23rd August.

Present at examination :—Boys, 10 ; girls, 7 ; total, 17.

1. The premises are in fair condition, and reasonably suitable ; the schoolroom is sufficiently provided with furniture, apparatus, and books. 2. The moral tone of the school is fair. 3. The occupation is appropriate and fairly arranged ; the instruction reasonably intelligent and skilful. 4. The average proficiency varies from tolerable to fair.

HEXHAM :—Regular inspection, 14th March.

Present at examination :—Boys, 19 ; girls, 15 ; total, 34.

1. The premises are in passable condition, but not, as a whole, well adapted to school purposes. The general organization is fair. 2. The moral tone of the school is very fair. 3. The subjects are fairly appropriate, and suitably arranged ; the methods reasonably intelligent and effective. 4. The average proficiency exceeds tolerable, and the general character of the school is fair.

HAMILTON (Primary) :—Regular inspection, 25th and 26th May.

Present at examination :—Boys, 64 ; girls, 37 ; total, 101.

1. The general condition of the premises and the organization of the school are very good. 2. The moral tone of the school is very good. 3. The occupation is appropriate, and suitably regulated ; the instruction intelligent, earnest, and skilful. 4. The average proficiency of the pupils exceeds fair, and the general character of the school may be estimated as from very fair to good.

HAMILTON (Infant) :—Regular inspection, 30th May.

Present at examination :—Boys, 61 ; girls, 54 ; total, 115.

1. The accommodation is inadequate, but the organization, as far as practicable, is effective. A new school since erected. 2. The moral tone of the school is very fair. 3. The occupation is suitable, and regulated with reasonable skill and care ; the instruction is intelligent and fairly effective. 4. The average proficiency varies from tolerable to fair, and the general character of the school is fair.

HANBURY (Primary) :—General inspection, 17th and 18th May.

Present at examination :—Boys, 42 ; girls, 28 ; total, 70.

1. The out-offices have been neglected in point of cleanliness, otherwise the premises are in good condition ; the accommodation is reasonably adequate and suitable, and the general organization effective. 2. The discipline is very lax, and the moral tone of the school only tolerable. 3. The subjects, which include algebra, accord with the standard ; they are fairly arranged, but not effectively taught. 4. The average proficiency of the pupils and the general character of the school are only tolerable.

HANBURY

HANBURY (Infant) :—Regular inspection, 19th May.

Present at examination :—Boys, 45 ; girls, 33 ; total, 78.

1. The room is too small for the numbers, and otherwise unsuitable, but fairly organized. 2. The moral tone of the school is good. 3. The subjects are appropriate and suitably arranged ; the methods intelligent, fairly skilful, and effective. 4. The average proficiency of the pupils is nearly very fair, and the general character of the school good.

KIMBRIKI :—Regular inspection, 24th October.

Present at examination :—Boys, 10 ; girls, 15 ; total, 25.

1. The building is indifferently suitable and poorly furnished, but moderate as regards condition and organization. 2. The moral tone of the school is tolerable. 3. The occupation is fairly appropriate, but clumsily arranged ; the instruction is moderately intelligent and effective. 4. The average proficiency is nearly moderate.

LAMBTON (Primary) :—Regular inspection, 6th, 8th, 9th, and 13th June.

Present at examination :—Boys, 107 ; girls, 81 ; total, 188.

1. The accommodation is insufficient, but the premises are in very fair condition, and the organization of the school is suitable and effective. 2. The moral tone of the school is very good. 3. Latin and algebra are added to the prescribed subjects, and all are suitably regulated ; the instruction is appropriate, fairly impressive, and effectual. 4. The average proficiency exceeds very fair, and the general character of the school is good.

LAMBTON (Infants) :—Regular inspection, 9th June.

Present at examination :—Boys, 101 ; girls, 72 ; total, 173.

1. The accommodation and stock of furniture are insufficient, and the site is low and damp, but the organization of the school is, as a whole, fairly effective. 2. The moral tone of the school is good. 3. The subjects are suitable and properly arranged ; the methods intelligent, vigorous, and effective. 4. The average proficiency is nearly fair, and the general character of the school good.

MARLEE :—General inspection, 10th November.

Present at examination :—Boys, 13 ; girls, 8 ; total, 21.

1. The premises are suitable, in good condition, and the school is fairly organized. 2. The moral tone of the school is fair. 3. The ordinary subjects only are taught ; they are fairly arranged, and taught with care and moderate skill. 4. The average proficiency is tolerable.

MARKWELL :—Regular inspection, 19th September.

Present at examination :—Boys, 9 ; girls, 25 ; total, 34.

1. The building is unsuitable, and in bad repair, but a new schoolroom is in course of completion. Under the circumstances the organization is tolerable. 2. The moral tone of the school is fair. 3. Only the ordinary subjects are taught ; they are fairly arranged, and tolerably well taught. 4. The average proficiency is nearly fair.

MINIMBAH :—Regular inspection, 1st December.

Present at examination :—Boys, 19 ; girls, 15 ; total, 34.

1. The premises are in very fair condition, and the schoolroom is reasonably sufficient and well organized. 2. The moral tone of the school is good. 3. Except as to singing, the subjects accord with the standard, and are properly arranged ; the methods are fairly intelligent, careful, and effective. 4. The average proficiency is nearly fair.

MINMI :—Regular inspection, 7th and 8th March.

Present at examination :—Boys, 50 ; girls, 59 ; total, 109.

1. The building is insufficient, unsuitable, and in bad repair, but, under the circumstances, tolerably well organized. Other premises since provided. 2. The moral tone of the school is good. 3. The instruction accords with the standard, and is fairly intelligent, earnest, and effective. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

MITCHELL'S ISLAND :—Regular inspection, 1st November.

Present at examination :—Boys, 21 ; girls, 23 ; total, 44.

1. The premises as a whole, are suitable and in good condition, and the school is effectively organised. 2. The moral tone of the school is fair. 3. The occupation is fairly appropriate and well arranged, but the methods, though of tolerable value, want experience. 4. The average proficiency is from moderate to tolerable.

MOSQUITO ISLAND :—Regular inspection, 23rd May.

Present at examination :—Boys, 14 ; girls, 11 ; total, 25.

1. The premises are fairly suitable and in good condition, and the general organization of the school is fair. 2. The moral tone of the school is fair. 3. The occupation is suitable, and in general properly arranged ; the methods are fairly intelligent, and passably effective. 4. The average proficiency is tolerable, and the general character of the school fair.

MONKERAI :—Regular inspection, 7th September.

Present at examination :—Boys, 13 ; girls, 16 ; total, 29.

1. The schoolroom and its organization are tolerable. 2. The moral tone of the school is fair. 3. The subjects are suitable and fairly arranged ; the methods passably intelligent and effective. 4. The average proficiency varies from tolerable to fair.

NELSON'S PLAINS :—General inspection, 11th August.

Present at examination :—Boys, 18 ; girls, 11 ; total, 29.

1. The building is unsuitable, the furniture old and clumsy, and the general organization only moderate. 2. The moral tone of the school is fair. 3. The subjects are suitable and properly arranged ; the methods tolerably earnest, skilful, and effective. 4. The average proficiency and general character of the school are tolerable.

NEWCASTLE (Primary) :—General inspection, 10th, 11th, 12th, and 25th April.

Present at examination :—Boys, 143 ; girls, 88 ; total, 231.

1. The ground is too small, and the school accommodation inadequate to the requirements of the place, but the organization is appropriate and effective. 2. The moral tone of the school is very good. 3. Mensuration and algebra are added to the prescribed subjects, and all are properly regulated ; the instruction varies in merit from tolerable to very good ; as a whole, it is effective. 4. The average proficiency is below fair, but as far as the teacher is responsible, the general character of the school may be considered good.

NEWCASTLE

NEWCASTLE (Infant) :—Regular inspection, 26th April.

Present at examination :—Boys, 119 ; girls, 72 ; total, 191.

1. The schoolroom is fairly suitable, though inadequate to present requirements ; it is reasonably well provided with furniture and requisites. 2. The moral tone of the school is very good. 3. The subjects are appropriate and well arranged ; the methods skilful, well applied, and effective. 4. The average proficiency is very fair, and the general character of the school good.

NEWCASTLE SOUTH :—General inspection, 3rd to 5th May.

Present at examination :—Boys, 175 ; girls, 118 ; total, 293.

1. The premises are new, suitable, in excellent condition, and well found in all essential requisites. 2. The moral tone of the school is very good. 3. The subjects accord with the standard and include besides elementary Latin ; they are suitably arranged and skilfully taught. 4. The average proficiency varies from fair to very fair, and the general character of the school is good.

ONYBIGAMBAH :—Regular inspection, 11th May.

Present at examination :—Boys, 30 ; girls, 17 ; total, 47.

1. The buildings are in very fair condition, reasonably suitable, and the general organization of the school is fair. 2. The moral tone of the school is very fair. 3. The prescribed subjects are taught and arranged with considerable care and skill ; the methods are intelligent but wanting in energy of application. 4. The average proficiency is tolerable, and the general character of the school, fair.

OXLEY ISLAND :—Regular inspection, 3rd November.

Present at examination :—Boys, 20 ; girls, 26 ; total, 46.

1. The schoolroom is old and in bad condition, but clean and well kept, and tolerably organized. 2. The moral tone of the school is very fair. 3. The occupation is suitable and properly arranged ; the instruction intelligent and skilful. 4. The average proficiency is nearly very fair.

PLATSBURG (Primary) :—Regular inspection, 21st and 22nd June.

Present at examination :—Boys, 67 ; girls, 44 ; total, 111.

1. The fencing is incomplete, and there is no playshed ; otherwise the premises are in excellent condition, and the school is effectively organized. 2. The moral tone of the school is good. 3. The occupation is suitable, and properly regulated ; the instruction fairly intelligent and effective. 4. The average proficiency is nearly very fair ; and the general character of the school, good.

PLATSBURG (Infant) :—Regular inspection, 22nd June.

Present at examination :—Boys, 48 ; girls, 44 ; total, 92.

1. The accommodation is inadequate and the organization defective in consequence. 2. The moral tone of the school is good. 3. The occupation is appropriate and suitably arranged ; the instruction judicious and effective. 4. The average proficiency is nearly very fair, and the general character of the school good.

PARADING GROUND :—General inspection, 29th February.

Present at examination :—Boys, 8 ; girls, 6 ; total, 14.

1. The building is old, in bad condition, and unworthy of expense ; nor is there any real necessity for a school in the place. Sufficient furniture and appliances are available for present wants. 2. The moral tone of the school is fair. 3. The subjects are suitable without arrangement ; the methods are careful but mechanical. 4. The average proficiency slightly exceeds tolerable.

RAYMOND TERRACE :—General inspection, 1st August.

Present at examination :—Boys, 19 ; girls, 17 ; total, 36.

1. The building is new and fairly suitable ; but the premises are not yet out of the hands of the contractor. Under the circumstances the organization is fair. 2. The moral tone of the school is fair. 3. The subjects are suitable and fairly arranged ; the methods tolerably skilful and effective. 4. The average proficiency of the pupils and the general character of the school are fair.

REDBANK :—Regular inspection, 24th November.

Present at examination :—Boys, 30 ; girls, 25 ; total, 55.

1. The schoolroom is old and in bad repair, generally unsuitable, and inconveniently situated, but as well organized as practicable under the circumstances. 2. The moral tone of the school is very fair. 3. The prescribed subjects are taught and arranged with passable care and skill ; the methods are fairly intelligent and effective. 4. The average proficiency varies from tolerable to fair.

SEAHAM :—Regular inspection, 17th August.

Present at examination :—Boys, 13 ; girls, 11 ; total, 24.

1. The condition of the premises and the organization of the school are tolerable. 2. The moral tone of the school is fair. 3. The occupation is passably appropriate and well arranged ; the instruction is earnest, but deficient in skill and effect. 4. The average proficiency is slightly above indifferent.

STOCKTON :—Regular inspection, 18th July.

Present at examination :—Boys, 45 ; girls, 47 ; total, 92.

1. The building is fairly suitable and commodious, adequately furnished, and pretty effectively organized. 2. The moral tone of the school is good. 3. The occupation is suitable, and fairly arranged ; the instruction intelligent, vigorous, and effective. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

TABEE :—General inspection, 20th November.

Present at examination :—Boys, 67 ; girls, 41 ; total, 108.

1. The fences are insecure, and in places unsightly ; the out-offices are unsatisfactory, and the teacher's accommodation is inadequate ; otherwise, the premises are in good condition, and the general organization of the school is fair. 2. The moral tone of the school is fair. 3. The subjects are appropriate, and arranged with reasonable care and skill ; the methods intelligent and fairly judicious. 4. The average proficiency is tolerable, and the general character of the school fair. The teacher was but a short time in charge.

TELEGHERRY :—Regular inspection, 8th September.

Present at examination :—Boys, 25 ; girls, 27 ; total, 52.

1. The condition of the premises and the organization of the school are fair. 2. The moral tone of the school is very fair. 3. The subjects are fairly suitable, and passably regulated ; the instruction is careful and painstaking, but not satisfactorily effective. 4. The average proficiency exceeds tolerable, and the general character of the school is fair.

TINONEE :—General inspection, 22nd November.

Present at examination :—Boys, 29 ; girls, 21 ; total, 50.

1. The premises are in good condition, and the school is very fairly organized. 2. The moral tone of the school is very fair. 3. Except singing all the prescribed subjects are taught and properly regulated ; the instruction is skilful and intelligent. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

THALABA :—Regular inspection, 5th September.

Present at examination :—Boys, 14 ; girls, 17 ; total, 31.

1. The building is old and unsuitable, but in tolerable repair, and the school is passably organized. 2. The moral tone of the school is fair. 3. The occupation is fairly appropriate, and arranged in the requisite guides ; the instruction is intelligent, but wanting in energy. 4. The average proficiency exceeds moderate, and the general character of the school is tolerable.

TERALBA :—General inspection, 8th March.

Present at examination :—Boys, 12 ; girls, 12 ; total, 24.

1. The ground is not enclosed, but the premises are suitable, in good condition, and fairly found in furniture and appliances. 2. The moral tone of the school is tolerable. 3. The instruction is fairly appropriate, suitably arranged, and imparted with tolerable care and skill. 4. The average proficiency is about moderate.

TOMAGO :—General inspection, 28th February.

Present at examination :—Boys, 14 ; girls, 9 ; total, 23.

1. The material condition and general organization of the school are tolerable. 2. The moral tone of the school is tolerable. 3. The instruction is fairly appropriate, and moderately effective. 4. The average proficiency slightly exceeds moderate.

WALLESEND (Primary) :—General inspection, 14th and 19th June.

Present at examination :—Boys, 90 ; girls, 73 ; total, 163.

1. The premises are suitable, and in good condition ; but a weather-shed and new out-offices are needed. The organization of the school is effective. 2. The moral tone of the school is excellent. 3. The subjects are appropriate and skilfully arranged ; the methods intelligent, vigorous, and effective. 4. The average proficiency exceeds fair ; and the general character of the school may be estimated as from good to very good.

WALLESEND (Infant) :—General inspection, 20th June.

Present at examination :—Boys, 75 ; girls, 66 ; total, 141.

1. A new and suitable schoolroom, well furnished, and provided with all essential requisites. 2. The moral tone of the school is very good. 3. The subjects are appropriate and well arranged ; the methods intelligent, skilful, and effective. 4. The average proficiency is very fair, and the general character of the school good.

WARATAH :—Special inspection, 3rd March.

Present at examination :—Boys, 40 ; girls, 27 ; total, 67.

1. The premises are new and suitable, and the school is well found in furniture and appliances. 2. The moral tone of the school is fair. 3. The subjects accord with the standard, and are fairly arranged ; the methods are reasonably intelligent, but feeble in application. 4. The average proficiency is a little above moderate.

WILLIAM TOWN :—General inspection, 1st March.

Present at examination :—Boys, 24 ; girls, 21 ; total, 45.

1. The material condition of the premises and the general organization of the school are fair. 2. The moral tone of the school is fair. 3. The subjects are suitable, and arranged with reasonable care and skill ; the methods are reasonably intelligent, but not effective. 4. The average proficiency is only moderate.

WINGHAM :—Regular inspection, 7th November.

Present at examination :—Boys, 26 ; girls, 13 ; total, 39.

1. The building is unsuitable and inconveniently situated, but the school is tolerably well organized. 2. The moral tone of the school is good. 3. Except as to singing, which is not taught, the occupation agrees with the standard, and is properly arranged ; the instruction is fairly intelligent, earnest, and effective. 4. The average proficiency varies from fair to very fair.

WOOLLA WOOLLA :—Regular inspection, 23rd November.

Present at examination :—Boys, 24 ; girls, 21 ; total, 45.

1. The schoolroom is suitable, in excellent condition, and well found in furniture and appliances ; but the teacher's accommodation is poor and inadequate. 2. The moral tone of the school is good. 3. Except singing the prescribed subjects are taught and suitably arranged ; the methods are intelligent, fairly skilful, and effective. 4. The average proficiency is nearly very fair.

PROVISIONAL SCHOOLS.

ASH ISLAND :—General inspection, 10th March.

Present at examination :—Boys, 10 ; girls, 8 ; total, 18.

1. The condition and organization of the school are moderate. 2. The moral tone of the school is fair. 3. The instruction is reasonably appropriate, but not properly arranged ; the methods are of moderate value. 4. The average proficiency is moderate.

BELMONT :—General inspection, 3rd February.

Present at examination :—Boys, 9 ; girls, 5 ; total, 14.

1. The building is fairly suitable and passably organized. 2. The moral tone of the school is fair. 3. The instruction is tolerably intelligent and effective. 4. The average proficiency slightly exceeds moderate.

BUNGAY :—General inspection, 16th November.

Present at examination :—Boys, 15 ; girls, 17 ; total, 32.

1. The building and its organization are tolerable, but the play-ground accommodation is defective. 2. The moral tone of the school is fair. 3. The ordinary subjects are taught and fairly arranged ; the methods are intelligent, careful, and reasonably effective. 4. The average proficiency is fair.

CRAWFORD

CRAWFORD RIVER :—General inspection, 18th September.

Present at examination :—Boys, 9 ; girls, 10 ; total, 19.

1. The ground is unfenced and unprovided with out-offices, but the condition and organization of the schoolroom are passable. 2. The moral tone of the school is very fair. 3. The subjects are fairly suitable and well arranged ; the methods reasonably skilful and effective. 4. The average proficiency exceeds tolerable.

DINGO CREEK :—Regular inspection, 8th November.

Present at examination :—Boys, 13 ; girls, 9 ; total, 22.

1. The condition of the premises and the general organization of the school are tolerable. 2. The moral tone of the school is fair. 3. The ordinary subjects are professedly taught, but unskilfully arranged ; the instruction is meagre and of small value. 4. The average proficiency is little more than indifferent.

HARRINGTON :—General inspection, 2nd November.

Present at examination :—Boys, 6 ; girls, 9 ; total, 15.

1. The premises are suitable, and the organization of the school is fair. 2. The moral tone of the school is fair. 3. The subjects are appropriate, but not fully arranged ; the methods are careful and fairly effective. 4. The average proficiency exceeds tolerable.

KELVIN GROVE :—Regular inspection, 25th October.

Present at examination :—Boys, 15 ; girls, 7 ; total, 22.

1. There are no out-offices ; otherwise the accommodation is fair, and the organization of the school tolerable. 2. The moral tone of the school is tolerable. 3. The occupation is appropriate and regulated with tolerable care ; the instruction is moderately intelligent and earnest. 4. The average proficiency exceeds moderate.

MOUNT GEORGE :—General inspection, 17th November.

Present at examination :—Boys, 13 ; girls, 9 ; total, 22.

1. The building is fairly suitable, in good condition, and pretty well organized. 2. The moral tone of the school is tolerable. 3. The ordinary subjects are taught and arranged with tolerable care and skill ; the methods are moderately intelligent and skilful. 4. The average proficiency is about moderate.

MYALL RIVER :—Regular inspection, 20th September.

Present at examination :—Boys, 13 ; girls, 20 ; total, 33.

1. The ground is not enclosed ; there are no out-offices ; the building is of a coarse description but passable for the place and tolerably well furnished. 2. The moral tone of the school is good. 3. The ordinary subjects are taught and properly arranged ; the methods are intelligent and skilful. 4. The average proficiency exceeds very fair.

OAKENDALE :—Regular inspection, 18th August.

Present at examination :—Boys, 12 ; girls, 9 ; total, 21.

1. The condition and organization of the school are reasonably effective. 2. The moral tone of the school is very fair. 3. The occupation is fairly suitable and arranged in the requisite guides ; the instruction is reasonably intelligent and effective. 4. The average proficiency is tolerable.

SALISBURY :—Regular inspection, 1st September.

Present at examination :—Boys, 15 ; girls, 11 ; total, 26.

1. The schoolroom is very unsuitable and badly organized, but steps are in progress for the erection of a new one. 2. The moral tone of the school is tolerable. 3. The subjects are suitable and arranged with moderate skill ; the methods are of indifferent merit. 4. The average proficiency is very moderate.

HALF-TIME SCHOOLS.

BULLADELAW :—Regular inspection, 21st September.

Present at examination :—Boys, 8 ; girls, 7 ; total, 15.

1. The premises are moderately suitable, and the organization of the school is tolerable. 2. The moral tone of the school is fair. 3. The occupation is fairly suitable and arranged in the usual guides, but these are not practically observed ; the methods, judged by results, want energy and care. 4. The average proficiency is tolerable.

BOOLAMBAGLE :—Regular inspection, 22nd September.

Present at examination :—Boys, 4 ; girls, 13 ; total, 17.

1. The building is in fair condition, tolerably suitable, and provided with a reasonable stock of furniture and appliances. 2. The moral tone of the school is fair. 3. The occupation is fairly appropriate and passably arranged ; the instruction is feeble and of small value. 4. The average proficiency is moderate.

HANGING ROCK :—Regular inspection, 27th November.

Present at examination :—Boys, 8 ; girls, 9 ; total, 17.

1. The accommodation is fairly sufficient and suitable, and the organization of the school is reasonably effective. 2. The moral tone of the school is very fair. 3. The occupation is appropriate, intelligently regulated, and effectively applied. 4. The average proficiency and general character of the school are fair.

JOHNSON'S CREEK :—Regular inspection, 15th September.

Present at examination :—Boys, 6 ; girls, 2 ; total, 8.

1. The condition of the building and organization of the school are tolerable. 2. The moral tone of the school is fair. 3. The subjects are appropriate and suitably arranged ; the methods fairly intelligent and effective. 4. The average proficiency is about tolerable.

LANDSDOWNE :—Regular inspection, 27th November.

Present at examination :—Boys, 7 ; girls, 2 ; total, 9.

1. The accommodation is reasonably suitable, and the organization tolerably effective. 2. The moral tone of the school is very fair. 3. The instruction, comprising the ordinary subjects only, is suitable and effective. 4. The average proficiency and general character of the school are fair.

McLEAN

MCLEAN RIVER, UPPER :—Regular inspection, 30th November.

Present at examination :—Boys, 8 ; girls, 3 ; total, 11.

1. The schoolroom is fairly suitable and reasonably organized. 2. The moral tone of the school is very fair. 3. The subjects are suitable, fairly arranged, and taught with care and reasonable skill. 4. The average proficiency is nearly fair.

MCLEAN RIVER, LOWER :—Regular inspection, 30th November.

Present at inspection :—Boys, 7 ; girls, 8 ; total, 15.

1. The building is tolerable as regards condition, capacity, suitability, and organization. 2. The moral tone of the school is very fair. 3. The occupation is appropriate and fairly arranged ; the instruction reasonably skilful and intelligent. 4. The average proficiency is nearly fair.

WARD'S RIVER :—Regular inspection, 13th September.

Present at examination :—Boys, 8 ; girls, 7 ; total, 15.

1. The building is in tolerable condition, fairly suitable, and passably organized. 2. The moral tone of the school is fair. 3. The occupation is suitable and properly arranged ; the instruction tolerably intelligent and effective. 4. The average proficiency is tolerable.

SYDNEY DISTRICT.

INSPECTORS' REPORT on the condition of Public, Provisional, and Certified Denominational Schools, for the year 1876.

THE number of schools in operation at the beginning of 1876 was 110. These consisted of 39 Public, 3 Provisional, and 68 Denominational Schools. During the year new Public Schools were opened at Coogee and in Sussex-street, comprising, in all, four departments ; and aid was granted to a Provisional School at Greenwich. During the same period the Provisional School at Clontarf was closed on the ground of small attendance. The number of existing schools or departments is therefore 114. Public Schools are in course of erection at Watson's Bay, North Sydney, Balmain, and Newtown. School sites have been secured in the following localities :—St. Leonard's, Balmain East, Balmain West, Pyrmont, Surry Hills, Woollahra, Waterloo, and Darlington, and plans for the necessary buildings in most of these places have been prepared. Great difficulty is experienced in procuring eligible sites in the city and suburbs, owing to a scarcity of vacant land and to a disposition on the part of owners to ask unreasonably high prices. A good deal of time has been spent by us in this business not it is hoped without a moderate degree of success.

All the schools of the district have been thoroughly inspected during the year ; they have also, with few exceptions, been incidentally visited within the same period. We regret to have to report that from various causes we have not been able to visit the schools as often as we could wish.

The organization of schools continues to improve. In several the ventilation is defective, and in a still greater number the light is bad. The want of reasonably-sized playgrounds is also not an uncommon one. But these are defects which necessarily in this district at least are of slow or uncertain cure. Substantial additions or improvements have been made since last report to the following schools :—Botany, Camperdown, Manly, Marrickville, Paddington, Pyrmont, Tempe, William-street, Chippendale Wes., Darlinghurst, C.E., Newtown Wes., Surry Hills R.C., Waterloo C.E.

With few exceptions the schools are sufficiently found in educational appliances and their external organization is of a fairly satisfactory character. Lavatories are now attached to most schools, and weather-sheds are coming into pretty general use. It were well if a much wider effort were made towards planting trees in the larger sized playgrounds.

The attendance during the first half of the year was seriously interfered with by the prevalence of sickness among children ; in point of regularity it greatly improved during the latter half. Under ordinarily favourable circumstances about 68 per cent. of the pupils attend regularly. The extent of irregularity therefore is not such as to pressingly call for any legislative action. There is a healthy desire on the part of a large majority of parents to give their children a fair chance of receiving such education as is to be got, and if free schools were established in a few centres of population they would doubtless afford the necessary education to large numbers of children at present attending no school.

A good deal of unpunctuality prevails in some of the worst schools, but even in a few of the better conducted there is room for improvement in this feature of school management. In too many instances pupils may be seen dropping into school long after the prescribed time, and taking their places without inquiry being made as to the cause of lateness. It is not too much to say that where such remissness obtains other essentials of good discipline are equally disregarded.

Little fault can be found with the order that distinguishes our schools or with the means by which that order is maintained. The government is usually characterised by mildness, combined with firmness—is based on humane principles—and is discreetly and effectively administered. Instances of harshness are rare, and are almost invariably caused by the defective or vicious home training of the pupils. Military drill is taught less successfully than heretofore, or rather it is not practised to the same extent. The consequence is that the marching is occasionally loose and disorderly, and the school movements somewhat irregularly conducted ; but this state of things is the exception and not the rule.

Speaking generally, it may be affirmed that the discipline of our schools continues to improve, and is decidedly healthy. There are two schools in which the order is below fair, and but one of these could be correctly designated a disorderly school.

Cases of decidedly bad classification are seldom met with. Teachers in general appear to have a fair knowledge of the principles on which a sound classification is based, and make a reasonable effort to give these principles practical effect. Faults in classification usually occur in connection with the lower classes, and in schools to which separate infants' departments are attached. The number of schools having a higher class than a third is comparatively small. We venture to say that no teacher in charge of a school numbering one hundred and twenty pupils, and sustained in part by an infants' department, should be without a fourth class.

The means for systematizing the teaching are for the most part intelligently applied. A few of the time-tables are loosely arranged, and recognize inadequately the importance of one or other of the prescribed subjects of instruction, but the great bulk of these documents are well got up, and are carefully adhered to. The programmes of lessons are rarely compiled with sufficient judgment and neatness ; nor are the lesson registers always reliable guides. Greater care needs to be bestowed on the compilation of both kinds of documents.

The methods of teaching in ordinary use are those usually termed modern. Their use is dictated by a knowledge of the principles of psychology. In character they are at once natural and rational, and as such have been recommended for adoption by the more successful of modern educationists. They are mainly synthetic in the lower classes, and a combination of the synthetic with the analytic in the upper. Where their application is accompanied by appropriate questioning, together with a judicious use of the blackboard, they are found to be most effective. But in the hands of no teacher are they likely to be productive of full or adequate results unless he possess good disciplinary power. This, next after natural aptitude for teaching, is the main essential to a teacher's success.

The

The number of pupils enrolled at the times of inspection was 18,983, and the number actually present at examination was 14,252. Of this number—

All were examined in reading.
 13,952 were examined in writing.
 10,954 were examined in arithmetic.
 7,741 were examined in grammar.
 9,954 were examined in geography.
 All were examined in object lessons.
 4,413 were examined in Scripture.
 13,383 were examined in singing.
 7,755 were examined in drawing.
 232 were examined in mensuration.
 953 were examined in geometry.
 452 were examined in algebra.
 42 were examined in trigonometry.
 596 were examined in Latin.
 3,319 were examined in needlework.

Of the 14,252 examined in reading 1,817 were learning the alphabet, 3,803 were in monosyllables, 5,255 in easy narrative, and 3,377 in ordinary prose. Exclusive of those in the alphabet, the reading of 10,713 ranged from fair to good, and of 1,722 from indifferent to tolerable.

Of the 13,952 examined in writing 6,848 wrote on slates and 7,104 on paper. The writing of 10,830 ranked from fair to good, and of 3,122 from indifferent to tolerable.

Of the 10,954 examined in arithmetic 1,776 were in the higher rules, 1,973 in the compound rules, and 7,205 in the simple rules. The answering of 5,863 ranged from fair to good, and of 5,091 from indifferent to tolerable.

Of the 7,741 examined in grammar, 4,535 were learning elementary, and 3,206 advanced, grammar. The answering of 5,748 was from fair to good, and of 1,993 from indifferent to tolerable.

Of 9,954 examined in geography 6,641 were learning elementary, and 3,313 advanced, geography. The answering of 7,457 ranged from fair to good, and of 2,497 from indifferent to tolerable.

Of 4,413 examined in Scripture the answering of 3,811 ranked from fair to good, and of 602 from indifferent to tolerable.

Of 14,252 examined in object lessons the answering of 12,048 ranged from fair to good, and of 2,204, from indifferent to tolerable.

Of 7,755 examined in drawing the work of 6,316 ranked from fair to good, and of 1,499, from indifferent to tolerable.

Of 13,383 examined in music the singing of 9,696 ranged from fair to good, and of 3,687, from indifferent to tolerable.

Of 953 examined in Euclid the answering of 630 was from fair to good, and of 323 from indifferent to tolerable.

Of 452 examined in algebra the answering of 370 ranked from fair to good, and of eighty-two, from indifferent to tolerable.

Of 232 examined in mensuration the answering was fair to good.

Of 596 examined in Latin the answering of 495 ranged from fair to good, and of 101 from indifferent to tolerable.

Of forty-two examined in trigonometry the answering was fair.

Of 3,319 examined in needlework the sewing of 3,024 ranked from fair to good, and of 295 from indifferent to tolerable.

Reviewing the results obtained in the several subjects of instruction, we are warranted in stating that reading, Scripture, object lessons, mensuration, and needlework are taught well. Writing, grammar, geography, drawing, algebra, Latin, very fairly; and arithmetic, Euclid, music, and trigonometry, fairly. The teaching, therefore, imparted in the schools of the district, is marked by considerable thoroughness.

The examinations were for the most part oral, but written tests were used where such were more likely to subserve the end in view. As during previous years, special attention was directed to dictation and composition, and we are happy in being able to report that marked improvement continues to be made in the teaching of these branches. We have also deemed it desirable to attach more than ordinary importance to mere reading as such. This will be apparent when we state that of the 14,252 examined in reading every child was tested therein individually. We were not induced to adopt this course from any doubt as to the ability of our teachers to handle the subject with reasonable skill, but simply from a conviction that a tendency was growing up to spend too much time in mere explanation, and not sufficient in teaching children to read well. It should be stated too that the tests applied in arithmetic, Euclid, algebra, mensuration, and trigonometry, were more vigorous and exact than those applied to other subjects, and this may be partly the reason why the results in the mathematical branches are usually less satisfactory than in the others.

Viewing the condition of the different kinds of schools inspected, we find six Public Schools below, seventeen up to, and twenty-one above, the standard. Of Provisional Schools, one is below, and two up to the standard; while of Denominational Schools twenty are below, twenty-one up to, and twenty-six above, the standard. Of the six Public Schools below the standard four were established but two or three weeks prior to their inspection, so that, having regard to this fact, this class of schools has made a decided advance in efficiency since last report. Improvement, but to a less extent, has also been made by the Provisional and the Denominational Schools.

The number of teachers employed in the schools of the district is 343. They consist of 114 principal teachers, sixty-four assistant teachers, and 165 pupil teachers. The average number of pupils under each teacher is fifty-one. With few exceptions the teachers have been specially trained for their work, and a very large number of them have graduated from the rank of pupil-teacher. They are persons of more than average intelligence, of respectable attainments, and of good character. Most of those holding the higher certificates have proved themselves to be superior teachers. The large body of pupil teachers employed in the schools of the district is perhaps the most hopeful feature in connection with our educational system. The training they undergo is tolerably complete, although somewhat rigorous. The results thereof have up to the present been very fairly successful. They are invaluable helps in a school, do a large amount of downright hard useful work at a small cost, and become in a large number of cases excellent teachers.

There is nothing new to record under the head of local supervision of schools. In about four Public Schools it is fairly active and beneficial; in the remainder it either nominally exists or not all. In Denominational Schools the local supervision is of a somewhat improved character, but even here it is in almost all cases left to be exercised by the clergyman alone.

Inspectors' Office,
 Sydney, 27th December, 1876.

EDWIN JOHNSON,
 FREDERICK BRIDGES, } Inspectors.

SUMMARIES of Reports on Public and Provisional Schools, Sydney District, 1876.

The remarks under head 1 relate to the material condition of schools; under 2 to their moral character; 3, to the subjects and methods of instruction; 4, to the proficiency of the pupils.

PUBLIC SCHOOLS.

BALMAIN (Primary—V.) :—Regular inspection, 9th, 10th, 11th May.

Numbers present :—Boys, 189; girls, 144; total, 333.

1. The accommodation afforded by the schoolroom is wholly inadequate to existing requirements but measures are in progress to remove all possible complaints on this score. There is a sufficiency of educational appliances. That part of the organization for which the teacher is responsible is very good. 2. A numerous attendance is maintained. The pupils are fairly regular, punctual, neat in appearance, and extremely well conducted. The government is characterised by vigour, intelligence, and tact. Excellent order is secured, and the general discipline is all that could be desired. 3. The instruction is of full range, well regulated, and imparted by good methods. 4. The following is the proficiency of the several classes :—First, good (nearly); second, very fair to good; upper second, good; third, very fair to good; fourth, very fair; fifth, very good to excellent.

BALMAIN (Infants—V.) :—Regular inspection, 9th May.

Numbers present :—Boys, 103; girls, 81; total, 184.

1. The premises in use are small and unsuitable, but it is the Council's intention to erect a proper building shortly. The organization is satisfactory in the circumstances. 2. The attendance during the inspection was slightly below the average; this was attributed to heavy rain on the previous day. The children present were tidy and pleasing in appearance, orderly, and well behaved. 3. The instruction is of full range, methodically treated, and suited to the capacities of young children. 4. The class proficiency is :—First, fair to very fair; second, fair; third, fair +.

BOTANY (V.) :—Regular inspection, 13th July.

Numbers present :—Boys, 22; girls, 18; total, 40.

1. The buildings are commodious, in excellent repair, and well adapted for school purposes. There is a good supply of suitable furniture and apparatus. 2. Wet weather has caused the attendance to be lower than usual, but even under favourable circumstances it is very low for the locality. About three-fourths of the pupils attend regularly, but the punctuality is unsatisfactory. The inspection for cleanliness is not strict enough. The government is mild, the pupils are quiet and obedient, but the marching is loose and disorderly. 3. The course of instruction for a school of three classes is followed. The methods of teaching are of very fair merit, but no earnestness is manifested. The fact that twenty-five out of forty pupils examined were in the lowest class, and only four in the highest, the third cannot but be regarded as unsatisfactory. 4. The average proficiency of the school is fair.

BOTANY ROAD (N.-V.) :—Regular inspection, 17th March.

Numbers present :—Boys, 70; girls, 72; total, 142.

1. In the circumstances the school is properly organized. The supply of material is ample. 2. The day of inspection was a wet one. Ordinarily the attendance exceeds 200. The children are under good control; they are punctual, well-behaved, and very fairly attentive to instruction. 3. The instruction is of full range for the classification. 4. The proficiency is as follows :—First or infants class, fair; upper first, fair; second, fair; third, very fair.

BOURKE-STREET (Boys—N.-V.) :—Regular inspection, 14th and 15th March.

Number present, 133.

1. The site is both limited and unsuitable. The schoolroom is fairly satisfactory, but its appointments are not good. The organization is passable. 2. The enrolment and attendance are of stationary character, the latter being about three-fourths of the former. Whilst the discipline has improved it must be noted that restless and talkative habits are manifest defects in the several classes. 3. The course of instruction covers what is prescribed for a school having a fourth class. 4. The average proficiency lies between fair and very fair.

BOURKE-STREET (Girls—N.-V.) :—Regular inspection, 8th and 9th March.

Number present, 120.

1. This school is fairly organized. 2. A fair attendance is kept up. The pupils are fairly regular, but only moderately punctual; they present a neat and cleanly appearance, are in good order, and under healthy government. 3. The instruction is of full range, very fairly regulated, and imparted by appropriate methods. Earnestness and painstaking characterise the teaching. 4. The attainments of the classes may be described thus :—First, moderate to tolerable; second, fair; third, fair (nearly); fourth, very fair. The pupils are attentive and work well. The comparatively low results are due to class promotions and changes in the teaching staff.

BOURKE-STREET (Infants—N.-V.) :—Regular inspection, 7th March.

Numbers present :—Boys, 123; girls, 95; total, 218.

1. The school accommodation continues very indifferent. The organization is satisfactory in the circumstances. 2. A large attendance is maintained. The pupils are fairly regular and punctual, reasonably neat in appearance, and very well behaved. The government is genial but firm, and effects good order. 3. All the usual subjects are taught. The instruction is well arranged, and the methods of teaching are appropriate and effective. 4. The following is the proficiency of the classes :—First, good; second, good; third, very fair to good; fourth, very fair to good. The pupils are attentive, and answer with spirit, intelligence, and accuracy.

CAMPERDOWN (Primary—V.) :—Regular inspection, 15th February.

Numbers present :—Boys, 39; girls, 31; total, 70.

1. The school is in fair material condition, and is satisfactorily organized. 2. About seven-ninths of the pupils attend regularly. The punctuality is decidedly bad. With few exceptions the pupils are clean, fairly subdued in demeanour, and very fairly behaved. The government is mild to a fault; it needs to be firmer and more vigilant. 3. A few instances of bad classification are to be met with. The instruction is of full range, very fairly regulated, and imparted with considerable earnestness and painstaking. 4. The attainments of the several classes are, second, fair +; third, tolerable to fair; fourth, fair. The pupils are fairly attentive, but need to answer with greater spirit and intelligence.

CAMPERDOWN (Infants—V.) :—Regular inspection, 15th February.

Numbers present :—Boys, 38; girls, 35; total, 73.

1. This department is taught in the same room as is the primary. A proper division-wall, and the necessity for desks, are urgent requirements. The organization is passable in the circumstances. 2. The attendance is generally good as regards regularity, but is marred by marked unpunctuality. The order is fair. 3. The methods of instruction are well suited to the capacities of infants. 4. The proficiency reaches fair.

CLEVELAND-STREET (Boys—V.) :—Regular inspection, 14th, 15th, 16th, 21st, 22nd, November.
Number present, 374.

1. The schoolroom is in excellent condition, and is amply supplied with educational appliances. 2. The pupils are fairly punctual and regular in their attendance. They are clean, tidily dressed, and in excellent order. 3. All the prescribed subjects are taught; the methods pursued are of modern cast, but need to be applied with greater earnestness and energy. Recent indiscriminate promotions have reduced the proficiency. 4. The proficiency of the various classes is first, fair; lower second, fair +; upper second, good +; lower third, very fair to good; upper third, fair; fourth, very fair; fifth, good +.

CLEVELAND-STREET (Girls—V.) :—Regular inspection, 14th, 16th, 20th, 21st, 22nd, 23rd, November.
Number present, 346.

1. This school is in very good material condition, and well organized. 2. A fairly numerous attendance is maintained, and is marked by commendable regularity. The pupils are also punctual, neat, and cheerful in appearance, and extremely well-behaved. The order and discipline may be pronounced excellent. 3. Good judgment is evinced in the classification. The instruction is of full range, ably devised, and skilfully imparted. 4. The proficiency of the several classes stand thus :—First, fair to very fair; second, good to very good; upper second, fair; lower third, good; upper third, good; fourth, good; fifth, very good +. The pupils enter into the work of examination with considerable enthusiasm, and answer with readiness, thoughtfulness, and accuracy.

CLEVELAND-STREET (Infants—V.) :—Regular inspection, 12th and 13th September.
Numbers present :—Boys, 237; girls, 126; total, 363.

1. The schoolroom is commodious, well-ventilated, and in good repair. It is sufficiently provided with suitable furniture and apparatus. The property is well kept. 2. A large attendance is maintained. It was much less than usual on the days of examination, owing to unfavourable weather. The pupils are very fairly regular, punctual, becoming in appearance, and in very good order. The government is judicious and effective. 3. The usual infant's school routine is observed. The methods are appropriate and applied with earnestness and skill. 4. The following is the proficiency of the classes :—First, very fair to good; second, good; upper second, very fair; third, good; upper third, good; fourth, good +; fifth, very good.

COOGEE (V.) :—General inspection, 2nd November.
Numbers present :—Boys, 34; girls, 16; total, 50.

1. The schoolhouse is a fine stone building, but its appearance is spoiled by a shingled roof. It is well and suitably furnished, and provided with a sufficiency of books and apparatus. 2. The school has been in operation barely three weeks, and is rapidly improving in attendance. A large number of the scholars are attending a school for the first time. The teacher is doing his best to induce habits of order among them, and is making good progress in this direction. 3. All the prescribed subjects are taught; the lesson documents are judiciously compiled; the methods of teaching are appropriate, and are painstakingly applied. 4. The proficiency of the classes is as follows :—First, tolerable; second, barely tolerable; third, tolerable +.

DEVONSHIRE-STREET (N.-V.) :—Regular inspection, 2nd February.
Numbers present :—Boys, 62; girls, 31; total, 93.

1. Materially the school is well conditioned and properly equipped. The organization agrees with customary plans. 2. About three-fourths of the pupils attend with regularity; their punctuality is of very fair worth. The government is tolerably effective. 3. The classification recognizes a third class, and for such a school the course is of full range. 4. The average proficiency is as follows :—First class, fair to very fair; second class, fair; third class, fair.

FORT-STREET (Boys—V.) :—General inspection, 9th, 10th, 11th, 12th, 13th, 17th, 18th, 19th October.
Number present :—513.

1. The organization of this school is in its main or leading features unaltered. 2. Little difficulty is experienced in keeping up the maximum attendance allowed. The pupils are regular, punctual, neat in appearance, and well-conducted. The government is suitable, excellent order is maintained, and the moral tone is high. 3. The course of instruction is of a reasonably wide range, is regulated with judgment, and imparted by sound methods. 4. The following is the proficiency of the classes :—First, fair +; second, good; upper second, good +; third, good to very good; fourth, good; upper fourth, very good; fifth, very good.

FORT-STREET (Girls—V.) :—Regular inspection, 11th, 12th, 13th, 17th, 18th, and 19th October.
Number present :—392.

1. The schoolroom is an excellent building, well supplied with suitable furniture and apparatus, and provided with all the necessary out-buildings. As a whole the organization may be pronounced excellent. 2. A very fair attendance is now maintained; the pupils are regular and punctual. The government is mild but effective, excellent order is maintained; the pupils are neatly and becomingly attired; they are modest and respectful. 3. The work of instruction is earnestly and painstakingly prosecuted; every teacher appears to be animated by the earnest desire to discharge her duties efficiently. The classification is judicious, the methods employed are of modern cast and highly educative. The examination covered a wide range, and was very minute and searching; nevertheless the pupils acquitted themselves well and evidenced a thorough knowledge of the subjects taught. 4. The proficiency of the various classes is :—First, very fair; second, good; lower third, very fair +; upper third, good; lower fourth, good; upper fourth, very good +; fifth, very good to excellent. The school is in a thoroughly efficient state.

FORT-STREET (Infants—V.) :—Regular inspection, 9th, 10th, and 11th October.
Numbers present :—Boys, 214; girls, 135; total, 349.

1. The schoolwork is carried on in four rooms; there is a full supply of school requisites; under the circumstances the organization may be regarded as very good. 2. The pupils attend with very fair regularity and punctuality; they are clean and tidy, and as a rule manifest a subdued becoming demeanour. The government is firm and vigorous, and effects very good order. 3. The usual infant school course is followed; all the prescribed subjects are taught. The instruction is marked by vigour and earnestness. Very satisfactory improvement has been made in arithmetic. 4. The proficiency of the classes is :—First, very fair; second, good; third, fair to very fair; fourth, good; fifth, good +.

GLEBE (Primary—V.) :—Regular inspection, 11th and 12th April.
Numbers present :—Boys, 88; girls, 67; total, 155.

1. The school is in excellent material condition, and in point of organization unexceptionally good. 2. Rainy weather reduced the attendance on the days of examination. The prevalence of scarlet fever has also for some time past lessened the number of pupils. Ordinarily as much as four-fifths of the pupils attend with very fair regularity. All other features of the discipline are satisfactory. The pupils are neat

neat in appearance, subdued in demeanour, and well conducted. Very good order is maintained. 3. The instruction is of full range, well devised, and imparted by appropriate methods. 4. The proficiency of the several classes stands thus:—First, fair; second, moderate to tolerable; upper second, fair to very fair; third, very fair; fourth, very fair +.

GLEBE (Infants—V.) :—Regular inspection, 11th April.

Numbers present :—Boys, 63; girls, 47; total, 110.

1. This school is taught in excellent premises. It is well organized, and in healthy tone. 2. The attendance was lower than usual on account of rain; ordinarily the number present reaches 170. The children present were becomingly dressed, attentive, and orderly. 3. The full course of instruction prescribed for infants' schools is treated in an intelligent and efficient manner. 4. The proficiency is as follows :—First class, fair to very fair; second, very fair to good; third, very fair to good.

MANLY (V.) :—Regular inspection, 22nd February.

Numbers present :—Boys, 34; girls, 11; total, 45.

1. The premises are well conditioned; the school is correctly organized. 2. From two causes—prevalent sickness and constant removals from the locality—the attendance has been very fluctuating. The records show that during the past twelve months the attendance of each child enrolled has not exceeded three and a half months. The pupils present are orderly and reasonably attentive to instruction. 3. The teaching, which is earnestly prosecuted, deals with all the prescribed subjects. 4. The general proficiency slightly exceeds tolerable.

MARRICKVILLE (Primary—V.) :—Regular inspection, 2nd August.

Numbers present :—Boys, 62; girls, 39; total, 101.

1. Certain additions and repairs are needed. With this exception the organization of the school is satisfactory. 2. A very respectable attendance is maintained. The pupils are regular, punctual, neat in appearance, and well behaved. The government is mild but firm, and very fairly effective. Good order is maintained, and the prevailing tone of the school is cheerful and healthy. 3. The instruction is of full range up to the requirements of a fourth class, is regulated by carefully prepared lesson documents, and imparted by modern methods. 4. The following is the proficiency of the several classes :—Second, very fair; upper second, fair to very fair; third, good; fourth, good.

MARRICKVILLE (Infants—V.) :—Regular inspection, 2nd August.

Numbers present :—Boys, 53; girls, 40; total, 93.

1. The schoolroom is commodious, well ventilated, and in excellent condition; the organization throughout is good. 2. In fine weather the pupils attend with very fair regularity, but the almost impassable state of the roads in rainy weather largely reduces the attendance; the punctuality also is commendable. The order in all points is good. 3. The prescribed course for an infants' department is followed; the lesson guides are drawn up with very fair skill. The methods are of modern cast, and are earnestly applied. Under examination the pupils are attentive; they answer promptly, and for their age thoughtfully. 4. The proficiency of the various classes is :—First, tolerable to fair; second, fair+; third, good.

NEWTOWN (Primary—N.-V.) :—Regular inspection, 22nd March.

Numbers present :—Boys, 76; girls, 52; total, 128.

1. The school is well organized in the circumstances. 2. A fair attendance is maintained. The pupils are tolerably regular, punctual, neat in appearance, and very fairly behaved; the government is mild and fairly effective. 3. All the subjects prescribed for a school having a fourth class are taught, except that French is substituted for geometry. The instruction is arranged with very fair judgment. The methods are fairly appropriate, but need to be marked by questioning more direct, and searching in character. 4. The attainments of the different classes are :—Second, tolerable; upper second, fair; third, fair; fourth, tolerable to fair.

NEWTOWN (Infants—N.-V.) :—Regular inspection, 22nd March.

Numbers present :—Boys, 54; girls, 36; total, 90.

1. The organization is satisfactory in the circumstances; the school is properly equipped. 2. The attendance is at present low on account of prevalent infantile sickness. The children present were pleasing in appearance, well behaved, and orderly. 3. The full infants' course is taught in a methodical manner, but the frequent breaks in the teaching staff have affected the results. 4. The average proficiency is about fair.

NORTH SYDNEY (N.-V.) :—Regular inspection, 5th October.

Numbers present :—Boys, 30; girls, 21; total, 51.

1. The existing organization is satisfactory in the circumstances. The new buildings in course of erection are expected to be completed by the end of the year. 2. School attendance and school operations have been much interfered with by the long continued prevalence of scarlet fever in the locality. Ordinarily the attendance is marked by fair regularity. The pupils are also punctual, becomingly attired, and well behaved; the government is mild, judicious, and promotive of good order, and a healthy moral tone. 3. The classification is appropriate; the course of instruction that prescribed, and reasonably well arranged. The methods are suitable, and diligently applied. 4. The proficiency of the several classes is as follows :—First, fair to very fair; second, fair; third, fair to very fair.

PADDINGTON (Boys—V.) :—Regular inspection, 16th, 17th, and 22nd February.

Number present :—176.

1. There are no material defects; the school is excellently organized. 2. The prevalence of scarlet fever in the neighbourhood has reduced the attendance. Ordinarily the pupils attend with very fair regularity. They are also punctual, cleanly in appearance, and in very good order. 3. A sound classification obtains. The instruction is well methodised, and imparted with diligence, earnestness, and ability. 4. The following is the proficiency of the several classes :—First, very fair; second, very fair; upper second, good; third, very fair (nearly); fourth, good. For their ages and opportunities the pupils answer with intelligence and accuracy.

PADDINGTON (Girls—V.) :—Regular inspection, 17th and 18th February.

Number present :—107.

1. The premises are thoroughly good and well appointed. The organization is sound. 2. For some considerable time the average attendance has been affected by fever and other forms of sickness among children. The school is well controlled, the pupils being orderly and well behaved. In the several classes the mental effort evinced was very satisfactory. The moral tone of the school is good. 3. The course of instruction includes all subjects prescribed for a school having a fourth class. 4. The proficiency of the several classes is :—First, fair+; second, third, and fourth, each very fair to good.

PADDINGTON

PADDINGTON (Infants—V.) :—Regular inspection, 16th February.

Numbers present :—Boys, 86 ; girls, 83 ; total, 169.

1. This school is provided with excellent premises. There is an ample supply of furniture and working appliances. The organization is sound. 2. The attendance has for some time been low, not exceeding two-thirds of the enrolment. This is caused by prevalent infantile sickness. The children present were clean and fairly orderly. Those in the two upper classes did not make satisfactory mental effort when under test. 3. The full infant's course is observed, and proper provisions are made for its systematic treatment. 4. The average proficiency slightly exceeds fair.

PITT-STREET (Primary—N.-V.) :—Regular inspection, 2nd June.

Numbers present :—Boys, 36 ; girls, 26 ; total, 62.

1. The material condition of the school is reasonably good in the circumstances. The school is very fairly organized. 2. Wet weather has interfered slightly with the attendance. About two-thirds of the pupils attend regularly. They are fairly punctual, tolerable neat in appearance, and fairly behaved. Very fair order is maintained. 3. The instruction includes all the subjects prescribed for a school of three classes, is very fairly arranged and imparted by appropriate methods. 4. The following is the proficiency of the several classes :—first, moderate ; second, very fair ; third, very fair +.

PITT-STREET (Infants—N.-V.) :—Regular inspection, 30th May.

Numbers present :—Boys, 39 ; girls, 28 ; total, 67.

1. The department is taught in a portion of the room devoted to the primary classes. The organization is satisfactory in the circumstances. 2. The ordinary attendance is much below the number of pupils enrolled (100). This is attributed partly to prevalent sickness among children, and in many instances, to the frequent removals to other schools. Fair order is secured, and the general tone of the school is healthy. 3. There are but two classes ; the teaching appears to have been systematic. 4. The proficiency reaches tolerable in the first class, and from fair to very fair in the second.

PYRMONT (Primary—V.) :—Regular inspection, 3rd August.

Numbers present :—Boys, 52 ; girls, 34 ; total, 86.

1. The material condition could scarcely be worse. The building is old and delapidated, and too small for the number of pupils in attendance. The play-ground is unfenced, exceedingly rough and stony, and in very close proximity to a quarry. 2. The pupils are regular and punctual, and well-behaved. The government is judicious, firm, and effective ; the moral tone is high, and the discipline as a whole, very good. 3. The range of lessons embraces all the subjects prescribed for a school of four classes, with the addition of algebra and Latin. The teaching is earnest and painstaking ; the lesson guides are judiciously compiled ; the methods pursued are skilful, and the instruction sound and effective. 4. The proficiency of the classes is—first, very fair ; second, good + ; third, very fair ; fourth, good.

PYRMONT (Infants—N.-V.) :—Regular inspection, 3rd August.

Numbers present :—Boys, 48 ; girls, 39 ; total, 87.

1. The material condition of this school has been fully described in previous Reports and is unaltered. The school is well organized in the circumstances. 2. Recent sickness among children has had a depressing effect on the attendance. Usually the pupils attend with fair regularity. They are also punctual, neat in appearance, and in good order. The government is judicious and effective. 3. The course of instruction is that prescribed for infant schools. It is regulated by the usual documents, and imparted by appropriate methods. 4. The following is the proficiency of the several classes :—First, very fair ; second, very fair to good ; third, very fair to good.

ST. LEONARDS (N.-V.) :—Regular inspection, 6th April.

Numbers present :—Boys, 86 ; girls, 78 ; total, 164.

1. A shed has recently been placed at the disposal of the teacher for teaching purposes. This, together with the schoolhouse, a good substantial building, affords reasonable present accommodation. Suitable furniture and apparatus are provided. 2. The pupils attend with fair regularity. They are also punctual, clean, quietly conducted, and in very fair order. The government is very fairly effective. 3. The instruction is of full range up to the requirements of a third class. It is judiciously arranged, and imparted with energy, intelligence, and ability. 4. The following is the proficiency of the classes :—First, very fair + ; upper first, very fair ; second, good (nearly) ; third, very fair +.

SUSSEX-STREET (Boys—V.) :—General inspection, 28th November.

Number present :—62.

1. The school building is a handsome substantial structure, well lighted and ventilated, and admirably adapted for educational purposes. The furniture and apparatus, as well as the out-buildings, are of a superior character. 2. The pupils are in good order, clean in person and dress, and reasonably punctual and regular in their attendance. 3. All the prescribed subjects are taught ; the methods are suitable and are carefully and earnestly applied. 4. The proficiency is :—First, tolerable ; second, tolerable ; third, tolerable to fair ; fourth, very fair. In all probability this school will secure a large attendance.

SUSSEX-STREET (Girls—V.) :—General inspection, 29th November.

Number present :—61.

1. The schoolroom is commodious, well-ventilated, and excellently furnished. Except that diagrams are needed, the school is fairly provided with apparatus. The playground arrangements are as complete as could be expected in the circumstances. 2. For the time the school has been in operation, the attendance, though small, may be regarded as satisfactory. Very fair order is secured, but restlessness among the pupils, and other symptoms of disorder are occasionally prevalent. The general discipline is, however, healthy, and the teacher is doing reasonable work under this head. 3. Except that object lessons had been temporarily omitted from the curriculum of the second and third classes, the instruction accords with the course laid down. It is judiciously arranged, and taught by appropriate methods. 4. The following is the proficiency of the several classes :—First, moderate ; second, tolerable to fair ; third, fair.

SUSSEX-STREET (Infants—V.) :—General inspection, 29th November.

Numbers present :—Boys, 74 ; girls, 63 ; total, 137.

1. The schoolroom is in all respects very good, but will probably soon be found too small for the number of pupils in attendance. A class-room is urgently required. 2. Many of the pupils are now attending school for the first time ; on this account great difficulty has been experienced in bringing them under control, and in inducing habits of order and cleanliness. The government is genial but firm, and maintains fair order. 3. The ordinary infant school course is followed as far as the meagre attainments and low mental culture of the pupils will admit. The methods of teaching are appropriate, and are prosecuted earnestly and vigorously. 4. The proficiency of the pupils is only moderate, but even this is very satisfactory for the short time the pupils have been under instruction. This school affords the means of education to many young children, who would otherwise grow up in ignorance, and is likely to be numerous attended.

SUSSEX-

SUSSEX-STREET (N.-V.) :—Regular inspection, 28th March.

Numbers present :—Boys, 31 ; girls, 28 ; total, 59.

1. The school premises are unsuitable. New buildings are in course of erection. There is a sufficiency of educational appliances. 2. The attendance is marked by irregularity, but the pupils are fairly punctual ; with few exceptions they are passably neat and clean in person. Very fair order is maintained. The tone of the school is healthy. 3. All the prescribed subjects are taught. The instruction is properly regulated. The methods are appropriate, and applied with zeal and painstaking. 4. The following is the proficiency of the classes :—First, tolerable ; second, very fair ; third, fair. The pupils are attentive, and make a reasonable effort to answer the questions proposed.

SUSSEX-STREET SOUTH (N.-V.) :—Regular inspection, 24th February.

Numbers present :—Boys, 78 ; girls, 46 ; total, 124.

1. Excellent vested premises will be opened shortly. The present school is well organized. 2. Usually the attendance reaches 150. A picnic on the day of inspection will account for the low attendance. The punctuality is reasonably satisfactory. The pupils are well-behaved, attentive, and industrious. The government is effective, and the tone of the school healthy. 3. The course of instruction is that prescribed for a school having a third class. Method and industry characterize the teaching. 4. The positions of the classes as regards efficiency are—First or babies class, fair + ; upper first, tolerable to fair ; second, very fair + ; third, very fair +.

TEMPE (V.) :—Regular inspection, 25th April.

Numbers present :—Boys, 42 ; girls, 26 ; total, 68.

1. The premises are good, and the school is well found in requirements. The organization is effective. 2. A satisfactory attendance is secured, and the pupils are reasonably punctual, well-behaved, and very fairly earnest in their work. 3. The instruction is methodical, reasonably effective, and in accordance with regulation. 4. The class proficiency is—First, tolerable + ; second, very fair ; third, very fair to good.

WATSON'S BAY (N.-V.) :—Regular inspection, 20th March.

Numbers present :—Boys, 33 ; girls, 18 ; total, 51.

1. As a make-shift, the schoolhouse fairly answers the purpose. It is suitably furnished, and orderly kept. 2. A good attendance is secured. The pupils are reasonably regular and punctual, cleanly in person, and quietly behaved. The government is judicious and effective. Good order is maintained. 3. The instruction embraces the usual subjects, is very fairly arranged, and imparted with zeal and painstaking. 4. The following is the proficiency of the classes :—First, fair ; second, fair ; third, fair +.

WILLIAM-STREET (Boys—V.) :—Regular inspection, 16th, 17th, and 18th May.

Number present :—Boys, 270.

1. Materially this school is in very good condition, and is efficiently organized. 2. Rainy weather reduced the attendance on the days of examination. The repeated absence of the teacher (Mr. Coates) through ill-health has also acted as a disturbing influence on the attendance. Ordinarily there would appear to be considerable irregularity. In other respects the discipline is of a vigorous, healthy, and effective character. The punctuality is good, the cleanliness very good, and the order excellent. 3. The instruction is of liberal range, including Latin and algebra, in addition to the branches prescribed for a fourth class. It is regulated by the usual lesson documents which are compiled with judgment. The methods of teaching are appropriate, and applied with energy, intelligence, and skill. 4. The following is the proficiency of the several classes :—First, very fair + ; second, fair to very fair ; upper second, very fair ; third, very fair ; fourth, very good.

WILLIAM-STREET (Girls—V.) ; Regular inspection, 7th, 8th, and 9th June.

Number present :—235.

1. The schoolroom is large, and fully supplied with all necessary materials. There is an excellent class-room attached. The organization as a whole may be pronounced excellent. 2. The pupils are punctual, and attend with fair regularity ; they are neatly and becomingly attired, respectful in demeanour, and in very good order. The government is mild and gentle, but firm and effective. The discipline as a whole is very good. 3. The instruction is of a high range ; the methods are intelligent, and are earnestly and judiciously applied ; the prompt, thoughtful answering of the pupils shows the thoroughness of the teaching. 4. The proficiency of the various classes is—Lower second, very fair ; upper second, very fair to good ; lower third, very fair ; upper third, very fair to good ; fourth, very good (nearly). The school is in a very efficient state.

WILLIAM-STREET (Infants—V.) :—Regular inspection, 5th and 6th June.

Numbers present :—Boys, 227 ; girls, 183 ; total, 410.

1. The material condition of this school is very good ; its organization is not less satisfactory. A book-press is wanted. 2. A large attendance is maintained. The pupils are fairly regulated, clean and tidy in appearance, and well behaved. The government is mild, but firm and effective. 3. The instruction includes all essential branches, is judiciously arranged, and effectively taught. 4. The following is the proficiency of the several classes :—First, very fair ; second, very fair ; third, very fair ; fourth, very fair to good ; fifth, good to very good. The pupils are attentive and intelligent. Their conduct and answering evidence careful training.

BILOELA (Prov.) :—Regular inspection, 24th April.

Numbers present :—Boys, 11 ; girls, 10 ; total, 21.

1. The schoolroom is a good one. It is amply supplied with requisites, and in the circumstances the school is satisfactorily organized. 2. The attendance is good, both as regards regularity and punctuality. The order is fair, and the tone of the school reasonably healthy. 3. There are but two classes ; for these the prescribed course of instruction is followed, and fair methods regulate the teaching. 4. The proficiency of the pupils approaches fair.

BOTANY HEADS (Prov.) :—Regular inspection, 1st March.

Numbers present :—Boys, 13 ; girls, 3 ; total, 16.

1. The schoolroom is too small, but in all other respects fair facilities are afforded for carrying on the work of instruction. 2. The pupils are regular, punctual, neat in appearance, and well behaved. Very fair order is maintained. 3. All the ordinary subjects are taught. The instruction is very fairly regulated, and the methods are characterised by earnestness and painstaking. 4. In point of proficiency the classes rank thus :—First, very fair ; second, very fair to good ; third, very fair.

CLONTARF (Prov.) :—Regular inspection, 28th July.

Numbers present :—Boys, 4 ; girls, 7 ; total, 11.

1. The room in which the school is held is a portion of one of the buildings on the Clontarf pleasure-grounds ; it is fairly suitable for the purpose, and large enough to accommodate a greater number of pupils than attend. There is a sufficient supply of books and furniture. 2. Most of the pupils are regular and punctual ; they are tidily dressed. The government is firm ; the pupils are quiet, orderly and attentive. The discipline may be regarded as good. 3. The teacher is careful and painstaking, and has done good work in the circumstances. 4. The proficiency of the pupils exceeds fair. On account of the small number of pupils attending the school has been closed.

GREENWICH

GREENWICH (Prov.) :—General inspection, 15th November.

Numbers present —Boys, 7 ; girls, 7 ; total, 14.

1. The schoolhouse is uncomfortably small, but in fair repair. It is tolerably provided with the necessary furniture. Suitable out-buildings are provided. 2. The attendance is small, but marked by commendable regularity. It has been reduced by the removal of a large family from the district. The pupils are rather unpunctual, but neat in appearance and quietly behaved. 3. The course of instruction includes the usual subjects, except singing and drawing ; it is regulated with passable judgment. The methods of teaching are partially modern in character, and are earnestly applied. 4. The following is the proficiency :—First, tolerable ; second, fair.

YASS DISTRICT.

INSPECTOR'S Report upon the condition of Public, Provisional, Half-time and Certified Denominational Schools for the year 1876.

During 1876, Public Schools have been established at Smithtown, Wallendbeen, Jindalee, and Bethungra ; and Provisional Schools at Rye Park and Cungegong. Two-Mile Creek has been changed into a Public School. Rossi Provisional was closed for want of attendance, and re-opened as a Half-time School, and Carwoola Half-time School has been changed into a Provisional School.

The number of schools or departments in operation is seventy-eight. These are classed as follows :—

Public	27
Provisional	29
Half-time	12
C. E.	3
R. C.	7

Public School buildings are required at Murrumburrah, Yass, Brawlin, Red Bridge, and Mitten's Creek ; and measures are being taken for the establishment of Provisional Schools at Pearce's Hill, Millong, and Merrill Creek. When these arrangements are completed, this district will be as well supplied with the means of education as the scattered nature of the population will admit.

All the Schools in the district, except one, were fully examined during the year, and the schools at Yass, Young, Bowning, Binalong, Wombat, and Gunning were incidentally inspected twice each. It was impossible to visit any of the others more than once.

The total enrolment of pupils at the time of the examinations was 3,073, and the total number present 2,355. The total ordinary attendance reached 2,340, and from the most careful inquiries, it is estimated that no fewer than 1,708 children are in the district who are receiving no education whatever.

Teachers and Local Boards complain of the indifference manifested by large numbers of the people, in reference to the education of their children. The numbers present at the examination this year, gives a too favorable view of the school attendance. With the intention of increasing the effectiveness of local supervision, the Council has decided that once in each year, the Local Board of each school shall have notice of the Inspector's visit ; and, as a rule, each school can only be visited once. This visit is made the occasion of securing a full attendance. So much is this the case, that, in some schools, all the pupils enrolled were in attendance at inspection.

In but a very small number of schools is arithmetic taught satisfactorily. Theory is generally well taught, but the practice is not. Too few examples are given. Indeed many teachers seem to imagine that having explained a rule to their pupils and having helped them to work a few examples in illustration, they are fit to proceed onwards. That this is a mistake was clearly proved at the examinations held during the year. Many pupils, when thrown upon their own resources, failed to solve questions which their Teachers believed they thoroughly understood.

In the teaching of grammar, accidence and syntax are largely neglected.

In reading, the meaning of words in the lower, and etymology in the higher classes, have not hitherto received sufficient attention.

The scope and purport of object lessons are very generally misunderstood. In the hands of many teachers, the object lesson is simply a lecture, producing unsatisfactory results.

As a body the teachers in this district are anxious to improve the efficiency of their schools. Many of them work under great disadvantages, receiving but little sympathy and encouragement from their Local Boards, while contending against the apathy and indifference of the parents, who keep their children from school for the most trifling causes, and thus hinder the attainment of satisfactory results. Some of the teachers in the Public and Denominational schools are very efficient, and produce good work. A few of the Provisional school teachers have, during the past year, received a course of training, and arrangements are now being made for affording to all untrained teachers a like opportunity. It is thus hoped that all Provisional Schools in the district will shortly be supplied with teachers, competent for the duties they have to perform, and that in future more satisfactory results will be produced in this class of schools.

J. H. MURRAY,
Inspector.

ANNEX A.

SUMMARIES of Reports furnished on Public, Provisional, and Half-time Schools, during the year 1876.

I.—PUBLIC.

BETHUNGRA :—General inspection. Visited, 15th November.

Enrolled :—Boys, 21 ; girls, 22 ; total, 43. Present :—Boys, 16 ; girls, 20 ; total, 36.

Ordinary attendance, 30. In district not enrolled, 60.

The working material supplied by the Council is good, in all other respects the material condition is indifferent. The discipline is lax. The attainments are very low. This is a new school, in operation only a few weeks, and would not now have been examined but in order to determine the teacher's point of commencement.

BINALONG :—Regular inspection. Visited, 27th July.

Enrolled :—Boys, 25 ; girls, 25 ; total, 50. Present :—Boys, 22 ; girls, 20 ; total, 42.

Ordinary attendance, 40. In district not enrolled, 60.

The material condition is very bad ; the discipline is lax. The instruction is distributed with only moderate skill. The attainments are tolerable.

BOWNING :—Regular inspection. Visited, 26th July.

Enrolled :—Boys, 15 ; girls, 13 ; total, 28. Present :—Boys, 15 ; girls, 13 ; total, 28.

Ordinary attendance, 28. In district not enrolled, 50.

The material condition is bad, but tenders are invited for the necessary improvements and extensions. The discipline is weak ; the instruction is unskillfully regulated, and feebly applied ; the attainments are low, and the school is retrograding.

BURROWA :—

BURROWA :—Regular inspection. Visited, 28th July.

Enrolled :—Boys, 31 ; girls, 14 ; total, 45. Present :—Boys, 21 ; girls, 8 ; total, 29.
Ordinary attendance, 38. In district not enrolled, 60.

The material condition is good ; the discipline is sound ; the instruction is carefully distributed ; the attainments are, upon the whole, fairly satisfactory. The local supervision is beneficial, and the school has improved during the year. Several members of the Local Board were present during the inspection.

COOTAMUNDRA :—Regular inspection. Visited, 19th August.

Enrolled :—Boys, 44 ; girls, 31 ; total, 75. Present :—Boys, 15 ; girls, 16 ; total, 31.
Ordinary attendance, 35. In district not enrolled, 70.

The material condition is only moderate. The discipline is unsatisfactory. The instruction is distributed with fair care and skill, but the teaching is perfunctory, and the results are low.

CUNNINGAR :—Regular inspection. Visited, 8th September.

Enrolled :—Boys, 19 ; girls, 14 ; total, 33. Present :—Boys, 16 ; girls, 13 ; total, 29.
Ordinary attendance, 30. In district not enrolled, 12.

The fences and buildings need repairs. The discipline is healthy. The instruction is tolerably well regulated, but the teaching is lacking in life and penetration. The results are nearly fair.

DALTON :—General inspection. Visited, 24th February.

Enrolled :—Boys, 21 ; girls, 24 ; total, 45. Present :—Boys, 15 ; girls, 21 ; total, 36.
Ordinary attendance, 35. In district not enrolled, 40.

The material condition is good. The discipline is sound. The classification is correct. The instruction is judiciously regulated. The attainments are fairly satisfactory.

ELIZABETHFIELD :—Regular inspection. Visited, 12th May.

Enrolled :—Boys, 11 ; girls, 11 ; total, 22. Present :—Boys, 6 ; girls, 11 ; total, 17.
Ordinary attendance, 20. In district not enrolled, 20.

The material condition is bad. The discipline is moderate. The regulation of the instruction is also moderate. The attainments are low.

FROGMOOR :—General inspection. Visited, 18th March.

Enrolled :—Boys, 17 ; girls, 18 ; total, 35. Present :—Boys, 13 ; girls, 10 ; total, 23.
Ordinary attendance, 36. In district not enrolled, 0.

The material condition, as respects all but the buildings, is satisfactory ; the discipline is firm ; the classification is correct ; the instructional documents are carefully compiled. The attainments are nearly tolerable. The local supervision is beneficially exercised.

GRENFELL :—Regular inspection. Visited, 1st and 2nd November.

Enrolled :—Boys, 51 ; girls, 32 ; total, 83. Present :—Boys, 46 ; girls, 28 ; total, 74.
Ordinary attendance, 60. In district not enrolled, 100.

The material condition is good ; the discipline is sound ; the attainments are lower than at last examination, from causes which attribute no blame to the teacher ; the instruction is properly regulated.

GRENFELL (Infants) :—Regular inspection. Visited, 31st October.

Enrolled :—Boys, 24 ; girls, 33 ; total, 57. Present :—Boys, 24 ; girls, 33 ; total, 57.
Ordinary attendance, 48. In district not enrolled, 100.

The material condition is good ; the discipline is sound ; the instruction is carefully distributed. The attainments are fairly satisfactory. The local supervision is earnest, intelligent, and effective. The school as a whole is highly appreciated by the public.

GUNDAROO :—Regular inspection, 15th May.

Enrolled :—Boys, 21 ; girls, 17 ; total, 38. Present :—Boys, 13 ; girls, 12 ; total, 25.
Ordinary attendance, 28. In district not enrolled, 6.

The schoolroom and its appliances are in a fairly satisfactory condition. The discipline is weak. The instruction is unskilfully regulated. The attainments are low ; the classification is faulty ; the moral tone is low.

GUNNING :—General inspection. Visited, 3rd and 4th May.

Enrolled :—Boys, 73 ; girls, 70 ; total, 143. Present :—Boys, 55 ; girls, 54 ; total, 109.
Ordinary attendance, 105. In district not at school, 30.

The material condition is good ; the discipline is sound. The instruction is well regulated ; the attainments are satisfactory ; and the local supervision is active.

HARDEN :—General inspection. Visited, 7th August.

Enrolled :—Boys, 21 ; girls, 15 ; total, 36. Present :—Boys, 19 ; girls, 7 ; total, 26.
Ordinary attendance, 27. In district not enrolled, 26.

The material condition is the worst possible ; the discipline is weak ; the instruction is regulated with tolerable skill and care, and earnestly applied. Methods of a modern cast produce fairly satisfactory results ; all things considered.

JINDALEE :—General inspection. Visited, 28th August.

Enrolled :—Boys, 20 ; girls, 14 ; total, 34. Present :—Boys, 20 ; girls, 14 ; total, 34.
Ordinary attendance, 28. In district not enrolled, 34.

This school is conducted in Mr. Coker's woolshed, which has been fitted up by the proprietor for the purpose. It is very comfortable, and well supplied by the Council with all necessary requisites. The classification is correct. The instruction is properly distributed, and vigorously applied. The methods are modern, and the attainments, for the classification of the pupils, and the time the school has been opened, are satisfactory.

MARENGO :—Regular inspection. Visited 22nd March.

Enrolled :—Boys, 19 ; girls, 14 ; total, 33. Present :—Boys, 14 ; girls, 7 ; total, 21.
Ordinary attendance, 26. In district not enrolled, 20.

The material condition is fair ; the discipline is also fair ; the instruction is carefully regulated ; and the attainments are fair.

MURRUMBATEMAN :—Regular inspection. Visited, 12th and 13th May.

Enrolled :—Boys, 21 ; girls, 24 ; total, 45. Present :—Boys, 15 ; girls, 15 ; total, 30.
Ordinary attendance, 33. In district not enrolled, 12.

The material condition of the school and its appliances are good ; the discipline is fair, and the attainments are nearly fair. The classification is correct, and the moral tone is fairly satisfactory.

PEELWOOD :—

PEELWOOD :—Regular inspection. Visited, 10th and 11th March.

Enrolled :—Boys, 43 ; girls, 37 ; total, 80. Present :—Boys, 30 ; girls, 18 ; total, 48.
Ordinary attendance, 35. In district not enrolled, 70.

The material condition of the schoolroom and play-ground is good ; the classification is defective ; the instruction is regulated with only moderate skill ; the attainments are low.

QUEANBEYAN :—Regular inspection. Visited 15th June.

Enrolled :—Boys, 50 ; girls, 43 ; total, 93. Present :—Boys, 31 ; girls, 29 ; total, 60.
Ordinary attendance, 70. In district not enrolled, 50.

The material condition is unsatisfactory ; the discipline is indifferent ; the classification is injuriously minute ; the instructional documents are too general, and also too minute ; the methods are of modern cast ; the teaching is spiritless, and the attainments are only moderate.

SMITHTOWN :—General inspection. Visited, 10th November.

Enrolled :—Boys, 19 ; girls, 19 ; total, 38. Present :—Boys, 18 ; girls, 18 ; total, 36.
Ordinary attendance, 30. In district not enrolled, 6.

The temporary building employed as a school-room is very unsuitable ; the books and appliances are good and sufficient ; the instruction is well regulated ; the discipline is sound ; the attainments, making due allowance for the short time the school has been in operation, are satisfactory.

TIPPERARY GULLY :—General inspection. Visited, 16th and 19th August.

Enrolled :—Boys, 19 ; girls, 19 ; total, 38. Present :—Boys, 16 ; girls, 17 ; total, 33.
Ordinary attendance, 34. In district not enrolled, 15.

The material condition, except in working appliances, is of the lowest type ; the discipline is fairly effective ; the instruction is regulated carefully ; the attainments are nearly tolerable.

TWO-MILE CREEK :—General inspection. Visited 25th and 26th August.

Enrolled :—Boys, 14 ; girls, 8 ; total, 22. Present :—Boys, 14 ; girls, 7 ; total, 21.
Ordinary attendance, 18. In district not enrolled, 100.

For some time a Provisional School of an unsatisfactory kind existed at Two-mile Creek. A large number of children residing within the school radius did not attend, and their parents asked for a Public School. The Council desired to accede to the request of the people, but many obstacles were in the way. These are now, happily, removed, and the school has been opened with a fair prospect of success. The examination took place at this early date to give a starting point to the teacher. This point is about as low as it is possible to be.

WALLENBEEEN :—General inspection. Visited, 17th November.

Enrolled :—Boys, 17 ; girls, 19 ; total, 36. Present :—Boys, 14 ; girls, 15 ; total 29.
Ordinary attendance, 32. In district not enrolled, 39.

The material condition is reasonably good ; the discipline is sound ; the instruction is regulated with care ; the attainments are low, but as high as could be expected in a new school commenced only a few weeks past.

WOMBAT :—General inspection. Visited 21st August.

Enrolled :—Boys, 24 ; girls, 32 ; total, 56. Present :—Boys, 18 ; girls, 18 ; total, 36.
Ordinary attendance, 40. In district not enrolled, 120.

The material condition is very good ; the discipline is healthy ; the instruction is carefully regulated ; the attainments are nearly fair ; the moral tone is pleasing.

YOUNG :—Regular inspection. Visited, 26th and 27th October.

Enrolled :—Boys, 43 ; girls, 29 ; total, 72. Present :—Boys, 32 ; girls, 21 ; total, 53.
Ordinary attendance, 60. In district not enrolled, 100.

The material condition of the schoolroom is, in the main, good ; the discipline is sound ; the instruction is properly regulated ; the attainments are lower than at last inspection, owing to the deficiency in the teaching staff during the year.

YOUNG (Infants) :—Regular inspection. Visited, 25th October.

Enrolled :—Boys, 41 ; girls, 55 ; total, 96. Present :—Boys, 35 ; girls, 44 ; total 79.
Ordinary attendance, 86. In district not enrolled, 100.

The material condition, as respects the internal arrangements of the school, is very good ; the instruction is judiciously distributed, and applied with zeal and earnestness ; the attainments are fair.

II.—PROVISIONAL.

BARWANG :—Regular inspection. Visited, 4th August.

Enrolled :—Boys, 11 ; girls, 10 ; total, 21. Present :—Boys, 9 ; girls, 8 ; total, 17.
Ordinary attendance, 18. In district not enrolled, 14.

The material condition is bad ; the discipline is lax ; the classification is faulty ; the lesson documents are unsuitable. The methods have a modern cast, but the teaching is perfunctory and heartless, and the attainment are below indifferent.

BINDA :—General inspection. Visited, 3rd March.

Enrolled :—Boys, 12 ; girls, 6 ; total, 18. Present :—Boys, 9 ; girls, 4 ; total, 13.
Ordinary attendance, 11. In district not enrolled, 1.

The material condition is fairly suitable for a small school ; the discipline is lax ; the programmes are tolerably well compiled. The attainments are low, and the school work is spiritless. In a few weeks there will be only eleven children of a school age within the school radius, and the Local Board contemplate asking the Council to sanction the amalgamation of this school and the Walner Provisional, in the formation of a new Public School within two miles of Binda, and to be called the Binda Public School. This school has since been closed.

BEREBANGELO (Prov.) :—General inspection. Visited, 10th February.

Enrolled :—Boys, 16 ; girls, 6 ; total, 22. Present :—Boys, 15 ; girls, 6 ; total, 21.
Ordinary attendance, 20. In district not enrolled, 12.

The material condition is bad ; the discipline is loose ; the instruction is regulated with moderate skill. The attainments are low, but the prospects of improvement are hopeful.

BUNGENDORE :—

BUNGENDORE :—Regular inspection. Visited, 6th June.

Enrolled :—Boys, 17; girls, 11; total, 28. Present :—Boys, 11; girls, 6; total, 17.
Ordinary attendance, 25. In district not enrolled, 50.

The material condition is good; the discipline is effective; the instruction is well regulated and diligently applied; and the attainments, all things considered, are reasonably satisfactory. Judging from the gentlemen who were present at the examination, much interest is felt by the public in this school. The public money is wasted, and the best interests of the children of this little town are injured by sustaining two small and necessarily inefficient schools, instead of one good Public School.

BURROWA FLATS :—Regular inspection. Visited, 3rd August.

Enrolled :—Boys, 12; girls, 16; total, 28. Present :—Boys, 11; girls, 13; total, 24.
Ordinary attendance, 22. In district not enrolled, 18.

Like most Provisional Schools on private lands the material condition is bad. The discipline is fair; the instruction is carefully but unskilfully distributed; it is applied mechanically but with energy and zeal; the attainments are, for two classes, over tolerable. The teacher, if trained, could maintain a third class here.

CHAIN OF PONDS :—General inspection. Visited, 9th and 10th February.

Enrolled :—Boys, 14; girls, 16; total, 30. Present :—Boys, 11; girls, 11; total, 22.
Ordinary attendance, 20. In district not at school, 12.

The material condition is bad. The discipline is sound. The instruction is regulated with moderate skill. The attainments are low.

CUNGEGONG :—General inspection. Visited, 15th November.

Enrolled :—Boys, 19; girls, 13; total, 32. Present :—Boys, 15; girls, 11; total, 26.
Ordinary attendance, 25. In district not enrolled, 20.

The material condition is, as a whole, inferior, but the school is not likely to continue longer than while the railway is being formed. The discipline is sound. The instruction is well regulated. The attainments, considering that the school has been opened but a short time, may be considered satisfactory.

CUTTYCUTTYGANG :—General inspection. Visited, 9th March.

Enrolled :—Boys, 13; girls, 12; total, 25. Present :—Boys, 6; girls, 3; total, 9.
Ordinary attendance, 21. In district not enrolled, 30.

The material condition is bad; the discipline is lax; the instruction is unskilfully regulated; the classification is faulty; and the attainments are very low and unsatisfactory. The authorized scale of fees is not in force and the receipts are only £12 a year.

FISHER'S CREEK :—Regular inspection. Visited, 21st March.

Enrolled :—Boys, 19; girls, 14; total, 33. Present :—Boys, 14; girls, 4; total, 18.
Ordinary attendance, 18. In district not enrolled, 15.

Except in appliances furnished by the Council, the material condition is bad; the discipline is lax; the instruction is improperly regulated; the attainments are very low, and the condition of the school is in every prospect unpromising. A new teacher has been appointed since the examination.

FULLERTON :—Regular inspection. Visited, 10th March.

Enrolled :—Boys, 10; girls, 18; total, 28. Present :—Boys, 4; girls, 15; total, 19.
Ordinary attendance, 20. In district not enrolled, 30.

The material condition is good; the discipline is fair; the teaching is moderately skilful; the classification is defective; the attainments are low.

GOOD HOPE :—General inspection. Visited, 8th February.

Enrolled :—Boys, 18; girls, 16; total, 34. Present :—Boys, 15; girls, 13; total, 28.
Ordinary attendance, 23. In district not enrolled, 8.

The material condition is indifferent. The discipline is sound, and the instruction is regulated with moderate skill. The attainments are a little over moderate. The Scripture lessons are not taught.

GRABEN GULLEN :—General inspection. Visited, 29th February.

Enrolled :—Boys, 15; girls, 13; total, 28. Present :—Boys, 14; girls, 11; total, 25.
Ordinary attendance, 21. In district not enrolled, 15.

Excepting the appliances furnished by the Council, the material condition is bad. The discipline is sound; the classification is correct; the instruction is regulated with due care. The attainments are fairly satisfactory. There is, in reality, no local supervision. The authorized scale of fees is introduced, but many of the people disregard it, and send the teacher in reply to her bills for fees little or nothing as they feel inclined. Her receipts from fees are only £5 for the whole year.

HOSKINGTON :—Regular inspection. Visited, 9th June.

Enrolled :—Boys, 14; girls, 17; total, 31. Present :—Boys, 10; girls, 15; total, 25.
Ordinary attendance, 24. In district not at school, 8.

The working material supplied by the Council is suitable and sufficient. The discipline is effective. The instruction is well distributed and energetically applied, and the results are satisfactory.

HOVELL'S CREEK :—General inspection. Visited, 17th March.

Enrolled :—Boys, 8; girls, 14; total, 22. Present :—Boys, 7; girls, 14; total, 21.
Ordinary attendance, 18. In district not enrolled, 12.

The material condition is bad; the discipline is weak; the instruction is not yet properly regulated; the classification is fairly correct; the attainments are low. A new teacher has just entered on duty.

KOHAN :—Regular inspection. Visited, 5th June.

Enrolled :—Boys, 11; girls, 13; total, 24. Present :—Boys, 6; girls, 13; total, 19.
Ordinary attendance, 22. In district not enrolled, 10.

The material organization is bad; the discipline is fairly effective; the attainments are moderate; the methods are unsuitable, but earnestly applied.

MAJURA :—Regular inspection. Visited, 24th May.

Enrolled :—Boys, 10; girls, 15; total, 25. Present :—Boys, 8; girls, 14; total, 22.
Ordinary attendance, 18. In district not enrolled, 10.

The material condition of the schoolroom is tolerable; the discipline is fair; the instruction is unskilfully regulated; the attainments are low; the local supervision is nominal only, but there is in this respect, hope of improvement.

MANTON'S

MANTON'S CREEK :—General inspection. Visited, 4th February.

Enrolled :—Boys, 18 ; girls, 25 ; total, 43. Present :—Boys, 11 ; girls, 12 ; total, 23.
Ordinary attendance, 20. In district not at school, 7.

The material condition is under the circumstances, reasonably good ; the instruction is regulated with only moderate skill. The teaching is wanting in penetration and energy ; the attainments are indifferent. The local supervision, except in relation to material organisation, is of little or no benefit, but in this respect, it is commendable and creditable to Mr. Mackay.

MARKDALE :—General inspection. Visited, 15th March.

Enrolled :—Boys, 10 ; girls, 12 ; total, 22. Present :—Boys, 10 ; girls, 12 ; total, 22.
Ordinary attendance, 18. In district not at school, 11.

The material condition is bad ; the discipline is the same ; the classification is fairly correct ; the instruction is faulty in regulation, and without the usual guides ; the attainments are very low. The inspector's suggestions at former examinations are unheeded.

MICHELAGO :—Regular inspection. Visited, 14th June.

Enrolled :—Boys, 19 ; girls, 13 ; total, 32. Present :—Boys, 15 ; girls, 8 ; total, 23.
Ordinary attendance, 25. In district not enrolled, 20.

The material condition is fair ; the discipline is indifferent ; the instruction is unskilfully distributed, and the methods are mechanical ; the teaching is ineffective. The attainments are low, and so also is the moral tone of the school. Steps are in progress for placing this school in a satisfactory condition.

MUGWILL :—General inspection. Visited, 16th May.

Enrolled :—Boys, 16 ; girls, 9 ; total, 25. Present :—Boys, 12 ; girls, 9 ; total, 21.
Ordinary attendance, 20. In district not enrolled, 10.

The working material supplied by the Council is good and sufficient ; the discipline is bad ; the instruction is unskilfully regulated ; the attainments are low ; the classification is bad.

NEW LINE :—Regular inspection. Visited, 8th June.

Enrolled :—Boys, 13 ; girls, 11 ; total, 24. Present :—Boys, 12 ; girls, 11 ; total, 23.
Ordinary attendance, 21. In district not enrolled, 22.

Except in teaching appliances, the material organization is of a very low type ; the discipline produces fair order ; the instruction is regulated without skill, and applied with feeble effort. The results are low.

ROSSI :—Regular inspection. Visited, 9th June.

Enrolled :—Boys, 7 ; girls, 17 ; total, 24. Present :—Boys, 3 ; girls, 13 ; total, 16.
Ordinary attendance, 17. In district not enrolled, 10.

The material condition is wretched ; the discipline is lax ; the instruction is distributed without care or skill, and applied without heart or energy, and the results are very low. The attendance is very irregular and very unpunctual.

RYE PARK :—General inspection. Visited, 29th and 31st July.

Enrolled :—Boys, 19 ; girls, 11 ; total, 30. Present :—Boys, 18 ; girls, 10 ; total, 28.
Ordinary attendance, 27. In district not enrolled, 22.

The schoolroom is a very fine building of its kind ; the discipline is mild ; the instruction is properly distributed ; the attainments, for the time the school has been in operation, may be considered fairly satisfactory.

SPRING CREEK :—General inspection. Visited, 7th February.

Enrolled :—Boys, 11 ; girls, 16 ; total, 27. Present :—Boys, 11 ; girls, 16 ; total, 27.
Ordinary attendance, 24. In district not at school, 6.

The material condition is the worst possible. The discipline is mild. The instruction is unskilfully regulated. The attainments are very low.

STONE HUT :—Regular inspection. Visited, 23rd May.

Enrolled :—Boys, 14 ; girls, 11 ; total, 25. Present :—Boys, 14 ; girls, 9 ; total, 23.
Ordinary attendance, 16. In district not a school, 0.

The material condition is bad ; the discipline is fair ; the classification is faulty. The instruction is unskilfully regulated. The attainments, in the branches taught, are tolerable. The local supervision is beneficial, and exercised exclusively by Mr. W. Davis. The people benefited by the school take little or no interest in it.

TALLAGANDRA :—General inspection. Visited, 16th and 17th May.

Enrolled :—Boys, 16 ; girls, 9 ; total, 25. Present :—Boys, 12 ; girls, 9 ; total, 21.
Ordinary attendance, 19. In district not enrolled, 10.

The schoolroom is fairly supplied with all necessary school appliances ; the discipline is mild ; the instruction is unskilfully regulated ; the attainments are low ; and the classification is faulty.

TUGGRANONG :—General inspection. Visited, 26th May.

Enrolled :—Boys, 21 ; girls, 15 ; total, 36. Present :—Boys, 21 ; girls, 6 ; total, 27.
Ordinary attendance, 25. In district not enrolled, 9.

This school is one of a large number in this district that have been built by public subscription upon private land. The promoters, finding they have no claim upon the school, refuse to contribute to its repair or extension, and the owner of the site, a member of the Local Board, has given the teacher a month's notice to deliver up possession to him. The discipline is ineffective, and the range and results are small. A Public School will be opened at Tuggranong as soon as the necessary buildings can be erected.

WALNER :—Regular inspection. Visited, 6th March.

Enrolled :—Boys, 13 ; girls, 13 ; total, 26. Present :—Boys, 11 ; girls, 12 ; total, 23.
Ordinary attendance, 20. In district not enrolled, 8.

The material condition is good ; the discipline is mild and effective ; the classification is correct ; and the instruction is regulated with moderate skill. The attainments are not high, but under the circumstances of the school, tolerably reasonable.

WETANGERRA :—General inspection. Visited, 22nd May.

Enrolled :—Boys, 22 ; girls, 15 ; total, 37. Present :—Boys, 15 ; girls, 14 ; total, 29.
Ordinary attendance, 25. In district not at school, 8.

The discipline is lax ; the instruction is improperly regulated. The classification is faulty, and the attainments are low. The local supervision is confined to the visits of the Rev. G. P. Smith of Canberra, who manifests a deep interest in the cause of education in this district.

III.—HALF-TIME.

BURRA :—Regular inspection. Visited, 13th June.

Enrolled :—Boys, 7 ; girls, 9 ; total, 16. Present :—Boys, 6 ; girls, 7 ; total, 13.
Ordinary attendance, 13. In district not enrolled, 8.

The material condition is, as a whole, indifferent ; the discipline is effective ; the classification is correct. The lesson documents are suitable, and the methods chiefly so. The teaching is honest, patient, and penetrating, and produces satisfactory results.

MCDONALD'S FLAT :—Regular inspection. Visited, 13th June.

Enrolled :—Boys, 8 ; girls, 6 ; total, 14. Present :—Boys, 7 ; girls, 6 ; total, 13.
Ordinary attendance, 13. In district not enrolled, 5.

The material condition is fair ; the attainments are between fair and very fair. In all else the condition of this school is the same as that of the other Half-Time school at Burra, in conjunction with which it is worked.

CARWOOLA :—Regular inspection. Visited, 10th June.

Enrolled :—Boys, 13 ; girls, 15 ; total, 28. Present :—Boys, 8 ; girls, 12 ; total, 20.
Ordinary attendance, 20. In district not enrolled, 5.

The material condition is indifferent ; the discipline is fair ; the instruction is regulated with some care, and applied with fair energy and perseverance ; the methods have a modern cast, and the results are moderate.

FOXLOWE :—Regular inspection. Visited, 10th June.

Enrolled :—Boys, 6 ; girls, 3 ; total, 9. Present :—Boys, 5 ; girls, 2 ; total, 7.
Ordinary attendance, 7. In district not enrolled, 0.

The material condition is good ; the discipline is fair ; the lesson documents are constructed with reasonable care ; the classification is correct ; the attainments are nearly moderate.

CURRAN'S CREEK :—General Inspection. Visited, 2nd March.

Enrolled :—Boys, 5 ; girls, 8 ; total, 13. Present :—Boys, 5 ; girls, 8 ; total, 13.
Ordinary attendance, 12. In district not enrolled, 7.

This school is taught by the same teacher as the Lost River H.-T. School, and is in the same condition.

LOST RIVER :—General inspection. Visited, 1st March.

Enrolled :—Boys, 6 ; girls, 8 ; total, 14. Present :—Boys, 5 ; girls, 7 ; total, 12.
Ordinary attendance, 12. In district not enrolled, 8.

The material condition is reasonably satisfactory ; the discipline is sound ; the classification is correct ; the instruction is well regulated. The attainments, considering the circumstances of the school, are fairly satisfactory.

GUNDAROO, UPPER :—Regular inspection. Visited, 19th May.

Enrolled :—Boys, 6 ; girls, 5 ; total, 11. Present :—Boys, 6 ; girls, 5 ; total, 11.
Ordinary attendance, 7. In district not enrolled, 0.

The working material is good ; the discipline is lax ; the instruction is unskilfully regulated. The attendance is very bad, and the attainments are very low.

SUTTON :—Regular inspection. Visited, 19th May.

Enrolled :—Boys, 6 ; girls, 13 ; total, 19. Present :—Boys, 5 ; girls, 11 ; total, 16.
Ordinary attendance, 17. In district not enrolled, 7.

The attendance is good, and there is ground for believing that a Provisional School could be maintained here. In all other respects what was said in the report of the Upper Gundaroo H.-T. School, applies equally to Sutton.

INGLEWOOD FOREST :—Regular inspection. Visited, 7th June.

Enrolled :—Boys, 16 ; girls, 12 ; total, 28. Present :—Boys, 6 ; girls, 6 ; total, 12.
Ordinary attendance, 18. In district not enrolled, 10.

The material condition may be regarded as fair ; the classification is unsuitable ; the instruction is inappropriate and applied without energy or spirit, and the results are small.

MULLOON :—Regular inspection, Visited, 7th June.

Enrolled :—Boys, 8 ; girls, 6 ; total, 14. Present :—Boys, 5 ; girls, 6 ; total, 11.
Ordinary attendance, 10. In district not enrolled, 3.

The condition of this school is in every respect the same as that of the Half-time School at Inglewood Forest.

WHEEO :—General inspection. Visited, 28th February.

Enrolled :—Boys, 8 ; girls, 6 ; total, 14. Present :—Boys, 7 ; girls, 5 ; total, 12.
Ordinary attendance, 10. In district not enrolled, 13.

The material condition is bad ; the discipline is satisfactory ; the classification is fairly appropriate ; the lesson documents are executed with moderate skill ; the methods have an intelligent hue, but the teaching is lacking in spirit and penetration, and the results are small.

WINDUELLA :—General inspection. Visited, 28th February.

Enrolled :—Boys, 9 ; girls, 7 ; total, 16. Present :—Boys, 1 ; girls, 2 ; total, 3.
Ordinary attendance, 10. In district not enrolled, 2.

As far as I could judge from the examination of the small number of pupils present, and all other circumstances, this school is in much the same condition as the Half-time School at Wheeo, which is worked in conjunction with it. I think nearly everything said in the report of the Wheeo school will also apply to the Half-time School at Winduella.

APPENDIX I.

RECEIPTS and DISBURSEMENTS of the Council of Education, from 1st January to 31st December, 1876.

8. Meaning of the word person and as to equitable estates		18. Conveyances by trustees of Schools	
9. As to taking private lands		19. Title and application of Act	

A BILL

Intituled an Act to facilitate the acquisition by the Council of Education of sites for Schools.

Preamble.	<p>WHEREAS it is expedient that greater facilities should be given by law for the acquisition by the Council of Education of sites for Public Schools and school buildings:</p> <p>Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled, and by the authority of the same, as follows:—</p>
Taking of Crown Lands.	<p>1. In respect of all land which, at the time of selection as herein mention, shall be vested in Her Majesty, and not dedicated to any other public purpose, nor contracted to be granted absolutely or conditionally in fee simple, nor being under lease for mining purposes, it shall be lawful for the Council of Education to select, and after the expiration of sixty days' written notice to the Minister for Lands as hereinafter provided, to enter upon and hold to them and their successors for the purposes of public education, so much of such land (not exceeding the quantities next mentioned) as the said Council shall think necessary for those purposes; that is to say—in respect of town lands one acre, of suburban lands five acres, and in respect of lands situated elsewhere twenty acres: Provided that if, within the said period of sixty days, the Minister for Lands shall signify to the Council his disapproval of such selection, either in the whole or in part, the same (so far as such disapproval shall extend) shall become void.</p>
Notice to Minister for Lands.	<p>2. Every such notice shall be under the hand of the President, countersigned by the Secretary of the Council, and shall specify the quantity of land proposed by the Council to be taken, and its position, dimensions, and boundaries, so far as the same can without actual survey and admeasurement be ascertained, but in each case with reasonably sufficient accuracy so that the land intended to be indicated, although inartificially described, may be identified.</p>
Church and School Lands and lands under lease.	<p>3. The land commonly called the Church and School Lands shall, for the purposes of this Act, be deemed not dedicated to any public purpose, and shall be open to selection by the Council of Education accordingly. Provided that where any portion of such land selected by the Council, or any other land lawfully selected under the first section of this Act, shall at the time be under lease from the Crown or contract for such lease, the parties interested therein shall have the like written notice <i>mutatis mutandis</i> as is hereinbefore directed to be given to the Minister for Lands; and, if the selection finally be carried out, shall be entitled to compensation in the manner hereinafter provided in the case of private lands compulsorily taken.</p>
Restrictions on selection and effect of valid selection.	<p>4. It shall not be lawful for the Council to select or take compulsorily under this Act any enclosed land forming part of a homestead, or garden, shrubbery, or pleasure-ground, or on which there shall be any dwelling erected. But, where land shall have been lawfully selected or taken under this Act, and the Council have become entitled to enter upon and hold the same, such land shall be legally vested in the Council in fee simple in possession without grant or conveyance; and, where the grant of a right-of-way of necessity would by law be implied in the conveyance of such land, the same right shall exist, notwithstanding the absence of such conveyance.</p>
Conveyances of land other than Crown land.	<p>5. In respect of land owned by private persons, or bodies other than the Crown, which may have already been acquired or which shall after the passing of this Act be acquired or sought to be acquired by the Council of Education, by gift or purchase, or which shall be taken compulsorily by the Council under the provisions hereinafter contained, every person seized or possessed of or entitled to any such land, or any estate or interest therein, although as a trustee, committee, or guardian, or tenant in tail or for life or years only, or being a married woman, or if an infant being of the age of eighteen years, may convey such land to the Council.</p>
Effect of such conveyances.	<p>6. Every such conveyance shall operate, to vest effectually in the Council and their successors not only the estate and interest of the parties thereto, and their heirs, executors, and administrators, and in respect of a conveyance by a married woman as if she were sole and of age, in and as to every such infant as if he were of age, and in respect of conveyances by trustees, committees, and guardians, all the estate and interest of the several cestui-que-trusts, persons of unsound mind, or wards, for whom they act respectively, but also in respect of any conveyance by a tenant in tail or for life, or for ninety-nine years where fifty years at the least of that term are unexpired, the estate and interest of every person entitled in reversion, remainder, or expectancy after him, or in defeasance of the estate of such tenant.</p>
To protect the interests of reversionists.	<p>7. Provided always that, with respect to the interest of every person so entitled as last aforesaid, the value of such interest shall be ascertained in the manner hereinafter directed in the case of lands compulsorily taken under this Act, and the amount when so ascertained shall be paid by the Council of Education to the party entitled thereto, if known and accessible; but, if he be not known or not accessible, the amount shall forthwith be deposited in the Government Savings Bank in Sydney for his use; and the fact of such deposit shall thereupon be advertised by the Council in the <i>Government Gazette</i>, under the hand of the President, countersigned by the Secretary, with a statement of the cause thereof.</p>
Meaning of the word person, and as to equitable estates.	<p>8. The word "person" in the fifth section shall be taken to include corporations, whether sole or aggregate. And where any person is equitably entitled as tenant in tail or for life to any land, but the legal estate therein is vested in some trustee, such person shall be deemed a tenant in tail or for life within the meaning of that section, and may effectually convey all the estate and interest in such land under the same section, although such trustee be no party to the conveyance.</p>
As to taking private lands.	<p>9. Whenever any land, owned or claimed by private persons, or by any corporate body, shall be required by the Council of Education under this Act, and the parties entitled thereto or interested therein will not consent to part with such land, or shall not be willing to accept the sum offered for the same, the Council may give notice in writing to the person in possession of the land, if any, and to the parties entitled to or interested in the same, or the parties who by this Act are enabled to convey the same, or to such of them as can by diligent inquiry be discovered, that the land (not exceeding in area according</p>

according to its position the quantities specified in the first section) is required under this Act for the purposes of Public Education; which notice shall be under the hand of the President, countersigned by the Secretary, and shall contain the particulars required by the second section, and shall demand from the parties (who are hereby required within thirty days next following to deliver to the Council) the particulars of their estate and interest in the land indicated, and of their claims severally in respect thereof.

10. Every such notice shall be delivered to the party addressed or left at his usual place of abode; or if any of the parties interested be absent from the colony, or cannot be found, or be unknown, the notice to him or them shall be advertised not less than twice in the *Gazette*, and three times in some newspaper circulating in or nearest to the district in which the land is situated. And if, within the period of sixty days after such delivery or publication (whichever shall be the later in date), the parties entitled to or interested in or by this Act enabled to convey the land do not agree as to its value, or as to the amount to be paid to them respectively, or if there be any of such parties absent from the colony, or unknown or incapable of assent, or who, being entitled to compensation under this Act as a lessee for years, or as a reversioner or person entitled in remainder, shall not agree with the Council as to its amount, the land shall be appraised, and the due proportion of its value payable to each person interested be estimated, in the manner hereinafter mentioned; together with the amount of compensation, if any, over and above that value, which may be thought just to any such lessee, reversioner, or remainder man, or to the owner or other parties interested, by reason of the severance of the land intended to be taken from other lands of the same owner.

11. On the application in a summary way of the Council of Education (acting in that behalf by their President or Secretary or by an Inspector of Schools) to the Master in Equity of the Supreme Court, or to any District Court Judge, such Master or Judge shall appoint a Valuator for the purposes aforesaid; who shall before entering on his duty make before the Master or Judge, or before some Justice of the Peace, a solemn declaration in the form contained in the schedule hereto, and shall, on the completion of his valuation, be paid by the Council for his trouble such sum as shall at the time of his appointment have been fixed by such Master or Judge. And such Valuator shall have power to require the several parties to attend before him, and to produce all documents in their power respectively, touching the matter in question, and may examine the parties and their witnesses by solemn declaration or on oath; but the Council of Education shall be sufficiently represented by their Secretary or by a School Inspector. And the valuation and decision of such Valuator, which shall be in writing and signed by him, shall be conclusive and binding on all the parties.

12. Before appointing any person as Valuator, the Master in Equity or District Court Judge shall require notice to be given (or proof that notice has been given) to the parties interested in the land to be valued, or such as are known and accessible, of the application made to him; and shall permit them or any of them to propose to him the name of a person as Valuator, but the Master or Judge may, at his discretion, decline to appoint any such person.

13. For the purposes of this Act, where the land acquired or taken or sought so to be is under Mortgage, but the Mortgagee is not in possession, the Mortgagor shall, as between him and his Mortgagee, be deemed the owner of such land; and may alone effectually convey it to the Council. Provided that the Mortgagee shall have had due notice under the ninth and twelfth sections, and that the value of the land (either as agreed upon between the parties interested and the Council, or as the same shall have been estimated in manner aforesaid) shall be paid exclusively to such Mortgagee, unless the Mortgagor and himself shall otherwise agree respecting its appropriation. But where the Mortgagee is in possession of the land, he shall for the purposes of this Act be deemed its sole owner, in equity as well as at law.

14. In every case where the person entitled to receive the estimated value of land acquired or taken and valued under this Act, or any person entitled to a portion only of such value, shall be under disability not removed by this Act, or shall be unknown or not accessible, the amount payable to such person shall be forthwith deposited in the Government Savings Bank in Sydney for his use; and the fact of such deposit shall thereupon be advertised by the Council in the *Government Gazette*, under the hand of the President, countersigned by the Secretary, with a statement of the cause thereof.

15. If, in any case in which under the provisions of this Act the Council of Education shall be entitled to enter upon and take possession of certain land, the owner or occupier or any other person shall refuse to give up the possession thereof, or shall hinder the Council or their duly appointed agent from taking possession of the same, it shall be lawful for any Police Magistrate to issue a warrant to the Sheriff, or to the Bailiff of the nearest District Court, to deliver such possession to the person appointed by such warrant to receive the same; by virtue of which warrant the Sheriff or Bailiff shall deliver possession of such land accordingly. The cost accruing in respect of the issuing and execution of such warrant shall be paid by the person so refusing or hindering as aforesaid, and may be recovered by the Council by action against him in any District Court.

16. The Council of Education shall within the meaning of this Act be entitled to enter upon and take and hold possession of any land, which they may under this Act have selected or taken or otherwise acquired, so soon as the provisions of this Act affecting the same land and imposing any duty upon the Council in respect thereof shall have been satisfied. And where any money shall be payable by the Council to any person, in respect of his title to or interest in such land, a valid tender thereof if refused shall be equivalent to payment.

17. Every person having such title or interest as aforesaid, and being paid or having had tendered to him the amount at which the land or his interest therein was valued under this Act, shall on demand execute a conveyance thereof to the Council of Education and their successors; such conveyance to be prepared at the Council's expense, and tendered to him for such execution.

18. Whenever any land shall at any time have been conveyed in trust to any person, or otherwise dedicated and set apart in his hands, as the site of a school or buildings for the purposes of education, and the trustee or person holding the same shall desire to convey such land with the buildings thereon to the Council of Education for the purposes of a Public School, it shall be lawful for him so to convey the same; and the conveyance shall be effectual to vest the premises thenceforth in the Council and their successors for those purposes. And the word "person" in this section shall extend to trustees where there are more than one, and be taken to include Corporations, whether sole or aggregate.

19. This Act may be cited as the "Sites for Schools Act;" and its several provisions shall be in force for the purposes of public education, under the Public Schools Act of 1866, as also under any Act hereafter passed for amending the same, unless such amending Act shall otherwise direct.

SCHEDULE.

(Declaration by valuator; to be indorsed on the instrument appointing him.)

I, A.B., do solemnly and sincerely declare, that I have no interest directly or indirectly in the property in question, and that I will faithfully, impartially, and honestly, according to the best of my skill and ability, execute the duty of making the valuation hereby referred to me.

NEW SOUTH WALES.

REPORT

OF THE

COUNCIL OF EDUCATION

UPON THE CONDITION

OF THE

CERTIFIED DENOMINATIONAL SCHOOLS

FOR

1876.

Presented to both Houses of Parliament, in pursuance of the Act 30 Vic. No. 22, sec. 27.

SYDNEY : CHARLES POTTER, ACTING GOVERNMENT PRINTER.

1877.

THE COUNCIL OF EDUCATION TO HIS EXCELLENCY THE GOVERNOR,

SUBMITTING

REPORT UPON DENOMINATIONAL SCHOOLS FOR 1876.

To His Excellency SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor-in-Chief of the Colony of New South Wales and its Dependencies, and Vice-Admiral of the same.

May it please your Excellency,

We have the honor, in compliance with the requirements of the Public Schools Act, to submit this our Tenth Annual Report upon the condition of Certified Denominational Schools, being that for the year 1876.

The number of Certified Denominational Schools in operation at the close of the year was 181; Appendix A. two of them (Hamilton and Wagga Wagga) being schools to which certificates were granted since 1875.

On the list for 1875 there were 191 schools; but at the close of that year, as stated in the last Report, seven of such schools had already lost their certificates. In two instances the certificates had been voluntarily surrendered, and in five others they had been withdrawn, as shown in the following list:—

Gosford C.E.	} Certificate withdrawn.
Morpeth C.E.	
Appin R.C.	
Bargo R.C.	
Maitland W. C.E.	
Berrima R.C.	} Certificate surrendered.
Parramatta R.C.	

At the end of 1875 the certificate was also withdrawn from Phoenix Park R.C. School, but such withdrawal did not take effect till last year.

In 1876 six certificates were surrendered, viz. :—

Campbelltown C.E.
 Lord's Forest C.E.
 Pitt Town C.E.
 South Creek C.E.
 Campbelltown Pres.
 Scone C.E.

Of these, the first five were not open during any portion of 1876, and therefore they do not appear on the list for the year. Scone C.E. School was in operation during the first half of the year, but when a Public School was opened in the township this school lost its teacher, and its supporters did not ask for the appointment of another.

Five applications for certificates to Denominational Schools were received by the Council in 1876. Appendix B. Of these, two were granted, two were declined, and one was under consideration at the close of the year. One school, Plattsburg R.C., added to the list in 1876, had its certificate granted at the close of 1875, as mentioned in the Report for that year.

Applications for Certificates received in 1876.		
Name of School.	Denomination.	Result of Application.
Dubbo	R.C.	Declined.
Gundagai	R.C.	Declined.
Hamilton	R.C.	Granted.
Newcastle, South	R.C.	Under consideration.
Wagga Wagga	R.C.	Granted.

The

Appendix C.

The general report upon the condition of Certified Denominational Schools is, according to the usual practice, included in the Report upon Public Schools. Detailed statements showing the condition of the several Denominational Schools inspected are appended; and the usual summary of information as to the enrolment of pupils, the number in average attendance, and the amount of school fees received by the Teachers, will be found in the annexed Returns.

Appendix D.

The undermentioned sums were appropriated from the Church and Schools Estates Revenue, to the several classes of Certified Denominational Schools:—

	£	s.	d.
To Church of England Schools	441	11	3
Roman Catholic	263	12	5
Presbyterian	94	12	4
Wesleyan	69	17	6
Total	£869	13	6

We submit this as our Report upon the Certified Denominational Schools for the year ending 31st December, 1876; and in testimony thereof, we have caused our corporate seal to be affixed hereto, this thirtieth day of April, one thousand eight hundred and seventy-seven.

(L.S.)

W. WILKINS, Secretary.

J. SMITH, President.
W. A. DUNCAN.
ALFRED STEPHEN.
G. WIGRAM ALLEN.

APPENDIX C.

ALBURY DISTRICT.

III.—CERTIFIED DENOMINATIONAL SCHOOLS.

COROWA (C.E.) :—Regular inspection, 16th August.

Enrolled :—Boys, 40 ; girls, 30 ; total, 70. Present :—Boys, 28 ; girls, 24 ; total, 52.

Held in a building well adapted for its purpose. The premises present a very neat appearance, and are kept in good condition. The free schools at Wahgunyah entice many of the pupils away, or the attendance would show a larger average. The classification is appropriate. The discipline is mild and tolerably effective ; the pupils are not very regular or punctual. The instruction is earnest and tolerably skilful, and the general results range from tolerable to fair.

ADELONG (R.C.) :—Regular inspection, 14th June.

Enrolled :—Boys, 45 ; girls, 39 ; total, 84. Present :—Boys, 33 ; girls, 27 ; total, 60.

This school is held in the Catholic church ; the building is fairly suitable. The premises are kept neatly. The discipline is weak, but the teaching is zealous. The proficiency of the pupils may be estimated as tolerable nearly. A moderately pleasing tone prevails in the school.

TUMUT (R.C.) :—Regular inspection, 29th November and 1st December.

Enrolled :—Boys, 39 ; girls, 49 ; total, 88. Present :—Boys, 35 ; girls, 45 ; total, 80.

This school, held in the Catholic church, is tolerably well found in working material. Tolerable discipline is maintained, and the average proficiency is nearly fair. Satisfactory progress is being made, and the general aspect of the school fairly answering to the requirements of the standard.

Inspector's Office,
Albury, January 27th, 1877.CHARLES HOOKINS,
Inspector of Schools.

ANNEX B.

ARMIDALE DISTRICT.

SUMMARIES of Reports upon Certified Denominational Schools examined during the year 1876.

I.—CHURCH OF ENGLAND.

TAMWORTH (C.E.) :—General inspection, 2nd, 3rd, and 4th October.

Numbers enrolled :—Boys, 71 ; girls, 56 ; total, 127. Numbers present :—Boys, 70 ; girls, 50 ; total, 120.

Since last inspection the buildings have undergone extensive and very necessary repairs, at a cost of about £150. The premises are now in good order : and, but for the want of a few more desks and forms, the material condition and equipment are all that can reasonably be desired. As far as effected by the Teacher, the organization is fair. Material increase in the attendance has taken place, and the pupils are punctual and very fairly regular in their attendance. In point of discipline the school has retrograded somewhat. The government is too easy and indulgent ; and the pupils readily fall into disorderly attitudes, and are given to whispering during work. The course of instruction is complete and carefully regulated. The teaching is earnest and painstaking, but not attended with satisfactory results, owing mainly to the defective discipline. The pupils yield too passive an attention under instruction and are not called upon to exert themselves. The average proficiency is *tolerable to fair nearly*. The local supervision is confined mainly to the Chairman of the Board, who visits the school regularly and takes an active interest in its welfare.

II.—ROMAN CATHOLIC.

ARMIDALE (R.C.) :—Regular inspection, 21st September.

Numbers enrolled :—Boys, 48 ; girls, 50 ; total, 98. Numbers present :—Boys, 37 ; girls, 43 ; total, 80.

The building is too small, and its position is bad ; but steps have been taken to secure other and, on the whole, more suitable premises. Improvement is noticeable in the general organization, and the condition of the school records is now satisfactory. The attendance of pupils both as regards regularity and punctuality is reasonably satisfactory ; and in its other effects the discipline may be considered

considered good. The marching of the pupils, however, leaves considerable room for improvement. Singing is not taught, but otherwise the prescribed course is followed. The methods employed are of very fair quality, and the teaching is marked by reasonable industry and energy. Under examination the pupils are attentive, and, as a whole, give evidence of very fair mental training. The average proficiency is *fair**. Local supervision is confined to the Chairman of the Board, who visits the school frequently, and otherwise takes an active interest in its welfare.

J. D. BRADLEY,
Inspector of Schools,
Armidale District.

BATHURST DISTRICT.

DETAILED statement of the condition of Certified Denominational Schools examined during the year 1876.

Those marked thus * were inspected by Mr. Huffer.

CHURCH OF ENGLAND SCHOOLS.

* BATHURST (Primary) :—Regular inspection, 12th and 13th June.

Enrolled :—Boys, 56 ; girls, 56 ; total, 112. Present :—Boys, 31 ; girls, 37 ; total, 68.

Playsheds, lavatories, and new closets are much needed, and the schoolroom should be re-coloured and lime-washed. The pupils are very fairly regular and punctual, and the prevailing tone of the school is good. The course of instruction is that prescribed ; the classification is appropriate ; the lesson documents are judiciously drawn up, and the teaching is carried on with industry and skill. The general proficiency in class 2 ranges from tolerable to fair, and in classes 3 and 4 it is very fair.

* BATHURST (Infants) :—Regular inspection, 12th and 13th June.

Enrolled :—Boys, 81 ; girls, 49 ; total, 130. Present :—Boys, 47 ; girls, 36 ; total, 83.

A playshed, a lavatory, and new closets are much needed ; in other respects the material condition is fair. The pupils are fairly regular and punctual, and their order and attention are tolerable. The subjects prescribed for Infant Schools are taught ; the classification is tolerably appropriate, and the teaching is carried on with industry. The assistant is but moderately skilful in her work. The general proficiency is about tolerable.

SOFALA :—Regular inspection, 2nd October.

Enrolled :—Boys, 24 ; girls, 7 ; total, 31. Present :—Boys, 24 ; girls, 7 ; total, 31.

Ordinary attendance, 31.

The building is of very fair character, and the school is amply furnished and satisfactorily organized. A lavatory shed is much required. Most of the pupils attend with regularity and punctuality. The order secured is good, and the tone of the school is healthy. The course of instruction is of the usual kind. The proficiency reached averages fully fair.

ROMAN CATHOLIC SCHOOLS.

BATHURST (Boys) :—Regular inspection, 16th and 17th November.

Enrolled, 120 ; present, 83. Ordinary attendance, 92.

The school premises are good, and the supply of appliances is ample. The out-offices are of excellent character. The school is well organized, and effectively disciplined. The boys are reasonably punctual in attendance ; quite ten were absent through heavy rain. There are four classes, and excepting that singing is not taught, the course of instruction is a full one. The teaching has been prosecuted under marked disadvantage, and considering that the teacher has worked without assistance for quite a year, he has wrought with good effect. The average proficiency reaches very fair, nearly.

BATHURST (Girls) :—Regular inspection, 14th and 15th November.

Enrolled, 148 ; present, 131. Ordinary attendance, 130.

The schoolroom is well adapted to its uses, and is amply found in appliances ; no exception can be taken to the organization. A good attendance of pupils is secured, and unpunctuality is an exceptional state of things. The behaviour of the girls, their general industry and moral tone are noteworthy. The education given accords with the Council's standard. The methods are of modern cast, and they intelligently affect those under instruction. The position of the classes in point of efficiency is as follows :—First, very fair ; second, fair to very fair ; third, very fair to good ; fourth, good.

BATHURST (Infants) :—Regular inspection, 13th November.

Enrolled :—Boys, 71 ; girls, 111 ; total, 182. Present :—Boys, 54 ; girls, 89 ; total, 143.

Ordinary attendance, 140.

The schoolroom is a good and well-appointed one. The routine and general organization are effective. The children attend with satisfactory regularity and punctuality. They are under genial discipline, and are instructed in all the subjects prescribed for Infant Schools. The proficiency was found to be very fair.

ORANGE.—Regular inspection, 1st and 4th September.

Enrolled :—Boys, 103 ; girls, 128 ; total, 231. Present :—Boys, 88 ; girls, 107 ; total, 195.

Ordinary attendance, 170.

The schoolroom is a good one, but it affords insufficient accommodation to the pupils ; it is well furnished, and the necessary out-offices are provided. The records are properly kept, and a sound organization obtains. The personal appearance and behaviour of the pupils and the general tone of the school are good. The discipline is genial, but firm. There are four classes, but a very large proportion of the pupils is in the lowest class. The course of instruction is full, and the methods employed have been of careful cast. The general proficiency exceeds very fair.

SOFALA :—

SOFALA :—Regular inspection, 28th September.

Enrolled :—Boys, 28 ; girls, 29 ; total, 57. Present :—Boys, 18 ; girls, 23 ; total, 41.

Ordinary attendance, 36.

The schoolhouse is a neat building, but it is too small. The interior of the schoolroom is dingy, and the wall plaster is damaged. Of furniture and working appliances there is a good supply. The school is satisfactorily organized. The pupils attend in a very irregular manner, caused, it is stated, by *sickness and home demands*. The punctuality noted is of fair character. The government is effective. The instruction, both as regards subjects and methods, is of passable worth. In results, the classes show a proficiency ranging between tolerable and fair.

2nd January, 1877.

J. W. ALLPASS,
Inspector, Bathurst District.

ANNEX B.

BRAIDWOOD DISTRICT.

SUMMARIES of Reports furnished on Certified Denominational Schools, during the year 1876.

I.—CHURCH OF ENGLAND SCHOOLS.

BRAIDWOOD :—Regular inspection, 29th August, 1876.

Enrolled :—22 boys ; 22 girls ; total, 44. Present :—16 boys ; 17 girls ; total, 33.

1. The material condition is good in all respects. 2. The pupils are attentive and in fair order. 3. All the prescribed subjects are taught except singing and drawing. The general proficiency is between *very fair* and *good*.

MORUYA :—Regular inspection, 1st June, 1876.

Enrolled :—47 boys ; 49 girls ; total, 96. Present :—32 boys ; 40 girls ; total, 72.

1. The material condition is satisfactory. 2. The discipline has improved, but it cannot yet be called good. 3. The mark for dictation, arithmetic, grammar, geography, and drawing is up to the average, and that for reading, writing, object lessons and singing, above. The general proficiency is between *fair* and *very fair*.

II.—ROMAN CATHOLIC SCHOOLS.

ARALUEN :—Regular inspection, 9th and 10th May, 1876.

Enrolled :—95 boys ; 89 girls ; total, 184. Present :—70 boys ; 71 girls ; total, 141.

The building is in a fair state of repair, and there is a sufficient supply of furniture, apparatus, and working stock. 2. The discipline has greatly improved, that of the first class is good, and that of the other classes very fair. 3. The mark for reading, writing, dictation, grammar, and object lessons is above the average. The general proficiency is between *fair* and *very fair*.

BEGA :—Regular inspection, 3rd August, 1876.

Enrolled :—27 boys ; 15 girls ; total, 42. Present :—25 boys ; 14 girls ; total, 39.

1. The school is in a good state of repair, and sufficiently well provided with all requisites. 2. Both in regard to discipline and attainments, the school has greatly fallen off since last inspection. The general proficiency is between *tolerable* and *fair*.

BRAIDWOOD :—Regular inspection, 30th and 31st August, 1876.

Enrolled :—62 boys ; 68 girls ; total, 130. Present :—40 boys ; 54 girls ; total, 94.

1. The building is in a good state of repair, and is well supplied with all requisites. 2. The discipline is satisfactory. 3. All the prescribed subjects are taught except singing and drawing. The mark for every subject is beyond the average. The general proficiency is between *very fair* and *good*.

COOMA :—Regular inspection, 14th March, 1876.

Enrolled :—53 boys ; 47 girls ; total, 100. Present :—43 boys ; 43 girls ; total, 86.

1. The material condition is reasonably good. 2. The children are too inattentive ; and there is a want of system and firmness in the government. 3. The present teacher has had to reorganize this school, in order to remedy to the best of his ability the defects that grew up under his predecessors. 3. The general proficiency is only *tolerable*, but this mark is no fair estimate of what the teacher may produce when he has been longer in charge.

JEMBAICUMBENE :—Regular inspection, 12th April, 1876.

Enrolled :—35 boys ; 34 girls ; total, 69. Present :—30 boys ; 30 girls ; total, 60.

1. No alteration has been made in the material condition since last inspection. 2. The children show a disposition to copy, in other respects the discipline is satisfactory. 3. All the prescribed subjects are taught except singing and drawing. The mark for reading and writing is beyond the average, and that for other subjects up to the average. The general proficiency is between *fair* and *very fair*.

MORUYA :—Regular inspection, 2nd June, 1876.

Enrolled :—59 boys ; 54 girls ; total, 113. Present :—40 boys ; 40 girls ; total, 80.

1. The material condition is satisfactory. 2. There is a want of firmness and activity in the government. The children are noisy, and give but a listless attention to their duties. The elder pupils appear to be loosely controlled. 3. Since last inspection, the two departments have been amalgamated. The girls still retain their superiority over the boys, and to their answers may be ascribed the creditable position taken by the school as a whole. The proficiency of class I is *good*, and that of the other classes *fair*.

REIDSDALE :—Regular inspection, 24th October, 1876.

Enrolled :—29 boys ; 25 girls ; total, 54. Present :—28 boys ; 21 girls ; total, 49.

1. The schoolroom is large, but there is no fireplace. There is a sufficient supply of all requisites. 2. The discipline is good. 3. All the prescribed subjects are taught except singing and drawing. The mark for writing and dictation is above the average, and that for all other subjects up to the average. The general proficiency is *very fair*.

Braidwood, 11 December, 1876.

J. C. MAYNARD,
Inspector, Braidwood District.

CAMDEN DISTRICT.

CERTIFIED DENOMINATIONAL SCHOOLS.

SUMMARY of Reports for 1876.

THE following remarks are abridged statements of my detailed reports upon the condition of the Denominational Schools inspected by me during the year 1876. The remarks chiefly relate to the material condition and organization of the schools, the general discipline and moral training, the subjects and methods of instruction, and the progress of the pupils in learning.

CHURCH OF ENGLAND SCHOOLS.

ASHFIELD :—General inspection, 12th October.

Enrolled :—Boys, 40 ; girls, 24 ; total, 64. Present :—Boys, 31 ; girls, 21 ; total, 52.

A supply of water has been provided since the last inspection ; but playsheds, lavatories, and a residence for the teacher are still wanting. About 55 per cent. of the scholars are regular, and the punctuality has been somewhat improved recently. The schoolroom floor was not quite clean, but there are proper facilities for ventilation, and drill instruction is given to the boys. The pupils are clean and orderly. All the prescribed subjects are taught, and the methods of tuition are intelligent. There are three free scholars ; but it appears no C.E. children of the educable ages in the locality are growing up without education. The Local Board intends to make some of the material improvements required. About 65 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is *fair*.

CAMDEN :—Regular inspection, 5th May.

Enrolled :—Boys, 52 ; girls, 23 ; total, 75. Present :—Boys, 36 ; girls, 16 ; total, 52.

A lavatory and playsheds are still required, and the residence needs some repairs, but otherwise the material condition of the school is good. The classroom and closets have been rebuilt since last inspection. All the prescribed subjects are taught with skill and intelligence, and the general discipline is satisfactory. There are six free scholars ; but the teacher is not aware of any C.E. children in the vicinity not under instruction. About 67 per cent. of the scholars are regular, and nearly all punctual. The schoolroom is clean and well ventilated. About 75 per cent. of the questions asked at the examination were answered, and the proficiency of the pupils is *above fair*.

CANTERBURY :—Regular inspection, 1st August.

Enrolled :—Boys, 23 ; girls, 13 ; total, 36. Present :—Boys, 21 ; girls, 13 ; total, 34.

The walls of the schoolroom have been cemented, the woodwork painted, and other improvements made since last inspection. The material condition of the school is good ; but there is no residence for the teacher. The average attendance of the scholars is about 65 days per cent., and the general discipline is passable. All the prescribed subjects are taught. There is only one free scholar ; but twenty children of the school ages in the locality are not under instruction. The proficiency of the pupils is *fair*.

DAPTO :—Regular inspection, 26th October.

Enrolled :—Boys, 32 ; girls, 37 ; total, 69. Present :—Boys, 30 ; girls, 36 ; total, 66.

A kitchen, a lavatory, a playshed, and the painting of the buildings are much needed ; but the supply of apparatus and books is sufficient. About 66 per cent. of the scholars are regular, and nearly all punctual. The general discipline is fairly effective. All the prescribed subjects are taught. There are twelve free scholars, and nine children of the educable ages in the locality not attending school. The attainments of the pupils are *very fair nearly*.

ENFIELD :—Regular inspection, 2nd August.

Enrolled :—Boys, 38 ; girls, 32 ; total, 70. Present :—Boys, 33 ; girls, 29 ; total, 62.

The buildings will shortly require re-shingling, but otherwise the material condition of the school is good. The average attendance of the scholars is only 56 days per cent., and they are still unpunctual. All the prescribed subjects are taught ; but the first and second classes are backward at arithmetic and writing from dictation. There are four free scholars, and about twenty children of the school ages not under instruction. The average attainments of the pupils are *tolerable*.

FOXGROUND :—Regular inspection, 23rd February.

Enrolled :—Boys, 28 ; girls, 12 ; total, 40. Present :—Boys, 27 ; girls, 10 ; total, 37.

A lavatory is wanting, but otherwise the material condition of the school is passable. About 70 per cent. of the scholars are regular, and nearly all punctual. They are clean, orderly, and attentive to their lessons. Singing and drawing are not taught, but the instruction in the other branches is properly regulated. There are no free scholars ; but seven children of the school ages in the locality are not under instruction. The proficiency of the pupils is *tolerable*.

JAMBEROO :—General inspection, 11th February.

Enrolled :—Boys, 34 ; girls, 33 ; total, 67. Present :—Boys, 28 ; girls, 25 ; total, 53.

The buildings need painting and other improvements, and a lavatory and playshed are required. The general discipline is satisfactory. All the prescribed subjects are taught, and the methods of tuition are intelligent and effective. The average attendance of the scholars enrolled is 65 days per cent. There are nine free scholars ; but the teacher is not aware of any C.E. children of the school ages in the locality not under instruction. The proficiency of the pupils is *very fair*. This school will be closed when the Public School in course of erection has been completed.

LIVERPOOL :—Regular inspection, 15th June.

Enrolled :—Boys, 66 ; girls, 50 ; total, 116. Present :—Boys, 44 ; girls, 27 ; total, 71.

A playshed, a bell, a lavatory, and a hatroom are required ; but arrangements are in progress for the erection of a residence for the teacher. The supply of apparatus and books is sufficient, but the records are not quite complete. The average attendance of the scholars is about 66 days per cent., and they are nearly all punctual. They are orderly, clean, and attentive, and the boys are well advanced in squad drill. All the subjects of instruction prescribed by the Council are taught. There are eight free scholars, and about fifteen C.E. children of the educable ages in the town and vicinity not under instruction. The methods of tuition are intelligent, and the attainments of the pupils are *very fair*.

MACQUARIE RIVER :—Regular inspection, 26th September.

Enrolled :—Boys, 36 ; girls, 30 ; total, 66. Present :—Boys, 29 ; girls, 25 ; total, 54.

The buildings need painting and some repairs. A bell, a lavatory, another closet, and playsheds are required ; but the supply of furniture, apparatus, and books is sufficient. About 70 per cent. of the scholars are regular and nearly all punctual. They are clean, orderly, and industrious, and the schoolroom

room is well ventilated. All the usual subjects are taught. There are six free scholars, and ten children of the school ages in the neighbourhood not under instruction. The proficiency of the pupils is *above fair*.

WOLLONGONG :—General inspection, 14th August.

Enrolled :—Boys, 59 ; girls, 42 ; total, 101. Present :—Boys, 49 ; girls, 37 ; total, 86.

A lavatory, a playshed, and a bell are still required, but the supply of furniture, apparatus, and books is sufficient. About 68 per cent. of the scholars enrolled are regular and nearly all punctual. They are clean, orderly, and attentive. All the prescribed subjects are taught, and the instruction is properly regulated. The schoolroom is clean and well ventilated. There are eight free scholars, but it appears there are no C.E. children of the school ages in the locality not under instruction. The attainments of the pupils are *very fair*.

WOONONA :—Regular inspection, 22nd August.

Enrolled :—Boys, 34 ; girls, 27 ; total, 61. Present :—Boys, 23 ; girls, 20 ; total, 43.

A lavatory, a playshed, and a bell are required, and the buildings need repairs, but the supply of furniture, apparatus, and books is sufficient. About 75 per cent. of the scholars enrolled are regular, but they are not punctual. The discipline is passable in other respects. All the prescribed subjects are taught, except singing. There are eight free scholars and about sixteen children of the school ages in the locality not under instruction. The Local Board has promised to make some of the material improvements required. The proficiency of the pupils is *fair*.

ROMAN CATHOLIC SCHOOLS.

CAMDEN :—Regular inspection, 3rd May.

Enrolled :—Boys, 12 ; girls, 22 ; total, 34. Present :—Boys, 12 ; girls, 17 ; total, 29.

The windows and ceiling of the schoolroom and the foundations of the closets need some repairs. There is no residence for the teacher, and a lavatory is required, but the furniture, apparatus, and books are sufficient. The average attendance of the pupils is about 66 days per cent. They are unpunctual, tolerably clean, but wanting in industry and attention. All the prescribed subjects are attempted to be taught, but the instruction is very defective, and the progress of the younger children is unsatisfactory. There are five free scholars and ten R.C. children of the educable ages in the town and vicinity not under instruction. The attainments of the scholars are barely *tolerable*.

CAMPBELLTOWN :—Regular inspection, 25th July.

Enrolled :—Boys, 41 ; girls, 49 ; total, 90. Present :—Boys, 40 ; girls, 46 ; total, 86.

The material condition of this school is reasonably good. Two rooms have been recently added to the residence, and the front of the schoolroom painted. The stock of apparatus and books is sufficient, but the furniture is not of modern construction. All the prescribed subjects are taught except singing, and the methods of tuition are intelligent and effective. The average attendance of the children enrolled is about 64 days per cent., and they are nearly all punctual. The boys are well advanced in squad drill, and the general discipline is satisfactory. There are no free scholars, and it appears no R.C. children of the educable ages in the town and vicinity are growing up without education. The proficiency of the pupils is *good*.

CHARCOAL CREEK :—General inspection, 31st October.

Enrolled :—Boys, 27 ; girls, 27 ; total, 54. Present :—Boys, 24 ; girls, 24 ; total, 48.

A residence for the teacher, a lavatory, a bell, and a playshed are still wanted, but otherwise the material condition of the school is reasonably good. The average attendance of the scholars is about 64 days per cent., but they are not sufficiently punctual, and the general discipline is lax. Singing is not taught. The classification is too high. There are no programmes of lessons, and the time-table makes no provision for teaching object lessons nor drawing. The instruction of the younger children is much neglected. There are three free scholars, and about ten R.C. children of the school ages in the neighbourhood not under instruction. The proficiency of the pupils is *tolerable*.

DAPTO :—Regular inspection, 25th October.

Enrolled :—Boys, 19 ; girls, 22 ; total, 41. Present :—Boys, 16 ; girls, 20 ; total, 36.

A small kitchen has been erected since the last inspection, but a supply of water is much needed. The stock of furniture, apparatus, and books is sufficient, and the general discipline is satisfactory. Singing is not taught, but the instruction is well regulated, and the methods of tuition are intelligent and effective. The average attendance of the scholars is about 68 days per cent., and they are nearly all punctual. There are seven free scholars, and about ten R.C. children of the educable ages in the locality not attending school. The proficiency of the pupils is *above very fair*.

IRISHTOWN :—Regular inspection, 27th April.

Enrolled :—Boys, 27 ; girls, 15 ; total, 42. Present :—Boys, 24 ; girls, 14 ; total, 38.

This school is held in the R.C. chapel, and the material condition is passable. About 66 per cent. of the scholars enrolled are regular and nearly all punctual. They are clean, and tolerably orderly and attentive. Singing is not taught. There are fourteen free scholars, and seven R.C. children of the educable ages in the locality not under instruction. The proficiency of the pupils is about *tolerable*.

JAMBEROO :—General inspection, 10th February.

Enrolled :—Boys, 23 ; girls, 17 ; total, 40. Present :—Boys, 8 ; girls, 6 ; total, 14.

A lavatory, a playshed, and hat-pegs are required, but otherwise the material condition of the school is passable. The records are incomplete. The small attendance was caused by the heavy rain during the morning. The children are unpunctual, and the discipline is lax. The average attendance of the scholars enrolled is about 67 days per cent., and the classification is very low for their ages. There are no free scholars, but it appears there are about fifteen R.C. children of the educable ages in the neighbourhood not under instruction. The attainments of the pupils, which may be chiefly attributed to the labours of the late teacher, are *fair*.

LIVERPOOL :—Regular inspection, 14th June.

Enrolled :—Boys, 29 ; girls, 31 ; total, 60. Present :—Boys, 25 ; girls, 28 ; total, 53.

The buildings need painting, but otherwise the material condition of the school is reasonably good. The pupils are clean, orderly, and tolerably attentive, and the boys are well advanced in squad drill. The average attendance of the pupils enrolled is about 75 days per cent. All the prescribed subjects are taught except singing. The writing is careless, and the third class is backward in the meanings of words. There are eleven free scholars, and seven R.C. children of the educable ages in the town and vicinity not under instruction. The average attainments of the pupils are *fair*.

MENANGLE :—

MENANGLE :—Regular inspection, 11th April.

Enrolled :—Boys, 28; girls, 20; total, 48. Present :—Boys, 25; girls, 19; total, 44.

This school is held in the Roman Catholic chapel. The building needs painting, but otherwise the material condition of the school is passable. About 70 per cent. of the scholars are regular, and nearly all punctual. They are clean, orderly, and tolerably attentive to their lessons. Singing and drawing are not taught. There are no free pupils, and it appears there are no R.C. children of the educable ages in the neighbourhood not attending school. The attainments of the pupils are fair.

OAKS :—Regular inspection, 11th May.

Enrolled :—Boys, 21; girls, 21; total, 42. Present :—Boys, 14; girls, 18; total, 32.

The school is held in a small wooden building, but the erection of the new schoolroom is nearly finished. The average attendance of the scholars is about 55 days per cent., but they are not sufficiently punctual. They are clean and orderly, and tolerably attentive to their studies. All the prescribed subjects are taught. There are twelve free scholars, and fourteen children of the school ages in the place not under instruction. The attainments of the pupils are *tolerable*. The first class is backward at reading, and the second in writing.

ROCKY POINT :—Regular inspection, 3rd February.

Enrolled :—Boys, 17; girls, 18; total, 35. Present :—Boys, 16; girls, 16; total, 32.

A residence for the teacher, a lavatory, and a playshed are required; but the supply of furniture, apparatus, and books is sufficient. About 88 per cent. of the children enrolled appear from the records to attend regularly, but they are not all punctual, and the discipline is lax. All the prescribed subjects are taught. There are two free scholars, and seven children of the educable ages in the neighbourhood not at school. The proficiency of the pupils is *barely tolerable*.

SPANIARD'S HILL :—Regular inspection, 9th May.

Enrolled :—Boys, 24; girls, 13; total, 37. Present :—Boys, 18; girls, 10; total, 28.

Fencing and a verandah to the schoolroom have been recently erected, and arrangements are in progress for building a playshed and lavatory. The pupils are tolerably clean and orderly, but they are not sufficiently punctual. Singing is not taught. The average attendance of the pupils enrolled is about 60 days per cent. There are no free scholars, but eight children of the school ages in the neighbourhood are not attending school. The writing is careless, and the elder children are backward at composition; but the average attainments of the classes are *tolerable*.

WOLLONGONG :—Regular inspection, 16th August.

Enrolled :—Boys, 28; girls, 9; total, 37. Present :—Boys, 19; girls, 8; total, 27.

A weathershed has been supplied since the last inspection, but the residence needs repairs and the schoolroom is in much need of painting. The supply of furniture, apparatus, and books, is sufficient. The children are clean, orderly and attentive, and all the prescribed subjects are taught except singing. The average attendance of the pupils enrolled is 66 days per cent. There are four free scholars, and five R.C. children in the town and vicinity not under instruction. The proficiency of the pupils is *very fair*.

PRESBYTERIAN SCHOOLS.

CHARCOAL CREEK :—Regular inspection, 1st November.

Enrolled :—Boys, 19; girls, 21; total, 40. Present :—Boys, 18; girls, 18; total, 36.

A playshed and lavatory have been supplied since last inspection; but a bell is wanting, and the schoolroom needs reshingling. The furniture and working materials are sufficient. All the prescribed subjects are taught except singing. The pupils are clean and orderly, but not sufficiently punctual. The average attendance of the scholars is 65 days per cent. Although this school is Presbyterian in name, there are only five children of that denomination attending it. There are no free scholars nor children of the educable ages growing up without education. The proficiency is *fair*.

WESLEYAN SCHOOLS.

ROCKY POINT :—Regular inspection, 4th February.

Enrolled :—Boys, 25; girls, 28; total, 53. Present :—Boys, 20; girls, 23; total, 43.

There is no residence for the teacher, and a bell, a playshed, and a lavatory are required. The working materials are sufficient. The average attendance of the scholars enrolled is 67 days per cent., but they are not all punctual. The cleanliness, order, and attention are passable. Singing is not taught. There are six free scholars; but the teacher is not aware of any Wesleyan children of the educable ages in the neighbourhood not at school. The proficiency of the pupils may be estimated as *tolerable*.

Inspector's Office, Sydney,
30th December, 1876.

W. M'INTYRE,
Inspector, Camden District.

CUMBERLAND DISTRICT.

CHURCH OF ENGLAND SCHOOLS.

BURWOOD :—Regular inspection, 12th October.

Enrolled :—Boys, 47; girls, 37; total, 84. Present :—Boys, 35; girls, 23; total, 58.

The school building has been painted, and the residence has undergone repair since last inspection. The school is fairly furnished, and provided with necessary teaching appliances. The discipline is mild, but firm, and the prevailing tone is healthy. The teaching is earnest and careful, and reasonable self-reliance and accuracy mark the examination of the pupils, who yield an average proficiency of about fair.

CABRAMATTA :—Regular inspection, 10th and 13th March.

Enrolled :—Boys, 17; girls, 24; total, 41. Present :—Boys, 14; girls, 18; total, 32.

The buildings are old, and the site is not central. The teacher's residence is small and uncomfortable; otherwise the school is fairly organized and supplied with requisite materials. The government is mild, and the order and attention are tolerable. Singing is not included in the list of subjects. The instruction is moderately guided; the teaching seems industrious, but is wanting in point, and the results are from moderate to tolerable.

CASTLE

CASTLE HILL :—Regular inspection, 11th August.

Enrolled :—Boys, 37 ; girls, 33 ; total, 70. Present :—Boys, 30 ; girls, 28 ; total, 58.

The schoolroom has been painted since last inspection, and the general material condition of the premises is fairly satisfactory. Steps taken to lease the buildings temporarily for a Public School, decided to be established in the locality, failed to secure them. The attendance as well as the proficiency has been much injured by sickness. The government is mild, but very fairly effective in producing order and attention. The instruction is carefully regulated, the teaching is industrious and painstaking, and the average proficiency is about fair.

CASTLEREAGH (West) :—Regular inspection, 11th April.

Enrolled :—Boys, 44 ; girls, 27 ; total, 71. Present :—Boys, 29 ; girls, 23 ; total, 52.

There is no teacher's residence, but the school is commodious and fairly supplied with needful working stock. The discipline is tolerably effective, and the pupils are clean and fairly attentive. The classification is tolerably suitable. The teaching is industrious, but wanting in thoroughness and penetrative force. The average proficiency slightly exceeds tolerable. Steps have now been taken by the supporters of this school to supersede it by a public one.

COBBITTY :—Regular inspection, 13th March.

Enrolled :—Boys, 28 ; girls, 18 ; total, 46. Present :—Boys, 21 ; girls, 15 ; total, 36.

The material condition of the schoolroom is satisfactory, but the teacher's residence is too small, and the proper playground is scanty. The pupils are fairly punctual, and the regularity is above the average of country schools. The discipline is mild, and the order and attention are tolerable. The arrangement of the instruction, the actual teaching, and the average results may be ranked as tolerable.

EMU :—Regular inspection, 24th March.

Enrolled :—Boys, 29 ; girls, 17 ; total, 46. Present :—Boys, 22 ; girls, 15 ; total, 37.

The premises are constructed of weatherboard, partially lined with pine. Some repairs were being effected on the premises at the time of inspection. The discipline produces tolerable order and attention, and the pupils are fairly clean. The teaching is marked by industry rather than by point and force, while the pupils are weak in power of application to work, and manifest but little anxiety to answer. The average proficiency is from moderate to tolerable.

KURRAJONG (North) :—Regular inspection, 19th April.

Enrolled :—Boys, 27 ; girls, 22 ; total, 49. Present :—Boys, 15 ; girls, 16 ; total, 31.

The schoolroom is suitable, but the residence is still of a poor kind. The discipline is mild, but wanting in promptness and energy, and the pupils are tolerably orderly and attentive. The teaching is careful and industrious, but needs vigour and point. The average proficiency is somewhat beyond moderate.

PARRAMATTA :—Regular inspection, 21st and 22nd November.

Enrolled :—Boys, 111 ; girls, 72 ; total, 183. Present :—Boys, 86 ; girls, 38 ; total, 124.

The material condition of the school is satisfactory, and it is provided with the usual needful educational appliances. The pupils are clean, and very fairly attentive. The government is firm, and the general spirit of the school is fairly pleasing. The lesson guides are suitable, the methods are appropriate, and the teaching is careful and industrious. The following are the results of the several classes :—First and second, fair ; third, slightly beyond fair ; fourth, fair to very fair ; the average proficiency being thus fully fair.

PARRAMATTA (North) :—Regular inspection, 23rd and 24th November.

Enrolled :—Boys, 109 ; girls, 67 ; total, 176. Present :—Boys, 88 ; girls, 43 ; total, 131.

The school is fairly furnished and provided with necessary teaching appliances. The pupils are clean, and, on the whole, very fairly orderly and attentive. The government is firm, and the prevailing spirit of the school is pleasing. The instruction is properly regulated, the teaching is marked by care and industry, and the average results in the several classes are :—First class, tolerable to fair ; second, fair+ ; third and fourth, fair ; average proficiency fair.

PENNANT HILLS :—Regular inspection, 17th August.

Enrolled :—Boys, 30 ; girls, 30 ; total, 60. Present :—Boys, 24 ; girls, 18 ; total, 42.

The material condition is reasonably satisfactory, and the records are correctly kept. The attendance has been irregular from sickness. The pupils are clean and tolerably orderly and attentive. The government is mild, but needs vigilance and promptness. The teaching is industrious, but fails to produce satisfactory results, the average proficiency being only slightly beyond moderate.

PETERSHAM :—Regular inspection, 12th December.

Enrolled :—Boys, 68 ; girls, 61 ; total, 129. Present :—Boys, 49 ; girls, 42 ; total, 91.

The material condition of the school is reasonably satisfactory. Only about sixty per cent. of the pupils are regular ; they are clean and pleasing in their demeanour. The discipline is mild, but wanting in vigour. The classification is low. The work is guided by the usual documents. The quality of the teaching varies from tolerable to very fair, and the following is the average proficiency of the several classes :—First, fair to very fair ; second, fair ; third, tolerable.

RICHMOND :—Regular inspection, 15th June.

Enrolled :—Boys, 51 ; girls, 44 ; total, 95. Present :—Boys, 44 ; girls, 35 ; total, 79.

The schoolroom is suitable and capacious, and the general material organization is reasonably satisfactory. The discipline is fairly effective in producing orderly and attentive habits. The instruction is regulated by the necessary documents, and the subjects are those prescribed. The teaching is industrious and careful, and the average results are from tolerable to fair.

RYDE :—Regular inspection, 30th November.

Enrolled :—Boys, 46 ; girls, 35 ; total, 81. Present :—Boys, 32 ; girls, 23 ; total, 55.

The material condition is satisfactory, and the records are correctly kept. The pupils are clean, orderly, and fairly attentive. The government is quiet, but firm and vigilant, and the prevailing spirit of the school is pleasing, but vigorous working habits do not prevail. The teaching is intelligent, and the average proficiency is from tolerable to fair.

SEVEN HILLS :—Regular inspection, 27th July.

Enrolled :—Boys, 25 ; girls, 16 ; total, 41. Present :—Boys, 23 ; girls, 14 ; total, 37.

The general material organization is on the whole reasonably satisfactory, and the records are correctly

correctly kept. The government secures tolerable order and attention, but muttering and talking prevail among some of the pupils. Singing is not included in the subjects of instruction. The teaching does not foster self-reliance and thoughtful work, and is only productive of an average proficiency of moderate to tolerable.

WILBERFORCE :—Regular inspection, 3rd August.

Enrolled :—Boys, 38 ; girls, 30 ; total, 68. Present :—Boys, 34 ; girls, 21 ; total, 55.

The schoolroom is tolerably suitable, but, from its position, the discipline is interfered with in passing in and out of school ; it is provided with a fair quantity of necessary teaching appliances. The children are clean, but only tolerably orderly and attentive. The government is too slack, and fails to produce steady working habits among the pupils. Object lessons are only partially taught, but otherwise the subjects accord with prescribed requirements. The lesson guides and the registration of work need more care. The teaching is discursive, and wanting in point and penetrative force. The results are from moderate to tolerable.

WINDSOR :—Regular inspection, 8th and 9th June.

Enrolled :—Boys, 52 ; girls, 58 ; total, 110. Present :—Boys, 31 ; girls, 31 ; total, 62.

The schoolroom has been cleaned, and improvements made as regards painting and fencing since last inspection. The general material condition is fairly satisfactory. Sickness has affected the regularity and progress. The scholars are fairly punctual, orderly, and attentive. The government is mild, the teaching is industrious, and the average proficiency somewhat exceeds tolerable.

ROMAN CATHOLIC SCHOOLS.

CABRAMATTA :—General inspection, 9th March.

Enrolled :—Boys, 18 ; girls, 22 ; total, 40. Present :—Boys, 16 ; girls, 15 ; total, 31.

The building is constructed of slab and bark. The roof of the schoolroom and of the closet is in urgent need of repair. There is but a scanty supply of school materials, and the furniture is of a clumsy description. A high average of attendance is maintained, but the punctuality is bad. The pupils are fairly clean, and tolerably orderly and attentive. Singing is omitted from the subjects of instruction. The teaching seems industrious, but wanting in animation and energy, and the average results slightly exceed moderate.

CONCORD :—Regular inspection, 13th October.

Enrolled :—Boys, 30 ; girls, 20 ; total, 50. Present :—Boys, 27 ; girls, 16 ; total, 43.

Another group of desks is necessary, as well as a book-press. A new closet has been erected since last inspection. The teacher's residence is not suitable, but there is some prospect of the erection of a new one. The discipline is mild, but lacks vigour and promptness. The pupils are tolerably orderly and attentive. The classification is low, and the teaching is industrious, but wants energy and point. The average proficiency is nearly tolerable.

KURRAJONG :—Regular inspection, 20th April.

Enrolled :—Boys, 28 ; girls, 26 ; total, 54. Present :—Boys, 12 ; girls, 14 ; total, 26.

The material organization may be pronounced tolerable. The pupils are fairly clean, and moderately orderly and attentive. The discipline is only moderately effective. Singing is not included in the subjects of instruction ; the work is only partially registered ; and the teaching is of a mechanical type. The results are from indifferent to moderate. The attendance was smaller than usual on the day of examination.

LANE COVE :—Regular inspection, 24th and 25th August.

Enrolled :—Boys, 24 ; girls, 23 ; total, 47. Present :—Boys, 17 ; girls, 19 ; total, 36.

The school is poorly furnished, and very scanty provision is made for the teacher. The records continue to be badly kept. The regularity is high, but the pupils are only tolerably punctual or clean, and they are neither orderly nor attentive. The government is very slack. The classification is injudicious ; the teaching is vague and desultory ; and the average proficiency only reaches from small to indifferent. In no respect is this school in a satisfactory condition.

NELSON :—Regular inspection, 12th May.

Enrolled :—Boys, 20 ; girls, 21 ; total, 41. Present :—Boys, 16 ; girls, 17 ; total, 33.

The school is tolerably furnished and supplied with necessary teaching requisites. The government produces only moderate order and attention. Singing is omitted from the prescribed subjects ; the lesson guides are indifferent ; and the methods lack intelligence. The pupils show little self-reliance or promptness ; the teaching is of a mechanical character ; and, considering the ages and enrolments of many of the pupils, the average proficiency is very unsatisfactory.

PENRITH :—General inspection, 23rd March.

Enrolled :—Boys, 37 ; girls, 27 ; total, 64. Present :—Boys, 28 ; girls, 16 ; total, 44.

There is no residence, and the windows and floor are in need of repair, as well as the closets, one of which should be replaced by a new one. Another group of desks should be provided to improve the organization. The discipline is slack, and the pupils are consequently only moderately orderly, and they are far from attentive. The teaching lacks intelligence, force, and thoroughness, and the average proficiency is nearly moderate.

PETERSHAM :—Regular inspection, 19th October.

Enrolled :—Boys, 31 ; girls, 26 ; total, 57. Present :—Boys, 28 ; girls, 16 ; total, 44.

The schoolroom is suitable, but the residence is a poor slab building of three rooms. There is a fair supply of needful materials, and the furniture is of tolerable quality. The government is mild, but too slack ; and the pupils are tolerably orderly and attentive. The subjects do not embrace singing. The teaching is industrious, but wanting in energy and point ; and the average proficiency is nearly tolerable.

RICHMOND :—Regular inspection, 14th June.

Enrolled :—Boys, 32 ; girls, 35 ; total, 67. Present :—Boys, 18 ; girls, 23 ; total, 41.

The residence is small, damp, and unsuitable, but tenders have been called for its improvement. The material organization of the school building is fairly satisfactory. The government is mild, but firm, and produces fair order and attention. The classification is judicious, and the teaching is industrious and fairly intelligent. The average proficiency is from tolerable to fair.

RYDE :—Regular inspection, 27th November.

Enrolled :—Boys, 38 ; girls, 31 ; total, 69. Present :—Boys, 27 ; girls, 16 ; total, 43.

The material condition is only tolerable. The schoolroom is too small, and the furniture is clumsy. The discipline is firm and vigilant, and secures orderly and attentive habits among the pupils. The teaching is industrious and energetic ; and the average proficiency is about very fair.

VILLA

VILLA MARIA :—Regular inspection, 26th October.

Enrolled :—Boys, 36 ; girls, 38 ; total, 74. Present :—Boys, 34 ; girls, 35 ; total, 69.

The material condition is on the whole fair, and the records are properly kept. The pupils are orderly and attentive, and the discipline is prompt and firm. The classification is suitable. The teaching is intelligent and vigorous ; and the pupils answer with spirit, and apply themselves with energy to their work. The average proficiency is very fair.

WINDSOR :—Regular inspection, 7th and 8th June.

Enrolled :—Boys, 77 ; girls, 49 ; total, 126. Present :—Boys, 49 ; girls, 33 ; total, 82.

The teacher's residence continues to be too small, but otherwise the material condition is reasonably satisfactory. The discipline is mild, but firm and vigilant, and the pupils are clean, respectful in demeanour, and very fairly attentive. The instruction is marked by energy and fair intelligence ; and the average proficiency is from tolerable to fair.

GOULBURN DISTRICT.

SUMMARIES of Reports on Denominational Schools inspected during the year 1876.

I.—CHURCH OF ENGLAND SCHOOLS.

BURRAWANG :—Regular inspection, 8th February.

Enrolled :—Boys, 23 ; girls, 29 ; total, 52. Present :—Boys, 23 ; girls, 27 ; total, 50.

In view of the prospects of the school the material provisions may be regarded as tolerable. The internal organization is correct in the main. The general discipline is about *tolerable*. Results of instruction *tolerable*. General efficiency *tolerable*.

GOULBURN :—Regular inspection, 6th, 7th, and 8th March.

Enrolled :—Boys, 67 ; girls, 44 ; total, 111. Present :—Boys, 50 ; girls, 39 ; total, 89.

Some improvements to the premises have been effected, but others are necessary. Owing to recent interruptions the internal organization is at present imperfect, but this is no fault of the teacher's. The general discipline is from *fair* to *very fair*. The results of the instruction, and the general efficiency, may both be rated from *tolerable* to *fair*. The state of the school is no measure of the skill or qualifications of the present master, who has only just entered on duty. Some time elapsed between the removal of his predecessor and his own appointment, during which the upper portion of the school declined considerably.

NORTH GOULBURN :—Regular inspection, 2nd March.

Enrolled :—Boys, 39 ; girls, 33 ; total, 72. Present :—Boys, 28 ; girls, 23 ; total, 51.

The material condition is unimproved. The internal organization is as good as circumstances allow. The general discipline is *good*, and the moral tone high. The instructional results average *fair* +. Decided improvement has been effected since last inspection.

SUTTON FOREST :—Regular inspection, 10th November.

Enrolled :—Boys, 38 ; girls, 43 ; total, 81. Present :—Boys, 23 ; girls, 28 ; total, 51.

Material organization and condition fair. Internal organization *tolerable* ; over minute classification being a defect. General discipline *fair*. Results of instruction *moderate* to *tolerable*. General efficiency *tolerable* (barely). The present teacher has been but a short time in charge.

TERRARA :—Regular inspection, 14th August.

Enrolled :—Boys, 35 ; girls, 36 ; total, 71. Present :—Boys, 26 ; girls, 23 ; total, 54.

The material condition is unchanged. The internal organization is correct in the main. The discipline is *fair* on the whole. The instructional results average about *fair*. The school does not satisfactorily meet the educational requirements of the place.

II.—ROMAN CATHOLIC SCHOOLS.

GOULBURN (Boys) :—Regular inspection, 20th and 21st March.

Enrolled, 87. Present, 73.

The material organization is unchanged. The internal organization is *fair*. The discipline is about *tolerable* on the whole. The results of instruction average above *tolerable*. Changes on the teaching staff during the past year have been unfavourable to the school, which has nevertheless somewhat improved in numbers, and has lately recovered considerably in efficiency.

GOULBURN (Girls and Infants) :—Regular inspection, 14th, 15th, and 16th March.

Enrolled :—Boys, 37 ; girls, 140 ; total, 177. Present :—Boys, 17 ; girls, 96 ; total, 113.

The material condition and organization continue very satisfactory. The actual school business is in the main devolved on several persons unrecognised by the Council. The number of free pupils is abnormally large. Denominational peculiarities are still characteristic features of the school. The discipline of the whole school averages *good*, being *very fair* in the infants' and *very good* in the girls' branch. The instruction is carefully and earnestly prosecuted, and produces results approaching, on the average, *very fair*.

MITTAGONG :—Regular inspection, 19th July.

Enrolled :—Boys, 25 ; girls, 12 ; total, 37. Present :—Boys, 12 ; girls, 11 ; total, 23.

The premises are unimproved, and cannot be regarded as suitable for school purposes. The internal organization is *fair*. The general discipline is *tolerable*. The instruction produces *tolerable* results. The general efficiency has somewhat declined, and is not up to the full measure of the teacher's capabilities. He is under great disadvantages and discouragements, however. The school is still conducted in all respects as a Public School. To this fact, and to the inefficiency of local Public School provisions, the school owes its existence. As a *Denominational* school it ceased to exist years ago. It does not meet any legitimate educational want.

TARALGA :—Regular inspection, 23rd May.

Enrolled :—Boys, 33 ; girls, 24 ; total, 57. Present :—Boys, 22 ; girls, 18 ; total, 40.

The material condition is unchanged. The internal organization is *tolerable*. Several of the children have been kept an unduly long time in the first and second classes, and in one or two instances the actual classification of pupils is not properly represented in the class roll. The discipline is *fairly* satisfactory on the whole. The instructional results are somewhat uneven, but average nearly *tolerable*. Arithmetic has been attended to at the expense of other required subjects.

ULLADULLA :—

ULLADULLA :—Regular inspection, 25th August.

Enrolled :—Boys, 20 ; girls, 20 ; total, 40. Present :—Boys, 20 ; girls, 19 ; total, 39.

The material organization has been improved by the addition of necessary furniture. The internal organization is correct. The general discipline is *very good*. The instructional results, all round, are from *fair to very fair*. Taking into consideration recent drawbacks, arising from the prevalence of epidemics, the general results of the teacher's work is fully very fair.

III.—PRESBYTERIAN SCHOOL.

SHOALHAVEN :—Regular inspection, 10th and 11th August.

