<b>E</b>		
<b>ELECTORAL—continued:—</b>		
<b>ELECTIONS AND QUALIFICATIONS COMMITTEE:—</b>		
Speaker's Warrant laid on Table, 15; maturity reported, 39; Members sworn, 45 (6), 52; Speaker appoints first meeting, 47; Reports brought up, 65, 279, 329; leave given to adjourn <i>sine die</i> , 65, 329; Chairman empowered to summon, and fix time and place for meeting, 259.....	1	519, 520, 545
<b>Privilege—Seat of Dr. William Camac Wilkinson:—</b>		
Motion made ( <i>Mr. McElhone</i> ) that it be referred to Committee to inquire and report whether Dr. Wilkinson, one of the Members for the Globe, is not disqualified, by reason of holding an office of profit under the Crown as Lecturer in the Sydney University, 46; Report brought up and read by Clerk, 65.....	1	519
<b>Seats of Mr. Chanter, Mr. Ellis, Mr. Hurley, and Mr. Wall:—</b>		
Motion made ( <i>Mr. Thompson</i> ) that it be referred to, whether these gentlemen are entitled to sit and vote in the Assembly, as they were not sworn in by Mr. Speaker nor by the Commissioners before Mr. Speaker took the Chair, and negatived, 58.		
<b>Election Petition—South Sydney—Trail v. Wise:—</b>		
Mr. Speaker laid on Table Election Petition from W. H. Trail, alleging that at some Polling Booths votes were wrongly declared informal and should have been counted in favour of petitioner; that at some booths the ballot-papers were wrongly counted, whereby a larger number of votes were made to appear to be given in favour of Mr. Wise than were so given and that Mr. Wise was declared duly elected, and praying that the return be declared null and void; that a scrutiny of all ballot-papers be made by the Committee of Elections and Qualifications; that Mr. Wise may be declared not lawfully elected; that your Petitioner be declared duly elected:—and such further order and determination be made as may be just, 258, 259; referred to Committee of Elections and Qualifications, 259; Report brought up and read by Clerk, 279.....	1	545
<b>Privilege—Seat of Mr. J. C. Neild:—</b>		
Motion made ( <i>Mr. McElhone</i> ) that having been appointed Commissioner to the Adelaide Exhibition, and having drawn money to pay his expenses, the question whether Mr. Neild has accepted an office of profit under the Crown be referred to the Committee of Elections and Qualifications, 259; Report brought up and read by Clerk, 329.....	1	520
<b>ROLLS:—</b>		
For the years 1880, 81-2, 82-3, 83-4, 84-5, 85-6, and 86-7, laid on Table, 28.....	1	557

<b>P</b>		
<b>PRIVILEGE:—</b>		
<b>Mr. J. P. ABBOTT:—</b>		
The Speaker's ruling requested ( <i>Mr. J. S. Farnell</i> ) as to the right of Mr. Abbott to sit and vote without having taken the oath, and before the return of the Writ for Wentworth,— <i>Point of Order</i> , That matter should not be treated as one of Privilege, Mr. Speaker said he was not justified in stopping the debate;—motion made ( <i>Mr. Slattery</i> ) that this House dissent from Mr. Speaker's ruling, and negatived, 13;—on the question of Privilege Mr. Speaker ruled that there was no legal evidence that the oath could be administered to Mr. Abbott until the Writ had reached the proper authority with his name endorsed thereon, 14; Sir Henry Parkes called attention to the presence of Mr. Abbott in the Chamber, and the Speaker calling upon Mr. Abbott to withdraw—he withdrew accordingly, 14.		
<b>SEAT OF WILLIAM CAMAC WILKINSON, ESQ.:—</b>

(SECOND SESSION.)

## NEW SOUTH WALES.

# DISTRIBUTION OF NAVAL PRIZE MONEY, &c.

(REGULATIONS FOR THE—DESPATCH RESPECTING.)

Presented to Parliament by Command.

Department of Justice,  
Sydney, 28th January, 1887.

THE following communication from the Lords Commissioners of the Admiralty, addressed to the Judge of the Vice-Admiralty Court of New South Wales, transmitting copy of an Order of Her Majesty in Council, and Proclamation thereunder, regarding the Distribution of Naval Prize Money, &c., after the 30th September, 1886, is published for general information.

WILLIAM CLARKE.

Admiralty,  
8th November, 1886.

Sir,

Her Majesty having been pleased, by her Order in Council of the 3rd August last, to issue Regulations for the Distribution of Naval Prize Money, &c., after the 30th September, 1886, according to the scale therein set forth, I am commanded by my Lords Commissioners of the Admiralty to transmit to you a copy of the said Order in Council, together with two copies of the Queen's Proclamation, which is to take effect from the 1st October, 1886, and I am to request that you will, without delay, acknowledge the receipt of the same, in order that the date of such receipt may be duly noted.

I have, &c.,

EVAN MACGREGOR.

The Judge, Vice-Admiralty Court,  
New South Wales.

At the Court at Osborne House, Isle of Wight, the 3rd day of August, 1886.

Present :

The Queen's Most Excellent Majesty in Council.

WHEREAS there was this day read at the Board a Memorial from the Right Honourable the Lords Commissioners of the Admiralty, dated the 9th day of June, 1886, in the words following, namely :—

“Whereas Your Majesty was graciously pleased by Your Royal Proclamation of the sixteenth day of May, 1871, to regulate according to the scheme set forth therein or recognized thereby, the distribution of the net proceeds of prizes captured from the enemy, of captures and seizures under the several Acts of Parliament passed relating to the Revenues or Customs and to Trade and Navigation, for the abolition of the slave trade, for the capture and destruction of pirates and piratical vessels, and of the rewards conferred for the same, as also, of the awards for all salvage granted to the crews of Your Majesty's ships and vessels of war when not otherwise specially apportioned by the terms of the respective awards and allowances ;

“And Whereas We are of opinion that certain alterations in the apportionment and classification of the shares are desirable, consequent on the re-adjustment of the relative rank of the Military and Civil Branches of Your Majesty's Navy.

“And also that it is expedient that specific provisions should be made for the classification of officers, seamen, marines, soldiers, and others holding acting appointments, in the apportionment of such net proceeds and salvage, and other like awards and allowances ; as well as for persons temporarily employed in Your Majesty's Navy ;

“We humbly beg to recommend that Your Majesty would be graciously pleased, by Your Order in Council to amend the above-mentioned Proclamation from and after the thirtieth day of September next ; and to direct that the Proclamation transmitted herewith for Your Majesty's gracious approval be substituted in lieu thereof.”

Her Majesty, having taken the said Memorial into consideration, was pleased, by and with the advice of Her Privy Council, to approve thereof :

And Her Majesty, by and with the advice aforesaid, is hereby pleased to direct that the aforesaid Proclamation of the 16th day of May, 1871, be annulled from and after the 30th day of September next, and the same is hereby annulled accordingly, save and except as to any captures or seizures which may have been made before the 1st day of October next, and any captures or seizures which shall have been made after the 30th day of September next, and which shall be condemned and adjudged in any of Her Majesty's Courts of the Admiralty, or any Court or Mixed Commission, before notice of this Order shall have been received by the Court of Vice-Admiralty, or of Mixed Commission, in which such condemnation or adjudication shall pass ; and further that the proceeds of all such captures and seizures made before the 1st day of October next, or which shall be made after the said 30th day of September next, and which shall be condemned or adjudged in any of Her Majesty's Courts of Vice-Admiralty, or any Court of Mixed Commission, antecedent to the notice of Her Majesty's Royal Proclamation, having been received in such Courts together with all rewards

aforesaid, shall continue to be distributed in the proportions and manner directed in and by Her Majesty's said Proclamation, dated the 16th day of May, 1871:

And Her Majesty, by and with the advice aforesaid, is further graciously pleased to order and direct that the Proclamation so as aforesaid transmitted for Her Majesty's gracious approval (a copy whereof is hereunto scheduled) shall be substituted in lieu of the aforesaid Proclamation of the 16th day of May, 1871, save as aforesaid; and further to order and direct that the Right Honourable the Lords Commissioners of the Admiralty are to give the necessary directions herein accordingly.

C. L. PEEL.

By the Queen.  
A PROCLAMATION.

VICTORIA R.

WHEREAS by Our Order in Council of this day's date We were graciously pleased to annul, from and after the thirtieth day of September next, Our Royal Proclamation of the sixteenth day of May, one thousand eight hundred and seventy-one, regulating, according to the scheme set forth therein or recognized thereby, the distribution of the net proceeds of prizes captured from the enemy, of captures and seizures under the several Acts of Parliament passed relating to the Revenues of Customs, and to Trade and Navigation, for the abolition of the slave trade, for the capture and destruction of pirates and piratical vessels, and of the rewards conferred for the same, as also of the awards for all salvage granted to the crews of our ships and vessels of war, when not otherwise specially apportioned by the terms of the respective awards and allowances, and in consequence of certain alterations in the apportionment and classification of the shares being desirable, it is expedient that provision should be made for the future distribution of such net proceeds and salvage not otherwise specially apportioned, and all other moneys whatsoever granted to be shared among the officers and crews of our ships and vessels in the manner of prize money.

We do, therefore, now make known to all Our loving subjects, and to all others whom it may concern, by this Our Proclamation, by and with the advice of Our Privy Council, that Our Royal Will and Pleasure is, and We do hereby direct, that ships or vessels being in sight of a prize, as also of the captor, under circumstances to cause intimidation to the prize and encouragement to the captor, shall be alone entitled to share as joint captors, and that the distribution of all such net proceeds of prizes, rewards, allowances, salvage awards, and of all bounties and grants whatsoever distributable to Our Royal Navy in the manner of prize money, shall be made as follows; viz.:

That the Flag Officer or Officers shall have one-thirtieth part of the whole net proceeds arising from prizes captured from the enemy, and from all other captures and seizures, &c., as aforesaid, made by any of the ships or vessels under his or their command, and of the rewards conferred for the same, according to the following conditions and modifications, save and except as hereinafter provided and directed, that is to say,

When there is but one Flag Officer he shall have the entire one-thirtieth part; when two Flag Officers shall be sharing together, the Chief shall have two-thirds, and the other Flag Officer shall have the remaining one-third of the one-thirtieth part; and when there shall be more than two Flag Officers, the Chief shall have one-half of the said one-thirtieth part, and the remaining half shall be equally divided among the junior Flag Officers; Commodores of the First Class and Captains of the Fleet to share as Flag Officers: Provided always, that no Flag Officer, unless actually on board any of Our ships or vessels of war, and at the actual taking, sinking, burning or otherwise destroying any ship or ships of war, privateer or privateers belonging to the enemy, shall share in the distribution of any head money or bounty money granted as a reward for the taking, sinking, burning, or otherwise destroying any such ship or vessel of the enemy.

That no Flag Officer, unless actually present at the capture or destruction of any pirates or piratical ship, vessel, or boat, shall share in any distribution of the proceeds or bounty in respect of such pirates, or of the crews of such piratical ship, vessel, or boat.

That no Flag Officer shall share in any remuneration or reward conferred or awarded to the Crew of any of Our ships or vessels as salvage, unless he shall have been actually on board the ship or vessel to which the award shall be made, or have personally aided and assisted in the transaction at the time the service was rendered.

That no Flag Officer commanding in any port in the United Kingdom shall share in the proceeds of any prize captured from the enemy, or in other captures, seizures, rewards, or any distributive proceeds as aforesaid, made by any ships or vessels which shall sail from or leave such port by order of the Lord High Admiral, or of Our Commissioners for executing the Office of Lord High Admiral.

That when ships or vessels under the command of several Flag Officers belonging to separate stations, shall be joint captors, &c., each Flag Officer shall receive a proportion of the one-thirtieth part according to the number of Officers and men present under the command of each such Flag Officer; and when ships or vessels under orders from the Lord High Admiral or from Our Commissioners for executing the Office of Lord High Admiral, are joint captors, &c., with other ships or vessels under a Flag or Flags, the like regulations as to the apportionment of the Flag Share to the Flag Officer or Officers are to be observed.

With reference to Flag Officers it is to be noted,—

That when an inferior Flag Officer is sent to reinforce a superior Officer on any station, the superior Flag Officer shall not share in any prize taken by the inferior Flag Officer before he has arrived within the limits of that station, unless the inferior Officer shall have received some order directly from, and shall be acting in execution of some order issued by such superior Flag Officer.

No chief Flag Officer quitting any station, except upon some definite urgent service, and with the intention of returning to the station as soon as such service is performed, shall share in any prize taken by Our ships or vessels left behind after he has passed the limits of the station, or after he has surrendered the command to another Flag Officer appointed by the Admiralty to command in chief upon such station.

An inferior Flag Officer quitting any station (except when detached by orders from his Commander-in-Chief upon a special service, accompanied with orders to return to such station as soon as the service has been performed), shall have no share in prizes taken by the ships and vessels remaining on the station after he has passed the limits thereof.

In like manner Flag Officers remaining on such station shall not share in the prizes taken by such inferior Officer, or by ships or vessels under his immediate command, after he has quitted the limits of the station, except he has been detached as aforesaid.

A Commander-in-Chief or other Flag Officer belonging to any station shall not share in any prize or prizes taken out of the limits of that station by any ship or vessel under the command of a Flag Officer of any other station, or under orders from Our Commissioners of the Admiralty, unless such Commander-in-Chief or Flag Officer is expressly authorized by our said Commissioners to take the command of that station in which the prize or prizes is or are taken, and shall actually have taken upon him such command.

Every Commodore having a Captain under him shall be esteemed a Flag Officer with respect to the thirtieth part of the prizes taken, whether he be Commanding-in-Chief or serving under command.

Any Officer on board any of Our ships of war at the time of capturing any prize or prizes who shall have more commissions than one shall be entitled only to share in such prize or prizes according to the share allotted to him by the above-mentioned distribution in respect to his superior commission or office.

And with reference to these regulations it is to be noted, that a Captain, Commander, or other Commanding Officer of a ship or vessel shall be deemed to be under the command of a Flag when he shall actually have received some order from, or be acting in the execution of some order issued by a Flag Officer, whether he be or be not within the limits of the station of such Flag Officer; and in the event of his being directed to join a Flag Officer on any station, he shall be deemed to be under the command of such Flag Officer from the time when he arrives within the limits of the station, which circumstance is always to be carefully noted in the log book; and it shall be considered that he continues under the Flag Officer of such station until he shall have received some order directly from or be acting in the execution of some order issued by some other Flag Officer duly authorized, or by the Lord High Admiral, or Our Commissioners for executing the Office of Lord High Admiral.

Every Commodore of the second class shall share as Captain.

And We hereby direct, that the Captain, Commander, Lieutenant commanding, Staff Commander commanding, Navigating Lieutenant commanding, or any other Officer duly commanding any ship or vessel of war, singly making a capture or seizure, or otherwise entitled to the distributive benefit arising from any proceeds, reward, grant, bounty, salvage, or other award as aforesaid, that is to say, the Officer actually in command at the time, shall have one-tenth of the remainder, or if there is no Flag Officer to share, one-tenth of the entire net proceeds, except that if the single capturing ship be a rated ship having a Commander under the Captain the Commander shall take a portion of the one-tenth part according to the proportion hereinafter set forth; and if more than one Commanding Officer of the same rank of command shall be entitled to share as joint captors, &c., the one-tenth shall be equally divided between them; but when Captains, Commanders, Lieutenants, Staff Commanders, and Navigating Lieutenants commanding, respectively, Our ships and vessels of war, and Commanders under Captains in rated ships, shall share together in whatever variety of combination, the one-tenth shall be so divided into parts for a graduated apportionment as to provide for each Captain

receiving six parts; each Commander commanding, or Commander under the Captain in a rated ship, three parts; and each Lieutenant commanding, Staff Commander commanding, or Navigating Lieutenant commanding, or other Officer actually commanding a vessel of war, two parts; which We hereby direct shall be the proportion in which they shall respectively share; Colonel of Marines (Artillery or Light Infantry), or of Land Forces serving as Marines, doing duty with a Battalion or Force employed on shore for Naval operations to share as Captains; Lieutenant Colonel of Marines (Artillery or Light Infantry) or of Land Forces serving as Marines employed on shore for Naval operations, if in actual command of a Battalion or Force, to share as Captains; if second in command to share as Commanders; Major of Marines (Artillery or Light Infantry) or of Land Forces serving as Marines employed on shore for Naval operations, if in actual command of a Battalion or Force, to share as Commanders. And We further direct, that after provision shall thus have been made for the Flag share (if any), and for the portion of the Commanding Officer or Officers and others as above specified, the remainder of the net proceeds shall be distributed in eleven classes, so that each Officer, man, and boy composing the rest of the complements of Our ships and vessels of war, and actually on board or absent on duty in a prize (who it is Our will and pleasure shall be the only absentees entitled to share) at the time of any such capture, seizure, &c., as aforesaid, and every person present and assisting shall receive shares or a share according to his class, as set forth in the following scale:—

First Class: Staff Captain, Deputy Inspector General of Hospitals and Fleets when borne on ship's books, Secretary to Admiral of the Fleet or to Commander-in-Chief, Paymaster-in-Chief in the event of such an officer being employed afloat, Chief Inspector of Machinery and Inspector of Machinery when borne on ship's books, other than harbour ship, *forty-five shares each*.

Second Class: Senior Lieutenant of a rated ship not bearing a Commander under the Captain, Staff Commander, Major of Marines (Artillery or Light Infantry) or of Land Forces, doing duty as Marines, if the Senior Military Officer of a Fleet or Squadron, Chaplain over fifteen years' seniority, Fleet Surgeon, Secretary to an Admiral or Commodore of the First Class not Commanding in Chief or to a Captain of the Fleet, Fleet Paymaster, Fleet Engineer, Naval Instructor over fifteen years' seniority, *forty shares each*.

Third Class: Lieutenant over eight years' seniority, Navigating Lieutenant over eight years' seniority, Major of Marines (Artillery or Light Infantry), or of Land Forces doing duty as Marines, whether having higher brevet rank or not, Chaplain over eight and under fifteen years' seniority, Staff Surgeon, Staff Paymaster, Paymaster, Staff Engineer, Chief Engineer, Naval Instructor over eight and under fifteen years' seniority, *thirty-five shares each*.

Fourth Class: Lieutenant under eight years' seniority, Navigating Lieutenant under eight years' seniority, Captain of Marines (Artillery or Light Infantry), or of Land Forces doing duty as Marines, whether having higher brevet rank or not, Quartermaster of Marines (of ten years' service as such), Chaplain under eight years' seniority, Surgeon, Secretary to Commodore Second Class, Assistant Paymaster over twelve years' seniority, Assistant Paymaster over six years' seniority, Engineer over six years' seniority, Engineer under six years' seniority, Naval Instructor under eight years' seniority, also Lieutenant of the Royal Naval Reserve (when embarked for service afloat), Chief Officer of a Cruiser in the Coast Guard, Chief Officer of a Coast Guard Station, who has been in command of a Cruiser (when embarked for service afloat), Engineer of the Royal Naval Reserve (when embarked for service afloat), Assistant Engineer First Class of the Royal Naval Reserve (when embarked for service afloat), *thirty shares each*.

Fifth Class: Sub-Lieutenant, Lieutenant of Marines, Quarter-Master of Marines (under ten years' service as such) (Artillery or Light Infantry), or of Land Forces doing duty as Marines, Assistant Paymaster under six years' seniority, Assistant Engineer, Chief Gunner, Chief Boatswain, Chief Carpenter, Gunner, Boatswain, Carpenter, also Sub-Lieutenant of the Royal Naval Reserve (when embarked for service), Second Class Assistant Engineer of the Royal Naval Reserve (when embarked for service), Senior Mate of a Cruiser in the Coast Guard, Chief Officer of a Coast Guard Station who has never commanded a Cruiser (when embarked for service), *twenty shares each*.

Sixth Class: Midshipman, Clerk, Pilot, Chief Gunner's Mate, Chief Boatswain's Mate, Chief Captain of the Fore-castle, Admiral's Coxswain, Chief Quartermaster, Chief Yeoman of Signals, Warrant Officer of Marines (if embarked), (Artillery or Light Infantry), or of Land Forces doing duty as Marines, Staff Sergeants and Colour Sergeants of Marines (Artillery or Light Infantry), or of Land Forces doing duty as Marines, Head Schoolmaster, Master at Arms, Naval Schoolmaster, Writer First, Second, and Third Classes (Old System), Writer First Class (New

System), Chief Engine Room Artificer (Old System), Chief Engine Room Artificer First and Second Classes (New System), Chief Torpedo Artificer, Chief Carpenter's Mate (Skilled), Chief Carpenter's Mate, Engine Room Artificer (Old System), Engine Room Artificer First, Second, Third and Fourth Classes (New System), Ship's Steward, Ship's Steward for General Mess, Ship's Cook (Old System), Ship's Cook First Class (New System), Ship's Cook for General Mess, Chief Bandmaster, Chief Sick Berth Steward, Chief Stoker, and all other Chief Petty Officers, also Midshipman of Royal Naval Reserve (when embarked for service), Second Mate of a Cruiser in the Coast Guard Service, Chief Boatman of the Coast Guard in Charge (when embarked for service), *twelve shares each*.

Seventh Class: Naval Cadet, Assistant Clerk, Gunner's Mate, Boatswain's Mate, Captain of the Fore-castle, Captain's Coxswain, Quartermaster, Yeoman of Signals, Coxswain First Class, Captain of the Maintop, Captain of the Fore-top, Captain of the Quarter-deck Men, Captain of the Hold, Sailmaker, Ropemaker, Sergeant of Marines (Artillery or Light Infantry), or of Land Forces doing duty as Marines, Ship's Corporal First Class, Ship's Corporal Second Class, Carpenter's Mate (Skilled), Carpenter's Mate, Caulker, Blacksmith, Torpedo Artificer, Armourer, Plumber, Painter, First Class, Leading Stoker, Sick Berth Steward First Class, Sick Berth Steward (under former regulations), Ship's Cook Second Class (New System), Bandmaster, Head Krooman in rated ships, Tindal or Head Man of Seedies in rated ships, and all other First Class Petty Officers, also Chief Boatman of the Coast Guard (when embarked for service), *ten shares each*.

Eighth Class: Coxswain Second Class, Captain of the Mast, Second Captain of the Fore-castle, Second Captain of the Maintop, Second Captain of the Fore-top, Signalman, Second Captain of the Quarter-deck Men, Captain of the Mizentop, Sailmaker's Mate, Leading Seaman, Corporal of Marines (Artillery or Light Infantry), or of Land Forces doing duty as Marines, Bombardier of Marine Artillery, Cooper, Caulker's Mate, Armourer's Mate, Painter Second Class, Plumber's Mate, Shipwright (Skilled), Sick Berth Steward Second Class, Sick Berth Attendant (under former regulations), Musician, Writer Second Class (New System), Head Krooman (in other than rated ships), Tindal or Head Man of Seedies (in other than rated ships), and all other Second Class Petty Officers, also Commissioned Boatman and Divisional Carpenter of the Coast Guard (when embarked for service), *seven shares each*.

Ninth Class: Yeoman of Store Room, Second Captain of the Hold, Sailmaker's Crew, Able Seamen, Signalman Second Class, Ordinary Seamen, Signalman Third Class, Gunner of Marine Artillery, Private of Marines, Drummer and Bugler of Marines (Artillery or Light Infantry), or of Land Forces doing duty as Marines, Shipwright, Stoker First Class, Blacksmith's Crew, Plumber's Crew, Cooper's Crew, Writer Third Class (New System), Lithographer, Stoker Second Class, Carpenter's Crew Second Class, Admiral's Steward, Admiral's Cook, Admiral's Domestic, Captain's Steward in all rated ships, Captain's Cook in all rated ships, General Mess Steward, Captain's and Cabin Steward in despatch vessels, Captain's and Cabin Cook in despatch vessels, Ward Room Steward in ships of First and Second Class, Ward Room Cook in ships of First and Second Class, Bandsman, Ship's Steward's Assistant, Sick Berth Attendant (under new regulations) after three years' service, if qualified for promotion, Tailor, Shoemaker, Butcher, Lamp Trimmer, Second Head Krooman, Second Head Tindal or Second Head Man of Seedies, also Boatman of the Coast Guard (when embarked for service), and Dock and Victualling Yard Apprentices (if embarked for service), *four shares each*.

Tenth Class: Ordinary Seaman Second Class, Baker, Captain's Steward, Captain's Cook in ships below Fourth Class, Ward Room Steward, Ward Room Cook in ships below Second Class, Gun Room Steward, Gun Room Cook, Captain's Servant, Commander's Servant, Secretary's Servant, Engineer's Servant, Engineer's Cook, Warrant Officer's Cook, Bandsman Second Class, Sick Berth Attendant (under new regulations), under three years' service, or if not qualified for promotion, Assistant Sick Berth Attendant (under former regulations), Assistant Baker, Captain's Cook's Assistant, Ward Room Servant, Ward Room Cook's Assistant, Ward Room Officer's Servant, Gun Room Servant, Warrant Officer's Servant, Cook's Mate, Cook's Mate (New System), Cook's Mate Second Class (New System), Barber, Assistant Butcher, Krooman, Seedie, Supernumeraries, except as hereinafter provided, and persons borne merely as passengers, and not declining to render assistance on any occasion of capture, seizure, &c., *two shares each*.

Eleventh Class: Signal Boy, Boy First Class, Boy Second Class, Ship's Steward's Boy, Baud Boy, Boy Writer, one share each.

And with respect to Supernumeraries, We do hereby direct:—

1st. That all Supernumeraries holding ranks in the Service above the ranks or ratings specified in the Sixth Class of this Our Proclamation who have been ordered to do duty in any of Our ships and vessels by the Lord High Admiral, by Our Commissioners for executing the Office of Lord High Admiral, by the Senior Officer of the Fleet or Squadron, or, if none senior, then by the Captain or Commanding Officer of the capturing ship or vessel, if not by special authority employed in higher capacities, shall share according to the ranks which they respectively hold in the Service; but in all cases, to qualify them for so sharing, and not merely as Supernumeraries in the Tenth Class, due notation of their being thus respectively ordered to do duty must be made on the Victualling Lists and Prize Lists.

2nd. That all Supernumeraries holding ratings in the Service below the denominations of those specified in the Fifth Class of this Our Proclamation, and who at full victuals are engaged in the ordinary duties of the ship, shall always share according to the ratings which they bear in the Service.

3rd. That no Interpreter, unless holding some rank or rating in the Service, shall share in any proceeds, bounties, or awards as aforesaid, except by the special permission of the Lord High Admiral, or Our Commissioners for executing the Office of Lord High Admiral for the time being.

And in order that Our Royal Intentions herein may be duly carried into effect, We further direct that when any capture or seizure is made, or service performed for which a distributable grant or reward is to be made, or is expected to be conferred or awarded to any of Our ships or vessels of war, the Captain or Commanding Officer shall transmit or cause to be transmitted, as soon as may be, to the Secretary of the Admiralty, a true and perfect list of all the Officers, Seamen, Marines, Soldiers, and others who were actually on board on the occasion, with a notation thereon, stating whether any other of Our ships or vessels was in sight at the time of the capture, accompanied by a separate list containing the names of those belonging to the Crew who were absent on duty or otherwise at the time, specifying the cause of such absence, each list to contain the quality of the service of each person, with their several ratings, to be subscribed by the Captain or Commanding Officer, and three or more of the Chief Officers on board.

And when the list of those actually on board, with the separate list of persons absent, though belonging to the ship or

vessel, shall have been verified on examination with the ship's books lodged as official records, the Accountant-General of Our Navy and Comptroller of Navy Pay, shall grant a certificate that such lists are correct or have been corrected, as occasion may require, in order that distribution of the respective prize or other proceeds payable as prize or salvage money may be duly made in the Department of the Accountant-General of Our Navy and Comptroller of Navy Pay.

And in the distribution of such prize, or other proceeds payable as prize and salvage money, We hereby direct that all Officers, Seamen, Marines, Soldiers, and others, holding acting appointments superior to their substantive ranks or ratings, and who are in receipt of the pay of such acting appointment, shall share in the classes to which the ranks and ratings in which they are acting, may belong: And further, that all persons temporarily employed in Our Navy shall share in the Classes to which the ranks and ratings to which they are temporarily appointed may belong.

And in the event of difficulty arising with respect to any of the regulations hereby ordered, or if any case should occur not herein provided for, or not sufficiently provided for, We are pleased hereby to authorize the Lord High Admiral, or Our Commissioners for executing the Office of Lord High Admiral for the time being, to issue such directions thereupon as may appear just and expedient; which directions shall have the same force and effect as if specially provided for in this Our Royal Proclamation: Provided always, and the distribution hereinbefore ordered shall take effect only with respect to the proceeds of captures, seizures, and services as aforesaid, which shall be made and performed on and after the first day of October, one thousand eight hundred and eighty-six: and that the proceeds arising from all captures, seizures, and services as aforesaid, made or performed prior to that date, shall be distributed in accordance with any Proclamation or Proclamations now in force, or in force at the time of such captures, seizures, or services respectively and applicable thereto, which We are pleased hereby to direct accordingly.

Given at Our Court at Osborne House, Isle of Wight, this third day of August, in the year of Our Lord one thousand eight hundred and eighty-six, and in the fiftieth year of Our Reign.

God save the Queen.

NEW SOUTH WALES.

---

**MUTUAL EXTRADITION OF FUGITIVE CRIMINALS.**  
(TREATY BETWEEN HER MAJESTY AND THE PRESIDENT OF THE REPUBLIC OF GUATEMALA—  
DESPATCH RESPECTING.)

---

Presented to Parliament by Command.

---

Department of Justice,  
Sydney, 21st March, 1887.

HIS Excellency the Governor directs the publication, for general information, of the following Despatch from the Principal Secretary of State for the Colonies, transmitting a copy of an Order of Her Majesty in Council, for giving effect to the Treaty between Her Majesty and the President of the Republic of Guatemala, for the Mutual Extradition of Fugitive Criminals.

WILLIAM CLARKE.

[Circular.]

Sir,

Downing-street,  
11th December, 1886.

I have the honour to transmit to you, for publication in the Colony under your Government, a copy of an Order of Her Majesty in Council, dated the 26th day of November, 1886, for giving effect to the Treaty between Her Majesty and the President of the Republic of Guatemala for the Mutual Extradition of Fugitive Criminals, signed at Guatemala on the 4th of July, 1885.

The Treaty will come into operation on the 13th instant, in conformity with Article XVIII.

I have, &c.,

EDWARD STANHOPE.

The Officer Administering  
the Government of New South Wales.

[Extract from the "London Gazette," of Friday, December 3, 1886.]

At the Court at Windsor, the 26th day of November, 1886.

PRESENT :

The QUEEN'S Most Excellent Majesty.

Lord President.  
Earl of Rosslyn.

Viscount Cross.  
Lord Stanley of Preston.

WHEREAS by the Extradition Acts, 1870 and 1873, it was amongst other things enacted that, where an arrangement has been made with any Foreign State with respect to the surrender to such State of any fugitive criminals, Her Majesty may, by Order in Council, direct that the said Acts shall apply in the case of such Foreign State; and that Her Majesty may, by the same or any subsequent Order, limit the operation of the Order, and restrict the same to fugitive criminals who are in or suspected of being in the part of Her Majesty's Dominions specified in the Order, and render the operation thereof subject to such conditions, exceptions, and qualifications as may be deemed expedient; and that if, by any law made after the passing of the Act of 1870 by the Legislature of any British Possession, provision is made for carrying into effect within such possession the surrender of fugitive criminals who are in or suspected of being in such British Possession, Her Majesty may, by the Order in Council applying the said Acts in the case of any Foreign State, or by any subsequent Order, suspend the operation within any such British Possession of the said Acts, or of any part thereof, so far as it relates to such Foreign State, and so long as such law continues in force there and no longer :

And whereas in accordance with section 18 of "The Extradition Act, 1870," the Legislature of the Dominion of Canada has, by laws passed in the years 1877 and 1882, and respectively styled "The Extradition Act, 1877," and "An Act to Amend the Extradition Act, 1877," made provision for carrying into effect within the Dominion the surrender of fugitive criminals who are in or are suspected of being in the Dominion.

And whereas a Treaty was concluded on the fourth day of July, one thousand eight hundred and eighty-five, between Her Majesty and the President of the Republic of Guatemala, for the mutual extradition of fugitive criminals, which Treaty is in the terms following :—

"Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and his Excellency the President of the Republic of Guatemala, having judged it expedient, with a view to the better administration of justice and to the prevention of crime within the two countries and their jurisdictions, that persons charged with or convicted of the crimes or offences hereinafter enumerated, and being fugitives from justice, should, under certain circumstances, be reciprocally delivered up, have named as their Plenipotentiaries to conclude a Treaty (that is to say) :

"Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, James Plaister Harriss-Gastrell, Esquire, Her Britannic Majesty's Minister Resident and Consul-General to the Republic of Guatemala ;

"And his Excellency the President of the Republic of Guatemala, His Excellency Señor Don Manuel J. Dardon, Secretary of State for Foreign Affairs of the Republic of Guatemala ;

"Who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following Articles :—

"ARTICLE I.

"The High Contracting Parties engage to deliver up to each other, under the circumstances and conditions stated in the present Treaty, those persons who, being accused or convicted of any of the crimes or offences enumerated in Article II, committed in the territory of the one Party, shall be found within the territory of the other Party.

"ARTICLE II.

"The extradition shall be reciprocally granted for the following crimes or offences :—

"1. Murder (including assassination, parricide, infanticide, poisoning), or attempt to murder.

"2. Manslaughter.

"3. Administering drugs or using instruments with intent to procure the miscarriage of women.

"4. Rape.

"5. Aggravated or indecent assault ; carnal knowledge of a girl under the age of 10 years ; carnal knowledge of a girl above the age of 10 years and under the age of 12 years ; indecent assault upon any female, or any attempt to have carnal knowledge of a girl under 12 years of age.

"6. Kidnapping and false imprisonment, child-stealing, abandoning, exposing, or unlawfully detaining children.

"7. Abduction of minors.

"8. Bigamy.

"9. Wounding, or inflicting grievous bodily harm.

"10. Assaulting a Magistrate, or peace or public officer.

"11. Threats, by letter or otherwise, with intent to extort money or other things of value.

"12. Perjury or subornation of perjury.

"13. Arson.

"14. Burglary or housebreaking, robbery with violence, larceny, or embezzlement.

"15. Fraud by a bailee, banker, agent, factor, trustee, director, member, or public officer of any Company, made criminal by any law for the time being in force.

"16. Obtaining money, valuable security, or goods by false pretences ; receiving any money, valuable security, or other property, knowing the same to have been stolen or unlawfully obtained.

"Su Majestad la Reina del Reino Unido de Gran Bretaña é Irlanda, y su Excelencia el Presidente de la República de Guatemala, habiendo juzgado conveniente, con la mira de mejorar la administracion de justicia y prevenir los crímenes en ambos países y sus jurisdicciones, que las personas acusadas ó convictas de los delitos ó crímenes que en seguida se enumerarán, huyendo la justicia, sean, bajo ciertas circunstancias, recíprocamente entregadas, han nombrado por sus Plenipotenciarios para concluir un Tratado á saber :

"Su Majestad la Reina del Reino Unido de Gran Bretaña é Irlanda, James Plaister Harriss-Gastrell, Esquire, Ministro Residente de Su Majestad Británica y Consul-General al República de Guatemala :—

"Y su Excelencia el Señor Presidente de la República de Guatemala, su Excelencia el Señor Don Manuel J. Dardon, Secretario de Estado en el Despacho de Relaciones Exteriores de la República de Guatemala ;

"Quienes, despues de haberse comunicado mutuamente sus respectivos plenos poderes, y encontrádoslos en buena y debida forma han aceptado y admitido los Artículos siguientes :—

"ARTICULO I.

"Las Altas Partes Contratantes se comprometen á entregarse recíprocamente en las condiciones y circunstancias expresadas en el presente Tratado, las personas que siendo acusadas ó convictas de los delitos ó crímenes enumerados en el Artículo II, cometidos en el territorio de una de las Partes, se encuentren dentro del territorio de la otra Parte.

"ARTICULO II.

"La extradicion será recíprocamente acordada por los siguientes crímenes ó delitos :—

"1. Homicidio premeditado (incluyendo el asesinato, el parricidio, el infanticidio, el envenenamiento), ó tentativa de homicidio premeditado.

"2. Homicidio.

"3. Administracion de drogas ó el uso de instrumentos afín de ocasionar el aborto en las mujeres.

"4. Estupro.

"5. Atentado al pudor con violencia ; relaciones sensuales con una muchacha menor de 10 años ; relaciones sensuales con una muchacha mayor de 10 años y menor de 12 años ; atentado al pudor con cualquiera mujer, ó tentativa alguna para tener relaciones sensuales con una muchacha menor de 12 años.

"6. Hurto de niños ó adultos para trasportarlos á otro país ó conservarlos en el mismo (plagio), indebida encarceracion, abandono, exposicion, y encierro ilegal de niños ó adultos.

"7. Rapto de menores.

"8. Bigamia.

"9. Heridas ó golpes graves en el cuerpo.

"10. Violencias contra algun Magistrado, oficial de paz ó público.

"11. Amenazas por medio de cartas ó de otra manera, con ánimo de obtener indebidamente dinero ú otras cosas de valor.

"12. Perjurio, soborno para perjurio.

"13. Incendio voluntario.

"14. Robo con efraccion, robo con violencia, rateria, y hurto.

"15. Fraude cometido por un depositario de bienes, banquero, mandatario, comisionista, administrador de bienes ajenos, tutor, curador, liquidador, síndico, oficial ministerial, director, miembro ú oficial público de alguna Compañía, considerado el fraude como criminal por alguna ley vigente.

"16. Estafa ó todo lo que sea obtener dinero, fianza ó mercaderías por medio de falsos datos ; recibir dinero, fianza ó cualesquiera otros valores, sabiendo que han sido robados ó adquiridos en oposicion á las leyes,

"17. (a.) Counterfeiting or altering money, or bringing into circulation counterfeited or altered money.

"(b.) Forgery, or counterfeiting or altering, or uttering what is forged, counterfeited, or altered.

"(c.) Knowingly making, without lawful authority, any instrument, tool, or engine adapted and intended for the counterfeiting of coin of the realm or national coin.

"18. Crimes against Bankruptcy Law.

"19. Any malicious act done with intent to endanger persons in a railway train.

"20. Malicious injury to property, if such offence be indictable.

"21. Crimes committed at sea.

"(a.) Piracy, by the law of nations.

"(b.) Sinking or destroying a vessel at sea, or attempting or conspiring to do so.

"(c.) Revolt, or conspiracy to revolt, by two or more persons on board a ship on the high seas against the authority of the master.

"(d.) Assault on board a ship on the high seas with intent to destroy life, or to do grievous bodily harm.

"22. Dealing in slaves in such manner as to constitute an offence against the laws of both countries.

"The extradition is also to take place for participation in any of the aforesaid crimes as an accessory before or after the fact, provided such participation be punishable by the laws of both Contracting Parties.

"ARTICLE III.

"No Guatemalan shall be delivered up by the Government of Guatemala to the Government of the United Kingdom, and no subject of the United Kingdom shall be delivered up by the Government thereof to the Government of Guatemala.

"ARTICLE IV.

"The extradition shall not take place if the person claimed on the part of the Government of the United Kingdom, or the person claimed on the part of the Government of Guatemala, has already been tried and discharged or punished, or is still under trial in the territory of Guatemala or in the United Kingdom respectively for the crime for which his extradition is demanded.

"If the person claimed on the part of the Government of the United Kingdom, or on the part of the Government of Guatemala, should be under examination for any other crime in the territory of Guatemala or in the United Kingdom respectively, his extradition shall be deferred until the conclusion of the trial and the full execution of any punishment awarded to him.

"ARTICLE V.

"The extradition shall not take place if, subsequently to the commission of the crime, or the institution of the penal prosecution or the conviction thereon, exemption from prosecution or punishment has been acquired by lapse of time, according to the laws of the State applied to.

"ARTICLE VI.

"A fugitive criminal shall not be surrendered if the offence in respect of which his surrender is demanded is one of a political character, or if he prove that the requisition for his surrender has, in fact, been made with a view to try or punish him for an offence of a political character.

"ARTICLE VII.

"A person surrendered can in no case be kept in prison or be brought to trial in the State to which the surrender has been made, for any other crime, or on account of any other matters, than those for which the extradition shall have taken place. This stipulation does not apply to crimes committed after the extradition.

"ARTICLE VIII.

"The requisition for extradition shall be made through the Diplomatic Agents of the High Contracting Parties respectively.

"The requisition for the extradition of an accused person must be accompanied by a warrant of arrest issued by the competent authority of the State requiring the extradition, and by such evidence as, according to the laws of the place where the accused is found, would justify his arrest if the crime had been committed there.

"If the requisition relates to a person already convicted, it must be accompanied by the sentence of condemnation passed against the convicted person by the competent Court of the State that makes the requisition for extradition.

"A requisition for extradition cannot be founded solely on sentences passed in contumaciam, but persons convicted for contumacia shall be deemed to be accused persons.

"ARTICLE IX.

"If the requisition for extradition be in accordance with the foregoing stipulations, the competent authorities of the State applied to shall proceed to the arrest of the fugitive.

"17. (a.) Falsificar ó alterar moneda, ó poner en circulacion moneda falsa ó alterada.

"(b.) Contrahacer, falsificar ó alterar, ó poner en circulacion lo que está falsificado, contrahecho ó alterado.

"(c.) Hacer premeditadamente, sin permiso de la autoridad constituida, algun instrumento, herramicnta ó máquina con la intencion de falsificar ó contrahacer la moneda nacional.

"18. Crímenes cometidos contra la Ley de Quiebras.

"19. Cualquier acto doloso ejecutado con la mira de poner en peligro las personas que viajen en trenes de ferro carriles.

"20. Perjuicio malicioso causado á la propiedad, si el delito es justiciable.

"21. Delitos cometidos en el mar :-

"(a.) Pirateria, segun la ley de las naciones.

"(b.) Echar á pique ó destruir un buque en el mar, ó esforzarse ó conspirar para hacerlo.

"(c.) Sublevacion ó conspiracion para rebelarse, de dos ó más personas á bordo de un buque, en alta mar, contra la autoridad del capitán.

"(d.) Ataques á bordo de un buque en alta mar, con intencion de quitar la vida ó de hacer otro daño grave corporal.

"22 Darse al Tráfico de Esclavos, si fuese con violacion de las leyes ne ambos países.

"La extradicion tambien se puede pedir por la participacion en cualquiera de los crímenes mencionado más arriba, como un accesorio ántes ó despues del hecho, con tal que dicha participacion sea castigado por las leyes de las dos Partes Contratantes.

"ARTICULO III.

"Ningun Guatemalteco será entregado por el Gobierno de Guatemala al Gobierno del Reino Unido, y ningun súbdito del Reino Unido, será entregado por su Gobierno al Gobierno de Guatemala.

"ARTICULO IV.

"La extradicion no se efectuará si la persona reclamada por parte del Gobierno del Reino Unido, ó la persona reclamada por parte del Gobierno de Guatemala, ha sido ya juzgada, absuelta ó castigada, ó está aún procesándose en el territorio de Guatemala ó del Reino Unido respectivamente, por el delito por el cual se pide la extradicion.

"Si la persona reclamada por parte del Gobierno del Reino Unido, ó por parte del Gobierno de Guatemala, estuviese sometida á juicio por algun otro delito en el territorio de Guatemala ó del Reino Unido respectivamente, se diferirá su extradicion hasta el fin del juicio y la plena ejecucion de cualquiera castigo á que fuese condenada.

"ARTICULO V.

"La extradicion no se efectuará si, subsecuentemente á la ejecucion del crimen ó al empezar el proceso, ó á la conviccion del reo, se puede oponer la prescripcion para que sea exento de proceso ó del castigo, segun las leyes del Estado al cual se reclama.

"ARTICULO VI.

"El reo fugitivo no será entregado si el delito por el cual se pide la extradicion es de un carácter político, ó si se prueba que la peticion para entregarlo se ha hecho en efecto con la mira de juzgarlo ó castigarlo por un delito de carácter político.

"ARTICULO VII.

"Una persona entregada no podrá, en ningun caso, ser mantenida en prision ó procesada en el Estado al que se ha hecho la entrega, por ningun otro crimen ó delito, ó por ningun otro crimen ó delito, ó por ninguna otra causa que aquella por la cual se ha efectuado la extradicion. Esta estipulacion no se aplica á crímenes cometidos despues de la extradicion.

"ARTICULO VIII.

"Le peticion de extradicion se hará respectivamente por medio de los Agentes Diplomáticos de las Altas Partes Contratantes.

"La demanda de extradicion de una persona acusada debe ir acompañada de una orden de prision, dictada por la autoridad competente del Estado que pide la extradicion, y fundada en testimonios tales que segun las leyes del lugar donde se encuentre el acusado, justifiquen su prision como si el delito hubiese sido cometido allí.

"Si la demanda se refiere á una persona ya convicta, debe ir acompañada de la sentencia de condenacion pronunciada contra la persona convicta por el Tribunal competente del Estado que hace la demanda de extradicion.

"Una demanda de extradicion no puede fundarse solamente en sentencias dictadas por contumacia; pero las personas convictas de contumacia deben ser consideradas como acusadas.

"ARTICULO IX.

"Si la demanda de extradicion está de acuerdo con las precedentes estipulaciones, las autoridades competentes del Estado al que se dirige la peticion procederán á la prision del fugitivo.

"The prisoner is then to be brought before a competent Magistrate, who is to examine him, and to conduct the preliminary investigation of the case, just as if the apprehension had taken place for a crime committed in the same country.

"ARTICLE X.

"A fugitive criminal may be apprehended under a warrant issued by any Police Magistrate, Justice of the Peace, or other competent authority in either country, on such information or complaint, and such evidence, or after such proceedings as would, in the opinion of the authority issuing the warrant, justify the issue of a warrant if the crime had been committed or the person convicted in that part of the dominions of the two contracting parties in which the Magistrate, Justice of the Peace, or other competent authority exercises jurisdiction: provided, however, that in the United Kingdom the accused shall, in such case, be sent as speedily as possible before a Police Magistrate in London. He shall, in accordance with this Article, be discharged, as well in Guatemala as in the United Kingdom, if within the term of thirty days a requisition for extradition shall not have been made by the Diplomatic Agent of his country in accordance with the stipulations of this Treaty.

"The same rule shall apply to the cases of persons accused or convicted of any of the crimes or offences specified in this Treaty, and committed on the high seas on board any vessel of either country which may come into a port of the other.

"ARTICLE XI.

"The extradition shall take place only if the evidence be found sufficient, according to the laws of the State applied to, either to justify the committal of the prisoner for trial, in case the crime had been committed in the territory of the same State, or to prove that the prisoner is the identical person convicted by the Courts of the State which makes the requisition, and no criminal shall be surrendered until after the expiration of fifteen days from the date of his committal to prison to await the warrant for his surrender.

ARTICLE XII.

"In the examinations which they have to make in accordance with the foregoing stipulations, the authorities of the State applied to shall admit as entirely valid evidence the sworn depositions or statements of witnesses taken in the other State, or copies thereof, and likewise the warrants and sentences issued therein, provided such documents purport to be signed or certified by a Judge, Magistrate, or Officer of such State, and are authenticated by the oath of some witness, or by being sealed with the official seal of the Minister of Justice, or some other Minister of State.

"ARTICLE XIII.

"If the individual claimed by one of the two High Contracting Parties, in pursuance of the present Treaty, should be also claimed by one or several other Powers, on account of other crimes or offences committed upon their respective territories, his extradition shall be granted to that State whose demand is earliest in date; unless any other arrangement should have been made between the different Governments to determine the preference, either on account of the gravity of the crime or offence, or for any other reason.

"ARTICLE XIV.

"If sufficient evidence for the extradition be not produced within three months from the date of the apprehension of the fugitive, he shall be set at liberty.

"ARTICLE XV.

"All articles seized which were in the possession of the person to be surrendered at the time of his apprehension shall, if the competent authority of the State applied to for the extradition has ordered the delivery of such articles, be given up when the extradition takes place; and the said delivery shall extend, not merely to the stolen articles, but to everything that may serve as a proof of the crime.

"ARTICLE XVI.

"The High Contracting Parties renounce any claim for the reimbursement of the expenses incurred by them in the arrest and maintenance of the person to be surrendered and his conveyance till placed on board ship; they reciprocally agree to bear such expenses themselves.

"ARTICLE XVII.

"The stipulations of the present Treaty shall be applicable to the Colonies and foreign possessions of her Britannic Majesty.

"The requisition for the surrender of a fugitive criminal who has taken refuge in any of such Colonies or foreign possessions shall be made to the Governor or chief authority of such Colony or possession by the Chief Consular Officer of the Republic of Guatemala in such Colony or possession.

"El prisionero sera conducido entónces ante el Magistrado competente, quien debe examinarlo y hacer la investigacion preliminar del caso, como si la aprehension se hubiese efectuado por un delito cometido en el mismo pais.

"ARTICULO X.

"Un delincuente fugitivo puede ser aprehendido en virtud de una órden de prision dictada por cualquier Magistrado de Policia, Juez de Paz ú otra autoridad competente en ámbos paises, teniendo á la vista tales informes ó quejas, y tales pruebas, ó habiéndose procedido á tales diligencias que, en la opinion de la autoridad que dicta la órden de prision, justificaria dicha órden si el crimen hubiese sido cometido ó si la persona hubiese sido convencida en la parte del territorio de las dos Partes Contratantes en la cual el Magistrado, Juez de Paz, ú otra autoridad competente ejerce jurisdiccion; con tal, sin embargo, de que en el Reino Unido el acusado sea en tal caso conducido tan pronto como se pueda ante un Magistrado de Policia en Londres. El criminal fugitivo será, segun este Artículo, puesto en libertad, sea en Guatemala ó en el Reino Unido, si en el término de treinta dias no se hubiese hecho la demanda de extradicion por medio del Ajente Diplomático de su pais, conforme á las estipulaciones de este Tratado.

"La misma regla será aplicada al caso de las personas acusadas ó convictas de alguno de los delitos ó crímenes especificados en este Tratado, y cometidos en alta mar á bordo de cualquier buque de uno ú otro pais que entre en un puerto del otro.

"ARTICULO XI.

"La extradicion se efectuará solamente si los testimonios se encuentran suficientes segun las leyes del Estado á que se hace la demanda, ya sea para justificar el sometimiento á juicio del preso, en caso en que el crimen hubiese sido cometido en territorio de dicho Estado, ó para probar la identidad del preso convencido por los Tribunales del Estado que hace la demanda, y ningun delincuente ó criminal puede ser entregado ántes de pasados quince dias desde la fecha de su sometimiento á juicio, en tanto que se dicte la órden de entrega.

"ARTICULO XII.

"En el examen que se haga de conformidad con las precedentes estipulaciones, las autoridades del Estado á que se ha recurrido reconocerán como plena prueba las deposiciones juradas y las relaciones de los testigos hechas en el otro Estado, ó las copias de aquellas, y asimismo las órdenes, y sentencias pronunciadas, con tal que esos documentos estén firmados ó certificados por un Juez, Magistrado, ú Oficial de dicho Estado, y sean autenticados por el juramento de algun testigo, ó que sean sellados con el sello oficial del Ministro de Justicia ó de algun otro Ministro de Estado.

"ARTICULO XIII.

"Si el individuo reclamado por una de las Altas Partes Contra antes, conforme al presente Tratado, fuese reclamado simultáneamente por uno ó varios otros Estados, por otros delitos ó crímenes cometidos en sus respectivos territorios, su extradicion será otorgada al Estado que ha presentado primero la demanda de extradicion; á ménos que algun otro arreglo no haya sido estipulado entre los diferentes Gobiernos, para determinar la preferencia, ya sea en vista de la gravedad del crimen ó delito, ó ya por cualquiera otra causa.

"ARTICULO XIV.

"Si despues de tres meses de la aprehension del fugitivo no se hubiere aducido prueba bastante para la extradicion, será puesto en libertad.

"ARTICULO XV.

"Cualesquiera artículos que se embarguen á la persona aprehendida, si la autoridad competente del Estado requerido para la extradicion ha ordenado la entrega de ellos serán entregados al tiempo de verificarse aquella; y se hará no sólo de los artículos robados sino de toda lo que pueda servir como prueba del crimen.

"ARTICULO XVI.