Enrolled :—Boys, 62 ; girls, 47 ; total, 109. Present :—Boys, 56 ; girls, 35 ; total, 91.

Some improvements to the premises have been made, others are wanted. The internal organization and the general discipline are *very good*. The fourth class has a good knowledge of the first three books of Euclid and of elementary algebra, in addition to the ordinary subjects, and a high standard of instruction is reached throughout. The results of instruction average from *very fair to good*. The school is in a healthy and progressive state, and in a *good* state of efficiency.

D. S. HICKS,
Inspector, Goulburn District.

GRAFTON DISTRICT.

CERTIFIED DENOMINATIONAL SCHOOLS.

SUMMARIES of Reports on the Certified Denominational Schools examined in 1876.

CARR'S CREEK (Wes.) :—Regular inspection, 16th June.

Numbers enrolled :—Boys, 14 ; girls, 17 ; total, 31. Numbers present :—Boys, 10 ; girls, 14 ; total, 24.

1. No material improvements have been effected since last inspection. The organization is reasonably satisfactory ; the records are correctly kept. 2. Eleven-sixteenths of the pupils are regular, and four-fifths punctual. The government is inclined to be lax. 3. All the prescribed subjects are taught. The classification and occupation are passable. The methods are modern, but the teaching is wanting in energy. The average proficiency is nearly tolerable.

GRAFTON (R.C.) :—Regular inspection, 19th and 22nd June.

Numbers enrolled :—Boys, 72 ; girls, 61 ; total, 133. Numbers present :—Boys, 38 ; girls, 42, total, 80.

1. Since last inspection the fences and out-offices have been repaired. With this exception, the material condition is the same as that described in former reports. Under existing circumstances the organisation is reasonably satisfactory. The desk accommodation is insufficient. The records are correctly kept. 2. Upwards of two-thirds of the numbers enrolled are regular ; the punctuality is better. Other features of the discipline show improvement since last year. 3. Singing excepted, the course of instruction is complete. Except that there are too many subdivisions in the first class, the classification is appropriate. The lesson documents are of fair worth. The methods are modern ; the average proficiency is fair (nearly).

FREDERICKTON (C.E.) :—Regular inspection, 31st August.

Numbers enrolled :—Boys, 39 ; girls, 31 ; total, 70. Numbers present :—Boys, 31 ; girls, 23 ; total, 54.

1. The building is old and in disrepair. Additional furniture has been provided since last inspection. There is a tolerably fair supply of requisites. 2. Over two-thirds are regular and punctual. The discipline has improved since last inspection. 3. All the prescribed subjects are taught. The classification and occupation are suitable. The average proficiency approaches fair.

KEMPSEY (C.E.) :—Regular inspection, 15th August.

Numbers enrolled :—Boys, 24 ; girls, 21 ; total, 45. Numbers present :—Boys, 20 ; girls, 19 ; total, 39.

1. New out-offices have been erected since last inspection, and the windows have been repaired and painted. There is a full supply of furniture, apparatus, and books. The records are not all correct. 2. Seven-twelfths of the numbers are regular, and nearly all punctual. The order is unsatisfactory, the pupils being noisy and careless in their movements, and listless in manner. 3. The course of instruction is that prescribed, except singing. The classification and occupation are passable. The methods are modern, but the teaching is desultory and wanting in energy. The proficiency of the school is from moderate to tolerable.

KEMPSEY (Pres.) :—Regular inspection, 11th August.

Numbers enrolled :—Boys, 31 ; girls, 31 ; total, 62. Numbers present :—Boys, 23 ; girls, 23 ; total, 46.

1. Substantial improvements have been effected since last inspection. The organisation is reasonably satisfactory. The records are correctly kept. 2. Nine-fourteenths are regular, and nine-tenths punctual. The marching is loose and disorderly. The class movements need increased precision. 3. Except singing, all the prescribed subjects are taught ; and instruction in elementary Latin is given to two boys of the third class. The classification is somewhat improved, and the instruction is regulated by the usual guides. The methods are intelligent ; the average proficiency is tolerable. Sickness interfered with the regular working of the school for some time before the examination.

ULMARRA (Wes.) :—Regular inspection, 7th June.

Numbers enrolled :—Boys, 23 ; girls, 17 ; total, 40. Numbers present :—Boys, 16 ; girls, 15 ; total, 31.

1. The premises are in very fair repair. The forms are unsuitable, and additional desks are needed. The records are correct. 2. Three-fourths of the pupils are regular, and nearly all punctual. The government is feeble. 3. All the prescribed subjects are taught. The classification is faulty as regards the first class. The lesson documents are of tolerable worth. The methods are mechanical. The average proficiency is tolerable +.

T. DWYER,
Inspector, Grafton District.

MAITLAND DISTRICT.

SUMMARY of Reports upon Certified Denominational Schools inspected in 1876.

I.—CHURCH OF ENGLAND SCHOOLS.

BROKE :—Regular inspection, 25th July.

Numbers enrolled :—Boys, 19 ; girls, 18 ; total, 37. Numbers present :—Boys, 13 ; girls, 18 ; total, 31.

1. School held in a church ; accommodation and supply of furniture, sufficient ; supply of working materials, tolerable ; school property carelessly kept. 2. Attendance partial and irregular $\frac{3}{4}$; government

government feeble; pupils not sufficiently orderly, diligent, and respectful; disciplinary condition tolerable and unimproved. 3. Prescribed subjects taught; lesson documents of fair merit; classification low in point of age; teaching earnest and tolerably intelligent; class work in point of quietness, diligence, and precision, not sufficiently enforced; younger pupils too free and easy. 4. Average proficiency and progress of pupils, partially satisfactory—barely tolerable. Arithmetic and grammar, indifferent.

BUCHANAN :—Regular inspection, 15th February.

Numbers enrolled :—Boys, 24; girls, 27; total, 51. Numbers present :—Boys, 22; girls, 25; total, 47.

1. Schoolhouse commodious, but old, insecure, and badly ventilated; lavatory, weathershed, and bookpress needed; appointments otherwise reasonably sufficient. 2. Increase in attendance, 25 per cent.; three-fifths of the pupils of other than C.E. denomination; rate of regularity, only $\frac{3}{5}$; twenty or more R.C. children in non-attendance; government healthy, intelligent, and fairly watchful and exacting; moral tone and condition, very fair. 3. Course of instruction complete except in singing; classification and lesson documents of fair merit; teaching zealous, animated, and fairly intelligent. 4. Average proficiency of pupils, tolerable; writing, very fair; arithmetic, moderate.

DENMAN :—Regular inspection, 29th and 30th August.

Numbers enrolled :—Boys, 21; girls, 34; total, 55. Numbers present :—Boys, 19; girls, 29; total, 48.

1. Better ventilation needed, also lavatory and weathershed; material organisation otherwise very fair; aspect neat and clean. 2. Attendance well maintained; punctuality very fair; rate of regularity $\frac{4}{5}$; government mild and fairly intelligent; disciplinary condition fair. 3. Course of instruction complete for three classes; lesson documents of fair merit; classification low; teaching animated and tolerably skilful. 4. Average proficiency of pupils, tolerable; arithmetic and geography moderate.

JERRY'S PLAINS :—Regular inspection, 28th July.

Numbers enrolled :—Boys, 31; girls, 25; total, 56. Numbers present :—Boys, 21; girls, 18; total, 39.

1. Lavatory and sundry repairs needed; school held in a church of imperfect stability; material condition and appointments otherwise very fair. 2. Attendance partial and steady, punctuality fair; rate of regularity $\frac{3}{5}$; government healthy and fairly intelligent; pupils clean, cheerful, and very fairly orderly, and well behaved; disciplinary condition improved and very fair. 3. Course of instruction appropriate for three classes; lesson documents and classification of fair merit; teaching zealous and fairly effective; examinations not sufficiently searching. 4. Average proficiency of pupils fair; writing, good; arithmetic, geography and singing, tolerable.

EAST MAITLAND :—Regular inspection, 8th, 9th, 10th, and 11th February.

Numbers enrolled :—Boys, 67; girls, 40; total, 107. Numbers present :—Boys, 51; girls, 26; total, 77.

1. Lavatory, weathershed, and additional out-offices needed; material organization otherwise satisfactory. 2. Attendance steady and fairly punctual; rate of regularity $\frac{3}{5}$; government earnest and fairly intelligent, but not satisfactorily firm, watchful, and exacting; pupils of 3rd class too free and easy, talkative, and self-willed; schoolwork wanting in quietness, precision, and vigour; disciplinary condition of upper section tolerable, and of lower section fair. 3. Prescribed subjects taught; classification and lesson documents of very fair merit; profitable occupation of the pupils not satisfactorily well sustained or enforced; teaching zealous and fairly intelligent, but not sufficiently impressive, thorough, and effective. 4. Average proficiency of the pupils :—Lower section, tolerable+; upper section, barely tolerable; writing and drawing, very fair; arithmetic, grammar, dictation, and geography, moderate.

WEST MAITLAND :—Regular inspection, 17th May.

Numbers enrolled :—Boys, 52; girls, 40; total, 92. Numbers present :—Boys, 38; girls, 24; total, 62.

1. Out-offices filthy, inadequate, and badly arranged; material condition and appointments otherwise very fair; lavatory needed; cleanliness of schoolroom floor and windows unsatisfactory. 2. Decrease in attendance, 12 per cent.; rate of regularity, $\frac{3}{5}$; government mild and very fairly intelligent; pupils clean and very fairly well behaved, but not adequately zealous, painstaking, and diligent. 3. Course of instruction complete for three classes; lesson documents of very fair merit; classification rather low in point of age; teaching earnest and tolerably intelligent, but deficient in thoroughness and vigour; examinations not sufficiently patient, regular, and effective. 4. Average proficiency and progress of pupils, from moderate to tolerable; writing, very fair; arithmetic and grammar, indifferent.

MUSWELLBROOK :—General inspection, 12th, 13th, and 14th September.

Numbers enrolled :—Boys, 78; girls, 66; total, 144. Numbers present :—Boys, 61; girls, 56; total, 117.

1. School buildings new, well designed, and of superior merit; supply of furniture and apparatus adequate. 2. Increase in attendance, 25 per cent.; rate of regularity, $\frac{4}{5}$; government firm, and very fairly intelligent; appearances neat and clean; pupils clean, docile, and well behaved; class movements somewhat noisy and irregular; supervision of playground too lax; moral tone healthy and very fair. 3. Course of instruction complete for three classes, and appropriately regulated; classification rather low; one 12 $\frac{1}{2}$ per cent. of the pupils in 3rd class; teaching zealous, animated, and fairly skilful; examinations not sufficiently patient, regular, and effective. 4. Average proficiency of pupils fair; writing, very fair; arithmetic and dictation, moderate.

SCONE.

This school has lapsed, in consequence of the withdrawal of all the children to attend the neighbouring Public School.

SINGLETON :—Regular inspection, 15th June.

Numbers enrolled :—Boys, 48; girls, 22; total, 70. Numbers present :—Boys, 37; girls, 15; total, 52.

1. Lavatory and better book-press needed; material condition and appointments otherwise satisfactory; schoolroom not satisfactorily neat and clean; condition of reading books unsatisfactory. 2. Decrease in attendance, 20 per cent.; rate of regularity, $\frac{3}{5}$; government healthy and fairly intelligent; pupils clean and fairly well behaved, but not satisfactorily zealous, painstaking, and diligent. 3. Prescribed subjects taught, except sewing; lesson documents of fair merit; classification, defective; teaching earnest, active, and fairly intelligent. 4. Average proficiency and progress of pupils, unsatisfactory; writing, fair; arithmetic, spelling, grammar, and geography, barely moderate; present teacher but little responsible for such results of the examination.

SINGLETON :—Incidental inspection, 14th December.

Numbers enrolled :—Boys, 34; girls, 13; total, 47. Numbers present :—Boys, 18; girls, 6; total, 24.

1. Playground littered with paper; schoolroom rather untidy; supervision of the classes lax; younger ones not sufficiently orderly; discipline but partially satisfactory. 2. Decrease in attendance since the inspection in 1875, 60 per cent., the actual gross attendance at present being only thirty-six, nine of whom pay no school fees; general condition, languishing.

WOODVILLE :—Regular inspection, 26th April.

Numbers enrolled :—Boys, 32; girls, 28; total, 60. Numbers present :—Boys, 27; girls, 25; total, 52.

1. Lavatory needed; material condition otherwise improved and respectable; supply of furniture and other requisites, adequate. 2. Increase in attendance, 20 per cent.; rate of regularity, only $\frac{3}{8}$; government healthy, improved, and fairly intelligent; appearances, neat and clean; appearance and general conduct of pupils, very fair; class work not sufficiently vigorous; disciplinary condition improved and fair. 3. Course of instruction complete, and very fairly well regulated; teaching of fair and improved merit in point of painstaking and efficiency. 4. Average proficiency of pupils, fair; writing, drawing and sewing, very fair; geography, tolerable.

II.—ROMAN CATHOLIC SCHOOLS.

BLANDFORD :—Regular inspection, 15th November.

Numbers enrolled :—Boys, 32; girls, 41; total, 73. Numbers present :—Boys, 18; girls, 34; total, 52.

1. Material condition and appointments, fair; bell, lavatory, weathershed, and water tank needed; cleanliness and neatness of appearances improved. 2. Attendance full and steady; rate of regularity, $\frac{5}{8}$; government of improved and fair merit; fair order maintained; class work not sufficiently vigorous and effective; disciplinary condition about fair. 3. Prescribed subjects taught; lesson documents and classification of fair merit; teaching, earnest and tolerably intelligent; examinations to be more frequent and searching. 4. Average proficiency of pupils, improved and tolerable; sewing, very fair; arithmetic and object lessons, moderate.

LOCHINVAR :—Regular inspection, 26th May.

Numbers enrolled :—Boys, 24; girls, 27; total, 51. Numbers present :—Boys, 12; girls, 19; total, 31.

1. School held in a church; supply of furniture and apparatus adequate; seats unsuitable; lavatory and weathershed needed; aspect, fairly neat and clean. 2. Attendance steady, but partial and irregular, $\frac{3}{4}$; government mild, firm, improved, and fair; pupils clean, docile, and well behaved; school work quiet, earnest, and apparently regular, but in need of additional vigour. 3. Instruction appropriate and fairly well regulated; classification judicious in general; teaching earnest, and tolerably intelligent, but not adequately effective; examinations not sufficiently patient and regular. 4. Average proficiency of pupils, barely tolerable; sewing and writing, fair; arithmetic, dictation, drawing, and geography, moderate.

EAST MAITLAND :—Regular inspection, 21st April.

Numbers enrolled :—Boys, 40; girls, 31; total, 71. Numbers present :—Boys, 16; girls 11; total, 27.

1. Schoolroom commodious and well lighted, but ill ventilated, and untidy in appearance; repairs to windows needed, as also lavatory and weathershed; supply of furniture and other requisites, adequate; 2. Decrease in attendance, nearly 50 per cent., in consequence of teacher's unpopularity; rate of regularity for past twelve months, $\frac{1}{4}$; government feeble and lax; moral tone barely tolerable. 3. Prescribed subjects taught, except singing and sewing; lesson documents and classification of fair merit; teaching earnest, and tolerably diligent, but only moderately spirited and effective. 4. Average proficiency of pupils, moderate; teacher since removed.

WEST MAITLAND (Boys) :—Regular inspection, 19th and 20th April.

Number enrolled :—Boys, 108. Number present :—Boys, 58.

1. Material organization and appointments superior and satisfactory; aspect somewhat untidy. 2. Increase in attendance, 22 per cent.; pupils not satisfactorily punctual and regular, $\frac{1}{2}$; government earnest and fairly intelligent, but not adequately firm, watchful, and effective; appearance, demeanour, and general conduct of the pupils, but partially satisfactory; supervision of the playground lax; class movements not satisfactorily quiet and orderly; moral tone not sufficiently satisfactory. 3. Prescribed subjects taught, except singing; lesson documents of very fair merit; classification defective; teaching thorough, earnest, and tolerably skilful, but not adequately painstaking and effective. 4. Average proficiency of pupils barely tolerable; teacher since removed.

WEST MAITLAND (Girls) :—Regular inspection, 18th, 19th, and 22nd April.

Number enrolled :—Girls, 108. Number present :—Girls, 72.

1. School held in a commodious, well lighted, and adequately appointed upper room, admirably neat and clean; hat-room and larger playground now provided. 2. Attendance steady; punctuality improved and fair; rate of regularity $\frac{5}{8}$; government mild and intelligent; pupils clean, orderly, and well behaved; school work performed with improved regularity and efficiency; disciplinary condition healthy and very fair. 3. Course of instruction complete for four classes; lesson documents appropriate; classification rather low in point of age; teaching earnest, painstaking, and fairly intelligent in general; additional vigour needed. 4. Average proficiency of pupils, nearly fair; singing, good; arithmetic, dictation, and geography, moderate.

WEST MAITLAND (Infants) :—Regular inspection, 23rd May.

Numbers enrolled :—Boys, 62; girls, 73; total, 135. Numbers present :—Boys, 34; girls, 46; total, 80.

1. Material condition and appointments improved and satisfactory. 2. Attendance steadily maintained, but not satisfactorily punctual, rate of regularity, $\frac{5}{8}$; government mild and judicious; very fair order maintained; school work improved in vigour and precision; appearance and demeanour very fair; moral tone improved, healthy, and very fair. 3. Instruction appropriate and very fairly well-regulated; classification of fair merit; and teaching zealous, painstaking, and fairly intelligent, but rather feeble in the lower classes. 4. Average proficiency of pupils tolerable +.

MORPETH :—Regular inspection, 27th and 28th April.

Numbers enrolled :—Boys, 57; girls, 45; total, 102. Numbers present :—Boys, 47; girls, 31; total, 78.

1. Material condition and appointments very fair; lavatory, weathershed, and additional diagrams needed; aspect neat and clean. 2. Increase in attendance 12 per cent.; rate of regularity low, $\frac{3}{8}$; government mild, firm, and intelligent; good order maintained; pupils clean, and subdued in demeanour, but not sufficiently smart and active; moral tone very fair in general. 3. Instruction appropriate, well regulated, and of third-class range; classification rather low in point of age; efficiency of examination partial; teaching zealous, animated, and very fairly intelligent. 4. Average proficiency of pupils, fair; first class pupils not sufficiently supervised.

MUSWELLBROOK :—Regular inspection, 24th August.

Numbers enrolled :—Boys, 50; girls, 28; total, 78. Numbers present :—Boys, 43; girls, 22; total, 65.

1. Lavatory and weathershed needed; material organisation otherwise superior; aspect clean and respectable. 2. Attendance well-maintained and reasonably punctual, but rather irregular, $\frac{1}{2}$; government

government mild and intelligent; appearance neat and clean; very fair order maintained, younger ones somewhat unsteady in their class movements: disciplinary condition healthy and very fair. 3. Prescribed subjects taught, except singing; lesson documents appropriate; classification low in point of age; teaching zealous, painstaking, and very fairly intelligent; younger ones somewhat overlooked. 4. Average proficiency of pupils, fair+.

SINGLETON :—Regular inspection, 16th June.

Number enrolled :—Boys, 51. Number present :—Boys, 36.

1. Schoolroom reduced in length, arrangement of desks consequently defective; lavatory and weathershed unprovided; material condition and appointments otherwise satisfactory. 2. Decrease in attendance of boys, 25 per cent.; rate of regularity, $\frac{31}{46}$; girls withdrawn to form a private school under teachers of a religious order; government tolerably effective; profitable employment of the lower classes not sufficiently supervised and enforced; moral tone tolerable. 3. Subjects of instruction as prescribed, except singing; lesson documents of fair merit, but not strictly observed; classification tolerably judicious; teaching apparently earnest and diligent, and tolerably intelligent, but not sufficiently impressive and well distributed. 4. Average proficiency and progress of pupils, moderate; writing, fair; dictation and geography, indifferent.

East Maitland, 15th January, 1876.

J. S. JONES,
Inspector of Schools, Maitland District.

NEWCASTLE DISTRICT.

DETAILED Statement showing the condition of the Certified Denominational Schools inspected in 1876, as regards—

1. Their material condition.
2. Their moral character.
3. The subjects and methods of instruction.
4. The proficiency of the pupils.

DUNGOG (C.E.) :—General inspection, 29th August.

Present at examination :—Boys, 21; girls, 26; total, 47.

1. The condition of the premises and the general organization of the school are fair. 2. The moral tone of the school is tolerable. 3. The instruction is fairly appropriate and tolerably effective. 4. The average proficiency is moderate, and the general character of the school tolerable.

HEXHAM (C.E.) :—General inspection, 13th March.

Present at examination :—Boys, 28; girls, 29; total, 57.

1. The premises are in passable condition, and the general organisation of the school is fair. 2. The moral tone of the school is very fair. 3. The subjects are appropriate and suitably arranged; the methods fairly intelligent, skilful, and effective. 4. The average proficiency exceeds tolerable, and the general character of the school is fair.

HAMILTON (R.C.) :—General inspection, 18th December.

Present at examination :—Boys, 35; girls, 34; total, 69.

1. The premises are in excellent condition, suitable, and well-appointed, and the organization of the school is reasonably effective. 2. The moral tone of the school is fair. 3. The subjects are suitable and properly arranged; the methods fairly intelligent, skilful, and effective. 4. The average proficiency and general character of the school are fair.

LAMBTON (R.C.) :—Regular inspection, 31st May and 1st June.

1. The premises are in good condition and reasonably suitable, and the school is fairly organized. 2. The moral tone of the school is very fair. 3. The occupation is fairly appropriate and skilfully arranged; the instruction careful, intelligent, and fairly effective. 4. The average proficiency exceeds fair, and the general character of the school is very fair.

MILLER'S FOREST (C.E.) :—Regular inspection, 10th August.

Present at examination :—Boys, 15; girls, 20; total, 35.

1. The schoolroom is in bad condition, but under the circumstances fairly organized. The out-offices need repairing. 2. The moral tone of the school is fair. 3. The occupation is fairly suitable and passably arranged; the instruction careful, but not satisfactorily judicious and energetic. 4. The average proficiency varies from moderate to tolerable.

MILLER'S FOREST (R.C.) :—Regular inspection, 9th August.

Present at examination :—Boys, 24; girls, 15; total, 39.

1. The schoolroom is tolerably suitable, neatly kept, and fairly organized. 2. The moral tone of the school is good. 3. The subjects are appropriate and well arranged; the methods intelligent, judicious, and effective. 4. The average proficiency is nearly very fair.

NEWCASTLE (C.E.—Christ Church) :—Regular inspection, 22nd to 24th March.

Present at examination :—Boys, 91; girls, 75; total, 166.

1. The condition of the schoolroom and premises is good; the stock of furniture, apparatus, and books reasonable in all respects, and the general organization of the school effective. 2. The moral tone of the school is good. 3. Singing, drawing, geometry, algebra, and needlework are added to the ordinary subjects; all are suitably arranged, and imparted with fair skill, intelligence, and effect. 4. The average proficiency is fair, and the general character of the school very fair.

NEWCASTLE (C.E.—St. John's) :—Regular inspection, 27th April.

Present at examination :—Boys, 33; girls, 13; total, 46.

1. The premises are suitable and in very fair condition, and the school is fairly organized. 2. The moral tone of the school is fair. 3. The classification is low, but the occupation fairly appropriate; the instruction is feeble and of small value. 4. The average proficiency and general character of the school are about tolerable.

NEWCASTLE (R.C.—Boys) :—Regular inspection, 15th, 16th, and 21st March.

Present at examination :—Boys, 85.

1. The room is suitable, provided with sufficient furniture, apparatus, and books, and in general effectively organized. 2. The moral tone of the school is good. 3. Latin, algebra, geometry, and drawing are added

added to the ordinary subjects; all are fairly regulated, and taught with satisfactory intelligence and reasonable effect. 4. The average proficiency varies from tolerable to fair, and the general character of the school is very fair.

NEWCASTLE (R.C.—Girls):—Regular inspection, 10th and 11th July.

Present at examination:—Girls, 97.

1. The schoolroom is suitable, and provided with a good stock of furniture and appliances. 2. The moral tone of the school is excellent. 3. The occupation is suitable and well regulated; the instruction judicious, well directed, and effective. 4. The average proficiency is nearly very fair, and the general character of the school very good.

NEWCASTLE (R.C.—Infants):—Regular inspection, 12th July.

Present at examination:—Boys, 56; girls, 63; total, 119.

1. The room is small for the numbers, but reasonably suitable and fairly organized. 2. The moral tone of the school is good. 3. The occupation is suitable and well arranged; the instruction appropriate, intelligent, and effective. 4. The average proficiency is nearly very fair, and the general character of the school good.

PLATTSBURG (R.C.):—General inspection, 23rd June.

Present at examination:—Boys, 46; girls, 34; total, 80.

1. The building is suitable, in good condition, fairly furnished, and altogether pretty effectively organized. 2. The moral tone of the school is very fair. 3. The instruction is appropriate, well regulated and effectively imparted. 4. The average proficiency exceeds very fair.

RAYMOND TERRACE (C.E.):—Regular inspection, 3rd August.

Present at examination:—Boys, 28; girls, 22; total, 50.

1. The premises are suitable and in good condition, and the organisation of the school is satisfactory. 2. The moral tone of the school is very fair. 3. The occupation is suitable and properly arranged; the instruction intelligent, but not adequately energetic. 4. The average proficiency exceeds tolerable, and the general character of the school is fair.

RAYMOND TERRACE (R.C.):—Regular inspection, 2nd August.

Present at examination:—Boys, 22; girls, 25; total, 47.

1. The building is old and unsuitable, but cleanly kept and tolerably well organized; arrangements for the erection of a new school have, I understand, been completed. 2. The moral tone of the school is fair. 3. The occupation is suitable, and arranged with passable care and skill; the instruction is tolerably intelligent and effective. 4. The average proficiency is tolerable.

STROUD (C.E.):—Regular inspection, 12th September.

Present at examination:—Boys, 15; girls, 16; total, 31.

1. Repairs and improvements are needed, but the premises as a whole are in good condition, and the school is tolerably well organized. 2. The moral tone of the school is tolerable. 3. The occupation is fairly suitable and well arranged; the instruction is of tolerable merit. 4. The average proficiency and general character of the school are about tolerable.

UPPER BENDOLBA (C.E.):—General inspection, 30th August.

Present at examination:—Boys, 15; girls, 25; total, 40.

1. The condition of the premises and the general organization of the school are tolerable. 2. The moral tone of the school is fair. 3. The subjects are fairly suitable and well arranged; the methods tolerably intelligent, skilful, and effective. 4. The average proficiency exceeds tolerable, and the general character of the school may be estimated as from tolerable to fair.

WALLSEND (C.E.):—General inspection, 20th July.

Present at examination:—Boys, 44; girls, 18; total, 62.

1. The building is considerably out of repair, and wanting in thorough cleanliness; the furniture is badly arranged, and the general organization is only tolerable. 2. The moral tone of the school is tolerable. 3. The instruction accords with the standard, is fairly regulated, and imparted with tolerable skill and effect. 4. The average proficiency is fair.

SYDNEY DISTRICT.

SUMMARY of Reports on Certified Denominational Schools.

THE remarks under head 1 relate to the material condition of schools; under 2, to their moral character; 3, to the subjects and methods of instruction; 4, to the proficiency of the pupils.

BALMAIN (C.E.):—Regular inspection, 7th February.

Numbers present:—Boys, 97; girls, 89; total, 186.

1. The schoolhouse is substantially built, roomy, remarkably well ventilated, and fairly found in suitable furniture and apparatus. 2. The pupils attend with fair regularity, are reasonably punctual, clean, and well conducted. The government is mild, but tolerably firm, and very fairly effective. 3. The classification is moderately judicious. All the prescribed branches are taught up to the requirements of a fourth class. The instruction is tolerably regulated, but the standard is low. The methods are suitable and fairly effective. 4. The following is the proficiency of the several classes:—First, tolerable to fair; second, tolerable; upper second, fair (nearly); third, fair (nearly); fourth, fair. Higher results might have been expected had the classes not been recently disturbed by promotions.

BALMAIN (R.C.):—Regular inspection, 5th September.

Number present:—Boys, 70.

1. The schoolroom is fairly suitable, and is reasonably well supplied with the necessary appliances, but the desks and forms are clumsy and unsuitable. There is no playground, and the school work is somewhat disturbed by the operations of another school in an adjoining room. Since last inspection new water-closets have been erected. 2. The attendance is increasing. The pupils are regular and punctual, clean and tidy, and in very fair order. The moral tone is good. 3. All the prescribed subjects are taught; the methods are of very fair merit, and are applied with vigour and effect. 4. The proficiency of the various classes is:—First, fair to very fair; second, fair to very fair; third, very fair.

BOTANY (Wesleyan):—Regular inspection, 8th February.

Numbers present:—Boys, 17; girls, 15; total, 32.

1. Since last inspection a supply of water has been provided. It is intended to erect a lavatory and a weathershed as early as practicable. The material condition of the school may be regarded as satisfactory.

satisfactory. About three-fourths of the pupils appear to attend regularly. This is an improvement on the character of the attendance last year. The pupils are tolerably punctual; with two or three exceptions clean, and in tolerable order. The government and discipline have changed for the better. 3. The classification of the pupils and standard of instruction are low. The lesson documents are arranged with moderate judgment; the methods of instruction are in the main mechanical, but marked by painstaking. 4. The proficiency of the classes may be described thus:—First, tolerable to fair; second, tolerable to fair. The pupils are fairly attentive, but think sluggishly, and are of low intelligence.

CAMPERDOWN (R.C.):—Regular inspection, 3rd February.

Numbers present:—Boys, 32; girls, 39; total, 71.

1. Some repairs to the premises have been effected since the last inspection, but the schoolroom cannot be rendered a very satisfactory one. At present the appliances are unsatisfactory. 2. The pupils are under fair control, and for the most part are clean and tidy in person. The attendance is marked by very fair regularity; the punctuality is bad. 3. The instruction is imparted in a methodical manner, and to the requirements of a third class is of full range. 4. The average proficiency is tolerable.

CHIPPENDALE (Wesleyan):—Regular inspection, 7th September.

Numbers present:—Boys, 109; girls, 96; total, 205.

1. The school practically consists of two departments; the first class, numbering 97 at the inspection, is taught in a separate room, and is, for all purposes of instruction, regarded as an infant department. The schoolrooms are large, suitable, and well furnished. 2. About three-fourths of the pupils attend regularly and with satisfactory punctuality. In point of discipline the school shows a decided improvement since last inspection. In the three upper classes the discipline is now very fair; in the first or infant class it is very good. 3. Fair judgment is shown in the classification of pupils and in the compilation of the lesson documents. The teaching appears to be earnest, but to lack vigour and thoroughness. 4. The proficiency of the classes is as follows:—First, very fair; second, fair; upper second, tolerable; third, tolerable to fair.

CHRIST CHURCH (Primary):—Regular inspection, 22nd August.

Numbers present:—Boys, 132; girls, 63; total, 195.

1. The schoolroom is an excellent structure, well suited for teaching purposes; it is appropriately furnished. 2. About three-fourths of the pupils attend regularly; the punctuality is also satisfactory. Proper attention is devoted to cleanliness, and the pupils present a neat and cheerful appearance. Tolerable order is maintained. 3. The instruction includes all subjects, geometry excepted; it is regulated with fair judgment. The methods are in part modern, and are moderately suitable, and applied with fair earnestness and painstaking. 4. The proficiency of the classes may be described thus:—First, fair; second, tolerable to fair; third, moderate to tolerable; fourth, tolerable to fair.

CHRIST CHURCH (C.E.):—Infants' regular inspection, 22nd August.

Numbers present:—Boys, 96; girls, 79; total, 175.

1. The schoolroom is large and suitably furnished. All necessary out-buildings have been provided. 2. A good and increasing attendance is maintained; the pupils are fairly regular and punctual; they are clean and tidy, and in good order. 3. All the subjects prescribed are taught. The instruction has been painstaking, based upon appropriate methods, and effective. 4. The proficiency is as follows:—First class, fair; second, fair to very fair; third, very fair.

COOK'S RIVER (C.E.—Primary):—Regular inspection, 26th October.

Numbers present:—Boys, 44; girls, 44; total, 88.

1. The school buildings are in very fair repair, and sufficiently found in proper educational appliances. The school is very fairly organized. 2. The attendance is fair for the locality, and is marked by tolerable regularity. The pupils are fairly punctual, becomingly attired, and well behaved. The government is appropriate, and effects very fair order. 3. The instruction is of full range up to the requirements of a third class, judiciously arranged, and taught with earnestness and zeal. 4. The following is the proficiency of the several classes:—First, fair; second, fair to very fair; upper second, very fair; third, good (nearly).

COOK'S RIVER (C.E.—Infants):—Regular inspection, 26th October.

Numbers present:—Boys, 37; girls, 51; total, 88.

1. The building is good, but somewhat out of repair. There is a sufficient supply of school requisites. 2. The government is genial, but sufficiently firm to maintain good order. The pupils attend with reasonable regularity and punctuality; they are clean and tidy, and well behaved. 3. The instruction accords with the course prescribed for Infant Schools; it is imparted by suitable methods, and with very fair earnestness and vigour. 4. The proficiency of the classes is:—First, fair; second, very fair; third, very fair.

COOK'S RIVER (R.C.):—Regular inspection, 2nd March.

Numbers present:—Boys, 17; girls, 16; total, 33.

1. Except that several panes of glass are broken, the schoolhouse is in very fair repair. The school is tolerably organized. 2. The pupils are irregular and unpunctual in attendance; they are passably neat in appearance, and in very fair order. The government has improved in vigilance and firmness. The moral tone of the school is fair. 3. All the prescribed subjects are taught; the lesson documents are compiled with fair ability. The methods are modern, and diligently applied. 4. The attainments of the classes are:—First, tolerable to fair; second, fair+; third, fair. The school is in a fair state of efficiency.

DARLINGHURST (C.E.—Primary):—Regular inspection, 22nd June.

Numbers present:—Boys, 69; girls, 24; total, 93.

1. The schoolroom is commodious and well ventilated, with a good classroom attached. All necessary out-buildings are provided. There is a good supply of books and apparatus. 2. The pupils are fairly regular and punctual; they are neat in appearance and respectful in demeanour. The government is firm and effective; the moral tone is healthy, and the order good. 3. All the prescribed subjects up to the requirements of a third class are taught. The teaching is earnest and painstaking, the methods are intelligent, and are zealously applied. 4. The following is the proficiency of the various classes:—First, very fair; second, very fair; third, good.

DARLINGHURST (C.E.—Infants):—Regular inspection, 22nd June.

Numbers present:—Boys, 51; girls, 30; total, 81.

1. The schoolroom is an excellent structure, amply found in educational appliances. Other features of the organization are also satisfactory. 2. Sickness has reduced the attendance. Ordinarily the pupils attend with very fair regularity, are reasonably punctual, neat and tidy in appearance, and well behaved. 3. All essential branches are included in the school course. The instruction is fairly arranged, and imparted by suitable methods. 4. The proficiency of the several classes is:—First, fair to very fair; second, very fair; third, very fair to good.

DOUBLE BAY (C.E.—Primary) :—Regular inspection, 24th October.

Numbers present :—Boys, 45 ; girls, 38 ; total, 83.

1. The building is good, fairly suitable, and provided with a full supply of materials. The out-offices are in a very bad state, but steps are being taken to erect new ones. 2. Four-fifths of the pupils are regular ; the punctuality is fair. The government is mild, but vigorous and effective. The pupils are clean, tidily dressed, and in very good order. The moral aspect of the school is pleasing. 3. Up to the standard for a third class, the instruction is of full range, the teaching is careful and systematic, and the methods employed are of very fair merit. 4. The proficiency of the classes is :—First, very fair ; second, very fair+ ; third, very fair to good.

DOUBLE BAY (C.E.—Infants) :—Regular inspection, 24th October.

Numbers present :—Boys, 62 ; girls, 60 ; total, 122.

1. Except that the playground wants levelling, little fault can be found with the material condition of this school. The school is fairly organized. 2. A good attendance is secured. The pupils are very fairly regular, punctual, neat in appearance, and in good order. The discipline is healthy and effective. 3. The usual Infant School course is observed. The instruction is intelligently regulated, and imparted with earnestness and skill. 4. The proficiency of the classes is as follows :—First, very fair+ ; second, good ; third, good.

ERSKINE-STREET (Pres.) :—Regular inspection, 29th August.

Numbers present :—Boys, 36 ; girls, 21 ; total, 57.

1. Except that this playground is too small, the material condition of this school is fairly satisfactory. The schoolhouse is in good repair, suitably furnished, and well kept. 2. The attendance has fallen off. The bulk of the pupils are but infants ; they attend with tolerable regularity and fair punctuality. Fair order is maintained, and the discipline as a whole may be regarded as tolerably satisfactory. 3. All the required subjects are taught. The instruction is carefully arranged and imparted by appropriate methods. 4. The following is the proficiency of the several classes :—First, fair ; second, fair ; third, tolerable to fair.

GLEBE (C.E.) :—Regular inspection, 3rd May.

Numbers present :—Boys, 55 ; girls, 38 ; total, 93.

1. The material defects of this school are many, and are of long standing. Promises have been made again and again by the clergyman that the school shall be put into a proper state. In the circumstances the organization is of fair worth. 2. Usually a good attendance is secured. The pupils are very fairly punctual, fairly orderly and well-behaved, but only tolerably industrious. 3. Excepting singing, the course includes the subjects laid down for a school in which the highest class is a third. The teaching, whilst methodically treated, is not very effective in results. 4. The proficiency is as follows :—First class, tolerable ; second moderate+ ; third, moderate to tolerable.

HAYMARKET (R.C.) :—Regular inspection, 24th August.

Number present :—Boys, 131.

1. The school is held in a portion of St. Francis' Hall ; the room is large and adapted for school purposes. All needful educational appliances and out-buildings have been provided. 2. The attendance is very fluctuating, and is influenced to an unusual extent by holidays and wet weather. The punctuality is satisfactory ; the pupils are clean and tidy, and in very fair order. 3. The instruction accords with the standard up to the requirements for a fourth class ; the methods are of fair merit, and are vigorously applied. 4. The proficiency of the classes is :—First, fair ; second, fair to very fair ; third, fair ; fourth, very fair to good.

THE HEBREW SCHOOL :—General inspection, 9th February.

Numbers present :—Boys, 43 ; girls, 21 ; total, 64.

1. At present this school is conducted in the building known as the Masonic Temple. In the circumstances, the organization is correct. 2. Two-thirds of the pupils enrolled attend with regularity. For the most part, they are punctual, tidy, and clean. The government, which is but tolerably effective, has improved under the present teacher. 3. The pupils are arranged in three classes, but about one-half are in the lowest class under a pupil teacher's charge. 4. In the class taught by the pupil teacher good work has been done ; the proficiency in the other two classes reaches tolerable.

KENT-STREET NORTH (R.C.—Boys) :—Regular inspection, 31st October.

Number present, 118.

1. The schoolroom is commodious and suitable, though its nearness to a busy thoroughfare is a serious drawback. Out-buildings of an inferior character have been provided. Except that the stock of reading books is insufficient, the school is tolerably well supplied with educational appliances. 2. Notwithstanding a vigorous local opposition, a good attendance is still maintained. The pupils are fairly regular and punctual ; the government effects very fair order. 3. All the subjects prescribed for a school of three classes are taught ; the classification is appropriate ; the methods employed are of very fair merit. 4. The proficiency of the classes is :—First, tolerable to fair ; second, fair ; third, very fair to good.

KENT-STREET NORTH (R.C.—Girls) :—Regular inspection, 2nd November.

Number present, 101.

1. The schoolroom is suitable and in good condition ; it is well supplied with furniture and apparatus. All necessary out-buildings are provided. 2. There is no falling off in the attendance, though strenuous efforts are made on behalf of a neighbouring nuns' school. The pupils attend punctually and with fair regularity ; they are clean and tidy, and manifest a modest, becoming demeanour. The order is very fair. 3. The instruction satisfies the requirements of the standard as far as the third class. The classification is correct ; the teaching is earnest and painstaking. 4. The proficiency of the various classes is :—First, fair to very fair ; second, very fair ; third, very fair to good.

KENT-STREET SOUTH (R.C.—Boys) :—Regular inspection, 10th August.

Number present, 79.

1. There is no proper playground ; with this exception, the material state of the school is satisfactory. The school is reasonably well organized. 2. Ordinarily the attendance is characterised by fair regularity. Of late, sickness among the pupils has had an unfavourable influence on the attendance. The pupils are fairly punctual, clean, and passably neat in person, and in good order. The government is characterised by vigour, firmness, and decision. 3. The instruction is of full range, and intelligently regulated. The methods are modern, and applied with energy and earnestness. 4. The attainments of the several classes may be represented :—First, fair to very fair ; second, fair to very fair ; third, tolerable ; fourth, very fair.

KENT-

KENT-STREET SOUTH (R.C.—Girls and Infants) :—Regular inspection, 10th August.

Numbers present :—Boys, 51 ; girls, 104 ; total, 155.

1. The school is held in the Roman Catholic church, the arrangements of which are inconvenient for school purposes. There is no playground—only a narrow side passage. The desks have also to serve as pews, and hence such subjects as writing and drawing are taught under great disadvantages.
2. The pupils are tolerably regular and punctual ; they are clean and tidy, and, excepting a portion of the first class, in satisfactory order. The government is strict and effective, but inclined to harshness.
3. The instruction is prosecuted with fair vigour and earnestness ; the lesson guides are drawn up with passable skill. The large proportion of young children compels a low range, but the methods are of fair merit.
4. The proficiency of the classes is :—First, tolerable ; upper first, moderate to tolerable ; second, fair to very fair ; third, very fair.

NEWTOWN (C.E.) :—Regular inspection, 21st September.

Numbers present :—Boys, 44 ; girls, 52 ; total, 96.

1. The schoolroom is large and suitable ; the furniture, though not of good pattern, is sufficient. Lavatories and weather-sheds have not yet been provided. In other features the organization is good.
2. The pupils are punctual, and tolerably regular ; they are clean and tidy, and in very fair order.
3. For a school having an infants department attached, the classification and range of instruction are too low. The highest class is a third ; up to that standard all the prescribed subjects are taught. The teaching appears to be methodical and painstaking, but not very skilful. The pupils are idle, and show no desire to acquit themselves well.
4. The proficiency of the various classes is :—First, tolerable ; upper first, fair to very fair ; second, fair to very fair ; third, very fair.

NEWTOWN (C.E.—Infants) :—Regular inspection, 21st September.

Numbers present :—Boys, 45 ; girls, 42 ; total, 87.

1. The schoolroom is sufficiently commodious and properly furnished ; it is well ventilated, but poorly lighted. Other features of the organization are satisfactory.
2. The attendance has largely increased. The pupils are tolerably regular, fairly punctual, and in good order. The government is judicious and effective.
3. The course of instruction is that prescribed, is fairly regulated, and based on modern methods.
4. The following is the proficiency of the classes :—First, very fair ; second, very fair.

NEWTOWN (R.C.) :—Regular inspection, 31st July.

Numbers present :—Boys, 52 ; girls, 38 ; total, 90.

1. The schoolroom is beneath the church, poorly lighted, and rather damp ; it is fairly furnished, and provided with a sufficiency of apparatus and books. That part of the organization for which the teacher is responsible is satisfactory.
2. The attendance is irregular ; of late it has been lowered by exceptional circumstances. The pupils are somewhat unpunctual, but reasonably clean in person, and well conducted. The discipline as a whole is very fair.
3. All the subjects prescribed for a school of three classes are taught. The instruction is regulated with judgment, and imparted by suitable methods.
4. The following is the proficiency of the several classes :—First, tolerable ; second, tolerable ; third, fair to very fair. The comparatively low attainments are due to irregularity of attendance and to the inexperience of the pupil teachers.

NEWTOWN (Wes.) :—Regular inspection, 14th September.

Numbers present :—Boys, 92 ; girls, 58 ; total, 140.

1. The school-buildings are large and suitable, but the walls are dingy and discoloured ; there is no playshed ; in other features the organization is satisfactory.
2. The attendance, which was slightly reduced at the day of examination, is increasing ; as a rule, both punctuality and regularity are satisfactory. The pupils are clean and tidy, and in very fair order.
3. The teaching is earnest and painstaking, the prescribed course is observed up to the standard of the third class ; the lesson guides are drawn up with very fair judgment, and the methods pursued display fair skill.
4. The proficiency of the various classes :—First, fair to very fair ; second, very fair ; upper second, fair ; third, good.

PADDINGTON (C.E.) :—Regular inspection, 29th August.

Numbers present :—Boys, 30 ; girls, 13 ; total, 43.

1. The schoolroom is commodious, and in very fair condition ; there is a full supply of furniture and apparatus, but the desks are of a very cumbersome pattern. Lavatories have been erected, but as there is no water supply they are useless.
2. Few of the scholars are permanent—the usual attendance is about two-thirds of the enrolment. The punctuality is satisfactory ; the pupils are clean and tidy, and under effective control.
3. The classification is as appropriate as the circumstances of the school permit, but the third class has almost disappeared, and as most of the pupils are mere infants, there is little probability of its being restored. The instruction accords with the prescribed course, and is given with great care and fair success.
4. The average proficiency exceeds fair.

PADDINGTON (R.C.) :—Regular inspection, 14th February.

Numbers present :—Boys, 44 ; girls, 40 ; total, 84.

1. The material condition of the premises is of very fair worth. The pupils are faultily classified ; the organization in other respects is passable.
2. As a rule a good attendance is secured, and the children are tolerably punctual and fairly clean. The order is not satisfactory.
3. The subjects prescribed for a school having a third class are included in the course, but the range taken is very low, and the teaching is by no means effective.
4. The class proficiency is as follows :—First, tolerable ; second, tolerable ; third, moderate to tolerable.

PARRAMATTA-STREET (C.E.) :—Regular inspection, 19th and 20th September.

Numbers present :—Boys, 130 ; girls, 105 ; total, 235.

1. The school premises are in all respects good, and are well supplied with educational appliances. All necessary out-buildings have been provided ; by the recent purchase of a large block of land, the Local Board has given the school the rare advantage of a good playground.
2. The discipline throughout is very good, and the moral tone excellent.
3. All the prescribed subjects are taught ; the classification is correct ; intelligent and modern methods are pursued ; the teaching is earnest and painstaking.
4. The proficiency of the several classes is :—First, fair ; second, very fair ; third, fair ; fourth, very fair to good.

PARRAMATTA-STREET (C.E.—Infants) :—Regular inspection, 19th September.

Numbers present :—Boys, 107 ; girls, 96 ; total, 203.

1. The schoolroom is commodious, well ventilated, and in very good repair ; it is sufficiently provided with suitable educational appliances.
2. A good attendance is secured. The pupils are fairly regular, tolerably punctual, passably clean in person, and in very fair order. The government is tolerably judicious and effective.
3. The course of instruction is that prescribed, is fairly regulated, and based on modern methods.
4. The following is the proficiency of the classes :—First, fair ; second, tolerable ; upper second, fair ; third, fair.

PARRAMATTA-

PARRAMATTA-STREET (R.C.—Girls) :—Regular inspection, 2nd May.

Number present, 84.

1. This department is taught in what was the boys' schoolroom. The building has been repaired, and its walls cleansed. There is a proper supply of apparatus and teaching appliances. The organization accords with prescribed plans. 2. The attendance has of late much improved, but very many of the pupils are unpunctual. The general appearance and demeanour are satisfactory; they are fairly orderly and attentive. 3. The course of instruction is that laid down for a school having a third class. The methods are of tolerable worth. 4. The proficiency is as follows:—First class, moderate to tolerable; second, fair+; third, fair+.

PARRAMATTA-STREET (R.C.—Infants) :—Regular inspection, 2nd May.

Numbers present :—Boys, 47; girls, 86; total, 133.

1. The organization of this school is not satisfactory. 2. The attendance of the pupils is marked by much irregularity. Circumstances of a special character have of late conspired to increase this irregularity. The punctuality also is but tolerable. The remaining features of the discipline are more satisfactory. The government is judicious, and secures very fair order. 3. The course of instruction is suitable and sufficiently comprehensive; fair judgment is shown in the arrangements of the lesson documents; the methods of teaching are appropriate and diligently applied. 4. The attainments of the several classes may be described thus :—First, tolerable; second, fair+; third, very fair.

PYRMONT (C.E.) :—Regular inspection, 29th May.

Numbers present :—Boys, 89; girls, 64; total, 153.

1. The schoolhouse is a good one, but playsheds and suitable school furniture are very necessary. The organization is of fair worth. 2. The attendance has been recently affected by sickness among the children. As a rule the children are very fairly punctual, and they are tidy and of pleasing appearance. The discipline is mild. 3. The subjects prescribed for a school having a third class for its highest are carefully taught. 4. The results of the examination are :—First class, fair; upper first, tolerable; second, very fair; upper second, tolerable; third, fair to very fair.

PYRMONT (R.C.) :—Regular inspection, 10th February.

Numbers present :—Boys, 33; girls, 29; total, 62.

1. In most respects the premises are well conditioned. The school is properly organized, and amply supplied with materials. 2. The ordinary attendance is about three-fourths of the enrolment, and very fair punctuality is secured. The pupils are clean in person, well behaved, and healthily governed. 3. Well regulated methods influence the teaching. The course is a full one for a third class. 4. The proficiency averages fair.

RANDWICK (C.E.) :—Regular inspection, 17th August.

Numbers present :—Boys, 43; girls, 30; total, 73.

1. On the whole the premises are good and suitable, but there is neither playshed nor lavatory. 2. The attendance has been seriously interfered with during this year by sickness and by the lengthened absence of the teacher. As a rule three-fourths of the pupils attend regularly; the punctuality, too, is satisfactory. The discipline is very fair. 3. The instruction accords with the prescribed course, but it is feebly given, and is deficient in penetrativeness. 4. The proficiency of the classes is :—First, fair; second, fair; third, fair.

REDFERN (C.E.) :—Regular inspection, 30th March.

Numbers present :—Boys, 72; girls, 34; total, 106.

1. This school is properly equipped and organized. 2. Recently the attendance has through sickness and other causes fluctuated considerably. The pupils are very fairly punctual; they are clean, tidy, well-behaved, and orderly. The moral tone of the school is healthy. 3. All necessary branches are taught. The teaching has been earnestly and carefully conducted. 4. The proficiency is as follows:—First class, tolerable+; second, tolerable to fair; upper second, fair to very fair; third, fair to very fair.

REDFERN (C.E.—Infants) :—Regular inspection, 29th March.

Numbers present :—Boys, 68; girls, 62; total, 130.

1. The school-buildings are in good repair, and the school is very fairly organized. 2. Sickness has caused a falling off in the attendance. The pupils are fairly regular, punctual, clean, and in good order. The government is mild and effective. 3. The usual infants' school routine is followed. The instruction is judiciously regulated, and imparted by appropriate methods. 4. The attainments of the several classes may be estimated thus :—First, fair to very fair; second, fair; third, fair to very fair.

ST. ANDREW'S (C.E.) :—Regular inspection, 9th August.

Numbers present :—Boys, 41; girls, 29; total, 70.

1. The schoolroom is large, and capable of accommodating a much larger number of pupils than attend. The desks and forms are old-fashioned and in bad condition. 2. The pupils are irregular, and unpunctual; they are clean, but not tidy. The government is feeble—it is only with difficulty that even the semblance of order is obtained. The pupils are rude and boisterous, and the moral tone of the school is low. 3. The teaching appears to have been careful and systematic, but to have been given without force, and as the pupils are inattentive the results are unsatisfactory. 4. The proficiency of the various classes is :—First, moderate; second, moderate to tolerable; third, moderate.

ST. ANDREW'S (C.E.—Infants) :—Regular inspection, 9th August.

Numbers present :—Boys, 51; girls, 36; total, 87.

1. The school is in good material condition and well organised. 2. A tolerable attendance is maintained, although of late it has been marked by irregularity. The pupils are fairly punctual, neat in appearance, and in good order. The government is judicious, and the tone of the school cheerful and healthy. 3. The subjects taught accord with the prescribed course. The instruction is suitably arranged, and imparted by approved methods. 4. The following is the proficiency of the several classes :—First, fair; second, very fair; third, very fair.

ST. JAMES'S (C.E.—Boys) :—Regular inspection, 22nd and 23rd May.

Number present :—84.

1. The premises are in good condition; the schoolroom is spacious, well ventilated, and amply equipped. A thoroughly satisfactory organization obtains. 2. A uniform attendance is secured. The children are punctual, neatly attired, well-behaved, and orderly. The moral tone of the school is healthy. 3. A fourth class is maintained. The instruction is of full range, methodical, and on the whole effective. 4. The proficiency is as follows :—First class, very fair to good; second, fair to very fair; third, very fair to good; fourth, very fair to good.

St.

ST. JAMES'S (C.E.—Girls) :—Regular inspection, 23rd May.

Number present :—76.

1. In all respects the schoolroom is a good one. There is a good supply of books, maps, &c., and the school is effectively organized. 2. The attendance is firm, and the punctuality good. The children are pleasing in appearance, well-behaved, and very attentive when under instruction. The moral tone of the school is excellent. 3. The highest class is a third, and the range of instruction is to that extent full. The several branches have been treated with marked care. 4. The proficiency is :—First-class, good ; second, very good ; third, very good.

ST. JAMES'S (C.E.—Infants) :—Regular inspection, 22nd and 23rd May.

Numbers present :—Boys, 72 ; girls, 65 ; total, 137.

1. Except that the walls and class-room need cleaning, the material state of this school is satisfactory. There is a sufficiency of suitable furniture and apparatus, and the school is very fairly organized. 2. Wet weather has temporarily reduced the attendance, but ordinarily a good deal of irregularity obtains, and the pupils are not at all punctual. The government is rather feeble ; restlessness and other symptoms of disorder are prevalent. 3. The usual Infant School course is followed. The instruction is very fairly arranged, and imparted by appropriate methods, but the teaching is deficient in life and vigour. 4. The proficiency of the several classes may be described thus :—First, fair (nearly) ; second, tolerable to fair ; third, fair.

ST. LEONARDS (C.E.) :—Regular inspection, 8th August.

Numbers present :—Boys, 63 ; girls, 18 ; total, 81.

1. The school building is substantial, commodious, and fairly suitable ; it is well supplied with educational appliances. 2. The attendance has been seriously interfered with for some time by the "scarlet fever" epidemic. Under favourable circumstances, three-fourths of the pupils are regular, and nearly all are punctual. The government is mild, but firm, and the discipline is in all respects good. 3. Up to the requirements of a third class the instruction is of full range, and accords with the prescribed standard. The pupils are thoughtful and self-reliant, and give evidence of careful teaching. 4. The proficiency of the various classes is :—First, very fair ; second, very fair ; third, very fair to good.

ST. LEONARDS (R.C.) :—Regular inspection, 5th April.

Numbers present :—Boys, 47 ; girls, 30 ; total, 77.

1. The premises, which are of an inferior kind, are very fairly kept. So far as circumstances allow the school is properly organized. 2. The attendance is somewhat affected by sickness among children. Very fair punctuality is secured. The pupils are clean, well-behaved, and for the most part orderly. The general discipline is of very fair worth. 3. The course of instruction is of full range ; the teaching is conducted in a methodical and careful manner. 4. The class proficiency is as follows :—First, fair ; second, fair to very fair ; third, very fair ; upper third, good.

ST. MARY'S (R.C.—Boys) :—Regular inspection, 26th and 27th September.

Number present :—190.

1. The schoolroom is a large, substantial building, but somewhat out of repair. There is neither lavatory nor playshed. The furniture is sufficient, but old-fashioned and cumbrous. 2. The attendance has nearly doubled since last inspection, and is still increasing. As a whole, the discipline is very fair. 3. The instruction is of full range up to the standard for a fourth class, and includes geometry, algebra, and Latin. It is to the teacher's credit that during the year he has formed a fourth class and brought it to good proficiency. 4. The proficiency of the various classes is :—First, tolerable ; second, fair + ; third, fair to very fair ; fourth, good.

ST. MARY'S (R.C.—Girls) :—General inspection, 27th and 28th September.

Number present :—98.

1. The schoolroom is well situated, airy, and in very fair repair. It is tolerably well found in educational appliances. 2. About three-fourths of the pupils attend regularly, and with fair punctuality. They are neat in appearance, fairly subdued in demeanour, and well behaved. The order has greatly improved under the present teacher. The government is suitable and effective. 3. Up to the range of a third class, all the prescribed subjects are taught. The instruction is properly arranged, and imparted by correct methods. 4. The following is the proficiency of the classes :—First, fair ; upper first, fair to very fair ; second, very fair ; third, fair.

ST. MARY'S (R.C.—Infants) :—General inspection, 27th and 28th September.

Numbers present :—Boys, 58 ; girls, 62 ; total, 120.

1. The schoolroom is fairly suitable, but is too near the street, and is imperfectly ventilated. Except that the gallery is too steep and the steps too high, the furniture and apparatus are of a reasonably satisfactory kind. 2. A very fair attendance is maintained ; for an infant department, the punctuality and regularity are creditable. The pupils are subdued and respectful in manner, clean and tidy, and in very fair order. 3. The course of instruction includes all the prescribed subjects ; the lesson guides are carefully drawn up, the methods are intelligent and are applied with fair energy. 4. The proficiency of the classes is :—First, tolerable ; second, fair ; third, fair +. The school has made good progress under the present teacher.

ST. PHILIP'S (C.E.—Boys) :—Regular inspection, 25th and 26th July.

Number present :—114.

1. The schoolroom is a very good one, and is well supplied with the ordinary educational appliances. 2. About three-fourths of the pupils are regular, but many are unpunctual. The discipline throughout is unsatisfactory ; the pupils are rude, disobedient, and extremely disorderly. 3. The course prescribed for a school of four classes is followed. The attainments have been reduced by recent changes in the teaching staff. Very fair skill in teaching is manifested, but its effectiveness is marred by the bad order. 4. The proficiency of the classes is :—First, second, and third, fair ; fourth, tolerable.

ST. PHILIP'S (C.E.—Girls) :—Regular inspection, 26th and 27th July.

Number present :—102.

1. The organization is very good. Except that it is too near the street, the schoolroom is all that can be desired. 2. About two-thirds of the pupils are regular in attendance ; the punctuality is good. The pupils are tidily dressed, they are modest and respectful in demeanour, and well-behaved. 3. The teaching, though wanting in animation, is careful and painstaking. The classification is appropriate, but it will probably be difficult to maintain a fourth class. 4. The proficiency of the various classes is :—First, fair ; second, very fair ; third, fair ; fourth, very fair.

Sr.

ST. PHILIP'S (C.E.—Infants) :—Regular inspection, 26th and 27th July.

Numbers present :—Boys, 148 ; girls, 126 ; total, 274.

1. The schoolroom is commodious, well ventilated, and very fairly equipped with needful educational appliances. The organization as a whole is reasonably good. 2. Sickness among children, combined with bad weather, has had an unfavourable influence on the attendance. Usually the pupils attend with passable regularity ; they are also punctual and clean in person. The government is judicious and effective. Good order is secured. 3. The usual Infant School course is followed. The instruction is properly regulated, and imparted by approved methods. 4. The following is the proficiency of the several classes :—First, very fair ; upper first, very fair (nearly) ; second, very fair to good ; third, very fair ; fourth, very fair +.

SURREY HILLS (C.E.) :—Regular inspection, 15th August.

Numbers present :—Boys, 50 ; girls, 37 ; total, 87.

1. The schoolhouse is in very fair condition, and provided with a sufficiency of suitable furniture. The school is properly organized. 2. The attendance, which has of late been reduced by disturbing causes, is recovering ; it is marked by fair regularity. The pupils are reasonably neat and clean in person, fairly subdued in demeanour, and becomingly behaved. The government is mild, and very fairly effective. 3. Suitable provision is made for imparting to the teaching progressive arrangement. The methods are modern, and are applied with very fair earnestness and diligence. 4. The following is the proficiency of the classes :—First, fair to very fair ; second, very fair ; third, very fair.

SURREY HILLS (C.E.—Infants) :—Regular inspection, 15th August.

Numbers present :—Boys, 57 ; girls, 46 ; total, 103.

1. The organization is in all respects complete, all the essentials for infant school teaching have been provided. 2. Under ordinary circumstances the pupils are very fairly regular and punctual ; the scarlet fever epidemic has for some months past injuriously affected the attendance. The pupils are clean and tidy, and in good order. 3. The instruction accords with the prescribed course ; it is prosecuted with earnestness and vigour, and with satisfactory results. 4. The proficiency is as follows :—First, tolerable ; second, fair to very fair ; third, very fair to good.

SURREY HILLS (R.C.—Boys) :—Regular inspection, 31st August and 1st September.

Number present :—153.

1. The schoolroom is under the church ; it is not large enough for the number of pupils in attendance, and is badly lighted and ventilated. The massive stone pillars which support the church form a serious obstacle to effective organization and discipline. 2. About two-thirds of the pupils attend regularly, the punctuality also is satisfactory. The government is strict and effective, and notwithstanding the great difficulties encountered, good order is maintained. 3. As far as the standard for a third class the instruction is of full range. The lesson guides are judiciously compiled, the classification is correct, the methods are educative, and are vigorously applied. The pupils under examination are thoughtful, self-reliant, and eager to answer. 4. The proficiency of the various classes is—First, fair ; second, very fair ; upper second, good + ; third, good.

SURREY HILLS (R.C.—Girls) :—Regular inspection, 6th September.

Number present :—109.

1. The schoolroom may be regarded as a very passable makeshift ; it is sufficiently found in educational appliances. All remaining points of organization are reasonably satisfactory. 2. A very respectable attendance is maintained. The pupils are fairly punctual and regular, and in very fair order. They are clean, and tolerably neat in person. 3. Fair judgment is evinced in the classification ; the instruction is properly arranged, and the methods of teaching are tolerably appropriate. 4. The proficiency of the several classes is :—First, tolerable ; second, fair ; third, fair.

SURREY HILLS (Wesleyan) :—Regular inspection, 27th April.

Numbers present :—Boys, 64 ; girls, 46 ; total, 110.

1. The schoolroom is spacious, well-ventilated, and satisfactorily furnished. The limited nature of the site deprives the school of proper playgrounds. The school is well organized. 2. The attendance at the inspection was quite forty lower than usual, on account of the attractions at the Exhibition building. In most respects the discipline is of a satisfactory character. The children are reasonably punctual, becomingly attired, and very fairly attentive to instruction. 3. The highest class is termed upper third, but the course of instruction is, in range, identical with that prescribed for a fourth class, and to this elementary French is added. 4. The proficiency of the classes is :—First, very fair ; second, good (nearly) ; third, very fair ; upper third, good to very good.

SURREY HILLS (Wesleyan—Infants) :—Regular inspection, 27th April.

Numbers present :—Boys, 42 ; girls, 37 ; total, 79.

1. A group of desks is still a pressing requirement ; in other respects the school, materially considered, is in a fairly satisfactory state. 2. The attractions of the Agricultural Exhibition, combined with the prevailing sickness among children, have lowered the attendance. Ordinarily about four-fifths are regular ; with few exceptions, they are punctual and clean. The government is somewhat feeble, and the order but tolerable in consequence. 3. The usual Infant School course is observed. The instruction is intelligently arranged, and imparted by appropriate methods. 4. The proficiency of the several classes is :—First, tolerable to fair ; second, fair to very fair ; third, very fair.

TRINITY (C.E.) :—Regular inspection, 4th April.

Numbers present :—Boys, 62 ; girls, 40 ; total, 102.

1. The premises are of satisfactory character. The school is correctly organized. 2. A good attendance is secured, but many of the pupils are unpunctual. The children are tidily dressed, are reasonably attentive to instruction, and tolerably orderly. 3. The highest class is a third, and corresponding with this classification, the instruction is of full range. Method and earnestness characterize the instruction. 4. The proficiency of the pupils is fair.

TRINITY (C.E.—Infants) :—Regular inspection, 4th April.

Numbers present :—Boys, 59 ; girls, 62 ; total, 121.

1. The schoolhouse is sufficiently commodious, and in good material condition ; it is reasonably provided with the needful appliances. 2. The attendance is marked by much irregularity. Sickness has latterly thinned the number of pupils. Little exception can be taken to the punctuality. The pupils are also fairly neat in person, tolerably well-behaved, and in very fair order. 3. A strict adherence to the usual infants course is observed. The instruction is properly arranged and imparted by appropriate methods. 4. The proficiency of the several classes is :—First, fair ; second, fair (nearly) ; third, tolerable to fair.

VICTORIA-STREET (R.C.—Girls) :—Regular inspection, 16th August.

Number present :—76.

1. The schoolhouse is in good repair, and very fairly found in educational appliances. 2. A fair attendance is maintained; of late it has been lowered by the prevalence of sickness among the pupils. All the other features of the discipline are very satisfactory. The moral tone of the school is excellent. 3. Good judgment is shown in the classification; the instruction is carefully regulated; the methods are appropriate and earnestly applied. 4. The attainments of the classes are as follows :—Second, tolerable to fair; third, tolerable to fair; upper third, fair to very fair. The falling off in the proficiency is due to irregularity of attendance and the feeble health of the teacher.

VICTORIA-STREET (R.C.—Infants) :—Regular inspection, 16th August.

Numbers present :—Boys, 55; girls, 41; total, 96.

1. The schoolroom is sufficiently large, and is well supplied with books and apparatus. 2. The discipline throughout is good; the pupils are clean and tidy; they are reasonably punctual and regular in attendance. The government is mild, but sufficiently firm and effective. A sound moral tone pervades the school. 3. The ordinary course for Infant Schools is followed; modern methods are employed, and the teaching is pursued with careful industry. 4. The proficiency is as follows :—First class, very fair; second, very fair to good; third, good.

WATERLOO (C.E.) :—Regular inspection, 13th April.

Numbers present :—Boys, 39; girls, 32; total, 71.

1. The fences and water-closets are much in need of repair; a tender has been accepted by the Local Board for the necessary improvements. The school is properly organized and equipped. 2. Wet weather reduced the attendance on the day of inspection. The children present were punctual, clean, becomingly dressed, orderly and attentive. A healthy tone pervades the several classes. 3. Results indicate a methodical and careful treatment of the subjects of instruction prescribed. 4. The position of the classes as regards proficiency exceeds very fair.

WATERLOO (C.E.—Infants) :—Regular inspection, 13th April.

Numbers present :—Boys, 34; girls, 28; total, 62.

1. The playground has been refenced and provided with improved water-closets since last inspection. The material condition of the school is now reasonably satisfactory. 2. Wet weather, joined to prevailing sickness among the children in the neighbourhood, has temporarily reduced the attendance. The pupils are tolerably punctual, fairly neat in appearance, and quietly behaved. The government is judicious and effective. 3. The usual infant school course is followed. The instruction is well regulated, and imparted by modern methods. 4. The proficiency of the classes may be described thus :—First, very fair to good; second, very fair (nearly); third, very fair to good. The pupils are attentive, and answer with intelligence and spirit.

WATERLOO (R.C.) :—Regular inspection, 21st March.

Numbers present :—Boys, 89; girls, 66; total, 155.

1. A new schoolroom is in course of erection; when it is completed, the present material defects will be remedied. There is a reasonably good supply of working appliances. The organization is, in the circumstances, of satisfactory character. 2. Two-thirds of the children enrolled are regular in their attendance. The children present were clean, reasonably well behaved and orderly, but a large number were unpunctual. 3. The lesson guides provide for the full treatment of the subjects prescribed for a school having a third class. 4. The proficiency of the classes is :—First, fair+; second, tolerable; upper second, fair to very fair; third, tolerable; upper third, tolerable to fair.

WAVERLEY (C.E.) :—Regular inspection, 20th March.

Numbers present :—Boys, 43; girls, 36; total, 79.

1. The premises are of satisfactory character. The school is properly organized. 2. The children attend with very fair regularity and punctuality, and their personal appearance and behaviour are pleasing. 3. The subjects prescribed for a school having a third class are taught in a systematic manner, but the range taken in each branch is comparatively low. 4. The average proficiency reaches fair.

WAVERLEY (R.C.) :—Regular inspection, 1st August.

Numbers present :—Boys, 48; girls, 39; total, 87.

1. The school is held in the old R.C. church; it is fairly suitable and in tolerable repair. The furniture, though not of the best type, is sufficient. The most noticeable defect in the organization is the want of a hat-room. 2. Three-fourths of the pupils are regular attendants, they are also punctual. The government is not sufficiently strict, and greater quietness in conducting the school business is necessary. The moral tone is fair, and the same estimate applies to the discipline as a whole. 3. Except that the standard in arithmetic and geography is too low, the course prescribed for a school of three classes is followed. The methods are mechanical, and the teaching generally superficial. 4. The proficiency of the classes is :—First, moderate; upper first, tolerable; second, moderate; third, tolerable.

WAVERLEY (Presbyterian) :—Regular inspection, 31st May.

Numbers present :—Boys, 54; girls, 34; total, 88.

1. The premises, whilst of inferior kind, are in very fair condition. The school is reasonably well furnished, and is satisfactorily organized. 2. A good attendance is secured. The pupils are punctual, becomingly dressed, orderly and attentive. The moral tone of the school is healthy. 3. All subjects prescribed for such a school are methodically and earnestly treated. 4. The proficiency of the pupils averages from very fair to good.

WOOLLOOMOOLOO (Presbyterian) :—Regular inspection, 20th April.

Numbers present :—Boys, 73; girls, 52; total, 125.

1. The limited character of the site prevents proper playgrounds, in other respects the premises are good. The school is well organized and amply supplied with material. 2. Owing to the recent Easter holiday, the attendance was low. As regards punctuality and orderly habits the discipline effects good results. The moral tone is sound. 3. All branches prescribed for a school whose highest class is a third are treated in an intelligent manner. 4. The proficiency is :—First class, very fair to good; second, fair+; upper second, very fair; third, good.

YASS DISTRICT.

SUMMARIES of Reports furnished on Denominational Schools during the year 1876.

I.—CHURCH OF ENGLAND.

CANBERRA :—Regular inspection. Visited 25th May.

Enrolled :—Boys, 21 ; girls, 22 ; total, 43. Present :—Boys, 9 ; girls, 15 ; total, 24.

Ordinary attendance, 26. In district not enrolled, 12.

The material condition is fair, the discipline is lax. The instruction is regulated with tolerable skill and care. The attainments are over tolerable. The classification is fairly correct.

YASS :—Regular inspection. Visited 11th and 12th September.

Enrolled :—Boys, 72 ; girls, 56 ; total, 128. Present :—Boys, 49 ; girls, 42 ; total, 91.

Ordinary attendance, 98. In district not enrolled, 100.

Except in working appliances, which are good, the material organization is wretched. The discipline is sound and healthy. The instruction is well regulated. The Curriculum is of full range, including Latin, geometry, and algebra. The attainments are high.

YOUNG :—General inspection. Visited 18th August.

Enrolled :—Boys, 71 ; girls, 59 ; total, 130. Present :—Boys, 49 ; girls, 43 ; total, 92.

Ordinary attendance, 95. In district not enrolled, 100.

There is no Teacher's residence, otherwise the material condition is good. The discipline is good in the first class, but weak in the second and third. The classification is faulty, no scholars being fit for the third class. The teaching in the lower division of the school is marked by life and energy, which would be very beneficial if applied in the same way to the upper division.

II.—ROMAN CATHOLIC.

BUNGENDORF :—Regular inspection. Visited, 6th June.

Enrolled :—Boys, 24 ; girls, 17 ; total, 41. Present :—Boys, 24 ; girls, 14 ; total, 38.

Ordinary attendance, 32. In district not enrolled, 50.

The schoolroom is in fair condition, but the furniture is old and clumsy ; the teaching appliances, furnished by the Council, are good and sufficient. The discipline is fair. The classification is injudicious, and the instructional documents are defective ; the attainments are nearly moderate.

BURROWA :—Regular inspection. Visited 2nd August.

Enrolled :—Boys, 42 ; girls, 45 ; total, 87. Present :—Boys, 40 ; girls, 40 ; total, 80.

Ordinary attendance, 75. In district not enrolled, 60.

The discipline is lacking in precision ; the classification is incorrect ; the instruction is distributed with fair skill ; the methods are modern ; the teaching is desultory, and the attainments are tolerable.

GRENFELL :—Regular inspection. Visited 6th November.

Enrolled :—Boys, 34 ; girls, 26 ; total, 60. Present :—Boys, 29 ; girls, 21 ; total, 50.

Ordinary attendance, 47. In district not enrolled, 100.

The schoolroom is a low wooden building, iron-roofed ; it has, however, been made as suitable for its present purpose as it is possible ; otherwise the material condition is fair. The discipline is sound. The instruction is properly regulated. The attainments, considering the condition of the school at last inspection, are fairly satisfactory. The appearance of the school is pleasing.

JUGIONG :—Regular inspection. Visited 1st September.

Enrolled :—Boys, 17 ; girls, 17 ; total 34. Present :—Boys, 14 ; girls, 15 ; total, 29.

Ordinary attendance, 26. In district not enrolled, 20.

The Teacher's residence is unsuitable, otherwise the material condition is fair. The discipline is effective. The instruction is appropriately distributed and honestly applied, but the attainments are low, owing chiefly to irregular attendance.

QUEANBEYAN :—General inspection. Visited 16th June.

Enrolled :—Boys, 33 ; girls, 25 ; total, 58. Present :—Boys, 28 ; girls, 18 ; total, 46.

Ordinary attendance, 40. In district not enrolled, 50.

The material condition is fair. The discipline is indifferent. The instruction is improperly regulated, and feebly applied. The attainments are nearly moderate, and the moral tone is low.

YASS :—General inspection. Visited, 13th September.

Enrolled :—Boys, 47. Present :—Boys, 37.

Ordinary attendance, 37. In district not enrolled, 100.

The school requisites are in fair condition. The discipline is wanting in precision. The instruction is regulated with moderate care and skill, but the application of it would be improved by an increase of energy and penetrative force. The attainments are low. The present teacher has only lately assumed charge, and is not responsible for the condition of the school.

YOUNG :—General inspection. Visited, 17th August.

Enrolled :—Boys, 40 ; girls, 28 ; total, 68. Present :—Boys, 35 ; girls, 16 ; total, 51.

Ordinary attendance, 60. In district not enrolled, 100.

The material condition is reasonably good. The discipline is wanting in exactness and firmness. The classification is faulty. The instruction is regulated with moderate skill ; the teaching is somewhat superficial. The results are low, but higher may be reasonably expected. The teacher has been but a short time in charge, and is only in a small degree responsible for the present condition of the school.

J. H. MURRAY,
Inspector.

MUDGEE

MUDGEE DISTRICT.

DETAILED Statement of the condition of Denominational Schools in the Mudgee District, inspected during the year 1876.

I.—CHURCH OF ENGLAND SCHOOLS.

MUDGEE (Primary) :—Regular inspection, 18th December.

Enrolled :—Boys, 59 ; girls, 56 ; total, 115. Present :—Boys, 40 ; girls, 39 ; total, 79.

The material condition and organization of the school are very good. Cleanliness is very satisfactory. The discipline is mild, judicious, and effective. The prescribed subjects are taught, and the instruction is properly regulated. The teaching is conducted with zeal. The average proficiency exceeds fair.

MUDGEE :—Regular inspection, 10th August.

Enrolled :—Boys, 62 ; girls, 54 ; total, 116. Present :—Boys, 49 ; girls, 39 ; total, 78.

The school is very fairly organized. The attendance is regular and punctual. The pupils are, as a rule, clean and tidy. The discipline secures fair order. The instruction is properly regulated. The school is in a higher state of efficiency than it was last year. The average proficiency is fair.

II.—ROMAN CATHOLIC SCHOOLS.

GULGONG :—Regular inspection, 20th and 21st December.

Enrolled :—Boys, 87 ; girls, 37 ; total, 124. Present :—Boys, 23 ; girls, 19 ; total, 42.

The schoolroom is large, airy, and well ventilated, but as it is built of bark it falls rapidly into decay. A more substantial building is now in course of erection. The supply of working materials is sufficient. About two-thirds of the pupils enrolled are usually in attendance, but owing to the prevalence of sore eyes, and the nearness of the holidays, the attendance was very small during the week on which the examination was held. Cleanliness, order, and attention are satisfactory. The prescribed subjects are intelligently taught. The average proficiency exceeds fair.

HILL END :—Regular inspection, 18th August.

Enrolled :—Boys, 27 ; girls, 35 ; total, 62. Present :—Boys, 22 ; girls, 23 ; total, 45.

The defects in the organization mentioned last year still exist. The school is fairly found in working appliances. Regularity and punctuality are not satisfactory. Fair order is maintained. The attainments in the classes are very uneven, and the lower classes seem to have been neglected. The average proficiency exceeds tolerable.

MUDGEE :—Regular inspection, 6th and 7th August.

Enrolled :—Boys, 83 ; girls, 13 ; total, 96. Present :—Boys, 71 ; girls, 13 ; total, 84.

A playshed and lavatories are badly wanted ; in other respects the material condition is good. The attendance has increased considerably during the year. Cleanliness is reasonably satisfactory, and the discipline secures good order. In addition to the subjects prescribed for four classes, a creditable amount of algebra and geometry is taught. The instruction is properly regulated, and the teaching is carried on with very satisfactory results. The average proficiency approaches good.

WELLINGTON :—General inspection, 23rd March.

Enrolled :—Boys, 29 ; girls, 49 ; total, 78. Present :—Boys, 19 ; girls, 29 ; total, 48.

A new and excellent school has been built since last inspection ; it is thoroughly well furnished, and fully equipped with all necessary working appliances. The discipline is good, and the tone of the school pleasing. The prescribed subjects are taught with intelligence and care. The school has made good progress during the year. The average proficiency is fair.

Mudgee, 6 January, 1877.

G. O'BYRNE,
Inspector of Schools, Mudgee District.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

EDUCATION.
(DEBTS ON PUBLIC SCHOOLS.)

Ordered by the Legislative Assembly to be printed, 19 September, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 27th February, 1877, That there be laid upon the Table of this House,—

“ A Return giving the names of all Public Schools on which a debt existed
“ on the 20th April, 1875, and for which the Local Boards or any Local
“ Committee were liable, with the amount of the debt due on each such
“ school respectively at the date named, and at the present time; and also
“ the names of all Public Schools, the Local Boards of which have been
“ unable to collect, or have represented to the Council of Education that
“ they have been unable to collect, the full amount of the local quota
“ required for the erection of school buildings prior to the 20th April, 1875;
“ with the steps taken by the Council of Education on such representations,
“ if any.”

(Mr. J. Watson.)

EDUCATION.

The Secretary, Council of Education, to The Under Secretary of Justice, &c.

Council of Education Office, Sydney, 19 September, 1877.

Sir, In transmitting herewith the return relative to debts on Public School buildings, which was moved for in the Legislative Assembly by Mr. J. Watson, M.L.A., I am directed to state, for the information of the Honorable the Minister of Justice and Public Instruction, that the Council of Education has caused this return to be compiled from reports furnished by the several local Boards who are responsible for the correctness of their respective statements. The Council has no means of verifying these statements, except what is afforded by reference to former letters on the subject. The return itself shows the cases in which such reference has been made and the results.

I have, &c.,
W. WILKINS,
Secretary.

RETURN giving the names of all Public Schools on which a debt existed on the 20th April, 1875, and for which the Local Boards or any Local Committee were liable, with the amount of the debt due on each such school respectively at the date named, and at the present time; and also the names of all Public Schools, the Local Boards of which have been unable to collect, or have represented to the Council of Education that they have been unable to collect, the full amount of the local quota required for the erection of school buildings, prior to the 20th April, 1875, with the steps taken by the Council of Education on such representations, if any.

Name of School.	Amount of debt due on 20th April, 1875.	Amount of debt due at present time.
Albion Park	£8 0 0	£8 0 0
No previous representation has been made to the Council of Education as to the existence of this liability.		
Aldavilla	£6 0 0	£6 0 0
No previous representation made. It is now stated that the liability was caused by the omission of some persons to pay promised subscriptions to local quota of cost of buildings.		
Araluen... ..	£39 13 2	£39 13 2
No previous representation made. It is now stated that the liability was caused by the omission of some persons to pay promised subscriptions to local quota of cost of buildings.		
Armidale	£65 18 4	£51 8 4
It was represented in February, 1876, that the Public School Board were liable for a debt of £70. The Council declined to pay the debt.		
Balranald	£4 0 0	£4 0 0
No representation has before been made to the Council as to the existence of this liability.		
Batlow	£15 0 0	£15 0 0
No previous representation has been made to the Council as to the existence of this liability.		
Bega	£55 0 0	£11 2 1
No representation has previously been made to the Council as to the existence of this liability.		
Bergalia	£12 0 0	£12 0 0
No previous representation has been made to the Council as to the existence of this liability.		
Blayney	£19 15 6	£19 5 6
No previous representation made to the Council as to the existence of this liability.		
Burrowa	£91 16 2	£109 9 6
It was represented in April, 1872, that there was a debt on the school buildings of £100; but the Council was not asked to liquidate it.		
Cunningar	£25 0 0	£25 0 0
No previous representation made to the Council as to the existence of this liability.		
Dundee... ..	£30 0 0	Nil.
No previous representation has been made to the Council as to the existence of this liability.		
Forest	£15 0 0	Nil.
No representation was made to the Council previously as to the existence of this liability.		
Germanton	Nil.	£20 0 0
No previous representation has been made to the Council as to the existence of this liability.		
Gerringong	£86 14 0	Nil.
It was represented in February, 1876, that this liability was caused by the omission of some persons to pay promised subscriptions to local quota of cost of buildings, in consequence of a resolution of the Legislative Assembly, passed 20th April, 1875. The Council paid the debt.		

Glen

Name of School.	Amount of debt due on 20th April, 1875.	Amount of debt due at present time.
Glen Innes	£138 4 4	£126 4 2
It was represented in January, 1877, that this liability was incurred by the Public School Board in order to make up the local quota of cost of buildings. The Council deferred its decision on the question of paying the debt.		
Grafton	£8 13 8	£16 11 8
No representation previously made to the Council as to the existence of this liability.		
Grenfell	£30 0 0	£45 0 0
It was represented in December, 1875, that there was a debt on the school buildings of £35; but the Council was not asked to liquidate it.		
Greta	£60 0 0	Nil.
It was represented in January, 1876, that the balance (£20) of this debt was still due, and the Council paid that amount.		
Gulgong	£141 0 9	Nil.
It was represented in June, 1875, that the Public School Board were liable for a debt of £140 16s. 9d., which amount the Council paid.		
Gunnedah	£24 1 4	Nil.
It was represented in April, 1876, that this liability still existed, and the Council paid the amount (£24 1s. 4d.)		
Hanbury	£46 13 4	£29 0 0
It was represented in September, 1875: (1) that the Public School Board were liable for a debt of £46, which amount was borrowed to enable them to make up a local quota of £46 13s. 4d. towards cost of repairs; and (2) that owing to the resolution of the Assembly it was impossible to raise the money locally. The Council declined to pay the debt.		
Hartley	£3 15 0	£3 15 0
No previous representation has been made to the Council as to the existence of this liability.		
Hopefield	£52 16 0	Nil.
It was represented in May, 1875, that the Public School Board were unable to collect the balance (£52 16s.) of the local quota of the cost of school buildings, and the Council paid the amount.		
Hornsby	£50 0 0	£20 0 0
No previous representation made to the Council as to the existence of this liability.		
Howlong	£100 0 0	£100 0 0
No previous representation has been made to the Council as to the existence of this liability.		
Inverell	£159 13 11	£47 2 1
In February, 1876, the Public School Board requested the return of the local quota (£266 13s. 4d.) of the cost of the school buildings. The Council agreed to refund the sum of £154.		
Limekilns	£8 6 4	£8 6 4
Until the present time no representation was made to the Council as to the existence of this liability.		
Luddenham	£50 0 0	£50 0 0
No previous representation was made to the Council as to the existence of this liability.		
Macquarie Plains	£6 0 0	Nil.
No previous representation has been made to the Council as to the existence of this liability.		
Maitland, East	£350 0 0	£250 0 0
It was represented in January, 1877, that the Board were unable to raise the sum of £250, the balance due on account of the local quota of the cost of purchasing the school premises, in consequence of the resolution of the Assembly. The Council deferred its decision on the question of paying the debt.		
Maitland, West	£208 15 0	Nil.
In October, 1875, the Board stated that the public refused to contribute towards the local quota of cost of school buildings on account of the resolution of Parliament.		
Millfield	£100 0 0	Nil.
It was represented in October, 1876, that the Public School Board were liable for a debt of £30 13s. 6d., of which the Council granted £20.		
Mitchell's Island	£1 14 6	£1 14 6
No previous representation has been made to the Council as to the existence of this liability.		
Oberon	Nil.	£9 10 0
Until the present time no representation was made to the Council as to the existence of this liability.		
Palmer's Island	£49 3 5	£29 17 5
No representation has previously been made to the Council as to the existence of this liability.		
Parkes	£174 4 5	Nil.
The Public School Board reported in January, 1876, that they were unable to raise the balance (£174 4s. 5d.) of the local quota of the cost of the school buildings, owing to the resolution of the Assembly, and the Council paid the amount.		

Name of School	Amount of debt due on 20th April, 1875.	Amount of debt due at present time.
Richmond, North	£63 18 4	£63 18 4
No previous representation has been made to the Council as to the existence of this liability.		
Round Swamp...	£10 19 6	£10 19 6
The Local Committee in September, 1875, requested the return of the amount (£75) locally subscribed towards the cost of the school buildings. The Council declined.		
Saumerez Creek	£12 9 3	Nil.
No representation made until now to the Council of the existence of this liability.		
Tattalia	£18 0 0	£18 0 0
No previous representation made. It is now stated that the liability was caused by the omission of some persons to pay promised subscriptions to local quota of cost of buildings.		
Tempe	£18 14 0	Nil.
It was represented in December, 1874, that the Public School Board were liable for a debt of £45, which the Council declined to pay.		
Tirrania...	£15 8 0	£15 8 0
No previous representation has been made to the Council as to the existence of this liability.		
Uralla	£128 16 8	Nil.
Until now no representation was made to the Council as to the existence of this liability.		
Wagga Wagga	£292 4 6	£165 18 0
No representation until the present time had been made to the Council as to the existence of this liability.		
Wallsend	£163 13 10	£162 3 6
No representation was made to the Council of the existence of this liability until this return was called for.		
Waratah	£86 8 0	Nil.
It was reported in September, 1875, that a debt of £63 17s. 6d. was due by the Public School Board, and that the residents declined to contribute in consequence of the resolution of the Assembly. The Council paid £50 of the amount due.		
Wattle Flat	£26 0 0	£8 10 0
It was represented in September, 1875, that a debt of £26 existed for which the Board were liable. The Council declined to pay the debt.		
Wilbertree	£18 0 0	£18 0 0
No previous representation has been made to the Council as to the existence of this liability.		
Wollongong	£16 6 8	£16 6 8
No previous representation has been made to the Council of the existence of this liability.		
Wombat	£74 1 10	£95 15 2
It was represented in January, 1877, that the Public School Board were unable to raise the sum of £86, a debt incurred in order to provide the balance of the local quota of the cost of additions to the school buildings. The Council deferred its decision on the question of paying the debt.		
Woolla Woolla	£46 13 8	Nil.
No previous representation has been made to the Council as to the existence of this liability.		
Wyagdon	£37 13 10	£37 13 10
No representation was previously made to the Council as to the existence of this liability.		
Young	£332 16 0	£376 19 9
It was represented in February, 1877, that the Public School Board were liable for a debt of £376 19s. 9d., incurred in order to provide the local quota of the cost of the school buildings. The Council deferred its decision on the question of paying the debt.		

Council of Education Office, Sydney, 19th September, 1877.

W. WILKINS;
Secretary.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SITES FOR PUBLIC SCHOOLS.

(APPLICATIONS FOR.)

Ordered by the Legislative Assembly to be printed, 21 May, 1877.

RETURN respecting applications for grants of land for sites for Public Schools, promised by Mr. Robertson, M.P., in answer to a Question asked in the Legislative Assembly, by Mr. Booth, M.P., on 20th February last.

LEGISLATIVE ASSEMBLY, 20 FEBRUARY, 1877.

(15.) Sites for Public Schools:—Mr. Booth asked the Secretary for Lands, pursuant to Notice,—

- (1.) How many applications have been made to the Minister for Lands by the Council of Education for sites on which to erect Public Schools, from the 1st of January, 1874, to 1st of January, 1877?
- (2.) How many of such applications have been granted?
- (3.) The date of each application, and the date of each grant, where the application has been complied with?

Mr. Robertson answered,—In the course of a few days I will lay upon the Table of the House the information required by the Honorable Member.

1. Two hundred and thirteen (213) applications were made by the Council of Education, through the Honorable the Minister of Justice and Public Instruction, to the Government, for grants of land for Public School purposes, from the 1st January, 1874, to the 31st December, 1876.

2. Up to 1st March, 1877, notice had been received at this office that the Honorable the Minister for Lands had approved of the appropriation for Public School purposes of the land mentioned in eighty (80) of the above applications.

3. A list of the applications, showing the dates upon which the land was applied for, and the dates upon which the appropriations were approved of, is subjoined.

Council of Education Office,
Sydney, 9th May, 1877.

SITES FOR PUBLIC SCHOOLS.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EDUCATION.

(PUBLIC SCHOOL AT WOOMARGAMA—CORRESPONDENCE RESPECTING DISMISSAL OF TEACHER.)

Ordered by the Legislative Assembly to be printed, 26 June, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 8 May, 1877, That there be laid upon the Table of this House,—

“Copies of all Documents, Papers, Letters, and Minutes that passed between the Council of Education and the Local Board of the Woomargama Public School, having reference or in any way connected with the dismissal of the late Teacher of the above School; also the evidence taken by the Inspector of the District in the case, and the decision of the Council thereon.”

(Mr. Day.)

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

• Council of Education Office, Sydney, 21 June, 1877.
Adverting to your letter dated 11th ultimo, transmitting a copy of an Order of the Legislative Assembly for “Copies of all documents, papers, letters, and minutes that passed between the Council of Education and the Local Board of the Woomargama Public School, having reference to or in any way connected with the dismissal of the late teacher of the above school; also the evidence taken by the Inspector of the district in the case, and the decision of the Council thereon”,—I am directed by the Council to forward herewith the information required.

2. I am to point out that, as will be seen from the Council's letter to the Local Committee, dated 21st February last (No. 77-3185), the late teacher, Mr. O'Brien, *was not dismissed* from the charge of Woomargama Public School, but was removed to another situation, the Committee being informed as follows:—“It is not to be understood from his removal that any blame attaches to him, but simply that the circumstances of the school would appear to render a change of teachers advisable.”

I have, &c.,

W. WILKINS,
Secretary.

EDUCATION.

No. 1.

The Hon. Sec., P.S. Committee, Woomargama, to The Council of Education.

Sir,

Woomargama Public School, 19 February, 1876.

I am instructed by the undersigned members of the Local Committee to state, for the consideration of the Council, that the conduct of the teacher has become so reprehensible that they have discontinued sending their children to school; therefore the undersigned deem it their duty to apprise the Council of the reasons for the non-attendance of their children. The age of the teacher has hitherto inclined the Committee to bear his unbecoming conduct with patience, in hopes of his amending; such amendment not having taken place, they feel themselves compelled to place his conduct in its true light before the Council.

R. CAPPER WEBB,

Hon. Sec.

P.S.—Enclosed please find the complaints of the Committee.—R.C.W.

[Enclosures.]

JOHN NICHOLLS agrees with the other Committee men.

Woomargama Public School, 19 February, 1876.

Also states that he was in ignorance of the attendance at the school at the time he signed the vouchers.

JOHN NICHOLLS.

ROBERT JAMES charges the teacher with disgusting conduct out of school, and bad discipline in it, and up to within this last week or two, that the school was not opened at the proper time, and not for an hour and sometimes for an hour and a half after time.

Woomargama Public School, 19 February, 1876.

ROBERT JAMES.

ROBERT PARKER complains as follows: That the teacher is guilty of intemperance and cruelty to the children; also, that the attendance at the school is not in accordance with the vouchers sent into the Council.

Woomargama Public School, 19 February, 1876.

ROBERT PARKER.

JAMES DENISON complains as follows: That the teacher, Mr. W. O'Brien, is of intemperate habits out of school hours, guilty of improper language to the children during school hours, and guilty of detraction. Carelessly neglecting the school grounds and materials. Until lately he has not rung the bell for months until ordered to do so by one of the Committeemen. I further believe that his abstract has been signed without a proper knowledge of the school attendance. My reasons for not drawing the attention of the Secretary to these matters is that I feel disinclined to do anything injurious to a public teacher.

Woomargama Public School, 19 February, 1876.

JAMES DENISON.

No. 2.

The Secretary, Council of Education, to The late Inspector of Schools, Albury District.
B.C., Inspector of Albury District. For your immediate inquiry and report.—W.W., 23/2/76.

No. 3.

The Secretary, Council of Education, to The Hon. Sec., P.S. Committee, Woomargama.

Sir,

Council of Education Office, Sydney, 23 February, 1876.

I am directed by the Council of Education to acquaint you that your letter, dated 19th instant, upon the subject mentioned below, is under consideration, and that a further communication respecting it will be addressed to you as soon as the Council has arrived at a decision in the matter.

I have, &c.,

Secretary.

Memorandum from The Secretary, Council of Education, to The Teacher,
Woomargama Public School.

(76-7,478.)

Council of Education Office, Sydney, 17 May, 1876.

MEMORANDUM from the Secretary to Mr. W. O'Brien teacher of the Public School at Woomargama, as to small attendance of pupils during the last four months.

THE Council has had under notice the fact that the average attendance of pupils at the Public School at Woomargama during the last four months has not exceeded 16.5.

I am to intimate therefore that the Council will be compelled to reduce the school to the rank of a Provisional School, as regards salary payable to the teacher, unless a material improvement with attendance take place.

W. WILKINS,
Secretary.

No. 6.

The Secretary, Council of Education, to The Hon. Sec., P.S. Committee,
Woomargama.

(76-7,479.)

Sir,

Council of Education Office, Sydney, 17 May, 1876.

I am directed by the Council of Education to acquaint you that the Council has had under notice the fact that the average attendance of pupils at the Public School at Woomargama during the last four months has not exceeded 16.5.

I am therefore desired to intimate that unless the attendance be materially increased, the Council will be compelled to reduce the school to the rank of a Provisional School, as regards the salary payable to the teacher.

I have, &c.,
W. WILKINS,
Secretary.

No. 7.

The Teacher, Woomargama Public School, to The Secretary, Council of Education.

Sir,

Public School, Woomargama, 24 May, 1876.

I have the honor to acknowledge the receipt of your memorandum (No. 76/7478) and dated 17th May, 1876, informing me that the Council will be compelled to reduce the school to the rank of a Provisional School, as regards salary payable to me, unless a material improvement in the attendance take place, and with reference thereto, I beg to state that no blame can attach to me, inasmuch as the small attendance is principally owing to the removal of a number of children from the district, most of whom were regular. I enclose a list of their names. Another cause of the small attendance is irregularity of attendance, which is attributable to sickness, bad weather, the employment of the big boys at farm and other works, and very frequently the children are kept at home for the most frivolous purposes. This state of things I have done my utmost to correct, but failed through want of compulsory means; under all the circumstances I beg most respectfully to ask the Council to remove me to another school. I am easily satisfied a Half-time School, or even a Provisional School where the school-fees could be collected, would be preferable to this. On the subject of removal I beg leave to remind you that I received a communication from you, dated 8th February, 1876, and informing me that my application for removal to another school had been duly noted in the office in accordance with the provisions of clause 47 of the Regulations of 29th November, 1875.

I take the liberty of inquiring from you, is there any likelihood of it being accomplished? I am also desirous of knowing that if, in the event of my salary being reduced, I resigned my present appointment, would I get another under the Council?

My reason for putting this question is that I would not be able to gain a subsistence here, on account of the dearness of provisions and having to pay house-rent (there being no residence attached to the school), if my salary were reduced. I beg further to add that the attendance of pupils is twenty-four at present, but the average is low for the reasons already mentioned.

I have, &c.,
WILLIAM O'BRIEN,
Teacher.*List of Pupils removed to other Districts.*

Jane Denison, age 14; Emma Denison, 15, removed to Albury; Elizabeth Creer, 14, removed to Albury; Agnes Davis, 9, removed to Germanton; Catherine Noble, 11, removed to Albury; Michael Walsh, 15, removed to Molong; Alfred Lucan, 16, removed to Ournie; Martha Harrison, 8, removed to Melbourne; James Dexter, 13, Henry Dexter, 11, and John Dexter, 7, removed to Mullengandra; Patrick Corbel, 8, removed to Pullitop; Ada Podmore, 5, Louisa Podmore, 4, removed to Kyamba; Percy Denison, 5, dead; Samuel Parker, 5, dead.

List of Boys at present employed at Farm and other works.

William Levi Parker, age 15 years; William Parker, 15; Robert Parker, 13; William Cook, 13; William Podmore 15; William Nichols, 13; Edward Rice, 14; James Keighran, 14; Frederick Brooke, 14.

No. 8.

The Hon. Sec., P.S. Committee, Woomargama, to The Secretary, Council of
Education.

Sir,

Woomargama, 7 June, 1876.

I duly received yours, of date 17th ultimo (76-7479), and called a meeting of the school committee to day, and now enclose report for the consideration of the Board.

I have, &c.,
R. CAPPER WEBB,
Hon. Sec.
REPORT

REPORT of a meeting of Committee held at Woomargama Public School, 7th June, 1876. Present:—Messrs. J. Nicholls, R. James, R. Parker, Thos. Mitchell, Mr. O'Brien (teacher), and R. C. Webb, in the Chair.

The falling off in attendance was considered. Mr. O'Brien stated that eighteen children that had attended the school had now left the district.

That 27 now attend, but of this number 6 attend very irregularly, their parents having them often at work at home.

That 14 children have withdrawn from the school.

The list of names making up the above names were called over, and found correct.

R. Parker stated that his reasons for not sending his children to school were on account of the drunken and dirty habits of the school teacher.

R. James stated his reasons for not sending his children to school, to be the beastly conduct of the teacher out of school, and his bad discipline in it.

Thomas Mitchell moved,—“That the Secretary be requested to draw up a report of this meeting and transmit it to the Board with a request that the Inspector hold an investigation at the earliest date convenient.” Seconded by R. Parker and carried unanimously.

R. CAPPER WEBB,
Hon. Sec.

No. 9.

The Teacher, Woomargama Public School, to The Secretary, Council of Education.

Sir,

Woomargama Public School, 13 June, 1876.

I have the honor to inform you that the statements made by Messrs. James and Parker concerning me are literally untrue; the true cause of the withdrawal of their children from the school is owing to my endeavouring to collect the school fees from the members of the Committee. Mr. Nicholls owes for school fees, £10 12s.; Mr. Denison, £6 3s. 4d.; Mr. Parker, £1 4s.; and Mrs. Creer, sister to Mr. Dawson, a member of the Committee, £4 9s. 6d.; their opposition entirely arises from this cause, and, I am sorry to say, the example set by the majority of the Committee has a most pernicious effect on the other parents, for very few pay any fees. I hope this fact will be considered previous to reducing my salary. I would also point out the fact that I have to pay house rent and that provisions are unusually dear in this place.

I beg also to state that most of the withdrawals are big boys, who are kept constantly at work at home. Hoping this explanation may prove satisfactory,— I have, &c.,

WILLIAM O'BRIEN,
Teacher.

No. 10.

The Acting Inspector of Schools, Albury District, to The Secretary, Council of Education.

Woomargama Public: Charge against the teacher of.

1 July, 1876.

ONLY two members of the Local School Board being present at the meeting called by me to inquire into above charge I have deemed it advisable to defer the inquiry till I pass on my way to Germanton, a fortnight hence.

C. HOOKINS,
Acting Inspector.

No. 11.

The Teacher, Woomargama Public School, to The Acting Inspector of Schools, Albury District.

Sir,

Public School, Woomargama, 22 July, 1876.

I have the honor to acknowledge the receipt of your communication of the 20th instant, requiring an explanation and reply to the following charges, made against me by Messrs. Denison and James:—

1. Improper language respecting my superior officer.
2. Bad state of closet and urinal.
3. Not ringing the bell.

These charges were made by Mr. Denison, and the following by Mr. James:—

1. Intoxication on several occasions.
2. Irregularity in opening school 10 p.m., 10:30 p.m., and 11 o'clock.

With regard to the first charge made by Mr. Denison, I beg to state it is entirely false. I never spoke in a disparaging way of the late Mr. Flannery, who is the person alluded to, for I always considered him to be a most able man, and thoroughly fitted for the high position he held; besides, he was always most friendly to me. It is a pure invention, and in unison with the other false charges he made against me.

With regard to bad state of closet and urinal I have also to state that this charge is also false. I have never seen sticks in it, and the seat is not broken, and I have frequently thrown lime into it to prevent any smell arising, and it is thoroughly scoured when the schoolroom is washed out. The urinal has been for a short time choked, but it is now remedied, and during the time it was choked it was emptied daily, and surely it was Mr. Denison's duty to draw my attention to it if he observed such a state of things.

As regards the charge of not ringing the bell I beg to state that it is more than twelve months since I omitted ringing the bell, and then only for a few mornings, and my reason for not doing so was because all the children who could hear it were present, for the majority of the children live a considerable distance from the school. I was advised by a member of the Committee to ring it every day there was school and I have not neglected it a single day for the last twelve months; the late Inspector has been here since and no charge concerning this matter was made to him.

With regard to Mr. James's charge of intoxication I beg to give it the most unqualified denial. I declare most positively that Mr. James never saw me in a state of intoxication. He stated at the investigation that he heard me on one or two occasions halloo out when passing his house; surely such evidence as that could not cause him to conclude I was intoxicated, and if he thought so it was his business to see me and speak to me; on another occasion he saw me walking with a son of Mr. Keighran and for that reason he concluded I was intoxicated. He has kept no dates of these serious charges, neither has he mentioned them to the late Mr. Flannery when he held the general examination of this school on last Christmas, for all

all this that he alludes to took place prior to Mr. Flannery's visit. My explanation of the matter is that on several occasions I have known my servant to spend a considerable part of the evening at James's house, and in passing by I hallooed to him to come home; surely that could not be construed into a charge of impropriety unless by a malevolently minded person who was prepared to state a falsehood for the purpose of injuring me; and again, I submit it would be contrary to common sense to suppose that I would be walking with a child in a state of intoxication; I again assert it is a falsehood.

With respect to his other charge I beg to state that I was deceived as to the correct time on two or three occasions by my watch failing to keep the correct time, but I declare I was never so late as 11 o'clock. I have now made arrangements with Mr. Madden, who is a very early riser, and has a most regular timepiece, to call me every morning and prepare at his house an early breakfast for me. I am determined never again to depend on my watch; it is impossible to know the correct time in the lonely place I live, in the absence of the sun, and having to depend on an incorrect timepiece. I have never been wilfully late and the children have not suffered through it for I have made the time up. I have now arranged matters so that I can never be deceived again, and I hope this explanation will be considered satisfactory.

Having concluded my reply to the charges made against me I beg leave to state the reasons why these men were induced to show such violent opposition to me as to make such unfounded charges against me as they have done: Mr. James showed a dislike to me at first because I did not deal with him for provisions, &c., &c.; after that he endeavoured to get his niece into my situation, in which he failed; lastly, he took offence at making his children get home lessons; he said that he sent them to school for the purpose of learning their lessons, and that he would not be bothered with them getting tasks at home. Because I did not subscribe to this he removed his children from and commenced to show the deadly hatred he bore to me.

Mr. Denison first showed opposition to me on last Christmas because his second child did not receive a prize at the examinations; he said I favoured Levi Parker's son, and that his daughter should have got the prize. You have seen the boy at the school on the day of your examination and you made remarks on his intellectual appearance. I declare to you I showed no favor, and the matter rested entirely with the examiner, Mr. Dixon. The next cause of his opposition was my applying to him and others for the school fees, which has caused all this bitterness and concoction of lies.

I will conclude by stating that this is the first time for nearly three years that I have had charge of this school and there has never been a complaint made to the late Inspector against me, and I believe it was solely my applying for the school fees that caused this vile conspiracy to be raised against me.

I have, &c.,
W. O'BRIEN,
Teacher.

No. 12.

The Acting Inspector of Schools, Albury District, to The Secretary, Council of Education.

27 July, 1876.

Woomargama Public: Complaint against the teacher.

AFTER the inspection of the above school on the 20th instant, I made inquiry into the charges preferred against the teacher by Messrs. Denison, Nichols, Parker, and James.

I must premise by stating that Mr. Nichols withdrew his charge, I believe, out of pity for the teacher, an aged man.

The complaints of Messrs. Denison and Parker are of Mr. O'Brien's intemperance, neglect of duty, and incompetency; of Mr. James, are intoxication and of incompetency.

Intemperance.—I must consider this charge not proven, as Messrs. James and Parker, although they state they have seen him on several occasions tipsy, give no dates of these occurrences, nor is their evidence supported by outside opinion. Mr. O'Brien confesses that he every day has a glass of ale, but very rarely touches spirits, and strenuously denies ever being incapable of taking care of himself.

Incompetency.—Mr. O'Brien is an old man, and the results of examination exhibit the necessity of a younger and stronger man to manage the school; with this drawback, I consider Mr. O'Brien quite competent to teach and conduct a school.

Neglect of duty.—On this point I can but conclude that Mr. O'Brien is guilty. So far as unpunctuality goes, Mr. O'Brien seems sometimes to oversleep himself; but it must be said, on the other side, that he by extra lessons in the afternoon restores to the pupils the lesson lost in the morning. It is admitted by Mr. O'Brien that he did not ring the bell as complained of, but when remonstrated with, the local Board admits that he has been more circumspect since.

The complaint about "detraction" and the "abstracts of salary" were withdrawn by the Board.

It is much to be regretted that the members of the local Board present—Messrs. Parker, James, and Denison—were not more solicitous for the teacher's comfort than seems to be the case. Messrs. Denison and Parker are considerably behind in their school fees, according to Mr. O'Brien; and I cannot help thinking that much of the animosity shown the teacher by these persons arises, as alleged by Mr. O'Brien, out of a demand made upon them for these fees, in compliance with advice given by the late Mr. Flannery.

Recommendation.—Taking all the circumstances into consideration, I would respectfully advise that the Council reprimand Mr. O'Brien for "neglect of duty"; and I believe that this would satisfy the general opinion of the locality and the justice of the case.

C. HOOKINS,
Inspector.

No. 13.

The Secretary, Council of Education, to The Acting Inspector of Schools, Albury District.

Council of Education Office, Sydney, 10 August, 1876.

Woomargama Pub.: Your memorandum of 27th ultimo as to complaints against teacher.

WITH reference to your report upon the charges preferred against the teacher of the above school, I am to request that you will be good enough to furnish a copy of the evidence which you took at the investigation recently held by you, with a view to enable the Council to arrive at a decision in the matter:

In regard to the charge of intemperance, you observe: "I must consider this charge *not proven*, as Messrs. James and Parker, although they state they have seen him on several occasions tipsy, give no dates of these occurrences, *nor is their evidence supported by outside opinion*." It is not clear how the circumstances mentioned can be taken as affecting the trustworthiness of the direct statement ascribed to Messrs. James and Parker.

Concerning the allegation of incompetency you remark: "Mr. O'Brien is an old man, and the results of examination *exhibit the necessity of a younger and stronger man to manage the school*."

Nevertheless, you add: "I consider Mr. O'Brien quite competent to teach and conduct a school." Evidently these statements are not consistent.

You report that "Messrs. Denison and Parker are considerably behind in their school fees, *according to Mr. O'Brien*." Be good enough to state if you endeavoured to verify this representation.

W. WILKINS,
Secretary.

No. 14.

The Acting Inspector of Schools, Albury District, to The Secretary, Council of Education.

Corowa, 18 August, 1876.

Woomargama Pub.: Your B.C., No. 76-10,709, dated August 10th, 1876.

WITH this I have the honor to furnish the Council with a copy of the notes of evidence at the inquiry into the conduct of the teacher of the above school; with it, also, the letter of Mr. Walsh, testifying to the payment by Mr. O'Brien of Mr. Parker's account. I looked into the fee book of the school and saw no entry of any money being received from Mr. Parker.

As regards the charge of intemperance—after a careful consideration of the evidence on this point against Mr. O'Brien, having due regard to the apparent animus of the two witnesses against the teacher, and to the character he bears in the locality as regards sobriety, I am of opinion that the teacher is not given to excess in drink; he appears to be one whom one or perhaps two glasses of the Colonial beer would render garrulous and excited. Had he the reputation of a drunkard I should certainly have known it in Albury while I was a teacher. I believe also that these witnesses exaggerate the condition of Mr. O'Brien on the days of his presumed intoxication.

With regard to Mr. O'Brien's competency as a teacher, I would remark that under happier circumstances, in a position of greater personal comfort as regards his lodgings, and receiving more encouragement than he gets from Messrs. Denison, James, and Parker, Mr. O'Brien would work with greater zeal and exhibit more satisfactory results; as it is, he seems to have fallen into a state of semi-despondency, caused by what he considers the persecution of these persons. A younger, stronger, and less sensitive man would be more capable of meeting the difficulties of the place and overcoming them.

C. HOOKINS,
Inspector.

Woomargama Public: Inquiry into conduct of Teacher.

COPY OF NOTES OF EVIDENCE taken at the said inquiry by the Inspector of Schools on the 20th July, 1876.

Mr. Denison—no occupation, about 70 years, Woomargama:—

1. That Mr. O'Brien had used disrespectful language towards Mr. Flannery, by saying that he himself was a better man and more fit to occupy the position of inspector.
2. That he had slandered Mr. Lenihan, in saying that this gentleman had spoken contemptuously of the parents of his pupils.
3. That Mr. O'Brien neglected the school ground; he had visited the school, and had seen the urinal choked and full; also the seat of the closet out of repair; he had also observed that the ground immediately about the building was unswept and presented an unbecoming appearance.
4. That some ten months ago Mr. O'Brien did not ring the school-bell daily; had remonstrated with him, since which it had been rung regularly, but not punctually; sometimes it did not ring till 10 o'clock a.m.—sometimes later.

Mr. James, storekeeper, 45 years, about, Woomargama:—

1. That he had seen the teacher intoxicated, not incapable of walking, but excited, garrulous, and noisy; had seen him three times within eighteen months; could not give the dates; had seen him at Keighran's hotel, where he then resided, under the influence of liquor.
2. That the discipline obtaining in the school was bad; he had seen the pupils chasing each other through the school-room during play-hours, the teacher being absent; the teacher went home to his dinner, a distance of 500 yards; he had known the school not to be open till 10.30 a.m., even 11 a.m.; the teacher he thought sometimes overslept himself.

Mr. Parker, butcher and farmer, about 50 years, Woomargama:—

1. That he had seen Mr. O'Brien intoxicated; he could not give the exact date, but it was two or three times the last twelve months, not incapable of standing or walking, but excited, noisy, and talkative.
2. That he was not indebted to Mr. O'Brien for school fees, as he had paid them within a trifle by a contra-account for meat owing by the teacher.
3. That Mr. O'Brien was too severe with the pupils; he had beaten his daughter he thought cruelly; he could not say anything as to want of discipline or unpunctuality in the school, as he lived too far away.

Mr. Nichols, carpenter, about 50 years, Woomargama:—This witness declined to appear against Mr. O'Brien.

Mr.

Mr. Denison acknowledged that he did owe some school fees to *Mr. O'Brien*.

Mr. O'Brien, teacher, Woomargama Pub. :—

1. That the charges of disrespect to *Mr. Flannery*, and slander against *Mr. Lenihan* are false; that he regularly attended to the closet and urinal; therefore it was not unusual for them to be in bad order; that he was only absent from the school about twenty minutes at dinner-hour; that after school he did usually have a glass of ale, rarely two glasses, as a refreshment, he being an old man, that he solemnly declared. *Mr. Parker* and *Mr. James* spoke falsely and out of malice in saying that he was intoxicated on certain occasions; that Messrs. *Denison* and *Parker* complained against him, as he had requested payment of fees; and *Mr. Denison*, as he was offended because his daughter had not received a coveted prize at the Christmas examination.

That he did not owe *Mr. Parker* for meat; he had paid him, as *Mr. Walsh's* letter would testify (*Mr. Walsh's* letter with this); that Messrs. *Parker*, *Denison*, and *James* were the only dissatisfied parties; that *Mr. James* was instigated in his action by his wife, who had been offended by his making certain purchases in *Albury* instead of at her shop; that the people generally were satisfied with his labours.

Corowa, August 18th.

C. HOOKINS,

Inspector.

Dear Sir,

I have examined the bill furnished by *Mr. Robert Parker* to you for meat, and I can safely affirm that all the items mentioned, with the exception of the last, were paid for by you in my presence. I am willing to verify same on oath if necessary.

Gamboola, 2 April, 1876.

I am, &c.,

MICHAEL WALSH.

Mr. J. Denison to The Secretary, Council of Education.

Sir,

Woomargama, 6 October, 1876.

I have the honor by direction to acknowledge the receipt of your letter of 26th Oct., *re* the complaint made by *Mr. John Tomkins*, charging *Mr. W. O'Brien* with drunkenness and neglect of duty; and further to inform you that at a meeting of this committee, held this day, *Mr. Tomkins* substantiated his charge; and also to state, for the information of the Council, that *Mr. O'Brien* has obtained the signature of *Mr. Nichols* to his pay-sheet by fraudulent means, *viz.*, by promising to give *Mr. Nichols's* children free schooling. This is acknowledged by *Mr. Nichols*, and corroborated by *Mr. James Keighran*. The school was also closed during the whole of the week ending the 28th October, and *Mr. A. Podmore*, the nearest resident, gave evidence of having seen *Mr. O'Brien* the worse of drink frequently during the week. The school was opened on 30th October, and during the week ending 4th Nov. there was only an attendance of four children. I have the honor to forward, by direction, the names of the parents and number of children that are now deprived of the opportunity of receiving instruction in consequence of the neglect of the present teacher.

I have, &c.,

J. DENISON.

The Hon. Sec., P. S. Committee, Woomargama, to Mr. R. J. James.

Sir,

Woomargama, 2 November, 1876.

Enclosed with this is a letter from the Council *re* the conduct of Mr. O'Brien. I am too busy to come down just now, but if you and the other committee-men come to a decision, and let me know it, I can forward it; or should the Committee wish, I can refer them to the original statement made by all the Committee.

Awaiting the decision of the Committee,

I am, &c.,

R. CAPPER WEBB.

P.S.—In consequence of the Secretary being so very busy, we send this communication direct, to save further delay.

J. DENISON.

No. 19.

Mr. J. Tomkins to The Secretary, Council of Education.

Sir,

Woomargama, 22 October, 1876.

I have the honor to call your attention to the continual drunkenness of the teacher of the Woomargama State School, and the consequent neglect of the children attending.

I arrived here some two months since with a family of eight children, and sent seven of them to school; but after a trial of seven weeks I found it necessary to discontinue their attendance in consequence of the neglect of the teacher.

I regret having to make this complaint, but my duty as a parent leaves no other course open than to place the facts before you. Mr. O'Brien frequently goes to the school so much the worse for drink that he sits in his chair for hours and allows the children to do as they please. During the last week he has only opened the school one day. Trusting that this matter will receive your early attention,

I have, &c.,

JOHN TOMKINS.

No. 20.

Memorandum from The Secretary, Council of Education, to The Teacher, Woomargama Public School.

Council of Education Office, Sydney, 26 October, 1876.

Complaint preferred against you.

A COMMUNICATION has been received at this office calling attention to your "continual drunkenness, and the consequent neglect of the children" attending the school under your charge: It is represented that you "frequently go to school so much the worse for drink that you sit in your chair for hours and allow the children to do as they please," and that during the week ending 21st instant the school was only open for one day.

It is requested that you will at once furnish any explanation you may have to afford in regard to these representations.

W. WILKINS,
Secretary.

No. 21.

Memorandum from The Secretary, Council of Education, to The Hon. Secretary, P. S. Committee, Woomargama.

Sir,

Council of Education Office, Sydney, 26 October, 1876.

I am directed by the Council of Education to acquaint you, that a communication has been received at this office calling attention to the continual drunkenness of Mr. O'Brien, teacher of the Woomargama Public School, and the consequent neglect of the children attending the school. It is represented;

represented that he "frequently goes to school so much the worse for drink that he sits in his chair for hours and allows the children to do as they please," and that during the week ending 21st instant the school was open for one day only.

2. It is accordingly requested that the Board will be good enough to furnish a report in regard to these representations.

I have, &c.,
W. WILKINS,
Secretary.

No. 22.

The Teacher, Woomargama Public School, to The Secretary, Council of Education.

Sir,

Woomargama Public School, 30 October, 1876.

I have the honor to acknowledge the receipt of your memorandum containing serious charges preferred against me, and, in reply thereto, I declare most solemnly they are entirely false. I can safely affirm that I have attended to my school duties with the utmost regularity, and always in a perfectly sober state. The only reason I can assign for the violent opposition is, because Mrs. James, the postmistress, who possesses considerable influence over the lower order of people, is anxious to put me out of my situation, with a view of getting her niece into my position. The way she exerts her influence is by giving credit for provisions, &c., and withholding it at her pleasure. One of her most intimate friends is a man named Tomkins, who has lately come from Victoria; he is a bullock-driver, and at present employed by Mr. Mitchell in putting up a fence, and I am informed that he will be leaving when he has finished his work. He has got no holding here, but lives in a bark hut, temporarily put up. His children are most unruly, and I was obliged to punish them, which gave him offence; in addition, he refused to pay the regular school fees. He is a most unprincipled man, spending his leisure time in gambling and drinking, to excess. I believe he would make a ready instrument for Mrs. James to make false charges against me. It is stated that I frequently go to the school so much the worse for drink that I sit in my chair for hours and allow the children to do as they please. How can such a statement be borne out, when no one capable of judging has visited the school for months, with the exception of Professor Smith? I confidently appeal to him to say whether I was in a state of drunkenness, or incapable of minding my business, when he visited the school. Surely one or two unruly children, after being punished, should not be believed.

With regard to my absence from school for a few days, it was caused by extreme illness, arising from an internal complaint which I am unfortunately subject to; but thanks to God I am now in my usual state of health and vigour.

As a corroboration of my explanation, I beg leave to refer you to the enclosed letter from Mr. G. Madden, the hotel proprietor; he is besides a large landed proprietor, and one of the most respectable men in the neighbourhood. No one living here can give a truer estimate of my character than he can, as he is a daily observer of it.

Hoping that this explanation may prove satisfactory, I have most respectfully to ask for a removal to another school. It would be a mercy to do so, as I am like a person in a nest of hornets—stung all round.

I have, &c.,
WILLIAM O'BRIEN,
Teacher.

No. 23.

Mr. G. Madden to The Secretary, Council of Education.

Sir,

Woomargama, "Traveller's Rest" Hotel, 30 October, 1876.

I beg leave to inform you that Mr. O'Brien has resided with me since July last, I have had full opportunity of observing his conduct, and I have no hesitation in saying that during that time he has acted with the strictest proper conduct. The charges preferred against him in your memorandum are entirely false; he has attended to his school duties most punctually and regularly, and always in a sober state. I have frequently heard of praise being given to him for his exertions in the performance of his duties. I believe the sole cause of opposition to him arises from a desire to put the postmistress' niece in his place. As regards his absence from school it was caused by internal illness, arising from an internal complaint, and in no way proceeding from drink.

I remain, &c.,
GEORGE MADDEN.

P.S.—I am willing to make a declaration before a Magistrate to the above facts if necessary.—G.M.

No. 24.

The Teacher, Woomargama Public School, to The Secretary, Council of Education.

Sir,

Woomargama Public School, 7 November, 1876.

I have the honor to inform you that a private meeting was held here on yesterday evening by four members of the Committee, namely, Messrs. Denison, Parker, James, and Nichol, and their friends, in the absence of Mr. Webb, the honorary secretary, and Mr. Mitchell, the only gentlemen and impartial persons on the committee, for the purpose of drawing up a report condemnatory of me. A man named Tomkins acted as secretary, and drew up the report. It was conducted most unfairly, and I was given no opportunity to attend and refute any of the statements made against me. You are aware that these four men have before this made the most serious charges against me, including drunkenness, neglect of duty, &c. (a copy of which I enclose.) These charges were investigated by your Inspector, Mr. Hookins, and proved to be groundless and devoid of truth. I suppose their report now is a repetition with additions. I contend for that reason no dependence should be placed on their statements; they are violently opposed to me, and would assert any falsehood to injure me, principally because they are largely indebted to me, and for that reason want to get rid of me.

Nichols

Nichols owes me £11; Denison owes me £6 3s. 4d; Parker owes me £1 4s.; and James is anxious to get his niece into my situation. You can easily see their animus towards me, and that I could expect no fair play from men like them; besides, they are most unprincipled men and arrant liars. Parker keeps an unlicensed shanty, and was lately accused and charged by the police with cattle-stealing, and his two sons were detected by a respectable settler named Graham stealing a fat goat. I have good proof that Nichols stole 16 lbs. of beef from me which was hanging under my verandah. James is a groom to Cobb & Co., and is a rough uncouth man and capable of asserting any falsehood. Denison is a paralyzed cripple and capable of any viciousness. I am told that Tomkins stated that he came into the school and found me sitting in my chair drunk. I declare most solemnly it is a wilful lie, and I am sure if it were investigated he would not get a single child to corroborate his statement. Surely he could not come into the school without being seen by some one of the children, and I declare most positively that he could not possibly do so without my knowledge, for I contend I was never drunk either in the school or out of it. I can prove this by sworn testimony if necessary to do so. It is very easy for an unprincipled man to assert a falsehood, but his lying is palpable when he cannot prove it, as was instanced at the late investigation. I am also told a man named Podmore stated he frequently saw me drunk. He never did, and like the others he is opposed to me because he is indebted to me in the amount of £1 15s. 9d. for school fees. I am also told that a man named Salfinger stated at the meeting that he declined sending his child to school as long as I was the teacher, and notwithstanding he sent him to-day and yesterday. This man is indebted to me in the amount of £2 15s. for school fees. I think that I have said enough to show you clearly that these men are not worthy to be believed, as they were proved to be liars by Mr. Hookins, besides, their meeting could not be called a committee meeting in the absence of the Honorary Secretary, and therefore their report should be rejected. I declare most positively that my explanation is the correct version of the matter, and I can prove every word of it. I conclude by hoping that you will shield me from these unprincipled and infuriated men, and give me fair play.

I have, &c.,

WILLIAM O'BRIEN,
Teacher.

[Enclosure.]

Woomargama Public School, 19 February, 1876.

JAMES DENISON complains as follows:—That the teacher, Mr. W. O'Brien, is of intemperate habits out of school hours, and guilty of improper language to the children during school hours. He is also guilty of detraction, and carelessly neglecting the school grounds and materials. Until lately he has not rung the bell for months, until ordered by one of the committee to do so. I further believe that his abstract has been signed without a proper knowledge of the school attendance. My reasons for not drawing the attention of the secretary to these is that I feel disinclined to do anything injurious to a public teacher.

JAMES DENISON.

ROBERT PARKER complains as follows:—That the teacher is guilty of intemperance and cruelty to the children; also that the attendance at the school is not in accordance with the vouchers sent in to the Council.

R. PARKER.

R. JAMES charges the teacher with disgusting conduct out of school, and bad discipline in it, and up to within this last week or two that the school was not opened at the proper time, and not for an hour and sometimes for an hour and a half after.

R. JAMES.

JOHN NICHOLS agrees with the other committeemen, and also states that he was in ignorance of the attendance at the school at the time he signed the voucher.

JOHN NICHOLS.

No. 25.

The Secretary, Council of Education, to The Hon. Secretary, P.S. Committee,
Woomargama.

Sir,

Council of Education Office, Sydney, 17 November, 1876.

In reference to my letter dated 26th October ultimo, I am directed by the Council of Education to acquaint you that a communication has been received at this office, signed by Messrs. J. Denison, R. Parker, R. James, and J. Nichols, members of the local committee, reporting upon the charges preferred against Mr. W. O'Brien, teacher of the Woomargama Public School, in which they express themselves strongly in opposition to the teacher. Communications have also been received from Mr. O'Brien, in which he represents that the members of the Committee who have furnished the report "are violently opposed to him" principally "because they are largely indebted to him, and for that reason want to get rid of him." He alleges further that they are endeavouring to bring about his removal from his situation, with a view to the appointment of a niece of the postmistress, Mrs. James, to the charge of the school.

2. The Council has instructed me therefore to request that the Committee will be good enough to furnish any observations they may desire to make in regard to Mr. O'Brien's representations.

I have, &c.,

W. WILKINS,
Secretary.

No. 26.

The P.S. Committee, Woomargama, to The Secretary, Council of Education.

Sir,

Woomargama, 28 November, 1876.

We have the honor to acknowledge the receipt of your communication of the 17th (per favour of R. C. Webb, Esq., who is too busy to attend at present), *re* the statements forwarded by Mr. W. O'Brien to the Council. The committee held a meeting this evening in the schoolroom (Mr. W. O'Brien present), and upon inquiry find both statements to be untrue.

1st.

1st. The committee are aware that Mr. Denison is unable to pay; the other members deny being indebted—Mr. Robert Parker having paid Mr. O'Brien, and Mr. O'Brien admits that he allowed Mr. Nichols to be exempt from payment on account of Mr. Nichols signing the vouchers for payment; the non-payment of other persons is chiefly owing to the action of Mr. O'Brien, for that he did solicit parents to send their children from time to time free of charge to make up the attendance for the current month, under the promise that he would resign; therefore the indebtedness of the parents does not in any way influence the committee against the teacher.

2nd. The statement that Mrs. James's niece is desirous to obtain the situation of schoolmistress is also without the slightest foundation.

We beg further to inform the Council that we the undersigned members of committee now present consider that the retention of Mr. W. O'Brien as teacher of this school, after the proof given to Mr. Inspector Hookins of Mr. O'Brien's drunkenness and neglect of duty, leaves no other course open to us but to resign our position as members of the local committee.

We have, &c.,

 ROBERT JAMES.
 JOHN NICHOLS.
 JAMES DENISON.

No. 27.

The Teacher, Woomargama Public School, to The Secretary, Council of Education.

Sir,

Woomargama Public School, 30 November, 1876.

I have the honor to inform you that a meeting, consisting of four members of the committee and three persons not belonging to the committee, was held here on the 28th instant for the purpose of considering a communication lately received from you, regarding statements made by me, reflecting on members of the committee. The Honorary Secretary, Mr. Webb, and Mr. Mitchell were both absent. I ventured to tell them that strangers had no right to take any part in a committee meeting and that it was illegal for them to do so; therefore a man named Tomkins, a bullock-driver, attacked me in a most brutal manner; he applied language of a most offensive and insulting nature to me, and made several attempts to assault me; he is a coarse brutal man, and like the generality of bullock-drivers replete with bad language. This man was appointed secretary to the meeting, and as I have no dependence in his truthfulness in writing down correctly my answers to questions put to me by members of the committee I take leave to acquaint you with what I said. I was first asked my reason for believing that the indebtedness of members of the committee was the cause of their opposition to me. I replied by saying that I was convinced of it from the fact of their showing no opposition to me, or bringing false charges against me until I asked them for their school fees, and that ever since they have persecuted me in a most unrelenting manner. I beg to state that I was directed by the late Mr. Flannery, the school Inspector, to send them bills for what was due and inform them that if they were not at once paid I would be obliged to report the circumstance of non-payment to the Council of Education; I carried out his directions, and in consequence have gained the continued aversion of these men.

The next question put to me was, who are the persons indebted to me? I told them by mentioning their names, when two men who were present, named Nichol and Salfinger, stated they did not owe me a farthing, that I had agreed to teach their children as free pupils in consideration of their sending them for the purpose of making up the number in attendance. I declare most positively that I never made such an agreement with them or any one else. I affirm it is a wilful falsehood on their part to say so, and the only way I see to test the accuracy of my statement and the falsity of theirs is to sue them, and then I will be able to prove on oath that no such compact or agreement was ever made by me. I admitted however that I told Nichol I would not press him for the school fees due as long as he signed my monthly abstract for payment, but that agreement is broken through by his refusing to sign it unless I paid him cash, irrespective of the debt, for doing so. I think under the circumstances my telling Nichols that I would not press him for his fees was excusable when it is considered that all the others, with the exception of Messrs. Webb and Mitchell, who were absent in Melbourne, refused to sign it, and at the time I required the money to meet my immediate wants. I was then asked if I ever offered or gave any one 10s. for getting my abstract signed; I answered certainly not. I will briefly state what actually did occur in this matter: Some time ago when Messrs. Webb and Mitchell were absent in Melbourne, I applied to all the other members to sign my abstract, and each of them refused to do so, although it was perfectly correct; on my way home I met two men named Keighran and Broben, and I told them of the circumstance of all the members of the Committee refusing to sign my abstract, and that it was evident their intention was to starve me out, as I could not get the common necessaries of life without paying for them, there being only one store in the neighbourhood kept by Mrs. James, and that she would give me no credit. I begged of them to intercede for me and relieve me from my distress, which they were good enough to do, and succeeded in getting Nichols to do it. In the course of conversation I thoughtlessly said I would willingly give any person 10s. for getting it signed, but these persons did not take this expression as an offer to them for getting the paper signed, for they never asked for it, and I affirm I never offered or gave it to them. It was a mere idle expression, without meaning, and not addressed to any one in particular. It was somewhat like a kingdom for a house; it only showed my distress of mind, and I most positively state that I would on no account have paid it; it slipped from me unintentionally. I was next asked for my authority for saying that Mrs. James was using her influence for getting her niece into my situation. I refused to answer that question because I knew they were acquainted with the fact as well as I was. However as you might require to know it, I beg to inform you that I was told by several persons, including Mr. Madden, the hotel-keeper, Mrs. Keighran, Mrs. Graham, Mr. Walsh, and Mr. Salfinger; at this stage of the proceedings, Tomkins, the bullock-driver, stood up and moved that I be ordered to leave the room, which was carried; he stated that he had matters of a private nature to bring before the meeting, and not fit for my ears. As I am ignorant of what took place after leaving the room, I beg to state that if you find anything requiring my explanation, I will explain it by your sending it to me. I have to state, in conclusion, that I think the conduct of these four members is highly reprehensible for allowing strangers to take part in their proceedings, and this Tomkins

is

is the leader and concocter of all the false statements contained in their report, and I am informed that he is this day urging the persons indebted to me and who did not attend the meeting to sign papers to the effect that I agreed to teach their children free. I think that it would be most unjust to me to receive any statements from an illegally constituted meeting as reliable and correct, for I have no doubt they will falsify matters to carry out their own purposes.

I have, &c.,

WILLIAM O'BRIEN,
Teacher.

[Enclosure.]

B.

Woomargama School District, 8 January, 1877.

We, the undersigned inhabitants of the Woomargama School District, comprising parents of children, and others, solemnly declare that we have known Mr. O'Brien, teacher of the Public School, for a considerable period, and during that time we have always seen him in a perfectly sober state, and most exemplary in his conduct. We sincerely hope he will be successful in the vindication of his character; and we affirm that we consider his management of the Public School to be excellent.

No. 28.

The Acting Inspector of Schools, Albury District, to The Secretary, Council of Education.

Inquiry into the charges against the teacher of the Woomargama Public School.

Albury, 31 January, 1877.

In obedience to the Council's instructions, contained in your B.C. No. 76-19,450, and dated 11th December, 1876, I visited this locality on Monday, the 29th instant. I sent notice of my contemplated visit to Mr. James on the previous Friday, with a request that he would acquaint the parties to the accusation of my coming. I also notified Mr. O'Brien, but it is to be observed that Mr. James, who is post-master, did not deliver Mr. O'Brien's letter till the Sunday evening.

I have to state beforehand, that the course of inquiry was repeatedly interrupted by the violent and unseemly conduct of Messrs. James, Denison, and Parker, who appeared by their conduct to be bitterly prejudiced against Mr. O'Brien, and gave expression to their feelings by derisive sneers and comments on the evidence tendered by those friendly to Mr. O'Brien; in fact the evidence tendered by these men is largely robbed of its value by their intemperate and disorderly conduct. I regret also to observe that much of this was provoked by the audible comments Mr. O'Brien would persist in making on various points of the evidence.

It will be observed that while Messrs. Parker, James, and Podmore, as well as Mr. Tomkins, are unanimous in their assertion of having seen Mr. O'Brien intoxicated, others, including Mr. Gee, declare their belief in his general sobriety, and this is shared by those who have signed the document marked B (herewith). Value is not to be placed to all these signatures, but there are a sufficient number written by, to my knowledge, respectable men to give the document equal value to the testimony of the above-mentioned Parker, James, and Podmore. Mr. Tomkins's assertion of having seen Mr. O'Brien asleep in the classroom is not supported by the evidence of the pupils Parker and Graham; and even so, in the recent hot and oppressive weather, the fact of an old man falling asleep in the heat of the day, is, I submit, *not* a proof of intoxication. Taking then the evidence into consideration, as given at the inquiry, and bearing in mind the feeling against Mr. O'Brien, shown by the three men above mentioned, I cannot but think that their statement, "That Mr. O'Brien is so often tipsy as to cease to be regarded as strange," is not true. From inquiries however made outside of the sphere of local feeling in Albury and elsewhere, from information given by respectable persons, whose names I am not permitted to divulge, I am of opinion that Mr. O'Brien did occasionally indulge to excess. I am informed that he has been seen tipsy in Albury in the sense of being stupefied with drink, but that these instances occurred some time ago, before my inquiry in July last. If he has since given way it is the weakness of an old man yielding to the violence of such men as Parker and Keighran, as described in Mr. Madden's evidence; of Keighran, it may be stated that he was fined at the Police Court recently for savagely chewing a man's ear while in a state of intoxication. A dead set (to use a vulgarism) seems to have been made upon the old man occasionally by these men and by others, to make him squiffy (drunk), and by bullying and cajoling; I must express my belief that they have succeeded in their desire in occasional instances.

If taken out of "this nest of hornets," as Mr. O'Brien expresses it, and removed to a locality where he would meet with kindness and consideration, I believe that he would be better able to satisfy the Council of his sobriety and good conduct.

2. The charge made by Mr. O'Brien, "That Mr. James is conspiring to oust him in favor of his niece," is founded on some intemperate expressions made by Mrs. James, "That she would yet dance upon his grave, and see her own niece occupying his position," magnified and perverted by the process of tittle-tattling prevalent in all country places, and demands no notice.

As regards Mr. O'Brien's paying Mr. Nichols 10s., and signing an acquittance of school fees to induce him to sign his salary abstract, the 10s. being, according to Mr. Nichols's evidence, due for work and labour, the evidence shows that such a transaction did take place, and Mr. O'Brien did not deny the fact. The explanation is that Mr. James, bitterly hostile to Mr. O'Brien, keeps the only store in the place, and will only supply him with what he requires for cash. The members of committee—Parker, Denison, James, and Nichols—refuse to sign his salary abstracts: hence he is practically penniless. In his distress he resorts to Nichols, a needy man, and induces him to sign—as stated in his evidence.

4. The men Parker, Denison, James, and Podmore disclaim all feelings of rancour against Mr. O'Brien; but, as I have elsewhere remarked, the conduct of the first three men at the inquiry was such as to force upon me the impression that these feelings exist, and in a highly concentrated state, in the hearts of these men. How caused? It is my opinion, at first by want of tact, displayed by Mr. O'Brien in carrying out Mr. Flannery's direction: That the fees should be regularly collected, and the disposition of these men to evade payment if possible. Parker stated at the last inquiry that he paid his fees by supplying Mr. O'Brien with meat; but Mr. O'Brien showed, by documentary proof, that he paid for the meat in another way. Denison acknowledges his indebtedness. Nichols also. Podmore indirectly acknowledges his indebtedness by becoming insolvent. As regards Mr. Tomkins's refusal to pay the regular fees, he and Mr. O'Brien agreed that 10s. a month be paid for the Tomkins's whole family, and this person showed me a receipt for 10s. for the month of October.

The allegation "that Mr. O'Brien bargained with certain parents to take their children free, in order to swell the attendance," rests on the assertion of Mr. Parker. I regard it as true, as it was verbally confirmed by Messrs. Tomkins and Denison.

Mr. O'Brien's sweeping assertions, touching the character of his opponents, require modifying to some extent. Mr. James is a rough but honest and truthful man. Mr. Denison was a noted political agitator (styled Jemmy the Plasterer), and arrant drunkard; now he is crippled by rheumatism, but a man of strong passions and unscrupulous conduct. Nichols and Podmore are imbeciles from indulging in drinking. Parker is, I believe, all that Mr. O'Brien says of him. Tomkins is apparently a respectable man. I believe I have touched on all the points of importance in the papers forwarded to me, bearing on this case. I would now express my opinion that, in consequence of the ill-feeling against Mr. O'Brien on the part of these men, and the constant agitation they are sure to sustain while he remains, it would be advisable to remove him to another place; and should the Council concur in my opinion, and sanction the removal, I would suggest that he be appointed to the Welaregang Provisional school, now vacant.

I fear that Mr. O'Brien does not possess sufficient tact and discretion to entrust a more important school to him.

C. HOOKINS,
Inspector.

Woomargama Public School: Charges against teacher.

At an inquiry into the above charges, held at the schoolroom, Woomargama, on the 29th January, 1877, the following evidence was given in my presence.

C. HOOKINS,
Inspector.

John Tomkins, C.E., carrier, Woomargama: Resided in Woomargama since 20th July; am about to make my home here; I have eight children to go to school; I do not send them, because I disapprove of the teacher's conduct; I saw Mr. O'Brien drunk about the 1st of October, between Madden's Hotel and the school, about half-past 10 a.m.; I spoke to him; he did not answer; his unsteady gait made me believe that he was tipsy; again, at the end of the second week of October, returning by the school, I called in; I knocked at the classroom door, which flew open, and I observed Mr. O'Brien sleeping on a form; the inner door was shut; heard the pupils in the schoolroom in disorder; I did not wake Mr. O'Brien; I spoke to him—he did not answer; I presumed from this that he was tipsy; during the week ending the 20th October I consider the school was practically closed, as there was only for one day (Monday) an attendance of about 4 pupils; I consider my children have been neglected by Mr. O'Brien; I have sent on an average every day 5 children.

JOHN TOMKINS.

Robert James, C.E., storekeeper, Woomargama: Have resided 11 years in Woomargama; I have seen Mr. O'Brien repeatedly tipsy, reeling and staggering about; have seen him so often that I have ceased to regard it as strange; the assertion that I desired my niece to become teacher of the school, and for that purpose am trying to get rid of Mr. O'Brien, is untrue; my niece is on her dying bed now; I have two children of school age.

ROBERT JAMES.

James Denison, R.C., gentleman:—I have resided in Woomargama twelve years; have two children of school age; I do not send them on account of the teacher's conduct; I have no opportunity of observing Mr. O'Brien whether he is sober or otherwise; I accuse him of unbecoming conduct in visiting the parents, and inducing them to forego their threats of reporting him to the Inspector at the annual examination.

J. DENISON.

John Nichols, C.E., labourer:—I have resided seven years in Woomargama; I have four children of school age; I keep them away because of the teacher's conduct; I have not, that I am aware of, seen Mr. O'Brien tipsy since the Inspector's last visit; I am not aware or do not remember seeing Mr. O'Brien guilty of bad conduct; I did tell Mr. James one day that I took my children away because my children were lousy; Mr. O'Brien offered to pay me money due if I would sign his abstract; I had refused to sign the abstract unless he would pay me; I had always been accustomed to sign it; I do not know of Mr. O'Brien offering 10s. or any money to Mr. Broker to induce me to sign his voucher; Mr. O'Brien paid me 10s., and gave me a receipt for the school fees due; my account was for work done for Mr. O'Brien.

JOHN NICHOLS.

Robert Parker, C.E., farmer, Woomargama:—Have resided ten years in Woomargama; have five children fit to attend school; they do not attend because of the drunken beastly habits of the teacher; I have seen him drunk; I have seen him so, frequently at the public-house, and in the street; I cannot assign a date; I call his habits beastly because he does not keep himself clean and tidy as a teacher should do; I have seen him with a dirty face and clothing; I accuse Mr. O'Brien of inducing parents by unfair means to send their children to school to swell the numbers at inspectorial examinations; by unfair means, I mean that he offered to take the children and teach them for nothing; he made the offer to me, also to Mrs. Denison, also to Mr. Tomkins; he made the offer to me after I took them away.

ROBERT PARKER.

James Keighran, hotel-keeper, R.C., Woomargama:—I have resided three years in Woomargama; I have four children of school age; have not seen him the worse for liquor since the last inspectorial visit; I decline to say whether he is of filthy habits, as I have no opportunity of judging; I know that he offered money to induce a person to sign his abstract; he offered Mr. Nichols 10s.; I cannot say whether it was a gift, or in payment of an account; I have not known him offer any one else since the last inquiry by the Inspector.

JAMES KEIGHRAN.

Charles

Charles Cook, C.E., farmer, Woomargama:—I have two children; have resided here seven years; I do not send them because Mr. O'Brien told my children "That if they can't learn their lessons at home, he can't teach them at school"; the letter dated 18th July, 1876, was signed by my wife without my consent; I do agree with the contents of the letter marked A.
CHARLES COOK.

(A.)

Woomargama, 18 July, 1876.

I beg to state that I am compelled to keep my children from school in consequence of their being employed at home. And I beg further to state that I have no objection to Mr. O'Brien, the teacher.

CHARLES COOK.

William Gee, C.E., grazier, 3 miles from the school:—I reside over 3 miles from the school; I have two children of school age; I do not send them to school, it is too far, and I require them at home; have known Mr. O'Brien three years; have frequent opportunities of observing his conduct; have never seen him under the influence of liquor; from my opportunities of knowing, I believe Mr. O'Brien to be entirely fit to be a teacher, both as to conduct and ability; I have visited the school, but not since the Inspector's last visit; every time I met him outside he was as sober as he is now.

WILLIAM GEE.

Elijah Marsh, C.E., farmer, Woomargama:—I have resided in Woomargama two years; I have four children of school age; I do not send them to school, but I promised to send them to-day, by withdrawing them from Germanton School; this school is too far; I withdrew them from Woomargama Pub. because the teacher was sick, and my children were irregularly taught; I had no other reason for withdrawing my children; their improvement was greater with Mr. O'Brien than with the teacher of Germanton School; he never, on any occasion, offered to take my children for nothing—not in my presence I mean; I have never seen him under the influence of liquor; I have not seen Mr. O'Brien very frequently this last twelve months; my children have attended this school regularly up to October last.

his
E. x MARSH.
mark

Thomas Freer, C.E., mail-driver, Woomargama:—I have resided two years and a half in Woomargama; I have one child; I have never seen Mr. O'Brien under the influence of liquor; have never driven Mr. O'Brien as a passenger; I have never seen Mr. O'Brien come out of the coach intoxicated; I have had every opportunity of observing his conduct during the day; I drive the night mail; I sleep from 5 a.m. to 12 noon; I reside close to the school; I do not know that Mr. O'Brien offered money to Nichols; I do not consider myself prevented by Mr. O'Brien's conduct from sending my child to school; I have never observed anything in Mr. O'Brien's conduct since last inquiry derogatory to the position of a teacher.

THOMAS FREER.

Mr. Geo. Madden, R.C., hotel-keeper, Woomargama:—I have resided in Woomargama since July last; have no children of school age; I have never known him (Mr. O'Brien) give way to excess in drinking; I have never seen him tipsy; I have known persons say, "We'll try to make him (squiffy) drunk"; I have known James Keighran put the whip round Mr. O'Brien's neck, and lead him to the bar; Mr. O'Brien was dragged unwillingly to the bar; I remonstrated with Keighran; Mr. O'Brien drank three glasses of ale,—one large, two small; he drank the first willingly, he drank the others unwillingly; Mr. O'Brien lives in a detached part of my house; he passes most of his evenings in his own room or walking about; I have always observed him going to school in a sober and proper state.

GEORGE MADDEN.

Patrick Madden, R.C., farmer, bachelor:—I have heard the charges preferred against Mr. O'Brien; I cannot say whether they are true or false; I have seen Mr. O'Brien tipsy once, but not since July last; I have never seen Mr. O'Brien guilty of conduct unbecoming a teacher; I have seen Mr. O'Brien scores of times lately.

PATRICK MADDEN.

William James Parker, 16 years, pupil:—I have attended school off and on for about four years; I do not attend regularly; have not attended school since Mr. Tomkins came to Woomargama; I therefore could not have seen him; the door mentioned in Mr. Tomkins's evidence (back door) is sometimes unlocked and sometimes locked; I have gone out through the door more than once; I found the door unlocked, but have sometimes found it locked; I have never known Mr. O'Brien leave the schoolroom except for a short time, never more than ten minutes; I live 2 miles away; I have no means of seeing Mr. O'Brien after school hours, except occasionally; I have never seen Mr. O'Brien tipsy; I have seen the children unruly, but I have not seen Mr. O'Brien neglect teaching us.

WILLIAM JAMES PARKER.

Jane Graham, C.E., 16 years, pupil, Woomargama:—Have attended this school four years; have attended this last six months regularly; the back door is mostly locked; I found it on one occasion unlocked; it could be unlocked without my knowing it; I see him two or three times a week, but during these times have never seen him tipsy; I never knew him leave the school during school hours; I have never known Mr. O'Brien go and sleep during the school hours, either in the classroom nor schoolroom; I never am absent from the school during school hours.

JANE GRAHAM.

Richard Podmore, C.E., tanner, Woomargama:—I have lived 6 years in Woomargama; I have one child seventeen years old; I intend sending him to school again, but not to Mr. O'Brien; I live opposite the school; I have seen Mr. O'Brien tipsy lately at the hotel; I have seen him drink to excess; I have seen him drink five or six glasses (large); I judged him to be tipsy from his manner; he is very different when sober; I do not think he could keep from drink; he drinks ale; have not observed him come drunk to school.

RICHARD PODMORE.

No. 29.

The Teacher, Woomargama Public School, to The Secretary, Council of Education.

Sir,

Provisional School, Woomargama, 31 January, 1877.

I have the honor to inform you that the majority of the people here have decided to give me their support, and continue it as long as I remain here, in consequence of the glaring false charges preferred against me by Messrs. Tomkins, Parker, James, Denison, and Podmore. It is evident to the simplest understanding they are mere vague assertions, unsupported by any corroboration whatever, and for the most part reiterations of statements made at the last investigation held before you last July. I have now an attendance of 22 children; the families are as follow:—

Messrs.	Keighran	4	children
	Nichols	3	"
	Freer	1	"
	Salfinger	1	"
	Parker	1	"
	Graham	5	"
	Marsh	3	"
	Morris	4	"

22

And

And I have no doubt the number will be increased. I hope you will attend to the evidence given by Messrs. Gee, G. Madden, P. Madden, Keighran, Freer, and Nichols, and the two children, and as a matter of justice give me the benefit of it, because it is perfectly true, and the contra evidence is utterly untrue and devoid of truth. With regard to Tomkins, his statement that he judged of my being drunk in the first instance by my gait, surely he should, if such was the case, he would have followed me up to the school and proved it; but he could not have done that for he never saw me. As regards his second charge—that I was lying asleep on a form in the classroom—that is a glaring falsehood, for there has not been a form in the place indicated for the last six months, and it is a flat contradiction to his statement made to the Council, namely,—“That he found me asleep in my chair from the effects of drink.” How could he know that when he did not awake me; and I ask you would it be likely that he would leave his children at the mercy of a drunken man. And another thing that strikes me as rather odd: Is it at all probable that a man going to visit a school for the first time would go to the back door instead of the front, where every stranger enters. I think it must appear manifest to you that both his charges are untrue, and a base invention; but I am not astonished at it, for I know him to be an arrant liar, and a man of the worst character, being a gambler and a drinker to excess. As regards the report that I have been drunk in Albury, I declare it to be a monstrous lie. I have been only four times in Albury for the last six months, and the first three times I went to Albury in the morning and came out in the evening. The last time I went to Albury was at the last Christmas vacation, and I remained there five days; during that time I resided at the “Carriers’ Arms,” and I wish you would ask the landlord (Mr. Cass) if I was drunk during that time; and besides, I had the honor of seeing you and conversing with you in that time, and I leave it to you to say if I was drunk. I should mention to you that I have made it a rule through life never to drink beer or any other drink, either before or during school time, and I have taken the greatest pains to instruct the children in the school, which was proved by Mr. Marsh’s statement when he said his children got on with me much better than they did at the Ten-mile School. I should also mention that the hostility of Messrs. Parker and Podmore arises from the fact, because they both know that I have got authority from the Council to sue them for school fees. In order to show my fitness for holding a Public School, I beg to mention that I have conducted four schools under the Council, and in none of them have charges been made against me with the exception of this; and I venture to say if I was removed to another school all charges against me would cease. I enclose a prospectus of a school I conducted in Melbourne, and I think it right to state that my health at present is excellent, being full of vigour and activity, and that I have serious intentions of entering the state of matrimony, as I have at present a chance.

I have, &c.,
W. O'BRIEN.

No. 30.

The Teacher, Woomargama Public School, to The Secretary, Council of Education.

Sir,

Provisional School, Woomargama, 1 February, 1877.

I have the honor to offer you a few explanations on the matters discussed at the late investigation held here on the 29th ultimo. In the first place, I beg to assure you that the charges preferred against me by Tomkins are entirely false. He laid two charges—the first, that he met me going to the school at 10½ in the morning, drunk. His evidence on this point is very weak, and shows clearly his want of truth; he states that his reason for thinking so was in consequence of my gait. Now I ask you, sir, is such evidence reliable?—Could he not have followed me to the school, and, if such was the case, proved it, and have easily got corroboration? My answer is, that it is a direct lie. In the first place, I have never been later, since the investigation held in July last, than 9 o'clock in the morning; my practice since then is to ring the bell every morning at the school at 9 o'clock precisely; and my rule through life has been not to drink beer or any other strong drink either before school or during school time. Mr. Madden, since I have resided at his house, which is since the investigation held in last July, can bear his testimony to that fact. He stated that he never saw me under the influence of drink, and that I attended to my school duties punctually, soberly, and regularly. Surely such evidence as this ought to be considered as a sufficient refutation to the first charge, especially when Mr. Madden’s character is unsullied, and Tomkins’ character is the worst in the neighbourhood; he spends his leisure time in the public-house nightly, gambling and drinking, and is well known to be an arrant liar, and capable of inventing the most scandalous falsehood. As regards the second charge, namely, that I was asleep in my chair the worse of drink, he stated that he did not see me asleep in my chair the worse of drink, but that I was lying asleep on a form in the classroom quite drunk. The evidence he gives to support this scandalous charge is that his object in visiting the school was to see the way it was conducted, and on entering by the back door the first sight that presented itself to his view was myself in the state described, and that he did not awake me, and that the children were in a state of disorder. My reply to that is that it is perfectly false. My reasons for saying so are as follow:—In the first place, it is not at all likely or probable that he, on going to the school for the first time, would enter by the back door instead of the front; I have never known any stranger to do it yet. Secondly—There was no form in the place indicated in the classroom; it has been removed to schoolroom for a considerable time. Thirdly—He has given no reason for saying that I was drunk; he states that I was lying asleep—fast asleep,—and that he did not awake me. Surely it must be manifest to the obtusest understanding that the charges are base fabrications. Two other reasons I will give, namely, that two of the children were examined, and they stated they never saw me either drunk or asleep in the school; and, in the next place, could any one believe that the children would remain in the school if I was in the beastly state described? It is quite evident that, from their natural curiosity, they would peep into the classroom, and if they saw me in the state described they would rush out of the front door and go home and tell their parents. Another thing that shows the falsity of the charge is the fact of Tomkins not removing his children, or bringing Mr. James, who lives only a few yards from the school, to corroborate his charge; but he could not do so, for it never took place. I should mention that the children are unanimous in saying that they never either saw me asleep or drunk in the school or anywhere else. The only reason I can assign for his placing me in the classroom, and not in my chair in the schoolroom, where he placed me at first, was because he could not get any of the children to corroborate his statement but that is absurd reasoning, because they would be sure to see me in the classroom as readily as

in

in the schoolroom. I declare most solemnly that the whole thing is a palpable falsehood and the emanation of a villainous and unprincipled mind. I think I am much to be pitied by being in contact with such rascals. I hope you will view this matter in its rational state, and give me the justice I deserve. I have now to state that the statements made by Messrs. James, Parker, and Denison, are equally untenable; they reiterated their former statements which they made at the investigation held in July last, before Mr. Hookins, and which were then proved to be perfectly devoid of truth; they repeated their statements this time with more intensity. James was asked if he had seen me drunk, and his answer was that I was drunk—drunk—drunk, perpetually. Parker made a similar answer. Messrs. Gee, G. Madden, P. Madden, Keighran, Marsh, Freer, and Nichols gave their evidence in my favour, truthfully and fairly, and I consider the utmost reliance should be placed in it. I have also handed a testimonial, signed by nearly all the respectable settlers in the district, testifying to my sobriety and the ability I have displayed in the school. I have to state another matter, which shows the feeling of the people towards me. Nearly all the parents and others interested in the school were permitted by Mr. Hookins to be present at the inquiry, and say either for or against me; they listened attentively, and were thoroughly convinced of my innocence, and in consequence they met after the inquiry and decided on giving me their support and continuing it as long as I remain here. I have now an attendance of twenty-two children, and expect an additional number after the harvest. The families in attendance are as follows:—

Mr. Keighran	4 children.
„ Graham	5 „
„ Marsh	3 „
„ Nichols	3 „
„ Morris	4 „
„ Freer	1 „
„ L. Parker	1 „
„ Salfinger	1 „
Total	22 children.

I have now a couple of matters to complain of: I will first allude to Mr. Nichols, concerning 10s. which I gave to him. It was alleged I gave it to him as a bribe; I did no such thing. I gave it to him for repairing my buggy, and my reason for not giving it before was because he owed me £10 sterling for school fees, but when he was exempted from that debt by the Council of Education, I considered myself bound to pay him what I owed him. I will now allude to the reason that actuates Messrs. Tomkins, Parker, James, Denison, and Podmore to be inimical to me. It is because Mrs. James exerts a great influence over them, and they are all heavily in debt to her, and her object has always been to drive me out of my situation for the purpose of putting her niece in my place. I reiterate that statement because I have got proof of it. It was only lately she made this extraordinary statement, namely, "That she would dance 'Larry O'Brien' at my wake, and that her niece would be teacher of the Woomargama school in defiance of me." She made this statement in presence of Mr. G. Madden, who communicated the fact to the Inspector. In conclusion, I have to state since the last investigation I have never been in the company of Messrs. James, Parker, Denison, and Podmore. They never go to Madden's public-house; their haunt is a sly grog-shop in the neighbourhood. Madden's house is too select for them, and they consequently could not see me in a drunken state, for I have never entered the sly-grog-shop. I now leave my case confidently in your hands, and I am sure you will deal with it justly and mercifully, and extend to me the justice it deserves. I hope I have convinced you of the falsity of the charges.

I have, &c.,

WILLIAM O'BRIEN,
Teacher.

No. 31.

Minute of Sir Alfred Stephen.

Woomargama School: Charges against the teacher, O'Brien.

MR. O'BRIEN must be removed if only for his own sake. To a large extent he appears to be the victim of persecution, and the conduct of certain members of the Board at the inquiry before the Inspector is strong evidence of it. The transaction as to the 10s. to Mr. Nichols is quite as discreditable to the latter as to Mr. O'Brien, and under the circumstances requires no reprimand. The teacher should be cautioned as to his future conduct—that it should be such as not to excite suspicion—and residence in a public-house should be avoided. Care will of course be taken that the "niece" spoken of shall not profit by the change of teachers. I suppose that the Inspector's selection of a place for Mr. O'Brien may be adopted. The Board should be informed that the Council does not find the charges proved, and that the removal of Mr. O'Brien does not imply any stain on his character.

A.S., 15/2/77.

No. 32.

Memorandum from The Secretary, Council of Education, to The Teacher, Woomargama Public School.

Council of Education Office, Sydney, 21 February, 1877.

Inquiry into charges preferred against you.

HAVING had under notice the Inspector's report upon his inquiry into the charges preferred against you as teacher of the above school, the Council is of opinion that the complaints made have not been substantiated, and has informed the Local Committee to that effect.

The Council considers it advisable, however, that you should be removed to another school, and has therefore decided to appoint you to the charge of the Provisional School at Welaregang. Formal notification of your appointment will be given in a separate communication.

I am instructed further to caution you as to the necessity for exercising great circumspection in your future conduct, and to point out that it is not desirable that you should take up your residence in a public-house, if any other course be practicable.

W. WILKINS,
Secretary.

No. 33.

The Secretary, Council of Education, to Mr. J. Denison.

Sir,

Council of Education Office, Sydney, 21 February, 1877.

I am directed by the Council of Education to acquaint you that the Council has had under notice the Inspector's report upon his inquiry into the charges preferred against Mr. W. O'Brien, as teacher of the Public School at Woomargama.

2. I am further to state that the Council is of opinion that the complaints made against Mr. O'Brien have not been substantiated. The Council considers, however, that it is desirable that Mr. O'Brien should be removed from the school and has therefore appointed him to another situation. I am to observe that it is not to be understood from his removal that any blame attaches to him, but simply that the circumstances of the school would appear to render a change of teachers advisable.

I have, &c.,

W. WILKINS,
Secretary.

No. 34.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Albury District.

Council of Education Office, Sydney, 22 February, 1877.

Woomargama: Your report dated 31st ultimo, on inquiry into teacher's conduct.

HAVING had under notice your report on your inquiry into the charges preferred against Mr. W. O'Brien, as teacher of the above school, the Council is of opinion that the complaints made against him have not been substantiated, and has informed the Local Committee to that effect.

The Council considers it advisable, however, that he should be removed to another school, and has accordingly appointed him to the Welaregang Provisional School, as recommended in your report. He has been cautioned as to the necessity for exercising great circumspection in his future conduct, and has been informed that it is not expedient that he should reside at a public-house.

W. WILKINS,
Secretary.

EDUCATION.

No. 1.

(A.)

Application for the Establishment of a Public School at Broke.

TO THE COUNCIL OF EDUCATION.

GENTLEMEN,

Post Town, Fordwich, 10 July, 1875.

We the undersigned residents at Broke request that you will be pleased to establish a Public School at that place, under the provisions of the "Public Schools Act of 1866."

We have, &c.,

Local Committee {
 GEORGE WATTS.
 GEORGE CARTER.
 T. MARONEY.
 JOHN A. BLAXLAND, Honorary Secretary.
 FRANCIS HUNT.
 F. DODINGTON.

We have not stated any guarantee as we did not think such would be required after the resolution passed by Parliament.

Information to be supplied by Local Committee.

1. Describe the position of the proposed school? Government grant.
2. What other schools maintained or aided by the Council of Education are within 2 miles of the site of the proposed school? Church of England.
3. If none are within 2 miles, what is the distance of the nearest school? None.
4. Are there any Primary Schools not aided by the Council of Education within 2 miles of the proposed school? If so, of what character, and how attended? None.
5. State the number of children from four to fourteen years of age, living within a radius of 2 miles of the site of the proposed school, *e.g.*,—

Boys	38
Girls	27
Total	65

Religious Denominations:—

Church of England	34
Roman Catholic	27
Presbyterians	4
Wesleyans
Others
Total	65

6. Give a technical description of the proposed site, according to the dimensions and bearings of its boundaries by survey. If possible annex a plan of the ground.
7. By whom is the site granted, and on what terms? By the Government.
8. Is there a right-of-way to the site secured? Yes.
9. Is the ground level or otherwise? Level.
10. What is the nature of the ground upon which the building is to rest? Is it of a rocky, clayey, or sandy character? How drained? How affected by floods? Sandy nature; not liable to floods; well drained.
11. Of which of the following materials are the proposed buildings to be constructed?
 - Hewn masonry.
 - Rubble.
 - Brick? Brick building.
 - Studs and weatherboards.
 - Sawn or split slabs.
12. Are these materials suitable in all respects? Yes.
13. Of what materials are the public or best buildings in the neighbourhood constructed? Brick.
14. What is the cost of building stone, and of what description?
 - Ashlar or rubble?
 - Of bricks, per 1,000? About £2.
 - Of stone or shell lime, per bushel? About 15d.
15. State the price of hardwood, cedar, and pine, per 100 feet, and of shingles, per 1,000? Hardwood £1, cedar 4d. per foot, pine at 25s., shingles at £1.
16. What timber in the locality is the most suitable for shingles and flooring boards? What is the usual length of the shingles? Ironbark, red gum; length of shingle, 18 inches.
17. Do the rates mentioned include carriage to the school site? If not, state cost of carriage? Carriage immaterial.
18. What is the current rate of wages paid in the district to workmen employed in building? 10s. per day.
19. Is there a natural supply of water? Yes, the Willoughby Brook.
20. State the quantity and quality of fencing required, and the cost per rod? Cost of fencing about 5s. per rod for three-railed fence.
21. Add any other circumstances deemed desirable for the information of the Council.