"La Altas Partes Contratantes renuncian á cualquier reclamacion por el reembolso de los gastos hechos en la captura y mantenimiento de la persona que há de entregarse, y en su conduccion hasta ponerla á bordo del buque, comprometiéndose reciprocamente á hacer ellas mismas tales gastos.

"ARTICULO XVII.

"Las estipulaciones del presente Tratado serán aplicables á las Colonias y posesiones extranjeras de Su Majestad Británica.

"La peticion para la entrega de un criminal fugitivo que se haya refugiado en alguna de tales Colonias ó posesiones extranjeras se hará al Gobernador ó principal autoridad de tal Colonia ó posesion por el principal Ajente Consular de la República de Guatemala en dicha Colonia ó posesion.

"Such requisition may be disposed of, subject always, as nearly as may be, to the provisions of this Treaty by the said Governor or chief authority, who, however, shall be at liberty either to grant the surrender or to refer the matter to his Government.

"Her Britannic Majesty shall, however, be at liberty to make special arrangements in the British Colonies and foreign possessions for the surrender of Guatemalan criminals who may take refuge within such Colonies and foreign possessions, on the basis, as nearly as may be, of the provisions of the present Treaty.

"The requisition for the surrender of a fugitive criminal from any Colony or foreign possession of Her Britannic Majesty shall be governed by the rules laid down in the preceding Articles of the present Treaty.

"ARTICLE XVIII.

"The present Treaty shall come into force ten days after its publication, in conformity with the forms prescribed by the laws of the High Contracting Parties. It may be terminated by either of the High Contracting Parties, but shall remain in force for six months after notice has been given for its termination.

"The Treaty, after receiving the approval of the Congress of Guatemala, shall be ratified, and the ratification shall be exchanged at London as soon as possible.

"In witness whereof the respective Plenipotentiaries have signed the same, and have affixed thereto the seal of their arms.

"Done at Guatemala, the fourth day of July, in the year of our Lord one thousand eight hundred and eighty-five.

"(L.S.) J. P. HARRISS-GASTRELL.

"(L.S.) M. J. DARDON."

And whereas the ratifications of the said Treaty were exchanged at Guatemala on the 6th day of September, one thousand eight hundred and eighty-six;

Now, therefore, Her Majesty, by and with the advice of Her Privy Council, and in virtue of the authority committed to Her by the said recited Acts, doth order, and it is hereby ordered, that from and after the thirteenth day of December, one thousand eight hundred and eighty-six, the said Acts shall apply in the case of Guatemala, and of the said Treaty with the Republic of Guatemala.

Provided always, and it is hereby further ordered that the operation of the said Acts shall be suspended within the Dominion of Canada so far as relates to the Republic of Guatemala and to the said Treaty, and so long as the provisions of the Canadian Acts aforesaid continue in force, and no longer.

C. L. PEEL.

"Podrá darse curso á tales peticiones, sujetándose siempre lo más aproximadamente posible á lo estipulado en este Tratado, por dicho Gobernador ó principal autoridad, quien, sin embargo, estará en libertad de conceder la entrega ó referir el asunto á su Gobierno.

"Su Majestad Británica quedará, sin embargo, en libertad de hacer arreglos especiales en las Colonias Británicas y posesiones extranjeras para la entrega de los Guatemaltecos criminales que puedan refugiarse dentro de tales Colonias y posesiones extranjeras, observando, lo más que se pueda, las estipulaciones del presente Tratado.

"La demanda para la entrega de un criminal fugitivo de alguna Colonia ó posesion extranjera de Su Majestad Británica estará sujeta á las reglas establecidas en los Artículos precedentes del presente Tratado.

"ARTICULO XVIII.

"El presente Tratado empezará á ejecutarse diez dias despues de su publicacion, de conformidad con las formas prescritas por las leyes de las Altas Partes Contratantes. Puede denunciarse por cualquiera de las Altas Partes Contratantes; pero permanecerá vigente por seis meses despues de haberse dado aviso para su terminacion.

"Este Tratado, despues de haber sido aprobado por el Congreso de Guatemala será ratificado, y las ratificaciones serán canjeadas en Lóndres tan pronto que sea posible.

"En fé de lo cual los respectivos Plenipotenciarios lo firman y sellan con el sello de sus armas.

"Hecho en Guatemala, el cuatro de Julio en el año de mil ochocientos ochenta y cinco.

"(L.S.) J. P. HARRISS-GASTRELL.

"(L.S.) M. J. DARDON."

## MUTUAL EXTRADITION OF FUGITIVE CRIMINALS.

(TREATY BETWEEN GREAT BRITAIN AND THE REPUBLIC OF THE EQUATOR—DESPATCH.)

---

Presented to Parliament by Command.

---

Department of Justice,

Sydney, 1st November, 1886.

His Excellency the Governor directs the publication, for general information, of the following Despatch from the Principal Secretary of State for the Colonies, transmitting a copy of a Treaty for the mutual extradition of Fugitive Criminals between Great Britain and the Republic of the Equator.

J. P. GARVAN.

[Circular.]

Downing-street,

13th July, 1886.

Sir,

I have the honour to transmit to you, for information and publication in the Colony under your Government, a copy of a Treaty for the mutual extradition of Fugitive Criminals between Great Britain and the Republic of the Equator, signed on the 20th day of September, 1880, the ratifications of which were exchanged on the 19th of February last, and which, by order of Her Majesty in Council of the 26th of June, came into operation on the 2nd instant.

I have, &amp;c.,

GRANVILLE.

The Officer Administering

the Government of New South Wales.

275—A

[Extract from the London Gazette of Friday, July 2, 1886.]

At the Court at Windsor, the 26th day of June, 1886.

Present:

THE QUEEN'S MOST EXCELLENT MAJESTY.

Lord President.  
Lord Steward.

Earl of Rosebery.  
Mr. Fowler.

WHEREAS by the "Extradition Acts, 1870 and 1873," it was amongst other things enacted that, where an arrangement has been made with any foreign State with respect to the surrender to such State of any fugitive criminals, Her Majesty may, by Order in Council, direct that the said Acts shall apply in the case of such foreign State; and that Her Majesty may, by the same or any subsequent Order, limit the operation of the Order, and restrict the same to fugitive criminals who are in or suspected of being in the part of Her Majesty's dominions specified in the Order, and render the operation thereof subject to such conditions, exceptions, and qualifications as may be deemed expedient; and that if, by any law made after the passing of the Act of 1870 by the Legislature of any British possession, provision is made for carrying into effect within such possession the surrender of fugitive criminals who are in, or suspected of being in, such British possession, Her Majesty may, by the Order in Council applying the said Acts in the case of any foreign State, or by any subsequent Order, suspend the operation within any such British possession of the said Acts, or of any part thereof, so far as it relates to such foreign State, and so long as such law continues in force there and no longer:

And whereas, in accordance with section 18 of "The Extradition Act, 1870," the Legislature of the Dominion of Canada has, by laws passed in the years 1877 and 1882, and respectively styled "The Extradition Act, 1877," and "An Act to Amend the Extradition Act, 1877," made provision for carrying into effect within the Dominion the surrender of fugitive criminals who are in, or are suspected of being in, the Dominion:

And whereas a Treaty was concluded on the twentieth day of September, one thousand eight hundred and eighty, between Her Majesty and the President of the Republic of the Equator, for the mutual extradition of fugitive criminals, which Treaty is in the terms following:—

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, and His Excellency the President of the Republic of Ecuador, having judged it expedient, with a view to the better administration of justice, and to the prevention of crime within their respective territories and jurisdictions, that persons charged with or convicted of the crimes hereinafter enumerated, and being fugitives from justice, should under certain circumstances be reciprocally delivered up; Her Britannic Majesty and the President of Ecuador have named as their Plenipotentiaries to conclude a Treaty for this purpose, that is to say:

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Frederick Douglas Hamilton, Esquire, her Minister Resident at Ecuador;

And His Excellency the President of Ecuador, General Cornelio E. Vernaza, Minister of Foreign Affairs and of the Interior;

Who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following Articles:—

#### ARTICLE I.

It is agreed that Her Britannic Majesty's Government and that of Ecuador shall, on requisition made in their name by their respective Diplomatic Agents, deliver up to each other reciprocally any persons who, being accused or convicted of any of the crimes hereinafter specified, committed within the jurisdiction of the requiring Party, shall be found within the territories of the other Party:—

1. Murder, or attempt or conspiracy to murder.
2. Manslaughter.
3. Counterfeiting or altering money, or uttering counterfeit or altered money.
4. Forgery, counterfeiting, or altering, or uttering what is forged or counterfeited or altered.
5. Embezzlement or larceny.
6. Obtaining money or goods by false pretences.
7. Crimes against bankruptcy law.
8. Fraud by a bailee, banker, agent, factor, trustee, or director, or member or public officer of any company made criminal by any law for the time being in force.
9. Rape.
10. Abduction.
11. Child stealing.
12. Burglary or housebreaking.
13. Arson.
14. Robbery with violence.
15. Threats by letter or otherwise with intent to extort.

16. Piracy by law of nations.
17. Sinking or destroying a vessel at sea, or attempting or conspiring to do so.
18. Assaults on board a ship on the high seas with intent to destroy life or to do grievous bodily harm.
19. Revolt or conspiracy to revolt by two or more persons on board a ship on the high seas against the authority of the captain or master.

Provided that the surrender shall be made only when, in the case of a person accused, the commission of the crime shall be so established as that the laws of the country where the fugitive or person so accused shall be found would justify his apprehension and commitment for trial if the crime had been there committed; and, in the case of a person alleged to have been convicted, on such evidence as, according to the laws of the country where he is found, would prove that he had been convicted.

Su Magestad la Reina del Reino Unido de la Gran Bretaña e Irlanda, y Su Excelencia el Presidente de la República del Ecuador, habiendo juzgado conveniente para la mejor administración de justicia, y para prevenir los crímenes dentro de sus respectivos territorios y jurisdicciones, que las personas acusadas ó convictas de los crímenes enumerados en seguida, y que estando fugitivas de la justicia deban, bajo ciertas circunstancias, ser entregadas recíprocamente; Su Magestad la Reina de la Gran Bretaña e Irlanda y el Presidente del Ecuador han nombrado sus Plenipotenciarios respectivos para celebrar un Tratado con este fin, es decir:

Su Magestad la Reina del Reino Unido de la Gran Bretaña e Irlanda, al Señor Federico Douglas Hamilton (Escudero), su Ministro Residente en el Ecuador;

Y su Excelencia el Presidente del Ecuador, al Señor General Cornelio E. Vernaza, Ministro del Interior y de Relaciones Exteriores;

Quiénes, después de haberse comunicado sus plenos poderes, y encontrádoslos en buena y debida forma, han convenido y estipulado los Artículos siguientes:—

#### ARTICULO I.

Se ha convenido en que el Gobierno de Su Magestad Británica y el del Ecuador deberán, previo pedimento hecho en su nombre por sus respectivos Agentes Diplomáticos, entregarse recíprocamente cualesquiera personas que siendo acusadas ó convictas de cualquiera de los crímenes puntualizados en seguida, cometidos dentro de la jurisdicción de la parte solicitante, sean encontrados dentro del territorio de la otra parte:—

1. Asesinato, ó tentativa ó conspiración para asesinar.
2. Homicidio.
3. Falsificación, ó alteración de moneda, ó circulación de moneda falsificada ó alterada.
4. Falsificación, contrahecho, ó alteración, ó circulación de lo falsificado, contrahecho ó alterado.
5. Hurto, ocultación de bienes de una herencia aun no aceptada por el heredero, ó ratería.
6. Obtener moneda ú otros efectos por medio de falsos pretextos.
7. Crímenes contra las leyes de la bancarrota.
8. Fraude por un individuo libre bajo fianza, banquero, agente, factor, síndico ó curador, director, miembro ó empleado público de alguna compañía, declarado criminal por ley vijente en ese tiempo.
9. Estupro con violencia.
10. Abduccion.
11. Robo de niños.
12. Robo nocturno, ó entrada en una casa con violencia con el objeto de robar.
13. Incendio intencional.
14. Robo con violencia.
15. Amenazas por escrito ó de cualquier otra manera con el objeto de cometer algun acto de extorsion.
16. Piratería segun el derecho de gentes.
17. Hundimiento ó destruccion de una embarcacion en el mar, ó tentativa ó conspiracion coneste objeto.
18. Asaltos á bordo de un buque en alta mar, con el intento de quitar la vida ó de causar graves daños corporales.
19. Rebelion ó tentativa de rebelion ejecutada por dos ó mas personas á bordo de un buque en alta mar, contra la autoridad del capitán ó patron.

Con tal que la entrega, en el caso de una persona acusada, se haga únicamente cuando se puntualice la perpetración del crimen de manera que las leyes del país en que sea hallado el fugitivo ó persona acusada justifiquen su captura y enjuiciamiento si allí se hubiese cometido el crimen; y en el caso en que se declare convicta á una persona en mérito de pruebas que, segun las leyes del país en que ella sea hallada, bastarian para tenerla por convicta.

## ARTICLE II.

In the dominions of Her Britannic Majesty, other than the foreign or colonial possessions of Her Majesty, the manner of proceeding shall be as follows:—

## 1. In the case of a person accused:—

The requisition for the surrender shall be made to Her Britannic Majesty's Principal Secretary of State for Foreign Affairs by some person recognized by the Secretary of State as a Diplomatic Representative of the Republic of Ecuador, accompanied by a warrant or other equivalent judicial document for the arrest of the accused, issued by a Judge or Magistrate duly authorized to take cognizance of the acts charged against him in Ecuador, together with duly authenticated depositions or statements taken on oath before such Judge or Magistrate, clearly setting forth the said acts, and a description of the person claimed, and any particulars which may serve to identify him. The said Secretary of State shall transmit such documents to Her Britannic Majesty's Principal Secretary of State for the Home Department, who shall then, by order under his hand and seal, signify to some Police Magistrate in London that such requisition has been made, and require him, if there be due cause, to issue his warrant for the apprehension of the fugitive.

On the receipt of such order from the Secretary of State, and on the production of such evidence as would, in the opinion of the Magistrate, justify the issue of the warrant if the crime had been committed in the United Kingdom, he shall issue his warrant accordingly.

When the fugitive shall have been apprehended in virtue of such warrant, he shall be brought before the Police Magistrate who issued it, or some other Police Magistrate in London. If the evidence to be then produced shall be such as to justify, according to the law of England, the committal for trial of the prisoner if the crime of which he is accused had been committed in England, the Police Magistrate shall commit him to prison to await the warrant of the Secretary of State for his surrender; sending immediately to the Secretary of State a certificate of the committal and a report upon the case.

After the expiration of a period from the committal of the prisoner, which shall never be less than fifteen days, the Secretary of State shall, by order under his hand and seal, order the fugitive criminal to be surrendered to such person as may be duly authorized to receive him on the part of the Government of Ecuador.

## 2. In the case of a person convicted:—

The course of proceeding shall be the same as in the case of a person accused, except that the warrant to be transmitted by the recognized Diplomatic Representative, in support of his requisition, shall clearly set forth the crime of which the person claimed has been convicted, and state the fact, place, and date of his conviction. The evidence to be produced before the Police Magistrate shall be such as would, according to the law of England, prove that the prisoner was convicted of the crime charged.

After the Police Magistrate shall have committed the accused or convicted person to prison to await the order of a Secretary of State for his surrender, such person shall have the right to apply for a writ of *habeas corpus*. If he should so apply, his surrender must be deferred until after the decision of the Court upon the return to the writ, and even then can only take place if the decision is adverse to the applicant. In the latter case the Court may at once order his delivery to the person authorized to receive him, without the order of a Secretary of State for his surrender, or commit him to prison to await such order. A like proceeding shall be observed towards criminals in prison in Ecuador.

## ARTICLE III.

In the Republic of Ecuador the manner of proceeding shall be as follows:—

## 1. In the case of a person accused:—

The requisition for the surrender shall be made to the Minister for Foreign Affairs of Ecuador by the Minister or other Diplomatic Agent of Her Britannic Majesty, accompanied by a warrant for the arrest of the accused, issued by a Judge or Magistrate duly authorized to take cognizance of the acts charged against him in Great Britain, together with duly authenticated depositions or statements taken on oath before such Judge or Magistrate, clearly setting forth the said acts, and a description of the person claimed, and any other particulars which may serve to identify him.

The said documents shall be transmitted to the Minister Secretary of State for the Interior Department, who shall then, by order under his hand and seal, signify to some Police Magistrate that such requisition has been made, and require him, if there be due cause, to issue his warrant for the apprehension of the fugitive.

On the receipt of such order from the Minister Secretary of State, and on the production of such evidence as would justify

## ARTICULO II.

En los dominios de Su Magestad Británica distintos de las posesiones coloniales ó extrangeras de Su Magestad, el procedimiento será como sigue:—

## 1.º En el caso de una persona acusada:—

El pedimento de entrega se hará al Principal Secretario de Estado de Negocios Extranjeros de Su Magestad, por cualquiera persona reconocida por el Secretario de Estado como un Agente Diplomático de la República de Ecuador, acompañado de un testimonio ú otro documento judicial equivalente, para proceder al arresto del acusado, expedido por un Juez ó Magistrado debidamente autorizado para conocer de los actos de que ha sido acusada la persona en el Ecuador, juntamente con las deposiciones debidamente autenticadas ó relaciones hechas con juramento ante un Juez ó Magistrado, manifestando con claridad dichos actos, y una descripción de la persona reclamada, todos los particulares que conduzcan á indentificarla. Dicho Secretario de Estado transmitirá los documentos expresados al Principal Secretario de Estado en el despacho del Interior de Su Magestad, quien por una órden firmada y sellada de su mano hará saber á algun Magistrado de Policía de Londres que tal demanda ha sido hecha, y le requerirá, si hubiere causa suficiente, para que expida la cédula de arresto contra el fugitivo.

Con el recibo de la órden del Secretario de Estado, y con la produccion de suficiente prueba en opinion del Magistrado que justificase la expedicion del auto si el crimen hubiese sido cometido en el Reino Unido, expedirá en consecuencia la respectiva cédula.

Cuando el fugitivo hubiere sido aprehendido en virtud de tal auto, será conducido ante el Magistrado de Policía que lo expidió, ó ante otro de igual clase de Lóndres. Si la prueba que deba entónces producirse fuere tal que justificase, segun las leyes de Inglaterra, el sometimiento á juicio del preso, si el crimen de que hubiese sido acusado lo hubiese cometido en Inglaterra, el Magistrado de Policía le someterá á prision para esperar el decreto de entrega expedido por el Secretario de Estado, enviando inmediatamente al Secretario de Estado un certificado de la prision practicada, y un informe del caso.

Despues de expirado el periodo de detencion del preso, que nunca debe ser de ménos de quince dias, el Secretario de Estado, por órden firmada y sellada de su mano, ordenará que el criminal fugitivo sea entregado á la persona que está debidamente autorizada para recibirle de la parte del Gobierno del Ecuador.

## 2.º En el caso de una persona convicta:—

El curso del procedimiento será el mismo que en el de una persona acusada, excepto que el auto que sea transmitido por el Agente Diplomático reconocido, en apoyo de su solicitud, manifestará con claridad el crimen del cual la persona reclamada haya sido convicta, y relacionará el hecho, lugar, y fecha de su conviccion. La prueba que deba producirse ante el Magistrado de Policía debe ser tal que, en conformidad con las leyes de Inglaterra, probare que el preso fuese convicto del crimen que se le acusa.

Despues de que el Magistrado de Policía haya puesto en prision á la persona acusada ó convicta para esperar la órden de un Secretario de Estado para su entrega, dicha persona tendrá derecho de pedir un escrito de *habeas corpus*. Si ella lo efectuaré así, su entrega debe ser diferida hasta despues de la decision de la Corte sobre el pedimento de dicho escrito, y aun entónces tendrá lugar solamente si la decision fuese adversa al recurrente. En este último caso puede la Corte ordenar la inmediata entrega á la persona autorizada para recibirle, sin órden del Secretario de Estado sobre dicha entrega, ó someterlo á prision para aguardar la órden. Igual procedimiento se observará respecto de los delincuentes puestos en prision en el Ecuador.

## ARTICULO III.

En la República del Ecuador, el procedimiento será como sigue:—

## 1.º En el caso de una persona acusada:—

La peticion para la entrega se hará al Ministro de Relaciones Exteriores del Ecuador por el Ministro ú otro Agente Diplomático de Su Magestad Británica, acompañado de un auto de arresto del acusado expedido por un Juez ó Magistrado debidamente autorizado para conocer de los actos de que se le acusase en la Gran Bretaña, junto con las deposiciones bien autenticadas, ó relaciones hechas con juramento ante dicho Juez ó Magistrado, manifestando con claridad los actos expresados, y una descripción de la persona reclamada y otras particularidades que puedan servir para identificarla.

Dichos documentos se transmitirán al Ministro Secretario de Estado en el Departamento del Interior, quien entónces, por órden firmada y sellada de su mano, hará saber á algun empleado de Policía que tal demanda ha sido hecha, y le requerirá, si hubiere causa suficiente, para que expida el mandamiento de arresto contra el fugitivo.

Con el recibo de la órden del Ministro Secretario de Estado, y con la produccion de suficiente prueba que justifique la expe-

the issue of the warrant, if the crime had been committed in Ecuador, he shall issue his warrant accordingly.

When the fugitive shall have been apprehended in virtue of such warrant he shall be brought before the Police Magistrate who issued it, or some other authority of the same class. If the evidence to be then produced shall be such as to justify, according to the law of Ecuador, the committal for trial of the prisoner if the crime of which he is accused had been committed in Ecuador, the Police Magistrate shall commit him to prison to await the warrant of the Secretary of State for his surrender, sending immediately to the Secretary of State a certificate of the committal and a report upon the case.

After the expiration of a period from the committal of the prisoner, which shall never be less than fifteen days, the Secretary of State shall, by order under his hand and seal, order the fugitive criminal to be surrendered to such person as may be duly authorized to receive him on the part of the Government of Her Majesty.

2. In the case of a person convicted :—

The course of proceeding shall be the same as in the case of a person accused, except that the warrant to be transmitted by the Minister or other Diplomatic Agent in support of his requisition shall clearly set forth the crime of which the person claimed has been convicted, and state the fact, place, and date of his conviction. The evidence to be produced before the Magistrate charged with the investigation of the case shall be such as would, according to the laws of Ecuador, prove that the prisoner was convicted of the crime charged.

ARTICLE IV.

A fugitive criminal may, however, be apprehended under a warrant issued by any Police Magistrate or other competent authority in either country, on such information or complaint, and such evidence, or after such proceedings, as would, in the opinion of the person issuing the warrant, justify the issue of a warrant if the crime had been committed or the prisoner convicted in that part of the dominions of the two Contracting Parties in which he exercises jurisdiction: Provided, however, that in the United Kingdom the accused shall, in such case, be sent as speedily as possible before a Police Magistrate in London, and that he shall be discharged, if within thirty days a requisition shall not have been made for his surrender by the Diplomatic Agent of his country, in the manner directed by Articles II and III of this Treaty.

The same rule shall apply to the cases of persons accused or convicted of any of the crimes specified in this Treaty, committed on the high seas, on board any vessel of other country, which may come into any port of the other.

ARTICLE V.

If the fugitive criminal who has been committed to prison be not surrendered and conveyed away within two months after such committal, or within two months after the decision of the Court, upon the return to a writ of *habeas corpus* in the United Kingdom, he shall be discharged from custody, unless sufficient cause be shown to the contrary.

ARTICLE VI.

When any person shall have been surrendered by either of the High Contracting Parties to the other, such person shall not, until he has been restored, or had an opportunity of returning to the country from whence he was surrendered, be triable or tried for any offence committed in the other country prior to the surrender, other than the particular offence on account of which he was surrendered.

ARTICLE VII.

In any case where an individual convicted or accused in Ecuador of any of the crimes described in the present Treaty, and who shall have taken refuge in the United Kingdom, shall have obtained naturalization there, such naturalization shall not prevent the search for, arrest, and surrender of such individual to the Ecuadorian authorities, in conformity with the said Treaty.

In like manner the surrender shall take place on the part of Ecuador in any case where an individual accused or convicted in England of any of the same crimes who shall have taken refuge in Ecuador shall have obtained naturalization there.

ARTICLE VIII.

No accused or convicted person shall be surrendered, if the offence in respect of which his surrender is demanded shall be deemed by the party upon whom it is made to be one of a political character, or if he prove to the satisfaction of the Police Magistrate, or of the Court before which he is brought on *habeas corpus*, or to the Secretary of State, that the requisition for his surrender has, in fact, been made with a view to try or to punish him for an offence of a political character.

de la boleta si el crimen hubiese sido cometido en el Ecuador expedirá en consecuencia la boleta de prision.

Cuando el fugitivo hubiere sido aprehendido en virtud de tal boleta, será conducido ante el empleado de Policía que lo expidió ó ante otro de igual clase. Si la prueba que deba entónces producirse fuere tal que justificase, segun las leyes del Ecuador, el sometimiento á juicio del preso, si el crimen de que hubiese sido acusado lo hubiese cometido en el Ecuador, el empleado de Policía lo cometerá á prision para esperar el decreto de entrega expedido por el Secretario de Estado, enviando inmediatamente á este un certificado de la prision practicada y un informe del caso.

Despues de expirado el periodo de detencion del preso, que nunca debe ser de ménos de quince dias, el Secretario de Estado, por órden firmada y sellada de su mano, ordenará que el criminal fugitivo sea entregado á la persona que esté debidamente autorizada para recibirle de parte del Gobierno de Su Magestad Británica.

2º. En el caso de una persona convicta :—

El curso del procedimiento será el mismo que en el de una persona acusada, excepto que el auto que deba ser trasmitido, por el Ministro ú otro Agente Diplomático en apoyo de su pedimento, deberá manifestar claramente el crimen del que la persona reclamada ha sido convencida, y determinar el hecho, lugar, y fecha de su conviccion. Las pruebas que deban producirse ante el Magistrado encargado de la investigacion del caso deben ser tales que, segun las leyes del Ecuador, probaren que el preso fue conviccto del crimen del que se le acusa.

ARTICULO IV.

El criminal fugitivo puede sin embargo ser aprehendido por un auto expedido por cualquiera Magistrado de Policía ú otra autoridad competente en cada uno de los dos países, con tales informaciones ó quejas y pruebas, ó despues de tales procedimientos que en opinion de la persona que expido el auto, justificasen la expedicion de un auto si el crimen hubiese sido cometido ó el prisionero conviccto en aquella parte de los dominios de las dos Partes Contratantes en la cual el Magistrado ú otra autoridad competente ejerza jurisdiccion; sin embargo que en el Reino Unido el acusado, en tal caso, será enviado con la brevedad posible ante un Magistrado de Policía en Lóndres, y que será puesto en libertad, si dentro de treinta dias no se hubiese hecho una solicitud para la entrega, por el Agente Diplomático de su país de la manera prescrita en los Artículos II y III de este Tratado.

Las mismas reglas se observarán en los casos de personas acusadas ó convictas de cualquiera de los crímenes especificados en este Tratado, cometidos en alta mar ó abordo de cualquiera embarcacion de uno de los dos países que pueda entrar á uno de los puertos del otro.

ARTICULO V.

Si el fugitivo criminal que ha sido cometido á prision no fuere entregado ó llevado á fuara en el término de dos meses despues del arresto, ó dentro de dos meses despues de la decision de la Corte sobre el escrito de *habeas corpus* en el Reino Unido ó en el Ecuador, será puesto en libertad, á ménos que causa suficiente se demostrare en contrario.

ARTICULO VI.

Cuando alguna persona hubiere sido entregado por una de las Altas Partes Contratantes á la otra, tal persona, mientras no haya sido devuelta ó haya tenido una oportunidad de volver al país de donde fué entregada, no podrá ser sometida á juicio ni juzgada por ningun delito cometido en el otro país, anteriormente á la entrega, á no ser por el delito particular por cuya causa fué entregada.

ARTICULO VII.

En cualquiera caso en que un conviccto ó acusado en el Ecuador de alguno de los crímenes detallados en el presente Tratado, y que se hubiere refugiado en el Reino Unido y obtenido naturalizacion allí, tal naturalizacion no impedirá la busca, arresto y entrega del individuo á las autoridades del Ecuador, en conformidad con dicho Tratado. De igual manera la entrega se verificará de parte del Ecuador, en cualquiera caso en que un individuo acusado ó conviccto en Inglaterra de cualquiera de los mismos delitos se hallare refugiado en el Ecuador y hubiere obtenido allí naturalizacion.

ARTICULO VIII.

Ninguna persona acusada ó conviccta será entregada, si el delito por el cual se demanda su entrega se estima por la parte á quien se solicita ser de carácter político, ó si la persona probare á satisfaccion del Magistrado de Policía ó de la Corte ante la cual es conducido en *habeas corpus*, ó del Secretario de Estado, que el pedimento de su entrega ha sido, en efecto, hecho con la mira de juzgarle y castigarle por un delito de carácter político.

## ARTICLE IX.

Warrants, depositions, or statements on oath, issued or taken in the dominions of either of the two High Contracting Parties, and copies thereof, and certificates of or judicial documents stating the fact of conviction, shall be received in evidence in proceedings in the dominions of the other if purporting to be signed or certified by a Judge, Magistrate, or officer of the country where they were issued or taken.

Provided such warrants, depositions, statements, copies, certificates, and judicial documents are authenticated by the oath of some witness, or by being sealed with the official seal of the Minister of Justice, or some other Minister of State.

## ARTICLE X.

The surrender shall not take place if, since the commission of the acts charged, the accusation, or the conviction, exemption from prosecution or punishment has been acquired by lapse of time, according to the laws of the country where the accused shall have taken refuge.

## ARTICLE XI.

If the individual claimed by one of the two Contracting Parties, in pursuance of the present Treaty, should be also claimed by one or several other Powers, on account of other crimes committed upon their territory, his surrender shall, in preference, be granted in compliance with that demand which is earliest in date.

## ARTICLE XII.

If the individual claimed should be under prosecution, or in custody, for a crime or offence committed in the country where he may have taken refuge, his surrender may be deferred until he shall have been set at liberty in due course of law.

In case he should be proceeded against or detained in such country on account of obligations contracted towards private individuals, his surrender shall nevertheless take place, the injured party retaining his right to prosecute his claims before the competent authority.

## ARTICLE XIII.

Every article found in the possession of the individual claimed at the time of his arrest shall be seized, in order to be delivered up with his person at the time when the surrender shall be made. Such delivery shall not be limited to the property or articles obtained by stealing or by fraudulent bankruptcy, but shall extend to everything that may serve as proof of the crime. It shall take place even when the surrender, after having been ordered, shall be prevented from taking place by reason of the escape or death of the individual claimed.

## ARTICLE XIV.

Each of the two Contracting Parties shall defray the expenses occasioned by the arrest within its territories, the detention, and the conveyance to its frontier, of the persons whom it may consent to surrender in pursuance of the present Treaty.

## ARTICLE XV.

The stipulations of the present Treaty shall be applicable to the foreign or colonial possessions of the two High Contracting Parties.

The requisition for the surrender of a fugitive criminal who has taken refuge in a foreign or colonial possession of either party shall be made to the Governor or chief authority of such possession by the Chief Consular Officer of the other at the seat of Government; or, if the fugitive has escaped from a foreign or colonial possession of the Party on whose behalf the requisition is made, by the Governor or chief authority of such possession.

Such requisitions may be disposed of, subject always, as nearly as may be, to the provisions of this Treaty, by the respective Governors or chief authorities, who, however, shall be at liberty either to grant the surrender, or to refer the matter to their Government.

Her Britannic Majesty shall, however, be at liberty to make special arrangements in the British Colonies and foreign possessions for the surrender of Ecuatorian criminals who may take refuge within such Colony, on the basis, as nearly as may be, of the provisions of the present Treaty.

## ARTICLE XVI.

The present Treaty shall come into operation two months after the exchange of the ratifications. Due notice shall in each country be given of the day.

Either Party may at any time terminate the Treaty on giving to the other six months' notice of its intention.

## ARTICULO IX.

Los autos, deposiciones ó relaciones bajo juramento, expedidos ó tomados en los dominios de cualquiera de las dos Altas Partes Contratantes, las copias de ellos y certificados ó documentos judiciales que establecen el hecho de la convicción, serán recibidos en prueba en los procedimientos que se sigan en los dominios de la otra, siempre que se encuentren firmados ó certificados por un Juez, Magistrado, ó alguacil del país de donde han sido expedidos ó tomados.

Con tal que dichos autos, deposiciones, relaciones, copias, certificados, y documentos judiciales sean autenticados con el juramento de algun testigo, ó sellados con el sello oficial de Ministro de Justicia ó de algun otro Ministro de Estado.

## ARTICULO X.

La entrega no se efectuará si, desde la comision de los actos imputados, ó desde la acusacion ó convicción, el lapso del tiempo hubiese eximido al delincuente del enjuiciamiento ó del castigo, segun las leyes del país en donde el acusado se hallare refugiado.

## ARTICULO XI.

Si el individuo reclamado por una de las Partes Contratantes, en ejecución del presente Tratado, fuere tambien reclamado por una ó varias Potencias, con motivo de otros crímenes cometidos en sus territorios, la entrega se hará con preferencia á aquella cuyo reclamo se hayá hecho con fecha anterior.

## ARTICULO XII.

Si el individuo reclamado estuviere enjuiciado, ó en custodia, por un crimen ó delito cometido en el país donde se haya refugiado, su entrega puede ser diferida hasta que hubiere sido puesto en libertad, en el debido curso legal.

En caso de que se hallare encausado ó detenido en dicho país por causa de obligaciones contraídas con individuos particulares, su entrega se verificará, no obstante, reservándose la parte agraviada su derecho para continuar sus reclamos ante la autoridad competente.

## ARTICULO XIII.

Tudo objeto encontrado en poder del individuo reclamado, al tiempo de su arresto, será recaudado para entregarlo junto con su persona cuando deba verificarse su entrega. Tal devolución no se limitará á los artículos obtenidos por robo ó quiebra fraudulenta, sino que se extenderá á todas las cosas que puedan servir como prueba del delito. Esto se verificará aun cuando, despues de ordenada la entrega de la persona, no hubiere tenido efecto por causa de la fuga ó muerte del individuo reclamado.

## ARTICULO XIV.

Cada una de las dos Partes Contratantes costeará los gastos ocasionados por el arresto dentro de su territorio, la detencion y la remision á su frontera, de las personas que consienta en entregar en conformidad del presente Tratado.

## ARTICULO XV.

Las estipulaciones del presente Tratado serán aplicables á las posesiones coloniales ó extrangeras de las dos Altas Partes Contratantes.

La petición de extradicion de un criminal fugitivo que se hubiere refugiado en una colonia ó posesion extrangeras de cualquiera de las Partes, se hará al Gobernador ó autoridad principal de tal posesion ó colonia, por el principal Agente Consular de la otra Parte en el asiento del Gobierno; ó si el fugitivo se ha fugado de una posesion extrangeras ó colonial de la Parte en cuyo favor se ha hecho la petición, por el Gobernador ó autoridad principal de dicha posesion ó colonia.

Tales peticiones pueden ser despachadas, sujetándose siempre con la mayor estrictez posible á las prescripciones de este Tratado por los respectivos Gobernadores ó autoridades principales, quienes, sin embargo, podrán, ó conceder la entrega, ó referir á su Gobierno el asunto en cuestion.

Su Magestad Británica podrá, no obstante, hacer especiales arreglos en las colonias Inglesas ó posesiones extrangeras, para la entrega de los criminales Ecuatorianos que se hayan refugiado dentro de tal colonia ó posesion bajo las bases mas posiblemente exactas á las que se prescriben en el presente Tratado.

## ARTICULO XVI.

El presente Tratado comenzará á surtir sus efectos dos meses despues del cange de las ratificaciones. En cada país se dará el correspondiente aviso del dia.

Cualquiera de las Partes puede en cualquiera tiempo terminar el Tratado, dando á la otra el aviso de su intencion con seis meses de anticipacion.

## ARTICLE XVII.

The present Treaty shall be ratified, and the ratification shall be exchanged at the capital of Ecuador within eight months after the approbation of the Legislative Power according to the laws of each country.

In witness whereof the respective Plenipotentiaries have signed the same in duplicate, and have affixed thereto the seal of their arms.

Done at Quito, capital of the Republic of Ecuador, the 20th September, one thousand eight hundred and eighty.

## ARTICULO XVII.

El presente Tratado será ratificado, y cangendas las ratificaciones en la capital del Ecuador dentro de ocho meses despues de aprobado por el Poder Legislativo, en conformidad á las leyes de cada país.

En testimonio de lo cual los Plenipotenciarios respectivos firman la presente Convencion, dos de un tenor, y ponen sus sellos.

Hecha en Quito, capital de la República del Ecuador, á veiente de Setiembre, de mil ocho cientos ochenta.

(L.S.) FRED. DOUGLAS HAMILTON.  
(L.S.) CORNELIO E. VERNAZA.

And whereas the ratifications of the said Treaty were exchanged at Quito, on the nineteenth day of February, one thousand eight hundred and eighty-six.

Now, therefore, Her Majesty, by and with the advice of her Privy Council, and in virtue of the authority committed to her by the said recited Acts, doth order, and it is hereby ordered, that from and after the second day of July, one thousand eight hundred and eighty-six, the said Acts shall apply in the case of the Equator, and of the said Treaty with the Republic of the Equator.

Provided always, and it is hereby further ordered, that the operation of the said Acts shall be suspended within the Dominion of Canada so far as relates to the Republic of the Equator and to the said Treaty, and so long as the provisions of the Canadian Acts aforesaid continue in force, and no longer.

C. L. PEEL.

1887.

(SECOND SESSION.)

## NEW SOUTH WALES.

INTERNATIONAL COPYRIGHT ACT.  
(DESPATCH RESPECTING.)

Presented to Parliament by Command.

Department of Justice,  
Sydney, 1st November, 1886.

His Excellency the Governor directs the publication, for general information, of the following Despatch from the Principal Secretary of State for the Colonies, and of the International Copyright Act passed in the last session of Parliament, referred to therein.

J. P. GARVAN.

[Circular 1.]

Downing-street,  
31st August, 1886.

Sir,

With reference to my predecessor's Despatch General of the 16th of April last, I have the honor to transmit to you, for publication in the Colony under your Government, a copy of the International Copyright Act (49 & 50 Vic., cap. 33), passed in the last session of Parliament.

I have also the honor to enclose a copy of the Parliamentary Paper noted in the margin (C. 4,856), containing further correspondence respecting the formation of an International Copyright Union, in continuation of the Paper enclosed in Lord Granville's Despatch above referred to.

I have, &amp;c.,

EDWARD STANHOPE.

The Officer Administering the  
Government of New South Wales.

49 &amp; 50 VIC., CHAPTER 33.

An Act to amend the Law respecting International and Colonial  
Copyright. [25th June, 1886.]

WHEREAS, by the International Copyright Acts, Her Majesty is authorized by Order in Council to direct that, as regards literary and artistic works first published in a foreign country, the author shall have copyright therein during the period specified in the order, not exceeding the period during which authors of the like works, first published in the United Kingdom, have copyright:

And whereas, at an International Conference held at Berne, in the month of September, one thousand eight hundred and eighty-five, a draft of a convention was agreed to for giving to authors of literary and artistic works, first published in one of the countries parties to the convention, copyright in such works throughout the other countries parties to the convention:

And whereas, without the authority of Parliament, such convention cannot be carried into effect in Her Majesty's dominions,

and consequently Her Majesty cannot become a party thereto; and it is expedient to enable Her Majesty to accede to the convention:

Be it therefore enacted by the Queen's Most Excellent Majesty, by and with the advice and consent of the Lords Spiritual and Temporal, and Commons, in this present Parliament assembled, and by the authority of the same, as follows:

Short titles and construction.

1. (1.) This Act may be cited as the International Copyright Act, 1886.

(2.) The Acts specified in the first part of the First Schedule to this Act, are, in this Act, referred to, and may be cited by the short titles in that schedule mentioned; and those Acts, together with the enactment specified in the second part of the said schedule, are, in this Act, collectively referred to as the International Copyright Acts.

The Acts specified in the Second Schedule to this Act may be cited by the short titles in that schedule mentioned, and those Acts are in this Act referred to, and may be cited collectively as the Copyright Acts.

(3.) This Act, and the International Copyright Acts, shall be construed together, and may be cited together as the International Copyright Acts, 1844 to 1886.

Amendment, as to extent and effect of order under International Copyright Acts.

2. The following provisions shall apply to an Order in Council under the International Copyright Acts:—

(1.) The order may extend to all the several foreign countries named or described therein:

(2.) The order may exclude or limit the rights conferred by the International Copyright Acts in the case of authors who are not subjects or citizens of the foreign countries named or described in that or any other order; and if the order contains such limitation, and the author of a literary or artistic work first produced in one of these foreign countries is not a British subject, nor a subject or citizen of any of the foreign countries so named or described, the publisher of such work, unless the order otherwise provides,

shall, for the purpose of any legal proceedings in the United Kingdom for protecting any copyright in such work, be deemed to be entitled to such copyright as if he were the author; but this enactment shall not prejudice the rights of such author and publisher as between themselves.

- (3) The International Copyright Acts, and an order made thereunder, shall not confer on any person any greater right or longer term of copyright in any work than that enjoyed in the foreign country in which such work was first produced.

#### Simultaneous Publication.

3. (1) An Order in Council, under the International Copyright Acts, may provide for determining the country in which a literary or artistic work, first produced simultaneously in two or more countries, is to be deemed, for the purpose of copyright, to have been first produced, and for the purposes of this section, "country" means the United Kingdom and a country to which an order under the said Act applies.

(2) Where a work, produced simultaneously in the United Kingdom and in some foreign country or countries, is, by virtue of an Order in Council under the International Copyright Acts, deemed, for the purpose of copyright, to be first produced in one of the said foreign countries, and not in the United Kingdom, the copyright in the United Kingdom shall be such only as exists by virtue of production in the said foreign country, and shall not be such as would have been acquired if the work had been first produced in the United Kingdom.

#### Modification of certain provisions of International Copyright Acts.

4. (1) Where an order respecting any foreign country is made, under the International Copyright Acts, the provisions of those Acts, with respect to the registry and delivery of copies of works, shall not apply to works produced in such country except so far as provided by the order.

(2) Before making an Order in Council, under the International Copyright Acts, in respect of any foreign country, Her Majesty in Council shall be satisfied that that foreign country has made such provisions (if any) as it appears to Her Majesty expedient to require for the protection of authors of works first produced in the United Kingdom.

#### Restriction on translation.

5. (1) Where a work, being a book or dramatic piece, is first produced in a foreign country to which an Order in Council, under the International Copyright Acts applies, the author or publisher, as the case may be, shall, unless otherwise directed by the order, have the same right of preventing the production in, and importation into, the United Kingdom of any translation not authorized by him of the said work as he has of preventing the production and importation of the original work.

(2) Provided that if after the expiration of ten years, or any other term prescribed by the order, next after the end of the year in which the work (or, in the case of a book published in numbers, each number of the book) was first produced, an authorized translation in the English language of such work or number has not been produced, the said right to prevent the production in, and importation into, the United Kingdom of an unauthorized translation of such work shall cease.

(3) The law relating to copyright, including this Act, shall apply to a lawfully produced translation of a work in like manner as if it were an original work.

(4) Such of the provisions of the International Copyright Act, 1852, relating to translations, as are unrepealed by this Act, shall apply in like manner as if they were re-enacted in this section.

#### Application of Act to existing works.

6. Where an Order in Council is made, under the International Copyright Acts, with respect to any foreign country, the author and publisher of any literary or artistic work first produced before the date at which such order comes into operation, shall be entitled to the same rights and remedies as if the said Acts, and this Act, and the said order, had applied to the said foreign country at the date of the said production: Provided that where any person has, before the date of the publication of an Order in Council, lawfully produced any work in the United Kingdom, nothing in this section shall diminish or prejudice any rights or interests arising from, or in connection with such production, which are subsisting and valuable at the said date.

#### Evidence of foreign copyright.

7. Where it is necessary to prove the existence or proprietorship of the copyright of any work first produced in a foreign country, to which an Order in Council, under the International Copyright Acts, applies, an extract from a register, or a certificate, or other document, stating the existence of the copyright, or the person who is the proprietor of such copyright, or is, for the purpose of any legal proceedings in the United Kingdom, deemed to be entitled to such copyright, if authenticated by the official seal of a Minister of State of the said foreign country, or

by the official seal or the signature of a British diplomatic or consular officer acting in such country, shall be admissible as evidence of the facts named therein; and all Courts shall take judicial notice of every such official seal and signature as is in this section mentioned, and shall admit in evidence, without proof, the documents authenticated by it.

#### Application of Copyright Acts to Colonies.

8. (1) The Copyright Acts shall, subject to the provisions of this Act, apply to a literary or artistic work first produced in a British possession in like manner as they apply to a work first produced in the United Kingdom:

Provided that—

- (a) the enactments respecting the registry of the copyright in such work shall not apply if the law of such possession provides for the registration of such copyright; and
- (b) where such work is a book, the delivery to any persons, or body of persons, of a copy of any such work shall not be required.

(2) Where a register of copyright in books, is kept under the authority of the government of a British possession, an extract from that register, purporting to be certified as a true copy by the officer keeping it, and authenticated by the public seal of the British possession, or by the official seal or the signature of the Governor of a British possession, or of a Colonial Secretary, or of some Secretary or Minister administering a department of the Government of a British possession, shall be admissible in evidence of the contents of that register; and all Courts shall take judicial notice of every such seal and signature, and shall admit in evidence, without further proof, all documents authenticated by it.

(3) Where, before the passing of this Act, an Act or ordinance has been passed in any British possession respecting copyright in any literary or artistic works, Her Majesty in Council may make an Order modifying the Copyright Acts and this Act, so far as they apply to such British possession, and to literary and artistic works first produced therein, in such manner as to Her Majesty in Council seems expedient.

(4) Nothing in the Copyright Acts or this Act shall prevent the passing, in a British possession, of any Act or ordinance respecting the copyright within the limits of such possession of works first produced in that possession.

#### Application of International Copyright Acts to Colonies.

9. Where it appears to Her Majesty expedient that an Order in Council, under the International Copyright Acts, made after the passing of this Act, as respects any foreign country, should not apply to any British possession, it shall be lawful for Her Majesty, by the same or any other Order in Council, to declare that such Order and the International Copyright Acts and this Act shall not, and the same shall not, apply to such British possession, except so far as is necessary for preventing any prejudice to any rights acquired previously to the date of such Order; and the expressions in the said Acts relating to Her Majesty's dominions shall be construed accordingly; but, save as provided by such declaration, the said Acts and this Act shall apply to every British possession as if it were part of the United Kingdom.

#### Making of Orders in Council.

10. (1) It shall be lawful for Her Majesty from time to time to make Orders in Council for the purposes of the International Copyright Acts and this Act, for revoking or altering any Order in Council previously made in pursuance of the said Acts, or any of them.

(2) Any such Order in Council shall not affect prejudicially any rights acquired or accrued at the date of such Order coming into operation, and shall provide for the protection of such rights.

#### Definitions.

11. In this Act, unless the context otherwise requires—

The expression "literary and artistic work" means every book, print, lithograph, article of sculpture, dramatic piece, musical composition, painting, drawing, photograph, and other work of literature and art to which the Copyright Acts or the International Copyright Acts, as the case requires, extend.

The expression "author" means the author, inventor, designer, engraver, or maker of any literary or artistic work, and includes any person claiming through the author; and, in the case of a posthumous work, means the proprietor of the manuscript of such work and any person claiming through him; and, in the case of an encyclopedia, review, magazine, periodical work, or work published in a series of books or parts, includes the proprietor, projector, publisher, or conductor.

The expressions "performed" and "performance" and similar words, include representation and similar words.

The expression "produced" means, as the case requires, published or made, or performed, or represented; and the expression "production" is to be construed accordingly.

The expression "books published in numbers" includes any review, magazine, periodical work, work published in a series of books or parts, transactions of a society or body, and other books of which different volumes or parts are published at different times.

The expression "treaty" includes any convention or arrangement.

The expression "British possession" includes any part of Her Majesty's dominions, exclusive of the United Kingdom: and where parts of such dominions are under both a central and a local Legislature, all parts under one central Legislature are, for the purposes of this definition, deemed to be one British possession.

Repeal of Acts.

12. The Acts specified in the Third Schedule to this Act are hereby repealed as from the passing of this Act to the extent in the third column of that schedule mentioned:

Provided as follows:

- (a) Where an Order in Council has been made before the passing of this Act, under the said Acts as respects any foreign country, the enactments hereby repealed shall continue in full force as respects that country until the said Order is revoked.
- (b) The said repeal and revocation shall not prejudice any rights acquired previously to such repeal or revocation, and such rights shall continue and may be enforced in like manner as if the said repeal or revocation had not been enacted or made.

FIRST SCHEDULE.

INTERNATIONAL COPYRIGHT ACTS.

PART I.

Session and Chapter.	Title.	Short Title.
7 & 8 Vic., c. 12	An Act to Amend the law relating to International Copyright.	The International Copyright Act, 1844.
15 & 16 Vic., c. 12	An Act to enable Her Majesty to carry into effect a convention with France on the subject of copyright, to extend and explain the International Copyright Acts, and to explain the Acts relating to copyright in engravings.	The International Copyright Act, 1862.
33 & 39 Vic., c. 12	An Act to amend the law relating to International Copyright.	The International Copyright Act, 1875.

PART II.

Session and Chapter.	Title.	Enactment referred to.
25 & 26 Vic., c. 68	An Act for amending the law relating to copyright in works of the fine arts, and for repressing the commission of fraud in the production and sale of such works.	Section twelve.

SECOND SCHEDULE.

COPYRIGHT ACTS.

Session and Chapter.	Title.	Short Title.
8 Geo. 2, c. 13	An Act for the encouragement of the arts of designing, engraving, and etching, historical, and other prints, by vesting the properties thereof in the inventors and engravers during the time therein mentioned.	The Engraving Copyright Act, 1734.
7 Geo. 3, c. 33	An Act to amend and render more effectual an Act made in the eighth year of the reign of King George the Second, for encouragement of the arts of designing, engraving, and etching historical and other prints, and for vesting in and securing to Jane Hogarth, widow, the property in certain prints.	The Engraving Copyright Act, 1766.

SECOND SCHEDULE—continued.

COPYRIGHT ACTS.

Session and Chapter.	Title.	Short Title.
15 Geo. 3, c. 53.	An Act for enabling the two Universities in England, the four Universities in Scotland, and the several Colleges of Eton, Westminster, and Winchester, to hold in perpetuity their copyright in books given or bequeathed to the said Universities and colleges for the advancement of useful learning and other purposes of education; and for amending so much of an Act of the eighth year of the reign of Queen Anne, as relates to the delivery of books to the warehouse-keeper of the Stationers' Company for the use of the several libraries therein mentioned.	The Copyright Act, 1775.
17 Geo. 3, c. 57.	An Act for more effectually securing the property of prints to inventors and engravers, by enabling them to sue for and recover penalties in certain cases.	The Prints Copyright Act, 1777.
54 Geo. 3, c. 56	An Act to amend and render more effectual an Act of His present Majesty for encouraging the art of making new models and casts of busts and other things therein mentioned, and for giving further encouragement to such arts.	The Sculpture Copyright Act, 1814.
3 Will. 4, c. 15	An Act to amend the laws relating to Dramatic Literary Property.	The Dramatic Copyright Act, 1833.
5 & 6 Will. 4, c. 65	An Act for preventing the publication of Lectures without consent.	The Lectures Copyright Act, 1835.
6 & 7 Will. 4, c. 69	An Act to extend the protection of copyright in prints and engravings to Ireland.	The Prints and Engravings Copyright Act, 1836.
6 & 7 Will. 4, c. 110	An Act to repeal so much of an Act of the fifty-fourth year of King George the Third, respecting copyrights, as requires the delivery of a copy of every published book to the libraries of Stion College, the four Universities of Scotland, and of the King's Inns in Dublin.	The Copyright Act, 1836.
5 & 6 Vic., c. 46	An Act to amend the law of copyright.	The Copyright Act, 1842.
10 & 11 Vic., c. 95	An Act to amend the law relating to the protection in the Colonies of works entitled to copyright in the United Kingdom.	The Colonial Copyright Act, 1847.
25 & 26 Vic., c. 68	An Act for amending the law relating to copyright in works of the fine arts, and for repressing the commission of fraud in the production and sale of such works.	The Fine Arts Copyright Act, 1862.