[Enclosure.]

[Enclosure.]

Annex to Application for establishment of a Public School at Broke; Post Town, Fordwich.

We, the undersigned, Parents (or Guardians) of Children residing within the undermentioned distances from the site of the proposed Public School at Broke, hereby undertake that our children, whose names are inserted below, shall attend the said School.

No. 2.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir,

Council of Education Office, Sydney, 26 November, 1875.
I am directed by the Council of Education to acquaint you that your formal application for the establishment of a Public School at Broke, presented by W. C. Browne, Esq., M.P., is now under consideration, and that a further communication respecting it will be addressed to you as soon as the Council has arrived at a decision thereon. Signed also by 5 others.

I have, &c.,
W. WILKINS,
Secretary.

No. 3.

Memorandum from The Secretary, Council of Education, to the Inspector of Schools, Maitland District.

Broke: Application for a Public School at.

Sir,

For your inquiry and report.

Council of Education Office, Sydney, 26 November, 1875.

W. WILKINS,
Secretary.

BROKE.—I visited Broke, and conferred with the Local Committee hereof, on the 4th instant. I also selected a more central and suitable site in place of the one already granted by the Crown.

Broke has already a certified C. E. School, but nearly all the people are dissatisfied with it, and are very anxious to have a Public School, which, when established, will inevitably drain the C. E. of all its scholars.

The people have raised no funds towards the cost of erecting the necessary school premises because of the Parliamentary declaration that Public Schools should be built solely by the State, and because such schools have been provided by the Council without local aid.

The Local Committee is composed of men who are influential, suitable, and very anxious to see the Public School established without delay.

The necessary details of information as to the attendance and school premises are annexed hereto.

Recommendation: I beg leave to recommend that the application for a Public School at Broke be favourably considered by the Council.

J. S. JONES,
Inspector.

[Annex to 3.]

Queries to be answered by Inspectors when reporting upon applications for aid in the establishment of Public Schools. (A.)

1. Where is the school to be situated? Broke—Post Town, Fordwich.
2. What is the nearest Post Town—mention its distance? Fordwich, nil.
3. Have you inspected the proposed site? Is it suitable? (1) Yes. (2) Yes.
4. Is the proposed site the property of the public, or of a private individual. In the latter case is the owner willing to convey the site to the Council? To the public. A grant of the land has not been obtained, but is to be applied for immediately.
5. What schools are in the neighbourhood? Broke, C.E.
6. Do a majority of the residents favour the establishment of a Public School? Yes.
7. Who are the Local Committee? State their professions or occupations, and religious denominations? Mr. George Watts, C.E., grazier; Mr. George Carter, C.E., grazier; Mr. Timothy Moroney, R.C., farmer; Mr. John A. Blaxland, C.E., grazier; Mr. Francis Hunt, R.C., blacksmith; Mr. Francis Dorrington, C.E., innkeeper.
8. Have they chosen one of their number to act as secretary, and another as treasurer? Yes. Mr. J. A. Blaxland, secretary. Mr. G. Watts, treasurer (nominal).
9. What is the population of the school district? About 250.
10. Is the district likely to be permanently inhabited? Yes.
11. State the number of children expected to attend the school, distinguishing males and females:—38 boys, 27 girls; total, 65.
12. State any information you may have received relative to the circumstances of the people likely to require the school? The people generally are in comfortable circumstances, and many of them well-to-do landowners.
13. What amount of local subscription has been raised, or is likely to be raised, towards the erection of the school buildings? (1.) None, the people having been informed by Mr. W. C. Browne, M.L.A., that the Council will build the school without local aid.
14. Will the amount subscribed be remitted to the secretary as required by article 6 of the Regulations? ———.
15. Have you conferred with the local promoters as to the nature of the proposed school buildings, and the materials to be used? State whether the probable amount of funds available will suffice for the erection of the buildings? If not, state whether you have brought this fact explicitly under the notice of the promoters, and their views thereupon? (1.) Yes, it has been deemed advisable to build the school of brick. (2.) ———. (3.) ———.

16. Have the Local Committee considered the necessity for fencing and out-offices in estimating the expense of the school buildings? ———.

17. How is it proposed to keep the building in repair? If it be the settled policy of the Council to exact a local quota towards the cost of effecting repairs, funds can be raised for the purpose, but not otherwise.

18. Have you given the Local Committee any information as to the articles of furniture usually deemed indispensable to the proper conduct of the school, and will they be provided? Yes.

19. Is it properly understood by the promoters of the school that school fees must be paid. What is the gross amount of fees likely to be paid annually? Yes. £50 or £60.

20. In addition to the matters above referred to, state any other circumstances within your knowledge connected with the application which you may consider material for the information of the Council?

The local certified C.E. school has fallen considerably in the estimation of the parents, nearly all of whom have guaranteed to withdraw their children therefrom, and send them to the Public School when erected.

J. S. JONES,
Inspector.

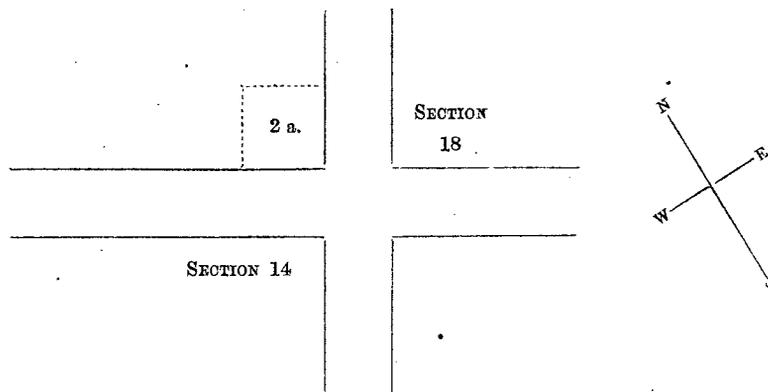

No. 4.

The Inspector of Schools, Maitland District, to The Secretary, Council of Education.

(75-890.)

Broke P.: *Re* proposed change of site.

I BEG leave to report that the site already granted for a Public School hereat is not sufficiently suitable for the purpose. It is subject to floods, it forms part of a natural watercourse, and it is not as central as could be wished. I have inspected a better site, and it meets with the approval of the local committee. I would therefore advise the Council to have it selected in exchange for that already granted, and that the District Surveyor be instructed to consult Messrs. Blaxland, Dorrington, and Watts as to the *locus* of the land, a rough sketch of which is as follows:—

J. S. JONES,
Inspector.

No. 5.

The Inspector of Schools, Maitland District, to The Secretary, Council of Education.

Inspector's Office, 22 December, 1875.

I ADVISE that school accommodation should be provided for sixty pupils in one department, the estimated average number in each department being as follows—

Boys, 30.

Girls, 30.

Infants,

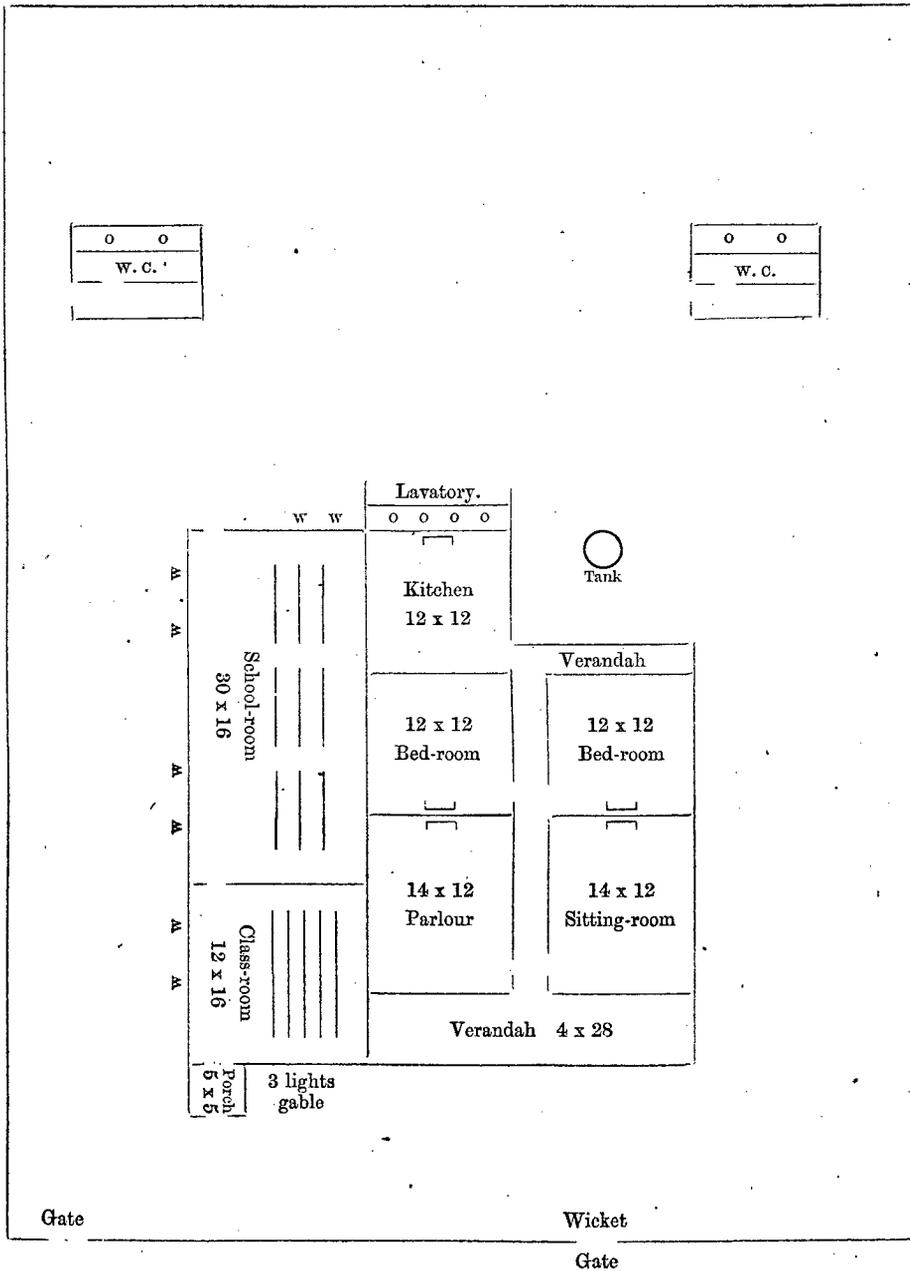

In addition to the above a classroom (1) will be necessary for 20 pupils.

A teacher's residence, consisting of four rooms and kitchen, is required.

The buildings should be constructed of brick on concrete foundation.

I estimate the cost, including out-offices, water supply, fencing, and furniture, at £450.

On the back of this memorandum I have given a rough plan of the school-site, showing the best position for the school-buildings, closets, and tank, and teacher's residence.

SECTION 18.

SECTION 14.

N.B.—The site has as yet not been granted, but applied for, and presumed to be 5 chains by 4 chains.—J.S.J.

J. S. JONES,
Inspector of Maitland District.

No. 6.

The Secretary, Council of Education, to The Inspector of Schools, Maitland District.
(B.C., 75-25,469.) Council of Education Office, Sydney, 22 December, 1875.

Broke: Your B.C., 75-890, dated 20th instant, recommending that another site be applied for.

THE description given by you of the proposed site is not sufficiently definite to enable the Council to make application to the Government for a grant thereof. Be good enough therefore to furnish a description, giving therein both the number of the section in which the land is situated, and the names of the streets it fronts.

W. WILKINS,
Secretary.

No. 7.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Maitland District.

(B.C., 75-468.)

Council of Education Office, Sydney, 7 January, 1876.

Broke: Your report, undated, on application for Public School.

THE Council desires that you will be good enough to report the number of pupils residing in the district, the school accommodation already provided, and the character of such accommodation.

W. WILKINS,
Secretary.

No. 8.

Memorandum from The Inspector of Schools, Maitland District, to The Secretary, Council of Education.

Broke: *Re* proposed Public School at. (Your B.C., No. 76-468.)

THE number of children of school age residing in the district of Broke is between sixty-five or seventy.

2. There is no school building in the proper sense of the term. The school is conducted in a weatherboard church, the greater part of whose furniture is stowed away in the chancel.

3. The part of the church appropriated for school purposes measures 30 ft. by 15 ft. by 10 ft., and affords accommodation for about fifty children.

J. S. JONES,
Inspector.

No. 9.

Memorandum from The Inspector of Schools, Maitland District, to The Secretary, Council of Education.

Broke: *Re* site of proposed Public School at. (Your B.C., 75-25,469.)

I AM unable to furnish the Council with a more definite description of the land defined in my B.C., 75-890, because,—

1. The land of which the proposed school site forms a part is an unsurveyed portion of the Government township.

2. The intended streets that are to run by the proposed school have not been measured or named.

J. S. JONES,
Inspector.

No. 10.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Maitland District.

(B.C. 76-1,288.)

Council of Education Office, Sydney, 19 January, 1876.

Broke: Your B.C. of 8th instant, notifying that you are unable to give a more definite description of proposed new Public School site.

THE description given in your B.C. 75-890 is insufficient to enable the Council to apply for the new site recommended by you.

13 and 14,

Herewith is transmitted copy of part of a plan of the village of Broke, showing the sections mentioned in your B.C. 75-890.

Be good enough to endeavour to give a definite description of the land in question, from the information given therein.

W. WILKINS,
Secretary.

No. 11.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir,

Council of Education Office, Sydney, 19 January, 1876.

Referring to the formal application, dated 10th July last, for the establishment of a Public School at Broke, I am directed by the Council of Education to state that the Council sees no objection to the proposal. Notice of the application has therefore been sent for publication in the Government Gazette, in accordance with the requirements of the 24th section of the "Public Schools Act of 1866."

2. A further communication will be made to you when the necessary notice has been published.

I have, &c.,
W. WILKINS,
Secretary.

No. 12.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Maitland District.

(76-1,287.)

Council of Education Office, Sydney, 19 January, 1876.

Broke: Application for a Public School.

NOTICE of the application for the establishment of a Public School at the above place has now been sent for publication in the Government Gazette, in accordance with the provisions of the 24th section of the Public Schools Act.

W. WILKINS,
Secretary.

No. 13.

No. 13.

Memorandum from The Inspector of Schools, Maitland District, to The Secretary, Council of Education.

(B.C., 76-106.) Broke (P.): *Re* site of. (Your B.C., 76-1,288.)

THE proposed site of this school is marked by a cross in the annexed plan of the Broke township, and appears, from Mr. Blaxland's letter to me (29/1/76), sent herewith, to have been recently surveyed by the local surveyor, and divided into $\frac{1}{2}$ -acre blocks.

J. S. JONES,
Inspector.

[Annex to No. 13.]

J. A. Blaxland, Esq., to The Inspector of Schools, Maitland District.

My dear Sir,

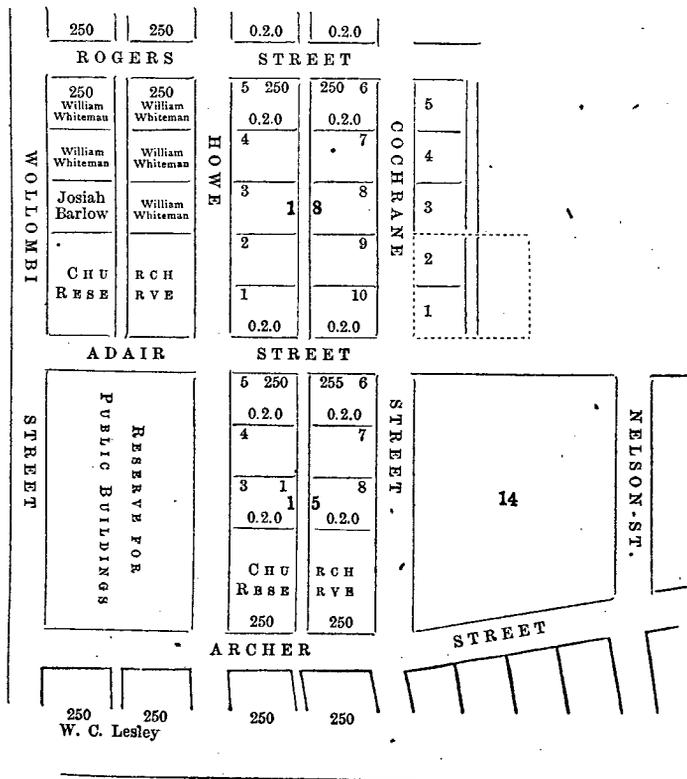

Broke, 29 January, 1876.

I am in receipt of yours of the 24th instant, and herewith send you the plan you enclosed to me, on which I have marked the Public School site with dotted lines.

The land has been surveyed since your inspection, and cut up, I believe, into $\frac{1}{2}$ -acre lots, which you may see by applying at the proper quarter.

Yours, &c.,
JOHN A. BLAXLAND,
Hon. Sec.

BROKE.
PORTION
OF
VILLAGE.

No. 14.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 3 February, 1876.

I am directed by the Council of Education to state that the Council would be glad if the Honorable the Minister of Justice and Public Instruction will be so good as to cause an application to be made to the Government for a grant, for Public School purposes, of the undermentioned land at Broke:— 2 acres in section 19, situated at the intersection of Cochrane and Adair streets.

2. The Council desires that this land should be granted, in exchange for that already dedicated for school purposes, which fronts Wollombi-street, and which is uncentral, subject to floods, and forms part of a natural watercourse. The exact position of the land now required can be pointed out to the surveyor by Mr. J. A. Blaxland, a local resident.

I have, &c.,
W. WILKINS,
Secretary.

No. 15.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir,

Council of Education Office, Sydney, 3 February, 1876.

I am directed by the Council of Education to acquaint you that application has now been made to the Government for a grant, for Public School purposes, of 2 acres of land in section 19, at Broke, situated at the intersection of Cochrane and Adair streets, in exchange for the land fronting Wollombi-street, already dedicated for a school site.

I have, &c.,
W. WILKINS,
Secretary.

10

No. 16.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir, Department of Justice and Public Instruction, Sydney, 11 February, 1876.

3 Feb., 1876.

In transmitting to you the accompanying copy of a letter from the Secretary to the Council of Education, I am directed to state, for the information of the Secretary for Lands, that the Minister of Justice and Public Instruction approves of the application therein made for 2 acres of land for Public School purposes at Broke.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 17.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Maitland District.

Council of Education Office, Sydney, 3 February, 1876.

Broke:—Your B.C., 76-106, dated 1st instant, as to proposed new site.

APPLICATION has now been made to the Government for a grant, for Public School purposes, of 2 acres of land in section 19 at the above place, situated at the intersection of Cochrane and Adair streets, in exchange for that already dedicated for a school site, which fronts Wollombi-street.

W. WILKINS,

Secretary.

No. 18.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir,

Council of Education Office, Sydney, 15 February, 1876.

With reference to a letter from this office, dated 18th ultimo, in which you were informed that notice of the application for the establishment of a Public School at Broke had been sent for publication in the Government Gazette, I am now directed by the Council of Education to acquaint you that notice of the proposal having been duly inserted in that publication, and no objection thereto having been notified to the Council, the Council has finally resolved to establish the school as a Public School, and to recognize the gentlemen signing the application as the Local Committee.

2. Plans and specifications of the proposed school buildings will be prepared in due course, and forwarded to the Public School Committee for tenders.

I have, &c.,

W. WILKINS,

Secretary.

No. 19.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Maitland District.

Broke: Application for a Public School.

Council of Education Office, Sydney, 15 February, 1876.

THE Council has now finally resolved to establish a Public School at the above place.

W. WILKINS,

Secretary.

No. 20.

Memorandum from The Secretary, Council of Education, to Council's Architect.

Broke: Sketch-plan to be prepared.

Council of Education Office, Sydney, 16 March, 1876.

THE Council desires that you will be good enough to prepare a sketch-plan of the proposed Public School buildings at the above place, in accordance with the information contained in the accompanying building form, dated the 22nd December last.

W. WILKINS,

Secretary.

SKETCH-plan of school and teacher's residence herewith transmitted, which I estimate will cost about £1,200, including water supply, fencing, and water-closets. Before proceeding with the fair plans it will be necessary to know whether stone suitable for foundations, sills, &c., can be obtained in the vicinity.—G. ALLEN MANSFIELD, Architect, 21 April, 1876.

No. 21.

No. 21.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 29 March, 1876.

In inviting your attention to my letter of the 3rd February ultimo, applying for certain land at Broke for Public School purposes, I am directed by the Council of Education to request that you will be good enough to have the matter again brought under the notice of the Honorable the Minister of Justice and Public Instruction, with a view to such steps being taken as will lead to an early decision in the matter.

I have, &c.,

D. J. COOPER,

For Secretary.

No. 22.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir,

Department of Justice and Public Instruction, Sydney, 11 April, 1876.

Referring to my letter of the 11th February, respecting the application of the Council of Education for a grant of land at Broke for Public School purposes, I am directed by the Minister of Justice and Public Instruction to request that you will bring the matter under the notice of the Secretary for Lands, with a view to his having the goodness to cause the necessary steps to be taken, so that an early decision may be arrived at therein and communicated to me for the information of the Council.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 23.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Maitland District.

(B.C., 76-6,262.)

Council of Education Office, Sydney, 24 April, 1876.

Broke: Ground plan of proposed school buildings.

A GROUND plan of the proposed Public School buildings to be erected at the above place is forwarded herewith for your approval. To be returned

If you deem any amendments desirable, be good enough to state precisely what alterations are recommended.

The Architect desires to be informed whether stone suitable for foundations, sills, &c., can be obtained in the vicinity.

W. WILKINS,

Secretary.

No. 24.

The Inspector of Schools, Maitland District, to The Secretary, Council of Education.

Broke P.: Your B.C., 76-6,262.

I HAVE no suggestions to offer respecting the plans of the school buildings hereof, beyond recommending what appears to have been over-looked, that water-tank, spouting, and guttering be provided.

2. Stone suitable for sills and foundations, hearths, and steps is, I believe, to be obtained in the vicinity.

J. S. JONES,

Inspector.

No. 25.

J. A. Blaxland, Esq., to The Secretary, Council of Education.

Sir,

Broke, 15 May, 1876.

With reference to your communication of the 15th February last, stating that our application for a Public School at Broke had been favourably received, and that plans, &c., of said school would be forwarded to us in due course,—we now respectfully request that the same may be attended to as soon as possible, as the existing Denominational School is to be broken up immediately, the teacher having tendered his resignation, and the clergyman having decided not to appoint another teacher, in consequence of a Public School having been promised to the district.

I have, &c.,

JOHN A. BLAXLAND.

No. 26.

Memorandum from The Secretary, Council of Education, to The Council's Architect.

Council of Education Office, Sydney, 26 May, 1876.

Broke: Returning sketch-plan of proposed school buildings at.

THE Council now desires you to be good enough to prepare the full plans and specifications, making the alterations as marked on the sketch-plans. The sketch-plans should be returned to this office with the full plans and specifications.

It is desirable that this case should be made an urgent one.

Stone suitable for foundations, sills, &c., can be obtained in the vicinity.

GEORGE MILLER,

For Secretary.

Full plans of school and teacher's residence herewith transmitted, which are planned to seat seventy-five pupils. Estimated cost, about £1,100.—G. A. MANSFIELD, Architect, 8 June, 1876.

12

No. 27.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir,

Council of Education Office, Sydney, 27 June, 1876.

With reference to your letter of the 15th ultimo, I am directed by the Council of Education to acquaint you that the plans and specifications of the proposed Public School buildings at Broke are completed.

2. Will you be good enough, therefore, to inform me, as soon as practicable, in what newspapers the Public School Committee recommend that advertisements inviting tenders for the works should be inserted, and to what place the plans and specifications should be sent, in order that intending tenderers may inspect them.

I have, &c.,

W. WILKINS,

Secretary.

No. 28.

J. A. Blaxland, Esq., to The Secretary, Council of Education.

Sir,

Broke, 30 June, 1876.

We, the Public School Committee, wish you to withdraw from sale the allotments of ground in section 19, as we marked off on the plan sent to us for our Public School, and which we see are up for sale on 19th July next, at the Singleton Court House. We wish you to inform the Land Agent at Singleton to have the same withdrawn from sale.

Your letter of 27th is at hand; we, the School Committee, wish the plans to be sent to the Singleton Court House, also wish the same to be inserted in the *Maitland Mercury*.

I have, &c.,

JOHN A. BLAXLAND,

Hon. Sec.

No. 29.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 1 July, 1876.

In inviting attention to my letters, dated 3rd February and 29th March last, applying for certain land at Broke, for Public School purposes I am directed by the Council of Education to acquaint you, for the information of the Honorable the Minister of Justice and Public Instruction, that the Public School Board has now reported to the Council that the land in question is advertised for sale in Singleton on the 19th instant.

2. In view of the fact that the land is required for school purposes, the Council would be glad if Mr. Docker would be so good as to cause such steps to be taken as will lead to its being withdrawn from the proposed sale, and granted to the Council.

I have, &c.,

W. WILKINS,

Secretary.

13

No. 32.

The Under Secretary of Justice and Public Instruction to The Secretary, Council of Education.

Sir, Department of Justice and Public Instruction, Sydney, 4 July, 1876.

Referring to your letter of 1st instant, intimating that certain land at Broke, applied for by the Council of Education as a site for a Public School at that place, is advertised for sale in Singleton on the 19th instant, and requesting that steps might be taken to lead to it being withdrawn from the proposed sale, and granted to the Council,—I am directed by the Minister of Justice and Public Instruction to state for the information of the Council that your communication has been brought under the notice of the Secretary for Lands, with a view to the request contained therein being complied with.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 33.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir, Council of Education Office, Sydney, 7 July, 1876.

With reference to your letter of the 30th ultimo, I am directed by the Council of Education to acquaint you that advertisements inviting tenders for the works in connection with the proposed Public School buildings at Broke have been forwarded for insertion in the *Maitland Mercury* and in the *Singleton Argus*. The tenders should be addressed to you on or before the 29th instant. When received by you, will you be good enough to submit them to the Council for approval, accompanied by the plan and specification?

2. The plan and specification, together with a few tender forms, are transmitted herewith. It is desirable that you should make the necessary arrangements, in order that intending tenderers may be enabled to see the plan and specification at the Court House at Singleton.

I have, &c.,
W. WILKINS,
Secretary.

No. 34.

Tender for School Buildings.

West Maitland, 28 July, 1876.

Tender for the erection of Public School and residence at Broke.

IN pursuance of advertisement in the *Maitland Mercury*, I, the undersigned, do hereby tender to provide the materials and perform the various works required for the erection and completion of school and teacher's residence at Broke, agreeably to the plan and specification, for the sum of one thousand five hundred and forty-two pounds, and to complete the same within six months from the date of the acceptance of this tender.

I propose the undermentioned persons as sureties for the due performance of the contract, viz. :—

Mr. William Taylor, carpenter, West Maitland.
Mr. David Fox, painter, West Maitland.

The Chairman and Local School Board for Public School, Broke.

JAMES PRITCHARD.

MEMORANDUM.

SHOULD the foregoing tender be accepted, we the undersigned, do hereby agree to be responsible for the due performance of the contract, and we hereby undertake that we will, within seven days from the date of the notification of the acceptance of the said tender, jointly and severally execute and deliver to the Council of Education or Local School Board, Broke, a bond to them in the penal sum of five hundred pounds for securing such performance.

JAMES PRITCHARD.
DAVID FOX.
WILLIAM TAYLOR.

Witness—WILLIAM LOVELL, West Maitland.

No. 35.

Tender for School Buildings.

Broke, 28 July, 1876.

Tender for Public School at Broke.

IN pursuance of advertisement in the *Maitland Mercury*, I the undersigned, do hereby tender to provide the materials and perform the various works required building a school, residence, and buildings, tank, fencing, school furniture, &c., agreeably to the plan and specification, for the sum of eleven hundred and seventy-five pounds (£1,175), and to complete the same within seven months from the date of the acceptance of this tender.

I propose the undermentioned persons as sureties for the due performance of the contract, viz. :—

Mr. Reginald Thomas Blaxland, grazier, Fordwich, Singleton.
Mr. Charles Picton, grazier, Yellow Rock, Singleton.

To the Secretary, Council of Education.

JOSEPH CLARKE.

MEMORANDUM.

MEMORANDUM.

SHOULD the foregoing tender be accepted, we the undersigned, do hereby agree to be responsible for the due performance of the contract, and we hereby undertake that we will, within fourteen days from the date of the notification of the acceptance of the said tender, jointly and severally execute and deliver to the Council of Education a bond to them in the penal sum of five hundred pounds (£500), or any amount that may be required for securing such performance.

CHARLES PICTON.

Witness—VALENTINE HEATON.

No. 36.

R. Blaxland, Esq., to The Council of Education.

Sir,

Broke, 31 July, 1876.

I have been requested by Mr. Joseph Clarke, who, I believe, has tendered for the erection of our school, to inform you that he is to my knowledge a thoroughly competent person to undertake such work. His reasons for doing so are, that he fears he may not be known to you as a builder. He has erected several of the largest buildings in this immediate neighbourhood. The Fordwich Steam Flour Mills and my father's house, which are brick on stone foundations, which have given great satisfaction.

Yours, &c.

R. BLAXLAND.

No. 37.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir,

Council of Education Office, Sydney, 7 August, 1876.

I am directed by the Council of Education to acquaint you that the specifications of the proposed Public School buildings at Broke, together with two tenders for the works, have been received at this office without any letter whatever accompanying them.

2. I am further to point out that the plan of the buildings has not been forwarded, and that a recommendation as to the more suitable tender for acceptance should be furnished by the Public School Committee to the Council. Will you be good enough, therefore, to transmit the plan referred to, and a report upon the tenders.

I have, &c.,

W. WILKINS,

Secretary.

No. 38.

J. A. Blaxland, Esq., to The Secretary, Council of Education.

Sir,

Broke Public School, 11 August, 1876.

With reference to your letter of the 7th ult., informing the Board that the plan of the Public School at Broke had not been forwarded with the other papers, I shall write to the C.P.S., Mr. Dudding, and make inquiries—it may have been mislaid in the Court House, Singleton—and shall have it forwarded at once.

The Board were not aware that the tenders should have been opened here, or that they should have sent any recommendation. If the tenders are sent back to the Board they will be attended to.

We regret this error has occurred, but being all new hands at this work, had only the Secretary's instructions to follow.

I have, &c.,

JOHN A. BLAXLAND,

Hon. Sec.

No. 39.

J. A. Blaxland, Esq., to The Secretary, Council of Education.

Sir,

Broke, 12 August, 1876.

In a separate parcel I beg to enclose, per this post, plan of the proposed Public School at Broke, which was found in the Court House, Singleton.

I have, &c.,

15

No. 41.

J. A. Blaxland, Esq., to The Secretary, Council of Education.

Sir,

Broke, 23 August, 1876.

I wrote to you on the 10th ult., informing you that I had found the plan of the propose. Public School at Broke, and had sent it in the same post to you, with two forms. Please let me know if you have received them.

I shall be much obliged if you will inform the Board what action or steps the Council of Education has taken with regard to the two tenders sent in, whether they are going to return them, or approve of one down there.

The Board will be much obliged if you will lay this matter before the Council of Education at once, and let them have an answer, as the building is very much required in this locality.

I have, &c.,

JOHN A. BLAXLAND,
Hon. Sec.

No. 42.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

(No. 76-13,651.)

Sir,

Council of Education Office, Sydney, 25 August, 1876.

Referring to previous correspondence, I am directed by the Council of Education to acquaint you that the Council has authorized the acceptance by the local committee at Broke, of Mr. Joseph Clarke's tender for the erection of Public School buildings, for the sum of one thousand one hundred and seventy-five pounds (£1,175), of which the Council will pay the whole.

2. I am further to state, however, that the Council cannot sanction the commencement of the buildings until the site has been granted. When notification has been received at this office from the Government, that the land applied for has been appropriated for school purposes, the Council will transmit the usual bonds, agreements, plans, and specifications for signature by the parties to the contract, and will authorize the Board to have the works proceeded with.

3. In reply to your letter of the 23rd instant, I am to inform you that the original plan of the buildings was duly received at this office on the 15th.

I have, &c.,

W. WILKINS,
Secretary.

No. 43.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Maitland District.

Council of Education Office, Sydney, 25 August, 1876.

Broke: Erection of School Premises authorized.

THE Council has authorized the performance of the undermentioned works in connection with the above school, at a cost of £1,175 (the works, however, are not to be commenced until the site has been granted):—Erection of school buildings.

When visiting the school you should inspect these works and report whether they have been faithfully executed.

W. WILKINS,
Secretary.

No. 44.

Memorandum from The Secretary, Council of Education, to Council's Architect.

Broke: Duplicate plans and specifications of proposed buildings.

Council of Education Office, Sydney, 25 August, 1876.

THE Council desires that you will be good enough to prepare duplicates of the accompanying plans and specifications of the proposed Public School buildings at the above place.

W. WILKINS,
Secretary.

DUPLICATE plan and specifications, together with originals, are herewith transmitted.—J. ALLEN MANSFIELD, Architect, 1 September, 1876.

No. 45.

J. A. Blaxland, Esq., to The Secretary, Council of Education.

Sir,

Broke, 2 October, 1876.

Referring to your letter of the 25th August, 1876 (No. 76-1365), the same stating that the tender of Mr. Joseph Clarke was accepted to build the Broke Public School, I beg to state that the committee is anxious to have the bond and other necessary documents signed that the contractor may go on with the work. We trust that you will use your influence to carry the same into effect as speedy as possible.

I have, &c.,

No. 46.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir,

Council of Education Office, Sydney, 10 October, 1876.

With reference to your letter of the 2nd instant, stating that the Public School Committee at Broke are anxious to have the bonds and agreements in connection with Mr. Joseph Clarke's contract for the erection of Public School buildings at that place signed, in order that the works may be proceeded with, I am directed by the Council of Education to invite your attention to my letter of the 25th August last (No. 76-13,651), in which it is notified that the Council cannot transmit the bonds and agreements for signature and authorize the commencement of the buildings until the site has been granted by the Government.

2. The Council has endeavoured to secure an early grant of the proposed site which was applied for on the 3rd February last, having sent two communications to the Government since that date relative to the matter, but without effect. The Government have now been again written to on the subject, and the Council hopes that the land will shortly be set apart for Public School purposes. When the site has been obtained a further letter will be addressed to you.

I have, &c.,

W. WILKINS,

Secretary.

No. 47.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 10 October, 1876.

With reference to your letter of the 4th July last (No. 76-5090), respecting certain land at Broke, required for Public School purposes, I am directed to state that the Council of Education would be glad if the Honorable the Minister of Justice and Public Instruction would be good enough to take such action as will lead to a speedy grant of the land.

2. I am to add that Public School buildings, for which a tender has been accepted, are urgently needed in the locality, but the Council cannot authorize their erection in consequence of the site not being granted, and the Council therefore trusts that Mr. Docker will move in the matter as requested in the first paragraph of this communication.

I have, &c.,

W. WILKINS,

Secretary.

No. 48.

The Under Secretary of Justice and Public Instruction to The Under Secretary of Lands.

Sir,

Department of Justice and Public Instruction, Sydney, 13 October, 1876.

Referring to my letter of the 1st July and previous correspondence respecting the application of the Council of Education for a grant of land at Broke for Public School purposes, I am directed by the Minister of Justice and Public Instruction to request that you will bring the matter under the notice of the Secretary for Lands, with a view to his having the goodness to cause the necessary steps to be taken, so that an early decision may be arrived at therein and communicated to me for the information of the Council.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 49.

Memorandum to The Secretary, Broke.

Council of Education Office, Sydney, 15 November, 1876.

Mr. Lindsay Thompson, of the Lands Office, informed me this morning that there appears from the papers to be no objection to the Council's application being granted, and that the matter now only awaits the Minister's approval.

CHAS. CHATFIELD.

No. 50.

(76-18,374.) The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, 20 November, 1876.

With reference to my letter dated 10th ultimo, and to previous correspondence, relative to the application of the Council of Education for a grant of certain land at Broke for Public School purposes, I am directed to state, for the information of the Honorable the Minister of Justice and Public Instruction, that it has been ascertained, on inquiry at the Lands Office, that the land in question has been measured, and further, that there appears from the papers to be no objection to its being granted to the Council.

2. The case now awaits the decision of the Minister for Lands; but it is represented that a difficulty may be experienced in obtaining a speedy grant of the land, from the fact that it will be necessary that the Government should be placed in possession of the site which has already been dedicated for school purposes before granting the new site. It is therefore suggested that, in order to save time, the Council should re-convey to the Crown the land already dedicated, and thus enable the Minister for Lands to deal finally with the case at an early date. The Council is willing to adopt this course, if necessary, but would prefer that the new site for the school be at once granted, the re-conveyance of the old site to the Crown being apparently a matter of no very great urgency; while, on the other hand, tenders have been accepted for the erection of school buildings, and the contractor has been waiting for three months for permission to commence the work.

I have, &c.,

W. WILKINS,

Secretary.

Memorandum to The Secretary on Broke.

Council of Education Office, Sydney, 6 December, 1876.

Mr. Thompson states that this case has not been decided yet, but that it will be submitted to the Minister to-morrow, with a recommendation to grant the new site prior to resuming the old one.

CHAS. CHATFIELD.

No. 53.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

(76-19,323.)

Sir, Council of Education Office, Sydney, 8 December, 1876.

Adverting to my letter, dated 20th ultimo (No. 76-18,374), I am directed by the Council of Education to again inquire whether the Government has yet arrived at a decision upon the Council's application for a grant of certain land at Broke in exchange for the land formerly dedicated for school purposes.

2. As mentioned in my letter, there was apparently no objection to a compliance with the Council's application, and it has now been ascertained, from recent inquiries at the Lands Office, that it is proposed to grant the new site without delaying the matter until the old one has been resumed.

I have, &c.,

W. WILKINS,
Secretary.

No. 54.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir, Department of Justice and Public Instruction, Sydney, 12 December, 1876.

Referring to my letter of 27th November last, respecting application of the Council of Education for a grant of certain land at Broke for Public School purposes, in exchange for the land formerly dedicated for school purposes, I am directed by the Minister of Justice and Public Instruction to inform you that a further communication has been received from the Council of Education on the subject, inquiring whether any decision has yet been arrived at.

2. As mentioned in my letter above referred to, there was apparently no objection to a compliance with the Council's application, and it has been ascertained from recent inquiries at the Lands Office that it is proposed to grant the new site without delaying the matter until the old one has been resumed.

I have, &c.,

No. 55.

The Under Secretary for Lands to The Under Secretary of Justice and Public Instruction.

Sir, Department of Lands, Sydney, 4 January, 1877.

In reference to your letter of 27th November last, urging that the application of the Council of Education for a grant of 2 acres of land within section 19 at Broke, in the county of Northumberland, for Public School purposes, may be speedily dealt with, I am directed to inform you that the Honorable the Minister for Lands has approved of the land in question being appropriated for the purpose before-mentioned.

I have, &c.,

W. W. STEPHEN.

No. 56.

The Under Secretary of Justice and Public Instruction to The Secretary, Council of Education.

Sir, Department of Justice and Public Instruction, Sydney, 11 January, 1877.

County
Northumberland

With reference to your letter of the 8th December last (No. 76-19,323), I am directed by the Minister of Justice and Public Instruction to state, for the information of the Council of Education, that a communication has been received from the Department of Lands intimating that the Secretary for Lands has approved of the appropriation, for Public School purposes, of 2 acres of land, within section 19 at "Broke."

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 57.

Telegram from Secretary, Council of Education, to J. A. Blaxland, Esq.

Council of Education Office, Sydney, 13 January, 1877.

MINISTER of Lands has approved of appropriation for Public School purposes of 2 acres of land, within section 19 at Broke. Papers in connection with contract for school buildings will be sent on Monday.

No. 58.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir, Council of Education Office, Sydney, 15 January, 1877.

Also copy of
tender.

With reference to my letter of the 25th August last, intimating that the Council of Education had authorized the acceptance of Mr. Joseph Clarke's tender for buildings in connection with the Public School at Broke, I am now instructed to forward herewith plans, specifications, and bonds, in duplicate, and agreements in triplicate. All these documents require to be signed by the parties to the contract, and one copy of each must be returned to this office. The contractor should retain one copy of each, and the third copy of the agreement should remain in the hands of the Public School Committee. No payments on account of the works can be sanctioned until these documents have been received.

2. It is particularly requested that no alteration may be made in the wording of the documents.

3. I am further to impress upon the Committee the necessity for a strict observance of the directions contained in the accompanying circular as to payments.

I have, &c.,

W. WILKINS,
Secretary.

No. 59.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir, Council of Education Office, Sydney, 15 January, 1877.

I am directed by the Council of Education to invite the attention of the Public School Committee to the conditions upon which payments are made by the Council on account of erection of Public School Buildings, or of additions or repairs to existing premises.

1. The Council will not contribute towards the cost of any buildings, additions, repairs, or other works for which its sanction has not been previously obtained.

2. Remittances of local contributions should be made by bank draft, by cheque upon Sydney Bank, or by Post Office order.

3. Plans and specifications of the buildings, additions, or repairs required, will be prepared by the Council's Architect, or by local Architects approved of by the Council. In cases involving a small expenditure only, they may be prepared by the Public School Committee, and submitted to the Council for approval.

4. If the Architect's plan and specification be approved of, the tenders for the works will be invited by advertisement from this office, in such papers as may be decided upon.

5. The Public School Committee are in no case to accept tenders, on account of which the Council is expected to contribute, unless the Council's sanction has been expressly intimated to them in writing.

6. The Council, when a tender has been approved of, will authorize its acceptance by the Public School Committee, notifying at the same time the precise amount that will be contributed from the Public funds; and the Public School Committee may then enter into a contract with the tenderers. It should be clearly understood that the Council is not a party to the contract, but simply supplies the funds necessary for its execution.

7. When a tender for a specified amount has been accepted under the Council's sanction, no further sum for additions to the works, for "extras," or for inspection of the buildings by an architect, will be granted unless application be made in the first instance to the Council and the proposed expenditure be approved.

8. The forms of bonds and agreements will be prepared in this office, and forwarded for signature by the contractor and the Public School Committee. The attention of the Public School Committee is especially invited to the terms mentioned in the 2nd clause of the agreement on which payments will be made by the Council. By a strict observance of these terms much inconvenience and loss of time may be prevented.

9. Payments on account of contracts are made by cheques drawn by the Council in favour of the Public School Committee. It is not the practice of the Council to place moneys in a bank to the credit of a Public School Committee before the works have been commenced.

10.

10. When payments are due on account of works performed, *application should be made to this office for vouchers, accompanied by a certificate stating value of work performed.* The necessary blank forms of voucher will then be sent for signature. On the return of these forms (duly signed) to this office, payment will be made in accordance with the instructions given at the foot of the vouchers, which may be filled up in any of the following modes:—

1. *To Mr.* , at Sydney. In the event of this plan being adopted, personal application must be made to the cashier at this office during the usual business hours.
2. *To the credit of* in the Bank at Deposits for Country Banks will be made by crossed cheques, unless the cashier is authorized in writing to deduct the cost of a bank draft.
3. *To* , by Post Office Order. The cost of a Post Office Order will be deducted from the amount to be paid.
4. *To* , by post to In this case the cheque will be forwarded by post at the risk of the Cheques forwarded by post will be registered if explicit directions be given for that purpose, and a register stamp be forwarded with the vouchers; *but not otherwise.* No payment can be made unless the direction as to the mode of payment, as well as the receipt, be duly signed. The "date of receipt," the "number of the cheque," and "witness to payment" must be left blank.

I have, &c.,

W. WILKINS,
Secretary.

No. 60.

The Secretary, Council of Education, to J. A. Blaxland, Esq.

Sir,

Council of Education Office, Sydney, 16 January, 1877.

With reference to my telegram of the 13th instant, I am now directed by the Council of Education to acquaint you that the Minister for Lands has approved of the appropriation for Public School purposes of 2 acres of land at Broke, being portion of section 19.

2. The Government has been asked to furnish a tracing of the land in question, a copy of which, when received, will be forwarded to you.

I have, &c.,

W. WILKINS,
Secretary.

No. 61.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 16 January, 1877.

With reference to your letter dated 11th instant, notifying that the Honorable the Minister for Lands has approved of the appropriation for Public School purposes of 2 acres of land within section 19 at Broke, I am directed by the Council of Education to state that the Council would be glad to be furnished with a tracing of the land in question.

I have, &c.,

W. WILKINS,
Secretary.

Springside: Application for aid to a Provisional School at.

Council of Education Office, Sydney, 18 July, 1874.

For your report.

W. WILKINS,
Secretary.

No. 3.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 18 July, 1874.

I am directed by the Council of Education to acquaint you that your formal application for aid to a Provisional School at Springside is now under consideration, and that a further communication respecting it will be addressed to you as soon as the Council has arrived at a decision thereon.

I have, &c.,

W. WILKINS,
Secretary.

No. 4.

Application, &c.

Application for aid to a Provisional School at Springside, Canoblas.

Gentlemen,

Springside, 24 August, 1874.

We beg to request that you will grant assistance to the Provisional School proposed to be established by us at Springside in accordance with the 13th section of the Public Schools Act.

We submit the name of Miss S. Mara as teacher of the school, knowing her to be a person of good moral character, and believing her to be competent to perform the required duties.

We are, &c.,

A. U. ALLEY.
W. WALSH.
DANIEL SHERRY.

The Council of Education, Sydney.

Information to be supplied by applicants.

1. Describe the position of the proposed school? 8 miles from Orange, on the road to Four-mile Creek.

2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? None.

3. If none are within 2 miles, what is the distance of the nearest school? (4) Four miles.

4. Are there any Primary Schools, not aided by the Council of Education, within 2 miles of the proposed school? If so, of what character, and how attended? There is a school kept by an old woman. The average attendance is about (6) six—ten on the roll.

5. State the number of children from four to fourteen years of age living within a radius of 2 miles of the site of the proposed school, *e.g.*,—

Boys	39
Girls	34
Total						73
Religious Denominations:—						
Church of England	10
Roman Catholic	34
Presbyterians	0
Wesleyans	27
Others	2
Total						73

6. Describe the proposed school buildings as regards—(1) material; (2) dimensions; (3) accommodation afforded; (4) state of repair? (1) Substantial slab-wood building with thatched roof; (2) 36 × 14 feet; (3) Forty; (4) Good.

FORM to be filled up by Teachers of proposed Provisional Schools.

Name.	If Married.	Age.	Place where born.	Religious Denomination.	Where Trained.	Where employed, and during what length of time, as Teacher in the Colony.
Susan Mara.....	Unmarried...	20	N.S.W.	Roman Catholic...	Untrained...	Sally's Flat, 10 months. German Hill, 14 "

SUSAN MARA.

Annex to Application for aid to a Provisional School.

We, the undersigned, Parents (or Guardians) of children residing within the undermentioned distances from the site of the proposed Provisional School at Springside, Four-mile Creek, near _____ hereby undertake that our children, whose names are inserted below, shall attend the said school.

Name of Parent or Guardian. (To be written by himself.)	Distance from School.	Name of Child.	Age.	Religious Denomination.

No. 5.

Mr. A. Alley to The Council of Education.

Gentlemen, Springside, 5 October, 1874.
 In reference to our application for a Provisional School on the Four-mile Creek Road, near Springside, I have the honor to inform you that if you intend to entertain the application, and do not do so without further delay, the inhabitants will withdraw their promised support, and transfer it to a private school, already established at Springside.

I have, &c.,
 A. U. ALLEY,
 Secretary.

No. 6.

The Secretary, Council of Education, to Mr. A. Alley.

Sir, Council of Education Office, Sydney, 10 October, 1874.
 Referring to your letter of the 5th instant, inquiring as to the application for aid to a Provisional School at Springside, I am directed by the Council of Education to acquaint you that the Council's decision in the matter is deferred, pending the receipt of the District Inspector's report. That officer's attention has been again invited to the matter, and it is hoped that his report will soon be received.

I have, &c.,
 E. JOHNSON,
 (For Secretary).

No. 7.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Bathurst District.

Springside: Application for aid to a Provisional School.

Council of Education Office, Sydney, 10 October, 1877.

THE above application was referred to you for report on the 18th July last.

Be good enough to attend to the matter at your earliest convenience, as the applicants are complaining of the delay.

E. JOHNSON,
 (For Secretary).

No. 8.

Memorandum from The Inspector of Schools, Bathurst District, to The Secretary, Council of Education.

Springside: Application for aid to a Provisional School at.

Carcoar, 13 November, 1874.

SPRINGSIDE is a settlement of free selectors on the road leading from Orange to Cadia.

Two (2) applications have been made for aid to a Provisional School for the locality. In the first application (herewith returned) it was proposed to establish the Provisional School about $1\frac{1}{4}$ mile from the new Public School at Gosling Creek. The second application annexed was only forwarded after I had visited the place, and reminded the Committee that the means of education had already been provided for the locality by the establishment of the Gosling Creek school.

The site on which it is now proposed to establish a Provisional School is (according to the hon. secretary's statement to me) fully 4 miles from the Gosling Creek school, and all the children who would attend such school, if established, reside 3 miles or more from any existing school. The hon. sec. (Mr. A. U. Alley) further stated to me, at the time of my visit, that the locality of the intended site contained a school population of about twenty-five children, but in the application he has since forwarded such population is given as seventy-three.

Had the school population of the locality been insufficient to warrant the establishment of a Public School I should have recommended the Council to aid a Provisional School in accordance with the annexed application, but to grant such aid to a locality having a school population of seventy-three, would certainly be contrary to the Council's Regulations. At first I thought a mistake had been made in "returning" the school population as seventy-three, but from information since obtained I now believe the return made to be correct.

Miss Mara, the teacher secured for the proposed school, is in all respects a suitable person to have charge of a Provisional School, and the hon. sec. to the Committee stated that the residents would provide a good school building.

I beg to recommend that the local Committee be urged to take steps towards establishing a Public School for the locality.

J. HUFFER,
 Inspector.

[Annex to No. 8.]

Information to be supplied by Inspectors when reporting upon applications for aid to Provisional Schools. Proposed Provisional School at Springside.

1. Who are the persons signing the application as promoters of the school? State their occupations and respective religious denominations? Mr. Alex. U. Alley, free selector, C.E.; Mr. Henry Ring, free selector, R.C.

2. Are they suitable persons to act as a local Committee? Mr. Alley appears to be a suitable person to act as a member of a local Committee. Mr. Ring appears to be only moderately suitable for such an office.

3. Is the information supplied by the applicants correct as regards the distance of other schools? No; Gosling Creek Public School (new) is only $1\frac{3}{4}$ mile from the proposed school. The Spring Terrace School (at present closed) is only $3\frac{1}{2}$ miles distant, and the Orange schools are about $4\frac{1}{2}$ miles distant.

4. Is the information supplied respecting the number of children living within 2 miles of the proposed school correct? No; I believe there are about eighty children living within 2 miles of the proposed school.

5. Is the number of children residing within a reasonable distance of the proposed school insufficient to warrant the establishment of a Public School. (Public Schools Act, sec. 8.)? No; a Public School has now been established at Gosling Creek, $1\frac{3}{4}$ mile from the proposed school.

6. State the number of children expected to attend the school, distinguishing males and females? 13 boys; 19 girls; 32.

7. What do you consider will be the average attendance of pupils? From twenty to twenty-five.

8. Is the district likely to be permanently inhabited? Yes.

9. Describe the school buildings as regards—(1) material; (2) dimensions; (3) accommodation afforded; (4) state of repair? (1) slab walls, zinc roof, boarded floor; (2) 26 ft. x 15 ft.; (3) about thirty-five; (4) moderate.

10. Has sufficient school furniture been provided? If not, will the local Committee engage to provide it? A sufficient supply of tolerably suitable desks and forms has been provided.

11. State what information you have obtained relative to the teacher's character and qualifications? The teacher, Miss Susan Mara, was employed in the Provisional Schools at Sally's Flat and German Hill. Her character and qualifications are already known to the Council.

12. Are the local Committee aware that all Provisional Schools must be conducted as Public Schools? Yes.

13. In addition to the matters before mentioned, state any other circumstances within your knowledge connected with the application, which you may consider material for the information of the Council. As the proposed school is only $1\frac{3}{4}$ mile from the new Public School at Gosling Creek, the annexed application for aid ought not, I think, to have been made.

J. HUFFER,
Inspector.

15/11/74.

[2nd Annex to No. 8.]

Information to be supplied by Inspectors when reporting upon applications for aid to Provisional Schools.

Proposed Provisional School at Springside.

1. Who are the persons signing the application as promoters of the school? State their occupations and respective religious denominations? Mr. Alex. U. Alley, free selector, C.E.; Mr. Wm. Walsh, free selector, R.C.; Mr. Daniel Sherry, free selector, R.C.

2. Are they suitable persons to act as a local Committee? Yes, tolerably so.

3. Is the information supplied by the applicants correct as regards the distance of other schools? I have not visited the proposed site, but Mr. Alley informed me that a site not less than 4 miles from Gosling Creek school was to be selected, and that such site would be over 4 miles from any other school in the locality.

4. Is the information supplied respecting the number of children living within 2 miles of the proposed school correct? I have not been able to obtain definite information respecting this matter. Mr. Alley informed me when I visited the locality that there were about twenty-five children within 2 miles of the site to be selected for the school, but in the annexed application, which has since been filled in and forwarded to me, a "return" of seventy-three children is given.

5. Is the number of children residing within a reasonable distance of the proposed school insufficient to warrant the establishment of a Public School? (Public Schools Act, sec. 8.) As I have not been able to obtain definite information with regard to the number of children resident in the locality, I am unable to answer this question satisfactorily. If the number given under heading five in the annexed application be correct, however, there are sufficient for a Public School.

6. State the number of children expected to attend the school, distinguishing males and females? 18 boys; 20 girls; 38.

7. What do you consider will be the average attendance of pupils? From 21 to 25 (?)

8. Is the district likely to be permanently inhabited? Yes.

9. Describe the school buildings as regards—(1) material; (2) dimensions; (3) accommodation afforded; (4) state of repair? The committee intend to erect a building of the following description:—(1) substantial slab walls, thatched roof, boarded floor; (2) 36 ft. x 14 ft.; (3) for about forty-five; (4) the building is not yet erected.

10. Has sufficient school furniture been provided? If not, will the local Committee engage to provide it? The local Committee will engage to provide sufficient furniture.

11. State what information you have obtained relative to the teacher's character and qualifications? The teacher, Miss Susan Mara, was formerly employed as teacher of the Provisional Schools at Sally's Flat and German Hill. Her character and qualifications are already known to the Council.

12. Are the local Committee aware that all Provisional Schools must be conducted as Public Schools? Yes.

13. In addition to the matters before mentioned, state any other circumstances within your knowledge, connected with the application which you may consider material for the information of the Council? The annexed is the second application which has been made for aid to a Provisional School at Springside. The first application is herewith returned to the Council's office. In the first application the committee proposed to establish the school about $1\frac{3}{4}$ mile from the new Public School at Gosling Creek. When I visited Springside for inquiry respecting the first application, Mr. Alley, the honorary secretary to the Committee, informed me that a Provisional School of about twenty-five children could be established on a site fully 4 miles from the Public School at Gosling Creek, and he afterwards forwarded to me the annexed application (No. 2) for aid to such a school. From the information given in the application it would

would appear that there are seventy-three children of a school age in the locality, but this information does not agree with that given to me by Mr. Alley at the time of my visit. He then stated that there were about twenty-five children residing within 2 miles of the intended site.—J.H.

No. 9.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 26 November, 1874.

I am directed to acquaint you that the Council of Education has had under consideration the formal application, dated 24th August last, for aid to a Provisional School, Springside, together with the District Inspector's report thereon.

2. In reply, I am instructed to state that the Council declines to grant aid to the proposed school, on the ground that the number of children resident in the locality, as shown in the application, is sufficient to maintain a Public School. Under these circumstances the local Committee should at once take the necessary steps towards the establishment of a Public School.

I have, &c.,

E. JOHNSON,
(For Secretary).

Signed also by
N. Walsh and
D. Sherry.

73.

Forms B and C
for Public School
herewith.

No. 10.

Memorandum from The Inspector, Bathurst District, to The Secretary, Council of Education.

Council of Education Office, 26 November, 1874.

Springside: Application for aid to a Provisional School. Your memo. dated 13th instant.

THE Council has adopted your recommendation in this case, and the Committee have been urged to take steps towards the establishment of a Public School.

E. JOHNSON,
(For Secretary).

No. 11.

Mr. A. Alley to The Council of Education.

Gentlemen,

Springside, 22 December, 1874.

In reply to yours of the 26th November, 1874, refusing to grant aid to a Provisional School at Springside, on the ground that there are a sufficient number of children to maintain a Public School, I have the honor to inform you that it would be useless for us to apply for a Public School, as the pecuniary position of the inhabitants will not admit of their subscribing the necessary funds for the building.

I trust the Council will take this into their earnest consideration.

I have, &c.,

A. U. ALLEY.

No. 12.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 7 January, 1875.

I am directed by the Council of Education to acknowledge the receipt of your letter of 22 December last, in reference to an application made to the Council for aid to a Provisional School at Springside, and representing inability to take steps to establish a Public School.

I have, &c.,

W. WILKINS,
Secretary.

No. 13.

Memorandum from The Inspector, Bathurst District, to The Secretary, Council of Education.

Orange, 22 May 1875.

Springside: Relative to the applications that have been made for a Provisional School at.

A PUBLIC and not a Provisional School should be established at Springside, and I have advised Mr. Alley, the Secretary to the local Committee, to apply to the Council for the proper forms. On the plan showing my recent inspection of school site a piece of land marked thus: o, appears. This land is the site that will probably be recommended by the local Committee, and I was given to understand that no other Crown land could be obtained, but shortly after my arrival in Orange I ascertained that a site central to Spring Terrace and Springside could be found.

The result of a second visit to the locality enables me to recommend a most suitable site for a school, central to Springside and Spring Terrace.

Such a school will command an attendance of (50) fifty pupils.

I am aware that the Council has a school site at Spring Terrace, but I believe that the site I now propose will be found much better situated for the whole locality.

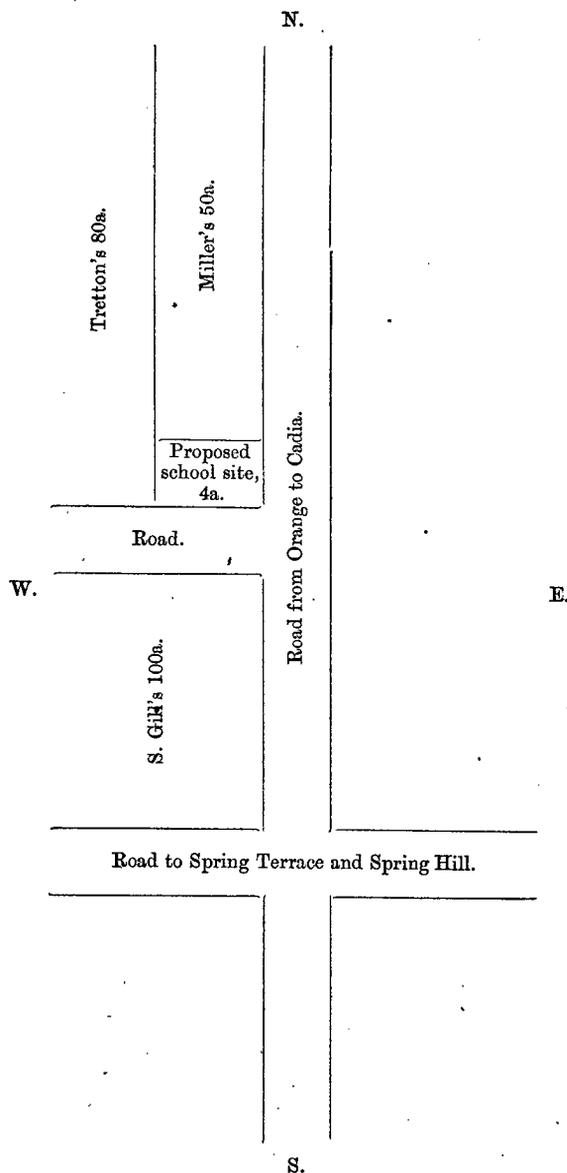

I have annexed a description of the land in question; it contains 4 acres.

J. W. ALLPASS,
Inspector of Schools.

The proposed site is 2 miles from the present Spring Terrace site, and is 5½ miles from Spring Hill.—J.W.A.

No. 14.

The Secretary, Council of Education, to Mr. A. Alley.

(75/10,543.)

Sir,

Council of Education Office, Sydney, 11 June, 1875.

I am directed to acquaint you that the Council of Education has had under consideration a report received from an Inspector relative to the establishment of a Public School at Springside.

2. In view of this report the Council has instructed me to transmit herewith forms to enable the local School Committee to make application for the establishment of a Public School at the place mentioned. I am therefore to request that you will be good enough to have these documents properly filled up, signed, and returned to this office, together with a description of the land approved by the residents in the locality as a site for the school, when the Council will be in a position to take further steps in the matter.

I have, &c.,

W. WILKINS,
Secretary.

No. 15.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 15 July, 1875.

I have the honor, by direction of the Council of Education, to invite your attention to the letter which was addressed to you from this office on the 11th June ultimo, on the subject mentioned below, and to request that you will be good enough to furnish an early reply.

I have, &c.,

W. WILKINS,
Secretary.

Subject: Forwarding form of application for the establishment of a Public School at Springside, and requesting a description of the proposed site.

454-B

No. 16.

No. 16.

The Secretary, Council of Education, to Mr. A. Alley.

Sir, Council of Education Office, Sydney, 14 August, 1875.
 Referring to my letter of the 11th June last (No. 75/10,543), forwarding a form of application for the establishment of a Public School at Springside, and to a further letter from this office dated 15th July ultimo (No. 75/13,377) on the same subject, I am directed by the Council of Education to request that you will be good enough to state whether the local Committee intend to make application for the establishment of a Public School at the place mentioned.

I have, &c.,
 GEORGE MILLER,
 (For Secretary.)

No. 17.

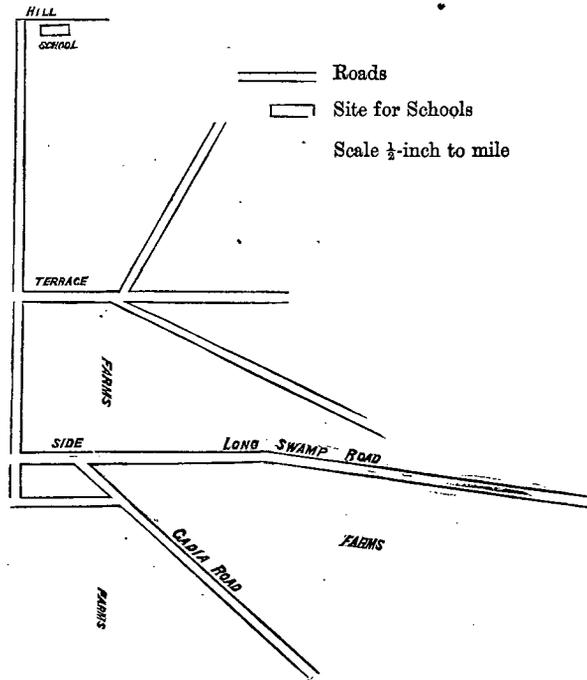

Mr. W. Selwood to The Council of Education.

Springside, 9 September, 1875.

ABOUT three months since, a special Inspector visited this locality and saw the three sites purposed to build a Public School on, and I am told approved of the 4-acre block of Government land at Springside, as it is the best and most central, which I trust you will perceive by the rough sketch I send, showing the three sites as situated from Spring Hill where I believe there is a Public School.

We should have taken steps in the matter long since but thought it useless, as the local Inspector approved and decided to build the school at Spring Terrace, which decision we considered absurd, as it is within 3 miles of Spring Hill. I am requested by several parties to write and ascertain whether the Council approve of the 4-acre block of Government land at Springside, and for such information as required with a form, that immediate steps may be taken in the matter for the erection of a Public School at Springside.

I have, &c.,
 WILLIAM SELWOOD.

No. 18.

Mr. A. Alley to The Council of Education.

Gentlemen, Springside, 13 September, 1875.
 In reply to yours of the 14th August (No. 13/775) received yesterday, I have the honor to inform you that the local School Committee intend to make immediate application for the establishment of a Public School at Springside. If possible, all necessary information will be forwarded to the Council of Education next week. My temporary absence from home for the last five months prevented me replying to your two last letters.

I have, &c.,
 A. U. ALLEY.

No. 19.

The Secretary, Council of Education, to Mr. W. Selwood.

Sir, Council of Education Office, 16 September, 1875.
 With reference to your letter dated 9th instant, inquiring as to the proposed Public School site at Springside, and requesting that a form of application may be forwarded to you, I am directed by the Council of Education to acquaint you that all the necessary forms to enable the local Committee to apply for the establishment of a Public School at the place mentioned were transmitted to Mr. Alley on 11th June last. A communication has however now been received from that gentleman, in which he states that immediate steps will be taken in the matter.

2. It is believed that the site mentioned in your letter is identical with that which the Council has approved of. In order to avoid confusion, it is desirable that the correspondence with the Council respecting the school should be conducted by one person acting on behalf of the local Committee.

I have, &c.,
W. WILKINS,
Secretary.

No. 20.

Application, &c.

Application for the establishment of a Public School at Springside.

GENTLEMEN,

Springside, 16 September, 1875.

We the undersigned residents at Springside and Spring Terrace request that you will be pleased to establish a Public School at that place, under the provisions of the "Public Schools Act of 1866," and we hereby engage to raise, by local subscriptions, £ for the erection of schoolhouse, teacher's residence, out-buildings, and fences—for providing furniture and apparatus, and for other necessary purposes—the total cost of which we estimate to be £ . We further submit the following as the names of persons by whom payment of the sum of £ will be guaranteed, viz. :—

We have, &c.,

Local Committee { ARTHUR UNDERWOOD ALLEY.
THOMAS COMMINS.
WILLIAM SELWOOD.

The Council of Education.

Information to be supplied by local Committee.

1. Describe the position of the proposed school? Parish of Beneree, bounded north and south by Government road; east by the main Cadia Road; west by Mr. Benjamin Fourthun's selection.

2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? There are no schools aided by the Council of Education within 2 miles of the proposed school.

3. If none are within 2 miles, what is the distance of the nearest school? 5 miles from the proposed site to school at Gosling Creek.

4. Are there any primary schools, not aided by the Council of Education, within 2 miles of the proposed school? If so, of what character, and how attended? One temporary private school, kept by Miss Eslick, seventeen children in attendance; no room for more; will only be continued till the Public School should be opened.

5. State the number of children, from four to fourteen years of age, living within a radius of 2 miles of the site of the proposed school, e.g. :—

Boys	43
Girls	54
Total	97
Religious Denominations :—							
Church of England	15
Roman Catholic	32
Presbyterians	0
Wesleyans	48
Baptists	2
Total	97

6. Give a technical description of the proposed site, according to the dimensions and bearings of its boundaries by survey. If possible annex a plan of the ground. See reply to No. 1 question and plan taken by Mr. Inspector Allpass.

7. By whom is the site granted, and on what terms? The land belongs to Government.

8. Is a right-of-way to the site secured? A right-of-way is secured by Government road passing through the land.

9. Is the ground level, or otherwise? The ground is not quite level, but will require very little raising, having a slight incline in one direction.

10. What is the nature of the ground upon which the building is to rest? Is it of a rocky, clayey, or sandy character? How drained? How affected by floods? The foundation is of a rocky character, naturally well drained. Impossible to be flooded. A portion of the land is very good.

11. Of which of the following materials are the proposed buildings to be constructed?

Hewn masonry.
Rubble.
Brick.
Studs and weatherboards.
Sawn or split slabs.

At a meeting of the inhabitants, held at Springside on Thursday, the 16th inst., it was carried that the school, &c., be built of brick, roofed with shingles.

12. Are these materials suitable in all respects? These materials are suitable in all respects.

13. Of what materials are the public or best buildings in the neighbourhood constructed? Slabs and shingles.

14. What is the cost of building stone, and of what description?

Ashlar or rubble?
Of bricks, per 1,000? £2 per 1,000 in Orange; carriage about 10s. per ton.
Of stone or shell lime, per bushel? Stone lime, 1s. 6d. per bushel delivered.

15. State the price of hardwood, cedar, and pine per 100 feet, and of shingles, per 1,000? Hardwood per 100 feet, 20s. delivered; shingles per 1,000 delivered, 22s.

16. What timber in the locality is most suitable for shingles and flooring boards? What is the usual length of the shingles? Stringy-bark is the best timber; length of shingles, 18 in.

17. Do the rates mentioned include carriage to the school site? If not, state cost of carriage. Rates included.

18. What is the current rate of wages paid in the district to workmen employed in building? From 6s. to 10s. per day.

19. Is there a natural supply of water, or will a tank or well be required? If a well, at what depth will water be obtained? There is a good spring on the ground, but it will require a well about 10 feet deep.

20. State the quantity and quality of fencing required, and the cost per rod? 3 acres to be fenced with a three-rail split fence; cost per rod, 5s.

21. Add any other circumstances deemed desirable for the information of the Council? It is very probable that any one taking the contract for building would have all the bricks made on the school ground, as there is every facility for such being done. It will also be necessary for the land to be cleared a short distance around the proposed site for the school. It is very lightly timbered.

[Annex to No. 20.]

Annex to Application for establishment of a Public School at Springside.

We, the undersigned Parents (or Guardians) of children residing within the undermentioned distances from the site of the proposed Public School at Springside, hereby undertake that our children, whose names are inserted below, shall attend the said School.

No. 21.

Mr. A. Alley to The Council of Education.

Gentlemen,

Springside, 17 September, 1875.

I have the honor to enclose application for a Public School at Springside, with the names of ninety-seven children. We have given you all the information with respect to proposed building, and cost of material, &c., that it was possible for us to obtain, and we earnestly hope that the Council of Education will lose no time in calling for tenders for the erection of a Public School and residence for teacher, as it is most urgently required.

I have, &c.,

A. U. ALLEY.

No. 22.

Mr. W. Selwood to The Secretary, Council of Education.

Dear Sir,

Springside, 18 September, 1875.

Your letter of the 16th instant is to hand. In reply I beg to state as an explanation for my proceedings with the Council, it was told us some months since Mr. Alley received letters from the Council. Hearing no more about it, and Mr. Alley has advertised the good will of the farm which he had for six years, and intended to leave the district if he could do so, and keeping us in ignorance, we thought he was disinterested in the matter. Consequently I was requested by several parties to write to the Council. If we had known that all the necessary forms to enable a local Committee to apply for the establishment of a Public School was in Mr. Alley's possession, I certainly should not have written to the Council requesting them.

Trusting this is sufficient to show my ignorance of Mr. Alley's proceedings with the Council up to that date,

I remain, &c.,

WILLIAM SELWOOD.

No. 23.

Government Gazette Notice.

New Public Schools.

Council of Education Office, Sydney, 29 September, 1875.

It is hereby notified for general information, in accordance with the provisions of the 24th section of the "Public Schools Act of 1866," that applications have been received at this office for the establishment of Public Schools at Springside, Woodhouselee.

By Order of the Council of Education,

W. WILKINS,

Secretary.

No. 25.

No. 24.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 30 September, 1875.

Referring to the formal application, dated 16th instant, for the establishment of a Public School at Springside, I am directed by the Council of Education to state that the Council sees no objection to the proposal. Notice of the application has therefore been sent for publication in the Government Gazette, in accordance with the requirements of the 24th section of the "Public Schools Act of 1866."

2. A further communication will be made to you when the necessary notice has been published.

I have, &c.,

W. WILKINS,
Secretary.

No. 25.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Bathurst District.

Council of Education Office, Sydney, 30 September, 1875.

Springside: Application for a Public School.

NOTICE of the application for the establishment of a Public School at the above place has now been sent for publication in the Government Gazette, in accordance with the provisions of the 24th section of the Public Schools Act.

W. WILKINS,
Secretary.

No. 26.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

(75-21,031.)

Sir,

Council of Education Office, Sydney, 22 October, 1875.

I am directed by the Council of Education to state that the Council would be glad if the Hon. the Minister of Justice and Public Instruction will be so good as to cause an application to be made to the Government for a grant for Public School purposes, of the undermentioned land at Springside, viz., 4 acres, parish of Beneree; bounded on the north by Miller's selection of 50 acres; on the south by a road; on the east by the road from Orange to Cadia; and on the west by Tretton's 80 acres. The exact position of the site can be pointed out by Mr. A. U. Alley, a resident in the locality.

I have, &c.,

W. WILKINS,
Secretary.

No. 27.

The Secretary, Council of Education, to Mr. A. Alley.

(75-21,032.)

Sir,

Council of Education Office, Sydney, 22 October, 1875.

With reference to a letter from this office, dated 30th ultimo, in which you were informed that notice of the application for the establishment of a Public School at Springside had been sent for publication in the Government Gazette, I am now directed by the Council of Education to acquaint you that notice of the proposal having been duly inserted in that publication, and no objection thereto having been notified to the Council, the Council has finally resolved to establish the school as a Public School, and to recognize the gentlemen signing the application as the local Committee.

2. Application has been made to the Government for a grant of 4 acres of land, bounded on the north by Miller's selection of 50 acres; on the south by a road; on the east by road from Orange to Cadia; and on the west by Tretton's 80 acres. A further communication will be addressed to you when the decision of the Government has been notified to this office.

3. Plans and specifications of the proposed school buildings will be prepared and forwarded to you, in due course, in order that tenders for the works may be procured by the local Committee.

I have, &c.,

W. WILKINS,
Secretary.

No. 28.

Memorandum from The Secretary, Council of Education, to The Inspector of Schools, Bathurst District.

Springside: Application for a Public School.

Council of Education Office, Sydney, 22 October, 1875.

THE Council has now finally resolved to establish a Public School at the above place.

W. WILKINS,
Secretary.

15

No. 29.

The Secretary, Council of Education, to Mr. E. Gell.

(75-21,097.)

Sir,

Council of Education Office, Sydney, 22 October, 1875.

I am directed by the Council of Education to inquire (1) whether you would be willing to undertake the preparation of plan and specification of a proposed Public School at Springside, near Orange, and superintend the erection of the buildings; and (2) in the event of your agreeing to do so, upon what terms?

2. It is necessary to explain that, owing to the great press of business, the Council's architect, G. Allen Mansfield, Esq., is not able to supply the requisite plans and specifications with sufficient rapidity. To prevent loss of time from this cause, the Council has resolved to employ under certain limitations, and wherever practicable, local architects to prepare plans and to superintend the erection of school buildings. The principal conditions upon which local architects will be employed, are the following:—

1. As a rule the Council's architect will furnish a sketch plan of the proposed buildings.
2. Fair working plans, elevations, and sections are to be prepared by local architects, with all details, subject to revision when considered desirable by the Council's architect.
3. The Council may, when deemed advisable, send its own architect to inspect works carried on under the superintendence of local architects.
3. The revision by the Council's architect is intended to secure the advantage of that officer's long and extensive experience in the construction of school buildings, and his inspection of buildings may be found necessary in cases of disputes.
4. In the case of Springside however it is intended that the matter should rest entirely in your hands, should you be disposed to undertake the work on terms acceptable to the Council.

I have, &c.,

W. WILKINS,

Secretary.

No. 30.

Mr. E. Gell to The Secretary, Council of Education.

Sir,

Bathurst, 27 October, 1875.

I have the honor in reply to yours of the 22nd (No. 75-21,097) to state that I shall be glad to prepare plans and specification for and superintend the erection of the proposed Public School at Springside.

My terms are 5 per cent. upon the cost, and a further charge of two guineas per day travelling expenses.

I have, &c.,

ED. GELL.

No. 31.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir,

Department of Justice and Public Instruction, Sydney, 27 October, 1875.

In transmitting to you the accompanying copy of a letter from the Secretary to the Council of Education, I am directed to state, for the information of the Secretary for Lands, that the Minister of Justice and Public Instruction approves of the application therein made for 4 acres of land for Public School purposes at Springside.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 32.

(75-22,604.) The Secretary, Council of Education, to Mr. E. Gell.

Sir,

Council of Education Office, Sydney, 12 November, 1875.

Referring to your letter of the 27th ultimo, I am directed by the Council of Education to state that the Council has agreed to pay you for preparing plans and supervising the works in connection with the proposed Public School buildings at Springside at the rate of 5 per cent. upon the cost of such buildings, together with £2 2s. per day for travelling expenses when supervising the works.

2. Will you be good enough, therefore, to prepare and forward to this office as soon as practicable a sketch plan of the proposed buildings (including teacher's residence), to accommodate sixty pupils and to be constructed of brick, with shingled roof. A plan (ground) showing the position of the porch and lavatory and the most convenient way of placing the desks is transmitted herewith for your guidance. The teacher's residence should consist of three rooms and a kitchen, 12 feet by 12 feet each, and a small storeroom (say 12 feet by 6 feet); water-closets and a tank will also be required.

I have, &c.,

W. WILKINS,

Secretary.

No. 33.

Mr. E. Gell to The Secretary, Council of Education.

Sir,

Bathurst, 20 November, 1875.

In accordance with your instructions (No. 75-22,604), I forward a sketch of plan for the proposed Public School at Springside.

When returning the sketch I shall be glad to receive any remarks your experience may suggest.

I have, &c.,

ED. GELL.

No. 34.

No. 34.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

(75-24,483.)

Sir,

Council of Education Office, Sydney, 10 December, 1875.

In inviting your attention to my letter of the 22nd October last (No. 75-21,031), applying for certain land at Springside for Public School purposes, I am directed by the Council of Education to request that you will be good enough to have the matter again brought under the notice of the Honorable the Minister of Justice and Public Instruction, with a view to such steps being taken as will lead to an early decision in the matter.

I have, &c.,

W. WILKINS,

Secretary.

No. 35.

(75-24,780.) The Secretary, Council of Education, to Mr. E. Gell.

Sir,

Council of Education Office, Sydney, 14 December, 1875.

With reference to your letter of the 20th ultimo, enclosing sketch plan of the proposed Public School buildings at Springside, I am directed to acquaint you that the Council of Education approves of the plan of the schoolroom, but notes that the plan submitted by you does not include a hall, that the rooms are not of the prescribed dimensions, and moreover that exception may be taken to their arrangement.

2. A rough sketch, showing the usual dimensions and arrangement of the teacher's residence, is forwarded herewith for your information; and I am to request that you will be good enough to adopt this plan, and to prepare as soon as practicable the full plans and specification of the whole of the works, including a tank, spouting, two water-closets, furniture, and fencing for 4 acres of land, with the necessary gates. The plans and specifications, when completed, should be duly submitted to the Council for approval. The Council will be glad if you will complete this matter at an early date, as there are other works that may be placed in your hands.

3. I am to add that the water-closets should be constructed separately for the sexes, and that the one for the use of the boys should have a urinal attached.

4. With regard to the furniture, it is desirable that you should confer with the District Inspector as to the articles required for the school. A few blank forms of plans and specifications are transmitted herewith for your guidance. One of these forms, filled up, is usually attached to the specification of the buildings.

I have, &c.,

W. WILKINS,

Secretary.

No. 36.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir,

Department of Justice and Public Instruction, Sydney, 16 December, 1875.

Referring to my letter of the 27th October, respecting the application of the Council of Education for a grant of land at Springside for Public School purposes, I am directed by the Minister of Justice and Public Instruction to request that you will bring the matter under the notice of the Secretary for Lands, with a view to his having the goodness to cause the necessary steps to be taken, so that an early decision may be arrived at therein and communicated to me for the information of the Council.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 37.

Mr. A. Alley to The Council of Education.

Gentlemen,

Springside, 18 December, 1875.

I have the honor to acknowledge the receipt of yours of the 22nd October (No. 75/21/032), informing me that plans and specifications for the proposed school buildings at Springside would be forwarded to me in due course of time, but up to the present I have not received them, though anxiously looking for them by every mail.

If it is the intention of the Council to build us a schoolhouse, &c., unless tenders are called for and obtained at once there is no possibility of a school being built for, at the very least, twelve or eighteen months, because it is impossible to get timber out of the bush in this district during winter, so that unless it is obtained this summer it cannot be obtained until next, and if we are to be so long without this much required building, as far as the present school children are concerned we might as well be without it altogether.

I have, &c.,

A. U. ALLEY.

No. 38.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 28 December, 1875.

With reference to your letter of the 18th instant, respecting the erection of the proposed Public School buildings at Springside, I am directed by the Council of Education to acquaint you that the Council's architect has been unable, through press of work, to prepare the necessary plans and specifications. The services of an architect at Bathurst have, however, been secured to draw these documents, and to supervise the works. The Council therefore hopes to be in a position shortly to authorize the local School Committee to procure tenders.

17

2. I am, however, to remind you that until the land applied for by the Council has been granted by the Government the erection of the buildings cannot be proceeded with.

I have, &c.,
W. WILKINS,
Secretary.

No. 39.

Mr. E. Gell to The Secretary, Council of Education.

Sir,

Bathurst, 21 January, 1876.

By this mail I forward plans and specification for the proposed school at Springside.
Hoping they will receive the approval of the Board,

I remain, &c.,
ED. GELL.

No. 40.

The Secretary, Council of Education, to Mr. E. Gell.

(76-1,906.)

Sir,

Council of Education Office, Sydney, 31 January, 1876.

With reference to your letter of the 21st instant, forwarding plans and specifications of the proposed Public School buildings at Springside, I am directed to state, that the Council of Education has approved the documents submitted, and will cause tenders for the works to be procured by the local School Committee as soon as a notification has been received at this office from the Government granting the land applied for as a school site.

2. In the meantime, I am to request that you will be good enough to prepare duplicate plans and specifications, and forward them to this office in due course. The original plans and specifications are transmitted herewith.

I have, &c.,
W. WILKINS,
Secretary.

No. 41.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

(76-2,188.)

Sir,

Council of Education Office, Sydney, 4 February, 1876.

In inviting your attention to my letters of the 22nd October and 10th December last, applying for certain land at Springside for Public School purposes, I am directed by the Council of Education to request that you will be good enough to have the matter again brought under the notice of the Honorable the Minister of Justice and Public Instruction, with a view to such steps being taken as will lead to an early decision in the matter. Nos. 75-21,031
and 24,483.

2. I am to add that the Council cannot proceed in the matter of the erection of the necessary school buildings until a site has been granted.

I have, &c.,
W. WILKINS,
Secretary.

No. 42.

Mr. E. Gell to The Secretary, Council of Education.

Springside: Public School plans.

Sir,

Bathurst, 7 February, 1876.

In accordance with instructions No. 76-1,906, I forward duplicate plans and specifications of Springside School, &c.

Awaiting your further instructions,

I remain, &c.,
E. GELL.

No. 43.

Mrs. E. Gell to The Council of Education.

Bathurst, 10 February, 1876.

Mrs. Gell begs to inform the Council of Education that Mr. Gell is away at Mudgee and cannot be back till Monday or Tuesday next, when he will be sure to send the plans required.

No. 44.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir,

Department of Justice and Public Instruction, Sydney, 15 February, 1876.

Referring to my letter of the 16th December and previous correspondence respecting the application of the Council of Education for a grant of land at Springside for Public School purposes, I am directed by the Minister of Justice and Public Instruction to request that you will bring the matter under the notice of the Secretary for Lands, with a view to his having the goodness to cause the necessary steps to be taken, so that an early decision may be arrived at therein and communicated to me for the information of the Council.

2. I am to add that the Council cannot proceed in the matter of the erection of the necessary school buildings until a site has been granted.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

18

No. 45.

The Secretary, Council of Education, to Mr. A. Alley.

(B 9.)

Sir,

Council of Education Office, Sydney, 19 February, 1876.

Referring to your letter, dated 18th December last, I have now the honor, by direction of the Council of Education, to forward herewith the full plans and specifications of the proposed Public School buildings at Springside, in order that tenders for the works may be procured by the Public School Committee, and submitted to the Council for approval.

2. The plans and specifications should be returned to this office with the tenders.

I have, &c.,

W. WILKINS,
Secretary.

No. 46.

Mr. A. Alley to The Council of Education.

Gentlemen,

Springside, 18 March, 1876.

I have the honor to acknowledge the receipt of yours of the 19th February (which did not reach me till the 26th), forwarding plans and specifications for Public School at Springside. I have advertised for tenders, and hope to be able to forward them to you by the end of the month.

I beg to call your attention to the fact that no class-room is provided for in the plans, and if it has been an oversight on the part of the architect it might yet be added to the end where the lavatory is, and the lavatory moved further back.

I have, &c.,

A. U. ALLEY,
Hon. Secretary.

No. 47.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 23 March, 1876.

With reference to your letter of the 18th instant, I am directed by the Council of Education to state that the omission of a class-room from the plans and specifications of the proposed Public School buildings at Springside is not an oversight, inasmuch as the Council is of opinion that it is not expedient to erect such rooms in connection with small Public Schools.

I have, &c.,

W. WILKINS,
Secretary.

No. 48.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

(76-5,726.)

Sir,

Council of Education Office, Sydney, 10 April, 1876.

Referring to my letter of the 4th February last (No. 76-2,188), with respect to an application from this office for a grant of certain land at Springside for Public School purposes, I am directed to state that the Council of Education will be glad to be informed whether the Government has yet decided on the application.

2. If no decision has been arrived at, I am instructed to request that you will be good enough to invite the attention of the Honorable the Minister for Justice and Public Instruction to the matter, who, the Council trusts, will take such steps as will lead to the early settlement thereof.

3. I am further to add that the erection of the requisite school buildings will have to remain in abeyance until the site has been granted.

I have, &c.,

W. WILKINS,
Secretary.

No. 49.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir,

Department of Justice and Public Instruction, Sydney, 24 April, 1876.

Referring to my letter of the 23rd November and previous correspondence, respecting the application of the Council of Education for a grant of land at Springside for Public School purposes, I am directed by the Minister of Justice and Public Instruction to request that you will bring the matter under the notice of the Secretary for Lands, with a view to his having the goodness to cause the necessary steps to be taken, so that an early decision may be arrived at therein and communicated to me for the information of the Council.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 50.

Mr. A. Alley to The Council of Education.

Gentlemen,

Springside, 24 April, 1876.

In reply to yours of the 19th February last, I have the honor to forward two tenders, together with the plans, &c., for the proposed school buildings at Springside.

The Public School Committee also wish to recommend that the Council of Education appoint Mr. John Hale, architect, Orange, to superintend the erection of the building, as he has been chiefly instrumental in

in obtaining the tenders, and had to go to a good deal of trouble to do so, the builders being so full-handed did not care about it.

I also enclose account for advertising.

I have, &c.,
A. U. ALLEY,
Hon. Sec.

[Annex to No. 50.]

Western Examiner Office, Anson-street, Orange, 31 March, 1876.

Mr. A. U. Alley Dr. to George Hall, Printer and Publisher,—
1876 to 4 insertions tenders for school, March 4th to 25th, at 3s. 9d., 15s.

[2nd Annex to No. 50.]

Blayney, 18 April, 1876.

Tender for Schoolhouse and Teacher's Residence.

In pursuance of advertisement in the *Western Examiner*, we the undersigned do hereby tender to provide the materials and perform the various works required at Springside, build schoolhouse and teacher's residence, fencing, &c., agreeably to the plan and specification, for the sum of £1,879, and to complete the same within nine months from the date of the acceptance of this tender.

We propose the undermentioned persons as sureties for the due performance of the contract, viz. :—
Mr. George Hawke, junior, storekeeper and miller, Blayney; Mr. Clarke Chambers, farmer and grazier, Blayney.

To A. U. Alley, Esq., Secretary, School Board, Springside.

WILLIAM CHAMBERS.
JAMES HAUGH.

MEMORANDUM.—Should the foregoing tender be accepted, we the undersigned do hereby agree to be responsible for the due performance of the contract, and we hereby undertake that we will, within seven days from the date of the notification of the acceptance of the said tender, jointly and severally execute and deliver to the Committee a bond to them in the penal sum of £200 for securing such performance.

WILLIAM CHAMBERS.
JAMES HAUGH.
GEO. HAWKE, Blayney.
CLARKE CHAMBERS, Blayney.

[3rd Annex to No. 50.]

Orange, 19 April, 1876.

Tender for Springside Public School.

In pursuance of advertisement in the local papers, I the undersigned do hereby tender to provide the materials and perform the various works required in the erection and completion of the above building agreeably to the plan and specification, for the sum of £1,385, and to complete the same within six months from the date of the acceptance of this tender.

I propose the undermentioned persons as sureties for the due performance of the contract, viz. :—
Mr. John Atkinson, bread and biscuit manufacturer, Anson-street, Orange; Mr. Robert Shyms, hotel-keeper, Bing and Lord Streets, Orange.

The Council of Education, Sydney.

THOMAS TAYLOR.

No. 51.

Memorandum from The Secretary, Council of Education, to The Council's Architect.

Council of Education Office, Sydney, 26 April, 1876.

Springside: Honorary Secretary's letter, submitting plans, specifications, and tenders for school buildings at.

FOR your perusal and report.

W. WILKINS,
Secretary.

BEFORE taking into consideration the tenders here submitted, I must draw your attention to the fact that the plans and specifications are not sufficiently complete to allow me to recommend the acceptance of any offer for the erection of the buildings.

- 1st. The width or depth of the concrete is not marked on plans or specified.
- 2nd. The filling-in of the trenches with concrete is specified on a wrong principle.
- 3rd. The sizes of the foundation-wall should be either marked on plans or specified.
- 4th. The external walls of residence are unnecessarily thick, nine-inch brickwork being ample for the same.
- 5th. The damp course should on no account be of zinc, but of slate, well bedded in cement.
- 6th. Corbels at the external angles are not desirable when barge boards are used.
- 7th. The sizes of the window-openings and fire-places should be marked on plans.
- 8th. The porch is badly designed, being unsightly, and the roof too low.
- 9th. The crown of tank is too flat; it should be formed semi-circular.
- 10th. The depth of soil-pits are not shown on plan or specified.
- 11th. The schoolroom should be ventilated at the floor level and also at the eaves. I append a clause to be inserted in the specification for that purpose.
- 12th. The roof of schoolroom as shown is very expensive and heavy for the size of building, as is also constructed on a wrong principle. I append a sketch of a principal roof suitable for the structure.
- 13th. No collar-ties or struts are shown to the other roofs, which are very necessary.
- 14th. The school floors should be raised to form platforms for the desks, each 4 inches high, as shown in pencil.
- 15th. Kerosene wood preserving oil should be freely used on all timber near the ground.
- 16th. The lengths of desks should be marked on plan or specified.
- 17th. The "furniture form" is not filled in properly. See red ink corrections.

18th.

- 18th. Doors to the water-closets are unnecessary; they should be omitted.
 19th. The urinal should be constructed of brick, cemented, and connected to soil-pit with 3-inch earthenware pipe.
 20th. No bell has been provided for.

With these alterations I would advise that fresh tenders be invited.

G. ALLEN MANSFIELD,
 Architect.

28th April, 1876.

No. 52.

The Secretary, Council of Education, to Mr. E. Gell.

(76-7,955.)

Sir,

Council of Education Office, Sydney, 27 May, 1876.

With reference to the plans, specifications, and tenders, for the proposed Public School buildings at Springside, I am directed by the Council of Education to acquaint you that the matter having been submitted to the Council's architect, that officer reports as follows:—

“Before taking into consideration the tenders here submitted, I must draw your attention to the fact that the plans and specifications are not sufficiently complete to allow me to recommend the acceptance of any offer for the erection of the buildings:—

- 1st. The width or depth of the concrete is not marked on plans or specified.
- 2nd. The filling in of the trenches with concrete is specified on a wrong principle.
- 3rd. The sizes of the foundation-wall should be either marked on plans or specified.
- 4th. The external walls of residence are unnecessarily thick, 9-inch brickwork being ample for the same.
- 5th. The damp course should on no account be of zinc, but of slate, well bedded in cement.
- 6th. Corbels at the external angles are not desirable when barge boards are used.
- 7th. The sizes of the window openings and fire-places should be marked on plans.
- 8th. The porch is badly designed, being unsightly and the roof too low.
- 9th. The crown of tank is too flat; it should be formed semicircular.
- 10th. The depth of soil-pits are not shown on plan or specified.
- 11th. The schoolroom should be ventilated at the floor-level and also at the eaves. I append a clause to be inserted in the specification for that purpose.
- 12th. The roof of schoolroom as shown is very expensive and heavy for the size of the building, and is also constructed on a wrong principle. A tracing showing a cheaper and better method of constructing the principal roof is appended hereto.
- 13th. No collar-ties or struts are shown to the other roofs, which are very necessary.
- 14th. The schoolfloor should be raised to form platforms for the desks each 4 inches high as shown in pencil.
- 15th. Kerosene wood preserving oil should be freely used on all timber near the ground.
- 16th. The lengths of desks should be marked on plan or specified.
- 17th. The “furniture form” is not filled in properly—see red ink corrections.
- 18th. Doors to the water-closets are unnecessary; they should be omitted.
- 19th. The urinals should be constructed of brick, cemented and connected to soil-pit with a 3-inch earthenware pipe.
- 20th. No bell has been provided for. With these alterations I would advise that fresh tenders be invited.”

2. In view of this report, will you be good enough to make the necessary alterations in the plans and specifications in accordance with the architect's recommendations, and return the documents to this office as early as practicable.

I have, &c.,
 W. WILKINS,
 Secretary.

Returned here
 with.

No. 53.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 27 May, 1876.

With reference to your letter of the 24th April ultimo, submitting tenders for the proposed Public School buildings at Springside, I am directed by the Council of Education to acquaint you that the matter having been referred to the Council's architect, that officer reports that certain alterations and amendments are necessary in the plans and specifications, which have been returned accordingly to the architect, Mr. Gell.

2. When completed and received at this office, the documents will be forwarded to the Public School Board, in order that fresh tenders may be invited for the works.

I have, &c.,
 W. WILKINS,
 Secretary.

No. 54.

Mr. E. Gell to The Secretary, Council of Education.

Sir,

Bathurst, 9 June, 1876.

I have the honor to acknowledge the receipt of the plans and specifications without tracings and duplicate specifications prepared for proposed Public School and teacher's residence at Springside.

The alterations suggested shall be made as soon as possible. I beg however to state that it is rather late to take exception to part of the design, a sketch plan having been furnished and approved of subject to certain alterations to the teacher's residence (see No. 75/24,780), in accordance with which the plans were prepared. I may also add, that as directed, I consulted the district Inspector as to the articles of furniture required and the form is filled up with his approval.

In

21

In accepting the conditions set forth in your letter No. 75/21,097, I certainly did not contemplate having the plans criticised in the manner of paragraph 8, No. 76/7,955, more particularly in this case, exceptional as it is in the light of the latter part of the letter containing these conditions.

I have, &c.,
EDWARD GELL.

No. 55.

Memorandum from The Secretary, Council of Education, to The Council's Architect.

Springside: Mr. E. Gill's letter respecting plans and specifications of proposed School buildings.

Council of Education Office, Sydney, 14 June, 1876.

FOR your perusal in connection with your memorandum of 28th April last, it may be mentioned that at the time Mr. Gell was instructed to prepare the plans and specifications he was given to understand they were not to be subject to criticism. This understanding was unfortunately overlooked when the tenders were sent to you for report.

W. WILKINS,
Secretary.

IN reporting on the plans I was not of course aware of the nature of the arrangement made with Mr. Gell.

My suggestions for alterations were made only where experience seemed to point out a real necessity for them, or where it appeared that some point had been overlooked.

I regret very much if any portion of my criticism has been displeasing to Mr. Gell, and on referring to paragraph 8 (No. 76/7955), I find that it is expressed in terms hardly so courteous as those which I would desire to use towards a brother professional. On this point I shall communicate with Mr. Gell direct.

It is not, I think, advisable that any conditions should be made with local architects exempting their plans from criticism. Such criticism is, perhaps, the least pleasant portion of my duties; but, in view of the grave errors contained in many of the plans which have been submitted to review, it would, I think, be inexpedient to accept such plans without amendment.

Some of these errors are in matters of school arrangement; others on the still more serious question of construction.

I may point out that very few architects have any practical knowledge of school building or arrangement. It is a branch of the profession distinct from all other, and requiring special experience; and it should in no way be considered as a slight by architects that their plans are submitted to a friendly revision by one who has had exceptional opportunities of studying all the details and requirements of Public Schools.

G. ALLEN MANSFIELD,
Architect.

17 June, 1876.

No. 56.

Mr. A. Alley to The Council of Education.

Gentlemen,

Springside, 17 July, 1876.

I must again urge upon you the necessity of forwarding the plans and specifications for the proposed Public School at Springside if we are to have the building erected before next year. It is now twelve months since the Council entertained our application for a school, and matters are about as far forward as when we applied.

Our first application was made about two and a-half years ago.

I have, &c.,
A. U. ALLEY.

No. 57.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 21 July, 1876.

With reference to my letter of the 10th April last (No. 76/5,726), respecting an application from the Council of Education for a grant, for Public School purposes, of certain land at Springside, I am directed by the Council to request that you will have the goodness to again bring the matter under the notice of the Honorable the Minister of Justice and Public Instruction, with a view of such steps being taken as will lead to an early decision.

I have, &c.,
W. WILKINS,
Secretary.

No. 58.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 24 July, 1876.

With reference to previous correspondence, I am directed by the Council of Education to acquaint you that the plans and specifications of the proposed erection of Public School buildings at Springside are completed.

2. Will you be good enough therefore to inform me, as soon as practicable, in what newspapers the Public School Committee recommend that advertisements inviting tenders for the works should be inserted, and to what place the plans and specifications should be sent for inspection by persons who desire to tender.

I have, &c.,
W. WILKINS,
Secretary.

No. 59.

No. 59.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir, Department of Justice and Public Instruction, Sydney, 25 July, 1876.

Referring to my letter of the 22nd April and previous correspondence, respecting the application of the Council of Education for a grant of land at Springside, for Public School purposes, I am directed by the Minister of Justice and Public Instruction to request that you will bring the matter under the notice of the Secretary for Lands, with a view to his having the goodness to cause the necessary steps to be taken, so that an early decision may be arrived at therein, and communicated to me for the information of the Council.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir, Department of Justice and Public Instruction, Sydney, 23 September, 1876.

Referring to your letter of the 22nd August last, stating that the Minister for Lands had approved of the appropriation of 4 acres of land in the parish of Beneree, county of Bathurst, for Public School purposes, I am directed by the Minister of Justice and Public Instruction to inform you that a communication has been received from the Council of Education requesting that they may be furnished with a tracing of the land in question.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 67.

Mr. A. Alley to The Council of Education.

Gentlemen,

Springside, 30 September, 1876.

In reply to yours of the 12th instant (No. 76-14,548), I am happy to hear that the Honorable the Minister for Lands has at last approved of the appropriation of 4 acres of land for Public School purposes.

As there can now be no further obstacle in the way of the building being proceeded with, I trust the Council of Education will cause the plans and specifications to be forwarded to me at once, so that tenders may be obtained, and the work be proceeded with while the fine weather lasts.

I have, &c.,

A. U. ALLEY.

No. 68.

(76-15,663.) The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 4 October, 1876.

With reference to your letter dated 30th ultimo, requesting that the plans and specifications of the proposed Public School buildings at Springside may be forwarded to you, in order that tenders for the works may be procured, I am directed by the Council of Education to invite your attention to my letters, dated 24th July and 7th September last, informing you that the plans and specifications of the proposed buildings were completed and requesting you to inform me in what newspapers the Public School Committee recommend that advertisements calling for tenders for the erection of the same should be inserted, and to what place the plans and specifications should be sent for inspection by persons who desire to tender.

2. Will you be good enough therefore to furnish me with the necessary information as early as practicable.

I have, &c.,

W. WILKINS,
Secretary.

No. 69.

Mr. A. Alley to The Secretary, Council of Education.

Sir,

Springside, 14 October, 1876.

In reply to yours of the 4th instant (No. 76-15,663), referring me to your letters of the 24th July and 7th September for reply, I have the honor to inform you that yours of the 24th July has never reached me, and that of the 7th September I only received to-day, it having been addressed to Lucknow, as well as that of the 4th instant. Many letters of yours have lain at Lucknow for weeks for the same reason.

The local Committee recommend that the advertisements calling for tenders for the proposed school at Springside be inserted in the *Western Examiner* and *Carcoar Chronicle*, and that the plans and specifications be left with Mr. John Hale, architect, Orange.

I have, &c.,

A. U. ALLEY.

No. 70.

The Secretary, Council of Education, to Mr. E. Gell.

Sir,

Council of Education Office, Sydney, 24 October, 1876.

I am directed by the Council of Education to acquaint you that advertisements inviting tenders for the erection of the proposed Public School buildings at Springside have been inserted in the newspapers published at Carcoar, Orange, and Bathurst. The tenders should be addressed to Mr. A. U. Alley, the honorary Secretary to the Public School Committee at Springside, on or before the 18th November next.

2.

2. The duplicate plans and specifications are transmitted herewith, in order that intending tenderers may be enabled to inspect them. The original documents have been forwarded to Mr. Alley.

3. Will you be good enough to return the plans and specifications to this office after the date mentioned.

I have, &c.,
W. WILKINS,
Secretary.

No. 71.

The Secretary, Council of Education, to Mr. A. Alley.

Sir, Council of Education Office, Sydney, 24 October, 1876.

With reference to your letter of the 14th instant, I am directed by the Council of Education to acquaint you that advertisements, inviting tenders for the works in connection with the proposed Public School buildings at Springside, have been forwarded for insertion in the newspapers published at Carcoar, Orange, and Bathurst. The tenders should be addressed to you on or before the 18th November next. When received by you, will you be good enough to submit them to the Council for approval, accompanied by the plan and specification.

2. The plan and specification, together with a few tender forms, are transmitted herewith. It is desirable that you should make the necessary arrangements with regard to the plan and specification, in order that intending tenderers may be enabled to inspect them. A duplicate set of the documents referred to have been sent to E. Gell, Esq., architect, Bathurst, who will supervise the erection of the buildings.

I have, &c.,
W. WILKINS,
Secretary.

No. 72.

The Secretary, Council of Education, to Mr. C. Austen.

Sir, Council of Education Office, Sydney, 24 October, 1876.

I am directed by the Council of Education to request that you will be good enough to have the accompanying advertisement, in connection with the proposed Public School buildings at Springside, inserted in the undermentioned newspapers, and to charge the cost thereof to the Council's account (three insertions):—*Carcoar Chronicle, Orange Western Examiner, Orange Western Advocate, Bathurst Times, Bathurst Free Press, Bathurst Western Independent.*

I have, &c.,
W. WILKINS,
Secretary.

No. 73.

The Under Secretary for Lands to The Under Secretary of Justice and Public Instruction.

Sir, Department of Lands, Sydney, 17 November, 1876.

In compliance with the request contained in your letter of the 23rd September last, I am directed to forward, herewith, for the information of the Council of Education, a tracing showing the land in the parish of Beneree, county of Bathurst, proposed to be dedicated for Public School purposes.

Tracing, Spring side.

I have, &c.,
W. W. STEPHEN.

No. 74.

Mr. A. Alley to The Council of Education.

Gentlemen, Springside, 20 November, 1876.

I enclose one tender for proposed School buildings at Springside. I think one or more must have miscarried to me, or else have been forwarded to you, as I was promised two others. I will see the parties next week and ascertain. I will also forward the plans and specifications next week when I go to Orange.

I have, &c.,
A. U. ALLEY.

B.C., Inspector of Bathurst District, for your report as to the number of children expected to attend this school. Do you consider the expenditure of £1,275 in providing school buildings justifiable? W.W., 15/12/76. I have made careful inquiries, and from information received I consider that the attendance will be about fifty (50). I consider that the cost of a brick school-house—provided there be no ornamentation—for fifty children should, if the class-room be omitted, not cost more than £1,000.—J. W. ALLPASS, Inspector, 30/12/76.

[Annex to No. 74.]

Orange, 14 November, 1876.

Tender for erection of Public School, Springside.

In pursuance of advertisement in the I, the undersigned do hereby tender to provide the materials and perform the various works required in building the abovenamed Public School agreeably to the plan and specification, for the sum of thirteen hundred and seventy-five pounds ten shillings (£1,375 10s.), and to complete the same within time required from the date of the acceptance of this tender.

I propose the undermentioned persons as sureties for the due performance of the contract, viz.:—Mr. Martin Byrne, baker, Summer-street, Orange; Mr. Edward Smith, baker, Summer-street, Orange.

GEORGE SAMUEL JAMES,
Builder, Summer-street, Orange.

[2nd.]

[2nd Annex to No. 74.]

Orange, November 15, 1876.

Tender for Public School, Springside.

In pursuance of advertisement in the local papers, I, the undersigned, do hereby tender to provide the materials and perform the various works required in the Public School building and teacher's residence, and to complete the whole of the works agreeably to the plan and specification, for the sum of £1,275; and to complete the same within seven months from the date of the acceptance of this tender.

I propose the undermentioned persons as sureties for the due performance of the contract, viz. :—
Mr. John Atkinson, biscuit manufacturer, Anson-street; Mr. Robert Stynes, hotel-keeper, Byng-street and Lord's place.
The Secretary, Council of Education.

THOS. TAYLOR,
Contractor.

No. 75.

The Under Secretary of Justice and Public Instruction, to The Secretary, Council of Education.

Sir, Department of Justice and Public Instruction, Sydney, 23 November, 1876.

Referring to your letter of the 12th September last and previous correspondence (No. 76-14,547) respecting Land for Public School purposes at Springside, I am directed by the Minister of Justice and Public Instruction to inform you that a communication has been received from the Department of Lands on the subject, forwarding tracing showing the land in the parish of Beneree, county of Bathurst, proposed to be dedicated for Public School purposes.

Tracing forwarded.
Parish Beneree,
county Bathurst.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 76.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

(76-18,783.)

Sir,

Council of Education Office, Sydney, 27 November, 1876.

I am directed by the Council of Education to acknowledge the receipt of your letter, dated 23rd instant, forwarding a tracing of 2 acres of land at Springside, proposed to be dedicated for Public School purposes.

2. In reply, I am to point out that in your letter of 7th September last (No. 76-6,492) it is notified that the Minister for Lands had approved of the appropriation for Public School purposes of 4 acres of land at the place mentioned.

3. In view of this fact, and as the Council applied for a grant of 4 acres (see my letter of 22nd October, 1875), the Council would be glad to know whether an area of 4 acres or of 2 acres has been granted; and, if the latter, whether there are any special reasons for a refusal of its application for the larger amount of land.

I have, &c.,

W. WILKINS,
Secretary.

No. 77.

Memorandum from The Secretary, Council of Education, to the Council's Architect.

Council of Education Office, Sydney, 30 November, 1876.

Springside: Hon. Sec's. letter, enclosing plan, specification, and tender for Schoolbuildings at Springside.
For your perusal and report.

W. WILKINS,
Secretary.

Two tenders is submitted, the lower of which is that of Mr. Thos. Taylor, for the sum of £1,275.

This tender is slightly above the usual rate for this class of building, but may be considered reasonable for that locality.

Provided the contractor is known to be a good and trustworthy tradesman, and his sureties responsible persons, I would recommend the acceptance of this tender.

All documents herewith.

G. ALLEN MANSFIELD,
Architect.

6 December, 1876.

No. 78.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir, Department of Justice and Public Instruction, Sydney, 11 December, 1876.

Referring to your letter of 17th November last, forwarding tracing of certain land at Springside, parish of Beneree, and county of Bathurst, for Public School purposes, I am directed by the Minister of Justice and Public Instruction to inform you that a further communication has been received from the Council of Education on the subject, stating that in your letter of 22nd August last (No. 76-3,071 Ms.) it is notified that the Minister for Lands had approved of the appropriation for Public School purposes of 4 acres of land at the place mentioned.

Returned herewith.

2. In view of this fact, and as the Council applied for a grant of 4 acres (see my letter 27th October, 1875 (75-8,228), they would be glad to know whether an area of 4 acres or of 2 acres has been granted; and, if the latter, whether there are any special reasons for a refusal of its application for the larger amount of land.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 79:

The Secretary, Council of Education, to Mr. E. Gell.

Sir,

Council of Education Office, Sydney, 19 January, 1877.

I am directed to acquaint you that the Council of Education has had under notice the tenders of the proposed Public School buildings at Springside, the lowest of which amounts to £1,275. This sum is regarded by the Council as excessive.

2. In view of the high rate of the tender, the Council declines to authorize its acceptance, and has decided to procure fresh tenders. Before such tenders are however invited, the undermentioned alterations in the plans and specifications should be made, viz. :—Fencing to consist of two-rail fence, to be erected round the site. All paling and batten fencing to be omitted. Underground tank to be reduced to 10' x 10' with a flat cover of planks.

3. Will you be good enough therefore to amend the plans and specifications as indicated above, and to return them to this office as soon as practicable, accompanied by an estimate of the cost of the whole of the works.

I have, &c.,

W. WILKINS,

Secretary.

No. 80.

The Secretary, Council of Education, to Mr. A. Alley.

Sir,

Council of Education Office, Sydney, 19 January, 1877.

I am directed to acquaint you that the Council of Education has had under notice your letter of the 26th November last, enclosing plan, specification, and tenders for the proposed Public School buildings at Springside.

2. In reply, I am to state that in view of the high rate of the lowest tender, which amounts to £1,275, the Council declines to authorize its acceptance, and has decided to procure fresh tenders. Before such tenders are however invited, certain alterations are to be made in the plans and specifications, and the documents have accordingly been forwarded to Mr. E. Gell to be amended.

3. A further communication will be addressed to you in due course, when the plans and specifications have been returned to this office by Mr. Gell.

I have, &c.,

W. WILKINS,

Secretary.

No. 81.

Mr. T. Cummins to The Secretary, Council of Education.

Sir,

Beneree, Orange, 2 March, 1877.

It is seven years and eight months since myself and others of my neighbours made an application to the Council of Education for aid to a Provisional School. Six months after your Inspector, Mr. M'Credie, inspected the school, found 22 children in attendance, found our teacher competent, but he told us our Committee were all Catholics, that we were within 3 miles of Spring Terrace, where he intended having a Public School built in three months, and that we would not get any aid. I was rather too imprudent in reminding this well paid officer of the injustice, and also that Spring Terrace could never be a central place for a school. I wrote at the time to your Hon. Council, through the Hon. Saul Samuel, then Member for Orange, protesting against this injustice to our children in depriving them of the benefit the State sought to confer, but M'Credie was all powerful. Our teacher left, Mr. M'Credie did not build the school at Spring Terrace as stated, and my children and those of my neighbours are left seven years without the benefit of any education.

Some two years ago another more humane of your staff visited our neighbourhood, found no school in existence, and a large number of children growing up in ignorance; he recommended a site for a Public School that the people of Spring Terrace approved of, and also those of a part of the parish of Waldgrave, and would at any time, now known as Springside. Our local Secretary, Mr. Alley, is all this time corresponding with you, plans and specifications have been sent, tenders called twice but none accepted; consequently it looks as if this unfortunate part of New South Wales was doomed to be seven years more without any education. Being the father of seven sons, the oldest not 13, the youngest not 1 month, I do honorable gentlemen consider it anything but justice rendered to us.

Excuse my humble attempt to explain my grievance.

Yours, &c.,

THOS. CUMMINS.

Sir, Council of Education Office, Sydney, 26 April, 1877.
 With reference to my letter of 19th January last, I am directed by the Council of Education to acquaint you that advertisements, inviting fresh tenders for the works in connection with the proposed Public School buildings at Springside, have been forwarded for insertion in the newspapers published at Carcoar, Orange, and Bathurst. The tenders should be addressed to you on or before the 23rd May next. When received by you, will you be good enough to submit them to the Council for approval, accompanied by the plan and specification.
 2. The plan and specification, together with a few tender forms, are transmitted herewith. It is desirable that you should make the necessary arrangements with regard to the plan and specification, in order that intending tenderers may be able to inspect them. A duplicate set of the documents referred to have been sent to E. Gell, Esq., architect, Bathurst, who will supervise the erection of the buildings.
 I have, &c.,
 W. WILKINS,
 Secretary.

No. 89.

No. 89.

The Secretary, Council of Education, to Mr. C. Austin.

Sir,

Council of Education Office, Sydney, 26 April, 1877.

Three insertions. I am directed by the Council of Education to request that you will be good enough to have the accompanying advertisement in connection with the proposed Public School buildings at Springside, inserted in the undermentioned newspapers, and to charge the cost thereof to the Council's account:—
Carcoar Chronicle, Orange Western Examiner, Orange Western Advocate, Bathurst Times, Bathurst Free Press, Bathurst Western Independent.

I have, &c.,
 W. WILKINS,
 Secretary.

No. 90.

The Under Secretary for Lands to The Under Secretary for Justice and Public Instruction.

Sir,

Department of Lands, Sydney, 16 June, 1877.

Referring to your letter of the 24th April last, further respecting the Public School site at Springside, I am directed to invite your attention to my letter of the 10th April last, and to inform you that the dedication of the land being now complete the deed of grant will be prepared in due course.

2. I am to forward, for the information of the Council of Education, the enclosed tracing, which shows by blue tint the position of the site referred to.

I have, &c.,
 W. W. STEPHEN.

No. 91.

The Under Secretary of Justice and Public Instruction to The Secretary, Council of Education.

Sir,

Department of Justice and Public Instruction, Sydney, 21 June, 1877.

Referring to your letter of 17th April last, and previous communication respecting application of the Council of Education for grant of certain land at Springside for Public School purposes, I am directed by the Minister of Justice and Public Instruction to inform you that it has been ascertained from the Department of Lands that 4 acres is the amount of land stated in the list of dedications in which the site for the Public School is included; the dedication of the land being now complete, the deed of grant will be prepared in due course.

2. I am to forward herewith for the information of the Council of Education, a tracing received from the Lands Department, which shows by blue tint the position of the site referred to.

I have, &c.,
 W. E. PLUNKETT,
 Under Secretary.

MEMO.—This Paper is issued in substitution for one bearing a similar heading, distributed 7 March, 1877.

*Legislative Assembly Chamber,
Sydney, 20 March, 1877.*

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EDUCATION.

(PUBLIC SCHOOL BUILDINGS—DENOMINATIONAL SCHOOLS.)

Ordered by the Legislative Assembly to be printed, 20 March, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated 16 August, 1876, That there be laid upon the Table of this House,—

“(1.) A Return of all Public School Buildings erected by the Council of Education since 1st January, 1867, showing in the case of each School the name of the town or locality where it is situated, the cost of its erection, and the proportion granted from the Public Revenue, and the proportion locally contributed; the number of pupils the School is designed to accommodate, and the material of its construction, including walls and roof.

“(2.) A Return of all Denominational Schools to which Certificates have been granted since the issue of Certificates to the Schools taken over from the Denominational School Board in 1867, giving like particulars, so far as they can be given, in each case.”

(*Mr. Parkes.*)

EDUCATION.

The Secretary to the Council of Education to The Under Secretary, Department of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 2 February, 1877.

As requested in your letter of the 21st August last (No. 76/6401) I am directed by the Council of Education to transmit herewith, for the information of the Honorable the Minister of Justice and Public Instruction, the accompanying documents relative to school buildings and certificates to Denominational Schools, which are to be laid before the Legislative Assembly at the instance of Henry Parkes, Esq., M.P., viz. :—

- “(1.) A Return of all Public School buildings erected by the Council of Education since 1st January, 1867, showing in the case of each school the name of the town or locality where it is situated, the cost of its erection, and the proportion granted from the Public Revenue, and the proportion locally contributed, the number of pupils the school is designed to accommodate, and the material of its construction, including walls and roof.
- “(2.) A Return of all Denominational Schools to which certificates have been granted since the issue of certificates to the schools taken over from the Denominational School Board in 1867, giving like particulars as far as they can be given in each case.”

I have, &c.,

W. WILKINS,

Secretary.

EDUCATION.

No. 1.

The Rev. E. J. Luckie to The Colonial Secretary.

Sir,

Liverpool, 15 November, 1876.

I have the honor to acquaint you that I have just learned that the certified Catholic School of this town was closed to-day, and upon inquiry as to the cause, and knowing that the Local Board was not consulted about it, I was told that certain members of the New South Wales Ministry, namely, Messrs. Lackey and Burns, gave the children a holiday.

As this alleged act of these gentlemen was done in contravention of regulation 89 of the Rules and Regulations of the Council of Education, and in utter disregard of the authority of the Local Board, I desire to be informed at your earliest convenience by what authority, if any, such holiday was granted?

I beg to point out to you that the regulation referred to is as follows:—"No. 89. No school is to be closed upon any school day without the written direction of the Local Board, who must satisfy themselves that circumstances warrant that step; and in no case for more than one day without the sanction of the District Inspector or the Council."

I have, &c.,

EUGENE J. LUCKIE, R.C.C.,
Chairman of Local Board.

The Under Secretary of Justice and Public Instruction.—H.H., B.C., 16/11/76. Acknowledge, 16.
The Council of Education.—J.D., 12/11/76. The Secretary to the Council of Education.—W.E.P.,
B.C., 20 Nov., 1876.

No. 2.

The Principal Under Secretary to The Rev. E. J. Luckie.

Reverend Sir,

Colonial Secretary's Office, Sydney, 16 November, 1876.

I am directed by the Colonial Secretary to acknowledge the receipt of your letter of the 15th instant, complaining of the closing of the Roman Catholic Denominational School at Liverpool on that date, and to inform you that your communication has been brought under the notice of the Minister of Justice and Public Instruction.

I have, &c.,

HENRY HALLORAN.

Unauthorized closing of school.

Council of Education Office, Sydney, 30 November, 1876.

THE Council is in receipt of information to the effect that the above school was closed on 15th instant, without the consent of the Local Board. Be good enough to state whether this is the case; and, if so, under what circumstances the school was closed?

W. WILKINS,

Secretary.

No. 6.

The Rev. E. J. Luckie to The Minister of Justice and Public Instruction.

Sir,

Liverpool, 1 December, 1876.

I have the honor to inform you that I received a communication of the 16th ultimo from the Colonial Secretary's Office, in reply to a letter of mine of the 15th ultimo.

In this reply I was informed that my letter was forwarded from that office to you, for the purpose, as I presume, of obtaining from you for it that attention I desired and the subject of it imperatively demanded.

I regret to say that up to the present date I have not received any reply informing me what decision you have arrived at with regard to the subject of my complaint.

As

3

As my complaint was justified by the circumstances under which it was made, may I request you will be so good as to let me know at your earliest convenience what redress you have thought fit to give for the outrage committed by the official gentlemen complained of for having unwarrantably violated the rules and discipline of a school, and grossly insulted the authority of the Local Board.

I have, &c.,

EUGENE J. LUCKIE.

The Council of Education.—J.D., 4 Dec., 1876.
W.E.P., B.C., 5/12/76.

The Secretary to the Council of Education.—

No. 7.

The Under Secretary, Department of Justice and Public Instruction, to The Rev.
E. J. Luckie.

Reverend Sir, Department of Justice and Public Instruction, Sydney, 5 December, 1876.

I am directed by the Minister of Justice and Public Instruction to acknowledge the receipt of your letter of the 1st instant, further with reference to your complaint respecting the closing of Denominational School, Liverpool, by Messrs. Burns and Lackey, and to inform you that your communication has been brought under the notice of the Council of Education, with reference to your previous letter on the subject.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 8.

Mr. W. Long to The Secretary, Council of Education.

Sir,

Cert. Den. C.E. School, Liverpool, 4 December, 1876.

In reply to your memo. No. 76-18,968, of the 30th ultimo, requesting me to "state whether the above school was closed on the 15th November, 1876, and if so, under what circumstances," I beg to state that the Hon. J. Lackey, W. A. Long, Esq., M.P., Hon. J. F. Burns, accompanied by the Mayor of Liverpool, and N. G. Bull, Esq., J.P. (member of the Local School Board), visited this school on the 15th November, 1876, and remained for some time, observing the way in which it was conducted.

On leaving the school the Hon. J. Lackey and Mr. Long, M.P., requested me to give the children a half holiday. I stated that Mr. Bull could do so, and I obtained the consent of the Local Board for the purpose of complying with the wishes of the abovenamed gentlemen.

The school was closed for the afternoon.

I am, &c.,

WILLIAM LONG,

Teacher.

No. 9.

Mr. C. Stratford to The Secretary, Council of Education.

Sir,

Liverpool Public School, 4 December, 1876.

In reply to your letter, No. 76/18,967, I have the honor to state that the Liverpool Public School was closed half-day on the 15th ultimo.

On that date the Hon. J. Lackey, Hon. J. F. Burns, W. A. Long, M.L.A., and the Mayor and Aldermen of Liverpool visited the school, and asked half holiday for the pupils, which was granted with the consent of the Chairman of the Local Board.

I have, &c.,

CHAS. STRATFORD,

Teacher, Public School, Liverpool.

No. 10.

Mr. J. S. Gribbin to The Secretary, Council of Education.

Sir,

Certified Denominational R.C. School, Liverpool, 5 December, 1876.

I have the honor to reply to your memo. of 30th ultimo, No. 76/18,966, referring to the "unauthorized closing of above school on 15th ultimo."

On the date mentioned the school was closed from the mid-day recess only, at the request of two Cabinet Ministers and a number of other gentlemen who wished the children of this school, in conjunction with the children of the Public and E.C. Schools, to have a half-day's holiday.

At the time of the visit of these gentlemen (12.25 p.m.) I was preparing to dismiss the school for the mid-day recess, and I was under the impression that the Rev. E. J. Luckie, the Chairman of the Local Board, was away from home; but as I anticipated no objection on his part I did not offer any objections. Sir, I am just as fond of a holiday as my juniors. However, on reporting the matter to the Rev. E. J. Luckie he seemed very much annoyed, and stated he would report the matter.

The gentlemen who visited the school were—the Hon. the Minister for Works, the Hon. the Postmaster General, W. A. Long, Esq., M.L.A., S. Pearce, Esq., Mayor of Liverpool, C. A. Scrivener, Esq., J.P., S. Solomon, Esq., J.P., N. J. Bull, Esq., J.P., and others, of whose names I am not cognizant.

Further, I may add that the other members of my Local Board perfectly agree with me as to the course taken on the occasion.

I have, &c.,

JAMES STEELE GRIBBIN,

Master.

Unauthorized
closing of C.D.
R.C. School,
Liverpool, 15th
November, 1876.

No. 11.

No. 11.

The Secretary, Council of Education, to The Under Secretary, Department of Justice and Public Instruction.

FROM inquiries which have been made by the Council of Education it appears that the schools under its supervision at Liverpool, comprising the Public, Certified Denominational Church of England, and Certified Denominational Roman Catholic Schools were closed after the mid-day recess on the 15th ultimo, at the request of the Minister for Works, the Postmaster General, the Member for the District, and the Mayor and Aldermen of Liverpool, for the purpose of giving the children a half holiday.

Although in view of the provisions of clause 89 of the Regulations under the Public Schools Act there can be no doubt that a technical violation of a by-law was thus committed, yet, under the circumstances, the Council deems it to have been excusable, and therefore sees no reason for interfering in the matter.

B.C., 14 December, 1876.

W. WILKINS,
Secretary.

The Rev. E. J. Luckie may be informed in terms of report.—J.D., 19 December, 1876.

No. 12.

The Under Secretary, Department of Justice and Public Instruction, to The Rev. E. J. Luckie.

Sir, Department of Justice and Public Instruction, Sydney, 21 December, 1876.

Referring to your letter of 1st instant, and previous correspondence respecting conduct of Messrs. Burns and Lackey, in closing the Denominational School at Liverpool, and my reply thereto of 5th instant, stating that your communication had been forwarded for the information of the Council of Education,—

I am directed by the Minister of Justice and Public Instruction to inform you that under a communication which has been received it appears from inquiries made that the schools under the supervision of the Council of Education at Liverpool, comprising the Public, Certified Denominational Church of England, and Certified Roman Catholic Schools, were closed after the mid-day recess on the 15th ultimo, at the request of the Minister for Works, the Postmaster General, the Member for the District, and the Mayor and Aldermen of Liverpool, for the purpose of giving the children a half-holiday.

Although in view of the provisions of clause 89 of the Regulations under the Public Schools Act there can be no doubt that a technical violation of a by-law was thus committed, yet, under the circumstances, the Council deems it to have been excusable, and therefore sees no reason for interfering in the matter.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 13.

The Rev. E. J. Luckie to The Minister of Justice and Public Instruction.

Sir, Liverpool, 29 December, 1876.

I beg to acknowledge the receipt of your communication of the 21st instant, regarding the complaint of the Local School Board at Liverpool against the gentlemen mentioned in the communication under reply, for the outrage committed by them on this Board, and which concludes with the following determination of the case:—"Although in view of the provisions of the clause 89 of the Regulations under the Public Schools Act there can be no doubt that a technical violation of a by-law was thus committed, yet, under the circumstances, the Council deems it to have been excusable, and therefore sees no reason for interfering in the matter."

In reply, I beg to say that I cannot accept your decision as satisfactory, and least of all, as any reparation for the insult offered to the Local Board, or redress for the injury inflicted upon the discipline of the school with which it is connected.

Your communication admits that the law has been violated, and states it was "excusable," but fails to show any proper justification whatever for such violation. Permit me to say that this is unworthy of the Minister of Justice and Public Instruction.

If it could have been shown that the gentlemen complained of had interfered with the discipline of the school in ignorance of the law, or merely to gratify official vanity, the case might be viewed otherwise; but they were not ignorant of the law, or of the Regulations of the Act, and therefore their violation of it was done contumaciously, and is deserving of the severest censure of the Minister of Justice.

Here, where motives are better understood, there is no doubt, that in the case complained of the gentlemen culprits coquetted for political influence with certain parties in this town; and instead of censuring them for their conduct, and giving some guarantee against a recurrence of it, the Council of Education, and I regret to say, the Minister of Justice and Public Instruction, have not only condoned the violation of the law, and the insult offered to the Local Board, but they have thereby given an approval and encouragement to the exercise of the devices of political partisanship, to the weakening of school discipline and the indefinite train of immoralities that must necessarily flow from such condonation and encouragement.

I beg to submit this matter again for your reconsideration, with the hope that you will grant that reparation and redress which the circumstances of the case demand.

I have, &c.,
EUGENE J. LUCKIE.

Acknowledge.—J.D., 3/1/77.

5

No. 14.

The Rev. E. J. Luckie to The Secretary, Council of Education.

Sir,

Liverpool, 29 December, 1876.

I beg to acquaint you, for the information of the Council of Education, that I have received a reply from the Minister of Justice and Public Instruction regarding a complaint, already well known to you, which I felt obliged to make lately, of the conduct of certain members of the present Ministry who, as I was informed, coquetted for political influence in this town, by unwarrantably taking upon themselves to give a holiday to school children, thereby violating rule 89 of the By-laws of the School Act, impairing the school discipline, and insulting the Local School Board.

The determination of the Minister of Justice and Public Instruction is expressed as follows:—
“Although in view of the provisions of clause 89 of the Regulations under the Public Schools Act there can be no doubt that a technical violation of a by-law was thus committed, yet, under the circumstances, the Council deems it to have been excusable, and therefore sees no reason for interfering in the matter.”

I beg to say I cannot accept this reply as satisfactory, for it not only shows no proper justification whatever for holding “excusable,” and condoning the gentlemen culprits conduct alluded to, but it refuses any reparation or redress for the outrage committed by them on the Local Board here.

I beg to submit this case for the consideration of the Council of Education, and to request it will have the goodness, as the Regulations of the Schools Act are apparently a dead letter, to give the Local Board here some protection against such political devices as have been resorted to in the case complained of,—the infringement of school discipline, and against insult and outrage to itself.

I have, &c.,

EUGENE J. LUCKIE.

No. 15.

The Under Secretary, Department of Justice and Public Instruction, to The Rev. E. J. Luckie.

Rev. Sir,

Department of Justice and Public Instruction, Sydney, 4 January, 1877.

I am directed by the Minister of Justice and Public Instruction to acknowledge the receipt of your letter of the 29th ultimo, further with reference to the closing of the Denominational School at Liverpool.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

Rev. Sir,

Council of Education Office, Sydney, 9 January, 1877.

I am directed by the Council of Education to acknowledge the receipt of your letter of 29th ultimo, with reference to a complaint made by you regarding the closing of the Certified Denominational Roman Catholic School at Liverpool, at the instance of the Honorable the Minister for Works and the Honorable the Postmaster General.

2. In reply, I am instructed to state that the Council has already had this matter under consideration in connection with your complaint to the Honorable the Minister of Justice and Public Instruction, and that the Council must now decline to interfere further.

I have, &c.,

W. WILKINS,
Secretary.

No. 17.

The Rev. E. J. Luckie to The Secretary, Council of Education.

Sir,

Liverpool, 10 January, 1877.

I beg to acknowledge the receipt of your letter of yesterday's date, stating that “the Council of Education must decline to interfere further in the matter of the complaint I have brought before it.”

In reply I beg to acquaint you, for the information of the Council, that since the Council has shown by this reply that from some unaccountable inherent weakness it is either unable or unwilling to vindicate the grossly violated school regulations, or afford any protection to the Local School Board, which the Council has appointed to hold cognate jurisdiction with itself, the Chairman of this Board shall in future exclude from the schools under his supervision anyone—no matter what may be his rank or social condition—whom he shall have discovered to have violated the School Regulations, or abused the privileges of a visitor.

This compromise of the interests of justice and of the schools committed by the Council too vividly reminds me of what I have learned and witnessed in America, when I lately visited many of its schools, and presages similar disasters for education and society in this country.

I have, &c.,

EUGENE J. LUCKIE.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EDUCATION.

(INSUFFICIENCY OF CUBIC SPACE IN SCHOOLS—CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 31 July, 1877.

Dr. Bowker to The Council of Education.

Gentlemen,

Avoca, Darling Point, 6 July, 1877.

I take the liberty of writing to you on an extremely important matter, *i.e.*, the cubic space per head in the schools over which you preside.

I am presuming that your attention has not hitherto been directed to the subject, for doubtless had you been aware of the evil and its consequences, it (the evil) would not have continued in existence.

As a medical practitioner I have been consulted by so many teachers of public schools, and have felt myself obliged to give certificates of the necessity of rest and change so frequently, that I set myself to inquire as to the cause of teachers so often being obliged to become invalids, and my first inquiry was about the quantity of atmospheric air obtainable by them during their occupation of teaching, *i.e.*, about the cubic space for each and the ventilation in their schools and dwellings, this being the first and most important item towards the preservation of their health.

I was astonished at the replies I received. In no one case had they half of the minimum thought necessary by the best authorities. Dr. Budgett, a late Scotch writer, says—"In fact, all rooms for school purposes should be 12 feet high at least; thus a room of 20 × 30 feet would accommodate twenty pupils, &c." This would give a cubic space per head of 360 feet. Further on, the same author writes—"6 feet square and 10 to 12 feet high, is the minimum space allotted by the authorities on the Continent, and this arrangement supposes an effectual system of ventilation." This also gives 360 cubic feet per head as the minimum.

Parkes, in his "Practical Hygiene," says, as a sort of summing up (page 124):—"A change equal to four or five times an hour is I believe all that can be borne under conditions of warming in this country, and if this be correct, from 750 to 1,000 cubic feet should be the minimum allowance of the initial air space." The above calculation contemplates adults. With reference to children instead of adults, as in schools, he says—"Some persons however class two children as one adult; but if this rule be adopted, the rule should at any rate be restricted to children under five years old." (Children breathing more quickly, having to grow, and being more susceptible.) With regard to the inconvenience and expense of so much space to each, the same author observes:—"It has been found very difficult, without incurring greater expense than the Country could bear, to give every man even the 600 cubic feet; and as soldiers are healthy men and can bear rapid movements of air, and as some of the entering air is warmed by the barrack grate, the 600 feet may possibly suffice."

Now what do we find here? A remarkably intelligent patient has given me the following measurements and calculations about his school:—"Schoolroom 30 × 20 × 12½ = 7,500 cubic feet, making no allowance for furniture and spaces occupied by the bodies of the children; 7,500 ÷ 75 = 100 cubic feet space for each person. On many occasions there were between eighty and ninety children, while on others there would not be over fifty. Ventilation defective. About twenty boys and girls over fourteen years.

Teacher's bed-room for teacher and wife, 10 × 10 × 8 = 800 cubic feet. No ventilation other than a window within 3 feet of bedstead. Children's bed-room (ages 17, 13, 11 years) 10 × 8 × 8 = 640 cubic feet. No ventilation other than a window 1½ feet off bedstead.

Another teacher patient a few days ago answered my inquiry by estimating as nearly as he could guess the dimensions of his school at 30 × 20 × 12 = 7,200 cubic feet, and said that he had often 100 in his school. This would give only 72 cubic feet for each.

I have often myself, in visits to patients, passed through rooms in ordinary, small dwelling-houses—rooms absolutely crowded with children, with a young girl as teacher. I am sure the cubic space for each would be in these much less than in any I have mentioned, the ventilation almost nothing. I do not know if these schools are altogether private, or assisted by and therefore under the control of some Board. In either case the injury is as great.

I do not hesitate to say that children or young people who are thus obliged to breath impure air are being gradually poisoned, their constitutions gradually undermined, and themselves rendered more liable to pulmonary consumption—that great scourge of crowded communities. Education is an evil instead of a blessing under such circumstances. As Hufeland says, "On ne doit pas former l'esprit aux dépens du corps."

Besides, when such a state of matters becomes widely known compulsory education would be impossible; for all the power of the British Government would be unable to force parents to send their children to pest-houses, and a schoolroom inadequately provided with pure air is a veritable pest-house.

I believe that, when public schools shall have been examined by competent persons, it will be found that many have been built on wrong principles, and that the pavilion plan will be considered the best, with the teacher's house separate.

I remain, &c.,

R. R. G. BOWKER, M.D.,

L. R. College of Physicians, London,

F. R. Coll. Surg. England, L.A.S. London.

The Secretary, Council of Education, to Dr. Bowker.

Sir,

Council of Education Office, Sydney, 20 July, 1877.

I am instructed to acquaint you that the Council has had under consideration your letter of the 6th instant, in which you bring under its notice the subject of ventilation of schools.

2. In reply, I am to convey to you the thanks of the Council for the trouble you have taken in the matter, and to state that the subject will receive the Council's full and constant attention.

I have, &c.,

W. WILKINS,

Secretary.

[3d.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

LECTURES FOR PROMOTING TECHNICAL EDUCATION.

(CORRESPONDENCE.)

Ordered by the Legislative Assembly to be printed, 18 September, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly, dated 6th June, 1877, That there be laid upon the Table of this House,—

“Copies of all Correspondence between the Government and the Committee of the Sydney Mechanics’ School of Arts, the Trustees of the Free Library, the Council of the Royal Society, the Senate of the Sydney University, the Committee of the Engineering Association, or any other body, respecting the formation of Evening Classes, and the delivery of courses of Scientific Lectures for promoting Technical Education in the Colony.”

(Mr. Dibbs.)

SCHEDULE.

NO.	<i>Sydney Mechanics’ School of Arts.</i>	PAGE.
1.	Secretary to Mechanics’ School of Arts, Sydney, to Colonial Secretary, inquiring when a deputation could be received, with enclosure. Minutes thereon. 21 October, 1874	2
2.	Principal Under Secretary to Secretary, Mechanics’ School of Arts, acknowledging No. 1. 24 October, 1874.....	3
3.	Under Secretary of Justice to same, in reply to No. 1. 28 October, 1874.....	3
4.	Secretary to Mechanics’ School of Arts to Under Secretary of Justice, inquiring when deputation could be received. 5 April, 1875.....	3
5.	Under Secretary of Justice to Secretary, Mechanics’ School of Arts, in reply to No. 4. 6 April, 1875.....	3
6.	President of the Mechanics’ School of Arts to Under Secretary of Justice, respecting vote of £2,500, passed by the Legislative Assembly. Minutes thereon. 31 May, 1875.....	4
7.	Under Secretary of Justice to President of Sydney Mechanics’ School of Arts, in reply to No. 6. 23 June, 1875	4
8.	President of the Mechanics’ School of Arts to Colonial Secretary, further respecting No. 6. Minutes thereon. 25 November, 1875	4
9.	Under Secretary of Justice to President of Mechanics’ School of Arts, in reference to No. 7. 9 December, 1875 ...	5
10.	Secretary to Mechanics’ School of Arts to Minister of Justice, inquiring when a deputation in connection with forming Technical Classes and Working Men’s College could be received. Enclosures. 16 May, 1877	5
11.	Under Secretary of Justice to Secretary, Mechanics’ School of Arts, in reply to No. 10. 21 May, 1877	13
12.	Secretary to Mechanics’ School of Arts to Under Secretary of Justice, respecting No. 11—Enclosures. Minutes thereon. 6 June, 1877	13

19.	Memo. from Secretary to Council of Education, with enclosure, in reference to No. 18. 8 August, 1877.....	24

LECTURES FOR PROMOTING TECHNICAL EDUCATION.

Sydney Mechanics' School of Arts.

No. 1.

The Secretary, Sydney Mechanics' School of Arts, to The Colonial Secretary.

Sir,

Sydney Mechanics' School of Arts, 21 October, 1874.

A deputation from the Committee of the Sydney Mechanics' School of Arts having been appointed to wait upon the Government respecting proposed extensions to its educational system, and also to endeavour to secure, on behalf of the Mechanics' Institutes of the Colony, the benefit of any instruction in science provided under the new Mining Act, I do myself the honor to request that you will be good enough to state at what time you will be pleased to receive such deputation. I have the honor also to enclose herewith a memorandum of request from the Committee, together with other papers relating to this institution.

I have, &c.,

JOHN ROGERS,
Secretary.

[Enclosure.]

MEMORANDUM of request to the Government of New South Wales from the Committee of the Sydney Mechanics' School of Arts.

PROVISION having been made in the new Mining Act for courses of lectures on science to be delivered by Professors appointed by the Government, the Committee of the Sydney Mechanics' School of Arts conceive, in view of its central position and large educational appliances, that it would be the most suitable place in the city for imparting a knowledge of the sciences of geology, mineralogy, and chemistry. Its large number of members proves it to be the most successful School of Arts in the Colonies, and having been founded in the year 1833 it may be cited as the Mother of the Mechanics' Institutes in Australasia. Some time since it was resolved to increase the present class operations by establishing a Working Men's College for giving evening instruction to the artisans and apprentices of the city. One great obstacle to the extension of its educational course has been the difficulty of obtaining and providing for suitable teachers on technical science in relation to the arts and manufactures; and it is believed if a School of Mines were affiliated with the Sydney Mechanics' Institute practical teaching in mineralogical science could be effected, and a great want in the community met. It is also thought that as there are seventy-six Schools of Art in the Colony subsidized from public funds, that by a union of these institutions they could be enabled to have arranged courses of scientific lectures by the teachers appointed by the Government. The following excellent recommendations of the recent Royal Commission on Scientific Instruction in Great Britain, under the presidentship of the Duke of Devonshire, are respectfully suggested as being worthy of adoption in this Colony:—

That courses of lectures be given in connection with the collection of physical and mechanical instruments, the establishment of which we have proposed; the object of these lectures being to illustrate the progress of scientific and mechanical discovery and invention.

That the establishment of lectures on science, accessible to all classes on payment of a small fee, should be promoted by the Government in the great centres of population.

That, in the first instance, with the view of carrying out the preceding recommendations the system of instruction of this kind, which has already been established by the Government in the metropolis, should be developed by the institution of courses of lectures on the principal branches of experimental and natural science.

The concluding paragraphs of the final report state that throughout the Commissioners have been guided by two convictions,—

The first, that the diffusion among the people of a general knowledge of science is in itself an object of great importance, and that in particular an acquaintance with the manner in which abstract science is brought to bear upon industrial occupations is of the greatest moment to the working classes of this country, not merely as tending to increase the skill of the artisan in his handicraft, but as the best means of awakening his intelligence by forcing him to reflect upon the general laws which are exemplified by the processes with which he is familiar in his daily life.

The second, that no real advancement of knowledge, and none of the higher benefits of science as educational discipline, are to be hoped for from merely general and occasional scientific instruction, whether it be derived from books or from lectures, but that such advancement and benefits will result only from systematic and sustained study.

In submitting their request to the Government the Committee desire to point out that for the past forty years the Sydney Mechanics' School of Arts has been the principal means of instruction to the youths and adults of the city, and that within the past three years the classes have been extended so as to include female students, with successful results. Some members, both male and female, have creditably passed the senior and junior examinations at the Sydney University. The following are classes of the institution, and 294 pupils attended them during the past year:—Latin, French, Chemistry and Physics, Writing and Arithmetic, Phonography, English Grammar and Elocution, School of Design, Ornamental Art, Architectural and Mechanical Drawing, Water Colors, and Singing. Very successful courses of class lectures on geology and mineralogy have been delivered during the past few years, but owing to the resignation of the teacher they have been recently discontinued, as the Committee cannot obtain a suitable lecturer. A well-attended course of lectures on experimental physics is now being delivered by the teacher of the chemistry class. There are also in connection with the institution a large chess club, and a successful debating class. The reading-room contains all the principal English, Foreign, and Colonial newspapers and periodicals, together with a large reference library. The circulating library consists of about 17,000 volumes of well selected literature and works relating to the Colony, and during last year was used by over 2,000 different members. The class accommodation is now fully occupied, and the Committee are desirous of establishing at once a Working Men's College, as nearly as possible upon the model of the one in Great Ormond-street, London, of which Thomas Hughes, Esq., M.P., is Principal. It has therefore been decided to resume the apartments now occupied by the Secretary, and to enlarge and improve the present building so as to supply the following additional class accommodation:—

Rooms—No. 1, about 26 + 15 feet.

No. 2, " 24 + 15 "

No. 3, " 24 + 15 "

No. 4, " 26 + 15 "

No. 5, a room on the ground floor, fitted with shelves, presses, &c., for chemicals and specimens. Table for lecturer and seats for students say about 24 + 15 feet.

No. 6—a room on upper floor, with skylight, fitted with hanging desks to walls and with sunlight; say about 35 feet + 25 feet for School of Design.

A separate ladies' reading room is also to be provided and the library accommodation increased 50 per cent. Other important improvements are to be made in the ventilation of the present building and to provide for the comfort and convenience of the members.

The principal reason for instituting a Working Men's College is that under present arrangements it has been found that owing to neglected elementary education and long hours of labour the artisans and apprentices are placed at great disadvantage

advantage in keeping up with and competing against those whose labour being of a less exhausting nature are in a better position to study. The Working Men's College will embrace the following classes:—English Grammar, English Literature, Physical Science, Political Economy, Arithmetic, Algebra, Mensuration, Geometry, Practical Geometry, School of Design (Mechanical Drawing, &c.), Mechanics, &c. It is proposed that many of these classes shall be free to members of the Institution engaged in the industrial arts. Scholarships will be founded and the degree of Associate conferred upon the students distinguishing themselves at the yearly examinations.

To meet the pressing requirements for increased class accommodation, competitive designs have been called for to afford the necessary room, and it is now hoped that the Government will place a sum of money on the Estimates for 1875 towards the proposed extensions. In order to help forward the development of the resources of this new country it is imperative that our artizans and apprentices should have technical instruction in mechanical and chemical science as applied to the arts and manufactures, and this it is believed can best be secured by evening scientific lectures in our Schools of Art.

Should the Government accede to the request of the Committee, expense in subsidizing two rival institutions for performing a similar work will be avoided, and the lectures can commence without delay, as there are now in the Sydney School of Arts excellent geological and mineralogical cabinets. It cannot but be admitted that efficiency and economy in working will be best promoted by all evening instruction in science being given at one central place in the City, and in connection with one institution. In affiliating the Mining School with the School of Arts the lecturers and students would have the advantage of a library and reading room containing the latest scientific publications and receiving all new books of special interest. The labours of the professors could not but be greatly assisted by the elementary knowledge obtainable by students in the various classes of the School of Arts. If the School of Mines were affiliated with the Sydney University it could only be used by a few students, and numbers of persons who cannot attend any but evening lectures will be practically debarred from profiting by any instruction in science provided by the Government.

A large block of land at the rear of the School of Arts, with entrance from George-street, has recently been secured by the Committee, and it is suggested that it would be a central and convenient site for the erection of a building should a School of Mines be affiliated with the Sydney Mechanics' Institute. On this land could also be erected an Industrial and Technological Museum similar to Institutions in the manufacturing Towns of Great Britain, with apparatus for illustrating science in its relation to agriculture, mining, and manufactures. The Engineering Association of New South Wales have recently applied to the Committee of the Sydney School of Arts for accommodation to give technical instruction in matters affecting the iron trades, and it cannot but be considered highly expedient that the thousands of apprentices and workmen employed in this City should have training in the science relating to their several callings, at our Mechanics' Institute.

[Copy of Act of Incorporation of the Sydney Mechanics' School of Arts—Report from the Select Committee of the Legislative Assembly on the Sydney Mechanics' School of Arts Incorporation Bill, ordered by the Legislative Assembly to be printed on 27th March, 1874—also, Annual Report of the Sydney Mechanics' School of Arts, for 1873, with Circular, inviting competitive plans for alterations to School of Arts—forwarded with this communication.]

The Minister of Justice and Public Instruction.—H.P., 23/10/74. The Under Secretary, Law Department.—H.H., B.C., 24 Oct., 1874.

No. 2.

The Principal Under Secretary to The Secretary, Sydney Mechanics' School of Arts.

Sir,

Colonial Secretary's Office, Sydney, 24 October, 1874.

I am directed by the Colonial Secretary to acknowledge the receipt of your letter of the 21st instant, requesting that a time may be stated to receive the deputation appointed to wait upon the Government respecting various matters relating to the Sydney Mechanics' School of Arts, and to inform you that your communication has been brought under the notice of the Minister of Justice and Public Instruction.

I have, &c.,

HENRY HALLORAN.

No. 3.

The Under Secretary of Justice, &c., to The Secretary, Sydney Mechanics' School of Arts.

Sir,

Department of Justice and Public Instruction, Sydney, 28 October, 1874.

Referring to your letter of 21st instant to the Colonial Secretary's Department, inquiring at what time a deputation will be received from the Committee of the Sydney School of Arts respecting proposed extension to its educational system, I am directed to inform you that the Minister of Justice and Public Instruction will receive the deputation on Friday next, the 30th instant, at 11 a.m.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 4.

The Secretary, Sydney Mechanics' School of Arts, to The Minister of Justice, &c.

Hon. Sir,

Sydney Mechanics' School of Arts, 5 April, 1875.

I do myself the honor, by direction of the Committee of the above Institution, to inquire at what time you will be pleased to receive a deputation from it respecting the proposed alterations and additions to that institution, and also for the purpose of respectfully suggesting that in the proposed new Mining Bill provision should be made for courses of lectures on mineralogical science in connection with the Mechanics' Institutes of the Colony.

I have, &c.,

JOHN ROGERS,

Secretary.

No. 5.

The Under Secretary of Justice, &c., to The Secretary, Sydney Mechanics' School of Arts.

Sir,

Department of Justice and Public Instruction, Sydney, 6 April, 1875.

Referring to your letter of the 5th instant, inquiring what time the Minister of Justice and Public Instruction would receive a deputation from the Sydney Mechanics' School of Arts respecting proposed alterations and additions to that building, and for making provision in new Mining Bill for courses of lectures on mineralogical science in connection with that institution, I am directed to inform you that Mr. Docker will receive the deputation on Thursday next, the 8th instant, at 11 a.m.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

No. 6.

No. 6.

The President, Sydney Mechanics' School of Arts, to The Under Secretary of Justice, &c.

Sir,

Sydney Mechanics' School of Arts, 31 May, 1875.

With reference to the vote of £2,500 lately passed by the Assembly in aid of the Sydney Mechanics' School of Arts, I do myself the honor to request information as to whether the Government would pay the institution £1,500 of the sum voted on the institution showing that it had to the credit of its building fund in a Bank £3,000, of which sum £2,000 would be money raised on mortgage by the institution, and £1,000, its accumulated savings, not including any part of the £200 annually voted by Parliament. Should the sum of £1,500 be granted to the institution on these terms, we should not require any further portion of the sum of £2,500 voted by the Legislature, as that sum was asked for on the supposition that the institution would only have to raise pound for pound.

I am aware that the terms suggested are somewhat different to those on which aid is usually granted to institutions such as this, but I would at the same time point out that as the credit of the institution is good, and its affairs prosperous, we cannot expect the public to make donations to it such as less flourishing institutions obtain, in order that the Parliamentary vote may be secured.

And I would submit that the successful management which enables the institution to raise money to a certain amount upon its credit, but at the same time cuts it off from the ordinary resource of donations, should not be allowed to stand in the way of its obtaining the portion asked for of the Parliamentary vote.

The money will be entirely devoted to the improvement of the building as a teaching institution, and will be expended upon the enlargement of our library and reading-room, and in providing increased accommodation for our classes, the steadily increasing number of our members, of whom there were for the year ending the 31st of March last 2,101 on the roll, rendering the necessity for these improvements day by day more clearly apparent.

Trusting that this application may receive your favourable consideration,

I have, &c.,

W. C. WINDEYER,
President, Sydney Mechanics' School of Arts.

Cabinet, for consultation.—J.D., 4/6/75. Cabinet is of opinion that this request must be declined.—JOHN R., 21/6/75.

No. 7.

The Under Secretary of Justice, &c., to The President, Sydney Mechanics' School of Arts.

Sir,

Department of Justice and Public Instruction, 23 June, 1875.

Referring to your letter of 31st ultimo, requesting that £1,500 of the sum voted for the Sydney School of Arts should be paid to the institution on its showing a Bank credit of £3,000 to the building fund, I am directed by the Minister of Justice and Public Instruction to state that the matter has been submitted for the consideration of the Cabinet, and they are of opinion that your request cannot be complied with.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 8.

The President, Sydney Mechanics' School of Arts, to The Colonial Secretary.

Sir,

Sydney Mechanics' School of Arts, 25 November, 1875.

Referring to my interview with you relative to the payment by the Government of the sum of £2,500 voted by Parliament in aid of this institution, I do myself the honor to submit for the consideration of the Government the following circumstances as sufficient to justify the Government in paying over a portion of the money to the institution.

The sum of £2,500 has been voted by Parliament on the usual terms—that double that amount be raised by private subscription. The circumstances, however, of the Sydney Mechanics' School of Arts, preclude all hope of moneys being subscribed by the public in its aid, as by successful management the institution has been able to save £1,000 towards a building fund, and its financial position is such that it is in a position to borrow to a certain extent on mortgage, though not sufficiently to enable it to carry out proposed improvements. Under these circumstances it is quite impossible for the institution to obtain subscriptions as if struggling in difficulties, and as it did in its earlier days.

I would, however, submit that the success of the institution should not be allowed to prejudice its interests in its claim upon the consideration of the Government, and I would urge that the good use to which the aid annually granted it, in common with other similar institutions, has been put, gives it an additional claim for help in extending the sphere of its usefulness. I would submit that all that Parliament really required in voting this money, on condition that a certain sum should be contributed by private subscription, was an assurance that some interest was taken in it by the public—a safeguard against the whole burden of such institutions being thrown upon the Government, and a guarantee that self-interest would secure a judicious outlay of the money voted in their aid.

The sum required by the institution for the erection of new class rooms and the extension of its library and reading rooms is £4,500, and I would submit that, for the reasons given by me, the Government would be justified in paying the institution £1,500 of the amount voted by Parliament on condition that the institution raised £3,000, £1,000 of which would be money saved by it, and £2,000 raised upon mortgage of its property. In earnestly pressing our request upon the consideration of the Government I would point out that the Sydney Mechanics' School of Arts more nearly approaches the ideal of what such an institution should be than any other in the country, as will be seen by the Returns recently made to the Assembly. Of 2000 members 600 are mechanics and youths. We have a library of over 16,000 volumes, a most excellently supplied reading room, and a number of classes in full work, all which advantages are offered to our members for an annual subscription of £1. Trusting that our request may be acceded to,

I have, &c.,

W. C. WINDEYER,
President.

Immediate

Immediate. This letter, although addressed to the Colonial Secretary, would appear to have been intended for the Minister of Justice, &c., and was placed under cover to this Department. The previous papers are forwarded herewith by direction of Mr. Docker. The Principal Under Secretary, B.C., 30 November, 1875.—W.E.P.

£1,500 has been placed on Estimates of the Minister of Justice for 1876. Papers returned to Mr. Under-Secretary Plunkett.—H.H., B.C., 1/12/75. Inform.—J.D., 7/11/75. Mr. Windeyer, 9/12/75.

No. 9.

The Under Secretary of Justice, &c., to The President, Sydney Mechanics' School of Arts.

Sir,

Department of Justice, &c., 9 December, 1875.

Referring to your letter of 25th ultimo to the Colonial Secretary applying, for reasons therein stated, that a portion of sum of £2,500 in aid of building fund of the Sydney Mechanics' School of Arts may be paid to that institution, I am directed by the Minister of Justice and Public Instruction to inform you that £1,500 has been placed on Estimates for 1876 to replace a portion of the sum voted on Estimates for present year in a manner unsuited to position of that institution.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 10.

The Secretary, Sydney Mechanics' School of Arts, to The Minister of Justice, &c.

Honorable Sir,

Sydney Mechanics' School of Arts, 16 May, 1877.

I do myself the honor to inform you, that at a general meeting of the committee of the above institution a deputation of certain members of that committee was appointed to wait upon you for the purpose of representing the claims of this institution to some grant from the public funds for the furtherance and support of the Technical Classes and Working Men's College about to be established in connection with the institution.

Secondly. I beg also to enclose a memorandum concerning the imparting of scientific instruction in connection with the Mechanics' Schools of Art of the Colony, and other information respecting the action taken by this institution in the matter of technical education.

Thirdly. If it should, as I trust it will, be agreeable to you to receive the deputation, I have the honor to request that you will communicate to me the time when you would be pleased to meet them.

I have, &c.,

JOHN ROGERS,
Secretary.

[Enclosures.]

MEMORANDUM respecting imparting of Technical Scientific Instruction in connection with Mechanics' School of Art.

MECHANICS' Institutes are now established in nearly every important town of New South Wales, and the greater majority of them possess substantial buildings and good libraries. From a recently published Parliamentary Return it appears that in the year, 1874 the sixty-eight Schools of Art of the Colony had 6,887 members, of whom 1,981 were artisans and apprentices. The value of the property held by these institutions is now estimated at nearly £100,000. Very few lectures have been delivered in connection with Mechanics' Institute, owing to the great difficulty of obtaining suitable lecturers. Evening classes were only in operation at twelve Schools of Art in 1874. It is now believed that Mechanics' Institutes should be enabled to better accomplish their original mission by the initiation of a general scheme of Government Technical Scientific Instruction in connection with them.

The total amount of the annual Government subsidy given to Schools of Art in 1874 only amounting to £3,102, which sum was divided amongst sixty-eight institutions, at the rate of £1 for every £2 paid as subscriptions by their members, the yearly receipts of nearly all these institutions have been found barely sufficient for the purpose of their libraries and reading-rooms, leaving no funds available for the payment of teachers or lecturers.

On the passing of the "Mining Act of 1874," it was considered desirable to endeavour to secure for Schools of Art the services of the lecturers referred to in its 8th clause, and a deputation from the Committee of the metropolitan School of Arts waited upon the Government in the matter. As no School of Mines has yet been formed, it is hoped that the Mechanics' Institutes of the Colony may be allowed the instruction in geological, mineralogical, and chemical science provided for in the Mining Act.

The classes of the Sydney Mechanics' School of Arts have for a great many years imparted instruction to a large number of students, and the committee are now extending its operations by forming in connection with it a Working Men's College for training in technical science the artisans and apprentices of the city. Being centrally situated, and having already an excellent circulating and reference library, elementary classes and apparatus, it is believed that, with the increased accommodation about to be erected, that this institution will be found to be the most suitable place in the metropolis for imparting popular scientific instruction. In order to ascertain the views of the artisans of the city on the question of technical education, a sub-committee of the Sydney Mechanics' Institute some months since had several conferences with the Trades and Labour Council of New South Wales and the Engineering Association, and both these bodies expressed themselves highly favourable to the formation of a Working Men's College in affiliation with the Sydney School of Arts.

It is hoped, therefore, that in any scheme for diffusing a knowledge of technical science throughout New South Wales, that the claims of the various Mechanics' Schools of Art of the Colony may receive favourable consideration at the hands of the Government.

Extract from Herald, 21 June, 1872,

MINERALOGICAL SCIENCE.

To the Editor of the *Herald*.

Sir,

The present discussion in your columns as to the best means for securing popular instruction in mineralogy induces me to state a few facts in support of your assertion as to the want of science-teaching in this Colony. In the recent impetus given to mining enterprise, a great necessity has been felt for the diffusion of a knowledge of the principles of mineralogy. Many ludicrous mistakes have been made owing to prospectors not understanding how to apply its simplest tests. As pointed out by Mr. Krefft, the mere exhibition of groups of minerals would not, however, supply the instruction required, or afford much information to the casual observer. Even with the help of Dr. Thomson's excellent manual, the student would need oral instruction in making experiments for distinguishing the chemical composition of minerals. The suggestion made some time since by Mr. W. Tunks, M.P., for the delivery of systematic courses of scientific lectures in connection with the Schools of Art of the Colony, should be adopted with the founding of Mineralogical Museums. The intimate relation subsisting between geology, chemistry, and mineralogy renders it necessary that the subject matter of lectures should embrace these sciences. In 1869, on my motion, classes for the study of geology and mineralogy were formed in connection with the Sydney Mechanics' School of Arts. The splendid collection of geological and mineralogical specimens in that institution, for many years unused, were thus brought into requisition. By the kind help of Dr. Thomson and other gentlemen connected with the Sydney University, several courses of lectures were then delivered on these sciences. Owing to the departure for Europe of one of the lecturers, and the pressing studies of another, these classes had to be discontinued. For over twelve months efforts have been made to secure suitable teachers for these classes, but without success. Lectures on chemistry are, however, now being delivered every Friday by Mr. E. H. Rennie, B.A., affording instruction in this very useful science. Several members of the science classes at the School of Arts, being Public School teachers, have made use, as object lessons in their schools, of the information thus acquired. Would not a knowledge of the elements of mineralogy be of as much use to our Colonial youth as a smattering of a classical language? Instruction for one hour weekly for a few months would teach the senior scholars in our schools the use of the blowpipe tests. After leaving the primary school, any youth having thus acquired a taste for science might continue his studies in a Mechanics' Institute. It would be too much to expect, however, that our Schools of Art should bear the expense of a series of courses of scientific lectures, including fees and travelling expenses, especially as the small annual subsidy allowed to them of late years has been reduced one-half. The complaint as to the small attendance at lectures in this city is not true respecting scientific subjects popularly handled by a good lecturer. Could not the lecturers to the Mechanics' Institutes of Great Britain, in connection with the Society of Arts, be induced to deliver courses of scientific lectures in this Colony? On their return to England they would thus be furnished with reliable information as to our resources, which could be used in lecturing in the interests of the Colony. The endowment of science scholarships in connection with our Mechanics' Institutes would be a great stimulus to youth. We offer large rewards for the training of the body in aquatics, running, walking, &c., but little stimulus for the training of the mind. The scanty justice meted to the Rev. W. B. Clarke—the father of Australian geology—is very little inducement to our young men to undertake scientific observation; and yet if we wish for an intelligent development of the resources of our native country, our motto should be "science with practice."

Yours truly,

Blue's Point, June 19, 1872.

E. DOWLING.

ANNUAL MEETING OF SYDNEY MECHANICS' SCHOOL OF ARTS, 1873.

Extract from S. M. Herald, 5 February, 1873.

THE CHAIRMAN then called for any resolutions of which notice had been given.

Mr. DOWLING moved,—“That a Working Men's College be formed in connection with this institution, as suggested some years ago by its late president, Dr. Woolley.” He should have felt very diffident in moving this resolution had it not been that some years ago he had heard the late lamented Dr. Woolley, at one of the annual meetings, express a desire that such a college should be formed; and had not that lamented gentleman perished it would, as he believed, have been long ere this in existence. In the report they saw amounts set down for a library and reading-room, and other matters; but the part of the institution which he considered most valuable was unnoticed. There were other libraries in Sydney, but this was the only institution which afforded the means to labouring men of attending the evening classes, and participating in the benefits of education. In the report for the year 1857 the committee had regretted the absence of a working men's college; and it was ascribed to the want of means to provide substantial rewards to the diligent. The institution had been largely fettered by debt; but that debt would be cleared off, he believed, in the course of this year, and he thought the time would then arrive for the establishment of scholarships and degrees in science. The experiment had been tried in England, and found to work successfully, as Ruskin and other eminent men could testify. According to the last Census it appeared that there were 10,000 mechanics and apprentices in Sydney. It would be well if some of these could be gathered in and stimulated to study. There was the apparatus lying idle; they had £400, and gifts to about the same value, which were lying upon the shelves unused. He thought our youths ought to be stimulated to study science. In Melbourne so much stir had been made about this matter that a Technological Commission had been appointed. In England scholarships worth £100 and other large rewards were offered to industrious students in science; and he thought that if a college were established here many young men might be sent home to participate in these advantages. He adverted to the great progress in science made upon the Continent owing to the advantages of such colleges. He felt convinced that if a working man's institute could be formed many large-hearted men would come forward and endow it with scholarships, &c. He felt a great interest in this institution, of which he had been a member since he was nine years of age—(Cheers)—and as a native of the city, and a mechanic himself, he felt that the time had arrived to make a stand in this respect. He considered that the class-rooms ought to be extended; those at present used were incommodious and ill-ventilated. He urged that the mechanics and apprentices of the city ought to be brought in to participate in the advantages of this institution. He referred to Mr. Scott Russell's work on the progress of the colleges upon the Continent.

Mr. DALGARNO seconded. He felt assured that the suggestions made would have due weight with the meeting.

Mr. WANNAN said the proposer had hardly sketched out his scheme. He had no doubt, however, that if the matter were properly placed before the Government it would be supported.

Mr. M'RAE said that, while the project could hardly fail to meet with sympathy he feared that it would be altogether beyond the means of the institution at present. The absence of a mechanical class was simply due to the want of an application for that purpose by half-a-dozen members of the institution. So far as the desirability of a working man's college was concerned, he would be willing to support the resolution; but in its present shape he considered that it went rather too far.

A gentleman in the body of the hall expressed a desire for more particulars. Such a college was very desirable there could be no doubt. If anything could be done to supply a deficiency in this institution (one of the creditable fruits of which was Mr. Dowling), he for one should be very willing to support any endeavours which might be made.

Mr. M'RAE moved as an amendment “That it be an instruction to the committee to take steps with a view to determine whether it is practicable to establish a working man's college in connection with this institution, and, in the event of such being found practicable, a special general meeting to be called for the purpose of discussing the propriety of its establishment.”

Mr. DOWLING replied upon his motion. He was willing to accept the amendment. All he desired was that the matter should be well ventilated. His own view was that the working men's college should not interfere with existing classes, and the prizes—diplomas or certificates—should be given to any of the meritorious students. He thought however, that it was very desirable that the tuition should be under the auspices of the School of Arts. Four years ago he had moved for the establishment of classes in geology and mineralogy; but after establishment they had been discontinued for want of a teacher. In a college such as he proposed, however, he firmly believed that, with the support he believed they should receive from the outside public, gentlemen of attainments could be obtained to take charge of these classes. He quoted from and referred to two English works, “Learning and Working” and “The Working Men's College Magazine,” in which a great deal of information was to be obtained. He again urged the desirability of stimulating the youthful mechanics to studies in science.

The original proposition was withdrawn, and the amendment was carried without dissent.

Extract

Extract from Annual Report, 1874.

THE WORKING MEN'S COLLEGE.

At the last annual meeting the committee were instructed to endeavour to make arrangements for forming technical science classes for the instruction of the artisans and apprentices of the city. Although your committee are impressed with the necessity for the School of Arts fulfilling to a greater extent its mission as a Mechanics' Institute, the lack of sufficient accommodation has hitherto prevented them from obtaining teachers of science in relation to the arts and manufactures. The committee have, however, now succeeded in leasing, with the option of purchase, a portion of land at the rear of the institution with entrance from George-street, with a view of providing increased accommodation for the present or any future departments of the institution. Designs for the additions have been kindly furnished by several architects; and the Honorable the Colonial Secretary has promised that, on approved plans being submitted, the Cabinet will consider the advisability of placing on the Estimates a Government grant. Your committee have had several meetings for the consideration of the plans, but owing to the high price of labour and building material and other causes, they have not been able to arrive at any definite conclusion on the subject. The following important reports have been received from the sub-committee appointed to consider the feasibility of these objects:—

Report of the Working Men's College Committee.

April, 1873.

The committee appointed to consider the above subject beg to report to the general committee:—

That two meetings have been held; at the first of which they considered more especially the primary objects for which they were appointed, which they consider to be, how to improve the present system of classes in connection with the institution by making them, or a portion of them, more practical than at present they appear to be, and to add some others which might prove of great utility to the members. In this they were urged by the fact of the Government in the Mining Bill now before the Assembly providing, in one of its clauses, for appointing lectures in various sciences, such as geology, mineralogy, chemistry, &c., in connection with the School of Mines proposed to be established; and your committee considered that with the many advantages possessed by our institution, the Government might be induced to expend a portion of the sum to be voted for such purpose in establishing primary classes in the above sciences, from which students who may have successfully passed in their annual examinations may be admitted into the upper school, whenever it may be established, free of all fees that may be payable therein.

These are the somewhat crude ideas that your committee considered, and believing that the Mining Bill would be brought up without delay for discussion, they thought no time was to be lost in laying before some of the members of the Assembly their thoughts on the subject. With this object they consulted Messrs. Macintosh, Wearne, Tunks, and Hoskins, gentlemen more especially connected with this and kindred institutions, all of whom were more or less favourable to the plan proposed, but suggested that, as the Mining Bill was not likely to be considered this session, our plans should be more matured, and laid before the Premier, asking his co-operation. Concurring in this view, your committee propose that a deputation of the general committee should wait upon Mr. Parkes, stating the objects to be more especially—

1. The appointment of lecturers for the above purpose, as provided in the Mining Bill, who shall have classes not only in the Sydney School of Arts but in various institutions within a certain range, which may be divided into districts, giving courses of lectures, which may be varied in the different sciences in each session. This would make the diffusion of the above sciences more general than if confined to Sydney alone, whilst the same course of lectures would suffice for the various districts.
2. To bring to his notice the special advantages possessed by the Sydney School of Arts in rooms, specimens of mineralogy and geology, apparatus for mechanical science, &c., all of which could be utilised for the object in view.
3. The peculiar position of our institution being so central and available for evening classes, which—now that the institution is no longer encumbered by a debt that has, in a measure, restricted their usefulness by a want of space—can, we hope, shortly have better accommodation afforded them.
4. Should the plan proposed by Dr. Liversidge, in the *Herald*, be adopted, of placing the above School of Mines in the University, it would have so many disadvantages, and be so purely local, as compared with our modification, which would make a knowledge of the above sciences general throughout the colony.
5. Quote from the journal of the Society of Arts of the 10th January, 1873, what is being done at Melbourne by the Government in connection with the technological school.
6. Examinations might be held for honors, and the obtaining of the Whitworth Fellowships open to our colonists. These would be invaluable to our mechanics enabling the possessor to visit the most celebrated workshops of Europe.

These, we submit, are proposals worthy of the consideration of the general committee, and connected with the object for which we were appointed, and if not successful in obtaining any promise from the Government of this colony, might, we venture to submit, be the province of the general committee to carry out, after due deliberation of the merits or demerits of the subject now mooted.

Report dated June 5th, 1873.

The committee would urge upon the general committee the necessity of immediately carrying out the suggestion made in a previous report, namely, that a deputation wait upon the Honorable the Colonial Secretary, in order to endeavour to obtain for the institution the services of any professors or lecturers who may be appointed in connection with the department of mines.

Your committee is of opinion that it is advisable to extend the working of the classes, so as to place the educational advantages of the institution within the reach of the mechanics of the city and suburbs. For this purpose it is recommended that classes for mechanics be established, namely, mechanical drawing, architectural drawing, practical geometry, arithmetic, and mensuration; and further, that if possible these classes be free. In order to carry out this scheme it will be necessary to make alterations in the building, so as to allow of the erection of a large class-room. In connection with this matter the committee advises that the working of the commission for promoting industrial and technological instruction in the colony of Victoria be brought under the notice of the Government with the view of securing similar aid.

Classes.

For several years past the committee have recorded their regret that the institution had so few well ventilated class-rooms for the use of the students. The want of suitable meeting rooms has been more especially felt by the debating and chess clubs, and by the science classes.

Notwithstanding, however, this great drawback, the classes in operation generally show increased attendance, and the teachers report satisfactory results. Although the classes are the most important of the educational agencies in connection with the institution, your committee cannot but regret that hitherto no scholarships have been founded, so as to make them more popular with the rising youth of Sydney. It is to be lamented that the leisure time of great numbers of the young men of the city is devoted to questionable amusements, and, not being members of any literary society, that they cannot have realised the truth of an expression by the late lamented Dr. Woolley, "that an educated man is a gentleman, no matter what his occupation." If employers of labour could be induced to take a greater interest in the moral and intellectual welfare of their apprentices, there is no doubt that numbers might be persuaded to spend their evenings profitably in the classes of this institution.

Extract from Herald, 11 August, 1874.

ART SCHOOLS.

To the Editor of the *Herald*.

Sir,—The assertion of Mr. J. H. Thomas, that technical education has been found to be a mistake in England, may easily be disproved by reference to the final Report from the recent Royal Commission on Scientific Instruction in Great Britain, presided

presided over by the Duke of Devonshire. With a view to still further extend the benefits of technical education, that Commission has made the following recommendations :—

- “That the establishment of lectures on science, accessible to all classes on payment of a small fee, should be promoted by the Government in the great centres of population.
- “That in the first instance, with a view of carrying out the preceding recommendation, the system of instruction of this kind which has already been established by the Government in the metropolis should be developed by the institution of courses of lectures on the principal branches of experimental and natural science.
- “That the proposed lectures be of two kinds :—First, lectures of an elementary character, on the general principles and most important facts of science; secondly, lectures specially intended for the working classes, on the application of science to the arts and industries of the country.”

The concluding paragraphs of the Report state that throughout the Commissioners have been guided by two convictions :—

“The first, that the diffusion among the people of a general knowledge of science is in itself an object of great importance, and that, in particular, an acquaintance with the manner in which abstract science is brought to bear on industrial occupation is of the greatest moment to the working classes of this country, not merely as tending directly to increase the skill of the artisan in his handicraft, but as the best means of awakening his intelligence, by forcing him to reflect upon the general laws which are exemplified by the processes with which he is familiar in his daily life.”

The second “That no real advancement of knowledge and none of the higher benefits from science as educational discipline are to be hoped for from merely general and occasional scientific instruction, whether it be derived from books or from lectures, but that such advancement and benefits will result only from systematic and sustained study.”

A great Conference of Mayors of the principal towns in Great Britain, Chairmen of Science and Art Schools, and others, was held in London, on the 20th May last, to urge upon the Government the necessity of carrying out the recommendations of the Royal Commission, and appropriate resolutions were passed by a “representative meeting, at which there were deputies from all parts of the United Kingdom.” The Chairman (Lord Houghton) in his opening address said, “the object of this meeting was to discuss the necessity on the part of the Government to extend the usefulness of our public museums and galleries and make them subservient to the technical instruction of the people. The reasons for this action were two-fold. It was desired to promote those industrial and important effects which result from the introduction of museums and objects of art into the crowded localities of this country, an object which all who had turned their attention to the subject knew to be of essential importance to the manufacturing interests of the country, and which had been rather too much neglected.” (*Vide Journal of the Society of Arts, 22nd May, 1874.*)

Mr. Thomas thinks that the only place where technical education should be obtained is between the walls of the workshop; but even the *employés* of the Sydney firms named by him have decided otherwise, and, in meeting together for mutual instruction under the name of the “Engineering Association,” they have had many valuable discussions on subjects in technical science. It is for the purpose of still further carrying out the objects of this Association, and to enable workmen and apprentices in the other branches of the arts and manufactures to share in similar advantages, that the Scientific College is to be founded at the Sydney Mechanics’ School of Arts.

If the name of school of design be sometimes a misnomer, it is attributable to the fact that in some of the schools the pupils are taught to ignore the study of technical art; and, as in the case of many of the Mechanics’ Institutes, broadcloth and silk have ousted moleskin and print. The work displayed at the exhibitions of the schools of design in Victoria prove that they are not to be despised as educational institutions.

In the matter of the ornamentation of railway stations, I do not understand the canons of art-criticism sufficiently to decide between the dictums of Ruskin and Mr. Thomas, but it is evident that even in this city the comfort and utility of some of its largest edifices have been sacrificed to a weakness for architectural display.

Professional jealousy and a desire to keep intact the secrets of the workshop have often retarded the progress of the arts and manufactures. It is to be hoped, therefore, that in this Colony the practical teachings of such educational reformers as Albert the Good, Whitworth, and Scott Russell may have attention, and the material interests of the Colony be promoted by the encouragement of mechanical science. In nearly every Colony under the British Crown industrial or technological instruction is afforded by the Government. Let it not be said of New South Wales that she refused to take part in the race for commercial greatness, but with stately slowness refused her sons that scientific training which, by introducing new industries, might enable them to place Sydney in its proper position as one of the largest manufacturing cities in the world.

Yours truly,
E. D.

Blue’s Point, 10th August, 1874.

Extract from *Herald*, 31 August, 1874.

ART SCHOOLS.

To the Editor of the *Herald*.

SIR,—The recent report from the Royal Commission on Scientific Instruction in Great Britain, which strongly recommended the extension of instruction in technical science, has received but scant justice at the hands of Mr. J. H. Thomas. Australians have been charged with a lack of reverence, but I trust no countryman of mine would be guilty of so lightly treating the well matured opinions of the many high educational authorities who gave evidence before that Commission. I am, however, glad to find that although Mr. Thomas is not in favour of giving instruction in technical science, he earnestly advocates the formation of a Working Men’s College. Some time since on my motion it was resolved that a Working Men’s College be founded in connection with the Sydney School of Arts, and competitive designs are now advertised for to afford the necessary class accommodation. It has been thought that in the educational course of the proposed college technical science should have a place, in order that the School of Arts may fulfil one of its objects as a mechanics’ institute. The great impetus given of late years to the study of physical science, and the spirit of the times, also require that popular evening instruction be afforded in mechanical, chemical, and mineralogical science. It is one of the fundamental principles of the Working Men’s College in London that “it endeavours to impart to each man that knowledge he is most in need of;” and Dr. Birkbeck, the founder of mechanics’ institutes, was first induced to start them by noticing the inquisitive countenances of a circle of operatives who had crowded round a model of a centrifugal pump which had been constructed for him in their workshop. The original prospectus issued by Dr. Birkbeck is as follows :—“I shall during the next session deliver a course of lectures upon the mechanical affections of solid and fluid bodies, abounding with experiments and conducted with the greatest simplicity of expression and familiarity of illustration solely for persons engaged in the practical exercise of the mechanic arts; men whose situation in early life has precluded the possibility of acquiring even the smallest portion of scientific knowledge, and whose subsequent pursuits not always affording more than is necessary for their own support and that of their dependent connections, have not enabled them to purchase that information which curiosity, too active for penury wholly to repress, or the prevailing bias of their natural genius might prompt them to obtain. I have become convinced that much pleasure would be communicated to the mechanic in the exercise of his art, and that the mental vacancy which follows a cessation from bodily toil, would often be agreeably occupied by a few systematic philosophical ideas upon which at leisure he might meditate. It must be acknowledged, too, that greater satisfaction in the execution of machinery must be experienced when the uses to which it may be applied, and the principles upon which it operates are well understood, than where the manual part alone is known, the artist remaining entirely ignorant of everything besides; indeed I have lately had frequent opportunities of observing with how much additional alacrity a piece of work has been undertaken, when the circumstances were such as I have now stated.” Dr. Birkbeck fully realized his expectations, and Mr. Robert Hunt, F.R.S., who for over twenty years regularly lectured to the mechanics’ institutes of Great Britain, also says—“I believe that the artisans of England will support any institution in which they can really learn. When I have seen the eager attention of 650 working men night after night listening to lectures on physics, on chemistry, on metallurgy, on geology, on natural history, and on mineralogy, and, when I know that 1,500 applications have been made within a few hours to attend those lectures which have been given by the Professors of the Government School of Mines, I cannot but believe that a large and influential class are eager to learn, read, and inwardly digest the truths of science and the beauties of literature.”

The

The opinion of Mr. Thomas that the technical scientific instruction provided on the Continent by the various Governments would not be suitable for the British workman, was not shared by the deputation of artisans from the various trades who were appointed to visit France, and report upon the Paris Exhibition. Mr. J. Scott Russell, in his work on "Systematic Technical Education," says, respecting that deputation:—"It is impossible to go through the evidence of the eighty-six representatives of the skilled workmen of England without sharing their profound conviction: 1st. Of the pressing evil of the nation in regard to manufacturing pre-eminence. 2nd. Of the culpability of the educated classes and of the executive Government in having neglected the education of the people. 3rd. That it is satisfactorily proved by these reports that the reluctance of the working classes to receive superior technical education, to bear taxation for that purpose, and to accept the active agency of Government institutions and officials (which reluctance has been put forward as an excuse for this neglect) has no existence in fact, that it is therefore the negligence, apathy, and reluctance of the governing classes and the Government which have hitherto alone prevented the organization of systematic technical education. 4th. It appears that until the mission to France of the English artisans in 1867, they, the working men of England, were not aware that the Governments of other countries had organised complete education in all trade crafts, from the lowest mechanical labour to the highest professional skill. 5th. Throughout the whole of these reports there runs a feeling of profound admiration for the system of education given in France; but they were evidently not aware that the educated men and statesmen of France had themselves become conscious that their system was far below the level of excellence of the educated German nations; that a Royal Commission, under the presidency of M. Behic, formerly Minister of Commerce, had recently been occupied with that subject, and had arrived at the conclusion that the technical education of France, which our artisans admired in Paris, was, as a national system of technical education, extremely defective; and the investigations of this Commission prove that if England is the worst educated of the first-class powers of Europe, France is the second worst. 6th. There runs parallel with these convictions a consciousness that the English workman is by nature the best of workmen, and that with systematic education their works would excel those of competing nations."

Sir William Hamilton and Archbishop Whately differed in defining the terms "science" and "art," but Mr. Thomas should have no difficulty over the word "technical," as modern usage and requirements have stamped it in the English language with an univocal signification.

Our Premier, Mr. Parkes, has done much for the cause of primary education. It yet remains for him to continue his noble work by enabling the mechanics' institutes to afford technical scientific instruction, and thus aid in the development of arts and manufactures in our midst. The letter from Mr. Stevens, in to-day's issue, shows what is being done for technical education by the Government of Victoria. Judging by the eager groups daily assembling in Pitt-street, the only scientific instruction received in this city by numbers of young men is in the art of betting and bookmaking, and a large number of students are now being easily plucked by the professors.

Blue's Point, 19 August 1874.

Your's truly,
E. D.

Editorial Article in Empire, Monday, October 2, 1874.

THE provision in the Mining Act which authorizes the establishment of a School of Mines is in accordance with public opinion. The progress of mining industry on the one hand, and the influence of the general intellectual training which promotes a desire for scientific knowledge on the other, combine to produce a popular demand for such an institution. Not long ago we had occasion to comment in these columns on the praiseworthy effort made at Hill End to set up a local School of Mines for that gold-field. In this effort Hill End is following the example of Ballarat, and probably similar projects will be taken up in other gold-fields of this Colony. Meanwhile the Government is pledged, by the Act which they got passed through Parliament, to set up a central School of Mines for the benefit of the whole country. And, as appears by the report of the deputation to the Minister of Justice and Public Instruction, which was published in last Saturday's issue, the Committee of the Sydney School of Arts are desirous to have a School of Mines established in the building to be erected for the advancement of science on the ground lately purchased for the extension of that institution.

There is thus a remarkable unanimity on the part of the Parliament, the Ministry, a large section of the mining population, and members of the community who have interested themselves in the advancement of science—all earnestly seeking the establishment of a School of Mines. Then the Parliament has provided, in the Mining Act, that the School of Mines may be connected with the University of Sydney; and in that case the School of Mines "shall be under the control and management of the Senate of the University, and the Senate shall appoint such professors and readers and other persons as may be required." Thus, without expressly binding the Government to connect the School of Mines with the University, the Legislature has pretty clearly indicated its opinion that the University, as the chief centre of learning and science in the country, is the fitting head of the proposed scientific institution. There is, therefore, a multitude of counsellors at hand to guide the forthcoming School of Mines. The difficulty is to determine, in the manner which will best promote the public interest, where the institution shall be set up, and to whose hands the management shall be entrusted. As to the place, there can be no question that for the public interest, and for the advancement of the design of the Legislature in making provision for a School of Mines, a central position in the city would be the best. The Committee of the School of Arts purpose to establish a Working Men's College, as nearly as they can make it, like that in Great Ormond-street, London, of which Thomas Hughes, Esq., M.P., is Principal. This college is to furnish instruction in English grammar, English literature, physical science, political economy, arithmetic, algebra, mensuration, geometry, mechanics, &c.; and in association with these it would be well that those working men who desire it should have opportunities of receiving such instruction as a School of Mines is designed to afford. The document presented on behalf of the Committee of the School of Arts by Mr. Macintosh, M.L.A., says truly: "In order to help forward the development of the resources of this new country, it is imperative that our artisans and apprentices should have technical instruction in mechanical and chemical science, as applied to the arts and manufactures;" and this object might be effectually promoted "by evening lectures in our School of Arts."

The position of the School of Arts in the centre of the city, and the prospect of the early establishment there of a Working Men's College, are strong reasons for acceding to the proposal that the School of Mines should be set up in that locality.

Extract from Sydney Morning Herald, 31st October, 1874.

PROPOSAL TO CONNECT A SCHOOL OF MINES WITH THE SYDNEY SCHOOL OF ARTS.

A DEPUTATION, consisting of the Hon. John Sutherland, Messrs. J. Wearne, M.L.A., W. M. Alderson, J. Macintosh, M.L.A., J. Fowles, F. Bridges, J. Rogers, E. A. Rennie, and E. Dowling, waited upon the Hon. G. W. Allen, Minister of Justice and Public Instruction, yesterday, for the purpose of asking the Government's assistance in establishing a School of Mines in connection with the School of Arts. The Hon. R. P. Abbott, Minister for Mines, was present.

In the absence of the President of the School of Arts the deputation was introduced by the Hon. John Sutherland, senior Vice-President.

The following memorial was presented to the Minister for Justice and Instruction two or three days ago, and it was therefore spoken of as having been read:—

MEMORANDUM of request to the Government of New South Wales, from the Committee of the Mechanics' School of Arts.

PROVISION having been made in the new Mining Act for courses of lectures on science, to be delivered by lecturers appointed by the Government, the Committee of the Sydney Mechanics' School of Arts conceive—in view of the central position and large educational appliances of that institution—that it would be the most suitable place in the city for imparting a knowledge of the sciences of geology, mineralogy, and chemistry. Its large number of members proves it to be the most successful School of Arts in the Colonies; and, having been founded in the year 1838, it may be cited as the mother of Mechanics' Institutes in Australasia. Some time since it was resolved to increase the present class operations by founding a Working Men's College, for giving evening instruction to the artisans and apprentices of this City. One great obstacle experienced to the extension of its educational course has been the difficulty of obtaining and providing for suitable teachers in technical science in relation to the arts and manufactures; and it is believed if a School of Mines were affiliated with the Sydney Mechanics' Institute practical teaching in mineralogical science could be effected, and a great want in the community met.

It is also thought that, as there are seventy-six Schools of Art in this Colony subsidized from public funds, by a union of these institutions they could be enabled to have arranged courses of scientific lectures by the Professors appointed by the Government.

The following excellent recommendations of the recent Royal Commission on Scientific Instruction in Great Britain, under the presidentship of the Duke of Devonshire, are respectfully suggested as being worthy of adoption in this Colony:—

“That courses of lectures be given in connection with the collection of physical and mechanical instruments, the establishment of which we have proposed, the object of these lectures being to illustrate the progress of scientific and mechanical discovery and invention.

“That the establishment of lectures on science, accessible to all classes on payment of a small fee, should be promoted by the Government in the great centres of population.

“That, in the first instance, with the view of carrying out the preceding recommendations, the system of instruction of this kind, which has already been established by the Government in the metropolis, should be developed by the institution of courses of lectures on the principal branches of experimental and natural science.”

The concluding paragraphs of the report state that throughout the Commissioners have been guided by two convictions:—

“The first, that the diffusion among the people of a general knowledge of science is in itself an object of great importance, and that in particular an acquaintance with the manner in which abstract science is brought to bear upon industrial occupations is of the greatest moment to the working classes of this country; not merely as tending directly to increase the skill of the artisan in his handicraft, but as the best means of awakening his intelligence by forcing him to reflect upon the general laws which are exemplified by the processes with which he is familiar in his daily life.

“The second, that no real advancement of knowledge, and none of the higher benefits of science as educational discipline, are to be hoped for from merely general and occasional scientific instruction, whether it be derived from books or from lectures, but that such advancement and benefits will result only from systematic and sustained study.”

In submitting their request to the Government, the Committee desire to point out that for the last forty years the Sydney Mechanics' School of Arts has been the principal means of instruction to the youths and adults of the City, and that within the past three years the classes have been extended so as to include female students with successful results. Some members of these classes, both male and female, have creditably passed the Senior and Junior Examinations at the University. The following are classes of the institution, and 294 pupils attended them during the past year:—Latin, French, chemistry and physics, writing and arithmetic, phonography, English Grammar, elocution, school of design (water colours, &c.), ornamental art, mechanical drawing, architectural drawing, and singing. There is also a large chess club and a debating club. Very successful courses of class lectures on geology and mineralogy have been delivered during the last few years, but owing to the resignation of the teacher they have been recently discontinued, as the Committee cannot obtain a suitable lecturer. A well-attended course of lectures on experimental physics is now being delivered by the teacher of the chemistry class. The reading-room contains all the principal English, Foreign, and Colonial newspapers and periodicals, together with a large reference library. The circulating library consists of about 17,000 volumes of well-selected literature and works relating to the Colony, and during last year was used by over 2,000 different persons. As the class accommodation is now fully occupied, and the Committee are desirous of establishing at once a Working Men's College, as nearly as possible upon the model of the one in Great Ormond-street, of which Thomas Hughes, Esq., M.P., is principal, it has been decided to resume as class-rooms the apartments occupied by the secretary, and to enlarge and improve the present building so as to supply extra class accommodation. The principal reason for instituting a Working Men's College is that, under present arrangements, it has been found that, owing to their education having been neglected, and long hours of labour, the working men and apprentices are placed at great disadvantage in keeping up with and competing against those whose labour being of a less exhausting nature, are in a better position to study. The Working Men's College will embrace the following classes:—English grammar, English literature, physical science, political economy, arithmetic, algebra, mensuration, geometry, practical geometry, mechanical drawing, mechanics, &c. It is proposed that many of these classes shall be free to members of the institution engaged in the industrial arts. Scholarships will also be founded, and a degree of associate conferred upon the students distinguishing themselves at the yearly examinations.

To meet the pressing requirements for increased class accommodation, competitive designs have been called for to afford the necessary room; and it is hoped the Government will consent to place upon the Estimates a sum of money towards the proposed extensions. In order to help forward the development of the resources of this new country, it is imperative that our artisans and apprentices should have technical instruction in mechanical and chemical science, as applied to the arts and manufactures, and this it is believed can be best gained by evening scientific lectures in our School of Arts.

Should the Government accede to the request of the Committee, expense in subsidizing two rival institutions at the same place for performing a similar work will be avoided, and the lectures can commence without delay, as there are now in the School of Arts excellent geological and mineralogical cabinets. It cannot but be admitted that efficiency and economy in working will be best promoted by all evening Government scientific instruction in the City being given at one central place, and in connection with one institution. In affiliating the Mining School with the School of Arts the lecturers and students would have the advantage of a large library and reading-room, containing the latest scientific publications, and receiving all new books of special interest. The labours of the professors cannot but be greatly assisted by the elementary knowledge obtainable by students in the various classes of the School of Arts. If the School of Mines were affiliated with the Sydney University it could only be used by a few students, and numbers of persons who cannot attend any but evening lectures will be practically debarred from profiting by any instruction in science provided by the Government. A large block of land at the rear of the School of Arts, with entrance from George-street, has recently been secured by the Committee, and it is suggested that it would be a central and convenient site for the erection of a building, should the School of Mines be affiliated with the Sydney Mechanics' Institute. On this land could also be erected an Industrial and Technological Museum, similar to institutions in Great Britain, with apparatus for illustrating science in its relation to agriculture, mining, and manufactures. The Engineering Association of New South Wales have recently applied to the Committee of the Sydney Mechanics' School of Arts for accommodation to give instruction in matters affecting the iron trade; and it cannot but be considered expedient that the thousands of apprentices and workmen employed in the City should have training in the science affecting their various callings at our Mechanics' Institute.

Mr. MACINTOSH explained that the Committee of the School of Arts were anxious to extend their educational appliances, and had purchased a block of land at the rear of the present institution, on which they proposed to erect buildings for a working men's college; and it was thought that the Government would find it advantageous in helping the Committee to establish a School of Mines in connection with the College. Plans of the new buildings were nearly ready, and they would be furnished to the Government without delay.

Mr. ALLEN said that so far as he understood the document that had been presented to him, the School of Arts Committee wanted two things—that the School of Mines which might be hereafter established by the Government should be affiliated to the Mechanics' School of Arts; and that the Government should place a sum of money on the Estimates to assist the Committee in carrying out the proposed building alterations. He should be glad if some member of the deputation would explain in what way the Committee proposed to affiliate the School of Mines with the School of Arts, because, according to the Mining Act, the School of Mines which the Government were empowered to establish must be under the control of the Minister for Mines.

Mr. MACINTOSH pointed out that the Committee of the School of Arts contemplated the establishment of a School of Mines long before the Mining Act was passed.

Mr. E. DOWLING referred to the proposed alterations, and said that the School of Mines, though connected in some way with the School of Arts, might still be under the control of the Mining Department. It would be necessary to have a separate and distinct building for a School of Mines. The School of Arts was a much more central place for scientific lectures than the University; and besides that, it was proposed that the lectures of the mining professors should, as at Ballarat, be given in the evenings, when the working classes specially could have the opportunity of attending.

Mr. BRIDGES said that, amongst other things, the Committee of the School of Arts contemplated the erection of a large class-room which would hold 150 or more students, for giving them oral instruction in various branches of science. The Government might appoint its own professors, who would lecture on mineralogy one or two evenings a week. Special accommodation would be provided for such lectures. There was already in connection with the institution a set of geological specimens.

Mr. ALLEN thought the benefits of a School of Mines might be largely increased if it was established in a more central place than the University, where the evening lectures could be given.

Mr. BRIDGES said there was no doubt that the time would come when the School of Mines would have to be a separate institution. But it was thought that a commencement might be made by connecting it with the School of Arts.

Mr. ABBOTT pointed out that as the law now stood it would be impossible for the Government to take the course pursued at Ballarat, a School of Mines was there endowed by the Government, but they had no control over it. It would be injudicious to have a School of Mines partly under Government control and partly under the control of a Committee of the School of Arts.

Mr. BRIDGES thought the Government might give the members of the School of Arts and others the benefit of the lectures.

Mr. ABBOTT said that before that could be done, lecturers would have to be appointed, and a School of Mines formed.

Mr. FOWLES did not think the Committee of the School of Arts contemplated having the management of the School of Mines.

Mr. ABBOTT thought the School of Mines would not be so widely useful as it might be made if it were established at the University.

Mr. FOWLES said that if the Government decided to initiate the School of Mines at the School of Arts, the plan of the proposed new buildings might be modified as it was found necessary.

Mr. ALDERSON said that the Committee of the School of Arts were anxious that no time should be lost in establishing a School of Mines; and they thought its establishment would be facilitated if the Government consented in the first instance to connect it with the School of Arts. When the time came for the establishment of a museum in connection with the School of Mines, then the Government could provide a separate institution, and the School of Arts rooms could be used for something else.

Mr.

Mr. WEARNE said that the Committee of the School of Arts did not wish to confine the advantages that might be derived from a School of Mines to the Sydney Mechanics' Institute. There were in nearly all large centres of population in the Colony Schools of Art, and the lecturers might travel about lecturing at the principal townships.

Mr. MACINTOSH thought it would be better not to speak of the proposal as an affiliation of the School of Mines with a School of Arts. The word "affiliation" did not really convey what was meant. It was more of a Working Men's College than a School of Mines that was intended.

Mr. ALLEN thought he could promise, on behalf of his colleagues and himself, that the matter should have their earliest and most favourable consideration. It was possible that the School of Arts might render material service towards the establishment of a School of Mines. With regard to the request for pecuniary assistance he thought everybody must recognize the great good that had been done by the Sydney School of Arts; and he should be happy to bring under the notice of his colleagues the question of placing a sum of money on the estimates to aid in the erection of the new buildings. It would be necessary that the Government should be informed as to the cost of the proposed buildings.

Mr. FOWLES: About £5,000.

Mr. BRIDGES thought the request for money divided itself into two parts—a request for assistance in putting up the new buildings, and a request for assistance in the erection of the working men's college. He thought the second was the special application.

Mr. ALLEN thought it would be well for the Committee of the School of Arts, when making application for money, to state distinctly for what purpose it was wanted, and the conditions under which it would be accepted, if given.

After a few other remarks the deputation thanked the Minister for his courtesy, and withdrew.

Extract from Annual Report—February, 1876.

STEPS had previously been taken with a view to obtain a promise from Government of assistance in effecting the important alterations contemplated by the Committee. Advantage was therefore taken of the appointment of a deputation from the general committee to wait on the Minister of Justice and Public Instruction, in accordance with the recommendation of the sub-committee on the Working Men's College (quoted in last year's report), to bring the whole matter under the notice of the Government. The deputation consisted of John Macintosh, Esq., M.L.A., Joseph Wearne, Esq., M.L.A., and Messrs. Fowles, Alderson, Bridges, Dowling, Rennie, and Rogers, who waited on the Minister of Justice, the Hon. G. W. Allen, on October 30th, to whom they were introduced by the Hon. John Sutherland, M.L.A., the senior Vice-president of the institution. The Hon. R. P. Abbott, Minister for Mines, was present during the interview. The primary object of the deputation was to request that the School of Mines provided by the "Mining Act of 1874," be affiliated with the School of Arts, and also to seek for assistance in establishing a proposed Working Men's College. It was stated by Alderman Macintosh that the committee of the School of Arts wished to make several improvements, in order that they might have greater facilities for educational purposes than exist at present; that there was sufficient room on the ground which had been secured at the rear of the present premises to erect a building in which a School of Mines and Working Men's College could be established; that for the purpose of carrying out such matters he believed that the School of Arts was entitled to a certain amount proportionate to the subscription that might be raised; but in order to carry out the improvements proposed, the committee were of opinion that a special grant ought to be made by the Government for the purpose. After Messrs. Dowling and Bridges had explained some of the details of the proposed additions to the resources of the institution, Mr. Fowles stated that when the present front of the School of Arts building was erected, he formed one of a deputation which waited upon the then Colonial Secretary (Mr. now Sir Charles Cowper) to ask for a grant of money, as they then only contemplated the erection of a portion of the proposed building. £2000 were placed upon the Estimates—the School of Arts contributing a similar sum; and Mr. Cowper promised that when the other part of the building was completed, the Government would give an equal sum. He thought, therefore, that when the plans had been selected, they could be sent to the Minister, with a solicitation that a moiety of the estimated cost should be borne, as the building would be entirely for educational purposes. Mr. Allen said in reply that he was glad to hear from Mr. Fowles that the proposal was not to ask the Government for a sum of money independent of private subscriptions. He thought that everybody must recognize the great good which the Sydney School of Arts had effected, and it therefore had a claim upon the Government; he would be happy to bring their application under the notice of his colleagues; but it would first be necessary for him to know what the cost of the proposed building would be. Mr. Fowles remarked that it would be about £5,000. Mr. Allen said if they would send him the plans he would submit them to his colleagues. The Committee have now the pleasure to report that since the interview of the deputation with the Minister of Justice, the sum of £2,500 has been placed upon the Estimates for the purpose of effecting the proposed improvements in the institution. They trust, therefore, that in the next year's report their successors will be enabled to record the commencement, at least, of these important additions to the building.

As the selected design provides for the utilising of the whole of the present building for educational purposes, it becomes necessary to make arrangements for the Secretary's residence elsewhere. The Committee therefore voted the sum of £80 per annum to that officer as house rent, in lieu of his present quarters on the premises.

The treasurer's financial statement is highly satisfactory, showing a balance to the credit of the institution of £631 18s. 2d. The receipts for 1874 amounted to £2,195 6s. 4d. against £2,066 6s. 2d., for the year 1873.

During the year applications were received from the Engineering Association and the Trades and Labour Council for the use of one of the class-rooms; and it has accordingly been let to those societies for the occasional use of their members. The Committee, however, hope that when the proposed alterations are completed, they will be enabled to effect some more advantageous and permanent arrangement.

The number of members subscribing to the institution is as follows:—

	1st qr.	2nd qr.	3rd qr.	4th qr.
1875... ..	1378	1522	1586	1447
1874... ..	1322	1389	1484	1319
Increase	56	133	102	128

The average increase of members during each quarter as compared with the previous year is 104.75.

The scheme for the establishment of a Working Men's College in connection with the School of Arts, the desirability of which was affirmed by the annual meeting of members in February, 1873, has necessarily remained in abeyance until the requisite accommodation could be afforded by the completion of the proposed additions to the building. It must be obvious however, that the Committee would be greatly assisted in their endeavours to carry out the expressed wishes of the members were the class of persons who it is considered would be benefited by such a scheme, to avail themselves more largely of the existing resources of the institution by joining the classes already established. It may appear almost unnecessary to remind members that instruction in writing, arithmetic, grammar, mathematics, natural science, and mechanical and architectural drawing—for which purpose, amongst others, the establishment of a Working Men's College has been frequently urged—is provided for in the present classes of the institution.

Extract from Herald, 4 February, 1877.

ENGINEERING ASSOCIATION.

YESTERDAY evening a special meeting of members of this Association was held at the Society's rooms, School of Arts, for the purpose of considering the following subject:—Technical classes as a branch of public education in the Colony. The attendance was small. Mr. Macintosh, M.L.A., Dr. Paterson, Mr. Rogers, Mr. E. Dowling, officers or committeemen of the School of Arts, were present by invitation. Mr. G. Davidson (the president) occupied the chair, and called upon Mr. Laing to open the subject. Mr. Laing said that the main object of their association had been to promote a technical education of the young men of the city, though they had never succeeded in carrying it out to the extent that they would have desired. He contended that there were no adequate facilities in the Colony for enabling apprentices to the engineering to acquire a scientific knowledge of the business. The country had spent millions in the construction of railways, and yet no schools had been provided for the education of those who would have to work these railways. And no means had been provided for the youth of the Colony to enable them to develop profitably the vast mineral resources of the Colony, or to teach them the best methods of turning our raw produce into manufactured goods. He read extracts from various works to show that America and continental countries were in advance of England in the matter of providing technical instruction to the artisans of the country. However, the great exhibitions had had the good effect of awakening the attention of English people to the importance of the subject; and now in the mother country both elementary and more advanced scientific education was being given in special schools and classes formed in all the great centres of industry. He moved the following resolution:—"That the members of this Association having seen and felt the great loss and inconvenience arising from the want of schools to supply the technical education required for carrying on successfully the various trades and industries with which they are or have been connected, consider that the establishment of a polytechnic college school or schools for teaching the various branches of knowledge required in engineering, building, mining, manufacturing, and agricultural industries, would be advantageous for the development of the intellectual material and industrial resources of the Colony. That such college, school, or schools should be conducted in such a manner as would enable boys after leaving the primary schools, and being apprenticed to any trade or profession, to continue their education at evening classes, and thereby acquire such special instruction and technical knowledge as would assist their progress in the trade, business, or profession they had adopted as their future pursuit in life. Seeing that provision has been made out of the public funds for primary education, grammar schools, and a university, we think a polytechnic college, school, or schools should also be provided for and established in connection with our Public schools. It would render the system more complete, and by enabling the artisans, manufacturing, mercantile, and agricultural classes to obtain technological training, would meet a want of instruction existing in practical life which none of our educational institutions as at present constituted can supply." Dr. Paterson expressed his concurrence in the proposals to promote technical education, not merely in engineering, but in all branches of trade. The School of Arts was not altogether what it should be in regard to this matter. Technical knowledge in several branches was already given under the auspices of the institution, but this ought to be greatly extended. There were certain rooms in the building which were available six days in the week to those who wished to obtain practical knowledge; and the committee of the School of Arts were fully alive to the importance of the matter. A sub-committee, consisting of Mr. Dowling (a gentleman who had given much attention to the subject), Mr. Rogers, Mr. Oram, and himself, had waited upon the Council of the Trades and Labour Association with a view to secure their sympathy in this grand object, and he thought that that body had not listened to their proposals disagreeably. They had not yet heard what the Council intended to do with regard to the proposal; but he thought their reply would be favourable. He might say that the Committee of the School of Arts desired no extraneous aid in carrying out this object of imparting a technical instruction in all branches of trade. Of the importance of such instruction there could be no doubt, and the education of our youth would be incomplete without it. He quoted from a recent work by Mr. Twining to show what was being done in England and elsewhere in promoting technical instruction. Mr. Twining proposed that there should be schools of arts, colleges, and a university; that examinations should be held and degrees should be given to stimulate the students. To follow a trade successfully, a man should have a knowledge of the science underlying it. Perhaps they could not here expect to go so far as to have a university, but they might by means of the schools of arts do much to extend technical knowledge. It was for such objects that these institutions were founded; and, if they carried them out, they would be much more worthy of the assistance of the State than they were at the present time. Mr. Macintosh said he would be very happy to co-operate with the Association of Engineers in the matter under discussion, and he trusted that the engineers would aim at securing the co-operation of other branches of trade, for all were interested in technical education, or what he called practical education. Mr. E. Dowling also addressed the meeting on the advantages of a technical education, and showed how its importance had been enforced by a Royal Commission appointed in England; and how practical demonstration of its benefits had resulted in the working of technological museums and institutions in England and Victoria. If rich persons in the community would only provide scholarships an immense impetus would be given to young men to seek to make themselves efficient in technical knowledge. The committee of the School of Arts hoped to establish a technological museum; and he thought that under the auspices of that institution classes might be formed and education given more advantageously than in connection with the primary schools. Mr. Laing maintained that if the scheme were merely carried out in schools of arts it would have only a local interest. It should be part and parcel of the Public school system. Mr. Dowling said that no feeling of localism need be engendered by the carrying out of the system in schools of art. Any person could join the classes at the Sydney School of Arts without being a member of the institution, and it was proposed that there should be affiliation with all the schools of arts throughout the country. The committee of the School of Arts proposed to form classes without any outside aid, although he thought the youth of the country were as much entitled to have an institution for technical education as were comparatively few to have a University. Mr. Cruickshank commented on the want of models and other appliances for the impartation of practical knowledge of the engineering profession. The deputation from the School of Arts then withdrew, when Mr. Laing's resolution was seconded by Mr. H. Davis and passed, and the further consideration of the subject, on the motion of Mr. Cruickshank, was deferred until the next monthly meeting of the association.

SYDNEY MECHANICS' SCHOOL OF ARTS.

Classes.

The following, for Ladies and Gentlemen, are now in operation:—

Chemistry.—Mondays, at 7 p.m.; 10s. quarter.

Civil Service.—Tuesdays, at 7 p.m.; 21s. quarter.

Drawing, Architectural.—Mondays, at 7:30 p.m.; 12s. 6d. quarter.

" *Mechanical*.—Wednesdays, at 7:30; 12s. 6d. quarter.

" *Ladies' Class*.—Mondays and Thursdays, from 3 p.m. till 5 p.m.; 21s. quarter.

Elocution.—Tuesdays, at 7 p.m.; 10s. quarter.

French.—Mondays and Thursdays, at 6 p.m. for Ladies, and 7:30 p.m. for Gentlemen; 10s. quarter, 15s. half-year, 21s. year.

Latin.—Wednesdays, at 7 p.m.; Free—5s. deposit as security for punctual attendance.

Mathematics.—Wednesdays and Fridays, at 7:30 p.m.; 10s. quarter.

Reading and Grammar.—Fridays, at 7:30 p.m.; 7s. 6d. quarter.

Shorthand.—Mondays, at 7 p.m.; 10s. quarter.

Singing.—Thursdays and Saturdays, at 7:30 p.m.

Writing and Arithmetic.—Tuesdays and Fridays, at 7:30 p.m.; 10s. quarter.

Non-Members of the Institution can join any of the above Classes (except Latin) by payment of an extra fee of 2s. 6d. per quarter.

13

No. 11.

The Under Secretary of Justice, &c., to The Secretary, Sydney Mechanics' School of Arts.

Sir,

Department of Justice, &c., 21 May, 1877.

In reply to your letter of 16th instant, representing that a deputation of certain members of the Committee of the Sydney Mechanics' School of Arts is desirous of waiting upon the Minister of Justice and Public Instruction, with reference to a grant in support of the Technical Classes and Working Men's College in connection with the institution, I am directed to inform you that Mr. Suttor will be happy to receive the deputation on Wednesday next, 23rd instant, at 11 a.m.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 12.

The Secretary, Sydney Mechanics' School of Arts, to The Under Secretary of Justice, &c.

Sir,

Sydney Mechanics' School of Arts, 6 June, 1877.

In compliance with your request to be informed in writing of the precise object of the deputation from the General Committee of this institution, which lately waited on you respecting the establishment of a Technical or Working Men's College in connection therewith, I have now the honor to state,—

1. That the object of the deputation was to endeavour through you to prevail on the Government to place upon the Estimates for the present year a sum of £2,000, to be granted to the Sydney School of Arts without the usual conditions, such sum to be expended by the committee in carrying out the extensive additions and alterations to the building which will be required for the establishment of such a college as that referred to.

2. From the printed report of our Improvement Committee which was laid before you, together with the plans connected therewith, it will be seen that the contemplated additions and alterations are calculated to increase the accommodation afforded by the institution to considerably more than double of that which exists at present, and this, together with the establishment of the new technical classes and the introduction of the other improvements, will amount nearly to a re-modelling and re-organization of the institution.

3. The Committee are convinced that such increase of accommodation is now absolutely necessary for the preservation of the popularity which the institution since its foundation in 1833 has uniformly enjoyed, for the extension of its usefulness to meet the ever increasing requirements of the public, and placing and keeping it on a level with the many similar institutions in Great Britain, where the education of the industrial classes both in general knowledge and in technical subjects is systematically carried on.

4. The Committee have found it impracticable to effect these improvements (which have been estimated to cost between £4,000 and £5,000) with the means at present at their command. There is a balance in the Bank to the credit of the institution amounting to £1,300, and it would be futile under such circumstances to ask for special subscriptions to the Building Fund. The committee therefore knowing the liberality of the Government in promoting the cause of education generally, and believing that a special regard would be paid by it to the educational wants of the industrial classes, and considering further that the circumstances under which the special grant now sought to be obtained were quite exceptional, thought themselves justified in representing the whole case to the Government, and applying for its assistance in the terms stated to you by the deputation.

5. You were pleased to ask the deputation whether the money now standing to the credit of the Sydney School of Arts was not made up partly from funds granted by Government in previous years in aid of the institution; such is certainly the fact, but the proportion which the funds supplied by the Government bears to the total income of the institution is so small that little account (it is submitted) should be taken of it in the consideration of this application. I append for your information a return showing the revenue of the Sydney School of Arts for the last fifteen years, from which it appears that during that period the Government aid amounted to £2,750, while the sums raised by the institution itself amounted to £24,674 6s. 8d. The Sydney School of Arts is not subsidised by Government to the same extent as similar institutions throughout the Colony. It receives a fixed grant of only £200 a year, whatever may be the amount of its proper income, which has lately exceeded £2,000 a year; whereas the country institutions receive £1 for every £2 subscribed by their members.

6. You were also pleased to ask the deputation for information respecting the tenure of the land upon which it is proposed to erect the new buildings. In reply I beg to state that the portion upon which the most substantial of these will be erected and which will be principally used as class-rooms in connection with the Technical College is held on a ninety-nine years lease. Another portion on which it is proposed to erect a large lecture hall is held on a lease for two lives, with option of purchase after its termination, while of the third portion a lease for seven years has been obtained with a promise in writing to the Committee that at the end of that time the fee simple of it may be purchased by them.

7. I venture to think that the Minister for Justice and Public Instruction will be gratified to learn that the General Committee have already been on several occasions in communication with the Engineering Association and the Trades and Labour Council of New South Wales, both of which bodies have expressed their concurrence with the views of this Committee and have indicated their desire to co-operate with us in carrying these views into effect. But as yet no definite arrangement has been arrived at between us in consequence of the want of means to provide suitable accommodation for carrying out the objects we have in common.

8.

8. For further and more detailed particulars of the condition and prospects of this institution, the work it has done, and the objects at which it aims, I beg respectfully to again refer you to the several documents which have been laid before you in connection with this application, and pray that you will be pleased to recommend it to the most favourable consideration of the Government.

I have, &c.,
JOHN ROGERS,
Secretary.

[Enclosure.]

REPORT OF IMPROVEMENT COMMITTEE TO GENERAL COMMITTEE OF THE SYDNEY SCHOOL OF ARTS.

Gentlemen,

Your Committee, in arriving at a decision in reference to the plans for improving the accommodation of the Sydney School of Arts, were, to some extent, influenced by what appeared to be the general opinion of the members, and which resulted in the plans submitted to them last year being withdrawn, after discussion at two Special Meetings.

The two chief objections which were then raised to those plans, seemed to be—firstly, because the vacant land at the back was not utilised for building purposes, thereby causing the various departments of the institution to be much crowded together; and secondly, because of the proposal to place the reading room on the first floor of the building.

To endeavour to remedy these and other defects, it was suggested at the second Special Meeting of members that the Committee should try to obtain a fresh site on which to build. But every endeavour having been made to secure an eligible site, without success, this Improvement Committee was appointed to report on the best means of carrying out the much needed additions and improvements to the institution.

Your Committee have therefore, after much consideration, had new plans prepared, which they now submit, with a recommendation that they be adopted.

In framing these plans, they have kept in view the great future of this institution; and have endeavoured to provide sufficient accommodation in all departments, to meet its ever-increasing requirements, for a long time to come.

Moreover, with a view to making the institution more popular, they are desirous of adding several new and important features to it.

The most important is, perhaps the proposed great extension of the usefulness of the library; where, it is suggested, members shall have the same privileges that they may enjoy at any Public Library.

In the new library, books will be so arranged and classified, on low shelves, that they will be within easy reach of all readers and students.

To this room will also be transferred the reference library, and cases of geological specimens now in the reading room.

Library.—To meet all these requirements, your Committee have set apart a very large room on the first floor of this building. Having a superficial area of about 2,400 feet, and extending over the whole length of the front of the building, and back over the whole length of the present reading and chess rooms. Thus forming a magnificent room, which if properly fitted up and conducted, will rival the Public Library of Sydney.

Reading-room.—Another new feature that your Committee wish to add to the institution is to make the reading room of more general usefulness than it has hitherto been. The news of the day, the arrival and departure of steamers, and other matters of public information and interest, should be duly recorded here. They therefore propose that the greater portion of the old building which constitutes the present reading room, and the chess room, shall be pulled down, and a new reading room built in their place; leaving a passage about 6 feet wide between that and the hall.

This gives a fine room 63 feet x 24 feet, or a superficial area of 1,500 feet. It is lit by windows front and back, as well as by a borrowed light from an opening in ceiling, through the floor of the library above, leading to skylight in roof of building; thus providing both good light, and efficient ventilation, in the centre of both rooms.

Ladies' Room.—A third new feature in the proposed alterations, is a ladies' room; which your Committee think will be a great acquisition to the institution.

This room is on the ground floor, formed out of a portion of the present library. It will be fitted with a small lift, by which books may be passed to the new library above.

This lift will prove a convenience to persons who may desire to exchange books, without the exertion of going up stairs to do so.

Office.—A small office for the secretary is also shown in the old library room. It is placed where he will be accessible to all, and be in a good position for general control.

Stairs.—The grand stairs leading to the new library will be commodious, and of easy gradient, viz.: 5 feet broad, with a rise of 6½ inches and about 12 inch tread. Starting from the floor of the old library they will ascend by three flights to the landing, which is placed opposite to the end window in the new library.

This completes the alterations which it is proposed to make in the present old building.

Hall.—The hall with its retiring rooms remain as at present.

Class-room and Keeper's Quarters.—The class-room, which is now over those retiring rooms, which measures 40 feet by 13 feet, as well as the keeper's quarters which are over that again, will also remain as at present.

These rooms will be approached by stairs from the vacant land adjoining.

Chess-room.—A chess-room 35 feet by 10 feet 6 inches will be built in old yard, on the site of the present out-houses, which will be removed to the vacant land at the back.

Area and Passage.—An area is left in the old yard, and a passage through to the land at the back, and thence through to George-street.

Vacant

Vacant Land.—We now come to the vacant land. Here it is proposed to erect class-rooms and a working-men's college.

In planning these buildings, your Committee have been careful to put the more permanent structures on that portion of the land for which we have the longest tenure.

The land is divided into three sections, with a reserved lane added. One section has been secured for ninety-nine years; another during the lives of two people. The third is secured only for about seven years, when in all probability we may be able to purchase it.

Thus, on the first-named block, it is proposed to erect a three-story building for class-rooms and chemistry lecture-room.

Class-rooms.—The class-rooms are five in number, and of the following dimensions, viz.:—One, 32 feet by 16 feet; two, 16 feet by 15 feet; one, 13 feet by 16 feet; and one large one for drawing class, 48 feet by 16 feet.

Chemistry-room.—There is also the chemistry lecture-room, 35 feet by 17 feet 6 inches, a portion of which will be built on the adjacent block of land, for which we have only the seven years certain tenure. This, however, with the outhouses, are the only buildings proposed to be put on that portion of the land.

Lecture-room.—The Working Men's College and lecture-room is provided for on that section of land which we hold on the tenure of two lives.

It is a large room, 48 feet by 27 feet 6, or superficial area of 1,320 feet. It will have an open roof, and there will be a passage to it from both Pitt and George streets.

This completes the buildings proposed to be created as additions to the institution.

Summary.—The whole accommodation may be comparatively summarized as follows:—

	At present.	As proposed.
Reading-room	1,150	1,512 feet
Library	560	2,420 "
Ladies' Room	—	255 "
Chess-room	220	367 "
Working Men's College	—	1,320 "
Chemistry-room	220	647 "
Six Class-rooms	1,730	2,500 "
	<u>3,880</u>	<u>9,021 feet</u>

In addition to the above, by the alterations proposed, more crush room will be provided at the entrance to the hall. The passage also will be widened from 4 feet, as at present, to about 6 feet.

In submitting the accompanying plans to the General Committee, we would recommend that the buildings on the vacant land be erected first; so that, as far as practicable, the business of the institution may be conducted there, while the alterations are progressing in the old building.

Portico.—Your Committee are also of opinion that a portico should be erected at the Pitt-street entrance, and would submit the accompanying sketch, which it will be seen also provides for the efficient lighting of the front:—

Approximate estimate of cost of first section, viz., buildings on the vacant land	£2,500
Approximate estimate of cost of second section, viz., alterations to old building	1,200
Approximate estimate of cost of portico	300
	<u>£4,000</u>

CHARLES M. FISHER,
Chairman of Improvement Committee.

Sydney, 27th April, 1877.

Acknowledge and inform that this application will receive due consideration when preparing Estimates for next year.—F.B.S., 20/6/77.

No. 13.

The Under Secretary, Department of Justice, &c., to the Secretary, Sydney Mechanics' School of Arts.

Sir,

Department of Justice and Public Instruction, Sydney, 25 June, 1877.

I am directed by the Minister of Justice and Public Instruction to acknowledge the receipt of your letter of the 6th instant, respecting the establishment of a Technical or Working Men's College in connection with the School of Arts; and requesting that £2,000 may be granted without the usual conditions, and to inform you that the matter will receive due consideration when preparing the Estimates for next year.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

Sydney University:

No. 14.

The Chancellor of the Sydney University to The Minister of Justice, &c.

My Dear Mr. Docker,

Barham, Darlinghurst, 11 November, 1876.

The Senate of the University has appointed a deputation to wait upon you in order to bring under your notice and that of your colleagues an application which it has been determined to make to the Government for a permanent annual addition of £4,000 to the present endowment of £5,000, thus bringing up the amount to that of the permanent endowment which has been enjoyed by the Melbourne University since its first establishment. The special reasons for making this application at the present time will be found detailed in the accompanying copy of a resolution of the Senate passed at its last monthly

monthly meeting. I may mention that the Senate has been anxious for some time past to extend the curriculum of subjects now taught in the University, but has been prevented from doing so by the want of funds. The largely increased number of students who matriculated at the last examination offers a further reason for pressing the attention of the Government upon the subject at the present time.

May I ask when it will be convenient to you to receive the deputation.

Yours, very truly,
E. DEAS-THOMSON.

Forward copy of reply to The Honble. the Colonial Treasurer.—J.D., 13/11/76. The Col. Secretary for consultation.—J.D., 29/11/76.

[Enclosures.]

Resolution passed by the Senate, 1st November, 1876.

THAT in making application to the Government for an increased endowment of £4,000 per annum to the University the Minister should be informed—(1.) That the present endowment of £5,000 per annum is insufficient after deducting the amount necessary for the preservation and repair of the University buildings for giving proper instruction in those branches of knowledge now professedly taught in the institution, viz., Latin, Greek, mathematics, chemistry, natural philosophy, experimental physics, geology, and mineralogy. (2.) That it is utterly impossible, without increased means, to provide instruction in the important subjects of history, law, mental philosophy, biology, animal and vegetable physiology, and engineering. (3.) That the long contemplated establishment of a school of medicine in connection with the University will necessitate the appointment of a Professor of Anatomy and several professional lecturers on such subjects as surgery, practice of medicine, therapeutics, pathology, clinical medicine, surgery, and midwifery. (4.) That the formation of a School of Mines is also necessary. (5.) That lectures on many of the subjects above-mentioned, if not in all, might be given by the University, if the annual endowment were increased to £9,000 per annum—the amount of endowment given to the Melbourne University.

ENDOWMENT OF THE UNIVERSITY OF SYDNEY.

The following scheme is submitted to the Minister of Justice and Public Instruction as an approximation to the way in which it is proposed to use the increased endowment now asked for the University:—

<i>Professors:—</i>	£
1. Classics, mental philosophy	1,000
2. Mathematics, natural philosophy	1,000
3. Chemistry—Inorganic, organic, and practical	1,000
4. Biology, geology, and mineralogy	1,000
5. Anatomy, physiology	1,000
<i>Assistants, Lecturers, &c.:—</i>	
1 Master for junior classics and mathematics	300
1 Assistant in practical chemistry and metallurgy	250
1 Assistant to the chair of natural philosophy as lecturer on mechanics and engineering	250
1 Demonstrator in practical anatomy	200
6 Professional lecturers on medical subjects	600
2 Lecturers in law	400
1 Lecturer in history and English literature	300
1 Registrar	500
7 Servants, messengers, &c.	800
	£8,600

The balance of £400 with the fees from lectures will, it is believed, meet all the other expenses of the institution, such as those of the chemical laboratory, the school of anatomy and physiology, natural history, mechanics, &c.

By the system above proposed the University would gain over and above what is at present taught:—1st. Instruction in mental philosophy, law, history, and English literature; 2nd. All the education necessary for the medical profession; 3rd. A complete course of natural philosophy, coupled with mechanics and engineering; 4th. The addition of organic chemistry and metallurgy to the chemical school; and 5th. Biology (including animal and vegetable physiology). The Senate would also then be in a position to establish a Faculty of Science, as proposed by Professor Liversidge, on the London University system, giving the Degrees B.Sc. (Bachelor of Science), and D.Sc. (Doctor of Science.) Degrees in Medicine also could then be conferred on those who had received their education on the spot.

Two buildings, detached from the main building of the University, are absolutely necessary for carrying out the above scheme—one for a chemical laboratory, the other for anatomical purposes. The first, Professor Liversidge thinks, should be a temporary building, costing not more than £1,000, with fittings and apparatus costing another £1,000—£2,000 in all. £1,000 would be ample for a temporary anatomical building; it could be built of iron, and should consist of four rooms—1. A dissecting room; 2. A room for making preparations, or for physiological investigations; 3. A room for anatomical preparations, and a pathological museum; and 4. A class-room, which might be used for most of the lectures on medical subjects.

The Government should be asked, therefore, to place on the Estimates the following sums:—

	£
Building and fitting laboratory	2,000
Building for anatomical purposes	1,000
Annual vote for repairs of buildings	500
	£3,500

Although the foregoing is the general scheme of the way in which it is proposed to appropriate the endowment, if as now requested it should be increased to £9,000, it must of course be subject to any change or modification which the Senate from time to time may deem to be necessary or expedient.

It is proper also to point out that, in order to enable the Senate to enter into a permanent engagement with the additional professors and lecturers whom it will be necessary to appoint, and to give an assurance to the public of the permanency of the system, it is highly desirable that the increased endowment should, as the original one, be provided for by an Act of the Legislature, and not be subject to an annual vote.

Regular accounts of the expenditure should, of course, be required to be laid annually before Parliament.

17

No. 15.

The Minister of Justice, &c., to The Honorable Sir E. Deas-Thomson.

Department of Justice and Public Instruction, Sydney, 13 November, 1876.

My dear Sir Edward,

I have received your note of the 11th instant, in which you inform me the Senate of the University are desirous that I should receive a deputation from that body on certain matters enumerated in a resolution of the Senate, bearing date the 1st instant.

As the question involved in the resolution is of great importance, I considered it desirable that one of my colleagues should be present at the interview.

The Treasurer has kindly consented to assist me in receiving this deputation, and if Friday, the 17th, at 11 a.m., will suit the convenience of the Senate, I would desire to fix that day and hour for the interview.

I remain, &c.,

JOSEPH DOCKER.

Copy of above forwarded for information of Colonial Treasurer.—B.C., 13 November, 1876.

No. 16.

The Minister of Justice, &c., to The Honorable Sir E. Deas-Thomson.

Department of Justice and Public Instruction, Sydney, 20 March, 1877.

My dear Sir Edward,

In reference to the letter I received from you on the 11th of November last on the subject of an increased endowment to the University, and the information and memoranda furnished by the deputation of the Senate which I promised to lay before my colleagues, I have now the honor to inform you, for the information of the Senate, that I duly carried out that promise, and the subject has been two or three times under consideration.

But I regret to be compelled to add that the multifarious and harassing matters which have been forced upon the attention of the Cabinet has prevented my colleagues from bestowing that exclusive attention to this important matter which they would otherwise have desired to enable them to have arrived at a definite conclusion.

I am therefore reluctantly compelled to leave all further proceedings for consideration by my successor.

I have addressed these remarks to you as you have been the medium of communication with me on behalf of the Senate.

I remain, &c.,

JOSEPH DOCKER.

No. 17.

The Under Secretary of Justice, &c., to The Honorable Sir E. Deas-Thomson.

Sir,

Department of Justice and Public Instruction, 23 July, 1877.

Referring to letter of 20th March last from the Minister of Justice respecting the application of the Senate of the University for increased endowment to that institution, I am directed by the Minister of Justice and Public Instruction to inform you, that the Government do not consider it desirable at present to ask Parliament to increase the endowment to above institution.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

Engineering Association.

No. 18.

EXTRACT from *Sydney Morning Herald* of 5th May, 1876, containing report of Deputation from Engineering Association to Minister of Justice, respecting Technical Education.

YESTERDAY morning a deputation, consisting of Mr. J. Sutherland, M.L.A., Mr. Davidson, President of the Engineering Association of New South Wales, Messrs. Cruickshanks, Laing, and Davies, members of the same Association, Mr. John Young, President of the Builders' and Contractors' Association, Messrs. Giles, Edwards, Baldwin, Dooley, Teys, Dixon, and White, members of the Trade and Labour Council of New South Wales, waited upon the Honorable the Minister for Justice and Public Instruction at his office, Macquarie-street.

Mr. J. Sutherland introduced the deputation, and said their business there was to try and impress upon the Minister the necessity for assisting the youth—and he might say also the old age of the country—to educate themselves; to provide, with the help of the Council of Education, teachers to form night-classes for the instruction of youth. He would be glad to see one started to begin with; he did not care where it was, so long as it was in a central position, and he was sure the necessity for this sort of thing would soon be apparent throughout the whole country. It was only by the assistance of the Council of Education that this could be done. The Engineering Association had been working in this direction, and for some years past had one or two classes in operation at the School of Arts; but the committee and officers of the School of Arts, however willing to assist, had not the means to do what the country requires, and they had now come to the head of the Educational Department of the country, hoping that he would consider this matter carefully; and no doubt the Council of Education would give him every assistance.

524—C

Very

Very little money would be required, for he believed there were already sufficient teachers at the disposal of the Council of Education. At a future time they might make application for suitable buildings for the purpose. He reminded the Minister how much the Owens College at Manchester, and the Andersonian University at Glasgow, had done towards educating the people. It was not mechanics alone, but every one in the community, that would be benefited by the course proposed. We should no longer see our young men hanging about at the street corners, but they would be more profitably engaged in improving themselves.

Mr. Davidson read a brief statement which he had caused to be written out, bringing under the notice of the Minister the great necessity for the establishment of evening training schools, in which technical knowledge might be acquired. He drew attention to the fact that in the old country, and on the Continent, every inducement was given to young men to study the principles of their profession. We are placed at a great disadvantage here in this respect. The mechanical and commercial prosperity of the Colony depend upon the amount of intelligence which the people possess for the development of our resources. We have Grammar Schools, and a University for the learned professions, but the most important link is missing, and it could only be supplied by the establishment of evening training schools. He then briefly described the institutions of this kind which exist in England and Scotland, and contended that great benefit would arise from the establishment of similar institutions here. They only asked that some portion of the education grant should be set apart for this object.

Mr. Dixon, as a member of the Trade and Labour Council, representing a large body of all sections of working men, fully agreed with what had been said, more particularly because they, as a body, needed this more than perhaps the Engineering Association, because there was a large number of them who had never had the benefit of early education, and felt the want of it now. There was ample machinery for this purpose at the command of the Council of Education, and it could easily be brought into operation, and it would be one of the best things for this country that Mr. Suttor could possibly be identified with. In the race between nations, if our youth are not well educated in the respective branches of knowledge, we shall soon fall behind, and we do not wish to do that. We have the blessing of a good system of primary education, to complete which we only needed the establishment of such schools as had been pointed out. He went thoroughly and heartily in favour of this scheme, believing that it was highly necessary at the present time. The Trade and Labour Council would do all in their power to impress upon their youths the necessity of taking advantage of these schools.

Mr. Laing desired to point out that not only the mechanical but also the pastoral and agricultural interests would be benefited by this being carried out. The course of study might include the science of the application of ploughing, mowing, threshing, chemistry, practical physics, the nature of manures, and the kinds of grasses which would be suitable to different soils. In a country like this, to be good colonists, there was an absolute necessity for general knowledge, so that a young man might be able to turn his hand to more than one thing. If this plan were carried out in connection with our Public School system, each Local Board might define the educational requirements of its own district. They sought this for the benefit of the producing classes, so that with a knowledge of natural physics they might suitably employ the natural productions of the Colony, and know how to make the most of them.

Mr. F. B. Suttor said, that from the opinions they had placed before him he could see they were engaged in a laudable object—to give a technical education to the young men who now only receive primary education. He agreed with them that this was not a party question, nor a question for the benefit of one class alone. In a country like this they should offer every inducement to young men to rise in the position to which their talents might entitle them; they should hold out every inducement to them to perfect their education. He was glad the deputation had waited upon him, because without any concert between them, a deputation from the Senate of the University had waited upon him a few days ago, and urged upon him almost the same matter in regard to the University. They were anxious that their endowment should be increased, so that they might establish new chairs, and to employ lecturers to educate young men after they go to the University, in these very subjects. By this system the University would gain over and above what is at present taught:—1. Instruction in mental philosophy, law, history, and English literature. 2. All the education necessary for the medical profession. 3. A complete course of natural philosophy, coupled with mechanics and engineering. 4. The addition of organic chemistry and metallurgy to the chemical school. 5. Biology (including animal and vegetable physiology). They were anxious to employ professors to give young men a practical education. If they could popularize the University by doing this, it would be a great step in the right direction. He hoped he should be able to carry out the views of the Senate in that respect; and the fact that this deputation had waited upon him with a similar request would strengthen his hands. He was desirous of doing everything he could to educate every man in this country. He would give this matter his very best attention. He would consult with the Council of Education, and if there was no great difficulty in the way, he hoped before long to be able to do something to meet their wishes.

After some further conversation the deputation thanked Mr. Suttor and retired.

[Enclosures.]

Sir,

Sydney, 4 May, 1877.

We have been deputed by the Engineering Association and Trade and Labour Council to await upon you for the purpose of bringing under your notice the great necessity which exists for the establishment (in connection with our Public School system) of evening training schools, in which tradesmen and young people could acquire that technical knowledge which is so necessary for their success in life. We would also draw your attention to the fact that in the old country and on the Continent every facility and encouragement is given to induce young men to study the principles of their respective professions after they leave the primary schools; and being deeply sensible of the importance of technical training, we feel that we are placed at great disadvantage in not having the same opportunities of acquiring knowledge as they have at home.

The mechanical and commercial progress of this Colony depends (in a great measure at least) upon the amount of intelligence which the people possess for the successful development of our resources; and if we have not the same opportunities and inducements we must of necessity drop behind in the race.

We have Grammar Schools, a University, &c., for the learned professions, but to the largest portion of the community the most important link is missing, and can only be supplied by the establishment of evening training schools.

In England, Scotland, and Ireland these schools have become permanent and popular institutions, and there is now a Public Department for the spread of scientific knowledge.

The London Society has upwards of 115 local boards, whose object is to establish training schools for those who cannot attend during the day.

In

In the Anderson University of Glasgow, during the session of 1874-5, there were 953 day and 1,324 night students.

At the Glasgow Mechanics' Institute during the session of 1875-6 there were 2,595 night students. Professor Roscoe, of the Owens College, Manchester, in a letter to Mr. Laing, of the Engineering Association, says:—"In this college we have upwards of 1,000 evening students—young men who are occupied during the day and who spend their evenings in the prosecution of some branch or branches of science or literature. This is one of our most useful spheres of action."

These examples show what has been done at home; we therefore take the present opportunity of pointing out the great benefit which similar schools and classes would confer upon this Colony, and we respectfully ask that some portion of the educational grants may be set apart for the above object.

THE OWENS COLLEGE, MANCHESTER.

Session 1876-7.

1. The Evening Session will be opened with an introductory address by Alfred T. Bentley, Esq., M.A., Fielden Lecturer in Mathematics, on Monday, the 16th October, 1876, at 7:30 p.m., and will end on Tuesday, the 1st May, 1877. The introductory address will be open to the public without charge. On the following evening the class lectures will be commenced. There is a vacation at Christmas from the 23rd December to the 12th January, inclusive.

2. The registration of new students (only) will take place on Wednesday, the 11th, Thursday, the 12th, and Friday, the 13th October, from 6:30 to 9 p.m. Each candidate will be required to produce a letter of recommendation from his employers or such other testimonial as may be approved by the Principal.

In order to expedite the work of registration, each student is recommended to be prepared with a form filled up with his name and address, and a list of the classes which he proposes to enter. Blank forms may be obtained from the porter in attendance.

3. Former students may re-enter on Tuesday, the 17th, to Friday, the 20th October, inclusive, from 6:30 to 9 p.m., and on each evening of the week (except Saturday) to the end of October, from 7 to 8 p.m.

4. After the period above mentioned students can only be admitted between the hours of 10 a.m. and 5 p.m. (Mondays to Fridays inclusive), and new students must apply to the Principal between the hours of 12:30 and 2:30 p.m. After the month of November any person desiring to enter a class must apply personally, or by letter, to the Lecturer, and obtain his consent before he can be admitted.

5. Each lecture course, except where otherwise stated, consists of twenty lectures, and the fees, which are to be paid on entrance, are as follows:—

Admission fee (charged to new students only)*	£0 2 6
Each full lecture course.....	0 10 6
Practical mechanical drawing	0 10 6
Free-hand drawing.....	0 15 0
Each division of the laboratory course (including the use of apparatus and chemicals)	4 4 0

6. The first lecture will be given in each class whatever the number of students may be who have entered to it; but unless five persons at least shall have entered at the date of the second lecture the class will not be held, except at the desire of the lecturer.

7. Examinations of all the classes will be held at the end of the session. On the results of these examinations exhibitions† will be awarded. The public award of exhibitions will take place on Tuesday, the 1st of May, at 7:30 p.m.

8. The library of the college is open to all evening students on payment of a library fee of 2s. 6d. for the whole period of studentship. Students in the evening classes who entered previously to the session 1874-5, and all who have once paid the library fee, will receive a free ticket for the library on application to the Registrar. Each student using the library must show his ticket to the librarian on his first attendance, and he must produce the same on any future occasion if demanded.

The library hours are from 6:30 to 9 p.m., on Mondays, Tuesdays, Wednesdays, and Thursdays, until the termination of the regular courses. The library is closed to readers during the college vacations, and on incidental college holidays. Admittance to the library and to the use of its books is in the case of all persons conditional upon the strict observance of its rules (see *Calendar*). Books are not to be taken out of the library, and application must be made to the librarian for those required for use in the library. Works of reference are kept apart, and can be taken from the shelves by the students. Conversation and reading aloud are prohibited in the library.

9. The courses of instruction for this session comprise the following:—

Greek.

- Lower Junior Class.*—Dr. Hager. (*Mayor's Greek for Beginners.*)
Higher Junior Class.—Mr. England. (Ditto and selections from Xenophon.)
Lower Middle Class.—Prof. Wilkins. (Homer, *Odyssey*, Book XII.; Syntax.)
Higher Middle Class.—Dr. Hager. (Xenophon, *Cyropaedia*, Book I.)
Senior Class.—Prof. Wilkins. (Herodotus, Book II.)
Greek Testament Class.—The Principal. (*St. Mark* and one of the shorter Epistles.)

Latin.

- Junior Class.*—Prof. Wilkins. (Elementary.)
Lower Middle Class.—Mr. England. (Selections from Cicero.)
Higher Middle Class.—Mr. England. (Horace, *Odes*, Books III. and IV.)
Senior Class.—Mr. England. (Livy, Book IX.)
Composition Class.—Prof. Wilkins. (On Latin Syntax.)

English

* A day student entering to the evening classes, or *vice versa*, will be required to pay the admission fee accordingly.

† Details respecting exhibitions open to the competition of evening students will be found in the Evening Class Syllabus.

English Language.

- First Course.*—Dr. Adams. (Grammar and History of the Language.)
Second Course.—Mr. Toller. (Early English.)
Third Course.—Mr. Toller. (The English subjects for the first B.A. Exam.)

English History and Literature.

- Literature Class.*—Prof. Ward. (History of English Poetry from Chaucer to Spenser.)
History Class.—Prof. Ward. (English History from the close of the 10th to the close of the 13th Centuries.)

Mathematics.

- Junior Geometry Class.*—Mr. Millar. (Elementary.)
Middle Geometry and Algebra Class.—Mr. Bentley. (Elementary Plane Geometry and Solid Geometry. Algebra from Quadratic Equation.)
Senior Geometry Class.—Mr. Bentley. (Analytical Geometry of two dimensions.)
Junior Algebra Class.—Mr. Millar. (Todhunter's *Algebra for Beginners.*)
Senior Algebra Class.—Mr. Gwyther. (Commencing with Permutations.)
Trigonometry.—Mr. Gwyther. (Plane Trigonometry up to the Solution of Triangles.)
Differential and Integral Calculus.—Prof. Barker.

Mechanics.

- Experimental Course.*—Mr. Poynting. (Matter, Force, Simple Mechanical Powers and their combinations, &c.)
Mathematical Course.—Mr. Poynting. (Elementary Statics and Dynamics.)

Physics and Astronomy.

- Experimental Physics.*—Prof. Core. (Magnetism and Electricity.) If a second class can be formed the subject of heat will be taken up in it.
Astronomy.—Prof. Core. (Astronomical Instruments and the Heavenly bodies.)

Engineering, and Geometrical and Mechanical Drawing.

- Civil Engineering.*—Prof. Reynolds. (Surveying and Surveying Instruments, &c.)
Mechanical Engineering.—Prof. Reynolds. (Theory of Mechanical connexion and Hydraulic Machinery, &c.)
Geometrical Drawing.—Mr. Millar. (Plane and solid.)
Practical Drawing Class.—Mr. Millar.

NOTE.—Free admission to the Drawing Class is given to—

(a) Workmen or sons of workmen, being over fourteen years of age, who were on the 24th August, 1869, or who at any time, and from time to time thereafter may be, employed as workpeople at the Works at Openshaw, of the "Ashbury Railway Carriage and Iron Company, Limited."

(b) Pupil teachers, for the time being, of the Wesleyan Schools at Openshaw.

Persons claiming free admission must produce certificates of eligibility.

The exemption of payment does not extend to the College admission fee.

Logical and Political Economy.

- Logic.*—Prof. Adamson. (Deductive and Inductive Logic.)
Political Economy.—Prof. Adamson. (Industry, Trade, Finance, &c.)
 (Elementary Course, for Pupil Teachers only.)

Acting teachers and assistant teachers in schools within the Boroughs of Manchester and Salford, supported wholly or in part by public contributions, are admitted to the Political Economy Classes free of fee, under the provisions of the Cobden Endowment. (See *Syllabus.*)

Jurisprudence and Law.—Prof. Hopkinson.

Elements of English Law. (This class will not be formed unless twenty students, at least, enter for it in the first week.)

Chemistry.

- First Lecture Course.*—Prof. Roscoe. (The Non-Metallic Elements.)
Second Lecture Course.—Mr. Williams. (The Metals.)
Third Lecture Course.—Prof. Schorlemmer. (Organic Chemistry.)
Fourth Lecture Course.—Mr. Muir. (Chemistry of Food.)
Laboratory Course.—Prof. Roscoe, Mr. Williams, and Mr. Muir.

Natural History.

- Zoology.*—Prof. Williamson. (Anatomy and Physiology of the Animal Kingdom.)
Animal Physiology.—Prof. Gamgee.
Geology and Palæontology.—Prof. Dawkins.
Special Course.—Prof. Dawkins. Six lectures on Field Geology, after Easter. (See *Syllabus.*)
Botany.—(The course will be omitted this Session.)

French.—Mr. J. F. H. Lallemand, B. ès Sc.

- Lower Junior Class.*—Grammar, Accidence (first part). Exercises. Reading. (An Elementary Knowledge of French Grammar is expected.)
Higher Junior Class.—Grammar, Accidence (second part). Exercises. Reading.
Lower Senior Class.—Grammar, Syntax (first part). Reading.
Higher Senior Class.—Grammar, Syntax, (second part). Commercial Letters.
Composition and Literature Class.—Augier, *Le Gendre de M. Poirier*, Conversation, &c.
 (The work of this class is conducted entirely in French. Students desiring to enter it will be required to pass a short preliminary examination in the accidence of French Grammar, and on the principal rules of Syntax.)

German.—Prof. Theodores.

- Junior Class.*—Grammar, Accidence. Exercises. Composition.
Senior Class.—Grammar, Syntax. Reading. Commercial Correspondence.

Spanish.—Señor Alvarez.

- Junior Class.*—Grammar, Accidence. Exercises. Reading.
Senior Class.—Grammar, Syntax. Reading. Commercial Correspondence.

Italian.—Signor Guidal.

Grammar, Exercises, Conversation, Correspondence, &c.

Free Hand Drawing.—Mr. William Walker.

The subject will be taught both theoretically and practically.

Harmony and Musical Composition.

- Junior Class.*—Mr. Hecht. (Thorough Bass, &c.)
Senior Class.—Mr. Hecht. (Counterpoint, Canon, Fugue, &c.)

EVENING CLASSES.—GENERAL TIME TABLE, 1876-7.

	Monday.	Tuesday.	Wednesday.	Thursday.	Friday.
6 to 7.	Chemical Laboratory, Junior and Senior. (6 to 8.) French Composition and Literature.			Chem. Laboratory, Senior. (Lent Term 6 to 8.)	Political Economy, Pupil Teachers. Chem. Laboratory, Senior. (Mich. Term 6 to 8.)
7 to 8.	Greek Testament. Latin, Junior. Latin, Higher Middle. Civil Engineering. French, Higher Senior.	Greek, Lower Middle. English History. Physics, Experimental. Geometrical Drawing Lecture. Political Economy, Senior.	Greek, Higher, Junior. Geometry, Senior. Mechanics, Experimental. Zoology. Physiology. French, Low. Junior. German, Junior.	English Language, First Course. Mechanical Drawing, Practical (7 to 9). Spanish, Junior. ? Italian.	Greek, Lower Junior. Geometry, Junior. Trigonometry. Diff. and Integral Calculus. Geology. Free Hand Drawing (7 to 9). Harmony, Junior.
8.5 to 9.5.	Greek, Senior. Latin, Senior. Mechan. Engineering. Chemistry Lectures, First Course. Chemistry Lectures, Third Course. French, Lower Senr.	Latin Composition. English Literature. Astronomy. Logic.	Latin, Lower Middle. Geometry and Algebra, Middle. Mechanics, Mathematical. French, Higher Junior. German, Senior.	English Language, Second Course. Chemistry Lectures, Fourth Course. Spanish, Senior.	Greek, Higher Middle. Algebra, Junior. Algebra, Senior. Chemistry Lectures, Second Course. Harmony, Senior.

A detailed syllabus of the several courses of lectures for the Session 1876-7, and of the scholarships, exhibitions, and money prizes open to Evening Students, together with the Principal's report, the award of exhibitions and honours, and the examination papers of the preceding Session, may be procured (price 6d. by post 7d.) from Mr. Cornish, Piccadilly, the bookseller to the College; and from other booksellers in Manchester.

ANDERSON'S UNIVERSITY.

James Young, Esq., of Kelly and Durriss, F.R.S., President.

Syllabus of Classes.—1876-77.

1.—FACULTY OF ARTS.

Physics and Natural Philosophy—Prof. George Forbes, M.A., F.R.S.E.—Lectures and Demonstrations twice a week at 9 a.m., commencing in November. £1, 1s. per course of five months.

Physical Laboratory—Prof. George Forbes—The construction and use of apparatus, commencing in November. £1 1s. per month for six hours a week.

Chemistry (Lectures and Demonstrations)—Prof. Wm. Dittmar, F.R.S.E.—Daily, 10 a.m., commencing in November. £2 12s. 6d. per course of six months.

Laboratory (Instruction in Analysis, &c.)—Prof. Wm. Dittmar, F.R.S.E.—Daily (Saturday excepted), commencing in November. Session of six months.

Demonstrations on, and Practical Instruction in, Analysis—Five times a week from 11 to 12. Fee during the first quarter, £1 1s.; to laboratory students, free.

Technical Chemistry ("Young Chair")—Prof. E. J. Mills, D.Sc., F.R.S.—Daily, Laboratory, 10 a.m. to 4 p.m. Saturday 10 a.m. to 1 p.m. Lectures three days per week at 9 a.m., commencing in November. £18 per session of nine months, £7 per quarter of three months, or £2 10s. per month.

Applied Mechanics—Prof. W. T. Rowden, B.Sc. (London), Associate Royal School Mines—Tuesdays and Fridays, 10 to 12 a.m.; Mondays and Thursdays, 7.15 to 9.15 p.m. Fee, £1 1s. [7s. 6d. to artisans and others, under certain conditions, in the evening classes.]

Machine Drawing—Prof. Rowden—Tuesdays at 11 a.m., and 7.15 to 9.15 p.m. Fee, 10s. 6d. [5s. to artisans.]

Practical, Plane, and Solid Geometry—Prof. Rowden—Wednesdays, 7.15 to 9.15. Fee, 10s. 6d. or 5s. Prof. Rowden's classes will commence on 16th October.

Mathematics—Prof. Alexander Laing, LL.D.—Hours, from 9 till 2 daily.

Arithmetic, Theoretical and Practical—15s. per quarter.

Algebra, Geometry, Trigonometry &c.—£1 1s. per quarter.

Evening Classes—Tuesdays and Thursdays—Session of six months, commencing 1st October.

Arithmetic, Algebra, &c.—From 7 till 8. £1 1s. per session.

Geometry, Plane and Solid—From 8 till 9. £1 1s. per session.

2.—FACULTY OF MEDICINE.

Winter Session.—Beginning on Tuesday, 24th October, and closing in April.

Chemistry, 10 a.m.; *Laboratory Instruction*, daily, 10 till 5 (Saturdays excepted).—Prof. Dittmar, F.R.S.E.

Surgery, 3 p.m.—Prof. Dunlop, M.D.

Anatomy (Lectures), 11 a.m.; *Demonstrations on Practical Anatomy*, 1 p.m.; *Dissection*, daily, 9 till 4.—Prof. Buchanan, A.M., M.D., and Demonstrators.

Institutes of Medicine (Physiology); 12 noon—Prof. Eben. Watson, M.D.

Materia Medica, 4 p.m.—Prof. Morton, M.D.

Practice of Medicine, 5 p.m.—Prof.

Ophthalmic Medicine and Surgery, and Clinical Instruction at Ophthalmic Institution, daily, 1 p.m.—J. R. Wolfe, M.D., F.R.C.S.E.

Hospital Practice in Royal Infirmary, visit at 9 a.m.

Clinical Lectures do. do. 9 a.m.

Summer Session.—Beginning on the First Tuesday of May, and closing at the end of July.

Botany, 10 a.m.—Mr. Hennedy.

Operative Surgery, 11 a.m.—Prof. Dunlop, M.D.

Practical Physiology, 10 a.m.—Prof. Eben. Watson, M.D.

Surgical Anatomy, 12 noon; *Dissection*, from 6 a.m.; *Osteology*, for beginners, daily—Prof. A. M. Buchanan, A.M., M.D., and Demonstrators.

Practical Medical Chemistry—Prof. Dittmar, F.R.S.E.

Midwifery, 3 p.m.—Prof. J. G. Wilson, M.D., F.R.S.E., F.R.C.S.E.

Medical Jurisprudence, 4 p.m.—Prof. Alexander Lindsay, M.D.

Ophthalmic

Ophthalmic Medicine and Surgery, and Clinical Instruction at Ophthalmic Institution, daily, 1 p.m.—J. R. Wolfe, M.D., F.R.C.S.E.

Hospital Practice in Royal Infirmary, visit at 9 a.m.

Clinical Lectures do do 9 a.m.

Class Fees.—For each of the above courses of lectures (chemistry excepted), first session, £2 2s; second session, £1 1s.; afterwards, free.

Anatomy Class Fees.—For both courses (lectures and demonstrations), first session, £4 4s.; second session, £4 4s.; summer session, with dissection, £1 1s.

Practical Anatomy.—The dissecting-room is free for two sessions to those who attend both courses of anatomy. After the second year the fee for practical anatomy is £1 1s. per session.

Ophthalmic Surgery—Attendance gratis, by paying a matriculation fee of 5s.

The fees for all the lectures and hospital practice required of candidates for the diplomas of physician and surgeon amount to £50.

Certificates of attendance on the lectures at this school are received by the Royal Colleges of Physicians of London and Edinburgh; by the Royal Colleges of Surgeons of England, Ireland, and Edinburgh; by the Faculty of Physicians and Surgeons of Glasgow; by the Army, Navy, and East India Boards; and by the Apothecaries' Hall. They also qualify for graduation in the University of London and the University of Edinburgh.

Students attending the medical classes have the opportunity of witnessing the practice of the following hospitals, viz. :—Lying-in hospital, £1 1s. for six months; Ophthalmic Institution, including systematic lectures, 5s. for course of six months; Dispensary for Skin Diseases, £1 1s. for three months; Royal Infirmary, 560 beds, where medical and surgical clinical lectures are delivered. The number of patients admitted to the Royal Infirmary amounts to 6,000 annually, besides 13,000 out-patients treated at the dispensary; and the average number of surgical operations is 450 annually. The patients admitted to the Ophthalmic Institution average 3,000 annually; and there are upwards of 300 important operations on the eye annually.

The laboratory for instruction in practical and analytical chemistry is open from 10 till 4.

The Materia Medica Museum contains a valuable collection of plates and specimens, recently much enlarged.

A valuable medical library is attached to the Medical School.

The University Museum contains a splendid collection of specimens in Natural History, including more particularly those of zoology, geology, mineralogy, and antiquities. The museum is open free of charge to all students attending the University.

3.—CLASSES.

French.—Mons. A. L. Gorecki—Monday and Thursday—Beginners, 7 to 8; advanced, 8 to 9. Fee for the session, 25s. Special classes for pupil teachers; fee for the session, 15s. Classes for masters, assistants, and governesses, on Saturday; fee for the session, £1 1s. Morning classes will be formed if desired.

German.—Herr Gustav Walter (of Berlin)—Evening classes, Tuesday and Friday—7 till 8, beginners; 8 till 9, advanced. Commencing September 26th; fee, £1 5s. per session of six months. Morning classes will be formed if desired.

Hebrew.—Mr. Macklin. £1 1s. per quarter.

Latin and Greek.—Mr. Macklin—Five days a-week each; 15s. per quarter, or £1 2s. 6d. each for two classes or two quarters. Saturday, principally for teachers; two hours upon same terms.

Writing and Book-keeping.—Mr. D. C. Maclean—Monday, Tuesday, Wednesday, Thursday, and Friday, from 9 a.m. till 3 p.m., and 7 till 8, and 8 till 9 p.m., except Friday evening. Writing, junior pupils, 8s. 6d. per quarter; advanced do., 10s. 6d. per quarter; 16s. for 2 hours. Book-keeping, 16s. per quarter; do., 2 hours, £1 1s. per quarter; do., per session of five months, £1 1s.; do., 2 hours per session of five months, £1 12s. 6d. Writing, per session of five months, 17s., including stationery.

Popular Evening Lectures and Classes.

Applied Mechanics—Mondays and Thursdays, 7.15 to 9.15 p.m.

Machine Drawing—Tuesdays, 7.15 to 9.15 p.m.

Practical Geometry—Wednesdays, 7.15 to 9.15 p.m. Prof. W. T. Rowden—To Artizans. 7s. 6d. for Applied Mechanics, and 5s. each for the other courses. To commence on 16th October.

Natural Philosophy [Astronomy, Navigation, and Meteorology]—Prof. George Forbes, M.A., F.R.S.E.—Tuesdays, half-past 8 p.m., commencing 3rd October. Fee for course of six months, with use of library, 2s. 6d.

Anatomy and Physiology—Prof. A. M. Buchanan, A.M., M.D.—Wednesdays, half-past 8 p.m., commencing 4th October. Fee for course of six months, with use of library, 2s. 6d.

Chemistry—(Organic Chemistry).—Prof. Dittmar, F.R.S.E.—Fridays, half-past 8 p.m., commencing in November. Fee for course of six months, with use of library, 2s. 6d.

Music—(Scientific, Theoretical, Historical, and Biographical)—Mr. Brown. Thursdays, 8 p.m., commencing 5th October. Fee for course of six months, with use of library, 2s. 6d., with additional fee for examination of class exercises.

Art and Practice of Vocal Music—(Tonic-Sol-Fa Method)—Mr. Anderson—Mondays, quarter-past 8 p.m., commencing 2nd October. Fee, gentlemen, 4s.—ladies, 2s. for the course of six months.

Botany.—Mr. Henedy—in Summer, Mondays, half-past 8 p.m. Fee for course of four months, with use of library till October, 3s.

Practical and Analytical Chemistry in the Laboratory.—Once a week—Prof. Dittmar, F.R.S.E.

Students attending the Popular Evening Lectures and classes have the privilege of competing for the prizes and certificates offered by the department of science and art.

The Evening Popular Lectures have connected with them an extensive and well-selected library of works on science and general literature, amounting to upwards of 6,000 volumes, to which considerable additions of new and valuable works are constantly being made.

Glasgow, September, 1876.

J. B. KIDSTON, Secretary.

GLASGOW MECHANICS' INSTITUTION, 38, BATH-STREET—SESSION 1876-77.

EVENING LECTURES AND CLASSES—SESSION OF SIX MONTHS.

The second quarter commences at the beginning of January.

Chemistry—By Mr. Robert R. Tatlock, F.R.S.E., F.C.S. On Friday evenings, at 8 o'clock, for six months. Introductory lecture, Friday, 6th October. Fee, 5s., with library during the course.

Natural Philosophy—By Mr. Peter Alexander, M.A. On Tuesday evenings, at 8 o'clock, for six months. Introductory lecture, Tuesday, 3rd October. Fee, 5s., with library during the course. For both of the above courses, with library for one year, 10s.; or for the half session, 5s. Students holding tickets for either of the above courses are members of the institution while they hold such tickets.

Music—By Mr. W. M. Miller. Beginners' class, from 7 till 8 p.m.; fee, 5s. Advanced class, from 8½ till 9½ p.m.; fee, 7s. 6d. For six months—commencing on Wednesday, 1st November. Ladies and apprentices tickets half-price for each of the above courses.

Theoretical Mechanics—By Mr. Peter Alexander, M.A. On Thursday evenings, at 8 o'clock, for six months, commencing 5th October. Fee, 7s. 6d. per quarter, or 12s. 6d. per session.

French—By Monsieur Dutoit. Commencing on Monday, 25th September. Evening classes :—Initiatory, Monday and Thursday, from 8 till 9.30; advanced, Tuesday and Friday, from 8 till 9.30. Fee, 21s. for the whole session of six months.

Latin and Greek—Mr. Geo. M'Crindle. Commencing Monday, 2nd October. Greek, on Monday and Wednesday, from 9 till 10 p.m. Latin :—Junior, on Monday, Wednesday, and Friday, from 7 till 8 p.m.; senior, on Monday, Wednesday, and Friday, from 8 till 9 p.m. Fee, 12s. 6d. per quarter, or 21s. for session of six months.

Spanish—By Mr. Archd. Revie. Commencing on Tuesday, 3rd October. Junior, on Tuesday and Friday, from 8 till 9 evening. Senior, on Tuesday and Friday, from 9 till 10 evening. Fee, 12s. 6d. per quarter, or 21s. for the whole session of six months.

Elocution.—

Elocution—By Mr. William Moffat. On Thursday evenings, for six months. Introductory readings on Thursday, 5th October, at 8 o'clock. Elementary class, from 8 till 9 o'clock; fee, 7s. 6d. Advanced class, from 9 till 10 o'clock; fee, 9s. Text book:—"Moffat's Practice of Elocution."

Phonography—By Mr. William Silver. Commencing on Wednesday, 4th October. Initiatory, Wednesday evenings, from 8 till 9 p.m. Advanced, Wednesday evenings, from 9 till 10 p.m. Fee, 5s. per quarter, or 8s. for the whole session of six months.

Geology—By Mr. John Young, F.G.S., Vice-President of the Geological Society, Glasgow. On Monday evenings, at half-past 7 o'clock. Commencing 5th November. Fee, 5s.

EVENING CLASSES—SESSION OF NINE MONTHS.

First quarter commences on Monday, 4th September; second quarter commences on Monday, 27th November; third quarter commences on Monday, 26th February.

Advanced Arithmetic and Mathematics.—By Mr. Archibald Thom. Junior Class, on Monday and Wednesday, from 6 till 7:30 p.m., and from 7:30 till 9:30 p.m. Fee, 7s. 6d. per quarter, or 20s. for the whole session of nine months. Advanced class on Tuesday and Thursday, from 7:30 till 9:30 p.m. (embracing the more advanced books of Euclid, Analytical Trigonometry, Analytical Geometry, and the differential and Integral Calculus). Fee, 9s. per quarter, or 23s. 6d. for the whole session of nine months.

Mechanical Drawing—By Mr. William Brown, engineer. On Tuesday and Thursday, from 7:30 till 9:30. Fee, 7s. 6d. per quarter.

Drawing, Painting, and Architecture—By Mr. A. D. Robertson, artist. On Wednesday and Friday, from 8 till 10 evening. Ornament and architecture; fee, 7s. 6d. per quarter. Water-colour drawing and landscape painting; fee, 15s. per quarter.

English Grammar, Composition, and Literature—By Mr. J. D. Reid, M.A. On Monday, Wednesday, and Friday. Elementary class, from 8 till 9 p.m.; fee, 7s. 6d. per quarter. Advanced class, from 9 till 10 p.m.; fee, 9s. per quarter.

Writing, Arithmetic, and Book-keeping—By Mr. John Macgregor. Tuesday, Thursday, and Friday, from 6 till 8 p.m. and from 8 till 10 p.m. Fee for writing and arithmetic, 8s. per quarter. Fee for writing and arithmetic and book-keeping, 9s. 6d. per quarter.

Evening class for Females—By Mr. John Higgins. For reading, grammar, writing, and arithmetic, on Monday, Wednesday, and Friday, from 8 till 9:45. Fee, 6s. per quarter; with book-keeping, 7s. 6d. per quarter.

The Institution is in connection with the Department of Science and Art. Students are entitled, free of charge, to compete for the valuable certificates and prizes, and other advantages offered to competitors.

LIBRARY.

Fee for the library for six months, to students attending any of the classes, 2s. 6d.

The library contains about 8,000 volumes in the various departments of Literature and Art. It is open to the Public at the annual charge of 6s. The leading Monthly and Quarterly Magazines and Reviews are added on publication.

Fees payable to Mr. Alexander Buchanan, at the Institution Library, 38, Bath-street.

SYLLABUS OF LECTURES.—SESSION 1876-77.

Chemistry—By Mr. Robert R. Tatlock, F.R.S.E., F.C.S. Introductory lecture on the evening of Friday, 6th October, at 8 o'clock. Subject:—"Crystallization."

The course this session will be devoted chiefly to the chemistry of the leading metals and their compounds, and will be profusely illustrated by experiments, specimens, and diagrams. It will consist of twenty-five lectures, extending over six months. The principal chemical manufactures will receive a large amount of attention. Special facilities will be given to students intending to present themselves for examination at the end of the session by the Government Department of Science and Art, for successful appearance at which Queen's Prizes and Certificates are granted by the Department. The following is an outline of the course which will be pursued:—

Chemical action and laws relating to chemical combination; chemical formula and nomenclature; General properties of gases; the non-metallic elements and their leading compounds.

General properties of Metals.—Their detection by the spectroscope and other means.—History, preparation, properties, and uses of the leading metals and their compounds, including potassium, sodium, lithium, barium, strontium, calcium, magnesium, aluminium, zinc, iron and steel, tin, arsenic, antimony, bismuth, lead, copper, mercury, vanadium, silver, gold, platinum.

Resume.—An excellent collection of first-class works on modern chemistry has been added to the library during the past session. This includes "Watt's Dictionary of Chemistry," 7 vols; "Ure's Dictionary of Arts, Manufactures, and Mines," and Roscoe's, Frankland's, Fresenius's, and Crookes's Works.

A gold and silver medal and some book prizes are offered for competition at the ordinary examinations of the class, which are held monthly.

Natural Philosophy—By Mr. Peter Alexander, M.A. Introductory lecture, Tuesday, 3rd October, at 8 o'clock p.m. Subject:—"A Night with the Coil."

The following is an outline of the course:—

Sound—Production and propagation, velocity of propagation in solids, liquids, and gases, reflection, echoes, refraction, noise and musical note, intensity, resonance, interference, beats, pitch, siren, modes of vibration of bodies, nodes and loops, harmonics, quality of musical sounds, musical instruments, the voice, musical intervals, the diatonic scale, the ear.

Light—Theories, undulatory theory, wave length, colour, intensity, velocity, reflection, mirrors, single refraction, lenses, rainbows, prism, spectrum, spectrum analysis, dispersion and achromatism, total reflection, mirage, double refraction, polarization, interference, diffraction, colours of thin films, Newton's rings.

Heat—Thermometry, expansion of substances, maximum density of water, the three states of matter, specific heat, latent heat, calorimetry, three modes of transference of heat, conduction, radiation, convection, heat of chemical combination, fuel, thermodynamics.

Applied Mechanics—By Mr. Peter Alexander, M.A. Commencing Thursday, 5th October, at 8 o'clock p.m.

Materials employed in the Arts—Principles and processes by which they are converted into the conditions and forms required in the arts, the mechanical powers and their combinations into simple machines, mechanical contrivances by which the condition, direction, and rate of motion are changed, fly wheels, governors, &c., strength of beams, pillars, shafts, &c., prime movers, water, steam, air, &c., engines, structures, roofs, bridges, foundations.

Geology—By Mr. John Young, F.G.S., Vice-President of the Geological Society of Glasgow. Introductory lecture, Monday, November 6th, at 7:30 p.m.

The course will consist of twenty lectures, embracing sketches of the physical features, mineral composition, Fauna and Flora of the several geological formations, and will be illustrated by maps, diagrams, minerals, rocks, and fossils.

Excursions of the class to localities of geological interest around Glasgow will take place on the Saturday afternoons, during the spring and early summer months. An opportunity will also be afforded to the class of studying the collection of minerals, rocks, and fossils in the Hunterian Museum, University of Glasgow.

Text Books:—"Lyell's Elements of Geology for Students," "Page's Advanced Text Book of Geology," "Dr. Young's Physical Geography," "Nicholson's Manual of Palaeontology."

The Council of Education. Favour of report.—F.B.S., 7/5/77. The Secretary to the Council of Education.—B.C., 8 May, 1877.—W. E. PLUNKETT.

Council

Council of Education.

No. 19.

Minute of The Secretary, Council of Education.

Technical Education : Question of establishing Evening Schools for.

THE Council has adopted a minute hereon, of which the annexed is a copy.

Council of Education Office, Sydney, 8 August, 1877.

W. WILKINS,
Secretary.

The Under Secretary, Department of Justice and Public Instruction.—B.C., 8 August, 1877.

[Enclosure.]

Technical Education—Question of establishing Evening Schools for.

FROM the accompanying papers it appears that a deputation waited upon the Honorable the Minister for Justice and Public Instruction, and placed before him certain information bearing on the subject of "Technical Education."

The deputation consisted of Mr. J. Sutherland, M.L.A., and of officers and members from the undermentioned Associations of New South Wales :—

- "The Engineering Association."
- "The Builders' and Contractors' Association."
- "The Trades and Labour Council."

The deputation desired that the Council of Education would establish in Sydney and throughout the Colony, in connection with the Public School System, "Evening Schools" for the technical training of artisans, farmers, and others.

The request is based upon the following grounds :—

- (a.) That such training is required to educate the producing classes in the knowledge that would teach them how to make the most of the resources and natural productions of the country ; and thus enable the Colony to compete with Great Britain and other countries where, it is stated, young men, have facilities and inducements to study the scientific principles which underlie the mechanical processes of their various occupations.
- (b.) That the Government is applied to in the matter, because it is believed that such schools cannot be successfully established and maintained except in connection with the Public School system.

It is further asserted by the deputation that the mechanical and commercial progress of the Colony must depend in a great measure upon the efficient training of youth in technical knowledge ; and as evidence that evening training schools have proved useful where properly established and conducted, it is further stated that in three institutions alone in Great Britain—The "Anderson University" and the "Mechanics' Institute, Glasgow, and "Owen's College," Manchester—such schools are attended in a year, by about 5,000 students. The deputation also cited an expression of opinion on the subject by Professor Roscoe, of Owen's College, who it appears, stated that he considers the teaching of evening science classes, &c., to be one of the most useful spheres of action in connection with that institution.

No estimate of the number of persons likely to attend evening classes, if established in Sydney or elsewhere, is given ; though the deputation appear to wish it to be understood that there are many youths connected with the prominent industries of the Colony, who would at once be ready to become students in evening schools. They further expressed their intention to use their influence with the working men and youths of the Colony, in order to induce them to take advantage of the instruction that may be imparted in such schools when established.

The deputation do not specify the particular branches of technical knowledge they desire to have taught, but they refer generally to those branches immediately connected with mechanical industries, agriculture, mining, &c., and they appear to think that the course should be similar to that introduced into the principal institutions of Great Britain. In connection with this part of the matter they suggest that, if the classes be organized in connection with the Public School system, each local Board might define the educational requirements, as regards technical knowledge, of its own district.

It may be as well at once to dispose of the suggestion as to the part that might be taken by local Boards in this matter. Experience shows that any expectation of usefulness on the part of these bodies, in connection with such questions, would in the vast majority of cases be utterly futile. It is not necessary therefore that this suggestion should be further considered.

Without doubt, the importance of the subject however renders it desirable that means should be devised for giving instruction to youths who have left school, and to others of maturer years, in the various branches of science which are connected, more or less directly, with the daily work of artisans and others, who depend for their subsistence upon their manual skill. In many countries practical steps have been taken to secure industrial training of this kind. Among the first to recognize the importance of the subject were several of the North German countries, in which technical schools have long been established.

"The German 'Gelehrtschulen,' says a recent writer, are intended both for apprentices and journeymen, chiefly in the following trades : carpenters and joiners, cabinetmakers, machinists or engine-fitters, pattern-makers, cutlers and hardware manufacturers, modelers and plasterers, tailors, and shoemakers, &c. Persons also who aspire to be master builders come to the schools ; but regular architects would be trained at the Polytechnic or Gymnasium school. The instruction given at the Bremen school is much the same as that communicated by our science and art teachers under the South Kensington department ; but at the schools in Hamburg, Holz-Minden, Einbeck, Hannover, Nurnberg, &c., there are, in addition, workshops where practical teaching is given by skilled workmen. The director (Gelehrtschule-Consulent) of the Bremen School told me that he would much like to have such workshops connected with his school, taught by practical skilled workmen, that, his students might learn how to apply the scientific and artistic knowledge which they were gaining there to the actual material in which they would have to work when engaged in their respective trades, whether wood, iron, stone, plaster, clay, &c. In Holland also, I may mention, the need of these workshops, with skilled workmen for teachers, as a most important addendum to all schools for the instruction of artisans, is being fully recognized ; and its Ambacht or technical trade schools, the practical teaching of the workshop has for some time been part of the established system. At Amsterdam and Rotterdam, these Ambacht schools, I am told, are particularly admirable ; but I am not aware of any other similar schools existing at present in that country. I was informed however, that to those schools only apprentices were admitted. It is earnestly to be hoped that the Government of this country, before very long, may see the propriety of so far extending the powers and scope of the science and art department as to permit of their giving the same payments to skilled workmen of approved competency, in the capacity of teachers, as they now give to certified teachers, under the existing regulations. So long as such teachers can pass an examination proving their fitness to impart the practical and scientific kind of instruction required, surely their inability to come up to quite a different and higher standard ought not to be a barrier in the way of their receiving the Government grant as 'payment for results.' * * * What is right and necessary for improving and completing the technical education of continental workmen cannot be altogether unnecessary or wrong for British workmen who, on the whole, have fewer opportunities for art culture and technical improvement generally.

There cannot be a doubt that these workshops are as necessary for completing the technical and scientific training of artisans, as the laboratory for chemical and mining students, or the dissecting-room and the hospital for medical pupils.*

In France, and Switzerland also technical education has long been considered necessary and means for providing it have been adopted. In the United States of America great attention has also been given to the subject.

No steps appear to have been taken to supply this instruction in Great Britain, nor does the necessity for it seem to have been perceived until the Paris Exhibition of 1867 revealed the comparative inferiority of British workmen to their Continental brethren. Since that time, however, energetic steps have been taken to retrieve the character of British workmanship. After inquiry by a Commission the "Science and Art Department" was expanded, schools and classes were established throughout the country, in which various branches of mathematical and natural science, together with drawing, designing, and other branches of art are taught ; and, even in the ordinary day schools teachers are specially remunerated for success in instructing their pupils in the rudiments of the same subjects. Besides the provision made by the State, various public bodies, private associations, and individuals have taken up the subject with great zeal and liberality, and in the mother country technical instruction is now obtainable in any place above the rank of a mere village. The following brief account of a "Trade School" will show the range of instruction supplied in such institutions.

"Having recently visited the Bristol Trade School, * * * I may mention here that it consists of two departments, one for those under, and another for those above, the age of eighteen ; also a preparatory department for boys not under nine years of age. The subjects taught in the middle school are mathematics, descriptive geometry, mechanical and experimental physics, chemistry, art drawing, &c., and in the adult department, chemistry and chemical analysis, machine drawing and building construction, vegetable physiology and botany, applied and theoretical mechanics, steam, freehand, model, and perspective drawing, Latin, French, German, &c. There is also the 'mining department' school, which is well equipped with educational appliances, and the 'chemical laboratory' department, both of which have convenient and well furnished rooms for practical chemistry, for chemical analysis, and assaying. The neighbourhood of Bristol abounds in subjects of geological instruction, and the owners of coal mines give every facility for study on the part of the students in the trade school."

See Reports of
the Science and
Art Department.

To

To come nearer home, the neighbouring Colony of Victoria has made considerable advances towards the provision of technical instruction. In accordance with a resolution of the Legislature a Commission was appointed in 1869 "to promote by Annex A. lectures and otherwise, technological and industrial instruction among the working classes," and funds have since been voted annually towards the carrying out of that object. The Commission, however, was subsequently superseded by another of a more comprehensive nature, having charge of the Public Library, Museums, and National Gallery of Victoria. In connection with these institutions technical instruction is systematically given upon various departments of science and art.

Up to the present time no direct attempt appears to have been made to supply technical instruction in New South Wales to persons of the operative class. It is true, that in the better description of Public Schools some success has been achieved in the teaching of elementary mathematics and drawing; that in some of the Mechanics' Schools of Art similar instruction has been imparted, and that a School of Design and the Academy of Art have, in their respective spheres, laboured to promote education in art. But of none of these can it be said that the object of the deputation has been the purpose kept in view.

Assuming the desirability of providing means for industrial instruction in this Colony, fuller information is required before any arrangements for teaching could be determined upon. No definite information for example has been furnished as to the number of persons likely to offer themselves for instruction, the subjects upon which instruction is desired, or the terms upon which it may be given. This and any other necessary information could probably be elicited by means of circulars addressed to—

1. The several organizations of professional men and artisans.
2. The Committees of Mechanics' Institutes.
3. Employers of labour.
4. Teachers and Boards of Schools in the more important towns.

Until such information has been obtained it would be premature to consider other questions which suggest themselves in connection with this matter, such as the delivery of lectures, the establishment of classes, the terms of admission, the inducements to be held out to young persons to join such classes, the mode of ascertaining the results of teaching, the introduction of an elementary course of instruction in technical knowledge for advanced pupils in the ordinary schools under the Council's supervision, special lectures to teachers employed by the Council and to students in the Public Training School, and the establishment of a Technological Museum with necessary appliances, including workshops for practical training.

But perhaps the first question in point of urgency that requires to be decided relates to the authority by which the work could be carried on, whether by the Minister, by the Council of Education, by irresponsible bodies such as the Committees of the different Schools of Arts, or as in the mother country, by these latter in conjunction with, but in subordination to, an administrative commission appointed by and responsible to the Government. On this point it may be remarked that the educational institutions of the Colony already suffer from the absence of unity of purpose, and that with the view of preserving some appearance of co-ordination among them it seems desirable to retain the power in the hands of either the Minister or the Council.

But the Council has not hitherto regarded technical education as falling within the scope of its duties and responsibilities. As the Public Schools Act, from which the Council derives its authority, contains an express provision (section 6 of that measure) restricting the application of the Parliamentary grants "for Public Instruction" to elementary instruction, and as the general tenor of Parliamentary debates on the subject support the view that the Act contemplates the provision of primary school education only, of which technical instruction does not properly form a part, the Council is of opinion that, with its present powers, this matter does not fall within the scope of its duties. Whatever may be the advantage of or necessity for technical teaching, it is admittedly less a constituent of primary instruction than of that higher kind of education sometimes denominated "secondary education."

Council of Education Office, Sydney, 23rd July, 1877.

W. WILKINS,
Secretary.

ANNEX A.

TECHNOLOGICAL COMMISSION OF VICTORIA.

To His Excellency Sir John Henry Thomas Manners-Sutton, K.C.B., Governor, &c., &c.

Offices of the Technological Commission, Exhibition Buildings, 11th November, 1869.

Sir,

We have the honor to submit to you a further report with reference to "promoting technological and industrial instruction, by lectures and otherwise, among the working classes of Victoria," a duty imposed upon us by your Excellency's Commission.

In our former report we addressed your Excellency on the subject of lectures, a school of design, and a technological or industrial museum, as some of the obvious and necessary means of promoting such instruction. We purpose now to submit some further observations upon these subjects.

Lectures.

In the report alluded to we expressed our opinion that lectures on industrial instruction—that is, on the application of scientific knowledge to industrial occupations—should be delivered in Melbourne in the first instance, and then in other centres of population throughout the country, and announced that we were engaged in making arrangements for the delivery of such lectures. In conformity with this, we considered it advisable to collect as much of public opinion as we could with reference to the delivery of these lectures, and accordingly we had a circular letter addressed to the Mayors of the several Borough Councils throughout the country on the subject. The circular contained among others the following query:—"Whether, in your opinion, a course of lectures on some of the sciences, in their application to our prominent industries, would be acceptable to the artizans and working classes in your Municipality."

From answers to these communications we had every reason to suppose that the proposal would be well supported, and letters generally approving of the project were received from the Corporation of Geelong and the following Borough Councils:—

Ballarat	Footscray	Maryborough	Talbot
Ballarat East	Geelong	Portland	Taradale
Brunswick	Hamilton	Richmond	Wangaratta
Buninyong	Heathcote	Sale	Warrnambool
Creswick	Hotham	Sandridge	Williamstown
Dunolly	Jamieson	Sebastopol	Woodend
Eaglehawk	Kew	Smythesdale	
Emerald Hill	Kilmore	Steiglitz	
Essendon and Flemington	Kyneton	St. Kilda	

Strengthened in our opinion by these communications, and feeling that the lectures, in order to command success, should be of the highest order, and judging from the *dictum* of Professor Tyndall that lectures of such a character can be rendered acceptable to mixed audiences, as the lectures of Professor Huxley to the working classes at Nottingham have been, we put ourselves in communication with gentlemen of high scientific attainments with the view of preparing a course of such lectures for delivery in Melbourne in the first instance.

Selections from the following courses were provisionally adopted:—

Introductory Lecture.

Industrial instruction—The applied sciences.

Mining, &c.

1. On the chemistry and metallurgy of gold.
2. On the chemistry of other metals and alloys.
3. On precious stones, and on discriminating the different formations producing them.
4. On building stones: the supply, and their permanent qualities as tested by experiment and use.
5. On sands and clays, as used for glassmaking and pottery.
6. On the ventilation of mines in theory and practice.
7. On gunpowder, gun-cotton, nitro-glycerine, and their respective economic value in mining.
8. Practical mechanics, &c.

Agriculture.

Agriculture.

1. On the chemical principles involved in modern agricultural practice.
2. On the chemistry of soils, and method of analysis.
3. On vegetable foods.
4. On fertilising manures, their origin, composition, and value, with instructions as to testing the same.

Manufactures.

1. On the chemistry of wine-making and distillation.
2. On the chemistry of brewing.
3. On the chemistry of oils and fats, &c.
4. On the chemistry of the preservation of meats, &c.
5. On the chemistry of tanning, and the tanning properties of our indigenous and other barks.

The delivery of a selection from the above in Melbourne would have been of a tentative character, and after their delivery arrangements were proposed for the re-delivery in other places.

We had also been assured that a gentleman of known ability as a lecturer was willing to inaugurate the course by a lecture on technological instruction. We then applied to the Government for the use of the Octagon Hall in the Exhibition Building, then unoccupied, for the delivery of the same. The Chief Secretary replied that "The requirements of the Commission would be met by the enlarged trust about to be issued," referring to a Commission which he had announced the determination of the Government to constitute, for the joint management of the Public Library, Industrial Museum, and Art Collection.

Under these circumstances we delayed, persuaded that the only proper place for their delivery was in a building erected for kindred purposes, and where the expensive material for illustrating such lectures could be kept in safety and without expense.

We have only now to express a regret that this attempt upon our part to "fuse scientific with general knowledge" has been impeded by want of access to a room for the delivery of these lectures, which was not in any other use at the time.

SCHOOLS OF DESIGN.

In our former Report to your Excellency we stated that we proposed to confer with the representatives of the several trades "for the purpose of ascertaining how far Schools of Design would be supported by the mechanical classes, and that, from some information which we already had received," we expressed our belief that the result would be satisfactory. At the time of presenting this Report to your Excellency we were in consultation with Mr. S. H. Roberts and some of the members of the Painters and Decorators' Society, who took an interest in the matter; and the result of these interviews has been the establishment of the Artisans' School of Design.

The progress of the school has since then been most successful. The pupils on the books of the school number 160, and the average attendance is about 90; and upon several occasions, when members of the Commission happened to visit the school, there were over one hundred pupils actively engaged. There are classes now formed at which Messrs. Buvelot, Clarke, Shew, Roberts, and Burt teach gratuitously. Considering that the Committee of Management have no public funds at their disposal, we deemed it of great importance to assist such an undertaking, and we presented the Committee with the sum of £10 out of the funds at our disposal for the purchase of easels, drawing boards, and other necessary materials of instruction. Since then the school has far exceeded what was anticipated, and we have resolved to present the Committee with a further sum to be expended in the same manner. From what we have seen of the expenditure already incurred, we must say that the money is most judiciously and economically spent.

The success of the members of the Painters and Decorators' Society was sure to have effect with other trade organisations, and some members of the Society of Carpenters and Joiners have already founded a school for technical instruction. We were invited to visit and confer with that body, and found that, although the school had only been opened for four nights, there were twenty pupils; that it was proposed to have a preparatory class for younger pupils; that a class for geometry was formed; that classes for other branches of scientific instruction were contemplated; and that classes for the making of models and for mechanical and other drawing were in progress. We considered that the wants of this school required some assistance, and we have resolved to present the Committee with the sum of £5 for the purchase of models and other materials. The Committee appear to be most anxious to provide for the instruction of the students. The Society have a small library of valuable books bearing on their trades, and are most anxious to increase it; and many have expressed their belief that lectures on scientific subjects in relation to constructing and manufacturing trades would be most desirable.

We are in communication with other bodies upon these subjects, and we hope for further results. We hope that in some of the Suburban Municipalities—such as Collingwood, Prahran, Williamstown, &c., where the artisan classes are resident, that kindred schools may be opened. One of the most gratifying features in this movement is the self-reliant spirit which we have found among the artisan class, and the earnest desire to prosecute their instruction in every possible way; and we should not be doing our duty if we did not specially recognize the services of the members of the Painters and Decorators' Society, before alluded to, for to them is due the eminent success of the Artisans' School of Design.

THE TECHNOLOGICAL OR INDUSTRIAL MUSEUM.

We regret to say that no progress has been made with reference to this institution, if we except the action of the late Treasurer, who has placed the sum of £1,000 on the estimates for the purchase of cases. It is now near three years since the Intercolonial Exhibition was closed, and we cannot help remarking that since then, with one or two exceptions, the building has been used for purposes foreign to the intentions of Parliament, as expressed when voting the moneys for its erection. And while the leading statesmen in England are, by their action in Parliament and by their private subscriptions, forwarding the creation of museums (such as we are now alluding to) throughout the manufacturing districts, the matter here has been kept in a state of suspense and uncertainty, disappointing and discouraging to the artisan and manufacturing classes. We, however, are glad to find that through the personal exertions of the Secretary of Mines, Mr. Brough Smyth, the very valuable collection of geological specimens, the property of the Mining Department, is again arranged for public inspection, and, at the request of some of the members of the Intercolonial Exhibition, he has taken charge of the remnant of exhibits which were left for the then intended Museum; and further, that the specimens of Australian woods collected by the Exhibition Commissioners have been cleaned and placed together, for public purposes hereafter.

EXHIBITION OF RAW MATERIAL—THE FINE ARTS AND MANUFACTURES.

We may be permitted to remind your Excellency of the letter from the Agent-General of Victoria, together with the report of the eminent lapidary, Mr. Harry Emanuel, on the diamond and other precious stones of this country, and of the strong opinions expressed by Mr. Emanuel as to the economic value of the recent discovery with reference to these stones. Taking this correspondence into consideration, we thought to organize a small exhibition of such stones in the rough, as coming from the debris which contained them; also to exhibit specimens of the debris, with the view of making the eye of the miner more practically conversant than at present with the appearance of these products, and the character of the formations where they are found. It was also proposed that the process of testing with the blow-pipe and by "water-weighing" should be explained at the Exhibition. The proposal to have types of the different precious stones exhibited, as we intended, has since been commended in a recent publication by Professor Thomson, of the Sydney University. We accordingly applied to the Chief Secretary for permission to hold the Exhibition in the Exhibition Building, but we were not able to carry out our intention in consequence, as we have heard, of objections on the part of the Trustees of the Public Library.

The Fine Arts.—In the course of the year there were four exhibitions of the Fine Arts; one at Melbourne and another at Geelong, held at the same time; one at Ballarat and another at Sandhurst, both open contemporaneously. Independent of these there was one held in New Zealand at the same time with the Melbourne Exhibition, to which some Victorian artists had forwarded exhibits before the Melbourne Exhibition was announced; and it is to be hoped that in future not more than one exhibition shall take place in this country at the same time. We believe if there was a properly organised responsible body with reference to Fine Arts, such clashing of exhibitions could not take place.

Manufactories.—We find that at present there is in England a great desire to hold local and departmental or sectional exhibitions, and in the last year several exhibitions of this special class have been held; also on the Continent—in France, with reference to the Fisheries, and recently in the Netherlands for products for domestic uses.

We have it in contemplation to recommend something of the sort. One year it might be, for example, an exhibition of timber and its applications, or of household furniture; another, perhaps, of agricultural implements, and so on. However, on this matter we intend to confer with the leading trades and manufacturers before we come to any resolution.

TECHNOLOGICAL

TECHNOLOGICAL INSTRUCTION IN SCHOOLS.

After the perusal of the several Parliamentary Reports on Industrial Instruction submitted to the Imperial Parliament, and which have been forwarded to us by the Agent-General for Victoria, through the Chief Secretary, we find that it is considered of the first importance that "Natural Science" should at an early period constitute a part of general instruction; and with the view of acquiring information how far this is carried out in Victoria, we have applied by circular and queries for information. A great amount of interesting information has already been received, and we hope shortly to report specially on the subject.

Apprentices.—We have also addressed in the same manner the employers of labour, with a view of eliciting their opinions as to the means of affording apprentices and journeymen in their respective trades instruction in certain branches of science as applicable to their working engagements.

Nautical Schools.—We find, by the Report of the Committee of the Privy Council on Education, that schools of this class are most anxiously looked after by the Imperial Government, and aided by money and otherwise. Here, as yet, there has not been any care of this description, while the peculiar position of such towns as Williamstown and Sandridge would appear to demand some attention of the sort. We find that our trading fleet registered in Melbourne numbers forty-four steamers and 340 sailing vessels, and there must be a very large number not only of nautical men but of engineers required for such a fleet; and it is submitted to your Excellency that the special instruction of such a class should be as much an object of interest to us as it is to the people of England. With a view of acquiring accurate information upon this subject, we have applied, through the Chief Secretary, to the Agent-General of Victoria for information as to the formation and management of such schools, and as to the amount of aid received from the Government for the purpose; and when such information is received we shall endeavour to act upon it.

MECHANICS' INSTITUTES.

There are about eighty of these Institutions throughout the country. There does not appear to be any united action among them, or conference, as far as we know, for the more effectual carrying out their objects; and with a view of arriving at more perfect information with reference to their working and management, we have addressed circular inquiries to the Secretaries on the subject. We may remind your Excellency that in Lancashire alone there are about ninety Mechanics' Institutions associated with the Society of Arts in London; that by this system their self-government and independence is secured, and great advantages conferred. Books, models, &c., can be exchanged, concerted arrangements carried out for the delivery of lectures, and many advantages accrue to each which would not take place if they occupied isolated positions. It is with the view of considering how far combined action can be carried out, such as we describe, that we have sought the information alluded to; and when this has reached us it will be our duty to report more fully.

We may now close our Report by stating that we believe that special and fitting instruction of a scientific character among the artisan classes is of as much importance to the community at large as is a special instruction for the professions. The latter is amply provided for by the State here, while the former has not received much attention. The artisan in this country should at least receive as much care from the Government as he does in England—that is, if it is expected he can compete with the English artisan. And we have no hesitation in stating that he has not the advantages of instruction here as in England, where Schools of Design, Lectures, and Museums of Industry and Art, are daily on the increase. Whenever we conferred with the artisans, we had reason to know that they are most intent on acquiring information, and although opinion appears unanimous on the subject, it is not as effective as it should be for want of organisation. It is, therefore, in contemplation to have a Conference in the early part of the year with representatives of the several trades and manufacturers who can meet with us and others, and confer upon many of the topics which we have now alluded to. This course has been adopted in London on several occasions with advantage, more especially at a Conference of Working Men recently presided over by the Earl of Lichfield. We hope for similar results here.

SAMUEL H. BINDON, *Chairman.*
J. J. BLEASDALE, D.D.
DAVID BLAIR, M.P.
J. G. BURTT, M.P.

GEORGE ROLFE, M.P.
D. THOMAS, M.P.
W. M. K. VALE, M.P.

ANNEX B.

INDUSTRIAL INSTRUCTION.

On Distributing the Prizes at the Ballarat School of Design, in June, 1873, Judge Bindon, who presided, delivered the following Address:—

BEFORE I proceed to address this large audience on the subject of industrial instruction, I must first express my thanks for being permitted to occupy the chair this evening, and assure the Committee of the School of Design how sensible I am of the honor conferred upon me by having been invited to distribute their prizes upon this the second occasion of my doing so. It is an honor the more appreciated when I remember the importance of this city and district; remarkable for mineral wealth and the enterprise of its miners; remarkable for the agricultural wealth of the surrounding country, and the intelligence of its farmers, if I may judge from the admirable papers which have been read before the Farmer's Club, and which should have been printed before now in a collected form for the use of other districts; a city which I trust, will be as famous for its woollen manufactory as it is now for its iron works, which turn out machinery that would be no discredit to the manufactory of a Stephenson or a Krupp.*

Since last I had the pleasure of presiding here, I need scarcely remind you that the question of public instruction has undergone quite a revolution. I am not going to allude to the merits or demerit of a measure which is now the law of the land. There may be differences of opinion among you, and it would be wrong in me, a stranger, to intrude mine—no matter how decided it may be. But there can be no difference of opinion as to the manner in which the Attorney General carried the measure through the House, or that the cause of public instruction is raised to a higher stage in public opinion than it ever was before.

The election for Boards of advice are exciting the greatest interest throughout the country, and public opinion is as active as it can be. In England there are two Cabinet Ministers charged with the interests of public instruction, while here there was not even one. But now we have a Minister of Public Instruction responsible to Parliament, and the question no longer occupies a subordinate place, or rather no place at all, in the consideration of the Cabinet, but one which must be present whenever the Minister of Public Instruction is there.

However, satisfactory as much of this may appear, there is very much more to be done; and I earnestly hope that no spirit of contentment, resulting from any measure of success which has attended Mr. Stephen, will blunt his energy, or prevail with the Boards of Advice, or with the people, with whom the question ultimately rests. A state of contentment, no doubt, is very agreeable to an individual—"rest and be thankful"—but very fatal to the progress of a people. History, as well as our own experience, tells us that every benefit which has resulted to the people has come "not from smooth but troubled waters."

As far as I am informed, the Minister of Public Instruction has not yet publicly approached the question of technical education—or, as I have called it, industrial instruction—and therefore it appears a fitting opportunity for us to consider some facts with reference to it.

There are at present in this country nineteen Schools of Design associated with the Technological Commission, with a roll of over 1,400 pupils. Few persons imagined, when attention was first called to the question, about four years ago, that the result would be so satisfactory. The modest sum of £200 was first granted, and this has been since increased to an

annual

*The ironworks of Messrs. Krupp at Essen, in Prussia, are, I believe, the largest in the world. There are 8,000 hands employed, and the present Director rose from the position of workman to that of Director. All the fitters are so skilled in designing that whenever called upon, they can furnish the Director with an accurate drawing of the work upon which they are engaged. The technical education of the apprentices and young workmen is closely attended to.—*Letter of Mr. Samuelson, M.P., Parliamentary Paper, 28th November, 1867.*

annual vote of £500; and the satisfactory result which has followed so small an expenditure is owing to the zeal of the several committees of management, to the ability and liberality of the teachers, and above all, to the desire upon the part of the students to improve themselves, and nowhere has all this been more prominent or more successful than in Ballarat, and I see nothing to prevent the number of schools which I have mentioned being greatly increased throughout the country. I am satisfied that students can be had wherever there are three or four zealous persons willing to act together in the matter and for many reasons it is desirable that this branch of industrial instruction should be extended.

In every branch of the constructive or mechanical trades facility of design is of the highest value. A drawing does for many branches of knowledge what a map does for geography. The roughest sketch will often convey to the mind what pages of writing would fail to do. Young people take pleasure in drawing, and delight in returning from the school with their little sketches. The parent has an opportunity of testing the latent ability of his child, and selecting for him—often a very difficult task—a suitable trade or occupation. And I am satisfied that, as in nature there is a soil and a climate suitable for every plant, so in the world of industry there is a place for every worker if we could but find it out; and these Schools of Design act as a sort of trial or “convincing ground” to enable us to do so.

But, although Schools of Design may form a very important section in the course of technical instruction, more is required. We want night-schools, at which miners, manufacturers, and artisans, especially the apprentice class, can improve themselves in arithmetic, in algebra (the shorthand of calculation), in geometry, mineralogy, and chemistry, which is so essential in many manufactures; and I see no difficulty in grafting them on to many of the State schools throughout the country—that is, if the people are wise enough to insist upon it.

I am at a loss to know why the working classes in this country should not have the same advantages as the working classes in England. They must compete with the English workmen, and how can they without similar knowledge and advantages? I think many of you will be a little surprised when I point out how scientific industrial instruction is provided by the Imperial Parliament for the British and Irish workmen. According to the last Parliamentary returns there are in England 527 scientific schools or classes receiving aid from the Government, with 25,355 students; in Scotland, 34 schools, with 4,824 students; and in Ireland, 212 schools, with 8,397 students. All these schools, as they are called in the Parliamentary Report, are under the Department of Science and Art at South Kensington. The governing body for the time being consists of two Cabinet Ministers. The present Ministers are the Marquis of Ripon and the Home Secretary, the President and Vice-President of the Committee of the Privy Council for Education. I hold in my hand a map of Great Britain, and beg of you to look it over and see how thickly grouped the red spots are upon it, showing the localities of these schools. Look also at the map of Ireland, which is before me, with the schools similarly marked. Look now at the map of Victoria, and what a contrast. Not one such school that I know of. Well, it is the duty of the Minister of Public Instruction to fill in his map, and to give to the working classes here, at all events, the same advantages as the working classes enjoy in Great Britain and Ireland.*

But if we want to see the value of technical instruction in the broadest light, and the material or trade advantages resulting from it, let us look at Switzerland, a country without coal to any extent, without a seaboard, a country of mountains, and beset with hostile tariffs. What has she done? She rivals England in many branches of her trade. She has beaten Macclesfield and Coventry in its ribbon trade. The annual value of her ribbon trade amounts to £1,600,000; that of England to £61,000. Look at Zurich, a small canton or province in Switzerland, with a population equal to a third of that of Victoria. She has a most efficient University, with forty-two professors, where what are called the “learned professions” are taught, and most efficiently. But she has besides what I particularly direct your attention to, and what, I think, is of more importance to the bulk of the population—a Technological Institution, where the “working professions” are taught, with its 600 matriculated students. Of these, 150 are studying civil engineering and 169 mechanical engineering, and with buildings larger than Buckingham Palace. These facts are so remarkable that I had better state that I am indebted to the lectures of Professor Lyon Playfair and to Parliamentary papers for every fact and figure which I give.

The importance of the economic results arising from this system of education may be further measured by the fact that the embroidery trade alone is equal to more than £1,500,000. “Every young girl, as she tends her flock, may be seen with her needle and her tambour. Everywhere the work goes on.” Says M. Reybaud, “Let me give you a contrast. I recently saw a young girl, near Dandenong, tending her flock. Her costume may have looked picturesque, but it was rather incomplete. She sat on a fence, watching her cows, to prevent them from breaking into a cultivated paddock. She was not knitting, which was a little required, but reading a novel by Mr. Anthony Trollope.”

The British Minister in Switzerland, in accounting to the late Lord Clarendon for the wonderful state of industrial prosperity among the Swiss people, after giving full credit to industrial instruction and workmen’s organisation, says that democracy has greatly served to advance the cause of the operatives. Let us use it here for the like purpose.

I will now ask you to consider some facts in reference to France. At the period of the Paris Exhibition in 1867 the Society of Arts in London organised a band of artisans for the purpose of sending them over to Paris to report on foreign and English manufactures there exhibited, and on the means of instruction or improvement available for the foreign and English workmen. The number of workmen selected for this purpose was no less than eighty, and they represented about fifty of the mechanical and manufacturing trades of England. I hold the reports of these workmen in my hand, and never was there more complete and decisive verdict in favour of the foreigners than that which they give. The advantages of instruction available to the French and other foreign workmen appear, in their judgment, to be far in excess of what is available to the English artisans, and the result appeared throughout the different exhibits—English and foreign. Another body of artisans were sent over under the direction of a committee of noblemen and gentlemen, with a similar verdict. Now, these inquiries were carried on apparently with as much care as if they were judicial proceedings. And, as far as France is concerned, let us remember this extraordinary fact—that, after being crushed by war in such a manner as a surviving nation never was before, her wheels are as ready for your wool as ever they were, and at a greatly increased price; while her manufactured exports to America have increased in proportion as 65 to 59; exhibiting an amount of activity in her manufactures which is astonishing, considering her misfortunes.

In a young country like this it is particularly desirable that we should carefully look to the new rather than the old world; and I will now mention some facts relative to technology in America. I am indebted to an article in the *Quarterly Review* for stating that five American gentlemen have recently contributed £63,000 to the Technological Institute of Boston. We are apt to regard the Americans as a pleasure-loving, money-making people—not in this respect unlike ourselves; but recent events have proved that no place on earth affords to science and its teaching a more hospitable home than does America. Last year Professor Tyndall visited New York for the purpose of lecturing on science. His reception was enthusiastic, as if he had been a royal personage, or some celebrated warrior. The streets were so crowded with persons trying to get admission to his lectures that the traffic was interrupted. Three hundred thousand copies of his lectures have been printed. The *New York Tribune* published a three-cent edition with illustrations. The Professor delivered thirty-five lectures, and his receipts were nearly £5,000, and the surplus of such receipts, after payment of expenses, he has nobly devoted to the teaching of science in America. When shall we welcome him here? I believe in the history of young America there will be no brighter page than that which describes the reception of Professor Tyndall, nor a nobler gift recorded than that of his.†

I have now ventured to point out to you the state of science more particularly in its application to industry, and its economic results in Switzerland, and I have alluded to industrial institutions in England, in France, and in America. There are many striking proofs of the value of technical education yet to be noticed which I have not time to mention. And I have gone so far at this particular juncture, because there appears to be a feeling in some quarters—as yet but timidly expressed—that our system of public instruction will have gone far enough if it includes elementary knowledge, reading, writing, and arithmetic. If this becomes a fact, it will be a great calamity. To use the words of Professor Playfair, “It will vulgarise education, and render it comparatively useless for the purposes of the working classes.” There is no such limit in a University, where the learned professions are taught.‡ Why, then, should there be a limit where the working classes are taught? Another

* Some of the subjects taught at the Science Schools alluded to include mathematics, mechanics, mineralogy, metallurgy and mining, chemistry, geology, acoustics, zoology, botany, nautical astronomy and navigation, steam, magnetism, and electricity, &c. The examinations are chiefly conducted by officers of Royal Engineers, quartered throughout the country, and more than seventy officers acted as inspectors and examiners in 1871. Besides these Science Schools there are 465 schools, with night-classes for drawing, and 16,140 pupils, receiving aid from the Science and Art Department of the Government, in the same manner as the Science Schools, but independent of them.

† The reader can form some opinion of the value set upon museums in America from the fact that the Senate of the State of Massachusetts, on a recent occasion, made an official visit to the Cambridge Museum of Zoology, and were conducted through the museum and its class-room by Professor Agassiz.

‡ Each student in the University of Sydney costs the general revenue £78 annually. Each University student here cost the general revenue in 1871 over £70, not taking into consideration the cost of building the University.

Another distinguished man, Professor Huxley, says that confining the public system of education to reading, writing, and arithmetic, reminds one of teaching a child how to use a knife, a fork, and a spoon, without giving them the food to practise on. It may be as aptly said that it is like teaching the use of the rifle without a bullet. The "three R's" are but the tools of education, and not education either industrial or productive; and productive education should be the aim of the State, and nothing less will justify the expenditure.*

I hope the testimony of such men will have weight with the Minister, will have weight with the Boards of Advice, will have weight with you. I hope the action of such men as Sir Joseph Whitworth and Sir Josiah Mason will have weight. Sir Joseph Whitworth has given £100,000 to promote technical instruction in England. Sir Josiah Mason in his deed of gift founding a college for technical instruction, tells us an instructive story. He says that in the course of his life he has taken up several branches of the mechanical trades one after the other, and that in all he felt the great difficulty he had to contend with was the want of scientific knowledge; and that in order to remove this, he has determined to found an institution for the teaching of science in its application to industry. Mr. Young the great manufacturing chemist, has told us the same story, and can we afford to disregard such testimony? As I have told you, we have near three times the population of Zurich. We are vastly richer; let us promote industrial instruction as she has done, and youths and men will soon find their "billets."

Before I conclude, I must say that Ballarat has done its duty. You have formed your School of Design with very little assistance; it is second to none as far as I can see. Its students have won their prizes in Sydney. Although encumbered with many difficulties, you have founded your School of Mines, which has an admirable laboratory, as efficient as it can be, and remarkable to my mind, for its economy in construction, without any of those feeble attempts at ornamentation or display which constantly consume so much public money, and which in this case have been rigorously avoided.

I must now beg to thank you, and with your permission, will proceed to the distribution of the prizes, &c.

* Where instances occur of nations abounding in pauper and criminal classes being made prosperous and happy in less than a generation, through the powerful influence of education that has never been confined to a smattering of the "R's." Such an instance is Baden, which, by eight years of industrial education, lessened the number of prisoners from 1426 to 691—to such an extent, that prisons had to be closed for want of occupants.—*Professor Playfair*.

EDUCATION.

No. 1.

Mr. J. Crofton Dodwell to The Commissioners of Education.

Sirs, Fern Grove, Rydal, 16 February, 1876.
I beg respectfully to lay before you the following facts with reference to the district lying between Ben Bullen and Crown Ridge, on the Mudgee Road.

There is no school whatever in the district, and there are thirty-one children (as the accompanying list will show) ready to attend school, some of them thirteen and fourteen years of age, and as yet *totally* neglected. Besides the thirty-one mentioned above, there are fully as many more who will soon reach school age. The parents are most anxious that some measures should be taken to provide education for their children.

Hoping to hear from you at your earliest convenience,—

I have, &c.,

J. CROFTON DODWELL,
Church of England Catechist.

P.S.—Kindly excuse any error in the address of this letter.—J.C.D.

Number of children living between Ben Bullen and Crown Ridge on the Mudgee Road, ready to attend school—

Mr. Taylor	5	Mr. O'Brien	2
Mr. Kirby	2	Mr. R. Yeomans	2
Mr. Collett	2	Mr. Paddison	2
Mr. Gardner	2	Mr. O'Farrell	1
Mr. T. Larkin	3	Mr. Laufrauchais	1
Mr. J. Larkin	2	Mrs. Simpkins	1
Mr. M. Corlis	4				
Mr. Bindle	2	Total	31

N.B.—There are fully twice this number of children in the district, but these are ready for school immediately.—J.C.D.

No. 2.

The Secretary, Council of Education, to Mr. J. C. Dodwell.

Sir, Council of Education Office, Sydney, 21 February, 1876.
In acknowledging the receipt of your letter of the 16th instant, with reference to the establishment of a school at Ben Bullen, I am directed by the Council of Education to state that the Council will be glad if you will be good enough to furnish me with the name of a person resident in that locality with whom the Council could correspond in regard to the proposed school.

I have, &c.,

W. WILKINS,
Secretary.

No. 3.

Mr. J. C. Dodwell to The Secretary, Council of Education.

Sir, Fern Grove, Rydal, 22/2/76.
In reply to your letter of the 21st instant, I beg to forward you the name of George Paddison, of Crown Ridge, Mudgee Road, as one with whom you might correspond with reference to the establishment of a school in that locality.

I have, &c.,

J. CROFTON DODWELL.

No. 4.

The Secretary, Council of Education, to Mr. G. Paddison.

Sir, Council of Education Office, 2 March, 1876.
I am directed by the Council of Education to acquaint you that a communication was received at this office on the 17th ultimo from Mr. J. C. Dodwell of Rydal, representing the necessity for a school between Ben Bullen and Crown Ridge on the Mudgee Road, and stating that there are thirty-one children ready to attend such school. On the 21st ultimo, Mr. Dodwell was requested to furnish the name of a person resident in the locality, with whom the Council could correspond in regard to the proposed school, and in reply he suggested your name for the purpose specified.

2. If willing to act as correspondent on behalf of the proposed school, the Council would be glad if you would be good enough to have the accompanying form of application for aid to a Provisional School filled up, signed, and returned to this office, as early as practicable, when the Council will be in a position to take further steps in the matter. A copy of the Public Schools Act and Regulations is also transmitted herewith for your information.

I have, &c.,

W. WILKINS,
Secretary.

No. 5.

No. 5.

Application for aid to a Provisional School between Ben Bullen and Crown Ridge.

Gentlemen,

Cullen Bullen, 12 March, 1876.

I beg to request that you will grant assistance to the Provisional School established by
at between Ben Bullen and Crown Ridge, in accordance with the 13th section of the Public Schools Act.

The Council of Education, Sydney.

I have, &c.,

MICHAEL CORLIS.

Information to be supplied by Applicants.

1. Describe the position of the proposed school? Between Ben Bullen and the Crown Ridge, and about half-a-mile from the Mudgee Road.

2. What other schools, maintained or aided by the Council of Education, are within 2 miles of the site of the proposed school? None.

3. If none are within two miles, what is the distance of the nearest school? Six miles.

4. Are there any primary schools, not aided by the Council of Education, within two miles of the proposed school, if so, of what character, and how attended? None.

5. State the number of children from four to fourteen years of age, living within a radius of two miles of the site of the proposed school, *e.g.*,—

	Boys	18
	Girls	13
	Total	31
Religious Denominations:—							
	Church of England	20
	Roman Catholic	11
	Total	31

6. Describe the school buildings as regards, 1. Material; 2. Dimensions; 3. Accommodation afforded; 4. State of repair? No schoolhouse built. Will you please state whether the applicants are required to erect a building or will the Council of Education do it, or bear a share of the expense, or have we sufficient number of children for a Public School.

Annex to Application for aid to a Provisional School.

WE, the undersigned Parents (or Guardians) of children residing within the undermentioned distances from the site of the proposed Provisional School between Ben Bullen and Crown Ridge, hereby undertake that our children, whose names are inserted below, shall attend the said school.

Name of Parent or Guardian.	Distance from School.	Name of Child.	Age.	Religious Denomination.

No. 6.

The Secretary, Council of Education, to Mr. M. Corlis.

Sir, B 3. Council of Education Office, Sydney, 15 March, 1876.
I am directed by the Council of Education to acquaint you that your formal application for aid to a Provisional School between Ben Bullen and Crown Ridge is now under consideration, and that a further communication respecting it will be addressed to you as soon as the Council has arrived at a decision thereon.

I have, &c.,
W. WILKINS,
Secretary.

No. 7.

The Secretary, Council of Education, to The Inspector, Bathurst District.

Ben Bullen and Crown Ridge: Application for aid to a Provisional School between these localities.

For your inquiry and report. Be good enough to suggest a suitable name for the proposed school.

Council of Education Office, Sydney, 15th March, 1876.

W. WILKINS,
Secretary.

No. 8.

The Inspector, Bathurst District, to The Secretary, Council of Education.

Ben Bullen and Crown Ridge: Application for Provisional School between ——. Your B.C., No. 76-6,897.

I expect to have obtained full information respecting the above and to be able to furnish my report by the end of the current week.

8/5/76.

J. HUFFER,
Inspector.

No. 9.

The Inspector, Bathurst District, to The Secretary, Council of Education.

Ben Bullen and Crown Ridge: Application for the establishment of a School between.

I have visited Ben Bullen and Crown Ridge, and have obtained the information necessary to enable me to report upon the application for the establishment of a school for those localities. Additional forms, supplied by me on the day of my visit, are now being filled up by the people requiring the school; and as soon as such forms are returned to me I will complete my report and forward it to the Council's office. I expect to have the papers returned to me early in next week.

Cow Flat, 18/5/76.

J. HUFFER,
Inspector.

No. 10.

Application for the establishment of a Public School at Ben Bullen.

Post Town—Cullen Bullen.

THE undersigned, on behalf of the residents at Ben Bullen and Crown Ridge, hereby request that a Public School may be established between those places under the provisions of the Public Schools Act.

Local Committee { MICHAEL CORLIS.
GEORGE PADDISON.
JOHN LARKIN.
GEORGE KIRBY.

Information to be supplied by Applicants.

1. Describe the position of the proposed school, between Ben Bullen and the Crown Ridge? County, Roxburgh; Parish of Ben Bullen; Post Town, Cullen Bullen.
2. What other schools, maintained or aided by the State, are within 2 miles of the site of the proposed school? None.
3. If none are within 2 miles, what is the distance of the nearest school? 7 miles.
4. Are there any Primary Schools, not aided by the State, within 2 miles of the proposed school? If so, of what character, and how attended? Not any.
5. State the number of children, from four to fourteen years of age, living within a radius of 2 miles of the site of the proposed school, *e.g.*,—

Boys	24
Girls	13
Total	37

Religious Denominations:—

Church of England	23
Roman Catholic	14
Total	37

6. What land is available for a site on which to erect the necessary school buildings? Give a surveyor's description and, if possible, a plan of the ground.

No. 11.

The Inspector, Bathurst District, to The Secretary, Council of Education.

Ben Bullen: Annexed Application for the establishment of a Public School at.

THE river Turon rises in a swamp on the east side of the road leading from Wallerawang to Mudgee, and it crosses that road at Ben Bullen about 14 miles from Wallerawang. Jews' Creek is the local name for the stream in this part of its course. About $3\frac{1}{2}$ miles further from Wallerawang, on the same road, the Crown Ridge Creek (a tributary of the Turon) is crossed. On Jews' and Crown Ridge Creeks, and in the locality lying between them, there are fourteen families, having among them a school population of thirty-six children; and it is proposed to establish a Public School in a central position (between the two creeks named), about three-quarters of a mile west of the Mudgee Road. The following statement will more exactly show the position of the families for whom the school is required:—Near Jews' Creek crossing (Ben Bullen) there are about six children for school, near the Crown Ridge Creek crossing there are nine children, on Jews' Creek (about 2 miles west of Ben Bullen) there are ten children, and between Jews' Creek and Crown Ridge Creek there are eleven children.

An application for the establishment of a Provisional School was first forwarded to the Council; but when I visited the locality I found that *all* the residents desired to have a Public School established, and I therefore furnished the Committee with the necessary form of application. Such application has now been returned to me, and I append it to this report. I also append a rough plan showing the position of the site proposed for a school.

The proposed site is on a "selection" of 120 acres, for which Charles Corlis (son of Michael Corlis, one of the Committee) has very recently made application. Such "selection" has not yet been surveyed, and Mr. Corlis is quite willing that 2 acres, or 4 acres, of it (at its northern boundary, as shown in the plan) should be granted by the Government for a Public School site. A technical description of the land is given on the annexed form. I do not think that any site more suitable could be selected in the locality.

I beg to recommend that a Public School be established in accordance with the annexed application. On an accompanying form I have suggested the kind of building that I think would be cheapest and most suitable for the locality. If a Public School be erected, the local Committee will undertake to clear and fence the school-ground without aid from the Council. When applying for the school site, application for a "right of way" to it—from the Mudgee Road and from Jews' Creek (2 miles west of the Mudgee Road)—should also be made.

J. HUFFER,
Inspector.

12/6/76.

[Annex to No. 11.]

Queries to be answered by Inspectors when reporting upon applications for the establishment of Public Schools.

1. Where is the proposed school to be situated? Near Ben Bullen, on the road leading from Wallerawang to Mudgee—about 14 miles from Wallerawang.
2. What is the population of the school district? About 120.
3. Is the district likely to be permanently inhabited? Yes.
4. State any information you have obtained relative to the circumstances of the people for whose children the school is intended, especially whether they have a permanent interest in the locality? About half the children belong to freehold settlers, six are the children of "labourers" employed about the locality, and the remainder are the children of miners residing on Jew's Creek. The majority of the residents have a permanent interest in the locality.
5. What schools already exist in the neighbourhood; and at what distances from the proposed school are they situated? Do they provide sufficient accommodation for the whole number of children in the district? Cullen Bullen (H.-T.) is 6 miles from the proposed school, Round Swamp (proposed Public) is 12 miles, Dark Corner (Provisional) is about 14 miles. These schools do not provide accommodation for the children in the Ben Bullen locality.
6. State the number of pupils expected to attend this school, distinguishing males from females? Number likely to be enrolled—boys, 23; girls, 13; total, 36. Probable average attendance—boys, 16; girls, 9; total, 25.
7. Have you inspected the proposed site? What are its dimensions? Is it suitable? Yes. The local Committee wish to have 4 acres granted by the Government. No site more suitable than the one suggested can be selected in the locality.
8. Give, if possible, a technical description of the site? The proposed site is in the county of Roxburgh, and parish of Ben Bullen. It is part of a "selection" of 120 acres, for which Charles Corlis (son of Michael Corlis) has very recently made application. The following is a technical description of the 120 acres referred to:—Commencing at a point in the northern boundary of W. Bowman's 900 acres (which point is 13 chains 39 links south, and 10 chains east from the south-east corner of Michael Corlis's 31 acres 1 rood, 0-vr), then east along W. Bowman's northern boundary 40 chains, and then south 30 chains to the point of commencement.
9. If this be a case in which you recommend the Council to erect schoolrooms, &c., you will state that fact, and furnish the required information on the proper form, as to the size and material of the necessary buildings? The required information is furnished on the proper form.
12. Who are the local Committee? State their professions or occupations, and religious denominations? Michael Corlis, farmer and grazier, R.C.; *George Paddison, hotel-keeper, C.E.; John Larkin, farmer, C.E.; George Kirby, miner, C.E.
13. In addition to the foregoing matters, state any other circumstances which you may consider material for the Council's information in deciding upon the application? On the Jews' and Crown Ridge Creeks, and in the locality between them, there is a scattered population consisting of fourteen families. These families have among them thirty-six children of an age to attend school. The position of the site proposed for the school is shown on the annexed rough map of the locality. Each family resides about 2 miles from the proposed site, and therefore all the children would have to walk that distance to attend school. The population of the whole locality is sufficient to warrant the establishment of a Public School. It would not be practicable to establish H.-T. schools in the locality.

J. HUFFER,

Inspector of Bathurst District.

Bathurst, 12 June, 1876.

* Mr. Paddison's wife and children are Roman Catholics.

No. 12.

The Inspector, Bathurst District, to The Secretary, Council of Education.

Public School at Ben Bullen.

I advise that schoolroom accommodation should be provided for 36 pupils, in one department.

A teacher's residence, consisting of three rooms, including kitchen, is required.

No. of pupils expected to attend:—23 boys, 13 girls; 36, total.

The buildings should be constructed of split slabs, roof shingled, and the walls should have battens on outside, and lathing and plastering inside.

I estimate the cost, including out-offices, weather-shed, water-supply, fencing, and furniture, at £150.

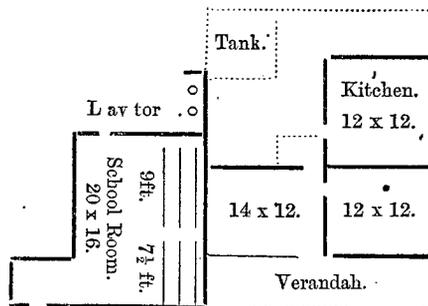

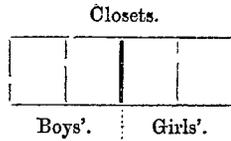

On the back of this memorandum I have given a rough plan of the school site, showing the best position for the school buildings, closets, and tank and teacher's residence.

J. HUFFER,

Inspector of Bathurst District.

Inspector's Office, Bathurst, 12 June, 1876.

NOTE.—The Local Committee will undertake to have the school site cleared and fenced with a 3-railed fence.

No. 13.

Notification in Government Gazette.

B4. Council of Education Office, Sydney, 20 June, 1876.
New Public Schools.

It is hereby notified for general information, in accordance with the provisions of the 24th section of the Public Schools Act of 1866, that applications have been received at this office for the establishment of Public Schools at Ben Bullen and Marangulla.

By order of the Council of Education,

W. WILKINS,
Secretary.

No. 14.

The Secretary, Council of Education, to Mr. M. Corlis.

Sir,

B5. Council of Education Office, Sydney, 21 June, 1876.

Referring to the formal application, undated, for the establishment of a Public School at Ben Bullen, I am directed by the Council of Education to state that the Council sees no objection to the proposal. Notice of the application has therefore been sent for publication in the Government Gazette, in accordance with the requirements of the 24th section of the Public Schools Act of 1866.

2. A further communication will be made to you when the necessary notice has been published.

I have, &c.,

W. WILKINS,
Secretary.

No. 15.

The Secretary, Council of Education, to The Inspector, Bathurst District.

Ben Bullen: Application for a Public School.

B6. Council of Education Office, Sydney, 21 June, 1876.

NOTICE of the application for the establishment of a Public School at the above place has now been sent for publication in the Government Gazette, in accordance with the provisions of the 24th section of the Public Schools Act.

W. WILKINS,
Secretary.

No. 16.

No. 16.

The Secretary, Council of Education, to Mr. M. Corlis.

Sir, Council of Education Office, Sydney, 17 July, 1876.

With reference to a letter from this office, dated 21st ultimo, in which you were informed that notice of the application for the establishment of a Public School at Ben Bullen had been sent for publication in the Government Gazette, I am now directed by the Council of Education to acquaint you that notice of the proposal having been duly inserted in that publication, and no objection thereto having been notified to the Council, the Council has finally resolved to establish the school as a Public School, and to recognize the gentlemen signing the application as the Local Committee.

2. The Council has further agreed to accept the land offered by Mr. Charles Corlis for a school site. Will you be good enough, therefore, to forward to this office his written consent to the appropriation of 2 acres, in order that application may be made to the Government for a grant of them.

3. Plans and specifications of the proposed school buildings will be prepared, and tenders for the works invited, in due course.

I have, &c.,

W. WILKINS,
Secretary.

No. 17.

Mr. M. Corlis to The Secretary, Council of Education.

Sir,

Ben Bullen, 22 July, 1876.

In answer to your letter, No. 76-11,043, dated 17th instant, I herewith forward, as required, my son's written consent to the appropriation of two acres of land for a school site at Ben Bullen.

I have, &c.,

MICHAEL CORLIS.

[Enclosure to No. 17.]

I, the undersigned, do hereby consent and authorize the Council of Education to appropriate the land marked on the plans forwarded to Inspector Huffer as a school site, situate at Ben Bullen, and to hold the same for all time to come.

CHARLES CORLIS,
Ben Bullen, 22 July, 1876.

No. 18.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 17 August, 1876.

I am directed by the Council of Education to state that the Council would be glad if the Honorable the Minister of Justice and Public Instruction will be so good as to cause an application to be made to the Government for a grant, for Public School purposes, of the undermentioned land at Ben Bullen, viz.,—4 acres at Ben Bullen, county of Roxburgh, with a frontage of 5 chains to the northern boundary of a selection of 120 acres, for which Charles Corlis has recently made application, and which is described on the back of the enclosed rough plan of the locality.*

2. The Council also desires that rights of way from the Mudgee Road and from Jews' Creek to the required land (which can be pointed out to the surveyor by Mr. M. Corlis, a local resident) may be granted.

I have, &c.,

W. WILKINS,
Secretary.

[Description on back of plan.]

BEN BULLEN.

Description of a selection of 120 acres, for which Charles Corlis has recently made application—July, 1876:—

“Commencing at a point in the northern boundary of W. Bowman's 900 acres (which point is 13 chains 39 links south and 10 chains east from the south-east corner of Michael Corlis's 31 acres 1 rood, 0-vi); then east along W. Bowman's northern boundary 40 chains; then north 30 chains; then west 40 chains; and then south 30 chains, to the point of commencement.”

[Enclosure to No. 18.]

I, the undersigned, do hereby consent and authorize the Council of Education to appropriate the land marked on the plans forwarded to Inspector Huffer as a school site, situate at Ben Bullen, and to hold the same for all time to come.

CHARLES CORLIS,
Ben Bullen, 22 July, 1876.

No. 19.

The Secretary, Council of Education, to Mr. M. Corlis.

Sir,

Council of Education Office, 17 August, 1876.

With reference to your letter, dated 22nd ultimo, I am directed by the Council of Education to acquaint you that application has now been made to the Government for a grant, for Public School purposes, of 4 acres of land at Ben Bullen, having a frontage of 5 chains to the northern boundary of a selection of 120 acres, for which Charles Corlis has recently made application, and also for rights of way from the Mudgee Road and from Jew's Creek to the land in question.

I have, &c.,

W. WILKINS,
Secretary.

No. 20.

No. 20.

The Secretary, Council of Education, to The Inspector, Bathurst District.

BEN BULLEN : Your report of 12th June last, on application for the establishment of a Public School.

Council of Education Office, Sydney, 17 August, 1876.

Application has now been made to the Government for a grant of four acres at the above place, fronting the northern boundary of a selection of 120 acres, for which Charles Corlis has recently applied, and also for rights-of-way from the Mudgee Road and from Jew's Creek to the land desired.

W. WILKINS,
Secretary.

No. 21.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir, Department of Justice and Public Instruction, Sydney, 23 August, 1876.

In transmitting to you the accompanying copy of a letter from the Secretary to the Council of Education, I am directed to state, for the information of the Secretary for Lands, that the Minister of Justice and Public Instruction approves of the application therein made for four acres of land for Public School purposes at Ben Bullen; also the rights-of-way from the Mudgee Road and from Jew's Creek to the required land. Rough plan forwarded herewith.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 22.

The Under Secretary of Justice and Public Instruction to The Secretary, Council of Education.

Sir, Department of Justice and Public Instruction, Sydney, 23 August, 1876.

I am directed by the Minister of Justice and Public Instruction to acknowledge the receipt of your letter of 17th instant, applying for four acres at Ben Bullen, also the rights-of-way from the Mudgee Road and from Jew's Creek to the locality; and to inform you that the same has been approved and for warded to the Department of Lands, and to state, upon intimation being given to this department that the Secretary for Lands sees no objection to the appropriation of the land applied for, a further communication will be addressed to you upon the subject.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 23.

The Under Secretary for Lands to The Under Secretary of Justice and Public Instruction.

Sir, Department of Lands, Sydney, 13 October, 1876.