THIRD SCHEDULE.

ACTS REPEALED.

Session and Chapter.	Title.	Extent of Repeal.
7 & 8 Vic., c. 12	An Act to amend the law relating to International Copyright.	Sections fourteen, seventeen, and eighteen.
15 & 16 Vic., c. 12	An Act to enable Her Majesty to carry into effect a convention with France on the subject of copyright, to extend and explain the International Copyright Acts, and to explain the Acts relating to copyright engravings.	Sections one to five, both inclusive, and sections eight and eleven.
25 & 26 Vic., c. 68	An Act for amending the law relating to copyright in works of the fine arts, and for repressing the commission of fraud in the production and sale of such works.	So much of section twelve as incorporates any enactment repealed by this Act.

1887.

(SECOND SESSION.)

## NEW SOUTH WALES.

ADDITIONAL TREATY OF COMMERCE BETWEEN GREAT  
BRITAIN AND ROUMANIA.  
(DESPATCH.)

Presented to Parliament by Command.

(Circular.)

Downing-street, 22 February, 1887.

Sir,

I have the honor to transmit to you, for information and publication in the Colony under your Government, a copy of an Additional Treaty of Commerce (C. 4,935) between Her Majesty and the King of Roumania, signed at Bucharest the 26th November, 1886.

I may observe that the alterations in the duties are understood to be in the direction of a reduction of duty in each case.

I have, &amp;c.,

The Officer Administering  
the Government of New South Wales.

H. T. HOLLAND.

ADDITIONAL TREATY OF COMMERCE BETWEEN HER MAJESTY AND HIS MAJESTY THE KING OF  
ROUMANIA.

Signed at Bucharest, 26th November, 1886.

[Ratifications exchanged at Bucharest, 31st December, 1886.]

## ENGLISH TEXT.

HER Majesty the Queen of the United Kingdom of Great Britain and Ireland and His Majesty the King of Roumania, having found it expedient to revise the text of Articles III and XI of the Treaty of Commerce and Navigation, signed at Bucharest, on the 24th March (5th April), 1880, have with this object determined to conclude a Treaty, and have named as their respective Plenipotentiaries, that is to say:—

Her Majesty the Queen of the United Kingdom of Great Britain and Ireland, Percy Sanderson, Esquire, a Companion of Her Most Distinguished Order of Saint Michael and Saint George, Her Consul-General in Roumania and Chargé d'Affaires at Bucharest.

And His Majesty the King of Roumania, M. Michel Phérokýde, His Minister Secretary of State for Foreign Affairs, Grand Officer of His Order of the Star of Roumania, &c., &c.

Who, after having communicated to each other their respective full powers, found in good and due form, have agreed upon and concluded the following Articles:—

## ARTICLE I.

The provisions of Article III of the Treaty of the 24th March (5th April), 1880, are replaced by the following stipulations:—

The following goods will pay, on their entry into Roumania, the duties hereinafter specified:—

	Fr. c.	
1. Plain biscuits, not sweetened .....	25 00	per 100 kilog.
2. Pitch, Colophanum, and tar .....	5 00	”
3. Paints, common, prepared with oil, ground, for painting houses, ships, &c.....	8 00	”
4. Linseed oil .....	10 00	”
5. Felts for carpets, of all colours, printed or not, by the yard and by the piece.....	20 00	”
6. Cotton twist, single, carded, grey or bleached, called in Roumanian “cretz,” “cretzishor,” or “extra-cretz.”	15 00	”
7. Doubled yarns, in two or more threads, grey or bleached .....	20 00	”
8. Dyed cotton yarns of all kinds.....	45 00	”

Article I—*continued.*

	Fr. c.
9. Jute cloth, very common, and sacks made out of such cloth .....	5 00 per 100 kilog.
10. Cements, natural and prepared .....	00 60 "
11. Common earthenware, that is to say—	
1. Earthenware of one colour, or white, as well as white decorated with coloured borders only, but not gilt or silvered.	} 2 40 "
2. Common printed plates, of two colours, imported in baskets .....	
12. Copper, brass, and bronze, rough, in all forms, broken pieces of copper, brass, and bronze, copper filings; not gilt or silvered.	Free
13. Copper, brass, and bronze, in sheets, or wire (including wire for strings of musical instruments), copper and brass wire for tissues and embroidery; not gilt or silvered; trunnions and pillars belonging to machinery.	"
14. Metal bedsteads of all kinds, of iron, brass, bronze, &c., with or without ornaments, painted, varnished, ornamented with pictures, bronzed, &c.; iron furniture for rooms, also of gilt or silvered, and whether covered or not.	8 50 "
15. Tin (pewter), raw, in all its forms, in sheets, rods, &c.; tin and pewter filings, broken pieces of tin and pewter.	Free
16. Iron and steel rails of all kinds, and railway points.....	"
17. Iron hoops, for wheels .....	"
18. Iron, in sheets and laminated, unenumerated .....	"
19. Tin plates .....	3 50 "
20. Various articles, fittings and detached parts of machinery, of cast iron .....	Free
21. Iron chains, other than for ships .....	7 00 "
22. Unenumerated articles of iron and steel, common, simple, tinned, enamelled, but not polished; tools and instruments of iron, not polished, with or without wooden handles.	15 00 "
23. Articles of iron and steel, semi-fine, polished; tools and instruments of steel, or steel and iron polished; combined or not with other products, such as tin and wood.	15 00 "
24. Articles of tin and sheet iron, painted, enamelled, or galvanized .....	8 50 "
25. Cutlery, common, of iron, or steel, common scissors, with settings of wood, bone, horn, or other common materials.	20 00 "
26. Hats, trimmed or not, of felt made from wool without any mixture of other materials such as hair, fur, silk, &c.	200 00 "

In conformity with Article 5 of the Roumanian Customs Law, the weight liable to duty shall be established at the option of the person presenting the goods, either by weighing the goods divested of their packing material, or by deducting from the gross weight the percentage which constitutes the legal tare, as set forth in the Roumanian General Tariff.

## ARTICLE II.

The Treaty of the 24th March (5th April), 1880 (of which the provisions that are not modified by the clauses of the present Treaty remain in force), as well as the present Treaty, shall continue in force until the 28th June (10th July), 1891.

In case neither of the two Contracting Parties shall have notified, twelve months before the said date, its intention of putting an end to the present Treaty, and to the Treaty of the 24th March (5th April), 1880, they shall remain binding until the expiration of one year from the day on which either of the Contracting Parties shall have given such notice.

## ARTICLE III.

The ratifications of the present Treaty shall be exchanged at Bucharest as soon as possible.

In witness whereof, the respective Plenipotentiaries have signed the present Treaty and affixed thereto their seals.

Done in duplicate at Bucharest, the fourteenth (twenty-sixth) day of November, one thousand eight hundred and eighty-six.

(L.S.) PERCY SANDERSON.

(L.S.) M. PHERÉKYDE.

1887.

(SECOND SESSION.)

NEW SOUTH WALES.

# MILITARY FORCES OF THE COLONY.

(ANNUAL REPORT FOR 1886.)

Presented to Parliament by Command.

REPORT of the Major-General Commanding on the Military Forces of New South Wales for the year 1886, viz.:—

## Permanent Artillery.

### STRENGTH.

The strength of the corps on the 1st of January last was 380, as compared with 486 of the previous year, the establishment being in process of reduction from 500 to 370 of all ranks.

### REDUCTION.

This reduction was brought about by the urgent necessity for retrenchment throughout the public service; and I may here remark that other branches of the military service have been likewise subjected to large reductions.

### DISTRIBUTION.

The distribution of the corps remains much as heretofore, except that the various detachments have been reduced in strength to allow of greater concentration at the Victoria Barracks. This arrangement undoubtedly favours the better maintenance of discipline and proper practise of interior economy, inasmuch as officers and men are now more intimately associated, and under the eye of the commanding officer.

### FLUCTUATION.

During the year the number of recruits enlisted was 65; men returned from desertion, 24. On the other hand, the corps lost,—by desertion, 58; death, 2; and discharge, 128. This last item is made up as follows:—Termination of limited engagement, 25; discharge by purchase, 7; medically unfit, 9; free discharge, 2; transfer, 1; incorrigible and worthless characters, 30; discharge with ignominy, 4; services no longer required, 1; reduction of establishment, 45; not likely to become efficient, 2; conviction of felony, 2.

### CONDUCT.

The number of courts-martial is 60, as compared with 44 of previous year. Committals by summary award of commanding officer amount to 50. The above increase may be accounted for by the numerical addition to the 1885 establishment and the hurried enrolment during the last war-scare, when possibly lesser discrimination than usual was exercised in the selection of recruits.

### ANNUAL INSPECTION.

At my annual inspection of the corps I found the clothing in a very unsatisfactory condition, the contractor having failed to complete his contract within some months of the specified time, which, besides being productive of much inconvenience and hardship to the men, formed an additional cost to the public by the issue of compensation allowances. The arms and accoutrements were in good order and serviceable condition. The drill was fair. The books and other documents were, with some exceptions, correctly posted; at the same time there was a want of uniformity and thorough check in carrying out this portion of the interior economy of the corps. This defect will be met by the compilation of a book of standing orders

220—

[1,058 copies—Approximate Cost of Printing (labour and material), £3 7s. 10d.]

orders suited to local requirements, and to which end instructions have been issued to the commanding officer. The barrack rooms and various offices and out-buildings I found clean. I must, however, draw attention to the drainage, or rather want of drainage, in the Victoria Barracks, which remains in the same deplorable condition described in my Annual Reports of 1883 and 1885. The barracks were inspected by the late Colonial Secretary, the Medical Adviser to the Government, and the Board of Health Department during the year, but nothing has been done to improve matters; and it is not surprising that several cases of enteric fever have broken out, three of which were in the officers' quarters. Much inconvenience and annoyance has been caused at various times by the irregular way in which the closets, dust-bins, &c., are emptied; the contractors evincing great independence in the matter. The barracks generally, except at Newcastle, require repair. The barracks at Bare Island have not yet been commenced, consequently the men are under canvas. All the outlying barracks, forts, magazines, ordnance, stores, &c., in charge of the corps were maintained in good condition and fit for service.

#### ANNUAL INSTRUCTION.

Courses of instruction in gunnery, each lasting from eight to ten weeks, have been carried out by the Imperial instructors, under Colonel Bingham, R.A., and supervised by the Officer Commanding Artillery Forces; 4 officers, 16 non-commissioned officers, and 99 men were put through. These courses of instruction, whilst ensuring a creditable state of efficiency, have awakened a degree of zeal and interest in the work which was hitherto wanting. Middle Head was the site selected for carrying out this instruction, there being no School of Gunnery in a central position available. I am assured that *thorough instruction cannot be given* unless in a properly constructed building, which I have recommended should be erected in the Victoria Barracks for the convenience of not only this corps but the Volunteer and Reserve Artillery; unless such a building is available for the latter branches of the Force especially we must be content to have them insufficiently trained. The corps, as usual, went into camp last Easter with a portion of the Volunteer Force. The long-standing want of a nucleus of permanent and trained horses for the field battery is still perpetuated. This effectually precludes officers and men acquiring a proper knowledge of field-battery duties, and of performing field movements in that smart and precise manner which thorough efficiency demands.

#### RESERVE.

Concurrently with the recent reduction of establishment it was endeavoured to form a reserve, to be affiliated to the corps, but, although liberal terms were offered, so little encouragement was received that the idea was abandoned.

The Permanent Artillery have done good work in connection with changes, additions, &c., in armament at outlying forts.

#### HOSPITAL.

During the year eighty-five recruits were passed into the ranks, with an average chest measurement of 37½ in., and with a general physique superior to that of 1885. Of the 408 admissions into the hospital a large number were cases of a trivial nature, necessitating only 24 hours' detention. The number of men under treatment for a period not over three days was 110, and under seven days 207. The return of diseases and injuries are specified under the following heads:—

Urinary organs	...	...	...	...	...	...	...	...	...	87
Alimentary canal, &c....	...	...	...	...	...	...	...	...	...	34
Acute, specific, and general	...	...	...	...	...	...	...	...	...	136
Respiratory organs	...	...	...	...	...	...	...	...	...	59
Nervous	...	...	...	...	...	...	...	...	...	5
Injuries and miscellaneous	...	...	...	...	...	...	...	...	...	86

Two deaths occurred during the year. In my periodical visits to the hospital I have found everything clean and in good order, and the patients content, which reflects credit on Surgeon-major Williams and his staff of assistants. This officer, during his short visit to England, attended a class of medical instruction in ambulance duties, and secured first marks in a class of seventy. It is proposed during the current year to organize an ambulance corps for general service, on the lines recommended by Surgeon-major Williams, and in light of the experience gained by him in the Soudan, and more recently in England.

#### PROVOST.

The provost has been governed in accordance with existing regulations, and the maintenance of discipline strictly enforced. The duties of Provost Sergeant are satisfactorily discharged by Sergeant-major Shaw.

## Volunteer Force under Partial-payment System.

#### STRENGTH.

The strength on the 1st January was 3,295, as compared with 4,124 of previous year, and the establishment has been lowered from 5,297 to 2,830. This shows a present excess of strength over establishment of 465, which it is intended to meet by the temporary classification of surplus men as supernumeraries pending absorption.

#### CLOTHING, ARMS, AND ACCOUTREMENTS.

My annual inspection of the various corps showed that the clothing was in a generally satisfactory condition. The arms (Martini-Henry lately supplied) were in good order; but the buff leather accoutrements were, as a rule, not well kept, a result which may be put down to the aversion of commanding officers to inflict fines. The necessity of improvement has been strongly put to these officers, and should their neglect of duty continue I shall be prepared to recommend they be required to resign in favour of officers with a sterner sense of duty.

#### DRILL

## DRILL.

The Volunteer Artillery has been drilled to 80-pounders, 40-pounders, and field guns, and shows an improvement generally, although it may be noted that I found it necessary to withhold, as a temporary measure, the efficiency of one battery, which, however, subsequently worked up and qualified. A squad of officers has been put through a short course of drill with the 25-ton gun by the Imperial instructors; but until a School of Gunnery in a central position is erected it is foolish to expect the Volunteer Artillery to be properly trained. As a matter of fact, officers and others engaged in civil occupations during the day cannot give the necessary attendance, unless they have special facilities, such as would be found in the school above noted, and without which I moreover consider the services of the Imperial instructors are, in a great measure, thrown away. Again, the want of permanently trained horses similarly affects the efficiency of the Volunteer Field Battery.

The Torpedo Corps has been exercised, as far as circumstances permitted, in their special duties. Quarterly lectures have been given and voluntary classes held by Major Penrose, R.E. A class of officers and non-commissioned officers has been instructed by this officer in the practical working of the electric search-light. Signalling classes under Warrant Officer Wood, R.E., have also been held. Urgent necessity exists for the erection of a suitable drill-shed near the water, in order that the evening drills may be utilized in work special to the corps. I consider this corps is serving under *serious disadvantages*, for it requires a nucleus of permanently enrolled men, proper storage accommodation, and a specially adapted steamer of the Miner class, with boats, &c., to enable it frequently to practise that which would be required of them in time of war. Other details, unnecessary here to recapitulate, also require attention before the corps can be placed in a position to satisfactorily perform the duties required of it. The commanding officer, Lieut.-Colonel Cracknell, and his officers deserve credit for what they have done with the insufficient means at their disposal.

The drill of the Engineer Corps is good, and the modelling shed having been completed useful work can always be carried on. The usual quarterly lectures have been given by Major Penrose, R.E.

The drill of the Infantry is good, notwithstanding I considered it necessary to disqualify two companies, which, however, subsequently proved their efficiency.

## CONTINUOUS TRAINING.

In addition to the day and night drills at detached periods throughout the year, the annual course of continuous training for six days was, as usual, held at Easter, when 1,090 of Artillery and Torpedo Corps encamped at Middle Head, under the Officer Commanding Artillery Forces; and 2,844, of which were 1 Troop of Reserve Cavalry, 1 Field Battery Permanent Artillery, 1 Field Battery Volunteer Artillery, 1 Company of Engineers, and 4 Regiments of Infantry, encamped at the National Park, under my personal command. Excellent work was done in both camps. In the former, instruction and exercises special to the two branches were carried on. In the latter, two brigades were formed, and practical instruction was afforded in guard and outpost duties, cavalry and field artillery exercises, stable duties, company, battalion, brigade, and divisional drills, in close and extended order, the attack and defence of positions, visual signalling, the formation of rifle pits, shelter trenches, &c. The conduct of the Force in both camps was excellent, and the result of the six days' training may be considered in the highest degree satisfactory. Corps being now thoroughly habituated to the practice of a proper system of interior economy, the various duties were performed with regularity, order, and comfort. Facilities were afforded for a proportion of Reserve officers to attend the camp, which I am glad to say were taken advantage of.

## CONDUCT, DISCIPLINE, AND EFFICIENCY.

The general conduct and discipline of the Force is satisfactory, and the percentage of efficient is 74, as compared with 80 of previous year. This decrease may be accounted for by the depression of trade forcing men to leave their districts in search of employment.

## Volunteer Reserves.

## STRENGTH.

The strength of the Reserves is 2,711, as against 3,210 on 1st January, 1886. By the death of Colonel Raymond the command of the Metropolitan and Western Reserves became vacant. This command has been taken up by Lieutenant-Colonel Eden, Commanding the Southern Reserves, who, with the assistance of his adjutants, will be enabled to continue the same.

## CLOTHING, ARMS, AND ACCOUTREMENTS.

The Reserves are now complete in clothing, with few exceptions of late enrolments. The arming of the cavalry is in course of completion; the artillery and infantry are armed with Henry rifles; the accoutrements to the present time are not uniform throughout, but steps will be taken during the current year to have these corps equipped as complete as possible.

## DRILL.

The drill of the various corps, taking into consideration the extreme difficulty of securing on the spur of the moment capable and steady instructors, I found to be in a few instances good, in the majority indifferent, and in the remainder bad. As conducing very much to this unsatisfactory state of affairs was the persistent neglect of some officers commanding corps to make known the shortcomings of instructors—indeed in some cases months elapsed before the Staff was in a position to take any action towards replacing men who had proved unworthy of their position. Camps of instruction have on several occasions been formed, and with, no doubt, good effect; still it is to be noted that the time thus occupied has been of such short duration as to preclude the acquirement of any but a very superficial knowledge of camp routine and general duties in the field.

The cavalry is generally well mounted, and promises to become a valuable arm of the service.

## EFFICIENCY.

## EFFICIENCY.

The number of efficient on the 1st of January, 1886, was so low that the regulation which specifies disbandment in the case of efficient being below a certain number had to be waived in the case of every corps. I am prepared to recommend that a similar concession be exercised this year in the case of such as I think will be enabled during the current year to make up lost ground. The number of efficient is but 58 per cent., notwithstanding the conditions of service are in no sense exacting. I found throughout my inspections that the complaint of officers was, in the majority of cases, and in explanation of the unsatisfactory condition of corps, "laxity of attendance, and that *they had no hold whatever over their men.*" This I am afraid is inseparable from the system, but, nevertheless, every encouragement should be given to those corps which do possess vitality.

It is to be noted that the rule which hitherto obtained of only enrolling corps in places on the line of railway, or immediately contiguous to recognized coal ports, has been departed from, and corps have been formed in places difficult of access, and in sparsely populated districts where but little hope could exist of getting either a sufficient number of men or of finding suitable persons willing to accept commissions, the result being a maximum of expense with a minimum of military efficiency. It seems to me that in such places rifle clubs should be formed under the authority of the Government, as a second-class military reserve, to be made available in time of war. Nothing beyond the most rudimentary military exercises should be required of them, the principal aim being the making of good rifle-shots, for which certain facilities should be given. In anticipation of war, these clubs could be speedily mobilized and officered, and when necessity arose could be placed in fortified works, &c., where their services would be most useful, and thus free the more highly-trained troops for operations in the field. By this means a valuable and economical body could be added to the military strength of the Colony.

## MUSKETRY.

The number of men of all branches of the services who have gone through musketry instruction during the past year is 2,485, of which 2,121 belong to the Engineer, Torpedo, and Infantry Corps, under the partial-payment system. Very few of the Reserve Corps have been in a position to go through the course, rifle ranges in many instances not yet being available. Of the 2,121 above noted, 426 qualified as marksmen, 849 1st class, 633 2nd class, 639 3rd class, giving a figure of merit of 39.56, as against 26.79 of former year. Much difficulty has been experienced by the officers commanding Reserve Corps in securing suitable ranges—indeed many corps are still wanting in this respect.

## WORKS, ARMAMENT, &amp;c.

## CHANGES IN ARMAMENT.

The changes in regard to disposition of armament during the past year have been as follows:—

The 18-ton gun at point of Middle Head has been removed, and prepared for mounting on casemate platform in the iron-fronted battery below George's Head. The 18-ton gun at Bare Island has been altered, and fitted with new gear from England.

An alteration in one of the pits for 18-ton gun at South Head is being effected.

The two 8" B.L. guns of 12 tons, with fittings, and the greater portion of the hydro-pneumatic carriages have arrived, and been transhipped to Newcastle, where they are stored pending the alteration of the pits.

Some modifications and alterations have been made in the mounting and loading appliances for the two 25-ton guns at Middle Head.

Alterations in some of the batteries had been begun by the Colonial Architect's Department to afford better communication, but the work has been stopped.

The iron casemate battery is ready to receive ammunition, and is being gradually armed.

Nothing has been done to provide batteries either at the north side of the harbour, at Newcastle, Broken Bay, or Wollongong.

A Committee was recently appointed to select sites for guns and electric lights, and a report forwarded to the Government, with recommendations, which await decision. It is to be hoped that the new works, additions, and alterations to old works may be taken in hand, and thus complete the defence.

## AMMUNITION AND STORES.

The large order sent to England in 1885 for guns, carriages, appliances, ammunition, Nordenfeldt guns, rifles, and Whitehead torpedoes is on point of completion.

The supply of artillery matériel is sufficient, and a proper reserve of small-arm ammunition is maintained, but, in consequence of non-completion of orders (one as far back as 1884), no margin remains for annual rifle practice; and, seeing the disturbed state of Europe, it has been considered desirable to temporarily stop issue. Some time since I recommended that the offer of Messrs. Kynock & Co. should be accepted for the manufacture of small-arm ammunition in Australia, and for the supply annually required by the Government, as no dependence can be placed upon the prompt completion of orders in England.

There is an insufficiency of torpedo stores, which it has been sought to remedy some six months ago, but I am under the impression that the matter still awaits ministerial sanction.

The supply of breech-loading rifles is ample for all purposes; but it may become necessary, as a magazine rifle would seem to be on the point of adoption by all countries, that this Colony should procure a certain supply of that weapon, say, at all events, for arming the first line. No action in this respect should, however, be taken until the Imperial authorities have definitely decided upon the pattern to be adopted in the Imperial service, it being a matter of vast importance that the armament of England and her Colonies should be, as far as possible, identical.

JOHN RICHARDSON,  
Major-General Commanding.

Head Quarters, Sydney, 25 March, 1887.

1887.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MILITARY ENCAMPMENT.

(CAMP EQUIPMENT.)

*Ordered by the Legislative Assembly to be printed, 18 March, 1887.**[Laid upon the Table of this House by the Colonial Secretary in answer to Question No. 5, Votes No. 7, Friday, 18 March, 1887.]*

## QUESTIONS.

MR. McCOURT to ask THE COLONIAL SECRETARY,—

- (1.) The amount of Military Camp Equipment on hand ?
- (2.) The amount of equipment (such as tents) at present issued to the unemployed ?
- (3.) Are the Camden Reserves debarred from holding a local Encampment at Easter at their own expense ?
- (4.) Are Reserved Corps invited to take part at the Easter Encampment, National Park ?

## ANSWERS.

1:—

AMOUNT of Military Camp Equipment on hand, 18th March, 1887.

NEW SOUTH WALES.

## EASTER ENCAMPMENTS.

(TENDERS FOR CONVEYANCE OF MILITARY STORES TO AND FROM.)

[Laid upon the Table of this House, in accordance with promise made in answer to Question No. 15, of Tuesday, 29th March, 1887.]

MR. SCHEFF to ask THE COLONIAL SECRETARY,—Will he have any objection to lay upon the Table a Return, showing the names of the various tenderers, and the prices given in, and the successful tenderer in each case, for the cartage of military baggage and stores to and from the Easter Encampments for 1885, 1886, and 1887?

Tenders for Conveyance of Stores to and from Military Camp.	Tenders for service of such Transport as may be required in Camp.		
	One Horse and Cart Per Diem.	Two Horses and Cart Per Diem.	Four Horses and Cart Per Diem.
E. Sutton	£ s. d. 0 14 0	£ s. d. 1 5 0	£ s. d. 2 0 0
T. Henley	0 8 9	0 16 0	1 5 0
Wright, Heaton & Co....	1 0 0	1 12 6	1 17 6
J. Hartigan	0 11 0	0 17 6	1 5 0

The tender of Wright, Heaton & Co. has been accepted.

No tenders were called for in 1885 and 1886.

1887.

CARRINGTON, Order of Saint Michael and Saint  
Governor. George, Governor and Commander-in-  
Chief of the Colony of New South  
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the construction of a military road to connect the Fortifications at the South Head with B-n Buckler and Forts near Botany, in the said Colony, for and towards the completion of which said works public funds are available; and whereas the lands hereinafter described are required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification, published in the Government Gazette, and in a newspaper, that is to say, in the "Sydney Morning Herald," circulated in the Police District wherein the said lands are situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the construction of the above military road, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other encumbrances whatsoever; and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the lands hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, and Colony of New South Wales: Commencing at the north-west corner of allotment marked G on the plan numbered C. 623-690, deposited in the Surveyor General's Department; and bounded thence by a line, being the western boundary of said allotment, bearing south 9 degrees 26 minutes 31 seconds west for a distance of 853'86 links; thence by a line bearing south 80 degrees 53

minutes 26 seconds east for a distance of 842 links to a road line 100 links wide; thence by said road line bearing north 9 degrees 26 minutes 31 seconds east for a distance of 100 links; thence by a line bearing north 80 degrees 53 minutes 26 seconds west for a distance of 741'42 links; thence by a line bearing north 9 degrees 26 minutes 31 seconds east for a distance of 753'28 links to Stuart-street; thence by that street bearing north 80 degrees 53 minutes 26 seconds west for a distance of 100 links to the point of commencement,—being a strip of land 100 links throughout, containing 1 acre 2 roods 15'3 perches, a portion of the property of Joseph Turner Robinson.

Also all that piece or parcel of land, situate in the parish of Alexandria, county of Cumberland, and Colony of New South Wales: Commencing at a point on the western boundary of allotment marked F on the plan numbered C. 623-690, deposited in the Surveyor General's Department, bearing south 9 degrees 26 minutes 31 seconds west 146'8 links from the north-west corner of said allotment; thence bounded by a line bearing south 45 degrees 31 minutes 45 seconds east for 714'8 links; thence by a line bearing south 21 degrees 45 minutes 7 seconds east for 202'76 links; thence by a line bearing south 1 degree 59 minutes 30 seconds west for 786'84 links to Gregory-street; thence by that street bearing north 80 degrees 53 minutes 26 seconds west for 100'78 links; thence by a line bearing north 1 degree 59 minutes 30 seconds east for 753'32 links; thence by a line bearing north 21 degrees 45 minutes 7 seconds west for 160'68 links; thence by a line bearing north 45 degrees 31 minutes 45 seconds west for 623'68 links to a road line 100 links wide; and thence by that road bearing north 9 degrees 26 minutes 31 seconds east for 122'12 links to the point of commencement,—being a strip of land 100 links wide throughout, containing 1 acre 2 roods 18'1 perches, of which Cecilia Despointes, John Baptist Despointes, Mitchell Thomas Despointes, and James Harris are said to be the owners.

Also all that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, and Colony of New South Wales: Commencing at a point on the northern boundary of allotment numbered 27 on the plan numbered C. 389-690, deposited in the Surveyor General's Department, bearing south 80 degrees 53 minutes 26 seconds east distant 66'82 links from the north-west corner of said allotment; bounded thence by a line bearing south 1 degree 59 minutes 30 seconds west for 232'31 links; thence by a line bearing south 31 degrees 13 minutes 45 seconds east for 862'53 links; thence by a line bearing south 42 degrees 15 minutes 15 seconds east for 362'52 links; thence by a line bearing south 19 degrees 13 minutes 10 seconds east for 394'72 links; thence by a line bearing south 7 degrees 44 minutes 15 seconds east for 482'51 links; thence by a line bearing south 44 degrees 26 minutes 25 seconds west for 251'3 links to Cliff-street; thence by that street bearing north 9 degrees 30 minutes east for 174'6 links; thence

by a line bearing north 44 degrees 26 minutes 25 seconds east for 59 21 links; thence by a line bearing north 7 degrees 44 minutes 15 seconds west for 114 44 links to the street last before-mentioned; thence along that street by lines bearing north 9 degrees 30 minutes east and north 80 degrees 53 minutes 26 seconds west for distances of 248 53 links and 77 1 links respectively; thence by a line bearing north 7 degrees 44 minutes 15 seconds west for 48 84 links; thence by a line bearing north 19 degrees 13 minutes 10 seconds west for 364 28 links; thence by a line bearing north 42 degrees 15 minutes 15 seconds west for 351 78 links; thence by a line bearing north 31 degrees 13 minutes 45 seconds west for 902 01 links; thence by a line bearing north 1 degree 59 minutes 30 seconds east for 274 63 links to Gregory-street; and thence by that street bearing south 80 degrees 53 minutes 26 seconds east for 100 78 links, to the point of commencement,—being a strip of land 100 links wide throughout, containing 2 acres 1 rood 21 6 perches, of which John Starkey, Harriette Campbell, and a syndicate known as the Sydney Syndicate are said to be the owners.

Also all that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, and Colony of New South Wales: Commencing at a point on the western boundary of Cliff-street, distant 49 5 links, bearing south 9 degrees 30 minutes west from the south-west intersection of Cliff-street and Bigh-street; bounded thence by a line, being the western boundary

of Cliff-street, bearing south 9 degrees 30 minutes west for 174 6 links; thence by a line bearing south 44 degrees 26 minutes 25 seconds west for 313 31 links; thence by a line bearing south 11 degrees 29 minutes 15 seconds west for 138 24 links; thence by a line bearing south 21 degrees 27 minutes 55 seconds east for 328 06 links; thence by a line bearing north 52 degrees 25 minutes west for 194 44 links; thence by a line bearing north 21 degrees 27 minutes 55 seconds west for 190 88 links; thence by a line bearing north 11 degrees 29 minutes 15 seconds east for 197 4 links; thence by a line bearing north 44 degrees 26 minutes 25 seconds east for 486 02 links, to the point of commencement,—being a strip of land 100 links wide throughout, containing 3 roods 12 3 perches, of which a syndicate known as the Sydney Syndicate are said to be the owners.

In witness whereof, I have herunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this seventh day of October, in the year of our Lord one thousand eight hundred and eighty-six, and in the fiftieth year of Her Majesty's Reign.

By His Excellency's Command,

WILLIAM JOHN LYNE,

GOD SAVE THE QUEEN!

1887.

(SECOND SESSION.)

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

## TORPEDO DEFENCE.

(REPORT, &c., ON CONDITION OF CERTAIN DRUMS OF ARMoured ELECTRIC CABLE AT BERRY'S BAY.)

*Ordered by the Legislative Assembly to be printed, 7 June, 1887.*

Major Penrose, R.E., to General Officer Commanding, New South Wales.

*Re Armoured Cable, Berry's Bay.*

Sir,

Sydney, 17 May, 1887.

I have the honor to submit herewith "a report on the condition of certain drums of armoured electric cable at Berry's Bay."

These tests were carried out on the 12th, 13th, and 16th May, certain preliminary operations being performed on the 11th.

I am unable to comply with that part of my instructions, which direct me to report whether the cable has deteriorated, and to state the cause of such deterioration, if it exists, owing to there being no copy of the specification, or record of the maker's tests. I don't know, therefore, what conditions the cable was supposed to satisfy.

I have, &c.,

COOPER PENROSE,  
Major, R.E.

REPORT on the condition of thirty drums of light armoured cable at Berry's Bay, Submarine Mining Depot.

THIS cable is coiled in thirty wooden drums, two of which have been already opened and used. Each drum contains a knot of cable; the cable in question is not used in the Imperial Service. As far as I know eight unused drums were taken at haphazard from store and submitted to the ordinary electrical tests for such cables.

These tests are as follows:—

- (a.) Conductivity resistance of the copper wire core.
- (b.) Insulation resistance of the dielectric or insulating material.

The annexed table marked X is a record of the tests as taken.

*Conductivity.*

The conductivity of the core is good in each instance.

*Insulation Resistance of Dielectric.*

This cannot be called satisfactory for new unused cable. The insulation resistance of only one drum out of eight exceeds a megohm (1,000,000 ohms). One would expect to find the insulation resistance of a knot of new cable several hundred megohms. I am unable to say, owing to the absence of specification or record of manufacturer's tests, whether the insulation resistance of the dielectric has deteriorated in these seven instances.

It can hardly be supposed, however, that the makers would allow cable to leave their works showing insulation resistance varying from 20,000,000 ohms (No. 12 drum) to 3,640 (No. 18 drum).

*Treatment of No. 18 Drum.*

As No. 18 drum showed such a very low resistance, I thought it necessary to trace out the fault, and see whether it was due to one or two leaks in the dielectric or to a general badness of the insulating material.

The table X and diagram Y illustrate this part of the report. The cable was cut into four equal parts. I and II were pretty fair, III and IV were bad, III being the worst. III was again subdivided, and the process carried on until two pieces each 62½ yards long were obtained, which instead of showing

a practically infinite resistance only balanced a few thousand ohms (11,600 and 10,940). It was unnecessary to repeat the process with No. IV section, which was nearly as bad as No. III, as it was quite plain that the low resistance of the complete drum was due to a general badness of insulation in one half of it, and especially in the third quarter.

Owing to the cable being stored dry, the process of testing these eight drums was so tedious, and took up so much valuable time and labour, that no more drums were tested.

Every care was taken to eliminate any errors, and Nos. 14 and 18 drums were coiled on to the other drums to see whether the inner ends of the coils might have been damaged, and 20 yards were cut off each end without altering the results.

Until this cable is coiled into tanks it will always be a tedious and laborious task testing it.

This cable, so far as the eight drums examined are concerned, and if it does not get any worse, is quite good enough for experimental purposes, and the good drums might, with great advantage, be used in the actual defences. I think the remainder of this cable should be tested as soon as possible.

C. PENROSE,  
Maj., R.E.

RECORD of Electrical Tests of eight drums of armoured cable, taken at Berry's Bay on Thursday, Friday, and Monday, 12th, 13th, and 16th May, 1887.

Weather—very favourable; bright sun and dry air on 12th and 13th; on 16th no sun—but calm and dry.

Identification No. of drum.	Length of piece of cable tested.	Condition of armouring, serving, &c.	Conductivity resistance in ohms per knot.	Insulation resistance, actual of each piece in ohms.	Remarks.
No. 12.....	1 knot	Very good	13.6	20,000,000	Constant of galvanometer 90,000,000 w. per volt.
„ 6.....	1 „	do	13.6	10,440	
„ 13.....	1 „	do	13.9	84,100	Fell in 2 hours from 104,000 to 84,100.
„ 14.....	1 „	do	13.6	6,500	
„ 18.....	1 „	do	13.1	3,640	This cable giving the worst results, was cut up to localise faults if possible; see below.
„ 23.....	1 „	do	14.16	604,000	
„ 24.....	1 „	do	13.3	14,400	
„ 26.....	1 „	do	13.33	22,070	
No. 18 was divided into 4-knots called hereafter—I, II, III, IV.					
I.....	500 yards	Very good	.....	Over 1,000,000 ohms	No. III, showing the worst result, was further subdivided—one half of the cable much inferior to the other half (originally on inside of drum).
II.....	500 „	do	.....	500,000	
III.....	500 „	do	.....	4,950	
IV.....	500 „	do	.....	6,820	
No. III subdivided into parts III i and III ii.					
III i.....	250 yards	Very good	.....	35,000	This being a very low resistance for so short a piece of cable—III ii was again subdivided.
III ii.....	250 „	do	.....	5,540	
No. III ii subdivided into parts III ii a and III ii b.					
III ii a.....	125 yards	Very good	.....	120,000	III ii b again subdivided in pieces x and y. This shows that the low insulation resistance is equally distributed. These short pieces should have shown a practically infinite resistance.
III ii b.....	125 „	do	.....	5,740	
III ii b } x.....	62½ yards	do	.....	10,940	
III ii b } y.....	62½ „	do	.....	11,600	

C. PENROSE,  
Major, R.E., 17/5/87.

Report herewith on armoured cable, by Major Penrose, R.E. I shall be glad of return of same as soon as convenient.—J.S.R., M.G. The Principal Under Secretary.—B.C., 7 May, 1887. The Officer Commanding the Torpedo Corps does not appear to have seen this report. He should perhaps have an opportunity of reading it before any further action is taken.—C.W., 18/5/87. Refer to Colonel Cracknell for any explanation he may wish to make.—H.P., 19/5/87. The Major-General Commanding the Military Forces.—C.W., B.C., 19/5/87. Lieut.-Col. Cracknell for any remarks he may wish to offer. By order.—H.D.M., A.A.G., 29/5/87. Remarks herewith.—E. C. CRACKNELL, 30/5/87.

MAJOR PENROSE having reported that the cable referred to in these papers is quite good for experimental purposes, which is the principal use for which it was originally intended, it is perhaps unnecessary for me to add anything in reference to his report beyond directing attention to that part of it, and, at the same time, to point out that he considers the greater part of the cable which came under test to be good enough even for actual warfare, which is a higher service than it is expected to fulfil so far as submarine work is concerned, although it is also intended for use as a field telegraph wire by trenching in the sand or soil, so that directions can be given to detached bodies of troops and field artillery in the case of an enemy making a feint to land at any of the bays on the south side of Port Jackson, and to keep up communication with places where aerial lines are liable to be shot away. As it may be advisable to anticipate further inquiry into this matter, I am glad to have the opportunity of dealing with the report generally. As regards the insulation resistance of the dielectric being regarded by

Major

Major Penrose as unsatisfactory, I may point out that the instruments with which I supplied that officer, to enable him to conduct this examination, were the most sensitive instruments in use at the present day for telegraph cable testing, and therefore the smallest loss of insulation or "leakage," which might be detrimental to the efficacy of a long telegraph cable, but which would not impair the value of such a cable as that forming the subject of this inquiry, would be made very apparent, so that although the figures representing the condition of this cable vary considerably, yet the lowest insulation recorded shows that the material is fully up to the requirements; and this, from the public aspect of the case, is all that can be desired.

Connected, however, with this matter is the question as to the expediency of storing the cable in water or in a dry store; and, on this point, I should like to say that it is a matter of opinion, amongst experts in this branch of science, whether a cable having an India-rubber coating should or should not be stored in water. Those who hold the view that it is not absolutely necessary, being governed by the knowledge that India-rubber is not injured by heat (the chief source of deterioration in cable coverings), unless it is some few degrees above the temperature of boiling water; whilst those who think otherwise appear to be guided by the impression that, as it is necessary that gutta-percha cables should be kept in water, so it is desirable to treat India-rubber in the same way. As I do not desire that my own opinion upon this point should have any undue weight, I have obtained from Mr. Squier, the Superintendent of the Eastern Extension Telegraph Company here, who has had considerable experience with submarine cables, an expression of his view with regard to the matter, and I append hereto a copy of his letter, from which it will be seen that he fully agrees with the position I have taken up. But, apart from the question as to the expediency or otherwise of dry storage, I desire to point out that the arrangements at Berry's Bay are such as to preclude the possibility of keeping the cable in water. To have placed it on drums in the open salt water, as I found it in Berry's Bay, would have destroyed it altogether, because the cobra (*teredo navalis*) would, in a very little time, have eaten through the wood of the drums, and the cable would then, of necessity, have fallen into a confused heap from which it would have been almost impossible to extricate it. As an evidence of the destructive effect of this cobra I forward herewith a piece of wood, similar to that of which these drums are made, and which has been in the water at Berry's Bay for six months only. The condition of this sample speaks for itself.

On these grounds, then, I justify my action so far as the open salt water is concerned; and as regards keeping it in tanks on the shore, I can only say that I have hitherto refrained from incurring such an expense as the erection of tanks, large enough to carry 30 knots of cable, until it was definitely settled as to whether the torpedo stores were to be permanently retained at Berry's Bay or removed to Goat Island, which latter place I have for some time urgently recommended as being so much better adapted for the purpose.

To sum up,—the cable, according to Major Penrose's report, is quite good for the purpose it was originally intended. The question of dry or wet storage of India-rubber cables is quite an open one amongst those qualified to form an opinion. The arrangements at Berry's Bay are altogether inadequate for wet storage. When more suitable accommodation is provided the cable can be stored in water if required. Meanwhile the Government may rest assured that I shall take every possible precaution to prevent this cable from deteriorating to any such degree as will impair its future usefulness in the direction in which it will be required.

E. C. CRACKNELL,  
Lieut.-Col., 25/5/87.

J. E. Squier, Esq., to The Superintendent, Electric Telegraphs.

E.E.A. & C. Telegraph Co. (Ltd.), Sydney Station,  
23 May, 1887.

My dear sir,

The light steel-armoured cable with India-rubber core, of which you have shown me a specimen, should, in my opinion, be stored in a cool building with the drums upon which it is coiled. I should not place it in water.

Faithfully yours,  
J. EUSTON SQUIER.

[One Plan.]

**BERRY'S BAY TORPEDO STORE.**

---

No. 1.

E. C. Cracknell, Esq., to The Principal Under Secretary.

17 September, 1877.

I HAVE the honor to inform you that the torpedo stores ordered are now on the way from England, and it is necessary that a store should be procured to stow them in on arrival until the store already authorized can be erected, and I would recommend that Mr. Berry's store at Berry's Bay be rented, at an annual rental not exceeding £110 for this purpose.

---

No. 2.

The Principal Under Secretary to E. C. Cracknell, Esq.

Sir,

22 September, 1877.

In reply to your letter of the 20th instant, in which you represent that it is necessary to provide a receptacle for the torpedo stores now on the way from England, I am directed to inform you that the Colonial Secretary has approved of the renting of Mr. Berry's store at Berry's Bay for that purpose, at an annual rent not exceeding £110, for such term as may be necessary.

---

No. 3.

The Principal Under Secretary to The Under Secretary for Finance and Trade.

Sir,

22 September, 1877.

Mr. E. C. Cracknell having represented that it is necessary to provide a receptacle for the torpedo stores now on the way from England, I am directed to state, for the information of the Colonial Treasurer, that the Colonial Secretary has approved of the renting of Mr. Berry's store at Berry's Bay for that purpose, at an annual rent not exceeding £110, for such term as may be necessary.

---

The Under Secretary for Finance and Trade to The Principal Under Secretary.

THE storage of explosives is under the management and control of the Treasurer, who should have been consulted before premises had been rented for that purpose.

B.C., 26 September, 1877.

---

No. 4.

E. C. Cracknell, Esq., to Mr. W. G. Mathews (Agent for Mr. D. Berry).

Sir,

3 October, 1877.

I have the honor to inform you that your offer to rent the store at Berry's Bay, the property of Mr. Berry, for the use of this department, at a rental of £110 per annum, including rates and taxes, has been accepted, and I shall be glad if you will get the floors and crane on the wharf repaired.

This, of course, will include the use of the wharf.

---

No. 5.

Mr. W. G. Mathews (*pro* Mr. D. Berry) to Major Cracknell.

Sir,

Lyons' Buildings, 227, George-street, Sydney, 8 October, 1877.

I do myself the honor to acknowledge the receipt of your letter of the 3rd inst., accepting the offer made by me, on behalf of Mr. David Berry, to rent the store situated in Berry's Bay, including the use of his wharf for one year, at the rate of £110 per annum.

I beg to state that I shall get the floors repaired as soon as practicable, and, also, that I reserve the right of ingress and egress to the wooden store within the enclosed paddock surrounding said store, as well as Mr. Berry's right to graze his horse upon the grass therein, but in no way to interrupt your work or business at any time with said store.

---

No. 6.

Major Cracknell to Mr. W. G. Mathews.

Sir,

11 October, 1877.

I have the honor to acknowledge the receipt of your communication of the 8th inst., respecting the store at Berry's Bay, and to inform you that I wish the attached wooden store spoken of by you to be included with the premises rented by the Government.

---

No. 7.

3

No. 7.

Mr. W. G. Mathews (*pro* Mr. D. Berry) to Major Cracknell.

Sir,

18 December, 1877.

I do myself the honor to offer for your approval, as a residence for the man in charge of the premises occupied by your department on Berry's Wharf, North Shore, a cottage, in its present condition, for the period of one year, at a yearly rent of £10.

No goats or cattle to be allowed to be kept upon the premises.

No. 8.

Major Cracknell to The Principal Under Secretary.

I BEG to recommend that this be sanctioned.

Approved.—H.P., 21/12/77.

E.C.C., 18/12/77.

No. 9.

The Principal Under Secretary to Major Cracknell.

Sir,

22 December, 1877.

In reply to your communication of the 18th instant, I am directed to inform you that the Colonial Secretary approves of your hiring for one year, at the yearly rent of £10, which will be chargeable to the vote of £30,000 for warlike stores, the cottage offered by Mr. David Berry as a residence for the man in charge of the torpedo stores at Berry's Bay.

No. 10.

The Officer-in-charge of Torpedo Store to The Ordnance Storekeeper.

Berry's Bay, 11 January, 1878.

RECEIVED from the Ordnance Storekeeper the keys of Berry's Bay stores, three in number, for Major Cracknell.

No. 11.

The Principal Under Secretary to Major Cracknell.

Sir,

29 March, 1878.

Referring to my letter of the 22nd September last, conveying authority for the renting of Mr. Berry's store at Berry's Bay, for the storage of torpedo stores, I am now directed by the Colonial Secretary to transmit herewith, for your information, a copy of a report which has been furnished by the Colonial Architect respecting such building.

No. 12.

The Colonial Architect to The Under Secretary for Public Works.

Sir,

19 March, 1878.

In returning the enclosed communication, respecting store at Berry's Bay, leased by the Government for storage and torpedo stores, forwarded to me under blank cover on 21st December last, I do myself the honor to state that I have caused the store in question to be inspected by an officer of my department with regard to its security, and he reports as follows:—

The building which is of stone is badly constructed, bad material has been used in the walls, the lower courses of which are fretting away, but not to such an extent as to endanger the stability of the building. The upper floor which is carried by the tie beams of roof is very badly put together, the joints having very little bearing on the beams. I recommend that no stores whatever be placed on this floor; all the other floors are of better construction, and average strength, with hardwood girders 28 feet long, 12 × 10, supported in the middle by strong posts, joists, 10 × 2 with 11 feet bearing, and hardwood flooring-boards. I believe these floors are able to carry the load it is intended to place on them; at the same time it is advisable to arrange the heaviest of the packages as much as possible over the beams. The platform at top of outer step-ladder should not be used for landing packages upon as the timbers are decayed. There is no necessity for using it for this purpose, as the sill of the doorway answers all the purpose of a landing stage. There is a small weatherboard store detached from the principal building; a portion of the floor of which is but indifferently supported in consequence of the decay of a timber sleeper under the middle of the joists, but as it appears it is not intended to use this building for heavy stores it does not need further notice.

The extreme load per square that the floors of main store will have to carry will not exceed 2½ tons.

No. 13.

Minute by Major Cracknell.

It will be interesting to know who took so much interest in Berry's store that it was considered necessary to call upon the Colonial Architect to report upon it. The store is all that is necessary for the articles stored there, and I will venture to say that no better place can be rented at double the amount paid.

E.C.C., 11/4/78.

## No. 14.

## Memorandum from Captain Walker to Major Cracknell.

26 May, 1885.

I FORWARD herewith three notices to quit the Berry's Bay Torpedo Works at the end of the current year, served upon me by Messrs. Norton & Co., solicitors, at the instance of Mr. W. G. Mathews, agent for the proprietor of the estate, D. Berry, Esq., of Coolangatta, near Shoalhaven, and I would point out that the land and premises at Berry's Bay are most suitable for the purposes of torpedo stores and works, and I think it would be advisable for the Government to take steps to resume a sufficient portion of the present site for the use of the Torpedo Force, as I believe it would be very difficult to obtain such a large area, as suitable as this, anywhere on the foreshores of the harbour.

It is necessary that prompt action should be taken in reference to this matter, because, if the Government is compelled to remove, it will lead to considerable inconvenience, and great trouble will be experienced in rearranging the apparatus and stores at a new place, besides occupying much time and entailing expense, which would be obviated if the present stores were retained.

## No. 15.

## Mr. W. G. Mathews to Major Cracknell.

## NOTICE.

As agent for and on behalf of Mr. David Berry, of Coolangatta, Shoalhaven, in the Colony of New South Wales, I do hereby give you notice that the said David Berry intends to enter upon and take possession of all and singular the lands, messuages, and tenements which you now hold at the yearly rental of £110 per annum as tenant under the said David Berry, within the parish of Willoughby, county of Cumberland, at or near Berry's Bay, in the said Colony of New South Wales, and you are therefore required to quit and deliver up possession of the same at the end of this present current year, for which you now hold the same.

Given under my hand this 1st day of April, in the year of our Lord 1885.

## Colonel Roberts to The Principal Under Secretary.

Sir,

15 June, 1885.

I have the honor to submit memo. from the Officer Commanding Torpedo Corps, forwarding three notices to quit the Berry's Bay Torpedo Works at the end of the current year, served upon him by Messrs. Norton & Co., solicitors, at the instance of the agent for the proprietor of the Estate, and to recommend that the suggestion contained in the memo., viz., "that a sufficient portion of the site should be resumed," be carried out as soon as possible, otherwise very considerable trouble will arise in moving and re-establishing the present stores and appliances for use of Torpedo Corps elsewhere.

## No. 19.

## The Principal Under Secretary to The Commandant.

3 July, 1885.

THE proposed resumption can I think be effected under the Lands for Public Purposes Acquisition Act 44 Vic. No. 16, secs. 6 and 7 (2), 15th June, 1885.

The Commandant, B.C., 6th July, 1885.—J.B., for P.U.S.

P.B.W.,  
Major Comdg. T. and S. Corps.

No. 22.

Memo. from Captain Walker to The Major of Brigade.

11 June, 1885.

THE plans for the torpedo loading shed to be erected at Berry's Bay Depôt have been completed by the Colonial Architect's Department, but the work cannot be proceeded with until authority is given in accordance with the Cabinet minute. I shall be glad therefore if the Acting Commandant will cause the necessary steps to be taken so that tenders may be invited by the Colonial Architect for building the shed, with the least possible delay.

Bgde. Major,—Have covering letter written *re* this subject.—C.F.R., Col., 13/6/85.

No. 23.

Colonel Roberts to The Principal Under Secretary.

Sir,

15 June, 1885.

I have the honor to forward the accompanying communication from the Officer Commanding the Torpedo Corps reporting that the Colonial Architect has completed the plans for the torpedo loading shed to be erected at Berry's Bay, and requesting that instructions may be now given for the building of the shed which I have to recommend for approval.

Seen.—W.B.D., 19/6/85.

No. 24.

Minutes by Colonial Secretary and Major, Torpedo and Signalling Corps.

THIS land will not require to be resumed at the present time; let another place be looked out.

A.S., 13/7/85.

I THINK it would be advisable to continue the present lease for two or three years, and as I understand from Mr. Mathews that Mr. Berry is willing to allow us to remain at an increased rental, I would recommend that he be communicated with on the subject.

P.B.W., 14/7/85.

No. 25.

Mr. R. Smith to Major Walker.

My dear Walker,

Torpedo Station, 24 July, 1885.

I understand that you are desirous, on behalf of the Torpedo Corps, of getting a fresh lease of Mr. Berry's land and water frontage in Berry's Bay, including the wharf, the store buildings, the cottage, and the boat-shed.

I estimate that these properties would readily sell at £20,000, and I do not think that Mr. Berry would consent to sell them for less than £25,000, and even then would be unwilling to part with them, as they form the key to that portion of the estate, and are a very valuable site for manufacturing purposes. At the same time if it could be arranged that the Government would undertake not to resume I would be prepared to recommend Mr. Berry to let the property at a rental of about 3 per cent. on what I consider the capital value of the property to be. The tenancy to be for three years, and the tenants to put and keep the premises in good and substantial repair and condition, with similar reservations as now exist with respect to supply of fresh water for drinking purposes, for Mr. Berry's employees in the neighbourhood.