In reply to your letter of the 23rd August last, approving of the application of the Council of Education for four acres of land for Public School purposes at Ben Bullen, and also the rights-of-way from the Mudgee Road and from Jew's Creek to the land applied for, I am directed to inform you that as two acres only is the area usually granted for Public School sites, the Council of Education should be invited to state their reason for applying for four acres in the present instance.

I have, &c.,

W. W. STEPHEN.

No. 24.

The Under Secretary of Justice and Public Instruction to The Secretary, Council of Education.

Sir, Department of Justice and Public Instruction, Sydney, 20 October, 1876.

Referring to your letter of 17th August last, No. 76/13,266 respecting grant of four acres of land at Ben Bullen, for Public School purposes, I am directed by the Minister of Justice and Public Instruction to inform you that a communication has been received from the Department of Lands, intimating that as two acres only is the area usually granted for Public School sites, to invite the Council of Education to state their reason for applying for four acres in the present instance.

I have, &c.,

W. E. PLUNKETT,
Under Secretary.

No. 25.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir, Council of Education Office, 4 November, 1876.

I am directed by the Council of Education to acknowledge the receipt of your letter dated 20th October ultimo, inquiring the Council's reasons for applying for a grant of so large an area as 4 acres of land at Ben Bullen, for Public School purposes.

2. In reply, I am to state, for the information of the Honorable the Minister of Justice and Public Instruction, that, as the extra land is required for the purpose of a paddock for the use of the teacher and pupils, the Council trusts that no objection will interfere with a favourable consideration of the application.

I have, &c.,
W. WILKINS,
Secretary.

No. 26.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir,

Department of Justice and Public Instruction,
Sydney, 10 November, 1876.

Referring to your letter of 13th October last, inquiring for what reason the Council of Education have made application for 4 acres of land at Ben Bullen, for Public School purposes, I am directed by the Minister of Justice and Public Instruction to inform you that a further communication has been received from the Council of Education on the subject, stating, that as the extra land is required for the purpose of a paddock for the use of the teacher and pupils, the Council trusts that no objection will interfere with the favourable consideration of the application.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 27.

Mr. M. Corlis to The Secretary, Council of Education.

Sir,

Crown Creek, 2 December, 1876.

You said in your last that application had been made to the Government for a grant of 4 acres of land for a Public School at Ben Bullen. Please let me know if the Council of Education has taken any further steps in the matter.

I have, &c.,
MICHAEL CORLIS.

No. 28.

The Secretary, Council of Education, to Mr. M. Corlis.

Sir,

Council of Education Office, 13 December, 1876.

With reference to your letter of the 2nd instant, respecting a grant of certain land for Public School purposes at Ben Bullen, I am directed by the Council of Education to acquaint you that the decision of the Government has not yet been notified to this office. Correspondence has taken place between the Government and the Council relative to the matter, and now a communication has been sent from this office requesting an early settlement of the case.

I have, &c.,
W. WILKINS,
Secretary.

No. 29.

The Secretary, Council of Education, to The Under Secretary of Justice and Public Instruction.

Sir,

Council of Education Office, Sydney, 13 December, 1876.

In inviting your attention to my letter of the 4th ultimo, No. 76-17,544, and to previous correspondence respecting certain land at Ben Bullen, required for Public School purposes, I am directed by the Council of Education to request that you will be good enough to have the matter again brought under the notice of the Honorable the Minister of Justice and Public Instruction, with a view to such steps being taken as will lead to an early decision in the matter.

I have, &c.,
W. WILKINS,
Secretary.

No. 30.

The Under Secretary of Justice and Public Instruction to The Under Secretary for Lands.

Sir,

Department of Justice and Public Instruction, Sydney, 20 December, 1876.

Referring to my letter of the 10th November, and previous correspondence, respecting the application of the Council of Education for a grant of land at Ben Bullen, for Public School purposes, I am directed by the Minister of Justice and Public Instruction to request that you will bring the matter under the notice of the Secretary for Lands, with a view to his having the goodness to cause the necessary steps to be taken, so that an early decision may be arrived at therein and communicated to me for the information of the Council.

I have, &c.,
W. E. PLUNKETT,
Under Secretary.

No. 31.

No. 31.

Mr. M. Corlis to The Council of Education.

REFERRING to your letter, No. 19,580, of the 13th December, 1876, in which you state "that the decision of the Government has not yet been notified" as to the erection of a school at Ben Bullen,—it is, indeed, now, however, rather better than two months since the date of your last communication to me; and I may add, a much longer period since the site for erection of the school at this place received the sanction of Mr. Huffer, the School Inspector of the district. I am indeed really at a loss to know how it is that ere this you have received no intimation from the Government as to the future course of action to be pursued by the Government as to the establishment of a school at this place. The locality selected by myself and others interested, and approved by Mr. Huffer, is conveniently and centrally situated. The site for the erection of the school at this place is approved of by nearly all the residents of the district. I believe there are one or two families in the vicinity of the Crown Ridge who, I am given to understand, are resolved not to send their children to the Ben Bullen School. The number of children at the Crown Ridge is only six (6). I have been told by parties worthy of credence that one of the residents at the Crown Ridge lately took advantage of the visit of a Mr. O'Byrne, a School Inspector of the Mudgee District, and who, as I am told, visited the locality approved by Mr. Huffer, and disapproves of it, on no other grounds than that it would be rather too far to send the children of the Crown Ridge the winter season. In conclusion, I shall observe that at the Crown Ridge there is a public-house, and in case of a school being established at this place, none of the parents in the vicinity would send their children, and also because it would be inconvenient, and, moreover, because the *water is exceedingly bad*.

Trusting you will take immediate action in the establishment of a school at Ben Bullen,—

I am, &c.,

M. CORLIS.

B.C. Inspector of Bathurst District. For your report. Application has been made to the Government for a grant of 4 acres of Charles Corlis' 120-acre selection. Is not this site suitable? It is understood that the residents of Crown Ridge and Jew's Creek intend to make application for Half-Time Schools at those places. Will such schools affect the proposed Public School at Ben Bullen?—W.W., 7/3/77.

I believe Crown Ridge and Jew's Creek are in the Mudgee District. If so, perhaps Mr. O'Byrne can give the proper information respecting the probable effects of a school at Ben Bullen on the proposed Half-time Schools at Crown Ridge and Jew's Creek.—J.W.A., 12/3/77.

No. 32.

The Secretary, Council of Education, to Mr. M. Corlis.

Sir,

Council of Education Office, 7 March, 1877.

With reference to your letter, undated, urging the speedy establishment of the proposed Public School at Ben Bullen, I am directed by the Council of Education to acquaint you that the Government has not yet authorized the appropriation by the Council of the site intended for the school, which, as you are aware, was applied for in August last.

2. The Council cannot therefore proceed with the erection of the proposed school buildings at present, being precluded by section 23 of the Public Schools Act from expending the public funds on premises the site of which is not vested.

I have, &c.,

W. WILKINS,

Secretary.

No. 33.

The Under Secretary for Lands to The Under Secretary of Justice and Public Instruction.

Sir,

Department of Lands, Sydney, 9 May, 1877.

In reference to your letter of the 20th December last, inviting attention to the application of the Council of Education for a grant of 4 acres at Ben Bullen, county of Roxburgh, for Public School purposes, I am directed to inform you that the reason given by the Council of Education for asking for a grant of the additional area, namely 2 acres, can hardly be considered in the light of a special one, and that in consequence thereof the Minister for Lands has approved of 2 acres being granted as the site for a Public School and the reservation of 2 acres for school paddock.

I have, &c.,

W. W. STEPHEN.

No. 34.

The Under Secretary of Justice and Public Instruction to The Secretary, Council of Education.

Sir,

Department of Justice and Public Instruction, Sydney, 29 May, 1877.

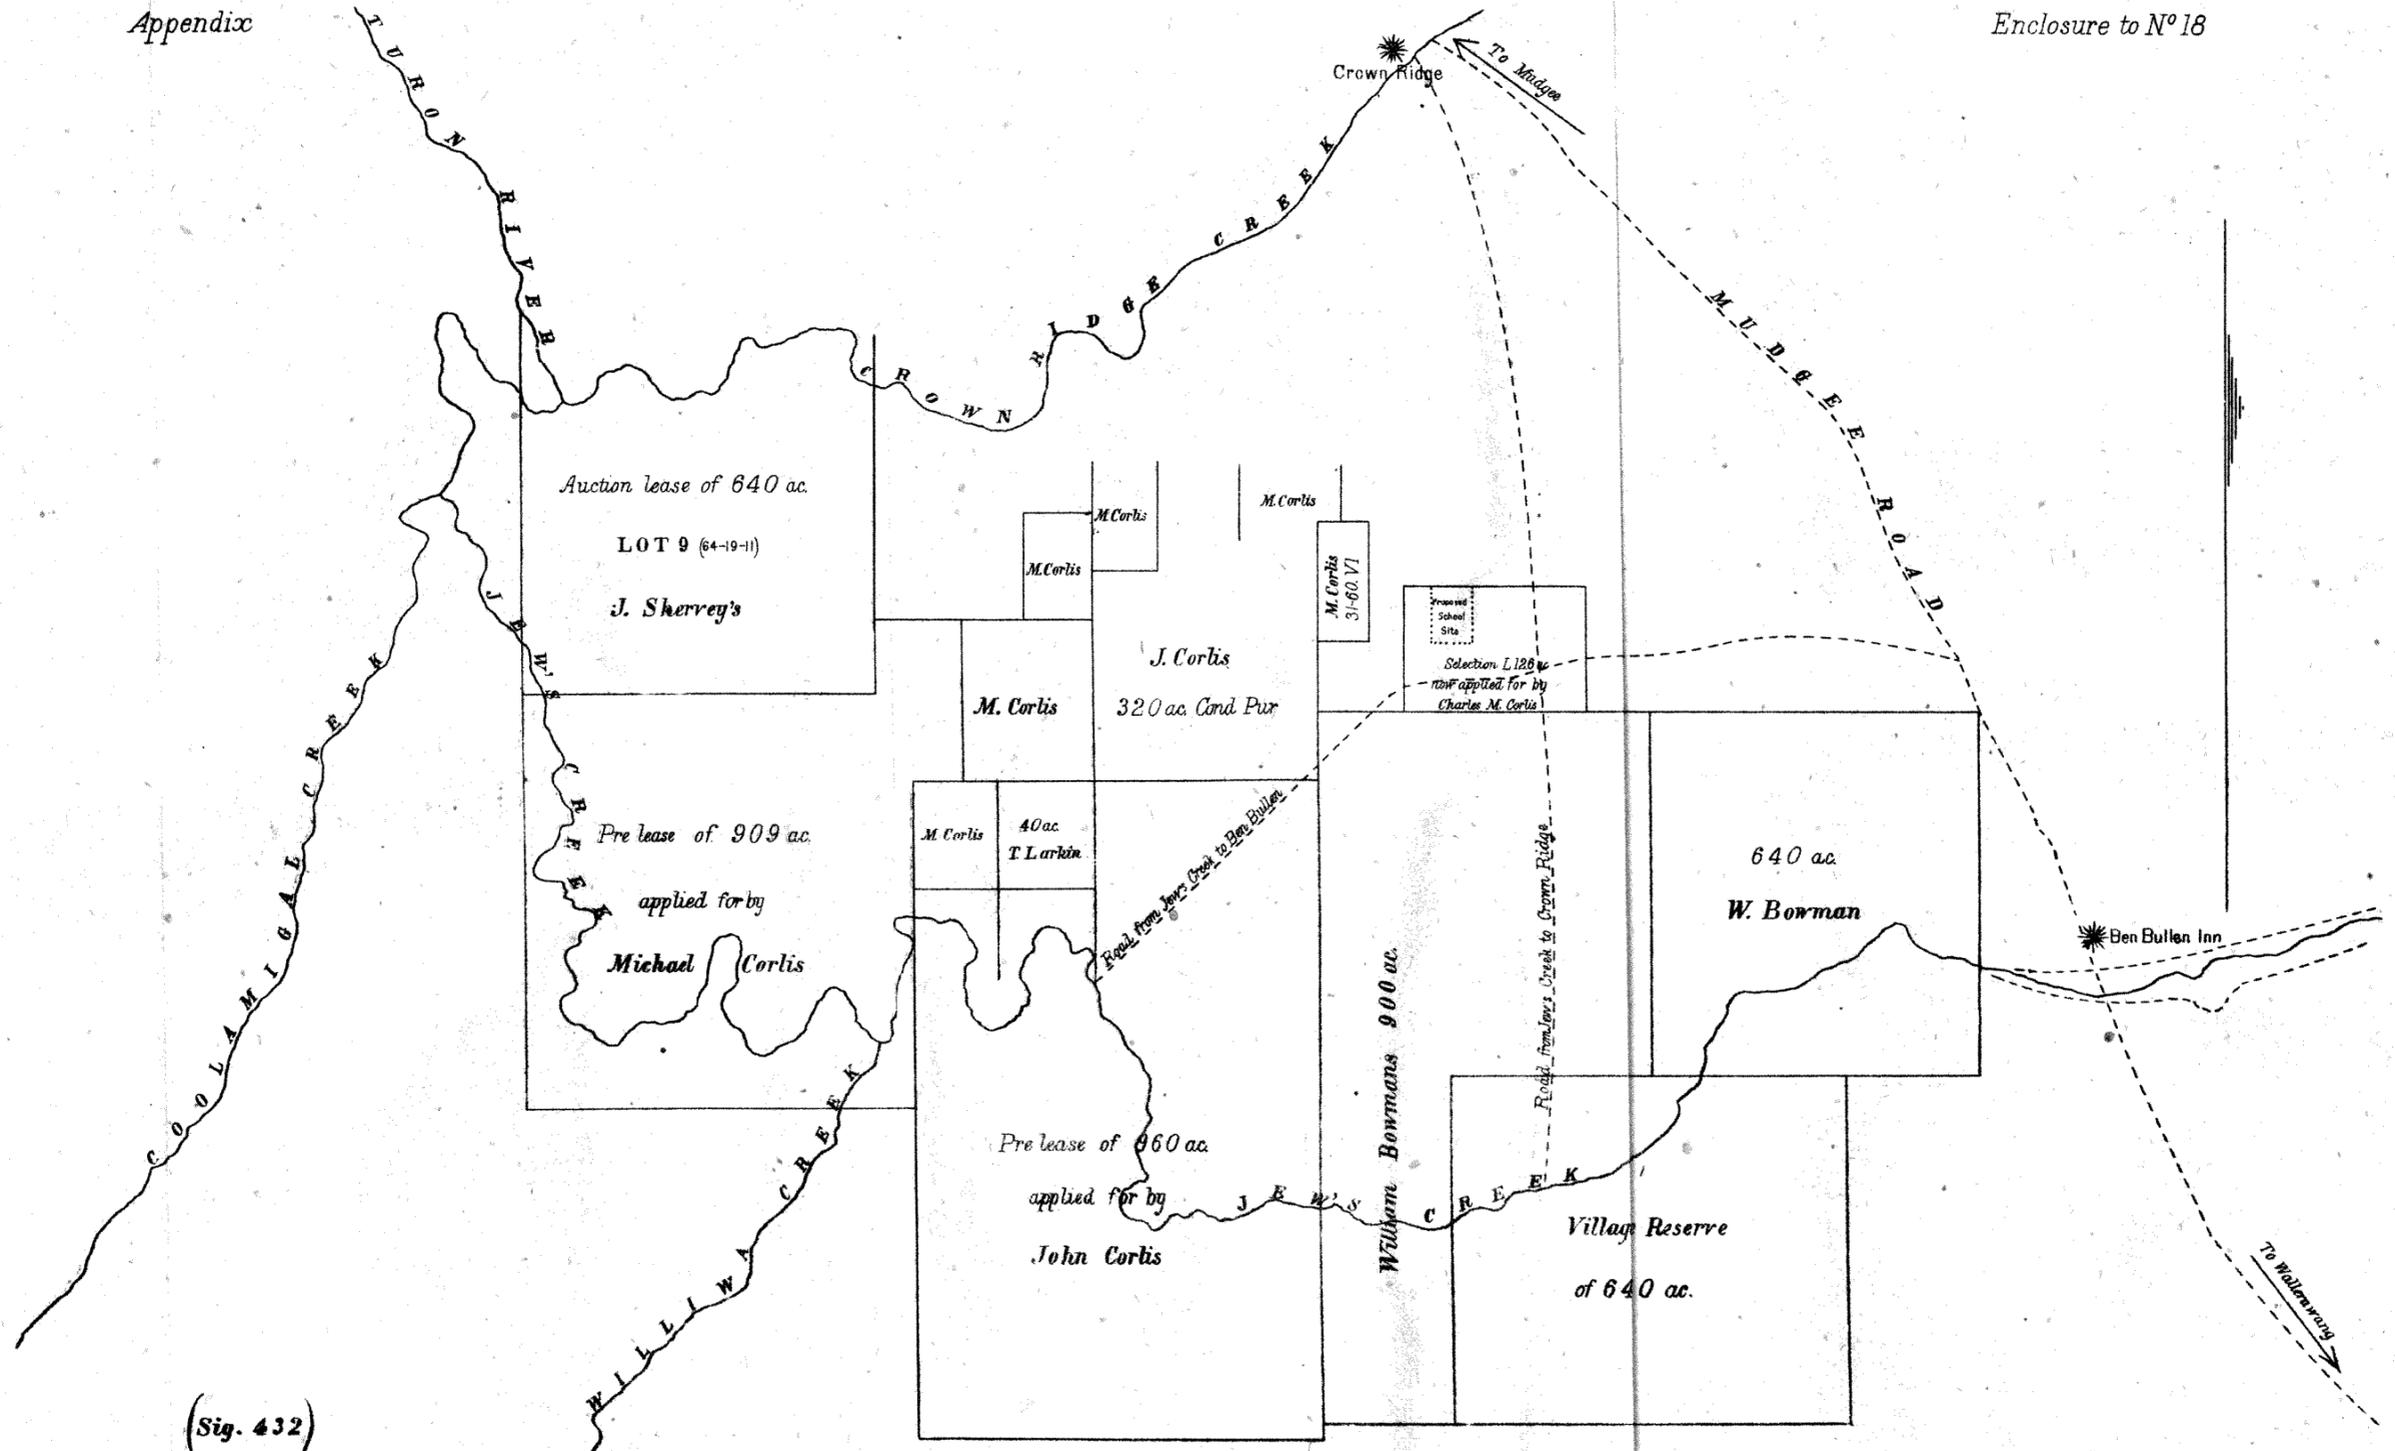

Referring to your letter of 13th December last, and previous correspondence respecting Public School site at Ben Bullen, I am directed by the Minister of Justice and Public Instruction to inform you, that under a communication which has been received from the Lands Department, the reason given by the Council of Education for asking for the grant of the additional area, viz., 2 acres, can hardly be considered in the light of a special one, and that in consequence thereof the Minister for Lands has approved of 2 acres being granted as the site for a Public School, and the reservation of 2 acres for a school paddock.

I have, &c.,

W. E. PLUNKETT,

Under Secretary.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DRAINAGE OF LANDS, MACLEAY RIVER.

(PETITION OF INHABITANTS OF MACLEAY RIVER.)

Ordered by the Legislative Assembly to be printed, 22 February, 1877.

To the Honorable the Legislative Assembly, in Parliament assembled.

The humble Petition of the Inhabitants of the Macleay River District,—

SHOWETH unto your Honorable House :—

That upwards of one hundred thousand pounds worth of property has been destroyed by floods in the Macleay River within the last seven years.

That it is the universal opinion in the district that two cuttings through opposing sandbanks, one into Korogoro Creek and another into Kellick Creek, would liberate the water in times of flood, and cause it to flow directly into the sea, so as to prevent most of the injury to property.

That since the year 1869 several public meetings have been held on the subject, several petitions have been presented, and several interviews have been had with the Minister for Works for the time-being, with the object of having these cuttings effected, but without success.

Your Petitioners therefore humbly pray that your Honorable House will take such measures as will secure to them the relief the circumstances of the case demand.

And your Petitioners will ever pray.

[*Here follow 70 signatures.*]

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DRAINAGE OF LANDS, LOWER MACLEAY RIVER.

(PETITION OF INHABITANTS OF SUMMER ISLAND, MACLEAY RIVER.)

Ordered by the Legislative Assembly to be printed, 22 February, 1877.

To the Honorable the Legislative Assembly, in Parliament assembled,—

SHOWETH:—

We, the undersigned inhabitants of the Macleay River District, beg leave to represent to your Honorable House that the district is subject to periodical floods, which are dangerous to human life and destructive to property.

That within the last seven years property to the amount of £100,000 has been destroyed, causing great suffering and embarrassment to the inhabitants of the district.

That the evil is remediable by causing two cuttings, one into Korogora Creek and another into Kellick's Creek, through sandbanks which prevent the flood waters from getting away to the sea, and causing the above-named destruction of property by floods.

That several petitions and applications have been from time to time forwarded to the Minister for Works for the time being, on the subject of these cuttings, but without any satisfactory result.

That your Petitioners now respectfully pray your Honorable House to take their case into consideration, and adopt such measures as will secure to them the necessary relief in the premises as to your Honorable House may seem meet.

And your Petitioners will ever pray.

Summer Island, Macleay River,
5 February, 1877.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

DUTY ON TOBACCO.

(PETITION OF OLIVER MAXWELL.)

Ordered by the Legislative Assembly to be printed, 31 January, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Oliver Maxwell, of number nine, Market-street, in the City of Sydney, in the Colony of New South Wales, tobacco manufacturer,—

HUMBLY SHOWETH :—

That about the year one thousand eight hundred and sixty-nine your Petitioner commenced the business of a tobacco manufacturer in Market-street, in the City of Sydney.

That your Petitioner still carries on the same business, and has, at an expense of about two hundred pounds, procured improved machinery to enable him to carry on the same business.

That from the twenty-third day of February, one thousand eight hundred and seventy-six, to the fifth day of December, in the same year, your Petitioner has paid to the Government duty on leaf tobacco amounting to three hundred and seventy-six pounds eight shillings sterling.

That if the alteration proposed in the tariff on manufacturing of tobacco in bond be passed and allowed by your Honorable House, and all manufacturers be thereby compelled to work in bond, such alteration will be a great and irremediable hardship on your Petitioner, on whom it will entail a greatly increased expense in carrying on his business beyond his power to bear, and will therefore cause the complete ruin of the business of your Petitioner, and the absolute loss of his trade, and the machinery used by him therein.

Your Petitioner therefore prays that the proposed alteration in the tariff on manufacturing tobacco now before your Honorable House, may not be passed.

And your Petitioner, as in duty bound, will ever pray.

Dated this thirtieth day of January, in the year of our Lord, one thousand eight hundred and seventy-seven.

OLIVER MAXWELL.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

EMPLOYMENT OF FEMALES BILL.

(PETITION OF MEMBERS OF EARLY CLOSING ASSOCIATION OF NEWCASTLE, IN FAVOUR OF.)

Ordered by the Legislative Assembly to be printed, 6 February, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Members of the Early Closing Association of Newcastle, and other Employés and Inhabitants thereof,—

HUMBLY SHOWETH:—

That your Petitioners, regarding with especial favour the Bill introduced to your Honorable House by the Hon. Member for West Sydney (Mr. Cameron), and having for its object the shortening and defining of the hours of labour of female employées, hail the same as a measure calculated to confer inestimable benefits on that portion of our female population at present engaged in various factories and work-rooms in the Colony of New South Wales.

Believing, as your Petitioners verily do, that the prolonged hours of labour pursued under so many disadvantages has a pernicious effect upon both the moral and physical stamina of those so engaged, cannot conclude otherwise than that serious and material deterioration must follow as a consequence.

Your Petitioners considering moreover that those young females, thus subject to so unnatural a strain on their constitution at so critical a period of their lives, are destined to become wives and mothers, have just cause to apprehend that they may through an enfeeblement of system transmit to their posterity those constitutional infirmities so contracted, even to their third and fourth generation.

Your Petitioners being therefore deeply impressed with the beneficence of this measure, would humbly beseech your Honorable House to extend its provisions so as to embrace the protection of females—especially those of tender years—from excessive hours of labour, whether employed in factories, work-shops, or retail establishments throughout the Colony.

Your Petitioners, for these and many other reasons, therefore pray that your Honorable House will in its wisdom so deal with this measure on its merits that it may become law.

And your Petitioners will, as in duty bound, ever pray, &c.

[Here follow 350 signatures.]

1876-7.

EMPLOYMENT OF CHILDREN.

REPORT.

THE SELECT COMMITTEE of the Legislative Assembly, appointed on the 19th December, 1876,—“with power to send for persons and papers, and to make visits of inspection, to inquire into and report upon the employment of young persons in trades, professions, and callings unsuited to their years, and calculated to be injurious to their physical and moral development,”—have agreed to the following Report:—

1. Your Committee have extracted the following information from the evidence contained in the Progress Report of the Select Committee of last Session, which was referred to them by your Honorable House:—

BRICKYARDS.

- (1.) In the Metropolitan District, embracing the neighbourhoods of Marrickville, Waterloo, Petersham, and Ashfield, a number of boys of tender years are employed in the making of bricks. Appendix C.
Q. 8, 16.
- (2.) They are at work during the whole of the year, and the daily hours of labour extend from 6 o'clock a.m. till 6 o'clock p.m., one hour intermission being allowed for each meal (breakfast and dinner). Q. 15.
Q. 14, 113.
Q. 173, 216.
- (3.) The majority of these boys are under the age of fourteen years. They are technically known as “puggers-up,” and are required to perform labour of a very arduous character, viz., that of carrying in their arms masses of wet clay from out of a pit to the table of the maker. The average load is 50lbs., and the quantity thus daily carried by each boy amounts in the aggregate to some 6 or 7 tons, and is moved a distance of from 10 to 14 yards. Q. 8, 16, 108, 182.
Q. 24.
Q. 56.
Q. 23.
Q. 19, 22, 23.
- (4.) Little opportunity is allowed these boys to receive any education. The long hours of labour, and the exhausting character of the work, preclude them from taking advantage of the educational establishments existing in the neighbourhood. Q. 25.
Q. 119, 163.
Q. 126, 131.
Q. 78, 80.
- (5.) “Puggers-up” earn wages varying from 10s. to 20s. per week. They are hired by the brickmakers from their parents, who receive their wages. Q. 40.
Q. 223, 224, 225.
- (6.) The severe character of this kind of work is detrimental to the health of those engaged in it. Q. 55, 56.
Q. 1048, 1049.
- (7.) Two females are known to be employed in the same way. Q. 153.

TOBACCO FACTORIES.

- (8.) Young persons of both sexes are employed in this branch of manufacture, which is extensively carried on in the City of Sydney. Q. 232, 233, 297.
Q. 231, 294.
- (9.) The management of one large factory does not employ girls, deeming that to do so would, under the conditions by which this business is necessarily carried on, be conducive to immorality. Q. 329.
Q. 344, 345.

(10.)

Q. 235, 301.
Q. 234.
Q. 1062.
Q. 1069.
Q. 1070 & 71
1072.

Q. 358, 526, 557.
P. 13, O'Keefe
P. 14, A. Flynn.

P. 13, Blessington, Tunston, Willis, Gibson, Lee, O'Keefe.
Q. 237, 8, 303.

Q. 527 to 531.

- (10.) The hours of labour are ten daily, and the character of the work is not physically severe, but where many are massed together in ill-ventilated rooms the evidence points to the fact that unhealthy results must inevitably follow, and immorality may be a consequence if persons of both sexes be employed together in the same manufactory.
- (11.) The wages earned vary from 8s. to 20s. per week, and are paid to the lads and girls, who are supposed to hand their earnings to their parents.
- (12.) The educational proficiency of those employed in these factories is of a low standard. No encouragement is used by the employers to induce them to improve their condition in this respect.
- (13.) The parents also seem to be careless of their duties in the same direction.

LEATHER AND WOOLLEN FACTORIES.

Q. 369, 594, p. p. 19, 20, and 27—visits of inspection.

Q. 714, 717, 602.

Page 28.

- (14.) The manufacture of leathern and woollen articles is carried on to a considerable extent in the Colony, and many young persons of both sexes are engaged therein. The hours of labour are generally ten, and the wages earned vary from 4s. to 15s. per week, and are supposed to be paid over to the parents.
- (15.) In these branches of industry the manual labour is light, but the workers are required to stand, no relaxation, except during the meal hours, being allowed.
- (16.) The inspection showed that in two of the leather factories the process of tanning was carried on in close proximity to the buildings in which large numbers of persons were employed. The stench arising from this branch of the business was intolerable, and in certain states of the weather must be injurious to health.
- (17.) The woollen factory examined was found to be very close, hot, and badly ventilated.
- (18.) The educational condition of the young employés was not satisfactory. So long as the children perform the day's work, and hand the result of the day's labour to the parents, parental duty seems to be satisfied.

COLLIERIES.

Q. 879.
Q. 900.

Q. 894, 895, 903,
904, 906, and 907.

Appendix, Tabulated Statement.
R. N. Moody.
Q. 986 and 987.

Q. 880 and 881.
Q. 893 and 878.

- (19.) It appears that many lads between 13 and 15 years of age are employed here. The wages earned vary from 2s. to 3s. per day, and are paid sometimes to the parents, and sometimes to the workers.
- (20.) The educational state is of a very primary character, and no effort is made to add to or keep up the amount of instruction acquired. The nature of the employment and the social surroundings militate against any voluntary effort in an improving direction, by the youthful employés in the mines.
- (21.) The work is not very laborious, and legislation has secured that the conditions under which these persons labour shall be as healthy as the case permits of.

2. After carefully considering the subject and the evidence thereon referred to them by your Honorable House, your Committee have been led to the following conclusions, viz. :—

- (1.) That the time has arrived when it is desirable to legislate in order to regulate the employment of children.
- (2.) That the age at which children may be employed, and their hours of labour, ought to be fixed.
- (3.) That it is necessary that children should not, by the nature of the employment, be debarred from all possibility of mental improvement.

(4.)

- (4.) That in order to obtain the desirable result of securing mental instruction to those whom necessity compels to labour at an early age, legislation should take such a direction as either to compel a certain proficiency in learning to be attained before engagement be sanctioned, or a certain amount of instruction to be imparted during the term of employment.
- (5.) That the buildings and places in which children are employed should be under Governmental inspection, in order that undue crowding, and any other conditions injurious to health or morality, may be prevented.

W. H. SUTTOR, JUN.,
Chairman.

*No. 3 Committee Room,
Sydney, 25th January, 1877.*

PROCEEDINGS OF THE COMMITTEE.

THURSDAY, 21 DECEMBER, 1876.

MEMBERS PRESENT :—

Mr. W. H. Suttor, | Mr. Farnell.

In the absence of a Quorum, the meeting called for this day lapsed.

THURSDAY, 11 JANUARY, 1877.

MEMBERS PRESENT :—

Mr. W. H. Suttor, | Mr. Jacob,
Mr. Farnell, | Mr. Fitzpatrick.

Mr. W. H. Suttor called to the Chair.

Entry from Votes and Proceedings, appointing the Committee, and referring Paper thereto, *read* by the Clerk.

Printed copies of the Paper *referred*, before the Committee.

Committee deliberated.

Re-assembling of the Committee to be arranged by the Chairman.

[Adjourned.]

THURSDAY, 25 JANUARY, 1877.

MEMBERS PRESENT :—

Mr. W. H. Suttor in the Chair.

Mr. Fitzpatrick, | Mr. Farnell,
Mr. Jacob, | Mr. H. C. Dangar,

Mr. F. B. Suttor.

Chairman submitted Draft Report which was read 1^o as follows :—

“(1.) Your Committee have extracted the following information from the evidence contained in the Progress Report of the Select Committee of last Session, which was referred to them by your Honorable House :—

Brickyards.

- (1.) In the Metropolitan District, embracing the neighbourhoods of Marrickville, Waterloo, Petersham, and Ashfield, a number of boys of tender years are employed in the making of bricks.
- (2.) They are at work during the whole of the year, and the daily hours of labour extend from 6 o'clock a.m. till 6 o'clock p.m., one hour intermission being allowed for each meal (breakfast and dinner).
- (3.) The majority of these boys are under the age of fourteen years. They are technically known as “puggers-up,” and are required to perform labour of a very arduous character, viz., that of carrying in their arms masses of wet clay from out of a pit to the table of the maker. The average load is 50 lbs., and the quantity thus daily carried by each boy amounts in the aggregate to some 6 or 7 tons, and is moved a distance of from 10 to 14 yards.
- (4.) Little opportunity is allowed these boys to receive any education. The long hours of labour, and the exhausting character of the work, preclude them from taking advantage of the educational establishments existing in the neighbourhood.
- (5.) “Puggers-up” earn wages varying from 10s. to 20s. per week. They are hired by the brickmakers from their parents, who receive their wages.
- (6.) The severe character of this kind of work is detrimental to the health of those engaged in it.
- (7.) Two females are known to be employed in the same way.

Tobacco

Q. 223, 224, 225.

Q. 55, 56.
Q. 1048, 1049.

Q. 153,

Tobacco Factories.

- (8.) Young persons of both sexes are employed in this branch of manufacture, which is extensively carried on in the City of Sydney. Q. 232, 233, 237, Q. 231, 204.
- (9.) The management of one large factory does not employ girls, deeming that to do so would, under the conditions by which this business is necessarily carried on, be conducive to immorality. Q. 329, Q. 344 & 345.
- (10.) The hours of labour are ten daily, and the character of the work is not physically severe, but where many are massed together in ill-ventilated rooms the evidence points to the fact that unhealthy results must inevitably follow, and immorality may be a consequence if persons of both sexes be employed together in the same manufactory. Q. 235, 304, Q. 234, Q. 1062, Q. 1069, Q. 1070 & 1071, 1072.
- (11.) The wages earned vary from 8s. to 20s. per week, and are paid to the lads and girls, who are supposed to hand their earnings to their parents. Q. 358, 526, 557, P. 13, O'Keefe.
- (12.) The educational proficiency of those employed in these factories is of a low standard. No encouragement is used by the employers to induce them to improve their condition in this respect. P. 14, A. Flynn, P. 13, Blessington, Tunston, Willis, Gibson, Lee, O'Keefe, Q. 237, 8, 303, Q. 527 to 531.
- (13.) The parents also seem to be careless of their duties in the same direction.

Leather and Woollen Factories.

- (14.) The manufacture of leathern and woollen articles is carried on to a considerable extent in the Colony, and many young persons of both sexes are engaged therein. The hours of labour are generally ten, and the wages earned vary from 4s. to 15s. per week, and are supposed to be paid over to the parents. Q. 369, 594, pp. 19, 20, and 27—visits of inspection.
- (15.) In these branches of industry the manual labour is light, but the workers are required to stand, no relaxation, except during the meal hours, being allowed. Q. 714, 717, 602.
- (16.) The inspection showed that in two of the leather factories the process of tanning was carried on in close proximity to the buildings in which large numbers of persons were employed. The stench arising from this branch of the business was intolerable, and in certain states of the weather must be injurious to health.
- (17.) The woollen factory examined was found to be very close, hot, and badly ventilated. P. 28.
- (18.) The educational condition of the young employés was not satisfactory. So long as the children perform the day's work, and hand the result of the day's labour to the parents, parental duty seems to be satisfied.

Collieries.

- (19.) It appears that many lads between 13 and 15 years of age are employed here. The wages earned vary from 2s. to 3s. per day, and are paid sometimes to the parents and sometimes to the workers. Q. 879, Q. 900.
- (20.) The educational state is of a very primary character, and no effort is made to add to or keep up the amount of instruction acquired. The nature of the employment and the social surroundings militate against any voluntary effort in an improving direction, by the youthful employés in the mines. Q. 894, 895, 903, 904, 906, and 907 Appendix, Tabulated Statement, R. N. Moody, Q. 986 and 987.
- (21.) The work is not very laborious, and legislation has secured that the conditions under which these persons labour shall be as healthy as the case permits of. Q. 880 and 881, Q. 893 and 878.

The "Vernon."

- (22.) The Industrial School Ship "Vernon" was inspected, and evidence taken as to the working of this institution. Q. 1001, Appendix B.
- (23.) The lads there are instructed in the course provided by the Council of Education, and are also taught bootmaking, tailoring, carpentry, and the work of a ship. They are, however, seldom apprenticed to the trades in which they have been instructed, but are principally employed by persons engaged in agricultural and pastoral pursuits. Q. 1017 and 1019.
- (24.) They are apprenticed after the age of 12 years, but it is not made conditional to have attained any degree of educational proficiency before this is done. Q. 998 and 999.

2. After carefully considering the subject and the evidence thereon referred to them by your Honorable House, your Committee have been led to the following conclusions, viz. :—

- (1.) That the time has arrived when it is desirable to legislate in order to regulate the employment of children.
- (2.) That the age at which children may be employed and their hours of labour ought to be fixed.
- (3.) That it is necessary that children should not by the nature of their employment be debarred from all possibility of mental improvement.
- (4.) That in order to obtain the desirable result of securing mental instruction to those whom necessity compels to labour at an early age, legislation should take such a direction as either to compel a certain proficiency in learning to be attained before engagement be sanctioned, or a certain amount of instruction to be imparted during the term of employment.
- (5.) That the buildings and places in which children are employed should be under Governmental inspection, in order that undue crowding and other conditions injurious to health or morality may be prevented.
- (6.) That an industrial school, situated on shore, where the boys could be taught the rudiments of those callings to which it would appear they are principally apprenticed, would be more beneficial than keeping up the existing arrangements in connection with the 'Vernon.'

On motion of Mr. Farnell, Draft Report *read* 2^o, paragraph by paragraph.

Paragraph 1 *read*.

Amendment proposed (*Mr. Fitzpatrick*) to omit sub-paragraphs 22, 23, and 24.

Question,—That the sub-paragraphs proposed to be omitted stand part of the paragraph,—*put*.
Committee divided.

Ayes, 2.

Mr. H. C. Dangar,
Mr. Farnell.

Noes, 3.

Mr. Fitzpatrick,
Mr. Jacob,
Mr. F. B. Suttor.

So it passed in the negative.

Paragraph as amended, *agreed to*.

Paragraph 2 *read*.

Amendment proposed (*Mr. Fitzpatrick*),—To omit sub-paragraph 6.

Amendment put and *agreed to*.

Motion made (*Mr. Farnell*),—That the Draft Report as amended be the Report of the Committee,
put and passed.

Chairman to report to the House.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

GUNPOWDER STORED AT GOAT ISLAND.

(RETURN RESPECTING.)

Ordered by the Legislative Assembly to be printed, 6 March, 1877.

RETURN to an *Order* of the Honorable the Legislative Assembly of New South Wales, dated the 19th December, 1876, That there be laid upon the Table of this House,—

“ A Return of all Powder and other Explosives now stored in Goat Island Magazine.”

(Mr. Cameron, on behalf of Mr. Charles.)

GUNPOWDER STORED AT GOAT ISLAND.

RETURN of Gunpowder and other Explosives stored in the Magazines at Goat Island on the 31st day of December, 1876.

Importers and Owners.	Description.	Quantity.
		Tons cwt. qrs. lbs.
The Imperial Government	Gunpowder in barrels, Gun Cartridges (of various calibre), Small Arm Cartridges, Filled Shell, Fuses, Tubes, and Torpedoes...	55 10 0 0
The Government of New South Wales	Gunpowder in barrels, Gun Cartridges (of various calibre)	32 10 0 0
Merchants	Sporting Gunpowder in canisters	24 0 0 0
Do.	Gunpowder in barrels, for blasting purposes...	173 0 0 0
Do.	Lithofracteur do.	2 0 0 0

	Total	290 18 0 0

J. THOS. BLANCHARD,
Ordnance Storekeeper and Barrack Master.

1876-7.

NEW SOUTH WALES.

STORAGE AND TRANSIT OF EXPLOSIVES.

(REGULATIONS.)

Presented to Parliament, pursuant to the 41st section of the Act, 40 Vic. No. 1.

The Treasury, New South Wales,
29th September, 1876.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to make the following Regulations for the purpose of carrying into effect the intention and objects of the "Gunpowder and Explosive Consolidation Act of 1876" (40 Victoria No. 1),—such Regulations to come into operation on and from the 1st proximo.

ALEX. STUART.

REGULATIONS UNDER THE "GUNPOWDER AND EXPLOSIVE CONSOLIDATION ACT, 1876"—(40 VICTORIA, No. 1.)

THE MANAGEMENT AND CONTROL OF ALL MAGAZINES, AND THE STORAGE AND CUSTODY OF EXPLOSIVES.

Magazines and licensed premises subject to Act 40 Victoria, No. 1.

1. All magazines and licensed premises for the storage of explosives and explosive substances, together with the importation, custody, removal, and carriage of the same, are subject to the provisions of the Act 40 Victoria, No. 1, and to such Regulations as may be made with regard to the same by the Governor with the advice of the Executive Council.

The duties of persons in charge of Magazines.

2. Every "Public Magazine" shall be under the general control and management of the Ordnance Storekeeper, but in charge of Foremen or other duly authorized officers. It shall be the duty of the Foreman to be present when the magazine is opened, to superintend the receipt and issue of explosives, &c., and all laboratory operations; to keep a daily journal of all such transactions; to alter as required the tally boards attached to the magazine bays; to exercise a diligent and careful supervision of the duties and conduct of all persons under him; to remain at the magazine during working hours, and on no account to leave it unless on duty or with the permission of his superior officer; to see that the doors, shutters, &c., of the magazine are well secured on leaving off work, and to receive under his charge all keys of the same; and to report generally to the Ordnance Storekeeper all matters relating to his office.

Working hours at Magazines.

3. At all Public magazines the hours of attendance on each working day shall be from 9 a.m. till 4 p.m., unless otherwise ordered; but whenever any explosives or cartridges are being landed from any vessel the magazines shall, if required, be open from 6 a.m. till 6 p.m. for that particular service.

Magazines established.

4. The magazines established as "Public magazines" for the storage of explosives are those at Goat and Spectacle Islands, in the Harbour of Port Jackson, the magazine at Gulgong, and the floating magazine in the Port of Newcastle.

Fires, smoking, &c., prohibited at Magazines.

5. No fires, smoking, or unprotected light will be allowed outside the dwellings of residents at the magazines, in or near any magazine, laboratory, shifting-room, or landing-place, or within the precincts of such magazines; nor shall anyone be allowed to carry about or bring into any magazine lighted tobacco-pipes, cigars, lucifer matches, or anything likely to cause combustion; nor shall any person under the influence of drink be permitted to arrive at, visit, or remain at any magazine, or enter its precincts. Any person in the employment of the department breaking this rule shall be immediately dismissed.

Detonators,

N.B.—A penalty of £20 is imposed by sections 32 and 33 of the Act on persons guilty of some of these offences; and they may be taken into custody forthwith.

Detonators, tubes, fuzes, caps, &c., to be stored apart from explosives.

6. No friction tubes, detonators, percussion caps, fuzes, or ammunition possessing their own means of ignition, shall be kept in any magazine, laboratory, or shifting house where any gunpowder or explosive is stored, or where such substances are under manipulation; but all such articles, either loose or in packages, shall be placed in a secure store by themselves. Officers in charge of magazines will be required to know exactly where each article is stored, so as to be able to find it at once when required on the darkest night.

Lightning-conductors, &c., to be kept in repair.

7. The lightning-conductors must be kept in proper repair, their wells kept constantly full of water; and where a magazine is supplied with a fire-engine or hydrant service, the same must be kept in perfect order, and so lodged as to be always ready and fit for use.

Packages of explosives not to be opened in a magazine.

8. No package must on any account be allowed to be opened or to remain open in any magazine; but when required for use must be taken to the laboratory, after the floors of the same have been carefully covered with a sufficient number of hides or wadmiltits, to prevent loose powder being scattered about. Under no circumstances, however, must more than two packages be kept there at one time. When packages are thus opened the officer in charge must be present, to see that no explosive remains there when the men are not working.

Packages must not be rolled about.

9. The practice of rolling barrels about must not be resorted to, as it tends to cause leakage, injures the powder, and by the friction endangers life and property. In stacking packages in the magazine a space must be left between them and the wall, to allow free circulation of air, which prevents injury from damp.

Breech-loading small arm ammunition not to be broken up nor powder used.

10. Powder, the produce of broken up breech-loading small arm ammunition, must not be stored in any public magazine, or used for any Government purpose; as danger arises from a mixture of the detonating composition with it; and no such ammunition, being Government property, shall be broken up without special instructions. No explosive to be destroyed by fire on any account within the magazine or its precincts or boundaries.

Strangers not allowed admission without authority to a Magazine.

11. On no occasion shall strangers have access to a magazine without proper authority; but when so admitted they must be attended by an officer of the department, whose duty it shall be to see that the necessary precautions have been adopted, and that they have no articles in their possession of a combustible nature, or likely to cause an accident.

Magazines to be watched during the day and night.

12. All public magazines in which explosives are stored shall (unless otherwise provided) be watched by a warder of the department, who must be a special constable, from 6 a.m. to 6 p.m., when he shall be relieved by another warder, who must also be a special constable. The Foreman of the magazine shall occasionally visit such warders to see that they are on the alert and doing their duty.

Laboratory operations,—and clothing to be used.

13. No laboratory operations, if it can be avoided, shall be carried on within 400 yards of the magazine. In all laboratory operations, as well as those connected with the receipt and issue of explosives, the regular winter and summer suits provided for the purpose must be worn, and also magazine shoes of suitable size, so fastened as to prevent sliding or shuffling along the floors or platforms. No person shall be allowed to enter a magazine without changing his shoes; but, if no works are being carried on, goloshes or sewn overboots may be used instead; or a person may be allowed to go barefooted, after carefully wiping his feet.

The floors of Magazines to be free from grit—Floating Magazine.

14. The floors of the magazines, shifting-rooms, and passages must be swept and kept free from gravel, sand, or grit; and previous to explosives being taken into or out of the magazine, the rolling ways and stages must be also carefully watered. The laboratory must be properly cleaned every working day, and watered after any work done therein. The decks of the floating magazine must be swept daily, and washed at least three times a week. The vessel must also be pumped out by the men therein employed at the morning relief. The "danger signal" to be hoisted at sunrise, and replaced at dusk by a signal lamp; a second one being kept in readiness in case of accident to the one in use. The bell to be struck as at a magazine on land, and during thick weather to be sounded at intervals, as is usual on board of vessels underweigh or anchored in the fairway.

Magazines to be properly aired.

15. The magazines must be carefully aired, but always with a due regard to the state of the atmosphere,—such as after rainy weather, dampness arising through excessive evaporation, or during damp north-easterly winds, or on very hot days, when the temperature is internally and externally so great as to cause condensation, &c.—when, in either case, the magazines should be kept closed.

Warder's duties.

16. The warder shall patrol the magazine buildings, and see that the instructions given in regulation 5 are strictly attended to. He must every half-hour strike the bell (giving four blows) during his guard; and every omission of such duty must be noted, and reported by the Foreman to the Ordnance Storekeeper. The warder must not allow any person to come within the precincts without authority—must see that no boats anchor or remain within the proclaimed precincts of the magazine, except those duly authorized, in which case they shall be under his supervision—must hail at night all boats or individuals approaching the magazine—report arrivals and departures to the Foreman—must see that no spirituous liquors are improperly introduced within the precincts by residents or visitors,—and must see that all lights are put out by 11 p.m., except those in the guard-room, the Foreman's quarters, and in the dwellings of such employes as have obtained permission to have lights on account of sickness.

Absentees

Absentees from the Magazine.

17. No employé shall absent himself for a whole night without authority; and all residents must return, unless under special leave, by 10 o'clock p.m., and the names of persons arriving after that hour will be forwarded on the following day to the Ordnance Storekeeper. Particular notice must be taken by the Foreman or warder of the condition of such persons, of their return, and the necessary precaution taken for the safety of the magazine. The Foreman must report to the Ordnance Storekeeper without delay any breach of the regulations by any visitor or resident.

Boats not to be used without special permission.

18. The Government boats must not be used, unless by special permission, or other than legitimate work, and when not required they must be well secured. The boatmen of the day will always be required to convey on shore, or back to the magazine, the residents of the magazine at which they are stationed, as also their friends, and others landing by authority; all of whom must conform to the regulations, otherwise they shall be removed. No boat to be used on any pretence whatever without the sanction of the Foreman, who, if he has reason to suspect that spirituous liquors are introduced or improperly kept, may visit and search the quarters of any resident; such proceedings to be reported to the Ordnance Storekeeper as early as possible.

Undergrowth, &c., not allowed at Magazines.

19. No undergrowth must be allowed to accumulate within the precincts of the magazine; nor will any shrubs or cultivation of any kind be permitted in or near the magazine enclosures; and no animals must be allowed within the said enclosures.

Thunderstorms, gales, and rain—Magazines to be at once closed and secured.

20. On rain threatening, or on the approach of a thunderstorm or a gale, any delivery of explosives or cartridges must cease at once, and the magazines be immediately closed and made secure. In the event of any other unforeseen cause of alarm arising, such as a fire breaking out in the vicinity of the magazines, the warder must give the alarm by ringing the bell. Particular attention must always be given to any of the foregoing causes of alarm; and on hearing the first clap of thunder, or on seeing a flash of lightning, although the storm may be then at a great distance, all hands on or off duty must at once repair to the officer in charge; who will adopt such precautionary measures as he may deem expedient for the safety of the magazine. Any extraordinary circumstances arising must at once be brought under the notice of the Foreman by the warder or other employé of the magazine.

Coverings authorized.

21. In all magazines the coverings shall consist of wadmiltits, hides, hair-cloth, or thick plain canvas.

IMPORTATION AND EXPORTATION OF EXPLOSIVES, AND THE PRECAUTIONS TO BE USED IN CONVEYING THEM.*Fires, lights, &c., not to be used when discharging and receiving explosives on board vessels.*

22. Before opening the hatches of a vessel or lighter, loading or unloading explosives or cartridges, all fires must have been extinguished at least one hour; and must be kept extinguished, until the hatches are again securely closed and covered. Whilst the loading or unloading of explosives is being carried on, or whilst they are in course of transit, no smoking shall be allowed in the vessel or lighter. The use of tobacco pipes, lucifer matches, lights, greased rags, or anything likely to cause ignition or spontaneous combustion, shall not be permitted on board any vessel engaged in such operations. All iron work or steel, over which explosives or cartridges are passed, must be covered with the authorized coverings, and lowered upon a cushion stuffed with white oakum, and covered with leather. Any person under the influence of drink, whilst this work is being carried on, must be kept under restraint, and if in the employment of the Government he shall be dismissed.

The holds of lighters to be carefully examined.

23. Previously to receiving explosives on board a lighter, special care must be taken by the officer in charge to examine the hold of the same. He must also see that it is swept clean, is free from grit and dust, and in a fit state to receive the explosives.

Restrictions when loading and unloading vessels with explosives.

24. Persons having in their possession any of the articles forbidden by any of the foregoing Regulations, shall neither be allowed to board nor to quit any vessel or lighter when loading or unloading explosives or cartridges. Steam vessels, or vessels with fires on board, passing at the time explosives are being loaded or unloaded, must at once be ordered to keep at least 200 yards off. In stowing explosives in the hold of the lighter the packages must be carried, and on no account rolled over each other. After all explosives have been discharged from the vessel, the coverings used must be removed, and the hold carefully cleaned out and freed from loose explosives. The officer in charge must see that the hatches of all boats, that leave either the magazines or vessels discharging with explosives on board, are well secured and covered over. When boats are anchored off a magazine, awaiting discharge, they must not be boarded at any time without permission; and on the approach of a thunderstorm, rain, or a gale, the precautions specified in regulation 20 must be adopted.

Clothing to be worn when shipping explosives.

25. All persons employed in loading and unloading explosives or cartridges must use magazine shoes, or goloshes, or go barefooted, and also wear the clothing provided for their use whilst so engaged.

Leaking and insecure packages how to be dealt with.

26. Packages of explosives or cartridges that are insecure or leaky must be put in a bag; but, if so damaged that the contents would be likely to cause an explosion in re-packing, the damaged packages must be forthwith thrown into the sea. Full particulars of such destruction must be reported as early as possible by the officer in charge to the Ordnance Storekeeper. Before a package is taken into a magazine it must be carefully examined to see that there is no iron or steel in or about it, or anything likely to cause explosion or spontaneous combustion.

Tools

Tools to be used.

27. All tools used in opening, securing, or removing packages containing explosives or cartridges must be made of copper, bronze, brass, gun-metal, or wood.

Vessels arriving in the Port of Newcastle.

28. On the arrival of a vessel in the port of Newcastle with explosives or cartridges on board, a Pilot-jack shall be hoisted at the main-mast head, and kept flying until the same have been wholly discharged. She must either anchor close by, or make fast to, the moorings laid down for the purpose; and there discharge all explosives or cartridges on board into the floating magazine, between the hours of 6 a.m. and 4 p.m. The necessary precautions in so doing must be strictly observed, so as to render the chance of explosion as remote as possible.

Special application to the Ordnance Storekeeper must be made for permission to transfer to the floating magazine any other explosive than gunpowder.

THE FLAG TO BE USED AS A DANGER SIGNAL.*Danger signal.*

29. In all cases where explosives or cartridges exceeding 50 lbs. weight are removed by land or water, the boats or vans conveying the same shall display a "danger signal;" which must be a red flag not less than 3 feet by 2 feet, with the word "Danger" painted or sewn on it, in black or white letters not less than 6 inches long. Such "danger signal" must be made of sheet zinc, tin, wood, or bunting.

THE REMOVAL AND CARRIAGE OF EXPLOSIVES BY LAND AND WATER.*Explosives not exceeding 100 lbs. may be conveyed by dealers.*

30. Explosives not exceeding 100 lbs. in weight may be conveyed by dealers within the City of Sydney at any time before 10 o'clock a.m., if properly secured and covered with the authorized coverings, and provided the other precautions required by the Act and Regulations are duly observed. All packages containing loose explosives for blasting or sporting purposes, when so removed, must be placed in bags or sacks to prevent leakage.

Applications for deliveries from Magazines.

31. Applications for the delivery of explosives from a public magazine must be made to the Ordnance Storekeeper, in the prescribed form, which can be obtained on application to that officer, and must be accompanied by the certificate of deposit. Before delivery can be obtained, the storage rent, and all lighterage fees and transport charges, &c., must be paid. Delivery shall thereupon be made in the City of Sydney (if the quantity exceeds 100 lbs. weight) by Government boats and vans to the persons duly authorized to receive the explosives. Cards of address must be given for each package before 3 p.m. on the day previous to delivery. A sober and trustworthy man must be in attendance at the place of delivery to receive the packages before 7.30 a.m. No insecure package to be given out of the magazine on any account.

Applications for permits.

32. Persons applying for permits for the delivery of explosives in the City of Sydney shall enter the detail of the permit in the delivery-book, in the presence of an officer of the department, who will forward the same to the Foreman of the magazine where such explosives are stored, so as to ensure a fair turn of delivery to each applicant (as the boats and carts will be limited to the carriage of (2) two tons). Masters of lighters will be held responsible for the due delivery of the explosive to the Government carters at the proclaimed wharf at 7.30 a.m. The carters will be held responsible for the safe delivery by 10 a.m. of all explosives thus landed to the persons to whom the packages are addressed, and from whom they must obtain proper receipts for such delivery. The clothing prescribed for the purpose must be used by the Government carters, who must see that all the precautions necessary to prevent explosions are adopted. They must not have anything in their possession likely to cause explosion or spontaneous combustion.

Short deliveries to be first in turn the following day.

33. Where an unfinished or incomplete delivery has been made on any day's order, through an over-demand, the order shall be completed on the next day of delivery. Any mistake, non-delivery, late delivery, or carelessness, must be at once reported in writing to the Ordnance Storekeeper, as no notice will be taken of verbal complaints.

Fees not to be given to employés.

34. Fees must on no account be taken by any employé of the Ordnance Department. Offenders in this respect render themselves liable to instant dismissal.

Explosives for transmission by Railway.

35. Every dealer requiring explosives delivered at Darling Harbour, Sydney, or at the Pilot Boat Harbour, Newcastle, for transmission by railway on the days appointed by the Railway By-laws for the purpose, must supply bags, and the necessary fastenings for them, to the Foreman of the magazine the day before delivery is wanted; so that the packages may be placed in them at the magazine. Each consignor must also depute a trustworthy and sober man, who shall be under the orders of the officer in charge, to assist in the delivery, and give the necessary receipt for the same. Such person will be required also to prepare the necessary way-bill; without which the explosive may be returned to the magazine, and treated as a fresh importation and subject to the usual charges thereon.

Conveyances to be used when the prescribed vans are not procurable.

36. In parts of the Colony outside the city of Sydney, or within the boundaries of any city or town to be hereafter proclaimed, where it is found impracticable for explosives to be removed in the vans prescribed by the Act, they may be carried in open vans, drays, or waggons; but the owners of such conveyances must provide and use the authorized coverings in so doing. The packages thus carried must be secured in bags, and so fastened as to prevent leakage. They must also be stowed apart from lucifer matches, oils, or anything liable to spontaneous ignition,—kept from contact with iron or steel, and so packed

packed as to be accessible, in case of fire, for immediate removal. Similar precautions must be taken by contractors or others when explosives only are conveyed by them; and due notice must be given by a consignor to the consignee of such removal, with a view to its immediate storage after arrival in the registered premises.

THE SIZE AND DESCRIPTION OF BOATS TO BE USED IN TRANSPORTING EXPLOSIVES BY WATER, AND THE MANNER IN WHICH SUCH BOATS SHALL BE CONSTRUCTED AND FITTED UP.

37. Boats that are specially intended for the transport of explosives must be built and fitted according to plans and specifications approved of by the Ordnance Storekeeper. Every such boat must have a mast with yard-arm attached, to be used as a lightning conductor, which must always be fixed, when the boat is moored with explosives on board. Lighters employed under contract must be provided with a sufficient number of the authorized coverings, to secure the packages of explosives on board from contact with anything likely to cause explosion or spontaneous combustion. No cooking stoves or firing will be allowed on board such vessels.

FOR THE STORAGE AND REMOVAL OF EXPLOSIVES FOR PUBLIC WORKS OR MINING PURPOSES.

Store for miners and public works, and where disallowed.

38. The quantity of any explosive which shall be allowed to be stored at one time in any "registered premises," for public works or mining purposes, will depend on the nature of the building or premises provided for storage of the same. Explosives must not, however, be stored in any place near to which any persons are employed. In premises, registered for the storage of any explosive, no tools must be used other than those described in regulation 27; and the removal of explosives from such premises must be conducted in the manner prescribed by regulation 36.

Description of a suitable storehouse at mines, &c., for explosives.

39. The store intended for the storage of explosives, for the use of miners and quarrymen, must be well and substantially built of brick, stone, or concrete, or excavated out of solid rock, or any substance not liable to ignition. It must also be so constructed and closed, as to prevent unauthorized persons having access thereto. To secure it from danger from without, no iron or steel must be exposed. When the store is not lined inside with wood, the packages of explosives must be kept in bags; and where practicable, the store should be fitted with a lightning conductor. Fires or lights unprotected, lucifer matches, or anything liable to rapid ignition or spontaneous combustion, must not be allowed in or near a building or premises registered for the storage of explosives. All such stores must be in detached buildings or premises, with the word "Gunpowder" painted thereon; and must always, when practicable, be enclosed with a close fence.

THE DUTIES OF INSPECTORS OF MAGAZINES.

40. The Inspectors of Magazines shall, under the control of the Ordnance Storekeeper, inspect periodically, or when required, all public and licensed magazines or registered premises, and see that the provisions for the storage and conveyance of explosives are duly carried out, and that every necessary precaution in connection therewith is exercised. They shall also report to the Ordnance Storekeeper, on the suitability of the building or premises proposed to be used for the storage of explosives, whether as licensed magazines or registered premises. The Inspectors should as far as practicable also be present, when explosives are being received and delivered at the public magazines, or when they are landed in Sydney for local consumption, or transmission by railway. They must also inquire into the general and particular management of magazines and registered premises, and furnish reports of all inspections to the Ordnance Storekeeper, for the purpose of being transmitted to the Minister.

MISCELLANEOUS.

Notice to masters of vessels.

41. Notice shall be given in the Harbour Regulations, directing the master or other officer of every vessel, arriving with explosives exceeding 12 lbs. weight on board, to deliver the same immediately to the Ordnance Storekeeper, and directing attention in other respects to the provisions of the "Gunpowder and Explosive Consolidation Act 1876," and the several Regulations made thereunder.

Small arm rifle cartridges.

42. Small arm rifle cartridges (not being explosives within the meaning of the aforesaid Act) not exceeding 50 lbs. weight, may be forwarded by steamers, carrying passengers, to any port or place, where there is no other available communication. They must, however, be placed on board such steam-vessels at the wharf, and must be securely packed in tin-lined cases, or if such be sent packed in a barrel, the same shall be placed in a bag. No danger-signal is necessary. When explosives have to be shipped under the 14th section of the Act, application must be made in the prescribed form to the Ordnance Storekeeper, and if approved it must be forwarded to the Collector of Customs, who will authorize the shipment.

Construction of buildings for compartments of registered premises.

43. All compartments of registered premises shall be called "danger bins"; and must be well closed and be substantially built of brick, stone, or concrete, or excavated out of the solid rock, or may be constructed of any substance not liable to ignition; and must be so constructed and closed, as to prevent unauthorized persons having access thereto. To secure such compartments from external danger they

must be lined inside with wood, and on no account shall iron or steel be allowed therein. They must also be kept free from grit, gravel, or sand, and be regularly and carefully swept, and nothing allowed to be brought in, or remain therein, likely to cause ignition or spontaneous combustion. If found necessary a lightning-conductor must be attached to the buildings or premises, in which such compartments are constructed. No person under the age of sixteen shall be permitted to enter such compartment, unless under the care of a responsible person. Compartments for the storage of explosives must be in that portion of the registered premises in which there is the least traffic, and must also be as remote from fires, lights, &c., as possible. No fire, lights, or lucifer matches, must ever be allowed in these compartments.

N.B.—Any person smoking, or bringing matches into any "registered premises," is liable by section 40 to a penalty of £50.

Licenses to be granted.

44. All licenses and certificates granted under the Act shall be issued by the Ordnance Storekeeper, and signed by him or the Colonial Treasurer, and will be valid only for the persons named therein, and for the quantities of explosives therein specified. Upon any wilful neglect of any of the provisions of the Act, or of any regulation made under its authority, licenses may be declared forfeited by two Justices; who may also impose a penalty of £10 for every day during the continuance of any such negligence.

Manufacturers of fireworks and cartridges.

45. Manufacturers of cartridges, fireworks, and other dangerous forms of explosives for sale, must apply to the Ordnance Storekeeper for permission to carry on their operations. On receipt of such application that officer shall himself inspect, or else direct the Inspector of Magazines to inspect, the premises wherein it is proposed to manufacture these articles; and upon being satisfied that all the precautions necessary to prevent explosions or accidents have been duly taken, the permission sought for may be granted by the Colonial Treasurer, by a "special license."

Storage of mechanically and chemically prepared explosives.

46. No mechanically prepared explosive, exceeding 25 lbs. weight, shall be stored with explosives chemically prepared; unless found on analysis (the expenses of making which shall be charged to the owner thereof) to be composed of an ingredient or ingredients, certified as not being liable to spontaneous combustion, or subject to the influence of sudden or atmospheric changes. When found dangerous, every explosive, whether mechanically or chemically prepared, must be placed in separate compartments or buildings, at distances not less than 10 feet apart from each kind of explosives.

Definition of Magazines, licenses, and Certificates of registered premises.

47. A "Public Magazine" shall mean those buildings now used as such at Goat and Spectacle Islands, and at Gulgong, together with the Floating Magazine at Newcastle, as well as any other buildings, premises, or floating hulks, which may be hereafter proclaimed as Public Magazines by the Governor. A "Licensed Magazine" shall mean any building or premises which has been inspected and recommended as suitable for the storage of explosives, and which has been approved by the Minister. "Licensed Magazines" shall be managed and be under the control of the person licensed to keep the same; who will be held responsible for the due observance of the several provisions of the Act, and the Regulations made thereunder. By a "Special License" shall be meant a license, to store explosives in a building, which has been approved by the Minister or the Ordnance Storekeeper, for the purposes provided for by section 27 of the Act aforesaid. An "Ordinary License" shall mean a license, authorizing any person to deal in explosives, subject to all the conditions made in respect to dealers. "Registered Premises" shall mean such premises, and compartments of premises, as are set apart for the storage of explosives, and which have been inspected by the Inspector of Magazines, approved by the Minister, and registered with the Ordnance Storekeeper, in the manner prescribed by the 39th and 40th sections of the Act.

1876-7.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GERARD KREFFT.
(PETITION OF.)

Ordered by the Legislative Assembly to be printed, 20 December, 1876.

To the Honorable the Speaker, and to the Honorable the Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Gerard Krefft, of Kellett Cottage, Kellett-street, in the city of Sydney,—
RESPECTFULLY SHOWETH:—

1. That your Petitioner is a dutiful and loyal subject of Her Most Gracious Majesty the Queen.
2. That on the 27th day of last July your Honorable House was pleased to appropriate the sum of one thousand pounds "to meet the claim put forward by Mr. Gerard Krefft to the salary of the Curator, from 1st August, 1874."
3. That soon after the Appropriation Act passed, in August last, your Petitioner applied to the Honorable the Colonial Treasurer for payment of this sum, and was prepared to give a receipt in the terms of the Vote passed by your Honorable House.
4. That payment was put off from day to day, and from week to week, on various grounds.
5. That at last, on the 27th September, your Petitioner was called upon by the Crown Solicitor to sign a bond, by which he would have solemnly bound himself never to institute any legal proceedings against any person or persons who had been Trustees of the Australian Museum during his residence there.
6. That having exhausted every personal effort to obtain payment, your Petitioner resorted to the Supreme Court.
7. That the Supreme Court could not afford him redress, because your Petitioner could not show that the law requires or authorizes the Honorable the Colonial Treasurer to pay your Petitioner any sum, the said appropriation of £1,000 not being set forth in the Appropriation Act.
8. That your Petitioner most reluctantly ventures to trouble your Honorable House upon a matter which has already engaged so much of your attention, but no other course is open to him. If your Honorable House does not think fit to interfere in your Petitioner's behalf, he must resign all hope of obtaining any redress for the wrongs and injuries he has suffered as a servant of the Government.
9. That your Petitioner humbly prays that your Honorable House may be pleased to take the foregoing into your favourable consideration, and to make such order thereupon as your Honorable House deems just and necessary. And your Petitioner, as in duty bound, shall ever pray.

Kellett Cottage, Kellett-street,
Sydney, December 19th, 1876.

GERARD KREFFT.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

HENRY JAMES COLLAREY.

(PETITION OF.)

Ordered by the Legislative Assembly to be printed, 16 January, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The humble Petition of Henry James Collarey, of Woonona, in the Colony of New South Wales, telegraph line contractor,—

SHOWETH :—

1. That your Petitioner has suffered great injustice by the cancellation of his contract for erecting the line of telegraph from West Kempsey to Grafton, by way of the Nambucca and Bellinger Rivers, work to be carried out in two sections simultaneously.

2. That on the sixth day of September, one thousand eight hundred and seventy-five, the contract to do this work was signed.

3. That on the eighth day of December, one thousand eight hundred and seventy-five, your Petitioner commenced work at the Macleay Heads, under instructions from Mr. Cracknell, the Superintendent of Telegraphs.

4. That this route would have carried the line through lightly-timbered country and been more easy of construction. On this route the work was being proceeded with so satisfactory as to warrant your Petitioner in concluding it would be completed in the specified time.

5. That about the nineteenth day of January, one thousand eight hundred and seventy-six, Mr. Harrison, the Government Inspector, ordered a deviation of the route so as to carry the line about 6 miles inland. This deviation required the line to pass through heavily timbered country, consequently more labour was required to do the work than your Petitioner could readily obtain.

6. That about the twenty-eighth day of February, one thousand eight hundred and seventy-six, your Petitioner received instructions to lose no time (from Mr. Cracknell) in pushing on the work at Grafton section.

7. That on the eighth day of March, one thousand eight hundred and seventy-six, your Petitioner proceeded with men to commence operations there, and on the twentieth of that month had forty-eight men with a competent overman capable of completing six miles a week on this section.

8. That about the twenty-first of the said month of March, your Petitioner received instructions from the Government Inspector to erect no poles till he returned.

9. That on the return of the Government Inspector (Mr. Harrison) your Petitioner had to remove the men back 13 miles for the purpose of erecting those poles, and doing other work that he (Mr. Harrison) ordered not to do till he returned, and through which your Petitioner suffered great loss through the neglect of the Government in not leaving an officer in charge of the works, and was obliged to discharge a number of his men.

10. That about the ninth of May this Mr. Harrison returned to the Grafton section and falsely represented himself as Mr. Jones, manager, and on the twentieth of the same month or thereabouts the said Mr. Harrison, representing himself as such, discharged your Petitioner's overman without any reference to your Petitioner, and falsely stated that your Petitioner's contract had been cancelled and given to Mr. Jones, whose manager he (Mr. Harrison) was. A further delay was caused by this Mr. Harrison, who also dismissed a number of labourers on his own authority, and his progress was so slow as to warrant the cancellation of his contract.

11. That about the eleventh day of the said month of May your Petitioner visited the Macleay section, and found works stopped and all materials removed several miles from off the line, and learned with surprise that this had been done on the authority of the said Mr. Harrison, who had stated that your Petitioner had been deprived of the contract, and through which your Petitioner was obliged to proceed to Sydney to learn if Mr. Harrison's statements were true, but found on inquiry that they were false; and your Petitioner then applied for and obtained an extension of contract time.

12. Your Petitioner then returned to Grafton section, but finding Mr. Harrison in charge proceeded to the Macleay section in order to hasten progress. As soon as your Petitioner reached Macleay section he used every effort to make rapid progress, but Mr. Harrison stopped work at the Grafton section without your Petitioner's knowledge or consent, nor did your Petitioner know the works were stopped until your

Petitioner received notice from the Acting Superintendent of Telegraphs that he had recommended cancellation of your Petitioner's contract for stopping works at Grafton section without his consent. But your Petitioner humbly submits that your Petitioner did not stop the works, but they were stopped by Mr. Harrison, and it was he who had recommended to the Acting Superintendent of Telegraphs the cancellation of contract of your Petitioner, and your Petitioner at once proceeded to Sydney to learn the truth of it, and found that such was the case, and through such cancellation your Petitioner sustained considerable loss and damage.

13. That your Petitioner refused to surrender his said contract, as he could prove by numerous disinterested witnesses resident in the neighbourhood that your Petitioner's contract was progressing at a rate that would justify the completion of the said contract long before the time of extension if the Government had complied with their usual conditions.

Your Petitioner therefore most humbly and respectfully prays your Honorable House to take his case into your favourable consideration, and grant to your Petitioner the justice which the nature of your Petitioner's case may demand.

And your Petitioner will ever pray, &c.

HENRY JAMES COLLAREY.

Dated at Sydney, this 10th day of January, A.D. 1877.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MASTERS AND SERVANTS ACT.

(SERVICE OF SUMMONSES UNDER, BY THE POLICE.)

Ordered by the Legislative Assembly to be printed, 4 June, 1877.

RETURN to an *Address* of the Honorable the Legislative Assembly of New South Wales, dated 29th May, 1877, praying that His Excellency the Governor will be pleased to cause to be laid upon the Table of this House,—

“Copies of all Correspondence that took place in the year 1870 between the Departments of the Colonial Secretary and Inspector General of Police and any other Department, together with all other Documents and Minutes, including the opinion of the then Attorney General, relating to the serving of Summonses by the Police under the Masters and Servants Act.”

*(Mr. Macintosh, on behalf of Mr. Jacob.)***SCHEDULE.**

NO.	PAGE.
1. The Inspector General of Police to the Principal Under Secretary. 4 May, 1870	2
2. Minutes of the Colonial Secretary and the Principal Under Secretary. 6 and 7 May, 1870	2
3. The Under Secretary, Law Department, to the Principal Under Secretary. 14 May, 1870	2
4. Minute of the Colonial Secretary. 16 May, 1870	2
5. Circular letter to Benches of Magistrates. 6 July, 1870	2
6. The Principal Under Secretary to Inspector General of Police. 6 July, 1870	3

MASTERS AND SERVANTS ACT.

No. 1.

The Inspector General of Police to The Principal Under Secretary.

Sir, Police Department, Inspector General's Office, Sydney, 4 May, 1870.
The subject mentioned in the accompanying copy of a report from Superintendent Zouch is one of some importance now that the Police Force has been so greatly reduced. I have, therefore, to suggest that reference be made to the Crown Law Officers on the subject, and if no legal objection presents itself, that a circular be issued to the various Benches, directing that in such cases the parties interested be compelled to serve the summonses in order to relieve the police of a duty they should not I think be expected to perform.

I have, &c.,

JNO. M'LERIE,

Inspector General of Police.

[Enclosure in foregoing.]

Mr. Superintendent Zouch to The Inspector General of Police.

Sir, Police Department, South-eastern District,
Superintendent's Office, Goulburn, 3 May, 1870.
I beg to point out that a great deal of the time of the police in country districts is taken up in serving summonses for recovery of wages under the Masters and Servants Act. Now as this appears to me to come more under the head of a civil process, and not properly appertaining to police, perhaps you will be good enough to obtain the opinion of the Attorney General on the matter.

The Magistrates in this district, at my suggestion, generally direct complainants to serve their own summonses, but if they were compelled to serve them, it would lighten considerably the duties of the police with little or no hardship to themselves, as they generally return to their service, or the neighbourhood, until the cases are disposed of.

I have, &c.,

HY. ZOUCH,

Superintendent.

No. 2.

Minute of The Colonial Secretary.

THE opinion of the Crown Law Officers may be invited on the question raised.—C.C., 6 May, 1870.

The Under Secretary to the Law Department.—H.H., B.C., 7 May, 1870.

No. 3.

Minute of The Attorney General.

I THINK the police ought to be relieved of this duty. As observed by Mr. Superintendent Zouch, the summonses under the Masters and Servants Act comes more properly under the head of civil process, and does not appertain to police. I think therefore that a circular should be issued to the various Benches upon the subject, informing them that the police are no longer to be expected to serve summonses under the Masters and Servants Act, but that such summonses should be delivered to the complainants for service by themselves or their agents, unless there be in any particular case special grounds satisfying the Justices that the assistance of the police is necessary or expedient.

W. M. MANNING,

Attorney General.

The Under Secretary, Colonial Secretary's Department.—W.E.P., B.C., 14/5/70.

No. 4.

Minute of The Colonial Secretary.

A CIRCULAR may be prepared as advised, and the Inspector General of Police informed.—C.C., 16 May, 1870.

No. 5.

Circular Letter to Benches of Magistrates.

(Circular, 70-3,619.)

Gentlemen,

Colonial Secretary's Office, Sydney, 6 July, 1870.

Attention having been called to the circumstance that much of the time of the police in country districts is taken up in serving summonses for the recovery of wages under the Masters and Servants Act—a matter which comes more properly under the head of civil process, and does not appertain to police,—I am directed by the Colonial Secretary to inform you that the police are no longer to be expected to serve summonses under that Act; but that such summonses should be delivered to the complainants for service by themselves or their agents, unless there be in any particular case special grounds satisfying the Justices that the assistance of the police is necessary or expedient.

I have, &c.,

HENRY HALLORAN.

No. 6.

No. 6.

The Principal Under Secretary to The Inspector General of Police.

Sir,

Colonial Secretary's Office, Sydney, 6 July, 1870.

In acknowledging the receipt of your letter of the 4th May last, with its enclosure, recommending that the police should be relieved from the duty of serving summonses for the recovery of wages under the Masters and Servants Act,—I am now desired by the Colonial Secretary to forward herewith, for your information, copy of a circular which has, after reference to the Attorney General and in pursuance of his opinion thereupon obtained, been this day addressed to the different Benches of Magistrates throughout the Colony, directing the discontinuance, except under special circumstances, of the practice in question.

Circular, 6 July, 1870.

I have, &c.,

HENRY HALLORAN.

[3d.]

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

MR. WILLIAM PITT WILSHIRE.

(PETITION OF.)

Ordered by the Legislative Assembly to be printed, 19 September, 1877.

To the Honorable the Speaker and the Honorable the Members of the Legislative Assembly of New South Wales.

The Petition of William Pitt Wilshire,—

HUMBLY SHOWETH :—

That on 25th August last, your Petitioner was charged with assaulting, &c., one Albert Packer ; and Wm. H. H. Becke, Esq., Justice of the Peace and Clerk of Petty Sessions at Windsor, granted a warrant for the arrest of your Petitioner.

That at 9 o'clock at night of the said 25th ultimo, a sergeant and policemen came to the residence of your Petitioner, at North Richmond, and whilst your Petitioner was in bed in an attic room a warrant was read from the outside of the house below, and a demand made that your Petitioner should accompany such person or persons to Windsor, a distance of fourteen miles, to which your Petitioner demurred, and would not come down or surrender, stating that a warrant was unnecessary, and that a summons was sufficient to bring him at any time, and that he had only acted in self-defence in his own house against A. Packer, and in defence of his property from demolition, and was unconscious of having violated any law therein.

Your Petitioner also informed the police that he would not admit them into his house, but that they could force the door, which they accordingly did.

Your Petitioner did not arise or descend from his room until about 3 o'clock on Sunday morning, the 26th August, when he first saw the police in his house.

Your Petitioner now humbly submits to your Honorable House that the issue of the said warrant was uncalled for, and wholly unnecessary, and he believes was issued more in a spirit of ill-feeling towards your Petitioner, and to degrade him, than in furtherance of the ends of justice, and was therefore an unjustifiable outrage on his personal freedom, and precluded your Petitioner from obtaining bail in consequence of its being Sunday morning.

Your Petitioner further respectfully submits, that he has been for some time past exposed to the constant and persistent aggressiveness in various ways by several persons, including John Michael M'Quade, Esq., Justice of the Peace, and Visiting Justice of the Windsor Gaol, and especially by your Petitioner's tenant, Austin Slattery, together with Albert Packer, who, at the instigation of the said Austin Slattery, as Petitioner believes, waylaid Petitioner with a double-barrelled gun, which was fired several times whilst Petitioner was returning to his house on the night of the 21st August last, and on the 25th afterwards attempted to dispossess your Petitioner of his house and grounds by a fraudulent paper, witnessed by Austin Slattery, and also by physical force eject your Petitioner from his homestead, all of which your Petitioner has reported to the Inspector General of Police, in various letters extending over a period of about four months, commencing from 7th May last, and also other letters to the Honorable F. B. Suttor, late Minister of Justice, of and concerning which your Petitioner prays relief, and that he may be heard personally at the Bar of your Honorable House.

And your Petitioner will ever pray.

WILLIAM PITT WILSHIRE.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

NEW GUINEA EXPLORATION.

(EXTRACT FROM THE LOG-BOOK OF THE STEAM-LAUNCH "NEVA.")

Ordered by the Legislative Assembly to be printed, 30 January, 1877.

Signor L. M. D'Albertis to The Colonial Secretary.

NEW GUINEA EXPLORATION.

Extract from the Log-book of the steam-launch "Neva."

I LEFT Sydney on the 20th of April, 1876, in the mail steamer "Brisbane" for Somerset, with Mr. Hargrave, the engineer, Moreman, a sailor, and Mr. Wilcox. I expected to get some native troopers from the Government at Brisbane (Queensland), but felt much disappointed that from the great demand for the police at Cooktown none could be spared, but on my arrival at the last-mentioned town I succeeded in engaging six coloured men.

- May 1st. Arrived at Somerset, and disembarked the "Neva" safely.
- 2nd to 5th. We were employed in fitting out the "Neva."
- 6th. Left Somerset at 2 p.m. on a trial trip, under a steam pressure of 30 lbs., proposing to visit Mount Adolphus Island, but the wood we used being wet we stopped at Muddy Bay until we had attained a power of 40 lbs. steam pressure, when we started for Cape York Island, and anchored at 4.15 p.m. west of Cape York; cut wood, and remained for the night.
- 7th. Passed the day on shore; the bilge water was very offensive on board the "Neva," and discoloured the paint.
- 8th. Left Cape York at 11 a.m., under a steam pressure of 40 lbs.; passed east of Albany Island and anchored at Somerset at 1.30 p.m. For five miles we had a current in our favour, and for three miles the current was against us, but the sea was calm.
- 9th to 11th. Engaged in completing the arrangements and stowage of the "Neva."
- 12th. Purchased two tons of coal from the steamer "Bowen," and was annoyed by some of the men getting drunk.
- 13th and 14th. Engaged in loading the "Neva."
- 15th. Was informed that Moreman was unwilling to go with the expedition, as higher wages had been offered to him. I therefore proposed to Moreman to discharge him on condition that he repaid the money I had advanced to his wife, and his passage money from Sydney, but he replied that it was his intention to go with the expedition.
- 16th. Moreman left last night. I was told he left with Captain Hovell on board his vessel.
- 17th. Moreman has not been seen in Somerset.
- 18th. Called on the Police Magistrate for a warrant to be issued against Moreman. The weather being fine and calm, I left Somerset at 1 p.m. and anchored at Harvey Rocks. Some of the bars of the furnace melted, so that we had to lessen our steam and help with the sail. Mr. Hargrave had an attack of fever.
- 19th. We left our anchorage at 7 a.m., and anchored at 10.15 at Long Island, where we remained all day and night—the engineer still continuing ill. The weather was very fine.
- 20th. Started at 7 a.m. and steamed until noon, and then sailed until 5 p.m., for we could not get fresh water at Long Island.
- 21st. We left at 7 a.m. under steam; at 9 a.m. saw the schooner "Pacific" at anchor on the Warrior Reef; we steered towards her, as she had some coal, rice, and biscuits on board for us; at 10 a.m. we went on board the schooner and received our supplies, and then left for Katow at 10.30 a.m.; being over the coral reef and having no chart we had some difficulty in keeping ourselves clear of accidents. Following one of the pearl fishing boats we sighted the coast of New Guinea, and landed at Katow at 3.30 p.m.; being desirous of procuring a pilot to Kiwai. Maino, his son, and another young native promised to go with me to-morrow to Kiwai.
- 22nd. Early this morning I landed again at the village Moatta, and found that Maino, his son Waruki and Dawan were ready and willing to accompany me as pilot to Kiwai. We left at 9 a.m. for Bristow Island, about 2½ miles from the main land, found a good channel from 3 to 7 fathoms deep. About 1 p.m. we were abreast of a coral reef east of Bristow Island, passed about a mile from the reef at low-water and found from 4 to 5 fathoms; after clearing the reef steered for Bampton Island, named by the natives Parama. At 4.30 p.m. we sighted Breakfast Island, named by the natives Mibu; at 7.15 p.m. anchored 3 miles south of this island in two fathoms water.

- May 23rd. At dead low-water, during the night the "Neva" struck the bottom, which being rocky occasioned some alarm, but fortunately the steamer received no injury, it being very calm at the time. At 7:30 a.m. we left for a small village at Kiwai Island, south-east of Mibu, named by the natives Tzamari, and anchored in front of the village about a mile from the shore on account of a mud flat. At 3 p.m. went on shore with the Moatta people; we were well received, as the natives are on good terms with the above people; they were ready to sell provisions in any quantity, consisting of pigs, bananas, yams, and cocoa-nuts, the medium of exchange being tobacco; so having loaded the dingy with a large stock of provisions we had to refuse to purchase any more. Remained at our anchorage all night.
- 24th. We had a strong breeze during the night with heavy rain in the morning, but it cleared up and became very fine during the remainder of the day. A few miles above Tzamari we found the water fresh. We passed close to some islands opposite to Kiwai Island and found a good channel 5 fathoms deep and shoaling to 1 or 2 fathoms, but it is very probable that we had got out sometimes from the proper channel. Anchored at 11:30 a.m. opposite a village at Kiwai named Para by the natives; this village can be readily recognized by some lofty trees which are very remarkable by being flat on the top. We found the current here ran from 4 to 5 knots an hour. The natives of this village did not come to us, and we saw only a small canoe in which were two men far away. Landed on an island opposite the village to cut wood, which we named Hixson Island.
- 25th. Left Hixson Island at 7:30 a.m., but the wood being wet we made but slow progress, but derived some assistance from our sail. After clearing Kiwai we had a fresh south-east breeze and made good speed. Passed Attack and Long Island without seeing any natives, and I made at this part some alterations in the chart planned in the former voyage of the "Ellangowan." We were in a good channel of from 5 to 7 fathoms deep. Passed on the left close to an island which judging from its vegetation is of recent formation; this was named Bennett Island. We now got into shallow water, but close to Canoe Island, there is a channel of 7 or 8 fathoms; anchored at the same place as when in the "Ellangowan." We have not yet seen any natives.
- 26th. This morning about 7 a.m. two canoes were seen about a quarter of a mile from the "Neva"; a short time after three more appeared behind but kept at a distance; we made signs and held out baits to them by waving red calico and called to them, but it was of no use. At 8:30 a.m. we raised the anchor, and the noise of our whistle and steam caused them to take flight, and to enable them to pull faster they left some of the canoe fittings behind; they were not armed or attired in their war dresses. I regretted we could not communicate with them, as they seemed to me to be the same people by whom we were well received in the "Ellangowan." We tried to pass close to the village on the main land west of Canoe Island, but we were obliged to stop at noon as we found we had got into shallow water and had but little steam from the wood being green. About this place are many sand-banks, dry at low water and difficult to cross. It was at this place the "Ellangowan" struck. I believe that when the river is properly surveyed, a safe and deeper channel will be found nearer to the eastern bank. At 5:30 p.m. we reached Howling Point, where, in the voyage of the "Ellangowan," we had seen natives; we, however, did not see any to-day, but heard the dogs barking and saw some smoke. At dark we sent up some rockets and made some experiments with a combination of the dynamite with the rocket, which consisted of inserting the fuse of a cartridge of dynamite into the body of the rocket. The first trial was unsatisfactory, as probably the rocket exploded before the fire had communicated with the fuse. The second time was a success, proving the possibility of sending a cartridge of dynamite to a great distance and which will explode after the rocket is spent. The time for the explosion of the dynamite may be regulated by the length of fuse. It is wonderful the effect it produces at night, hearing the heavy report of the dynamite after the explosion of the rocket and its shower of fire. We did not expect that the natives would venture to attack us this night. The day had been very fine.
- 27th. We did not see any fires on the land last night, nor did any natives make their appearance this day. We left at 11 a.m., but the strength of the current obliged us to stop and wait the rising of the tide. The second time we stopped at an island, which I named Walker Island. We then explored in the dingy a small creek for about half a mile and killed some fish with dynamite. We left again at 4:15 p.m., and anchored at dark.
- 28th. With the small supply of wood we had yesterday we left this morning at 5:30 a.m. having the flood tide with us. We went 6 or 7 miles and then anchored in seven fathoms water. It rained in the morning, but the remainder of the day was fine.
- 29th. Left at 6 a.m. with the rising tide, and the wood we used as fuel being dry we made a run of about 26 miles. At 11 a.m. we had to stop, having exhausted all our fuel. We did not meet any natives. Passed so many islands that it made this part of the river very narrow, but we had always from 5 to 7 fathoms. The banks at this part were low and flat, but covered with beautiful dense and luxuriant forest.
- 30th. We left at 7 a.m. and anchored at 4 p.m., at the distance of one or two miles from the last place we reached in the "Ellangowan." We passed a large island north-east of it and saw a small village on the main-land, composed of four or five new houses. Some few miles further we observed a few natives, some of whom were armed with bows and arrows. They were laughing and chattering at us, but did not appear to have any bad intentions. Near them, fastened to the bank, were some canoes. I waved some red calico towards them, but they did not or would not notice it, but soon after disappeared into the bush.
- 31st. We started early in the morning and reached Ellangowan Island, passing on the north side. The bank on the right was covered with dense and luxuriant forest trees, but on the left vegetation was very scanty, there being only a few lofty trees about the bank, and behind these, as far as we could see, was only an open country of coarse grassy vegetation, and appeared to be swampy and flooded at some seasons of the year. The banks of
the

- May 31st. the river had at this place a very different appearance from what we had previously seen for it was covered by that graminaceous plant the *Coix lacryma*. At 3 p.m. we discovered some huts in an abandoned village. We landed and found eight or ten old houses close to the bank, which was at this part 7 or 8 feet above the level of the water. Following a path through the forest behind the houses we found a new canoe which had been constructed on the spot. The ground around was cleared of trees and shrubs, and small trunks of trees were lying across of about two yards one from the other, on which the canoe had to be launched into the river. A similar plan is adopted on the north-west coast of New Guinea. In the houses I found a stone, some fresh water shells, fish bones, and pigs' skulls. The houses looked very rudely constructed, and it is very probable they were only used as places for shelter. Close by I observed some small platforms on which the natives preserve their provisions against the hungry dogs and pigs; such platforms are also used by the natives of Yule Island and Hall Sound. A short distance further on I saw a few more houses protected by a side wall made of leaves; they were probably used by the women. We left the village at 3.15 p.m., and anchored at 6 p.m., but we did not proceed any distance from the village, the wood procured there being wet. We had a fine and calm day.
- June 1st. Left at 8.10 a.m. and anchored at 2 p.m.; the engineer reported that from the quality and state of the wood we could not go any further to-day. The banks at this part were very low and covered with long coarse grass, of which the *Coix* was very prominent, and some straggling trees which appeared to be a species of *Acacia*. We saw a small channel, and considered it probable that we had anchored on the north side of an island formed by this creek. At this place the river assumes a much more broad appearance, and the presence of a number of aquatic birds suggests to me that we are not far from a lagoon.
- 2nd. We left at 7 a.m. and steamed until 5.30 p.m. when we anchored, during which time we ran thirty to thirty-two miles, advancing somewhat in a northern latitude, but the direction of the river seems to tend to the west. The banks of the river are still low and now are only covered by *Coix* and other coarse grasses, or a very poor vegetation, still here and there some clumps of beautiful trees would appear. The *Acacia* was also seen occasionally, but was not plentiful, the bread-fruit tree (*Artocarpus*) was more common on the banks, and also a species of taro. We also saw a few cocoa-nut trees, and I observed that those bearing fruit had their leaves hanging over the river cut down in the middle; this, I suppose was done by the natives, so that they could perceive at a distance which trees are bearing fruit. Also passed some huts, and saw some traps for catching fish at several places on the banks, especially on the left side; a short distance inland we also discovered a plantation of cocoa-nut trees, and observed some smoke; no doubt there is a village, but we saw nothing of the natives.
- 3rd. Left at 10 a.m. and anchored at 5 p.m. On three different points a quantity of smoke was seen, and about 2 p.m. we came upon a small grove of cocoa-nut trees; on the right hand, a little behind it, the ground is a little more elevated and covered with grass, and a little beyond a dense forest was seen. We landed here and got some cocoa-nuts; about half-a-mile from the cocoa-nut grove we met a canoe with a boy, and apparently also a woman; they did not appear to be frightened, but pulling away entered a lagoon on the right, and disappeared among the long reeds; some houses were seen in that direction. A little further on another lagoon was seen about three miles in extent as far as we could see; it may be larger, but a portion was not visible for the trees. We met also another canoe with two men, but they soon disappeared among the reeds. I endeavoured to make them understand that we were friends, but they avoided all intercourse with us, without evincing any great fear. The country we passed to-day looks much better, the banks were here and there more elevated, consisting of red clay, and the vegetation was much more luxuriant.
- 4th. We steamed from 8 a.m. to 5 p.m., except stopping at 11 a.m. to get more wood; the banks again became low, some of the land being covered with shrubs, and sometimes by coarse grass, among which the *Coix* predominated. A species of bamboo appeared very abundant at this place. A little before dark, about one or two miles inland on the left bank some cocoa-nut palms were seen, and probably there is a village, but we only saw a canoe with one native, who took no notice of us.
- 5th. Very early this morning I observed a canoe about 300 yards with natives behind us, and all our attention was directed to gain their confidence, but all our presents of red calico and bottles, sent down by the current, were unavailing; they did not notice or seem to care for them, but crossed the river and disappeared among the reeds. A short time after, two other canoes, manned by natives, passed the same way, without communicating with us. At 6.30 a.m. five large canoes came out from the place where the others had disappeared, with about twelve or fifteen men in each. After looking at us for some time they passed on, making a great noise and at times appeared as if they would approach nearer. They were in fighting order, as they were attired in their war dresses, and were armed with bows and arrows. I endeavoured to pacify them by sending some red calico, knives, and bottles, fastened to a piece of wood, but they did not take any notice of my presents or pick them up. When we raised up the anchor the flags were hoisted; this seemed to alarm them, for they almost immediately ceased shouting and talking, and pulled away; two chiefs apparently tried to place the other canoes ahead, so as to protect them from any danger. As soon as the "Neva" moved they began to retreat, but when we turned the bow of the steamer towards them they rapidly fled, still more terrified at the noise from the steam whistle and the report of a few shots from a revolver fired in the air, and they speedily got out of sight, vanishing among the reeds. We continued our course until 4 p.m., when we landed among some old houses on the left bank, which at this place was about twenty feet high from the water, and for the purpose of obtaining some more wood as fuel. To get into the house we had to climb up an old rotten ladder which was
not

not very safe. The houses were situated along the bank, and were similar to those used by the natives of Yule Island. In the middle of the village was a square place kept cleared of plants and other vegetation, and judging from a painted post, the carving of animals and other devices on the bark of some of the trees, and the remains of animal bones, it was evident that this place was used as a place of meeting for the people, for dancing or any public assemblies. The animals carved on the trees were principally reptiles, as alligators and iguanas, which are used as food by the natives, and may be also objects of veneration; some of the designs were very well executed, and I cut out one of these carvings from the tree, representing a human face, very odd and grotesque; the colours used were red, white, and yellow. The bones of pigs and fresh-water turtles were found in the houses, with net bags filled with fresh water shells, in the latter stored for the purpose of being converted into lime, which the natives use to mix with their betel leaf and areka-nut. The ground about this locality was somewhat undulating and tolerably dry. Bread-fruit trees were abundant and of large size, and taro was also growing on the bank. Our provisions being rather scanty, we had a good supply of fish from the river by aid of the dynamite.

- June 6th. We left about 7 a.m. and found the river bending very much till we got some miles west by north, when the banks again had only a little elevation, but the forest was very rich and luxuriant. We stopped a short time at some cocoa-nut palms to get a supply of nuts for the crew, who were very fond of them. At 3:30 p.m. we saw an opening on the left from the north-west, and came upon some places with not of a greater depth than one fathom of water, but we soon got again into the proper channel, when we then had from five to seven fathoms of water. Opposite the opening just mentioned there was a muddy bank on the right. At 4:30 p.m. we had to anchor, having no fuel, close to a bank of red clay, as we had exhausted all our wood. The weather was windy with a little rain, and we got some large fish by aid of the dynamite.
- 7th. We did not leave before 10 a.m., and, our supply of wood being bad, were obliged to go very slow, and to drop anchor at a small plantation, to procure more wood. Left; and stopped, after a short time, for the purpose of visiting another old village, and found some implements and other articles in one of the houses, which, in its form, resembles the reception-houses of the south-east coast of New Guinea—that is, like to an overturned boat, with a projecting spur in front,—the only difference being, that it was not built on piles. Part of the bank on which the village is situated has been washed away by the water, and consequently some of the houses have fallen down. Some fine banana-trees and tobacco plants were under cultivation by the natives; but, judging from the grass about the houses, I should consider they had been abandoned, from some cause or other, several months since. Steamed again for a few miles, and then anchored near a tall dead tree in the water, bearing the marks of fire—the first seen of any indication of fire since we entered the river.
- 8th. Left at 8 a.m., and anchored at 5 p.m., remaining half-an-hour at another old village. We found that tobacco was cultivated at this place, and appeared to be of excellent quality; some bags, with fresh water shells and the remains of alligators and fresh water turtles, were found in the houses. From stellar observations taken by Mr. Hargrave, we were now in 6° 28' south latitude; by my calculation, we are only four miles above. The health of all on board this day was very good.
- 9th. Left at 8 a.m.; and, the wood being good, we were able to steam until 4 p.m. without any delay. We spent the night near the left bank, mooring the "Neva" to a tree, and using the dingy as a bridge to go on shore from the steamer. The bank was high, and covered with a very rich vegetation, of more luxuriant growth than any we had yet seen, and of a deep green colour. During our excursions we met with no natives, but fell in with a young plantation of eleven cocoa-nut palms, a few huts, and some old landing-places. The bank was from 6 to 8 feet high above the level of the water; and, judging from the discolouration of the water, and the large amount of snags and *debris* brought down by the current, it is probable that there was very heavy rain about the higher lands of the interior far away from us. It was proposed to give the men a day's rest to-morrow (the first since we left), and also to go on a shooting excursion, as our provision was getting short.
- 10th. Went on shore at 8 a.m. with some of the men, and was very fortunate in killing, among many other birds, a noble full-grown cassowary (*Cassuaris sp.*), as well as a new species of goura-crowned pigeon. We soon returned to the "Neva" with a fine specimen of cassowary and a good supply of fresh meat.
- 11th. We left at 6:30 a.m., and anchored again at 5 p.m. By stellar observation Mr. Hargrave made our position 6° 20' south latitude, by my reckoning we were four miles more north. The bank was low, but covered with the most luxuriant vegetation and magnificent forest trees. I do not think this place is inhabited, as all traces of natives have disappeared. The men were dissatisfied that the cook did not give them a larger supply of meat, and also asked for an extra supply of biscuits; but I refused, as we had only about 40 or 50 lbs. of biscuit left.
- 12th. Left at 8:30 a.m.; but, our wood being bad, we could only proceed slowly. We passed an island, and found ourselves in front of some openings, one of which may very probably be another large branch of the river. We landed on the western point, to give time to get up sufficient steam to enable us to proceed; found an old arrow, and captured a living snake, so I named the point "Snake Point." I did not see any natives, but observed a cutting on a tree by some sharp instrument. We finished, this day, the flesh of the cassowary.
- 13th. Our wood being bad we did not proceed far this day. The banks were covered with a thick luxuriant forest. We passed two hills about 200 feet high, covered with a dense forest vegetation; the trees were of a rich deep green colour, and amongst the trees I observed some species of tree fern. We anchored at 5 p.m.

- June 14th. Left at 11 a.m., and anchored at 5 p.m. We were not able to make much progress this day from our fuel being bad. It is now three days since we have had a glimpse of any natives, but this day we had signs of some being in the vicinity, for we saw three or four canoes fastened to the muddy bank, but could not discover any tracks or signs of the owners, so I suppose the canoes must have been there for some time. The banks at this place were seven or eight feet high. I took a long walk and found that the forest was very rich, the lesser vegetation beautiful, and the soil very fertile, but in many parts it was exceedingly damp and muddy, and in other places covered with water. I found the sago palm very abundant.
- 15th. We were late in taking our departure this morning, not leaving until 10 a.m. We had cut a large quantity of wood, but being green we steamed this day very slowly, and were often obliged to stop. The banks as we passed along became of greater elevation, and once we stopped at the foot of a hill. At the edge of the water I observed some yellow sandstone with oxide of iron in it; this supported a conglomerate of flint-stone, basalt and quartz in abundance. Above the conglomerate was red clay and a strata of hard decayed vegetation. I collected several mineral specimens, with one or two fossils. The men washed some dirt for gold, but I did not think that they found any. From the washing I obtained a sample of iron-sand. The sight of a hill, rock, or stone seemed to animate my people, who no doubt engaged in the expedition in expectation of finding gold. We met this day canoes in different places some lying on the banks and one in a creek. On examination of this one I found only some leaves in it and two wretched paddles, being formed of long sticks with three bits of bark inserted in a cleft at the end, and tied with rattan; on the mud I recognised the foot-print of a boy or woman. I placed a bottle in the canoe, which I think will astonish the owner, who I suppose, was not far away. We anchored about 4 p.m., near a small creek, in which I procured some excellent fish by aid of the dynamite. Observed several paths in the forest, so I think we are in the vicinity of natives. Palmer had an attack of fever to-day.
- 16th. Left at 10:30 a.m., as we could not get up our steam before; we obtained more fish by dynamite. Visited the shore and shot a specimen of *Paradisea apoda*, if it should be that bird, which it closely resembles; if so it is the first time it has been met with in New Guinea. Not far from our starting point we saw a large rock above the water in the middle of the river, and trying to avoid it by nearing the right bank (it is about 25 feet high) came upon a large house, and a few natives were seen to run away armed with bows and arrows. We stopped in front of the house, and then landed to visit the house and the plantation, in order to procure food and ethnological specimens, so as to be able to form an opinion of the natives of this part of New Guinea, as so far we have not as yet been able to have any communication with them from their constantly running away on our approach. I found the house was constructed upon piles, fifteen feet high, very neatly built, but of a different style to any I have seen in other parts of New Guinea. The interior was very clean and arranged in good order. We inspected everything, and took away with us some weapons, stone implements, and several ornaments, which will serve to show by comparison and examination the race of people inhabiting this part of New Guinea. We procured also some bananas of a very bad quality, but did not see any pigs. In exchange for what we took, I left three axes, three knives, six bottles, some red cloth, and some handkerchiefs. We returned on board without seeing any natives, and steamed away. Soon after we passed a small island, got into shallow water and struck the ground three times, but fortunately received no injury, but on steering for the left bank we got into the proper channel, with a depth of water of two and three fathoms. About 4 p.m. we were obliged to stop, our supply of wood being exhausted. We saw three men and two canoes, but found it impossible to induce them to approach us, for they abandoned their canoes and disappeared into the forest.
- 17th. About 10 a.m. we left; after steaming a few miles the water became so shallow—only half a fathom, that we had to stop near to the right bank, where we found $1\frac{1}{2}$ fathom; the engineer went in the dingy to sound, and found the channel at one and one and a half fathoms on the right-hand side, but there was a large snag lying across it. He returned on board at 4 p.m., but too late to proceed any further. We proposed to clear the passage, but at the same time hoped we should have some rain by to-morrow, and have a greater depth of water. I went on shore, and ascended the summit of the hill, 250 feet high. On the top I found a good path along the ridge of the hill, and also visited a small house, which appeared to have been only recently vacated by the natives, judging from the remains of food, and fresh leaves used by them to sit upon. There were some net bags in which I found Dammar resin, and there were also some bamboos for carrying water. The paths at the summit of the hill were very numerous; from the top in a north to north-east direction I observed some very high mountains at a great distance, and the land rose gradually in that direction; it was so misty at the time that I found it impossible to determine the distance. In the afternoon I again visited the hills with some of the men; we then obtained a much better view, but not enough to enable us to form an opinion of the true distance, but I calculated they may be fifty or sixty miles distant from us.* The hills were covered with dense vegetation, and a yellow and red clay were to be seen here and there covering a hard sandstone. In the creeks quartz was seen in abundance. John, one of the men, is ill with fever; Palmer improving.
- 18th. After the rain of last night we found the water deeper and left at about 7:30, but found the current very strong against us at the rate of five miles an hour; had to stop at 1 p.m. for want of fuel, having progressed only four or five miles the water shallowed. I passed nearly four hours in rambling on shore, and found the country formed of small rounded hills from 50 to 100 feet high. Observed as usual in the creeks and gullies an abundance of quartz pebbles, and the dirt when washed gave a large quantity of iron. The forest is very luxuriant and of semi-tropical vegetation, and the ground was generally covered by a species of *Begonia*. Mr. Wilcox had an attack of illness.

19th.

* Probably it is the Charles Louis range.

- June 19th. Left at 7:30 a.m. but the wood being bad, we did not progress more than six or seven miles, and about noon had to delay for the purpose of cutting more wood; steamed again about 3 p.m., and stopped a short time after at some breadfruit trees we saw in a small plantation. We proceeded again, and as the water was shallow, having only three feet of water, I gave orders to the engineer to go slowly, and to stop when we had only half a fathom of water, to give us time to sound; but he must have mistaken my instructions, for he went at full speed, the result was that we struck the ground three times and had to stop. The men landed to cut wood, and I occupied myself by rambling about, and found the country undulating and hilly to the height of from 40 to 50 feet. The trees were here growing widely apart, but taller than any I had previously seen; the soil was of yellow clay, covered by a strata of decayed vegetation, mosses, an apparently new species of Pitcher-plant (*Nepenthes*) covered the ground in great abundance, quartz and sandstone were found in the creeks.
- 20th. It was raining all last night and this morning, to 9 a.m. Left at noon, but the wood being wet and a strong current against us we did not go very far. About 4 p.m. we arrived at a plantation on the left bank where we saw some poor sugar-cane and plenty of taro. Anchored to collect some provisions, as ours are all consumed, but I keep in reserve four or five pounds of flour, and biscuit, to be used only in case of necessity. We thought we perceived some movement on the bank, but could not distinguish if any natives were there, or only dogs or pigs. We landed and found a small house two or three hundred yards from the river, in the middle of a taro plantation; entered the house and got some sago and fish, which we found ready for cooking by the natives, and some ornaments and stone implements. Dawan captured a young pig, at which we were all delighted, as we all began to feel the want of meat. We determined to remain here for the night, to cut wood to-morrow, there being a great number of fallen trees, and to lay in a stock of taro for future occasions.
- 21st. We had a good deal of rain during the night and this morning, so that the men did not land to cut wood until 9 a.m. Captured another pig, and obtained ten bags of taro. I found two human skeletons exposed on a platform, and I secured them for scientific purposes; I left in exchange for what we took tomahawks, knives, handkerchiefs, beads, bottles, tins, and looking-glasses. Left at 12:30 p.m., but our progress was slow—the current being strong against us. From passing too close to the bank we were struck by the branches of an overhanging tree, occasioned by the want of care of the man at the wheel. I saw in the middle of the river a very singular plant which only grows on gravel banks in the rivers, serving as a natural warning to voyagers in an unexplored river. I was aware of this, and gave orders to proceed at half-speed, and told the man to steer to the left; but my directions must have been again misunderstood, as we went at full speed and received a severe shock upon the gravel bank; fortunately we sustained no damages, but we had to drop anchor for the night.
- 22nd. All night and morning we had heavy rains, and although we had our steam up till noon the current was so strong against us that we resolved to wait until the flood had subsided. Passed the day on shore, which teemed with a most luxuriant vegetation. I observed yellow clay and quartz in the creeks. Mr. Hargrave and the Chinaman ill with fever.
- 23rd. Left early this morning, and after steaming a few miles came upon two branches of the river; took the right branch, being the largest but not of a greater width than fifty or sixty yards, the depth of water being almost constant from two to three fathoms; but we had not proceeded very far when we came upon a gravel bank in the middle of the river, and found that we had shoaled to half a fathom of water; the "Neva" got aground, and the force of the current sent her on her beam ends, and we fully expected she would capsize. Sounded in the dingy from bank to bank, and found only half a fathom with a gravel bottom, at last found one fathom close to the right bank where we anchored, expecting, by waiting, the river would rise with the rain.
- 24th. We had no rain, so the shallow water still continued, and we were obliged to remain. I spent the day in shooting, and traversed some miles of country, which I found hilly, and the hills became more elevated as we passed inland from the river, still I did not see any mountains; the average height of the hills seen and ascended averaged for three to four hundred feet. Observed yellow clay, green sandy stone, and the usual quartz pebble in the creeks. This place afforded the greatest interest to the naturalist. On the top of one of the hills I found a small house, in which I discovered some arrows, stones used for cooking food, some flint implements, and some cassowary bones. Although the house was small, there was a division in the middle for a separation of the sexes. We had some rain during the day. Mr. Hargrave had a slight attack of fever.
- 25th. Abundance of rain last night, and the river rose this morning with a strong current. We left at 9 a.m., but in two hours did not make progress more than one or one and a-half miles; notwithstanding we took every precaution, we got twice aground, but did not sustain any damage. At 11 a.m. started for the third time, but the current drove the "Neva" against a snag, and we sustained two or three severe shocks and were nearly capsized, and lost from the roof a valuable collection of living plants, together with some shells and skulls and skeletons of animals which were stored on the roof for want of room inside the steamer, and also some yards of canvas, which got entangled in the screw and rudder, so that we could not move; the anchor was quickly dropped, so that we should not be carried by the current, but it placed the "Neva" on a gravel-bank, lying over on her side, and much water got into her. We made every effort to get her afloat again, but were unsuccessful; as the flood subsided the "Neva" remained on the now dry gravel-bank all the day. At 8:30 p.m. the clouds were heavy with rain, and every appearance of a thunder-storm, so we remained in hopes that a flood would relieve us from our unpleasant position.

- June 26th. Heavy rains last night; the river was rising, but at 6:30 a.m. our position had not improved. It appears to me, and to all, especially Mr. Hargrave, that we cannot proceed any further in the "Neva," and advised me when we floated again to return. I requested him to write his opinion in my log-book, which he did as follows:—"Mr. D'Albertis asked my opinion about the possibility of the "Neva" proceeding up the Fly River. I said, 'She cannot; the current is 6 or 7 knots, the channel narrow; the eddies make the rudder useless.'—LAW. HARGRAVE." From 6 to 8 a.m. the flood rose a little more, and we again tried to float the "Neva," but with no success, and she remained this day on the gravel-bank. Two men on the sick list.
- 27th. Last night, about 1 a.m. the water again rose until 6 a.m., when I sent two men in the dingy to put an anchor astern, in order to try to get her off the gravel-bank, on which she had been fixed for the last two days. By the carelessness of one of the men the points of the anchor struck the dingy, and damaged it so much that we had to defer any attempt to relieve the "Neva," as the dingy had to be put on shore to be repaired. The flood having subsided, the "Neva" remained dry on the bank, still on her beam-ends. I went up the country with the men about six miles, and crossed some swampy flats, and some very stiff hills, and followed the course of the river, in some places only 25 or 30 yards wide, and very shallow, with here and there gravel-banks similar to those on which the "Neva" is grounded, and which is composed of pebbles of quartz, basalt, limestone; and I also found some fossil plants, coral, and a fossil scapular bone of a turtle. The fossils appear to me to be the representant of a still living species.
- 28th. There was a very heavy flood last night, and this morning we were delighted to find the "Neva" in her normal position and afloat; the current of course ran very strong, so much so that it would have been imprudent to venture further up the river; it was therefore with much regret that I came to the conclusion to return, as I found it would be impossible to take the "Neva" further, as at low-water she was too deep, and at flood she had not sufficient power to stem the current; to abandon her, and to go on the land journey, it did not appear to me that it would be wise to attempt it, nor would it be possible. We reckoned that we were now in latitude $5^{\circ} 30'$ south, and longitude $141^{\circ} 30'$ east; so that, if the men could be induced to accompany me, from this the distance to be traversed in a straight line to Hall Sound would be about 400 miles, and I never at any time entertained the idea of crossing the land at a greater distance than 200 miles; the crew are also much exhausted by work, sickness, and a want of a constant supply of nourishing food, so that I think nothing would induce them to volunteer to follow me overland; not only this, but we have not yet reached the mountain range, and the only mountains we saw were in a northerly direction, and had we landed our course would have to be east by south-east, which, with the prospect of having to travel over flat, swampy country for such a distance, seemed to me an impossibility, particularly in a country like New Guinea, and without any means of carrying even our ammunition. So I gave orders to return, and the current took us in a few hours to the plantation from which we got our taro on the 20th instant. This course was also required, for we had finished all our provisions, and could find but little game, and no fish. We landed here again, and got as much taro as I considered will be sufficient to last six or eight days, so that I hope to be able to go and examine the large branch of the river we have seen at Snake Point. We were surprised to find that the natives had not returned to the house, for I found all the articles I left were untouched. The soil is very rich at this part, and covered with a luxuriant vegetation. A nutmeg (*Myristica*) tree was very abundant, bearing large and eatable fruit. The land was flat on the left bank, and hilly on the right. We remained here for this night to cut some wood to-morrow.
- 29th. At 9:30 a.m. we left the place, and passed down rapidly, aided by steam and the current, to the house we visited on the 16th instant. Some natives appeared in front of the house; they sent three arrows at us, but they did not reach their destination. Mr. Hargrave and myself fired three or four shots, and made them go away, but one came down to the bank, and under the shelter of some shrubs, thought to send us some of his arrows, but a discharge of a gun at him with game shot soon made him retire. We also fired three or four shots at some distant canoes to prevent them from approaching us. We then landed with the hopes of finding some pigs, but could not see any; we then visited the house, and a shocking sight there met my eyes: in the back room there was lying an old blind woman, only a thin diseased skin covered her bones; she was still alive, but evidently dying fast; the fore-part of the skull was broken, and the brain protruded, covering her grey hairs; on a careful examination I found that the wound had been made by a cutting instrument, and we afterwards saw some marks of blood near the door and on the ground in the direction in which we had seen the natives running away; probably the natives thought it better to kill her than to allow her to fall into our hands, or probably because she was helpless and diseased. Some few miles below the village we saw a canoe with two or three in it; when they saw us they hurried on shore, leaving the canoe. On examining it we found it was full of sago; we took it with us, and considered we were fortunate enough in securing food for about a fortnight, by far superior to the taro we had been using to live upon so many days, and left in exchange some trade as calico, axes, beads, &c.
- 30th. Left at 9:30 a.m., and although the current was in our favour, we did not go very far, as the wood was too green. When we arrived at Snake Point I gave directions to enter the western branch of the river, which I named Alice Hargrave River. Many on board were disappointed at this new arrangement, as they expected we were returning homeward; the natives Katow, Maino, Waruki, and Dawan, grieved and cried out at this change, and I at last pacified them by a promise of an increase to their wages, so they became consoled. We anchored at 5 p.m. four or five miles from the entrance. At first we found shallow water, and had some difficulty in finding the channel, which is from three to five fathoms deep. On my return from the Fly I made another chart in order to correct any errors that

that might have occurred when going up, and I was pleased to find that one agreed perfectly with the other, but great accuracy could not be expected with my appliances. From the great rising of the water to-day we could recognize only with difficulty many of the places we had marked as prominent points, and some noted in my chart as muddy or red banks had entirely disappeared.

- July 1st. We steamed this day from 9 a.m. to 4 p.m., and then had to stop from our wood being exhausted; we got up about 14 miles. We had a constant depth of water of from 4 to 5 fathoms, and only got out of the channel a short time after we started; the soundings gave us $1\frac{1}{2}$ fathom, but near to the right bank we again found 5 fathoms of water. We saw some old native houses, and a raft rudely constructed of two trunks of trees. For the first 7 or 8 miles the land we passed was very low, and covered with scanty vegetation; reeds were abundant, and the general appearance more especially on the left bank was swampy. We then passed a point where the bank is about 25 ft. high, but it soon decreased as we passed along to 5 or 6 ft., and the vegetation became very rich and luxuriant. It appeared to be raining not far from us.
- 2nd. There was nothing worth noting this day; we steamed to-day from 9 a.m. to 5 p.m., and had a depth of water varying from 3 to 5 fathoms.
- 3rd. Gave rest to the men, some of them not feeling well, and not being well myself remained on board; others went on a shooting excursion, and returned on board with some interesting birds. They informed me that during their excursion they found several native paths and a trap for catching pigs.
- 4th. Although I felt ill to-day from an attack of rheumatic fever, I proceeded to avoid loss of time. So we left at 8 a.m., passed some old houses, some creeks, and two small islands on the right and a smaller one on the left. At 3 p.m. had to stop on account of shallow water. Palmer and the Chinaman are both very sick, and I feel so exhausted that I can hardly stand.
- 5th. Remained the whole day at anchor, the water being too low. Some of the men landed and went on a shooting excursion. In the morning five or six natives made their appearance on the left bank, but not far from us; they did not evince any surprise but merely curiosity, and after laughing very much one of them turned his back and gave a slap to his hip as an insult (such an act is considered an insult in other parts of New Guinea); we replied by sending a rocket close to them, which made them disappear into the bush. I feel much worse, and three of the men are lying down with fever.
- 6th. Rain last night, deep water this morning with a very strong current against us. Left, but could not proceed further than a mile or perhaps less, and anchored at the foot of the left bank, which at this part was about 30 ft. high. Here was situated a small village of three or four houses; being too ill I could not go myself, but it was reported by some of the men who visited them that they were built very high on piles, and one of them which was supported by a tree was about 50 ft. from the ground. All round the houses the ground has been cleared from trees and cultivated by the natives. My men found the houses deserted and carefully shut up; they went inside and found everything had been removed. A short distance beyond they found another large but old house and some banana trees from which they gathered some fruit; they also brought on board some two or three stone implements they found which had apparently been forgotten by the natives. I was fortunate in obtaining the skeleton of a boy, which was brought on board by Mr. Hargrave. After replenishing our stock of wood we again tried to stem the strong current and twice we failed, being driven back by the current to the point from whence we started. The engineer considered it impossible to proceed further; I requested him to give a written statement to that effect, which he did as follows:—"On the 6th of July I tried twice to steam up the second rapids of the north-west branch of the Fly river and failed; Mr. D'Albertis asked me if I could steam further and I said no. LAW. HARGRAVE." After experience on the other branch of the river I considered it would be useless to make any further attempt, so I determined to return to-morrow and anchored below the village for the night.
- 7th. Early this morning the men went to cut wood and succeeded in killing two fine pigs. I was thinking of making another attempt this morning, but found John, Palmer, and Jackson very ill with fever, and although a little better myself unfit for work, so gave directions for our return, so in a few hours we were carried down by the current and again anchored in the Fly River at about 10 miles from Snake Point.
- 8th. Many being sick, we rested all day and cooked our pigs.
- 9th. From 7 a.m. to 3 p.m. we steamed down about 60 miles, and had to stop to cut wood. Sickness still on board.
- 10th. Steamed 50 miles down to our anchorage of the 5th of June.
- 11th. Left at 10 a.m., but the anchor got hold of a log, and so, not to lose it, we had to work to extricate it; we succeeded after three hours of hard work. We then proceeded to some new huts or shelters we saw on the left bank: there were also some canoes. Visited the huts, and found some bows and arrows and a fine large paddle. Did not see any natives, as they were probably engaged in collecting sago in the bush, or may be occupied in a hunting expedition. I am much better, but Jackson, John, and Palmer are still down with the fever.
- 12th. Left this morning, after getting our supply of wood, and about 1 p.m. arrived at the cocoa-nut grove we had previously visited, and discovered a village about a quarter of a mile distant, with many natives, who did not appear to be aware of our presence. I was desirous of paying them a visit, and returned with the "Neva" a short distance back to the channel, where in our ascending passage we observed a canoe pass through the reeds. Some of us went in the dingy, and with difficulty found the channel, which was obstructed with reeds and aquatic plants for about three-quarters of a mile. We then landed and found we were not nearer the village than when we were at the cocoa-nut grove, but still saw the natives in the village. We returned to the "Neva" with the hope of finding another

another passage to the village. A canoe appeared with two natives, and soon disappeared in the cocoa-nut grove; we followed them in the "Neva," found the channel they had taken, and went into the dingy. We soon found ourselves in a small lagoon, and saw a few men escaping from the village, where we landed soon after. The houses are on a small dry spot at the end of the lagoon, and in the middle was a plain covered with coarse grass, behind was a dense scrub. We succeeded in killing one pig and capturing another alive. When engaged in examining the houses, three canoes with native women only approached the village at a distance of about 200 yards. We went to see the new arrivals. For a little time they did not notice us, but soon they stopped pulling, and looked as if our appearance was something beyond comprehension, and then finding we were strangers, and of a novel kind, they pulled away in great terror before we had an opportunity of conciliating them, and disappeared behind a low hill. We got in the village some bows and arrows, human skulls preserved and painted by the natives, and some other articles. My men got a quantity of tobacco and sago. From the large quantity of tobacco and sago we saw, and the large marine shell used by the natives for ornament, I believe that these people grow tobacco, and trade with the southern tribes bartering it for shells.

- July 13th. This morning revisited the village with the hope of securing some more pigs; found a stuffed human head, the skull having been previously removed. I brought it away, and in return for what I had taken yesterday I left handkerchiefs, tomahawks, knives, hooks, beads, and calico. Observed a number of ducks in the lagoon, and succeeded in killing some of them. Left about 8 a.m., and soon after we saw nine canoes, four of them containing a number of men well armed, and wearing the usual war ornaments. In each canoe there seemed to be from fifteen to twenty warriors. The other five canoes contained but few men, who appeared to be unarmed, and remained some distance from the others. It was sufficiently apparent that their object was to attack us, but their ardour diminished very much as we approached them. I made every endeavour to assure them that our intentions were friendly, waving calico, but without success; so I gave the order to run the steamer at full speed to divide the war party in the middle, so as to leave the unarmed party up the current on our right, and the armed canoes below the current. As soon as they saw this, the unarmed canoes stopped, and seeing the others retreating as fast as they could paddle, went on laughing heartily. As soon as the canoes with the warriors reached the shore they deserted the canoes, with their arms and provisions, and disappeared in the forest. We boarded the canoes and found and appropriated plenty of sago, some fish, a living turtle, and some thousands of arrows, for which, this time, I did not pay anything. On going down the river we observed some more canoes, but they did not wait for us but went into some of the creeks.
- 14th. Passed Ellangowan Island, and at 5 p.m. anchored 37 miles from it.
- 15th. We steamed from 8:30 a.m. to 5 p.m., but we got on shore at 1 p.m., and it was some time before we got afloat again. At Howling Point we saw many natives on the opposite bank as well as canoes, and we slackened our speed, thinking they would come to us, but they appeared to be alarmed and pulled away.
- 16th. Rested the men this day; some went on a shooting excursion, but with very poor success.
- 17th. We left early, and at 3 p.m. anchored at Kiwai Island at a village, named by Maino, Auti. The inhabitants of Kawai are on very friendly terms with the people of Moatta (Katow). At this place Maino passed some years when a boy; one of his wives lives here. We bought a quantity of yams, taro, and cocoa-nuts, and a pig. I also bought twelve human skulls from a heap I saw in the verandah of a large house. We visited one of the large houses, but the natives did not like to go inside. The women and children had left the village. The house was very large and kept very clean, and could accommodate 300 people; the dim light of the interior and the peculiar form of the building conveys the idea of an old Gothic church. I saw a fine tame Horn-bill in the village, a female of *Buceros ruficollis*, or the red-necked Horn-bill. I wished to purchase it, but the natives said that they could not catch it, but would procure it for me to-morrow.
- 18th. Sent the men on shore to cut wood, and also a large knife and a red blanket to purchase the horn-bill. On the return of the men they said that the natives were willing to sell the bird, but could not catch it. I did not believe this statement, so I sent three rockets in the direction of the village; and then Maino went for the promised bird, and he returned with it on his arm.* Some canoes came with natives to wish us good-bye and to shake hands: we had met them before; some canoes also came off from the village where I had stopped when in the "Ellangowan," bringing cocoa-nuts and yams, but demanded too high a price for them. Left at 10:30 a.m. to go to Mibu Island to shorten the distance, so that we might in one day go from that place to the Katow River and land our pilots at their village, Moatta; anchored east of Mibu Island at 1 p.m.; strong south-east breeze and the health of all on board very much improved, no doubt from having a good supply of meat.
- 19th. Strong wind all night; the steamer rolled very much and shipped some water. I shall not go to sea yet, as it is too rough for a boat like the "Neva."
- 20th. Passed a terrible night from the heavy rolling of the "Neva" and powerful wind and sea, with the danger of the dingy getting destroyed against the stern of the "Neva"; took the advice of Palmer, the only sailor on board, who advised me not to venture the passage with such rough sea and strong head winds. Gave orders to get up steam and to go and find a safe anchorage and wait for more favorable weather. Maino suggested a channel which divides Mibu Island into two parts, forming two islands. We entered this channel, and found from five to seven fathoms depth of water; went out on the other side, west of the island, into the passage formed by Mibu Island and the mainland of New Guinea, considering that it may be possible by this way to get to Bampton Island or

Parama

* This bird is now in Sydney alive and in good health. It is the celebrated big bird of Mr. Stone.

- Parama of the natives. Steamed south for this island, but soon arrived abreast of the south end of Mibu Island, and found the sea too rough to proceed, so we anchored at the south end of Mibu Island; the steamer rolled very much, and we did not anticipate an agreeable night.
- July 21st. We had a miserable night with very bad weather, and the rolling of the steamer was very heavy, and the dingy struck several times on the stern of the "Neva" and caused a little damage. The rough weather continuing this morning, I got up steam and went directed by Maino to find a more sheltered place in one of the channels dividing Mibu Island. The one we are now in is 20 or 30 yards wide, and with 2 or 3 fathoms depth of water in the middle of the passage; the banks are low, muddy, and swampy, covered by mangroves and the Nipa palm, as well as an abundance of cocoa-nut palms. Waruki and Dawan crossed the island, and returned with some natives of Kiwai, who were on a visit to this island, and bought from them cocoa-nuts, yams, &c.
- 22nd. We had a much worse night than the preceding one, for on the tide changing we found ourselves across the channel, with the bow in the middle of the water and the stern on a dry bank. We set to work to get her out of this dangerous position, but when we succeeded we got into a worse state, for the strong current carried her on the opposite bank, on which we remained so fixed in the mud, in a very inclined position, that she could not be moved. The tide was falling all the time, so at last the "Neva" was lodged on a slippery mud-bank and was nearly capsized, and indeed was only prevented from overturning and ending her career in this place by the old roots of Nipa palms. At daylight it was dead low tide, and I sent on shore everything I could get out of the "Neva." As the tide rose the water entered the vessel and four men were employed in bailing the water out of it. We succeeded at last by great exertion to get her afloat again. None of us are expert seamen, but every precaution is taken to prevent accidents. Our provisions are getting short and water also, and if the wind does not subside we shall have to depend upon the natives for our supplies.
- 23rd. No change in the weather. The natives and some of the men crossed the island and saw the sea on the Kiwai side, and found it very rough. Last night we dragged the anchor, and this morning found we were some hundred yards from our original position, and at low water had only half a fathom. Returned to our former anchorage, and took every precaution to prevent a recurrence.
- 24th. The night has been nearly calm, so we steamed out, thinking to reach Parama; but in the morning the wind freshened and we had to stop again. I directed the steam to be ready by 4 a.m., so that if the night should be calm we might start and reach Parama before the strong breezes set in.
- 25th. The night had been calm, but were not ready to start before 6:30 a.m. The strong winds came on when the sun rose. We made an attempt to go but failed, for out of Mibu it was too strong for an open boat like the "Neva." As it was we shipped three seas, one after the other, with some damage to the stores and collections, and likely to be followed by worse consequences, so we returned to the channel first pointed out to us by Maino, in sight of Kiwai, and anchored. I sent Dawan and some men in the boat to buy a pig and some yams at Kiwai. The natives were unwilling to sell, but Dawan pointed out to Bob (one of the men) a fine pig and told him to kill it. This being done he afterwards paid for it with a large knife, a blanket, a crimean shirt, and a pair of trousers.
- 26th. A fine day and calm, but a heavy swell on the sea from the gales of the previous days. When the men were on shore to-day with the pig some natives arrived, and seeing the dead pig began crying out; but when Dawan told them it had been well paid for they were satisfied and went away in their canoes to the village at Kiwai, to secure the price, which was left in the hands of another for the proprietor.
- 27th. Rain during the night. Left at 5 a.m., but had to return to our anchorage. Maino got so alarmed at the sailing qualities of the "Neva" in a rough sea, that when we arrived at our anchorage he requested to be put ashore, telling us that he would never again expose himself to so dangerous a position. So I had to promise that I would not again leave except the day was calm. It rained to-day, so we filled our casks with fresh water.
- 28th July to 1st August. Detained by the weather. Living on game and some yams purchased from the natives.
- August 3rd. Calm night. Left at 5:30 a.m. Dawan did not come on board, so I left him behind with his friends. We arrived at Parama Island, passed in the channel between it and New Guinea, attempted to go as far as Jarro, but out of the channel we found shallow water and the wind too strong and the sea too rough to proceed, so we steamed back and anchored in the channel between Bampton or Parama island and the mainland of New Guinea. Sent to buy provisions at Wighi, a village on the mainland opposite, where they obtained yams, bananas, and cocoa-nuts. We have now ascertained that there is a passage from Bampton Island to Kiwai, or the mouth of the Fly River, west of Mibu, and it is probable that a future survey may discover a channel for larger ships. Two men attacked by fever this day. Dawan joined us to-day, coming in a native canoe.
- 4th. Left at 9 a.m. for Jarro, and Maino proved to be an excellent pilot; except in one or two occasions we had always 2 or 3 fathoms of water, the nearer we approached to Jarro, so here also a channel might be found for vessels larger than the "Neva." We had no accidents this day; but I am certain that we cannot go to sea with a head wind and rough sea, in safety, so I do not intend to attempt it any more.
- 5th. Remained at anchor all day, and visited the little island, where we found it had been used as a station for beche-de-mer. The island is well covered with shrubs and grass, and an ample supply of fresh water. The island seems formed of yellow and green sandstone with oxide of iron lying in strata, and forming a base to the yellow, reddish, and blue clay. The western part of it is swampy and muddy, and covered with mangrove. I found, in a creek, a good supply of fish; birds were also plentiful; so we had a good supply of fish and game.
- 6th.

- August 6th. Remained at anchor, and got a good supply of birds and fish.
- 7th. Left at 7 a.m. for Katow, passed between the mainland and Jarro, arrived at Katow, entered and anchored in the river at 10:30 a.m. So this day we had completed our passage from Mibu to Katow, passing inside all the islands close to the mainland, saving many miles than by the passage south of Bristow Island, Bampton Island, and Mibu. If a deeper channel could be found, no doubt this will be found the best course to be adopted for the Fly River. I asked Maino before he landed to sell or to get some one to sell me a pig, and not caring to trust that he will give the pig after he got on shore, I requested him to send on shore for the pig; he held a long conversation with his wife from the steamer; at last Maino spoke very decidedly, when the pig was brought, payed for, and killed, and Maino landed with his luggage and suite to his great satisfaction.
- 8th. This morning Maino sent us a present of taro, and we purchased from the natives some bananas and cocoa-nuts. I asked Maino to send some more provisions on board, so that we might have at least five day's rations on board, so that if we on leaving should be detained by the weather at some uninhabited island we should have sufficient supplies, but the natives did not bring any; so when it was dark I let off some rockets with the hope that to-morrow the natives would be better disposed.
- 9th. The rockets had the desired effect, for early this morning the natives came with yams, taro, and bananas, which we purchased with tobacco, which we found the best article for barter at this place. Two men ill with fever.
- 10th. More natives came to-day to sell provisions, but one demanded an axe for a cocoa-nut, which I refused. I was told by Dawan that the women and children left the village when they saw the rockets; I told him that they had nothing to fear, but at the same time they must understand that they must sell some provisions to feed my crew. After he left, women and children were seen returning to the village.
- 11th to 16th. Strong gales and heavy sea prevailing; could not leave, and had some difficulty in procuring food for all the crew, but what with pigeons, megapodius, cockatoos, parrots, fish, a few bananas, and taro from the natives, we were not exactly in a starving state.
- 17th. The weather more moderate; if we had provision on board we might have left this afternoon. Waima, another chief of Moatta, came on board and asked for a blanket, shirt, trowsers, and a large American axe, for a pig; I considered and sent the men to the village to get the pig, when Dawan suggested to the chief to ask for a gun instead of the other articles he had proposed, so the men returned without the pig, and I was angry with Dawan for his interference.
- 18th. I went on shore early this morning to the village, to inquire about the pig; Dawan appeared, and after much altercation a fight appeared imminent, but by threatening to fire rockets I kept the natives at a distance. Maino came and said I had to send a man to kill the pig, as it could not be held, but fearing for my man I asked to see the pig first, which after a little delay was driven to us, killed and paid for, amidst great shouts of laughter among the natives. Dawan had fled into the bush frightened. We all parted as friends as before, and Maino told me not to take any notice of Dawan, who was one of those who talked much but thought little. The pig was afterwards carried to the dingy, followed by about 100 natives; I threw some tobacco among them, and the struggle amongst the crowd to get a piece of this to them precious commodity caused a good deal of laughing, and good humour prevailed among them. I bought from a native two human skulls, taken by him from a bundle hanging in the front of the house of the young men. The natives have promised to supply me with all the food I may require, but I do not place much dependence upon them.
- 19th. At 3:30 a.m. we were ready to leave, but having been told it would be dangerous to leave in the dark I waited for daylight, but the wind increasing very much was obliged to put off our departure.
- 20th. The weather still very bad. As the natives brought no provision for sale, I sent the men to get some bananas from a plantation. Some natives from the interior are soon expected at Moatta with sago. One of the men sick.
- 21st. About 200 men and women from the interior passed this morning in sight of the "Neva," going to Moatta with sago, exchanging it for cocoa-nuts. They left again soon after, but none could be induced to sell any to us or to come near. I observed the women wore the small grass petticoat as at Yule Island. Mr. Wilcox ill.
- 22nd to 23rd. Still detained by the state of the weather.
- 24th. The weather being sufficiently calm I left at 5:30 p.m., but we soon struck on the left bank at the mouth of the river, and did not get afloat again until past 10 a.m., when we had to go back.
- 25th. As we could not start early I deferred it to the next day.
- 26th. Early this morning we had only a steam pressure of 22 lbs.; I would not leave until we had a pressure of 40 lbs.; which occasioned some loss of time, and with a receding tide I directed the course and considered we were almost out of danger, when we found we were only in half a fathom of water; I gave orders to stop, but by some accident the rope of the boat got entangled in the propeller, which caused some delay in cutting it; in the meantime the wind and the current sent us on a sand-bank, on which we struck so hard as to be unable to move, and ran a great risk of filling with water from the heavy breakers. On the tide flowing we again floated, but being too late to leave we had to return.
- 27th to 31st. The weather too tempestuous to leave and some difficulty to procure food. The men were however very successful in purchasing a supply of game.
- Sept. 1st. Nothing particular to mention from this day, the 5th, except the difficulty of purchasing a sufficient supply of food from the natives, but this day two pearl shelling boats called here, and we were glad to get some biscuit and rice from them.
- 6th. The pearl shell boats left this morning; we followed them, but as soon as we were out of the river we found that what was fine weather for the decked boats was bad for an open heavy steam launch, and Palmer advised me to return, notwithstanding he complained of our long detention at this place.
- 7th.

- Sept. 7th. Finding that every day I was exposed to new difficulties respecting getting a supply of food for the crew, I considered it advisable to send the boat to Brothers Island, to ask for some supply of provisions from Captain Redlich, who had a beche-de-mer station on that island. I expressed this proposal to the men and they agreed to it, so that four of them will start at 1 p.m. to-morrow.
- 8th. As arranged last night the four men left about 1 p.m., and we were not a little surprised to find Capt. Redlich calling at Katow in the afternoon. He will sail again to-morrow. I requested him to take six of my crew to Somerset, who it is my intention to discharge, from the difficulty of procuring food for them, and they also expressed a wish to leave; Capt. Redlich consented to take them, and he left at 2 p.m. on the 9th of September for Somerset, with the engineer and Jackson, and the other four he will take from his island, where he will find them. Wrote to the Rev. Mr. M'Farlane to pay the men and discharge them before the Police Magistrate at Somerset; Mr. Wilcox, Bob (South Sea islander), and the cook (a Chinese), remained with me.
- 10th. I felt relief to-day, as I am now quite independent of the natives for food, having but few persons on board. Eight native canoes, Waruki informed me, are fitting out for a fishing party to leave to-morrow.
- 11th. About 6 p.m. I saw a sail, it was our dingy returning from the Brothers Island; they reported that they got no provisions, as Capt. Redlich was absent. I told them what had happened in their absence, and they accepted my advice to return, and that Capt. Redlich would take them to Somerset. At this they were very delighted, and would not stay the night, but left again immediately. They gave me the news of the murder of Dr. James at Yule Island.
- 13th to 17th. Nothing of particular interest, except that this day, for the first time, a canoe with women came near the "Neva" to sell cocoa-nuts.
- 18th. Canoes returned from their fishing expedition.
- 22nd. Some canoes that arrived from Kiwai some days ago with sago are returning, taking with them some banana and other plants.
- 23rd. In the morning Moatta village was in a state of alarm, and all the men had left the village to repel an attack from some inland tribe; I observed, however, that the women passed near the "Neva" going to their usual work. About 4 p.m. I saw the natives returning, and seemed to be carrying a wounded or dead man. They would not permit Mr. Wilcox to enter the village, but told him they did not fight, as the bushmen ran away as soon as they appeared.
- 24th. Capt. Redlich arrived, bringing me provisions and letters, and returned on the following day.
- Sept. 25 to Oct. 4. Nothing has occurred worth mentioning, except that the Moatta people being now friends with the inland tribes, enabled me, with the assistance of the tobacco I received from Somerset, to purchase specimens of natural history.
- 5th. On the 5th a large canoe arrived from Wighi.
- 6th to 15th. Nothing of importance.
- 16th. Some natives from the interior visited Moatta to purchase fish, giving in exchange sago and bananas. Five canoes also arrived from Wighi. There was a man with them who had a gun and spoke English very well, and two others armed with clubs; they wished to come on board. I would not allow them to come armed on board, as it is not the usual custom among natives; so I told them to go away, which they refused to do for some time until I took my rifle. Bob at Tureture met the same man; it seems that he has been to Sydney on board of one of the pearl fishery vessels.
- 17th. Finding that the weather was breaking and likely to be fine and calm, we put the "Neva" in order for leaving.
- 18th to 29th. Nothing worth mentioning, except that two pearl shell boats came for provisions and water. A white man was in charge, but they had to go 4 miles distant for fresh water, and the natives and ourselves could only obtain it from the same distance. The Moatta people are much annoyed at seeing the inland natives receiving so much tobacco for animals, and they have tried to prevent their coming, and even threatening to fight them.
- 30th. The natives say the weather will now moderate and be fair, so I shall make every preparation for taking my departure for Somerset.
- Nov. 1. A boat arrived to-day with two native teachers, Lochat and Elia, from Cornwallis Island, sent by the kindness of Mr. M'Farlane, with a letter. They told me the weather was fine and calm, and would continue so for a few days. They left again in the afternoon. I shall leave to-morrow if the weather continues fine.
- 2nd. One of the inland natives brought me a beautiful snake of a species I had never seen before. Left at 10 a.m., and on arriving at the entrance of the river found the weather fine, and steered for Cornwallis Island with a gentle breeze, and aided by our jib-sail went at the rate of six miles an hour, passed north of Saibai, and anchored at Cornwallis Island at 4 p.m. The two following days we occupied ourselves in getting a supply of wood and water on board, in which the teachers aided me by lending their boat with two boys.
- 5th. I attended the service conducted by the native teachers in their little church; about 100 natives were present, men, women and children, almost the whole of them neatly dressed; they seemed very attentive to the service. A great number were from Saibai. I am not capable of judging of the influence of the teachers in a religious point of view, but from the benefit derived from their moral influence the result is very satisfactory; the advance of the natives of Saibai in civilization is progressing very fast, and the London Missionary Society may be proud of two such teachers as Elia and Lochat, who are eminently qualified to reform the wild tribes and to prepare the ground for future settlements.
- 6th. The wind being fresh and our anchorage not safe, I left for the Brothers Island, and arrived after a run of six hours. The passage was not pleasant, for the wind was fresh and

- and the sea rough, but I knew there was no danger of rocks or shallow water ; during the passage the men had to bail the water out, and it was with some difficulty it was kept from rising to the furnace and putting out the fire. On the following day, November 7th, Bob, the South Sea Islander, made a raft to go on shore to look for the dingy, but he found that Capt. Redlich had removed to Pumpkin Island ; as Bob did not see the dingy it was probably taken to that island. It is blowing very hard, but our anchorage is safe.
- Nov. 8th. Bob went on shore and made such arrangements as would enable us to get on shore to cut wood and obtain a supply of fresh water. There are no natives on the island. The wind still continues to blow very strong.
- 9th. Landed again to cut more wood, and obtained some birds. The Chinese cook was bitten by a snake of a poisonous species, and the symptoms in less than ten minutes were something very alarming ; I incised the wound, allowing it to bleed freely, applied ammonia, and gave brandy and ammonia internally.
- 10th. The cook was much better, but he was very ill in the night, but on the following day (11th) he was so much improved that I considered him out of danger.
- 12th. The weather being fine and calm, left the Brothers Island at 10 a.m., and anchored at Mount Ernest Island, where Mr. Jardine has a station. The next day was windy. I started for Somerset, but was obliged to return after going a few miles, from the stormy state of the weather.
- 14th. I left the "Neva," and went on board a boat going to Somerset.
- 20th. Returned to the "Neva." The wind during my absence had changed to the north, and the anchorage on the north side being unsafe the men had shifted anchorage to the south of Mount Ernest Island.
- 21st. Was calm last night, and we left early in the morning for Somerset. An accident happened to the engine by the bursting of one of the tubes, so I was obliged to cease steaming, but it very fortunately happened when we were only three miles from Somerset, when by aid of our sails and the current being in our favour, we soon anchored at Somerset. I left the "Neva" at Somerset, when I departed for Sydney, in charge of Bob, under the control of Mr. Powell, the postmaster, who kindly promised to see that the "Neva" was put in good order, cleaned, and painted.

After my long narrative I shall conclude with a few words expressing my regret at not having been able to do more ; but it is not the pioneer who shows the way that attains the most glory, but often the one who follows him, and it is easy to hear of a road but very difficult to find it out. I wish every success to any explorer of this part of New Guinea, should I not be able to return and complete my work ; and I hope that the little I have done will be some guide to, and enable him to find his way more readily than I did mine, and correct any errors I may have made. By this exploration we are now aware of a road to the interior of New Guinea, which is of more importance, as it is so near to Somerset, where a line of large steamers call twice a month. We also found a new passage from Moatta to the Fly River, shorter and safer than the one previously known, and when properly surveyed may be found navigable for larger ships. The richness of the land we visited, its vegetable and probably mineral productions, the soil suitable for the cultivation of many of the most valuable plants, as coffee, sugar, india-rubber, sago, tobacco, nutmeg, ought to attract the capital of the Colony to open up the country. The Dutch in their part of New Guinea, although on a small scale, derive some trade, and the part of New Guinea into which we penetrated was in latitude 50° 30' south, and ran about 500 miles on the winding river, the course of which may be seen on the chart appended, and it almost forms a line of demarcation between that part of New Guinea claimed by the Dutch and that remaining as yet unclaimed by any nation. About the Fly River, as far as I could judge, the natives appear less numerous than I have seen in other parts of New Guinea, and the land is cultivated in a smaller quantity, so that, in this part of New Guinea, the settler will not find the same difficulties I pointed out on former occasions when speaking of the south-eastern part of New Guinea, where the natives are more numerous and possess and cultivate all the best land. I have appended Baron von Müller's report on my collection of dried plants, and on the return of Professor Liversidge to Sydney he will report on the small collection of minerals I submitted to him for examination ; and I hope on a day not far distant to give the ethnological report on the natives, their weapons, also on the mammals and birds collected, the latter consisting of about fifty species, many of which are new or only recently described from specimens obtained during my first visit to the Fly River ; there is also a rich collection of reptiles, fish, both of salt and fresh water, some beetles, fresh water and land shells. I expect that the voyage of the "Neva" will be remembered by those who in future will take an interest in New Guinea, and by the scientific world.

I have now to give my grateful thanks to the Government for the aid they have afforded to me in this expedition by the loan of the steam-launch "Neva," without which it would have been impossible for me to have undertaken the expedition.

I remain,
Sir,
Your obedient servant,

L. M. D'ALBERTIS.

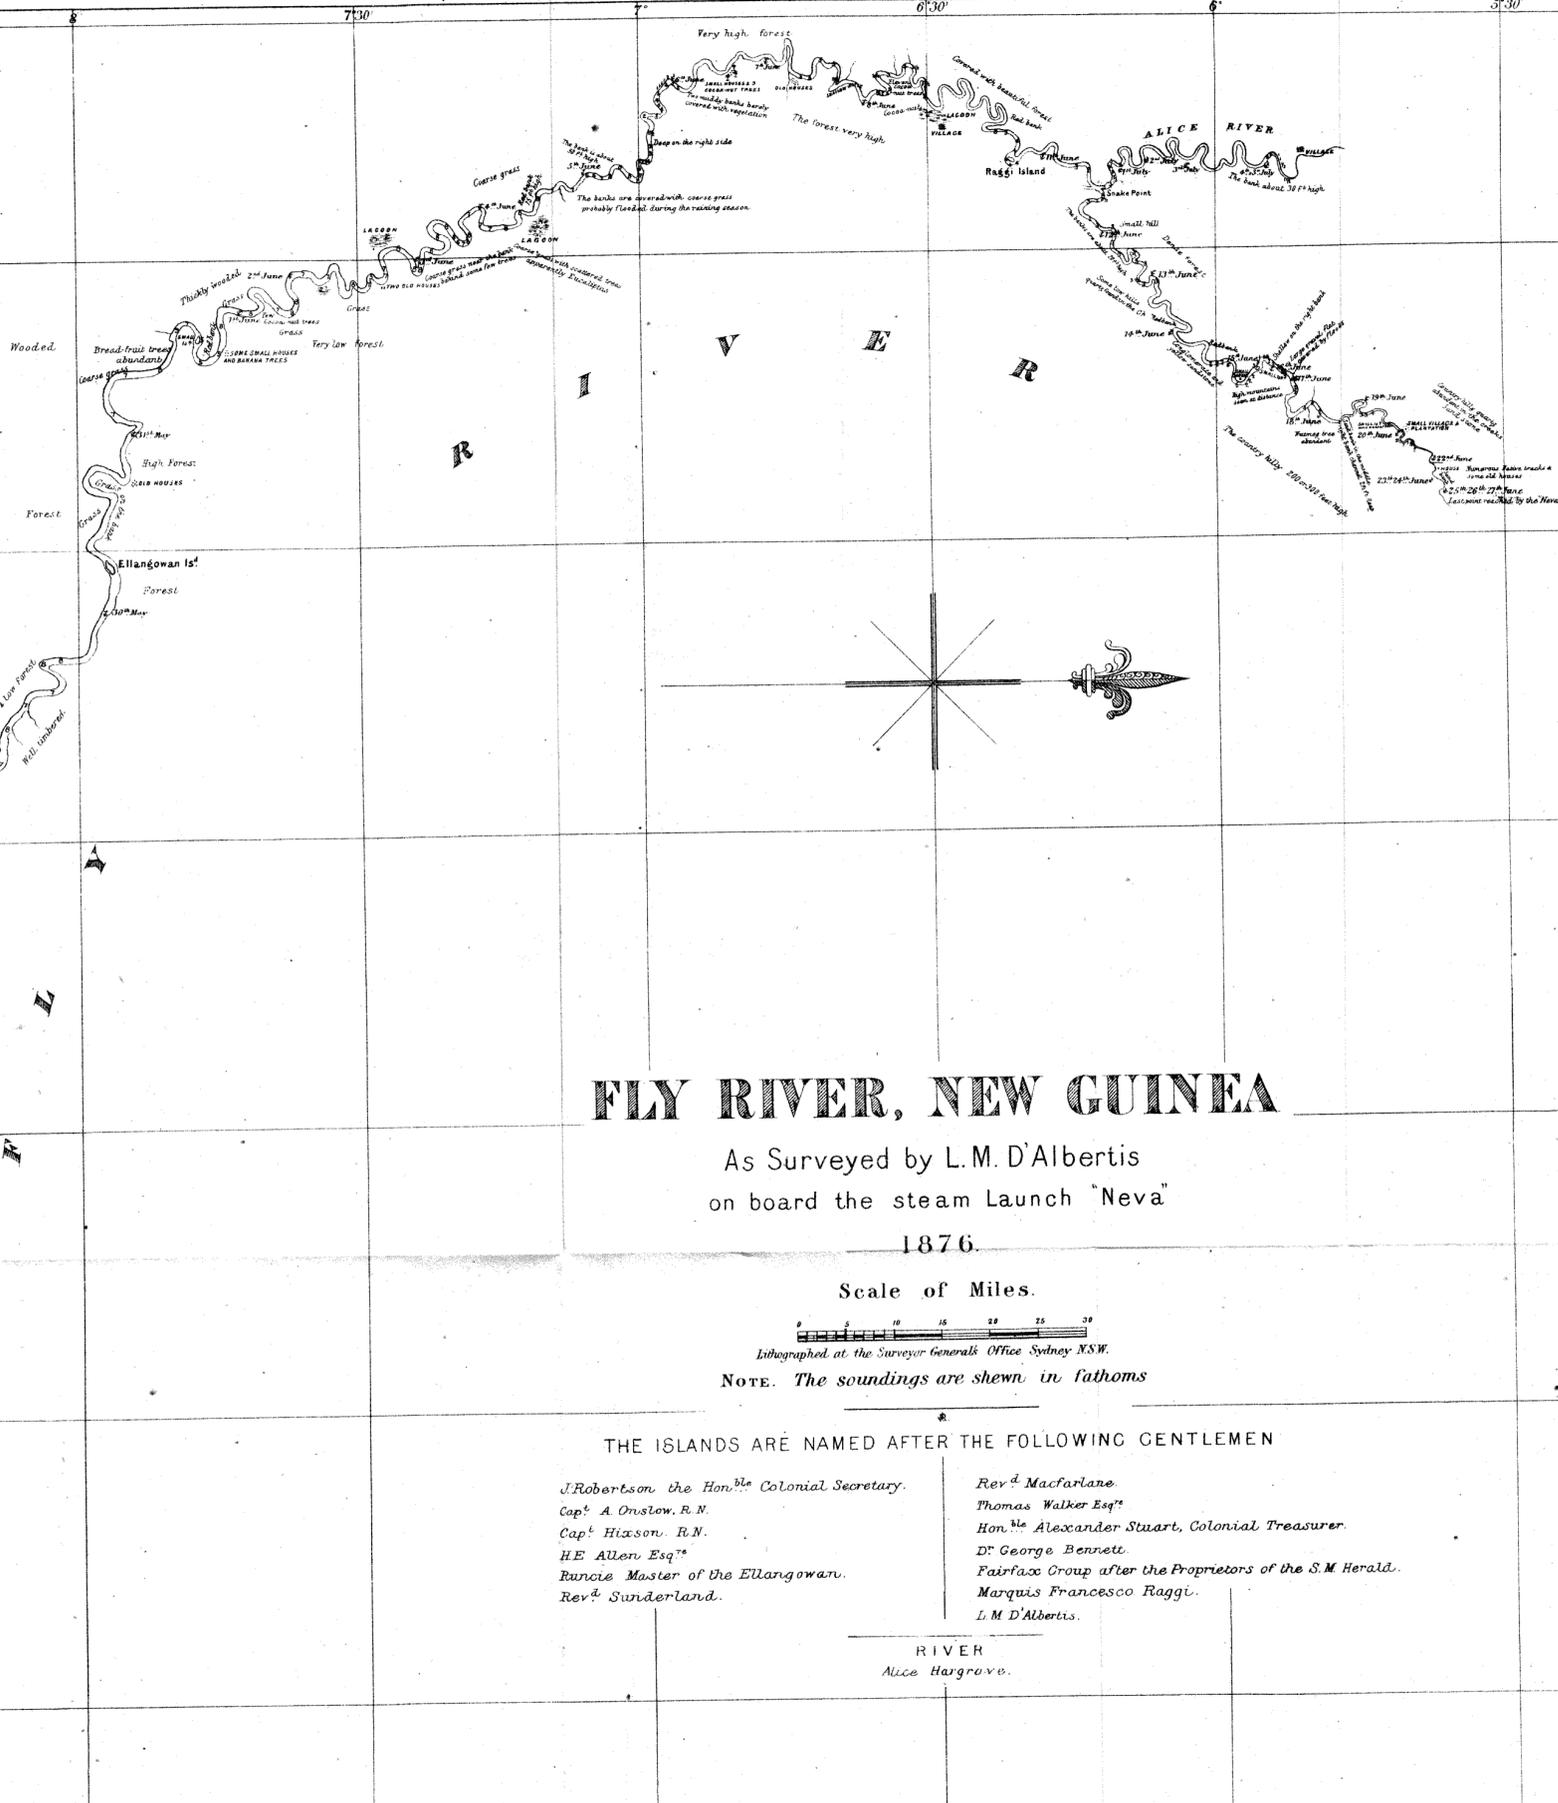

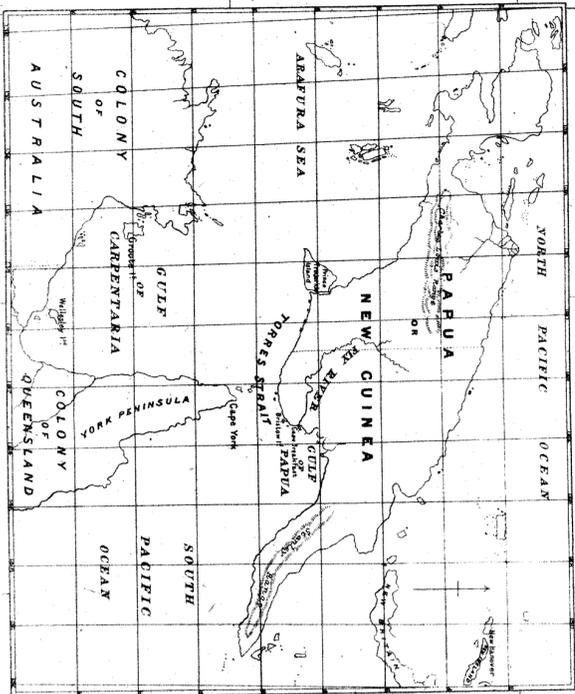

Sydney, 15 January, 1877.

APPENDIX.

Baron von Mueller's report.

THE collection of plants brought together by Signor D'Albertis, during his last expedition to New Guinea, is of particular interest, inasmuch as thus, for the first time, an insight into the vegetation of the more central portions of New Guinea is obtained. But since the distinguished Italian traveller, with the means at his command, could not extend his explorations beyond the country along the Fly River, only plants of strictly intratropical type, and mainly indicative of a jungle vegetation, came within his reach. It seems that no highland forms of plants descend to that river, as far as it was followed by Signor D'Albertis; nor shows the material kindly submitted to me any repetition of the Australian types, which some other portions of South-eastern Papua have brought to light, except two species of phylloidinous Acaciæ, both distinct from *A. Simoi*. This almost entire absence of Australian forms on these newly-traversed lines may perhaps be accounted for by geologic circumstances. But now, for the first time, are added to the hitherto recorded genera of New Guinean plants: *Gompharena*, *Grewia*, *Melhania*, *Muhlenbergia*, *Connarus*, *Terminalia*, *Pipturus*, *Codiaeum*, *Cynometra*, *Ceratophyllum*, *Jussiaea*, *Alstonia*, *Coleus*, *Vandellia*, *Limnanthemum*, *Calanthe*, *Eurycles*, *Costus*, *Schelhammeria*, *Dracaena*, *Hypaelytum*, *Phragmites*, *Paspalum*, *Lycopodium*, *Helminthostachys*, *Gleichenia*. The collection contains also species representing the following genera:—*Myristica* (nutmeg), *Wormia*, *Pittosporum*, *Elaeocarpus*, *Hibiscus*, *Dysoxylon*, *Harpullia*, *Vitis*, *Semecarpus*, *Maenga*, *Phyllanthus*, *Piper*, *Albizza*, *Mucua*, *Ficus*, *Eugenia*, *Barringtonia*, *Gardenia*, *Psychotria*, *Ixora*, *Plectronia*, *Myrmecodia*, *Ipomœa*, *Maba*, *Dischidia*, *Alstonia*, *Tabernæmontana*, *Mæsa*, *Coleus*, *Clerodendron*, *Solanum*, *Tournefortia*, *Cycas*, *Freycinetia*, *Flagellaria*, *Calamus*, *Pothos*, *Cordyline*, *Seleria*, *Kyllingia*, *Hypaelytum*, *Panicum*, *Coix*, *Leptaspis*. Besides, there are also representatives of other genera belonging to *Anonaceæ*, *Menispermaceæ*, *Rutaceæ*, *Laurineacæ*, *Melastomaceæ*, *Myrtaceæ*, *Araliaceæ*, *Urticaceæ*, *Euphorbiaceæ*, *Acanthaceæ*, *Gesneriaceæ*, *Orchidaceæ*, and *Palms*; but to define the species of these, and to contrast them with allied forms of other tropical regions, especially of the Sunda Islands, the Philippines, and Polynesia, will require careful investigation, the results of which will be promulgated in the succeeding pages of the publication on "Papuan Plants." As specially noteworthy on this occasion, may be mentioned a sapotaceous tree with edible fruit, two *Begonias* (one with spotted leaves), a grand *Hibiscus*, and several amaranthaceous and scitamineous plants of horticultural importance; further, a *Nepenthes* (Pitcher-plant), distinct from *N. Kennedii*.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

NO-LIABILITY MINING COMPANIES BILL.
(PETITION OF CERTAIN GOLD-MINERS AND OTHERS, IN FAVOUR OF.)

Ordered by the Legislative Assembly to be printed, 22 February, 1877.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The humble Petition of the Gold-miners and others, resident at Sydney,—

MOST RESPECTFULLY SHOWETH :—

That a Bill is now under the consideration of the Parliament intituled "A Bill to incorporate No-Liability Mining Companies."

That your Petitioners believe that by passing into law the above Bill, it will be conducive to the development of the mineral resources of this Colony, which are at present languishing for want of legislation of this character.

And your Petitioners further believe that an Act similar in character to the above Bill has worked beneficially in the Colony of Victoria.

Your Petitioners therefore humbly pray that the said Bill now under consideration of your Honorable House may be passed into law.

And your Petitioners, as in duty bound, will ever pray.

[Here follow 335 signatures.]

Commission.

VICTORIA, by the Grace of God, of the United Kingdom of Great Britain and Ireland, Queen, Defender of the Faith, and so forth,—

To our trusty and well-beloved—

The Honorable THOMAS HOLT, a Member of our Legislative Council of our Colony of New South Wales;

The Honorable JOHN BOWIE WILSON, and

JAMES SQUIRE FARNELL, Esquire, a Member of our Legislative Assembly of our said Colony.

Greeting :

KNOW ye that we, reposing great trust and confidence in your ability, zeal, industry, discretion, and integrity, do by these presents authorize and appoint you as hereinafter mentioned to make a diligent and full inquiry as to the best mode of cultivating the Oyster, of utilizing, improving, and maintaining the natural Oyster Beds of the Colony, and also, as to the legislation necessary to carry out these objects, with a view of offering such suggestions as you will think desirable for the framing of new laws and regulations thereto : We do by these presents give and grant to you, at any meeting or meetings to which all of you shall have been summoned, full power and authority to call before you all such persons as you may judge necessary, by whom you may be better informed of the truth in the premises, and to require the production of all such books, papers, writings, and all other documents as you may deem expedient, and to visit and inspect the same at the offices or places where the same or any of them may be deposited, and to inquire of the premises by all lawful ways and means : And our further will and pleasure is that you, after due examination of the premises, do and shall, within the space of three months after the date of this our Commission, or sooner if the same can reasonably be, certify to us, in the Office of our Secretary for Lands, under your hands and seals, what you shall find touching the premises : And this Commission shall continue in full force, although the proceedings thereunder shall not be continued by adjournment from time to time, and you may from time to time, if you shall see fit, without waiting for your full and complete Report, certify your several proceedings into our said Office, as the same shall be respectively perfected : And we hereby command all Government Officers, and all other persons whomsoever within our said Colony, that they may be assistant to you and each of you in the execution of these presents : And we appoint you, the said Thomas Holt, to be President of this our Commission, and do give you power at your discretion to procure such clerical and other assistance as you may deem necessary for enabling you to execute this our Commission.

In testimony whereof, we have caused these our Letters to be made Patent, and the Great Seal of our Colony to be hereunto affixed.

Witness our trusty and well-beloved SIR HERCULES GEORGE ROBERT ROBINSON, Knight Grand Cross of our Most Distinguished Order of Saint Michael and Saint George, our Governor and Commander-in-Chief of our Colony of New South Wales, at Government House, Sydney, in our said Colony, this twenty-third day of October, in the year of our Lord one thousand eight hundred and seventy-six, and in the fortieth year of our Reign.

(L.S.) HERCULES ROBINSON.

By His Excellency's Command,

THOS. GARRETT.

Entered on record by me, in Register of Patents, No. 10, pages 414-15-16-17, this twenty-third day of October, one thousand eight hundred and seventy-six.

HENRY HALLORAN,
(For the Colonial Secretary and Registrar of Records).

REPORT.