No. 26.

Major Walker to Mr. R. Smith.

My dear Smith,

Torpedo Station, 27 July, 1885.

I have no doubt that Mr. Berry could obtain a good price for the property now occupied by the Government as a torpedo store at Berry's Bay, but it is questionable whether the rent asked could be obtained. The building is in a very bad state of repair, and so old that if once you commenced to do anything to it in the shape of repairs the cost could not be accurately estimated. The roof is shingled, and should the Government vacate the place, it will be necessary for Mr. Berry to expend at least £1,000, before anyone could enter upon a tenancy; I cannot, therefore, see my way to advise that such a large increase in the rental be made. I am, however, disposed to submit a recommendation for payment of £350 per annum for a further term of three years, if Mr. Berry is agreeable to accept that sum.

I may state that the caretaker's cottage is in a very bad state of repair, and requires looking to.

P.S.—I am unable to bind the Government in any way as regards resumption,

No. 27.

## No. 27.

Mr. R. Smith, Solicitor, to Capt. P. B. Walker.

Dear Sir,

25 September, 1885.

*Re* Berry, I have the honor to enclose a copy of letter just received from Mr. Berry's agent respecting the stores now used by the Torpedo and Signalling Corps at Berry's Bay.

NOTE.—Other papers have been sent to Brigade Office—minute of P.B.W., T.S., 30/12/85. Copy of minute herewith.—T.S.

## No. 28.

Mr. John Hay to Mr. W. G. Mathews.

Dear Sir,

Coolangatta, 22 September, 1885.

*Re* North Shore store and wharf, &c., I duly received yours, and as I previously advised some time ago the letter of Messrs. Norton & Co. to yourself, making offer of £350 per annum, &c., &c., as made by Capt. Walker, has been submitted to Mr. Berry and declined. The Government have for a long period had the use of the premises at a nominal rent. I observe their time is up on the 11th October; Mr. Berry will give them to the end of the year to find a new position, or they can have it for twelve months at £500 a year. The rental asked by Mr. Berry is only nominal, as he can do better with the property when the Government give up possession.

## No. 29.

The Assistant Adjutant-General to Major Walker.

17 August, 1885.

THE Major-General commanding the forces is anxious to be informed as to the amount of rent required for the store at Berry's Bay.

## No. 30.

Major Walker to Assistant Adjutant-General.

18 August, 1885.

I HAVE not yet received a reply to my private letter to Mr. Berry's solicitors, in which I stated that I considered the premises as only worth £350 per annum, which sum I was prepared to advise the Government to pay; Mr. Smith has informed me privately that he has advised Mr. Berry to accept this proposal, but being a very old man I suppose it takes a long time for him to make up his mind. I think that it will be accepted there is no need for anxiety about the removal from the premises. I have a letter from the solicitors stating that they have no desire to disturb us, it being merely a matter of increase in rent.

## No. 31.

Major-General Richardson to Major Penrose, R.E.

8 October, 1885.

As the case at present stands I am awaiting Mr. Berry's decision as to the amount of rent he is prepared to accept.

## No. 32.

Major Penrose, R.E., to The Commandant.

8 October, 1885.

WHETHER we get Fort Denison or not the establishment at Berry's Bay will have to be retained, and I would strongly recommend that the necessary land should be resumed by Government.

## No. 33.

Major Walker to The Assistant Adjutant-General.

30 December, 1885.

IN reference to my minute of the 26th May last, respecting the site occupied by the Government as a torpedo depôt, I beg now to forward for consideration an offer from Mr. Berry to rent the premises to the Government from 11th October next, for one year, at a rental of £500.

Mr. Berry will allow us to remain until the end of present year, if no contract is entered into, but as it is impossible to obtain a suitable place, and remove the appliances belonging to the Corps within such a short period, I beg to recommend, for the approval of the Commandant, that the premises be taken for one year until some other arrangement can be made.

1887.

(SECOND SESSION.)

NEW SOUTH WALES.

## CIVIL SERVICE ACT, 1884.

(REPORT OF BOARD FOR 1886.)

Presented to Parliament, pursuant to Act 48 Vic. No. 24, sec. 62.

## REPORT

OF THE

CIVIL SERVICE BOARD OF NEW SOUTH WALES,

For the Year 1886.

To His Excellency the Right Honourable CHARLES ROBERT, BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council, Knight Grand Cross of the Most Distinguished Order of Saint Michael and Saint George, Governor and Commander-in-Chief of the Colony of New South Wales and its Dependencies ;

YOUR LORDSHIP,

We have the honor to submit to your EXCELLENCY in COUNCIL our Annual Report, in terms of the 62nd section of the "Civil Service Act, 1884."

2. Under the 12th section of the Act it is provided that one Member of the Board shall retire annually, and shall not be eligible for reappointment within twelve months, and in pursuance therewith WILLIAM GILMOUR MURRAY, Esq., retired in the order of rotation, on the 31st December, 1885, and THOMAS LITTLEJOHN, Esq., was appointed to the vacancy thus created.

3. At a meeting of the Board on the 25th January, the requirements of the 13th section were fulfilled by the re-election of the Hon. G. EAGAR as Chairman.

4. The business of the Board necessitated the holding of 39 meetings during the year.

5. The first Annual Report was submitted to your EXCELLENCY on the 22nd March, 1886, and the Civil Service List for that year was gazetted on 31st of same month. Against the classification of officers in this list, only 36 appeals were made to the Board, of which 11 were allowed, as specified in the Appendix.

6. The Returns furnished by Heads of Departments in accordance with section 25 give the necessary information as to the number of permanent and temporary officers employed in the several Departments, their salaries, efficiency, periods of absence and the causes thereof, together with the nature of their duties.

7. The "Civil Service List of 1886" shows the following classification under the operation of the Act:—

		Class 1	...	...	27
		" 2	...	...	40
		" 3	...	...	124
		" 4	...	...	367
GENERAL DIVISION	...	" 5	...	...	791
		" 6	...	...	475
		Probationary...	...	...	17
					<hr/> 1,841
		Class 1	...	...	13
		" 2	...	...	43
PROFESSIONAL DIVISION	...	" 3	...	...	87
		" 4	...	...	3
					<hr/> 146
TEMPORARY EMPLOYEES	...	...	...	...	1,210
EDUCATIONAL DIVISION	...	...	...	...	3,361
SECTION 7	...	...	...	...	3,756
" 8 (Salaries)	...	...	...	...	1,405
" 8 (Wages)	...	...	...	...	494
					<hr/> 12,213

8. The names of 63 candidates who passed the required examination, and were eligible for employment were registered during the year 1886. Of these 33 were appointed as Probationers, and 17, after six months service, having given proof of satisfactory conduct, and passed the Junior University or equivalent Examination, were recommended by the Board, under the 21st section, to an increase in salary at the rate of £25 per annum. The applications of several probationers for a like increase were disallowed, as they failed to produce the necessary certificates.

9. One hundred and sixty-eight cases of promotion under the 27th section were dealt with on the reports of Heads of Departments, and in many of these careful inquiry was necessary in order to ascertain the relative seniority and attainments of the officers who were claimants for the vacant positions. In a few cases the concurrence of the Board was withheld, so far as the officer first recommended was concerned, and these being referred to the Head of the Department, amended recommendations were received, which met the requirements of the Act, and the promotions were made in accordance therewith. By this course the Board endeavoured to secure the promotion of the best and most eligible officers, the claims of those with longest service, other things being equal, having the first consideration. With one exception, the Ministers of the Departments, in which the vacancies occurred, accepted the reports of the Board, and the approval of the Governor followed without delay.

10. The exception was in the case of the vacancy of Clerk of Petty Sessions at Orange. The Board considered that the claims of Mr. Stephen Murphy, Clerk of Petty Sessions at St. Leonards, gave him precedence over the other officers who were reported by the Under Secretary of Justice to be senior to Mr. Murphy.

Upon

Upon the papers being referred back, that officer made a recommendation in favour of Mr. Murphy, in which the Board concurred on the 22nd March, 1886, and made the required report to the Minister. In ordinary course the approval of the Governor-in-Council would have been at once obtained and Mr. Murphy's promotion completed, but it is the duty of the Board to state that no action was taken by the Department for a period of over nine months. The papers were not submitted to the Executive till December, and Mr. Murphy's appointment was made to date from 1st January, 1887.

11. Seven proposed exchanges between officers of different departments were submitted to the Board, of which six were concurred in, and the seventh was disallowed on the ground that public interests would be likely to suffer if it were carried into effect, but the officer who desired the exchange was recommended to the favourable consideration of his Minister in view of the certified value of his services.

12. Thirteen appointments to positions requiring special technical skill or attainments under the 28th section have been reported to the Board, a list of which is comprised in the Appendix.

13. In reference to appointments under section 29, a misconception, in the opinion of the Board, has arisen in some Departments as to the meaning of the term "New Office." The Board hold that this term does not apply to offices similar in character to those already existing, when the mere number is increased through the expansion of the business of any Department, as for instance when a new Clerkship of Petty Sessions is created; or even to offices which, having lapsed, have been subsequently revived. Under such misconception, appointments have been made, which in the opinion of the Board, are not in accordance with the intention and spirit of the Act. Officers eligible for promotion by reason of attainments and long service have been passed over to the advantage of juniors and temporary officers, who apparently had inferior claims to the positions. The Appendix contains correspondence between the Board and the Collector of Customs and some of the senior officers of his Department, as to certain appointments recommended by him, and approved by Executive authority, without having been in the first instance referred to the Board. These appointments, nineteen in number, were subsequently submitted to the Board for their concurrence, which was refused, on the ground that the Report of the Head of the Department, as then made, was not in accordance with the provisions of the Act.

14. Persons whose services are of a temporary nature are not under the control of the Board, but are appointed at the discretion of the Minister, and 399 appointments of this character have been reported to the Board.

15. One case, for alleged misconduct, under the 33rd section, was referred to the Board by the Department of Lands, and occupied their attention during several sittings, witnesses being summoned and examined upon oath, and their depositions taken in full. The whole of the charges against the officer concerned, with one exception, were disproved, and the Board were of opinion that in the exceptional case the explanation offered should be accepted, and reported accordingly, but their report was set aside by the Minister, and the officer was disgraced without further reference to them.

16. A report under the 37th section, charging an officer of the Customs with being addicted to the excessive use of intoxicants, was also investigated, and as the evidence showed that the charge was proved, but with mitigating circumstances, the officer was removed to a position less likely to afford temptation to a repetition of the offence.

17. Twenty-five persons availed themselves of the right to retire from the Service after having attained the age of 60 years, thereby opening the way for promotion to juniors in the Departments to which they belonged—21 of these receiving pensions, and 4, not having completed 15 years' service, receiving gratuities.

18. Thirty-one persons unfitted for further duty by reason of failing health or injuries accidentally received were enabled to retire from the Service under the sections of the Act which provide for gratuities or pensions in such cases, and 30 widows, in necessitous circumstances, were assisted by payments from the Superannuation Account.

#### THE SUPERANNUATION ACCOUNT.

19. The Board desire to draw special attention to the satisfactory state of the Superannuation Account, which, after meeting all the claims against it during the past two years, showed a credit balance on 31st December, 1886, of £152,526 17s. 10d.

The balance on 31st December, 1885, was £71,605 0s. 7d. The Account was augmented by the payment from Consolidated Revenue of £20,000, being the second annual subsidy from the Government, and £3,500, the annual amount provided for pensions under Schedule B of the Constitution Act. The deduction of 4 per cent. from salaries realized £63,642 1s. 0d.; interest, £4,876 19s. 8d.; fines, £63 13s. 6d.; which make the total receipts, £163,687 14s. 9d.

The disbursements during the year were—Pensions under Schedule B, £2,825 6s. 7d.; pensions under the Civil Service Act, £2,792 18s. 4d.; gratuities to widows in necessitous circumstances and to infirm officers, £5,426 8s. 11d.; refunds of deductions made in error from non-contributors, £116 3s. 1d.; total expenditure, £11,160 16s. 11d.; leaving a balance to the credit of the Account of £152,526 17s. 10d. on 31st December, 1886. Thus under the provisions of the Act a substantial Fund is being accumulated, chiefly by contributions from officers in the Public Service, to meet the necessities of bereaved families and of such as grow old and infirm in the Service, without the publicity and delay of a reference to Parliament, or any further demand on the Revenue. The Schedules appended show that during the years 1885 and 1886, the sum of £14,197 16s. 7d. was granted to 133 persons, whose claims to pensions or gratuities were fully investigated by the Board.

Given under our hands at Sydney, the eighteenth day of April, 1887.

G. EAGAR, CHAIRMAN,  
Under Secretary for Finance and Trade.

JOHN WILLIAMS,  
Crown Solicitor.

ARCH. C. FRASER,  
Acting Under Secretary of Justice.

THOS. LITTLEJOHN,  
Merchant.

CRITCHETT WALKER, J.P.,  
Principal Under Secretary.

## APPENDIX I.

RETURN of Appeals (in the order of their receipt), and the result thereof, in terms of Section 17 of the "Civil Service Act, 1884."

Name.	Office.	Grounds of Appeal.	Result.
Challis, F. M.....	Matron, Darlinghurst Gaol.	Responsibility of her position. Does Clerical work. Has charge of eleven officers, and between 200 and 300 female prisoners. Asking for classification in General Division.	The Civil Service Board having considered appeal, have no power to entertain it; the position of appellant in the Service is provided for by Section 8 of the Act. Disallowed. <i>D will signify this reply in subsequent appeals of the same nature.</i>
Hawkins, Henry S.	Chief Computer Trigonometrical Branch, Survey Office, and Actuary under the Civil Service Act.	That as 4 per cent. is deducted from his salary as Actuary, such salary should be computed in fixing his classification.	Transferred from Class 4 to Class 3, General Division.
Watt, M.....	Chief Warder, Parramatta Gaol.	Asking for classification in General Division on account of the important nature of his duties.	D. (Designation since altered by the Governor-in-Council, and classification granted by the Board.)
Hayward, Walter W.	Assistant Storekeeper, Fitzroy Dock.	Applying for removal to a similar position to that which he now occupies, with higher classification.	Informed that as the appeal contains no allegation of error in classifying according to salary, or the valuation of emoluments, the Civil Service Board have no power to deal with it; the matters brought under their notice in the appeal are beyond their control. Disallowed. <i>A will signify this reply in subsequent appeals of the same nature.</i>
Fuller, Francis.....	Clerk, Fitzroy Dock.....	Applying for removal to a higher position. Title of "Clerk" does not properly describe his duties. He is Book-keeper and Accountant, and has occasionally to do out-door work.	A
Goggin, David .....	Storekeeper, Fitzroy Dock..	Requesting reconsideration of his classification. His duties are partly clerical. Is held responsible for the checking of all goods received, and for the issue of same for the different Services.	D
Collman, John .....	Clerk, Roads and Bridges Department.	Asking for higher salary as a recognition of efficient services, extending over a period of ten years.	Disallowed.
Acocks, W. G. ....	Assistant Land Agent, Albury.	Asking that his designation as Assistant Clerk in Civil Service List may be altered to Assistant Land Agent, Albury, he having been removed to the latter position.	Informed that as his promotion was made on 22nd January, 1886, it could not be recognised in the Civil Service List of that year.
Fry, Francis E.....	Supernumerary Draftsman, Survey Department.	Asking that his designation as a Temporary Officer in Civil Service List may be altered to 6th Class, General Division, he having been gazetted.	Informed that as he was gazetted since 1st January, 1886, the change could not be recognised in the Civil Service List of that year.
Lee, Isaac .....	Inspector, Marine Board ...	Requesting transfer from Section 7 to Class 5, General Division, being a certificated Marine Surveyor, and having to perform duties of an onerous and responsible nature.	Informed that the appeal has been duly considered by the Civil Service Board, who are of opinion that as the appellant is under Rules and Regulations framed in accordance with Section 7 of the Civil Service Act, no ground of appeal under Section 17 of the said Act is disclosed which the Board have power to entertain. Disallowed. <i>B will signify this reply in subsequent appeals of the same nature.</i>
Hales, F. B. ....	Assistant Clerk of Petty Sessions at Orange.	Asking for alteration of his title from Assistant Clerk of Petty Sessions (as it appears in the Civil Service List) to Acting Clerk of Petty Sessions.	Informed alteration will be made in next List.
M'Neil, J. S. ... } Dalrymple, R. ... } Leigh, W. S. .... }	Clerks, Diamond Drill Branch, Department of Mines.	Appealing against being classified as persons temporarily employed, as they have been gazetted.	Informed that the Board having considered appeal against being designated as "persons temporarily employed," and having made due inquiry, are unable to recommend any alteration of status. Disallowed. <i>T will signify this reply in subsequent appeals of the same nature.</i>
Delaney, W. H. ...	Clerk, Goulburn Gaol.....	Reporting omission of his name from the Civil Service List.	Informed not returned by the Department. Not gazetted till 9th January, 1886.
Harris, John .....	Drillmaster, Protestant Orphan School, Parramatta.	Appealing against classification under Section 8. Duties partly clerical.	Disallowed, D.

Name.	Office.	Grounds of Appeal.	Result.
Eccles, John .....	Lithographic Printer, Survey Office.	Appealing against classification under Section 8. Duties are not mechanical but entirely administrative.	Transferred from Section 8 to Class 4, General Division.
Leng, Frank .....	Crown Land Agent at Wilcannia.	That as his salary is £220 he is entitled to classification in the 5th instead of the 6th Class, General Division.	Allowed.
Cripps, C. W. ....	Draftsman, Survey Office Cooma.	Stating that he was promoted to the 5th Class, General Division, on 1st October, 1885, and appealing against being classified as a 6th Class Officer.	Allowed.
Gordon, Lambert S.	Crown Land Agent and Registrar of Births, Marriages, and Deaths, Armidale.	Asking that he may be classed in Class 4 G., as in the Civil Service List for 1885.	Disallowed. Error in Departmental Returns for 1885.
Bardon, Richard ...	Clerk, Department of Mines	Appealing against being classified as a temporary employé, as he has been gazetted.	Disallowed, T.
Mayes, E. P. ....	Draftsmen, Department of Mines.	do do ...	do
Greville, G. H. ....			
Lee, S. A. ....			
Whittell, H. Rawes			
Smiles, Jas. T. ....			
Martin, William ...	Sub-overseer, Government Printing Office.	Asking that he may be granted classification in General Division as the other Sub-overseers have been.	Transferred from Section 7 to Class 5 General Division.
Connor, E. R., R.N.			
Cleynett, W. P. ....	Temporary Clerk, Audit Office.	That he has been gazetted a Junior Clerk, and asking for classification as such.	Disallowed, T
M'Crea, W. A. ....	Ticket Clerk in the Railway Department.	Applying for transfer from Section 7 to Class 5, General Division, on account of the administrative nature of his duties.	do, B.
Lewis, E. ....	Telegraph Operator and Postal Assistant, Wellington.	Stating that he is wrongly designated in the Civil Service List as "Telegraph Messenger."	Informed designation will be altered in next list.
Kennard, Charles ...	Director of Seamen, Government Shipping Office.	For classification in Class 6, General Division. His duties are partly clerical.	Transferred from Section 8 to Class 6, General Division.
M'Bride, George ...	Clerk, Electric Telegraph Department.	That he should be classed in 6th Class, General Division, instead of Section 7.	Disallowed.
Cassidy, James. ....	School-master, N.S.S. "Vernon."	Protesting against classification in 6th Class, as his salary and emoluments entitle him to be placed in the 5th Class.	Granted classification in Class 5, General Division.
Ball, James W. ....	Draftsman, Roads and Bridges Department.	Appealing against being classified as a Temporary Officer, as 4 per cent. is deducted from his salary.	Appeal allowed.
Gill, Robert John...

## APPENDIX III.

## No. 1.

The Collector of Customs to The Under Secretary for Finance and Trade.

Sir,

Custom-house, Sydney, 16 September, 1886.

I have the honor to inform you that, in consequence of the extra work devolving upon this Department in the collection of the *ad valorem* duties, it will be necessary to make several new appointments, and I submit herewith, for the consideration of the Hon. the Colonial Treasurer, a list of the proposed offices, showing the names of the officers (already in the Department) whom I beg to recommend for appointment thereto.

I have also to request that provision be made for the proposed salaries on the Additional Estimates for 1886 to date as from the 1st May, and that, pending Parliamentary sanction, authority may be given to charge the services to the Treasurer's Advance Account.

I have, &c.,

JAMES POWELL,  
Collector of Customs.

## PROPOSED APPOINTMENTS.

Second Landing Surveyor and Inspector of Invoices, Mr. John Baxter ... ..	£550
Landing Waiter, Mr. William Hamburger ... ..	250
" Mr. Edward Linder... ..	250
Both these gentlemen are in the Temporary Division, are employed as acting landing waiters, and have been in the Department—the former since 1880, the latter since 1882.	
Landing Waiter, Mr. Cornelius M'Auliffe ... ..	£225
" Mr. George Beauchamp St. John... ..	225
Both these gentlemen are on the Permanent Staff as lockers at tobacco factories.	
Landing Waiter, Mr. Augustus Henry Mun. de Berenger ... ..	225
At present assistant to examining officers (Temporary Division); date of first appointment, December, 1882.	
Landing Waiter, Mr. Thomas Henry Pearse ... ..	£200
At present acting landing waiter (Temporary Division); date of first appointment, June, 1882.	
Landing Waiter, Mr. Arthur Phillips ... ..	£200
At present assistant to examining officers (Temporary Division); date of first appointment, November, 1884.	
Locker, Mr. Robert James Somerville ... ..	£200
" Mr. Thomas Marshall Fancourt ... ..	200
Both these gentlemen are on the Permanent Staff as assistant lockers.	
Assistant Locker, Mr. Robert James Wilson ... ..	165
At present acting landing waiter (Temporary Division); date of first appointment, April, 1882.	
Assistant Locker, Mr. Thomas O'Brien ... ..	£165

At present acting clerk (section 8); boy messenger since 1879.	
Junior Clerk, Sylvestre Eugene Thomas ... ..	60
At present boy messenger (section 8); appointed 23rd October, 1885.	

The Secretary, Civil Service Board.—G.E., 21/10/86.

## No. 2.

The Secretary Civil Service Board to the Under Secretary for Finance and Trade.

In the matter of the proposed new appointments in the Customs Department in connection with the collection of *ad valorem* duties,—

The Civil Service Board are unable to concur in the recommendations of the Collector of Customs, as from a comparison of such recommendations with the Return furnished by him to the Board, under the 26th section of the Civil Service Act, 1884, it appears that there are officers in the Department whose claims to consideration may be superior to those whose names have been submitted.

The

The Board would also point out that the claims of the "officers" must be first dealt with, before the consideration of the proposed transfer to the permanent staff of persons temporarily employed.

It is therefore requested that all applications received for promotion to the several positions may be forwarded to the Board, together with a schedule showing the officers in the order of seniority, with the reasons why senior officers have been passed over.

The Board also consider that the older officers should be allowed the opportunity of making application for the appointments.

E. G. W. PALMER,  
Secretary, Civil Service Board.

The Under Secretary for Finance and Trade, B.C., 27/10/86.      The Collector of Customs, B.C.,  
28/10/86.—G.E.

No. 3.

The Collector of Customs to The Under Secretary for Finance and Trade.

Sir,

Custom-house, Sydney, 14 December, 1886.

I have the honor to acknowledge the receipt of a letter (with enclosures) addressed to you by the Secretary of the Civil Service Board, stating that the Board are unable to concur in certain recommendations made by me in reference to new appointments in connection with the collection of *ad valorem* duties, and requesting that all applications received for promotion relating to such appointments be forwarded to the Board.

When the arrangements for the collection of duties at value were made in the early part of March last, I submitted a plan of operations to the Hon. the Treasurer, and received instructions to select suitable officers for the new business, such business involving the creation of an entirely new branch in the Custom-house.

At that time the Bill had not been introduced into Parliament, but subsequently on the 4th April the Bill was presented to Parliament, and on the following morning the newly created staff commenced the collection of *ad valorem* duties, and the officers so selected have continued to discharge their duties from that date until now.

I desire to point out that I was called upon in March to organize a new branch. It was necessary to keep secret the intentions of the Government, and at the same time it was necessary to collect the new duties on the day following that on which the Bill was introduced. I call special attention to this in order to show that it was not desirable to offer any contemplated new office generally to the officers of the Department, and that to have done so would have been to anticipate the Treasurer's statement.

How far I have succeeded in giving effect to the wishes of the Government in the mode of collecting the new duties it is not for me to ask. But I trust the Civil Service Board will believe that in the selection of the officers I was animated by one desire only, viz., to safely collect the duties in the most efficient manner by the most competent officers then at my command.

No applications for the offices created under the *Ad Valorem* Duties Act were received by me until late in October, and only immediately before the Civil Service Board objected to my recommendations; and the applications are only from officers desirous of filling the position of Second Landing Surveyor and Inspector of Invoices.

The applications (at the Treasury) are from Mr. Gordon, Mr. Ormsby, Mr. Passmore, Mr. Stubbin, and Mr. Harper.

Mr. Gordon has stronger claims for promotion than any of the officers named. His experience in the department is greater than any of the candidates; but there are strong reasons for not appointing Mr. Gordon to an office requiring continuous intercourse with the public. I have recommended Mr. Gordon for an office for which I think him specially qualified, and I am authorized to state that his preference will certainly be yielded to the office I refer to.

Of Mr. Ormsby I can only speak in terms of the highest respect. His age and increasing infirmities disqualify him, in my opinion, for an office requiring quickness and decision.

Of Mr. Passmore I will only say that he is unfit for the position.

Mr. Stubbin is an excellent officer, whose integrity and value as a public servant cannot be overestimated. As a Landing Surveyor Mr. Stubbin would be a good selection. But for the special duties required as Inspector of Invoices Mr. Stubbin is not, in my opinion, eligible.

Lastly, of Mr. Harper: In the position Mr. Harper occupies as an Examining Officer he is doing good work. But there are very cogent reasons for not recommending Mr. Harper to a position requiring attributes he certainly does not possess.

The proposed appointments other than that of Second Landing Surveyor and Inspector of Invoices are, I presume, unobjectionable. They are selected men and no person has questioned their merits.

In conclusion I beg to state that the recommendations made by me were made after careful consideration and after five months experience of the officers' fitness in the discharge of the special duties for which they were selected and approved by the Treasurer.

I have a personal knowledge of every officer in this Department, a knowledge extending over thirty-three years of almost daily intercourse and experience. I have no preference for any person, and I know that I have discharged my duty faithfully to the Government in the selection of the persons whose names I have submitted.

Should the Board be unable to concur in the recommendations I have made, it will be both my duty and my pleasure to receive their nominations with respect, and to believe that I have erred in my judgment respecting the capabilities of the officers placed under my temporary control.

I have, &c.,  
JAMES POWELL,  
Collector of Customs.

## No. 4.

Mr. A. J. Ormsby to The Collector of Customs.

Sir,

A.S.N. Wharf, 19 October, 1886.

Though I think that if the Public Service were in a perfect state no one should require to apply for promotion, which would be arranged by the head of each department, yet as we have frequently had instances of the first in turn being passed over, and wrong persons appointed, to the great injury and often long continued disgrace of the Service, on the plea that those who did not ask did not want, and being quite willing to do any duty that may be required, I beg leave to offer myself as a candidate for the office of Second Landing Surveyor, about to be created.

I need not mention my claims, as you are aware that I am senior in the Service to all others likely to apply, and I have from time to time performed the duties of Landing Surveyor.

I have, &amp;c.,

A. J. ORMSBY.

Mr. A. J. Ormsby to The Collector of Customs.

Sir,

A.S.N. Wharf, 8 November, 1886.

In reply to your memorandum, inquiring whether my application was intended to be for the office of Second Landing Surveyor and Inspector of Invoices, I beg to inform you that as unfortunately the inconsistent duties have been combined I consider it to be my duty to apply for the position.

For the appointment of Inspector of Invoices alone I would not have applied, but as you may at any time require the Landing Surveyor to perform many duties which belonged to the office when two Landing Surveyors had hard work, I desire to hold the appointment of Second Landing Surveyor, which, I take for granted, will have to be severed from that of Inspector of Invoices.

I have, &amp;c.,

A. J. ORMSBY.

Mr. W. R. T. Passmore to The Collector of Customs.

Sir,

Grafton Wharf, 16 October, 1886.

In consequence of the proposed appointment of a Second Landing Surveyor by the Honorable the Colonial Treasurer, I do myself the honor to ask your influence and recommendation for the position.

I have conferred with Mr. Ormsby, the Senior Landing Waiter, who appears to be disinclined to make any application, and being second Senior Landing Waiter, together with my long and varied experience in that capacity for many years, will, I hope, entitle me to the position which I venture to believe I am able to fill with credit to myself and advantage to the Department, over which you preside.

I am, &amp;c.,

WM. R. T. PASSMORE.

Secn.—Jas. P., 18/10/86.

Memorandum from Collector of Customs to Mr. Passmore.

5 November, 1886.

THE office to be filled is that of Second Landing Surveyor and Inspector of Invoices.

Am I to understand that Mr. Passmore applies for the position?

JAS. P.

Mr. W. R. T. Passmore to The Collector of Customs.

Sir,

Grafton Wharf, 5 November, 1886.

In reply to your memo. of to-day's date, I beg formally to apply for the appointment of Second Landing Surveyor and Inspector of Invoices.

I was under the impression that I had already done so in my letter of the 16th October, 1886.

I am, &amp;c.,

WM. R. T. PASSMORE.

Mr. C. E. Gordon to The Collector of Customs.

Sir,

Gauger's Office, Custom-house, Sydney, 6 November, 1886.

I have the honor to request that you will kindly recommend this my application for the new office about to be created of Second Landing Surveyor and Inspector of Invoices.

I beg to bring under your notice that I was appointed an Inspector of Distilleries on the 4th May, 1853, and have consequently been more than thirty-three years continuously in the Service, and am senior to all the present officers of the Department, except Messrs. Fancourt, Ormsby, and Rucker.

I have, &amp;c.,

CHARLES E. GORDON,

Senior Gauger and Examiner.

Mr. R. Christison to The Collector of Customs.

Sir,

Sydney, 6 November, 1886.

Hearing that an appointment is to be made of a Second Landing Surveyor and Inspector of Invoices, I beg to apply for the position.

I may state that I have had considerable experience as Invoice Clerk during the time the *ad valorem* duties were in force formerly.

I make this application with due regard to the claims of officers senior to myself on the Landing branch, who may apply for the position.

Respectfully requesting that you will be good enough to forward this application with a favourable recommendation,

I am, &amp;c.,

ROBERT CHRISTISON.

Mr.

Mr. J. N. Stubbin to The Collector of Customs.

Sir,

New Zealand Wharf, 18 October, 1886.

Having seen by the *Sydney Morning Herald* that the Government are about to appoint a Second Landing Surveyor, I beg, through you, to apply for the same. I have now been over thirty-two years in the Custom-house, and I trust my past conduct will bear your favourable recommendation, and also that of all my superior officers.

I am, &c.,

JOHN N. STUBBIN.

Seen.—JAS. P., 18/10/86.

Memo. from Collector of Customs to Mr. J. N. Stubbin.

Custom-house, Sydney, 5 November, 1886.

THE office to be filled is that of Second Landing Surveyor and Inspector of Invoices.

Am I to understand that Mr. Stubbin applies for the position?

JAS. P.

Certainly, yes.—JOHN N. STUBBIN, L.W., 5/11/86.

No. 5.

The Secretary, Civil Service Board, to The Under Secretary for Finance and Trade.

In the matter of the proposed appointments in the Office of the Collector of Customs. The Civil Service Board having considered the letter of the Collector of Customs of 14th December instant, in answer to their minute of 27th October, are of opinion that the said letter is not a report in conformity with the 27th section of the "Civil Service Act, 1884," and that they are not therefore in a position, having due regard to the duties imposed upon them by that clause, to make any report or recommendation to the Minister in reference to the said letter.

They desire further to place on record their opinion, that the terms of the Act are disregarded when any recommendation is made by the head of a Department direct to the Minister, without the previous report and recommendation enjoined in the Act.

E. G. W. PALMER,

Secretary, Civil Service Board.

The Under Secretary for Finance and Trade, B.C., 20 December, 1886. The Collector of Customs.—G.E., 22/12/86, B.C. Seen.—JAS. P., 23/12/86.

No. 6.

The Secretary Civil Service Board to The Collector of Customs.

Sir,

Civil Service Board, 4 January, 1887.

I have the honor to request that the papers referring to the appointment of the Second Landing Surveyor and Inspector of Invoices may be returned for the information of the Civil Service Board.

I have, &c.,

E. G. W. PALMER,

Secretary.

Papers herewith.—JAMES POWELL, 5/1/87. The Secretary Civil Service Board. Submitted to Board, 31/1/87. Hold over.—E.G.W.P. The Collector of Customs, B.C., 5/3/87.—E.G.W.P.

SYDNEY: CHARLES POTTER, GOVERNMENT PRINTER.

---

1887.

REPORT of the Board of Inquiry into the working  
of the Lands Department, with Minutes thereon  
and Appendices thereto.

---

Reconstruction of Department of Lands.

MEMO. FOR THE CABINET.

IN submitting to my colleagues the report of the Board appointed by my predecessor, Mr. Copeland, to inquire into the condition of the staff and the general working of the Department, and the Under Secretary's minute thereon, I think it well to make a few brief preliminary and explanatory observations.

There can be no doubt but the Department has,—as most large Departments are naturally disposed to do, however closely watched they may be by those having control of them—gradually and greatly outgrown its real requirements, so far as numbers are concerned. The frequent changes of Ministers and of the law have contributed their quota to this increase. However, by the establishment of the system of local administration by the Act of 1884, it became palpable that a thorough re-organization of the Head Office Staff was not only necessary but inevitable, and that this re-organization would and should result in a large reduction was, of course, to be expected.

Under these circumstances, my predecessor, having had the necessity of the case prominently before him, appointed the Board, whose report is found herewith.

The Board, it will be observed, having carefully gone through each branch, and personally examined into the character of the duties performed by each officer, and the manner in which he performed them, into his general qualifications as an officer, his length of service, &c., then proceeded to prepare their plan of reconstruction. The character of this plan, as shown by the casting of the Estimates, is approved of by the Under Secretary. I also approve of it. In

In allotting the remuneration attached to the different offices, the principle of paying according to the character of the duties has been adopted. With the application of this principle in this case I have felt bound to concur.

In filling up, or rather reallocating the offices, every officer's qualification for the position to be filled has been carefully considered. Further, in performing this delicate and difficult task the Board did not restrict themselves to the members of the permanent staff, but, where circumstances in their opinion warranted it, resorted to the temporary staff, in order to obtain the best qualified man for the position under consideration.

It will be noted that neither the Under Secretary nor myself have felt justified in accepting the recommendation of the Board in every case. In some cases we have changed the person nominated for the office, and in other cases the remuneration. Generally, however, we have followed the lines laid down by the Board in this regard.

The results have been that a very large reduction in the number of officers and in the expenditure has been effected. The permanent staff has been reduced by £28,603, and the temporary staff by £20,218, and the total annual saving will be £73,390.

The saving on the Estimates of 1887 over 1886 on account of salaries for the Permanent and Temporary Staffs will be £48,821, but the annual saving on salaries calculated on the basis of the second half year of 1887 will be £73,390.

This great reduction in numbers and expense cannot of course be carried out peremptorily, nor without some provision being made for those whose services have, in the public interest, to be dispensed with.

It will be seen from the casting of the Estimates that the reconstruction will not come into operation till the 1st of July next. This will give all parties concerned three months' notice of the change as affecting themselves; and I propose to submit to you at an early date a proposition whereby those officers who have to retire, and who cannot come upon the Civil Service Fund, will receive fair, indeed liberal compensation.

The Board's duties did not extend to the country offices; with regard to these, however, they will be thoroughly examined with a view to reduction, and promotion of efficiency without delay, by the very able officers at the command of the Department. Without waiting for this, however, I have felt justified in reducing the number of Land Boards by two (*i.e.*, by abolishing the Boards at Albury and Wilcania) making other arrangements of a like nature in other directions, and by effecting retrenchment by the reduction of salaries nearly all round, and by striking off the increments that had accrued to them under the Civil Service Act since the appointments were made. In other directions also considerable reductions and retrenchments will be found to have been effected.

The Surveyor-General and the Deputy Surveyor-General have signified their desire and intention of retiring under the Civil Service Act's provisions during this year. The necessities of the new mode of administration will not require the last-named office to be continued, and the duties of the Surveyor-General will be so materially lessened in extent and responsibility that I believe the services of a competent officer to efficiently discharge them can and will be secured at a considerably less salary than that paid at present.

An

An examination of the Estimates will show that all the salaries of the highest officers in the Department have been reduced. One exception will doubtless be noticed—that of the Under Secretary. This officer has rendered, and does render, such valuable services to the Government in the position he holds that I could not conscientiously subject his salary to reduction; indeed, were it not that it would lead to difficulties with regard to the salaries of the other Under Secretaries, I would unhesitatingly have increased his salary to at least £1,000 a year. In his minute, the Under Secretary states that he leaves his position in the hands of the Government to be dealt with. I have every confidence that when a favourable opportunity occurs for so doing the Under Secretary's great services to the Government and the public will be fitly and amply recognized.

I need scarcely assure my honorable colleagues that the duty I have had imposed upon me has been acutely painful, as it has been difficult and trying. To perform an act of administrative duty which, however necessary and justifiable in the public interest, involves such far-reaching and serious consequences to persons who have hitherto held positions in the Public Service, and have been dependent upon them for their subsistence, cannot by any man be considered a pleasant duty. To me it has been most painful. The only consolation I have is that it has been done because it was necessary and justifiable in the public interest; and further, that I am confident my colleagues will be readily willing to endorse my proposals to alleviate the inevitable blow that must fall upon so many worthy persons in the carrying out of the great reform in the Department as embodied in the Estimates.

I would point out that this great reduction in the expenditure of this Department is not brought about in the main to, in part, satisfy the just demand of the public for retrenchment on account of the state of the public finances, but because, as I have already stated, of the altered conditions under which the Department has now to work. If there had been no deficit—if the public income had been equal to the public expenditure—this reconstruction of the Department, with its consequent great reduction in cost, would have been as justifiable and necessary as it is under existing circumstances. A very large annual amount will be saved, however, by this reduction of salaries, outside of the reconstructed branches.

In conclusion, I am gratified to have the assurance of those best able to express a reliable opinion upon the subject, and which, speaking with some knowledge and experience, I feel justified in endorsing, that the mode of administration, as proposed, can be carried out without loss of efficiency and with greater advantage than the one it displaces, to the community.

29th March, 1887.

THOS. GARRETT.

## MINUTE BY THE UNDER SECRETARY FOR LANDS.

HAVING carefully perused the reports of the Board appointed by Mr. Secretary Copeland on the 4th November last, to enquire into the working of the Department of Lands at head-quarters, I have to recognize the general accuracy of the contents, particularly as regards the anomalous rates of salary in certain specified instances as compared with the capacity of and duties performed by the recipients. I have on many occasions personally urged the consideration of this matter upon the attention of Ministers, and more particularly was it brought under notice in a minute written by me in 1885 (copy herewith marked Mins. 85-9,244), with reference to the payment of the increment provided under the Civil Service Act, which, in consequence of its general and indiscriminate distribution, as provided by law, led to salaries being largely increased where, in many instances, the officers were already overpaid for services rendered.

There can be no doubt that a considerable reduction as regards numbers can be made in the staff, and that the salaries of some of the officers who are deemed eligible for continued employment may, in some cases, be reduced, therefore I see no sufficient reason to warrant my dissenting from the general tenor of the recommendations of the Board, although I regret that it was not found practicable—owing, I believe, to limited time—to deal with the question of arranging the branches of the office upon a geographical basis.

The meaning of the observations made by the Board in reference to the disorganization and extravagances which were found to prevail in the Survey Office cannot be misunderstood; and I regret I have to state that in my opinion the responsibility as to both rests with the Surveyor-General, the Deputy Surveyor-General, and the Chief Draftsman, and is, to a considerable extent, the outcome of the continued opposition of the two former officials to the distribution of the residue of work under the repealed Acts among the Local Offices, a course for so long, but, unfortunately, unsuccessfully, advocated by me. The comments of the Board are couched in the following language:—"The Surveyor-General's charting divisions were occupied in dealing, in a very sluggish fashion, with work under the repealed Acts, which should properly have long before been transmitted to the different local offices. Had this course been pursued, a very large sum of money would have been saved to the Colony. The Board think it an essential part of their duty to point out that recommendations to this effect had been officially made to the Minister for Lands from a certain direction, and had been strongly resisted in a quarter more closely connected with the Charting Branches. As the Board are specially precluded by the terms of their instructions from dealing with officers above an indicated status, they cannot give more particular indication as to where the responsibility lies; but they feel it incumbent on them to declare in the most distinct terms that the resistance to the distribution of the work under the repealed Act has been, in their opinion, a result of a preference for individual interests over the interests of the public."

The Board have so fully and, I think, ably dealt with all the different matters which came under their observation that it appears to me unnecessary to comment at greater length upon the report generally, and I therefore proceed to make any recommendations based thereon.

### *Surveyor-General.*

As I understand it is the intention of the Surveyor-General to retire from the public service at the expiration of the leave of absence recently granted to him, it is perhaps unnecessary for me to make any further reference to him personally, merely observing that it will be requisite to appoint an officer to act as Surveyor-General during the absence on leave of the present incumbent of that office, and when the contemplated retirement is effected the acting officer could be permanently installed in the position, to which a salary should be attached having some proportionate difference to that paid to the permanent Head of the Department, and based upon the character and relative measure of responsibility of the two positions, and at the same time in that direction clearly defining the status of the officers. While referring to this subject it should not be lost sight of that the Surveyor-General's duties and responsibilities are materially lessened by the independent action cast upon the District Surveyors under the present land law.

### *Deputy Surveyor-General.*

The Deputy Surveyor-General having, I understand, intimated his intention of applying for a prolonged leave of absence, with the ultimate view of retiring under the provisions of the Civil Service Act, it is only necessary for me to state that in my opinion, and indeed, as clearly indicated by the report of the Board, the office should be abolished, being altogether unnecessary.

The office of Chief Draftsman should, I think, be continued under a rearrangement of duties designed to secure effective supervision of the entire staff of draftsmen at head-quarters. It is, however, my duty to recommend, for reasons which have been already adverted to, that the present occupant of the position—whose term of service has extended over thirty-eight years—should be required to retire under the provisions of the Civil Service Act.

There

There are a number of officers (*vide* Schedule A\* hereto appended) for whom no further useful occupation can be found, owing to the operation of the Crown Lands Act of 1834, and to the rearrangement suggested by the Board. The Schedule also contains the names of officers whose services have been rated so low by the Board as to render their employment in the Department undesirable. For those officers salaries may perhaps be provided until the 30th June, and in the meantime such arrangements completed for the retirement of those officers on the permanent staff as the circumstances of their respective cases may demand, and such other settlement effected as regards officers on the temporary staff as may be considered equitable.

The branches of the Survey Office at head-quarters, as proposed by the Board, are designated as follows:—

- “Miscellaneous Charting,”
- “Compiling and Lithographing,”
- “Occupation of Crown Lands,”
- “Roads,”
- “Correspondence,”
- “Plans Sales,” “Records,” and “Mounting,”

And I propose to refer to them in the order mentioned, but prior to doing so desire to point out that there is at present an Account Branch in the Survey Office, which it is proposed to amalgamate with the Account Branch of the Lands Department; this matter will be fully dealt with hereafter.

#### *Chief Draftsman.*

Assuming that the retirement of the Deputy Surveyor-General and the Chief Draftsman will be duly carried out, it will be necessary to provide for active and efficient supervision of the new or reconstructed branches of the Survey Office, and for this purpose the Board have suggested the appointment of an officer to be designated “Controller of Drafting,” but I think the long recognized title of Chief Draftsman far more appropriate, although the duties will differ very considerably from those attached to the present office. The Board apparently experienced such difficulty in nominating an officer for this position that they left it an open question. The responsibility of making a recommendation I fully recognize, but feeling assured that much of the success of the proposed rearrangement is dependent upon the selection of an officer of undoubted general experience and energy, combined with firmness of character and capacity, and having carefully considered the qualifications of the whole of the officers, I have arrived at the conclusion that the requirements of the office will be best met by the appointment of Mr. C. J. Saunders. While this officer has not the prolonged service which might be urged by others in furtherance of supposed claims, it must be borne in mind that length of service in any particular position does not constitute the sole requirement for an office such as that of the Chief Draftsman as now proposed. Much could, I feel, be said in favour of many of the senior officers as regards the manner in which they have discharged their respective duties under the system which it is now proposed to supersede; but at the present juncture it is absolutely necessary to set aside all personal considerations, however painful it may be to do so, and conscientiously recommend the officer who it is considered will best meet the imperative demand for greater economy and more effective and energetic supervision. The salary proposed by the Board is £600 per annum, but I venture to suggest £500 per annum.

#### *Miscellaneous Charting Branch.*

The Miscellaneous Charting Branch, as now proposed, will embrace a variety of work which has hitherto been dealt with in separate Branches of the Survey Office, and must, so far as at present can be gathered, continue to be performed at head-quarters. With the composition of this Branch, as definitely recommended by the Board, I see no reason for dissent. No specific recommendation is made as to an officer to take charge, beyond a suggestion as to salary, which I think can be reduced by £50 per annum. The Board discuss the qualifications of Mr. T. Stevens and Mr. C. J. Saunders for the position; but as I have suggested that Mr. Saunders should be appointed Chief Draftsman, it only remains for me to deal with the claims of Mr. Stevens. While recognizing the qualifications displayed by this officer in the position held by him for some years in the Survey Office, I am confident that his irritability of temperament, heightened possibly by weakness of health, have sensibly impaired, and always will impair, his efficiency, particularly in controlling others, and I therefore deem it my duty to suggest that he should not be placed in charge of the new Branch. Before proceeding to suggest any appointment, it is desirable that I should indite a few words in reference to an alleged injustice suffered by Mr. Stevens at the time the Chief Draftsmen of the District Survey Offices were appointed. That he was not nominated for one of these positions is perfectly true, and for the omission either the Surveyor-General or Deputy Surveyor-General—I believe the latter—is responsible. However, the injustice was of a temporary character only, as subsequently Mr. Stevens was offered one of these positions, which he declined.

Holding

---

\* This Schedule has not been printed, as its publication is considered to be undesirable.

Holding, as I do, the view that the premier consideration in making these new appointments should be general efficiency, energy, and aptitude for the particular position, and that considerations of seniority can only be permitted to operate when all other things are equal, I feel bound to recommend the appointment of Mr. J. T. Keating, an officer of fourteen years' service, and whose present remuneration is £390 per annum. This officer has had a thorough general experience in the Survey Office, in fact I might with perfect accuracy say in the Department.

*Compiling and Lithographic Branch.*

In connection with the Compiling and Lithographic Branch my ideas are in accord with the recommendations made by the Board, and I therefore submit them for approval.

*Occupation of Crown Lands Branch (Drafting).*

The suggestions of the Board in respect to salaries and positions in the Occupation of Crown Lands Branch are likewise submitted for approval, with the addition that Mr. F. Gerard, the Chief Draftsman, at present in charge, be continued as Draftsman-in-Charge of the Branch, as now proposed.

*Roads Branch.*

The proposals of the Board in reference to the Roads Branch are fully detailed in their report, and they appear to me to be of a character that will in the future meet all public requirements, and result in a most substantial reduction of expenditure. It is pointed out that though at present the expenses of this Branch are defrayed out of votes of this Department, it is attached for administrative purposes to that of the Department of Mines, and it will therefore be necessary, if the economic proposals now put forward are adopted, to re-transfer the administration to this Department.

*Correspondence Branch, &c.*

The remaining Branches, viz., "Correspondence," "Plans Sales," "Records," and "Plan Mounting," as by the Board proposed to be constituted, appear to be equal to any requirements that can be foreseen, and therefore the proposals are submitted for approval.

*Administrative Branch of the Department.*

Having dealt with the report of the Board so far as it relates to the Survey Office, my observations will now be devoted to what is generally designated the Administrative Branch of the Department. Properly this should have preceded that of Survey, but it appeared, for the purposes of this minute, to be more convenient in this instance to invert the positions. The Board recommend the re-establishment of the office of Chief Clerk and combining it with that of Registrar of the Appeal Court. When the latter appointment was provided for at the inception of the Crown Lands Act of 1884, it was anticipated that the duties devolving upon the Registrar would prove of a responsible and extensive character, but experience has shown that any duties which can be reasonably performed by that functionary, although somewhat responsible, are not extensive, consequently his duties have been more closely allied to those of a Chief Clerk. No better officer could be found for the position than Mr. Wilson, the present Registrar, and while being clearly of this opinion I think the salary of £700 per annum, resulting from the operation of the Civil Service Act before amendment, is a larger remuneration than it is worth, and therefore I have to suggest that on and after the 1st July next the salary should be £650 per annum. In my opinion the proper salary for the Chief Clerk is £600, and £50 is added thereto, to compensate for the extra duties of Registrar of the Appeal Court.

*Inquiry Branch.*

The creation of an Inquiry Office is recommended by the Board. In this recommendation I fully concur. Long ago such a step would have been taken but for difficulties encountered, which need not now be described. I do not concur in the salary proposed for the Officer-in-Charge, thinking £350 per annum a sufficient emolument; to the other salaries no objection can be offered. As regards the personnel of this Branch, I do not now propose making any recommendation, other than that suitable officers will be found among those now employed in the Department.

*Ministerial Branch.*

The Board has, in my opinion, under-estimated the requirements of the Ministerial Branch in attaching the duties appertaining to the supervision of the advertising to a Junior Clerk, who could not be entrusted with it. As, however, this business is not sufficient to occupy the time of any one officer it will be entrusted to the short-hand writer. Otherwise, I think the staff as arranged will meet the altered requirements of the Branch. The custody and issue of stores and stationery, which has hitherto been carried out in the Ministerial Branch, has been, under the proposal of the Board, suggested to be transferred to the Account and Stores Branch.

*Conditional*

Plan Sales  
Record and  
Mounting  
Branch.

Chief Clerk  
Registrar of  
Appeal Court.

*Conditional Sales Branch and Sub-Branchees.*

With the exception of a few alterations of salaries, the recommendations of the Board may be adopted in respect to the Conditional Sales Branch and the several proposed sub-branches. The salary of the third clerk in the branch-in-chief is proposed at £250, while in my opinion £200 per annum would be ample remuneration. An increase of £10 is also proposed for the clerk in charge of the sub-branch dealing with transfers; this I do not consider necessary, at the same time I must acknowledge that I fully recognize the efficiency of the officer in question. The same remarks apply to the 2nd, 6th, and 7th clerks, whose salaries may be respectively fixed at £250, £175, and £175, instead of £275, £200, and £200.

*Miscellaneous, Alienations, and Reserves Branch.*

The Board designate this as the Miscellaneous Branch, but the marginal title herein better indicates the nature of the business transactions therein conducted. The requirements of this Branch appear to have been sufficiently provided for by the Board, and the only suggestion that I have to make is that the reductions proposed in the salaries of the 8th, 9th, and 10th clerks are not such as should meet with approval. These officers are rated as good, and are now in receipt of small salaries. Two junior positions for which salaries have been provided yet remain to be filled from the officers of the Department as it is at present.

*Deeds, Diagrams, Description, and Noting Branch.*

With the exception of the omission of the proposed increase of £10 per annum to the head of this Branch, the recommendation of the Board is submitted for confirmation.

*Occupation Branch (Clerical).*

This Branch, as arranged by the Board, will, I have no doubt, meet ordinary business requirements, yet there will be times of pressure which will necessitate special temporary arrangements. The reduction proposed in the salaries of the temporary officers at present engaged upon a duty which will soon terminate is undesirable, and I think unmerited, and I cannot therefore recommend its adoption.

*Lease Branch.*

The arrangement suggested by the Board in respect to the Lease Branch is submitted for approval, with the exception that the salary allotted to the Third Clerk should remain at £250, and that the salary of the Fourth Clerk should be rated at £175, in place of £200.

*Correspondence Branch.*

The staff of the Correspondence Branch, as framed by the Board, is submitted for approval. I propose, however, that the salaries of the Third and Fourth Clerks should be each £220, instead of £240 and £200 respectively.

*Account and Stores Branch.*

Whilst fully concurring with the proposition to amalgamate the Branches that have hitherto had a separate existence in the Administrative Branch and Survey Office—indeed, I may add that this matter was brought under notice by me some months ago—I cannot fully endorse the proposals of the Board. The recommendation of the Board in reference to the nomination of an officer as head of the branch demands special attention. In this they are not unanimous, and a very strong protest by Mr. Houston against the nomination is appended to the report; and I have no hesitation in stating that I have at all times, and in many cases of pressing emergency, received from Mr. Cohen a zealous, intelligent, and willing support, and I feel assured that he is, from his general experience, the officer best qualified to take charge of this branch, and I recommend that he be appointed to the position. With regard to the staff, I cannot but think it beyond the requirements of the branch, but as I have not had an opportunity of going minutely into its future requirements, I refrain from suggesting any reduction at present; but I will take an early opportunity, after the reconstruction has been effected, of fully inquiring into the matter with a view to an immediate reduction of the number of officers, if the staff should prove to be more than sufficient. With regard to the salaries proposed, I think those of the 2nd and 3rd officers, and of the clerk designated in the report of the Board as third accountant should respectively be £350, £340, and £300, in place of £400, £350, and £290, as suggested by the Board.

Having made my recommendations upon the report of the Board, I deem it necessary, before offering any general remarks in conclusion, to invite attention to the Local Offices which have not been and could not be referred to in that report. In these offices a very considerable expenditure is involved, which it is thought is capable of reduction. No investigation, however, having been made into the staff of the local offices, it is not possible to critically review either the strength or efficiency of the respective

staffs

staffs or whether excessive salaries are being paid; but there are cases which demand no inquiry, particularly those of officers who received new appointments when the Crown Lands Act came into operation, and whose salaries at that time were thought to be in every way adequate to the duties attached to their offices; but their salaries have since been added to by the increment accruing under the Civil Service Act, which Act was not in existence, nor were its provisions considered when the rates of remuneration were determined.

The Chairmen were appointed at £700 per annum, with one exception, when the salary was, for special reasons, fixed at £800. Due consideration has been given to the duties and responsibilities attached to these offices, and the opinion is ventured that the original rate of salary is ample, and should be reverted to. Similar remarks may be made in regard to the Clerks-in-Charge and the Chief Draftsmen in the Local Offices, whose salaries, it is proposed, should be, when exceeding the original rate fixed, restored to it; save one exception, where it was rated at £450, which may be for the future reduced to £400.

It will be noticed that I do not propose any reduction of salary in connection with the office of District Surveyor, as in my opinion the duties and responsibilities of the position are fully worth the remuneration of £650 per annum.

The salaries of the Conditional Purchase Inspectors demand consideration. At the rate originally fixed, £350 per annum, these officials were amply paid for any services they could render; and I am sure this must be at once admitted without entering into any details as regards the particular nature of the duties they perform. I therefore suggest a reduction in salary accordingly. It should perhaps be mentioned that when absent from their head-quarters these Inspectors are paid a travelling allowance of 20s. per diem.

The salaries of the Crown Land Agents, varying from £440 to £240 per annum, need review, as in respect to these officers the increment paid under the Civil Service Act has had the effect of unduly increasing the remuneration for this class of work in many cases. Being of this opinion it appears to me necessary to suggest the following revision:—

Crown Land Agent—

Wagga Wagga, from £440 to £400	Corowa, from £340 to £300
Albury " 390 " 370	Glen Innes " 340 " 300
Cooma " 390 " 370	Goulburn " 340 " 300
Dubbo " 390 " 350	Gundagai " 340 " 300
Gunnedah " 390 " 350	Hay " 340 " 300
Young " 370 " 320	Lismore " 340 " 300
Tamworth " 340 " 300	Molong " 340 " 300
Bathurst " 340 " 300	Mudgee " 340 " 300
Bingera " 340 " 300	Singleton " 340 " 300
Bombala " 340 " 300	Wentworth " 340 " 300
Carcoar " 340 " 300	Burrowa " 320 " 300
Coonabarabran " 340 " 300	Coonamble " 320 " 300

In connection with the staff of Crown Land Agents which is not confined to those abovementioned, but comprises other similar offices throughout the Colony, there are three Emergency Land Agents, whose salaries were originally £300, but with the Civil Service increments added have been increased to £340. Two of these officers may, in my opinion, be reduced to £320, leaving the other at the sum of £340, for Mr. Boot, who is frequently called upon to undertake responsible duties other than those pertaining to his office.

In connection with the Local Offices there is a case requiring special consideration; it is that of Mr. C. E. Neate, an officer of twenty-five years' service and 58 years of age. He is at present Second Clerk in the Local Board Office at Orange, with salary at the rate of £420 per annum, but is pronounced to be unequal to the duties of the position; indeed, there is no office the duties of which would correspond with the emolument he receives to which he could be appointed; I have, therefore, to recommend that he be allowed to retire under the Civil Service Act.

The reconstruction proposed by the Board, being based on a valuation of the duties allotted to each officer, a considerable disturbance of salaries will be involved. Many officers are, as reported by the Board, overpaid (the surplus being in fact frequently due to the increments under the Civil Service Act), and they will suffer a reduction; while others, who have been performing work for which they are not, and could not be proportionately remunerated, are now recommended for the reward, in many cases long deferred, of their industry and perseverance.

As there is in some of the branches work of a character which must come to a termination in the immediate future, when further reduction will, in all probability, be rendered practicable, I am not prepared to recommend a transference of officers from the Temporary to the Permanent Staff, except where their services are likely to be continuous, and where they have distinctive claims to preferment by capacity and length of service.

I concur entirely with the judgment of the Board in their selection of officers to be transferred to the Permanent Staff, and recommend their appointment accordingly. (*Vide* Schedule B.) With

With regard to the large number of officers, chiefly in the Survey Branch, who, unfortunately, will be thrown out of employment by the falling off or absolute cessation of work at Head-quarters, it is perhaps proper to mention that this contingency has been fully set before the heads of the Survey Branch on more than one occasion in minutes penned by Mr. Farnell, when Secretary for Lands. On the 26th November, 1884, Mr. Farnell wrote as follows:—

“The law requires that the staff should be located in different parts of the Colony, and each staff must be composed of qualified officers. If the views of the officers as regards where they are to be employed can be met without public inconvenience or detriment to others, and with due regard to their present different positions, I see no reason why the Surveyor-General should not make recommendations having this course in view. While proposing the country staffs, the officers proposed to be retained at Head-quarters, and the duties they are to perform, should be specified, as it appears to me the officers going to the country will be more likely to be hereafter retained than those, or certainly the majority of them, remaining at Head-quarters, and this should be generally understood. I cannot state how I am likely to act until the different questions are fully submitted.” Min. 84-7,813.

At a later date, 8th December, 1884, writing on this subject, Mr. Secretary Farnell wrote:—

“I have not sufficient time at my disposal to go fully into this question at present, but it is desirable that the officers should know that their seniority and prospects, as referred to in the Surveyor-General’s minute, can only be considered so long as their services are required at Head-quarters as now proposed. Nominations have been made for the local survey offices, and I assume that the proper and most efficient officers have been selected. It is impossible that I can at this juncture give any assurance as to future permanent employment.”—Min. 84-8,721.

As regards the officers of the administrative division, the necessity for dispensing with their services arises in one or two instances from abolition of office consequent upon the amalgamation of branches, and in others from impaired efficiency, arising from a variety of causes, none of which it is hoped will form an insuperable barrier to the granting of gratuities or pensions.

As to the reduction of salaries recommended in connection with the Local Offices, I do not think that anything can be added to what has already been written in each case, beyond expressing a firm conviction that the reduced remuneration is in every way adequate to the duties and responsibilities of each of the offices affected.

In submitting the foregoing proposals as the outcome of an anxious and conscientious effort to meet the imperative necessity for retrenchment, and the partial reconstruction of the Department on an efficient basis with the least possible expenditure, it is not to be anticipated that a change of this drastic character and extent can be effected without inflicting hardship, and even possible injustice, to individuals; but in order to mitigate the former and prevent the latter, I beg to suggest that provision be made in the Estimates for all salaries of affected officers to the 30th June next, and by so doing every officer finding himself aggrieved will be afforded an opportunity of submitting his case for consideration, and if it should be substantiated then provision could be made in the Supplementary Estimates to meet any claims arising. As just previously stated, the reconstruction of the Department cannot be said to be more than partial, as there yet remains the local offices to be inspected and reported upon, which, when completed, will probably lead to further retrenchment, embracing perhaps a reduction of the number of offices; indeed, it is thought that steps in this direction might be taken at no distant date as regards the Local Offices at Albury and Wilcannia. Before concluding, I desire to point out that in a few cases there are officers receiving what may be considered high salaries whose remuneration it is not proposed to reduce, as I am fully convinced that their qualifications and responsibilities are only fairly recompensed and recognized by the emoluments they each enjoy.

S. Freeman,  
W. Houston,  
H. A. G. Curry

As to my own position, I prefer to leave the matter in the hands of the Government, feeling assured that due consideration will be given to the responsibilities attached to the office I have the honor to hold, as well as to the magnitude of the work I am personally called on to perform, neither of which, I may say, without, I trust, being open to a charge of egotism, are exceeded, if equalled, by those devolving upon any officer in the public service.

The weight of responsibility which has fallen upon me in dealing with this matter is perhaps unprecedented in the history of the Civil Service of this Colony, and the recommendations now submitted have not been arrived at without patient investigation and the most anxious consideration; and while it has been my endeavour to meet the public interests to the fullest extent, the claims and qualifications of the whole of the officers in the Department have been carefully considered, and every possible effort has been made to guard against the infliction of any hardship which could be possibly avoided.

CHARLES OLIVER.

26 March, 1887.

MINIST. 85-9,244.

## MEMO.

I understand that the Officers herein referred to have had certain deductions (and will have further deductions) made to the Civil Service Fund during the present year, and that the deductions are nearly equal to the increase of salary. I think, under the circumstances, the increases may be paid for this year; but next year, that the increases provided by the Act should be considered in connection with the discharge of their respective duties.

Intld., J.S.F.,  
4/9/85.

Copies of the submission and decision in this matter should be struck off for circulation throughout the Dept.

Intld., C.O.,  
17/9/85.

BEFORE signing the abstracts covering the amounts of increases due under the Civil Service Act of 1884, I respectfully desire to call the attention of the Secretary for Lands to the terms of section 4 of that Act, which reads that should the Minister be dissatisfied with the habits and conduct of any officer of his Department, or with the mode in which he discharges his duties, the Governor may order that such officer shall not receive the then accruing or any other increase to which he would otherwise be entitled. Then follows the action to be taken by the Civil Service Board.

In the absence of any regulations under the Act, I am unaware what course to pursue. My desire is to show that there are officers in this Department who, in my opinion, are amply remunerated for the services they perform, and are wholly incapable of satisfactorily discharging duties of a more responsible or valuable character. Is it intended to award them the annual increment accruing under the Act? There are also, unfortunately, officials whose salaries have been reduced, their habits and conduct being unsatisfactory, and by whom the allotted duties are performed in a most perfunctory manner.

I have been unable, through the excessive pressure of business attendant upon the introduction of the Crown Lands Act of 1884, to devote to the matter now brought under notice the attention which it deserves. Whilst of minor importance to the Crown Lands Act, it is so closely allied to the proper and effective organization of the Department as to command attention. To distribute the accrued increment indiscriminately and without consideration would probably defeat the principles of the Act, and would not offer to those deserving Officers any stimulus to continue giving their best services.

I trust I shall be excused for bringing this matter forward after it has been generally understood that the amounts would be paid; but I do not, under the circumstances, feel justified in certifying to the Vouchers without first seeking instruction.

Intld., C. O.,  
1/9/85.

## SCHEDULE B.

List of Officers temporarily employed in the Department of Lands recommended to be transferred to the Permanent Staff.

Name.	Length of Service.	Former Annual Rate of Pay.	Proposed Annual Salary.	Proposed Duties.	Remarks.
<i>Administrative Branch, Lands Department.</i>					
Marr E. C.	9	£ s. d. 273 17 6	£ 275	3rd Officer, Alienation Branch	Increase 1 2 6

MINUTE

## MINUTE BY MR. SECRETARY COPELAND APPOINTING BOARD OF INQUIRY.

MIN. 86-9,433.

I DESIRE during the present Parliamentary recess, and prior to the preparation of the estimates for next year's expenditure to have a thorough and searching inquiry into the inner working of the whole of the department, both with a view to general retrenchment, and, if possible, the introduction of a more simple yet comprehensive system of carrying on the work between the head-office and the various branches of the Department.

I had intended this inquiry to be carried out at the various Local Offices, concurrently with that at the Head-office, but the Under Secretary having drawn my attention to the difficulty of obtaining a sufficient number of suitable officers to carry out the enquiry simultaneously without bringing about an impediment in the current work of such a large Department, I therefore think it better to confine the enquiry in the first place to the Head-office, which when completed can be extended to the Local Offices.

I adopt this course with less reluctance, as I have already received (as requested by me) a confidential report from each Chairman of Local Land Boards, and the District Surveyors as to the merits and demerits of each officer under their respective charges, also embodying each of these gentlemen's views with respect to future retrenchment and economic working of their various offices.

The question of entrusting to a Royal or other Commission such an inquiry into the working of this and the other Departments of the Public Service has not so far been given effect to, should however such a Commission be ultimately decided on, the labors of the Board of Inquiry herein appointed, will not by any means be wasted, but will rather tend to clear the way and remove some obstacles to such Commission. However easy a matter it might be for outside business men to inquire into the working of some Government Departments, where the duties are of such a nature as to nearly approximate to an ordinary large business establishment, I think such a Commission would find serious difficulties in conducting an exhaustive inquiry into a Department like this, where a considerable amount of technical knowledge would be found absolutely essential to enable the Commissioners to make suggestions of a practical nature, and to be of any real service either to the Department or in the public interest.

Objections may be raised against the composition of the Board on the ground that it is the Department reporting on the Department, hence they are judges in their own cause. For this reason I had contemplated appointing as a third member of the Board one of the officers of another Department, but I find the services of this gentleman cannot be spared from the duties proper to his office.

The question then arises whether it would be judicious to seek the services of some gentleman from outside the Service; but, on consideration, I think great difficulty would be experienced in obtaining the assistance of any gentleman competent to take part in such an inquiry, as men with the necessary qualifications cannot be easily spared from any of the large business establishments. I have therefore determined to depend upon the resources at my own command, and have every confidence that the results, when completed, will prove the wisdom of the appointments.

The gentlemen hereby appointed to form the Board of Inquiry are:—Mr. R. D. Fitzgerald, Deputy Surveyor-General, and Mr. W. Houston, Chief Inspector of Local Land Boards and Land Offices, and I desire the Board to commence their duties without delay, and to conduct the inquiry as expeditiously as possible, consonant with absolute thoroughness.

The inquiry should take the form of ascertaining and reporting on the respective capacity for the position held by every officer in the Department, other than the Under Secretary, the Surveyor General, and the Assistant Under Secretary; also as to whether the salary is in any case higher than their respective duties warrant.

- (2.) Whether such officers are industrious, diligent, and whether the mode of performing their official duties is altogether satisfactory.
- (3.) Whether they are punctual in the hours of attendance, and whether frequently absent from the office through illness or other causes.
- (4.) Whether, with due regard to the expeditious and efficient conduct of the business of the office, it is absolutely necessary that the present number of officers should be retained.

The inquiry should deal separately with the various branches throughout the Department.

In furtherance of this part of the inquiry, I deem it my duty to call upon each officer-in-charge to faithfully and fearlessly render assistance to the Board, with respect to supplying information of the foregoing nature, irrespective of political or social influences, and without showing favouritism on the one hand or antipathies on the other.

The Board should also direct their attention towards the amalgamation of the two Account Branches, which should form one Branch instead of two as at present.

The question of disposing of the arrears of works under the repealed Act should also receive attention with a view to considering the advisability of completing the same at the respective local offices.

Attention should also be directed to the question of establishing an Inquiry Office where information should be obtainable without the loss of time incidental to the present system.

The Board should also consider the question of establishing, say, three branches at the Head Office, so that in each of such branches the whole of the work of four or five conterminous Land Board Districts may be concentrated in the hands of one set of men, instead of being scattered through the whole Department as at present, which it is thought would facilitate the business of persons having transactions with the office, and would also have the effect of training the officers of each branch in the working of all the sections of the Act instead of only one as at present.

The question of withdrawing the various groups of officials from the offices about town into the Head Office with a view of saving rent, as well as economizing time now wasted by journeys to and fro, should also receive the attention of the Board.

I also desire the Board to report and advise generally as to re-organization, with a view to transferring the efficient officers from the temporary to the permanent staff, and to report on all matters likely to improve the status of the Department and to increase the confidence of the public in the Officers of this Branch of the Civil Service.

The report is to be addressed to the Under Secretary, who will thereupon submit the same to me with such comments as he may deem necessary.

HENRY COPELAND,  
4/11/86.

The Deputy Surveyor-General and the Chief Inspector.—C.O., 5/11/86.

## MINUTE BY BOARD OF INQUIRY AS FIRST CONSTITUTED.

ML. 10,218 /86.

In the course of our investigation into the working of the Department, as directed by Mr. Secretary Copeland's minute of the 4th instant, and in view of the facts already elicited, we have become so deeply impressed with the importance of establishing the fullest possible confidence in the report of the Commission that we would with great respect urge upon the Minister the desirableness of appointing, as an additional member of the Commission, a gentleman of high character wholly disconnected with the Civil Service.

23rd November, 1886.

ROBT. D. FITZGERALD,  
W. HOUSTON.

Submitted.—C.O., 23/11/86. Seen.—H.C., 23/11/86.  
has been appointed to the Board.—C.O., 26/11/86.

The Board.—Mr. W. H. Traill

## PROGRESS REPORTS BY BOARD OF INQUIRY.

To the Honorable The Minister for Lands, Sydney.

Minute 86, 11,605.

Sir,

Board of Inquiry, Department of Lands. 24 December, 1886.

This Board has decided that it is proper not to defer until the completion of their inquiry and report a recommendation which the members consider to be, as regards themselves, definitely and finally determined upon, and prompt action on which will serve to facilitate the Minister's future course whatever may be his determination upon the Board's forthcoming general report.

The Board finds that the work in the Charting Branches generally, under the old Act, is reduced to some remnants which could be more advantageously wound up in the Local Offices. This work at present serves merely to obscure the actual fact that the draftsmen in the Charting Branches are without useful occupation proportionate to their numbers, in consequence apparently of progressive diminution of this class of work.

The preparation of the old work for despatch would furnish a few weeks perhaps of active employment, and when done would leave the way clear for final readjustments of the branches, &c.

We have, &c.,

W. H. TRAILL.  
ROBT. D. FITZGERALD.  
WM. HOUSTON.

The Minister having handed this recommendation to me, I beg to suggest that it be at once adopted. It is proper to add that a considerable time ago I made a similar report, but while it met with approval was not finally adopted by Ministerial authority.—C.O., 29/12/86.

Approved.—H.C., 30/12/86.

Min. 87/226.

With a view to the effectual carrying out of the recommendation by this Board with respect to the distribution to District Offices of the work now remaining in the Survey Office, under repealed Acts, which recommendation the Minister has been pleased to approve, the Board would suggest that attention be given to the details made in the enclosure herewith.

6/1/87.

W. H. TRAILL,  
For the Board.

Submitted.—The suggestion may be adopted.—C.O., 6/1/87. Approved.—H.C., 6/1/87.

## [Enclosure.]

1. No further work to be distributed for "charting," but all undealt with plans, including those recently received, to be catalogued before being despatched, and each case to be furnished with the complement of plans of adjoining portions requisite for comparison.

2. If information respecting limit of area in L.P. cases is not with papers in such cases, memo. of same to be supplied.

3. Copy of latest decisions in this matter to be supplied, and brief instructions as to mode of procedure.

4. Cases under submission to Minister to be remitted to the Under Secretary for Lands (under separate cover) with suitable covering memo.

5. Cases under reference to District or other Surveyors to be transmitted at once to District Surveyors, as above.

6. District Surveyors to be directed to deal with all surveys under the repealed Acts, instead of transmitting them to Sydney, as heretofore.

7. This to apply also to plans of designs and measurements in proposed towns and villages which can obviously be dealt with more effectually by persons familiar with local conditions than by those at Central Office, Sydney.

8. Instructions on this point should be issued in order to provide for uniform procedure in routine.

9. Cases under repealed Acts now being dealt with in Reserve Branch to be reported on, and forwarded with all material either to the District Surveyor for action or to the Minister, as circumstances may dictate.

REPORT

## REPORT BY BOARD OF INQUIRY.

86/10218 Ml. 86/9433 Ml.

Sir,

Department of Lands, Sydney, New South Wales, 26 February, 1887.

In compliance with the instructions embodied in the minute by Mr. Secretary for Lands Copeland, which, together with a letter by the original two official members of the Board, requesting that a non-official colleague might be associated with them, are herewith returned. We have the honor to hand you our report with respect to the organization, personnel, &c., of the Head Office staff.

The subjects upon which the Board are required to report are as follows:—

1. Ascertaining and reporting on the respective capacity for the position held by every officer in the Department other than the Under Secretary, the Surveyor-General, and the Assistant Under Secretary.
2. Whether the salary is in any case higher than their respective duties warrant.
3. Whether such officers are industrious and diligent.
4. Whether the mode of performing their official duties is altogether satisfactory.
5. Whether they are punctual in the hours of attendance, and whether frequently absent from the office through illness or other causes.
6. Whether, with due regard to the expeditious and efficient conduct of the business of the office, it is absolutely necessary that the present number of officers should be retained.
7. The inquiry should deal separately with the various branches throughout the Department.
8. The amalgamation of the two account branches.
9. The question of disposing of the arrears of work under the repealed Acts.
10. The question of establishing an inquiry office.
11. The question of establishing (say) three branches at the Head Office.
12. The question of withdrawing the various groups of officials from the offices about town to the Head Office.
13. Generally as to reorganization, with a view to transferring efficient officers from the temporary to the permanent staff.

1, 3, 4, 5.

With respect to 1, 3, 4, and 5, the result of the investigations by the Board will be found embodied in their ratings and remarks in a schedule attached, which, with all respect, the Board would suggest should be regarded as confidential.

2

The subject of point 2 the Board has determined can best be dealt with, by the plan adopted of adjusting salaries to correspond with specified duties, in their recommendations for re-organized staffs. Flagrant instances of over—and under—payment have however been specifically indicated in the detailed references to each branch, and in the accompanying schedules of existing staffs and staffs recommended.

6

With respect to the sixth point, the Board have to state that a very large abatement—nearly one-third—can be made in the number of officers at present employed, without impairing the efficiency of the staff; and indeed, in the opinion of the Board, with an actual gain in that regard.

Should the recommendations of the Board be adopted, it will be possible to reduce the number of officers in the Head Office from 416 to 274, and the aggregate outlay for salaries from £93,399 3s. 4d. to £62,198 7s. 1d.; the saving being £31,200 16s. 3d.

7

The Board have to state that the seventh point has been attended to. Separate and concise reports dealing with each and every branch of the Department are given.

8

The subject of amalgamating the two account branches (point 8) has been duly considered, with the result that such amalgamation is recommended.

9

Point 9. The disposal of arrears under repealed Acts was early dealt with by the Board, and a progress report recommending the transmission of such work to the local offices was addressed to you on the 24th December last.

10

The advantage or otherwise of creating an Inquiry Office (point 10) has likewise had due attention, and the establishment of a small staff for that purpose is recommended.

11

With respect to point 11, the Board is of opinion that the staff, as recommended to be remodelled, will be capable of effectively and expeditiously dealing with all duties without the disturbance and difficulties which would be involved in so radical a change of method as would be necessary were the system of Geographical Divisions instituted.

At the same time, should the Minister think proper to require that system to be adopted, the alteration will be much facilitated by the reduction of the staff and definition of the duties of individuals suggested by and embodied in the report of the Board.

The twelfth subject has been fully gone into. During the sitting of the Board some of the premises which remained in the occupation of the Department have been vacated, and the officers brought into the Head Office.

There still remain premises at the Exchange and in Wollen's Buildings in the occupation of branches of the Department. The Board have to state that should their recommendations be carried out there will be ample accommodation in the Head Office for all the clerical and drafting officers at present in those outlying buildings. It is also considered probable that accommodation can be provided for the lithographic printers in that part of the basement of the old building at present used for storage of lithographs for sale, these being removed to the less lofty collarage at present unused. Some alterations to provide light and to secure dryness would be required, but apparently those would not be difficult or costly. The floor level of the cellars alluded to is in reality higher than the court-yard which they adjoin on one side.

13

The Board have given prolonged and deliberate consideration to the subject (13) of Permanent and Temporary Officers. They find this surrounded by difficulties which they regard as insuperable in the existing conditions of the law relating to the Civil Service. Even to give effect to the readjustments of officers and salaries as recommended in their report there will, they recognize, be serious embarrassment, in consequence of the claims to retiring allowances and pensions which will have to be met. The economy sought to be secured may, and probably will, be seriously impaired thereby. As the Board have not considered themselves authorized to distinguish, otherwise than by the general ratings, the individual officers who should be selected for retention on the readjusted staffs recommended, it is not possible for them to calculate the amount in reduction of savings which will have to be taken into account. The fact has, however, been forced upon their observation that the Civil Service Act renders it impossible to manage Departments to the best advantage as regards both efficiency and economy. In this Department the work is

liable

liable to fluctuation, alike as regards quantity and quality, and the staff has required, and will continue to require, perpetual adjustments. It is quite clear to the Board that a proportion of transitory work of a high, as well as of a low class, will always crop up periodically. To deal with this, the temporary employment of officers, in some cases of high attainments, and only to be secured by liberal salaries being provided will be necessary. The Board are confronted by a formidable difficulty even when revolving the propriety of making the apparently obvious and simple accommodation that temporary officers should, after a definite term of service become, *ipso facto*, members of the permanent staff.

There have been under the observation of the Board a large number of temporary officers, who have been continuously employed in this Department for periods ranging from five up to eleven years, whose services are now no longer required; and there is little doubt that similar alternations will recur.

Even in the re-arranged staffs, as recommended by the Board, some proportion of the officers is required for the execution of work which will, within an appreciable term, be completed.

The Board find themselves therefore unable, despite their keen appreciation of the inconveniences and injustices which are occasioned by the existing distinctions, to recommend that the entirety of the re-arranged staffs be placed on the permanent establishment.

Nothing less, in their opinion, than a radical alteration in the Civil Service Act will enable the position of all officers employed in Government Service to be equitably dealt with, while the interests of the public are also secured. The Board are, in view of these difficulties, restricted to recommending that in the re-arrangement of the staff, should that be carried out, not merely should the best men as indicated in the ratings be selected without distinction, whether at present on the permanent or the temporary list, but that the permanent portion of the re-arranged staff be constituted indifferently of present permanent officers and of meritorious members of the temporary staff who are entitled to consideration in view of their efficiency and long service.

In this connection, the Board have to report that, should it be determined to legislate for Local Government, the Roads Branch may thereupon be deprived of a large proportion of its present work.

In the Occupation Branch (Drafting) there is a residue connected with repealed Acts which will be disposed of within the current year.

Evidence is before the Board that a very considerable diminution of the work to be executed in the Lease Branch will take place within six months. The operation of the Act of 1884 will occasion, by degrees, within the next three years, a very considerable curtailment of the work required to be executed in the Conditional Sales Branch.

These considerations will, however, be qualified by the intentions of the Government with respect to fresh Land Legislation.

The Board think it proper to allude to a matter not directly referred to their consideration by the Minister.

They observe that for messengers and office cleaners an annual expenditure of £3,973 is incurred, for twenty-one messengers, twenty-three office-cleaners, and two office-keepers (with quarters provided). The Board have no doubt that a considerable proportion of that outlay is in excess of what is necessary. From the attendance book they find that the average time devoted to work by office-cleaners is not so much as one and a half hour in the morning and one and a half hour in the evening, the lowest wage paid being £1 per week. To this average there are, however, individual exceptions of male office-cleaners, who appear to be on duty throughout the day.

Before concluding their report, the Board desire to state some of the methods adopted for the acquirement of information.

With respect to the officers, the opinions of the Heads of Branches respecting individual members of the staff were first obtained. The individual officers were then invited before the Board, their personal statements taken, and any inquiry made of them which suggested itself in view of the preceding evidence, or in the course of the interview. An exception was made in the case of the litho-printers and stone grinders, who were, however, invited to come before the Board if they so desired.

Every officer was then visited while at his work, and in the greater number of instances the matters actually being dealt with by officers at the time were seen and investigated by the Board. All books, &c., in use were in this manner inspected.

The Board wish to represent that their conclusions have been arrived at, not merely from consideration of the evidence appended, which indeed constitutes but a small proportion of the material upon which determinations have been formed. A great mass of official correspondence and other documents has passed under review, and has largely influenced the impressions formed by the Board. In addition to this, while visiting the different Branches and inspecting the work in progress, a constant succession of discursive conversations with officers of all grades took place, by which many matters were elucidated, and the formation of opinions affected.

The evidence as to the qualities of officers given by Heads of Branches was elicited on the understanding that it would be regarded as confidential, and the Board accordingly intimate that publication of such evidence would be a breach of good faith.

The total number of officers interviewed and visited has exceeded 400.

There is appended hereto some sheets of remarks on details which may be useful in view of future management, but with which it has been regarded as not convenient to cumber the body of this Report. A synopsis of expenditure and of staff is also attached.

The General Survey Branch will be investigated and dealt with in a separate report, which will be forwarded at an early date.

We have, &c.,  
 W. H. TRAILL,  
 ROBT. D. FITZGERALD,  
 WM. HOUSTON.

DETAIL

## DETAIL REPORTS ON BRANCHES.

*Various Officers.*

The necessity for a Chief Clerk in the Lands Department is obvious. The gentleman who is officially Registrar of the Appeal Court is understood by the Board to be regarded as also Chief Clerk in the Lands.

As a matter of fact, however, the Board found that this official's functions were mainly those of an additional Assistant Under Secretary, a variety of cases dealt with in the Branches passing through his hands, and being reviewed by him before submitted to the Under Secretary for the Minister. There is clearly required a Chief Clerk, who shall be relieved from the administrative functions now discharged by him, and who shall exercise an active supervision over all the clerical branches and every individual therein, keeping himself acquainted with the personal qualities of, and the work executed by each; and being constantly in a position to make such preferences and adjustments of the staff as variations in the work of the different branches may render necessary or advisable.

The Board is of opinion that these functions could very conveniently be discharged in combination with those of Registrar of the Appeal Court, the duties of which are but occasional, and not of an absorbing nature—always providing that the officer were relieved from all other labours.

The same necessity exists, but in a much stronger degree for a Controller of Drafting Branches in the Survey Office. The extensive changes recommended by the Board, coupled with the fact that a serious lack of organization has for a long time existed, render it imperative that there should be energetic supervision by an officer of more than ordinary efficiency. The present Chief Draftsman, although an estimable and conscientious officer, is conspicuously deficient in the organizing faculty and force of character which are essential. Upon a felicitous choice of an officer to replace this gentleman, the Board consider that the future successful working of the drafting branches mainly depends.

Unless the future Controller be a capable, active, firm, and intelligent officer, the Board see no prospect of a successful reconstruction of the Survey Office on the lines recommended by them.

Among other officers who come under the heading of "Various," and whom the Board have omitted in recommending a remodelled staff, is comprised one officer whom they found engaged in indexing old field books, a labour not without historical interest, but clearly unnecessary. The post seems to have been created as a provision for the gentleman who has held it for the past five years, and the Board cannot but regard it as having involved an improper disbursement of public moneys—over £1,000 having been paid in salary during that period.

*Ministerial Branch.*

This is a small branch, principally engaged in record duties. Here, all the correspondence of the Department is daily opened and distributed to the different Sub-departments. Stationery stores for the use of the officers at Head Office and Lands Offices are here kept in stock, and dealt out as required.

With respect to this Branch, the Board have to report that seven officers are now engaged at salaries aggregating £1,708 5s. per annum. The necessary work can be efficiently performed by four officers who will be fairly remunerated by salaries aggregating £678 5s. This will involve the superannuation of one staff officer now in charge of old records seldom referred to, who is paid a salary of £320 per annum for doing practically nothing. The stores are in charge of a staff-officer who also attends to advertising for the Department, and is paid £310 per annum. These stores can be combined with those in the Surveyor-General's Office, and the advertising business given to a junior clerk as part of his duties. One hopelessly inefficient staff officer receiving £270 per annum can be altogether dispensed with.

A saving can thus be effected of £1,030 per annum, without impairing the efficiency of the branch, the officer in charge of which has been dismissed since the Board commenced its duties.

*Conditional Sales Branch.*

This is an extensive branch, at present finding employment for forty-one officers, whose salaries aggregate £7,982 10s. 11½d. The branch is efficiently conducted, but presents some anomalies. The Board find themselves able, by recasting the duties, and adjusting the salaries to correspond, to advise that the work can be carried on by a staff of thirty-five officers, costing £6,705. The changes suggested include the removal of an old and capable staff-officer, at £370, whose value is neutralized by intemperate habits; by the reduction of another officer, similarly affected, who is absurdly overpaid for the duties discharged by him, and by other minor removals and reductions. At the same time the saving thus effected will be balanced to a certain extent by increases recommended in several instances to most efficient and valuable officers who have been in receipt of painfully inadequate remuneration. Thus, while a great advance of efficiency will be secured, there will be generally an increase in the salaries paid to the truly efficient among the rank and file; notwithstanding which a saving of £1,277 10s. 11½d. will be secured.

Amongst the registers in this branch the Board observe some which are in a scandalous condition, in consequence of too promiscuous access being permitted to clerks engaged in dealing with cases in different stages. By such clerks entries are made under no special supervision. Blots and smudges disfigure the pages in consequence, and there are even erasures. The Board have made close inquiry into this matter, and are satisfied that great delays and increased expenso would be involved were it made a rule that no entries should be written except by clerks appointed to have charge of certain registers. They, therefore, recommend that, while the present system of noting by different hands be permitted to continue, certain clerks be placed in charge of particular sets of registers and made responsible that scrawling and careless entries, blotting &c., shall not take place, reporting to the head of the branch any other clerk who in course of notations shall disfigure the books by carelessness or otherwise.

Erasures should as a matter of course be absolutely prohibited, and any offender severely dealt with.

Provision should be made for securing the books from access after office hours; and during office hours—especially at lunch time—strict measures should be taken that these registers should never be without a custodian.

Injunctions to this effect should be issued to the Clerk-in-Charge of the Branch.

*Records Sub-Branch.*

The records of the conditional sales branch are under the charge of an officer who has asserted, and obtained, recognition of a claim to independence of the head of the branch as a whole.

The Board is decisively of opinion that this should be peremptorily put a stop to. The records should be controlled directly by the head of the whole branch, and discipline in that respect maintained.

*Miscellaneous*

*Miscellaneous Branch.*

This is another branch which presents no features calling for adverse comment.

It is fairly well constituted, and the officers in general are fully occupied, and rather under than over paid.

There are exceptional instances of inefficiency, and the usual anomalies in the comparative rates of remuneration to individuals. These the Board have carefully considered and endeavoured to rectify in the re-adjusted staff which they recommend. The number of officers has been reduced in remodelling from twenty-three to eighteen, while the salaries have been recast to correspond with the duties. It has by this means been found possible to recommend a reduction in the whole cost of the staff from £3,460 18s. to £2,945, a saving of £515 13s.

The Board have regarded the Alienation staff as belonging to this branch, and recommend that both staffs should occupy the same room, which can be readily effected by a much needed removal of a partition and by more convenient arrangement of desks and other furniture.

*Ministerial Correspondence Branch.*

Nine officers are nominally employed in the branch, including the Clerk-in-charge, Mr. Victor Cohen, a highly paid officer, whose services are in reality chiefly utilized in miscellaneous duties of a confidential and responsible character for the Minister and Under Secretary. When the Board inspected the branch it was efficiently conducted by a junior officer at a moderate salary, and the Board consequently have recommended that the branch be permanently recast on that basis. Mr. Cohen's salary, £490, is thus saved, but the anomalies in the payment of the other officers are chiefly in inadequate remuneration of deserving officers. Consequently the remodelled staff of eight officers will give a saving of £306 13s. only.

The Board is of opinion that the officer-in-charge should sit in the same room with his staff, as was the case when they inspected the branch.

*Lease Branch.*

In this branch the work has of late been diminishing, and although the officers are not as a rule too liberally paid, the Board consider their number greater than is required to execute the shrunken work. A staff of nine in lieu of twelve is accordingly recommended, with a readjustment of salaries. The branch is at present conducted by a highly paid officer (£550 per annum) who has been withdrawn from his proper duties as Inspector of Local Boards and Land Offices, with a view to the reorganization and re-establishment of the branch for the purposes of the present Act. It is recommended that this officer be re-called to his own functions. This, with other changes, will reduce the expense of carrying on the branch from £2,670 15s. to £1,940, a saving of £730 15s.

*Occupation Branch (Clerical).*

Little comment is called for by this branch. The Board recommended a reduction of the number of officers from thirteen to ten, and a readjustment of salaries to agree with the value of the services rendered. A saving can be thus made of £720 14s. 6d. per annum, which can in about a year be augmented by £600 per annum in consequence of certain definite work of a temporary nature being then probably completed.

*Ministerial Account Branch.*

No exception whatever can be taken to the composition of this small branch, or the manner in which its duties are discharged by the officers employed.

For convenience of concentrated control, the Board have recommended that the much larger Account Branch of the Survey Office be amalgamated with this branch.

*Clerical and Account Branches, Survey Office.*

These branches present several striking features. The Board have evidence of the existence of divided authority, very detrimental alike to economy and efficiency, and recommend the amalgamation of the Survey Account Branch with the Ministerial Account Branch. Among the officers employed is one who is preposterously overpaid, even were he thoroughly efficient, instead of which he now is thoroughly effete.

The physical and mental condition of another highly paid officer appears to the Board puzzling and unsatisfactory.

Some of the books now being kept in these branches are out of date, and in fact have not been modified to meet the changed order of things following upon the land legislation of 1884; others are entirely valueless. A series of books (4) for recording memoranda to Surveyors is still kept, but the arrangements which called for the initiation of these records have long since been altered.

With respect to the personal staff of the Surveyor-General, the Board is of opinion that these officers have been led to assume a false position, which is responsible for much of the disorganization, lack of discipline, and incoherence of authority, which characterize the Clerical and Account Branches. The senior officers of the personal staff have become, perhaps involuntarily, obstacles to the free and proper access of the regular and responsible heads of the branches to the Surveyor-General. Thus a most pernicious and reprehensible practice has grown up of matters to be laid before the Surveyor-General by his senior officers, and which should be placed before him direct, accompanied with such *viva voce* representations and explanations as are ordinarily necessary, being intercepted and reviewed by the personal staff. Similarly, instructions have been issued to the head of the clerical and account staff not even signed by the Surveyor-General, but by an officer on his personal staff, junior to the officer instructed, simply initialed by that junior officer with the words "by [direction]." The Board, therefore, while recognizing that clerks to write minutes and have the care of papers are necessary, recommend that the present personal staff be not continued, but be replaced by juniors at salaries adequate for their true functions, by which means the relative positions of officers will in future be established beyond possibility of misconception.

*Roads Branch.*

The Board recommend that the existing practice which involves submissions to the Minister for Mines for ministerial authority be discontinued, and that the entire action be restored to the Minister and Department of Lands. This branch operates to a great extent under an Act of William IV., in which the Surveyor-General is obviously regarded as a member of the Executive. In any amending Land Bill it would be advisable to introduce a few clauses to correct the inconveniences thus created of a divided statutory authority and to transfer the responsibilities to the Minister for Lands as the person answerable to Parliament according to the existing system of Responsible Government.

Economy appears to have been lost sight of in this branch, which contains a larger proportion of officers, whom the Board regard as overpaid, than any other which has been investigated.

The draftsman in charge of this branch has, in consequence of the functions with which the Act of William IV. invests the Surveyor-General, having been practically abandoned to him, become in effect a sort of Under-Secretary, submitting cases direct to the Minister for Mines; and his salary has attained proportions which would be excessive were he acting like other Heads of branches under the supervision of the superior officers of the Lands Department.

The two officers next in rank, who each receive a salary as large as might with propriety be allotted to the Head of the Branch are, in the opinion of the Board, not only overpaid for their functions, but in a marked degree deficient of the abilities which alone could justify such salaries. The anomaly thus presented is aggravated by the fact that, in the opinion of the Board, at least three of the officers next in rank are superior in all respects—except personal character and industry, which are unimpeachable in all alike—to the two seniors.

In one case the junior officer has been longer in this Branch than his senior, whom he has actually instructed in his duties, and still relieves of intricate cases.

In suggesting a reconstruction of this Branch, the Board consequently recommend that the administrative duties now deputed to the Draftsman in charge be resumed and executed by the Surveyor-General, and that the two senior assistants will not be further required. The existing staff of twenty-two officers can consequently be reduced to sixteen, and the aggregate salaries from £5,704 13s. to £3,760.

The Board are of opinion that a very important and economical change can be effected in the conduct of alignments, which will be fully dealt with in the report on the General Survey Branch, under which Branch a considerable proportion of these surveys are carried out.

The Board find that it is part of Surveyors' contracts (Regulations to Lic. Sur. cl. 99) to supply a book of reference to accompany each survey and plan of a road, but that in practice it has been found that almost invariably such books of reference are so defective that they have to be reconstructed by the draftsmen in the office. The Board is satisfied that it is not within the Surveyors' power to construct complete and reliable books of reference, the Land Titles Office requiring to be referred to in many instances. It is therefore recommended that Surveyors be relieved of the obligation to furnish books of reference, and be required merely to supply the names of apparent owners or occupants of lands intersected or bounded by the roads surveyed. A proportionate reduction to be made in survey fees.

Questions relating to openings and closures of roads would, in the opinion of the Board, be best dealt with in open Court, on the principles of the Land Act of 1884; and the Board would recommend that in any Amending Land Act a few clauses to that effect be introduced, utilizing the existing machinery of the Land Act. Should a Local Government Bill be introduced these matters should naturally come within its scope.

*Charting Branches.*

The Board have been at great pains to analyze these branches, which they found in an extremely scattered and disorganized condition.

The Surveyor General's charting divisions were occupied in dealing in very sluggish fashion with work under the repealed Acts which should properly have been long before transmitted to the different Local Offices. Had this course been pursued, a very large sum of money would have been saved to the Colony. The Board think it an essential part of their duty to point out that recommendations to this effect had been officially made to Ministers for Lands from a certain direction, and had been strongly resisted in a quarter more closely connected with the charting branches.

As the Board are specially precluded by the terms of their instructions from dealing with officers above an indicated status, they cannot give more particular indication as to where the responsibility lies; but they feel it incumbent upon them to declare in the most distinct terms that the resistance to the distribution of the work under the repealed Acts has been, in their opinion, a result of a preference for individual interests over the interests of the public.

The shattered condition of these branches is attributable primarily to the change of system consequent upon the introduction of the Land Act of 1884; but the Board consider it their duty to declare that whereas in the Lands Department proper, the different branches were found by them fairly re-adjusted to altered conditions,—in the Surveyor General's Department no adequate or efficient effort seemed to have been made to this end, and disorganized remnants continued to occupy the office, involving most extravagant and unjustifiable expense for salaries.

Certified tracings, which are copies forwarded from District Offices of original plans of surveys, show portions which have to be laid down on the general maps in the Head office. The scale of the tracings and of the maps being uniform this is an exceedingly simple matter, and should be effected with great dispatch. The Board are not satisfied that expedition and consequent economy have been attained up to the time of their inspection; and after considering the very divergent estimates given by different officers as to the number of such portions which could be charted by a capable draftsman in a given period, they consider that as the work is of a nature which permits of being executed by contract that principle should be adopted.

The Board has observed that all certified tracings are, on being received at the Head Office, sent to the Plan-mounting Branch to be backed with calico for their better preservation. This involves delay in the charting of the plans, and also some expense. The Board regard this mounting as quite unnecessary, save in exceptional instances.

The tracings are generally of foolscap size, which can be stowed conveniently and without crumpling or injury, separately or with the other documents relating to the case which they illustrate, and are not exposed to any wear and tear before being finally put away. It is therefore recommended that certified tracings be mounted only in instances where a clear necessity exists.

In

In a progress report the Board recommended the immediate transference of the remaining work to the Local Offices; and the consequence of this recommendation, to which approval was accorded by Mr. Secretary for Lands Copeland, is to permit extensive reductions in the staff of draftsmen, including some old and highly paid superintending officers, whose occupation is gone.

#### *Miscellaneous Contract Branch.*

Scandalous mismanagement, resulting in corresponding extravagant waste of money appears to the Board to have characterized this Branch. The Board think it convenient to give instances.

In May 1882, Mr Surveyor Woolrych made application for a number of tracings for use in a room provided in the Pacific Chambers, rented by the Department for the use of Surveyors.

These premises lie within 100 yards of the Head Office, where the original plans are available. Not only was Mr. Woolrych's application approved; but the work was, in January, 1887, when the Board inspected the Miscellaneous Contract Branch, still incomplete, although the Surveyor's Room for which the tracings were sought, had been closed and dispensed with. It is not easy to arrive at the amount of money wasted in this instance.

In August, 1885, Mr District Surveyor Crouch, made an application for a vast quantity (5372) of tracings. This demand was fully and ripely considered, and instructions were given by the Surveyor-General that these tracings were to be supplied by degrees, although it had been shown that they would cost not less than £600; and although in consequence of a minute by the Deputy Surveyor-General, questioning the necessity of the work, it had been established that a great proportion of the tracings would not be immediately required; and that it was doubtful whether that proportion would ever be needed. This work also was still in progress when the Board inspected this Branch, up to which time 4,981 tracings had been made and supplied.

In January, 1886, Mr. District Surveyor Macdonald applied for a quantity of tracings, which he stated were "very urgently required" in connection with surveys then about to be undertaken.

In January, 1887, the Board found this work still in progress; 252 tracings had been supplied; together with 20 noted-up lithographs. In the interim a regulation had been established providing for the transmission of original plans to District Survey Offices, which rendered the provision of tracings unnecessary. Nevertheless this work, "urgent" a year before, was still being slowly carried on.

In yet another instance, a request was made in May, 1883, by Mr. Surveyor Poate, for the catalogue numbers of plans of surveys in a large part of the City of Sydney; and also in the Municipality of Paddington. An Officer of the Survey Department reported that it would probably occupy seven or eight days, and cost £5 or £6 to write out the list; but by the blunder of another officer in a responsible position, an instruction was issued to note the desired numbers on lithographs. Consequently when the Board of Inquiry visited the Branch nearly four years later (in January, 1887), they found the work but recently undertaken, and still in hand, no part of the required information having been supplied to the applicant, and the cost being then estimated at £80, about thirteen times the original valuation.

The Board recommends that this branch be placed under control of the draftsman in charge of the Lithographic Branch, whose time would not otherwise be fully occupied.

#### *Compiling Branch—Comprising Compiling proper, Litho-drafting and Printing.*

These branches are nominally under the direction of an officer at £600 per annum, whose attention is practically absorbed by the management of the Compiling Branch proper.

There is little to admire in the management of these branches, although the officer in charge has marked artistic talents, and is personally, and in every way estimable. The Board find that there has been great waste of money in the subsidiary branches, which a real and active supervision would have prevented.

A copperplate engraver has been retained at a considerable salary for years after his services ceased to be essential or necessary. A so-called overseer of the printing staff has been permitted to become a merely ornamental officer, and to draw from the revenue an allowance of £50 per annum, in addition to his salary of £300 for an alleged patent process which is, in fact, available in every lithographic shop in Sydney and elsewhere.

An enormous and costly stock of litho. stones has been accumulated without any real necessity or any adequate check, and even within the past year additions have been made to that stock by orders directed to a particular firm by the printer's overseer, through the Government Stores, without competition, and filled at prices just double what could have been obtained within a few doors of the Lands Office.

Vide Appendix C.

Vide Appendix D.

Office

Office. The Board are of opinion that sufficient interest has not been taken to resist the imposition upon this branch of unnecessary work. They have found it impracticable to determine peremptorily whether the number of hands in the printing sub-branch is merely sufficient or more than sufficient to execute the work devolving thereon, the quantity being extremely difficult to estimate. But they are of opinion that economy would be enhanced were the methods less antiquated—that is to say—were less work done by hand-press and more by machine.

The Board has had occasion also to give particular attention to the relative advantages of lithography and zincography, and have to recommend that the latter, which has already been successfully introduced, be substituted for lithography; that the existing stock of stones be gradually placed on the market, as the designs on them become out of date, and that zinc plates be imported in lieu thereof.

The lithographic printing staff will readily work the zincographic process, which is nearly identical, except in the superior handiness and in the greater cheapness of the material. A separate report respecting inquiries carried out, under direction of the Board, by Mr. Vautin, an officer of the Compiling Branch, is annexed as an appendix.

In recommending a staff for future purposes, the Board desires to call particular attention to the item:—

24 First-class Draftsmen, County and Parish Compilation, at £250—£6,000.

Appendix B.

They desire to intimate that these officers should be retained on a temporary basis only. It is the opinion of the Board that compilations of this nature can be best conducted in the District Survey Offices.

Eleven district surveyors have, in response to an inquiry by the Board, expressed this view, and have stated their readiness to undertake the parish compilations within their districts, either without extra assistance, or with extra help, which amounts to but nine draftsmen within the eleven districts. Of the remaining five district surveyors, one is uncertain in his reply, and the other four deprecate the duty being locally performed. Under these circumstances, and especially as the question of additional premises has been raised by at least one district surveyor, the Board do not deem it prudent to insist that the present system should be abandoned and the parish map compilations thrust upon officers, some of whom are unwilling or not in a position to undertake the work.

They have therefore made temporary provision for the continuance of the work as at present, not being willing to suggest the adoption of a hybrid system, and not considering that a change would be successful if guided by unwilling or careless hands.

But they emphatically recommended that a vigorous effort be made to gradually, and as rapidly as possible, transfer this work to the district officers, under the direct impulse of the Departmental Controller of Draftsmen.

By this change not only would the local officers be much earlier in possession of necessary maps, but few unnecessary compilations would be made, and a very marked economy would be secured. As eleven districts require but nine draftsmen to execute this work, it may be calculated that the whole sixteen districts will need but fifteen draftsmen, in lieu of twenty-four as provided for the Head Office.

The *Lithographic Drafting Branch*, which has a staff of really excellent draftsmen, has, in the opinion of the Board, been to a considerable extent misapplied to useless work.

The Board find, for example, in the Miscellaneous Contract Branch, a large register book, all the pages of which have been lithographed, whereas ordinary ruling and printing would have been much cheaper and in every way as serviceable.

Appendix E.

A variety of manuscript circulars, letter headings, memorandum headings, and other trifling productions have been executed most unnecessarily by the highly-paid skilled draftsmen of this branch, and printed on stone.

When this branch was visited by the Board, the most highly-paid draftsmen were employed in drawing on stone, plans of towns for new editions—the utility of which was not apparent in some cases—or in adding diagrams of the simplest description, which, if necessary, should have appeared on the Surveyors' plans prior to their being photo-lithographed in the first instance. In one case alone, which came under the notice of the Board (*See Appendix A*) the draftsman had already been for several months engaged in drawing a plan on stone, while lithographs were actually available, which, with but little trouble, could have been completed to date and reproduced as photo-lithographs.

Again, this class of drafting is far slower than ordinary drafting, and although the resultant prints are sharper and more satisfactory to the eye of an expert than work effected on paper by an ordinary draftsman and reproduced by photo-lithography or photo-zincography, the latter class of plans is quite suitable for all practical purposes. The Board consequently recommend that the litho-drafting staff be dispensed with, except three officers to effect any required additions or alterations to photo-lithos or photo-zincos, on the stone or on zinc, or, on occasion, to execute extra fine work for exhibition or similar purposes.

The Board recommend that a clause be imported into the specifications of contract with licensed surveyors, to the effect that all plans of surveys shall, unless otherwise specifically excepted in particular cases, be drawn in the style suitable for reproduction by photo-lithography and photo-zincography, and that failure in this respect shall be met by charging the surveyor whose plan is found unsuitable with the cost incurred by the Department in re-drawing or amending his plan.