To His Excellency SIR HERCULES ROBINSON, Knight Grand Cross of the Most Distinguished Order of St. Michael and St. George, Governor and Commander-in-Chief of New South Wales, &c., &c., &c.

MAY IT PLEASE YOUR EXCELLENCY,—

The Commissioners appointed to inquire into the best mode of cultivating the oyster, of utilizing and improving and maintaining the natural oyster beds of the Colony, and as to the legislation necessary to carry out these objects, beg to state that, having given the subject their most earnest attention, having obtained all available information respecting oyster culture in other countries, having taken evidence from persons practically engaged in that pursuit in Australia, and having caused the principal oyster-bearing rivers to be examined and reported on, not only as to their present state but also as to their capabilities of improvement, have the honor to report as follows:—

1. The climate of New South Wales is pre-eminently suitable for the breeding, growth, and fattening of oysters; that under proper management, the oyster may be produced in the Colony in the greatest perfection, the greatest profusion, and probably at a cheaper rate than in any other part of the world. All authorities concur in representing the oyster as a food of great dietetic value. In Europe and America the cultivation of the oyster is an industry of great commercial importance, and there is every reason to believe that it may be made even more valuable in Australia; but, to obtain the full measure of the results that are possible, the natural advantages of our oyster fisheries must be improved by art and culture—and must be carried on with the same close regard to the conditions of success that is found necessary in other pursuits. Oyster culture, like agriculture or grazing, requires an intelligent industry in order to turn natural advantages to the best account.

2. As to the commercial value of oysters, the Royal Commission (Ireland), 1870, report as follows: "The value of the oysters consumed in England annually is estimated at £4,000,000 sterling, and there is no doubt that double that quantity would find ready consumption, if obtainable." And in a foot-note on the same page of their Report (p. 34) the Commission quote the following passage from the "Popular Science Review":—"Such is the importance of this branch of commerce, that 700,000,000 of oysters are annually consumed in London alone, and quite as many, if not more, in the provinces. Now, supposing we value them at 6d. a dozen, which is certainly below the ordinary selling price, we shall then have an annual expenditure in England of about *three millions sterling* in oysters alone. Could any fact," they say, "more powerfully attest the value of this branch of commerce?" (Mr. Buckland, in evidence he gave before a Select Committee of the House of Commons, said he had paid as much as 3s. 6d. a dozen for oysters (natives) or seven times the value given as above in the "Popular Science Review.") Bertram, in the "Harvest of the Sea," estimates the number of oysters consumed in London at nearly 800,000,000. In Chambers's Encyclopædia it is said "the oyster trade in New York amounts in value to £1,250,000 per annum"; but from Baltimore it was recently stated, in the newspapers, that 40,000,000 tins of preserved oysters are annually exported, of the value of about £2,000,000 sterling.

3. From the above statements as to the value of oysters for home consumption and export, and in view of the fact that this climate is so admirably adapted for producing oysters in quantities almost without limit, and at the minimum cost, it would naturally be supposed that the oyster business in this Colony was equal in importance to that in any other in commodity, with probably the sole exception of wool; but so far from this being the case, we regret to say that the home consumption of oysters (as compared with the population) is small, the export of preserved oysters nil, and the shipment of oysters to the neighbouring Colonies will probably not exceed in value £40,000 a year. But, what may seem still more strange, this great oyster country is actually importing preserved oysters from America! We have not been able to ascertain from the Custom House the value of the American oysters imported into Sydney, but, as we have reason to believe that tinned oysters are to be had at the stores in almost every town in the interior, the quantity imported cannot be very inconsiderable. We hope, however, that the time is not far distant when the importation of oysters into Sydney will be deemed as great an inversion of trade as carrying coals to Newcastle.

4. The first thing necessary in oyster culture is *to secure the spat*. It must be emitted in warm weather, and have some hard substance to adhere to, or it will be irrevocably lost. The Royal Commission (Ireland, 1870) say in their Report: "The great object of oyster culture is to secure the spat." And with respect to the grants or licenses of the Board of Public Works (in whom the management of the Irish Sea Fisheries was vested up to the year 1869), they say, "most of them must be regarded as total failures as far as the production of oysters—the greatest object of all—is concerned. In many instances the oysters laid down have fattened, and the grants have thus proved advantageous to the grantee, but this is a matter of small moment in comparison with the main object—*increased production*."

5. The climate of New South Wales appears to be as superior to that of England in respect to the production and preservation of spat as it is for the production of the orange or the grape. In illustration of this we quote from evidence given last year before a Select Committee of the House of Commons, and also from evidence given before this Commission.

Mr. George Baker, a member of the Whitstable Oyster Company, examined by the said Select Committee of the House of Commons:—He attributes the scarcity of oysters to there being a scarcity of spat for a number of years. The largest fall of spat he has ever known were in those years which were extraordinarily hot. He believes that warm weather and still water are the most necessary conditions for a successful spat. He attributes the small fall of spat chiefly to the cold summers.

Mr. G. Harvey, oyster merchant, examined by the Committee:—He agrees with the former evidence, that a warm season is undoubtedly required to obtain a successful spat.

Mr. H. S. Goody, solicitor and clerk to the Colchester Oyster Fishery examined by the said Committee:—For about twelve years there had been very little spat in the Colne. The failure was attributable to unfavourable seasons. If they had had hot weather, a sudden cold disappointed all their hope of spat.

Mr. J. Wiseman, examined by the said Committee:—He has cultivated oysters about twenty-five years, and his family have cultivated oysters in that district for about, 300 years. He attributes the scarcity of oysters entirely to the unfavourable spawning seasons for the last ten or twelve years. He is of opinion that it is entirely attributable to the want of a high temperature. He has noticed for the last twelve years that the hotter the summer the greater the spat, and the colder the summer the less the spat.

Mr. H. Polley, fisherman, examined by the said Committee:—He said it is only favourable summers that will increase the supply of oysters, and we have not had that lately; heavy gales of wind during spawning time are quite as detrimental as frosty nights.

Mr. Frederick Wiseman, examined by the Committee:—He attributes the present scarcity of oysters to the want of spat during the last seven or eight years, which is to be ascribed to the low temperature of the water and strong winds during the spatting season. He says: It is simply temperature—temperature—temperature; we cannot fight against Providence; he should like to have an oyster bed in a locality where as high a temperature as 84 degrees is attained; he will stake his own existence that the scarcity of oysters may be attributed to the continuous bad seasons we have had.

Mr. William Burt, oyster merchant, examined by the Committee:—He attributes the cause of the decrease of oysters to the want of warm weather during the spatting months.

Mr. Blake, Inspector of Irish Fisheries, examined by the Committee:—The French system of oyster culture is in many respects a great success, but they have what we have not, a climate favourable to it; give us the French climate and the proper temperature, and at the right time, and you will see very astonishing results.

Mr. F. Buckland, examined by the said Committee:—You have to give oysters warmth (heat if you like) and quietness. For many years there was no fall of spat in the west of England, and in 1864 Mr. Wiseman and I considered the matter, and we saw that it was absolutely necessary to consult Nature; I went to the Isle of Ré to examine what I could see there. What was the first thing we saw there? We saw vines; we looked down from the vines on to the oyster beds. There are no vineyards in Essex. The same temperature which makes the vines grow makes the oysters spat; you have turnips, not vines, in England, and this is the principal reason why the French have succeeded.

Mr. Frank Buckland, in a letter to the *Times*, dated 22nd August (1876), says: "The cause of the scarcity of oysters, of late years, is without doubt attributable to the want of a fall of spat. * * * If the lambs die, where are the sheep to come from? So, if the infant oysters die, there will be no five and six year old oysters to pack in barrels at Christmas time; if at the time of their birth the water is cold and the weather boisterous, they die; if the weather is warm and tranquil they live. * * * Heat and

and tranquillity being therefore necessary, * * * he would like to try to breed oysters in a hot-house, with the temperature of the water up to 70 deg." Such artificial contrivances may be expedient in England, but owing to the mildness of the Australian climate the moment the young oyster has fixed himself to a holding on place he is perfectly safe, and only wants a favourable position to grow and develop; and Mr. Buckland in his evidence, describes an oyster as being, when born, an image of his mother, shell and all; he can open and shut his shell, and has the power of volition. In England, oysters the first year of their age are called *spat*, when two years old they are called *brood*, when three years old they are called *ware*, and it is not until they are four years old that they are called *oysters*.

The evidence above quoted as given before a Select Committee of the House of Commons, with respect to the failure and scarcity of spat, contrasts strikingly with the evidence given before this Commission a few months later as to the large production and unutilized superabundance of spat in this Colony.

Mr. Gibbins (one of the lessees) says that he never made any attempt to collect the spat by means of wood or stone placed in the rivers; he had no occasion for any artificial means of collecting it, there is such an enormous quantity of spat sticking to the rocks. From the time you enter the Hawkesbury River you may say there are 100 miles of nothing but rocks, and the spat sticking to them.

Mr. J. Emerson (one of the lessees):—They have such large quantities of spat lying about, any quantity of it can be collected. They have large quantities on the George's River; the banks are covered with it, except where there is sand. There is also a vast quantity of spat in Port Jackson. You can go up Middle Harbour and find any quantity of it, and no use is made of it. If it were put in good fattening ground it would grow and produce good oysters. He thinks that we are so prolifically supplied people will not turn their attention to it. If we did not get it we should have to adopt artificial means, such as are used in other countries. He thinks this profusion of young oysters is due almost exclusively to the genial warmth of the climate.

Mr. P. James:—He has never considered it necessary to go to any expense in securing spat, because there is plenty of spat to be had without it; the supply is almost inexhaustible; he has noticed countless millions of oysters sticking to the rocks in Port Jackson.

Mr. W. H. Bell:—He has frequently observed how the rocks in the harbour of Port Jackson are plastered with spat. He has no doubt that it would be an advantage if this spat were carefully knocked off the rocks and planted. The climate of this Colony is favourable to the cultivation of oysters. He was about twenty or twenty-two years of age when he left Whitstable. He has seen a good deal of the working of that Company; they breed only a small portion of the oysters they fatten; they purchase brood and ware at various places. At low spring tides there are a great number of persons collecting young oysters—any size that will bear removing. He thinks the Company purchases four-fifths of their oysters; they would certainly not be able to carry on their operations if they had not the opportunity of purchasing brood.

Mr. W. J. Langham, Inspector of Oyster Beds:—He said there were large quantities of oysters on the rocks and mangroves going to waste which might be converted into excellent food. Captain Griffin has done a great deal for a place like that he has at Limeburner's Creek. He utilizes all the spat he can get. He wished to get some from the rocks at Port Stephens, but Captain Griffin told him the lessees refused to let him have any; they preferred seeing it going to waste rather than allow him to utilize it. He thinks there is enough spat going to waste in Broken Bay to supply half the rivers working at the present time. There are oysters sent to market which, in his opinion, are not marketable, and which should not be sold as human food, but if they were laid down on suitable soil they would grow and become fat and good oysters. All the lessees seem to care about is to get as many oysters as they can. With respect to the rivers not leased, but closed, Mr. Langham said—"There is an immense quantity of spat at Port Hacking and no use is made of it; it was closed, at the request of the lessees, to prevent stealing. There are great quantities of young oysters on the rocks in Port Jackson; the Government do not make any use of them themselves, and will not allow any one else to do so."

6. We have thought it expedient to quote the above evidence at some length, in order to show the vast natural capabilities of this country for breeding oysters, and also the waste of young oysters which in England would be of high value, and which waste is as much to be deprecated as the former practice of burning oysters for lime. Bertram says—"The fisher people at Colchester and other places prowl about the sea shore and pick up all the little oysters they can find—those ranging from the size of a three-penny piece to a shilling, and persons and Companies having layings purchase them to be fattened for the table. At other places the spawn itself is collected, by picking it from the pieces of stone or the old oyster shells to which it may have adhered, and it is nourished in pits as in Burnham, for the purpose of being sold to the Whitstable people, who carefully lay it on their ground. The stock of oysters in the private layings of the Whitstable Company is said to be of the value of £200,000.

7. The breeding and fattening of oysters are as distinct as the breeding and fattening of cattle. In France the breeding is carried on in "*parcs*" and the fattening in "*claires*," which processes we will hereafter explain. In England there are many persons and Companies who never breed any oysters, but who do a very considerable business in buying spat, brood and ware, that is, young oysters one, two, and three years old, which they put in their "*layings*" or fattening beds to grow and fatten. The collecting of these very young oysters at the low tides gives employment to many persons, and the spat they collect is matured into excellent food which would otherwise be lost.

Mr. G. Baker, a member of the Whitstable Company, said, in the evidence he gave before the Select Committee of the House of Commons (1876), (to which we have alluded) he does not think his Company breeds a fifth of the oysters it sells. It has imported oysters during the thirty-five years he has been connected with it. If it were prevented from importing oysters from other grounds, it would bring the Whitstable Company to an end.

Mr. H. S. Goody, solicitor and clerk to the Colchester Oyster Fishery Company, said, in the evidence he gave before the said Committee, the Colne and the Blackwater fisheries join on to each other. The former is good fattening, and the latter good breeding ground. If the Colne Company had not been able to purchase brood, the fishery must have entirely failed. During the five years 1871 to 1875, the Colne Company have been supplied with brood at a cost of £16,138. He said, what astonishes any one who looks at the map and sees where the two rivers join (Colne and Blackwater), that in the former there is a large deposit of large oysters and no brood, and in the Blackwater few large oysters and plenty of brood.

Mr. Hole, oyster merchant, gave the following evidence before the said Committee:—Theirs is a growing and fattening process; they do not profess to be breeders; they never get any spat upon fattening grounds—such a thing was never known to be—the oldest servant they have never heard of such a thing. They put down small oysters, and their profit consists in the growth which they make. If they were to touch them in the summer months, they would disturb the beautiful shell growth that is being made, which is very thin. It is not at all injurious to remove brood. Oysters should be moved, just as anything in vegetation is transplanted. Oysters do not begin to thrive and fatten until they are moved. They import oysters from Ireland and all parts, and keep Falmouth as a sort of half-way house from Ireland. Oysters will not fatten at Falmouth; they are very poor, starved-looking things, and have not that nice fatness they acquire afterwards. They bring oysters into the Thames and Medway for the purpose of fattening them. The best fattening beds are supposed to be creeks and inland waters.

Mr. C. W. Harding gave evidence before the said Select Committee:—Is Bailiff of the Lynn Oyster Fisheries. He finds that the shallower the water the fatter the oysters are, and the deeper the water the poorer they are.

Mr. F. Pennell gave evidence before the said Select Committee:—He said it is very rarely that on a fattening bed the spat is produced, and if so that it comes to anything. He thinks a fattening oyster is always fit for market, and breeding oysters are rarely found fat. A fattening ground is usually a small creek, with muddy banks, and the bed is made in the middle with shells, upon which the oysters are laid. The fattening grounds are more or less all artificial. He would not prohibit the sale of oysters from a private bed, unless it was necessary to do so, in order to assist in carrying out some law, to enforce a close time on public beds; then he would stop consumption, but not for any other purpose. The law of nature is more or less suspended, as regards oysters being sick, on artificial fattening grounds. He has often made a hearty lunch of oysters in summer, and certainly thinks they are really fit to eat. He thinks the Committee has had evidence that only one oyster in ten, as a rule, spats, and all the rest would be fit to eat.

Mr. John Bullock, examined by the said Committee:—He has been thirty years connected with the Blackwater or Port Fisheries, where there are 400 or 500 vessels employed dredging in that river. He believes it to be a good river for breeding and growing oysters, but not for maturing and fattening them. He dredges and sells the oysters he has caught to Companies and private individuals, to mature and fatten for the market. He does not think it impoverishes the bed by carrying off the brood—he thinks it is beneficial.

Mr. Frederick Banyard, examined by the said Committee:—He has been engaged in oyster culture and oyster dredging from twenty to thirty years. He works upon his private ground or "*layings*," which is about an acre and a half, and when he is not so employed he works upon the Blackwater. He thinks, and indeed he is sure, that the Blackwater is one of the most productive spatting grounds in the kingdom. He says, brood growing upon a nice clay bottom would fatten as much in one year as another would upon a stony bottom in two years. He has private (oyster) ground upon a creek running into Blackwater, and 300 fishermen belonging to Mersea and Tollesbury have ground like that. They certainly are valuable.

Mr.

Mr. J. A. Blake, Inspector of Irish Fisheries, examined by the said Committee:—He said a place that is fit for fattening is not good for production, and, where production is most successful, there is the least done in the way of flavouring and fattening oysters. For example, one Honorable Member of this Committee has got a very good place for production, which he (Blake) has recently examined at his request, but it will never fatten nor flavour oysters, in his opinion. He must either send his oysters to where there is a marly soil like the London blue clay, or he must make fattening beds of his own by bringing the suitable soil. He is very strongly in favour of private fisheries.

Mr. S. Walpole, Inspector of Salmon Fisheries, examined by the said Committee:—He said there are a great many beds in England where the oysters are never sold for purposes of food, but to be laid down on other beds, in order that they may be fattened and brought to market subsequently. He thinks, with great submission to the Committee, that the chief object ought to be to protect the breeding beds.

Dr. Kemmerer, one of the most eminent of French oyster culturists, is of opinion that the oysters in the claires (fattening beds) are usually sterile, and that over-fatness is the cause in most cases.

8. From the evidence taken during the same year (1876) before a Select Committee of the House of Commons, and this Commission, it would appear that in England it was considered to be all-important to protect the breeding beds and secure the spat, whilst in this country the spat was so superabundant that it was not thought to be worth collecting and placing in suitable ground where it would grow and fatten. The time, however, will come, and probably is not far distant, when the immensity of oyster spat in this Colony will be utilised, and when oysters will become an important article of food for home consumption, and of commercial value for exportation; and when we shall not be satisfied with utilizing only what Nature so lavishly bestowed upon us without labour, but we shall also employ artificial means to breed as well as to fatten oysters.

9. The oyster is generally supposed to be hermaphrodite, and the spatting usually takes place when the parent oyster is from three to four years old. An oyster is estimated to produce between one and two million oysters at a birth, and of this spat a large proportion is destroyed by fish, crabs, and other enemies, or from the want of some hard substance to which it can adhere. The whole of the spat would perish if there were no other holding-on place for it than sand or mud.

10. With respect to the best kind of collectors to be employed, cultivators must be governed by the facilities offered in the neighbourhood, and they are very various. For instance, where wood is plentiful, as in this country, the best and cheapest means for securing the spat is probably the branches of trees, especially those of the swamp oak, but in places where there are few trees other means must be adopted. At the Island of Ré, where there are few trees, stones and tiles have been largely used as collectors of oyster spat. At one time there was quite a *furor* for oyster culture on that island, and several thousand parcs, as they are called, were constructed on the foreshores of that island. Bertram, in his "Harvest of the Sea," says:—"The secret of there being only a holding-on place required for the spat to insure an immensely-increased supply of oysters having been penetrated by the French people, the plan of systematic oyster culture was easy enough. A few initiatory experiments speedily settled the fact that oysters could be grown in any quantity. Oyster culture was begun as recently as 1858 at Ré, and in 1868 there were on that island upwards of 4,000 parcs and claires. The system of breeding oysters, that is, securing the spat in claires, was, Bertram says, inaugurated by a stonemason of the name of Bœuf. He enclosed a portion of the foreshore of the island, about 30 yards square, with a wall of rough stones about 18 inches high, and in this enclosure or parc he laid down a few bushels of growing oysters. The result of this initiatory experiment was so successful that in the course of a year he was able to sell £6 worth of oysters. Elated by the profit of his experiment he proceeded to double the proportions of his parc, and by that means more than doubled his oyster commerce, for in 1861 he was able to dispose of upwards of £20 worth, and this without impoverishing in the least degree his breeding stock. He continued to increase the dimensions of his farm, so that by 1862 his sales had increased to £40. When the great success of Bœuf's experiments had been proclaimed in the neighbourhood, a little army of about a thousand labourers came down from the interior of the country and, along with the native fishermen, took possession of portions of the shore, which were ceded to them by the French Government at a nominal rent of about a franc a week, to be cultivated as oyster parcs. The most arduous duty of these men consisted in clearing off the mud, which lay on the shore in large quantities, and which is fatal to the oyster in its early stages; but this had to be done before the shores could be turned to the purpose for which they were wished. After this preliminary business had been accomplished, the rocks had to be blasted in order to find stones for the construction of the parc walls; then these had to be built, and the parcs had to be stocked with breeding oysters, &c. Some gentlemen from the island of Jersey, who visited Ré, report that an incredible quantity of oysters had been produced on that shore, which

a few years ago was of no value; so that this branch of industry now realizes an extraordinary revenue, and spreads comfort amongst families which were formerly in a state of comparative indigence. A series of enormous and unproductive mud banks, occupying a stretch of shore about 4 leagues in length, are now so transformed and the whole place so changed as to appear to be the work of a miracle.

Dr. Kemmerer, of St. Martin's, Island of Ré, has invented a tile which he covers with some kind of composition that can, when occasion requires, be peeled off, and this plan is useful for the transference of the oyster from the collecting parc to the fattening claire.

Lake Fusaro is highly interesting as being the first seat of oyster culture. It is the *Avernus* of Virgil. It is still devoted to the highly profitable art of oyster-farming. The mode of oyster breeding at this place is now, as it was eighteen centuries ago, to erect artificial pyramids of stones in the water, surrounded by stakes of wood, in order to intercept the spawn. Fagots of branches were also used to collect the spawn, which must find a holding-on place within forty-eight hours after its emission, or it will be lost for ever.

The Royal Commission (Ireland) say:—Hurdles and fascines have been found to answer well as collectors, and they will be found cheaper. They are fixed in rows, by means of pegs, about 2 or 3 feet above the oysters, which are scattered on the soil under them.

Furze bushes are also found to answer fairly, but fascines and bushes are scarcely so suitable in a tide-way, in consequence of the liability of the twigs to catch weed, break, and float away, when the spat is carried with them. In all cases when wood is employed for collectors, it should be dry, hard, and sapless, and cut, at least, in the preceding season. Oysters are more easily detached from wood collectors; the loss or damage to the shell breaking them off is least upon fascines, as the twigs are easily broken off; the loss is greater on hurdles, greater still on tiles, and greatest of all on stones. The young oyster, though somewhat malformed at times on twigs, soon regains its shape when detached without damage. Tiles are largely used in France because they are cheap—about £2 per thousand. One cultivator, at Auray, possesses 200,000 tiles, and on these he obtained, in 1869, six-millions of oysters.

11. In New South Wales the production of oysters is immensely beyond our present requirements, and Nature has also provided us so amply with holding-on places (rocks, mangrove trees, &c.) for collecting the spat, that it appears almost superfluous for us to allude to the subject of oyster-breeding; but this state of things may not always continue, and at some future time information on breeding oysters will be as useful as that on the growth and fattening of oysters is at the present time.

12. As Regards the Fattening of Oysters.—The nature of the bed or soil on which it rests is a matter of the greatest importance. Bertram says the beds of "natives" are all situated on the London clay, or on similar formations. * * *. The portion of the beds set apart for the rearing of "natives" is as sacred as the waxen cells devoted to the growth of queen bees. But, although called "natives," in many instances they are not "natives" at all, but are, on the contrary, a grand mixture of all kinds of oysters, being brought from Prestonpans and Newhaven, in the Firth of Forth, and from many other places, to augment the stock. Many circumstances highly favourable to the growth and fattening of oysters are the reverse for successful breeding. Growth and fattening will proceed where there may be a large amount of fresh water and a strong current: the former would prove prejudicial to spatting, and the latter tend to prevent the adhesion of spat—at least in the locality at which it is voided. It is a remarkable fact that there are no fine flavoured oysters where there is not fresh water, and this fact was noticed by Pliny more than eighteen hundred years ago. The Royal Commission (Ireland) says: For fattening there are few places better than a salt marsh. The fattening ponds (termed claires) at Marennes and La Tremblade, of which sketches are appended, are at both places formed out of salt marshes, and are in many instances only old disused salterns or salt pans, in which rough salt was made. The number of oysters laid down in claires is proportioned to the time it is intended they should remain there; for as the food of the oyster is limited, a smaller number will of course fatten more rapidly than a larger number. The average distribution is about two or three to the square foot. The oysters thus fattened are of excellent flavour and quality.

Mr. Cholmondeley Pennell, Inspector of the English Oyster Fisheries, who was sent by the Board of Trade to inspect and report upon the French modes of oyster culture, says in his report:—"The fattening pits (claires) are excavated from one to two feet deep, and are of all shapes and sizes, from ten to sixty yards square, which latter is the maximum, the usual size being from forty to fifty yards square. It is in these pits that the celebrated green oysters are fattened. Round the margin of the claires, at Marennes, a trench or channel is excavated a yard or two wide, and an extra foot deep, the object of which is to equalize the temperature when the shallower water becomes too hot or too cold. One portion of the side

side of each claire is cut down to the depth at which it is wished to keep the water; this depression communicates with the nearest gully or natural channel, and at spring tides (when only the water in the tides can be changed) the tide, winding its way up the channel, finds ingress and egress. The same channel also serves to carry away the waste water whenever it is wished to lay the pits dry, for which purpose the simple method is adopted of digging a hole in the clay bank, which is readily stopped up again when desired.

During the summer months the sea has free ingress and egress to the claires to purify them, and the coating of blackish mud which has collected on the surface during the preceding year is also removed. In August they usually stop up the gaps in the banks, in order that the continued action on the soil and water may produce the greenish creamy scum with which the surface mud of all the claires is covered. Oysters in the claires do not begin to fatten until late in the autumn and winter. A large quantity of oysters will live well in the pits, but they will not fatten if too numerous. There is no doubt that the fewer oysters that are placed in a pit, the more food there will be for each of them and the quicker they will fatten. Wherever these claires have been constructed they have succeeded, and, when once constructed, the labour and expense of working them are small. The claires at Marennes occupy a strip of low-lying clay country on the river Seudre. The soil is marl, that is, a mixture of chalk and clay, and is of various colours—greyish, blue or black, greyish yellow, and in some cases red. The muddy or marly bottoms are most favourable to the growth and fattening of the oyster. Professor Sullivan says, “the soil of all places successful as oyster fattening stations contains more or less of a fine flocculent highly hydrated silty clay, abounding in vegetable and animal matter, derived chiefly from diatomacea, rhizopoda, and other microscopical organisms; and that the soils of those places which have proved successful as breeding stations always contains some of it, but not necessarily as much as those which fatten; and lastly, that in those places which have proved failures, this peculiar kind of mud is either wholly absent, or inferior in quality and quantity.”

13. The Royal Commission (Ireland) say, fruitful oyster mud may vary within very wide limits, from almost pure sand to almost plastic clay. In the very sandy grounds, there must, however, be always a sufficient quantity of highly hydrated clay to render the sand adhesive and to preserve it from becoming a mere loose running mass.

14. In the clayey grounds there must always be calcareous mud to make the clay porous and prevent it becoming too hard,—clay marls, with some intermixed sand, being perhaps the best of all materials for oyster grounds.

15. The earth known as the London clay appears to be the soil peculiarly adapted for oysters. It may be well here to explain that the term “London clay” is employed in a general and a special sense. In the former it is used as a collective name for a number of beds of the old tertiary formation, consisting of gravels and sands below and of clays above. In the special or limited sense, it is applied to the bluish or blackish clay, sometimes mixed with a greenish coloured earth and white sand, which forms the upper parts of the beds just mentioned. London clay is plastic clay, not differing much in chemical composition from ordinary potters’ clay. All fruitful oyster muds contain organic matter, always due, in part, to the presence of infusoria, and sometimes, in part, to small algæ or confervæ, remains of shell fish, and other marine creatures.

16. Bertram says, one of the most lucrative branches of oyster farming in France is the fattening of oysters in claires, at Marennes, which have been brought from the Ile de Ré breeding parcs. In the claires the oysters become green, and of considerably more value than the white oyster. The peculiar colour and taste of the green oyster are imparted to it by the vegetable substances which grow in the claires. The industry carried on at Marennes consists chiefly of the fattening in claires; and the oysters operated upon were at one period of their lives as white as those which are grown at any other place; indeed, it is only after they have been steeped a year or two in the muddy ponds (claires) of the river Seudre that they attain their much-prized green hue. The ponds (claires) for the manufacture of these green oysters—the oyster *par excellence*, according to all epicurean authority—require to be watertight, for they are not submerged by the sea, except during very high tides. Each claire is about 100 ft. square; the walls for retaining the waters require, therefore, to be very strong. They are composed of low banks of earth, five or six feet thick at the base, and about 3 ft. in height. These walls are also useful in forming a promenade, on which the watchers or workers can walk to and fro and view the different ponds. The floodgates for the admission of the tide require also to be thoroughly watertight and to fit with great precision, as the stock of oysters must always be covered with water, but a too frequent flow of the tide over the ponds is not desirable, hence the walls, which serve the double purpose of both keeping in and keeping out the water. A trench or ditch is cut in the inside of each pond, for the better collection of the green slime left at each flow of the tide; and many tidal inundations

are

are necessary before the *claire* is thoroughly prepared for the reception of its stock. When placed in these greening *claires* they are usually from twelve to sixteen months old, and they must be left for a period of two years at least before they can be properly greened, and if left a year longer they are all the better. Dr. Kemmerer says: "The green oyster has only been regarded as a luxury for the table of the rich, but I would like to see it used as food by every one."

17. In this Colony we have salt water swamps, marshes, mudbanks (or *crassets*, as they are called), more or less covered by the tides, where *claires* for the fattening of oysters (and probably also the *greening* of them if required) could be carried on to a very considerable extent. We have the same kind of rich mud as that in the estuary of the Thames, which is so celebrated for fattening oysters. Professor Watt has analysed some of the mud out of one of the bays of the George's River, and found it to be similar to the London clay, of which the Portland cement is made. There is nothing more unsightly than a salt water marsh, and it is probably as unhealthy to the neighbourhood as it is unsightly. Not a blade of grass grows thereon, or indeed anything which is useful for either man or beast. But these marshes may by means of *claires* become more highly productive than any high dry land however rich. They are capable of fattening oysters and growing grass or vegetables in perfection.

18. In cutting the *claires* it is not necessary that they should be of any particular shape or size, and it would be absurd to imitate the French in the *claires*, which were originally excavated for salterns. We learn from some of the witnesses, who gave evidence before a Select Committee of the House of Commons, that oysters grow and fatten the best in creeks and shallow water. Mr. Pennell says:—A fattening ground is usually a small creek with muddy banks, and the bed is made in the middle with shells, upon which the oysters are laid.

19. We think it right to mention, for the information of those who may contemplate making *claires* for the growth and fattening of oysters, that the experience of Mr. Holt (the Chairman of this Commission) is decidedly against the damming of them. Mr. Holt has constructed *claires* of more than 30 miles in total length, and he spared no expense in making flood-gates and dams, according to the most approved systems he had seen in France, but he has since had reason to believe that it was a mistake, and he has done away with them entirely, and let the *claires* have the full benefit of the ebb and flow of the tides, which has caused a very considerable saving in the expense of management, and a vast improvement in the oysters.

20. The green oysters produced in the *stagnant* *claires*, may, like the huge goose livers produced by keeping geese before hot fires for the *pâté de foie gras*, be appreciated by the French gourmands; but it is a question whether oysters and geese fattened by natural means are not the most wholesome. Monsieur Tandon, in his "*Le Monde de la Mer*" (World of the Sea), says:—"Oysters" (in France) "are put in *claires*—long canal-like excavations—filled with green, stagnant saltwater. The green matter, which makes the water all but offensive, penetrates the system of the poor Molusks compelled to inhale it. The oyster under this *regime* fattens, and soon obtains that obesity so relished by the connoisseur, but which is really the result of disease induced by the unwholesome water of the *claire*. Imagine the unspeakable disgust of the oyster after living in the beautifully clear and fresh water of the ocean, at being immured in a stagnant pool, whose water is seldom changed but always charged with filth!" The oyster *claires*, with the full flow of tides, resemble in many respects the English fattening creeks, with the sole exception that the former are probably more artificial than the latter. In this latitude there is no fear of the young oysters being killed by the frost by being left dry at low tides; on the contrary, there is reason to believe that they are benefited by the change; and at Arcachon, one of the most extensive and prosperous oyster fisheries in France, the oysters are always left dry at low tides. Mr. Buckland, in evidence he gave before the said Select Committee of the House of Commons (1876) said: Oysters have sometimes a very rotten appearance about the shell, like a very old wine cork. This is caused by a sponge called *clione*, which gets into the oyster shell and completely riddles it and makes it quite fragile to the finger. By exposing the oysters to the rays of the sun the *clione* is killed, and it will not live again.

21. The enemies of the oyster, such as the five-fingers, &c., can be seen when walking on the banks, and forked out with the greatest ease; and the oysters when ready for market can be gathered out of the *claires* as easily as potatoes are dug up in a garden, and at as little expense. Bertram tells us in England the dredgermen on the Colne River Fishery are never paid less than 12s. and sometimes 40s. a bushel for dredging the oysters. What a contrast there is between the cost of gathering oysters out of the shallow *claires* in this Colony and dredging for them in the deep waters of England.

England. As the climate of New South Wales is equal to that of the finest parts of France, Spain, or Italy; and is equally as applicable to the breeding, growth, and fattening of oysters as to the breeding, growth, and fattening of cattle on the natural pastures, all the year round.

22. Ten or twelve years ago the oyster industry in France was in a high state of prosperity, but five or six years later it was in a most deplorable state, and Mr. Pennell and others gave melancholy accounts of the failures of oyster culture in that country. This did not arise from natural causes, such as frost, snow, floods, &c., which occasioned such tremendous losses of spat and oysters in England, Ireland, and Scotland, but from the negligence and greed of the cultivators. The Royal Commission (Ireland, 1870) say in their Report: There is no reason to doubt that the decline in production (in France) is to be attributed to the neglected state of the collectors, and also to the selling of too many of the parent oysters, and thus annihilating to a considerable extent the source of spat. This, the Commission say, is admitted by the proprietors themselves, who have found their expectations to get spat without parent oysters to be delusive, and they are now taking means to renew the stock of oysters and collectors. The selling of their breeding oysters is but a repetition of the old story of killing the goose that lays the golden eggs. But now the tide has turned, and the French having learned by bitter experience not to trust solely to their fine climate and great natural advantages, have put their shoulders to the wheel, and by skill and industry have turned the bountiful gifts of Providence to good account. Like causes can never operate in New South Wales to injure the oyster industry, from the fact that there are many localities where marketable oysters cannot be profitably dredged for consumption, but where spat can at all times be obtained in any quantity.

23. Mr. Farrar, Secretary to the Board of Trade, in the evidence he gave before the said Select Committee of the House of Commons (1876), said:—"Mr. Pennell was sent by the Board of Trade, in 1868, to inspect the French oyster fisheries, and he gave a most melancholy account of them—nothing could be worse. The Irish Commission confirmed that melancholy account; but now it appears from the official returns of the French Government (1876) that the production has enormously increased. At Marennes the private cultivators have been enormously successful: At Cancale the value of the oysters produced had risen from 97,375 francs in 1869 to 720,800 francs in 1874. The oysterculturists, who have established parcs on the banks of the Auray, gather considerable quantities of young oysters in their collectors, and many of them have already realized important profits. Many of the proprietors of parcs are embarrassed by the abundance of their produce. Mr. J. A. Blake, Inspector of Irish Fisheries, in the evidence he gave before the said Select Committee (1876) said:—"French oysters will cause a great revolution in the oyster trade in England; so that we need to care very little about our own production at all, but look more to the fattening."

24. After carefully reading and considering everything procurable that has been written about a close season for oysters, as well as the evidence taken before this Commission, we have come to the conclusion that a close season is unnecessary, and would be prejudicial to the public interests and to the oyster industry in this Colony. There may be valid reasons for restricting the consumption of oysters to nine months in the year in those countries where, notwithstanding their dearness and scarcity, the people were not satisfied with eating them at one meal a day, but must needs have them (probably because they were dear and scarce) at *four* meals a day. Mr. Blake, in evidence he gave before the said Select Committee of the House of Commons (1876), attributes the scarcity and dearness of oysters chiefly to the great consumption of them. He says it became the custom in France about fifteen years ago to introduce oysters at four meals—at breakfast, luncheon, dinner, and supper; no entertainment was complete without oysters, and that fashion came into operation in England, and a vast demand for oysters arose, and the enhanced price induced the people to dredge extensively; whilst, at the same time, we began to have bad spatting seasons. There is every reason to believe that oysters that are not sick or spatting are as wholesome food in summer as in winter, and therefore there is no more reason to make a close season for oysters than there is for beef or mutton. Mr. F. Pennell, in evidence he gave before the said Select Committee of the House of Commons (1876), said he would not prohibit the sale of oysters at any time from a private bed unless it was necessary to do so in order to assist in carrying out some law to enforce a close time on public beds; then I would stop consumption, but not for any other purpose. He thinks a fattening oyster is always fit for market; he has rarely known the oyster sick on fattening ground; he has often made a hearty lunch of oysters in summer.

25. Having now indicated the actual resources of this Colony for oyster production, and the need of artificial culture, and the character of the operations suitable, we have to refer to the state and operation of the present Fishery law. The only law in this Colony relating to Oyster Fisheries is the 31 Vic. No. 20, intitled "*An Act to regulate Oyster Fisheries and to encourage the formation of Oyster Beds* (1868)." The preamble of the Act says: "Whereas it is expedient to encourage the cultivation and improvement of oyster fisheries,

fisheries, and to prevent the exhaustion of the oyster-beds in the Colony: Be it therefore enacted, etc. (the 1st clause is a mere interpretation clause, and the 2nd clause is as follows):—"The Governor, with the advice of the Executive Council may, subject to any regulations, * * * demise by auction, or otherwise, for any term not exceeding ten years, any Crown lands being part of the shore and bed of the sea, or of an estuary or tidal water, above or below, or partly above or below, low-water-mark, for or in connection with the laying down of any oyster-bed. The 3rd clause provides that every such lease shall be in writing, etc. On the 15th September, 1871, the Government published Regulations for carrying into effect the "Oyster Beds Act of 1868." The 6th Regulation says, leases shall not include more than *one* mile of the frontage of any river, creek, estuary, or tidal water. This Regulation, it appears, was cancelled with respect to the one mile frontage on the 21st February, 1873. And the 7th Regulation says, parties leasing oyster-beds will be required to enter into a bond for ten times the amount of the annual rent, with two sureties, approved by the Government to fulfil all the conditions of the lease, and also to leave the oyster-bed in as good condition at the termination of the lease as at the time of its being granted. The advertisements calling for tenders from persons willing to lease the oyster-beds for a period of ten years, say, "Each tender must be accompanied by a guarantee from two responsible persons as sureties, agreeing to become answerable for the due fulfilment of the conditions of the lease, etc." The oyster-beds in most of the tidal rivers of this Colony are now held by six persons (the lessees), and the other rivers not under lease are *closed*, at the instance of the lessees, to prevent any oysters being taken out of them to interfere with their monopoly.

26. *Mr. Langham*, the Inspector of Oyster Beds, in his evidence before this Commission with respect to the River Hawkesbury leased by *Mr. Gibbins*, says:—"He should say he claims under his lease 20,000 acres or more. He has laid down 4,000 or 5,000 bags of young oysters for a few months; he shifts them, that is all. There is no proportion at all between what he has taken from off the rocks and mangroves and those that remain; you could not tell where they were taken from, they are like a mere drop in a bucket of water." At another part of the evidence, he said:—"Capt. Griffin is the lessee of Limeburners' Creek. He has done a great deal in laying down or forming oyster-beds, for a small place like that. He utilizes all the spat he can get. Capt. Griffin told him (the Inspector) he wished to have some spat from the rocks on Port Stephens, but the lessees refused to let him have any. Capt. Griffin is the only one he knows of who has strictly complied with the terms of the Act." He gives similar evidence about most of the other leased rivers. The lessees make no use of the spat (that is, for growth and fattening), or only to an inappreciable extent, and although there is such a vast quantity going to waste they will not allow any person to take any.

27. The evidence given before this Commission shows that immature oysters (specimens of which we have seen) are not only sold in Sydney but also in Melbourne, which are not fit for human food. The New South Wales oysters, which ought to be the finest in the world, not only get a bad name in the Colony but also in Victoria. The Inspector says that all the lessees seem to care about is to get as many oysters off the oyster-beds as they can. *Mr. Emerson*, oyster merchant, in his evidence before the Commission, said:—"The sale of these small oysters (such as were exhibited, and which had been bought for the Commission at certain shops in the city) have a prejudicial effect on the public mind to prevent consumption. People who go into a shop and get these small oysters become disgusted; whereas if they got fat and well-flavoured oysters they would make them a regular article of food. *Mr. Emerson* handed in to the Commission a letter he had received from his agent in Melbourne (*Mr. Brooks*), in which the latter speaks of the reckless way the trade is being carried on, and the rubbish that comes from Sydney to the Melbourne market—oysters, he says, that never ought to have been allowed to leave their beds. * * * The result will be, he says, that at the expiration of some of these leases there will be no oysters fit for use. * * * He saw eighteen bags of Newcastle and Broken Bay oysters sold for 20s. ! (This is little more than half the freight, and very little more than the cost of the bags) ! *Mr. Brooks* (*Mr. Emerson's* agent) gives the prices of oysters sold during the last month (September, 1876), which range from 3s. to 30s. per bag. *Mr. Emerson* said he had no difficulty in getting a good price in Melbourne for good oysters, and while inferior oysters were selling at 3s. 6d. per bag in Melbourne, he got from 27s. to 30s. per bag for good oysters. The Inspector laid before the Commission a letter he had received from Melbourne, in which the writer informs him that during December last Newcastle oysters were sold at from 16s. to 22s. 6d.; Clyde River oysters at 20s.; Manning River oysters at from 18s. to 25s.; Cape Hawke oysters at 20s.; Clarence River oysters at from 14s. to 18s. Also, that at auction a lot of Newcastle oysters were sold at from 3s. to 6s. 6d. per bag; and a lot from the Clarence at from 6s. 6d. to 7s. per bag.

28. After carefully considering all the circumstances, we consider it to be our bounden duty to recommend the cancellation by the Government of all the so-called existing leases of natural oyster-beds,

as none of them have been granted according to law. We are of opinion that this is the only wise course the Government can adopt to save the oyster-beds from ruin. If any of the lessees can show that they are entitled to compensation we recommend that they should have it by all means.

29. The system we advise the Government to adopt for the future is not to lease the natural oyster-beds, but to grant licenses to persons to dredge, dive, or get oysters off the beds or rocks, and to charge for each license a small fee, and also a royalty on all matured oysters dredged for sale. We do not recommend any royalty to be paid on the spat, brood, or ware got off the rocks, mangroves, &c., and sold to grow and fatten; but we recommend (without prejudice to any of the provisions in the Lands Alienation Acts) that all lands which are covered by tidal waters should be leased for oyster culture for a term of fifty years, in areas not exceeding 5 acres, at—say 5s. per acre per annum for the first four years, and afterwards 20s. per acre per annum to the end of the lease, provided that during the first four years the said land shall be prepared and stocked with oysters.

30. We believe that the cancelling of the existing leases of natural oyster-beds and substituting the system of licenses will have a very beneficial effect in many respects. The Government will have the power to stop the dredging or diving on the oyster-beds whenever it may be reported by the Inspectors that sufficient oysters have been taken out of a bed, &c., and that there is some danger of the bed, &c., being exhausted if more oysters were removed. The licensees could not complain of the temporary closing of a river, as their licenses would enable them to dredge other beds; and their licenses would always be available for getting oysters off the rocks which are uncovered at low tides.

31. We think a royalty the best mode of raising a revenue for the use of the public waters and the protection of property. Bertram says, every bushel of oysters landed at the Billingsgate market has to pay, for tolls, &c., 8d. per bushel. We think a small royalty will have the effect of putting a stop to the small oysters (rubbish, as it is called) being sent to Melbourne for food. And a good effect will be produced by enabling all persons of good character to obtain a license to dredge, dive, or get oysters off the rocks, without the necessity of begging the oyster monopolists to give them employment.

32. The oyster waters in the Colony being thus offered to the public on such liberal terms, there would not possibly be any excuse for oyster thieves, or the receivers of stolen oysters. Cattle and sheep are protected, and oysters ought to be equally secured, in order that full-grown oysters may become as plentiful and cheap as beef or mutton. There are reasons why oysters should be *especially* protected, because there is more danger of oysters being stolen than either cattle or sheep. Oysters cannot be branded or identified with the same facility as sheep or cattle, and in shallow water (where they fatten the best) they are more exposed, and easily picked up by the idle who would rather steal than work. There are few persons who would invest capital in any industry, unless they have a tolerable assurance that it will be protected, and those persons who buy oyster spat to grow and fatten in their ponds, trenches (or claires) have to wait for three or four years before they can have any returns.

33. We suggest for the protection of the public, as well as private property, that no dredging on the oyster rivers should be allowed between sunset and sunrise; that no oysters should be conveyed from one place to another without a permit or pass, signed by the owner or his agent; that no oysters should be carried by water, unless the person in charge has a permit, or they appear on his manifest; a breach of any of these provisions should subject the offender to a penalty. We also recommend that all licensed oystermen should show their licenses whenever they are required to do so by an Oyster Inspector, or by the Police, or any Custom House Officer.

34. In order effectually to put a stop to the receiving of stolen oysters, we recommend that all dealers in oysters should be required to take out a license, and to keep an entry of all the oysters they purchase.

35. In all cases of conviction the Magistrates should have power to cancel the licenses, in addition to any penalties which may be imposed. And a moiety of all such penalties should go to the informer.

36. We have carefully revised and amended a Bill drawn by Mr. G. Milner Stephen, and think that if it become law it will work beneficially. Although the legislation upon oyster fisheries in the United Kingdom extends over some twenty-five Acts of Parliament, especially in later years as the knowledge of the subject has increased, we have felt it our duty to make the Bill as concise as possible, and we trust that that which accompanies this report embraces all the points necessary in this colony.

37. We also recommend the Government at once to appoint an efficient staff of Inspectors, for the supervision and preservation of our oyster fisheries, as their services are urgently required.

38. We think also that it would be advisable forthwith to issue amended regulations for the guidance of the present so-called lessees without recognising the legality of their position should their so-called leases not be immediately cancelled ; and it should be carefully provided in these regulations that all spat, brood, and ware, when dredged, should be at once returned to the bed from which they are taken, and only matured oysters sold therefrom.

39. In conclusion, we would draw your Excellency's attention to the evidence taken by this Commission and the reports of Messrs. Langham and Black appended hereto, which contain valuable information. We have also thought it advisable to append lithographs to illustrate some of the artificial processes for collecting and cultivating oysters in France.

40. We have endeavoured to make our Report as complete and brief as possible, but we have found that we could not do justice to this most important subject in fewer words.

Certified under our hands, at Sydney, this third day of May, 1877.

THOMAS HOLT, PRESIDENT.
J. BOWIE WILSON.
JAMES S. FARNELL.

40^o VICTORIÆ, 1877.

A BILL

To consolidate and amend the Laws for regulating Oyster Fisheries.

WHEREAS it is expedient to amend the laws for regulating Preamble.
oyster-fisheries and encouraging the formation of oyster-beds
Be it therefore enacted by the Queen's Most Excellent Majesty by and
with the advice and consent of the Legislative Council and Legislative
Assembly of New South Wales in Parliament assembled and by authority
of the same as follows:—

1. The Act thirty-first Victoria number twenty intituled "*An* 31 Vic. No. 20
Act to regulate Oyster Fisheries and to encourage the formation of repealed.
Oyster-beds" shall be and the same is hereby repealed.

Interpretation of Terms.

2. In the construction of this Act the following words within Interpretation of
inverted commas shall have the meanings assigned to them respec- terms.
tively unless inconsistent with the context (that is to say):—

"Governor"—The Governor with the advice of the Executive
Council.

"Oyster"—Every variety of edible oyster and the spat brood
and ware of oyster.

23—c

"Collectors"—

- “Collectors”—Any mineral or organic substance (whether stones slates tiles cultch shells wood hurdles or fascines of twigs) used for collecting the spawn or spat of oysters.
- “Dredging”—Any mode of fishing for or taking oysters whether by means of a dredge or otherwise.
- “Sea-shore”—The shore and bed of the sea or of an estuary or tidal river above or below or partly above and partly below low-water-mark or within three miles off the coast.
- “Private Owner”—The owner of any oyster-bed situated on his property.
- “Minister”—The Secretary for Lands.
- “Inspector”—The Controller or any Inspector of Oyster Fisheries or other Officer appointed by the Governor to carry into effect the provisions of this Act.
- “Fishery”—Any oyster-bearing waters.
- “Private Fishery”—Any oyster-bed held by a private owner in fee under a Crown grant or by lease from the Crown.
- “Lessee”—A tenant of the Crown.
- “Natural Oyster-beds”—All natural oyster-banks or beds or deposits of oysters whether found on mud sand clay rocks or other mineral or organic substances within *three* miles of the coast or within the headlands of any harbour bay estuary or tidal river (not being the property of any private owner) on which banks or deposits of oysters are found and which shall have been propagated without manual labour shall be deemed “natural oyster-beds.”
- “Artificial Oyster-beds”—Any ground under lease whether enclosed or otherwise where oysters are introduced or laid down for cultivation.

Governor may grant leases of ground for making artificial oyster-beds.

29 and 30 Vic. c. 97 s. 4.

3. The Governor may demise or lease for any term not exceeding *fifty* years or may renew the same at its expiration subject to such conditions and limitations as the Governor shall approve any land belonging to the Crown subject to be covered by water at high tide or within two feet of the level of high-water-mark and not exceeding five acres to any person for the purpose of forming or planting artificial oyster-beds subject to the provisions of this Act and of any regulations made under its authority at a yearly rental of *five shillings* per acre for the first *four* years and *twenty shillings* per acre for the remainder of the lease.

Not lawful to demise natural oyster-beds.

4. It shall not be lawful for any demise to be made of any natural oyster-bed but the same may be dredged by persons duly licensed in that behalf subject to the provisions of this Act and of the regulations made under its authority.

Leases to be in writing &c.

29 and 30 Vic. c. 97 s. 5.

5. Every lease granted under the authority of this Act shall be in writing or partly in print and partly in writing and be signed by the Governor and shall by reference to a map plan or tracing annexed thereto or other sufficient description define the position and limits thereby demised and shall contain all necessary covenants for the due observance of the several provisions of this Act by the lessee.

Lessees to mark out their limits upon the ground.

29 and 30 Vic. c. 85 s. 19.

Governor may cancel any lease of oyster-beds &c.

29 and 30 Vic. c. 85 s. 22.

29 and 30 Vic. c. 97 s. 10.

6. Every lessee shall within the time prescribed by the Regulations after the granting of his lease mark out with stakes or otherwise the boundaries of his leasehold in the manner directed thereby And whenever any demise shall have been granted of any artificial oyster-bed if it shall be made to appear to the Minister at any time that the lessee or his assigns shall have broken any of the conditions of the lease or is not properly cultivating the oyster-ground within the limits of such lease or has not properly defined the boundaries thereof then and in such case it shall be lawful for the Governor to cancel such lease.

7. For the purposes of the provisions contained in this Act the Minister may from time to time with respect to any lease thereby demised make such inquiries and examinations by an Inspector of Fisheries or otherwise and may require from the lessee thereof such information as the Minister may think necessary or proper And the said lessee shall afford all facilities for such inquiries and give true information accordingly or such lease may forthwith be cancelled.

Minister may direct inquiries to be made.
29 and 30 Vic. c. 97 s. 10.

8. All oysters being in or on a demised artificial oyster-bed within the limits of the demise or of any oyster-bed belonging to a private owner and which is sufficiently marked or known as such shall be the absolute property of the lessee or private owner and in all Courts of Law and Equity and elsewhere and for all purposes civil and criminal or other shall be deemed to be in the actual possession of the lessee or private owner.

Property in oysters on oyster-beds.
29 and 30 Vic. c. 85 s. 16.

9. Any person stealing any oysters from any oyster-bed being the exclusive property of any other person and sufficiently marked out as such shall be deemed guilty of larceny and being convicted thereof shall be punished accordingly.

Stealing oysters &c. deemed larceny.
24 and 25 Vic. c. 96 s. 26.

10. Whenever any oysters shall have been removed by any person from an oyster-bed which has been demised under the authority of this Act or belongs to a private owner and not either sold in an open fish market or disposed of by or under the authority of the lessee or private owner shall be the absolute property of the lessee or private owner and in all Courts of Law and Equity and elsewhere and for all purposes civil and criminal or otherwise the absolute right to the possession thereof shall be deemed to be in the lessee or private owner.

Property in oysters unlawfully removed from oyster-beds.
30 Vic. c. 18 s. 4.

11. It shall not be lawful to discharge any sawdust sugar-cane refuse or other rubbish or any blood or offal or any other filth into any oyster-bearing waters or into any watercourse whether dry or not leading into the same or to discharge the same elsewhere in such manner that it is carried or is likely to be carried into such oyster-bearing waters And if any person shall do any act in contravention of this section or shall otherwise suffer or permit any of the above named matters to be so discharged into any such waters he shall be liable to a penalty not exceeding *twenty* pounds nor less than *two* pounds and shall also be liable in addition to make full compensation to the lessee of any oyster-bed for any damage sustained by him by reason of any such unlawful act which compensation may be recovered from the person offending in any Court of competent jurisdiction.

Sawdust and other mill refuse &c. not to be discharged.
29 and 30 Vic. c. 89 s. 63.

12. Any person disturbing or injuring in any manner any oyster-bed or the oysters brood or spat thereupon or any oyster fishery shall on summary conviction be liable to a penalty not exceeding *ten* pounds and not less than *one* pound for the first offence and not exceeding *twenty* pounds and not less than *five* pounds for the second offence and to imprisonment for *three* months for the third and every subsequent offence And every person so offending shall in every case also be liable to make full compensation to the lessee for all damage sustained by him by reason of such unlawful act and in default of payment the same may be recovered in any Court of competent jurisdiction whether the person so offending has or not been prosecuted for or convicted of such offence.

13. Whosoever shall dredge for oysters between sunset and sunrise or shall gather or burn living oysters (whether he shall be or not the lessee of any oyster-bed) for the purpose of converting the shells into lime (and the possession of any living oysters together with any dead oyster-shells in the same boat or bags or heap shall be *prima facie* evidence of such purpose) shall on conviction thereof be liable to a penalty not exceeding *fifty* pounds and not less than *ten* pounds and if such person be a lessee of any oyster-bed the demise of the

Burning live oysters for lime prohibited.

the same may on the recommendation of the convicting Justices be cancelled by the Governor.

Oysters to be culled on the fishing-ground.

Rep. Ir. Comm. 1870.

14. Every person whilst engaged in dredging oysters from any natural oyster-bed shall immediately after making each drag or haul throw back into the water whilst on the fishing ground every oyster of less dimensions than *two and a half* inches at the greatest diameter thereof as well as all gravel and fragments of shells as shall be raised while engaged in such fishing. And every person offending against the provisions of this section shall be liable to a penalty not exceeding *twenty* pounds and not less than *one* pound and the whole of the oysters found in his possession shall be forfeited. And the possession by such person of any unsizable oysters shall be *prima facie* evidence that he had unlawfully taken them. Provided always that if the persons so offending shall prove to the satisfaction of the convicting Justices that any such oysters of less than the above standard dimensions are required as oyster brood for the purpose of stocking or replenishing any specified natural or artificial oyster-bed the said Justices may thereupon abstain from imposing any penalty.

Persons on pleasure excursions exempted from operation of this Act.

15. None of the provisions of this Act applicable to oyster-fishing shall be held to apply to any persons taking oysters when engaged in pic-nic parties or otherwise *bona fide* in the pursuit of pleasure. Provided that oysters so taken by them shall not be sold or offered by them for sale or dealt with in any other manner than for actual consumption on the spot where the same may be gathered.

Boards may be appointed for the consideration of matters affecting oyster fisheries.
7 & 8 Vic. c. 108 s. 4

16. The Governor may at any time nominate and appoint a Board to consider and report upon any subject connected with oyster fisheries for the information of the Minister and the benefit of those interested in the fisheries.

Oysters seized and adjudged to be forfeited may be deposited in tidal water.

17. Wherever any oysters shall be seized by reason of the same having been unlawfully dredged according to the provisions of this Act it shall be lawful for the Inspector of Fisheries or other person making such seizure to deposit the same temporarily in some convenient tidal water until the matter of such seizure shall have been determined by the Justices upon complaint made. And in case such oysters shall not be adjudged to be forfeited they shall be restored to the owner or person out of whose possession the same were taken. But upon the forfeiture of such oysters being adjudged by the convicting Justices as herein provided it shall be lawful for the Minister or Controller of Fisheries to direct the same to be removed to some oyster-bank appointed by the Governor and the same shall be finally disposed of in such manner as the Governor may direct.

Offenders may be apprehended if they refuse to tell their names &c.

5 and 6 Vic. c. 106 s. 57.

18. If any person shall be found offending against any of the provisions of this Act it shall be lawful for an Inspector of Fisheries or other person duly authorized to enforce the provisions of this Act or for any lessee private owner or other person interested in the fishery in which such illegal act may be committed to require the person so offending to desist from such offence and also to tell his real christian name surname and place of abode. And in case of his refusal in either respect or his giving such a general description of his abode as shall be illusory for the purpose of discovery or shall wilfully continue such offence it shall be lawful for the Inspector of Fisheries or other person so authorized and so requiring as aforesaid and also for any person acting by his order and in his aid to apprehend such offender and to convey him or cause him to be conveyed as soon as conveniently may be before a Justice of the Peace to be dealt with according to law. Provided always that if the person apprehended cannot on account of the absence or distance of the residence of a Justice or other cause be brought before any Justice within *twenty-four* hours the person

Ibid.

person so apprehended shall not be detained any longer but shall be discharged. Provided that he may nevertheless be proceeded against by summons or warrant as if no such apprehension had taken place.

19. Every person dealing in oysters whether by wholesale or retail shall be required to take out an annual license for which he shall pay *one* pound and shall keep a book in which he shall enter the particulars of all purchases of oysters made by him which shall be open at all times to the inspection of an Inspector of Fisheries or any officer of police and any person selling oysters without such license or failing to keep such book as above directed shall on conviction thereof be liable to a penalty of not less than *five* pounds nor more than *ten* pounds.

Oyster dealers to take out licenses.

20. The Governor may from time to time as may become necessary make such rules orders and regulations as shall seem expedient for the more effectual government management protection and improvement of oyster fisheries and the registration of all boats and brands and the licensing of all persons engaged therein and from time to time repeal rescind or vary the same and substitute others in lieu thereof and may impose and prescribe any conditions and restrictions for the regulation of the said fisheries and the carrying and sale of oysters and the preservation of good order among the persons engaged in such occupations respectively. And it shall be lawful for the Governor by such rules orders and regulations to impose any penalty not exceeding *ten* pounds and also appoint the minimum penalty for the breach of any of such rules orders or regulations. And all such rules orders and regulations shall be published in the *Gazette* and shall be binding and conclusive on all persons as if the same had been contained in this Act. Provided always that a copy of all such rules orders and regulations shall be laid with all convenient dispatch before Parliament if then sitting or if not then in session within one month after the commencement of its then next session and shall be approved by both Houses of Parliament.

Governor may make regulations.

5 and 6 Vic. c. 106 s. 91.

21. Every person employed or engaged in dredging for oysters from natural oyster-beds shall take out a license to be current till the *thirty-first day of December* in every year which license shall be issued to him by the *Controller of Fisheries* or such other officer as the Governor may appoint in that behalf on the payment of *one* pound and shall have the name and address of the person to whom the same shall be issued written thereon in clear and legible characters and such license shall not be transferred to or be available for any other than the person named therein. And if any such person shall not have taken out such license or shall be unable to produce the same when its inspection is demanded by an Inspector of Fisheries police constable or other authorized person it shall be deemed *prima facie* evidence that such person has been unlawfully fishing for oysters. And it shall be sufficient in any proceedings for the recovery of the penalty so to charge and prove the offence.

Dredgers required to take out licenses.

13 and 14 Vic. c. 88 s. 12 and 32 and 33 Vic. c. 92 s. 17.

22. Such licenses shall during the term authorize the owner thereof to dredge for oysters at such times and places only as the Inspector may appoint and subject to any regulations that may be issued for the carrying out of this Act. Provided that the person so licensed shall also pay to the Government a fee or royalty of not less than *two shillings and sixpence* for each bag of three bushels of oysters dredged and such sums shall be collected as and when provided by the Regulations. Provided also that all oysters dredged for sale shall be sold by the dredger in the shell. And any person dredging for oysters without such license or in contravention of the provisions of this section shall on conviction be liable to a penalty of not less than *five* pounds or more than *ten* pounds and to the forfeiture of all oysters then dredged by him.

Governor may grant licenses.

Governor may close up any fishery over-worked.

7 and 8 Vic. c. 108 s. 5.

23. Whenever any natural oyster-beds shall have been so severely dredged as to endanger their future productiveness as oyster-beds the Governor may by public notice published in the *Gazette* prohibit or close the fishery in the bay creek or other locality containing the same or any portion thereof (the position and limits of such oyster-bearing waters being defined in the said notice by a description of the natural features or by reference to a map or otherwise) for any period not exceeding *three* years and whosoever shall dredge for oysters from any oyster-bed situated in any such bay creek or other locality during the time the fishery shall be so prohibited or closed (unless he shall have the written authority of the Minister or an Inspector of Fisheries as herein provided) shall be liable on conviction thereof to the fines and forfeitures declared in and by the last preceding section Provided always that the Minister may authorize an inspector to clear the beds whilst closed from weeds mud or vermin And after being so cleared or worked to replenish if necessary with oysters or brood or with cultch stones shells or other proper material for the restoration of the bank or bottom.

Governor may appoint officers.

24. The Governor may appoint a Controller and Inspectors of Oyster Fisheries whose duty shall be to carry out the provisions of this Act and any regulations that may be issued thereunder and also do all in their power to improve the natural oyster-beds by planting collectors and otherwise improving the productiveness of the natural beds.

Oyster bags to be branded.

25. Whenever oysters are carried either by land or water they shall be placed in bags and each bag shall be branded with a legible brand at least three inches long which brand shall be registered in the manner and at the place to be named in the regulations and any oysters carried in contravention of the provisions of this section shall be forfeited and the person carrying them shall be liable on conviction to a penalty of not less than *two* pounds or more than *ten* pounds.

Oysters to be entered in manifest.

26. The master of any vessel carrying oysters shall enter them in the manifest stating the quantity the name of the shipper and also the name of the person to whom they are consigned And any oysters carried in any vessels and not so entered in the manifest may be seized by an Inspector Custom House officer or officer of police and confiscated and the master of the vessel shall be liable on conviction to a penalty of not less than *two* pounds and not more than *ten* pounds.

Oyster carriers to obtain permit.

27. Any person carrying oysters by land shall obtain a permit from the owner of the oysters stating the quantity by whom owned to whom consigned and also the locality from which they have been taken or dredged which permit shall be produced if demanded by any inspector of fisheries or officer of police and on the carrier failing to produce such permit the oysters shall be seized and forfeited and the person in whose possession the oysters are found shall be liable on conviction to a penalty of not less than *two* pounds or more than *ten* pounds Provided any person signing such permit other than the owner of the oysters or his agent shall on conviction be liable to a penalty of not less than *two* pounds or more than *ten* pounds.

All fishing boats and vessels to be registered and to be marked &c.

5 and 6 Vic. c. 106 s. 16.

28. A registry of all vessels and boats employed in dredging for oysters shall be kept at the nearest Custom House if any or otherwise at the nearest police office in the district to which every such vessel or boat belongs together with the name of the owner thereof and the port or place to which it may belong and stating the number of men usually employed therein And every such owner is hereby required to have his vessel or boat with his name so registered accordingly And every such owner shall thereupon be furnished by the officer so registering with a certificate thereof signed by him for which the owner shall pay a fee of *two shillings and six pence* and such certificate

certificate shall contain the mark number or letter assigned to such vessel or boat and shall be conclusive evidence of such registration. And the mark number or letter which shall be assigned to every such vessel or boat by the registering officer together with the name thereof of the owner or some owner if more than one and of the port or place to which she belongs shall be painted on the stern of such vessel and such mark number or letter shall also be painted on the bow or quarter and on the sails in such manner and in figures of such dimensions as the Minister may direct. And if any vessel or boat shall be used for dredging at any time after the expiration of *one* month after the passing of this Act without having been so registered or being so marked or whose sails are not marked according to the provisions of this section the owner master or person in charge of the same shall for every such offence be liable to a penalty not exceeding *ten* pounds and not less than *one* pound. Provided always that when any vessel or boat shall not be permanently engaged in dredging the mark number or letter may be temporarily attached to the sails bows or quarters thereof in such manner and for such time as the Minister shall authorize.

Penalty for using vessels not registered.

29. There shall be annually laid before both Houses of Parliament a report by the Minister respecting his proceedings under this Act during the preceding year.

Annual report to be laid before Parliament.
20 and 30 Vic. c. 85 c. 27.

30. All complaints may be heard and all penalties or forfeitures imposed and declared by this Act or of any regulation made under its authority may be enforced in a summary way before any one or more Justices in the manner provided by the Act of the Imperial Parliament eleventh and twelfth Victoria chapter forty-three as adopted by the Act fourteenth Victoria number forty-three or any Act amending the same and out of every penalty imposed under the authority of this Act the convicting Justices shall award a moiety thereof to be paid to the person on whose information the prosecution in the case was instituted.

Complaints to be heard in a summary way &c.

31. Where no penalty is specifically provided for any breach of the provisions of this Act or of any regulations made under its authority the person offending shall be liable to a penalty not exceeding *five* pounds and not less than *one* pound.

Penalties for offences not specifically provided for.

32. If any penalty imposed under the authority of this Act or of any regulations made thereunder shall not be paid forthwith or within the time appointed by the convicting Justices the person offending shall be adjudged to be imprisoned for any term not exceeding *three* months unless such penalty be sooner paid.

If penalty not paid the offender may be imprisoned.

33. All complaints or other legal proceedings taken for the breach of any provisions of this Act or of any regulations made under its authority may be laid and taken by any person against any person charged with any breach of this Act or the said regulations.

All proceedings may be taken by any person.

34. Any summons against any person offending against any provisions of this Act or any regulations made thereunder may be served either personally or by leaving the same at his last known place of abode with any inmate of the same. And in case the person so summoned shall not appear before the Justices in Petty Sessions according to the exigency of the said summons it shall be lawful for any Justice upon proof of the service of such summons to issue a warrant for the apprehension of the person so summoned and to proceed thereon according to the provisions of the Act fourteenth Victoria number forty-three and the English statutes thereby adopted.

Warrant may be issued against party summoned and not appearing.

35. The evidence of informers owners or occupiers of oyster-beds or of other persons interested in the oyster fishery shall be receivable in all Courts upon any legal proceeding taken against any offender against any of the provisions of this Act notwithstanding that the witness shall be entitled in case of the conviction of the offender to receive a portion of the penalty awarded. And it shall be

Evidence of informers &c. to be admissible.

5 and 6 Vic. c. 106 s. 103.

lawful

lawful for the Justices hearing the case to convict the offender upon such evidence notwithstanding that the witness shall not be corroborated by any other testimony.

The lease or certified copy to be evidence of the demise.

29 and 30 Vic. c. 97 s. 12.

36. The production of the lease signed by the Governor or a copy thereof certified as such by the Controller of Oyster Fisheries shall in all Courts of Justice be conclusive evidence in all civil and criminal proceedings that such demise was duly granted by the Governor of the oyster-bed therein described and defined.

Larceny from contiguous oyster-beds. 30 Vic. c. 18 s. 6.

37. Whenever a person shall be charged with larceny of oysters from any oyster-bed which may be contiguous to another or others it shall be sufficient in alleging and proving the place from which such oysters were stolen to allege and prove that such oysters were stolen from one or other of such contiguous beds and that the same belonged to and were in the lawful possession of one or other of the lessees or private owners thereof.

Justices may grant a warrant to enter suspected places. 5 and 6 Vic. c. 106 s. 85.

38. Any Justice of the Peace upon an information on oath that there is probable cause to suspect any breach of the provisions of this Act to have been committed anywhere by warrant under his hand and seal to authorize and empower by name any Inspector of Oyster Fisheries or any other officer appointed by the Governor under this Act to enter any dwelling-house or premises for the purpose of detecting such offence.

Police to aid and assist Inspectors.

5 and 6 Vic. c. 106 s. 89.

39. All police constables and others if called upon to aid and assist any Inspector of Oyster Fisheries or other officer in the execution of any of the powers or authority vested in him by this Act are hereby authorized and required to aid and assist such Inspector or officer in the lawful exercise of the powers and authorities so given to him for enforcing the provisions of this Act.

Appeal allowed to Quarter Sessions.

40. Any person feeling himself aggrieved by any conviction or penalty or forfeiture made under the authority of this Act where the penalty or sum exceeds *five pounds* may appeal against the same to the next Court of Quarter Sessions holden in the district where the subject matter thereof arose unless such Quarter Sessions shall be held within fourteen days from the date of such conviction or judgment and in that case to the Court of Quarter Sessions then next following. And such Court shall have power to hear and determine the matter in a summary way and shall have and exercise all other powers vested in them by the third section of the Act fifth William the Fourth number twenty-two and the decision of such Court shall be final and conclusive in respect to the subject matter of such appeal. Provided always that the person so appealing shall have given written notice seven days at the least before the hearing of such appeal of his intention to appeal and stating the grounds thereof to any one of the convicting Justices and to the person who prosecuted the matter before the Justices in Petty Sessions and provided also that the person convicted (in case a penalty shall have been awarded against him) shall pay into the hands of the convicting Justices the full amount thereof together with the costs awarded within twenty-four hours next after conviction and also enter into a bond with two sureties approved by such Justices conditioned to prosecute such appeal with effect and to abide the event of such appeal and to pay the full amount of all such costs as may on such appeal be awarded against him.

Short title.

41. This Act may be cited for all purposes as the "Oyster Act of 1877."

OYSTER CULTURE COMMISSION.

MINUTES OF EVIDENCE.

MONDAY, 6 NOVEMBER, 1876.

Present:—

HON. T. HOLT,

HON. J. B. WILSON.

THE HON. THOMAS HOLT, M.L.C., IN THE CHAIR.

Mr. Frederick J. Gibbins called in and examined:—

1. *Chairman.*] You are aware that this Commission has been appointed to inquire into the best mode of cultivating the oyster, and utilizing and maintaining the natural beds, in order to recommend to the Government the necessary legislation to secure those objects. I believe you have had a great deal of experience in oyster culture? Yes.

Mr. F. J. Gibbins.

6 Nov., 1876.

2. You have also been dealing in oysters as well as engaged in cultivating them? I have.

3. You have had experience not only in growing and fattening, but also in breeding them? Yes.

4. At what age do you consider oysters to be marketable—that is to say, fit for food? About four years.

5. What size would an oyster be at that age? That would depend greatly upon the river it came from.

6. Yes, of course; but you are aware, perhaps, that in England a gauge is employed in order to test their growth—all oysters that are sold are tested by a ring having a diameter of $2\frac{1}{2}$ inches, and if they can be passed through that ring they are not considered marketable. At what size do you think oysters should be considered marketable in this country? Well, as I have just stated, it depends greatly upon the river they are taken from. In the Newcastle river, where the beds are a mile apart, there is a difference of fully two inches in the size. In the bay they never grow to any size—they are always cuppy, but in the channel round Mosquito Island they are larger, and not so cuppy.

7. What are their respective sizes—those in the bay, and those in the channel? In the bay they are about 3 inches, and in the channel about 5 inches.

8. As large as 5 inches? Yes, when they are full-sized.

9. Do you think it would be desirable to have a gauge in this country to test the size of the oysters, so as to prevent such a number of small ones being sold? I think not.

10. Are you not aware that very small oysters are sold in the shops? Yes, there are a great many; the smallest oysters are those which are brought from off the Parramatta River, Port Hacking, and some other places; those are the smallest that are brought to market.

11. Do you think it desirable that these very small oysters should be sold for food? No.

12. What remedy do you suggest, as you appear to see objections to the use of the ring employed in England? I hardly know what to propose.

13. If the small oysters are 3 inches in size, and the largest 5 inches, would it not be safe to adopt a ring or gauge of $2\frac{1}{2}$ inches? Yes, it would be safe, but I don't think it would be advisable.

14. You think that no oysters that would pass through a $2\frac{1}{2}$ gauge ought to be sold? Yes;* but the oysters I am speaking of would be those taken from their natural beds; those you mean are of course very small and thin.

15. *Hon. J. B. Wilson.*] That would be an argument in favour of the ring, would it not? Yes.

16. *Chairman.*] But you have already stated that you think it is not desirable to allow these very small oysters to be used? Yes.

17. And these are chiefly rock oysters, which adhere to the rocks very high up, and are therefore not so much exposed to the water? Yes.

18. These oysters, if removed to good ground, would grow and become larger and fit for food, would they not? No, sir.

19. Have you ever made the experiment? I have.

20. Did you find they would not grow on rich ground? Yes; I have laid down plenty that came from ground of that sort, and I have found that they had come to their full growth before they were removed, and have not grown since they were moved.

21. Of course if they had come to their full growth they could not grow any more, but did they not fatten? Yes, but they did not become fit for market during that time.

22. Would they when full-grown go through a $2\frac{1}{2}$ -inch ring—you spoke of oysters being from 3 inches to 5 inches in size—would these oysters, fattened on your rich ground, go through a $2\frac{1}{2}$ -inch gauge? They would sir, that is to say the oysters that grow high up on the rocks. When I first commenced bedding oysters, especially in one place on the Hawkesbury River, it was these oysters chiefly that I got, and they are still lying in the bed. The only advantage I derived from them was that they spawned, and I got the spawn.

23.

NOTE (on revision):—

Sir,

In giving evidence before the Commission of Inquiry into Oyster Culture, on Monday, 6th November, I made an error in stating the size of the ring should be $2\frac{1}{2}$ inches in diameter; since then I have had a ring made, and find that, with very few exceptions, the whole of the oysters taken from my beds will pass through the ring; and I may say my oysters are no exception. I consider a ring $1\frac{1}{4}$ inch would be a fair size for marketable oysters. And I may also mention that in the size I gave I should have stated the oysters were from 3 to 5 inches in length. I have the ring mentioned above by me, and am quite willing to show the same, with a sample of oysters, to prove my statement.

Sydney, 15 November, 1876.

Yours respectfully,
FREDK. J. GIBBINS.To Lindsay G. Thompson, Esq.,
Secretary to the Commission on Oyster Culture.

23—A

- Mr. F. J. Gibbins. 23. *Hon. J. B. Wilson.*] Were they full-grown—that is to say, four years old—when you got them? Yes.
24. *Chairman.*] Were they growing high up on the rocks? Yes.
25. And when put down on the ground they fattened, but did not grow? Yes.
- 6 Nov., 1876. 26. Is not that contrary to all experience—Is it not the case that women and children knock them off the rocks and send them away to persons who fatten them for eating? Yes, I do the same; but I understood you to refer to the oysters which grow high up on the rocks.
27. I do not mean those only which grow on the highest rocks—what I wish to know is whether oysters growing on the rocks will not grow larger if placed in good ground. I do not mean the very small oysters such as are called Tom Thumb oysters, stunted in their growth. Oysters sticking to rocks, if moved would not they fatten? Oh yes; I thought you referred to the stunted oysters.
28. Have you formed any opinion respecting the spawning of oysters—do they spawn all the year round? Yes, every month in the year.
29. Do they spawn during some months more than in others? Yes.
30. Can you give us any idea of the percentage of the oysters which spawn at one time in one oyster bed? No, I cannot.
31. There have been many theories on the subject. Some say that not more than 2 per cent. spawn, others say 10 per cent.? I have formed no idea.
32. But you are aware that oysters have a large number of spat in the water? Yes. I have cut out a number of paragraphs from papers at different times, but I find there is a great difference in the quantities given.
33. Do you think the percentage of breeding oysters in a bed is greater than the percentage of breeding sheep or cows on a cattle station? Yes, sir.
34. What data have you for forming that opinion? The only ground I have for thinking so is from what I have noticed in one place, especially on the Hawkesbury River, where we threw over some ballast stones—stones with nothing on them—in order to see the set of the spawn on them.
35. And from the observations you then made you came to the conclusion that the percentage is greater than that of breeding sheep or cows? I think so, but I have had no means of proving it with any accuracy.
36. Are you aware that an oyster is said to produce a minimum number of eight or ten hundred thousand spat, and some naturalists are of opinion that the number is six or eight millions? I have heard so. The breeding depends greatly upon the state of the water while they are spawning.
37. Is not the opening of the oyster the best criterion—Have you even seen more than one or two out of a hundred that were spawning showing what are termed the white or black sickness, which are different stages of spawning? Yes, I think I have.
38. What proportion have you seen? Well, of course I have never opened such a quantity at a time; but when I have been on the Hawkesbury River, I have found nearly every oyster spawning; when they were opened the spawn would run away from them. On one occasion, on the Hawkesbury River, almost every oyster was spawning—as soon as you touched it the milk would run away from it.
39. Then do you think it would be desirable to have a close season for oysters? No, sir.
40. *Hon. J. B. Wilson.*] Is there not a greater percentage of spawning in some months of the year than in others? Yes, about Christmas time.
41. Although the oysters spawn all the year round? Yes.
42. Supposing you took the month of June, would you find a large proportion of oysters in a spawning state at that time? Yes, in some rivers. In the Clarence and Clyde Rivers the oysters are at their best all the winter.
43. *Chairman.*] Do they vary so much? They vary very much; the oysters from the Clarence River are really splendid all the winter.
44. But if there is such a very large proportion of oysters spawning at one time—nearly every one as you say—would it be undesirable to close that portion of the river for a time only? I should not think it desirable to have any close season here at all.
45. Why? On account of the quantity of oysters we have.
46. But are they wholesome as food when they are in a state of sickness? They are what we call watery then; I do not consider them fit for food.
47. *Hon. J. B. Wilson.*] You say that you do not consider it advisable to have a close season, on account of the large quantity of oysters we have—Do you think we have anything like the quantity we ought to have? Well, as far as I am concerned I think I may say that I have three times the quantity I had when I first took charge of the rivers.
48. But we are talking of the spawning, and you give, as a reason that there should be no close season, the quantity of oysters? Well, if there is a market for them in the winter I don't see any occasion for a close season.
49. *Chairman.*] You mentioned Christmas as the time that they are principally spawning: that month should certainly be closed? That is the time they are really fat, for of course they do not spawn unless they are fat. On the Hawkesbury River I can commence with January and finish with January, and give you really good, fat, marketable oysters all the year round.
50. From one river? From three rivers; when I cannot get them from one bed I can from the other.
51. Which are the three rivers? Newcastle, Broken Bay, and the Clyde River.
52. If you cannot get them from one place you are certain to get them from another—if they are not spawning in one river they are sure to be in the other? Yes.
53. Have you ever made any attempt to collect the spat by means of wood or stone placed in the rivers? No; in fact I am so situated, on the Hawkesbury River especially, that I have no occasion for any artificial means of collecting it.
54. There is such an enormous quantity of spat sticking on to the rocks? Yes.
55. And you employ persons to knock it off the rocks, and then you plant it? Yes.
56. Are the banks of the Hawkesbury River covered with spat the same as those of the Parramatta and Clarence Rivers? Yes, only thicker; from the time you enter it, just up Long Reach going up the river, you may say there are 100 miles with nothing but rocks with the spat sticking to them.
57. Which would be worth many millions sterling in England, where the great difficulty is in securing the spat? It would, but are their oysters the same as ours?
58. No doubt of it? I am given to understand that they are only mud oysters.
59. Have you sufficient fattening ground for the whole of the oysters on the rocks? Yes. 60.

60. If the demand were sufficient, then you would be able to plant all the oysters that are on the rocks for 100 miles? Not the whole of the distance, because there is a good deal of it where we could not put oysters on.

61. I mean suitable ground, free from any objections. Where you chiefly plant oysters, I presume, is in sheltered spots where there is plenty of mud? As little mud as possible—not sufficient to bury them.

62. But you would not expect to get fat oysters off the bare rock? No, but I always endeavour to get a gravelly bottom.

63. So as to prevent them from sinking. Would not a bed of oyster-shells be the best of all? Yes, wherever we can get an old bed they always do very well.

64. With respect to the oysters on the rocks, not only in Sydney but in other parts of the Colony, can you suggest any mode by which the Government could utilize them—Do you think it would be desirable to license persons who, with their wives and children, might be able to make a very good living by knocking them off the rocks and selling them to others who would fatten them? I do not think so; it would not be very easy to get persons to go into the business. The plan I have endeavoured to carry out is this: I have told them to take a particular spot and plant the oysters so as to form a bed, and I have offered to buy them when they had grown to a marketable size, but no one would go into it.

65. Would not it be too long for working men, who expect to get paid their wages at once, to wait? The people to whom I made the offer were men who were working for me and getting paid for their work.

66. But still it would be for wages only that they would care to work—they would like to be paid at once. Perhaps if you were to put it to them in another form, and offer to pay them so much a bag for all the oysters they knocked off they would be glad of the work? Then it would require a host of people to watch them.

67. But do you consider it desirable that the Government should continue to lease those large areas for oysters? I think the term of lease is too short.

68. *Hon. J. B. Wilson.*] The Chairman is referring to the extent of ground leased. Is not the area too large to be comprised in one block? I will answer that question in this way: We have the same difficulty to contend with here that they have in England, where they cannot prevent the practice of going to each other's ground and stealing the oysters. Even with all the care I take I get my oysters stolen, though I have men continually working and keeping a look-out, and I have an overseer at each place.

69. No wonder, the area comprised in your lease being so very extensive; it is scarcely possible for one overseer to supervise 100 miles? Of course when I say 100 miles that is the measurement along the shore taking each turning.

70. What I wish to know is whether you think it should be the policy of the Government, in the interest of the public, to continue to lease these large areas, or whether it would not be better for all parties to divide them and to lease smaller blocks? I do not think so.

71. You think it would be better to continue to lease these large areas for short terms rather than smaller areas for longer terms? No, I think the same areas should be leased for longer terms. I can only say that for my own part I would not take any lease a portion of which was sub-let. It is very difficult to get honest men on a river. Even in Sydney there are plenty of people who will buy oysters that are stolen from me who am a legitimate dealer.

72. With regard to securing the ownership of oysters, you are aware that in the case of cattle and sheep the Government take precautions to prevent persons from slaughtering or selling without a license, and neither cattle nor sheep can be driven from one place to another without a pass from the owner. Also with respect to the cutting of timber, licenses are required, and for other industries. Now supposing that the Government—I am merely putting the question as one of public policy, the object of the Government in appointing this Commission being to obtain advice as to the best course to pursue in the future, when the present leases, which I believe have about eight years to run, have expired—were to throw these large blocks open to tender in subdivisions of smaller areas, subject to such precautions as might be found necessary to prevent stealing? Of course I can only speak for myself, and I can only say that I should not like to tender for the lease of any river portions of which were sublet.

73. Do you think it is not possible for the Government to adopt such precautions as would prevent oyster-stealing—you seem to be afraid that other persons would steal the oysters from your rocks; that is your idea, is it not? Yes.

74. But still you have a great deal more than you can make use of? I am in hopes of having more; I have not at present.

75. Why, to knock off all the oysters annually that stick to your rocks you would require many hundred men? Yes.

76. So that your area is larger than one person could manage unless he went into it very largely. Therefore, supposing the Government should take precautions to prevent stealing, would it not be desirable to reduce the size of these blocks? No, sir, I think not.

77. Can you give the Commission any idea of the proportion of mud flats or fattening ground there is on the rivers which you lease from the Government? In Newcastle I may say there is none; in the Hawkesbury River, of course, there is a great deal.

78. That is where it is easy to get at the oysters—where they do not sink in the ground? Yes.

79. Are you aware that oysters do not breed in fattening grounds? No, sir, I am not.

80. That is the case in England, according to the evidence of some of the largest and most intelligent oyster merchants? It is not the case here.

81. One oyster merchant says that they never do, and were never known to breed on fattening ground? That makes me think there must be a difference in the oyster.

82. Can you form any idea where the oysters come from that stick to the rocks? I have no idea.

83. You have the same objection to the leasing of fattening grounds in smaller areas that you have to the rocks? Yes.

84. Have you any idea of the number of oysters that could be laid on one acre of ground? No, I could not tell you.

85. Would you consider a million too many? I have no idea of the number.

86. In England it is considered that about one million should be placed on an acre of ground for fattening? I could tell you by asking persons in my employ, but I have never calculated the number myself. We lay them down as singly as we can.

87. Have you ever considered the climate of Sydney in connection with the fattening of oysters—I mention

Mr. F. J.
Gibbins.

6 Nov., 1876.

Mr. F. J.
Gibbins.

6 Nov., 1876.

mention Sydney as the mean temperature between the two extremes—have you considered that the climate of Sydney, which produces the orange and the vine, is a suitable one for the culture of the oyster? I have not.

88. Have you had any experience in oyster culture in Europe? No, only in this country.

89. Then you have had no opportunity of comparing one climate with another? No.

90. But you are aware that several years ago in England they did not get any spat? Yes.

91. That is never the case here, because we have no frost or snow? No.

92. Do you think, from what you have seen, that this country is particularly adapted to oyster culture—that they can be produced to any extent if there is a market for them? Yes. I think they are produced to too great an extent at present.

93. But if they come to be exported, either by freezing or some other process (the Americans, I believe, export them in tins), they would be a very valuable article of export. Don't you think in that case that they could be grown to supply almost any demand? No, not to such an extent as that.

94. Why not? Well, I have never heard of any of the oyster beds at Home being swept away by floods, such as we have here.

95. But in England the oyster has a great many enemies; they have the five-fingers, and the dog whelk, and many other enemies, and they are dredged from a great distance in order to get clear of these enemies? There are many places in this country where the beds are so swept with floods that the lessees are almost afraid to go into the business.

96. Do the floods affect the rock oysters as well as the others? All of them. In one creek—the Browra Creek—in the Hawkesbury, during the heavy flood of '67, every oyster in the creek was killed, and at that time there must have been some thousands of bags of them in it. I have been improving that place since, and it is now coming on again—that was eight years ago.

97. You find oysters fatten best in ground where there is some fresh water as well as salt, do you not? Yes, wherever the waters mingle, fresh and salt, the oysters get on better; when the water is entirely salt they have not the same flavour.

98. *Hon. J. B. Wilson.*] With regard to the selling of oysters, do you not think some provision should be made under which every captain of a vessel should be held responsible for every oyster he carried to the Custom House, that they should be entered in his manifest, and that he should be able to show what beds they came from, and to whom they belonged? Supposing he did not put them on his manifest he would not be boarded by any officer, and he might put them into any boat he chose when going up the harbour.

99. But I am supposing there were proper officers to look after this traffic, and not that things should remain as they are, in a state of neglect. Don't you think a great deal might be done to prevent the stealing of oysters? No, because it is all done at night, and I do not think any officer could really look after it. For instance, when a vessel was coming up what could be easier than to send a telegram for a boat to meet her at any given place. Of course it would pay the parties to send a boat, as they would get the oysters at a low price.

100. There can be no doubt that a few oysters would be smuggled in that way, but with proper precaution a great deal of stealing might be prevented. Rum used to be smuggled in that way, but it has been put a stop to? The Parramatta River is the worst place for that; I have seen some very fine oysters sold in Sydney, and I have been told they came from Mr. Holt's place.

101. I am speaking of putting down wholesale stealing by means of proper supervision? Well, the Parramatta River is the worst place. Mr. Thompson can tell you that I have called upon him about it until I am almost ashamed to see him. Immense quantities have been coming in from there.

102. Of course we are looking to the future, and not to what is going on now, and I want to know whether you do not think that with proper supervision and inspection of the oysters imported and exported, if they were brought under the Customs regulations, this wholesale stealing might be prevented? Yes, to a great extent.

103. Are any oysters preserved for export in this Colony? I do not think so; I tried to preserve them myself, but the attempt turned out a failure.

104. Are any oysters so preserved that they can be transmitted to the towns in the interior? There is no occasion for it.

105. Do you mean there is no demand? No, but we send them up without preserving them.

106. You would find it very difficult to send a bag of oysters to Fort Bourke, for instance, on account of the carriage. I am speaking of towns in the interior of the Colony? I am supplying the Adelaide market at present. I am not sending them further up the country than Bathurst.

107. Are you aware that they export largely from the town of Baltimore, in the United States of America? No.

108. Would you be surprised to hear that the annual export from that town amounted to two millions sterling. They take so much care of them there that, notwithstanding that oysters are an article of almost universal consumption, they export two millions sterling per annum? I do not think they can take more care of them than I do, but I do not know whether they have the same difficulties to contend with. Since I have had the Clyde River, the oysters I laid down to form a bed have never grown at all; they are all gone—the last flood covered them all over.

109. Covered them with sand? Yes, it was all black sand where they were.

110. Are there not places in these rivers where beds could be made which would be protected from the floods? No, sir, I think not, with the exception of the Hawkesbury River. I suppose I have at the present time not less than 10,000 bags laid down to form beds.

111. Are they natural beds or artificial—did you lay down ballast or any other material to form them? No.

112. Nothing but oysters? No.

113. They were tolerably firm then—free from mud? Only a little of it; of course there must be some mud in every bed.

114. Did you pay attention to the nature of the soil on the banks of the rivers where you laid down the beds—you would not think of putting oysters down on sand? No; the bed in the Clyde River was originally sand, but it was a great place for mud oysters until they all died off.

115. Have you done anything in the Hawkesbury or other rivers to improve the natural beds and to try and extend them? There are very few natural beds in the Hawkesbury River.

116. Have you done anything to improve or extend those that are there? Yes.

117. How have you done it? By laying down other oysters on them.

118. But have you tried to extend them by laying down dead oyster shells or other material? No; in all rivers there are too many dead oyster shells—any quantity of them. 119.

119. What was the state of the oyster-beds when you leased them originally—are they improved at all since then? Yes.

120. How long have you had the Hawkesbury beds? A little over two years—about two years and six months.

121. Then they have not had much time to improve? No, but they are improving.

122. You stated to Mr. Holt that you have never adopted any artificial means of catching the spat? No.

123. Could not that be done very profitably in some of these rivers? I think not.

124. Why? Well, a very little flood would carry away anything of that sort.

125. Yes, but the expense would be trifling; a few fagots or some such material would be the means of attaching millions of spat. You think the natural rocks catch all that is needed? Yes.

126. That is to say for our present consumption? Yes.

127. Supposing our consumption were a thousand times as large, do you not think an immense quantity of spat might be secured by artificial means? It might be done; I have never tried it.

128. I presume you will admit that there has been a great deal of destruction going on of valuable oyster-beds in the Colony—I am not alluding to your own—from the beds being over-dredged? I do not think so, since they have been leased.

129. I am speaking of the country generally, before the leases were issued? Yes.

130. Can you tell us anything of the quantity of oysters taken out of the rivers? No.

131. Have you any further suggestions to make before you leave? No. I should be very glad to show my place to any members of the Commission if they would like to see it. I have watched it very carefully, and have been able to form a pretty good idea of the places where the oyster will grow.

132. Will fatten, you mean; there is no doubt about their growing? Yes, but there are some places—I may mention one creek in particular as an instance of it—the Moonah Creek—where there is a point separating it from another creek, the oysters will grow there as much in six months as they will in twelve months in any other place.

133. What is the reason, do you know? It is in consequence of the quantity of fresh water that comes into the creek.

134. They grow best where there is plenty of fresh water? Yes, where the fresh water is continually mingling with the salt.

135. Do they breed there as well as in other places? No, they do not breed there so well.

136. Then they will not breed so well on ground where they fatten? No; and even in the creek where they do grow so well, if you take the oysters and lay them down in the beds they will grow faster than any others you could bring.

137. *Hon. J. B. Wilson.*] The best fattening grounds are high up the river where there is plenty of fresh water? Yes. *To the Chairman:* I was requested by the lessees to ask your permission to inspect your beds. I am going very largely into oyster culture, and I might be able to learn something from what I saw there.

138. *Chairman.*] I shall be very glad to let you see the improvements I am adopting from what I have seen on the Continent and elsewhere. In about ten days or a fortnight when the men are not so busy, if you will pay me a visit, I will show them to you.

Mr. F. J.
Gibbins.

6 Nov., 1876.

Mr. John Emerson called in and examined:—

139. *Chairman.*] We have been appointed a Commission to inquire into the best mode of cultivating the oyster, and of utilizing and improving the natural beds, in order to recommend to the Government any legislation that may be necessary. Can you give us any information on the subject, Mr. Emerson. You are an oyster merchant, I believe? Yes. Before I give my evidence I wish to ask you one question which I hope you will not consider disrespectful. Am I to be examined as a lessee or as a private individual?

140. Not as a lessee. We merely wish to obtain from you such information generally on the subject as may serve to guide us in our recommendations to the Government. It is merely on public grounds that we do this. If any question is put to you which you think interferes with your interests, you can decline to answer it? I will explain my reason for putting that question. I am quite certain that if all the lessees were examined on this subject, my replies would be found to be totally different to all the others; consequently there would be five against me, and my opinions would go for nothing. I am quite aware that my views differ in every shape and form from those of the other lessees, both as to what has taken place and what ought to be done.

141. *Hon. J. B. Wilson.*] It is by collecting all the different opinions on the subject, and comparing them, that the Commission hope to be able to arrive at a correct decision. Therefore we shall be glad to receive any information you can give us? I shall be happy to afford you all the information I can.

142. *Chairman.*] You have been largely engaged in the oyster trade? Yes, for fifteen years.

143. You have also had some experience in oyster culture? Yes.

144. And in breeding and fattening oysters? Yes, in cultivating them on purely naked ground.

145. At what age do you consider oysters marketable, that is to say, in perfection for food—how long after they are spawned? Not less than five years, to attain a real good growth. They can of course be used sooner. I have some that were put down in April, 1874, two years and eight months ago, but to be thoroughly marketable and fit for food they ought to remain for two years more. They were no doubt about two months old when I laid them.

146. Where did you get them? From the shores of Botany Bay and off the rocks; they were collected anywhere.

147. Are there many small oysters sold in Sydney? A large quantity; they are used for what is called "chopping up," for the bottling trade, and are hawked about the streets, and sold in various ways.

148. Do you think it desirable that that sort of trade should be continued? No; it must end in the destruction of the beds if all the young oysters are used up; and by and by we shall be short of spat and all the natural beds will be worked out.

149. Don't you think it very desirable that the Government should adopt some gauge, and prohibit the sale of oysters for consumption that will pass through a ring of (say) $2\frac{1}{2}$ inches? It would be very difficult to do that, because there is such a difficulty in separating the oysters. Some of them grow together so that it is almost impossible to separate them. I think the better way would be to have a

proper

Mr. J.
Emerson.

6 Nov., 1876.

- Mr. J. Emerson.
6 Nov., 1876.
- proper inspection of the oysters after they are opened to see if they are fit to eat, in the same way that meat and poultry are inspected; and also to see if the oyster itself, not the shell alone, is an average size, because some oysters have very large shells and small fish.
150. But how could that be carried out. As far as I know, in no part of the world do they judge an oyster by the weight of the fish? (*Some samples of oysters were here produced.*) These oysters are only such as we commence to grow upon.
151. These small oysters come from Shoalhaven? Yes.
152. And they are sold as food in Sydney? Yes.
153. The fish must be very small? Yes; they are sold cheap; they are hawked about and disposed of, not as a luxury in the ordinary way, but for whatever they will fetch.
154. Have you seen oysters as small as these sold in Sydney? Yes, and worse, much worse.
155. Is not the oyster trade greatly prejudiced when such rubbish is sold for food? Yes, it acts badly in many ways. In the first place, the parties who sell these oysters, as long as they can make a living at it, strip them off the rocks without any regard to the future trade.
156. Is Shoalhaven a leased river? Yes, I believe it is under lease of older date to Mr. P. T. Johnson.
157. Is it the lessee who sends these in? Yes; they are put into the market as saleable oysters.

Mr. William John Langham, Inspector of Oyster-beds, called in and examined:—

- Mr. W. J. Langham.
6 Nov., 1876.
158. *Chairman.*] Perhaps you can give the Commission an explanation of the different samples of oysters now exhibited? They are samples which I procured from the shops this morning; there are seven of them. No. 1 is from Shoalhaven, at present under lease to Mr. Johnson.
159. *Hon. J. B. Wilson.*] And these oysters have been sent up to Sydney for sale by the lessee? Yes, with the exception of No. 5 and No. 7 samples.
160. And purchased by you at shops in Sydney? Yes, this morning. No. 2 sample is from Broken Bay, from Mr. Gibbins's place, who is also a lessee.
161. *Chairman.*] These also are sold in the shops? Yes, all the samples produced. No. 3 is from the Clarence River—Mr. Peter James, lessee; No. 4 is from Cape Hawke—Mr. George Clarke, lessee; No. 5 is from off a bed in George's River, cultivated by Mr. Emerson; No. 6 is also from George's River, from Mr. Emerson's lease: No. 7 is from the same bed as No. 5.
162. *Hon. J. B. Wilson.*] Do you consider it proper that these oysters should be offered for sale? Most decidedly not. I have complained over and over again to the lessees about it, but I have no power at present to prevent it.
163. With respect to No. 1 sample,—do you consider those oysters unfit to be sold in Sydney, on account of their small size? Certainly.
164. What do you think is the diameter of the largest? The largest I think does not exceed 2 inches.
165. And the smallest? About $\frac{1}{3}$ inch.
166. With regard to No. 2, the Broken Bay sample,—Are those oysters, do you think, sufficiently matured to be marketable? I think not.
167. And No. 3 sample, from the Clarence River? No, I think they might also be grown larger.
168. No. 4, from Cape Hawke? Yes, they are of average size.
169. No. 5, from George's River? Yes, I consider those marketable.
170. Would these last (No. 5 sample) go through a $2\frac{1}{2}$ -inch gauge? They would one way most decidedly.
171. We have evidence from Mr. Emerson that these oysters would require two years to mature? Yes, they would require all that.
172. And then they would not go through a $2\frac{1}{2}$ -inch gauge? No.
173. The samples No. 5 and No. 7 were not for sale in the shops? No; they are samples I procured to show the difference in size.
174. They are in fatter condition and more suited to the market than the others? Yes.

Mr. John Emerson's examination resumed:—

- Mr. J. Emerson.
6 Nov., 1876.
175. *Chairman.*] You have exhibited these two samples—Nos. 5 and 7—merely as a sample of your growing oysters. You do not consider that they would be fit for consumption for another two years? No; it would be to my advantage to leave them for that time. Of course, in the event of an emergency I could take them up and use them, but it would be more profitable to leave them, because they grow so much more during the last two years.
176. These mud oysters, which you get by dredging, of course are saleable? Yes; that is a sample (No. 7) of mud oysters of a rare species now nearly extinct.
177. Do you think it would be a wise policy—having regard to the public interest solely, without respect to lessees whose interests of course must be secondary—on the part of the Government, to prohibit the sale of these very small oysters, such as you have exhibited? Yes, I think no oysters should be allowed in the market except those that are a proper size.
178. Don't you think these small oysters have a prejudicial effect on the public mind to prevent the consumption? Yes, of course people who go into a shop and get these small oysters become disgusted and don't care to try them again for perhaps a month; whereas if they got good, fat, well-flavoured oysters they would make them a regular article of food.
179. And these same oysters if put on a good fattening ground would become large and healthy? Yes, I believe any oyster if put on to proper ground would grow.
180. Supposing a four-year old oyster were taken from the rocks and put on good fattening ground, would it grow? Yes, if it were taken off the rocks carefully without being chipped. All our George's River oysters grew on the face of the rock, and grew so thick that they grew outwards. When these are worked off they fall into the soft ground and become drift oysters. All these oysters are rock oysters, and if you take an old boot or a bottle and put it down they will adhere to it, but when they are put in soft ground they grow and fatten.
181. All the oysters in this Colony are of one species, are they not? Except the mud oyster—that is a different species. Even the stock of the mud oyster is different from that of the rock oyster. The stock of the rock oyster is on the left side, but in the mud oyster it is in the centre. There is a difference also in the shell,—the shell of the rock oyster is a flint, and that of the mud oyster is like a cuttle-fish, quite soft.

Mr. J.
Emerson.
6 Nov., 1876.

182. Is there any difference between the oysters got on the shores here and those obtained in the Channel? No, they are just the same; the Tasmanian, Western Port, and Chesapeake Bay oysters, and the Jersey oysters of the south part of New Zealand, are all the same oysters. The strangest thing with regard to the mud oyster is, that if you go south of the 39° of latitude in New South Wales, and across to New Zealand and right through that Colony and to the south of it, you will not find the rock oyster—they are all mud oysters. In Auckland, New Zealand, the shell is of a flinty description.
183. Will those oysters keep for any length of time? No, when they have been thirty-six hours out of the water they open their mouths.
184. And how long will the rock oysters keep? I have known rock or drift oysters to lie exposed for a period of six weeks.
185. Without being spoilt? Without being spoilt, but alive then.
186. One will not keep for more than thirty-six hours, and the other you have known to keep for six weeks? Yes, that is my experience.
187. With respect to the spawning of oysters, Mr. Emerson, have you formed any idea as to the number of oysters spawning at one time at the same place? No; it all depends upon the condition of the oyster at the time; if the oyster is in good condition and the weather is favourable it will spawn, but I think the time of spawning is greatly regulated by the weather.
188. The object of my question was to ascertain, if possible, what percentage of oysters are spawning at the same time and on the same bed? I don't think the oysters on any one bed spawn at the same time. You may take a bunch of oysters and find that one is spawning and the other is not.
189. Do you think it is necessary to have a close season? I think not.
190. Are there certain months in the year only when oysters spawn, or do they spawn all the year round? They are continually spawning.
191. All the year round? I think so. In fact I have opened clusters of oysters and found one good and the other watery.
192. You sell oysters all the year round, from the 1st January to the 31st December? Yes.
193. And you think a close season would be of no advantage? I do not think it would.
194. *Hon. J. B. Wilson.*] Do you think that all full-grown oysters spawn every year? No, I think not.
195. Well, what percentage of them spawn? I believe they all spawn when they come to maturity, but the time of spawning greatly depends upon the state of the weather.
196. That has a great deal to do with it no doubt, and a good deal of spat may be lost; but what I wish to know is, whether you have ever found in opening oysters that the whole of them were spawning—that is, were sick and unfit for food? No.
197. I am desirous of having your opinion, because it is the opinion of men experienced in oyster culture in England, that not more than ten out of every hundred spawn in the same year? I do not think they can have the same species of oyster at Home, because there we find that the mud oysters are only healthy and eatable and in their prime in the cold weather, and they must certainly spawn in the summer, while these large oysters are in their worst condition in the winter months.
198. I think you are mistaken as to the time these large oysters are fit for consumption in England. They are the only oysters that are eaten during the summer; it is only during the summer months that they can dredge for them. But it is not with reference to England, but to this Colony. Is it not a fact that during the whole year there are always good oysters in abundance, so that you have no occasion to throw them away because of their spawning? Oh, yes. We had one season when for fifteen months oysters could not be used in the Clarence River.
199. From what cause? Well, it was from some cause which we could not make out at all. Then there were other seasons when we worked the beds for eighteen months, and the oysters were in good condition all the time.
200. Were there floods,—was there a great deal of fresh water during that time? No; it was rather a cold winter. It has been just the same with the Queensland oyster beds. During one season they could be worked for fifteen months continually, and then a bad season would follow.
201. Then you think there is no occasion for a close season in this country? I think not, because there is no spawning season here, and if you closed the rivers for six months when the young spat was formed you would be unable to make use of it.
202. You think there is no more occasion for a close season for oysters than for sheep or cattle? I think not. I do not think, if you took any of the rivers, that you could determine the close season for two years; you could only see that a proper inspection was made to show whether the oysters were in a healthy condition.
203. Have you any idea of the quantity of spawn that a mother oyster will produce? No.
204. Some say as much as a million, and some even more? You could not make any calculation of that sort here, because during a cold or unfavourable season a great part of the spat would be destroyed.
205. Don't you think this is a very favourable climate for spawning? Yes.
206. Have you had any experience in oyster culture in England? No.
207. Have you made any experiments in forming artificial beds for laying down oysters? No, we have no occasion to do that here; we have such large quantities of spat lying about—any quantity of it can be collected.
208. Have you a large quantity of this spat on the banks of the George's River? Yes.
209. The banks are covered with it more or less all along the coast? Yes, except in places where there is sand; wherever there is a chance for spat to adhere to anything we find it.
210. And in Port Jackson there is a vast extent of spat also? Yes.
211. And no use is made of it? None whatever. You can go up Middle Harbour and find any quantity of it.
212. And if this spat were put on to good breeding ground it would grow and produce fat oysters? Yes.
213. Then is there not a very great waste in this Colony, since this spat is not collected and put in good ground. It is not perhaps felt at the present time, but if they go on working the beds they must die out? Yes.
214. Do you see any objection—I do not wish you to answer this question if you think it may prejudice your interests—to the Government giving licenses to persons whose business it would be to collect oysters from the rocks for the purpose of selling them to oyster growers and fatteners? I think it would be the proper course.

- Mr. J. Emerson.
6 Nov., 1876.
215. It would give remunerative employment to a large number of persons? Yes, but I think it would only be fair if it were compulsory upon these persons who had licenses to collect the spat, to sell it to the lessees of the rivers.
216. I am not speaking of lessees—I am only suggesting a policy for the future; suppose, for instance, that these leases had expired? Oh, yes; but while the rivers are leased I do not think it would be fair that any persons should be licensed to take spat out of them unless they sold it to the lessees.
217. Of course not—that would be an interference with private property; I am speaking with reference to the future. Besides all the rivers are not leased.
218. *Hon. J. B. Wilson.*] With regard to these rivers, do you think it would be desirable to lease them without leasing the foreshore also, so that not only these persons could collect the spat, but the public could collect it also? It would be a good thing, but I think there should be places set aside for the purpose, that these people should be licensed, and that none of the spat should be sold under any conditions except for the purpose of planting.
219. Now we will take the Hawkesbury River for instance,—there is a much larger quantity of spat there than one person can make use of? Yes.
220. Then where would be the harm of licensing persons to collect that spat and sell it? I do not see why it should not be done if other persons will cultivate it—if persons who have spat do not make use of it, I do not see why they should not allow others to do so.
221. *Chairman.*] Is it the case that oysters which only get the benefit of the high tides do not thrive but die? They do not die, but they are always sickly from being exposed to the sun; if they are knocked off and thrown into the water they thrive and grow. I believe that any live oyster thrown down on the ground would grow.
222. If all the oysters on the rocks were knocked off and thrown into the water, would that interfere with the breeding, or would that go on just the same? They would breed just the same.
223. Then does not this supply, on the rocks along the river banks, appear to you an admirable provision of nature to meet an increased demand? I think that, as we are situated, the whole business is going to ruin, because we are so prolifically supplied that people will not turn their attention to the means provided for saving the oysters.
224. We get what in England is only obtained by a considerable outlay of time and expense, without the least labour or outlay? Yes, and if we did not get it so easily we should have to adopt artificial means such as are used in other countries.
225. Don't you think this profusion of young oysters is due almost exclusively to the genial warmth of the climate? I think so.
226. What I mean to say is, that if we had frost and snow here, as they have in England, the greater portion of them would be destroyed. In England, sometimes for ten or fifteen years, they have hardly been able to save any, while in France, where the climate is warmer, they can save large quantities? Yes, it is the rule to save them here, and the exception to lose them in bad seasons.
227. You think then that this climate, which produces vines and oranges, is peculiarly suited to the growth of oysters? I think so, as far as my experience goes. I know what has been done in my leases out of almost nothing, in the course of two and a half years. These oysters which I have exhibited to-day were grown from a mere nothing; they would not have been worth anything if they had remained where they were. I do not think there is any obstacle at all to the growth of oysters here if proper ground is secured. Of course it is a question whether they can be made to pay.
228. What do you consider the most suitable ground for fattening? Do you mean on the foreshore or in deep water?
229. I mean both? I think a clear shelly bottom, with about a 3-mile tide is about the best. The ground should be turned over with a dredge every three or four months, to prevent the oysters from getting into one mass. I believe that when they are spread out they get much larger. In a new bed we sometimes find it all like one crust, and then the oysters are very poor; they are so close that they live upon one another, and don't get the same chance to feed as when they are separated.
230. Don't you think they fatten much better when they are laid down separately? They would in still water; but I think where there is a running tide it is sufficient to keep them apart.
231. With regard to the soil, is not mud essentially necessary for fattening them? Mud is a very good thing for fattening, but when the mud sets over them they get smothered; they require much more care than they do on a firmer bottom.
232. Sand is very injurious to oysters, is it not? Yes; sand will choke them.
233. I will ask you another question having reference to the policy to be adopted in the future. Do you think it would be wise on the part of the Government to lease small areas for fattening grounds, or to continue the present system of leasing large blocks? I think the areas should be large, but that there should be conditions imposed with regard to cultivation. For instance, for every 100 bushels of oysters taken out of a river I think the lessee should be compelled to show that he had cultivated a certain proportion, enough to keep the river in working order. If you took out a bushel of oysters and put back a bushel of spat, you would get ten times the quantity, because you would have three crops.
234. If the Government were to issue licenses in the way we have spoken of to men of good character to knock the oysters off the rocks, and to sell them to growers, don't you think it would give employment to a large number of persons; that it would also be the means of stocking fattening grounds, besides producing a large quantity of wholesome food? I think so, if the conditions of the licenses were that these persons should sell the oysters to no one but the lessees.
235. Is it not quite as possible to make regulations to prevent oyster-stealing as it is to prevent sheep- or cattle-stealing, and other offences of that class? Yes, I suppose so. I think it is quite as much a crime to steal oysters from a person's ground as it is to steal sheep off a run.
236. Then do you not think it would be a wise policy on the part of the Government to adopt precautions to prevent such waste as exists at present? Yes; if the penalties were sufficient to prevent the sale of the oysters to any one except the lessees or growers, because sometimes there is a scarcity of oysters, and these men might get oysters instead of spat, and bring them into town and sell them for consumption.
237. But that would be prevented by an inspector, in the same way as the sale of unwholesome fish is prevented. Is it not possible to have inspectors to prevent the sale of oysters of improper size? I don't think that could be done, unless all the oysters were taken to one place for inspection before they were offered for sale, and that would be difficult.

Mr. J. Emerson.
6 Nov., 1876.

238. Would not that prevent to a great extent the sale of small oysters? Yes. It would be to a certain extent an annoyance to lessees; for instance, where two or three hundred bags came in for the Melbourne market, if they had to be taken anywhere to be inspected it would be very inconvenient. It would also give one inspector an immense deal of work.
239. I am merely speaking of the principle and not of the details? I think the inspector should have power to inspect oysters anywhere, and to condemn them and prevent their sale if he considered them unfit, just as the Inspector of Nuisances has power to seize unwholesome fish. That would keep a good many oysters out which ought not to come into the market at all.
240. *Hon. J. B. Wilson.*] I suppose you are aware that there has been a very great destruction of the natural oyster beds of the Colony from over-dredging? I am well aware of it.
241. Do you think as a rule that these rivers which have been leased have been improved since they came into the hands of the lessees? I do not think so. I think they have been working them without any regard to the future; in fact, I have proved that one-third of the beds have been destroyed by competition--by one man working against another.
242. What is the term for which you think the Government should lease a river for cultivation? I don't think any term less than twenty years would be of the least use.
243. Do you think that is enough? If it were a longer term it would be a great encouragement, but it should not be less than twenty years.
244. Do you think it would be possible to carry out such an inspection of the oyster beds as to ensure their being handed over, at the expiration of the leases, in proper working condition? I think it would be, but it would take some time to find out the condition the beds are in at first. If that were properly done, it would be easy enough to ascertain whether they were left in the same state.
245. Do you think it would be desirable to insert in the lease a proviso that the beds should be returned in the same state as they had been in during the last five years of the lease? Yes, with the exception, of course, of accidents from flood or other causes.
246. Have you any information as to the price of oysters in Melbourne and the state of the oyster market at the present time? I have a letter from my agent in Melbourne, dated 30th October, 1876, in which he states that some oysters sent from Sydney to the Melbourne market, probably about 160 bags, were quite unsuitable. I also put in a letter from the same correspondent, dated 5 October, 1876.

Mr. L. Brooks to Mr. John Emerson, Sydney.

Melbourne, 5 October, 1876.

Dear Sir,

I wish you will oblige me to bring those facts before the Commission of Inquiry to protect and cultivate the oyster beds of your Colony. I want to show the reckless way the trade is being carried on, and the rubbish that comes from Sydney to the Melbourne market, in fact oysters that never ought to be allowed to leave the beds. It is a regular practice to send oysters in bags to Melbourne which are topped up; I mean by that that there are good oysters on the top and rubbish underneath, and the young brood that is in some of those bags ought never to be allowed to leave their beds; the result will be that at the expiration of some of those leases there will be no oysters left fit for use.

The result is, that with sending such rubbish, and more than is wanted for the regular supply, they are obliged to sell them by public auction at the fish markets, Melbourne. In one instance I saw eighteen (18) bags of Newcastle and Broken Bay sold for 20s. the lot.

I send you the price of which oysters have been sold by public auction during this last month.

Whatever information the Commission wish to get I shall be most happy to give them, either personally or by letter.
I am, &c.,
L. BROOKS.

Price of oysters sold by auction during the last month :—

	s.	d.	s.	d.
Newcastle oysters...	4	6	to	9 0
Broken Bay „	3	0	to	8 0
Clarence „	3	0	to	9 0
Camden „	4	0	to	10 0
Cape Hawke „	6	0	to	9 0
Manning „	11	0		

247. Have you any difficulty in getting a good price for good oysters in Melbourne? No, or I should not be able to get on at all.
248. While these inferior oysters have been sold in Melbourne for 3s. 6d. a bag, good oysters have still commanded a good price? Yes, from 27s. to 30s. per bag. Last year—the whole of last year I paid the Brisbane Oyster Company 18s. a bag for all their oysters, and that with freight and costs mounted up to 21s. when they were landed in Sydney, and if they had not been good oysters I should have lost money by them.

FRIDAY, 10 NOVEMBER, 1876.

Present :—

J. S. FARNELL, Esq.,

HON. J. B. WILSON.

THE HON. THOMAS HOLT, M.L.C., IN THE CHAIR.

Mr. George Clarke called in and examined, Mr. Henry Woodward, another witness, present by permission :—

249. *Chairman.*] You are an oyster merchant in Sydney, I believe? Yes.
250. We have been appointed by the Government a Commission to inquire into the best mode of artificially cultivating the oysters in this Colony, and of maintaining and improving the natural beds. I understand that you do a large business as an oyster merchant? Yes.
251. You have also some oyster beds, have you not? Yes.
252. Have you ever done anything in the way of cultivating the oysters artificially? Never.
253. You simply use the natural beds which you have leased from the Government? That is all.
254. You have no layings, as they are termed in England—beds prepared for laying down oysters? No.

Mr. G. Clarke.
10 Nov., 1876.

- Mr. G. Clarke.
10 Nov., 1876.
255. With respect to the spawning of oysters, have you formed any theory on the subject—whether they spawn all the year round, or only during certain months? I believe they spawn at various times in various places; that is to say, they do not all spawn at the same time in the same rivers.
256. Do you think that in any place they spawn all the year round—every month? More or less they do.
257. They spawn more or less during every month of the year? I could not say that they spawn every month, but they spawn at various periods in the year.
258. Of course they spawn more during certain months of the year than in others? Yes.
259. What are the months during which, in your opinion, the spawning chiefly takes place? My experience leads me to believe that they spawn principally during the months of March and April.
260. Does that apply to certain rivers or to the Colony generally? I think it is the case in all the rivers, except about two or three.
261. Do you think it is desirable on that account that there should be a close season—that no oysters should be sold during March and April? I do not see what would be the advantage of a close season.
262. You think that there are always abundance of good oysters to be had which are not spawning during those months? Yes, large quantities of them.
263. As in the case of sheep and cattle, although the ewes may be lambing and the cows calving at certain seasons, still there is always a supply of good meat? Yes, it is just the same.
264. You think it is quite as applicable to oysters as to sheep and cattle? Exactly so.
265. And that there are as many good oysters in proportion as there are sheep and cattle suitable for food? Quite so.
266. Are there not a great many very small oysters brought into Sydney for sale? Well, since the rivers were leased by the Government there are not so many sent in.
267. But formerly there were a great many miniature oysters brought into town, were there not? A great many.
268. Which were not fit for food? Oh they were perfectly good for food, but not being large were unsaleable; they were sound and good enough to eat, but inferior on account of their size.
269. It is stated in England upon good authority that these small oysters are not good for food—that they are skinny and watery? Then it is because they are out of season.
270. It is not on account of their being young then? Oh no; I could show you small oysters which are very fat and good.
271. Is not that because they are on a good fattening ground, in the same way that lambs are fat? Yes, no doubt it depends upon the ground they come from. You will find that, however small, they are as fat as the large oysters.
272. They are something like what are termed “natives” in England? Yes.
273. What size are these small oysters—would they pass through a $2\frac{1}{2}$ -inch ring? Yes, they are smaller than that. I should say they would go through a $1\frac{1}{2}$ -inch ring; that would be a fair medium size.
274. Are you not aware that in many parts of England oysters are not allowed to be sold if they will pass through a $2\frac{1}{2}$ -inch gauge? I was not aware of the size of it.
275. That does not apply to natives? I believe the native is the smallest oyster they have in England.
276. These very young or small oysters that come into Sydney are not generally sold in the trade—they are used chiefly for what is termed “chopping up,” and for the bottling trade—is it not so? That all depends upon what kind of oysters you are working on. Some of the oysters, when full grown, are not very large oysters.
277. Still they would not pass through a $2\frac{1}{2}$ -inch ring? Yes, they would pass through a smaller ring.
278. Those I was chiefly alluding to are the half-starved oysters which Mr. Frank Buckland—a great authority on the subject—defines as “mere skin and water.” Are they not, when bought by the merchants, chopped up for bottling? No, it would not pay to chop up oysters of that kind; we use the largest and finest oysters for that purpose, the small ones would be useless for bottling. We should only think of using them in a time of great scarcity, as they are entirely out of season. At the same time there are always plenty of oysters in season: we can get good oysters all the year round.
279. Now, with respect to the leasing of these rivers and estuaries from the Government, have you formed any opinion as to the best policy to be pursued in the interests of the public,—is it desirable to lease them in large blocks or in small areas? I cannot see what would be the good of small areas. I took up one small portion on the Clarence River myself, and I never saw it. I paid my money, but there were no oysters on it, and it was no good to me.
280. But if it were rich ground could you not have improved it by laying down oysters upon it? It would not pay a small man to do that, unless he had the lease of such a place for fifty years.
281. Now that is coming to the point I wish to arrive at. If you could lease these mud flats for a longer period, would that not be an inducement to take them and expend capital upon them? Where should we get the stuff to lay down on them?—the man alongside of me might have a good patch, and my men might take his oysters to lay down on my ground.
282. If the law were not sufficiently stringent to prevent larceny it ought to be made so. I am asking you whether, if these rich fattening grounds were let for a longer period, it would not be an inducement to capitalists to stock them? What precaution should I have against floods?—they would destroy all my capital. I might lay down 20,000 bags and in twenty-four hours the whole of them might be destroyed.
283. We have a great many farms on low-lying lands, subject to floods, and they manage to get good crops off them? Yes, because they get a crop in a few months, whereas with oysters we should have to wait for years.
284. But the floods would only bring fresh water;—would that injure the oyster-beds so much? Yes. I could mention one bed at Port Macquarie which has been destroyed twice within the lease. Every bag that has come out of it has cost £5 or upwards. That is only one place. There is the Manning River also which is also subject to floods; there is an oyster bed at the bar, one of the finest I ever saw, which has been destroyed for the second or third time.
285. What is the nature of the beds;—are they composed of blue clay, soft to the touch, like soft-soap? Not quite so soft as that, but something similar; but the one on the Manning bar is a sandy bottom.
286. Oysters do not fatten there, do they? Oh, yes; no oysters could exceed those that come from that bed, in any part of the world.

Mr. G.
Clarke.
10 Nov., 1876.

287. Where the oyster beds are subject to floods there is no inducement to incur the risk ; but are there not many places where there is good laying ground which is not subject to the action of floods ? There is no place in the Colony where the rivers are not subject to floods periodically.
288. Enough to destroy the oyster beds ? Yes, to destroy them for years.
289. Then you do not think there is much ground for artificial culture ? No, not artificial.
290. You have no doubt observed in many parts of Port Jackson and in some of the rivers that the rocks are completely plastered with rock oysters ? Yes, there is no place for that like our harbour of Port Jackson ; but our rivers are not like that—in some of them the oysters attach themselves to the mangroves.
291. Now if these young oysters were removed from the rocks or mangroves and laid down on rich mud, would they not produce rich and good oysters ? Well, I have laid oysters in that way in some two or three rivers, and they have never come to much—they have not grown a very great deal.
292. But if they had remained where they were, on the rocks or mangroves, they never would have come to perfection ? Oh, yes ; they come to great perfection on the rocks if they are left there.
293. Those high up on the rocks do not come to much ? Of course they are not so good as those that are covered by the water, but the small ones will become large.
294. Not if they are very high up on the rocks ? Yes ; although they are scarcely ever touched by the water they will grow to a good size, more especially on the Parramatta River. Mr. Josephson had some on his estate, some of the finest I have seen, and the water scarcely ever touched them.
295. Were the fish good and well flavoured ? Yes ; there is nothing so sweet as a first class rock oyster.
296. That may be a solitary case. Is it applicable to all the rivers with which you are acquainted—do the oysters which grow high up on the rocks come to perfection ? Yes, they come to perfection, but they are not so good as those which are covered with water.
297. Now, supposing there were licensed oystermen who would knock off the small oysters from the rocks and sell them to those who would lay them on good ground, would not those oysters come to much greater perfection than they could on the rocks ? Not having seen any of that kind of culture I could not say.
298. Have you had any experience in oyster culture in England ? Never.
299. But you have read that the celebrated Whitstable oysters are fixe-sixths of them purchased in large and small numbers from men, women, and children, who collect them and then laid down to grow ? Yes, but there is so much difference in the species and class between the oysters in England and those in New South Wales.
300. You think there is a difference in the species between the oysters in this country and those in England ? Yes.
301. In what respect do they differ ? In size and make, and in the hardness of shell. I have seen nothing like the English oysters except those we used to get from the Parramatta River some years ago—mud oysters.
302. Do not they resemble what are called the Channel oysters in England, or those that are artificially cultivated ? Not so much ; but we used to have oysters on the Parramatta which very much resembled the English natives—they were not much larger. That is not very long ago ; but they have wholly deteriorated since then. There were beds and beds of them.
303. How many years have you been in the trade ? Thirty years.
304. Do you find much change in the beds ? In what respect ?
305. Have they been seriously injured by dredging ? They were some years ago.
306. That is to say, there is nothing like the quantity of oysters on their natural beds that there were thirty years ago—is that the case ? Well, I see no difference. I think we have as many oysters now as we had thirty years ago. We keep turning out the same quantity year after year.
307. Then you think that what has been said about the beds being exhausted by over-dredging is not the fact ? Well, it was supposed that when the rivers were leased by the Government they were in a very low state, and we know by experience that there was nothing in some of them.
308. They had been injured then at that time ? Yes ; for instance, in the George's River there was nothing, and I remember when two men in my employ, who went to California, used to bring me as many as 40 bushels of oysters of immense size, and in those days they used to be burned for lime in thousands of bushels, as well as used for food.
309. Then George's River is one that has been seriously injured by over-dredging, and the oysters have also been used for improper purposes ? Yes.
310. And have other rivers been similarly injured ? Yes, the Newcastle River.
311. Any other rivers ? Those are two of the chief.
312. The rivers you leased from the Government had a rest for some time, had they not ? They were supposed to have, but the oysters were sold just the same.
313. Then the rest was no advantage to you ? No, rather the reverse.
314. It would have been better for you to have had your lease before the rest ? Yes.
315. Are all the rivers in the Colony subject to floods—there must be some in which the oysters are not liable to be destroyed in that way—are there not places in the George's River high up where they are not killed by floods ? In George's River the oyster beds are pretty free from floods, and it always was so.
316. And about Liverpool the floods cannot be very high ? No, but I don't think the oysters go as high up as Liverpool.
317. Supposing that there are rich flats available, do you not think it would be advantageous for the Government to let them in small blocks to persons who would purchase spat and cultivate it—don't you think in that way we should have more mature oysters, that it would also give employment to a number of persons and be the means of creating a valuable industry ? I don't think the time is ripe yet for artificial culture.
318. Have you any idea of the average number of oysters to one acre of ground ? Not the slightest.
319. Would you think a million too many—it is said that one acre will yield a million oysters. In England where a man has 4 or 5 acres he is considered rich. Now if the same system of culture were carried out in this Colony, don't you think it would be advantageous to the public ? I do not indeed, sir ; I don't think any one would take the trouble to go into it, so long as there is such a profusion of oysters in New South Wales.
320. But are not some of the neighbouring Colonies dependent upon this Colony for their supply ? Yes, that is upon New South Wales and Queensland.

Mr. G.
Clarke.
10 Nov., 1876.

321. Is it not a fact that great numbers of oysters have been sold in Melbourne for a merely nominal price,—not because there was no demand, but because they were in an immature state and unfit for the market; don't you think that if they had been fine well-grown oysters they would have fetched a good price? No, sir, there is no demand; I have sent down some of the finest oysters possible, and they have been literally given away—sold for 10s. a bag.
322. We have it in evidence that the reason these oysters were rejected is that they were too small? No, it was because the market was glutted.
323. *Hon. J. B. Wilson.*] We have it in evidence that certain oysters sold for 25s. a bag, and that certain other small oysters only fetched 2s. 6d. and 3s. 6d. per bag? They may certainly have been of inferior quality, and the market was glutted. If they had been of good quality they would not have been sent to the fish market at all.
324. Don't you think that if these oysters had been good, there were plenty of people who would have had sense enough to have bought them and to have laid them down somewhere to get fat until they were wanted? No, there is only one firm, the Western Port Oyster Company, who have tried to do that, and they have lost thousands of pounds by it.
325. The Western Port Company killed their own beds—the natural beds, I believe? Yes; whether it was from over-dredging I cannot say, though some of them furnished a supply enough to use up all the oysters in the country. They were like the English oysters; we have scarcely any like them now, except a few on the Parramatta River.
326. You think they were an entirely different species? Altogether different.
327. If you took these rock oysters and laid them down in rich mud, would not they become altogether different—Supposing you took young oysters before they had attained any size or shape, and separated them and put them down on rich clay, such as they make use of in England for fattening ground, would not those oysters become altogether different both in shape and appearance—almost a separate species from what they would have been if they had remained on the rocks or mangroves? I cannot see what would make them alter; the shells would be the same.
328. That is only your opinion,—you have not made the experiment to see whether the shells would be the same? I have had oysters laid down on the Parramatta River for three years. I laid them on Mr. Josephson's property, with his permission. I used to take some of them at various times off Mr. Josephson's rocks and lay them in deep water, and whenever we examined them we found they had increased considerably in size, but they were not different in appearance from those attached to the rocks, nor were the shells altered at all; they were just rock oysters and nothing else.
329. But you found that they had improved considerably in growth and quality after they were put on to rich mud? Yes, but it would not do to put them in mud; it was a kind of sandy loam.
330. I believe marl makes the best bed where there are plenty of oyster-shells. At any rate, if removed from the rocks and placed on rich laying ground, they would improve wonderfully, and grow very considerably? Yes, they would shoot rapidly.
331. And fill out? Yes.
332. Well, you see there are an immense number of these oysters on the rocks about Sydney, and if they were all transplanted to rich ground, would they not produce a large quantity of wholesome food for the inhabitants? Yes, but such an immense quantity of them would reduce their value considerably.
333. Do you remember, just before the gold discovery, that there was such a quantity of beef and mutton that there was a difficulty in knowing what to do with it? Yes.
334. Do you think there would be any fear of an equally large surplus of oysters? I do not think so.
335. Oysters are very wholesome food, are they not? Yes.
336. And quite as much a delicacy as beef and mutton? Much more so.
337. Then if you can produce good oysters—not the skin and water kind of oyster of which Mr. Frank Buckland speaks—would you not have a large demand for them beyond comparison with the present demand? There would still be skinny oysters, the same as there are now, because that comes from their not being in season.
338. Is there not an Inspector of Nuisances at present who inspects and condemns unwholesome fish? Yes.
339. Well, if we had an Inspector to look after oysters, would not he prevent oysters of that description from being sold? Well, he could not condemn them because they were not fat. Some persons do not care about fat oysters; they say—"Don't give me those very fat oysters, I like them to taste as if they had just come out of the salt water."
340. Frank Buckland, the greatest authority on oysters, says that when they are watery and skinny they are not good to eat? I will defy any person to condemn an oyster when there is nothing the matter with it.
341. Then if beef or mutton is thin and skinny you would not condemn it as unfit for food? No, because there is nothing the matter with it. I see plenty of meat hanging up which I should not care to eat myself; but it is cheap, and people buy it for that reason; it is sound and wholesome. It is the same with oysters, they are sound and fresh as they come out of the water, and there is nothing the matter with them. Many people do not care about fat oysters, they say—"You know my taste, Clarke, don't give me any of those very fat oysters."
342. I may mention that we had some oysters exhibited in this room which I should scarcely like to say were unwholesome, but were scarcely fit for human food. There was nothing in them, and it appears to be a mockery to sell such young oysters? Well, I could produce some very small oysters which you would find very fat and well-flavoured—in fact beautiful oysters, although small.
343. *Mr. Farnell.*] I understand that you know nothing about the culture of oysters? No.
344. All your experience has been gained by working the natural beds? Yes.
345. Speaking of the Parramatta River, I think you said that you had dredged it for thirty years? Yes.
346. For mud oysters? Yes.
347. Are you quite sure they were not a kind of oyster between the mud oyster and the drift oyster? No, they were mud oysters.
348. They were in shape much the same as the mud oysters, but were not dredged out of the mud? Yes, they were all dredged, but off the hard bottom.
349. Where did you get them? From the channel of the river.

Mr. G.
Clarke.

10 Nov., 1876.

350. Do you remember where they commenced to dredge when they discovered these oysters? They were getting some at Pyrmont, I believe.
351. And then they continued up the channel to Charity Point? Yes.
352. Are there any of the same kind of oysters now in the Parramatta River? They are almost wholly deteriorated.
353. What has been the reason of that? Over-dredging, beyond all doubt.
354. That is to say, the whole of the oysters were dredged and none left to spawn and breed? Just so.
355. Have you tried to take up any lately? Last winter I saw a few, perhaps a couple of dozen, got off the bottom, but that is all.
356. These oysters were attached to each other? No, they were single; you may perhaps among the very young oysters find a few attached to each other, but they separate very easily.
357. Then it is a fact beyond all doubt that the deterioration of the oyster beds in the Parramatta River has been caused by over-dredging? Without any doubt.
358. You have spoken of the beds on the Manning and other rivers as having been destroyed by floods,—is it the fresh water that kills them or the mud that smothers them? They get covered over; in one river the whole of the oysters were smothered with sand.
359. Are you aware that the bed of the Hunter River, or some portions of it, has very thick beds of shells on it? Yes.
360. Can you give the Commission any idea how these dead oyster-shells come there;—was it from the floods destroying the oysters from time to time? That has always been supposed to be the reason, but it has never been clearly ascertained; there are immense banks of shells there to the present day—any amount of shells on the Hunter.
361. You are aware that large quantities of oysters used to be taken out of the Hunter for the purpose of burning lime? Yes, I have seen it myself; I have seen boat-loads of oysters taken up which, if in England, would be worth ten guineas a bushel.
362. Referring to the bed on the Manning River bar, where you say the oysters fatten so well,—what has destroyed that bed? The floods have done that.
363. The deposit of sand or mud from the floods has totally destroyed it? Yes, and it is not the second or third time that it has done it.
364. Are the oysters lying on the bottom? Yes, lying on the bottom just inside the bar.
365. Not on the bar, but just inside it? Yes; it is a great pity to see it.
366. It is your opinion that oysters in this country spawn all the year round? Yes.
367. But not all at the same time? No.
368. Therefore there are always a quantity of eatable oysters? Yes, we can always get them. In fact, in the same river oysters will be spawning in one part of it and not in the other, either higher up or lower down; but there are always a quantity of fine eatable oysters.
369. Are you aware that they spawn at different times in the same river? Yes, they must do, or how would you account for some of them being poor and others fat? They are always poor directly after spawning. Mr. Holt says, the Inspector would condemn them for that, but there is nothing the matter with them except that they have been spawning.
370. Then don't you think they ought to have a period of rest when they may spawn? Oh yes; if I found the oysters poor on one bed, I should go to another bed in the same river where I could get good ones. You could not close the river.
371. What I want to ascertain is this—whether by the non-closing of these rivers the oysters will not be altogether obliterated, as has been the case in the Parramatta River. If there is to be no close season, and the oysters are to be taken indiscriminately, would not the final result be that the whole of the oysters in the river would be annihilated? It would take a very great number of years.
372. If you go on dredging a river without giving the oysters time to spawn, must not you destroy them by not allowing them to breed? I cannot say, I am sure. I can only speak of the Clarence River with respect to the production of oysters.
373. Suppose you were to kill ewes in lamb or cows in calf, would you not destroy their progeny? Certainly.
374. If you destroy spawning oysters is it not the same? The yield of oysters is so immense.
375. What is the yield of an oyster, do you know? I do not know; some people say a million.
376. Well, notwithstanding that you can, as you say, get eatable oysters during the whole year, the persons who dredge for them do not use much discrimination in taking them, whether they are spawning or not? Oh yes, they will not take them if they are spawning.
377. How do they know whether they are spawning if they do not open them? There is no occasion to do that—you can see the spawn floating about. The oysters are not good when they are spawning.
378. What are these poor skinny oysters? They are poor after spawning.
379. Have you had much experience in the collection of oysters off the rocks? I have used a great number of them.
380. Do you get as good and fat oysters off the rocks near low-water-mark as you do out of the rivers? Yes, sometimes, but they are not so thick.
381. Are the oysters in Middle Harbour, and on the rocks down the bay, as far as Shark Island, as large as those higher up the Parramatta River? There used to be some very fine ones in Middle Harbour some years ago; I have not seen them of late.
382. Are you aware that the oysters do not grow so large near the sea-coast—that the saltness of the water affects their growth? I was not aware of it.
383. Do you know from experience that oysters grow better in a place where fresh water and vegetable matter flow in and mix with the salt water? Yes, I know that from my experience on the Clarence River.
384. Do you know whether there are male and female oysters? No.
385. Do you know how they get their food? No.
386. You have had more to do with dealing in oysters than in cultivating them—in purchasing them and selling them again? Yes.
387. I think you stated that when the rivers were closed a great many oysters were stolen? Yes, that used to be the case, but since the rivers have been leased that has been put a stop to, to a great extent.
388. Do you, as a lessee, adopt any means of improving your beds? We do not take up young oysters.

- Mr. G. Clarke.
10 Nov., 1876.
389. That is the only distinction? Yes; we know when they are saleable.
390. You do not increase the production of the oysters? Not by artificial means; in fact there is such a quantity of them that if it were not for the floods in the rivers they would become of no value.
391. Does New Zealand produce many oysters? Great quantities.
392. Do many of them come in to Sydney? Some of them.
393. Do they fetch a good price? There is no sale for them—they are thrown away.
394. *Hon. J. B. Wilson.*] Is there any export trade for oysters from this Colony except in bags to Melbourne—are any preserved oysters sent away? No.
395. Do you happen to know what the annual export of oysters is from the town of Baltimore in the United States of America? Something fabulous, I believe.
396. Is it two millions sterling. Can you see any reason why we should not preserve oysters and send them up the country? The oysters you are speaking of are different from ours. If you were to preserve our oysters you would find that they would shrivel up into little things the size of nuts.
397. Have you seen any of the American oysters in the market before they were preserved? Yes.
398. Are they larger than that (*exhibiting top of ink-stand*)? Much larger.
399. Well, I have seen American oysters, and I have seen much larger ones here? We used to have very large oysters of that kind in the Parramatta River.
400. *Mr. Farnell.*] But they were not better than those in the George and Clarence Rivers? No. I have been a lover of oysters all my life, and I never saw finer oysters than those from the George's River, but they have deteriorated much in flavour.
401. After mature consideration, do you think it is unnecessary in any particular river to have a close season? Not while we have such a profusion of oysters.
402. Do you know whether the oysters to the north spawn sooner than those to the south of the Colony? I do not.
403. The oysters in the northern rivers spawn sooner than those in the southern rivers? I do not think so; the Newcastle oysters spawn somewhere about Christmas time, or a little after.
404. Do you know whether the oysters spawn during the winter months? If it is the spawning that causes them to be poor I should say they all spawn in the winter months—May, June, July, and August are the four months that they are supposed to be the poorest. But I have had oysters from the Tuross River quite fat during those months; it would be impossible to find fatter or finer.
405. *Hon. J. B. Wilson.*] Are there not many circumstances that would tend to make oysters poor other than spawning, are there—for instance, would not floods sicken them and make them poor? Fresh water makes them fat; I have known them burst with fatness.
406. When there is a great quantity of alluvium settling down after a flood has it not a tendency to make them poor? Well, the Hunter River has deteriorated very much this year, and I have never been able to ascertain the cause. I have thought that the steamboat traffic upon it has interfered with the beds very much.
407. *Mr. Farnell.*] It would affect the spawn? Yes, it does not settle. During the last three or four years the oysters from the Hunter have deteriorated in every respect.
408. Are you aware that severe frosty weather affects the spawn of oysters at a certain stage of their growth? No, I am not.
409. I think you said you did not know how much spat a single oyster will produce? I do not; I have asked a good many fishermen, but none of them could tell me.
410. The number is about two millions? Is it?
411. You do not think it is desirable to lease these rivers in small areas? I do not think it would pay; several persons have taken rivers in that way, and they have all given them up. There is only Captain Griffin, of Port Stephens, who has kept his on, and he cannot get any oysters out of his creek only about two bags a week; he has been ten years at it.
412. *Chairman.*] Are there many stolen oysters consumed in Sydney, do you think? Well, even now at the present time it is done. There is only one river of which I can speak with any very great certainty, and that is the Parramatta River; hundreds and thousands of bags have been stolen out of it since the closing.
413. What would you suggest to prevent it? I have seen a good many convictions lately at the Water Police Court by Inspector Ferris, but whether the fine is not sufficient or what is the reason I cannot say, but they go at it again.
414. What can you suggest—Do you think imprisonment instead of a fine, after the second or third offence, would have the effect of putting a stop to it? That might deter them.
415. Don't you think the receiver is just as bad as the thief? You see they don't ask any questions; a man sees a good bag of oysters and he buys it.
416. Should not some precautions be taken, such as are adopted to prevent cattle-stealing; for instance, men taking cattle from one place to another must have a pass; a butcher must have a license, and so on—What is your opinion as to the best precaution to take to prevent oyster-stealing? I don't think anything would prevent it in the Parramatta River.
417. *Mr. Farnell.*] Unless you had a sufficient number of persons to watch them? I don't think it could be done; why they are getting the oysters all the time they are watching the police boat, under some bank among the rocks.
418. *Chairman.*] Then you think that it is better to let them continue to steal rather than to adopt stricter measures to prevent them? Well, you see these men look upon the oyster beds as a sort of heirloom. They say to me—"We have got our living on this river for years, and we are surprised at you, Clarke, trying to take the bread out of our mouths."
419. But if these men were licensed, and paid £1 a year for the right to take oysters off the rocks, in the same way as timber-cutters are licensed to cut timber, would not that effectually prevent stealing? Well, there would be no harm in it.
420. What is your opinion as a practical man? I know that on the Parramatta River the oysters would still be stolen.
421. But the men would pay the £1 a year, would they not? Yes, they would pay that.
422. How long would it take them to strip the whole river in that way? It would not take long—there would be a great number of persons.
423. If all the oysters were taken away there would be none left to spawn? Oh, there is plenty of spawn; in fact the rivers were never in better condition than they are at present.

Mr.

Mr. Henry Woodward examined:—

424. *Chairman.*] You are an oyster merchant in Sydney? Yes.
425. You have heard me state to Mr. Clarke the object for which this Commission was appointed? Yes.
426. Any information which you can afford us we shall be glad to receive. Please to give us your opinion as to whether it is desirable, in the interest of the public, to lease large blocks as at present, or to lease the oyster-bearing rivers in small areas? My opinion is that the present mode of letting the rivers tends to prevent stealing. Of course a man cannot rob himself; but if there were a number of lessees pretty close together, the man who got a poor part of the river would probably take the oysters from some other bed where they lay thick and plentiful. We are quite sure this would be done, and we can't guard the rivers day and night.
427. But it is very possible to define the boundaries of the different leases by means of buoys? I don't think it is; if you were to put down buoys, in times of floods the dead timber carried down by the stream would catch hold of them and take them away. That would not happen in all rivers; for instance, the George's River, which is broad near your place, you could define the boundaries by buoys, but in other rivers you could not.
428. But don't you think the rivers could be utilized to a much greater extent if they were leased in small areas, and that this would give employment to a large number of persons? I believe there would be more oysters produced.
429. *Mr. Farnell.*] Will you explain what you mean by produced? I mean you would get more oysters out of the river. I believe if the rivers were put up in beds that poor men would take a bed here and there, and if they found oysters scarce it would be their business to obtain some elsewhere to enrich their beds.
430. *Chairman.*] Where would they get them from—off the rocks and mangroves—the small oysters which stick to them? Yes.
431. And these oysters being taken from the rocks and mangroves and planted on suitable ground, would grow large and saleable? Certainly they would; a great many would die from being cracked in taking off, but a large number would grow.
432. But if carefully taken off the rocks with a chisel there would not be a very large percentage killed? Yes; the way they grow in many of these places along the beach is in bunches, and they separate them with a knife.
433. Have you found it to answer well? In some instances we have lost every one, but in Camden Haven we have had 1,000 bags laid down, and I believe they have prospered well.
434. Then you do cultivate them artificially—Mr. Clarke said he did not? Mr. Clarke did not understand the purport of your question. He understood you to ask him whether he got a few oysters here and there and laid them down on artificial beds. We have laid lots of oysters down—Mr. Clarke is connected with me—and we have lost a number of them; we lost all that we laid down on the Manning River.
435. *Hon. J. B. Wilson.*] Mr. Clarke spoke of a valuable bed inside the bar of the Manning River? Yes.
436. Is it the case that that bed is all sand? No, it is not sand, but the sand covers it up; it is a sort of rocky sand bottom.
437. Could not you immediately after a flood, do something to save that bed, by raking it over so as to dislodge the sand? The oysters would be completely smothered with mud and sand before you could get at them, and the sand chokes them. Only a few weeks ago there was a little fresh on that bar, and it destroyed every oyster upon it; that is one of the finest beds possible.
438. Could nothing have been done immediately after the flood to save those oysters? Nothing, sir; and I will tell you another thing,—on that Manning River the fresh water kills them. I will tell you another thing,—we have a large shed, 100 ft. long, floored with battens about half-an-inch apart so that the water can get in between them; we had it full of oysters, and the flood water settled on them and killed them. The shed too was clear of the bank. Still that is not the case in every river; there are plenty of other rivers where the floods do not affect them at all.
439. There are a good many banks on the Manning River of rich alluvial soil, and when the flood waters come down a great deal of this alluvium is held in suspension by the water? Yes, and it settles on the oysters and kills them. During the last six years I have known that bed to be covered over several times, still the oysters settle there again.
440. *Chairman.*] Until another flood comes and destroys them? Yes; I believe it is no use to try to do anything there.
441. Are there any creeks connected with the Manning River that would answer? No, there is only Scott's Creek, which leads from the north to the south passage.
442. Is that a good place for oysters? There was once a famous bed for oysters there, when the old south bar was banked up and no water could run in or out there; but when the south bar was opened out the oysters came into the south passage and died out in Scott's Creek. It only became dead water then—there was no current. As far as my experience goes, there are no good oyster beds except where there is a good current of water. I could show you that in fifty places on the Parramattà River without going further.
443. But we see that in France oysters fatten in still ponds—old salt ponds? Yes, I have heard so, and I believe it; but I have had a good deal of experience here, and I have never known it to answer in still water.
444. Is it not a fact that large quantities of miniature oysters are brought into market in Sydney and sold as food? They are not brought now; it is not to be supposed that we should be foolish enough to bring in oysters that we could not sell at a good price.
445. Understand me, I am not speaking personally; there are a great many oyster merchants in Sydney. Is it not a fact that a large number of very small oysters are brought into Sydney? There are none brought into Sydney except by lessees; and it is not to be supposed that we should bring in very small oysters and sell them at 15s., when by keeping them a little longer we could get a pound.
446. But we have heard of small oysters sent to Melbourne by lessees which were condemned as unsaleable and sold at 3s. 6d. a bag? The only oysters sold at that price are those from Brisbane, and we have no control over them. There have been a large quantity of very poor oysters coming in lately, and it is those

Mr. H.
Woodward.
10 Nov., 1876.

Mr. H.
Woodward.
10 Nov., 1876.

those that have been sold at a low price in Melbourne, and not New South Wales oysters. We serve half the shops in Sydney, and we have all got the same oysters that Mr. Clarke has. We only sell the oysters from two rivers, the Cape Hawke and Clarence Rivers.

447. We have had oysters exhibited here not larger than that (*exhibiting top of inkstand*). Now will you be good enough to give us your opinion—you must consider these questions not addressed personally but generally—whether there are not a great many small oysters sold in Sydney at the present time; not so many perhaps as were sold formerly, but still a great many miniature oysters? Well, I cannot say a great many. I am not afraid to tell the truth. I was walking along King-street the other day and I certainly saw a number of small oysters, and the person who had them wanted to buy some from us. I don't think it right to mention his name, but at any rate the oysters were from one of our rivers.

448. *Mr. Farnell.*] From a closed river? No, sir, the river is not closed.

449. *Chairman.*] Do you think any legislation is necessary to prevent the sale of these very small oysters? I think so; I would try and prevent it if I had the power.

450. What gauge do you think it would be advisable to adopt—it would be necessary to fix some size? Well, in some rivers I should think $2\frac{1}{2}$ inches would be about a fair average.*

451. And that the sale of all oysters which would pass through a $2\frac{1}{2}$ ring should be prohibited? Yes, I think so; I do not mean every one, because there would always be here and there in a bag some that would go through; but I think the average should not be less than that.

452. Don't you think that if the public were supplied with good oysters they would buy much more largely than they do while this rubbish is sold? I should certainly think so.

453. You think the consumption would greatly increase? Certainly.

454. Do you not think it is to the interest of the oyster-dealers that there should be some legislation of that kind? Yes. I know we have tried all we could to stop it.

455. Do you think these skinny watery oysters are fit for food? No.

456. There is no nourishment in them? No; and I do not believe they are fit for food.

457. Then you think the Government would be quite as much justified in putting a stop to the sale of these small oysters as they are in prohibiting the sale of unwholesome fish? Yes, I do think so.

458. And if put on good fattening ground they would grow and become good oysters? You must understand that when an oyster is out of season it is poor, no matter where you put it or what it feeds on; you cannot make it fat until it comes to its season again.

459. Certainly, but after it recovers its sickness it would become good wholesome food? Certainly, if left where it was till its season came it would grow and become a good size.

460. Have you formed any theory about the spawning of oysters—do you think they spawn all the year round? No, I do not think they spawn all the year round. I am certain beyond all doubt that as a rule they spawn in March or April. I have paid great attention to this during the last twelve months especially, and I have never known them to fail during those two months.

461. That is only applicable to certain localities? I could mention four different places where that rule holds good.

462. They all spawn about the same time? All about the same time.

463. Have you not found spat in almost every month in the year in the large and small creeks? Oh, yes.

464. Then do you not infer from the finding of this spat at all times that some oysters, many or few, are spawning all the year round? Yes, I am sure there are some rivers where oysters on one bed spawn one month and on another bed the next month. I know one place where all the dredge oysters spawn in October or November, and I am aware that those which are found down near the sea are fit for eating all the summer, and spawn in the winter, just six months between them and the others. The dredge oysters are found in the upper part of the rivers and the bank oysters in the lower.

465. Do you think it necessary that there should be a close season during certain months of the year, when no oysters should be sold? I don't think it would be advisable; I think if you could prevent those poor oysters from coming into the market, which might be done under the Corporation laws, it would be sufficient.

466. You are of opinion that there would always be a sufficient quantity of good wholesome oysters obtainable all the year round? Yes, we could get enough to go on with. They are not so abundant at certain times in the year. Last year was a very bad year, owing to the long drought; none of our oysters to the north came on till after Christmas.

467. Of course we cannot provide against natural drawbacks, but I am speaking of legislation. You do not think it necessary to prohibit the sale of oysters in the Sydney market during any portion of the year? I do not consider it necessary.

468. You think it will be sufficient to prohibit the sale of small oysters? Yes.

469. *Mr. Farnell.*] Would it be practicable or advisable to close part of a river—certain beds—during a stated time; would it be possible and practicable to fix the close season by legislation? Oh yes, it would be practicable if you had a proper person to inspect the beds.

470. *Chairman.*] Would it not be sufficient if these persons were prevented from offering oysters for sale in the market that were in bad condition? I think so.

471. *Hon. J. B. Wilson.*] Could they tell whether oysters were in bad condition without opening them—You stated just now that the Corporation authorities might prohibit the sale of poor oysters—would it not be very difficult to determine which were poor and which were not; there might be a quantity of good oysters in a bag, and there might be some bad ones? It would be very difficult to define which were good and which were bad.

472. You have stated that during all seasons you can get a sufficient quantity of good oysters, but are they not got by the sacrifice of a great many poor oysters—that is to say, in getting the good ones do you not destroy a great number of poor ones? Well, there are always a few poor ones on the same bed.

473.

* NOTE (on revision):—When before the Commission yesterday I was asked what size should a fair grown oyster be, should it be of a size that it would not pass through a $2\frac{1}{2}$ -inch ring. I answered yes, it should be of such a size. While being asked and answering this question there was lying before me on the table the round top of an ink-pot, which I thought was about the size of a 2-inch ring, and not thinking an oyster that size would be a fair grown one answered yes, it should be able to pass through a $2\frac{1}{2}$ -inch ring; but, upon reflection and actual measurement of fair-sized oysters, I find I have given a wrong answer. Our oysters are not round in shape, as is the English, but long and narrow, and one of ours that would pass the narrow way through a ring $1\frac{1}{2}$ inch would be so long that it would hold fully as much fish as the round English mud oyster $2\frac{1}{2}$ inches. I therefore give it as my opinion that our oysters that would not pass through a ring $1\frac{1}{2}$ inch would be a fair marketable oyster, and those that would not pass through a 2-inch one would be large for New South Wales.—HENRY WOODWARD. 11 Nov., 1876.

473. And you think that as a rule they spawn chiefly in March and April? Either in March or April; that is about the time I believe the bulk of them spawn, and they remain poor all the winter.

474. *Chairman.*] Have you done anything to secure the spat, as is done in Europe, by putting down piles of hurdles or other material? No, we have not put down anything on purpose, but we have plenty of spat.

475. You consider that unnecessary on account of the large quantity of spat to be found clinging to the rocks and mangroves? That is it, sir.

476. If you require any oysters to plant, there is always an innumerable quantity to be found on the rocks? Yes, without adopting any artificial means to catch them.

477. Will you be so good as to give us your opinion as to the propriety of licensing persons on rivers—rivers of course not under lease, so as not to interfere with private rights—to collect oysters from the rocks and to sell them to those who have suitable ground to put them on. In this way those persons who are now stealing oysters in the Parramatta River might have remunerative employment? If you ask my advice, I think you might license a great number of persons to get these oysters from certain places as far up as Ball's Head, Lane Cove River, and the upper part of the Parramatta River. There are a number of small families who would make a good living at it; none of the big buyers would have anything to do with it.

478. Supposing every oyster on the banks of the rivers were knocked off annually, so that not one remained, would not that interfere with the trade? Not unless they were destroyed.

479. But don't you think the whole of the spat on the banks comes from the oysters in the middle of the river—in the deep water? Why should not it come from those on the rocks, where we know there are oysters spawning?

480. Well, if you ask me the question, I should say because these oysters do not come to maturity? There are as fine oysters as you could wish to see on the rocks.

481. Even those that are dry and above low-water-mark? Yes; on Mr. Josephson's property there is a high corner at Waterview Bay where there are some extraordinarily fine oysters, and as well-flavoured as you could desire. Mr. Josephson sold about 400 bags of them a little while ago—a large crop for his little bit of beach; there is no great extent of it, not more than a mile or a mile and a half.

482. *Hon. J. B. Wilson.*] That is at Lane Cove? Yes, Lane Cove; it is not his own property.

483. *Chairman.*] Do you think the plan of licensing men to collect oysters from the rocks, in the same way that timber-cutters are licensed, would be attended with any risk of stealing? No, I don't think there would be any greater risk; if they want to steal them they will steal them; they are doing it now without a license; if they had a license I should say they would not have the same inducement to steal. I think something should be done either by license or lease on the Parramatta River.

484. *Mr. Farnell.*] Would you give the men license to knock off oysters in front of private property? Well, it is almost all private property. If they don't go in front of private property where are they to go? I can't see any objection; if the owner thinks he has a right to it, of course it is a matter for the Government to decide.

485. *Hon. J. B. Wilson.*] You have stated that you considered it advisable to have a law prohibiting the sale of small oysters—Is there any particular age to which you would limit the oyster? You cannot tell by the age of the oysters; in times of drought they will remain stationary for six or eight or even twelve months, and all of a sudden they will spring out and grow more in three months than they have done during eighteen or twenty-four months previously.

486. Can you not tell the age of an oyster by the shell pretty nearly? Yes, I can pick up an oyster and tell its age by the shell.

487. Do you think it would be advisable to determine by legislation that no oysters should be sold under four years of age? No; there are plenty of places where oysters are full-grown at eighteen months.

488. *Mr. Farnell.*] Some oysters then became eatable at eighteen months? Yes.

489. Do you know at what age the oyster spawns? I do not. All the knowledge I possess on the subject is from reading; I believe they spawn at three years of age, but I cannot say whether that is correct or not.

490. Do you think it desirable to sell oysters until you have had one spawning season from them? If there were a great quantity of oysters in a river it might be desirable to get rid of a number of them; but if there were a scarcity it would be advisable to keep the oysters and let them spawn. If there are more oysters than the beds will feed it is advisable to get rid of some of them, the same as with cattle on a run.

491. Should not we be more likely to perpetuate the oyster by insisting, by law, that no oysters should be sold until they had had at least one spawning season? I cannot see how you could prove whether they had spawned or not. If you want to increase the number of oysters, of course it would be advisable to let them spawn first—most undoubtedly it would.

492. *Chairman.*] Have you any idea what percentage of oysters from a bed spawn. Supposing there were one million oysters on a bed, have you any idea how many out of the million would spawn in the course of the year? I have not.

493. Do you think there would be more than 10 per cent.? I really cannot answer you.

494. When you have been dredging oysters and have found some of them spawning, what proportion have been in a spawning state—can you form any idea? I don't believe any man in the world could tell whether an oyster was spawning by lifting it up.

495. *Hon. J. B. Wilson.*] Can you tell how many oysters in a bed are in the same state? I believe they would all be in the same state.

496. *Chairman.*] It is said in England that not more than 10 per cent. are spawning at the same time? I am not able to answer that question.

497. *Hon. J. B. Wilson.*] Do you think, as a rule, that the lessees are careful not to deteriorate the beds? Yes, I could show you that we have very strict rules. Our men never take anything away except the oysters—they throw everything over; they are not allowed to carry away an ounce weight of anything.

498. But do you put anything down to replace or improve the beds? No, but we don't take anything away.

499. Supposing a flood comes down and a large quantity of mud settles on the bed and diminishes its power of catching spat? But the mud does not remain on the oyster beds. I have been over many of them, and I find that the natural beds are a hard substance like marl.

Mr. H.
Woodward.
10 Nov., 1876.

- Mr. H. Woodward. 500. And you do not think it necessary to add to these beds by putting down dead oyster shells for instance from the banks? No, I do not think so. I heard you ask Mr. Clarke a question about dead oyster shells. The oysters at the bottom die and the young ones keep growing on the top and the bed keeps increasing. I have seen beds of great thickness which are formed in this way on the Manning and other rivers.
- 10 Nov., 1876. 501. Mr. Farnell.] Do you know anything in respect to the longevity of the oyster? No, I do not.
502. Chairman.] What is the thickest oyster shell you have ever seen—have you ever seen one 2 inches thick? No.

MONDAY, 13 NOVEMBER, 1876.

Present:—

HON. J. B. WILSON, | J. S. FARNELL, Esq.
THE HON. THOMAS HOLT, M.L.C., IN THE CHAIR.

Mr. Peter James called in and examined; Mr. Bell, another witness, being present, by permission:—

- Mr. P. James. 503. Chairman.] You are aware, I presume, that the Government have appointed us a Commission to inquire into the best mode of artificially cultivating oysters and utilizing them, and of maintaining and improving the natural beds? Yes.
- 13 Nov., 1876. 504. You are an oyster merchant in Sydney, I believe? Yes.
505. Have you been engaged in the business for many years? About eighteen or nineteen years.
506. Have you had any experience in Europe in the oyster trade? Not very much in Europe in respect to oysters, but I have had a good deal of experience in fish both in England and Ireland, and in Scotland as well. During that time I was sometimes among oysters a very little.
507. And you are now a lessee of oyster beds belonging to the Government of this Colony? Yes.
508. You are not a proprietor as well? No.
509. Do you breed any oysters? No, we have not bred any yet; we have tried a good deal of it once at Balmain, but we have not succeeded as yet.
510. Do you mean that you have tried breeding or fattening? Well, we have not succeeded in fattening.
511. By breeding I mean securing the spat and laying them down in suitable ground? We have never tried any artificial means of securing the spat.
512. But you have placed young oysters on beds in the Parramatta River to grow and fatten? Yes.
513. And don't you find it succeed,—do they not grow? No. We have tried it; we have separated the young oysters from the large ones and kept them there for two years, but we have never seen any difference in them.
514. Do they keep alive? Some of them, but not more than 10 per cent. of them lived.
515. About 90 per cent. died? Very nearly that.
516. What was the cause of their dying? Well, we have not had sufficient experience in our beds to know what it was. We laid down battens with boards across them, and laid the oysters down on that so that the mud might not smother them; but they died just as fast; we found most of them dead on the bottom.
517. What was the character of the soil on which you laid them; was it sand? There was a little sand; it was pretty hard,—gritty white sand with a little shell mixed with it.
518. Do you know that kind of mud which is universally known as London clay? I cannot say I do.
519. Do you know a description of mud which is soft to the touch, almost of the same consistency as soft soap? Yes, greasy and buttery.
520. Well, that is known as the London clay—was it on clay like that that you laid the oysters? Some of them, but most of them were laid on a hard sandy bottom. You see the ground is patchy; there are patches of white sand, and then you get a bit of soft mud; the patches of mud are near low-water-mark, but there is not much of it.
521. But you never tried the experiment of laying oysters on that soft mud? No, not on that mud particularly.
522. You have laid them all on the sand? Well, it is more like gravel than sand at the point at Balmain—rock, and little pebbles—and we have succeeded best at the point. I laid down thirty-six bags of oysters there one season, and I took up next season, I think, twenty-nine bags; that was the only success I had.
523. Hon. J. B. Wilson.] Had they improved much during that time? Yes, they had improved both in size and quality; but when we tried a little further in near the point we had no success at all; the oysters would grow perhaps half-an-inch or so, but they did not fill or shell up. We could see them a month or two after we laid them down, and they had shot out a little, but they never got further.
524. But are you not aware that that coincides with the experience of English cultivators—that oysters will never grow or fatten on sand? Yes, because the sand gets into them and chokes them; but here we never find any sand in them.
525. But we find, according to the evidence of witnesses before a Select Committee of the House of Commons this year, that they will neither thrive nor even live where there is sand, and Frank Buckland attributes this to the fact that particles of sand get into the mouth of the oyster when it is opened, and as they cannot reject the sand it kills them? We could not find many of our oysters with sand in them; in fact there are plenty of what are called sandy bottoms with very little loose or drift sand upon them. The bar bed on the Manning now is completely swept away—sanded up—but in a few years time it will be cleared away and oysters will settle there again.
526. On what rivers do you lease oyster beds? Camden Haven, the Clarence River, Port Stephens, the Manning River, Cape Hawke, and Port Macquarie.
527. Where do you get the best oysters? We reckon that the best oysters are from the Manning River and Camden Haven, but the largest quantity comes out of the Clarence River; we find them breed best there.
528. Are there many very poor oysters brought into the Sydney market for sale? There are a great many

many poor oysters after spawning time. On the Clarence River they generally spawn in the winter, but Mr. P. James last season was an exception, and we got fat oysters from the Clarence all the winter.