#### *Reserves Branch.*

By the transference of work hitherto executed in this branch to the District offices, and by the transfer of four officers with their duties to the new Miscellaneous Charting Branch, and of four others to the Compiling Branch, the Reserves Branch will, if the recommendations of the Board be adopted, cease to exist.

In this branch the duty of determining or carving out "Districts," as a preparation for a Local Government Bill to have been introduced by the late Government, was in progress.

It was stated by the officer in charge of the work that the basis of the division is that of "*local community of interests*," which is understood to mean the relation of groups of rural population to their business centres as determined by the prevalent direction of traffic, and road, railway, or water communication.

The

The limits of the districts were, it was explained, being arrived at by an inspection of the maps, upon copies of which were blocked out the proposed districts, the area of alienated land being computed at the same time.

It did not appear, however, that any consideration was accorded to the existing boundaries of police districts, or those of Local Land Boards, the survey staff of which may probably be called upon to perform some important duties should such a measure as a Local Government Bill become law.

Under any circumstances, however, it is patent that the opinion of any officer at Sydney on the subject of "local community of interests," say in the region of Moree, Bourke, Tamworth, or Silverton, can hardly be as reliable as that of a local officer, such for instance as the District Surveyor, who should certainly have been looked to for the initiation of this work.

#### *Occupation Drafting Branch.*

The officer in charge of this branch has retained, after the transfer of the branch from the Mining to the Lands Department, a status of Chief Draftsman, independent of the Chief Draftsman in this Department. In reconstituting this branch this anomaly should be removed, and the branch be placed under a draftsman-in-charge, and subjected, like all other drafting branches, to the supervision and control of the Departmental Chief Draftsman.

The Board's recommendation would reduce the number of officers in this branch from twenty-two to sixteen, and the total salaries from £5,525 2s. to £4,028 11s. While adjusting individual salaries, as in other instances, several officers are recommended to be transferred with their work to the compiling branch. The staff of quasi-contract draftsmen should be abolished. These draftsmen differ from temporary draftsmen only in being paid by the hour. They are not in any other sense contractors. The rooms allotted to this branch are overcrowded with presses and furniture, much of it unnecessary.

#### *Plans Record Branch.*

The nominal head of this branch was not seen by the Board, who have to report that the frequent and protracted absences of that officer, owing to indisposition, appear to them tantamount to an abandonment of his functions.

The work has been done by an underpaid subordinate who displays much aptitude and energy. The work in this branch has been very heavy in consequence of transmissions of large quantities of plans to District offices, but has now abated. It is likely always to be liable to fluctuations, but the Board is able to recommend reduction of the number of officers from nine to six, and of total salaries from £1,420 6s. to £950. A proportion of the officers retained should be on a temporary footing, as the work is as liable to dwindle as to increase.

#### *Plan Mounting Branch.*

The Board are satisfied that this branch has been extravagantly conducted in the past, partly as regards the individual salaries, but chiefly in consequence of lack of sharp supervision, and on account of the frequent and sometimes protracted leaves of absence granted to the head mounter to attend football excursions.

The work has of late considerably diminished, and recommendations of the Board, that a large proportion of certified tracings be henceforth not mounted, will tend to further diminution.

The work of packing lithos and plans for dispatch, hitherto executed in this Branch, may be readily effected in the Litho Sales Branch, where the staff will have ample time for the duty, and to which it naturally belongs. Without pretending to have arrived at an exact knowledge of the extent of reduction in the work, the Board are satisfied that a staff of two workmen, at salaries of £150 and £100 respectively, will be adequate, in lieu of the present staff of three, with salaries of £200, £150, and £125 4s.

The saving will be £225 4s.

#### *Maps Sales Branch.*

The Maps Sales Branch is well conducted by a staff of three officers, who were fairly paid till recently, when increases under the Civil Service Act raised their remuneration above the value of their work.

The Board have recommended a staff of equal number, at the salaries which obtained prior to that increase.

The time of the staff in this Branch is not excessively occupied, and the Board recommends that the packing of plans, &c., for despatch be executed in this Branch, instead of being relegated, as at present, to the Plans Mounting Branch.

#### *Deeds Branch.*

This Branch calls for no special comment.

#### *Diagram Branch.*

Consists of a single officer.

#### *Description Branch.*

No special comment required.

#### *Noting Branch.*

No special comment required.

The Board have judged it advantageous that these Branches should be amalgamated under one head, which will permit of the abolition of a great quantity of room-records.

In one instance the Board observed that papers handed through an arch between two rooms were noted as despatched from one and as received in the other. The Board have resolved, after careful consideration, that there is no practical or technical objection to descriptions being omitted altogether from deeds, the diagram being adequate; and would recommend that this view be given effect to, provided no statutory obstacle be found to exist.

The

The following are among the considerations which have weighed with the Board in submitting this recommendation :—

1. All descriptions are drawn from diagrams—*i.e.*, from plans. Therefore for purposes of definition plans or diagrams contain all necessary particulars.
2. Although, by omitting descriptions, alterations in deeds (*i.e.*, forgery) are made less difficult, forgeries are not impossible even when descriptions are engrossed. The question is one only of more or less trouble to a person determined to commit the crime. As against the Government, or as regards permanent alteration of a title, the copy of the deed in the Land Titles Office, and the records and plans of original survey in the Lands Department, are ample check and provision.

Should this recommendation be adopted, a further reduction in the number and cost of officers could be made—probably as much as £1,000 per annum in examiners of deeds and examiners of descriptions, in addition to an indefinite amount representing the cost of writing descriptions by contract.

#### PROPOSED INQUIRY OFFICE.

The initiation of an organized system for providing information to the public, promptly answering questions, and otherwise affording assistance in the transaction of general business, should be no longer delayed; moreover, it has come within the personal observation of all the Members of the Board that private land agents and others range apparently unchecked throughout the rooms of the office, although possibly they do not penetrate beyond the counters, where such barriers exist. This freedom of wandering about the building, and privilege of interviewing any officer at will, naturally results in much waste of time, and operates in other ways detrimental to the despatch of business.

The Board, while recognizing that the establishment of Local Offices has in a great measure relieved the Central Office in a way most conducive to the convenience of persons resident in the country, consider that the necessity exists for providing similar facilities and convenience in Sydney—not the least beneficial effect of which should be to prevent the interruptions to business from the causes above adverted to.

The Board, therefore, recommend that the rooms now occupied by the Ministerial Account Branch and Certificate Sub-branch, vacated by their present occupants, be made available for a small Inquiry staff. This should consist of a Head, possessing a general acquaintance with all the work of the office, assisted by a clerk and two juniors. The room should be placed in telephonic communication with the principal officials, with all the branches, and with other Departments.

The two juniors would be chiefly employed to convey from the Head of the Inquiry Branch any verbal queries not convenient for telephoning, and in investigations requiring reference to registers, or discussion with officers in branches. They would also procure any papers which might be required to elucidate a point upon which inquiry might be made.

Owing to the position of the rooms indicated, just within the main entrance, all persons desiring to interview could be conveniently required to address themselves in the first instance to the Head of the Inquiry Branch, and be by him introduced, if requisite, to the interior of the building.

A light ornamental metal door would effectually bar access by any other channel. The cost of this suggested new branch would be £800 per annum.

There is yet another point in this connection which demands attention, and that is the necessity for providing convenient access to the plan records of the Survey Office and facilities for taking tracings of these documents if required. The Board would recommend that a room containing three or four tables be set apart for this purpose in close proximity to the plans records room, and that a draftsman be placed in charge to assist inquirers in obtaining the requisite information.

While the Board are of opinion that every facility should be afforded to the general public to inspect plans and maps, they think it would be desirable to restrict the tracing of these documents to Licensed Surveyors or Authorized Draftsmen, for which privilege an annual fee might be charged, which would to some extent cover the cost of accommodation and attendance considered necessary.

## SCHEDULES OF EXISTING STAFFS OF BRANCHES AND STAFFS RECOMMENDED.

## EXISTING STAFF.

*Various Officers.*

	£	s.	d.
Registrar of Appeal Court ... ..	700	0	0
Chief Draftsman, Survey Office ... ..	700	0	0
Ex-Head of Division of Runs Branch... ..	390	0	0
Draftsman in charge of lease maps ... ..	265	0	0
Officer indexing old field-books ... ..	219	2	0
Clerk to Chief Inspector ... ..	165	0	0
3 Emergency Land Agents at £320 ... ..	960	0	0
Emergency Clerk ... ..	195	12	6

## STAFF RECOMMENDED.

*Various Officers.*

	£	s.	d.
Chief Clerk and Registrar of Appeal Court ... ..	700	0	0
Controller of Drafting Branch (Survey Branch) ... ..	600	0	0
Inspector of L. L. Board and Crown Lands Offices... ..	550	0	0
Clerk to Chief Inspector ... ..	165	0	0
3 Emergency Land Agents at £320 ... ..	960	0	0
Emergency clerk (14s. 6d. per day) ... ..	226	18	6

*Controller of Drafting.*—The Board have to report (Mr. Fitzgerald dissenting) that they have been unable to recognise in any officer who has been before them the possession of all the qualities requisite for the efficient discharge of the duties of the above position. They therefore decline to make any recommendation. There should, however, probably be among the officers in responsible positions in the Local Land Offices or District Survey Offices some who could competently fill the position.

## EXISTING STAFF.

*Ministerial Branch.*

	£	s.	d.
1 Clerk in charge ... ..	320	0	0
1 Temporarily in charge ... ..	240	0	0
1 Assisting at records ... ..	270	0	0
1 Old records ... ..	320	0	0
1 Stores and advertisements ... ..	340	0	0
1 Records ... ..	140	0	0
1 Junior clerk ... ..	78	5	0
7	£1,708	5	0

*Remarks.*—The old records, which are at present attended to by an officer at a salary of £320 per annum, should be stored in locked presses where space is not an object. The keys to be in charge of the head of this Branch. The stores should be combined with those in Surveyor-General's Department, one staff attending to all. The advertising work should be transferred to the junior clerk. The two last items at present occupy an officer at a salary of £340 per annum.

DETAILS AND SUGGESTIONS IN VIEW OF FUTURE MANAGEMENT.

*Register from the Queensland Crown Lands Department.*

The specimen register courteously lent by the Under Secretary of the Queensland Crown Lands Department might, it is suggested, be seen by the Heads of some of the branches as an illustration of a method of keeping, under consecutive numbers, in one book, both the index and particulars of correspondence received.

This method is distinctively economical and convenient where correspondence does not assume extraordinarily large proportions.

*Conditional Sales Branch.*

A number of conditional purchase applications, of various dates from 1882 to 1884, were found by the Board in the pigeon-holes of a desk.

Those, though ostensibly under the custody of a clerk, should be registered and put away.

The practice of keeping valuable records in isolated receptacles, even if temporarily convenient, is pernicious in principle, and calculated to lead to carelessness and possible loss.

*Registers—Disfigurement, &c.*

Amongst the registers examined and found to be disfigured by blots and erasures were those of the Land Districts of Cootamundra (1884) and Narrandera (1877-1884).

The main entries are generally well done, but the state of these books is indicative of gross carelessness in the clerks handling them. The same remarks apply in a lesser degree to Bathurst, 1884.

Goulburn Register, 1884, well kept.

*Deeds Branch—Unnecessary Clerical Work.*

There appears to be a quantity of unnecessary clerical work performed in this Branch in keeping registers of purchases, the particulars of which are to be found elsewhere; also in keeping a separate register for Room Records.

It is suggested that an officer might be detailed to inquire how far these registers subserve any useful purpose of reference; or whether they might not be dispensed with, and a less costly method of record adopted.

*Lease (Conditional) Branch.*

Much unnecessary labour is caused in this branch by the clerks being called upon to laboriously revise and correct schedules received from Local Land Board Offices, containing particulars of leases applied for under the 48 and 54 sections prior to the notification of the leases in the *Gazette*.

*Alienation Sub-Branch—Parchment Forms.*

An economy may be effected in this subdivision by abolishing the parchment covers used to convey the final result of auction sales, and substituting forms on paper of fair quality. These documents, in fact, being of less importance than the sale list, which is received in advance, and made out on an ordinary paper form, and contains the signatures of purchasers.

*Ministerial Branch—Old records.*

The old records referred to in the report on Ministerial Branch should be stored where space is not an object, say in the rooms in dome, in locked presses, the keys of which should be kept by the officer in charge of the Ministerial Branch.

*Occupation Branch—Unnecessary clerical labour.*

There appeared in some of the books a marked redundancy—such, for instance, as the record of Improvement Purchase papers sent to the Branch for query purposes; also a book kept by Mr. F. Williams, containing unnecessarily minute details of "authorities" to occupy Crown Lands.

*Compiling Branch—Mineral Lease plans.*

The reference to the Department of Mines in respect of Mineral Lease plans, referred to in evidence as a difficulty in executing Parish Map compilations, might be readily avoided by arrangement between the Departments, by which tracings of such plans might be sent to the Lands Department, as well as an intimation in the event of forfeiture or cancellation of the lease.

*Clerical and Account Branch—Unnecessary books.*

The books enumerated hereunder appear to be useless, and might be dispensed with:—

- Journal Book—Salaried Surveyors.
- Journal Book—Licensed Surveyors.
- Tracing Dispatch Book. (?)
- Memorandum Books (3)—Licensed Surveyors.
- Memorandum Book (1)—Salaried Surveyors.

*Charting Branch—Certified tracings.*

Certified tracings should not be mounted, the process being injurious to the material used for the tracings (vellum) and to the accuracy of the plot.

*Plans Record Branch—Reserve plans, &c.*

Plans, tracings, and sketches showing the position of reserves, which on the date of the Board's inspection of the Plans Record Branch had been received as a transfer from the Reserves Branch, should be handed to the Compiling Branch for custody and reference, together with the Catalogue Book containing particulars of them.

*Charting Branches—Unnecessary clerical work.*

A portion of the work performed by Mr. E. Stack, Clerk of Charting Branch, that of recording papers received by the Geographical Divisions prior to their being again recorded by the clerks of those divisions, is an instance of needless repetition, which should have been put a stop to long ago.

*Registers*

## MINUTE BY THE SECRETARY FOR LANDS.

HAVING perused the Report of the Board, appointed by my predecessor to inquire into the working of the staff of the Lands Department, and also a part of the appendices, it appears to me that, as regards the branches reported upon, the Board have not perfectly performed the duties assigned to them, and which they undertook.

The minute under which the Board was appointed, among other things, directed them to "ascertain and report upon the respective capacity for position of every officer in the Department," and "whether, with due regard to the expeditious and efficient conduct of the business of the office, it is absolutely necessary that the present number of officers should be retained."

This, it appears, plainly points out that it was a part of the duty of the Board to ascertain the personal qualifications of each officer in each Branch, and his fitness for the post he occupies; and, consequently, if not fit, that the Board should point out to what post the officer should be appointed, or whether he should be removed.

The Board have suggested the remodelling of certain branches of the Department, which, it is pointed out, would result in the saving of £31,200 16s. 3d. annually; and to the new branches they have given designations to officers, and affixed salaries, but they have not suggested the particular officers who should fill the positions.

In some cases the salaries proposed indicate the officer who the Board think should fill the position, and in a few others the names of the officers are mentioned, but generally no suggestions whatever are made in connection with the new position, and the Minister and the Under Secretary are left to ascertain from the suggestions as a whole, the officer for each position as it comes up for consideration. This is the duty the Board was appointed to aid the Minister and Under Secretary to discharge, and as the matter now stands, the Report in no way helps them to the fulfilment of it.

Take, for instance, the Occupation Branch as existing, and that proposed. The present expenditure is £2,910 14s. 6d. The Board proposes to carry on the business at an expenditure of £2,190, by reducing the staff from thirteen to ten, and that portion of the work should be only temporarily provided for.

Now what I wish the Board to do,—and, as I read their instructions—it was the wish of my predecessor they should do, is to suggest which of the three of the present officers should be discharged, and the positions to be assigned to the remaining ten, and which of these should be dispensed with when the work temporarily provided for has been completed.

The reason for my request or desire to be furnished with the suggestion just named is obvious. The Board having possessed themselves of knowledge enough to enable them to say what salary should be affixed to each office of the proposed reduced staff, and of the personality as regards character, habits, and capability of such present occupant, ought to be the very best authority to suggest which of the ten men to be retained should be placed in each particular office to make up the remodelled branch.

The above is simply an example. The same suggestion should be made as regards every branch of the Department.

In other respects the Report,—I am glad to be able to say,—is a most valuable and able document.

THOS. GARRETT.

## FURTHER REPORT BY BOARD OF INQUIRY.

To the Honorable The Secretary for Lands,—

Sir, Department of Lands, Sydney, New South Wales, 7 March, 1887.

Your minute of the 2nd instant is before the Board of Inquiry, and has been duly acted upon.

While forwarding, in accordance with the instructions conveyed in your minute above referred to, a list of officers to fill the various positions, and to execute the duties defined in the schedules which accompanied the Board's recommendations for a remodelled staff, the Board would respectfully submit that there was nothing in the Minute of Instructions by Mr. Secretary for Lands Copeland, which authorized the Board to make specific nominations to posts in the re-arranged staff.

This point was, in fact, maturely deliberated on by the Board, who agreed that to make such nominations, although certainly convenient and even desirable in view of the information they had acquired respecting the qualifications of individual officers, would be in excess of the functions and authority delegated to them, and would expose the Board to a possible imputation of having sought to invade the prerogatives of the Minister.

In considering the nominations now submitted, the methods by which the posts, the salaries, and the appropriate officers have been arrived at, should be distinctly kept in mind.

The Board first determined what duties required to be provided for.

Next were fixed such and such duties to each post.

The value of each post was then estimated; and

Finally, the most suitable officer for each post has been nominated, capable officers being retained at the duties they at present discharge, whenever this has been possible.

The course thus pursued has involved, in the final step, a modification of individual salaries in a majority of instances. Deserving officers who have hitherto been under-paid benefit by these alterations; whereas officers whose salaries have grown by successive accretions, while they continued to discharge unchanged duties of no great value, will experience a contrary effect.

Capable officers, also, for whom, owing to the contraction of the work, no provision can be made in their present positions, have, as far as possible, been nominated for positions in other branches, for which they are qualified. In these instances, also, it has not been always feasible to maintain exact correspondence between their present salary and the remuneration provided.

\*The Board submit herewith for the information of the Secretary for Lands a separate confidential list showing officers who are subjected to more than ordinary reduction of salary, in consequence of these changes, with special remarks in each instance.

With

\* This List has not been printed, as its publication is considered to be undesirable.

With regard to the Compiling Branch, the Board find that there are not available, after filling other posts, a sufficient number of first-class draftsmen for the positions temporarily provided. A variation from the original recommendation by the Board becomes therefore necessary.

Provision can thus be made for the retention of the services of seven good and very promising young draftsmen, originally cadets in the office, and these officers are accordingly nominated at appropriate salaries.

Some vacancies in this branch still, however, exist, and these the Board leave open, with the suggestion that among the staff of draftsmen on high salaries for whom no other provision has been made, there may be some who will elect to accept employment on this work in preference to retiring altogether.

\*A list is appended shewing every officer for whom no position has been provided. The rating, &c., of each is fully indicated.

We are, &c.,

W. H. TRAILL.  
ROBT. D. FITZGERALD.  
WM. HOUSTON.

\* This List has not been printed, as its publication is considered to be undesirable.

## MEMORANDUM BY MR. WM. HOUSTON.

MEMO.—I dissent, with much regret, from the conclusion arrived at by the Board with respect to the nomination of an officer to take charge of the newly constituted Account Branch, and consider it due in courtesy to my fellow members, and also desirable, for the information of the Secretary for Lands, to give a brief statement of the reasons which lead me to a different conclusion.

The duties which will devolve upon the Head of this Branch are such as no single officer has yet been called upon to perform—the framing of Estimates of Expenditure the collection and arrangement of statistical information, required to provide the Annual Estimates of revenue derivable from Crown Lands, and the close and active supervision of the accounts of Licensed Surveyors, Appraisers, Inspectors, &c.

These duties will, I am convinced, severely tax the powers and energy of the holder of this office, even if unweighed by age and otherwise qualified.

While I am in accord with the Board in its rating of Mr. Landers as a “capable” and thoroughly trustworthy officer in the position of Secretary and Cashier to the Survey Branch, and believe him to be deserving, from a long and faithful service of thirty-two years of every possible consideration, I do not think that he possesses the precise qualifications to enable him to undertake, with the prospect of a successful issue, the heavy duties involved in the Accountantship of the entire Department.

In the course of the Board’s inspection of the subdivisions of Mr. Lander’s branch (other than that of the Accountant, the supervisorship of which does not come within the scope of his functions as Secretary and Cashier), there was evidence of lack of arrangement, supervision, and organization, all of which deficiencies would in my opinion be fatal to the successful establishment of a branch of the character and dimensions of that contemplated.

The recommendations of the Board, if adopted, necessitate an absolute re-organization of almost every branch of the Department, and to effect this no effort should be spared to secure thoroughly qualified officers for the principal posts, even if it be necessary to go without the walls of the Department.

In the present case, however, that contingency does not arise, as there are at least two officers in the Department qualified to fill this post, both being young men of undoubted ability. These officers are—Mr. D. Miller of the Survey Branch, and Mr. V. Cohen. *Vide* confidential report on personnel of the Department.

Mr. Miller (whose record of service is about 12 years) was formerly employed in the Account Branch of the Survey Office; where he acquired an intimate knowledge of the management of Licensed Surveyors’ Accounts, and subsequently became instrumental in introducing a reformed method of dealing with those accounts.

The framing of the Estimates of Expenditure of the Survey Branch is, I believe, even now entrusted to Mr. Miller.

I am decisively of opinion, however, that his qualifications are not equal to those of Mr. Cohen, who is specially adapted by training and general experience for the headship of this important branch.

This officer has had 18 years service, and graduated in the Treasury; he has held the position of Accountant in the Stamps Office, and also in this Department.

The Account Branch was re-constructed by Mr. Cohen, and is now conducted on the lines laid down by him, and so far as the Board could judge, was in perfect working order.

The Estimates (both of Revenue and Expenditure) for the Department are framed under Mr. Cohen’s supervision, which is alone an experience of considerable value.

In conclusion, I desire to add, that having viewed this matter in every possible light, I am firmly of opinion that the success of the new branch will altogether depend upon the vigour, capacity, and experience of the officer selected to conduct it, and I certainly think that Mr. Cohen’s experience as an accountant, and general knowledge of the working of this Department as well as that of the Treasury, place him distinctively before all others as the best possible choice for the position.

8th March, 1887.

WM. HOUSTON.

I have read this memo. to Mr. Traill (Chairman of the Board) who desires me to state that, while he fully recognizes that my conclusions may reasonably follow the premises—the latter are in some essential particulars derived from information and knowledge personal to myself, and not in the evidence collected by the Board.—W.H., 9/3/87.

1 Record Clerk.....	200	0	0	Brett W.	4	Reduction, £34 15s.
1 Do.....	120	0	0	Carpenter G. P.	4	do £36 10s.

Since writing my minute of yesterday upon the Board's Report, I have decided that Mr. Stopps should retain the position of Draftsman in charge of the Roads Branch, at a salary of £450 per annum, which he has accepted. The salary (£400) proposed by the Board may be reduced to £315; and the two salaries of £320 each also reduced to £315. Should the staff prove to be over-officered, one of the officers receiving £250 per annum may be transferred to one of the vacant positions, with like salary attached, in the Compiling Branch. T. G., 30/3/87.

*New Miscellaneous Charting Branch.*

1 Draftsman in Charge.....	450	0	0		.....

1 Certified tracings to be charted by contract, will involve an outlay estimated as being equal to 3 draftsmen at £250.	750	0	0			

\* Indicates previous service. † Indicates already on staff.

## SPECIAL MEMO.

## DRAFTSMAN IN CHARGE OF NEW MISC. BR.

THE Board are agreed that either Mr. T. Stevens (£525, 23 years service) or Mr. C. J. Saunders (£390, 13 years service) should have this appointment, which is £450.

Mr. Fitzgerald urges Mr. Stevens, on the grounds of seniority, and of his having suffered several injustices of late.

Mr. Houston strongly prefers Mr. C. Saunders, on the grounds of his wider and more recent experience, unexpended energy, and special aptitude.

Mr. Trill declines to express a preference because there happens to be scarcely any evidence before the Board with respect to Mr. Saunders.

The Board therefore respectfully declare themselves unable to come to a decision between the two officers, and submit the matter to the Under Secretary to advise the Minister.

*Vide Confidential Report re Mr. Stevens.*

W. H. T.  
R. D. F.

## DEPARTMENT OF PUBLIC WORKS INQUIRY BOARD.

(REPORT AND EVIDENCE.)

*Ordered by the Legislative Assembly to be printed, 6 April, 1887.*

## Minute by the Secretary for Public Works.

Department of Public Works, Sydney, 14 December, 1886.

Appointment of Commission to Inquire into Works Department.

I DEEM it desirable, in view of the representations made that there are far more officers in the Government Departments than the requirements of the Service demand, and the necessity that exists at the present time for retrenchment, that inquiry should be made during the recess to ascertain in what way reductions can best be effected. If it is found that the duties to be performed can be carried out by a smaller number of hands than are now engaged it is desirable that a system of retrenchment should be adopted, so far as time will permit, in preparing the Estimates of Expenditure for 1887.

In order that the efficiency of the Service may not be interfered with by any immature scheme, it is necessary that investigation should precede any considerable reductions, so that any changes that are necessary may be made without interfering with the proper discharge of public work. To carry out such investigation, and to report to me with as little delay as possible, and in time for the preparation of the Estimates, I appoint Mr. J. Y. Mills, Mr. J. E. F. Coyle, and Mr. T. F. Waller, who will be assisted by the head of each branch as it is under examination, as a Commission of Inquiry into the working of this department of the Public Service, and wish them to direct their attention, as far as practicable, to ascertain—

- (1.) The amount of work to be performed.
- (2.) The method of performing it.
- (3.) The diligence of the employees in carrying out their work.
- (4.) The suitability, or otherwise, of the buildings and rooms in which the work is done.
- (5.) Whether the system of management is sufficiently stringent that it can be ascertained whether clerks absent themselves during office hours, and, if so, strictly on public business.
- (6.) Whether the present system of recording and transmitting papers between the various offices and officers can be simplified.
- (7.) To carefully go through each branch of the department—the Under Secretary's office, Harbours and Rivers, Roads, Railways (administrative), and Colonial Architect's,—and to report in what way a reduction can best be made in the number engaged, including permanent and temporary officers.

I wish to direct the attention of the Commissioners to this fact: that it has been asserted for years past that the Civil Service has been greatly overmanned, and, through political appointments and otherwise, has grown to much larger proportions than is necessary, so that even before the extension of the office hours the number of officers was in excess of the actual requirements of the Service. If this were so before the hours were lengthened, it must be still more true now the time has been extended from 4 to 5 o'clock, and a reduction proportionate, or nearly proportionate, to the time gained should be possible.

To assist the Commission in obtaining the fullest information, I must request all officers and others called upon by the Board to render every assistance in respect to supplying any particulars required in furtherance of the object sought.

W.J.L.

The Under Secretary will please forward a copy of this minute to-day to the head of each department.—W.J.L., 14/12/86. Heads of branches to note.—J.R., 14/12/86. Ch.A.G., 14/12/86. J.W., 14/12/86. W.C.B., 14/12/86. Copies to Commissioner for Railways, Engineer-in-Chief of Railways, Engineer-in-Chief Harbours and Rivers, Commissioner for Roads, Colonial Architect.—15/12/86. Inform heads of branches that Mr. Coyle has been added to the Board.—J.R., 16/12/86. Done.—16/12/86.

The Public Works Board of Inquiry to The Secretary for Public Works.

Sir,

15 December, 1886.

With reference to our inquiry, we shall be glad if you will cause us to be furnished with a plan showing the buildings occupied by the various branches of the Department, the rooms (size, &c.), and connections, together with the responsible officer in charge of each room.

In order to more clearly show the different branches, we would suggest that each branch is edged with a distinctive colour, and the rooms numbered for reference. As we wish this to be one of the first steps, we should like to have the information at once; and it might be got out roughly, to avoid the time that would be taken in preparing an elaborate plan.

Yours faithfully,

J. Y. MILLS.

T. F. WALLER.

Let this information be got out to-day.—W.J.L., 16/12/86.

Urgent. Done. J.R. 16/12/86.

C. Robinson, Esq., to The Under Secretary for Public Works.

Sir,

Sydney, 29 December, 1886.

I have the honor to inform you that having been verbally requested by the Honorable the Minister for Public Works to make provision for the shorthand-writing required to be done in connection with the Commission of Inquiry now sitting, I have engaged Mr. Herbert Robinson to do the work of transcription which, as I explained to the Minister, it would be impossible for me to undertake. The ordinary rate for this service is 1s. per folio for each copy supplied. The rate which I have arranged is to be charged in this instance is 6d. per folio for each copy.

The press of work at the Government Printing Office has been so great that I am informed that it will not be possible for the Government Printer to put the evidence into type for the next two months. Under those circumstances the Commissioners being anxious to complete their inquiry in the shortest time, arrangements have been made to supply them with four copies of the evidence simultaneously.

I have, &c.,

CHAS. ROBINSON.

Submitted, 30/12/86.—J.R.

Approved.—W.J.L., 5/1/87.

Inform, 6/1/87.—J.R.

The Under Secretary for Public Works to C. Robinson, Esq.

Sir,

Department of Public Works, Sydney, 6 January, 1887.

In reply to your letter of the 29th ultimo, I am directed to inform you that the Secretary for Public Works has approved of Mr. Herbert Robinson being engaged to transcribe shorthand-writing in connection with the Commission of Inquiry into the Department of Public Works, with remuneration at the rate of 6d. per folio for each copy made.

I have, &c.,

JOHN RAE.

C. Robinson, Esq., to The Under Secretary for Public Works.

Sir,

Sydney, 7 January, 1887.

In view of the approaching session of Parliament I shall be compelled to relinquish the work of the Commission of Inquiry into the Public Works Department.

In the absence of the Honorable the Minister for Works from Sydney I have, under the direction of the Commissioners, arranged with Mr. Charles A. Bernays to take up the duties which I have been attending to.

I may mention that the shorthand and secretarial service required is extremely arduous, having occupied my time about fourteen hours a day. The arrangement with Mr. Bernays is that he shall do the work for the ordinary fees, namely, three guineas per diem, this being of course irrespective of transcription.

I have, &c.,

CHAS. ROBINSON.

Submitted.—J.R., 10/1/87.

Approved.—W.J.L., 14/1/87.

Inform.

The Under Secretary for Public Works to C. Robinson, Esq.

Sir,

Department of Public Works, Sydney, 14 January, 1887.

I am directed to inform you that the Secretary for Public Works has approved of the acceptance of your resignation as Secretary of the Commission appointed to inquire into the working of this Department, as requested in your letter of the 7th instant.

I have, &c.,

JOHN RAE.

The Public Works Board of Inquiry to The Secretary for Public Works.

Sir,

Department of Public Works, Sydney, 11 January, 1887.

We have now the honor to comply with your request that we should hand you a progress report, but desire that you shall understand that the question of reduction in the Railway Department is of such magnitude, necessitating such close inspection and personal examination of so many officers, that you will readily comprehend that this Progress Report, owing to the short time the Commission has been in existence, must of necessity go but little into detail touching only as it were upon the various leading points forced upon our notice and upon which we think we can offer suggestions resulting, even at this early stage of our investigation, in substantial retrenchment.

We propose in this Progress Report to limit ourselves to suggestions relating only to the construction and existing lines branches of the railway, leaving for a future report the dealing with the details of the greater part of the inner working of the clerical, book-keeping, traffic, storekeeping, and other divisions, and not at present in anyway to touch upon the other Departments of the Civil Service included in our Commission, viz., Harbors and Rivers, Roads and Bridges, Under Secretary for Public Works, and Colonial Architect's, owing to the impossibility of our investigating them within the time up to the present at our disposal.

Looking

Looking broadly at the urgency of the question of retrenchment in the Public Service we are of opinion that as far as the departments we have referred to (other than the railways) are concerned they can only be properly dealt with by legislation, or, in other words, by the passing of a comprehensive measure of Local Government *with assured finance*; the creating of Harbor Trusts which would take over the present Department of Harbors and Rivers, retaining such officers as required, relieving the Government of all responsibility and expense further than the naming in London of a consulting Marine Engineer of high standing for the purpose of advising the Government upon any proposed scheme of harbour improvement submitted by the Trusts.

As regards all municipal bodies upon them we think should devolve the carrying out of water supply and sewerage. Building of bridges and making of roads and other local works now performed by Government under the heading of roads and bridges we would in the same way hand over to local bodies such as shire councils and road boards and thus get rid of two enormous ever increasing and unprofitable branches of the Public Service.

With reference to the Colonial Architect's Department we have little or no hesitation in saying that we will be able to suggest a plan which will reduce its dimensions and curtail its expenditure.

Returning to the subject matter of this report we see plainly that if retrenchment of a valuable and permanent character is to be instituted the first step will be the amalgamation of the separate, and we regret to say conflicting and antagonistic, branches of the Railway Department, namely, the construction and maintenance branches. So far as we can understand, the present recognised legal head of the department is the Commissioner for Railways, and we presume were a Board of Commissioners to be created all branches and officers of the railways would be under its control. The Commissioner therefore should be, we think, recognised not only by the Government and the law but also by every individual officer in the Service.

We therefore propose that the Engineer-in-Chief should have control over the construction and maintenance of railways having under him two competent Assistant Engineers, one to have charge of construction the other of maintenance, both being primarily responsible to the Engineer-in-Chief and all subject to the Commissioner or Board of Commissioners. These gentlemen, we are of opinion, should be procured from some of the great centres of railway work in Great Britain or America, to be appointed for a period of five years and to be eligible for reappointment if thought desirable for a further period of five years only, thus ensuring the keeping pace with the successive strides of an ever progressive science. In the event of the office of Engineer-in-Chief becoming vacant it should be filled up in like manner.

As these gentlemen would have to work together and confer with the Commissioner or Board of Commissioners his or their immediate officers, such as the traffic managers, the interlocking engineer, the designing and arranging of stations-yards, and general accommodation, would be carried out so as to ensure the greatest efficiency and safety with the least possible expenditure, and so far as practicable avoiding the necessity for alterations and additions which are now constantly occurring by reason of the alterations and destruction of the works constructed by one department not meeting with the approval or requirements of the other. And we make these remarks because the evidence before us shows that had the Commissioner and his officers, the interlocking engineer, and the traffic manager been consulted more frequently by the head of the construction branch, many alterations and consequent heavy expense would have been avoided.

The necessity for this change of system has been forced upon us from the very outset of our investigation by reason of the antagonism that is displayed between the heads of the rival branches of the service, and has, we have no hesitation in saying, been the cause of useless expenditure if not wilful waste of immense sums of public money which would have been saved, had those officers whose duty it was to protect the public interest conferred together, and so executed the works at the commencement that the large expenditures deemed advisable by the Existing Lines Branch would not have been necessary in order to make new lines workable, with due regard for the safety of the travelling public.

We cannot pass from this portion of our letter without directing your attention to clause 17, page 12, of our Report, regarding the feeling between the Construction and Existing Lines Branches, resulting not only in an immense and unnecessary expenditure of public money upon works and alterations, but also the maintaining of two large and expensive staffs, which can only be looked upon as an unnecessary tax, besides the relaxing of that discipline peculiarly necessary in matters relating to railway service, all tending to culminate in making what should otherwise be a large source of profit to the State, if not an actual loss an unprofitable undertaking.

As each new line now in course of construction is opened for traffic we have ample evidence that unless the existing condition of affairs is altered, and the railway service placed upon a sound business footing, the low per centage of profits now obtainable will yearly diminish profits which to an appreciable extent exist only on paper, and to which we will more particularly refer in a future report.

The question of surveys of land resumed for railway purposes, both for the construction and existing lines, is so important that we deem it necessary to at once draw your attention to what seems to us to be such a loose and incorrect system of surveying as to make it impossible that errors of such a nature have not occurred which may invalidate titles leading to claims arising, the settling of which will probably result in serious loss to the country. This subject will be reviewed by us at greater length hereafter, and we will therefore content ourselves at present with pointing out what we consider to be the absolute inaccuracy of the present system; and we would strongly urge upon Government the necessity of all future surveys of land being made by surveyors licensed under the Real Property Act. The plans of such surveys to pass through the Surveyor-General's Department, thus ensuring as is not now the case, that the land conveyed to the Crown is actually the land over which the railway is constructed.

"The adoption of this suggestion would also have the advantage of enabling the Government to dispense with the services of the staff surveyors of land resumed, and who form another of the many unnecessary and separate branches of the railway service.

We have, &c.,

T. F. WALLER, Chairman,	} Members of the Commission.
J. Y. MILLS,	
J. E. F. COYLE, M. Inst. C.E.	

## Progress Report—Construction Branch.

PROPOSED reductions presuming that the construction and maintenance of Railways are under one head, with an Assistant Engineer-in-Chief over each branch.

Surveying and Drafting Branch.	Dispensing with present Surveying and Drafting Branch, and re-engaging such officers as may be found absolutely necessary in surveying and drafting for the whole Department.
Inspecting Engineer. Mr. Drewitt's Staff.	Dispensing with Inspecting Engineer and two Assistant Engineers on Construction. Giving notice of the dispensing with Mr. Drewitt and staff, including architects, draftsmen and surveyors, if any, and re-engaging only such officers as may be found necessary, and under a younger and more active head.
Mr. Quodling's Staff	Giving notice to Mr. Quodling and the Clerical Staff under him, that their services will not be required, as we propose the transferring of the Book-keeping Department to (as it ought to be in any case) the Railway Accountant's Department.
Cadets.	Dispensing with all cadets in the Department and abandoning the system, as we think it would be more to the advantage of the service to fill up vacancies by appointments from the great centres of railway work; thus ensuring having men with a knowledge of the most recent improvements in construction and working, in place of (as under the present system of cadets) obtaining only a number of young men half trained, who, in the majority of cases, are turned out with no professional standing, useless to themselves and to the country, having been brought up in a school to a great extent now obsolete.

### EXISTING LINES DEPARTMENT.

Dispensing with the services of the Engineer of Existing Lines; also, the Deputy District Resident Assistant Engineers and Surveyors. Reducing the number of inspectors now under them, and replacing the latter, where necessary, by competent and better educated men. As it is our opinion that there is too much supervision and of too expensive a nature, the real work devolving for the most part on inspectors who, in many cases, are shown by the evidence to be unable to prepare the pay sheets and perform other simple clerical work properly appertaining to their position and the high salaries paid them. In adopting the proposed scheme of amalgamation of the two branches, these inspectors would naturally come under the direct control of the Assistant Engineer-in-Chief; or, if the appointment be found necessary, under a Resident Engineer of Existing Lines. Owing to many of the inspectors at present employed, a large and expensive clerical staff now exists for the performance of duties which better educated men would, to a large extent, undertake themselves.

Notice to be given to all architects, surveyors and draftsmen, that their services will be dispensed with at an early date; and this because the new system, as proposed by us, would provide for one department only, and containing, if necessary, members of each of the professions, but under one head and not, as is now the case, each engineer having an engineering, architectural, surveying and drafting branch under his immediate control. The entire drafting of the departments, under the system now in vogue, has grown into its present large dimensions owing to (as far as we can see) preparing special designs for every new work, alteration, or addition to work; even where the addition is merely the duplication of a building fresh drawings are prepared of the original plan, where a tracing would meet all the requirements.

The very objectionable method of what we call making work would be obviated to a very large extent, if not altogether, by the introduction of a uniform system of standard drawings which, with the accumulated improvements suggested by experience, would in a short time result in the department possessing plans of bridges, stations, sheds, shops, &c., &c., of a most complete and perfect character, and, what is still more necessary, of designs fitted for the requirements of the service, which cannot be said to be now the case, utility being in many instances not the primary consideration. By lithographing these standard drawings on inexpensive paper, plans of the various works with quantities would always be available at a moments notice at a cost of a few pence each. Lithographs used as working drawings being mounted on cloth by the persons using them.

It is needless at present going further in this matter, as it will be obvious to everyone that the reduction in the cost of the preparation of plans will be immense, as also in the erection of buildings as the plans of stations, &c., &c., could be completed in parts, the extensions being made at such times as the requirements of the service demanded. The question of the necessity of maintaining an architectural staff at all is to our mind doubtful; as far as our experience goes the class of work now undertaken by the architect and his staff should really be undertaken by the engineering draughting department, inasmuch as any buildings requiring architectural skill or knowledge cannot be other than the designing of outside large stations, such as at Albury, Bathurst, and places of like importance, and for which a plan of an elevation could, if found necessary, be obtained from outside architects and submitted for approval to the proper officers.

Notice to be given to the time-keepers and clerical branches attached to the District Engineers and their subordinates that their services will be dispensed with at an early date, and this action we deem necessary as we feel satisfied that this branch of the service is greatly overmanned, and it will be impossible to effect a proper cure in any other way, as this step would enable the Minister or the Commissioner to engage only such officers as may actually be required, and to take care that those engaged are fitted for the positions by satisfactory credentials showing previous training.

Our investigations not having advanced sufficiently to say whether the number employed of the latter is excessive or otherwise; we in this Progress Report do not intend to deal with them further than to submit that possibly reductions to some extent may be made in their number. The inspectors we have dealt with in our reduction schedule for existing lines.

Other

Other inspectors, such as for iron bridges, timber bridges, brickwork, stations, timber, signals, and telegraphs, &c., &c., we think should also receive notice that their services will probably be dispensed with at any early date, as we feel satisfied that an amalgamation of these offices would result in a material reduction without in any way impairing the supervision necessary to insure the proper maintenance of the railways or endangering the safety of the public, more particularly as we would advise the erection of iron bridges large and small in the first instance, as we understand the Existing Lines Branch are renewing all bridges in iron and masonry, and this change however we advise owing to the repeated statements as to the heavy expense entailed by constant renewals of timber bridges, made necessary by the depredations of the white ants, and rapid decay of timber from other causes which we are in evidence assured it is impossible to guard against, and therefore impossible to estimate with any degree of accuracy the life of such structures.

As to the truth of these statements we have not as yet any evidence of facts to go by, not having been shown the expenses per annum in the different districts for the maintenance or renewals of wooden bridges and culverts, nor yet any statement showing the class of timber used, the life of such timber, the qualities of the different sorts, and the ages of the various structures now on the older lines. These remarks apply more particularly to the wooden structures on the trunk lines, as it seems to us that the inspection is in any case out of all proportion, more especially if proper precautions had been adopted in selecting the material which a lengthened experience of the durability of timber under various conditions in this Colony ought to have suggested.

Payment of wages to be monthly instead of fortnightly as at present. The adoption of this system would not we think receive much (if any) opposition, nor would it entail any hardship on the individual if a month's notice of the change were given, while on the other hand it would mean a direct saving to the Government in interest of about £12,000 per annum, while no loss would be sustained by the men, as they would not be charged more for their goods by the storekeepers if they paid monthly instead of fortnightly, and further, there would be no peculiar innovation in the change, as many of the employees in the civil service are now paid monthly, and we are informed that this system obtains on the Victorian Railways.

To summarize the advantage of a system of monthly payments, we may state that the average receipts by the Railway Department are about £166,000 per month, equalling in round numbers £2,000,000 per annum, and the payments about £125,000 per month, or £1,500,000 per annum, thus showing that the Government would have to their credit £125,000 for a month, instead of for a fortnight only, and as the Government pay 5 per cent. on overdrawn accounts and receive 3 per cent. on credit balances, an average of 4 per cent. may be taken, representing a difference in favour of the public account between fortnightly and monthly payments of say £12,000 per annum.

Payment of wages by means of pay clerks is we think to a great extent an unnecessary and expensive system, there being now seven pay clerks, costing over £2,000 per annum, between wages and travelling expenses, and we think the services of these officers might be dispensed with, by having the wages paid either by the gangers, inspectors, or stationmasters along the line, as may be found most expedient.

The objections raised to this proposal we do not consider of sufficient weight to merit our largely entering into in this progress report, and we shall content ourselves by stating that the chief objection raised being the possibility of the payers (if gangers or inspectors) misappropriating the money, this objection we deem groundless, and for the following reasons:—

- A. Some railway companies pay their men through the gangers, the box or bag containing the wages for each gang being thrown out of the train (in passing) to the ganger, not even taking receipts.
- B. The gangs and the ganger, knowing the day and hour the train should pass, would be on the look out for their money, and we think the men might be safely trusted to see that they got paid.

Other complications in the way of receipts, &c., under the present system, creating of necessity much clerical work, and consequently a large staff of clerks, including time-keepers, would in a great measure be done away with. Besides also dividing a considerable risk, which now exists by the placing of large sums of money in the hands of a few pay-clerks, who proving dishonest and losing money, could only be looked to for reimbursement to the amount of their guarantee, that is to say, £400, when, as a matter of fact, they are entrusted individually and separately with cash to the extent of many thousands to distribute along the lines, and to the various branches in and around Sydney; which, whilst it reflects the greatest credit on them for the integrity displayed, we consider is expensive, unnecessary, and a system of open temptation. And while on the subject of payment of wages, we desire to record our opinion that the system of doing work by day labourer in the Department of Existing Lines is, with its consequent staff of inspectors and foremen for the different trades, and time-keepers has grown to inordinate dimensions. The necessity for repairing shops will no doubt always exist, but we think that a large proportion of the present army of workmen, including almost every description of artisans, could be dispensed with, and the work upon which they are employed—such, for example, as the painting of stations and the making of barrows, office furniture, &c.—be provided by contract. Where large bodies of men are permanently employed, work, or the appearance of work, has to be provided, and much of their time is likely to be consumed in travelling. Goods sheds, station buildings, and nearly all work apart from maintenance, should be done by contract, and the additional supervision or inspection (if any should be required) should be dispensed with on the completion of the work.

*Accountant's Branch.*—To carry out the proposed change in the payment of wages and salaries, and indeed the amalgamation of the Construction and Existing Lines Branches, this office would require reorganising, and it would therefore be well that the officers in this department should receive notice of the probable dispensing with their services. This should be done in order that the proper men may be placed in the positions they are best qualified to fill, and to enable a system of payment by cheque to be brought into operation as far as possible. And we would also suggest that all accounts should, prior to going to the Accountant's Branch, be sent to and examined by the Examiner, and not, as now is the case, the accounts of the Existing Lines only.

Owing

Offices.

Owing to the present arrangements of offices occupied by the Railway Department much loss is entailed on the State, not only from the ill-arrangement of the rooms, which in several instances could contain many more hands than they do, if lumbering desks and presses containing stationery and documents, not in daily requisition, were removed, and if desks on commercial or banking principles were substituted, but more particularly is loss incurred by the scattering of the offices under different roofs all over the city, a system which involves large expenditure in the way of rent, amounting to, for the requirements of the Civil Service, in round numbers £12,000 a year, exclusive of insolvency offices, Denham Chambers, and post and telegraph offices, and stables, to say nothing of the loss of time and expense incurred by keeping messengers constantly going to and fro with papers; messengers being often substituted by officers who find it necessary, or think they do, to personally carry the papers.

The impossibility of proper supervision under the present scattered arrangement of the offices creates a laxity of discipline, and a consequent diminution of work performed, and we are therefore satisfied that a very large saving can be made, not only in the amount of rent paid, but in the reduction of hands engaged, and in getting more work done and performed with greater expedition and efficiency.

Having strong views on this subject we would urge upon the Government the advisability of building offices at Redfern Railway Station, or other suitable site, capable of containing the whole of the railway staff required in Sydney, and then giving up all premises now rented by the Railway Department, and by occupying the rooms in the Works Office vacated by them, by other departments of the Civil Service, who have likewise premises rented in the City, thus ensuring retrenchment, not in the Railway Department only, but in the Civil Service generally, as we feel certain that the interest on the capital required to erect suitable railway offices would be so much less than the amount of rent now paid by Government for different offices, that the difference would enable the writing off of the capital expended on the building in a very few years. We would also urgently impress the necessity of having the building designed for the proper conducting and supervision of public business, and thus making it perhaps advisable to call for competitive designs. We would further submit that rooms, somewhat after the style of that occupied by Mr. Palmer's staff at the Mutual Provident Buildings, be adopted, which could be properly supervised if the heads of the branches be placed in positions so as to insure requisite oversight. Should such rooms be found unnecessarily large for any particular branch or department there would be no difficulty in dividing the same by plain partitions. Buildings constructed on these principles, with more attention to the interior, and less extravagance on ornamentation, useless lobbies, unnecessarily wide corridors, and winding staircases, would in themselves be a substantial saving.

Travelling allowances on the present scale appear to be too liberal and too numerous, and we think an allowance for actual costs incurred only should be given, which could be ascertained by adopting the system of travelling aid bills in use elsewhere.

Annual forage allowances and fees, we think, should be abolished altogether, and allowances for forage only, to be granted at such places and for such periods as absolutely necessary for an officer to keep horses. But under the present system large sums are voted year after year for forage allowances to officers who do not require to keep horses to enable them to discharge their public duties. We would, therefore, advise that all fees or remuneration paid to any officers in the public railway service for work performed by them during business hours, shall in future be paid to the Colonial Treasurer.

We would urgently direct your attention to the necessity for a business head to this great department, representing as it does a commercial enterprise with a capital of nearly £30,000,000, and strongly approve of the proposed bill creating a railway board, who would actually give direct personal attention to the management of the entire railway system, and not principally to office matters, as now appears to be the case with the Commissioner, who is of necessity closely confined to Sydney, performing the duties of general secretary, and not those of general manager. Without intending to reflect in any way upon the fitness of the two principal officers for occupying their present high positions, we may state that to us it appears impossible to conduct the business of the railways profitably or with economy while antagonism exists; and, therefore, in the public interest, the present unsatisfactory condition of affairs ought not to be allowed to continue.

Before closing this report we would say that owing to the short time since the appointment of the Commission, it is impossible for us to be able to enlarge upon many points which have come under our notice, or even to touch upon them at all, and besides which there are many officers which up to the present we have been unable to examine, but we may shortly state that the system of recording documents, clerical work generally, unnecessary copying of papers and otherwise, multiplication of work, distribution of stationery, requisitioning stores in unnecessary large quantities, has not, so far as we have gone, our approval, and we think that an improvement can be initiated which will result in a considerable saving. Bearing in mind the immense loss sustained by the State owing to the destruction of many valuable documents in the Garden Palace fire, we feel it incumbent on us to suggest, that at once steps be taken for utilising the fire-proof rooms on the basement floor of the Department of Works building, and that the valuable documents now therein, for the most part printed forms, shall be removed, and in their place, valuable plans, field books, level books, contracts, drawings, bonds, &c., be substituted. And should it be found, which we doubt, that the space is inadequate, extra fire-proof rooms could be constructed at little expense, by converting a couple of needless passages at the entrance from Phillip-street into the building, into fire-proof rooms. While on this subject we would advise, that instead of, as is at present the custom, the permitting of district engineers having in their possession in non-fire-proof buildings, valuable original signed contract drawings, that they be supplied with certified tracings, and the originals kept for reference in a fire-proof room, and that in the present offices where it is absolutely necessary that valuable plans and documents must be kept either during the course of preparation or after completion in non-fire-proof rooms, that safes should be supplied for their custody. In view of the possibility of the Government building railway offices, we would suggest that they be made fire-proof throughout, and would also draw attention to the fact that the fire-proof rooms now in the Public Works building are next door to useless; 1st, because few if any valuable documents are kept therein; and 2nd, because the fire-proof shutters are never closed, few persons being aware of such safeguards being provided for the windows.

We have, &c.,

T. F. WALLER, Chairman,	} Members of the Commission.
J. Y. MILLS,	
J. E. F. COYLE, M. Inst., C.E.,	

Sydney, 10th January, 1887.

PROPOSED

Travelling allowances.

Forage allowances and fees.

General Management.

Conclusion.

Proposed retrenchment, Construction Branch of Railway, amounting to £92,873, viz. :—

A. Engineer-in-Chief.—Forage allowance, as voted, to be abolished, actual expenses for hiring or keeping horses during tours of inspection only to be allowed ... ..	£150	
Travelling Expenses, as horse hire is provided for and railway travelling is free, should, we think, be reduced from 40s. per day to the actual travelling expenses incurred, as per receipted accounts, and this system we would introduce throughout the Civil Service where travelling expenses are allowed.		
B. Inspecting Engineer, salary ... ..	£600	
Travelling Expenses for say 6 months out of the year, at 30s. per diem... ..	273	873
C. District Engineers.—F. H. Small, salary ... ..	500	
Allowance ... ..	246	746
Balance of ten aggregate salaries with allowances ... ..	7,337	

How many of whom will have completed their work during the current year we have no evidence to shew, but presume some at least will be dispensed with. Information on this point the Minister can obtain from the Engineer-in-Chief, and, we think, considering the irresponsible position, or more properly speaking, the very limited powers intrusted to the District Engineers, it is advisable that these gentlemen's salaries should be fixed at £600 per annum, this sum to include all extraneous expenses, which would reduce the aggregate salaries and allowances from £7,337 now paid, to £6,000 per annum, and we would also submit that it is unnecessary to have a staff of Assistant Engineers on construction, if, as we would strongly advise, the responsibility of setting out the works devolve upon the contractors, as is the practice elsewhere, and not upon the Government, in which case the clause making it compulsory on the Government Engineers to set out the work would have to be expunged. This proposed system would give the District Engineers much more time, and would relieve the Government of responsibility, besides making a further reduction of £3,200, or a total per annum in the salaries of the District Engineers and their Assistants of ... ..

4,537

Which reductions we do not think would impair the efficiency of the Construction Branch of the Service, if the Inspectors allowed to each District Engineer are qualified for their positions.

D. Mr. Palmer and staff, as already advised, to be reduced by dispensing with eleven surveyors ... ..	5,250	
And there are also five Draftsmen whose services can be immediately dispensed with.		
Balance of reductions to be made during 1887 amount to ... ..	22,260	
Less salaries, say to 30th June, 1887, inclusive of Mr. Palmer's salary, equipment vote, travelling and forage allowance, also the salaries of six draughtmen for 1887, to be retained and transferred to the general staff ... ..	10,000	12,260

We are not now making provision for continuing a staff of Railway Surveyors, inasmuch as we presume not many fresh railways are likely to be proposed at present, considering the number of lines ready for contract and awaiting the authorization of Parliament, the more so as any number of qualified railway surveyors can be obtained at any time by advertisement.

E. Mr. Quodling (present Chief Clerk) and staff, together with all cadets, say ten in number, to be dispensed with ... ..	2,872	
As we consider if the proposed amalgamation of the two Branches is carried out there would be no vacancy for him as Chief Clerk, as one Chief Clerk would be sufficient, and we consider that Mr. Landers, Chief Clerk of the Existing Lines Branch, is eminently suited for the position.		
Less one Book-keeper, Mr. Bromley, to be transferred to Railway Accountant's Office under proposed amalgamation of Branches... ..	350	2,522
F. Mr. Drewett and permanent staff ... ..	5,475	
„ „ „ temporary „ ... ..	2,098	
Less salary for Head of Branch ... ..	£600	7,573
Six Draughtsmen and Messenger ... ..	1,350	1,950
		5,623

Proposed retrenchment in Existing Lines Branch of Railway Service, amounting to £36,326, being the sum the Commission, in accordance with their investigations to date, consider might be saved; but this amount does not in any way comprise reductions it is anticipated will result from further enquiry.

A. Engineer for Existing Lines.—Office proposed to be abolished; that of Assistant Engineer-in-Chief of Existing Lines to be substituted.		
B. Deputy Engineer.—Presuming the two branches would not be required ... ..	600	
C. District, Resident, Interlocking, and Assistant Engineers ... ..	5,880	
Less one to be retained Resident Engineer for each line, who would directly supervise the way and works at a yearly salary of £500, and one Interlocking Engineer at £500, and allow travelling expenses actually incurred, as shown by receipted accounts ... ..	2,500	3,380
D. Architects, Assistant Architects, Surveyors, Draftsmen, and all Cadets, say 23 ... ..	6,481	
Less seven draftsmen retained if competent, otherwise to be selected from those proposed to be dispensed with from the construction branch ... ..	2,000	4,481

T. F. WALLER, Chairman, }  
 J. Y. MILLS, } Members  
 J. E. F. COYLE, } of the  
 Commission.

Sydney, 11 January, 1887.

\* These additions are incorrect, but are printed from the manuscript supplied by the Board; the correct final total is £67,987, and not £68,199 as stated.

The Public Works Inquiry Board to The Secretary for Public Works.

Sir, The Department of Works, Sydney, 13 January, 1887.

Referring to our Progress Report of yesterday, we regret that we were unable to obtain information relative to the gate-houses and gate-keepers on the line in time to give you our views as to retrenchment which might be effected in this branch of the railway service, but we think from some partial information received to-day that there is no doubt a very large saving can be effected in a system which now costs in buildings and wages a very considerable sum of money.

We have, &c., T. F. WALLER, Chairman. J. Y. MILLS, J. E. F. COYLE, } Members of the Commission.

The Public Works Inquiry Board to The Secretary for Public Works.

Sir, Public Works Department, 17 January, 1887.

We have the honor to state that, so far as our investigations have proceeded up to date, we find that there is an apparent objection on the part of the heads of the departments to accept the position of Commissioners on this Board of Inquiry.

Our own opinion is that, under the circumstances, they should be relieved from the necessity of acting on the Commission.

We have, &c., T. F. WALLER. J. Y. MILLS. J. E. F. COYLE.

Under these circumstances I think it is wise that the heads of Departments should be relieved from acting, as it is no use their retaining the position unless they are willing to act in concert with the members of the Commission.—W.J.L., 17/1/87.

This paper has been sent to me by the minister; it should have been sent, I presume, to the Under Secretary for Works, as its matter affects other heads of departments besides the Railways. I have only to say, in reply to the Minister's minute of this date, "that it is no use their (the heads of departments) retaining the position," &c., that I have not been appointed to any such position as Commissioner on the Board of Inquiry, and have had no opportunity afforded me of saying whether I would act in concert with the members of the Commission.—C.H.A.G., 17/1/87.

This paper has just been handed to me by the Commissioner for Railways. In the Minister's minute of 14th ultimo, a copy of which was forwarded the same day to the heads of branches, there is nothing stated about their being appointed members of the Board. It is merely said that the Board will be assisted by the head of each branch as it is under examination, and, I presume, such assistance has been cheerfully afforded when asked for.—J.R., 18/1/87.

It was my intention that each head of a department should form one of the Commission in going through the department, but this I have now altered.—W.J.L., 19/1/87.

C. Robinson, Esq., to The Under Secretary for Public Works.

Dear Mr. Rae, 19 January, 1887.

Please accept my thanks for your kind reminder of to-day's date.

I have not made any charge for my work as Shorthand-writer, which would be £2 2s. per diem extra; but, as I receive salary for that department of work, I do not think it would be expedient for me to make any charge.

Yours faithfully, CHARLES ROBINSON.

Series B.—Contingency Form No. 1. Pay Voucher No.

NEW SOUTH WALES.

Contingent Expenses.—Department of Public Works. Claimant—Charles Robinson, Sydney.

Table with 3 columns: Date (1887, 19 January), Description (To secretarial services to Commission of Inquiry, Department of Public Works—twenty-five days (fees payable at 21s. per day)), and Amount (£ 26 s. 5 d.).

I certify that the amount charged in this voucher as to computations, castings, and rates is correct; that the service has been faithfully performed, and that the expenditure is duly authorized in terms of the Audit Act.

JOHN RAE.

Approved.—W.J.L., 19/1/87.

Minute by The Secretary for Public Works.

THE report of the Commission has been submitted to me on the eve of my retirement from office, and I am thereby prevented from carrying into practical effect the recommendations of the Commission so far as they meet with my approval. With regard to the delay in initiating the inquiry, I may state that for two months before the Commission was appointed I was endeavouring to secure gentlemen to act, but for a long time I failed to obtain those whom I wished to take up the matter.

I wish in the first place to bear testimony to the zeal the members of the Commission have displayed in conducting the inquiry, and to the thoroughness of their Progress Report. Generally, I approve of the conclusions they have arrived at, particularly with regard to the necessity for harmonious working between the Construction and Existing Lines Branches of the Railway Department, and also the recommendation of the Board with regard to the anomalous position occupied by the Commissioner, who should act as a General Manager, rather than as he is compelled to do at present, more as a Secretary, and I may say the suggestion of the Board is carrying out the principle embodied in the Railway Bill I submitted to the last Session of Parliament.

I strongly press these matters on the notice of my successor, as also the necessity for reducing the now overmanned clerical and inspecting branches. I have long been of the opinion that great reform was necessary, and I trust, in view of the information obtained by the Board, that the needed reform will be made *quickly* and with *thoroughness*.

I do not think it would be wise to give a general notice to all officers, as suggested, leaving the heads of departments to reorganise the offices, and select subsequently those officers whom they may consider the most suitable; *but I think notice should be given without delay to those whose services can absolutely be dispensed with.* This and other matters, although of much importance, are questions of detail however, and can be dealt with as may be deemed most desirable and satisfactory in carrying out the needed scheme of retrenchment. Personally, I regret that through my retirement I am unable to deal with this and the further Report of the Board on other branches of the department which is yet to be submitted.

W.J.L., 19/1/87.

#### Memo. from the Public Works Inquiry Board to The Colonial Architect.

Colonial Architect's Office, 21 January, 1887.

PLEASE furnish us with a list of the number of Court-houses in the Colony, showing where situated and total cost of each. Also the population of the places where these Court-houses are; also a list showing what buildings and lamps outside have to be lighted by the department, and where situated; also a statement showing the value of furniture purchased during the last five years, and for what departments, together with schedule prices for each year during that period.

T. F. WALLER, Chairman.

Forwarded to the Under Secretary for Works. As the information asked for by this communication, as far as I can give it, will take some considerable time to get up, and interfere with the current duties of my office, the work should not perhaps be entered upon without the Minister's instructions or authority.—J.B., 21/1/87. Submitted, 21/1/87, J.R.

#### The Secretary, Public Works Inquiry Board, to The Colonial Architect.

Sir,

Colonial Architect's Office, Sydney, 21 January, 1887.

I am instructed by the Commissioners to request you to furnish them, at as early a date as possible, with a statement showing your estimates asked for during the past five years, and the amounts granted. Please also to state how much in each year of the sums voted were for new buildings, how much for additions and alterations, how much for repairs, and how much for furniture. Please also to state out of what votes the sums so granted came.

I have, &c.,

CHARLES G. BERNAYS, Secretary.

Forwarded to the Under-Secretary for Works, with reference to my B.C. report of 21st instant on a previous application from the Works Department Commission—as providing the information asked by these two further communications will involve, like in the former case, the expenditure of considerable time and labour, interfering greatly with the current work of my department. I shall be glad to have the Minister's instructions or authority, if the information is to be supplied.—J.B., 22/1/87. Submitted, 24/1/87, J.R.

#### The Secretary, Public Works Inquiry Board, to The Colonial Architect.

Sir,

21 January, 1887.

I am instructed by the Public Works Department Commission to request that you will furnish them with the names of the gentlemen supervising the different districts, and who occupy the positions of assistant architects or foremen of works, giving the number and description of the different buildings now under their supervision, and the value of each.

I have, &c.,

CHARLES G. BERNAYS, Secretary.

#### Report of Board of Inquiry into the Public Works Department.

SUBMITTED for instructions.—J.R., 20/1/87.

I should like to have a *precis* showing how the Board was appointed, their power, functions, &c., before I deal further with the matter.—J.S., 21/1/87.

Prepare at once.—J.R., 21/1/87. Done—21/1/87.

#### Minute by The Secretary for Public Works.

Department of Public Works, Sydney, 21 January, 1887.

*Subject*:—Public Works Office Inquiry Commission.

By minute dated the 14th December, 1886, Mr. Secretary Lyne appointed Mr. J. Y. Mills, Mr. J. E. F. Coyle, and Mr. T. F. Waller as a Commission of Inquiry into the working of the Public Works Department, to ascertain the best means of effecting retrenchment; the heads of inquiry to be made being fully set forth in paragraphs Nos. 1 to 7 of the minute.

The Commission immediately afterwards commenced their labours, and so far have examined into a portion of the Railway Department, in reference to which they have submitted a Progress Report, in which extensive reductions are recommended. Mr. Secretary Lyne, on leaving office, wrote a further minute dealing with the matter.

At the present time inquiry is being made by the Commission into the working of the Colonial Architect's Branch of the department.

The whole of the papers are submitted herewith.—J.R.

Department

Department of Public Works, Sydney, 21 January, 1887.

*Subject* :—Inquiry, Department of Public Works. Fees to Commissioners, £450.

THERE is no vote under this branch of the department to which the above amount can be charged.

The Under Secretary for Finance and Trade states that the sum in question cannot be defrayed from the Treasurer's Advance Account.

JOHN RAE.

Minute by the Under Secretary for Public Works.

*Subject* :—Public Works Department Inquiry Commission.

Department of Public Works, 24 January, 1887.

I WAS NOT aware of the rate at which the members of the Board were to be paid till the 20th instant, when the vouchers were submitted for payment. It now appears that the fees of the members are to be £6 6s. per day; the shorthand-writer £3 3s. and so much for copying, say £5 5s. per day; and Mr. Robinson, who acted as secretary, £1 1s. per day up to the 20th instant. The vouchers submitted for payment and approved by Mr. Lyne are:—

Mr. Waller, on account of fees	... ..	£150	0	0
Mr. Mills, do do	... ..	150	0	0
Mr. Coyle, do do	... ..	150	0	0
Mr. Robinson, 25 days at 21s.	... ..	26	5	0

The cost of the Commission, as far as fees are concerned, is therefore about £25 per day. The time lost in the different Departments during examination cannot be defined. No expense has yet been incurred by the Government Printing Office. Mr. Potter was asked by Mr. Robinson to print the evidence, but refused to do so without Treasury authority, which he has not received. J.R.

Minute by Secretary for Public Works.

COMMISSION OF INQUIRY.

It seems to me that the inquiry of the Commission will extend over a longer period than was anticipated—certainly longer than I am prepared to give them. As, to make the suggestions or recommendations of the Board of value, it is necessary I should have the Report before considering my Estimates—but the preparation of the Estimates will not admit of delay, and must be commenced at once—I must direct, therefore, that the Board shall discontinue its investigation, and submit a final Report to me without delay.

delay as far as it has completed its inquiry. In doing this, I must commend the members of the Commission for the zeal they have manifested in carrying out their work. I believe both inquiry and retrenchment to be necessary; and before submitting their Estimates, I wish the head of each branch, who should be fully conversant with the requirements of his office and be able to deal with the matter quickly, to inquire carefully into the question, and only submit such appropriations and include such officers as are absolutely necessary for the proper working of the department, reporting to me what reductions can be made, and as far as possible providing for the omission of all temporary hands.

JOHN SUTHERLAND.

24/1/87.

Inclose copy and inform Commission, heads of branches. 24/1/87.—J.R.

### The Under Secretary for Public Works to The Public Works Inquiry Board.

Department of Public Works,  
Sydney, 24 January, 1887.

Gentlemen,

I am directed to inclose for your information a copy of a minute of the Secretary for Public Works on the subject of the investigations now being made by you as a Commission into the working of this department, and to request that in accordance therewith you will discontinue your inquiries without delay, and furnish your final report.

I have, &c.,

JOHN RAE.

[Enclosure.]

COMMISSION OF INQUIRY.

It seems to me that the inquiry of the Commission will extend over a longer period than was anticipated certainly longer than I am prepared to give them. As, to make the suggestions or recommendations of the Board of value, it is necessary I should have the Report before considering my Estimates—but the preparation of the Estimates will not admit of delay, and must be commenced at once—I must therefore direct that the Board shall discontinue its investigations, and submit a final Report to me without delay as far as it has completed its inquiry. In doing this, I must commend the members of the Commission for the zeal they have manifested in carrying out their work.

JOHN SUTHERLAND.

### The Public Works Inquiry Board to The Under Secretary for Public Works.

Sir,

90 Pitt-street, Sydney, 25 January, 1887.

87-1,104.

We have to acknowledge your favour of the 24th instant, numbered as per margin, together with copy of undated minute from the Honorable the Minister for Works, and we beg to state that in accordance with that minute we have now discontinued our inquiries, and further, that we shall at as early a date as possible furnish a Report as requested, which, however, cannot possibly be complete, inasmuch as our labours have not been concluded in any one department, and therefore can only be styled a "Progress Report."

We may state that the late Minister for Works, when appointing us, was perfectly aware that inquiries to be made, if to be of value, would take considerable time, as superficial examination would be worthless, and we were therefore somewhat surprised to notice in to-day's *Daily Telegraph* that a complaint had been made to the Honorable the Minister for Works by the Colonial Architect that our investigations required returns covering a period of five years, to furnish which would necessarily upset the whole of his department. We beg to state that such is not the case, and that the information we asked for ought to have been given to us at a moment's notice, as we simply required to see the papers referring to certain important works which had been begun and completed, and partly completed during the past five years. These papers ought to be obtainable as readily as papers referring to works finished in 1886. Had we been handed the papers no returns would have been necessary, as we should have seen there the information we required and been able to examine personally upon it; but we could obtain no information on these points either from the officers in the department or from the Colonial Architect himself. Indeed we cannot help saying that no desire, but rather the reverse, was evinced by the Colonial Architect to aid us in our inquiries. In fact, in some cases, officers of his department declined point-blank to give information, referring us to the Colonial Architect, and they were upheld in their action by that officer, who stated that he had a minute from the Minister which prohibited any officer of his department from furnishing information except through himself. The Colonial Architect informed the Commission that any information which they required could be supplied through him. This mode of procedure we declined to adopt, stating that we preferred to conduct the inquiry in a manner which seemed best to ourselves, and that an inquiry which would begin and end with the Colonial Architect would hardly, in our eyes, be the style of investigation with which we were entrusted. The minute referred to by the Colonial Architect, upon examination, turned out to be an old one of some years standing, relating only to the management of his office, and in no way applicable to the Commission.

Having received special instructions from the late Minister for Works, as *vide* his minute, to investigate the truth of certain charges made by a Member of Parliament against some officers in the Railway Department, we should be glad to learn whether we are to go on with that inquiry or not.

In view of preparing the Report as desired by the Minister, we should be glad if you would supply us with a copy of the full minute, including the final instructions and additional powers conferred upon us by the late Minister for Works, the Honorable W. J. Lyne. Awaiting your reply,—

We have, &c.,

T. F. WALLER, Chairman,

J. Y. MILLS,

J. E. F. COYLE,

} Members of the Commission.

Submitted—27/1/87. J.R.

Charles

## Charles A. Bernays, Esq., to The Colonial Architect.

Sir,

90 Pitt-street, Sydney, 29 January, 1887.

I am instructed by the Chairman of the Public Works Board of Inquiry to inquire at what date the information asked for by the Board will be ready, as it is their desire to send in their report to the Minister as soon as possible.

In addition to the information already asked for, the Board would be glad if you could supply them with details as to the cost of the North Shore Post and Telegraph Office and Court-house.

I have, &amp;c.,

CHARLES A. BERNAYS,  
Secretary.

Forwarded to the Under Secretary for Works, with reference to my B.C. minutes of 21st and 22nd instant on previous communications from the Board.—J.B., 31 Jan., 1887. Submitted.—1/2/87. Seen.—J.S., 2/2/87. Colonial Architect.—J.R., B.C., 2/2/87. To be returned.—J.R.

## Charles A. Bernays, Esq., to The Secretary for Public Works.

Sir,

Strathspey House, 187 Macquarie-street, Sydney, 29 January, 1887.

I had this morning the honor of an interview with the Under Secretary for Works with reference to the position I have been placed in owing to the labours of the Public Works Board of Inquiry having come to an end, and, at the suggestion of Mr. Rae, I beg now to lay before you certain facts which I trust you may take into your favourable consideration.

By letter of date the 7th January to the Under Secretary, Mr. Robinson, who had been performing the duties of Secretary to the Board, relinquished that position, and stated that he had arranged with me, by authority of the Board, to take up his duties at the ordinary remuneration of £3 3s. per diem. Previous to this Mr. Robinson communicated with me in Brisbane, asking me if I was willing to accept the position on the above terms, stating that there would probably be from two to three months' work. I wish it to be understood that I received no definite assurance as to the length of my engagement, but the inference to be drawn from the letter was that there would not be less than two months' work. On those terms I came down to Sydney, bringing my wife and family with me, I having previously let my house in Brisbane for three months. After a fortnight's work down here I find that there is no further need of my services, and that I shall be a considerable loser by the whole transaction.

It is under those circumstances that I venture to bring my case under your notice, believing that I am fairly entitled to two months' pay on the terms upon which I was engaged, and that you will not see an injustice done which is within your power to remedy, and which has arisen through circumstances which could not be foreseen.

If necessary I shall be happy to wait upon you and explain matters more fully than can possibly be done by letter; but in the meantime I am living in Sydney at great personal expense, and if you can possibly see your way to forward matters, and give me an early reply, it would be a great convenience and favour.

I have, &amp;c.,

CHARLES A. BERNAYS.

I regret that I can make no direction in Mr. Bernay's favour.—J.S., 31/1/87. Inform at once.—J.R., 31/1/87. Put with other papers.—J.R., 31/1/87.

## The Under Secretary for Public Works to Charles A. Bernays, Esq.

Sir,

Department of Public Works, Sydney, 31 January, 1887.

In reply to your letter of the 29th instant, claiming compensation for the loss of your position as Secretary to the Board of Inquiry appointed in connection with this department, I am directed to inform you that the Secretary for Public Works regrets that your claim cannot be entertained.

I have, &amp;c.,

JOHN RAE.

## Minute by Secretary for Public Works.

Letter from Board of Inquiry of date 25th January, 1887.

ACKNOWLEDGE receipt. Say that their observations in respect of the inquiry into the Colonial Architect's Department have been noted and will be referred to Mr. Barnett for any remarks he may wish to make thereon.

Send them copy of Mr. Lyne's minute of 14th December and of his last minute extending, at the Commissioner's request, the scope of the inquiry remitted to them by him, and say as regards their request to be informed whether they are to conduct the inquiry into the charges brought against certain officers of the Railway Department by Mr. Forsyth in the House, that I have to-day only had the papers on the subject placed before me and that looking to the serious nature of the accusations which affect the reputation and character of the officers in question and embrace a criminal charge of fraudulent practices (charges which have been generalized only and which Mr. Forsyth so far has declined to formulate to admit of their investigation) and to the fact that the present constitution of the Commission will not admit of their taking evidence on oath which the requirements of the case renders indispensable if justice is to be done; I am compelled to say that the inquiry cannot be held by them unless the charges are formulated and they are appointed a Royal Commission by the Governor and the Executive with all the powers and responsibilities attaching to a commission so appointed.

JOHN SUTHERLAND,

29/1/87.

Inform Board.

The Under Secretary for Public Works to The Public Works Inquiry Board.

Gentlemen,

Department of Public Works, Sydney, 29 January, 1887.

By direction of the Minister for Public Works, I have the honor to acknowledge receipt of your letter of the 25th instant, stating that in accordance with the Minister's undated minute (which I may inform you was of the same date as my letter to you of the 24th instant) you have discontinued your inquiries, and will at as early a date as possible furnish a report, which, however, will only be a progress report, as your labours have not yet been concluded in any one department.

I am to state that your observations in respect of the inquiry into the Colonial Architect's Department are noted, and will be referred to Mr. Barnett for any remarks he may wish to make thereon.

I have to transmit to you, in compliance with your request, copy of Mr. Secretary Lyne's minute of the 14th December, and of his last minute, extending, at your request, the scope of the inquiry, remitted to you by him; and I am to state as regards your request to be informed whether you are to conduct the inquiry into the charges brought against certain officers of the Railway Department by Mr. Forsyth, in the Legislative Assembly, that he has to-day only had the papers on the subject before him, and that looking to the serious nature of the accusations, which affect the reputation and character of the officers in question, and embrace a criminal charge of fraudulent practices—charges which have been generalised only, and which Mr. Forsyth, so far, has declined to formulate so as to admit of their investigation—and to the fact that the present constitution of the Commission will not admit of their taking evidence on oath, which the requirement of the case renders indispensable if justice is to be done, he is compelled to say that the inquiry cannot be held by you, unless the charges are formulated, and you are appointed a Royal Commission by the Governor and the Executive Council, with all the powers and responsibilities attaching to a Commission so appointed.

I have, &c.,

JOHN RAE.

Enclosures.—See Minute 14 December, W. J. Lyne, appointing Commission.

The Public Works Inquiry Board to The Secretary for Public Works.

Sir,

90, Pitt-street, Sydney, 10 January, 1887.

In proceeding with our investigation we find that if the Commission is to keep strictly within the four corners of your minute of the 15th December, 1886, it will be impossible to bring the duties required by you to a successful issue, and we therefore request that you will so enlarge the powers as to give us authority to examine all persons and officers connected with the following departments:—Railways, Harbours and Rivers, Roads and Bridges, Colonial Architect, and the department of the Under Secretary for Works, inasmuch as we find that the Construction and Existing Lines Branches of the Railways are so interwoven and dovetailed throughout the whole of that service, that if we limit our inquiries to the departments in and about the head office we will be unable to prosecute our inquiries so as to be a benefit to the Government, as many matters appertaining to the departments under the head office cannot be properly investigated or understood without referring to and examining officers outside of it. Therefore, in order to make a valuable report on the reductions which in our opinion can be effected, we think it will be desirable that you should give us authority to call for and examine any persons and documents connected with the service which in our opinion may be expedient.

We have, &c.,

T. F. WALLER,

J. Y. MILLS,

J. E. F. COYLE.

"WHILE I am desirous of having the result of the inquiry at the earliest date, I am equally anxious that the inquiry shall be as thorough as possible, in order that a complete scheme of retrenchment and if necessary reorganisation may be matured.

"The Commission intimate that under their present instructions the inquiry must to some extent be limited, and in order to enable them to fully carry out my intentions, I desire the extension of the scope of the inquiry, so to embrace persons and officers outside the head office (in other words, generally to inquire into the Railway and Tramway Department) as asked by the Commission, and at the same time to take up the charges raised by Mr. Forsyth, M.P., in his speech in the Legislative Assembly on the 30th September last (copy herewith).

"Although indefinite they demand some inquiry, and as the papers disclose I have requested Mr. Forsyth to formulate specific charges, but without success.

"The extended scope of the present Commission will, however, enable them simultaneously with their examination as to possible retrenchment to inquire into Mr. Forsyth's charges of alleged corruption, and I shall be glad if they do so.—W.J.L.

"Though upon first making his complaint, Mr. Forsyth, I understood, charged the Commissioner with fraud, he subsequently withdrew that charge (for which I must say I do not think there was the least foundation), and his charges therefore were levelled against Messrs. Scott and Braid, and it is these charges I desire the Commission to inquire into. As far as the papers quoted by Mr. Forsyth go, instead of implicating the Commissioner they disclose very straightforward action on his part.—W.J.L., 18/1/87."

The Public Works Inquiry Board to The Under Secretary for Public Works.

Sir,

90 Pitt-street, Sydney, 1 February, 1887.

In accordance with your letter of the 24th ultimo, numbered as per margin, we have now the honor to forward herewith for the information of the Honorable the Minister for Works the following report of the unfinished investigation made by us into the working of the Colonial Architect's Department.

We have, &c.,

T. F. WALLER,

Chairman of Board of Inquiry.

Submitted.—J.R., 2/2/87.

Acknowledge receipt.—J.R., 2/2/87.

[Enclosure.]

[Enclosure.]

## REPORT.

OWING to the difficulty we experienced in procuring information upon many essential points, in some cases stated to be unobtainable and in others promised to be supplied, which promise, however, up to the present has not been redeemed, but in lieu thereof we have received the following letter:—

“Colonial Architect’s Office, Sydney, 31 January, 1887.

“Sir,—In reply to your communication of 29th instant, applying for certain information asked for by your Board, I do myself the honor to inform you that I am unable to furnish the information referred to unless authorized to do so by the Minister for Works.

“I have, &c.,

“JAMES BARNET,

“Colonial Architect.

“Chas. Bernays, Esq., Secretary Public Works Board of Inquiry, 90 Pitt-street, Sydney.”

Owing also to the limited time allowed us in consequence of the pre-emptory stoppage of our investigations by the Hon. John Sutherland, Secretary for Public Works, which prohibited our insisting upon the production of the required information, and which also prohibited our being able to re-examine certain officers, we have found it impossible to give any report suggesting retrenchment. Your large experience will doubtless have shown you that after reading evidence many points will arise making it absolutely necessary that witnesses should in some cases be re-examined and proof procured to substantiate statements.

To illustrate the difficulty under which we labour, rendering it impossible for us to make a report other than an outline or *résumé* of what has come under our notice, the following important points, upon which information is required and has not been obtained, will suffice to explain:

Information regarding the following being required:—

- (a) Work now in the hands of each individual officer relating to buildings in progress and plans in course of preparation for authorized works, showing amounts authorized to be expended and probable estimated cost of buildings.

This information was necessary owing to the disconnected accounts given by some officers who were examined as to the work they were really engaged on. The Commission experienced great difficulty in ascertaining this fact, the officers themselves not appearing very clear on the subject, and in some cases mixing up work already completed with work to be completed, and likewise taking credit for work which, to some extent, at least, had been undertaken by others.

- (b) All works now under the control of clerks and foremen of works in the city and suburbs, giving particulars and description of such works, with their value, showing how often they were visited by the clerks and whether these were regular inspectors.
- (c) Production of official diaries of clerks and foremen of works.
- (d) City and suburban works in charge of non-resident foreman, giving the number and value of buildings under each and distance apart; also showing the number and value of works on which foremen are permanently stationed.
- (e) Plan of divisional districts under clerks and foremen of works, giving names of officers in charge, showing where buildings are being erected, description and value of same, and travelling distances between such works.
- (f) Information regarding all court-houses, gaols, and police barracks completed and partly completed during the past five years, with particulars in detail of the different structures and values; such as foundations, whether in concrete, rubble masonry block in course or ashlar and superstructure, whether of brick, stone, or concrete; and whether of one or two stories.
- (g) Particulars of the new gaol, land office, post office and telegraph office at Albury.
- (h) Particulars as to requirements by the Colonial Architect for new buildings, repairs, and alterations for 1887, specifying what buildings the money was required for. This information was furnished by the late Minister for Works, but recalled by the Works Department.
- (i) Information regarding all buildings and parks, the lighting of which comes under the control of the Colonial Architect; as also some information regarding the time occupied by the department in corresponding and arranging for the cleaning of privies, sweeping of chimneys, cleaning of windows, ordering of coffins, &c., throughout the Colony, so as to enable the Commission to judge as to the actual cost to the department of undertaking such works and to offer suggestions as to the simplification and economical performance of them in the future, as these duties appear to improperly devolve upon the Colonial Architect who complains, and we think justly, of their being forced upon his office. Such miscellaneous services cost about £40,000 a year; and in a great measure comprises petty jobs in the outlying districts, the authorising, certifying, and paying for which has to pass through the Colonial Architect’s Department.
- (j) Particulars of repairs and cleaning done to the Military quarters, to enable the Commission to ascertain whether a large portion of this work might not be carried out under the Military authorities and some of it performed by the soldiers themselves.
- (k) Particulars of what ought to constitute the furniture and the value of a properly fitted Court-house, land office, survey office, post office and telegraph office in the country, this information to apply only to the ordinary run of such offices and thus enable the Commission to determine whether the constant requisitions for additional furniture and fittings could not be obviated.
- (l) To obtain from the Colonial Architect a copy of his list, showing various prices charged and discount allowed for furniture since 1880, in order that the Commission may determine whether the schedules of prices, with discounts allowed, are in accord with present market values.
- (m) A statement showing the designs prepared for buildings during the past six years which have not been carried out, with the estimated cost of such buildings.
- (n) A statement showing the yearly estimates for new buildings, repairs, and furniture since 1880.

(o)

- (o) Particulars as to the amount paid for furniture, exclusive of fittings, since 1880, apportioning to the different departments the amounts incurred by each, to enable the Commission to suggest a plan whereby the Colonial Architect would be relieved of this onerous duty, a suggestion which, if carried into effect, would it is deemed, bring into competition many furniture-makers who under the present system do not compete for the work.

The result of our investigations has led us to believe that a proper and exhaustive examination of the Colonial Architect's Department would result in suggestions that that Department should be considerably curtailed, if not altogether done away with, the more so as competitive designs for buildings over (say) £7,000 even now can be obtained without cost to Government, excepting for premiums to be paid for those selected; and we feel certain that not only would a saving be effected, but an advantage in every way would accrue to the State were competitive designs to be called for all Government buildings, notice being given as to the amount available for such, and the designs submitted to an independent board of architects to select the most suitable. But should the department be required, it ought, we think, to be completely reorganized, and should undertake the architectural work required for all public buildings of every description, in which case there would not be as there now are two other architectural departments in the Railway Service, and one in the Education Department, when, in point of fact, if an architectural department is required at all, one ought to suffice. We are further of opinion that much money would be saved if the architects preparing designs for public buildings had more practical knowledge of the requirements, and were not permitted to so freely exercise their artistic ideas, resulting in many cases in expensive and ill-adapted buildings requiring alterations and additions to make them suitable for the purposes for which they were originally designed; and we also think that, in all cases before designs are prepared, the architect ought to be clearly advised of the actual requirements of the building, and the amount to be expended upon it, and that he should keep within that amount.

The advantage of such a system would be, that if the requirements rendered it impossible for a building to be designed for the amount available, the Minister being acquainted with the facts could decide whether he would authorize the amount the architect might state would be absolutely required. If he declined then no loss of time or money would ensue, which is not the case now, as many designs are commenced and finished, the estimated cost of which proving so much in excess of the intended outlay, and rendering it necessary either to abandon the erection of the building, or else to carry out works at a cost, reckless of whether the requirements of the place authorize the expenditure or not. (*Vide* Balmain Court-house, Newtown Court-house, Young Court-house, Goulburn Court-house, Bathurst Gaol, Glen Innes Gaol, &c., &c.)

Alterations and additions to buildings, likewise, require more careful looking into before being commenced; for example, plans for the proposed additions to the present Treasury building, amounting to about £70,000, which appears to us to be far too great a sum to expend in additions and alterations to an old building, the more so as more than sufficient accommodation could be obtained for the Treasury Department by completing the Lands Office, to say nothing of the various other departments which could be accommodated therein, and for which offices are now rented at exorbitant rates, besides having the further advantage of leaving the Government a valuable asset in the shape of the present Treasury buildings and site. The combining of the Lands Office and Treasury under one roof, we believe, has proved elsewhere a direct public benefit.

Customs House additions and alterations to cost £45,000, including the new wings and an additional story on the old building, which, however, on examination after completion of the wings proved to be totally unfitted to support another story. Consequently the old building has to be pulled down and a new one erected in its place. This will bring the total cost, we are informed, up to £62,000. We are also of opinion that a better building could have been erected from start to finish for much less money than that expended on this patchwork arrangement. Be that as it may, surely proper investigation before the commencement of the expenditure would have shown that the old building was not worth adding to and unfitted to carry an upper story.

Free Public Library: The cost of additions and alterations also appear excessive, as they will amount, when completed, to £25,000, which is now being expended on additions to an old building remarkable only for an entire absence of beauty and convenience.

While on this subject we may state that it has been intimated to us by the Colonial Architect that another cause, which goes to explain the apparently excessive sums expended on public buildings, is owing to the fact that bad sites are sold to Government, and that in many cases it would be far cheaper to buy others than to attempt to add on to old buildings, or adapt new buildings to such unsuitable sites. (*Vide* Newtown Court-house, North Shore Post and Telegraph Office, Police Barracks, Court-house, &c.)

In drawing attention to the fact that buildings were seldom or ever completed for the estimated cost, and that much money was expended in making alterations, we were told that this arose from many persons being allowed to have a voice in the designs, and who were incapable of understanding them; consequently, when the buildings were completed the arrangements were often condemned, requiring, therefore, all sorts of alterations to be made.

As an example of the ignorance or carelessness displayed as to the probable amount available for a building, and the mistake which is made in allowing architects free rein to their fancies, we may state that the design prepared for an Art Gallery, Technological Museum, &c., proposed to be erected on the site of the Colonial Architect's offices, was estimated to cost the modest sum of £1,000,000 sterling; but this statement the witness subsequently wished to amend, saying that the Colonial Architect informed him that he was wrong, and that the amount was only £400,000.

Supervision of buildings, or to speak more properly, the inadequate supervision of the erection of valuable buildings is, we find from evidence, a fact, and that several valuable buildings are in the course of erection, and under the supervision of one clerk of works or foreman only, who has not only to supervise these works but also to attend to his official duties. What may be the value of such supervision, or how it can possibly prevent scamping or slumming by contractors if so inclined, is a matter upon which we do not think there can be two opinions, but we think it our duty to strongly enter our protest against the continuance of such a loose system of guarding the public interest. When it is borne in mind that these structures are of brick and cement, or stone and cement, or concrete, how is it possible for a clerk of works or foreman, who is not continually on the spot, to be able to know what class of cement, mortar, or concrete is used, or what the character of the work is that is covered? The

absence

absence of official diaries being kept by these gentlemen also prevents the exercising of proper supervision over them by the head of the department. When we mention that at the present time several buildings are under the supervision of one foreman of works, the value of which run from £3,000 to about £50,000, and upon none of which is there a resident Clerk of Works or Inspector; indeed, so unnecessary does this close inspection appear to be in the eyes of the Colonial Architect, that the supervision of such an important building as the General Post Office was placed under a Foreman of Works who had also to supervise other valuable buildings at the same time. These remarks also apply to the supervision, or rather non-supervision, of buildings in the country districts, where the difficulty of proper oversight is augmented owing to the distance in some cases of hundreds of miles between the buildings.

The Medical School at the Sydney University, a building costing £48,000, is visited by a Clerk of Works three times a week, and is under the immediate charge of a young gentleman of 19, who also supervises the erection of some costly buildings on Spectacle Island; but in reality whose time is chiefly occupied, not in supervision, but in preparing detailed drawings for the contractor and clerical work. Even this supervision, valueless as it is for all practical purposes, is rendered still more so by the fact that although the work commences at 7 o'clock in the morning this officer does not go upon the site of the work until 9 o'clock.

Actual cost of preparing plans of buildings is a subject upon which we cannot give much information, not having examined the Clerical Branch of the Colonial Architect's Department; but we are satisfied, from the absence of books in the architectural branches, that it would be impossible to obtain correct information, and therefore that the statement by the Colonial Architect as to the cost in his department of preparing plans based on no proper data is unreliable. Much time is occupied in this department by drawing plans on every conceivable subject, such as chairs, tables, wardrobes, presses, picket fencing, pigeon-holes, and window-shutters, and of the most trivial repairs, for which, in private business, plans would be deemed quite unnecessary, but the drawings of which have the doubtful advantage of occupying time and keeping a staff engaged, which, if competent, would be far better employed in the inspection of works under contract costing several hundred thousands of pounds per annum. While on this point of superfluous and unnecessary work, we may state that had we been permitted to continue our investigations we would, we think, have been able to suggest the means of withdrawing from the Colonial Architect's Department a large amount of work now improperly devolving upon it, and consequently increasing the staff, and which work ought in most cases to be performed under the head of the department requiring such services, and who ought, in our opinion, to be quite as trustworthy and competent to carry out such work as an officer in the Colonial Architect's Department. That no advantage to the State in the way of economy or otherwise is gained by making the Colonial Architect perform the duties referred to is evident, as it is impossible for him to exercise close supervision in matters over which he has no control. For example, at times of general elections he receives instructions to provide and distribute throughout the Colony a large number of ballot-boxes, valued from £1 17s. to £2 4s. each, exclusive of cost of carriage to the places where required, a no inconsiderable item, numbers of these being never heard of again; and the same operation has to be gone through at every succeeding election.

The furniture supplied in many cases we consider to be of too expensive a character, but whether the quality is equal to the price we are hardly in a position to state, further than, to judge from the appearance of the furniture in the Public Works Office and new Lands Office in Sydney, we do not think it deserves the high eulogium passed upon it by the officer under whose particular supervision it is made, or that it will last anything approaching the period allowed to it, namely, fifty years.

With reference to the request made by the Minister, that we should, in our Report, furnish him with information that would enable him, when preparing his estimates, to retrench, we regret that it is impossible for us to do so in the face of our investigations having been abruptly quashed, and all evidence as to the probable requirements for the Colonial Architect's Department for expenditure upon the erection and completion of new buildings, additions, alterations, and repairs to old, having been either refused, or, if supplied, demanded back by the Works Department.

In concluding this Report, we wish it to be understood that in undertaking this Commission our only desire was to honestly and fairly carry out our investigations without fear or favour, to show the inner workings of the Departments as they really exist, to discover and disclose abuses, if any, and to submit suggestions as to the best means of carrying out the public business of the Colony in a simple and economical manner.

1/2/87.

T. F. WALLER,  
Chairman.

P.S.—Referring to the statement made by the Colonial Architect that, owing to the returns we required that he should furnish to us, he would have to upset the whole department, and occupy the entire staff for some months, to the detriment of the public business; in reply, we desire to state that had the Colonial Architect kept books such as any business man would keep the information asked for by us would have been at once available. We at the time only asked for information regarding the cost of some gaols and court-houses erected during the past five years; and we think that if the Colonial Architect kept proper books such information would be obtained in a few minutes. For example, if a book similar to that kept in the Public Works Department which gives an abstract of the percentage of cost of each item in railway construction, had been kept by the Colonial Architect in reference to his buildings, all the information required would have at once been at hand.—T.F.W., 1/2/87.

The Under Secretary for Public Works to The Public Works Inquiry Board.

Sir,

Department of Public Works, Sydney, 2 February, 1887.

I am directed to acknowledge the receipt of the report of the unfinished investigation made by the late Commission of Inquiry into the working of the Colonial Architect's Department, forwarded under cover of your letter of the 1st instant.

I have, &c.,

JOHN RAE.

## The Chairman Public Works Inquiry Board to The Secretary for Public Works.

Sir,

90 Pitt-street, Sydney, 1 February, 1887.

Having concluded our report on the Colonial Architect's Office, which we forwarded this day, we are now engaged in reviewing the evidence of the various officers in the railway branches of the Works Department investigated by us, and we will as speedily as possible forward you a complete copy of the evidence, with any remarks which we may deem necessary to make thereon.

In the meantime we shall be glad to learn whether it is your desire that we shall make arrangements with the Government Printer for printing the evidence in the usual way.

I have, &amp;c.,

T. F. WALLER,

Chairman of Board of Inquiry.

Acknowledge receipt, and state that on receipt of the evidence in manuscript the Government will decide as to the advisability of printing it.—J.S., 2/2/87.

## The Under Secretary for Public Works to The Chairman Public Works Inquiry Board.

Sir,

Department of Public Works, Sydney, 2 February, 1887.

I am directed to acknowledge the receipt of your letter of the 1st instant, intimating that the late Commission had concluded their report, and to inform you that upon receipt of the evidence in manuscript the Government will decide as to the advisability of printing it.

I have, &amp;c.,

JOHN RAE.

## The Chairman Public Works Inquiry Board to The Under Secretary for Public Works.

Sir,

90, Pitt-street, Sydney, 9 February, 1887.

Referring to our progress report published in the papers on the 17th ultimo, at the request of the late Minister for Works, I handed both the original and press copy to him, which he gave to the papers. On applying to them for either the original or press copy, I was informed that the press copy had unfortunately been destroyed and the original had been returned to your office. Will you favour me with the original in order that I may make a copy of it, and compare it with the report as printed by the papers. The Commission had no opportunity from the time the rough draft was handed to the transcribers to correct errors which may have occurred.

I have, &amp;c.,

T. F. WALLER, Chairman.

Submitted.—J.R., 10/2/87.

Forward certified copy of original report.—J.S., 11/2/87.

## The Under Secretary for Public Works to The Chairman Public Works Inquiry Board.

Sir,

Department of Public Works, Sydney, 14 February, 1887.

In reply to your letter of the 9th instant, I am directed to transmit herewith a certified copy of your Commission's Progress Report on the Railway Branch of this department.

I have, &amp;c.,

JOHN RAE.

The Secretary Public Works Inquiry Board to The Under Secretary for Public Works.

Sir,  
Strathspey House, 187 Macquarie-street, Sydney, 3 February, 1887.  
I have the honor to acknowledge your letter of the 31st January in which you are directed by the honorable the Minister for Works to express his regret that he cannot entertain my claim for "compensation." In appealing once more to the honorable the Minister I beg most respectfully to point out that my letter of 29th January contained no reference whatever to "compensation," but I asked for favourable consideration of an application for two months' salary in view of the fact that, with ministerial authority, I had been offered and had accepted what was practically a two months' engagement.

I cannot help thinking that there must be some misconception as to the application I have made, as I cannot conceive it possible that the Minister would refuse to recognise a liability, although only a small one, contracted on behalf of the Government by authorised persons and with the approval of the late Minister.

I beg, therefore, that you will once more place this matter fairly before the Minister for Works and request for me a reconsideration of the decision he has given.

In view of the labours of the Board of Inquiry shortly coming to an end—after they complete and forward the evidence together with their report, upon which work I am still occupied with them in my capacity as Secretary—I should be glad if you would inform me whether payment will be made for the two months' engagement previously mentioned.

It is of course understood that my services are at the disposal of the Government until the expiration of the two months.

I have, &c.,

CHARLES A. BERNAYS,  
Secretary, Public Works Board of Inquiry.

Submitted.—J.R., 4/2/87. Request Mr. Bernays to state by whom he was appointed and on what terms. Mr. Sutherland has no wish to avoid the payment for work legitimately incurred.—J.R., 7/2/87.

The Under Secretary for Public Works to The Secretary Public Works Inquiry Board.

Sir,  
Department of Public Works, Sydney, 8 February, 1887.  
In reply to your letter of the 3rd instant in further reference to your application for the payment for a period of two months of the salary attached to the office of Secretary to the Board of Inquiry into this Department, I am directed to request that you will be good enough to furnish me with all the particulars connected with your engagement as there are no papers in this office upon which your claim can in any way be based.

I have, &c.,

JOHN RAE.

The Secretary Public Works Inquiry Board to The Under Secretary for Public Works.

Sir,  
90 Pitt-street, Sydney, 11 February, 1887.  
I have the honor to acknowledge your letter of the 8th instant, and in compliance with the request contained in it I now enclose copies of all papers in my possession which in any way bear upon the claim I have made for two months' salary as Secretary to the Public Works Board of Inquiry. It is with great satisfaction I enclose copy of Mr. Robinson's letter of January 3rd, which, until this morning, I had been unable to find. You will observe that this letter bears out my assertion that no definite assurance was given as to the length of the engagement, but I think the previous part of the letter will show what induced me to accept the offer.

Upon this letter I rest my claim and ask for favourable consideration, and with the utmost confidence I now leave the matter in the hands of the honorable the Minister for Works.

I have, &c.,

CHARLES A. BERNAYS.

Submitted.—15/2/87. As Mr. Robinson could give no definite assurance as to the duration of Mr. Bernays' engagement I think he should be paid for the work actually performed.—J.S., 17/2/87.

[Enclosures.]

The Principal Shorthand-writer to C. A. Bernays, Esq., Shorthand-writer, Brisbane.

Dear Sir,

Sydney 3, January, 1887.

I understand that it is your intention to spend your recess in Sydney, and I therefore write to inquire whether, if so it would be convenient for you to take the secretaryship of a Commission for which I am acting; but which I shall relinquish about the 15th January. It is my present impression that there will be at least two months' work after that, but that is a point upon which I could give you no definite assurance.

Your duties would be almost exclusively confined to taking shorthand notes during the day and dictating them and revising transcription at night. The work so far has been heavy, say ten or twelve hours per diem for five days a week.

I am doing the work without any terms as to pay and do not expect to receive anything, but I believe that I could obtain remuneration for you at the rate of £3 3s. per diem.

Kindly let me have an answer by return post.

Yours truly,

CHAS. ROBINSON.

Telegrams from C. Robinson, Esq., to C. A. Bernays, Esq., Shorthand-writer, Brisbane.

7/1/87.

Will try and settle matter this morning; will wire to-day.

CHAS. ROBINSON,

Principal Shorthand-writer.

HAVE

7/1/87.

HAVE arranged that you take my place. Come down as soon as possible.

Telegram from C. A. Bernays, Esq., Shorthand-writer, Brisbane, to C. Robinson, Esq.

E/1/87.

\*THANK you. Will suit me well. Letter written, but will you wire.

\*This telegram is written from memory, but is believed to be correct.

In reply to  
letter of 3rd  
January

Chas. Robinson, Esq., to The Under Secretary for Public Works.

Sir,

7 January, 1887.

In view of the approaching meeting of Parliament I shall be compelled to relinquish the work of the Commission of Inquiry into the Public Works Department.

In the absence of the Honorable the Minister for Works from Sydney, I have, under the direction of the Commissioners, arranged with Mr. Charles A. Bernays to take up the duties which I have been attending to. I may mention that the shorthand-writing and secretarial service required is extremely arduous, having occupied my time about fourteen hours a day; but the arrangement with Mr. Bernays is that he shall do the work for the ordinary fees, namely, three guineas per diem.

I have, &amp;c.,

CHAS. ROBINSON.

The Under Secretary for Public Works to Chas. Robinson, Esq.

Sir,

Department of Public Works, Sydney, 14 January, 1887.

I am directed to inform you that the Secretary for Public Works has approved of the acceptance of your resignation as Secretary of the Commission appointed to inquire into the working of this department, as requested in your letter of the 7th instant.

I have, &amp;c.,

JOHN RAE.

The Under Secretary for Public Works to The Secretary Public Works Inquiry Board.

Sir,

Department of Public Works, Sydney, 18 February, 1887.

In reply to your letter of the 11th instant, further respecting the payment of two months' salary as Secretary to the Commission appointed to inquire into the working of this department, I am directed to inform you that as no definite assurance was given as to the duration of your engagement, no payments can be made for other than work actually performed.

I have, &amp;c.,

JOHN RAE.

The Under Secretary for Public Works to The Chairman Public Works Inquiry Board.

Sir,

Department of Public Works, Sydney, 18 February, 1887.

Referring to your letter of the 1st instant, I am directed to request that you will furnish me as soon as possible with the final report of your Commission on the working of this department.

I have, &amp;c.,

JOHN RAE.

The Chairman Public Works Inquiry Board to the Under Secretary for Public Works.

Sir,

90 Pitt-street, Sydney, 22 February, 1887.

I have the honor to acknowledge your favour of the 18th instant, and in reply to state that the transcription and copying of the evidence will be finished, I trust, to-day or to-morrow, when it will be forwarded to you. The final report on same will also be forwarded with the least possible delay. The evidence being very bulky will, you will see, have occupied much time in perusal, checking, and transcribing.

I have, &amp;c.,

T. F. WALLER.

Submitted.—J.R., 22/2/87.

The Chairman Public Works Inquiry Board to The Under Secretary for Public Works.

Sir,

90 Pitt-street, Sydney, 23 February, 1887.

In accordance with my letter of yesterday I have the pleasure now herewith to send you original copy, together with index of the evidence taken by the Commission, amounting to in all 811 pages. I have not had a fair copy made, presuming that the Minister would prefer having the original.

The final report of the Commission will be forwarded to you with as little delay as possible.

I have, &amp;c.,

T. F. WALLER.

Submitted.—J.R., 23/2/87.

Memo.

## Memo. respecting Report of Public Works Commissioners— Colonial Architect's Department.

With reference to the accompanying report on my Department, forwarded to me under B.C. on 11th instant, for any remarks, &c., I do myself the honor to state that on 15th December last I received a copy of a minute prepared by the late Minister for Works (Mr. Lync) notifying that he had appointed a Commission for enquiring into the several branches of the Public Works Department, with the view of retrenchment, by reducing the number of hands employed, &c., &c., the parties named to carry out the investigation being Mr. J. Y. Mills and Mr. T. F. Waller; by a subsequent communication I was informed Mr. Coyle had been added to the list. On the morning of the 17th January these gentlemen, without previous intimation, presented themselves at my office, accompanied by a shorthand-writer. On being seated they commenced to question me on several matters. I replied to their questions, explained and gave my opinions as to the subjects touched upon, &c. On their leaving I furnished them with some printed annual returns of expenditure, a list of officers of the Department, and a plan showing position of the different offices, at the same time offering my assistance in going through the other rooms, which they declined, but shook hands, saying they would not further trouble me, and took their departure for the office of the First Clerk of Works.