529. Those were aged oysters I suppose—sufficiently matured to be sent to market? Yes, as fat as I 13 Nov., 1876. have ever seen them.

530. Full-grown oysters, not young ones? Yes, full-grown.

531. Of what age do you think? About four, between three and four years.

532. Don't you think that no oysters ought to be brought to Sydney for consumption until they are full-grown, that is to say four years old? I don't think they ought to be, but still they are.

533. You think there are a number of young oysters brought to Sydney? There is no doubt of it.

534. There cannot be much nourishment in them? Some of them are very good, but of course if you wish to increase the beds tenfold you should keep them. Still I believe there is plenty of nourishment in them and they are fat enough.

535. Are there not plenty of small oysters which are mere skin and water? After spawning, that always sickens them.

536. Are not many of those oysters brought to Sydney for sale? No, we don't find a market for them when they are in that state.

537. But are there not many of these mere skin and water oysters sold in Sydney? No, I don't think there are many of them; the trade will not buy oysters that are not fit to eat. When they are skin and water we leave them where they are; we don't fetch them in because the shopkeepers won't buy them.

538. What are the sizes of full-grown oysters in this country? They vary very much in size. Those from the Clarence River are very small.

539. Would they pass through a 3-inch ring? Yes, easily enough.

540. Would they pass through a 2½-inch ring? Yes, nine-tenths of them would; they would almost go through a 2-inch ring.

541. Do you think it desirable that there should be some limit in respect to the size of oysters offered for sale in Sydney? I cannot see how it could be done.

542. You are aware that in England the Corporations have power by their by-laws to make regulations which have the force of law in respect to the size of oysters; and that the usual limit is 2½ inches; none smaller than that are allowed to be sold. That does not apply to natives? They are not the same sort of oysters that we have here; ours never reach the size of the English oysters.

543. Have you not seen as large oysters here as you have seen in England? No, except the mud oysters, and I have seen larger in England; I have seen some from the Isle of Man that you would have to cut into four or five pieces before you could eat them.

544. But you have seen some large mud oysters from the rivers of this country? Yes, but not so large as those I have seen in England.

545. The mud oysters are you think a distinct species, quite different from the drift or rock oysters? No doubt of it, altogether a different class of oysters.

546. We have had exhibited on this table some very small oysters in which there could be very little nourishment. Now, is it desirable in your opinion that in any new Oyster Bill some provision should be made to put a stop to the sale of these very young oysters? They certainly ought not to be sold, but it would be a very critical job to define the size.

547. What mode of prevention would you suggest? I am sure I cannot tell without taking time to consider.

548. You say that nine-tenths of the oysters from the Clarence River would go through a 2½-inch ring. Now supposing it were decided to have a gauge, what size would you suggest for that river? I think you would have to make a gauge for each river.

549. Now you are a practical man. Will you suggest to the Commissioners the sizes which would apply to the rivers you know? I do not think, after mature consideration, that any gauge could be adopted—even a separate gauge for each river—as the oysters vary so much both in size and shape in the same river.

550. Are there not a great many very small oysters not fit to be served to customers, which are chopped up for bottling? No doubt of it in the world.

551. Well, don't you think, even supposing that these oysters are not actually unwholesome, it is almost an affront to the public to sell oysters which have so little nourishment in them, which are mere skin and water? Well, I suppose it is; but there are not so many that are skin and water. You are laying too much stress on that, because there are plenty of small oysters that are full of meat. It is not the size of the oysters you must look at, but the time when they are taken out. Still the small oysters would grow four times the size if they were left alone.

552. Now Frank Buckland, who is perhaps one of the greatest authorities on oysters in the world, says that the sale of these very small oysters ought to be prohibited, because they are unfit for food? Well, I should not consider them so.

553. But you think it desirable that there should be some legislation on the subject, to prevent the sale of very small oysters? I do.

554. Have you formed any opinion with respect to the spawning of oysters? Well, the only opinion I have formed is that we have a great deal to learn on the subject. We see them spawning in November in some rivers—at Port Stephens for instance. Then again, we sometimes see oysters all through the season so poor that they are not likely to spawn at all, while in other places they are fat and perfectly fit to be eaten.

555. You think that spawning is going on in certain oyster beds all the year round? I believe there are a certain portion spawning all the year round.

556. *Hon. J. B. Wilson.*] In the same rivers? Yes, in the same rivers.

557. *Chairman.*] Now when this spawning is going on, there are always some oysters not spawning on the same river? Yes, there are still places where good fat marketable oysters are to be had all the time the others are spawning.

558. Have you any idea what percentage of spawning oysters there are in a river or a bed—10 per cent. or 2 per cent.? I should say there are sometimes 50 per cent. spawning together.

559. Do you mean in one river or in one bed? In one bed of a river.

560. Not in the whole river? No.

561. And there are other parts of the river where there is no spawning going on? Yes.

- Mr. P. James. 562. Where nearly the whole of the oysters are good for food? Yes, and fit for any market.
563. Then do you see any necessity for a close season? I cannot see how it could be done.
- 13 Nov., 1876. 564. It is done in England, and we wish to know whether you consider it desirable in this country to close the rivers for a certain period in the year? I do not think it is.
565. You think that good oysters can be had at all times during the year, just the same as good beef and mutton? I do indeed, sir—that is my opinion.
566. And that therefore there is no more necessity for a close season for oysters than there is for sheep and cattle? I don't see that there is.
567. Can you always discover when an oyster is sick or about to spawn? Yes, we can always discover it, for a very simple reason. If you simply touch them with your finger the milk or spawn comes from them.
568. Then, if by chance an oyster-opener were to open an oyster in that state, he would throw it aside, and not make use of it for food? I am afraid he would.
569. Do you think these oysters are wholesome food? Well, I don't like them myself, but a great many people do.
570. *Hon. J. B. Wilson.*] That is to say, up to the actual time of spawning? Yes, they like them up to the very moment they spawn.
571. *Chairman.*] Have you formed any theory with regard to the number of young oysters that a female oyster will produce at one birth? No, sir, I have never gone into the matter at all.
572. You do not know whether they are male or female, or hermaphrodites? Well, I am pretty certain myself that every thing in the world is male and female.
573. You have never considered it necessary, in consequence of the abundance of oysters, to take any pains to secure the spat? No, not to go to any expense about it, because there is plenty of spat to be had without.
574. Now, with respect to the rivers you lease from the Government, of which you say there are six; are the banks of rock or mud chiefly? Well, they are both rock and mud.
575. Where there are rocks is there much oyster spat sticking to them? Not so much; but we find, at Port Stephens for instance, mud islands, where there is a lot of little reeds sticking out of the water, and from them you can collect as much spat as you want.
576. You find they stick to the mangroves also? Yes, they stick to the mangroves and to these small reeds, and they grow in lumps there.
577. The supply is almost inexhaustible? Yes.
578. And, if not collected they go to waste? No, because at a certain season we do collect them; that is to say we select the largest among them; of course a good many go to waste.
579. Do you think they come to perfection there? Some of them do.
580. Those that are near the water and get the most of the tide? Yes.
581. Those that are high up on the rocks or mangroves do not come to perfection? Some of them do, but they mostly stick too close together and hinder each other from growing.
582. But if removed, and put on good fattening ground, would they not produce an immense quantity of good oysters? Well, I could not say for certain. We have now laid down 4,000 or 5,000 bags at Port Stephens, and we are waiting to see the result. We have never succeeded yet in any one place.
583. *Hon. J. B. Wilson.*] How long is it since you laid those oysters down? About twelve months.
584. And how long do you intend to leave them there? My intention was to leave them there for another two years.
585. *Chairman.*] How old were they when you laid them down? Some of them I should say were about two years old; and some of them were complete spat, about the size of your nail, about from three to six months old.
586. You have told us, that when about three or four years old they become perfect; ought these oysters not to be left till they reach that age? Some of them will be four years old then, and will have come to perfection if we have laid them on beds where they will grow. We have laid them on places where we know good oysters have been found, but whether it will suit them or not we cannot tell. Of course we have to lay them down when the place is covered with water, and in spreading them over the ground we cannot tell what is the nature of the soil on which they are placed.
587. Have you ever noticed the countless millions of oysters sticking on to the rocks in Port Jackson? Yes.
588. If they were removed and placed on good fattening ground, would not they produce an enormous quantity of good oysters? I have no doubt of it, if you could find suitable ground, and it could be made to pay.
589. Well, with regard to the price, that would be a question for the proprietor or lessee to consider. There would be very little expense in knocking them off the rocks and very little expense in planting them in suitable places, and therefore a reasonable price would pay any one? If you were sure of getting all these oysters back again that you laid down, of course it would pay; that is what we want to know—we have never seen it done yet, and we cannot tell whether it will answer; we want to see the oysters grow to their proper size.
590. But don't you know that London is principally supplied with oysters grown in that way, by collecting spat and laying them down on good ground; that it is as well known in England what is good fattening ground as it is known what ground is good to fatten sheep and cattle on? Then we want that experience here, I am sure.
591. What do you think of the climate of this country for the cultivation of oysters? I believe this climate is more suitable than the English climate. I believe they will come to maturity faster, and that there will be more of them.
592. Are you not aware that the great difficulty in England is in securing the spat—that sometimes for ten, twelve, and even fifteen years, the whole of the spat has been destroyed by severe frosts and stormy weather; and Frank Buckland says that unless they can get tranquillity and a temperature between 65° and 72° they lose almost the whole of it? I believe the frost will kill the spat; it even kills the oysters when they lay out on the ground.
593. Well, the great difficulty in England is in catching the spat, and they are now getting spat from France, where the seasons are much better for growing. Now, here, we have a superabundance of this spat, and it is going to waste; the only difficulty is in the fattening? That is all.

594. Then if we have as good fattening ground as they have in England, may not New South Wales become one of the largest oyster-producing countries in the world? I see no reason to prevent it. Mr. P. Jamies.

595. Do you not think that oysters are a commodity worth cultivating, seeing that in Baltimore, in America, they have an export of oysters equal to the export of meat and wool from this country six or eight years ago? I have no doubt it is well worth looking after, if we can only find suitable ground to lay the oysters on; that is the difficulty. 13 Nov., 1876.

596. It is well known what the suitable ground is, because wherever what is known as London clay, of which there is abundance in this country, is found, the oysters will do well; there are the insects found upon which the oyster loves to fatten? Yes.

597. I am going to ask you a question, but you need not answer it if it affects your interests. I should like to have your candid opinion as to whether it is expedient and good policy on the part of the Government to lease such large blocks on the rivers, or whether it would be desirable to lease the rivers in smaller areas? I believe you will get far more oysters by leasing them in large blocks, for many years to come, than you would by dividing them into small blocks, and the longer the term of lease the more people will be induced to go into the business.

598. I am only speaking now of the size of the areas. Instead of leasing the whole of a river in one block, don't you think it would be good policy to divide the river into several blocks, so that there would be a number of lessees, instead of a few having the monopoly of the rivers as at present. You need not answer the question unless you like? I see no reason for withholding my answer. I think it is far better to lease a river to one person than to cut it up into blocks.

599. You do not think it desirable then to make any change in that respect? I do not think so, and that is my candid opinion; I have no interest to serve in giving it.

600. Have you any idea how many oysters can be placed upon one acre of ground for fattening? A great many can be spread on one acre.

601. Should you think one million too many? I should not think it was; but it would all depend upon the richness of the ground, just the same as cattle runs. Some ground would fatten half a dozen cattle where other ground would not fatten one. Certain creeks will fatten oysters and others will not.

602. In England there are oyster merchants who have only about 4 or 5 acres of fattening ground, which have belonged to their families for centuries, and which yield very handsome returns. Now, if the Government were to decide upon leasing them for long periods, don't you think that small blocks—seeing that one acre will fatten a million oysters—could be leased to advantage? If you could find suitable ground, and there were plenty of it, they might, but as I cannot speak to that I cannot answer the question.

603. Do you see any objection to the Government granting licenses to persons to take oysters off the rocks and mangroves, in order to sell them to those who have what are termed "layings" or laying grounds for fattening? No, I don't see any objection to the taking them off the rocks, where we never look for them at present.

604. These oysters are at present going to waste, and they do not come to a good size? Not all of them going to waste, because when they come to a proper size we take them and send them to market.

605. Are not these very small oysters, such as we have seen on this table, which are sent to Sydney, most of them mere skin and water? No, I do not think so; some of them are as fat as any others.

606. Not those which are high up on the rocks? Of course they are not so fat.

607. Do they ever become fat? I have not had experience enough to answer that question.

608. Would not remunerative employment be found for a number of persons if the Government were to issue licenses, in the same way as timber licenses are issued, to persons who would collect these young oysters from the rocks and sell them? If you could find good ground to fatten the oysters I have no doubt it would in some few years time, but at present I don't think so. We want first to find out the proper places to put them on.

609. *Hon. J. B. Wilson.*] Supposing that your beds at Port Stephens, at the end of three years, were to turn out good, fat, marketable oysters, would you then have any objection to buy spat? We have plenty there that we can utilize if we find it answer.

610. But you have to collect it, and to pay for the collection, have you not? Yes.

611. Therefore you would be able to pay these licensed persons for collecting it? Oh, yes, when we found it answer we should have no objection to pay the expense of collecting it.

612. *Chairman.*] Are there any mud flats on the rivers you lease? I have no doubt there are.

613. Have you any idea of the nature of them? We have never looked for them; that is just the fact of the matter.

614. Don't you think a great many of the oysters that grow on the rocks and mangroves could be laid down with great advantage on these mud flats? Well, sir, you ought to be the best judge of that.

615. Yes, but I am putting the question to you. Have you had any experience of them? No, I have not. I still believe that there are places, if we could find them, on which all these oysters might be put, but we want to know a great deal more about them before we can manage to plant them so as to make it pay us.

616. I told you at the commencement that the object of the Government in appointing this Commission was to obtain that information? Yes. Then I would suggest to you that it would be better to get hold of some of our best oystermen, men who have had experience in dredging these rivers; they know what soil they lift the oysters from, and they can give you far better information than we can.

617. Now, with respect to the stealing of oysters, do you think that in any new Bill provision should be made to protect the lessee or proprietor? Well, it would be quite necessary, if you could find out how to do it.

618. Is it desirable to make some such provision as is made to prevent cattle-stealing—both in the Cattle-slaughtering Bill and the Droving Bill. There must be a license for slaughtering, and the drover is required to produce a pass, and so on. Do you think it desirable to introduce in any new Bill some similar provision to prevent oyster-stealing? Yes, if it could be done, but I can't see how it could be done.

619. It would effectually put a stop to oyster-stealing? I think it might. Of course the oysters from any of the leased rivers can only be sent to the market by some vessel, and if a man had a certificate that he had obtained his oysters from us, there would be an end of it at once; no other person could fetch those oysters away except the man who had the certificate.

- Mr. P. James. 620. *Hon. J. B. Wilson.*] You have stated to us that you have laid down a number of young oysters on the natural beds which you have leased from the Government? Yes.
- 13 Nov., 1876 621. Have you taken any steps to improve those beds? No.
622. Do you think if they had longer leases, the lessees would go to any expense to improve their beds? Yes, I think so. We have put ourselves to the expense of perhaps £200 in laying down these oysters, and we know they will not come to maturity for three or four years. If we take them up then we might ruin the bed, while if we left them for another four years they might give us a good return.
623. For what length of time do you think these areas ought to be leased? I think they should be leased for a certain time, with the right of renewal if the leased areas were found in good condition.
624. But without that right of renewal, what period do you think would be a fair thing? About thirty years, to induce people to lay out their money in improving the beds.
625. And do you think that if they got thirty years leases the lessees would object to any stringent regulations that at the end of that time they should give up the beds in a fair average working state—say the average condition of the previous five years? I cannot see why they should object; I don't think any reasonable man would object.
626. If the leases were for thirty years, do you think a condition like that would be reasonable? I think it would; still it would be a greater inducement if the Government were to give, upon a valuation of the river to show that it was improved, the right to a renewal of the lease.
627. Do you think if the Government gave a long lease to the portions of the rivers or estuaries that at present are not oyster-beds, people would be induced to try and form oyster-beds in them? No, not under present circumstances.
628. You think that depends upon the success of the experiments that are being made? Yes.
629. Don't you think—seeing that Mr. Holt is turning out such fine oysters—that they would be induced to follow his example? I should be very glad to see Mr. Holt's oyster beds and to gain what experience I could from him; we want a great deal of experience in this country yet. There is no doubt plenty of persons would follow his example if they could see their way clear.
630. In that way you would be able to keep up the supply, whatever the consumption might be? Yes.
631. And if the local demand was not equal to the supply, oysters would be preserved and become an article of export? Yes; I believe there would be plenty of persons who would preserve them.
632. Are you aware that almost all the gold-field towns in this Colony are supplied with American preserved oysters? Yes; I know a great quantity of them come in.
633. Do you know the value annually of the export of oysters from the town of Baltimore in America? I do not.
634. It is very large? So I have heard.
635. It amounts to two millions sterling per annum? We have some splendid oysters here, but they have been slaughtered in this country, there is no doubt of it. We have a great quantity of oysters at Cape Hawke, because that has had a ten years' rest. It is to our interest to get good oysters, and we must get them good.
636. Is that bed at Cape Hawke greatly improved? Yes, since we have had it. We could take 5,000 bags of marketable oysters from it now without hurting it.
637. That is the bed called Wallace Lake, is it not? Yes.
638. Have you laid down any oysters there? None at all—that is the natural increase of the bed itself; it is nearly ten years since it was drained out, and it has taken all that time to recover.
639. Was it closed by the Government before you took it? No, I think not. The Clyde River before it was leased by the Government was completely cleaned out—there was not a shell left on the bottom for the oysters to stick to.
640. Can you refresh your memory sufficiently to say how long it is since you leased the Wallace Lake. My object in asking the question is to see how many years it has taken to improve; I don't think you have had it in your possession for ten years? No, that is not the time we have had it to preserve; that is the time since it was cleaned out.
641. Can you recollect the number of years you have had it? Somewhere about three years.
642. Have you the Clyde River at present? No, Mr. Gibbins has the Clyde River.
643. Are you aware whether they are improving there now or not? I do not know; it takes a long time when a river is cleaned out.
644. *Mr. Farnell.*] Speaking of this place at Balmain, do you think it a suitable place for improving or fattening oysters? I don't think it is.
645. Don't you use it more as a place for storing oysters previous to bringing them into market? Certainly, to some extent.
646. Is it not very limited in area? It is rather limited.
647. The beach I think is not very extensive? No.
648. What is the whole area, do you think, at Balmain—You have enclosed it, have you not? No, we have only a place where we store the oysters for a time. Then when we get any in the winter which are not fat we sometimes lay them down there, but we never find them improve.
649. Is not the bottom rather rocky at Balmain? Yes, above low-water-mark.
650. And what beach there is is rather of a sandy nature? It is sandy below low-water-mark, but from the rocky point up to our shed it is simply gravel; it is when you get to the other side of our shed again that you find sand, but it is on the point we find that we can fatten oysters best.
651. The Chairman said something to you about London clay—Do you know of your own knowledge whether we have any of that clay here? No, I have never taken notice of it.
652. Do you think that the oystermen and others employed in dredging oysters could give us any information as to the character of the soil or clay in the various rivers? I believe if you give them time they would do it, but you would have to instil into them what you want. When they dredge for oysters they take up a portion of the soil at the same time, and they could save specimens of it for you to examine if you wished.
653. Some of them have been dredging in these rivers for many years, have they not? Yes; we have a man named Fraser who has been dredging nearly all his life.
654. You are aware, I presume, from your own experience, that soft mud or raw sand is not suitable for the cultivation of young oysters? Of course, I am well aware of that, because it smothers them.

655. You are aware also that there is a kind of oyster that thrives best in mud? Yes, some oysters succeed well in mud. I have heard of Cork Harbour turning out the best oysters, where the sewage from the town ran right through the harbour, but they are not the class of oysters we have here.
656. Is not it necessary to the successful cultivation of oysters that there should be some fresh water flowing into the beds at times? I believe they always fatten best where there is a certain portion of fresh water coming into the bed, but where there is too much fresh water the oysters are insipid in taste.
657. Do you know what the oyster feeds upon? I do not.
658. Now, speaking of small oysters such as the Chairman referred to as passing through a ring, notwithstanding that they are sometimes small they are still eatable? Yes, I think some of our oysters that would go through a ring a little over an inch diameter would be found very good and eatable.
659. And we have different kinds of oysters—large and small kinds? Yes, and we have oysters that are more cupped than others, that would pass through a $2\frac{1}{2}$ -inch ring,—or even a $1\frac{1}{2}$ -inch, and yet would have as much meat in them as some that would only go through a 3-inch ring.
660. Do you think there would be any difficulty in legislating so as to fix the age of the oyster as the test of its fitness for sale, rather than its size? I do not see how you could do it.
661. Then supposing the age could not be fixed, is it your opinion that oysters should be classified and passed through rings of various sizes? It would be rather a difficult thing to do. I cannot see how you would do it.
662. It would not do to have one general gauge for all the oysters from the various rivers? No.
663. Then would it not be possible to provide a different gauge for oysters out of different rivers? Well, I am afraid it would be hardly possible to do that, and you certainly could not fix upon one standard.
664. For instance, you might fix the gauge for the Clarence River at 2 inches; the Manning River, $2\frac{1}{2}$ inches; and any other rivers, where the oysters were larger, at 3 inches; and $1\frac{1}{2}$ for rock oysters, as the case might be? It might perhaps be done.
665. That you think would be the practical way of doing it? That would be the way if you did it by a ring at all. Even in the Manning River, for instance, there are oysters which grow to a large size; then again there are rock oysters, which are never anything but rock oysters, which you would have to legislate for; so that you could never adopt one gauge for all the rivers.
666. You are aware that the Government closed a number of the rivers some years ago? Yes.
667. Since the closing of those rivers, and up to the time of their leasing, a great many oysters have been taken out of them? A great many were taken while they were closed—almost as many as there were before.
668. For the want of persons to look after them? Yes.
669. Many of these rivers have been leased since? Yes.
670. And have they improved in productiveness since they were leased? Some of them; the Manning River has not; we are getting nothing off it, and we are not dredging it to any extent. It was completely cleaned out when it was leased; all the oysters, young and old, were taken out promiscuously during the time it was closed.
671. At what age do you consider that the oyster becomes eatable? Some grow much quicker than others; you might eat some at two years. I should say, on an average from three to four years they are about the best eating.
672. Do you know at what age the oyster first spawns—that is to say, when reproduction takes place? I do not; it is a matter I have never studied.
673. I think you stated that there were eatable oysters all the year round? Yes.
674. Notwithstanding the spawning season? Yes.
675. And that oysters in the same bed do not spawn at the same time? Yes.
676. And that oysters in this country generally spawn all the year round? There are certain places where oysters are spawning all the year round. Last year was an exception on the Clarence River. We got them fat all through the winter, while the year before we closed the river ourselves because the oysters were not fit to send to market.
677. Do you think it would be wise to legislate so as to give the Government power—notwithstanding that these natural beds might be leased to different persons—to close the rivers during the known periods in which the oysters are spawning; say, during the months of March and April? I do not see that it would be any good for the Government to do that. I cannot see how the Government could fix the spawning time.
678. I suppose you are aware that it is quite possible to annihilate the oysters altogether? I am quite aware of it.
679. Then, if some precaution be not taken to preserve them, the result will be that all the beds will be destroyed? I think it ought to be left to the lessees themselves; it is not to their interest to ruin the beds. If the oysters are not fit for market they will not take them. When they have spawned they are simply in a condition in which no one will buy them.
680. Then you think that if the Government gave the lessees long leases, in order to encourage them, they would take care that sufficient time was allowed for the oysters to reproduce themselves? Yes, I think self-interest would prompt them to do so; they are doing it at the present time.
681. And you are clearly of opinion that, in order to encourage persons to cultivate oysters and to perpetuate the present natural beds, it is necessary to give them leases for not less than thirty years? Yes, I think nothing less will induce people to risk their money on them to any extent. We have laid down 5,000 bags, and we have to wait about three years before we know whether it will answer our purpose, and by that time there will not be very much time left for us out of the present lease.
682. Do you think it would be wise on the part of the Government to lease the foreshore or such portions of the sea coast, or any part of a river, for a long term at a nominal rent in order to encourage cultivation? I do think so; I think it would be good policy.
683. You see these oysters on the table? Yes.
684. How many years have you been engaged in the trade? About eighteen years.
685. Do you remember some years ago that nearly the whole of the Sydney market was supplied from the Parramatta River, and with that kind of oyster? I remember that a great many came from the Parramatta River.

Mr. P. James.
13 Nov., 1876.

- Mr. P. James. 686. Are you aware that those beds were worked out at that time by over-dredging? Yes, but as far as I can see, these mud oysters can be dredged and annihilated much sooner than the rock oysters. I notice that in Victoria they are almost altogether annihilated from over-dredging.
- 13 Nov., 1876. 687. Are you aware that the oyster does not thrive so well near the sea coast where the water is very salt? I know that the nearer the coast the smaller the oyster is.
688. For instance, you do not get as good oysters down at Shark Island and in the bay as you do up the river? No; in the bed where we are dredging them now the water is very fresh, and if we take these same oysters and put them down at Balmain they die at once; I have had 160 bags of oysters die there in one week from the change from fresh to salt water. You could come every day and see them open their mouths and die. One year we lost about 700 bags of them over at Balmain.
689. Do you know as a fact that there are any oysters of that kind in the Parramatta River now? There are some odd ones, I believe.
690. You do not know whether that bed has resuscitated itself since? I do not know that it has.
691. Do you export oysters? Yes, of course we export the most of ours.
692. Where do you send them to? To Melbourne.
693. Does Queensland send many oysters to Sydney? A great many lately.
694. Are they superior or inferior to ours? Last year they were superior, but this year we shall beat them again.
695. What is the reason of that, do you know; is it because of the drought? No, I think they have over-dredged their beds.
696. And New Zealand also produces some oysters? Yes, but not many come here.

Mr. Henry Wallace Bell next examined:—

- Mr. H. W. Bell. 697. *Chairman.*] You are aware that the object of this Commission is to obtain information as to the best mode of cultivating and utilizing the oyster in this country, and of improving and maintaining the natural beds? Yes.
- 13 Nov., 1876. 698. We shall be obliged to you for any information you can give us. You are an oyster merchant in Sydney, I believe? Yes.
699. Have you been many years in business in Sydney? Yes, for the last ten or twelve years.
700. Have you had any experience in England? A little.
701. In what part of England? In Kent.
702. What was the name of the river? The Whitstable.
703. Were you one of the proprietors? No.
704. But every one born in Whitstable is a proprietor, is he not? No, he must be descended from those to whom the original grant was made.
705. Have you worked on any of the oyster beds on that river, or seen the working of them? Yes; not on the Company's ground, but on the Commons' ground.
706. Are you proprietor or lessee from the Government of any rivers in this Colony? I am interested in the Tuross River and Brow Lake.
707. Have you done anything in the way of breeding or fattening oysters? Nothing more than laying down brood by one party.
708. What do you understand by brood—is it the same as spat? Yes.
709. But in Whitstable they call it spat when it is a year old, brood when it is two years, ware when it is three years, and at four years old it is an oyster and saleable? Yes.
710. Then when you state that you laid down brood, you mean you laid down spat about a year old? Yes, about that; from six months to that age.
711. And what was the result of that experiment—did they grow and fatten well? Yes, at the particular place where we put them down.
712. What was the nature of the soil on which you planted them? It was slightly inclined to mud, but not much, with a mixture of shell and stone.
713. Dead oyster shells? Shells of various kinds and stone.
714. Where was this? On the Tuross River.
715. And they grew and fattened well? Yes, some of them soon became saleable.
716. Then as far as your experience goes it has been a success? Yes, as far as we have tried it. The extent of ground was very limited, or we might have gone on further with it.
717. There must be a great deal more of that kind of ground on the Tuross River? Yes, but it is all liable to floods.
718. The piece you made use of then was an exception? Yes, it was just out of the reach of the flood in what we call the Tuross Lake; it is only a branch of the river.
719. Is it connected with the tidal water? Yes, but it is out of the reach of the debris from the floods.
720. Is it a marsh? No, it is not a lake in reality, but only a branch of the river; but the residents in the neighbourhood call it a lake. It is something similar to the portion which I understand you hold on the George's River—a bight running in from the river.
721. What I wish to understand from you is whether it is possible by artificial means to make a great deal more of that fattening ground for oysters? I think it could be done with safety where there is no liability to floods.
722. Don't you think more branches could be made where oysters could grow and fatten? I can only speak of the Tuross River, where they would all be swept away by the floods.
723. I do not know anything about the banks of the Tuross River? They are very limited.
724. Do you think the rivers that you are acquainted with have been much injured by over-dredging? Yes, greatly so.
725. A great many oysters have been consumed to make lime? I believe large quantities of them have been burnt for lime.
726. Has that been the case on the Tuross River? Yes.
727. How long ago was that? As far as I can learn, some five or six years ago it was a constant practice by some of the residents.

728. Are you aware that there are a great many very small oysters brought into Sydney for sale? Yes, Mr. H. W. Bell. I have seen some very small ones.
729. What would you call oysters of that kind in Whitstable? Nothing more than brood.
730. Not so good as ware? Not so good as some of the ware.
731. These oysters, if laid down on good ground, would become large and saleable oysters, would they not? Some of them might, but not all; there are some kinds of oysters here that will not improve.
732. Don't you think that the sale of these very small oysters is prejudicial to the trade, even if they are eatable which is the opinion of some? It is no doubt so; still oysters though small may be good.
733. Still, when a person calls for a plate of oysters he likes to have good oysters set before him, and not mere skin and water? That depends upon the condition of the oyster.
734. The object of my question is to ascertain whether you do not consider it desirable that some limit should be fixed by legislation as to the size of the oyster offered for sale? I think so, decidedly.
735. Have you formed any opinion on the subject—Do you think oysters that would pass through a 2-inch or a 2½-inch ring should be prohibited from sale? I should say from 1½-inch to 2 inches.
736. You think that nothing below that size should be sold as human food? I think so.
737. Have you formed any decided opinion as to the spawning of oysters, not only as to the period of spawning, but whether they spawn more or less all the year round? It depends greatly upon the seasons of the year in all beds; there are more spawning in the south than in the north, and I believe they are spawning during the whole of the summer.
738. Are they spawning, do you think, during the winter months? Yes, more or less.
739. Then do you think it desirable that there should be a close season? If you could fix the time.
740. But if they are spawning all the year round, do you not think it desirable that there should be two or more months during which they should not be sold? The difficulty would be to decide upon the proper time; you would have to fix various periods.
741. I wish to know whether you consider it desirable to fix a close season, or whether there are oysters which are wholesome food—those that are not spawning—all the year round? Those that are not spawning are wholesome.
742. Do you know what percentage of oysters spawn, on a bed or river? I believe that all oysters spawn after they arrive at a certain age.
743. Have you ever attempted to catch young oysters by means of piles of stone or wood? No.
744. There is such an abundance of them that you have had no occasion to do so? Yes.
745. Are there many young oysters sticking on to the rocks and mangroves on the Tuross River? The only place is Rocky Point—all the other part of the river is black mud.
746. Is there plenty of spat there? No, it is very scarce.
747. Then if you wished to cultivate on a large scale you would have to import spat or brood? No, there would be sufficient for that, if we could find the ground on which to cultivate them; there are no foreshores on the Tuross River to any extent.
748. Then the oyster trade can never be carried on there to any extent? No, and I believe it is a fair sample of the rivers, from what I can hear.
749. You have observed how the rocks in the harbour of Port Jackson are plastered over with spat? Yes, frequently.
750. Would it not be an advantage if they were knocked off the rocks carefully and planted on fattening ground? I have no doubt of it.
751. Oysters are most wholesome food, are they not? Yes.
752. Do you see any objection to the Government licensing persons to knock these oysters off the rocks, in order to sell them to those who would lay them down on good ground to grow? You mean to lessees?
753. I am not speaking of leased rivers—some of the rivers are not leased, the Parramatta River for instance; besides, the longest lease is not ten years. It is with respect to the future, not the present policy, that I wish for your opinion? I think it would be very good policy.
754. Don't you think that a number of men, with their wives and families, would find remunerative employment in this way, if they could sell the oysters to persons who have laying or fattening ground? Undoubtedly; there are a great many now doing it by stealth.
755. Do not the oysters which are only reached by the high tides become stunted and soon perish, from their exposure to the hot sun? They become stunted, but I have never known them to perish.
756. Do you not often see only the under shell sticking to the rocks? Yes, but I think those oysters are often destroyed by fresh water—by the change of water.
757. Do you think it would be desirable to introduce into any new Oyster Bill a provision to prevent the stealing of oysters, in the same way that provisions are made in the Slaughtering Act and the Brand Act, to prevent cattle-stealing? Yes, I think it has long been needed. I have seen oysters exhibited in the windows in the shops in Sydney for sale which I knew were stolen.
758. Mr. Farnell.] How long have you been engaged in the oyster trade, Mr. Bell? Since 1853.
759. I think you stated to the Chairman that you had not gone into the cultivation of oysters? Not to any extent.
760. Have you made any examination or inquiry with a view to ascertain whether you could obtain foreshores or ground suitable for the cultivation and fattening of oysters in this Colony? Only in respect to the Tuross River and Browlake.
761. Then you are not aware whether we have in this country soil or clay such as they have in England suitable to the cultivation and fattening of oysters? I can speak only with regard to those two places, and there the ground is only of a very limited extent. I have seen some good soil on the Parramatta River.
762. Whereabouts was it? In different places.
763. Will you specify one spot? At Kissing Point.
764. That is rather a wide direction? Well, I have been walking along the shore at low water, and going up towards Parramatta from the landing-place have noticed some good ground.
765. Do you know the Flats? I have only seen them from the deck of the steamer.
766. You think there is some suitable clay on the foreshore above the landing? Yes.
767. Now, with regard to knocking oysters off the rocks, do not they fatten on the rocks when they are within a certain limit of low-water-mark? Yes, within a certain limit of low-water-mark; they fatten faster there than they do higher up.

- Mr. H. W. Bell.
13 Nov., 1876.
768. And those that you saw exposed for sale were rock oysters from the Parramatta River? Yes.
769. Were they marketable oysters? They were a mixed sample, large and small.
770. Are not the rock oysters generally as good as the drift oysters from the various rivers—the Clarence, the Manning River, Camden Haven, and others? Not as a rule.
771. Can you tell the difference? Oh yes; the rock oyster does not attain the thickness of the drift oyster.
772. Do you know the little cup oyster? Yes, well.
773. The oyster that attaches itself to the whelk? Yes.
774. Are they not good? Yes, they are some of the best.
775. Have you had any experience in the cultivation of oysters in England? Only in catching them.
776. Are you aware that mussels are injurious to oyster beds? If they are allowed to grow, but the ground is usually considered good for oysters where the mussel is got in England.
777. But where there are oysters and a large accumulation of mussels, the mussel smothers the oyster? Yes, it grows so much quicker than the oyster.
778. You think it would be advantageous to take these small oysters off the rocks and lay them down in fattening ground, supposing such ground could be obtained? Yes, it would add greatly to the supply.
779. Do you think the oysters from the rocks would improve under those circumstances? Yes, if care were used, and they were not covered with mud.
780. Would they thicken in the same way as oysters taken from the rivers? They would not attain the same thickness, but they would improve.
781. If these poor oysters from the rocks were put on good fattening ground, would they be superior to oysters which have attained perfection on the rocks? No, I don't think they would.
782. Has the oyster spat, after its first emission from the oyster, many enemies? A great many, and the oyster itself has also.
783. What are its enemies? Various kinds of whelk, the borer, the mussel, the star-fish, the sea-egg, and the stingaree.
784. Have you found the whelk an enemy to the oyster in this country? No, but I know it is very numerous in Moreton Bay. In England it is found to be very injurious to the oyster, and I have no doubt it is so here. It is called the dog whelk.
785. Are you speaking of the enemies to the oyster as applicable to England more than to this country? I think they apply to both equally. They would destroy the mud oyster much quicker than the rock oyster, on account of the difference in the hardness of the shell.
786. Have you noticed that the rock oysters are finer on rocks which are perpendicular, and where there is very little foreshore, or perhaps none? No, I have not noticed that.
787. Between high and low water-mark? Yes.
788. Have you ever observed that the best oysters are found in sheltered places? Yes, and where there is a good tide, both ebb and flow.
789. What is your opinion with respect to giving long leases of the natural oyster beds, on condition that they are given up in an improved state? I think it is very desirable.
790. Are you also favourable to the issue of long leases of foreshores or other places suitable to the cultivation of oysters as an encouragement to persons to produce them? I think it would be desirable.
791. Would you lease them in large or small blocks? In large blocks.
792. The beds in our rivers run patchy, I believe, do they not? Very much so.
793. There is no continuation of oyster beds in a river, but one here and one there? Yes, usually just on a point where the rocks lie.
794. The banks of the Tuross River I think you said are alluvial to a large extent? Yes, they are all covered with mud; there are no places suitable for cultivation in that river except just along the foreshore.
795. Have you ever considered the way in which oysters propagate? Each oyster produces its own kind.
796. That is, they are hermaphrodites? Yes.
797. The climate of this Colony generally is favourable, is it not, to the cultivation of oysters? Oh yes.
798. That is to say, the absence of severe winters? Yes; the frost is injurious to them; the rivers here are also sheltered.
799. *Chairman.*] When you left Whitstable were you very young? I was about twenty or twenty-two years of age.
800. Then you have seen a good deal of the oyster business? Yes—the working of that particular Company.
801. Are you aware that they breed only a small portion of the oysters they fatten? Yes, they buy them.
802. They purchase them as brood or ware from various places? Yes.
803. Are you aware that men, women, and children are employed in collecting oysters the size of a three-penny piece, wherever they can get them, to sell to the Company? Only men and lads; I never knew women and children employed in collecting them.
804. At any rate there are a great number of persons engaged in collecting young oysters? Yes, at certain times—at low spring tides.
805. Oysters of any size from a threepenny bit? Any size that will bear removing; the Company allow that privilege on their own grounds; that is to say, it is allowed to their own people, but to no one else.
806. And on the Commons ground? Any one can go there.
807. Are you aware that the Company import brood and ware from Ireland, and also from France? I don't know about France, but I know they do from Ireland and Scotland.
808. It is since you left that they commenced to import from France, last year I believe. Have you any idea of the proportion of oysters that they breed and that they fatten? I think they purchase fully four-fifths. I know that one year they paid £80,000 for brood in the county of Essex.
809. Then if they had not the opportunity of purchasing brood they would not be able to carry on their operations? Certainly not.
810. And London is principally supplied by Whitstable, is it not? Whitstable and other places.
811. But the greater portion comes from Whitstable? Yes.
812. The Whitstable Company are the largest oyster fatteners in the world, I believe, at present? I think so—in Great Britain at any rate; I don't know about America. 813.

813. Have you much knowledge of the Whitstable ground? It is chiefly clayey soil and marl.
 814. Is there not plenty of that soil in this country? There may be; I have not seen it.
 815. Is not the soil in the lake you have been working on something like it? That is shell and stones.
 816. And you say there is clay on the Whitstable ground? Yes, soft clay.
 817. Is there much difference between that and the soil we have here? Yes; I have seen nothing here like the soil we have at Home.
 818. Can you fatten oysters on your lake as well as you could in the Whitstable ground? No, the water is too still; there is no tide.
 819. But supposing you made a canal from the river to the lake, would not that have the effect of producing a tide? That could not be done; the lake, as it is called, is only a bight running a little way in from the river.
 820. *Mr. Farnell.*] The ground at Whitstable belongs to a Company? Yes.
 821. Have they a charter? Yes, they have a charter from Queen Anne.
 822. They do not pay any rent? Only a nominal one—a peppercorn rent; the proprietors can buy and sell their interests in it, but no one can purchase the right to the ground—that cannot be sold. I suppose there are some 800 or 900 persons who have an interest in it.

Mr. H. W.
Bell
13 Nov., 1876.

FRIDAY, 17 NOVEMBER, 1876.

Present:—

HON. J. B. WILSON, | J. S. FARNELL, Esq.

THE HON. THOMAS HOLT, M.L.C., IN THE CHAIR.

Mr. Peter Thomas Johnson called in and examined:—

823. *Chairman.*] Are you an oyster merchant in Sydney, Mr. Johnson? Yes.
 824. Have you been many years in the oyster business? Yes, about sixteen years.
 825. Then you have had a great deal of experience? I have, sir.
 826. Have you had any experience in England or in Europe? No, only the experience I have had here.
 827. In this Colony? Yes.
 828. You are a lessee of oyster beds from the Crown, are you not? Yes, at Shoalhaven.
 829. You are not a proprietor—you have not the freehold of any oyster bed? No, only those I have at Shoalhaven.
 830. As lessee? Yes.
 831. Have you been engaged in breeding oysters at all? Yes.
 832. What process do you adopt in breeding them? I shift them and lay them down again.
 833. But that is not breeding. What I mean is, catching the spat and laying them down on suitable ground to grow and fatten? No, I have never tried that, except that I have laid down wood for the spat to adhere to.
 834. Have you been successful in doing so? Yes, with a certain sort of wood.
 835. What sort of wood? Oak, branches of oak.
 836. Were the branches well covered with spat? Yes.
 837. The spat require something solid to stick to? They require something rough.
 838. Is it indispensable that it should be rough? Yes.
 839. Have you never seen spat sticking to a glass bottle? I have, but then you only find them single; if they accumulated and became thick they would all tumble off.
 840. Have you ever seen a glass bottle covered with them? Yes, I have; I have also seen pieces of earthenware and old boots covered with them. I believe I have got the largest sized spat off old boots.
 841. Then your experiments in breeding have been very successful? Yes.
 842. Have you any idea what amount of success you have had—the number of oysters on any branch or number of branches or fascines? No sir, I never took notice of it.
 843. And what do you do with these young oysters? I knock them adrift and shift them about.
 844. That is to say, after knocking them off you lay them down on beds to grow and fatten? Yes.
 845. And how have you succeeded? Very well; they grow very well and very fast.
 846. And become fat? Yes, and better tasted than they would be on their natural bed. I have had as fine oysters as I ever saw nine months after shifting them.
 847. On the Shoalhaven River? On the Shoalhaven.
 848. And what kind of ground did you make use of for that purpose? I had a small 50-acre lease before the rivers were leased.
 849. Was that where you put down the wood for catching the spat? Yes.
 850. Did you not continue it after you leased the river? Oh yes, I am doing it now.
 851. What was the area of the river you leased? 50 acres.
 852. I mean the river you now lease from the Government? I have all below low-water-mark.
 853. Yes, but what is the area of your lease, does it comprise 1,000 acres, 10,000, or what? I could not tell you; I should say the Crookhaven River is about 4 miles in length, and then there is the Shoalhaven, which I believe extends about 12 miles in one place.
 854. That makes 16, and what do you lease besides? There are the bays which are all below that, and the islands.
 855. Then you must have 3,000 or 4,000 acres altogether? I really could not say; there is plenty of barren ground amongst it.
 856. And also a great deal of fruitful ground, is there not? Yes, it is a very good place for growing.
 857. And they fatten well also? Yes, if they are not placed too thick.
 858. Was the whole of the 50 acres you leased at first good fattening ground? No, about half of it; it was too soft and muddy.
 859. But that could be easily remedied, could it not? That is what I put the timber on it for.

Mr. P. T.
Johnson.
17 Nov., 1876.

- Mr. P. T. Johnson.
17 Nov., 1876.
860. And that has answered well? Yes; the best part of the timber sinks into the mud, and that prevents the oysters from sinking. It is only certain wood that they will stick to.
861. Could not a very considerable profit be made out of an area of 50 acres, if you had it as a freehold? No, sir, there could not.
862. In England there are many oyster farms which are not over 5 acres in extent, which have belonged to the same families for generations, and which pay handsomely? Yes, provided you could go to the expense of making stone walls for the oysters to accumulate on; they want a fine hard bottom, with plenty of room to accumulate. 50 acres would be a very small piece; if you took 100 bags off 50 acres it would make a great hole in it.
863. Do you know how many oysters can be spread over an acre of ground, for growing and fattening? I should say about twenty bags of young spawn could be put upon it.
864. How many oysters would there be in a bag? That is more than any one could tell.
865. What do you mean by spawn? Young oysters.
866. That is, under a year old? They are not six months old.
867. Anything under a year old; about 6,000 to the bushel? More than that.
868. How many bags could you plant on 1 acre? About four bags, if they were broken up and spread about among the wood and stone, would make a very good bed.
869. In evidence given before a Select Committee of the House of Commons, it was stated that a million of oysters could be spread upon one acre of ground; you think that is too much? I do sir.
870. But if half, or even a quarter of the number were put down, could not a good deal be done with 50 acres if you had a freehold of it? Well, if I had a freehold of 50 acres I should like to cover it half with oysters and the other half with rubbish.
871. What do you mean by rubbish? Shells and bottles.
872. You would use half of it as growing and fattening ground, and the rest for catching spat? Yes, I should have a wall on each side and the oysters in the middle.
873. Now, even with the present price of oysters, could you not derive a very good income from 50 acres? No, I don't think it would pay a man to work it.
874. Did it not pay you when you worked it? No, I never had the opportunity of trying it much.
875. I should like now to have your opinion on a question of public policy—whether you consider it desirable that the rivers should continue to be leased, as at present, in large blocks; or whether it would not be to the public interest to lease them in small blocks? It might if the rivers were in a fit state to go to work upon; but not as they were when we leased them—completely worked out.
876. But if you had 50 acres it would never be worked out; you would always have plenty of spat? 50 acres would not be enough—it would not be worth working at.
877. How do they manage in England with only 5 acres; I have seen in France thousands of oyster parks, as they are called, which do not measure over 30 yards across? Well, there must be something different in the price of oysters, or else they must grow thicker than they do here.
878. But looking to the public interest, do you think it is expedient for the Government to lease such large areas so many miles in length to a few persons, and to shut out the rest of the population? Yes, I don't see that it would pay to let them in any other way. If the rivers had not been ransacked as they have been it might, but not as they are now.
879. Supposing they were in the state in which you first knew them? When I first knew them there were plenty of oysters, but there were none when I leased them.
880. Well, going back to that time—to the condition the rivers were in when you first knew them, and putting yourself in the place of the Government—how would you deal with these rivers; would you lease them in 50-acre blocks or in blocks comprising thousands of acres? Well, I should say for the present time that a lease of 500 acres—supposing the rivers to be in the condition they were when I first knew them—would pay a man better than the whole of a river at a larger rent.
881. What would you think would be a fair rent—having regard to the public interest? I should say the same as I paid for my first 50-acre lease—£2 a year rent.
882. You think about £20 a year for 500 acres would be a fair rent? Yes, I think it would be a fair rent for a river, considering what has got to be done to it. If you once take oysters off the ground they will never accumulate there again.
883. It was stated by a witness before a Select Committee of the Parliament in Sydney some seven or eight years ago that he thought £2 10s. an acre rent would be a fair rent? Then he must have had to work very hard to keep his bed with oysters on it and to get his money out of it.
884. You would think that rent excessive? I should, sir.
885. Do you think £1 an acre would be too much? I should say so; I think 5s. an acre is too much for ground to keep as an oyster bed.
886. But if you had it for a permanency—unless the Government should require to resume it, when of course you would receive compensation or the value of your improvements—so that it might be transmitted from father to son for generations; in that case would you consider it too much? No, because then a person could build stone walls on it and make it valuable; but now if he were to do that, by the time he had finished the lease would have nearly expired.
887. Then for a permanency, if the rivers were leased—not the whole of a river to one person, but in moderate-sized blocks, and supposing the principle of free selection were adopted the same as with land—what rent do you think would be fair? Every one to pick his own ground?
888. Yes, to pick his own ground? Under those circumstances I should not grudge 10s. an acre.
889. For blocks of 40 acres? No, about 100 acres, if I were allowed to pick my own ground, because then if my improvements did not benefit me they would my family after me.
890. How would it answer to select one portion of the land under water and the other portion above high-water-mark, where you could erect a homestead and out-buildings, or have a farm at which you could work when not employed in your oyster beds? I don't think that would answer, because a man in the oyster business has no time for farming.
891. He would require a homestead? Yes, it would do very well for that, but it would be very hard to get a place to live on anywhere near where the oysters were, and that is where he would want to be.
892. Then this 100 acres could be buoyed off? Yes, or staked or fenced round.
893. Do you know of many such places where land could be obtained so situated as not to interfere with navigation? That I do not.

894. Would the oyster beds we are speaking of interfere with navigation? Yes, you could not get 100 acres in a block without going across the channel.

895. If vessels passed over the ground would they do your oysters any harm? Of course they would: we don't want anything over our oyster beds, and vessels might get aground or lie about and do a great deal of injury; if the place was once made a thoroughfare every one would go over it.

896. But you do not look upon that as an insurmountable obstacle, because in England there must be constantly traffic going on over the oyster beds? Yes, but they are in deep water.

897. And your beds are in shallow water? Yes.

898. Are they dry at low tide? No, they are about 3 feet deep at low water.

899. Then large vessels could not pass there? No.

900. What is the rise and fall of the tide? About 4 feet; there is 7 feet of water at high tide.

901. Is there much traffic there? Yes.

902. Are you alluding to the bed of the Shoalhaven River? Yes.

903. What I wish to know is, whether you could not secure the ground free from any interference, except by such navigation as must necessarily pass over it, because whatever terms might be offered for it, the Government could not alienate any land for purposes which impeded navigation. Could the places you speak of be alienated for long leases without interfering with the traffic at all? I don't think it would be right to let anything go over the oyster-beds at all, because I might find it necessary to run a wall straight across, and when I got to the channel I should be done.

904. That is what I want to know—is it possible to lease oyster-beds without interfering with the traffic? I don't think so.

905. *Hon. J. B. Wilson.*] Are there any bays or inlets where oyster-beds could be laid down, not required for navigation? There are none down my way; we have all the oyster-beds.

906. Are there any places where oyster-beds could be formed—I am not talking of the natural beds, I mean artificial beds—in your neighbourhood? No, I don't think there are, not of that size; I don't believe you could get 50 acres anywhere.

907. Could you get 20 acres? Oh yes, you could get 20 acres alongside the beach.

908. *Chairman.*] Where would be the necessity of getting 50 acres in one block; could not you get 20 acres in one place and 20 or 30 more a little higher up or lower down? How could you look after them if they were in separate places?

909. *Hon. J. B. Wilson.*] Supposing every caution to be taken by the Government to prevent oyster-stealing and robbing the beds, so that you would not have to look after them, would there still be a difficulty? Oh, no; but consider the trouble it would be to do that.

910. Have you any trouble in preventing people from stealing your bullocks or horses? No; it might be done.

911. *Mr. Farnell.*] Then, as a matter of fact, there are several places that could be utilized for the purpose of oyster culture on the Crookhaven and Shoalhaven Rivers, in blocks of 20 acres? Yes.

912. *Chairman.*] With respect to stealing, do you think there would be much fear of the oysters being stolen? I am well assured that there would be plenty of it.

913. Don't you think it possible for the Government to make regulations sufficiently stringent to prevent it—could it not be provided that oyster-dealers should purchase from no one except those who had licenses, and that a register should be kept of all they receive; and that no oysters should be transported from one place to another unless the person taking them had a pass, carrying out the same precautions as are adopted to prevent cattle-stealing: cattle cannot be driven from one place to another unless the drover has a pass, and a butcher must not slaughter without a license? Yes, but cattle are branded, and oysters are not.

914. Yes, but that is not a reply to my question. I ask you if oyster-stealing could not be prevented by insisting that every person carrying them should have a pass. For instance, you are a proprietor of oyster-beds, and you send a pass with every lot of oysters you send in, to show that they come from your beds; and any person found taking in oysters without a pass would be looked upon by the police as having stolen them. Would not a precaution like that be effectual? Well, supposing I had 20 acres, and another party had 20 acres above me on the same river, and a third person had a similar block higher up, how could I swear to any of the oysters being mine? It is very easy now to say that all the oysters from Shoalhaven are mine, but then I should not be able to recognize them.

915. Then, are you to have a monopoly of the Shoalhaven River for all future time? I think if two or more parties had a river they would always be at war, because, it would be impossible to tell where the oysters came from.

916. But if the limits of the different blocks were buoyed off, would not that be a sufficient protection? That would not make any difference. Supposing I had the Shoalhaven River and another man had Crookhaven, could not he come down in the night and take my oysters?

917. Then he would be a thief? Yes, but I could not prove it; I could not watch the river all night.

918. Then, you think that one person should retain the whole of a river? I do.

919. But if the rivers could be secured so that there could be no oyster-stealing, then you think they might be divided into 40-acre blocks? Yes, if that could be done; but I should not like to have Crookhaven and another person have Shoalhaven; I know I should have to be up all night. You cannot swear to oysters the same as you can to cattle or timber.

920. With regard to the spawning of oysters, is it your opinion that they spawn during certain months only, or all the year round? I believe they spawn all the year round, for at low water I have seen bottles and stones on the beds with nothing on them, and only a fortnight afterwards I have seen them covered with oysters, and that too in the dead of winter.

921. Have you any idea of the percentage of oysters that spawn? I have not.

922. Do you think it desirable that there should be a close season—that during certain months in the year oysters should not be sold? I don't see how that could be done.

923. Do you think that oysters when not spawning are as fat and wholesome for food during the whole of the year? No, I think they are not. There are different times for different oysters to spawn. I know that my deep water oysters are better in the winter than in the summer time; while my bank oysters are not good in the winter and they are in the summer; so that if you made a close season you would have to shut one of them off.

Mr. P. T. Johnson.

17 Nov., 1876.

Mr. P. T.
Johnson.

17 Nov., 1876.

924. *Hon. J. B. Wilson.*] The beds you are working on at Shoalhaven are the original natural oyster-beds, are they not? Most of them.
925. And you have improved them by laying down timber and other hard substances? I have.
926. And you have succeeded well? Yes.
927. Now, in the greater portion of your lease, could not the mud at the bottom be overcome by laying down waste shells, wood, and other material, upon which oysters would thrive? Yes, but that takes time.
928. Supposing you had a lease of fifty years, could not that be done? Yes, but there is such a depth of mud that it would take a deal of stuff to make a hard bottom.
929. In what part of the Shoalhaven River, and at what distance from the sea do you find your oysters fatten best? About 3 miles from the sea.
930. Where they have a certain quantity of fresh water mixed with the salt? Yes, where the water is too salt they fatten, but they do not grow large.
931. Nearer the sea? Yes, we get the smallest oysters nearer the sea; we shifted some of those little oysters when they were no bigger than your nail, and nine months after they were shifted they were five times their size; they increased from an inch to 3 inches diameter.
932. What age were they do you think when you took them? Numbers of years old; I could not say how many.
933. They were full-grown oysters? Yes.
934. And when you moved them higher up the river they immediately commenced to grow and fatten? Yes.
935. How long do you require to let them lay before you take them up? About twelve months.
936. Supposing you had taken spat about six or nine months old, knocked off the rocks, and laid them down, how long would it have been before they were fit for market? About eighteen months, provided they were put in with a good heavy tide.
937. But would not they be much better after three or four years? The shell would be bigger, but I don't think the oyster would be better.
938. The oyster comes to maturity, under favourable circumstances, in about two years, does it not? Yes.
939. What is about the diameter of a well-grown oyster from the Shoalhaven River; would it go through a 2½-inch gauge (*ring 2½ inches diameter exhibited*)? Yes, I don't think I have an oyster that would not go through that ring.
940. Take up one of the rings before you which you think about the size of a Shoalhaven oyster? You mean the average size of the oysters?
941. Yes, what you think would be a fair average size? I think this (*taking up a ring 1¼ inch diameter*) is about the size, because mine are all long oysters.
942. Do you think any restriction should be placed by the Government on the sale of young oysters, or oysters of inferior size? Yes, I think there should be a restriction against the sale of young oysters; but as to the size I think it is impossible for any man to tell that.
943. Don't you think it would be safe to prohibit the sale of any oysters that would not pass through a 1¼-inch ring? Three-parts of the Shoalhaven oysters would go through that ring; they are most of them long oysters, years and years old; a great number of them would go through a 1½-inch ring.
944. Are they oysters that would readily sell in the market? Yes, they are what we call whelk oysters.
945. Why do you call them whelk oysters? They grow on the whelk.
946. Are there many of that kind in the Shoalhaven River? Yes, beds of them.
947. Are the oyster beds in the Shoalhaven improved since you took them? Yes; when I took them I did not know where to get a bag of oysters.
948. Did you commence at once to lay down oysters? Yes; I was months and months laying them down, with three boats working all day.
949. Then you have found it profitable? Yes.
950. I am very glad to hear it? I am now bedding them in the channel.
951. Have you ever attempted to make artificial beds on land which is dry, or partially so, at low water? Yes.
952. Were you successful? Yes, we have taken out some very good oysters.
953. Is there not plenty of ground in the Clyde and Tuross Rivers of the same character—nearly dry at low water—that could be utilized in the same way? No doubt there is; to have oysters all the year round you require to have them at low-water-mark, because the sun does the oysters a great deal of good.
954. A little of it? Yes, the morning sun.
955. *Mr. Farnell.*] You speak of the Shoalhaven River being 12 miles in length; how many natural oyster beds are there in that length? Five.
956. And what is about the extent of each bed? I think they are all about one length—about 100 yards.
957. By what width? About 60 feet.
958. Where are they situate—in the channel? Right in the channel, on a bar that runs across the river.
959. What is the nature of the soil in these natural beds? It is a rocky bottom.
960. In the Crookhaven River how many natural beds are there? Well, I call it all a bed, because it is all beach except in one place; there is about half a mile of dredge oysters.
961. That is, oysters taken out of the channel? Yes, that is what I call a bed; I do not call a few oysters here and there a bed; what I call a bed is where a man can dredge.
962. You say that you leased about 50 acres from the Government for the purpose of cultivating oysters? Yes.
963. What was the nature of the bottom in that lease? Mud and shell.
964. What was the depth of the water? Part of it is dry at low water.
965. Is the ground sufficiently firm for persons to walk upon it and attend to the oysters? Part of it.
966. Then, I understood you to say that in respect to this particular 50 acres which you have leased for cultivating oysters, you collect the brood or spawn from other places and lay them down there to grow and fatten? Yes.
967. I understood you to say that it is not very profitable? It is not, unless you have other places from which you can get oysters to send to market.
968. You could not make a living out of the 50 acres alone? No.

Mr. P. T.
Johnson.

17 Nov., 1876.

969. But would the 50 acres be sufficient, supposing you had a long lease, and supposing you could build walls and make the improvements of which you have spoken? Well, no; I think even with a long lease I should require twice as much.
970. How long would it take to make an oyster farm productive—to improve it so that you could get a return for your outlay? I could not say.
971. I think you stated that oysters are eatable when they are two years old? Yes. If you had plenty of money to keep you for that time, I dare say that with 100 acres you might make a living out of it in a couple of years.
972. Then a person with capital who went into oyster culture in a proper way could do well with 100 acres? Yes, I suppose so; but not as I went to work, with nothing.
973. In what condition was your ground when you went to it on the last occasion? In a very good condition; the oysters growing very fast.
974. Can you tell the Commission how many oysters you have got in the year from that 50 acres? No, because if I send a man for oysters he gets some here and some there; I could not tell you.
975. You keep no account of them? No, I have no occasion to do so.
976. Then how do you know that it does not pay, when you do not know the number of oysters you get off the ground? Because there is not the quantity of oysters growing on it; I know that when I take a bag off it.
977. But you do not seem to know how many are growing on it? I never took notice of the number. I judge by the look of the ground; it is only a small piece of ground, and if I took a load here and a load there from it I should very soon clear 50 acres, for they will not grow again where the ground is cleared.
978. Do you mean to say that they do not come there naturally? They do not.
979. But, if I understood you, you laid down oysters originally on this 50-acre block? Yes, I put down shells and wood and bottles, and so on, to make a hard bottom for the oysters, but I could do no good with it; there was about 6 inches of mud.
980. Well then, are there not places in the Shoalhaven or Crookhaven Rivers that are naturally suited to the cultivation of oysters without preparing the ground as you did your 50 acres? Not to my knowledge. I know every inch of them.
981. You spoke of some oysters you took from near the sea-coast which you planted in beds on the Shoalhaven River. What age were they? They had been there a number of years to my knowledge.
982. How many years? Eight years to my knowledge; they were there on the very day I first went down there.
983. Do you know from practical experience in oyster culture that the oyster is eatable at the age of two years? I know they grow very quickly.
984. At what age is the oyster fit for market? That depends upon the ground it is taken from. If it is taken from where there is a good running tide it is as large as it will be at two years.
985. Do you know at what age the oyster spawns? I do not; I have heard a great many arguments on the subject, but I could never tell.
986. Have you paid any particular attention to the habits of the oyster, or as to the quantity of spawn it throws out? No, sir; all that I have paid attention to is the taking them up where they are thick and putting them down in the heaviest tide to grow and fatten.
987. You stated that the young oysters will only attach themselves to one kind of timber—oak? Yes.
988. Will they not attach themselves to mangroves? Yes, to live mangroves, but if you shake the mangroves they will all drop off.
989. And they will not stick to any dead timber except oak? No; I have tried it so often.
990. Do you know anything of the northern rivers? Only the Clarence; I was working on the Clarence when it was first opened.
991. Do you know whether the oysters in the northern or southern rivers spawn first in the year? I have seen on the Clarence that they were very poor in the month of March, and that they were fat in February; the next month they were almost like a piece of black thread, they were scarcely any size.
992. Does not that take place with all oysters after spawning? No, my deep-water oysters are fat all the year round.
993. They are continually in season? Oh, they must spawn, but they are saleable all the year round.
994. Then do you mean to say that your oysters in the Shoalhaven River are eatable all the year round, and that they spawn all the year round? Yes, but they are fatter in the winter than in the summer.
995. Would you know when an oyster has spawned? I should not.
996. Not whether it has spawned or not? No, I could never make that out, though I have heard a good deal said about it. I know I have been in the water and had my arms skimmed all over with spat; but if you came and took every oyster off the rocks they would be covered again a week after.
997. The spawn you speak of was the spawn of rock-oysters? Well, it is very hard to say where it comes from.
998. Was it not in the vicinity of the rocks that you found it? Yes; I was getting rock-oysters at the time, but the spawn might have come down the bay.
999. You have never seen any of the deep-water oysters spawn? No, I have not; but I never took notice of them.
1000. Now, what length of lease, at a nominal rental, do you think the Government ought to give to encourage the cultivation of oysters? I think it should not be less than fifteen years.
1001. I do not mean leases of the natural beds, but of portions of rivers on which oyster-beds could be made? I think fifteen years would do.
1002. Do I understand you to say that it would pay persons to take leases for that period and to lay down fascines, to build walls, and to make artificial beds? Yes; it would take a man about five years to improve the beds, and the other ten years would pay him.
1003. And you think a fifteen-year lease would pay him, with the condition that at the expiration of that time he should give up the ground in good condition—say the average condition of the previous five years? Yes, I think fifteen years would pay him; ten years would be too little.
1004. In what state are the natural beds now which you have improved? In a very good state. When I went down there the other day I was quite satisfied with them.
1005. What are the banks of the Shoalhaven River which you lease composed of? Almost all mud and shells.

- Mr. P. T. Johnson.
17 Nov., 1876.
1006. What do the oysters stick to? They stick to the cobbler's pegs—the roots of the mangroves.
1007. Do you see any objection to the granting of licenses—at the expiration of the present leases—to men who would employ themselves with their families in getting these oysters off the cobbler's pegs or rocks and selling them to persons who have layings such as your 50 acres. Don't you think it would give remunerative and constant employment to a number of families? I think that if the rivers are leased as they are at present there will be no oysters on the rocks at all soon.
1008. You do not use all the oysters on these cobbler's pegs, do you? Yes; the large ones I make use of, and the young ones I put back and spread out on the flats to make beds of, to harden the ground.
1009. But you must be aware that there are a great number of spat going to waste, especially in Port Jackson for scores of miles, and up the Parramatta River you can see the rocks literally plastered with oysters? Yes, they want knocking off; they will never be any good if they are left where they are.
1010. Well, do you see any objection to the issue of licenses to persons to knock them off and sell them to persons who would lay them down to grow and fatten? No, I see no objection; I think it is the best thing that could be done.
1011. You think it would create profitable employment for industrious labouring men and their families, besides being profitable to those who purchased them in order to plant them to grow and fatten? Yes, I do; because the longer they are left the more bunchy they get.
1012. Would you be inclined to purchase them? I have more than I can make use of.
1013. Then those which you cannot use are going to waste? No, they remain there till they are wanted; it would be impossible for any one to keep them down altogether, they accumulate so fast.

Mr. Henry Wallace Bell called in and further examined:—

- Mr. H. W. Bell.
17 Nov., 1876.
1014. *Chairman.*] I understand that you have some additional evidence to give, Mr. Bell? Yes, with regard to the oyster beds of Victoria and Tasmania.
1015. You have had some experience in Victoria then? Yes.
1016. In what part of Victoria? At Western Port and Port Albert.
1017. What was the result of your experience? Well, we have been charged with having destroyed the oyster beds by overdredging, and I wish to remove that impression.
1018. Whom do you mean by "we"? The firm I am connected with, who are proprietors of a large number of oyster beds.
1019. You mean at those two places, Western Port and Port Albert? Yes.
1020. And is not that the fact? No doubt the beds were overdredged to a certain extent; but we took up ground at Western Port under the Victorian Act, and stocked it with ware, and the whole of it—some £3,000 worth—was destroyed where we never used a dredge at all, except perhaps occasionally, to see how the beds were looking.
1021. What was it that destroyed the oysters? That is what we could never arrive at.
1022. Was it some sudden influx of sand? No, it was nothing of that sort. We attributed it to some sort of disease; and we based our opinion upon the fact that a number of small patches of oysters—natural beds—that we did not dredge, except very slightly, were also destroyed at the same time in different parts of the bay.
1023. You think it was not from overdredging then, and that if there had been no dredging they would still have been destroyed? Yes, because the oysters died on the natural beds as well as on the artificial beds, and on those which were never dredged at all. I may mention that there is a very bad practice carried out here in dredging. It seems to be the custom here to take up a boat-load of oysters, young and old, and to carry it away and sort it elsewhere. All the cultch, except the oysters required for use, is then thrown away, and used for lime-burning or other purposes.
1024. Where is that done? It used to be done in all the leased rivers; we have prevented it as much as we could, but it has been the case in many places: all the cultch has been removed.
1025. Is there anything else you wish to say? No, I think not.
1026. *Mr. Farnell.*] You say the oystermen take the cultch away to some other place. Do you think they ought to sort the dredgings on the spot? Yes; it ought to be made compulsory to throw everything back from the boat. That is what they do in Victoria; but there they adopt a different system altogether.
1027. Are there no good oyster beds left in Victoria, that you are aware of? Not one that I am aware of.
1028. Then Victoria is dependent upon New South Wales and South Australia for her supply? Yes, and Queensland.
1029. And in Tasmania the beds are exhausted also? I think so.
1030. Were they very extensive in Tasmania? Yes, in Spring Bay.
1031. They were exported to Victoria in large quantities during the gold discoveries, were they not, and the beds were overdredged during that time? I do not think so. We only traded for them in 1861 and 1862. I think it must have been some other cause.
1032. *Hon. J. B. Wilson.*] Did the oyster beds at Western Port and Port Albert fall away at the same time? Yes, about the same period.
1033. Were there any symptoms of the disappearance of oysters in Victoria at the same time in any other place? I do not know of any other place where oysters are procurable.
1034. Then you think the disease, if any, was confined to those two places? Yes.
1035. You are lessee of the Tuross River and Brow Lake, are you not? Yes.
1036. Are you personally acquainted with the place? Yes.
1037. Do you not think there is a considerable quantity of low-lying mangrove land, covered with water at high tide, that would be suitable for oyster cultivation—for making beds? I do not know of any.
1038. Is there not a considerable quantity of low-lying land on the Tuross River? I believe so, on the right hand side.
1039. Do you think it so situated that it could be used for that purpose? I do not; there is too much mud on it.
1040. Could not that be overcome by laying down cultch of various kinds? I do not think so.
1041. Are you aware that these artificial beds have been tried in other parts of the Colony and have proved a success? I am not aware of it; my greatest objection is, that the rise and fall of the tide is not sufficient in the Tuross River.

1042. The tide rises about 4 feet, does it not? Yes. On the coast of France, and in other parts of Great Britain where there are oyster-beds, it is 30 or 40 feet or more. Mr. H. W. Bell.
1043. But what difference would that make, provided that the oysters were dry in both places for a certain time during every twenty-four hours? Well, I think they do better with a good run of tide over them. 17 Nov., 1876.
1044. You think a strong current is a great advantage to them? Most decidedly. I know that an attempt was made in Victoria, by Mr. Ross and others, to form a weir, and it was not successful; it was connected with the sea with a sluice-box.
1045. Do not oysters thrive in many parts of the world where there is no current? Yes, in some places where they get proper food, but not so well as where there is a current.
1046. If you had a very long lease or a freehold of 50 acres, could you not do a great deal with it in the way of oyster culture? It would depend entirely upon the locality.
1047. You have been speaking of places where there is too much mud—Could you not do a great deal by laying down proper cultch? Yes, if the oysters were not injured by frost, which is very severe down towards the south in the winter.

TUESDAY, 21 NOVEMBER, 1876.

Present:—

HON. J. B. WILSON, | J. S. FARNELL, Esq.

THE HON. THOMAS HOLT, M.L.C., IN THE CHAIR.

Mr. William John Langham, Inspector of Oyster Beds, called in and further examined:—

1048. *Chairman.*] You are Inspector of Oyster Beds, appointed under the Act 31 Victoria No. 20 to regulate Oyster Fisheries, and to encourage the formation of oyster beds? Yes. Mr. W. J. Langham.
1049. How long have you held that office? Upwards of two years, sir. 21 Nov., 1876.
1050. And what are your duties? They have chiefly consisted in the inspection of the different oyster beds under lease, and in reporting to the Government as to their condition.
1051. Are your duties confined to the inspection of rivers under lease—do you not also inspect those that are not leased? Yes.
1052. Then you inspect the whole of the oyster beds in the Colony as far as you are able? Yes.
1053. And how many rivers have you been able to inspect? Nearly the whole of them, with the exception of the Tweed and the Richmond, and one or two small places to the southward of Twofold Bay.
1054. You speak of the rivers being leased: upon what authority are they leased—is it not under the Act I have just mentioned (31 Victoria No. 20), which came into operation on the 1st February, 1868? I believe so.
1055. Are there not conditions provided in that Act under which the leases are issued? There is a condition that the rivers should be left in the same state as they were in when they were leased.
1056. Is that the only condition—does not the Act also state that the Government shall have power to demise them in connection with the laying down and forming of new oyster beds—is not that one of the conditions? Yes.
1057. Is it not another condition that the leases shall be in writing? Yes.
1058. Are you aware whether the lessees have complied with the conditions relating to the laying down and formation of oyster beds? In a few instances they have, but very few.
1059. In very few instances, not in every instance? No.
1060. Has the condition in the 3rd clause been complied with—that the leases shall be in writing? In one or two instances, that is all that I know of personally.
1061. And how many leases have been issued—how many lessees are there? I am not exactly sure of the number, because some of them are formed into companies.
1062. But the lease would still be the same—it would only be one lease? Yes; but the lessees are not the same, some of the original lessees have sold out.
1063. Did you see the Government advertisement in the *Gazette* and newspapers calling for tenders for these leases? Yes.
1064. Did you notice that it stated that all tenders must be accompanied by a guarantee from two responsible persons to enter into a bond to the extent of ten times the amount of annual rent, to see that the conditions of the leases are fulfilled, and that the leased areas are returned to the Government in the same state as when they were granted? Yes.
1065. That is what you alluded to? Yes.
1066. There is nothing of that kind in the Act? Yes, the Act states that the lessees shall find sureties.
1067. The Act gives the Government power to make regulations, but there is nothing of that kind in the Act. Are you aware that the bond has been executed in all cases by the lessees and their sureties? In one or two instances it has, but not on the whole.
1068. Have all the lessees strictly carried out the conditions under which the Government have power to demise these areas in respect to the forming of oyster beds? No, they have not.
1069. Have any legal proceedings been taken by the Government against those who have not done so? No.
1070. Have you reported on any occasions that the lessees have not complied with the conditions of their bond? No, because the bond has never been executed—the leases have never been executed.
1071. But you have already told us that these were the conditions under which the leases were issued. What I want to know is whether you have called the attention of the Government to the fact that these conditions have not been carried out? I have in my reports in some instances, but they have not been worded in that way.
1072. Have you copies of your reports? They have in the office.
1073. Then we can get them? Yes.
1074. Can you inform the Commissioners what are the areas of the different leases, naming them separately; a rough estimate will be sufficient? In the different rivers?

- Mr. W. J. Langham.
21 Nov., 1876.
1075. Yes, taking the rivers separately, and giving a rough estimate of the area of each lease? Do you mean what I term natural beds?
1076. I mean the total area included in each lease? The whole of a river and its tributaries are included in a lease.
1077. Well, take one river to begin with, and give us a rough estimate of the number of acres it comprises within 100 acres, or even 1,000 acres. Which is the most northerly river leased? The Clarence River.
1078. Have you any idea of the area of the Clarence River, including the creeks belonging to it—how many acres? Do you mean the oyster-bearing portions of it?
1079. Everything supposed to be included in the lease; is it 1,000 acres? More than that.
1080. Is it 5,000 or 10,000? It must be that at least.
1081. What are the banks of the Clarence River composed of—are they rock or mud? Mud and shell.
1082. Is it rich mud? Where the oysters are got it is.
1083. Rich mud? Yes.
1084. What do the young oysters chiefly stick to? Just on to the shell bottom.
1085. Are there any mangrove swamps there? Away back on the shore there are a good many.
1086. Do a great many oysters stick to the mangroves? Not a great many.
1087. Is there a great deal of spawning going on in the Clarence River? Yes. It is the lake portion, known as the oyster channel, in which the oysters are got on the Clarence; it is not in the main river.
1088. I am speaking of breeding: is it going on to a great extent in the swamps where these mangroves are? Not to any very great extent.
1089. Are the young oysters utilized? No; all that they use there are the natural beds; they lay nothing down.
1090. They make no use of the spat that is collected on the mangroves? No.
1091. That is going to waste? Yes; they just work the natural beds, that is all.
1092. Now, if these spat were collected and placed on ground suitable for fattening, would they not produce an immensity of food? A great deal.
1093. That is to say, the production of oysters could be increased to an incalculable extent? Yes.
1094. And all this is under lease? Yes.
1095. Have any improvements been made in carrying out the conditions of the Act with respect to laying down and forming new oyster-beds on the Clarence? Not that I am aware of.
1096. Could they be made without your being aware of it? No, unless it was done within the last nine or ten months—since I was up there.
1097. But you would have been almost sure to hear of it? Yes.
1098. They could scarcely have been made without your knowledge? No.
1099. Who is the lessee of the Clarence River? Mr. Peter James.
1100. *Mr. Farnell.*] Are there mangrove swamps in the Clarence? Yes, in the lake.
1101. *Hon. J. B. Wilson.*] You have stated that the natural oyster beds in the Clarence are in what is termed the lake. Is there a considerably strong tide-way or current in that lake? Not particularly.
1102. Not as strong as in the river? No, except in flood-time; it does not rush so strongly through.
1103. Are you aware whether there are any natural beds in the Clarence—in the river itself? No, I have never heard of any.
1104. How far is this lake in which the natural oyster beds are from the mouth of the Clarence River? I should think it was about four to five miles.
1105. But it is all salt water? Yes, freshened a good deal by the freshes.
1106. But at ordinary times it is salt water? Yes.
1107. And is it from this lake that the lessees get the principal portion of the oysters they send to Sydney? From the lake and the creek that runs into it from the river, which is called the oyster channel.
1108. That is almost the only use they make of the Clarence River? That is all.
1109. *Chairman.*] But they do not consider that any person except themselves has a right to make use of the oysters or the spat in the river or on the mangroves? No.
1110. Although they do not make use of it themselves they claim the exclusive right of the whole—that is their view of it? Yes.
1111. You say there are no natural beds in the river itself: where does the spat come from? From the creek that connects the lake with the river; there are natural beds in the creek.
1112. Does this creek supply the whole of the mangroves with spat? Yes, most of the spat comes out of it; there are a great number of natural beds in the creek.
1113. *Mr. Farnell.*] Is it a creek or an arm of the river? It is an arm of the river going into the lake known as the oyster channel.
1114. When you speak of the area leased in the Clarence, do you mean the whole of it, or only that which is oyster-producing? The whole area of the river; the only portion they make use of is this creek and the lake adjoining it.
1115. That is the only oyster-producing portion? Yes.
1116. Then the fact is that the lessees lease a portion of the river that is not oyster-producing at all? Yes.
1117. *Chairman.*] Is it not capable of producing oysters by artificial means? There are a great many places where there are sandbanks.
1118. I do not say the whole; but are there not places on it where as good oysters could be produced as those which come from the lake? Yes, by artificial means.
1119. Which is the next river to the Clarence that is leased? Port Macquarie is the next.
1120. What do you suppose is the area of Port Macquarie—the whole of the area which the lessees consider to be included in their lease? They consider the whole river is included, the same as in other cases.
1121. What is the area—is it 5,000 or 10,000 acres? It is 4,000 or 5,000 acres or more. I have no means of ascertaining the exact area—I can only give a rough estimate.
1122. What is the nature of the beds and the banks of the Port Macquarie River? The beds are very deep; they are about the deepest there are.
1123. Are they mud? No, it is a sort of small quartz pebble that the oyster attaches itself to in the bed of the river.

Mr. W. J.
Langham.

21 Nov., 1876.

1124. And the banks of the river, what are they? Alluvial for the most part.
1125. There is not much rock there? There is no rock there, except down towards the mouth of the river, where the oysters are very small.
1126. Are there many mangrove swamps? Yes, there are some on the edge of the river.
1127. Is there much spat attaching to them? There was not much when I was there.
1128. Did you see much spat anywhere, on the banks, in the swamps, or in the bed of the river? Very little except in the bed of the river, which is very deep.
1129. Is there much in the bed of the river? Not much, the floods seem to have destroyed the oyster beds to a great extent.
1130. Then it is not a very good oyster-producing river? What oysters there are are very fine, but the floods seem to have destroyed a good many.
1131. There are not so many young oysters going to waste as there are in the Clarence? No, sir.
1132. *Hon. J. B. Wilson.*] Is Port Macquarie under lease at present? Yes.
1133. *Chairman.*] I think it is desirable that we should obtain the fullest information with regard to these rivers, and that you should tell us in addition to the area the rent paid for each lease. What is the rent payable for the Clarence River? £185 a year altogether.
1134. *Hon. J. B. Wilson.*] Have you ever heard that Port Macquarie was very famous for its fine oysters during previous years? Yes.
1135. And the oyster beds you say have been destroyed? Yes, partly; and last year and the year before they got none; but they are working the beds again this year, and getting a few oysters.
1136. What is the rent of the Port Macquarie lease? £310 per annum.
1137. *Chairman.*] What is the next river, Mr. Langham? Camden Haven.
1138. What is the area of Camden Haven? I should think it was some 2,000 acres or more.
1139. What is the nature of its banks and beds? A mud formation generally, and mangroves; and there are natural beds of drift oysters on the bed.
1140. Is there any large extent of mangroves? Yes, a great extent.
1141. Are there a great number of small oysters sticking to them? Yes, a great many.
1142. Have the lessees made use of this spat? Yes, they have laid some of it down.
1143. To what extent do you think? They have laid down somewhere about a thousand bags; they have laid them down on the natural beds.
1144. Merely to grow and fatten? Yes.
1145. But they are not making beds where there were no beds previously? No.
1146. Is there a great deal of this spat going to waste? Yes.
1147. And they have the exclusive right to it? Yes.
1148. And however valuable it might be to others to lay down for growing and fattening, no one can touch it without their permission? No.
1149. *Mr. Farnell.*] When did you first know the Camden Haven River as an oyster-producing river—was it many years ago? It was about two years ago when I first went on to it; I have known that oysters were coming from it for the last five or six years.
1150. Large numbers of oysters were sent from Camden Haven to the Sydney market, were they not? Yes.
1151. Is it a fact that the Camden Haven River beds were worked out some years ago? Not that I knew of.
1152. Are the beds as prolific now as they were some years ago? There are not near so many oysters in them as there were when I first went down there.
1153. That is two years ago? Yes.
1154. Are the lessees over-dredging the beds? Yes.
1155. *Chairman.*] Who are the lessees? Mr. Woodward is the lessee.
1156. What rent does he pay? £170 a year.
1157. Do you mean by over-dredging that he has removed immature oysters—oysters that are too young? No; but they work the beds bare; for instance, when there are a quantity of oysters they put five or six men on, and when the oysters get scarce they knock the men off. When I first went down there were four men working there, now there is only one or two at the outside.
1158. What is the next river, Mr. Langham? The Manning.
1159. What is the leased area of the Manning? 8,000 or 10,000 acres at the least, I should think, or more, but I cannot speak with any certainty.
1160. What is the rent of the lease? £1,150 a year.
1161. What are the banks and beds of the Manning River composed of? Chiefly of mud.
1162. Are there many mangrove swamps there? Not a great many.
1163. Are there many young oysters there? No, there are very few as a rule.
1164. To what do they attach themselves? Chiefly to the beds at the bottom of the river.
1165. To the cultch? Yes. There are mangroves on the south side, but not to any great extent.
1166. Are there many young oysters sticking to the mangroves? No, not any great quantity.
1167. Who is the lessee? Mr. Woodward.
1168. Has he laid down or formed any oyster beds? No.
1169. He has done nothing? No; only worked the natural beds.
1170. Reducing the number of oysters upon them? Yes.
1171. What is the next river? Cape Hawke.
1172. What is the area of Cape Hawke? From 2,000 to 3,000 acres, as near as I can guess.
1173. And what are the banks and beds composed of? Chiefly mud—mud and shell.
1174. Are there any mangrove swamps? Yes, there is a great deal of mangrove about it.
1175. Are there many young oysters sticking to them? Yes, in places.
1176. Who is the lessee of Cape Hawke? Mr. George Clarke. I should say that it is known as Wallace Lake, and not Cape Hawke.
1177. Does he make use of any of this spat? No.
1178. Has he formed any oyster beds? No.
1179. Has he done anything to improve the leased area? No, he is only working the natural beds.
1180. And he has made no use whatever of the young oysters? No.
1181. What is the next river? Port Stephens.

- Mr. W. J. Langham.
21 Nov., 1876.
1182. What is the area, do you think, of Port Stephens? It is a very large place—thousands of acres.
1183. Can you give us some idea of its extent; does it contain 20,000, 30,000, or 50,000 acres? I should think there were from 30,000 to 40,000 acres, or more.
1184. Of what do the beds of the river and its banks chiefly consist; of course in such a large area they must vary considerably? In some places there is rock, and mud and shell banks in others.
1185. Are there mangroves as well? Yes. The rocks are a sort of ironstone.
1186. Are they covered with young oysters, the same as the rocks in Port Jackson? No, but there are a great many oysters there.
1187. And the mangroves—are they also covered? Yes.
1188. Who is the lessee of Port Stephens? Mr. Peter James.
1189. And what rent does he pay for this large area? £150 a year.
1190. For this vast area? Yes.
1191. Has he done anything in laying down and forming new oyster beds? He has laid down, I suppose, one or two thousand bags.
1192. What oysters were they? They were chiefly taken from the mangroves.
1193. Can you tell us what proportion the oysters he has laid down bear to the oysters on the rocks and mangroves? They bear no comparison to those that are left. I could not tell you what is the proportion.
1194. But out of this vast area 1,000 or 2,000 bags would be a mere nothing? Yes, you could not tell where they were taken from.
1195. And are there good layings, as they are termed in England, in the Port Stephens River, where young oysters removed from the rocks would grow and fatten? Yes.
1196. There must be a large extent of good layings in such an extensive area? Yes, there are several places where they could be laid down.
1197. And all these oysters that are now going to waste might be converted into excellent food? Yes.
1198. What is the next river? Lime-burner's Creek.
1199. And what is the area of that? About 500 or 600 acres.
1200. Who is the lessee? Captain Griffin.
1201. What rent does he pay? £2 10s. per annum.
1202. Has he done anything in connection with laying down or forming oyster beds? He has done a great deal for a small place like that.
1203. What is the nature of the beds and banks of Lime-burner's Creek? Chiefly mud.
1204. Are there any mangrove swamps? There is very little mangrove.
1205. Is there any rock? There is a little rock and a little mangrove, but not much.
1206. Does he utilize the spat? Yes, all he can get of it. Some time back he wished to get some of the spawn from the rocks on Port Stephens, but he told me that the lessees refused to let him have any.
1207. They preferred to see it going to waste rather than allow him to utilize it? Yes, they would not allow him to have anything at all to do with it.
1208. *Hon. J. B. Wilson.*] Does not Lime-burner's Creek flow into Port Stephens? Yes.
1209. *Chairman.*] Then Captain Griffin is the only lessee who has strictly complied with the terms of the Act? Yes, he is the only one that I know of.
1210. *Mr. Farnell.*] Is his lease a natural oyster bed? Yes, a portion of it.
1211. *Hon. J. B. Wilson.*] Has Captain Griffin been successful in his laying down? He made a claim on the mangrove swamp, and the back water used to come in and smother the oysters with mud; he had to take them away.
1212. You say they were smothered by mud, but had he formed a proper bed of cultch for the oysters? No, he had left the natural bed for them.
1213. What is the next river? The Newcastle River.
1214. What are the beds and banks of the Newcastle River? Shell and mud.
1215. And rock? No, there is no rock there.
1216. Are there any mangrove swamps? There are some, but very few.
1217. What is the area of the lease? 10,000 or 12,000 acres I should think.
1218. Who is the lessee? Mr. Gibbins.
1219. What rent does he pay? £775 a year.
1220. Has he carried out the conditions required by the Act, as regards laying down and forming oyster beds? No, he has never done anything beyond working the natural beds since he has had it.
1221. He has done nothing to improve it? No; he has shot a few oysters here and there at different times when he has been shifting them, that is all.
1222. Have you any idea what condition these oyster beds were in before he leased them—were they over-dredged, or in good condition? The river was closed for two years, but it was worked just as much during that time as it was before.
1223. Has it been improved since Mr. Gibbins leased it? No, I think it is becoming worse, and that it ought to have a spell.
1224. Then the object of the Act in his case has not been carried out? No.
1225. Are there many young oysters in the mangroves and banks: I think you said there were no rocks? They mostly stick to the ballast; the banks have been cut up for building to a great extent.
1226. *Hon. J. B. Wilson.*] How far from the mouth of the Hunter are the principal natural beds? About $2\frac{1}{2}$ to 3 miles.
1227. Are none of them higher up? They extend about two miles further up the main river to the upper end of Mosquito Island and Limeburner's Bay.
1228. *Chairman.*] What is the next river? Lake Macquarie was leased, but it was thrown up.
1229. It is not leased at present? No. The next river is Broken Bay.
1230. What is the area of Broken Bay? It is a large place; I should think some 8,000 to 10,000 acres.
1231. Who is the lessee? Mr. Gibbins.
1232. What rent does he pay? £127 a year.
1233. Are there many oysters sticking to the rocks and mangroves at Broken Bay? There are a great quantity sticking to the rocks there.
1234. Are the rocks at Broken Bay as thickly plastered with young oysters as the rocks in Port Jackson? Yes, there is ten times as much in some places.

1235. Are there any in the mangrove swamps? Not a great many; there are on the Brisbane Water side. Mr. Gibbins only uses the Hawkesbury; he does not use the Brisbane Water side at all.

Mr. W. J.
Langham.

1236. I am not asking you what he uses, but what he claims an exclusive right to? He claims a right to the whole of it.

21 Nov., 1876.

1237. Then were you right in stating that the area to which he claims exclusive right is 10,000 acres? I should say it is a good deal more, but I have no means of ascertaining the exact area.

1238. How much do you think then he can claim under his present lease? I should say 20,000 acres or more.

1239. And in this area there are mangrove swamps as well as rocks? Yes. It is to the rocks chiefly that spawn attaches; there are mangroves, but most of the young oysters are on the rocks.

1240. Does Mr. Gibbins make any use of these young oysters? He lays some of them down for a few months and shifts them—that is all.

1241. The oysters are knocked off the rocks and mangroves, and he lays them down to a small extent? Yes.

1242. Have you any idea to what extent he does this? He has laid down perhaps 4,000 or 5,000 bags there—that is all.

1243. Now, can you give us any idea what proportion those he has laid down bear to the oysters remaining on the rocks and mangroves? No proportion at all; you could not tell where they were taken from.

1244. They are like a mere drop in a bucket of water? Yes.

1245. Then there must be a vast quantity of young oysters going to waste? Yes; I think there is enough spat in Broken Bay to supply half the rivers working at the present time.

1246. What is the next river leased? George's River comes next.

1247. What do you think is the area of the George's River lease? I should think about 5,000 or 6,000 acres at least.

1248. Including Botany Bay? No; there must be 20,000 acres, or more, including Botany Bay.

1249. Who is the lessee? Mr. Albert Emerson.

1250. What rent does he pay? £131 a-year.

1251. Does he claim the whole of Botany Bay as well as George's River? Yes.

1252. And all the creeks running into it? Yes.

1253. And you estimate the area at 20,000 acres? Yes, or more.

1254. What do the beds and banks consist of? Chiefly rock.

1255. Are there many young oysters sticking to the rocks? Yes, a good few.

1256. Does Mr. Emerson carry out the conditions of the Act as regards laying down and forming oyster beds? Yes; he has laid down a large bed in front of his place.

1257. Young oysters taken from the rocks and mangroves? Yes; most of them off the rocks.

1258. Can you give us any idea what proportion the oysters he has laid down bear to those which remain on the rocks? You would hardly miss them from the rocks where they were taken.

1259. Then there are a great number of oysters left on the rocks which might be converted into valuable food, if they were placed on suitable ground where they would grow and fatten? A great many on the George's River, below high-water-mark, grow themselves; they are not so thick there as in some places.

1260. What was the general character of the oysters on the natural beds in Botany Bay and George's River, before they were leased? I could not say what they were before they were leased.

1261. *Hon. J. B. Wilson.*] Had they the reputation of being very fine oysters? Yes, always.

1262. Then, would not you gather from that that there must be some quality in connection with Botany Bay and George's River that would make them suitable places for laying down oysters and forming beds? Yes.

1263. Has Mr. Emerson succeeded with the oysters he has laid down—have they grown well? Yes, very well.

1264. Which is the next river that is leased? The Shoalhaven River.

1265. Who is the lessee? Mr. Johnson.

1266. What do you estimate the area of his lease to be? From 5,000 to 10,000 acres or more; there is a good extent of it, because there is the Crookhaven River as well.

1267. What are the banks and beds of the Shoalhaven River? Chiefly mud.

1268. Are there any mangrove swamps? Yes, a great deal of mangrove.

1269. Are there a great many young oysters on the mangroves? Yes, great quantities.

1270. What has the lessee done in connection with laying down and forming oyster beds there? He has laid down a few oak saplings at different places, to put oysters on, but he has made very little improvement—he generally takes the young oysters off the mangroves and lays them down in deep water to grow, but he does not leave them there for any length of time.

1271. He has not made improvements to any large extent? No.

1272. What proportion of the oysters on the mangroves does he take off? You could hardly notice what he takes away.

1273. There are so many of them? Yes; and they grow very fast. I have seen places where they have been taken off, and six months afterwards you would not know that any had been taken.

1274. But in the places where he lays them down they do grow, only that he does not leave them there long enough? No only for a few months.

1275. And he persists in sending oysters to Sydney in an immature state? Yes.

1276. Are there many suitable places for growing oysters on this river? Yes.

1277. Where they would grow and fatten well? Yes.

1278. What is the next river? Durass Lake.

1279. Who is the lessee? Mr. Bartley.

1280. What rent does he pay? £5 a year.

1281. What is the area of the leased ground? I should think about 1,000 or 1,500 acres or more.

1282. What is the nature of the banks and beds of the river? Chiefly mud and swamp.

1283. Are there any mangrove swamps? No.

1284. To what does the spat attach itself? To the whelk.

1285. Are there any good oyster beds there? Yes, the oysters are very fine there.

1286. What is the difference in the beds since they were leased—have they improved or otherwise? They are greatly improved since they were leased.

1287.

Mr. W. J.
Langham.
21 Nov., 1876.

1287. Does the lessee lay down much spat? He generally employs the blacks; they go round the lake and pick the young oysters off the rocks and throw them into deep water, and those which grow on the whelks which are in very shallow water are thrown into deep water also.
1288. And there are very fine oysters there? Yes, very fine.
1289. What is the next river? The Clyde.
1290. Who is the lessee of the Clyde? Mr. Gibbins.
1291. What rent does he pay? £135 a year.
1292. What is the estimated area of the Clyde lease? I should think 6,000 or 7,000 acres or upwards of that.
1293. *Hon. J. B. Wilson.*] Does that include Bateman's Bay? No.
1294. *Chairman.*] What are the banks and beds of the Clyde? Chiefly mud and mangrove swamps.
1295. There is not much rock there? Yes, there is rock too, a sort of slate rock.
1296. Are there many young oysters on the rocks? Yes, a great quantity.
1297. And on the mangroves also? Yes.
1298. What has the lessee done towards laying down and forming oyster beds? Very little; they have almost stripped the whole of the place. Some time ago they laid down a great quantity, but they have been taking them so quickly that the beds are nearly bare now.
1299. How long have they been laid down? About twelve months.
1300. And were they in a state of perfection when they were taken up? No.
1301. They were in an immature state? Yes, small-sized chiefly.
1302. Not fit for the market? No.
1303. But still they were sent to market? Yes.
1304. And now you say the oyster beds have been stripped bare? Yes, most of them.
1305. Does not the lessee employ any men to take the young oysters off the rocks to lay down? No, he has only one man there.
1306. What could one man do, supposing his whole time were employed in taking the oysters off the rocks and mangroves? He could not do a great deal; the blacks are generally employed.
1307. But you say there is only one man employed at present. I want to know what he is doing now and what can be done—that is to say, what proportion of the young oysters is taken for planting, and what proportion remains? Of late they have been taking the spat off the mangroves and sending it to Sydney and destroying the rest. When the blacks come, unless they are watched, they generally take the young oysters ashore off the mangroves and cull them and leave the rest to die. They will get a boat-load at a time and take them ashore to cull and leave the rest there.
1308. Do you mean that they are acting under the authority of the lessee, that they take the oysters from the mangroves, large and small, and when they have got them ashore they select the large ones to send to Sydney, and leave the smaller ones to perish? Yes, they generally employ the blacks to get them by the bag.
1309. Is that done to a large extent? Yes, there is a great deal of it lately.
1310. With respect to the larger oysters, what do they do with them? They send them to market.
1311. But are they marketable? Well there are people who buy them.
1312. That is not an answer to my question. Are they marketable, in your opinion? No, they are not.
1313. They are not such as should be sold for human food? No.
1314. But if laid down on suitable soil they would grow and become fat and good oysters? Yes.
1315. *Hon. J. B. Wilson.*] Were there not natural oyster beds in Bateman's Bay? There never were any in the bay; the bar separates it from the river.
1316. *Chairman.*] What is the next river, Mr. Langham? The Tuross.
1317. Who is the lessee? Mr. Martin.
1318. Is that the gentleman who was examined by us the other day? No, that was Mr. Bell, his partner.
1319. What is the area of the Tuross? From 2,000 to 3,000 acres, or more.
1320. And what is the rent of it? £135 a year.
1321. What are the banks and beds of the river? Rock and mud chiefly.
1322. Are there many young oysters sticking to the rocks? A great many in places.
1323. Are there any mangrove swamps? Yes, to a very small extent.
1324. Have the lessees done anything in laying down and forming oyster beds? No, they have been chiefly working the natural beds, that is all.
1325. Are there very many young oysters going to waste on the rocks? Well, there are a good few that could be made use of.
1326. Those that the lessees remove from the rocks are a mere nothing to those that are left? No; I do not know that they do remove any.
1327. But they would not allow any one else to remove them? No.
1328. What is the next river? Brow Lake.
1329. Who is the lessee? Mr. Martin has that also.
1330. What rent does he pay for it? £35 a year.
1331. And what do its beds and banks consist of? Chiefly mud.
1332. Are there any mangrove swamps? There is very little mangrove.
1333. To what does the spat chiefly attach itself? Most of them are mud oysters there.
1334. There is not much cultch there or dead oyster shells? No; there are a few stones here and there, but the place has not been worked for some time, and the freshes seem to have killed the oysters.
1335. Has the lessee done anything to improve his lease by laying down and forming oyster beds? No; it was formerly leased to a man named Brown, and he sold it within the last twelve months to Martin.
1336. Has it improved since it was leased by the Government? It seems to be in about the same state; very little has been done to it.
1337. All they seem to care about is to get as many oysters as they can out of it? That is all.
1338. What is the next river? That is the whole of them.
1339. Have you considered whether it is to the interest of the public to lease such large areas to one person or one company? I think not.
1340. Do you not think there are a number of persons who might make a good living out of these oyster-bearing rivers, if they were leased in small areas? Yes, smaller than they are at present.

1341. I wish to call your attention to some evidence given by Mr. Knight, before a Select Committee of the Legislative Assembly in 1867. In answer to a question from my honorable friend Mr. Wilson—"What extent do you think each bed should be?" Mr. Knight says,—“I think two acres would be plenty;” and in reply to a question put by the Chairman—"Do you think 2 acres would be a sufficient extent to afford a comfortable subsistence for a man with a family, through the whole year?" he says—"Yes, after the first three years, when it came into full bearing." Now, I wish to have your opinion, as a practical man and the Inspector of Oyster Beds in this Colony, on the subject of Mr. Knight's evidence, as to whether 2 acres would be sufficient to afford a comfortable subsistence for a man with a family during the whole year? I think it would be too small myself.

Mr. W. J.
Langham.
21 Nov., 1876.

1342. Have you any idea how many oysters can be planted upon 1 acre of ground? That depends upon whether you can get suitable ground.

1343. Mr. Knight states, in answer to another question by Mr. Macpherson, as to the rates obtained for small oysters beds in England,—“A bed of 3 or 4 acres in some cases would fetch as much as £50 or £100, but they are old-established places which have been planted, where there are adult oysters for spawning, &c., &c.” You think 2 acres would be too little? It depends entirely upon where it is; I think it is rather small myself.

1344. It is when compared with the 8,000 or 10,000 acres in some of these leases; but supposing it were extended to ten or twenty times that size, which would be 40 acres of good oyster ground, with the privilege of getting oysters off the rocks or mangroves, do you think a man would be able to make a good living out of it? Yes; of course I do not consider the whole of these 10,000 or 20,000 acres in these leased rivers as good oyster ground.

1345. No, you have spoken of them as the entire areas claimed by the lessees? Yes.

1346. Is it not the very same in respect to squattages—every acre on a run is not available—only a certain portion of it? Yes.

1347. Do you see any objection to the Government licensing persons, on the payment of a small fee, to remove the spat from the rocks and mangroves, and sell it to persons to lay down and fatten? That would not answer in every case, because in many instances private individuals would not allow these men to go in front of their residences or their orchards for that purpose; they would not care to have persons of unknown character trespassing on their property in that way.

1348. There might be exceptional cases of that sort, but how few of the rivers of which you have just given us an account have orchards or private residences fronting them? No, but all those rivers do not grow spawn to the same extent.

1349. But before these leases were granted any person might go on these grounds and get spat. What I wish to know is, whether you see any objection to restore these old oystermen's rights by means of licenses, the same as those granted for cutting timber? I see no objection, if they could be strictly confined to collecting spat.

1350. Would you not have a better check upon them if they had licenses than if they were without them: you could cancel the license if they did not stick to it? Yes, it might be done in that way.

1351. Do you not think, looking to the interests of the general public as well as to the interests of the oystermen, that it would be a mutual advantage, that a number of men should be able to earn a comfortable subsistence for themselves and their families by collecting the young oysters from the rocks and selling them for growing and fattening purposes? I think it would be better to reserve certain places for the purpose of collecting spawn, than to give them permission to go anywhere they liked. I would have certain places specially reserved for that purpose like Broken Bay or a portion of Shoalhaven, or the lower portion of Sydney Harbour.

1352. Do you see any objection to their getting spat off the rocks in Sydney Harbour or Middle Harbour? I think many private gentlemen would object to these men going in front of their places.

1353. But supposing those places were reserved, wherever, for instance, there was a wharf or jetty on private property, would you see any objection then? No, not in cases where it would not interfere with private property.

1354. Don't you think it would be the means of utilizing the large number of young oysters that are going to waste, besides providing valuable food? Yes, no doubt it would.

1355. Which will never become valuable as long as it remains where it is? No; there are places where the spat will grow; for instance, on the Parramatta River up to half-tide.

1356. Up to low-water-mark? I have seen fine oysters in the Parramatta River 2 feet above low-water-mark.

1357. But although some of the spat may live and become good oysters, there is a great deal of it that is lost? Yes.

1358. Which could be utilized if removed and planted on good laying ground? Yes.

1359. If it is found to answer well in France, as it is, and unlimited liberty is given there to persons to collect young oysters from the rocks, do you see why we should have more stringent regulations in this country? No, I do not see why.

1360. And are you not aware that in Kent, in the neighbourhood of the Whitstable Company's ground, on the Commons, there are men, women, and children constantly engaged in knocking oysters off the rocks as small as a threepenny bit, and selling them. Don't you think a similar system should be adopted here? I don't think there is any occasion for it here for a long time, because there is plenty of spat to last for a number of years.

1361. But you tell us that Captain Griffin was desirous of obtaining spat from the rocks on the adjoining lease in order to utilize it, and the lessee would not allow him. Do you think, then, that it is premature to adopt such a system? I think there might be reserves made in the different rivers on purpose to collect spat.

1362. Do you think it would be good policy to reserve a portion of every river, which should never be dredged, and from which spat should not be taken—a reserve solely for breeding? Yes, I think a portion should be reserved for breeding purposes.

1363. Are you aware that in France a portion—either one-fourth or one-fifth—is reserved by the Government for that purpose? Yes, I believe it is the case.

Mr. W. J.
Langham.
21 Nov., 1876.

1364. Then do you think it would be expedient to adopt a policy of that kind here, and to reserve either one-fourth or one-fifth, which should neither be open to the dredger or to the oystermen employed in knocking the oysters off the rocks? Yes, I think it would be; I think it would prevent disputes arising from persons taking spat off each other's ground. I think permission might be granted to take away a certain quantity, such as the Inspector might consider necessary for the purpose required, because a person might go to a place and take away oysters, and say they were for breeding, instead of which he might use them or sell them for eating.

1365. But would it not be desirable, in granting these licenses to take oysters off the rocks and man-groves, to limit them to a particular river, and not to allow the men to wander about from one river to another under one license? I think the licenses should be given for a certain time and for a certain river.

1366. Then in granting these licenses, would you allow, as they do in France, children of a certain age and unmarried daughters to be employed in collecting the spat? I don't know about the boys, but girls and young women I think ought to be left out.

1367. But if the parents go out, why should they not take their daughters with them? I hardly think that would be advisable.

1368. Are you aware that some of the witnesses examined here on a previous day recommended that licenses be issued to persons to get oysters off the rocks? I would sooner see them licensed to go on the rivers and get oysters by the bag than to get them in that way.

1369. I was coming to that. Do you not think it desirable to have two different kinds of licenses—one for those who dredge and another for those who knock the oysters off the rocks? I think a great many who had licenses to take oysters off the rocks would dredge; I don't see how you could prevent it. My idea is to reserve certain places especially for spawn.

1370. Do you see any objection to the Government alienating either by lease or sale small portions, say 20 or 40 acres, or whatever extent may be decided upon, and to let the holders have the exclusive right to the ground, either for a long term of years or for perpetuity? I should say for a long term of years, subject to improvements; I would not allow a person to take up a lease and do nothing with it.

1371. You are aware of the conditions in the Lands Alienation Act, are you not—that when a person makes a conditional purchase, one of the conditions is that he shall improve it to a certain extent within three years? Yes.

1372. Do you see any objection to the introduction of a similar condition into an Oyster Bill? No, I don't see any objection.

1373. That is to say, he holds the lease under a condition that improvements shall be made upon it, subject to the approval of the Minister, equal to those which would be required on dry land. How would that answer, do you think? I think it would answer very well.

1374. Now with regard to Crown lands on the shores; do you see any objection to conditional purchasers selecting land under water as well as dry land? No, I do not see any objection; I understand you to speak of places for artificially cultivating oysters.

1375. Yes, what I wish to know is whether it is not as desirable for the Government to encourage oyster cultivation as well as agricultural or pastoral pursuits? Yes, the only thing is that the law would have to be very stringent.

1376. Would it require a more stringent law than that now in force for the conditional purchasers on dry land? Well, you can see better what is done on dry land than you can under water, and persons would be taking oysters from their neighbours' ground.

1377. Could they not just as well steal from their neighbours' orchards or farms? Yes, but that would be noticed much quicker than stealing from an oyster bed.

1378. What depth would such beds be? They would vary from 3 feet upwards.

1379. At what depth can you see the bottom of the beds—4, or 5, or 6 feet? No, the water does not run nearly so clear on the northern rivers as it does in the George's River and about here.

1380. Then you think the great fear is that a person might be robbed and not know it? Yes; that has been the case with Captain Griffin on Limeburner's Creek.

1381. He has been robbed? Yes, repeatedly, and he knew nothing about it until he went over the ground and found it out.

1382. That deals with a separate question—the best mode of protecting the oyster beds—but it does not appear to me to affect the present question more than it does the protection of orchards or farm-yards. You may have read the other day the speech of a bishop who boasted of having robbed orchards when he was a boy at Parramatta. That can always be prevented. Do you think if proper protection were afforded and persons were allowed to select land under water as well as above water that oyster culture might be carried on in connection with farming? Yes.

1383. And that it would be very advantageous, as when a person was not employed in working his farm he might turn his attention to his oyster beds, and in that way increase his prosperity and happiness? Yes, a great many oysters might be grown in that way.

1384. You see no objection to it, except on the score of oyster-stealing? No.

1385. You think there is a great deal of stealing going on? Yes.

1386. What is your opinion as to the best mode of prevention: do you think that if persons were not allowed to remove oysters without a pass, as in the case of cattle and sheep, the practice would be checked? Yes, that has been an idea of mine for a long time past—that the men should all be licensed and the boats marked. I think all the men employed by the lessees to remove oysters should have a permit.

1387. Is not the receiver, knowing the goods to be stolen, as bad as the thief? Equally, if not more so.

1388. Is it not possible to put a stop to this stealing to a great extent by issuing licenses to these oyster-dealers, and obliging them to do the same as the butchers are compelled to at slaughter-houses—keep a record of all that they purchase from the oyster merchants? Yes, I have had that idea for some time back.

1389. Just carrying out the same precautions which are adopted in connection with cattle and sheep? Yes, or something similar to them.

1390. Don't you think a great improvement could be made in the Oyster Act by adopting the precautions which are provided in connection with other industries; for instance, for cutting timber a license is required, and for getting oysters off the rocks a license would be required; with respect to the droving of cattle or sheep a pass is required; with respect to the removal of oysters from one place to another a pass would be required; also, for slaughtering cattle and sheep a license is required; and a record has to be

be kept; so in respect to the sale of oysters, a license would be necessary as well as a record of all oysters purchased. If these precautions were carried out, do not you think oyster-stealing, and also the sale of improper oysters, might be put a stop to? Yes, I think so.

Mr. W. J.
Langham.

21 Nov., 1876.

FRIDAY, 24 NOVEMBER, 1876.

Present:—

Hon. J. B. WILSON,

J. S. FARNELL, Esq.

THE HON. THOMAS HOLT, M.L.C., IN THE CHAIR.

Mr. George Haiser called in and examined:—

(Some fresh samples of oysters were exhibited.)

1391. *Chairman.*] Have you had any experience in oyster culture, Mr. Haiser, either in this Colony or in Europe? Yes; in this Colony. Mr. G. Haiser.

1392. For how long? About twenty years. 24 Nov., 1876.

1393. In what part of the Colony? On the Clyde and Tuross Rivers, and on Durass Lake, and also on the Tomago. I have also dredged on several creeks to the north of Bateman's Bay.

1394. Have you known all those rivers for twenty years? I have worked on them, sir.

1395. What was the state of those rivers at that time? Very good, sir.

1396. And what state are they in at the present time, as regards the oyster beds? In a very poor state.

1397. They have fallen off very considerably during that time? Yes.

1398. With regard to the quality of the oysters, are they equal now to what they were twenty years ago, in size and meat? The meat is equal and the dredge oysters are as large, but the bankers, which used to be as large as the dredge oysters, have fallen off a good deal, and are not nearly so large now.

1399. The object of my question was, to ascertain whether they are inferior in quality as well as in quantity, to what they were twenty years ago? Yes.

1400. And to what do you attribute this—to over-dredging? To taking them away constantly to market without saving the young ones.

1401. Taking them to market before they were full-grown? Yes.

1402. In an immature state? Yes; it does not matter to them—they take them off just as they come.

1403. Have many of the oysters on those rivers been burned for lime? Yes, a great many.

1404. And that partly accounts for the decrease in quantity? Well, I would not exactly say that the lime-burning accounts for it.

1405. Partly, I suppose? Yes, partly.

1406. Are all these rivers which you have mentioned leased at the present time? Yes, the Clyde, Tuross, and Durass Lake; the Moruya and Tomago are closed, and also the Cullendulla.

1407. What was the state of those rivers before they were leased? Very good.

1408. Then the lessees have not improved them, have they? I cannot see it.

1409. Are they in a worse state than they were when they were first leased? Well, I have not examined them lately, and I could not say.

1410. *Mr. Farnell.*] Do you know as a matter of fact whether they are better or not? No, I do not.

1411. *Chairman.*] Do you know whether the lessees have removed large quantities of oysters from them? Yes, at times, when the market requires them they come in plentifully.

1412. Can you tell the Commission what kind of oysters have been removed—were they full-grown or very young? All sizes.

1413. Are you aware that in England they have different names for the oysters according to their size, in the same way that cattle of different ages are called calves, heifers, steers, and so on; thus, oysters one year old are called spat, at two years old they are called brood, at three years ware, and only when they are four years old are they called oysters and considered marketable? Yes.

1414. Now, what age were these oysters that were removed by the lessees from the rivers you speak of? It would be rather a difficult matter for me to say.

1415. Have there been any brood or ware, that is two or three year old oysters, taken away? Yes, I believe so.

1416. Have many of them been taken? Yes.

1417. And are there many taken away at the present time? I could not be certain, without going there to see; but I know that when I worked on the rivers before they were leased, there were very nice oysters growing on the rocks, and they have fallen off since, and are now something similar to the oysters now exhibited. The shells are very tender, and you have to be very careful in taking them off. When they take them off they don't look much to the age of the oysters, but how they can get a bag of them.

1418. What is the nature of the banks and beds of those rivers—are they rock or soil chiefly? There is gravel and mud and sand.

1419. Are there many young oysters sticking to the rocks, where there are rocks, or to the mangroves in the swamps? Yes.

1420. A great many? Yes.

1421. Do the lessees make any use of them? If they are large enough they send them to market.

1422. What do they consider large enough or old enough? Something similar to those now exhibited.

1423. How old do you think they are when they send them to market? Well, to the southward they don't breed so fast as they do to the northward. It would take fully five years on the Clyde before they could possibly be sent to market.

1424. Before they were full-grown? Yes.

1425. And do the lessees wait till they are five years old before they send them to market? I could not say that.

1426. Can you give us any idea of the age of the oysters when they are removed from the rocks and mangroves? It would be impossible for me to say without continually watching them.

1427. Well, now, as a rule are these spat which stick to the rocks and mangroves utilized? Well, when they work among these mangroves they smash these small oysters, so that they are wasted.

- Mr. G. Haiser. 1428. Would it not be possible to save them and to plant them on good ground so as to make them marketable oysters? Yes.
- 24 Nov., 1876. 1429. Then there is a great waste of young oysters? Yes.
1430. Do you think it is desirable in the public interest to lease these oyster-bearing rivers in such large blocks as are leased at the present time? I should think not.
1431. Do you think that if persons were licensed to get oysters off the rocks and mangroves, and licensed also to dredge for oysters, that it would conduce to the public interest and provide employment for a large number of persons? Yes, it would give employment to a good many, and each man could lay down the small stuff and cultivate the oysters, which is not done at present. There are plenty of places where if this small stuff was laid down natural beds would be formed, and that is what is wanted.
1432. Do you think also it would be desirable that the Government should alienate suitable places for fattening purposes, where the young oysters could be laid down to grow and fatten? Yes, that is my view of it.
1433. You think that would be desirable, and that it would increase the production of oysters? I think so.
1434. Do you think it would cheapen the price to the consumer? Yes.
1435. And that it would give a great deal of employment to dredgers and others having layings suitable for young oysters, besides largely increasing the supply of wholesome food for the public? Yes, sir, that is my opinion. Some years ago when I used to work on the rivers and I had seven or eight men working for me, I used to save the small stuff and place it on nice shingly beach; and after a certain time—about two years afterwards—I used to have nice little beds there that looked splendid.
1436. What do you think would be a reasonable fee to charge oyster-dredgers and oyster-gatherers from the rocks and mangroves, and also for the use of licensed boats? Including them all?
1437. No, separately; say the oyster-dredgers, for instance; do you think £2 or £3 would be too much? No.
1438. You think £3 a year would not be too much for dredging? No.
1439. Would you suggest that the boats should be numbered, so that no foreign boats could be used in the trade? Yes.
1440. Would you suggest that a small fee should be charged for licensing each boat—say £1, £2, or £3? That would make it rather heavy.
1441. Is it desirable, do you think, to take any notice of the boats at all for the protection of the trade? Oh, yes; by giving licenses and numbering the boats.
1442. Then what do you suggest as a reasonable fee for those who take oysters off the rocks and mangroves? I think there should be no difference; I think one should be as much as the other.
1443. You would have them each £3 a year? Yes.
1444. And you think they would make a comfortable living paying a license fee of £3 a year? They would.
1445. Do you think that fee should include their families, their wives, and children up to a certain age? Yes; sometimes it would be rather awkward if a man had big strapping sons.
1446. I was merely speaking of the general principle. I may mention what I had in view. The rule in France is that the wives, and unmarried daughters and sons under fifteen years of age, are included. Do you think a similar regulation would be suitable to this Colony, and that a license fee of £3 a year should comprise the wives, and unmarried daughters and sons under fifteen years? I should not like to recommend it.
1447. What would you suggest then—it is only a matter of detail? I think that every man having a boat should pay a license fee; but if he has a man with him, it is a question whether you should license the two men or the boat.
1448. What would you suggest? I would suggest that every man who goes in the boat should pay £3.
1449. And you think they would not object? No.
1450. And the effect of this would be to give additional employment to labouring men and their families, and also to cheapen the price of oysters? It would.
1451. Do you consider oysters wholesome food? I do, sir.
1452. Are they generally eaten as food to your knowledge by the labouring classes? Down our way where they cannot get meat plenty of families live on them; but now the rivers are leased, they are prohibited from using them. They are threatened with the law, and of course they cannot get them unless they do it when they are not seen.
1453. Unless they steal them in fact? Yes.
1454. But formerly they almost lived upon oysters? Yes, a good many families.
1455. You have not had sufficient experience of large towns like Sydney to say whether they are a common article of food among labouring families? No, I could not say.
1456. *Hon. J. B. Wilson.*] Are any of the natural beds in the rivers you have mentioned still productive and in good condition? Yes.
1457. Are they in as good condition as they were formerly? No.
1458. Is their deterioration produced by over-dredging? Yes.
1459. Do the lessees of these rivers take any pains to return the young oysters or ware to the beds when they are taken out, or do they take all the oysters to the bank and sort them and leave the young oysters to die? That is the general custom. They cull them on the bank; sometimes they cull them in the boats.
1460. Do the lessees as a rule pay much attention to the oysters, or do they employ men to get them at so much a bag? They employ blackfellows and others to get them by the bag.
1461. And they do not care where they get them or how? No.
1462. You have stated, in answer to the Chairman, that some years ago you laid down young oysters in certain localities, and that they grew and fattened in about two years? Yes.
1463. What was the nature of the soil on which you laid them? It was a shingly beach close to the mud.
1464. That is to say, the banks were mud, although under water it was a shingly beach? No, the banks were shingle, but a little way from low-water-mark it was mud.
1465. Were these young oysters laid down in a locality where much fresh water mixes with the salt, or in purely salt water? In purely salt water.
1466. Have you ever known oysters to grow and fatten in the sea without an intermixture of fresh water? Yes, I have sent oysters to market that came from outside the bar, which grew entirely in the open sea on the rocks among the bumborers.

Mr. G. Haiser.
24 Nov., 1876.

1467. Were they of large size? Yes; nice, cuppy oysters.
1468. Are there many places on the Clyde or Tuross Rivers where artificial oyster beds might be formed; and where, if oysters were laid down, they would thrive? Yes.
1469. Are there any of these swamps that you think would be suitable for the formation of artificial beds? Yes, plenty of them.
1470. If these swamps were leased for a sufficiently long term of years to encourage the lessees to lay out money upon them, how many acres do you think should be comprised in one lease? About 5 acres I should think.
1471. Do you think 5 acres cultivated in that way would give a sufficiently good living for a family? Yes, after the first three or four years.
1472. Have you ever thought what length of lease ought to be granted by the Government in order to thoroughly remunerate these persons for their outlay of time and money; do you think thirty years would be too long? No, I think it should not be less than twenty or thirty years; a great deal of money has to be spent on these places, and a man would get nothing out of them in less time than that.
1473. And you think a lease of thirty years would not be too long? I do.
1474. Supposing the Government should decide upon leasing these swamps in that way, do you think there are many persons of sufficient enterprise who would be willing to lease them, and to go into the business? Oh yes.
1475. There are a great many of these swamps about the Tuross River and the other localities you have mentioned, are there not? Yes, a great many about the Tuross, and a great many about the Clyde River, as well as all the rivers I have named.
1476. Are these swamps pretty much of a black clay soil? Yes, black clay.
1477. Have you any idea of the depth of that soil? It is very deep.
1478. But still not so deep but that a bottom could be formed by laying down shells and stones, or other material; there would be no difficulty in doing that? No.
1479. Has any person, as far as you are aware, attempted to make oyster farms in your part of the country? No. I intended several times to cut a trench into my ground, but I was afraid of being interfered with.
1480. By whom? Mr. Gibbins.
1481. Then you have some land down there? Yes.
1482. And you think it is suitable for the cultivation of oysters? Yes.
1483. And the only difficulty is the digging a trench to allow the salt water to get to your ground? No, there is no difficulty about the trench, but Mr. Templeton, a neighbour of mine, laid down some oysters on his land, and the lessee, Mr. Gibbins, claimed them as his property.
1484. Do you think that if these rivers, the Tuross and the Clyde, were closed for a year, the beds would improve? Of course they would get larger.
1485. They were closed for some time, were they not? No.
1486. Not the Tuross River? No. I always found that the oysters will grow best the more you work them. The rock oysters grow very thick, and when they are separated they have more room to grow.
1487. When do the oysters spawn on the Clyde? Generally between January and February.
1488. Do they spawn more in January and February than in other months? Yes.
1489. Then you would say that January and February are the spawning months on the Clyde? Yes.
1490. Do they spawn during the same months on the Tuross? That depends upon how the beds are situated. If the morning sun plays upon them they spawn much sooner than they do in beds which are shaded and do not get the sun till mid-day.
1491. But, generally speaking, the spawning time is the same on the Tuross? Yes, about the same, or a little later.
1492. Do you think that oysters spawn at the same time throughout the Colony? I do.
1493. *Mr. Farnell.*] You say that you have been dredging oysters some twenty years ago? Yes.
1494. From what rivers? From the Tuross, the Clyde, Durass Lake, Tomago, and Cullendulla.
1495. Did you dredge these oysters for the market? Yes.
1496. How many men did you employ? Sometimes five or six, sometimes less.
1497. How many years were you dredging in this way? About fourteen years at all events.
1498. You were dredging the natural beds? Yes, in deep water.
1499. Did you ever lay down young oysters on these natural beds? No, not on the natural beds.
1500. Then did you dredge them from the natural beds and put them elsewhere to grow and fatten? No; when the market was glutted I would dredge them and lay them down on any suitable place where I could take them up easily for the market.
1501. Then you have never done anything in the cultivation of oysters? No. Sometimes I laid down small stuff, but I did not make a practice of it.
1502. How old were the oysters you laid down? About twelve months old.
1503. How many did you lay down at a time? That is more than I can remember. Perhaps a couple of bags of culled oysters.
1504. Then you used to cull the small oysters from those you dredged from the natural beds, and then lay them down? Yes.
1505. Where did you lay them? On a shingly beach.
1506. What would the culling amount to? About a couple of bags.
1507. A couple of bags per day? Yes, every evening that I had been dredging.
1508. What was the extent of the beach? There was a frontage of about half a mile.
1509. By what width? About 10 feet.
1510. Did you occupy the whole of the ground with these culled oysters? No; we had an understanding amongst ourselves that we should not interfere with each other.
1511. How many persons were there, besides yourself, who made use of the beach? I should say there would be fifteen or twenty in different places. Of course we kept them separate.
1512. Now, do you know that at any one time this beach was ever strewed with oysters that had been culled? No, sir.
1513. How long did you allow the oysters to remain there? Until such time as I required them for the market.
1514. I want some definite information as to the time you left them there? I can only make a guess.

- Mr. G. Haiser. 1515. Did you leave them for a month, or a year, or two years? Two or three years. I never expected this small stuff to grow much; I simply threw them down to see what they would come to.
- 24 Nov., 1876. 1516. They were the cullings of the oysters which you dredged from the natural beds? Yes.
1517. And you never expected them to grow large, or looked upon them as a source of profit? No.
1518. Are you engaged in dredging oysters now? No.
1519. How came you to give up that occupation? On account of the rivers being leased.
1520. Have you applied for a lease or sent in a tender at any time? I have applied at different times for four places.
1521. Now what state was that river in at the time you dredged it for oysters? In a very good state.
1522. What do you call good? I call four bags a day good.
1523. And how many bags could you get in the day when you first commenced? Sixteen.
1524. And you got four bags a day just before it was leased? Yes.
1525. And the other rivers were just in the same state? Yes.
1526. Do you know in what year these rivers were leased? About '73 I think.
1527. Do you know what they have been producing—the rivers you have been working on—before they were leased? I could not say exactly; I have seen a great many oysters sent away from them.
1528. You do not know, as a fact, whether they have improved since they were leased? No.
1529. You have had no experience whatever in the cultivation of oysters? No, I never tried it.
1530. You have only taken them from their natural beds? That is all.
1531. Referring to your answers to Mr. Wilson about the swamps: have you a salt-water marsh belonging to you? Yes.
1532. Is it extensive? It is.
1533. What height of tide goes over it—is it dry at low-water? Yes.
1534. At ordinary times what depth of water is there? About 2 feet.
1535. And at spring tides? Of course there is more at spring tides.
1536. *Chairman.*] And you have been deterred from improving this marsh in order to lay down young oysters to grow and fatten from fear of the lessee of the Tuross River, Mr. Gibbins, interfering with you? Yes.
1537. Because he has interfered with a neighbour of yours who had laid down oysters on the swamp and had claimed them himself? Yes.
1538. *Mr. Farnell.*] Is the marsh your freehold property? No.
1539. Does your property adjoin it? Yes.
1540. Have you made application to purchase it? No.
1541. Then it is to all intents and purposes Crown land? The tide goes over it.
1542. Yes, but that does not give you a right to it—you have not purchased any freehold over which the tide flows? No.
1543. *Chairman.*] If the lessee had not interfered with you, what would you have done with this swamp? I should have cut a couple of trenches to let the salt water flow in and out of it.
1544. Did you ever hear of that being done? Yes.
1545. Where? On the Moruya.
1546. Will you be kind enough to describe what you have seen? They have a salt-water marsh there, and they lay down oysters in it and let the tide flow in and out of it.
1547. Do the oysters grow and fatten there? Yes. I admired the idea, and would have done the same thing with the marsh at my place.
1548. Are you aware that that is carried on to a great extent in France; that they take what you call trenches, but what they call clairs, to oyster grounds? I have heard of it, but I never knew anything about it before.
1549. Dr. Wilson has asked you some questions about a lease for thirty years. Do you think it would encourage persons to cultivate more, and to expend more labour and capital on oyster culture, if they were allowed to purchase the fee simple of the land to a limited extent, so that it might descend from father to son for generations, or even centuries? I think it would.
1550. Do you see any objection to persons being allowed to purchase land covered with water which is not required for navigation? No sir, I do not.
1551. Would not that have a beneficial effect in the improvement of the district, besides causing a considerable increase in the production of oysters? Yes, it would give employment to a good many persons.

WEDNESDAY, 29 NOVEMBER, 1876.

Present:—

HON. J. HOLT,

HON. J. B. WILSON.

THE HON. THOMAS HOLT, M.L.C., IN THE CHAIR.

Mr. William John Langham, Inspector of Oyster Beds, called in and further examined:—

- Mr. W. J. Langham. 1552. *Chairman.*] You have given us evidence in respect to many of the rivers that are leased, but not the whole of them? Yes; the others are only small places.
- 29 Nov., 1876. 1553. What are the leased rivers of which you have not given us any information. To begin with the Parramatta River, is any portion of that river leased? There are two small leases on it.
1554. To whom are the leases granted, Mr. Langham? One is to Mr. Gascoigne, and the other to Mr. Baldwin.
1555. What are the areas of those leases? They are only small frontages. One of them is about $1\frac{1}{2}$, and the other 2 or 3 acres.
1556. They are both frontages to the properties of the lessees? Yes.
1557. Are these leased portions of the river buoyed off in any way? No.
1558. What rent do the lessees pay for them? About £1 each, or a little more. I think there is no difference between them.
1559. And you say they are not buoyed off? No, there are a few stakes round Mr. Baldwin's place, that is all. 1560.

Mr. W. J.
Langham.

29 Nov., 1876.

1560. Then there is nothing to warn the public off—nothing to show that those portions of the river are leased to Messrs. Gascoigne and Baldwin? No.
1561. What is the nature of the soil? Sandy and rock.
1562. There is no rich mud? No.
1563. What is the term of the leases? Ten years.
1564. The leases are issued under the Act 31 Victoria, No. 20, are they not? Yes.
1565. Have the lessees made any improvements? Yes. Mr. Baldwin has done a little; he has put down some stakes and some brushwood, but the oysters do not seem to grow upon it to any extent. I imagine that the bottom is too sandy.
1566. Has he tried to breed there, or rather to collect spat? Yes. Mr. Gascoigne gets a few off the rocks; it is chiefly to the sandstone rocks that they attach themselves.
1567. Has Mr. Baldwin tried to lay down oysters to grow and fatten? Only a very few.
1568. And the other lessee, Mr. Gascoigne, has he tried it? No. He gets them chiefly off the rocks in front of his place.
1569. That is his object then in renting the portion of the river in front of his place? My idea is that his object is to get oysters from other parts of the river, and that he uses this place as a cloak. For instance, the other parts of the river are closed, and if he goes away at night and gets oysters, there is no way under present circumstances of making him show where he got them from.
1570. Then, in your opinion, these leases are a mere blind to enable the lessees to get oysters from other portions of the river which are closed? Yes.
1571. Do you think it is desirable to lease isolated portions of a river in this way? No, I think it is a mistake myself; I think the areas of these leases are too small, and I think also that the law is not sufficiently severe, because, even if they are caught, they have only to pay a fine of ten shillings or a pound at the Police Court, and it pays them to do that.
1572. Is the soil sandy in both places? Yes, it is a sort of drift sand with a slight touch of mud in it; the ground is loose.
1573. It is not at all suitable for fattening oysters? No, I don't consider it so.
1574. You have not told us anything about Mr. A. R. Emerson's lease, from the embouchure of George's River to Botany Head. Has he two leases? Yes, they are leased by the same person. It was his brother who gave evidence here.
1575. Is there any of the Cook's River land leased? Mr. George Lord has a small frontage opposite his place; he has only lately taken it up.
1576. What is the area of his lease? It is the frontage to his property; I could not say exactly what the area is—about 4 or 5 acres.
1577. What rent does he pay? £1 a year.
1578. Does he make use of it? He told me the other day, when I met him in the street, that he had been laying down some spat; but I have not been there lately myself; it is only a small sandy beach with a little mud.
1579. Well, you have now told us all about the leased rivers; now tell us about the rivers that are not leased. What about the Richmond River? That is not leased.
1580. Is it a closed river? Yes.
1581. What is the extent of the Richmond River? I have no idea; I have never been there.
1582. Then you cannot give us any information with regard to the soil; whether it is good fattening ground or not? I know there are quantities of oysters there; I have had samples sent up from it.
1583. How long has it been closed? Some few months—eight or ten months.
1584. Do you know anything of the Bellingher River? Yes, that is a closed river also.
1585. Have you ever been there? Yes.
1586. Are there many oysters there? Well, not a very great quantity; but they are fine oysters, what there are.
1587. What is the nature of the banks and the bed of the river? It is rich alluvial soil mostly; the oysters are chiefly in the bed of the river, in what is called the south arm.
1588. And are the oyster beds there extensive? No, they are no great size, only small patches; there are seven or eight patches in it that I know of.
1589. Do you think many oysters are stolen from these closed rivers? Yes; but of course the Bellingher River is a bar river, and the steamers cannot get up it.
1590. Then there is the Nambucca, is that a closed river? Yes.
1591. Have you ever been there? No.
1592. The Tweed River, do you know anything of that? That is a closed river.
1593. Have you ever been on it? No.
1594. Then you can give us no information about it? No.
1595. Do you know anything about the Tomago River? Yes, I have been there.
1596. What are its banks composed of chiefly? Alluvial soil, mostly mud banks, with a great many mangroves.
1597. Are there many oysters on the mangroves? No, very few.
1598. It is not a river which produces many oysters? No.
1599. The next is the Wogonga River; have you been there? Yes.
1600. What are its banks and its bed composed of? Most of the oysters there are rock oysters; there are a few mud oysters; the rock oysters are very fine.
1601. Is there a great deal of spat sticking to the rocks? A great deal, in places.
1602. And no use whatever is made of it? No.
1603. Do you know anything of the Bermagoe River? No.
1604. You have never been there? No; it is only a small place.
1605. The Panbula River, have you been there? Yes.
1606. Of what do its banks and bed consist? Shell banks, formed with mud oyster shells, and there are oysters on the rocks.
1607. Are there many small oysters sticking to the rocks? Yes, upon two or three of the points there are a good many.
1608. Are there any mangroves there? There are mangroves, but I did not notice many oysters attached to them; there is a large mangrove swamp there. There used to be chiefly mud oysters there, very large mud oysters; but when I went there almost all of them were dead.

Mr. W. J.
Langham.
29 Nov., 1876.

1609. What was the cause of that; did the floods kill them? I cannot say; they had been dead for some time. I was told by a man there that he had tried at different times within the last two years, and could not find any.
1610. But there are a good many oysters on the rocks? Yes.
1611. Do you know Tilba Tilba Lake? I have never been there.
1612. Or to Towamba Lake? No.
1613. Then you can give us no personal information about them? No.
1614. Have you been to Jervis Bay? Yes; there are one or two small beds there, that is to say, in the creek that runs into the bay.
1615. What are banks of Jervis Bay? Rock chiefly.
1616. Are there many small oysters sticking to them? Yes.
1617. Is any one allowed to take these small oysters off the rocks? No, not at present.
1618. Or from any of the closed rivers, or from the rocks at Port Jackson? No.
1619. Would you consider it your duty to prosecute a person if you saw him taking oysters off the rocks? It would depend upon who he was; if he were taking them for sale I should, but not if it was a gentleman or any one at a picnic party for instance. My instructions are not to prosecute in such cases.
1620. Do you know Twofold Bay? Yes.
1621. What are the banks and beds there? There is no river; it is an open bay.
1622. Are the banks rock or mud? Rock and sea sand.
1623. Are there many oysters sticking to the rocks? No, not a great many now; it is an open roadstead.
1624. Twofold Bay is not celebrated for its oysters, is it? No.
1625. Now we come to Port Hacking: what are its banks composed of? Chiefly rock.
1626. And the bed of the river? What I saw of it was rock and sand chiefly.
1627. Have you ever been there at low tide? Yes.
1628. Did you see many oysters sticking to the sides of the rocks? Yes, great quantities of them. I think that Port Hacking, as a rule, is only a place for breeding spawn; I never saw any oysters in deep water there.
1629. And what is the extent, do you think, of Port Hacking, where there are so many oysters? I should hardly like to say; it would only be a mere guess.
1630. But there is an immense quantity of spat there? Yes.
1631. Which is going to waste? Yes, no use is made of it.
1632. And it is a closed river? Yes, it is closed to prevent persons from bringing oysters taken out of George's River and other places under the pretence that they come from Port Hacking.
1633. Then it is not closed for the protection of the oysters at Port Hacking? Partly it is, but chiefly in order to prevent persons who have neither lease nor license from stealing oysters and taking them into Sydney.
1634. To protect the lessees. Was it at their request? I believe so.
1635. Do you know who applied to have it closed? I think Mr. Emerson was one of them; the other lessees also complained of oysters being brought into Sydney.
1636. From Port Hacking? No; the persons who brought them in pretended that they got them from Port Hacking, but the oysters were not like any I have seen there.
1637. Do you think it desirable to close a river for the protection of oyster beds in other rivers? Yes, at the present time when there is only one Inspector, and the law does not make any provision to compel persons to show where they get the oysters from which they bring into Sydney. You cannot charge a man with stealing them, although you know that he has no lease or other authority to take them.
1638. But if you met a man bringing in oysters, you could not stop him without some good reason? Well, if a river is closed and you can prove that they come from that river, of course it is stealing.
1639. Port Jackson, Middle Harbour, Lane Cove, and the Parramatta River are all closed, are they not? Yes; I think Mr. Josephson claims the frontage to his place in the Lane Cove River.
1640. Will you describe these places. To begin with Port Jackson—are there many young oysters on the rocks in Port Jackson? Great quantities of them.
1641. Is any use made of them? Not at present.
1642. The Government make no use of them themselves, and will not allow any one else to do so? No, not at present.
1643. What object have they in closing these places? It was done with the view of preventing persons from stealing oysters out of the other portions of the rivers. When persons were found with oysters in their boats they said they had got them from Bradley's Head, Middle Harbour, and so on, and there was no means of proving where they came from.
1644. But on the Parramatta River there are only two small leases. Is it desirable that the whole of Port Jackson should be closed on account of those two small leases? It is not only for them, but for the protection of the other lessees.
1645. To whom do you refer? To the lessees of other rivers, who complain that persons without lease or license of any kind are bringing oysters into market and competing with them who are paying a heavy rent for their rivers.
1646. Now, Mr. Langham, can you give the Commission any idea of the value of the oysters consumed in this Colony, and the value of those exported to Melbourne and elsewhere? From the whole of the beds?
1647. From the Colony generally? About 750 bags, averaging 3 bushels each per week, come into Sydney. Of this quantity about 400 bags go to Victoria, and of the total quantity (750 bags) about 150 bags come from Queensland, leaving about 600 bags produced in this Colony.
1648. You showed us on a previous occasion some very small oysters which you bought in the shops. Are many of these very small oysters exported to Melbourne or elsewhere? Yes; not so many to Melbourne, because the Melbourne people don't care about them—they won't fetch the price there; the best oysters are generally sent to Melbourne.
1649. Do you think it is desirable that such small oysters should be sold? No, I do not.
1650. Do you think the sale of such oysters should be prohibited by law? Yes.
1651. Can you offer any suggestion as to the best way of bringing this about? My idea would be to have a gauge, or something of that sort.

Mr. W. J.
Langham.
29 Nov., 1876.

1652. You have heard several witnesses examined before this Commission object to a gauge on the ground that oysters may have a small shell but a large fish, and we have been told that some oysters do not grow to a large size? We could have gauges of different sizes. I do not say that every oyster in a bag should be gauged; that is a matter which should be left to the Inspector.
1653. What do you think of this plan,—that the oysters should be submitted to Magistrates, and if they found them to be mere skin and water they should condemn them in the same way that unwholesome fish or meat are condemned? Yes, but that would be difficult; the oysters might be sound, though skinny and watery. I don't think the Magistrates would be able to tell what they were.
1654. You have misunderstood my question. I say supposing they were nothing but skin and water—suppose a working man buys oysters for his dinner, and there is nothing in them to satisfy his appetite; I ask you whether such oysters should not be condemned without being passed through a ring? Yes, I think the Inspector should condemn them.
1655. Has the Inspector at present power to condemn fish which he considers unfit for food? Well, he might take them before a Magistrate.
1656. And he should condemn them as being nothing more than brood or ware? Yes, it might be done in that way.
1657. Don't you think that if good oysters only were allowed to be sold the consumption of oysters in the Colony would be greatly increased? Yes.
1658. And that the sale of these oysters—which are in reality, according to the English nomenclature, no oysters—injures the oyster trade? Yes, it does. My idea would be that the Inspector should see them on the wharf and take them before a Bench of Magistrates, or some other authority, to know what was to be done with them.
1659. And if the Magistrates found them to be unsuitable for food, they could order them to be placed in some river or suitable place where they would grow to their proper size? Yes.
1660. You think that would have a beneficial effect upon the oyster trade? Yes.
1661. And that it would encourage persons to buy them for food, which they do not at present, because there is no food in those they purchase? Yes.
1662. Now, with regard to the price of oysters. Do you not think that the present monopoly of the beds increases the price immensely to the consumer? Yes, there is no doubt about that; the leaseholders can rule the market if they like at the present time.
1663. At what price do you think oysters could be sold per dozen so as to leave a fair margin of profit? It is seldom I have had anything to do with them by the dozen; it has generally been by the bag on the rivers.
1664. Have you any idea of the number of oysters in a bag? That depends upon the river they come from.
1665. Take full-grown oysters of the largest size—how many are there in a bushel? I should think about twenty dozen of good-sized oysters.
1666. You are very much mistaken. In England it is estimated that there are 1,500? Well, they cannot be the same kind of oysters, or they must lie much closer than those we have here.
1667. In England it is estimated that 5,000 brood, 2,000 ware, or 1,500 oysters go to a bushel. At what price do you think oysters could be supplied, so as to be food for the working classes as well as a luxury to the rich? At about 4s. a bushel, I should think.
1668. And how many would you calculate to the bushel? About twenty-five to thirty dozen; it would all depend upon where they come from; in some cases there would be more; I am speaking of large-sized oysters.
1669. That is scarcely 2d. a dozen. Do you think they could be sold to working men at a profit, at 4d. a dozen? I think about 6d. a dozen.
1670. Large-sized oysters full of meat? Yes.
1671. And with about a couple of dozen of such oysters a man could make a hearty meal? That would depend upon who it was.
1672. I am speaking of an average meal according to the general scale of rations for a working man? I have seen some gentlemen eat five or six dozen; but I should think two dozen would be a very fair meal.
1673. Then a person could make a very fair meal for about a shilling? Yes.
1674. But what would a meal of that sort cost at present? About two shillings at present, and if they had not got large oysters they would fill up the plate with small ones.
1675. Such oysters as they sell at the present time, would there be twenty-five or thirty dozen to the bushel? No, a great many more; I am not speaking of oysters like those.
1676. But how many of such oysters as an oysterman would supply would it take to fill a bushel; such oysters as they sell in the shops at 1s. a dozen? At a rough estimate, I should say about 600 or 700.
1677. My object is to see how much more consumption there would be if the oysters were sold at a reasonable price. Are you acquainted with the mode of oyster culture adopted in any other part of the world? No, only in this Colony.
1678. Only from what you have heard about it? Yes; I have read a good deal on the subject.
1679. Can you conceive any country more suitable for the cultivation of oysters in respect to climate and natural advantages than this is? No, they should grow remarkably well here.
1680. Do you think it would be possible to make oysters the cheapest food in the Colony—to produce fat, full-grown oysters in such quantities that they should be as cheap food as beef and mutton? I dare say it might in one point of view, but that is a question on which I hardly like to offer an opinion. Of course they would not go so far as beef and mutton.
1681. But with regard to the quantity of spat, there could be nothing better than the provision made by nature to cover the rocks so profusely? No.
1682. There can be no doubt about the supply of young oysters? No.
1683. And if taken care of they would become large and fat oysters? Yes.
1684. And what labour or expense would that involve? The chief trouble would be in laying them down.
1685. But there is little or no trouble in getting them after they have been laid down? No, not the slightest.
1686. Are you aware of the trouble and expense they go to in England to get the oysters when they are laid down? Yes.
1687. Are you aware that in Whitstable they pay 12s. to 14s. for merely dredging them? Yes, I believe so.
- 1688.

- Mr. W. J. Langham.
29 Nov., 1876.
1688. Then when they pay such an enormous sum for merely getting them out of the water, of course they cannot sell them so cheaply? No.
1689. And they have also to dredge the beds continually in order to get rid of the enemies to the oyster? Yes, they are all the better for being turned over occasionally.
1690. Are you aware that in England, Ireland, and Scotland the greatest difficulty they experience is in saving the spat? Yes.
1691. That sometimes for ten, twelve, or even fifteen years no quantity of spat can be saved? Yes, I have heard so.
1692. And are you also aware that in England, Ireland, and Scotland, unless the oysters are covered to a considerable depth, say 4 feet of water at low-tide, the whole of them are frequently killed by the frost? Yes.
1693. But you have never known oysters in this Colony to be killed by frost? I have known them to be killed by frost in a boat.
1694. In this latitude? No, to the southward. The oystermen here in the winter-time generally cover the oysters over in their boats to keep the frost off them.
1695. But I am speaking of oysters under water. You have never known them to be killed by frost in this country, even if dry at low-tide? No.
1696. Therefore the spat costs nothing except the trouble of collecting, and there is no trouble in getting them from the fattening grounds except putting them into the boats? No.
1697. Then with all these advantages, don't you think oysters in this country should be plentiful and cheap? Yes, they should be cheaper than they are.
1698. Do you attribute the present high prices to the monopoly of the rivers by a few persons? Yes, partly; and partly to the rivers being overworked, and the oysters scarce.
1699. Have they not been chiefly overworked in order to burn the oysters for lime? Yes; but that has not been done to any extent within the last few years.
1700. But you have told us of several rivers where the rocks are still covered with spat? Yes.
1701. So that they cannot have been injured by overdredging? No, not the bank oysters.
1702. What, in your opinion, has been the effect of closing the rivers upon the character of the oyster beds: have they improved? They have in some cases; but no one has been in charge of them, and the oysters have been taken away to a considerable extent. There has been nothing to stop it, except when the police have caught a person robbing the beds, or some one has given information, which has been very seldom the case, because no portion of the fine goes to the informer.
1703. *Hon. J. B. Wilson.*] So that, although the rivers have been closed by the Government, they have in reality been worked? Yes.
1704. And consequently there has been no opportunity for the oysters to breed? No, very little.
1705. How many Inspectors do you think would be required to protect the whole of the leased rivers properly—I mean from the Tweed down to the Victorian border. How many rivers do you think one man could look after—could he look after more than one? Yes, more than one in some instances. In some rivers, for instance, where there are bar harbours and the steamers do not trade. It is chiefly where there is steam navigation that protection is required.
1706. Do not persons send oysters down by these timber vessels? They do in a good many instances.
1707. How many Inspectors do you think would be required to protect the oyster-bearing rivers generally; a dozen? Less than that. I think about six Inspectors would do it.
1708. And do you think the services they would render would be of greater value than the remuneration they would receive; that is to say, that it would pay to appoint Inspectors to look after these rivers? I think so. Where there are only sailing-vessels on a river it is far easier to look after the oyster beds than where there is steam traffic.
1709. Do you think these six Inspectors would be able to look after the leased beds to see that the provisions of the Act were being carried out—would they be able to do that also? I think so, with the exception of places that were closed. It would take one person's whole time to look after a closed river.
1710. Do you think there would be any difficulty in introducing into the lease a provision to compel the lessees to return the beds to the Government at the expiration of the term of lease in a certain prolific state? I do not think so.
1711. You think it would be an advantage to introduce such a provision into all the leases? I think it would.
1712. In the way these areas are leased at the present time there is every inducement to the lessees to destroy the beds absolutely? Yes, there is nothing to prevent them. For instance, when the oyster-beds at Newcastle and on the Clarence were leased they took enormous quantities of oysters out the first year. I was told that about 7,000 bags were taken out of the Clarence during the first year of the lease, and in the Newcastle river a very large quantity was also taken, although the river was supposed to be partially closed at the time. The same thing was done in the Manning River. More oysters were taken out of these rivers during the first year than in any subsequent year. I tried to get a return of the oysters taken out each year, but the lessees declined to give me the correct quantities.

FRIDAY, 1 DECEMBER, 1876.

Present:—

HON. T. HOLT, | HON. J. B. WILSON.

THE HON. THOMAS HOLT, M.L.C., IN THE CHAIR.

Mr. Jonathan Knight called in and examined:—

- Mr. J. Knight.
1 Dec., 1876.
1713. *Chairman.*] How long have you been engaged in the oyster business, Mr. Knight? Eighteen years.
1714. In this Colony? Yes, on the river Hunter.
1715. Solely on the Hunter, or have you been on any other rivers? Yes, I have been on the Parramatta River.
1716. Have you had any experience in England in the oyster business? I did not follow it as a business in England, but I have made my living by it in this country for eighteen years—in Newcastle. 1717.

1717. But in England you did not follow the business at all? No, my occupation in England was a ^{Mr. J. Knight.} different one altogether.
1718. What was your employment when you were engaged in the oyster trade? I used to catch the oysters and sell them to the dealers, on the river Morpeth and other places. ^{1 Dec., 1876.}
1719. Can you tell the Commission what was the state of the oysters beds when you first commenced business; were the oysters more plentiful then than they are at present? Yes, you might get any amount by dredging for them; in fact the banks were covered with them—some of the choicest oysters, too.
1720. The banks were covered? Yes, portions of the river Hunter that used to be dry at low tide. When the water went off you could pick them up—choice, good oysters.
1721. What was the nature of the soil on which you found them? It was a rocky soil.
1722. Is there any rich mud there? Yes, in certain localities.
1723. Did you not find the oysters thrive best where there was rich mud? Yes, but when there is too much of it it smothers them.
1724. I do not mean in excess, but sufficient to afford them food in the numerous insects which abound in it? Yes, that would be beneficial.
1725. They would not thrive so well on the bare rock as where there is mud? No.
1726. Is that your experience? Yes.
1727. And at the present time there are not nearly so many oysters as there were formerly? I cannot say what there are now. I have not been in the business lately.
1728. How long is it since you discontinued it? About four or five years.
1729. Was it in consequence of the scarcity of oysters that you left off? No; my wife wished to shift from Newcastle, and I came away, or else I should have gone on with it. I have been for eighteen years getting my living solely by oysters—that and fishing. I never followed any other pursuit.
1730. But up to the time you left, the oyster beds had fallen off very considerably? Yes. I don't know the cause, unless it was a succession of floods, and the debris brought down by the floods covered over some of the places where there were the most oysters.
1731. Don't you think over-dredging has had something to do with it? I don't think it has, sir.
1732. You gave evidence before a Select Committee of the Legislative Assembly some years ago, in 1867, I believe? Yes.
1733. Did you not say then that there had been a good deal of over-dredging? Oh, there was an abundance of oysters then; I never found the least scarcity.
1734. Had there been any falling off in the beds? There was in certain localities, where the debris from the floods had covered them over and destroyed them.
1735. Did you not tell the Committee that great quantities of oysters had been sent to Sydney to be burned for lime? Not to Sydney, sir; they were burned in the locality for lime, quantities of live oysters.
1736. In answer to a question put by Mr. Farnell—"What quantity of oysters do the Newcastle oyster catchers send to the Sydney market weekly?" you stated—"They have fallen off lately wonderfully. I have known 200 or 300 bags to be sent, two or three years ago; at the present time I should think not more than fifty or sixty bags weekly"? Yes.
1737. Then in reply to another question,—"Are there many persons in Newcastle now getting live oysters for lime-burning?" you stated—"A great many are engaged in getting shells. The children pick out some of the oysters, but I should think there are some hundreds of bushels of shells burned for lime weekly at Newcastle"? So they have; at least, they did at that time.
1738. Then you say, when you are asked whether some of the beds are becoming exhausted,—"They are. At Fullerton Cove, which produced some of the finest oysters on the Hunter, there is a foot deep of mud, in consequence of the oysters having been taken away. There is an area of at least 10 acres, which was once a mass of oysters, now destroyed in consequence of having been taken away to burn for lime"? Yes, that was the case.
1739. Then there had been a considerable falling off when you gave that evidence? Yes, there had.
1740. The oyster beds were not in the same state as when you first knew them? No, there was an abundance of oysters then.
1741. They had fallen off since that time? Yes; some of them were destroyed by the floods, and others had been collected in boat-loads and burned for lime.
1742. It appears to me that there is some discrepancy in your evidence. (*Evidence read from the commencement by the shorthand writer.*) Do you wish your evidence to stand? Yes, I think it is very correct.
1743. You gave evidence before the Select Committee in 1867 on the subject of leasing land for oyster culture, and on what could be done if each person knew what was his own portion? Yes.
1744. I was struck with one answer you gave,—"If I were now to lay down a lot of stones, or shells and oysters, in some isolated place, where there had never been an oyster before, when they became in a fit state for market, some other man would perhaps come and take them, and I could not help myself. I fancy it would be beneficial even if we had to pay a little, we should be able to produce a tenfold better article and ten times the quantity"? I am of the same opinion now.
1745. You are aware that the object of this Commission is to inquire into the best mode of cultivating and utilizing the oyster, and of maintaining and improving the natural beds, in order to recommend to the Government the necessary legislation to secure those objects. We wish to have your opinion on the subject. What would you suggest as the best policy to adopt, in order to achieve the results to which you refer in your evidence—"to produce a tenfold better article, and ten times the quantity"? I will tell you what I should do if I had a bed myself, and what I think would be beneficial to the community at large.
1746. Well, first of all, what quantity of land would you require? I think an acre would be enough.
1747. What kind of land would you select for your purpose? The most rocky I could find.
1748. Would that be for breeding, or for growing and fattening? The two processes are quite distinct, are they not? Yes.
1749. Would your object be to breed oysters, or to grow and fatten them, or both? Both, in certain localities; I should shift them when they were large enough.
1750. But this acre of ground you would use for the purpose of breeding? For breeding and fattening altogether.

- Mr. J. Knight. 1751. Tell us what process you would adopt, first in breeding, and then in growing and fattening the oysters? I should throw down a quantity of stones for the spat to adhere to, and as soon as they were sufficiently large I should remove them to a certain locality where they would grow and get larger.
- 1 Dec., 1876. 1752. Now with respect to the parent oysters—Would you think it necessary to lay down any full-grown oysters to provide spat, or are there a sufficient number of parent oysters in the rivers to furnish spat? No, I don't think there are, sir.
1753. Have you any idea how you would place the stones you laid down. Would it be necessary to construct a wall—a low wall—with them? No; I would put down a number of rough stones so as to make a foundation, because spat will not adhere to a stone unless it is perfectly fixed. When the spat is ejected from the parent oyster it is something like a jelly, and it adheres to the first object it comes in contact with which is secure.
1754. Then you would secure the spat in this manner, and you would remove it from the stones and lay it down to grow and fatten? Yes.
1755. At what age would you remove the young oysters? I should think it would be fifteen or eighteen months before they could be removed.
1756. And you would knock them off the stones? Yes; I would take the stones that were most easy to remove without injuring the oysters.
1757. And what soil would you lay them down on? On the ground prepared for them.
1758. What kind of floor would you make? I would make the very firmest floor I could make.
1759. Do not oyster shells make a good floor? Yes, oyster shells make as good a floor as possible.
1760. You would lay them on the mud? Well, you see, if there is too much mud they get covered over; oysters want a permanent floor.
1761. And do you think that from 1 acre of land you would be able to produce a large quantity of young oysters and to grow and fatten them, if you were protected from oyster thieves? Yes; I believe that an acre properly cultivated would be quite enough. Better farm a little farm well than a large one and not half farm it; oysters require a great deal of attention.
1762. What rent do you think should be paid to the Government for an acre of ground? Well, I could not form an idea of that.
1763. But you gave evidence on that point before a Committee of the Legislative Assembly in 1867. You said that after the first three years a man would be able to pay £2 10s. to £3 an acre? Yes.
1764. Now do you think that from this acre of ground you would be able to make a good living after the first three years? Yes, I think so.
1765. And pay £2 10s. to £3 a year rent? Yes.
1766. Have you ever made any calculation or estimate of the quantity of fat marketable oysters you would be able to produce? No, I have not, sir.
1767. Then how have you arrived at the conclusion that you could make a good living out of an acre of ground? By practical experience and from localities I have visited where I have found abundance of oysters. I believe by cultivating them you could get them equally plentiful or more so than in their natural position.
1768. I do not doubt that you would be able to carry out all you say, but I should like the public to know the data on which you found your opinion. If I understand you rightly, you have arrived at this conclusion without calculating numbers, solely from what you have seen on an acre of natural oyster beds? Yes, that is what it is—from personal experience.
1769. And you are as confident in your own mind that you could make a comfortable living from one acre as if you had counted the oysters and sold them? Yes, I am certain of it.
1770. Are there any rocks where you have been employed? Yes; it is a kind of sandy debris, consisting of small portions of rock, and some portions of it are very fine and will cover up the oysters in their natural state.
1771. Yes, but what I want to know is—are there any rocks or mangroves for the oysters to attach themselves to? There are pieces of rock to which the oysters attach themselves, and the tide carries them down, so that they form natural oyster beds, which become as hard as solid rock in certain places.
1772. Do you think it would be necessary to set apart a portion of your land—supposing you would be at liberty to select it where you liked—for breeding, since there are such large quantities of spat sticking to the rocks and mangroves. Do you think you would be able to breed a better class of oysters from the stones you laid down? Yes, I believe that by cultivation they improve wonderfully, both in size and flavour and everything else.
1773. Have you not seen in other rivers and in Port Jackson that the rocky banks are literally plastered with young oysters? Yes, I have seen them adhering to the rocks.
1774. Well, if you were allowed to get these spat and transplant them to your own fattening ground with a bottom prepared as you described it, would not that economize your operations in oyster culture to a considerable extent? Well, I think there would be a difficulty in procuring these small oysters from the rocks without injuring them. A portion of the shell is apt to be split in taking them off; the least thing, even the point of a pin, will destroy them. They adhere so closely that it is a difficult job to get them off until they become adult.
1775. But don't you propose to take spat yourself from stones in your prepared bed? Yes.
1776. Would you not have the same difficulty in removing them from the stones as you would from the rocks? No, because the stones would be easily taken up and removed, and it would be more convenient to get the oysters off small pieces of stone laid down expressly for the purpose.
1777. But don't you think it would be easy to get the oysters from the rocks with a chisel and mallet? I should get them in the best way I could.
1778. Then supposing you got the young oysters off the rocks to which they adhere to an enormous extent, would not that be a great saving to you in your oyster culture? Oh yes, I should certainly get as many as I possibly could, and use my best endeavours to procure them without injury.
1779. Would not those oysters be equally as good as those which you could raise yourself. I mean would not the oysters taken from the rocks be as good as those taken from the stones—they would have to be removed in any case? They would be more liable to injury where they were removed from the rocks than from stones laid down expressly to receive them.
1780. Supposing they could be removed without injury; there would be no difference between them then?

Mr. J. Knight.

1 Dec., 1876.

- then? I think there would be a great difference. I believe if they are attached to stones laid down expressly for them they have ten times the opportunity of catching the animalcula on which they feed.
1781. That is because they are in deeper water? Yes.
1782. But supposing the rocks to which they adhere in their natural state are in as deep water as the stones which you propose to lay down would be, would there be any difference in the oysters then? Well, I could not answer that question.
1783. It is very unimportant after all. What I wanted to ascertain was whether if these young oysters, which are found sticking to the rocks in such vast quantities, were carefully removed and placed in ground prepared in the way you have described, with a hard bottom, they would not become valuable food to an almost incalculable extent? Yes, I fancy they would, and increase wonderfully too.
1784. Then what do you think would be the result if the Government were to grant licenses to persons to knock these oysters off the rocks, and also to lease or sell suitable grounds for fattening—Do you think it would have the effect of giving employment to a large number of persons? Yes, I do; and I think it would improve the oyster trade wonderfully.
1785. It would have the effect—? Of increasing the oyster trade.
1786. And it would provide a large quantity of food? Yes.
1787. Do you consider oysters to be wholesome food? Yes, I believe there is a great deal of nutriment in them.
1788. Do you think oysters should be sold to the public until they are full-grown? No; I fancy they only become adult when they are four years old.
1789. You are aware that in England they are called by different names according to their age, in the same way as cattle are termed calves, heifers, or cows. Thus, young oysters up to the first year are termed spat, in the second year they are called brood, in the third year ware, and it is only when they are four years old that they become oysters? Yes.
1790. You think that none but full-grown oysters—that is oysters four years old—should be offered for sale? Yes.
1791. Then if a working man wished to make his dinner off oysters, and went to an oyster shop for that purpose, and was served with brood or ware—that is oysters two or three years old—he would be deceived, and would be unable to make a dinner off them? No, they would not be the same quality.
1792. But with respect to the quantity, a working man requires something to satisfy his appetite? They would not be so nutritive as oysters four years old.
1793. But as to quantity, he would not be able to make his dinner off these meagre, immature oysters—mere skin and water? No.
1794. While if he went to a shop and was supplied for his dinner with full-grown oysters, it would be an encouragement to him to go there again? Yes.
1795. Do you think it is an injury to the trade to allow these small oysters—which are not called oysters in England—to be sold in the shops? Yes, it is injurious to the trade, and also to the people.
1796. And you think that an immense business might be done in the oyster trade if it were properly regulated? I think so.
1797. From your knowledge of the oyster business, you think that the quantity of oysters that might be produced would be something wonderful? Yes, when you consider it, it is wonderful.
1798. Have you ever known oysters in this country in the winter-time to be killed by frost? No.
1799. Are you aware that that is frequently the case in England? Yes; the frosts here have not the same effect. I have found on the Hunter River that when you get a certain distance from the sea the oysters are much more numerous. I think it is because they are supplied with more fresh water, for when the water is too saline they never come to the same perfection.
1800. With respect to the oyster produce, do you think that oysters can be raised here as cheaply as in almost any other country—at a very cheap rate? I do not see why they should not.
1801. Well, supposing this system were carried out—that persons were allowed to knock the young oysters off the rocks; and supposing that the Government offered every facility to persons to obtain a couple of acres or more for oyster cultivation, on reasonable terms, have you formed any idea of the price at which oysters could be sold to the public? I believe they could be sold a great deal cheaper than they are now, in consequence of the increased quantity that might be easily produced.
1802. What is the price now? I think about 6d. a dozen. I think they are about a halfpenny each if you go to a shop.
1803. Are full-grown oysters sold at that price? Well, there are a good many defective ones sometimes.
1804. But are they two or three or five years old, or what? I believe they are.
1805. We have had some very small oysters exhibited here purchased at the shops, which could hardly be that age. Have you seen any in the shops in Sydney younger than four years old? No.
1806. You have not seen any young oysters in the shops in Sydney? No, I have not.
1807. At what rate, supposing the Government were to encourage the production of oysters to an unlimited extent on the plan you have sketched out, could they be sold to the labouring classes, who are of course the largest consumers of meat and produce? Well, if they could be grown as I have shown you, I should say they could be sold at 2s. 6d. or 3s. a bushel.
1808. How many oysters go to the bushel? I should say from eighteen to twenty dozen.
1809. Then you think they could be sold at a little more than a penny a dozen? No, I don't think they could be produced and sold at a penny a dozen. I should say two-pence.
1810. If they could be produced and sold at three-pence or four-pence a dozen, don't you think large quantities would be purchased, more than are purchased at present? Yes, numbers of persons could afford to purchase them then.
1811. Do you think they are as wholesome food as beef or mutton? Yes. I don't think there is the same stability in them as in beef and mutton.
1812. Do you think they are digestible food? Yes; I believe the medical profession consider them so.
1813. *Hon. J. B. Wilson.*] It was principally in the Hunter River that you gained your experience, was it not? Yes.
1814. Do you know any localities in the Hunter River where artificial beds could be formed—I mean localities which are under water at high tide and dry at low tide. Do you know any places in the Hunter suitable for that purpose? Yes, acres and acres.
1815. How much of that ground do you think one man could cultivate? I should say two or three acres.

- Mr. J. Knight. 1816. And you think two or three acres of such ground would afford profitable occupation to a man and his family? Yes, I do.
1817. Have you had any experience in making these artificial beds? No, I have not.
1818. When you were sending oysters from Newcastle to Sydney, were you careful to pick out the small oysters before sending them off? Yes.
1819. You only sent the large ones to Sydney? No.
1820. What did you do with the others? Threw them back into the river.
1821. You were always careful to throw the small ones back into the river? Yes.
1822. Were not persons in the habit of collecting them for the lime-burners? Yes, a great many were destroyed in that way.
1823. How do you account for the fact that the oyster beds on the Hunter River were so much more prolific when you first knew them, seeing that there were probably as many floods in those days as there have been in subsequent years? Because they used to collect them in large quantities and burn them for lime.
1824. But that is what I call over-dredging. I do not allude to their being taken only for food, but for all purposes. Then you agree with me that over-dredging, that is taking them from the beds in large quantities, must have had a great effect in destroying them? I think it was the principal cause.
1825. You have not been connected with the Hunter at all since it was proclaimed a close river by the Government? No.
1826. Are you now living in the neighbourhood of any bays or inlets to the sea? No, I am not.
-

OYSTER CULTURE COMMISSION.

APPENDIX.

MEMORANDUM suggesting details of information which the Inspectors of Oyster Fisheries, to be appointed by the Commission, should be required to furnish.

1. What was the state formerly of the natural oyster beds of the rivers, &c., you inspected, as far as you are able to ascertain the facts?
2. Have the oyster beds been injured by over-dredging, or any other cause? If so, state to what extent.
3. Describe the present natural state of the rivers, &c.
 - (a) Are their banks and beds of rock, soil, or sand? Or if various, state how much there is of each.
 - (b) If the beds and banks are of rock, are they covered, or partially so, with spat or oysters?
 - (c) Are any of the beds of mud? If so, what portion of them is of that kind of mud similar to the London clay, so suitable for fattening oysters?
4. Are there any salt-water marshes near the rivers you have inspected? If so, are they more or less covered by the tidal waters, and to what extent? Do the swamps consist chiefly of sand, alluvial, or a rich clay mud? Do the swamps belong to the Government or to private parties? State also, as nearly as possible, their situation.
5. State what you consider to be the quality, sizes, and ages of the oysters; also the proximate extent of the beds.
6. The quantity of shells or other suitable material on the banks of the rivers which can be used as cultch.
7. State what you may have been able to learn from reliable sources about the spatting of oysters in the rivers, &c., you have inspected. It is very desirable to ascertain, if possible, whether there is any proof (as some persons assert) that the spatting of oysters is going on all the year round.
8. If it is considered that the spatting of oysters is confined to certain months, which are those months?

The above queries relate to matters of fact, and the Commission now require you will give your well-considered opinion on the following topics.

9. Do you consider it is for the interest of the public that the rivers, &c., should be leased, in very large areas, as at present, or in small and moderately sized areas.
10. Do you think it expedient that the Government should refuse to lease those rivers, &c., whose banks and beds are natural breeding beds but not fattening grounds?
11. Do you think it would be a wise policy on the part of the Government not to lease these natural oyster beds, but to allow licensed oyster-men to remove the spat and oysterlings therefrom, and sell them to those persons who have what are termed in England *laying beds*.
12. What improvements, if any, have been made in the leased natural oyster beds by the lessees? Also their nature and extent?
13. The Commission will be glad to receive from you any further information or matured opinions other than are suggested by the above queries.

MEMORANDUM—

For the purpose of report by the Inspectors, the Commission will understand a natural oyster bed to mean a portion of submarine land so covered with oysters as to make it payable commercially to work.

NOTE.—The numbered paragraphs in this and the following reports are the replies to the several questions set out in the foregoing memorandum.

RICHMOND RIVER FISHERY.

1. When first known abundant, and fine quality on all beds. See tracing, and some others since covered by river deposit.
2. Chiefly over-dredging; minor degree by river deposit.
- 3.—
 - (a) Hard, sandy mud, often intermixed with finely broken shell; on slope of banks; sometimes soft mud.
 - (b) Rock only around North Head.
 - (c) Specimen sent seems similar to best fattening grounds of Europe and America.
4. See tracing. Composed chiefly of *marked* specimen, although patches of soil unalloyed by sand and shell occur.
5. Quality good. None full size, as shown by shell found around dredgers' old camps. Age, 1, 2, and 3 years. Few spat on beds, but abundant over low-water-mark on large shell mounds, at short intervals on both sides of North Creek.
6. See tracings.
7. End September and October, prime fat end November. Fall off when rainy season begins—generally mid-March, but varies if light or escape rain. Oyster continues good till beginning September.
8. Spat of a size to notice generally about end October and November.
9. The fine fattening oyster-ground of Richmond certainly in moderately sized areas.
10. Better able to answer after inspection of more rivers.
11. So far as I have yet observed, yes; under judicious restriction rigorously enforced.
12. No lessees, and river closed.

Arrived hither 7 p.m., 18th instant. Received every assistance from Mr. Henry Bassmann, resident police constable; also every information from Mr. Ross, J.P., Mr. Moabs, Mr. Heough, Mr. Sparks, J.P., residents of twenty years and over; likewise from several aborigines. John Sinclair, Government signal-man, formerly many years dredger in Hunter, states:—Was sent hither, together with nine other dredgers, 1864, by Sydney dealers; found payable bed only in North Creek (those marked on tracing), and two fine beds, since covered by river deposit; dredged about 1,000 bags, most of which spoiled by vessels being bar-bound; so, after four months—three weeks of which only were spent in dredging—the speculation was abandoned. This party estimated that beds bore about 3,000 bags marketable oysters. The following year an unusual succession of floods destroyed many of the oysters by means of deposit, and covered the two now extinct beds. However, next season spat was very abundant, and settled not only on all congenial spots on banks of said creek and main river, and likewise on every heap of discharged stone ballast (but in both cases above low-water-mark, as at present), but also settled abundantly on the parent bed, which latter is not the case this year. Since then several parties similarly sent—that is, to dredge and forward the result at a given sum, probably 2s. to 3s. a bag—have not given beds time to recover. This system, it will be perceived, is calculated to prove very injurious to the beds, because it is the object of dredgers to swell the bag with young and old alike, the only check being the interest of employer; but that interest, save in the case of most but not all shipments to Melbourne, is nearly as well served by immature as mature oysters; for excepting one or two Sydney retail vendors, the trade make as much or more profit getting the bag of oysters aged one to two years at 2s. or 3s. less than mature oysters; provided there be in it only oysters sufficiently grown to supply the limited plate-trade they can command, the younger oyster pays better than the mature to bottle, especially at 3s. a bag less, and, at such reduction, on the average it yields a very handsome profit to the dredger's employer. A system of restriction to size and rigorous inspection seems to be the only remedy.

Floods which rise 25 feet and over at Lismore, spread before reaching Wardall, or 1st sec. of this map, and thence to mouth average in all ordinary cases from 2 to 3 feet higher than ordinary spring tides, and in the highest flood—1871, 5 March—known in the district during the occurrence of an unusually heavy easterly gale, the greatest height attained at Ballina was only 4½ feet, but without current either in Main River or North Creek. Hence, from the greater buoyancy of fresh water, it is probable oysters will suffer little, if any, from its effects, though much from extra muddiness of water, producing what is called sickness, and not, as on cultivated beds, being regularly freed by rake from accumulating deposit. Of course your honorable Commission will be perfectly competent to distinguish between the sickness thus produced and that produced by spawning operations, but which I have observed the trade persistently, as a rule, no matter when it occurs, allege to be caused by spawning alone, probably as a basis to resist the enactment of a close season.

However that be, on the two upper beds there is at present only a single layer of oyster, and probably 500 bags, but not sufficiently deep, especially as the clutch is composed chiefly of finely broken oyster-shell, and therefore neither live oyster nor clutch is capable of fixing the spawn as discharged. Hence the probable cause why few spat appear on the beds, while the banks of the creek and every stone of the ballast heaps between high and low water mark, in main river and entrances of creeks from Pilot Station to Wardall, are literally covered with, say, oysters aged one year and spat six weeks. I found, as per tracing, clumps of oysters here and there in bed of main river, together with mussel and cockle spat, but no mature mussel nor are residents acquainted with them, though they must somewhere exist in the river.

Finally, I am convinced the whole of the river to Wardall, and the North Creek as well, as far as tracing shows, are well suited for oyster-culture, especially with such an abundant supply of the finest clutch so convenient to any portion of said water, and from the fact that scarcely a flood occurs whose deposit may not easily be cleared off the beds by means of the ordinary oyster-rake, while nothing could be better adapted for the formation of trenches than the marshes, as marked in tracing. It may not be deemed amiss if I remark that the word is not commonly spelled *culch* nor so pronounced, but *clutch*, the original idea being to clutch or seize the spawn as ejected. We have had rough weather here, which has slightly impeded my operations. However, I have now finished. I proceed to Clarence Heads to-morrow, but it is somewhat difficult to procure horses.

I forwarded to Mr. Vesey, agent, King-st., a small box containing specimens of soil, which may be both interesting and instructive.

I have, &c.,

A. B. BLACK.

Ballina, 25 November, 1876.

CLARENCE RIVER FISHERY.

1. I fully endorse Mr. Fraiser's statement, as seen by myself both here and in America, on every bed in its natural state I have examined—that is, close set clumps of five or six oysters each, and two to four clumps thick all over the bed, averaging about eighteen mature oysters besides spat on every 5 square inches, over an unbroken bed of shell on a tolerably hard bottom, similar to specimen No. 2. Further, this is the condition of bed most suitable for retaining spat.

2. By over-dredging, slightly affected by flood deposit—which, however, is entirely preventable during floods by using the common English oyster-rake—last-quarter ebb and first-quarter flood. But this implies proper culture and one or two men employed per acre, which, however, the result would fully justify at even a less price than that at present obtained. Second query. To a very serious extent. The operation of the heavy bow-dredge used and manner of use, viz.:—Fixing a pole in bed and dropping boat thence with tide 30 or 40 fathoms, the length of a line fast to a windlass in boat's bow; then when dredge is cast, heaving up to said stake will obviously—especially when the oyster is scarce on the bed—have the effect of deeply furrowing the natural bed or clutch, and drag together oyster and clutch in its way into the boat, wound up to the stake, leaving at least large patches of the under stratum of soil bare, therefore quite unfit to bear oysters, much less spat, until again covered over by shell. While around the stake the refuse cullings of clutch are accumulated in heaps; the boat is sheered across tide when dropping from stake, in order to vary the furrow and widen the scope. Manifestly then, each successive dredging lessens the reproductive power

power of the bed. This is the actual condition of the beds as revealed by the tongs, which is the only implement by which it can effectually and readily be done. The dredge for this purpose is utterly useless, and in muddy water the water-telescope is little better, while diving is out of the question.

3.—

- (a) Banks of the whole of the lower estuary, creek, and lake are composed of a compact, unctuous, blackish soil—alluvium and decomposed vegetable matter—seemingly by aqueous agency hardened into rock, on a portion of eastern side of lake, and about the South Head, but not all of a uniform state of hardness, and coloured according as the white sea-sand more or less predominates.
- (b) The beds both under clutch and free of either oyster or clutch are invariably composed of said soil and sand (Specimen 2), save the wave-drift sands at river's entrance, which are said to shift every tide. But further up river, only in floods, and not always then, do the beds of the more compact mixture shift, but every freshet adds to them, while both in oyster creek and lake no perceptible difference has been noticed during the last fifteen years by either residents or aborigines.
- (c) Only observed in patches in deep water, in the narrow channels running between the more solid oyster-beds and oyster-grounds, which latter, in many places a-wash at half-tide, are largely intermixed with broken shell over the wide extent of the lake, and all this ground possesses apparently the highest fattening properties.

4. Salt-marshes are numerous; indeed all the land on the creek portion of Yumba Government reserve, that on opposite side, and about two-thirds of that surrounding the lake, may be termed such, as none of it is more than a few inches above ordinary tides, and most of it covered at high springs, while several depressions admit every tide over considerable areas; in fact, partially over hundreds of acres, especially at lake-end of creek, with not a tree or bush on it, but densely covered with common marsh grass, and the depressions with rank aquatic vegetation; all which is admirably suited for culture by means of trenches, including Freeburn Island, lower portion of Goodwood, and all the islands in the north lower arm, as marked in tracing, all being unselected.

5. Very few are mature; all, or nearly all, aged two years and under. The quality is good. Size of bed marked in tracing.

6. The quantity formerly abundant on both sides of creek, said to have been 8 or more feet high, and 20 to 30 wide; are rapidly diminishing, under the pressure of high prices obtained. The few beds on reserve, lying back from convenient reach, will soon be attacked if a prohibition, strictly enforced, be not at once issued, for nothing else can save such an essential element in the future development of the fishery, and nothing can replace it.

7. There are neither spat on oyster, nor oysterless clutch beds in creek, main river, north arm, nor lake, and comparatively few of year-old oyster, though abundance of two-year old; hence I conjecture that last year was a poor crop, and spawning has not yet taken place; but, as Mr. Fraiser says, the oyster begins to show signs of its approach. From what I observed on sea-dyke, and signs I could not account for in the Richmond, my belief in the uniformity of species and similarity of habits of rock or tidal-oyster and drift or under-water oyster, whatever it may be in other countries, is somewhat shaken in at least these two rivers, and perhaps Fraiser is correct; at any rate I shall require to see more, and examine their respective habits more fully, before I am disposed either to affirm or contradict; but I must say that his view of the case would completely account for whatever apparent anomaly exists in the spawning of oysters. However, a good microscope is necessary, and a patient investigation of their respective habits continued for at least a season or two, in order to satisfactorily settle the point.

8. Holding the above view, I agree with Mr. Fraiser as to a close season, and the time he specified, for although very curious anomalies, judged by quadruped breeding, occur in pisciculture, yet shore-oysters, breeding all the year round, can afford no good objection to the real oyster beds being closed sufficiently long to protect them during their legitimate spawning and spat maturing season.

Referring to Memorandum.—Every one of the beds and patches, both in Richmond and Clarence, are in every sense of the word commercially payable, at a relatively proportionate rent, however bare the oyster on them, and with the experience mentioned by Fraiser, corroborated by reliable evidence of other residents respecting the amazing recuperative power and productiveness of the lake-bed and its ramifications, the oysterless shell beds, barring the crop, is of equal commercial value to any oyster-bed, as that case fully proves; it is only when the bed is destroyed that such is comparatively valueless.

I arrived at the Clarence Heads from Richmond 3rd December evening; experienced much difficulty in conveying my implements through the bush.

I obtained much useful information from Mr. Black, fourteen years resident at Yamba, a freeholder of land and lessee of a run abutting on creek and lake, constantly visiting these parts, therefore in a position to observe what was transpiring during that period; also from other intelligent residents and aborigines. He, in common with others all more or less interested in the good management of the fishery, expressed dissatisfaction that the mode of leasing precluded the residents of the district from acquiring leases, and that the district derives no benefit whatever such as should naturally flow from so productive a fishery.

And in respect of engaging in the culture thereof if the opportunity were now afforded, it seems to me that having witnessed closely matters connected therewith under five years' occupation by an energetic lessee, thereby having their former somewhat hazy notions of the commercial value thereof corrected, not one of those to whom I spoke on the subject but expressed a strong desire to lease either oyster-grounds or marsh of moderate extent for the purpose of culture,—especially under fifty or sixty years tenure and reasonably encouraging conditions as to rent and restrictions; and all of them added that a close-season for the protection of breeding would be indispensable.

In conclusion, I may venture to point out that, although nothing could be more courteous and kind than the bearing of all the people at the beds, as well as that of every resident I met, nor could information be more cordially given nor opinions more freely expressed, as soon as my mission was made known; nevertheless I was really at a disadvantage, and extra labour enforced and time lost, by not being in a position to convene by some sort of authorized means the residents in numbers, in order that the object of the mission and the useful results which the Commissioners have in view might to all at once be more clearly and perfectly explained than was possible to each individually.

If I apprehend aright the nature or spirit of my instructions, written and verbal, they strongly impose the duty of accurately ascertaining whatever information residents of any particular fishery district may possess relative to the beds, together with an expression of opinion as to mode of management, under a leasing system, most suitable to that district, the culture of its beds, and general development of the fishery. If so, then I humbly submit the surest means to obtain such would be to invite by public notice a few leading residents to convene on a given day those interested in the matter or capable of giving information. Then answers and opinions openly expressed would give more general satisfaction, and any report of mine thus backed would inspire more confidence and be in every respect more useful, and above all, such course would remove individual distrust,—a not unusual feature in country life,—and tend to secure greater interest in the subject.

I have, &c.,

A. B. BLACK.

BELLENGER RIVER FISHERY.

1. In 1868 first dredged by two men in partnership—of whom one James Pettit, now in Pilot Service here, I get this information, and is an intelligent man. *His evidence enclosed separately.* These men found four beds: 1st. At Ferry mouth, off south arm. 2nd. Three miles up south arm. 3rd. Creek running through island in main branch. 4th. Lower end Burchell's Island, thence ridge running down left side of river. Said Pettit says—1st bed. Oysters in clumps, singly and somewhat apart could be picked up at low water, hence was well skinned. 2nd bed. From 8 to 16 feet low water, running in a ridge about 30 feet wide, bulging to 50 or 60 feet here and there, and about 1 mile in length, running irregularly from side to side of the south arm—a creek about 2½ chains wide. This bed was densely packed in clumps of five or six oysters each, and five or six clumps deep. Had to weight the bow dredge heavily in order to make an impression. Got in all, he thinks, about 1,500 bags, much of which was spoiled, as often vessels were weeks bar-bound; therefore made relatively little; skinned the bed however. 3rd. bed. Dry—save narrow channel at half-ebb. In single clumps in said channel, clumps eight to twelve attached, but a single layer only, i.e., not superimposed as in 2nd bed. This, on account of shallow water was as well skinned as bed No. 1, produced about 500 bags. 4th. bed. Water 8 to 18 feet low water, and in a strong tideway, oysters mostly single on large pebbles, and therefore

therefore slightly dredged, but is a favorite resort for the rather numerous blacks of the district, who dive, man, woman, and child, and procure by this means large quantities. This is, in form oblong, extending from left bank two-thirds over to Burchell Islet, extending down $\frac{2}{3}$ of a mile in a ridge varying from 15 to 40 feet detached at intervals.

2. Omitted.

3.—

(a) Left bank of river from bar to opposite lower end of Burchell Islet, sand and small admixture of soil, thence upwards alluvium deep and stratified resting on sand apparently deep. Islands alluvium-black unctuous soil, but lighter in colour than that of either Clarence or Richmond. Right bank upper end of Burchell Islet, similar soil running up to a spur of friable rock (similar to that in south arm) which occurs in island channel just above entrance to creek running through it, thence to entrance to south arm a redish clay mixed in black soil. This latter is also the character of south arm; right bank above marsh contained in Government reserve. Island in south arm alluvium and chiefly marsh—a spur left bank just above ferry, also similar to above described spur, of which more anon. From Pilot Station to outer head right bank—high ground at "Station" descending abruptly to a rather broad bottom rising again to form the heads; through this bottom runs a creek about 25 feet wide, 2 to 3 feet deep, and 3 to 4 miles long, terminating abruptly; bottom shingly and clean. This creek as also lower part of bottom together with a large bed of sandy mud in front of it (dry at half ebb) superior oyster ground—very easy to cultivate.

(b) Slightly covered wherever rocks occur, so also ballast discharged off vessels, and on detached clutch especially around Ferry Point and margin of first bed.

(c) Seldom mud alone—but sandy black mud—proportion two parts mud, one part sand; excellent bottom.

4. Island in main river; also large island in south arm; marsh commencing at a spur of friable rock right bank of south arm, running round (to 200 and 300 yards) back along said bank; part entrance; point of arm, to rising ground at Pilot Station; also peninsula formed in south arm.

If the 60 feet of neck of said peninsula were cut through it is highly probable that instead of that creek being the cause of forming the sand-bed by its 2½ knots current impinging obliquely on the 3 knots downward current of main creek, producing thereby a wide eddy of many acres extent—if said isthmus were cut through, the direct current of said island creek would most probably sweep off such accumulated wave drift sand bed (expense of such cutting—60 feet by 6 x 4—through alluvial soil at base of bluff friable rock; would cost little) and leave 20 to 30 acres of most superior oyster ground; bed of shingle and shale clutch clean, and only 2 or 3 feet depth at low water. I consider it my duty to notice this here, because I find a man named Wood has within the last week or two free selected this peninsula and a portion of said bluff, which cannot possibly be of any immediate advantage to him. I mean the peninsula on account of its submergence in spring tides; therefore, for both reasons ought, that is, in the interests of the fishery especially, probably for his own interest also, be refused. To resume: all the islands and marshes specified are superior ground for trench culture as well as a marsh, upper end of Government reserve, opposite Burchell Islet, between Tucker's special two years ship-building lease and free selection, next to said reserve. Then Ferry Point, also the spit of high sand banks covered with grass, running down to bar on left bank of main river would form excellent sites for fishery townships; and fish (as well as oysters) abound in the river.

The marshes indicated, as far as ascertainable, seem to be reserves or unalienated, excepting the peninsula particularised which, would, as mentioned, do harm to no one, if Government included it, and bluff as well, in the ferry reserve, adding probably 100 acres thereto.

5. Ferry bed or No. 1—good quality, age one year. No. 2 bed—middling, age one to three years. No. 3—good, age one to three years. No. 4—good, age one to three years. Since the time described specified in first answer, some hundreds of acres excellent oyster, growing both under and above low-water-mark.

6. Plenty of shell scattered through soil of whole Ferry Point, including bluff and peninsula (suggested as useful to reserve) and also throughout all the islands—reserve on left bank main river.

Pilot station reserve up right bank of south arm, near to upper end of island therein; also on land some distance up from ferry on public road, but nowhere in banks; shingle and gravel is however abundant in bed of river, and creeks; also some parts of pilot reserves and the aforesaid bluff.

7. Oysters are positively getting into condition to spawn and according to Pettit do so this month and first part of next, but no evidence whatever of spawning being carried on at any other time of the year.

8. End December, January, and early in February.

9. In moderately sized areas.

10. Answer in subsequent report.

11. To license resident lessees as an encouragement to take leases for culture; and also perhaps it may prove advantageous to license a limited number of persons to gather and sell spat to culturists at each fishery, but only for a period of the year suitable for the purpose, and also under strict restrictions and supervision.

12. Not leased.

Omitted to answer second query at proper place; hence now answer as follows:—No doubt beds 1, 2, and 3 were injured by over-dredging at first, and latter dredgers and blacks together have, assisted by flood deposit, prevented the recovery of the beds, and moving mass of sand in south arm must, in shifting greatly injure No. 1 bed. It is also too convenient for the blacks, who not infrequently sell them for grog, which practice in the interest of humanity ought to be stopped.

13. I would respectfully suggest, as a means to stop irregularities of any description in any fishery district, that a resident should be employed at a moderate pay as a supplement to his industrial income, to act as a bailiff and as a medium of information betwixt landlord and tenant.

James Pettit's evidence.—About ten years engaged in dredging, now in Pilot Service. Dredged in all these northern rivers, including Tweed, which, as I have heard from other sources, he declares to be the finest oyster fishery of all. Lost many bags by bar-bound vessels. Complains, as Fraiser, of Clarence, of untrustworthiness of Sydney agents; also of the action of Government in leasing to the detriment of dredgers, and thereby fostering an obnoxious monopoly. Is of opinion that oysters do not spawn in any northern river all the year round, but betwixt beginning of November and middle February. Is anxious, as many in same district, that oyster culture should be permitted under long leases, and moderate rental, no matter however stringent necessary restrictions be. Strongly in favour of close season; indeed his evidence agrees with and strengthens Mr. George Fraiser's report.

I have, &c.,

A. B. BLACK.

NAMBUORA RIVER FISHERY.

1. These beds have not been much worked, in consequence of the difficulty of transit to market; first worked about ten years ago by three or four men only, however, for a short time, and probably not more than a few hundred bags were then sent off, and probably half as many more spoiled through bar-bound vessels. Much of that sent was conveyed up Wattle Creek (a tributary running from inside of bar to within a few miles of the Macleay Heads), thence across for shipment at Macleay Heads. Two or three parties at different times subsequently have tried dredging, but with discouraging results for a similar reason. Hence it is presumable that excepting destructive effects of several floods, beds are pretty much in the original natural state. However, whatever the cause, there is ample evidence to show that at no late date, say thirty years ago, the existing beds were much better stocked than at any time since, and the stock of several existing clutch-beds must within that time have been exterminated. Last-named beds are clean, and quite ready to receive stock, which there is every reason to believe would thrive, as those which exist are in excellent condition; and rocks at head are covered with thriving tidal oysters.

2. Therefore beds are not injured by over-dredging, but by other causes. Clutch on existing oyster-beds is not furrowed, but portions are overlaid by a foot or two of soft deposit, and perhaps the clutch-beds referred to may thus have been overlaid at one time, while at another they were cleansed. The mischief cannot be entirely attributable to vermin, though rather numerous. What effect has been produced by denuding banks as well as land back of protecting timber? Long strips on either bank upward are thus exposed to the full force of the flooded river, and large sections thereof are by each flood washed away 8 or 10 feet deep, forming land in other parts, and banks or islets in river, which are obviously in a state of either increasing or decreasing movement during each flood. The soil is neither so unctuous nor tenacious as that of the Clarence.

3.—

(a) From North Head up 3 miles, land high, and banks friable rock, when a short marshy creek, excellent oyster and trench ground fills in a space about 250 yards by 500 back betwixt this and next range, which extends a mile or two

two further to level soil bank and free selections; right bank wave-drift sand mostly for 3 miles up; heavy shifting sand-banks up from bar same distance, and running on to east point of island, leaving only a narrow channel along right bank, and a narrower and shallower along left bank into a creek which forms said island. This creek nearly all its length is excellent oyster ground, and two-thirds up it a few excellent oysters, many of them single on shingle and shell clutch, and generally clean bottom. Main river from abroast of upper part of island the bottom is mostly good; sandy mud and broken shell, and a continuous rather narrow strip of soft mud sometimes overlying shell-clutch, and in spots shingle; much of it quartz shingle; a little below Mason's selection, on left bank shingly quartz and shells over the sandy mud in improved condition commences, and runs across to John Ainsworth's wharf, where a very fine rather large deep shelled very fine oyster begins to appear on a good bed of shell-clutch, extending nearly across the river, deepening from a nearly level bed of 10 feet water to $3\frac{1}{2}$ and 4 fathoms, fully $\frac{1}{2}$ channel over for better than $\frac{1}{4}$ a mile up to Gummo Gummo bluff, along which bed said quality of oyster singly and in clumps of 3 or 4 in single layer, is tolerably abundant, but beyond said point said clutch-bed runs into soft mud, and round the bluff a deep bay extends for a hundred or more acres of sandy mud and broken shell, a portion dry at $\frac{1}{2}$ ebb, and remainder 1 to 4 ft. low water. Admirable oyster-ground, round the inner margin of which and on isolated stones and pebbles on the bed are the finest tidal oysters I have ever seen—of course indication of the excellent quality of the ground for culture. But I think above this ground the water deteriorates in quality; however the bed becomes shingly, mostly without shell, and from said ground up to Taylor's arm there are two similar bays with from 1 to 4 feet depth of water at low-water, with tidal oysters round two intervening bluffs, also similarly on stones on ground. The main river about 300 yards by 100 in main river, and 200 to 300 yards into Taylor's arm there is a bed fairly stocked, and apparently for the past two years improving. This must not long ago have been a very extensive bed, and it would be both highly instructive and useful to know the cause or causes which produced the evidently sudden extermination of stock.

(b.) No spat, and not many last year's oysters.

(c.) Beds of sandy black mud, and also black unctuous mud in parts, but of lighter hue than that of Clarence.

4. One already mentioned left bank 3 miles from heads, and one below adjoining Ainsworth's farm, with a short creek in it. The left bank of Wattle Creek for 2 or 3 miles and some distance back, right bank of Wattle Creek is a narrow sandy spit dividing it from the sea. There are here and there a few tidal oysters in this creek, but a large extent of its bottom as well as the marshes is excellent oyster-ground. Fish abound in creek and river.

5. Quality good. Age from one to six or seven years.

6. There seem to be no banks of shell, yet shells are scattered abundantly all over the land on ridges as well, but plenty of shingles next in quality to shell for forming clutch.

7. Spawning is about to commence soon, as many are now in an advanced milky state; but no evidence to show spawning at any other time. On neither oyster nor clutch are any appearance of oysters less than a year old.

8. Therefore end of December and January may be the time.

9, 10, 11, are answered in other reports.

12. Not leased.

13. Residents appear to be anxious for the introduction of culture; also to engage therein, but object to non-resident lessees; also express a desire that Government should provide sound and detailed information on culture, and all express great interest in the matter—women as well as men.

MEMO.—As before remarked, I believe all the clean clutch-beds referred to are even without the oyster of high commercial value, and for obvious reasons ought not to be estimated at a value much less than the stocked natural beds.

All residents are exceedingly courteous and ready to afford every information they possess, but I experience difficulty in getting boats and means for travel.

C

I have, &c.,

A. B. BLACK.

MACLEAY RIVER FISHERY.

1. I have spoken to several residents ten to twenty-five years in the district, all of whom know or have heard of the existence of only two beds; one in Spencer's Creek as marked had disappeared over twenty years ago—the other in main river close to steam-boat store seems not to have thriven for the last twelve or fourteen years, and was practically destroyed during the flood of 1874; yet I find a few scattered clumps of a good quality over the bed and about the roots of mangroves. So also mangrove oysters are general here and there up to point above which the surface-water becomes too fresh to permit its existing. The creek whence artificial cutting is made to carry flood-water off by south-west rocks contains few oysters; but round creek end of cutting they are getting rather numerous, no doubt propagating from oysters in the short creek open to the sea, into which the cutting runs, close round said rocks, and may eventually, judging from present appearance, afford a good channel for trading craft.

2. No dredgers have had aught to operate on in this river, and I cannot conceive any feasible reason to account for the practical extinction of oysters where at no distant period they must have abounded. Freshness of water will not account for it, nor deposit, whether sea sand or alluvial, although the latter may in part. Perhaps an epidemical disease may have had something to do with it. But whatever the agency, I am, from various appearances of the present condition of the remaining clutch-beds, strongly of opinion that a similar agency was in operation about the same time to produce extermination of oyster on the now bare clutch-beds of all these rivers which I have examined; also that whatever the cause its strength is already spent, and all these bare clutch-beds in every one of those rivers are in process of recovery, if not, indeed, entirely recovered from the supposed causes of extermination, as for example the bare clutch-bed section tenth of Oyster Creek, Clarence—or the lake-bed of report on that river, which by some happy accident was stocked, at proper time for lessee, by spawn from the fairly stocked creek. But none of such clutch-beds in the other rivers being so favourably situated for such a freak of nature, as in that case the process of stocking by natural means may therefore be expected to take a much longer time; however, by artificial means, the thing may be done at once, and with as little risk as that of stocking a first rate station with sheep.

3.—

(a) Left bank, rocky at head; changing in the downward course of the river to a muddy sand, 8 or 10 feet above high-water; then to a grayish-black tenacious soil, not so black as that of the Clarence; then to a muddy or rather sandy nature with one-third of blackish soil and unbroken oyster-shell—many dry shell beds occur above the said grayish-black soil, as well as in all the islands, and this too forms the substratum of river bed mostly, also the right bank on spit terminating right bank.

(b) At south-west, rocks only—already noticed.

(c) Chiefly of sandy mud—subsoil generally as in other rivers reported on, the unctuous soil in this case of lighter hue. *Fattening of oyster* is unquestionably due to the *living* infusorial animalcules (in shape to the eye a slimy mud, but aided by the microscope a living mass of minute animals—a fact first disclosed by Ehrenberg) brought in by each recurring flood-tide to be deposited on bottom suitable for its retention. And so far into estuaries (even under a stratum of fresh-water) as this mud is conveyed by the tide and no further, but only on the kind of bottom indicated have we reason to expect the oyster to thrive. Therefore, I respectfully submit, that the oyster-fattening properties of either water or soil is in no respect due to long defunct infusoria such as that which may form a component of London clay, but to living tidal-infusoria. However, that clay may form a good subsoil for clutch-beds, and prove attractive as well to tidal-infusoria, but nowhere in the Thames does it come in such immediate contact with oyster-beds as to definitely justify such opinion only by deduction.

4. I note the existence of salt-water marshes, and better ground for trench culture could not be. The unctuous tenacious soil of the district belong all, I believe, to Government.

5. What few there are, are from 1 to 3 years, quality good, extent nothing.

6. Dry shell banks exist, and an unusually extensive bed about 10 or 12 miles up Clyburn Creek. About 12 or more feet deep above water, and several acres in area. Whence Kempsey obtains lime. It is situate on western portion of Government reserve, adjoining Plummer's selection. Oyster and cockle shells mixed, but no oyster could now exist miles below this spot.

7. Spawning operations are going on now, and no indication of spawning having occurred within the last year.

8. I should judge in December and January.
 9. Moderately sized, long leases.
 10, 11, 12. Answered in other reports.
 13. Residents take much interest in the matter, and express a strong desire to engage in the pursuit if encouragement in shape of long leases and moderate rent is offered.

I have retained these reports till now, expecting to have received plans of Bellenger and Nambuccera, at Port Macquarie, but not having come, therefore, I forward them without.

I have, &c.,
 A. B. BLACK.

PORT MACQUARIE FISHERY.

1. It seems that before limestone was discovered at Piper Creek well up the Maria River oysters as well as shell from the immediate beds was largely used, and even afterwards to the time of leasing, as much less wood was required in the process. Hence the beds were much injured, as forty or fifty years residents, who themselves were so employed, inform me that all the shallow beds, viz., those from the dam bed contiguous to town up to first point; that in the bend opposite to said point, also from the entrance to Limeburner's Creek, for about two miles up, most of these could be picked up by hand in 2 or 3 feet at dead low-water. Therefore the main beds now in first reach of river, being in 5 to 7 fathoms, escaped. However, these old people think that those beds were every few years smothered in silt, then recovered to undergo a similar process of skinning. These shallow beds were complete unbroken masses of oysters many tiers thick, and broke out in clumps of some dozens—to use their expression—as big as a bucket. Then on the decay of Port Macquarie oysters were undisturbed and grew apace on many but not on all the spots on which they formerly grew. This continued till /69, when one or two dredgers came by chance; their luck drew many others, so that towards the end of that year fourteen boats of two men were engaged on them, and for the two following years seldom less than ten to twelve boats were employed, averaging ten bags a day each, and on the shallow beds at first as much as twenty to twenty-five bags were got by one boat and two men. But in /73 most of the boats left, as the catch had gradually dwindled down to three and four, with harder work and a longer day. However, it is very evident the beds got such a thorough skinning that they have not yet recovered, and in some instances never will by natural means, *i.e.*, in any reasonable time. This oyster has a tendency to grow in larger clumps (ten to even twenty) than in most other fisheries. Andrew Barber's statement clearly describes the quantity hitherto found to exist on a bed in its original and natural state. And here I reiterate that in both America and New South Wales I have always observed the bed in its natural state to form in clusters, layer over layer; as in some of the bays in the delta of Mississippi, where it rises to obstruct navigation to a height from 6 to 8 feet of water to the top as in the case of coral, but I have invariably noticed that the living oyster is not found below the eighth layer—probably in that condition the eighth year is the term of its natural life.

2. From what I have written, it is evident the beds have been seriously injured by over-working, also, as before observed, the bow-dredge plays unmerciful havoc on the clutch as the bed becomes bare, although to break into so compact a mass a bow-dredge heavily weighted may be necessary at first—but I have reason to suppose not after the mass has been thus thoroughly shaken, when a straight-edged dredge alone should be tolerated—and, of course, weighted according to depth of water and strength of tide, which runs at the rate of 3 or 4 knots as here, in a depth of 5 to 6 and 7 fathoms. I do not think that the bed has been injured since it has come into possession of the lessee, but rather improved, from the fact that it has not paid to take oysters off it, on account of the thorough skinning in the years mentioned. I have bestowed three days dredging of ten hours each, both with my own dredge and that of Barber's, on the main bed, as marked in the sketch, and in a bushel of oysters, aged one and two years, could find only about eight or ten four year old oysters—no more in Limeburner's Creek bed, but on the small patch at entrance of the Moira, opposite the *punt*, there may be about 300 bags very fine old oysters; here, however, the ground is rocky and difficult to dredge, but by means of the tongs in a depth of 8 to 12 feet, the depth of the bed, I could very easily manage where the dredge couldn't work at all. I conclude from the foregoing remarks and general condition of the several beds, that from the time of the skinning—say from /72 until /75—the spat crop had failed, but has been very abundant both in /75 and /76, but from the present appearance of the old oyster now close on spawning, I fear the crop will be a very poor one. I find none of the two-year-olds in spawn. Barber's statement as to oysters dredged is amply confirmed by the testimony of many residents and a few former dredgers hanging about here at other work, and none believe that the bed has paid even the rent since in James' hands. However, if strictly conserved, in the second year from now, I calculate within bounds that the present 2-1 year's oysters will amount to two or three thousand bags, for a large area of the main bed is covered with them, but only a single layer. I do not think it possible that floods, whether high or low, can have in any respect an injurious effect on the deep-water beds in the reach from opposite Limeburner's Creek up to *punt*.

3.—

- (a) Banks, from dam, all round the bend between, are composed of a sub-stratum of the friable sandy, blackish, mud rock, which seems to be general in these northern rivers; over this soil of a clayey mixture, in some parts pipe-clayey; in a spot or two drift sand, and one narrow spot in middle of said bend (marked on sketch), hard large boulders. The islet near said point is a black unctuous soil, overlying said friable rock, and over black soil a layer of drift sand—several kinds of trees thereon. The lower part of reach round the point is clayey soil over said rock, thence a grayish black soil overlying said rock. This, in fact, is the general character of the banks of main stream and tributaries, save the sandy spit at entrance, opposite the town, and a high bank, 200 yards long, in Limeburner's Creek, about 1 mile up drift-sand over same kind of rock, and the rock itself forms the bed of the river in that part—sandy, mud mixed with shell, and in some parts shingle—forms the bed of the river and oyster ground.
- (b) There are in most parts oysters on mangrove twigs and stone, and in great abundance in several spots on the same sandy mud shore, where either shell, or shingly clutch has gathered.
- (c) As before said, none of the beds are of pure mud, but a considerable admixture of sand with it seems to be indispensable, at any rate such is the composition of every one of the beds on which oysters are found (lying on clutch of course) in any of these rivers which I have examined.
4. All the small islands marked in sketch are just awash at high springs, and the two points as well; those of the latter in Limeburner's Creek are also awash, but I think the water is not suitable for feed, at all events no oysters appear on shore or mangroves above the point marked. Islets are unalienated, 1st point is sold, 2nd doubtful.
5. Scarcely any four years and upwards, excepting about 300 bagfuls at point opposite "punt"; all the others aged 1 and 2 years. The quality is good. Extent of main-bed, $\frac{3}{4}$ mile by 300 yards; but all that reach from 1st point to 200 yards below "punt," excepting small patches of soft mud, is a good clutch-bed, composed of sandy mud, with a large admixture of shell of different kinds, and a portion of large pebbles running to size of small boulders of 100 or 150 lbs., and a kind of hard sandy crust, which the strong tide appears to constantly keep clean. Limeburner's Creek bed oysters as on the other, aged one and two years, but only about 200 yards by 50 in area. Round the islets on the Maria oysters formerly abounded, also on opposite shore, and now at small cost that ground could be put in an equally good condition. From the dam all round the bend oysters are found in isolated clumps, where formerly they abounded. Therefore these latter may be classed as good payable oyster-beds; for the latter will now pay, and the former is in a fit condition to receive spat whenever it chances to be driven thither.
6. There is not much shell anywhere on the banks. The first point, Limeburner's Creek, and a few on the left bank a mile up. However, a good deal of both shell and gravel may be picked up.
7. Oysters are now on the verge of spawning, and no evidence to show that spawning has occurred since about this time last year, and the old people already referred to say they think it occurs about December or January, but at no other time.
8. Consequently this account agrees with that of Messrs. Fraiser and Barber.
9. Moderately sized areas.
- 10, 11. Already answered.

12. As to improvements none, unless resting the bed on account of the unmarketable age of oyster, and that of taking oysters off one bed and laying them down on another, which indeed may improve the gain of lessee, but certainly in no shape or way tends to improve the bed or oyster-ground; that is, the landlord cannot possibly benefit by any such process.

Memo.—As remarked in a former report, a fair clutch-bed is barring the present crop as intrinsically valuable as an oyster-bed, and if in a better situation for the purposes of culture more valuable. I find it very difficult to get suitable boats and men, and also conveyance from one river to another, not to mention the cost. A small craft—steam-launch or sailing vessel, suitably fitted for the purpose—will be indispensable to the proper management of the fishery, the value of which would amply justify the cost. I find residents obliging in every respect, and express great interest in the matter; but consider themselves aggrieved by the present system of leasing, and by restrictions on the use of oysters; while old dredgers complain bitterly on having their means of livelihood taken from them to invest in a monopoly placed in the hands of a few Sydney dealers. Mr. Andrew Barber has afforded me, in a very kind manner, any assistance I required, and every information asked for at Mr. James' request. His statement enclosed evidently bears the impress of truth; I wrote it at his own dictation.

I have, &c.,

A. B. BLACK.

I have been regularly engaged in dredging for the last ten years, and previously at intervals for thirty years. For the past twelve months I have been in charge of these beds for Mr. James—prior thereto, engaged for six months by Mr. Gibbon on the Clyde.

I, as a young man, got oysters on the Parramatta River; of late years, regularly, Manning, Camden Haven, Cape Hawke, Clarence, and at Brisbane. I was one of the very first workers of the Camden Haven beds, and their first condition was as follows, viz.:—I had to work a stake down into the mud through oysters and shell. The bed was 3 or 4 feet deep at low-water. Attached a 35-fathom warp to this stake, and worked from it day by day of six hours each, for at least twenty days. At first had to weight the dredge heavily, and then only got in a tide perhaps half a bag of oysters, until bed was "broken up"; then from the same spot, about one-third of a circle, shearing (as the direct line from stake was worked out) with flood on ebb to aforesaid distance in all, and in that space I dredged regularly ten bags a day—that is, 200 bags off that spot. Then removed stake to another spot, and thereon got the same quantity in the same time. This was the manner and this the average of about five boats for fully two years—in fact, until the bed got thoroughly skinned in the third year, when all of them left, when no more than two to three bags could be got per day.

I returned when said bed was supposed to have recovered, in about three years time; found the ground pretty well covered, but in an exactly similar space to that above stated could never get in a day more than three or four bags, and then every dredgeful contained only a few clumps of five or six oysters each, amongst half a bushel of shell, chiefly cockles. This is also what my fellow-dredgers experienced, and also what I have heard to be the case on every other bed at first and second working; and precisely what I experienced when I worked on the Manning beds for the first time. From reliable information the same facts were experienced in about 1869, 1870, 1871, when this Macquarie bed was first worked after a very long interval; and the condition of the bed now is that it is pretty well covered with oysters of two and one year growth, not fit for another year or two for market, with very few marketable oysters amongst them; and as in that case, *i.e.*, Camden Haven, in 35 fathoms not more than half a dredge-full of oysters can be obtained, there being only a single layer, and considerable intervals between the clumps; but the bed is not only improving, but extending; and also fine clean clutch beds about the main bed, and also in other parts of the river. I have sent up to Mr. James in the twelve months I have been here only about 100 bags of oysters, and have shifted on to the main bed about 100 bags—part from bed in Limeburners' Creek, and part from dam-bed adjoining Port Macquarie—chiefly tidal oysters; which, however, do not grow so well as those would taken from deep-water beds.

Spawning.—The old oysters are about spawning now, but those of one or two years' growth have no appearance of spawning. On all the beds named my experience leads me to believe that spawning commences beginning November and finishes in February, provided freshes nor other unfavourable weather occur, which may delay the process a little longer; but in no case have I noticed anything resembling spawning at other times of the year. Therefore, I believe a close season during those months would prove favourable to the beds, in order to permit the young oyster to harden sufficiently to resist the action of the dredge.

When the beds of the Manning were leased, we, the dredgers thereon, conceived it to be a great hardship to be thrown so completely out of employment, and without warning. Accordingly, we got up a petition to Government against leasing, signed by all the Manning dredgers (about thirty), and by perhaps sixty residents, settlers, &c., who benefited more or less by the dredgers and their families. However, the petition appears not to have been noticed, and since that time neither I nor any of my fellow-dredgers who signed the same have made anything like a living thereat; but most of them, much against their will, were forced into other employments like myself, who have to eke out a living, together with a grown-up son, by sawing, &c. But I have hung on here, expecting that perhaps next summer, when a fair quantity of oysters become marketable, I may earn a tolerable living thereat.

I should be glad to lease ground for culture, especially on a lease sufficiently long to justify expenditure of time to bring it into a fair state of culture; for I have great faith in oyster-culture, especially from the mode in which I have noticed the natural extension of the worked-out natural beds, as also the extension of oysters on clean clutch-beds.

I have, &c.,

ANDREW BARBER.

CAMDEN HAVEN FISHERY.

1. I cannot give a better answer than that contained in the statement of Barber, in charge of Port Macquarie Fishery, confirmed by residents of this district, and by Bird, now a dredger here, and at that time employed on the beds—namely: that a man would work his warp-stake into the bed and not leave that spot for sixteen or twenty days, getting ten to fifteen bags a-day all that time; and that for a long time ten to twelve and even fifteen boats were so employed, until only three or four bags could be got, when all left one after the other. Some came back in about three years, only to get at most six or seven bags; worked until that also dwindled to two or three bags a-day; also, that the oyster since obtained has not been near so good as those obtained at first.

2. By over-dredging, most assuredly; and as far as I can find, by trying the bottom,—a comparatively easy and accurate process in this shallow water,—very little by silt, either flood or sea. I find an exactly similar condition of the clutch-bed and disposition of the oyster as on the other beds examined, viz.:—The clutch-bed furrowed, and long strips of mud between and in patches—clutch filled up in some places a foot or two deep, and oyster lying in streaks and patches, and many parts only isolated clumps, where originally they must have laid many clumps deep all over the bed. This state of the clutch may, however, be easily remedied under culture, by raking the clutch.

3.—

(a) The banks of the river, creeks, and lakes (excepting where rocky spurs from the North Brothers enter on north side of Taylor and south side of Queens Lakes, also about $\frac{1}{2}$ mile in front and above Lauristown), are composed in some parts as all the south-east portion of Lake Taylor, $\frac{1}{2}$ mile on left bank of North Creek, bank running along oyster-bed in said creek, round bay at upper end of said creek and south and west sides of deep bay at heads, of the friable, chocolate-coloured sandy mud rock, common to all these fisheries already examined, only more blackish; in most all the other portions of bank is blackish unctuous clay or soil, and shell in beds from a few inches to 2 and 3 feet on all the level land. In digging foundation of saw-mill, 6 feet below surface, went through a pure shell-bed 3 feet thick, cockles and oysters, which seems to extend under the whole, of the site of township. Beds in river (excepting the outer bed in bay at heads, marked by a black-ink line which consists of a hard bed of ware-drift sand, which, as informed, has not altered materially during past fourteen years) are composed of either hard or soft sandy mud and shell, as indeed is the bottom generally, save spots of soft mud in parts of lakes and channel of river; all excellent oyster ground.

(b) None of the beds without clutch contain oysters, but the banks in some parts are covered by tidal oysters.

(c) None of the beds are of pure mud—always mixed, as already stated; but the subsoil—or rather, in many beds a sub-stratum of the common black unctuous soil—lies from an inch or two to several feet under the common sandy

sandy mud bed on which the clutch rests; but, as in one portion of the Hastings bed and in the bed in the bend of N. Creek, there is a trace of pipe-clayey stratum under the common bed of sandy mud and shell bearing the clutch.

4. Beyond the water-mark of river, lakes, and creek, the land for some breadth is covered by spring-tides, and in many parts by neaps also;—consists of the common rich blackish soil, and here and there black but not unctuous soil, a decayed salt-marsh vegetation, and (excepting in the latter) cockle-shell is pretty general. That within marks referred to is, I believe, still vested in Government, and all extremely well fitted for culture by trenches.

5. Quality fair, but not so good as formerly. Age chiefly three, four, and five; less of two years than there ought to be to maintain present rate of dredging, and scarcely any one year old; plainly showing last year's crop either failed, or from some cause or other—no doubt explicable when more attention is bestowed on this most important subject—the oyster did not spawn. The proximate extent of oyster-beds are marked by a *red ink line*; clean shell-clutch beds by a *blue line*; good oyster ground, hard sandy mud and shell beds with a light coating of slimy mud, by *red-ink dots*; good soft sandy mud and shell beds by *blue-inked-otted line*; and wave-drift sand banks by a *black ink line*.

6. There is a larger quantity of shell than in the other rivers fit for clutch. Almost everywhere on the banks and some distance back, I hear also, it spreads all over the level ground, and in parts, as at Laurietown, some distance up the spur of the hill, also on the high ground at the head—again it occurs over all the north-western portion of Taylor's Lake under from 2 or 3 inches to 18 inches of soft mud slightly sandy mixed with broken shell; also shell on all the islands. Consequently culturists will have abundance of material to work with, and Laurietown, in the very centre of the fishery, is well suited for a fishery township.

7. Some of the oysters appear to be in the first stage of spawn development, but very few, and of that I am by no means sure; as until about two-thirds advanced in development it cannot positively be determined without the aid of a pretty powerful microscope; no spat appear anywhere in fishery. I questioned two of the three dredgers employed in fishing, but they could give no useful information, however did not believe that oyster spawned all the year round; and third oysterman, named Handley, who has charge of fishery, would give no information; but a good deal of totally unprovoked abuse of self and all concerned, which I am certain two of his employers would not countenance, nor scarcely, I think, would Woodward the lessee of this fishery. Both Mr. James and Mr. Gibbon gave me letters to each of their respective employes in charge of beds, directing that every assistance and information required should be afforded, but I had no letter from Woodward to his manager here.

8. Neither of the two dredgers referred to could give me any useful information, nor could any of the residents.

9. This fishery is specially adapted for culture in small areas, while as leased to one lessee it would probably be an impossibility in this country on account of both capital requisite for such a large undertaking, and also on account of scarcity of labour needful for even tolerable culture; but more than two hundred families could find ample and highly profitable employment, children included, starting with less capital than that necessary to enter on a free-selection.

10. So far as I have examined, I think, at least until culture has progressed sufficiently to yield a portion of the crop of spat yearly necessary for a holding, natural beds being brought into such a low condition, ought to be reserved under very strict regulations, for the exclusive use of the culturists of oyster-ground, merely as spat nurseries.

11. I believe it would be a wiser policy to give to lessees the privilege of collecting the spat off the natural beds free of cost, at least for a given term of years at first—that is to be collected by selves and families. The term of such concession to be calculated liberally, so as to allow fair time to have a crop or two of spat from those laid down in the first year of occupation; but under proper restrictions rigorously enforced.

12. On ridge of bed of softish sandy mud and shell on which formerly I am told clumps of oysters appeared in isolated patches. It is situated just above Laurietown; defined by blue-ink dots with a red line in centre marking positions of laying. On this spot dry last of ebb (informed by a dredger) was laid twenty months ago 900 bags of tidal oysters of the ordinary kind and age at present abounding, seemingly about two years old. They lie in a narrow row about ten clumps deep, appearing to have been bundled out of the boat anyhow; nevertheless they have thriven well for tidal oysters, probably all the better from not being at once, from a habitat exposed to sun and air twelve hours every twenty-four, plunged into deep water as at Port Macquarie. In another year they will be fit for market, at any rate within two years. However, they have not grown so well as deep water oysters would have done in this favourable situation—I mean if the latter were laid on the covered portion of this excellent fattening ground. However, this example of rough transplanting affords conclusive refutation to the assertion that culture will not succeed in New South Wales, &c., &c., for here, on this bank of soft sandy mud and broken shell the oyster thrives and grows as well, or indeed better, than ever I expected to see a tidal oyster thrive when transplanted. Only clutch not having been laid on the bed previously, the bottom tier or layer of clumps furnishes the clutch and keeps the upper tiers out of the mud, consequently the lower tier is dead, but all the others are as said healthy and growing. Hence, therefore, we are furnished with two important conclusions:—First, that culture will succeed equally as well in New South Wales on new ground as it does in any other country, and in that respect its habits and economy differ in no way from those of oysters in Europe and America. Secondly that a clutch bed is an absolute necessity of proper culture, unless, as in this case, a layer of live oysters be sacrificed to furnish the clutch-bed. I may also add a third conclusion, not however so important as the others, as this is sufficiently proved by the original state of the beds,—namely, that oysters will thrive and grow well eight or ten clumps deep, but most probably not so well as if laid singly and in three or four tiers deep. The above is the only improvement, if it can be so called, and that is in no respect an improvement to the fishery. If a clutch-bed had been laid even on this strip of ground, such would have permanently improved the bed to that small extent; but, as it is, these will no doubt all be taken up in the same rough-and-ready manner as laid, and the strip of bed left bare.*

I have, &c.,
A. B. BLACK.

MANNING RIVER FISHERY.

1. The enclosed statement includes most of 1867 up to date, put down as spoken. It shows that both subscribers are observing men (and, I may safely add, also decent), inclined to prove for themselves with means at hand the truth respecting culture—of this again. I carefully examined both patches referred to, also evidence obtained from Mr. Gyle, manager of fishery; and several old residents of respectability not only confirm the statement, but also afford the following facts, which is embodied in a short account of the fishery from its commencement to the present time, viz.:—*Catti-bed*, in main river, (as marked) was the first worked by "Sam the Tinker," 25 years ago (1852), who set the blacks to dive for them. He sent now and then a few bags to Sydney by sailing-vessels, which produced 10s. to 15s. a bag. Not, however, till 1861 did dredgers from Sydney disturb the bed; but by end of this year 10 or 12 boats were working on it, averaging eight or ten bags daily, in five or six hours. However, 12 or even 15 might have been obtained if chosen, but fear of glutting market prevented. The ordinary price was 5s. to 8s., running up to 15s. in time of scarcity, and in a glut nothing. I fear this element of uncertainty exercised a strong fascinating influence over the class of men engaged—"light come light go." This is the only *shell clutch bed* in fishery. It lies on a flat at entrance to Catti Creek, 5 to 6 feet deep, falling suddenly on to a narrow shelf 20 feet wide and 22 feet deep, then equally abruptly on to the bed of river in this bend 40 to 45 feet deep, and a strong ebb, but less strong flood, running over all the bed—clutch at first, on shallow portion, laid very thick, now scarcely a vestige remains. The deeper portion,

* In relation to the "tidal oyster."—Since startled by the positive statement, based on 25 years experience of George Fraiser, manager of Clarence Beds. "That tidal oysters spawned several times a year," I have closely observed, as far as opportunity would allow, its appearance and habits, in order to discover anything to justify that conclusion; as yet however, without further success than that of finding in some favoured spots in several rivers or creeks, spat seemingly of various ages or rather degrees of growth—but always apparently a well-defined period between each growth. Obviously, however, unless positive of the time of spawning or that of spawn setting, judging by mere growth alone is a very unsatisfactory mode of determining the age of a creature so extremely susceptible to many external influences, especially while living in an abnormal condition, as in that state it is confined between the verge of low-water and high-water-marks. Hence, according to the run of tide in these rivers it is deprived of food 12 to 10 hours each day and a fair supply the remainder; also an unusual degree of either cold or sun will impede growth; consequently, in favourable circumstances its growth at that early state of life would be rapid, while unfavourable circumstances might arrest its growth even one or two months. When pondering the matter in connexion with this heap of tidal oysters transferred to a less dry and more fertile bed, thereby to a more copious supply of food and better shelter; also on the mysterious law of lunar influence on fishes, whether dead or alive in water, or out of water, (a fact well known and operated on by fishermen), also on the movements of migrating fishes as the period of spawning approaches, likewise on mussels, &c., on tidal beds, extending even to the gestation and other vital processes of mammals, &c.—it seems probable that under such abnormal conditions the general spawning time of tidal oysters may be increased once or more during each year under the powerful influence of the clear moon in this generally dry country. However as the propagation and preservation of seed is one of the most important elements in this oyster industry, no means ought to be neglected to determine the spawning question. I shall certainly as I proceed neglect nothing that seems to tend to such solution.—
A. B. BLACK.

portion, however, has escaped with less damage, as it is, by reason of depth, shelving nature, and strong tide, difficult to dredge. In this portion some old oysters are found, and, considering the state of the bed, a fair number of two-year old oysters, but very far from what ought to be; for it will take these, as well as every other two-year-old on the fishery, to pay rent and wage for the two ensuing years. Few spat fell last year, and although all the oysters have now spawned scarcely a spat appears anywhere on the fishery. Scarcely had Catti been cleaned out than Scott's Creek bed was found (as marked.) Clutch, pebble, small boulders, and shell, depth from 1 to 10 feet, easy to work, barring the boulders. This was also cleaned out. Now south passage contained oysters, but the distance was too great, while these beds produced enough and more convenient for shipment, besides those in south passage were always very poor. Then the south bar was closed, and had been before the oldest resident went thither. However, in October, 1862, the heaviest flood by some feet witnessed in the district occurred, causing much distress. Graham, a selector, opened a slight passage on top of enclosing sand-bank on spot now the south bar, which the flood-water shortly increased to a mile wide and down to the rocky bed—so it ever since has continued. Now, evidently this sudden rush of the dammed up water must have produced a heavy scour in south passage. This heavy scour happening just before spawning thoroughly cleansed the passage not only of mud, &c., but also cleaned the clutch-bed, in this case composed in most parts of large and small pebbles and shell, along banks (say fore-shore) of hard decomposed shelly bottom and shell, and in isolated patches of a sort of rotten trap-rock. Now the mud, &c., being cleared off, the pebbles, shell, and rock cleansed by attrition of the slimy matter which prevents adhesion of spawn, was in the best possible condition to receive the spawn of parents invigorated by an abundant bi-daily supply of food direct from sea through the new south bar. Parents formerly half-starved by the indirect, often interrupted, and never sufficient supply through Scott's Creek, and recuration of tide through the upper end of the south passage coming from the north bar, received in the manner described, and at the proper time, a full supply of all the nutritive elements necessary to enable them to commence the reproductive process in a state of complete vitality (probably all the more from the deprivation endured until this time), under the most favourable circumstances possible for the production of the largest crop. Consequently what was looked upon as a sort of miracle by others, would just have been the thing expected by a student of their habits, viz., the covering of every particle of clutch from lower end of Cabbage-tree Island to Blair's Creek, and the parent oyster no doubt from this time forth continued healthy and fat. However, this discovery was not made till nigh three years later, by which time the two main river beds were completely skinned, the bar bed not being discovered until 1867. Whereupon south passage was set upon, but there being only one layer of nigh three years old, and one of barely two years, hence so many bags were not got as on beds of 6, 8, or 10 layers deep and older standing. However, the bed was of greater extent, and save the spell given (about 18 months), while closed by proclamation, it has been kept bare by constant dredging ever since, but never so bare as at present. In 1867 the bar-bed (as marked) was found, duly skinned, and left. Although this bed, no doubt, while closed would be the safest to work by poachers as quite convenient to shipment, yet in day-time it is the most troublesome, on account of being exposed to the full sweep of all the prevailing winds, which creates a sea dangerous to dredging for three or four days every week. This, however, lulls at night, and while closed enables the poacher to dredge and ship the booty before day-break on any vessel lying at the bar bound out. Thus it was this bed was skinned before it came into lessees' possession. This bar bed has pebble and shell clutch, depth mostly 6 to 8 feet, running from bank to 12 feet in channel. Pebble clutch is not so liable to injury by dredge as shell, but it is much inferior, as the oyster is more difficult to detach, less apt to catch the spawn, and more difficult and costly to handle in culture. The bed-rock here, in Scott's Creek, and in many parts of south passage is the chocolate-coloured friable, sandy mud rock common to all these northern rivers. The banks of main river consist of an equal depth of soil, but of a lighter colour than that of most of the rivers to the north, nor is it so unctuous as that of south passage, which latter, however, in many parts contains good-sized pebbles similar to those which form the clutch; and I learn also that throughout district there is hardly an instance of a well being dug which is not through 8 to 12 feet soil on to a bed of oysters, cockle and whelk shells, from a layer of 2 to 3 or 4 feet deep, into a bed of hard sea-sand more or less mixed with alluvium on top, similar to that sandy mud forming present shoals and bed of river; but only at Catti and one or two other places does said bed of shell appear on bank of river, although abounding in banks and soil of south passage. The beds in south passage and in Graham's Creek, inside Cabbage-tree Island are in every respect similar, but in said creek there is the material difference that the run of tide is not direct, neither in flood nor ebb. The former is thrown off into south passage by a heavy drift sand-bank across its entrance, so that only the latter part of flood runs fully in, while the ebb is similarly retarded, but in latter portion by the shallow oyster and clutch beds across its upper entrance, thus neither carrying into it an equal quantity of spawn nor food; consequently its oysters are neither so abundant nor fat, but the patches in it are numerous, easily worked, and thoroughly adapted for culture from end to end. Depth from 2 to 10 feet. Depth of south passage generally, on oyster-beds, from 5 to 6 and 7 feet, running into 10 and 12 feet in channel. Channel mostly 12 to 16 feet; but from opposite saw-mill to reef trap-rock, in bend, (as marked) is a gulch 30 feet deep, precipitous banks, width one-third of creek. It runs a short distance beyond said reef into an uniform flat of black sandy mud, 12 to 16 feet, which continues up to second bend, from which up to entrance there is a stream of pebbles and shell, with isolated oysters, and oysters on any stone forming wharfs. However, above reef referred to it has not been considered payable to work.

2. The minutè description given will show the injury done to beds by over-dredging, but it remains to point out the evil effect clearly manifested by the continuance of dredging. I have said last year's crop was bad, and from all appearances the present also will be nil. It cannot be expected that the lessees (I say lessees because there is a co-partnership of three—James, Clark, and Woodward—equally interested in all these northern beds) will bate one jot of contract while rent is to pay—in this case £1,150 yearly. Now although this fishery in its impoverished state, while in their possession may not have paid, yet they have been recuperated partly from profits of other fisheries and partly from monopoly of beds held in few hands. Nevertheless they will, while contract lasts, continue to take from it the last marketable oyster. As shown by the fact that while in fair condition the fishery could support twice the number of boats, procuring a larger quantity of oysters, though a lower price was obtained; now, however, strive from daylight to dark, the five dredges employed can each only obtain over all this extensive ground eight bags weekly. One working Catti, Bar, and Scott's Creek beds; three, till last week, now four working south passage beds, and working all the time the spawning process has been in progress. I must say that the men are very careful in culling and throwing the young oyster back. Probably, also, lessees are strict in ordering only mature marketable oysters to be forwarded. Still, in each case this care, though exercised on behalf of respective parties, is none the less most injurious to the reproductiveness of the beds, also for the sake of immediate profit, as spawning oysters won't keep. The oyster is not sent away while spawn is flowing while from it over the boat when dredged, yet both immediately before and after, when not actually in that state, it is sent to market. Consequently thus stands the case. No violent natural cleansing process has of late occurred, nor has there been a considerable number of spawning oysters ready to avail of the clutch thus cleansed as at the time above mentioned; but instead, the clutch has been destroyed, as much as a pebbly bed well can, the shallow portion of Catti bed is left with only a patch of a foot or so of clear clutch at long intervals, and everywhere shell and pebbles alike covered with slime and fine mud, the latter constantly stirred up by the bow dredge, while at the same time there probably does not exist in the whole of the fishery a sufficient number of spawning or mature oysters to fully stock a single bed, especially considering the many chances existing against the spawn falling on the right spot. Hence, obviously, while this process continues, this very valuable fishery will be reduced from bad to worse. I have bestowed unusual pains in examining the beds, and sought local information wherever I could find it, and the result is, maturely considered, that it would be a vast public gain to cancel the lease forthwith, even at the cost of returning the present year's rent, and then close the fishery until the future mode of management shall be determined. I submit these, my clear convictions, with much deference, and trust such will not be considered beyond my duty.

3.—

- (a) The banks of main river consist of 8 feet of lighter-coloured soil than that of most other rivers, that of south passage darker and more unctuous, the banks of both resting in many parts, more apparent towards both the N. and S. heads, on the blackish, friable, sandy, mud rock. Some, but not many, depressions of general level of surface. Where these exist soil generally sandy. Shell abounds in south passage.
- (b) In some parts rocks have gathered oysters, but not in all. The tidal oyster is not so abundant as in some other fisheries, and found chiefly close to beds in thick patches on sandy mud where shell or pebble clutch has accidentally been drifted, and also around Pelican Bay, wherever any kind of clutch, whether of soft black mud or the usual sandy mud, offers a resting place. Those on the soft black mud in Pelican Bay are the finest tidal oysters I have ever seen.
- (c) None of the beds are of other mud save the sandy mud mentioned, mostly hard, but sometimes soft—and all with clutch of some kind, excepting in the tidal lagoon on point opposite bar bed, where there are fine tidal oysters in clumps lying on the bare black soil, but no doubt at first a shell afforded foothold.

4.

4. There are few marshes available for culture. That last-mentioned is an excellent place. North side of Pelican Bay, for 40 or 50 yards back, Charlie Island, lower portion Cabbage-tree Island, Luttrite Island, and bottom of bay east of Luttrite Island, all these consist of the ordinary soil; I believe all of them are unalienated. Pelican Bay and Island is most excellent oyster ground, only 1 to 3 feet deep anywhere, save about 200 yards \times 10 wide, 5 feet deep, and large flats dry at half ebb.

5. The quality is good, 25s. per bag I am told they produce in Sydney; as before mentioned the old are scarce, two years, not so many as ought to be to meet expenses for the next two years; little or no crop last year, and no signs of more this. The extent of beds about that marked; but isolated clumps are found all over the south passage, Graham's Creek, south mouth of Scott's Creek, and about Luttrite Island, outside of beds as marked.

6. In Pelican Bay, as marked, there is a mound of shell, height 50 feet above high-water, 350 yards long by 60 wide; then at base along banks of Pelican Bay on east side 200 \times 30 yards \times 9 feet; on west side 300 yards \times 40 yards \times 7 feet, but running into bed of creek, also deep beds along this creek at intervals for $1\frac{1}{2}$ mile. The whole are fine large and perfect oyster-shells, an exception; for most shell beds are largely composed of cockle shell. Then the whole reserve for township, south bank of south passage, is a mass of shell; this would form an excellent fishery township, and another, the sand-spit opposite Bar bed; nearly every portion of south passage banks, east of Blair's Creek, consist largely of shell; all however save reserve is sold. The vast deposit head of Pelican Bay belongs to Mr. Macready, Pyrmont.

7. The oysters had begun to spawn middle of January, and completed middle of February, last year about one month earlier; but I have been told that they more often spawn before than after Christmas, or from end of October to end of February.

9. In small areas—As proof thereof, take first William Windsor's patch of 200 feet \times 20 in south passage, just on the edge of low-water, here then in that space 100 bags are laid of oysters, aged one year, chiefly tidal oysters, a portion one year and less deep water oysters; the latter he considers his employers may object to, hence he desires to say little about them, however, both he and Barry, whose stock consist of the latter sort from cullings at various times with only a few of the former find that the deep water oyster is far more profitable than the tidal to transplant; now it seems that these have increased about threefold in size, and this patch is not quarter covered. However, as it is, the cost was the keep of a man for three weeks, and also some of his own spare time. The result at the Sydney market price, say only £1 = £300 within two years, for only a small portion of spare time during that period, if that bed were his own.

David Barry's patch is on same bank further west, and similar in every respect, except that there is a small muddy spot over which he carelessly cast some pebbles and shell; the stock is young cullings and a few tidal oysters; however, not more than ten or twelve bags, as he is constantly taking them up in order to complete slackly filled bags. Both believe thoroughly in culture, so also do the other dredgers, and not only them, but all the residents on the river with whom I have come in contact, all seem to know of these two experiments, and profess deep interest in a Bill which would afford reasonable encouragement to engage therein. But all express themselves deeply aggrieved that the whole profits of a local product should go to a few Sydney dealers; also strongly speak of the supineness of Government in permitting the destruction of the fishery. They all seem to watch proceedings narrowly.

10. 11. These dredgers, together with manager, have hitherto favoured licensing, but that I suspect was the cry taken from Sydney shop-keepers, who desired above all things to prevent any Government interference with the fishery whatsoever, and that they should continue without let or hindrance to do as they pleased therewith. Hence the cries arose "license boats"—the next best substitute for free user; and "our oysters are different from other oysters, therefore culture will neither answer nor pay in this country." On account of few dredgers being able to keep money they were completely under the thumb of dealers, and whenever they got to Sydney almost all of them were indebted to an advance to one or other of the dealers to get back to fishery; hence no wonder "the one danced as t'other piped." However, the men under consideration seem one and all to be steady, thrifty, intelligent men; and once the idea opened to them, especially in view of the experiments described, that probably the new Bill might contain provision for leases of sufficient area for culture on encouraging terms as to length and rent, they all on reflection bethought of procuring young stock free of cost as a necessity of culture. I observed that when this idea was fully mastered, the licensing system was dropped, and all would be right if they could by any means surmount the first two or three years of culture.

12. No improvements whatever. An oyster shed at Croki for convenience of shipment, but no use to fishery.

Gentlemen,

Your most obedient servant,

A. B. BLACK.

STATEMENT of David Barry and William Windsor, married men, permanent residents on south passage.

19 February, 1877.

I, David Barry, have been constantly engaged dredging since 1867, and in that year commenced on south passage; got then three to eight bags a day, the latter a spurt; generally twenty bags a week of five days; but at first opening of bed the usual thing was eight bags a day; then I worked a while in the first rush to Port Macquarie, when the general thing was fourteen bags per boat (two men) a day; then went to Cape Hawke and got ten bags a day, eight boats working together, when we got the blacks to cull for us; then returned home to south passage. In each of the last-named cases, when no more than two bags at most a day could be procured we left. The passage then had not recovered to allow more than three bags a day to be procured; at about this rate we worked nearly 18 months, eight boats in winter and eighteen in summer, until the catch was reduced to one bag a day; but most of them now left starved out, but I being married, and my home in south passage, remained. When the beds were closed, I and others, about four or five boats, smuggled chiefly on Cattai and bar beds, where the oysters were young, nice, cuppy oysters, and sold high in Sydney. The average at first was four to six bags a night in 4 or 5 hours; this continued from time of closing till the beds were leased, gradually diminishing, however, to two bags a night. I and partner were fined towards the latter part of time referred to. Then when beds were leased I was employed in south passage by lessees, and so till now. At first seven boats were employed by lessees, and entire passage was divided into seven beds, each the exclusive stint of one boat; some beds were better than others; some only got one bag, mostly however four bags a day. A flood intervened and damaged some of the beds, which however was found to considerably benefit others, on to which the oysters had been drifted. This flood, but especially the gradually diminishing quantity of oysters prior thereto, actually starved out four of the boats, henceforth only I, William Windsor, and George Shoobert, remained, until we were compelled after two months' work to seek a rise of price per bag, 3s. 6d. first to 4s., then 5s., at which it now is; and last week one more boat was put on; now the average a week is eight bags. Hence it may be assumed that two of the best beds in the Manning, viz., Cattai and bar beds, were skinned before beds were leased. These were convenient to place of shipment, therefore less dangerous to work while closed.

Spawning.—Last year about end of December this year, spawning just about completed. They are about one month later this than last year, and which time is about spawning time of the above-named beds, i.e., Port Macquarie and Cape Hawke. I am positive that at neither of these fisheries do the oysters spawn all the year round—only between 1st Nov. to end February.

I, William Windsor, fully endorse the above statement of David Barry, having read it each in other's presence—as witness our respective signatures,—

DAVID BARRY.

WILLIAM WINDSOR.

I, William Windsor, had dredged in south passage, being married, and having my home here, 12 months before beds were closed, I was engaged by lessees as soon as fishery was leased, and allotted one of the beds, No. 9, which was a poor one; after flood referred to the arrangement of allotting a bed to each was annulled, and beds worked in common; I then got permission to occupy a portion of the foreshore for the purpose of laying down young oysters, chiefly tidal oysters; I solicited permission and obtained it, but on the understanding only that I should be paid nothing for laying them down. Hence the experiment was at my own risk, and I desired it for my own satisfaction, in order to learn how far such transplanting was likely to succeed and pay. I laid down, with assistance which I paid for, about 100 bags, on a space of 200 feet long by 20 feet wide, from bank into a depth of about 1 foot low water, age of oysters when laid, about 12 months. I found in breaking them up many were destroyed, therefore the greater part were laid in small clumps so as not to destroy an undue number, which otherwise would have

have been the case. These have now been down 18 months, and many are fit for market. The shape has somewhat altered, being inclined to approach the appearance of a deep-water oyster—the colour also—and have increased in size threefold. I have carefully attended them, and separated as many of the clumps as I could without causing injury, and generally kept them clean of deposit. At present, I believe, in consequence of lying pretty close, the spawn has caught rather abundantly this season. Lessees still continue to respect said agreement. The only pecuniary advantage I have is to be able to keep up a good weekly average, while other portions of bed may not yield such during winter, interruption from bad weather, or floods. Receiving 5s. a bag, as for other oysters. The Manning oysters command the highest price in either Sydney or Melbourne; hence we average no more than £2 weekly, working 12 hours daily, against 6 and 8 hours formerly.

WILLIAM WINDSOR.

Both the undersigned have tried the experiment of laying, though the one without agreement with lessees, and firmly believe that on good ground, cultivated with care, culture would pay well; but unless a long and secure lease be given at a reasonable rate of rent, there would be little to justify the attempt, and if so, rigid restrictions would be necessary.

WILLIAM WINDSOR.
DAVID BARRY.

CAPE HAWKE FISHERY.

1. Prior to the opening of the bar, according to John Pennington's statement in 1848 or 49, it seems the only oyster-bed was that marked No. 1, on which they were thick; however in 1859 this bed was found to have been either silted over or oysters swept away by such a strong rush of water as that likely to be produced by a flood so high as to sweep away the sand-bank which closed the bar. The opening of the bar showed, as in the case of south passage (Manning), that it is indispensable to the health and fertility or spread of oysters to have a fair supply of tidal water regularly fresh from sea. However, after 1859, when settlement began, several other of the beds were producing, and the number has been gradually increasing, still, however, No. 12 is vacant, though possessing all the appearances of a most excellent bed. No. 9 was infertile till 1872, and perhaps the next good spawning season may also stock No. 12 and some of the other equally good beds.

2. I beg to refer to enclosed statements. The beds are all shallow, generally from one to three or at most four feet, therefore dredge is not employed and tramping over gathering is rather beneficial than otherwise.

3. As shown in sketch, the lower portion, next bar is filled up with wave drift-sand slightly intermixed with mud, and only two or three narrow shallow channels between.

(a) Shores generally of creeks and islands consist of blackish unctuous soil, in many parts lying over a horizontal stratum some feet thick, of the common chocolate friable sandy mud rock; and on east side of lake, south, to narrowest part betwixt lake and sea, thence to Booty Hill, is a sandy spit drifted up in dunes covered with the ordinary kind of brush and tree congenial thereto; rocky round Booty Hill. Beyond, south-east portion, on the friable rock lies two to three feet soil, over it one to three feet pure oyster-shell, and above two or three feet more black soil; this extends to south extremity, thence along to Mr. Newman's (settler) blackish unctuous soil; thence along west side the land is elevated, and shores rocky.

(b) Very fine rock tidal oysters extend all along to north-west corner of lake where marked; but on east side no farther than opposite middle of Wallis Island; yet all round large island south of Wallis Island, and on west corner of Wallis they abound.

(c) None of mud, but wherever marked with blue line the beds are composed chiefly of shell and sandy mud similar to those producing oysters, and in fact many portions of them are seemingly better suited for oyster-bearing; indeed, it is not unreasonable to suppose that in time, even by natural means, most if not all will become fertile. However, Mr. Newman's (settler) selection marked south-west portion of lake, laid some down in front thereof, which has thriven and even increased. Also Mr. M'Kay, four miles up Woolambee from Govt. cutting on No. 2 bed has laid some which thrive very well. Hence it is proven that oysters will thrive artificially laid both at southern extremity of lake and well up Woolambee River.

4. Salt-water lagoon in Wallis Lake and that at north shore with a considerable extent of marsh around each, especially the latter, as all the islands (excepting west and north sides Wallis Island), together with that around both creeks and up the Woolambee about three miles, are admirably suited for trench culture; and lagoons for beds, but none of the lake shores are suitable.

5. Area about as marked in sketch. Beds No. 2 dry at half-ebb, and portions of 3, 7, 8, and 10, the latter running into two and three feet at low-water. A great portion of all the oyster-bearing beds; also non-bearing beds marked with blue ink, are hard shell slightly intermixed with sandy mud, while portions are softish sandy mud, all, however covered with various kinds of marine vegetation into which you sink to the ankles; and a considerable extent of those in lake are thickly dotted over with large live cockles each bearing a tuft of algae, however, all are apparently equally well suited for oysters. Cockles and oysters thrive well together; indeed, the oyster frequently attaches to a clean live cockle as to a whelk, but the cockle does not devour it as the whelk does. Both whelks and periwinkle (the veritable *Littorina littorea*) abound in both lake and estuary, each in its proper habitat.

6. There is an immense amount of both in the beds described, most of them many feet thick and in layers on islands; also mingled with soil everywhere save in the sand-spit which separates a portion of east side of lake from the sea; and none of the islands are alienated nor any of north shore.

7. Information relating to spawning I have succeeded in eliciting pretty fully in statement enclosed. I may, however, remark thereon that both John Pennington and John Hughes are both very intelligent and observing men, and the former has had probably more experience of the subject than any one in the Colony, having been during sixty-five years constantly to and fro to nearly every oyster-bearing river, and mostly dealing or procuring them for sale. I have also carefully noted down exactly what each desired to say; besides, every word relating to the fishery can be confirmed by many of the residents. I may remark in addition that as in Europe and America years occur in which oysters do not spawn; also, that whether spawn be fertile or not, there is like to be without artificial aid a lapse of several years in the natural course betwixt each prolific crop. I believe this to be universally the case. I shall take a future opportunity to refer to this subject.

This fishery affords by far the finest opportunity to accurately study the habits of the oyster. The water is far clearer than that of any of the northern rivers, and the beds do not exceed a depth of four feet, generally two and a half low-water. I have waded over all the oyster beds and a great portion of the ground in lake enclosed by blue lines.

The very clear water also affords an excellent opportunity to observe some of the oysters' enemies. A species of cephalopoda is rather numerous. It forms a hole and gathers around it a bushel or two of oysters piled up above the level of the bed, apparently partly for concealment partly for food. I have watched it busily conveying the oyster to its nest. I have also observed two different kinds of crab deliberately engaged chipping off the edge of the oyster with its chela, and when it has made the opening sufficiently large, insert either of its foremost claws, divide the muscle and abstract the oyster. It's astonishing how quickly it opens and devours the oyster.

8. According to both statements, while prolific spawning took place, probably end of October or early in November, barren spawning took place sometime in January, and as in England an oyster here and there is always found on the spawning bed which does not spawn, at least not that season. It appears also that at least in this fishery spawning takes place nearly at the same time over all the beds, and there is no evidence whatever to show that spawning happens more than once a year.

9. Moderately sized areas.

10.

11.

12. No improvements whatever. The lessee by a lucky hit got the fishery with a fuller crop than ever it had on it before (No. 9 bed additional), and immediately thereafter before oyster had grown to one-third its mature size, seven hundred and thirty bags are shipped to market. The evidence proves unquestionably that the oyster at the most only attained maturity last year, indeed some of them not yet. However, to this date about six thousand bags have been got. In all probability, if allowed to remain until the three years (as they ought to have been) those six thousand would have increased at least ten thousand bags, which, together with the two thousand to three thousand remaining, would give the amount of full crop of 1872, viz., twelve thousand to thirteen thousand bags—by no means a bad investment for £45 a year; and not a stiver of this large gain is spent on the fishery. Moreover, it is now only left with the specified number of tidal oysters. Certainly they are of better quality than the tidal oysters of any other fishery I have seen, but that does not mitigate the evil.

As

As may be inferred, this perhaps is the most interesting and instructive fishery in the Colony; accordingly I have examined it most carefully, and as already said, every word of this report together with the statements can be amply verified I enclose plan of fishery, sent. It will be perceived that such a thing is of no earthly use to me; it ought to be on a larger scale and much more accurate than that is—many of the islands and the creeks are omitted. I regret to say I have been delayed by illness, but now recovered, and to-morrow start for Port Stevens fishery. Township sites will be needed here, and I would strongly recommend the unalienated portion of the Forster reserves, Cockatoo Island and Wallis Island. This will eventually become a first class general fishery. I have expended all the forms.

I have, &c.,
A. B. BLACK.

Manager Mr. John Hughes' Statement.

Hearing in Sydney that Manning men had "rushed" Cape Hawke and were making a fine thing, I started thither, and arrived December, 1869; found about twenty men had been engaged about four months, and oysters getting scarce. By February, 1870, Manning men had left, and only I and three other residents remained. By May these also were starved out, and I continued till mid June. Got first portion of time six bags weekly; latter portion only three and four. This was the average of the others, while for two to three months of first working fifteen to twenty bags a day was a common thing on most of the beds, and as much as forty bags daily off Nos. 2 and 9 beds. Rakes and shovels were used thereon. June 25th, tried Smith's Lake, but oysters were scarce, though fine quality. Got only fifty-six bags in thirty-four days. Price during this time, 6s. Recommenced October, 1871. Carefully searched the beds. On skirts of beds found narrow hollows, each containing a bag or two of fine oysters which had escaped notice in the general scramble. These, together with oysters trodden into the mud by so many tramping over the beds, were now grown into fine oysters. Kept four boats going at an average of ten weekly at first, to four and three by April, 1872. By this time, however, two men had gone sawing, the third, a Chinaman, fell sick; and end of April I engaged a punting. I do not believe fifty bags remained on all the river beds together. An idea has always obtained among oystermen that one or more deep water beds exist somewhere, yet the district has been searched in vain.

End December, 1872, to the astonishment of every one in the district, as by magic, every bed on which oysters previously grew was more or less thickly covered with young oysters the size of a threepenny bit; and September, 1873, the fishery was leased, and neither Government nor lessee knew aught of the valuable crop it contained. I was engaged to manage the same by Company at 3s. a bag, but at my risk till outside of bar. Company were anxious to realise, and I was set to work end October, 1873. Chose No. 4 bed, as these were the largest. I do not know how many filled the bag, but two men were eight hours loading the boat, whereas in 1875 got same quantity in four hours; and in 1876, and now fill the boat with ten bags in from two to three hours. This, at least, shows that the spat of December, 1872, are still growing; and on none of the beds, although some beds grow larger oysters than others, have the oysters ever yet attained the full size.

From middle October, 1873, to end April, 1874, two boats, two men each, sent lessees 735 bags. From September, 1874, to May, 1875, sent 1,170. From August, 1875, to May, 1876, sent 1,770. From July, 1876, to present date, 1,600 bags. In addition to which about 300 bags spoiled on bar-bound vessels, although specially careful thereof, as I receive no pay for such. Nos. 2 and 4 beds, the latter small, have as yet been very little worked, but all the others are nearly bare. However, these two beds, though inferior in quality and size may, together with the scrapings of other beds, yield 3,000 to 4,000 bags; and although the spawning of 1872, they have not yet attained full size,—chiefly tidal oysters.

Spawning.—Seven seasons have passed during my residence here, but I cannot say I have particularly noticed any save this last; that of 1872 must have occurred six weeks or more before I noticed the spat, while that of 1870, 1874, and 1875, I noticed by the milky spawn flowing from them in the boat while bagging them, also by the falling off in condition consequent on spawning, yet this was merely in relation to their safe transit to market, and not in relation to reproduction. In 1876 I am sure no spawning took place, because the oyster, for the first time (save 1873, when I suspect it was too young) since my arrival showed neither signs of minkiness nor falling off in condition throughout the whole season. Now this year the bareness of many of the beds and the increasing demand for the remainder, as well as the barren results of every spawning season since that of 1872, aroused my anxiety respecting the result of this season's spawning; accordingly I watched narrowly, and observed on the 1st February, about noon, that No. 2 bed was spawning on an ebb tide and light westerly wind. This must have occurred simultaneously over the whole of the beds. (The other boat was working on No. 10 bed, and noticed the water whiten and spawn flow from the oysters gathered and in the boat, about noon also.) Bed No. 2 is nearly untouched, probably 2,000 bags on it. There was at the time about one foot of water on the bed. The water all at once became white, and drifted slowly down amongst the sand-banks which fill the lower portion of fishery towards the bar. Numerous fish collected amongst it, seemingly to feed on it. From the obvious abundance of spawn, I expected a crop similar to that of 1872. However, excepting under platform on edge of low-water in front of township on which oysters are bagged, I have looked in vain all over the beds for a single spat, and I gather sixteen bags daily. It is also a fact that in each previous year, save 1872, the proportion of yearly spat has not exceeded one to twenty older oysters.

3. I am quite sure that on this fishery the oyster spawns only once a year, and in some years, as 1876, no spawning takes place. The months in which it generally takes place, at least since I have been here, are January and first week in February, excepting in 1872—probably early part of November—as the spat seemed to be about six or eight weeks old when first observed. Now, considering this has been the only prolific crop, may not early spawning be an advantage and latter spawning abortive?

The prevailing weather at time of respective spawning was in October, November, and December, 1872, unusually strong north-easters, frequently heavy gales, but dry, though dense clouds, and overcast seaward. Punts that season were frequently windbound, and for days could only make progress at night when wind moderated.

1873 was wet and variable; the other seasons were variable, and moderate easterly weather, and dry.

Respecting management of fisheries.—I, as well as other oystermen, felt deeply aggrieved, and unjustly treated when the beds were leased without due warning, more especially when a little reflection would have shown that it was a scheme calculated to exclude oystermen, and throw the whole of the fisheries into the hands of men who were notorious for unjust and unscrupulous dealing in every relation with oystermen. It threw a great many men out of employment who found great difficulty at the time to get other work, and many families were starved in consequence. Yet I have no desire to return to a similar state of things, nor to a system of licensing as was proposed; for I have now seen enough of these beds, also from an experience of five years employment in the oyster trade in Sydney with Mr. G. Clarke, Market-street, about one year in a shop of my own, South Head Road, also close on a year with *Oyster Company* at *Balmain oyster-store*, then six months at first opening the oyster-beds, Brisbane, to feel assured that without a *strictly enforced close season* of four or five months licensing would be a mere change of name instead of a change of management: an encouragement of instead of stopping all the evils of skinning. I for one, and I also think most other oystermen, especially the steady men of the class, are strongly disposed to engage in culture under a reasonably long and secure lease, especially if lease were made renewable under a system of assessment by arbitration on expiration of lease; and in addition to the necessity of preserving the oyster and spat during the breeding season and while the oyster is recovering from spawning, a *close season* also would be an absolute necessity to enable, or it might be to compel negligent farmers to improve their respective leaseholds; while at the same time the licensee, if licenses be granted, would be thereby restrained from destroying the young oyster at a time it is so extremely liable to injury; likewise the relatively few Sydney shop-keepers could very readily arrange to sell fried fish during that season, which is also a very profitable trade, though not perhaps so profitable as that of oysters; therefore, it can by no means be deemed a hardship even in their case, while it would also have the effect of promoting the interests of the other fishery. Moreover, the "run" on the oyster the first part of the open season would fully compensate any loss of trade likely to be thereby sustained.

Respecting licenses.—Suppose, for example, I and others took leases for culture in this fishery, speculating on stocking our respective leaseholds with spat off the nearest beds, and oysters got scarce in the Manning, or Sydney dealers were short: what would hinder the Manning licensee coming across as before, or the Sydney dealer advancing cost of license, price of boat, provisions, &c., to any one they could pick up on the instant, taking care, according to custom, to exact to the uttermost farthing the sum so advanced out of the oysters first sent up; and as the custom heretofore, clearing off in a short time both marketable oyster with attached spat? Is it at all likely either of those parties would sell young stock to us unless they got a price equivalent to that paid for marketable oysters? Now the time requisite to separate the spat would be, at least, per bag

bag equal to ten times that required to fill a bag of marketable oysters. Hence, therefore, we would be required to pay at least fully ten times more for spat than would be obtainable in Sydney for the grown oyster; but, knowing our necessity, would such men be at all likely to sell even at this rate? Obviously in any way we would be at their mercy! Consequently, unless some special and strict reservation of beds be made for the sole purpose of enabling the leaseholder to supply himself with young stock, what advantage would the leasehold be to the individual? But should it be seen advisable to grant licenses, I submit that licenses should be granted for one fishery district only, and in such number only as that district will bear; and of course if licensee desire to remove charge in addition, a similar fee for the district removed to, viz.: £10 or £20 which is not too much for an oyster license. Lessees also should be permitted to hold licenses, *i. e.*—if licenses be granted.

JOHN HUGHES.

SIGNAL-MASTER John Pennington's Statement.

From 1831 I had occasionally traded to Cape Hawke, but in 1859 I came to reside, engaged by Mr. John Booth to punt shingles, &c., to traders; thereafter engaged by Government as Signal-master.

Forty-five years ago we got only cedar, and crew generally took a few bags of oysters. Then the bar was closed, and had been as long as the blacks could remember, consequently we loaded outside, and only came when a cargo was ready for shipment. In 1848 or 1849 the bar was opened by a heavy flood, but not till 1859 was there depth of water to cross, and in that year I took the first vessel over it. Thenceforward depth has continued pretty steady over eight and nine feet, excepting an occasional interruption of only a single neap-tide.

Forty-five and forty years ago we had discovered six or seven of the eleven beds which now produce oysters. However, only on No. 1 bed, and a few tidal oysters on beach in front of present township, did we find any; but in 1859 several of the beds had got stocked, and in October or November, 1872, all the shell beds not in the lake, excepting that numbered 12, were more or less well stocked, as follows—Before 1863:—

No. 1 bed was the only one stocked forty-five years ago when bar was closed, but in 1859 it had been silted with sandy mud and shell. In 1872 however, it had come in for a small share of the crop, and since then a few clumps are found on it. Probably this bed had been silted in the rush of water when bar was opened, as it just lies in the way.

No. 2,—through which Government cutting runs—was in 1859 covered two or three tiers deep in many parts by good saleable oysters, but skinned as clean as a whistle in 1864.

No. 3. I speak of (1859) as well stocked as above.

No. 4. Fairly stocked, not near the quantity, but finer quality.

No. 5. Not many, but larger and better shaped, and fine quality.

No. 6. Small patch, few oysters, but superior quality.

No. 7. A clump here and there, apparently beginning to form a bed.

No. 8. None for some years later.

No. 9. None for some years later.

No. 10. Small bed, finest oyster in fishery, three and four tiers deep.

No. 11. Only here and there a clump, apparently in process of forming.

No. 12. None, nor any yet, though as promising a bed as the best. While trading for cedar we got a few bags each trip off No. 1, and from 1859 I occasionally send up a few got off the most convenient bed.

In 1868 I found, in all, three bags on No. 9, which I sent to Mr. Clarke, Market-street. I asked only 10s., but the oyster was so superior that he was extremely eager to get more, but I searched in vain, yet in December, 1872, this bed was covered with young oysters.

In 1863 about nine oystermen came up from Sydney, gathered them up in baskets and got blacks to cull on the shore, leaving the small ashore to die. About the middle of 1864 the beds were completely skinned, when they left. These men got 2s. 6d. a bag, and Mr. John Booth had a contract to convey them in bulk to Sydney at the rate of 3s. a bag.

If I remember rightly, no oysters again appeared until about Christmas 1866, and after that the beds got again well covered, but not so well as before 1863, nor so well as in 1872.

In 1869, about July, eighteen or twenty men came over from the Manning, and by April or May, 1870, had cleared every bed of old and young alike, excepting small pockets here and there, about the edges of the beds which were overlooked, and those trodden into the mud, which for some time afterwards kept three or four of resident oystermen going till they were eventually starved off.

In December, 1872, to the surprise of every one, the beds were noticed to be covered with a thick crop of young oysters the size of sixpence, and now for the first time No. 9 bed, on which in 1868 I could get only three bags, was also densely covered, but none on No. 12, though as before observed, as likely a bed as any.

In 1873 beds were leased, and soon after, although oysters were very small, two boats were set to work on No. 4 bed. These boats, with only a month or two intermission in the winter, have been working ever since. Now only two beds, which have been little worked, appear to have anything on them; one of them is the large bed No. 2—the spawning of 1872—which has not yet attained to maturity, or to the size that oysters were before the skinning of 1863. However, although there are not so many on it as before that time, yet I have never seen a bed like it excepting those flats inside of Towra point, south side of Botany Bay, of many acres extent, covered several tiers deep, sixty years ago, when I and nine others were engaged burning lime off it for Mr. Street, who had the Government contract to supply lime.

Spawning.—I am sorry to say, now I see the importance of the question, that I have not taken much notice of spawning, indeed I never knew a dredger who did. However, when I think of it, it seems to me that, as in this case of Cape Hawke, the spawning is prolific only every other year, as in 1866 and 1872, when, as aforesaid, a most abundant crop had covered the beds before any one knew. I am perfectly certain of that of 1872, and of the kind of weather at the time, but not so clear whether the other in 1866 or 1867, but whichever the year 1866 or 1867, I am positive the weather was similar to that of 1872, unusually strong north-easterly winds, *i. e.*, black north-easters, thick overcast weather seaward, but dry, and generally moderate at night; whereas the ordinary summer weather here is lightish north-east to south-east winds, and a stiff southerly now and then, and at times a heavy thunder-shower or a few hours' rain from south-east.

I am also positive that spawning must take place, if not at the same time nearly at the same time, over all the beds, at least on this fishery, though not at the same time every year, as that of the most remarkable must have occurred early in November, while the others, excepting that of last year, occur some time in January. Those like myself who live pretty much on an oyster and fish diet, can readily tell the time, for then for a few weeks before, the milkiness of the oysters is general, and all at once, equally as general, the oyster becomes watery and flabby. However, on all the beds an oyster here and there is found which has neither been milky nor lost its condition all through the season of general spawning. Last year, however, the oyster was everywhere in good condition, from the winter of 1875 until this season's spawning took place, end of January, 1877. I might have noticed more of the habits of oysters, for my experience of them has extended over a period of sixty years, being since 1812 in the Colony, and aged twenty-three when I arrived, and for years, at the time before mentioned, I was constantly employed amongst them, chiefly on the southern shores of Botany Bay, where the bays to just within George's River were densely covered to an extent I have not seen equalled, yet I have seen most of the beds in the Colony. Then, however, oysters were only thought of for lime-burning; and nearly all Government buildings throughout the Colony were supplied therefrom. It has only been the result of the two several skinnings referred to leaving scarce an oyster to be got, which has particularly forced the subject on my notice, and the result is that only two seasons, viz., either 1866 or 1867 and 1872, have been prolific; all the others, that of 1864 to and including the present, 1877 have been unprolific, though in all save 1876 the oyster spawned; nevertheless, in no one season have the spat exceeded the proportion of one spat to twenty, thirty, or more older oysters.

Destruction of oysters.—The first set of skimmers, who came in 1863, picked them up in baskets and stored them on a shelving rocky flat on Wallis Island, blacks culled them, and all the young oysters were left to die; besides the schooner "Magnet" did not always come to time, and heaps of them died. But those dredgers got as many as twenty or thirty bags a day two men working together.

In 1869, the Manning men, some on their own hook; but two of them contracted to supply a Sydney man with 500 or 600 bags, which was got off No. 2 bed at the rate of 40 bags a day; (rakes and shovels were employed) then were shipped in a schooner, to lay down in Scott's Creek (Manning); however, it was reported that of this quantity all save 100 bags spoiled. Off same bed, and about same time, several men collected in a similar way 700 or 800 bags for shipment to Sydney; these were

stored by their camp on Oakey Island. However, the whole spoiled, and shortly after their departure from the district Tom Priestly erected a kiln, and with others made lime of the whole. These are the most remarkable cases of loss, but it is no unfrequent occurrence to have twenty to even 100 bags spoil, either while waiting shipment or by bar-bound craft. Eighty were thus lost the other day, although the poor man took every care of them, as it seems he suffers the entire loss. Then while all this skinning has been going on, not a single thing in the shape of improvement has been done even to the present moment.

JOHN PENNINGTON, Signal-master.

PORT STEPHENS LOWER FISHERY.

1. Both tidal and the few deep water beds, latter only round the rocky islets, formerly densely covered. Karun River and Limeburner's Creek, which contain nearly all the deep water-beds, examined only 2 miles up; therefore these remarks apply only to enclosed portion of plan: the other cut off. I have added Pipe-clay and Tellegarie Creeks, also Reedy Creek, all superior ground. Probably outline, lined by eye, may not be exact, but as to oyster ground it is.

2. Wantonly over-dredged, and tidal banks gathered and kept bare. Excepting a narrow fringe of inferior mangrove oysters round all low and marshy land, and the ordinary tidal rock oyster on the rocky points and islets; the tidal and whelk oyster on all the banks enclosed by *blue line* are of very superior quality. However, where formerly five and six bags were picked up in a boat's length or two, from half ebb to half flood—now not half a bag can be found on a mile of bank anywhere, nor from sunrise to setting. Corrie Island Creek, and yellow-coloured banks around west and south sides of Corrie Island were densely covered; now, however, shell-getters are stripping the bed and leaving puddles of soft mud in place of shell. Therefore, if this extensive bed is to be saved from complete destruction (a bed that would produce many thousand pounds worth of oysters yearly) *shell-getting* ought to be stopped forthwith. Besides, if any shell can be spared off it, it will, I apprehend, be all required in the culture of fishery.

3.—

- (a) The points on south side from Nelson's Head to Tenalba Point, and islands, excepting those in creeks, together with points of Fame Cove, and North Arm, North Shore, are of porphyritic rock, much broken. Everywhere else *within blue line* consists chiefly of sandy mud intermixed with shell, softish in parts, and more muddy and soft in middle of North Arm, west bend of Pipe-clay Creek, in Tellegarie Creek, and in Cromarty Bay; but in many places hard shell underlies from an inch or two to 2, 5, and 8 feet. On west side entrance to Pipe-clay Creek is bare pipe-clay running under the mud in bend, and here and there, running all over estuary, are found patches of shell bare, and also spread from bank to bank are three species of marine grasses, known as large and small turtle grasses, to which probably may be attributable the presence of numerous turtle; also several species of algæ. Amongst this vegetation, oyster, cockle, mussel, and whelk seem to thrive equally well.
- (b) Excepting the dense strip of inferior mangrove oyster above referred to, there exists not a marketable oyster from said strip to a depth of 3 feet low water spring tides, on any portion of these miles of the finest oyster-beds in creation for culture, and which the exercise of a little foresight might have had clothed with oysters worth £1 a bag for sale raw, or £2 to the country, preserved; for not in the Colony is a fishery more admirably suited in every respect for preserving purposes, whether it be oysters or cray-fish; of the latter it is not unusual for two men in one boat to catch 200 dozen in a night and commonly 20 to 50 dozen, besides being a fine feeding ground for every kind of fish we possess. In ledges and crevices of rocks not got at by dredge I find, by tongs, a fair quantity of mature oysters—the only mature oysters in the fishery. At times as many as forty boats have been employed at one time on the fishery, and for some time forty-five on the closing of the Hunter fishery. Indeed, until within the last twelve months, when the fishery could actually find existence *for no more than four or five men*, there has been not less than ten or twelve boats constantly employed from its first opening from fourteen to sixteen years ago.
- (c) All the beds are more or less intermixed with shell and sand, and on the very softest if there is anything to which spawn can attach it thrives well. The only approximation to London clay is the pipe-clay bed already mentioned; and on it (the bare pipe-clay) I picked up many whelks, as on all the banks, with one, two, and sometimes three last years' spat affixed; however I am told that the oyster of this bed is superior quality.
4. All marshes are marked with blue ink, and portions of the whole are covered at S. tides, and portions only 1 to 2 feet above high-water-mark. Alluvium and vegetable mould intermixed with sand, and in many parts with shell. The land on the north shore belongs to A. A. Company; that on south side, Government. All these marshes are superior ground, and fine sites for trench culture.

5. Only in the crevices of rocks, around points, and islands have I found a single mature oyster, none aged two years; and relatively few last year's, and none of this year's spat.

6. A fine shell mound just north of Cromarty's farm. Shell, as above described, around Corrie Island, and indications of it underlying the whole of the island over the rock. Shell all over within blue line round the islets west of Soldier's Point; and much shell has been shipped there, though none engaged at it at present. Shell off mouth of Tellegarie and Pipe-clay Creeks, extending west from the former to Malabula to point fully a mile off shore; and east from the pipe-clay bed nearly over to opposite shore of creek, and under mud in Cromarty Bay, Fame Cove, and in North Arm. In many places bare shell around islands, and in patches over estuary; also on most of the islands, and on east side of Pipe-clay Creek where it has been dug.

7. Oysters spawned this season in December.

8. November and December are the months for deep water oysters, from Sawyer's Point up, and "bankers" in lower fishery, March and April; some of these are now spawning. There is no evidence whatever to show that any spawn all the year round.

9. In small areas, I find every person I meet on the fisheries, especially those formerly and now engaged thereon, aggrieved by present system, and the unscrupulous and domineering manner in which they are too frequently treated by lessees. All the dredgers believe that off a few acres of oyster-ground double at least of present pay may be more easily realised than by working on skinned beds; and much more pleasantly, because as the skinning process proceeds, *to live*, the price must be raised per bag, and this appears to be secured with great difficulty, although from 15s. to 25s. and 30s. or more per bag is realised by lessee. Therefore when they, as in this case, can get only from four to six bags a-week all this season, they think that 4s. for bankers and 8s. for dredge oysters, and many men, as in Manning, for eight bags a week at 5s., is not a fair division of profit, especially when to obtain that quantity the work must be from daylight to dark, where formerly, and they all allege if it were not for the greed exhibited by lessee in thinning and not improving our natural beds, four or five bags were, and could now be, obtained in as many hours.

10. Ycs.

11. No. I have seen and heard sufficient to warrant me saying that if licenses be granted the skinning of beds would proceed as before, even in face of a close season of four or five months, unless expense were incurred in order to watch every bed and also to restrict every licensee to a given number of bags. Such course could only favour the few shop-keepers and dealers in Sydney, to the great detriment of Government in leasing oyster-ground, and in putting unnecessary expense on such lessees in stocking their beds. I believe it would answer every desirable purpose if each lessee were privileged, at a given fee, to dredge a given number of bags per season both as an encouragement, and as an assistance to improve lease as well as to live during the time that necessarily must elapse before his leasehold can become productive. And latter part of each close season, say twenty days might be allowed for the collection of spat off natural beds; also for a small fee, the privilege of getting shell for clutch. It appears to me such system would have greater force both as encouragement and restriction under a convenient plan of registering every bag sold than under one system of leasing, and another of licensing. Moreover, I apprehend it would give more satisfaction to residents of every description of the respective fishery districts, who, indeed, seem one and all fully aroused to a sense of the local importance of this industry. Then I also conceive it would be wise to consider the preserving aspect of the question, forasmuch as when even a small portion of the available oyster ground is in operation, more oysters will be produced than the demand for raw oysters would warrant; which, if no provision for preserving were made, would immediately influence further leasing and seriously affect leaseholders as well by reducing price; whereas provision for encouraging preserving

preserving would materially enhance present price and control its future. With this end in view fishery townships would be beneficial; and, indeed, in any case, I cannot conceive a possibility of doing without them. As in every case a landlord is expected to furnish a dwelling site, and convenience for carrying on the particular pursuit of his farming tenant; but this a water leasehold cannot afford, consequently a site of land should be attached to each leasehold.

12. I have neither seen nor heard of any. I am told 2,000 bags of mangrove oysters were laid on some of the up-river beds two years ago; but, as said in former reports, that is in no respect an improvement to landlord's benefit.

Gentlemen,

Your humble and most obedient servant,

A. B. BLACK.

UPPER FISHERY, PORT STEPHENS.

This is by far our most important fishery, not only on account of its numerous fine natural oyster-beds, banks, and extensive oyster-grounds (every spot contained in enclosed plan, to which I beg to refer for particulars, is good oyster-ground, and nearly all marshes, fit for trench culture), but also on account of its amazing productiveness.

It has been unremittedly worked fourteen years, not only by fifteen to twenty resident dredgers, and shell-getters of live oysters for limeburners, but also, as other less important or extensive fisheries got from time to time "skinned" the "skimmers" generally resorted hither in a body, in the fixed belief that though other fisheries failed, Port Stephens was inexhaustible. From time to time forty-five boats at once have been at work sending *spawning oyster and spat alike* to market. It is plain that no beds however productive could possibly withstand such exhaustive treatment. Accordingly, behold the results: probably not 1,500 bags young and old can at this moment be found on the whole fishery, quite capable if in fair condition of producing 30,000 bags yearly, without the least injuring its breeding stock. Besides in addition it possesses an inexhaustible supply of cray-fish, which with oysters are capable of furnishing all, either ourselves or neighbours want, of either article, raw or preserved, certainly as cheap and as good as they can be imported from America; and if beef didn't pay, there is no reason why preserving these articles shouldn't for the colonial market, if not for export.

With respect to productiveness as well as exhaustion, I beg to refer to enclosed statement of four respectable intelligent and experienced dredgers, every particular of which I have had fully confirmed, as well from other sources as from an accurate examination of the beds and fishery.

As regards *spawning*; of each off the seven beds therein referred to (which have been *partially* reserved, and in fact is the only "stand by" of importance), with the "tongs," I lifted, in each case, from a space not exceeding two square feet, fully 500, or about half a bag of oysters, which were lying one above another just as thrown down in the "clump," and which had lain thus undisturbed since April 1875, when laid. And so far from not improving in consequence of crowding, they had certainly improved, at least as much as their fellows laid at same time, which were lying singly adjoining, for I compared them in each of the said seven beds one with the other.

But the most remarkable circumstance connected with the experiment is, that these "*mangrove oysters*" had in one year changed their time of spawning from their regular time, namely, April, to that of dredge oysters, viz., November or December, and also the fact of shaping themselves to a form similar to that of the latter. They must have spawned (as shown by the young oysters, two year old, abundantly attached) just as laid down. Then next year (equally shown by a fair crop of one year olds) to have spawned probably in December; then this season shown unquestionably, by a fair sprinkling of spat four months old, to have spawned at same season of dredgers in November and December, confirmed also by being in process of recovery. Hence may fairly be inferred (1st.) That oysters laid many tiers thick will thrive as well as if laid singly. (2ndly.) That lying more than one tier deep, the upper layers will fix more spawn as it rises than if lying either singly or only one tier deep on a bed, consequently the latter must be less productive even relatively than a well-stocked bed. Therefore skinning won't pay.

In addition to the suggestions dredgers submit in statement (which I venture humbly to recommend, not only on the merits thereof, but also because such seems to have been hazily floating in the brain of every dredger I have chanced to meet, without coherence or chance of emergence, there is also a strong desire expressed to be freed from the thralldom to which they are subjected by *Sydney buyers*. Happily, however, this could be as easily effected as it would be generally beneficial, viz.: by providing that all oysters arriving in Sydney be sold by auction at the Fish Market or other convenient spot, by public or Government salesmen, subject to a reasonable percentage, to defray cost of wharfage, transport, buildings, and salaries of salesmen, &c. Such course would fully accomplish the end desired, and certainly defray all necessary cost. Besides, why should fish-selling be so regulated with proved advantage, and that of oysters omitted?

Gentlemen, I have &c.,

A. B. BLACK.

STATEMENT of undersigned Dredgers constantly employed on Port Stevens Fishery, from its opening, 1862, until present time, April, 1877, all of of whom own land adjoining.

End '62 or early in '63, working to any extent first began; and unlike any other fishery, continuously ever since.

A line from Myall Creek south to Nelson's Bay marks eastern limit of payable ground. Recently, however, oysters have appeared on south shore, eastward; on both north and south shores westward; around shore, and banks; off all rocky islets; a little up some creeks, and to the head of navigation in others "bankers" abounded, and dredge oysters on numerous beds from Goat Island to head of Karuan and its several branches; also a thick crust of mangrove or rock oysters (generally unmarketable) exist everywhere in their separate limits, always in a line above that of bankers, which latter are peculiar to this fishery; and in quality equal to most dredge oysters, whilst the whelk variety are superior. The last two years about 2,000 bags were sent off annually.

March and April, '75, lessee had 2,000 bags mangroves laid down on seven different natural beds, which have improved less than was expected, and not so much as we severally have experienced in laying down dredge oysters.

Probably the sudden change of habitat influences the matter. Be that as it may, just after "laying" they spawned, and being clean, and laid several clumps thick, a good crop of spat settled on the "mangroves" alone, not on the other portion of either of the seven beds; also, singular to say, most of them spawned this year, but same time the natives of the respective beds spawned; and have just recovered condition. That fact, together with the strongly-marked tendency to grow into a similar shape to that of said natives, clearly points to the inference that all the aforesaid varieties may spring from the one parent; also that difference of shape, and habits, however great, is due to mere accident of position.

Measure of work.—'63, and six following years, not less (often more) than twenty boats were constantly at work. Then nigh twelve months after the "closing" of other fisheries more than forty half the time, and afterwards twenty to thirty boats, which continued till fishery was leased. The first year or two, of which, twelve to fourteen boats were employed until absolute scarcity reduced the number to seven, which also, from the same cause, have been, in the last eighteen months, reduced to four regularly, who eke out a living on their land. The balance of the seven come and go,—as any bush-work pays better and is easier.

Measure of "catch."—'63 to '70, the daily "catch" kept regular, but falling off towards '70; but as scarcity increased, so did labour to meet it. Early part of that time ten and even fifteen bags of bank or dredge oysters were got in five or six hours; the latter part it took twelve to fourteen hours to get that quantity. But after twenty of the forty boats mentioned left, the skinned beds would only yield ten to twelve weekly. Even this quantity gradually diminished till the past twelve or eighteen months; when work as we may, from daylight to dark, four to five bags weekly is the utmost obtainable of dredge and eight to ten of the best of mangrove oysters, at 4s. and 8s. respectively—raised from 3s. and 7s. by a recent "strike." None of the old bankers exist; hence the resort to mangroves.

Evidence of productiveness.—The "catch," as stated, conveys an accurate idea of that of the dredge oyster, whilst that of bankers will be understood by the following facts:—Captain Banks supplied Sydney and Newcastle limekilns with live oysters. He laid his schooner on the soft bank, raked together the oysters, and completed the loading within her own length around; and in those times we got ten bagfuls in length of boat.

Present state of banks.—The banks, formerly densely covered, are quite bare, not a thing on them to fix spawn, save the whelks on beds they affect, which often fix spawn, which as soon as marketable is taken, whelk and oyster together. Even the extensive and very prolific natural beds occupying the whole of Corrie Creek and surrounding banks to west and south are totally

totally abandoned to shell-getters, who are turning over its surface to procure a layer of shell from 6 inches to 2 feet thick under 1 or 2 feet of sandy mud. The bed is being rapidly destroyed for oyster-breeding, which for that purpose would be 100 times more value to the country than any value realised from shell-getting.

Use of shell in culture.—We fully agree with Mr. Black, that if dry bank-shell were strewn on banks or under-water-beds, at time of spawning, being clean, spawn would as certainly fix thereon as on stone or any other substance accidentally thrown on banks, a fact which is forcibly brought to our notice each spawn-time. Besides, shell would be less costly to lay and handle, and easier to separate from spat, consequently it is the best material for the purpose; therefore ought to be conserved for use of fishery before it is too late. But at present Church and School Department, A. A. Company, and Government are alike disposing of them as fast as possible.

Spawning.—Deep-water oyster from middle November to end December, and fully recovers by April; bankers and mangroves from 1st April to middle May, recover by August. From this course we know no omission; nevertheless only two cases of prolific spawning have occurred within our knowledge, and neither of those were general. First, in November, '67, which densely covered peach-tree bed and all the other beds; thence up to the head of navigation in the Karvan and its several branches, very thick on the extensive "middle bed." Second was November, '72, but only on Sawyer's Point, Connor's and mussel beds. It will be perceived by map that several main beds were omitted, and none since opening of fishery has been observed to settle in Limeburner's, Deep Creek, and in several of less importance. Notwithstanding, a dense covering of spat settles annually on both mangroves, and mud on Muddy Island, Swan Bay,—a low soft mud flat, covered with mangrove vegetation, and every tide flows over it. This islet alone would greatly assist in re-stocking the exhausted beds if a system were devised to admit of it; indeed, every year it is found that spawn settles here and there everywhere on all beds, but nothing of importance. In fact, all the ground west of Schnapper Island may with truth be said to be one vast oyster-bed, for clumps of oysters are found occasionally everywhere, both in deep and shallow water.

The several facts instanced constrain the adoption of the following inferences:—

- (1.) That, naturally, a prolific crop occurs at rare intervals, and by accident.
- (2.) That a bed bare of oysters cannot be expected to fix spawn as it rises.
- (3.) That spawn each year may readily, by means of shell used as above described, or other substances, be fixed in quantity to re-stock exhausted or supply artificial beds.

Hence we are induced to suggest, with all due deference, the following conditions, conceived by us best adapted to encourage culture and secure its success, viz.:—

- (1.) Long leases, say fifty years, rent encouraging; and for every future term, rent assessed by arbitration, tenant having option of re-leasing.
- (2.) In all cases lessees must reside on leasehold.
- (3.) That improvement of leasehold, in a given degree, must be compulsory on pain of forfeiture, on notice given, and without appeal, and without compensation.
- (4.) That the first few years, at least, tenant to possess the privilege of procuring, free of cost, stock off natural beds, also shell for clutch off dry-bank beds.
- (5.) A "close season" to protect natural beds, and at proper time enable tenant to collect spat for stock, also other necessary operations of culture not convenient in open season.
- (6.) Licences ought not to be granted; such would be direct encouragement of "skimming," as practised heretofore; besides, it would be impossible to prevent the plunder of private beds. Licences would in the nature of things mostly be the unthrifty class of dredgers picked up in town by Sydney dealers for payment of license fee and a dredger's outfit, to be re-paid, with interest as usual, by consigned oysters.
- (7.) Fishery townships would be essential for dwellings and general conveniences of fishery operations and trade.

HENRY CURAN, Limeburner's Creek.

JAMES JOASS, Swan Bay.

JOHN HOLDOM, Sawyer's Point.

CHARLES EVANS, Carcarr Point, Swan Bay.

HUNTER RIVER.

It would require ten days at least for an examination of the Hunter equal to that bestowed on the northern fisheries reported on. However, what I could I have done in order to comply with the directions contained in letter dated 13th inst., and accordingly forward report to arrive a.m., Saturday 21st inst.

These beds, and oyster-ground relatively to those of northern rivers, are contained in a much narrower space; in form more compact; in shoaler water; and seem to me to be better disposed than the most of them, both as respects conformation of land or channel, producing a favourable run of tide, and no intervening obstruction (as high land or heavy timber) to strong winds at spawning time, producing the necessary agitation of water to cleanse both oyster and clutch to a condition fittest to fix the rising spawn.

This reason alone seems sufficient to account for not only a greater abundance of spawn generally settling each year in this river than seems the case in those more to the north; also for some of the alleged anomalies of time of spawning, &c.

The state of clutch-beds, in hills and hollows, shows to what extent the beds have been misused, and even now the bow-dredge drags up as much shell as oyster.

All the beds rest on old shell-beds, hence are not so easily destroyed as those resting on less suitable bottom or on a thinner layer of shell.

Condition of Oyster-beds.—I tried all the beds in back-channels, but not all in main river, while I closely examined the operations and dredged oysters of each of the eight boats dispersed dredging on the extensive bay or Fullerton Cove bed. The back-channel beds, considering the generally exhausted state of beds to the north, may be said to be fairly stocked, and I think from inquiry judiciously worked. However, considerable vacant spaces exist wherever I tried; and in a "fleet" of 35 fathoms not a half-dredgeful could in any case be got, while on the bay bed, in about same length and a dredge 4 feet wide about, as said, four to five bags daily are got where formerly ten, fifteen, and even twenty bags under similar conditions were got, in five or six hours, instead of ten as now. Moreover, a great deal of what is got are two and one year old oysters, and comparatively few either mature or of this season's spawning.

Spawning.—Over all the fishery (save the few untried beds) the oyster presents an appearance of recovery from spawning, which would correspond with the age, three or four months, of the relatively small quantity of this season's spat observable; and without an exception, the age of the respective seasons' spawning—namely, '74, '75, and '76, are strongly marked and very perceptible on comparison, and none appear which may be classed at any intermediate age. Although all the dredgers referred to seemed to be suspicious and accordingly very reticent, yet I ascertained that some time back, about or before Christmas, oysters were spawning, a fact, they said, clearly observable by the white spawn flowing from them as tumbled out of the dredge on the stern sheets of the boat. I beg to draw attention to these facts, as against the manager's statement further on.

It may fairly be inferred from the above that, while the respective crops of '74 and '75 were tolerably prolific, that of '76 i.e., this season's crop, was a very poor one.

I have not yet discovered any evidence to lead to the supposition, contrary to the general law of nature and the current opinion of experienced men, that oysters spawn (as some few here allege) all the year round. It might, however, be as has occurred in the case of more learned men—the young of one species might be taken for that of another. Be that as it may, it is a generally accepted fact that weather and its concomitant effect on tides, their temperature, &c., hastens or retards, as the case may be, spawning to the extent of even six or eight weeks, which no doubt alike affects dredge and tidal oysters; the latter of which, if the case of Port Stephens be taken as conclusive (a fact known to all experienced dredgers) spawn on the average about four months later than the former; a change probably due, as observed in a former report, to difference of habitat, and not from difference of species, as shown by the extensive experiment of transplanting mentioned in report on Port Stephens fishery.

However,

However, as obviously the question of spawning will be of importance in connection with the future of the fishery, I humbly submit it would be desirable that arrangements be made to determine a question which must necessarily occupy several years.

Oyster-ground.—I may fairly say that every spot of tidal-ground, creeks, all Fullerton Cove, and probably the whole bottom of the river, is superior oyster ground, and the unalienated islets for trench-culture, and spots also suitable for fishery township sites.

Shell.—Limeburners adjoining east entrance to Fullerton Cove, on late Dr. Mitchell's land, is an extensive bed, apparently a very prolific oyster-bed before the present geological change occurred—a layer seemingly over all Spit Island; also a streak along fore-shore of A. A. Company's land.

The verbal statement of Mr. Anderson, Managing Lessee:—

- (1.) That oysters spawn all the year round.
- (2.) That September or October, '75, laid on skinned bed close to Mosquito Island 600 bags " mangroves," which are slowly improving and growing to shape of nature of bed; but has paid no attention to their spawning.
- (3.) That river was closed four years three months prior to leasing, which was against—not favourable to increase,* shown in the bareness of beds on leasing.
- (4.) That first few months of lease worked pretty hard with seven or eight men, getting first part three bags, down to two and one daily, when the river was spelled for about six months; meanwhile had two men employed to keep beds clean, as mud is continually settling, but of course more in floods, which would bury oysters if left alone; and only occasionally got a bag or two of oysters. Then increased by degrees to six boats, and just before Christmas to nine; now averaging four to five bags daily, for which they are paid 4s. a bag; 234 bags weekly.
- (5.) Spelling beds is mainly ruled by state of market; when Brisbane and other oysters come in so as to glut the market we try to avoid it by spelling. We also possess an advantage by being in a position to ship direct to Melbourne whenever we please.

I have had a short conversation with three or four old experienced dredgers not engaged on fishery; their views precisely coincide with those expressed in the statement of Port Stephens dredgers.

I regret having no map, but have taken a rough sketch which can be readily transferred to the accurate nautical chart of the Hunter.

I have, &c.,

A. B. BLACK.

PORT JACKSON AND TRIBUTARIES.

January, 1877.

The Commission on Oyster Culture.

Gentlemen,

In obedience to instructions, I have the honor to append my report in respect to the oyster-bearing capabilities of Port Jackson and its tributaries, Parramatta and Lane Cove Rivers and Middle Harbour.

Replies to questions.

1. These rivers formerly contained large beds both of mud and drift oysters.
2. Yes, by over-dredging, and by the debris washed into them by the heavy rains.
3. There are quantities of drift oysters on the rocks, and in two or three parts the mud oysters are forming themselves into beds again.
 - (a) The banks are for the most part composed of sandstone rock, and soft mud on the shores.
 - (b) The rocks are partially and in some places literally plastered with oysters of all growths, from spat to fine well-sized oysters.
 - (c) There are beds of mud, principally of a very soft description.
4. Yes, mangroves on soft mud on the upper portion of the Parramatta River, covered at high tide. I am unable to distinguish private from public property, except those parts which are built upon.
5. The quality is very fine, age from spat to full-grown oysters. Bed confined principally to the rocks.
6. There is abundance of sandstone rock on the shores.
7. On Lane Cove and Parramatta Rivers good marketable oysters can be found all the year round; spatting is not confined to any particular season.
- 9 and 10. I do not think that these waters should be leased, but rather reserved for public recreation and closed during the winter months.
11. I think the spat might be removed with advantage to the growth of more mature oysters.
12. None of the natural oyster beds have been leased.

In the Parramatta River the most suitable localities I found to be from the point of Five Dock Bay to the Pennant Hills Wharf; also the bay near the Lunatic Asylum, the rocks at the mouth of Hen and Chickens Bay, and the main channel off Morrison's Bay.

Originally the oysters extended from Darling Harbour to the Flats in more or less quantities, but a few years back they became almost extinct from over-dredging—I refer to the mud oysters. I have no doubt that the sewage matter together with the light soil continually washing from the cultivated lands has tended in a great measure to destroy many of the beds which at one time gave abundant yield—in places where old catchers informed me immense beds existed I found on dredging nothing but a soft slushy mud.

On the bed off the Asylum the mud oysters are spawning, every one the dredge had collected was covered with brood and spat. This class of oyster is very large but of a coarse flavour, and will not keep more than (say) twenty-four hours after removal from the water.

The rock oysters are in fine condition, they have been so for some months and show no sign of change—they grow very quickly on the sandstone skirting the river and on the wharfs. Oyster-bearing foreshores exist only in small narrow strips, all else is mud of a soft nature, and the rush of water from the hills during wet weather would be very detrimental to artificial parks.

Soft mud is the usual bed formation of the river, and could not be utilized except at great expense. On the flats if the bottom were firmer, oysters could be fattened in great quantities.

In Lane Cove the rocks are covered with brood and ware—the formation is similar to that of the Parramatta River; it is only in narrow strips from Tamborine to Burns Bay, that oysters will lay. In this river Mr. Josephson laid down an artificial bed, and was very successful in his method of cultivation.

In Port Jackson oysters of all sizes and descriptions abound, especially on the northern side—in parts the rocks are really plastered with the mollusc. The beds are closed under the Oyster Bed Act and have been for some three years, and as the rocks are well within the view of the police the oysters are protected, and are a true index of what these waters will produce, even if left to the unaided efforts of nature.

In Middle Harbour brood and ware are plentiful, so much so that eighteen or twenty bushels per man per diem could readily be collected. The oysters here do not grow to any size, the water being too strong. Like Port Hacking, it is admirably suited for the production of brood and ware for layings in places more favourable to growth and fattening.

I am of opinion that it would not be desirable to lease these waters for oyster-fishing; they should be reserved for the use of pleasure-seekers, and the brood and ware utilized by removal to more genial localities.

Whatever may be learnt from other countries as to the various methods of oyster-culture, little is practically known as to their adaptability to the oysters on this seaboard; and if it is the intention of the Commission to recommend the artificial culture of oysters, it may be a prudent step to establish somewhere in Port Jackson or its tributaries an experimental oyster farm, where the several methods adopted elsewhere, and others which may be suggested, could be tried.

I have, &c.,

W. J. LANGHAM,

Inspector of Oyster Beds.

BOTANY

* Just as likely to be caused by poor crops the first year or two of closing, together with the "heavy rush" of dredgers on it while it was a few weeks opened just prior to leasing, in which time an enormous quantity of oysters were got.

BOTANY BAY, COOK'S RIVER, AND GEORGE'S RIVER.

To the Honorable the Commissioners for Oyster Culture.

Gentlemen,

George's River, February, 1877.

In obedience to instructions, I have the honor to report, for the information of the Commissioners the result of my examination into the oyster-bearing capabilities of Botany Bay, George's and Cook's Rivers.

- 1.—They were all largely oyster-bearing.
- 2.—By over-dredging, exposure to easterly gales, and sand drifts.
- 3.—Replies to these questions may be gathered more conveniently from my report in chief.
- 4.—Marshes exist on the south side of Botany Bay and Cook's River, and in one or two parts of George's River; they are chiefly soft mud and sand. I am not aware to whom they belong.
- 5.—Of all qualities, sizes, and ages, and, as will be gathered from my report, principally in George's River.
- 6.—Dead shell and rock on south side of Botany Bay, and all rock in George's River.
- 7.—The time of spatting is consequent upon the seasons and depth of water.
- 9.—Moderately sized areas.
- 10.—Yes.
- 11.—Yes.
- 12.—The only considerable improvement is in George's River, opposite Mr. Emerson's residence, and referred to in the appended report.

Botany Bay.

In my examination of the water, I failed to discover any live oyster, except a small bed in Marbray and Keeney Bays, chiefly a deposit of spawn on the mangroves. However, I discovered a large extent of dead mud-oyster-shells, extending from the old wharf at Sans Souci to Sandringham for and upwards of a quarter of a mile in length, with a mean width of 170 yards. Overlaying it is a crust of small shells and sand, and a species of coarse coral which was alive with marine insects. I was not able to ascertain the depth of the deposit, but after cutting through the crust the dredge showed nothing but clean dead shells. This deposit was totally devoid of live oysters or spawn. The whole bed of the bay, with the above exception, seems to be composed of dead shell smothered with drift sand. And however important the bay may have been as regards its oyster-bearing capabilities in former times, it seems to me that, owing to its exposure to easterly gales, and the eddies produced by the tides, causing the sand-drift to distribute in all directions, it cannot now be relied on as a field for oyster culture.

Cook's River

Is totally devoid of oysters. The mollusc was once plentiful in it, but it has not been worked for nine or ten years. The banks are composed of soft clay and overlaid with drift-sand, and, like Botany Bay itself, is by no means a desirable field for culture, *i.e.* to say, it would take a large outlay of capital to make and form beds in it, which on other rivers could be formed at comparatively little or no cost.

At the risk of exceeding my instructions in another respect, I will venture to remark on the system of "stalling" in connection with net-fishing, which is practised in these and other waters. The system is to fix stakes at the north of shallow bays. The fishermen combine and join their nets, so as to extend the whole width of these bays. This is done at high-tide. At low-tide the bays are left dry, and fish of all descriptions and size are thus caught. The marketable fish are collected, and the remainder in proportion of at least two-thirds in number are left to die in the mud. The practice is so general that the destruction of fish is immense—almost beyond calculation. Without fear of contradiction, I can assert that not only in Botany Bay and its tributaries, but in every water within reach of the Sydney Fish Market, there is not a bay in any suitable inlet in which this "stalling" process is not carried on.

George's River.

I inspected this river from the Salt-pan Creek to its mouth. It is at present under lease to Mr. A. Emerson. The mode of catching oysters on this river is by diving and the tongs. Owing to the rocky nature of the bottom the dredge is seldom used. Mr. Emerson has introduced a very complete diving apparatus, by which, with the aid of a covered punt, he can take oysters in most weathers. He has from twenty to thirty persons in his employ on the river. Some of them are South Sea Islanders, who dive in the shallow parts where the depth does not exceed say 10 feet.

These also collect fine marketable oysters from the rocks; indeed, the oysters in the river as a rule grow in the crevices and on the rocks even in the deep water, and can be obtained by the help of the diving apparatus. The banks and the bed of the river between the rocks is composed of a very soft description of mud, quite unsuitable for carrying oysters. The oysters are a fine sample, one of the finest brought to market. They are very prolific, exhibiting an unusual growth in a given period.

I note one exception to the generally soft nature of the mud of the river; it is in Snako Bay, where there is a bank on which oysters would readily grow and fatten.

I should not omit to give special mention to an effort made by Mr. Emerson to improve the already naturally great oyster-bearing capabilities of this water.

In the bay just fronting his residence he has stocked an old natural bed with brood he obtained from Port Hacking about two years and a-half since. The bed is about a $\frac{1}{4}$ of a mile in length by 150 yards in breadth, and on it were deposited several thousand bags of brood. This brood has now developed in the comparatively short space of two years and a-half into a fine, large, well-flavoured oyster. I can speak with confidence in respect to the fact, inasmuch as I had the opportunity of seeing the brood soon after it was laid down, and a more misshapen unpromising article it was almost impossible to conceive.

The Wooronora is a tributary of George's River; is not suitable for oyster culture, its beds being composed of sandy flats.

I have, &c.,

WM. J. LANGHAM,
Inspector of Oyster Beds.

CROOKHAVEN AND SHOALHAVEN.

The Commissioners of Oyster Culture.

Gentlemen,

I have the honor to report upon oyster-beds, Crookhaven and Shoalhaven.

Replies to questions.

- 1.—As prolific as any in the Colony.
- 2.—Yes, and but for their remarkably recuperative powers would now be entirely destroyed.
- 3.—
 - (a) Principally of mangrove swamps.
 - (b) The few rocks which exist are covered with brood and oysters.
 - (c) Mud and shell.
- 4.—Yes, wholly covered at high tide—mud and mangrove.
- 5.—I have set this out in my general report.
- 6.—Only the red stone mentioned in my report.
- 7.—Spatting depends on the seasons.
- 9.—Moderately sized areas.
- 10.—I think the Government should retain all natural beds in its possession.
- 11.—Yes.
- 12.—None.
- 13.—I have nothing to add, except to record a generally expressed opinion that the present monopoly of oyster-bearing waters should be broken, and that the industry should be made available for the general public.

The

The oysters commence at the south-east side of the Crookhaven River; they are found on the rocks in large quantities, and they extend up the river in the mangroves for a distance of four miles; besides these, are three very prolific natural beds, averaging (say) one hundred and seventy yards in length by thirty yards in breadth. The bed oyster is large and well flavoured, and at maturity is as fine a sample as can be shown in the Sydney market. These beds are composed of mud and shell, and their average yield I estimate under proper care and working would be about three thousand bushels per annum.

Curly's Bay, an inlet from Crookhaven, and almost dry at low-water, is skirted with oyster-bearing mangroves; these oysters require some cultivation to mature them, but the lessee sends them to market in an immature state; they have borne in great quantities, but the constant stripping for market has reduced them very considerably. There is a large area immediately adjoining their habitat on which they would readily grow and fatten with no labour or expense beyond the mere laying down; the cost of such laying would be (say) four-pence per bushel. The brood is more than sufficiently abundant to stock the whole of the present unused oyster-bearing ground in the river. Besides the mangroves, there are in Curly's Bay five small mangrove islands, which, with one exception, are covered at high tide—they abound with brood; some of the smallest of it the lessee lays down in the channel in a depth of (say) three feet at low-water; the larger, though not marketable, he sends to Sydney for sale. There are deposits of a red stone admirably adapted for use in the formation of artificial beds, and by its use a large extent of at present soft mud flats could be turned to a useful account.

Comerong Island separates the Crookhaven from the Shoalhaven River. A portion of this island is a mangrove swamp, and is prolific in brood, as also are three adjacent islands, which are wholly covered at high tide. The entrance from the Crookhaven to the Shoalhaven is by a dyke formed by the late Mr. Berry. The oysters accumulate on the stones here, and grow very fast; they would be a first-rate marketable sample at two years and six months, but as is usual here as in other places, they are not allowed to remain long enough. The scour of water in the dyke seems to exert a very beneficial and marked influence in the growth of the oyster.

On the Shoalhaven there is a belt of mangroves near the mouth at Coolangatta, opposite the residence of Mr. David Berry; they are not so extensive as those in Crookhaven, but the oysters on them grow with equal luxuriance. The bed of the Shoalhaven is composed chiefly of sand and debris from flood deposit.

In Broughton Creek, a tributary of the Shoalhaven, there are four small natural beds, which, under proper care and culture would yield annually (say) twelve hundred bushels, but at the present time they are almost bare. I form my estimate by previous knowledge of these beds.

The lessee is non-resident, and very little if any care is bestowed on the property; he seems to be content to reap the natural products, not even giving time for those products to arrive at maturity.

In concluding this report, I take occasion to remark generally upon the very little interest lessees take as to improving their holdings; they for the most part seem satisfied with Nature's efforts, and never dream of bestowing attention on their properties; the result must be, to exhaust the oyster-bearing capabilities of the waters of the Colony, and to destroy an industry which, if carefully protected, might afford a means of livelihood to thousands.

I have, &c.,
W. J. LANGHAM,
Inspector of Oyster Beds.

JERVIS BAY AND TRIBUTARIES.

March, 1877.

To the Honorable the Commissioners for Oyster Culture.

Gentlemen,

I have the honor to report on the oyster-bearing capabilities of Currambene, Cabbage-tree, and Moonie Creeks, tributaries of Jervis Bay, and as far as practicable of the bay itself, and in obedience to instructions have to report as follows for the information of the Commission.

Replies to questions.

- 1.—I have not made a previous inspection.
- 2.—No, they have not been much worked.
- 3.—
 - (a) A mixture of the three, with the addition of slate-rock—sand predominating.
 - (b) To a considerable extent covered.
 - (c) One bed in the upper part of Currambene Creek of a rich clay.
4. Yes, to a large extent sand mixed slightly with mud—could not ascertain—shown on tracing.
5. From brood to full-grown oysters. This is stated in the appended report.
6. Clay and slate rock.
7. The time of spatting is affected by the seasons and depth of water.
9. Moderately-sized areas.
10. Yes.
11. Yes.
12. These waters are not under lease.
13. See appended report.

Currambene Creek.

Oysters exist on the banks and bed of the creek, those on the banks being found on the mangroves and cobbles' pegs. They commence on the north side of the creek about five hundred yards from its mouth. The oyster bed is composed of mud mixed with sand, and extends in unbroken length for a distance of about half a mile up the creek, having a mean breadth of twenty-five yards. Along the banks the oysters are found in patches for a distance of a mile and a half.

On the south side oysters commence at about three hundred yards from the mouth. The formation is rock, large mangrove swamps extending back from the creek for say a quarter of a mile. The oysters on this side are in patches and scattered, and they extend up the creek to the same distance as those on the north side. Some at low-water-mark are marketable. I estimate that between three and four thousand bags of young oysters could be collected out of the creek every second year, and if removed to a suitable place would be marketable in (say) one to two years.

There are three beds of dredge or drift oysters, situated about one and a half mile up the creek from the mouth; the dimensions of the beds are about one hundred yards by twenty yards; they have been worked by fishermen and the blacks; they are in a depth of from two to four feet of water at low tide. The formation of the bed is soft rotten rock (I shall have the honor to submit a sample). The shells are of a dark green colour, covered with moss.

I discovered in this creek a bed of drift oysters, which it appears is not known to either fishermen or blacks. I assume it to be of comparatively recent formation. The oyster, which is a very fine sample, is covered with moss, the shell being quite dark in colour. The bed lies in ten feet of water at low tide. The banks are of stiff yellow clay.

The natural beds in the creek are evidently very prolific, having a splendid bottom, could be easily worked and improved. The bed of the creek at the entrance for a distance of a mile is soft drift sand.

Cabbage-tree Creek.

Situated on the north-east side of the bay, is about two miles in length; it contains no oysters. The banks and beds are composed of a very fine drift sand, with mangrove swamps composed of soft mud and sand. At low tide at a distance of a quarter of a mile from the mouth the water is not more than one foot at its deepest part. Kelp and sea-weed wash into the creek from the bay during southerly winds in great quantities; it will therefore be apparent to the Commission that the creek is not by any means suitable for oyster culture.

In the lake at the mouth of the creek I found, in about ten feet of water, a bed of mud oysters, and another similar bed at the Hole-in-the-wall near the Light-house. Owing to the heavy roll of the sea I was unable to test the extent of these beds. They are not disturbed by the oyster-catchers, the oysters being of a description that will not keep out of the water for more than twelve hours; I shall not, therefore, unless specially directed, spend time in making further inspection during more favourable weather.

Moonie

Moonie Creek.

Lies about half a mile south of Currambene. Oysters are found on the mangroves and cobblers' pegs for a distance of three-quarters of a mile, chiefly on the south side. The bed of the creek is composed of loose sands, the banks are mud and soft sand.

It is very desirable that the mangroves in these creeks should be preserved for oyster-breeding; they are of very large extent, and I am told in places where they are destroyed the banks soon become sandy, and so unfit to bear oysters.

I have, &c.,

W. J. LANGHAM,

Inspector of Oyster Beds.

BHERWERRE (ST. GEORGE'S BASIN), JERVIS BAY.

The Honorable the Commission on Oyster Culture.

Gentlemen,

In obedience to instructions, I have the honor to append my report on Bherwerre (St. George's Basin), Jervis Bay, and adjacent waters:—

Replies to questions.

1. I have not been able to ascertain.
2. So far as I am aware they have not been worked.
- 3.—
 - (a) Mangrove marshes and bold banks of raw sand.
 - (b) Slate rock, and partially covered with oysters.
 - (c) No.
4. Yes—covered at spring-tide—soft mud and sand.
5. Quality good; large size from spat to full-grown oyster; only one bed, 150 yards × 30 yards.
6. Nothing available.
7. At the time of my inspection (March) they were beginning to spat; I believe the spatting goes on all the year round.
9. In moderately sized areas.
10. I think they should not be leased.
11. Yes.
12. The beds have not been leased.
13. This will be replied to in the course of the report I append.

Bherwerre Creek, the inlet to St. George's Basin, is situated about 12 miles south of Jervis Bay; it contains a natural oyster bed of a slate formation; the oysters are of a fair average quality and size; at the mouth of the creek there are a few on the rocks, and the mangroves in the marshes contain them, but not in any material quantity; the mangroves are in patches on either side of the creek; I have shown their positions on the tracing.

About 3 miles up the creek, near a tributary named Salt-water Creek, I found a small bed of a soft description of slate, carrying, according to my estimate, about 150 bushels of a very fine oyster. The bed of the creek at that part is composed of slate rock and dead cockle shells; the depth of water is about 4 feet, with a fine run of tide, and seems admirably adapted for carrying oysters; I have no doubt that brood laid down there would thrive admirably, and that oysters would become abundant wherever this slate formation occurs. With one or two exceptions, the remainder of the bed of the river is a coarse, raw sand. I should remark that the oysters in the mangroves where they are covered with water are as a rule enveloped in a kind of moss; at the present time they are in first-class condition, indeed I do not call to mind having seen mangrove oysters in other rivers so full of meat.

To some ballast discharged last October twelvemonth, a species of mud oyster have attached themselves; oysters of this description are not found in any other part of this water. The mangrove swamps have sandy bottoms, consequently the oysters extend a very short distance back from the banks.

In the basin under a bold rocky headland known as Stock-yard Point I discovered a few scattered oysters, and this is the only spot in the basin where they exist, and neither in Con or Wandandian Creeks could I find any trace of the mollusc; but having a few in the boat, I discharged a part into each creek as an experiment. I hope on a future visit to ascertain how oysters will thrive in these still waters where there is neither rise nor fall of tide.

Cadmurrah or Swan Lake (locally known as Goodmire) is about 15 miles south from Jervis Bay. So far as I was able to ascertain during a searching examination, it does not contain any oysters. The inlet from the sea is about 1 mile in length. Its banks and bed are composed of raw sand, and a large portion of the lake is of similar formation. The remainder is of rock, extending at a shallow depth for a considerable distance towards the centre. This rock is as smooth as if paved. On it I placed some oysters as a means of further testing how far oysters will thrive in still water. If the experiment prove successful, this lake could be made immensely productive. At the time of my inspection it was literally alive with floating fish.

Barrarah Creek is about 16 miles south from Jervis Bay. I found a natural oyster-bed on the sandstone formation, about a mile from its mouth, on the north side. The bed extends for a distance of a $\frac{1}{4}$ of a mile. The rockoysters grow to a very fair size, and are in good condition. I believe if they were transplanted they would in a short time become a first-class sample. I estimate that 300 bushels of rock oysters could be taken at the present time.

The bank and bed of the creek on the south side are of raw sand, and not, therefore, oyster-bearing.

I take occasion to acknowledge the attention I received from Mr. James Dent, of Jervis Bay, and Mr. Charles Gordon, of Bherwerre. Those gentlemen afforded me most material assistance. Mr. Gordon was good enough to place his services and his local knowledge at my disposal for more than twelve days, and thus enabled me to effect considerable saving of my own time.

I have, &c.,

W. J. LANGHAM.

CLYDE RIVER.

Clyde River, 18 April, 1877.

To the Honorable the Commissioners for Oyster Culture.

Gentlemen,

In obedience to your instructions to me, I have the honor to state, for the information of the Commission, that I have inspected the above-named river, and report as follows.

Replies to questions.

1. Great quantities of oysters were obtainable almost in any part of the river twelve years back.
2. Yes, chiefly by over-dredging and floods to a great extent; for in the year 1865, I am informed that not less than sixteen boats were employed at one time, averaging a catch of not less than ten bags each per day; whereas, at the present time, about two to three bags are considered a good day's catch.
3. The beds in the river are at the present time almost completely exhausted; both the bank and drift oyster-beds are worked out.
 - (a) The banks and beds are chiefly composed of slate-rocks, which run north and south, quite irrespective of the course of the river; in some parts the reefs run from one side to the other, with mud in between them.
 - (b) The rocks and mangroves are partially covered with spat and oysters.
 - (c) Yes, beds of mud on the shores between the bold slate rocky points.
4. Yes, there are mangrove swamps covered at high tide of a large extent, and composed principally of oyster mud. They commence on the south side of the river near the residence of Mr. M'Leod, close to the township of Bateman's Bay, and extend up the river for 6 to 8 miles, except where they are intercepted by the reefs and rocky shores. I am not aware to whom the swamps belong.

5. From spat to full-grown oysters.
6. Slate rock, of which there is abundance.
- 7 and 8. The spatting is generally said to be from about the month of December to March. Seldom it is that two persons agree as to the time. My own opinion, as stated in other reports, is that it varies with the weather and depth of water. I observed spatting on some beds, while on others there was no sign of it.
9. I do not think they should be leased all in one, but in moderately sized areas.
10. I do.
11. Yes.
12. The lessee has not in any way improved the beds of this river since it came into his possession. He has laid down some young oysters on the mud flats and other suitable places, but removes them for market before they come to maturity, thereby exhausting the banks and beds.

This river is at present under lease to Mr. F. J. Gibbins, who resides in Sydney. It is under the charge of Mr. Latter. The oysters are first found in a large mangrove swamp, on the south side, near the residence of Mr. McLeod, and extend upwards on the north side as well for a distance of 6 or 7 miles. The bank near Mr. McLeod's was formerly the best in the river; it is now almost bare. Its dimensions are $\frac{3}{4}$ of a mile in length by 400 yards in width. On the mangrove swamps and banks of the river generally there are very few young oysters to be seen. Two years since they were in abundance. In the beds of the river the drift oysters have also become very scarce. At present only three boats are at work on the Moonlight bed, and they obtain from two to three bags per day. This bed is composed of dead mud oyster shells, to which the oysters have culched. It is the best place in the river at present. On the Rocky Point bed, the next up the river, it was no uncommon thing twelve years since for one boat to catch twelve to fourteen bags per day; and from the Chinaman's bed and reach the export weekly was from 800 to 1,000 bags. The present export does not exceed sixty bags.

With the assistance of Mr. Latter I was enabled to test some of the best of the old beds, viz., Bold Shore, Ices, Goat Island, Ireland's Point, and Templeman's—and in no case did the dredge bring up more than one-eighth of a bushel, and in some cases three or four oysters only. The depth of water on the dredging grounds varies from four to forty feet.

This river, unlike most of the others, had not the advantage of being closed before it was leased; indeed it was always open to oyster-catchers. I may perhaps be permitted to suggest that it should, if possible, be closed for two or three years and placed in charge of some responsible officer. As the river is so bare of oysters, I should imagine that such a course would be quite consulting the interests of the lessee, and the more so if he were allowed some reduction in rent during its closed period.

As will be gathered from my several reports, mangroves form a most important item in the economy of the oyster; therefore, in the prosecution of oyster culture, every care should be taken to protect and encourage their growth. On the river, they are at the present time being cut down for fodder in large quantities: the effect is not only to lessen the culch field, but the very soil on which they grow becomes changed in a short time from a consistent mud to a boggy sand, also, the saw-dust from the timber mills is discharged into the river, and must have a very deteriorating influence on the growth of the oyster. These are difficulties against which the lessee has had to contend, and should be taken into consideration in accounting for the bare state of the river.

It has been said that drift oysters will not grow on the natural beds. Possibly this may be accounted for by the fact that no sooner is a small patch of oysters discovered than it is immediately cleared. A close season will best prove how far the assertion is correct.

I append two letters—one from Mr. Barclay, twelve years' resident on the river, and the other from Mr. Templeman, an old oyster-catcher. The writers are known and respected.

I have marked on the tracing the localities referred to in this report.

I have, &c.,

W. J. LANGHAM,

Inspector of Oyster Beds.

Clyde River, April 18, 1877.

I, JAMES BARTLEY, have been engaged in the oyster trade on this river for the last twelve years. For the first two years I was able to obtain from nine to ten bags per day; after that time it gradually came down to as at present. A man cannot average more than from three to four bushels per day, working ten hours.

I wish also to mention that I was engaged on this river to lay down young oysters on beds. On one alone I laid 3,000 bushels, all of which were doing well up to the time of my leaving the employ of the present lessee. These have been sent to market before they came to maturity, and have not been replaced; in fact, there is not sufficient young oysters on the river at present to do it with, the river being so bare.

Spawning.—The number of years I have been engaged as an oysterman, I have paid great attention to the spawning of oysters, and I am perfectly convinced that oysters on different beds spawn at different times, some early some late in the year, there being no particular season on this river I am satisfied.

The deep-water beds which were so prolific ten to twelve years since have never recovered on beds made again on them; at Chinaman Rocky Point and the old bed it was no unusual thing for one boat with two men to obtain from fourteen to fifteen bags per day at that time. And am convinced if these beds are not stocked with brood that they will never recover of their own accord, the bottom being so dredged that nothing is left for the spawn to attach itself to.

JAMES BARCLAY.

Nelligen, Clyde River, N.S.W.

I, THOMAS TEMPLEMAN, have been an oysterman sixteen years on the Clyde River, and was able to obtain from six to ten bags per day up to the time of the river being leased, at which time myself and sons, and many other families, were deprived of the means of obtaining a living at our usual avocations.

THOMAS TEMPLEMAN.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

SUNDAY TRAFFIC IN INTOXICATING LIQUORS.
(PETITION OF SONS OF TEMPERANCE AND OTHERS OF YOUNG, AGAINST.)

Ordered by the Legislative Assembly to be printed, 11 January, 1877.

The Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Sons of Temperance, Good Templars and others, residing in the Town and District of Young,—

HUMBLY SHOWETH :—

That your Petitioners believe that the Sunday traffic in intoxicating drink is a fruitful source of crime, misery, drunkenness, and immorality, as proved by the records of our Police Courts, whose Monday business chiefly consists of cases arising from this cause. And that it is therefore necessary to the welfare of the community that publicans should be compelled to close their houses on Sunday as other tradesmen are.

And that the Act abolishing Police supervision having proved highly injurious should be repealed, and the Police authorized to enter public-houses at any time.

And your Petitioners will, as in duty bound, ever pray.

[Here follow 42 signatures.]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SUNDAY TRAFFIC IN INTOXICATING LIQUORS.
 (PETITION OF THE WESLEYAN CONFERENCE, AGAINST.)

Ordered by the Legislative Assembly to be printed, 20 February, 1877.

The Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned of the Wesleyan Conference now assembled,—

HUMBLY SHOWETH :—

That your Petitioners believe that the Sunday traffic in intoxicating drink is a fruitful source of crime, misery, drunkenness, and immorality, as proved by the records of our Police Courts, whose Monday business consists of cases arising from this cause; and that it is therefore necessary to the welfare of the community that publicans should be subject to the laws affecting other trades, and compelled to close their houses on that day.

Your Petitioners therefore humbly pray that your Honorable House will cause all public-houses to be closed on Sunday.

And your Petitioners will, as in duty bound, ever pray.

[*Here follow 102 signatures.*]

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

SUNDAY TRAFFIC IN INTOXICATING LIQUORS.
 (PETITION OF CONGREGATIONAL UNION OF NEW SOUTH WALES, AGAINST.)

Ordered by the Legislative Assembly to be printed, 20 February, 1877.

To the Honorable the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned Ministers and Members of the Congregational Union of New South Wales assembled,—

HUMBLY SHOWETH :—

That your Petitioners believe that the Sunday traffic in intoxicating drinks is a fruitful source of crime, misery, drunkenness, and immorality, as proved by the records of our Police Courts, whose Monday business chiefly consists of cases arising from this cause ; and that it is therefore necessary to the welfare of the community that publicans should be compelled to close their houses on that day as other tradesmen are.

Your Petitioners therefore humbly pray that your Honorable House will cause all public-houses to be closed on Sunday.

Signed in and on behalf of the Union,—

WILLIAM SLATYER,
 Chairman.

NEW SOUTH WALES.

VACCINATION.

(REPORT FOR 1876.)

Presented to Parliament by Command.

The Medical Adviser to the Government to The Principal Under Secretary.

Sir,

Sydney, 16 April, 1877.

I do myself the honor herewith to forward to you the annual returns of vaccinations received from the public vaccinators in the country districts, from the Vaccine Institution in Sydney, and from the public vaccinators in the suburbs, for the year 1876.

Table A contains the returns from the Vaccine Institution in Sydney and from the suburbs, and shows the number of successful vaccinations to have been 308 in children under 1 year of age, 679 in children of 1 year and under 5 years of age, and 230 in those from 5 to 10 years of age inclusive, giving a total of 1,217.

Table B includes the returns from the country districts, showing 644 successful vaccinations in children under 1 year of age, 1,564 in children of 1 year and under 5 years of age, and 936 in those of from 5 to 10 years of age inclusive, making the total from the country districts 3,144, the number of successful vaccinations in the Colony during the period of 12 months being only 4,361. From many districts no returns have been received, the vaccinators having been deterred from operating on account of the prevalence of infantile diseases, but from none, except the suburban district of Five Dock, have the returns for many years past given a large number of successful vaccinations; and there can be no doubt that our scheme for public vaccination has been a failure, and has never produced the results that were anticipated.

The small results obtained from our system are chiefly attributable to the indifference of the population to the subject of vaccination, the carelessness in respect to all sanitary arrangements, and to the remuneration for the work not being sufficient to induce a vaccinator to undertake long journeys in quest of those willing to avail themselves of his services. Nothing but an alarm, such as has recently been felt on account of the presence of a case of small-pox in Sydney, will wake up the community to such a sense of the value of vaccination as will make parent seek out the vaccinator, but the vaccinator may be induced to attempt more than he can reasonably be expected to do, under our existing regulations, by such an alteration in the scale of fees as would insure a fair reward for his work.

Any scheme of public vaccination to be effective must be one that makes provision for taking the vaccinator to the house of the people, and there being no wide-spread or deep-rooted feeling against the practice, the protection of the whole country against the infection of small pox is simply a matter of money.

I have, &c.,

H. G. ALLEYNE, M.D.,

Medical Adviser to the Government.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

COMPULSORY VACCINATION.

(PETITION OF P. H. SHEAFFE, J.P.)

Ordered by the Legislative Assembly to be printed, 20 February, 1877.

To the Legislative Assembly of New South Wales.

The Petition of the undersigned,—

HUMBLY SHOWETH:—

1. That your Petitioner sees with concern that it is proposed by a Member of the Council to introduce a measure to make vaccination compulsory.

2. That your Petitioner and several of his friends would rather suffer fine or imprisonment than suffer the introduction of human virus into their families.

3. That genuine vaccination by matter from the cow is considered by them preferable, and they would have it performed.

Therefore your Petitioner prays that should such measure become law, those who vaccinate as above, from the cow, may be protected from penalty.

And your Petitioner will ever pray.

P. H. SHEAFFE, J.P.,
and Capt. U.V.R.

1876-7.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

FLOODS IN THE HUNTER RIVER.

(REPORT FROM THE HYDRAULIC ENGINEER UPON PROPOSAL TO MITIGATE.)

Ordered by the Legislative Assembly to be printed, 10 October, 1877.

W. Clark, Esq., to The Colonial Secretary.

Sir,

Sydney, 4 October, 1877.

I have the honor to acknowledge receipt of Mr. Halloran's letter, No. 77-6,841, of 29th August, enclosing a letter from D. Sim, Esq., of Morpeth, on the subject of Floods in the River Hunter, which he proposes to mitigate by the damming back of a part of the rainfall, and I am requested to give an opinion thereon.

These floods from Maitland and its vicinity downwards are so disastrous and appalling in the destruction of property, and occasionally of life, as to suggest the necessity for some measure of relief.

The present state of things appears to be that the River Hunter, draining an area of country which the plan shows to be 8,000 square miles, brings down an enormous volume of water charged with silt, the result of the scouring action of the water on its passage to the river. Down to Maitland the fall is sufficiently rapid to keep the silt in suspension in its proper channel. When this point is reached the fall diminishes, and the section of the river, which at Oakhampton is capable of conveying 132,000 cubic feet per minute, with a velocity of about 10 feet per second, at Morpeth—a distance of six miles lower—is capable of discharging only 38,000 cubic feet, with a velocity of less than 4 feet per second,—the tortuous course of the river extending over $16\frac{3}{4}$ miles between the two places.

Under these circumstances the water spills over the banks, floods are caused, the velocity of the stream is diminished, and the silt in suspension is deposited. This operation during past ages has formed the rich alluvial plain which forms the valley of the Hunter from Maitland downwards, and to the action of the floods is also due its great fertility. It is a natural process of warping, which on the banks of the Humber, in England, is artificially adopted for increasing the fertility of the soil, by occasional deposits from river-water admitted upon low land for that purpose; and the question arises, supposing the prevention of floods to be possible, would the fertility of the district and its present condition of prosperity be maintained?

The desire now appears to be a mitigation of the disasters due to extreme floods, rather than any hope of their total avoidance.

The exhaustive Report of the Flood Commission of 1870 shows clearly that the task of dealing with this question is beset with difficulty, and an expense so great that the gravest and most careful consideration is necessary by any person who has a due sense of the responsibility of advising on the subject.

The proposals for improvement which may, and in fact have been made, assume several forms,—First, the straightening of the river and the improving of its discharging power by the increased velocity which would be given to the stream in the most tortuous portion of its course between Maitland and Morpeth above referred to; but it has been shown, and correctly, by Mr. Moriarty, that it would be useless

to improve the discharging power of any middle portion of the stream without a corresponding improvement in its lower reaches—that it would in fact be useless to improve the river between Maitland and Morpeth, while the natural channel at the latter place has a capacity of but one-fourth that which is necessary to convey the quantity of water that would be brought down the improved channel.

The improvements should in fact commence with the lower portions of the river.

The next mode of improvement is to form additional outlets for the floods to the sea. Several of these have been suggested, any one of which would involve an expense so enormous as to be wholly prohibitory.

My attention was however especially directed to one means of relief hitherto not sufficiently investigated. The neighbourhood of Raymond Terrace, where the highest floods are some 12 feet over the ordinary level; and it is contended that any relief which would at this point, near the confluence with the Williams River, reduce the level would also favourably affect the higher portion of the river by increasing the velocity of discharge.

Between Raymond Terrace and Tilligerry Creek, a branch of Port Stephens, there is low tract of land occupied chiefly by lagoons, and of a sterile sandy character and entirely without cultivation, the highest portion of which is said to be not more than 6, 7, or 8 feet above the level of the Hunter, while Tilligerry Creek at a distance of about 9 miles is as wide as the Hunter itself, and has a fall of the tide of 5 feet 6 inches. Mr. Windeyer, who resides near Raymond Terrace, also assured me that near to Fullerton Cove, a distance of 5 miles only, the flood water of the Hunter is separated from that outlet by a ridge of sand a few inches high only.

It is argued that if at this point of the river, about 8 miles below Morpeth, an auxiliary channel could be formed which would reduce the level, some relief to excessive floods might be obtained; and as no surveys appear to have been made of this place in connection with this inquiry, I would recommend that they be so made, and thereby add to the store of information obtained by the Commission.

Another means of improving the discharging power of the river would be to distribute the available fall by confining the flood water between embankments and elevating its surface for a portion of its length, the cost of which was estimated by the Commission at £2,500,000.

Mr. Sim now suggests another mode of mitigating the effect of floods, which also appears to have been considered by the Commission. He would intercept a portion of the flow during periods of rain in the higher parts of the river, and store it in reservoirs for use during periods of drought. There can be no doubt as to the value which water so stored would have for the country within its influence, for irrigation and for cattle.

The quantity to be dealt with is enormous. It was calculated that in the flood of August, 1857, 88,000 *millions of cubic feet* of water passed down the river between the 19th August and 2nd September. Some idea of the quantity and cost of storing water will be understood by referring here to the proposed Prospect Dam for the Sydney improved water supply. The dam, which will contain 1,700 million cubic feet, is estimated to cost nearly £200,000.

Not having seen the country at the higher parts of the river, I am of course unable to say how far it is suitable or otherwise for the construction of such works; but it is evident that this mode of relief from floods would be in proportion to the cubic contents of the reservoir provided for storing it, and that the cost of the works would be very great.

The district of Mysore, in India, now unhappily the centre of the famine stricken area, owes its usual fertility entirely to the irrigation which is chiefly due to tanks or reservoirs, such as are here recommended. The water of the wet season of the year is used for cultivation during the dry season. It is one of the most fertile districts of India, but on the failure of the periodic rains for a protracted period the country is reduced to starvation.

It must be also borne in mind that when the rain falls in unusual quantity, and at unusually frequent intervals, as will occur in the uncertain climate of this country, and the reservoirs are full, if the rain continue, under these circumstances, a flood will ensue.

It

It is evident therefore, that in extreme cases, the storage of water can no more be an absolute protection from floods than it can at all times be a prevention from the effects of drought. What such reservoirs would do in the majority of cases is to mitigate the severity of floods, supposing them to be constructed of sufficient magnitude.

Apart, however, from the question of mitigating floods, there can be no doubt whatever that this suggestion is entirely in the right direction. When as recently the drought has been severe, the reservoirs would extend the available supply of water over larger areas, and would, if used for the purposes of irrigation on water meadows as in England and other countries, and for the growth of cereals as in India and elsewhere, add enormously to the producing power of the soil, extending it into the periods of drought, and increase the production and wealth of the Colony.

For this purpose also, not only the reservoirs to be constructed, as suggested by Mr. Sim, but the natural streams of the Colony must in time be made available, and in connection with the floods the subject of irrigation and storage of water is well worthy the consideration of the Government.

I have, &c.,
W. CLARK.