This officer being absent on leave, his room is occupied by one of the draftsmen, who, with other brother officers—according to Regulations in such cases—were attending to the duties of the First Clerk of Works. The officer in charge of the room they examined chiefly regarding the public buildings in Albury, viz. :—Gaol, police buildings, post office, telegraph office, and survey office, as to estimated cost, actual cost, materials used, and class of work specified and executed, where the stone used was obtained, and the cost of foundations from top of basecourse to bottom of footings, this information being required for each of the buildings named, and as most of them were built many years back, and not under the supervision of the officer interrogated, it was impossible for him to furnish the information asked for without reference to office books and records, and making the necessary calculations as to cost of foundations. He therefore suggested to the Commissioners reference to the Colonial Architect in the matter. Having ascertained what they required, I telegraphed to the local Foreman of Works at Albury, then at Wagga Wagga, to come on immediately to Sydney. On his arrival, after travelling all Sunday, I instructed him and the before-named officer to at once collect all the particulars, and have a copy made for the Commissioners, which was being done the last day they were in the office. After leaving the officer referred to, they went to the rooms of five clerks of works, a foreman of works, and the chief clerk, for the purpose of proceeding with their investigations.

In meantime, on 21st January, I received three letters from the Commissioners, asking to be furnished with the following information, viz. :—

List of the number of Court-houses in the Colony, showing where situated, and total cost of each, also the population of the places where these Court-houses are, also a list showing what buildings and lamps outside have to be lighted by the Department, and where situated, also a Statement showing the value of furniture during the last five years, and for what Departments, together with schedule prices for each year during that period. Letter No. 1.

A Statement, showing my Estimates for the last five years, and the amounts granted, also stating how much in each year of the sums voted were for new buildings, how much for additions and alterations, how much for repairs, and how much for furniture, also stating out of what Votes the sums so granted came. Letter No. 2.

To furnish names of the gentlemen supervising the different districts, and who occupy the positions of assistant architects or foremen of works, giving the number of the different buildings now under their supervision, and the value of each. Letter No. 3

Subsequently a further communication was received, asking when the information applied for by these letters would be ready, and in addition for details of the Court-house and Post and Telegraph Office, North Shore, but as the getting up of all this information would involve much labour and time, and considerably interfere with the current work of the office, I considered the preparation of such statements, &c., should not be undertaken without reference to the Minister for Works, to whom I forwarded these communications for his instructions and authority—more particularly as I had by this time seen in the newspapers the report of the Commissioners on the Railway Department, in which was inserted a paragraph showing these gentlemen had already passed an unfavourable and damaging verdict upon my Department, although they had not visited an office belonging to it.

Having now stated the part taken by the Commissioners while investigating my Department, the whole time occupied by these gentlemen being about twenty-three hours, with exception of one of the Members, who was not always present, I desire to make some remarks upon the more definite statements in their Report, which, it may be noticed, is of a general depreciatory tone throughout.

Every

Every information was furnished to the Commissioners, as far as it could be done, verbally or otherwise, while they were in the offices, of all their enquiries being answered as fully as possible; no difficulty was therefore thrown in their way, as inferred at the commencement and other portions of their Report.

With regard to the belief of the Commissioners, that a proper and exhaustive examination of the Colonial Architect's Department would result in suggestions that the Department should be considerably curtailed, if not altogether done away with, they do not suggest any means for the preservation or maintenance in repair of the 1,300 or more public buildings, ranging in value from a few hundred pounds to say a quarter of a million and upwards, spread throughout the entire area of the Colony—or for carrying on the numerous works in progress; and again, their suggestions that competitive designs for public buildings could be obtained by the Government at a cost only for premiums, shows an absence of knowledge in such matters, no mention being made of how the work is to be carried out, the architect's commission, salaries to clerks of works, travelling, clerical, and other expenses—besides it has been found that work carried out in this irresponsible way, and by private architects, has proved the reverse of economical. The Art Gallery in the Domain, and the Macleay Museum at the University, may be quoted as instances, in both cases the buildings far exceeding the money originally voted. The latter building I understand had no special officer to supervise the work, which I think can hardly meet the views of the Commissioners, as expressed in portions of their report, giving extreme opinions on supervision of works. The same, I believe, may be said with regard to public schools erected by private architects, but as no special votes, like in my Department are taken for these buildings, which are paid for I understand out of a lump sum, I am unable to compare their cost with the amounts appropriated for them in similar cases. Again, this suggestion of the Commissioners has been tried elsewhere and abandoned, the system adopted here is similar to that of other Colonies, England, and United States, and with satisfactory results.

With regard to the opinion of the Board, that much money would be saved if the architect's preparing plans had more practical knowledge of the requirements, &c., &c., I would state that previous to preparing plans, which is done under Ministerial authority, the head of the Department for which the building is required furnishes the particulars of the accommodation considered necessary. This will apply to the buildings quoted by the Commissioners, viz.:—Balmain Court-house, Newtown Court-house, Goulburn Court-house, Young Court-house, Bathurst Gaol, Glen Innes Gaol, &c., &c. The plans for all of which were, as usual in all cases, submitted to and approved by the Minister—therefore, should alterations or additions be afterwards considered necessary, it is not the fault of the architect.

In respect to the Custom-house additions and alterations, dwelt upon by the Commissioners, I would state that a new Shipping Office, &c., was proposed in the first instance, for which plans were prepared and a vote taken, but the then Treasurer determined that instead of erecting a new building, additions to the Custom-house, providing for the Shipping and other Departments, should be made; and as the condition of the internal foundations and walls could not be ascertained until they were all opened up, this could not be done while the building was occupied. With regard to the cost of the Free Library additions—about £25,000—alluded to by the Commissioners as apparently excessive, &c., this work is being done in accordance with the request of the Trustees, under authority of the late Minister for Public Instruction, and has been publicly tendered for, which is a fair way of testing its value.

The allusion in the report to an error which was inadvertently made by one of my officers as to the estimated cost for Art Gallery, Technological Museum, Lecture Hall, &c., proposed to be erected some years ago, while being questioned and exhibiting plans of foundations for that building, needs no comment; and as this officer afterwards corrected the error, it appears scarcely necessary that attention should have been called to it.

In reference to the paragraph respecting supervision of buildings, or, as the Commissioners are pleased to term it, the inadequate supervision, &c., I may state that the Colonial Architect is responsible for all works under his charge, and is supposed to use his own judgment as to the supervision necessary to ensure faithful and sound work, and is guided by the nature of the contract and the contractors he has to deal with. The particular case alluded to—that of the Foreman of Works over the Post-office extension having as well to supervise other valuable buildings, viz., Custom-house additions, and the new Fire Brigade Station—it will be sufficient for me to say that the Post-office is nearly completed, the Custom-house is far advanced, and the Fire Brigade Station has only recently been commenced; also, that no work which will be out of sight, such as foundations, &c., is ever carried out without strict and constant supervision. When the work is above ground there is not so much need, as all practical men know, for this constant attention, as any one of experience in such matters can without difficulty detect inferior work or materials; and in cases where such is provided the contractor has to pull down the work and remove the condemned materials from the site. I would also state that inspections are made frequently by clerks and foremen of works, and periodically by Colonial Architect.

The

The Medical School at the University is another building which the Commissioners consider to be much neglected, being visited by a Clerk of Works only three times a week, and under the immediate supervision of a young gentleman of 19, who also supervises the erection of costly buildings at Spectacle Island, &c., &c., the buildings referred to being in an advanced state, the same observations will apply as those made in regard to the Post-office, &c. Respecting the young gentleman alluded to, I need only say that he has had about five years practical experience, is on the work when the workmen commence, not 9 o'clock, as stated by the Commissioners, and is quite competent for the performance of the duties entrusted to him. He has, moreover, passed successfully an examination by the Technical College for masonry. Further, respecting this young gentleman's time being so much occupied in making detail drawings, &c., I would state that the draftsman employed in preparing drawings required for this building died very suddenly, and as the late Minister for Works (Mr. Lyne) would not approve of my recommendation for the appointment of another officer to fill the vacancy, it, therefore, necessitated the drawings being made by the officer referred to while on the works. I may also state with respect to alleged neglect in supervision of buildings, that the buildings erected during the time I have been Colonial Architect, about twenty-six years, will stand the test of practical men, as to the quality of the work and materials used in their construction.

Actual cost of preparing plans, &c., &c. As this is a subject the Commissioners state they cannot give much information upon, not having examined the clerical staff, yet are quite satisfied to dwell upon it in unfavourable terms, it does not perhaps require notice.

In regard to reference made as to the absence of official diaries being kept by my officers, I may state that they render weekly reports on all works, also monthly measurements and valuations, which are found sufficient for all purposes.

Ballot-boxes and numbers of them being never heard of again as stated in the report. This is a matter which concerns the Department in charge of electoral business.

I think it hardly necessary for me to make any further remarks upon this report, which indicates a want of experience and knowledge of the subjects dwelt upon, pointing rather to considerably and unnecessarily increase the cost of the Department, more especially with respect to the inferred necessity of having resident officers on all buildings in progress, instead of effecting any retrenchment, in number of hands, &c., as set forth in Mr. Lyne's minute.

As to the postscript referring to a "statement made by the Colonial Architect, that owing to the returns required by the Commissioners, he would have to upset the whole Department and occupy the staff for some months, to the detriment of the public business," this is incorrect, as the Colonial Architect made no such statement.

Colonial Architect's Office,  
Sydney, 24th February, 1887.

JAMES BARNET,  
Colonial Architect.

### The Chairman of Public Works Board of Inquiry to The Under Secretary for Public Works.

Sir, 90, Pitt-street, Sydney, 1 March, 1887.

As we understand that instructions have been given to print the Reports of the Commission, as also the evidence, we attach herewith corrected copy of the printed statement from the *Sydney Morning Herald* of the 17th January, regarding the retrenchment proposed in the Construction and Existing Lines Branch of the Railways.

We regret to see that so many clerical errors have crept in, whether in the printing or in the transcribing we are unable to state, inasmuch as the original Report, together with the Press copy, were obtained from us immediately they were written, and consequently before we had an opportunity of checking the figures.

Will you therefore be good enough to substitute the attached for any copy that may have been handed to the Government Printer, and also kindly instruct him to submit proofs to us of all the Reports and evidence as he prints them, in order that we may correct any errors that may occur.

I have, &c.,  
T. F. WALLER,  
Chairman of Public Works Commission.

The Chairman of Public Works Board of Inquiry to The Under Secretary for  
Public Works.

Sir, 90 Pitt-street, Sydney, 9 March, 1887.  
Referring to our Progress Report of the 17th January, we have now the honor to tender herewith our final Report in regard to those Departments investigated by us.  
We have, &c.,  
T. F. WALLER, Chairman.

Submitted, 9/3/87.—J.R. Let the whole be printed, but send me the Report as soon as possible.  
—J.S., 9/3/87.

The Chairman of Public Works Board of Inquiry to The Under Secretary for  
Public Works.

Dear Sir, 90 Pitt-street, Sydney, 15 March, 1887.  
As private business makes it necessary that I should visit the old country at once, I have made arrangements for leaving by the P. & O. Co.'s s.s. "Ballarat" on the 13th proximo. I will therefore esteem it a favor if you would ask the Honorable the Minister for Works if he would kindly authorise the payment of the fees due to the late Public Works Commission of Inquiry out of the Advance fund, so that I may be able to wind up my affairs previous to leaving.

I am, &c.,  
T. F. WALLER.

The Under Secretary for Public Works to The Chairman of Public Works  
Board of Inquiry.

Sir, Department of Public Works, Sydney, 18 March, 1887.  
In reply to your letter of the 15th instant, requesting the payment of fees due to the late Public Works Commission of Inquiry, I am directed to request that you will furnish me with a detailed statement of the dates and number of days you were employed, and also the charge as sanctioned by the late Secretary for Public Works, Mr. Lyne.

I have, &c.,  
JOHN RAE.

The Chairman of Public Works Board of Inquiry to The Under Secretary for  
Public Works.

Sir, 90, Pitt-street, 21 March, 1887.  
In reply to your letter of the 18th instant, numbered as per margin, I have the honor to state that the date of the appointment of the late Public Works Commission of Inquiry was the 15th December last, and that between that date and the date upon which the final Report of the Commission was furnished to you that is to say, the 9th instant, the Commission was engaged for seventy-one days.  
In reply to your second query, I may state that the remuneration fixed by the late Minister for Public Works was £6 0s. per day.

I have, &c.,  
T. F. WALLER.

FINAL REPORT from the Commissioners appointed by the Honorable W. J. Lyne, late Minister for Works, to inquire into the condition of the Department of Public Works.

---

HARBOURS, RIVERS, ROADS, AND BRIDGES.

Not having had an opportunity of examining these departments of the Civil Service we can only repeat what we said in our Progress Report of the 17th January:

Looking broadly at the urgency of the question of retrenchment in the Public Service, we are of opinion that, as far as the departments we have referred to (other than the Railways) are concerned, they can only be properly dealt with by legislation; in other words, by the passing of a comprehensive measure of Local Government, with assured finance; the creating of Harbour Trusts, which would take over the present Department of Harbours and Rivers, retaining such officers as required, relieving the Government of all responsibility and expense further than the naming in London of a consulting marine engineer of high standing, for the purpose of advising the Government upon any proposed scheme of harbour improvement submitted by the trusts.

As regards all municipal bodies upon them we think should devolve the carrying out of water supply and sewerage. Building of bridges and making of roads and other local works now performed by Government, under the heading of roads and bridges, we would in the same way hand over to local bodies, such as shire councils and road boards, and thus get rid of two enormous, ever-increasing and unprofitable branches of the Public Service.

And again impress on the Government the advisability of instituting with the least possible delay a system of Local Government. In dealing with such questions as arise in considering the position of these departments the difficulty meeting us at the outset is, that in the event of their abolition how will the important functions now discharged by them be performed? We naturally look elsewhere to ascertain in what manner this difficulty has been met, and we find that in other Colonies measures of Local Government obtain of a more or less comprehensive character. And on the local authorities devolve the duty of carrying out works performed by Government here, the experience being that as a large portion of all such expenditure is borne by the local bodies they can be depended on to guard against extravagance and to adjust their requirements to their means.

We think this explanation necessary as it may be deemed that in suggesting legislation we are exceeding the limits of the Commission entrusted to us.

COLONIAL ARCHITECT'S DEPARTMENT.

We think the evidence will bear out the propriety of our remarks regarding the want of proper supervision and the unnecessarily large and expensive public buildings. We desire to draw attention to the following illustrations of what we consider unnecessary expenditure:—

*Newtown Court-house.*

A personal visit to and inspection of this unsightly building disclosed the fact that the work is of an unsatisfactory character: walls discoloured and mildewed, loose sand running out from behind the architraves which is, we are informed, a matter of daily occurrence. This building occupies a large area, and has an imposing flight of steps leading to a spacious vestibule of about 30 feet square, and paved with  
marble,

marble, whilst the entrance to the underground portion of the building is by means of an extensive asphalt carriage subway, skirted on either side by pathways curbed apparently with Melbourne blue stone, specially dressed to suit the contour of the road. Cells have been provided for seventy prisoners, and also extensive police quarters. The cells, however, have been condemned by the Police Surgeon as unfit for occupation, while the police decline to accept the accommodation provided, and we think that the disapprobation thus expressed is not out of place. This building has cost from £15,000 to £18,000, whereas in our opinion a judicious expenditure of from £6,000 to £7,000 ought to have amply provided for all requirements.

*North Shore Court-house, Post and Telegraph Office, &c.*

This building, the amount of the contract for which is stated to be £11,500; but which we are informed on the best authority will cost more, probably £17,000, is an illustration of the impropriety of erecting public buildings on ill-adapted sites. Of course the Colonial Architect is not altogether responsible for the waste of public money taking place in the erection of this building, but at the same time we think that a public officer occupying the high position of the Colonial Architect should have advised the Government against building on such an unsuitable site, which from its shape must necessarily entail a wasteful expenditure of public money, particularly as the resumption of a short and unnecessary street at the back of the site in question would have obviated these objections, and thereby suitable buildings might have been erected for less than half the money.

*Custom House.*

The alterations and additions to this building are matters in our opinion for which some person deserves grave censure. Owing to the apparent carelessness of the Colonial Architect's Department no examination of the original structure upon which additional stories were to be put took place, although the designs were specially prepared in order to permit of utilising the original building, by the addition of two wings, and the raising of the old structure by means of another story, the consequence being that two long narrow wings were erected about 32 feet wide, the width of which it was impossible to increase, inasmuch as they were bounded on one side by streets and on the other by the old building which was to be retained intact, with the exception of the adding of the additional story. The result of this neglect was that two long and expensive slabs of buildings were erected at great cost, and when the time came for raising the old building it was discovered to be unfit to carry an additional story, a discovery which we think any professional man should have made before preparing designs for a work entailing such heavy expenditure. This want of professional foresight has involved additional expenditure of a large sum of money, increasing the total cost of the building from about £52,000 to £62,000, and also prohibiting the possibility of erecting a building of new design more suitable for the purposes intended and at a greatly reduced cost.

*Foundations of Buildings.*

Amongst the information required by us, which we were unable to obtain from the Colonial Architect's Department, was that regarding the cost and materials used in the foundations of buildings, to afford which we were given to understand would have upset his Department for months. Our reason for desiring to obtain the information was to ascertain whether in many cases the foundations of cottages and similar buildings were not composed of masonry of an unnecessarily expensive character. Abstract books, if kept properly, should, we maintain, give all this information at a moment's notice; and we would strongly advise, if the Colonial Architect's Office is allowed to continue in existence, that a proper system of indexed books, showing in detail the actual cost—not the estimated cost of buildings—be introduced so that the Government may be able to ascertain at any time the expenditure incurred upon work.

*Gaols.*

The gaols at Bathurst, Goulburn, and other places, strike us as being excessive in their cost, as they entail expenditures amounting to in some cases as much as £100,000.

*The*

*The Rookwood Reformatories.*

These buildings appear to us to be excessively expensive. Had suitable designs been prepared in the first instance, giving more accommodation under smaller roof area, a large proportion of this expenditure would have been unnecessary.

*Additions to Buildings.*

Designs for which are on a scale to our thinking far in excess of what ought to be expended, and we give here, too, examples which came under our notice, which will serve to illustrate our objection. Treasury buildings, to which additions were contemplated, and for which plans were prepared, estimating the cost at about £70,000, while the additions to the present Free Library, which has little to recommend it either for its beauty or convenience as regards site, is now being added to at a cost of some £25,000.

*Recording.*

This system, so far as our investigations have gone, proves to be apparently in need of reorganisation, as no means are afforded by the system of tracing papers which may have gone astray, and no acknowledgment of the receipt or delivery of papers is given.

*Correspondence.*

It appears to us that the enormous quantity of correspondence in this Department, taking up an immense amount of time, would, upon further examination, be found to be to a great extent unnecessary (for example *vide* Appendices A, B, and C, and attached copies herewith of letters from the military authorities). Repairs and other trivial miscellaneous works which appear to us to be unlimited, and in many cases to be of such a nature as to make it inadvisable that the valuable time of the Colonial Architect and his staff should be occupied in carrying them out ought, we think, to be removed from his department.

*Furnishing and Fittings for Public Offices.*

We think that in many cases the furniture and fittings required for public offices in the country might with advantage be procured in the township in which the buildings are situated or adjacent to, and we are of opinion that the officer in charge of this important and expensive branch of the Colonial Architect's Department ought to be better acquainted with the capabilities of our large inland towns for supplying the furniture and fittings required, and we have little doubt that it would be found that these requirements could be obtained as reasonably as they are now supplied by the Colonial Architect's Department in Sydney.

*Timekeepers.*

The fact of such officers being sent down to superintend insignificant jobs seems somewhat ridiculous, when buildings of the utmost importance are allowed to be erected with the most superficial oversight.

Referring once more to this question of nonsupervision, we desire to direct attention to the fact that large quantities of unbranded, inferior, and damaged cements are always on the Sydney market, and are used more or less in works even under supervision; what then may be expected to occur upon works when for days and weeks at a time no person representing the department visits Government buildings in course of erection.

In summing up this our report upon the Colonial Architect's Department, we are of opinion that the minor services performed by him for other departments can be equally well carried out by those departments to which they properly appertain. Such works as light-houses and fortifications should be constructed by engineers as properly belonging to that profession, while the designs for and erection of public buildings should be thrown open to competition to the architectural profession as we feel satisfied that whatever good services this department may have rendered in the past it has outlived its usefulness and should be forthwith abolished. We are the more confirmed in this opinion, as we find in the returns of this department that for nine years, ended in 1885, the amount expended on erections, additions, and repairs of public buildings, was

£3,299,627

£3,299,627, or an average of £366,625 per annum. The amount expended in furniture and fittings for public buildings during the same period was £193,705, or an average of £21,523, making a total expenditure as far as we have ascertained, on public buildings by the Colonial Architect, for the period named, of £3,493,332, or an average of £388,148 per annum. As to whether the Colony has received full value for its money may be judged from some of the examples quoted in this Report.

## RAILWAYS.

### *General Management.*

In our Progress Report we stated :—

Returning to the subject matter of this report we see plainly that if retrenchment of a valuable and permanent character is to be instituted, the first step will be the amalgamation of the separate, and, we regret to say, conflicting and antagonistic branches of the Railway Department, namely the construction and maintenance branches. So far as we can understand, the present recognised legal head of the Department is the Commissioner for Railways, and we presume were a Board of Commissioners to be created, all branches and officers of the railways would be under their control. The Commissioner, therefore, should be, we think, recognised not only by the Government and the law but also by every individual officer in the Service.

We therefore propose that the Engineer-in-Chief should have control over the construction and maintenance of railways, having under him two competent assistant engineers, one to have charge of construction, the other of maintenance, both being primarily responsible to the Engineer-in-Chief, and all subject to the Commissioner or Board of Commissioners.

These gentlemen, we are of opinion, should be procured from some of the great centres of railway work in Great Britain or America, to be appointed for a period of five years, and to be eligible for reappointment, if thought desirable, for a further period of five years only, thus ensuring the keeping pace with the successive strides of an ever progressive science. In the event of the office of Engineer-in-chief becoming vacant it should be filled up in like manner.

As these gentlemen would have to work together, and confer with the Commissioner or Board of Commissioners, his or their immediate officers, such as the traffic managers, the interlocking engineer, the designing and arranging of stations, yards, and general accommodation, would be carried out so as to ensure the greatest efficiency and safety with the least possible expenditure, and as far as practicable avoiding the necessity for alterations and additions which are now constantly occurring by reason of the alterations and destruction of the works constructed by one department not meeting with the approval or requirements of the other, and we make these remarks because the evidence before us shows that had the Commissioner and his officers, the interlocking engineer and the traffic manager, been consulted more frequently by the head of the construction branch, many alterations and consequent heavy expense would have been avoided.

The necessity for this change of system has been forced upon us from the very outset of our investigation, by reason of the antagonism that is displayed between the heads of the rival branches of the Service, and has, we have no hesitation in saying, been the cause of useless expenditure, if not wilful waste of immense sums of public money, which would have been saved had those officers whose duty it was to protect the public interest conferred together, and so executed the works at the commencement that the large expenditure deemed advisable by the Existing Lines Branch would not have been necessary in order to make new lines workable with due regard for the safety of the travelling public.

Our views upon this question are still strongly in favor of the formation of a Board for the management of the Railways, which should be removed from all political control or influence, as provided in the Bill brought forward by the late Government. A Board so appointed should exercise a personal supervision over the working of the various branches of the service, and their intimate practical knowledge would enable them to prevent the waste inseparable from the system that now obtains in the management of the railways of the Colony, where each head of a branch is practically uncontrolled. Such a Board would naturally assume the functions of a general manager, and be principally occupied outside in regulating the whole system of railway working, observing and remedying those defects which cause the enormous leakage now existing. In order to show the necessity that exists for having the inauguration and working of our railways removed as far as possible from political influence, we may state that the lines Juneec to Hay and Jerilderie, Werris Creek to Narrabri, Mudgee line, and Murrumburrah to Blayncy, constructed at a cost of £3,247,220, not only do not return any interest on the capital expended, but fell short of paying working expenses by £29,155 during the year 1885. At the end of that year unexpended votes for £2,700,000 for railways under construction were open, while in a few months working surveys of a further extension of the railway system of 886 miles, estimated to cost £9,913,500, will be completed and ready for letting by contract—indeed some portions are already under construction. 656 miles of this extension will average £13,395 per mile, while the portion between Grafton and Glen Innes, 103 miles in length, is estimated to cost £19,417 per mile, or £2,000,000.

It

It is outside our province to express any opinion upon the policy involved in this extension of the railway system ; but we mention it for the purpose of pointing out that, however desirable it may be to open up the country by means of railways, a large proportion of this extension, owing to the high cost per mile and the sparsely settled country through which it runs, cannot reasonably be expected to make any return by way of interest on capital, but will probably be a charge on revenue for many years, and will in this way still further reduce the percentage of profits derived from our railways.

We would suggest for consideration, in view of this large extension of the railway system, whether the time has not arrived for the introduction of a lighter and less expensive class of railways in construction and equipment, to afford means of communication and act as feeders to the main lines; as there is but little doubt that many of the new lines for which working surveys are now completed would, if constructed, entail even a greater loss than that sustained by the lines above quoted.

In making these remarks we do not desire that we should appear in any way to reflect upon the present Commissioner for Railways, for we feel satisfied that no man, no matter how able or how great his experience, could, under existing circumstances, re-organise the department so as to carry out the management of the railways of New South Wales in a manner profitable to the State or reflecting credit upon himself.

To show the immense increase in all grades in the number of hands now employed, we may observe that while in 1876 the railways of New South Wales comprised 508 miles, and the number of persons employed on the permanent way was 710, being an average of nearly 1·4 men per mile, the total number of men employed at that date being 2,443, giving an average of 4·8; in 1886, when the railways extended over 1,887 miles, there were employed 3,643 men on the permanent way, making the number of men per mile 1·93, and the total number of men per mile in 1886 5·76, supposing the number of hands employed on the railway to be, as stated, 10,882, but which we have no evidence to show is inclusive of the number of hands of the various trades employed in day labour, and who may be discharged from time to time. This shows an increase of 8,439 men, or an increase of nearly one man per mile; or, in other words, an increase of mileage of 1,379 miles since 1876, involving an increase in the number of men required to work them of 8,439, equal to (say) 6·12 men per mile to work the mileage open for traffic since that date,—an increase, we think, out of all proportion, inasmuch as that the extended mileage should reduce the cost per mile of management and supervision over the whole system of railways. In 1876 the total number of professional and clerical hands employed in the management of 508 miles of railway were 12, whereas in 1886 the district engineer in the metropolitan district has a clerical and professional staff of 54 for the management of 140 miles of railway and 36 miles of tramway, while the other district engineers have staffs as follow:—Southern District, 36; Western District, 43; Northern District, 23 (*vide* Appendices D, E, F, & G.)

The clerical staff under the Chief Clerk, who has to conduct the whole of the correspondence of the railways and tramways, including all the correspondence from the district engineers' offices, numbers only six, whereas the clerical staffs of the district engineers' offices, exclusive of timekeepers, cadets, inspectors, draftsmen, surveyors, and office boys are as follow:—Metropolitan 9, Southern 6, Western 4, Northern 4,—clearly showing that these offices must be overmanned, at least in our opinion, though to judge from the number of office boys and cadets employed, namely, 12 cadets and 9 office boys, the work must be heavy indeed. We append to this report a tabulated statement (Appendix II) showing the gradual increase in the professional and clerical staffs in the Department of the Engineer for Existing Lines between the years 1876 and 1886, the number of hands employed on the permanent way, and the mileage open for traffic during the same period, making it apparent that as the railways are extended, instead of a decrease in the number of persons employed per mile, as might reasonably be expected, there is a constant and steady increase.

#### *Selection of Routes for New Lines.*

It appears to us that there is a want of necessary examination by an engineer experienced in construction in regard to the selection of the best available routes for new lines; and we think this is to be regretted, as lines have been constructed with  
ruling

ruling grades of 1 in 40 where subsequent surveys have shown that not only were grades of 1 in 60 obtainable, but also curtailments in the lengths of the lines. We are of opinion that if the Engineer-in-Chief more frequently held personal interviews with his railway surveyors it is probable that routes would have been selected which might have avoided many of these objectionable grades, and been less expensive in construction and working. We may here state that the ruling grades which obtain on the lines of this Colony are very heavy, necessitating the use of ponderous locomotives to perform the required haulage, and the percentage for maintenance will always be a large item as compared with other railway systems where easier grades are worked by lighter engines. We are therefore of opinion that on all new railways every endeavour should be made to lower the ruling grade, even if necessary by lengthening the lines and adopting sharper curves in rough country, so that the use of these heavy locomotives should not be a permanent bar to economical management.

*Antagonism and unnecessary expenditure.*

Regarding the antagonism which we pointed out in our Progress Report as existing between the departments, we think there is little doubt that it is the cause of the wasteful expenditure of tens of thousands of pounds, as shown by Appendix I to this Report. The enormous expenditure by the Existing Lines Branch upon lines handed over by the Construction Branch clearly proves that either the Engineer-in-Chief does not hand over his lines properly constructed and completed for the due working of the traffic; or, on the other hand, if he does, that the money so expended is improperly expended. We would also draw attention to the Commissioner's Report on Railways for 1885, which will show that additions and improvements to stations and buildings and siding accommodation charged to capital account during 1885 amounted in the aggregate to £182,790, and that apparently the cost of some of these buildings is not only excessive, but, without proof to the contrary, some of them appear to be uncalled for. Before leaving this subject we would desire to enter our protest in the strongest manner against what we deem to be the pernicious system now in existence of permitting any operation upon the credit balance which may remain out of the vote for construction of any line; for it seems to us that so long as there is a credit balance, so long there is the temptation for the Existing Lines Branch to debit this vote with expenditure which ought properly to be charged against maintenance. We would therefore suggest that immediately the Construction Branch hand over a line as completed to the Existing Lines Branch it should be inspected then and there by the Engineer for Existing Lines, who shall point out to the Engineer-in-Chief what he thinks is still required, and when such requirements shall be completed or refused that the credit remaining to that vote shall at once be cancelled. Any further expenditure proposed by the Existing Lines Branch to be debited to capital shall be first authorized by Parliament.

*Monthly Payments.*

Referring to the payment of wages monthly instead of fortnightly, all the evidence of those competent to judge is entirely favourable to the adoption of the monthly system, the saving to be derived being not in interest only but also in the reduction of the number of pay clerks and other clerical assistance now required under the fortnightly system.

We desire to again draw attention to a clerical error which crept into and was carried right through our Progress Report, whereby the saving in interest was made to appear as being £12,000 per annum instead of £1,200, an error which we were unfortunately unable to detect or check, owing to the fact that both the original and press copy of the document in question were obtained from us previous to any checking being possible, and it was not until we saw the published report in the daily papers that we were aware of the error, an error which we submit, however, in no way affects the principle of monthly payments.

*Inspectors*

*Inspectors and Permanent way Men.*

In our Progress Report it is stated :—

## EXISTING LINES DEPARTMENT.

*District Engineers and Staff.*

Dispensing with the services of the Engineer of Existing Lines, also the deputy district resident assistant engineers and surveyors. Reducing the number of inspectors now under them, and replacing the latter, where necessary, by competent and better educated men, as it is our opinion that there is too much supervision and of too expensive a nature, the real work devolving for the most part on inspectors, who in many cases are shown by the evidence to be unable to prepare the pay-sheets, and perform other simple clerical work properly appertaining to their position and the high salaries paid them. In adopting the proposed scheme of amalgamation of the two branches, these inspectors would naturally come under the direct control of the Assistant Engineer-in-chief, or, if the appointment be found necessary, under a resident Engineer of Existing Lines. Owing to many of the inspectors at present employed, a large and expensive clerical staff now exists for the performance of duties which better educated men would to a large extent undertake themselves.

As regards the large number of inspectors of permanent way and others, such as inspectors of timber and iron bridges, masonry, &c., a number of whom we proposed in our Progress Report to do away with, we are further confirmed in our views. In that report we did not touch upon the gangers and permanent way men, but we are of opinion that by increasing the number of men in each gang to four, and lengthening the distance to be maintained from 4 to 6 miles, reductions may be made to the extent of fully 20 per cent. in the number of gangers and fettlers without impairing the efficiency of the maintenance.

This reduction would effect a saving of (say) £54,360 as compared with the amount paid in 1885, and is exclusive of the flying gangs, which number 440 persons, and in which probably a corresponding reduction may be made.

*Cattle-stops.*

Further savings may be made in the cost of construction and maintenance of railways by the adoption of improved American cattle-stops at level crossings. A pair of cattle-stops with sign-posts may be put in place complete for from £35 to £50, according to the class of crossing, and will last for twenty years, thus doing away with the necessity of gatekeeper's house, gatekeeper, and gates.

Returns furnished to us (Appendix J) show that there are 236 gatekeepers' houses at level crossings, erected by Government, on railways, at a cost of over £200,000, the present estimated value by district engineers being £192,796, exclusive of interlocking gates, and gates where there are huts not the property of Government but at which paid gatekeepers are stationed. These gatekeepers are usually fettlers' wives, to whom about 7s. 6d. per week is paid.

In addition to the first cost of (say) £200,000 for houses and gates at crossings, there would be an annual charge of perhaps 10 per cent. for renewals, maintenance, and wages amounting to £20,000. Cattle-stops put in at these 236 crossings, at £50 per pair, would amount to £11,800, with an annual charge at the same rate for renewals and maintenance of £1,180. Guard-rails, guard-baulks, metalling, &c., would be common to both, thus showing a saving in favour of cattle-stops of £188,200, and an annual saving of £18,820 in the level crossings included in the list furnished to us, without touching upon the interlocked gates or those at huts not the property of Government.

These cattle-stops are used on the railways elsewhere with much success, and we are not aware of any valid objection to their introduction on the railways of this Colony. Tradition, and the Standing Orders of the Imperial Parliament, have, we believe, barred their introduction on English railways up to a recent date, but the broad principle, first acted upon in the construction of American railways, that human beings possessed sufficient intelligence to protect themselves, might, we think, be safely accepted in this Colony, where, in the tramway system, as constructed and worked in Sydney, we already possess the most dangerous system of locomotive traffic in the world. The risk of trains being interfered with by animals getting on the line at crossings would be no greater than at present.

We would therefore recommend that on new lines cattle-stops be substituted for gates, gatekeepers, and houses at level crossings, and that the gates on lines already constructed be gradually replaced by cattle-stops, and the houses sold or otherwise disposed of.

Interlocking gates may always be necessary at certain crossings, and we do not propose to interfere with those already in use.

*Day*

*Day Labour.*

The following is an extract from our Progress Report:—

And while on the subject of payment of wages, we desire to record our opinion that the system of doing work by day labourers in the Department of Existing Lines, with its consequent staff of inspectors and foremen for the different trades and timekeepers, has grown to inordinate dimensions. The necessity for repairing-shops will no doubt always exist, but we think that a large proportion of the present army of workmen, including almost every description of artisans, could be dispensed with, and the work upon which they are employed, such for example as the painting of stations and the making of barrows, office furniture, &c., be provided by contract. Where large bodies of men are permanently employed, work, or the appearance of work, has to be provided, and much of their time is likely to be consumed in travelling. Goods-sheds, station buildings, and nearly all work apart from maintenance should be done by contract, and the additional supervision or inspection (if any should be required) should be dispensed with on the completion of the work.

The assertion by the Existing Lines Branch that the work cannot be done properly by contract labour is not borne out either by the evidence, the experience of other Departments, or by the experience of the public in general. The statement made by one officer that a trial of the contract system resulted in a respectable house in Sydney mixing their paints with water instead of oil appears to us to be incredible and scarcely deserving of sufficient weight to have permitted of the system being condemned without further trial. The enormous number of tradesmen of all classes, and day labourers now performing work which could, we think, be more advantageously done by contract, makes it a matter of vital importance that this question of day labour *versus* contract should receive the fullest investigation at the hands of impartial and competent judges.

Timekeepers for the most part do not keep the time, but simply make out wages sheets from information received from the gangers. And we think in many cases the clerical staff of the district engineers ought to have been able to do all this work without the employment of persons specially appointed as timekeepers.

*Clerical.*

As regards the multiplication of clerks, we think the evidence clearly shows that there are a number of clerks who do not appear to have any more defined work than that of being generally useful or generally keeping someone else, and that a lot of unnecessary work is done in the shape of extra book-keeping, needless checking, &c. We consider that if the office of Examiner is necessary that office ought to undertake all the checking required, and that the Examiner's office ought to be in the same building as the accountant's, which branch we think ought to be thoroughly reorganised, so as to be not only a record office but an office in which books should be kept which would give more detailed information than is now obtainable, and which is so frequently required by the Commissioner, the Minister, the House, and Members of Parliament, and which information, owing to the absence of books of a comprehensive character which should supply abstract detailed information, and would prove an immense saving of time, is not now available. This extra book-keeping and checking so far from, in our opinion, being calculated to prove an additional check is more likely to open the door to carelessness and fraud for we hold that the Examiner ought not to take any notice whatever of signatures at the end of documents purporting to certify to their correctness, but that he himself should be the only one whose certificate to the correctness of an account ought to carry weight.

*Cadets.*

In our Progress Report we suggested the

Dispensing with all cadets in the Department and abandoning the system, as we think it would be more to the advantage of the service to fill up vacancies by appointments from the great centres of railway work, thus ensuring having men with a knowledge of the most recent improvements in construction and working in place of, as under the present system cadets obtaining only a number of young men half-trained, who, in the majority of cases, are turned out with no professional standing, useless to themselves and to the country, having been brought up in a school to a great extent now obsolete.

As this system is universally condemned throughout the service we think that it would be better to fill vacancies for general work by young men trained to business habits outside the service, an appreciable proportion however of the higher appointments to be filled, as previously suggested, by persons specially trained at the great centres of railway work.

*Recording*

*Recording of Documents.*

This system so far as came under our notice is shown to be faulty, and not of the nature to either simplify work or insure the efficient transmission of papers, or afford adequate means for tracing same if lost.

*Routine.*

The routine now adopted in the transmission of papers appears to us to be open to improvement and simplification, both as regards time and system.

*Office Time Books.*

These books, as now kept, appear to us to be, in many instances, of little value.

*Working Hours.*

With reference to the recent extension of the working hours of officers in the Civil Service, we desire to state that we consider it would be preferable that the office hours should be from half-past 9 to 5 o'clock, with an interval of one hour in the middle of the day.

*Railway Profits*

As previously stated, to an appreciable extent, exist only on paper, and in this way large sums charged to the contractor for haulage of stuff for the construction of the lines, do not in reality come out of his pocket, but out of the pocket of the State, inasmuch as the contractor, when preparing his tender, simply looks up the published rates of carriage, and tenders accordingly, thus increasing the amount of his tender by the amount of the carriage he will have to pay. In the same way the Engineer-in-Chief, when making his estimate of the cost of any line, calculates the amount that will be charged by the Existing Lines Branch for carriage of permanent-way, &c., and adds this on to the estimated cost; consequently these two very large items are not profits, but they are just taken out of one pocket and put into the other. Granting even, for the moment, for the sake of argument, that they are profits, they cease the moment the construction of new lines terminate, and by reference to the railway account books it will be seen what a very large amount of money has been paid by contractors and the construction branch for carriage, and which has been claimed by the Existing Lines Branch as profit. Deduct this from the actual earnings of the railway, and it will be found that the supposed interest now paid by the railways will be reduced materially.

By reference to the Report of the Commissioner for Railways for the year 1885-6, it will be seen by a comparative statement therein of the rates charged for the carriage of railway material in New South Wales, Victoria, Queensland, and South Australia, for distances of 50 and 150 miles in New South Wales were respectfully 17s. 8d. and 49s. 4d. per ton; in Victoria, 13s. 6d. and 38s. 6d.; in Queensland, 8s. 4d. and 23s. 4d.; and in South Australia, 14s. 6d. and 38s. 11d.: thus showing that a mean of the rates of the three colonies is less than that of New South Wales by above 30 per cent.

Thus the cost of many railway works has been increased from this cause by from  $9\frac{3}{4}$  to 11 per cent. of the total cost of construction. This excessive charge not only adds to the cost of the works but creates a fictitious profit, and is not, in our opinion, legitimate revenue. In passing from this subject we may state that we have noticed on more than one occasion statements as to the possibility of selling the Government Railways to private individuals, and we think that the sooner that idea is abandoned the better for the country, for, in our opinion, the railways of New South Wales ought to be a certain source of large income if properly worked; and, moreover, it must be apparent to every thinking person that the present tendency of modern thought is in the direction of the State acquiring the railways rather than parting with them. The whole matter resolves itself into a question of management; and we fail to see why there should be any difficulty in managing the railways so as to make them not only profitable but a powerful colonising agent in settling the people on the waste lands of the Crown.

*Surveying and Drafting Branch.*

As we presume that, in the face of the Engineer-in-Chief's report, Mr. Palmer's report, and our Progress Report, this branch of the Service will not be continued beyond the few months necessary for the completion of the work in hand, especially as there are now completed working surveys for new railways estimated to cost, in round numbers, £10,000,000 sterling, we are of opinion that there is no further need for these gentlemen's services, and consequently think they ought to be dispensed with, particularly as it is well known that should it at any time be found necessary to re-engage professional men of this class no difficulty would be experienced in obtaining the required number.

*Land Surveys.*

The land survey along the line of route is laid down on the railway plan from lithographed parish maps, on which bearings and lengths of boundaries adjoining the railway are marked from records in the Survey Office. We have no evidence as to what meridian these bearings are from, or whether they are observed or calculated bearings, but we have evidence that the meridian on which the railway survey is based is a magnetic meridian arbitrarily determined by each surveyor merely swinging the needle of the instrument in ordinary use.

We need not point out that the meridian thus determined will not correspond with the meridian of the Survey Department, even if that should be a magnetic meridian, local attraction and instrumental error probably causing degrees of difference; so that, where no direct connection has been obtained on the ground for a distance of 1 or 2 miles, the accumulated error, caused by difference of meridian, would be quite beyond that admissible in any recognized system of survey.

No connection with the minor triangulation of the district or mathematical reduction of traverse is attempted in the preparation of these plans, but the land survey is *fitted in* on the railway plan by mere mechanical protraction, and it is hardly necessary to say that the difference of meridian alone would throw the line out of its proper position in a distance of 2 miles by some chains.

Plans of land resumed, prepared in the manner set forth above, are sent into the office of the Land Valuer without any connection whatever. This officer, in order that he may describe the land to be dealt with, scales the distances to some corner of an allotment or section of land, which may be chains out of its proper position relatively to the plan he is dealing with, and this is made the starting-point. The lengths of the boundaries are then arrived at by scaling, and from this data a description is prepared of a certain portion of land, which is duly conveyed to the Crown; but we venture to affirm that where no direct connection has been obtained for a mile or over that the land so conveyed is not that occupied by the railway.

No bearings or distances were shown on any of the land plans exhibited to us, the descriptions merely giving the scaled lengths of boundaries. We need not point out that in the absence of bearings the same description may apply to two pieces of land of entirely different shape. Whatever difficulty there may be in effecting a connection with some recognized starting-point, there ought to be none as to the accuracy of the survey of the portion of land to be conveyed. The distances and bearings measured and observed, or calculated from proper data, should be shown on all land plans, so that the elements for determining whether the survey is correct or not would appear upon the plan itself. No scaled distances should, on any account, be admissible. All levels not measured should be calculated from measured lines, and the whole capable of mathematical reduction, so that the closing error may be determined.

We recommend that, in future, all railway surveys should be carried out upon or reduced to the meridian of the land survey of the district through which the railway passes, so that the main traverse of the railway may be used to base the land survey upon. The plans of all lands resumed should pass through the office of the Surveyor-General, and be certified to before any conveyance is prepared.

The evidence on this point discloses such a condition of things that we feel compelled, at the risk of travelling beyond our Commission, to specially direct the attention of the Government to the whole question of Surveys. The practice that obtains of carrying on survey operations over an extended area from magnetic meridians arbitrarily determined, is one which, in our opinion, cannot fail to lead, in the near future, to consequences of the gravest character.

*Tramways.*

We regret not having had the opportunity of examining into the working and management of the Tramways, the more so as we are somewhat at a loss to understand why, in the face of the enormous traffic, 39,594,753 fares in 1885, and which has increased since then, in the first place they should not pay, and in the second place why so many 'bus proprietors can not only exist, but find remunerative employment for their capital, unless it is that the trams are not worked as they would be if in the hands of private individuals competing with other passenger-carrying companies.

With a traffic of 40,000,000 fares, representing a sum of £223,340 per annum, it is inexplicable to us why the Tramways do not pay interest on the £708,000 expended on them, and we have but little doubt that if they were in the hands of a private company, and worked on business principles, they would return a handsome profit.

We are of opinion that an adjustment of the time-table to the traffic would probably at once bring about not only an improvement in the receipts but a very large reduction in the working expenses, without in any way curtailing the legitimate facilities afforded to the travelling public. Bearing in mind, therefore, the acknowledged necessity for retrenchment it appears to us that the trams not being (as the railways are) a national undertaking, but simply a convenience for Sydney and its suburbs, the general revenue is improperly charged with the defraying any loss sustained, and we would therefore suggest that if they cannot be made to pay it might, in the interests of all concerned, be well to sell or lease them.

## CONCLUSION.

In presenting this, our Final Report on the Railways and Colonial Architect's Departments, we have to draw your attention to the fact that, owing to the abrupt termination of our investigations, we had not only to leave unexamined numerous important offices and officers in the Departments we commenced with, but also we were unable to in any way examine or investigate the greater portion of the departments committed to our care.

Amongst the important and unexamined branches, we may quote the Railway Traffic, Locomotive, Workshops, Tramways, Stores, Ticket, and Stationery Departments, and shortly the whole of the outside system, where undoubtedly the great leakage exists. We were also debarred from obtaining much information which we asked for and which would have been supplied to us had we been permitted to continue in the execution of our commission. The same remarks refer to our being unable to examine in detail the inner working of those offices which we began with, and to further examine officers upon points which, upon reading over the evidence obtained, suggested many important questions.

As regards the other departments of the Public Works Department, such as the Colonial Architect's office, we experienced the same difficulty, and we feel compelled to say that, owing to the action of the Minister, the at all times difficult task of extracting evidence was greatly enhanced, and placed us in a most invidious position.

As to the Departments other than those mentioned, such as Harbours and Rivers, Roads and Bridges, and Under Secretary for Public Works, we refrain from making any remarks further than those already contained in our first Progress Report; but in handing in this, our Final Report, we desire to state that should it be less valuable than we trusted it would have proved, and perhaps was anticipated by others, the fault lies not so much with us as with our premature dismissal.

T. F. WALLER, Chairman.

J. Y. MILLS.

J. E. F. COYLE, M. Inst., C.E.

9th March, 1887.

## APPENDICES.

## A.

*Re* ASH-PITS, VICTORIA BARRACKS.

The Colonel Commanding Garrison to The Colonial Architect.

Sir, Military Staff Office, Sydney, 6 January, 1887.  
I have the honor to request that in future notification may be given by the contractor when the work of emptying closets, &c., is to be carried out at Victoria Barracks. If this is done a non-commissioned officer will be detailed to go round with him to see that the work is performed in a satisfactory manner. I would also beg to suggest that a clause be inserted in the new contract rendering the contractor liable to a fine in the event of his non-compliance with the terms of same.

I have, &c.,  
CHAS. F. ROBERTS, Colonel,  
Commanding Garrison.

The Brigade Adjutant. I cannot state how often the contractor presents his vouchers for payment, as they do not come through this office. I have seen Mr. Little and he cannot give me any information.—S. WEBSTER, W.O., B.G.M.Q., 22/11/86.

Memo. from Artillery Brigade Office, Victoria Barracks, Sydney, to Mr. Webster.

CAN you let me know particulars asked for in Colonel's minute of to-day's date?—A.H.P.S.

Lieutenant Morris to The Officer Commanding N.S.W.A.

Sir, Victoria Barracks, 10 November, 1886.  
I have the honor to report, for your information, that the ash-pits in rear of the cauteen have not been emptied yet, and are in a very filthy condition.

I have, &c.,  
AUGUSTUS A. H. MORRIS,  
Lieutenant, N.S.W.A.

I find on inquiry that the ash-pits were not emptied last Friday according to custom.—M. M., Lt.-Col.

*Re* ASH-PITS, VICTORIA BARRACKS.

The Colonel Commanding to The Colonial Architect.

Sir, Military Staff Office, Sydney, 9 September, 1886.  
I have the honor to inform you that the ash-pits at Victoria Barracks have not been emptied for the last fortnight, and the smell arising from them is most offensive. It is requested that immediate steps may be taken to have this nuisance removed.

I have, &c.,  
CHAS. F. ROBERTS, Colonel,  
Commanding Military Forces.

Recommended to the Under Secretary for Public Works. It was suggested some time ago that the military should have the supervision of the cleansing of dust-bins, &c. Subsequently Colonel Spalding gave a promise that some men of the force should go round with the contractor's men each time they came. If this had been done it is difficult to understand how they should have been neglected for a fortnight. The signature of officer in charge that the work has been properly carried out by the contractor on each occasion should be produced before he can obtain payment of his accounts; therefore an end to these very frequent complaints would be avoided.—J.B., 13/9/86.

The Principal Under Secretary, B.C., 16/9/86.—J.R. The Major-General Commanding, B.C., 4/11/86.—C.W. O.C.P.A. For report in connection with the remarks of the Colonial Architect.—J.S.R., M.G., 5/11/86. Brigade Adjutant. Please let me see Mr. Webster on this.—C.F.R., Colonel, 5/11/86. Brigade Adjutant,—How often does contractor present his vouchers for payment, and do they come through this office?—C.F.R., Colonel, 22/11/86. D.A.Q.M.G. It appears no one can vouch for the work being done prior to payment being made, as vouchers do not pass through this office. (See memo. attached.)—C.F.R., Colonel, 22/11/86. The Chief Paymaster,—How are these accounts paid?—J.S.R., M.G., 1/12/86. The General Commanding. Paid by the Colonial Architect's Department.—F.B., Lt.-Col., 3/12/86.

Major-General,—I would recommend that the contractor be provided with a book, in which the dates he may empty the ash-pits can be entered, and initialled by a responsible non-commissioned officer (who will be detailed) as to the satisfactory manner, or otherwise, that the work is done.—CHAS. F. ROBERTS, Colonel, Commanding Garrison, 11/12/86.

P.H.S. Recommended that directions may be given for suggestion as above to be carried out.—J.S.R., M.G., 16/12/86. Approved.—G.R.D., 3/1/87. If the contractor then fails to keep the pits clean the contract to be cancelled.—G.R.D. The Under Secretary for Public Works, B.C., 4/1/87.—C.W. Colonial Architect, B.C., 6/1/87.—J.R.

## B.

*Re* STOVE TO BE EXCHANGED, VICTORIA BARRACKS.

From The Colonel Commanding Garrison to The Colonial Architect.

Sir,

Military Staff Office, Sydney, 29/11/86.

I have the honor to enclose letter from the Officer Commanding No. 3 Battery, N. S. W. Artillery, with minute of Officer Commanding A. Forces, in reference to exchanging the stove referred to for one of a serviceable description. As this seems to be a case of an urgent nature, I have to request that steps may be taken, with as little delay as possible, to have the matter attended to.

I have, &amp;c.,

CHAS. F. ROBERTS,

Colonel Commanding Garrison.

Forwarded for authority. There is a stove recently removed from the officers' quarters which might be repaired for £2 and meet this requirement, chargeable to vote "Furniture Public Offices," but no funds are at present available.—J.B., 10th January, 1887.

Submitted, 12/1/87.—J.R.

Approved.—W.J.L., 14/1/87.

Colonial Architect, B.C.,

15/1/87.—J.R.

Lieutenant-Colonel Murphy to The Officer Commanding Artillery Forces.

Sir,

Victoria Barracks, 26 November, 1886.

No 463, Gunner  
M. Gleeson.

I have the honor to forward an application from the Gunner named in the margin for a new stove to be placed in his quarters.

I have seen the stove complained of, it is useless, and I would suggest that it be exchanged, as he has nothing to cook with.

I have, &amp;c.,

M. MURPHY,

Lieutenant-Colonel Commanding No. 3 Battery, N. S. W. A.

D. A. Q. M. G. This appears an urgent case, and this man is employed all day carting water in the Barracks.—C. F. R., Col., 27/11/86.

## C.

*Re* PIPE OF URINAL, BARRACKS, SOUTH HEAD.

From The Colonel Commanding Garrison to The Colonial Architect.

Sir,

Military Staff Office, Sydney, 5 January, 1887.

I have the honor to inform you that the pipe of the urinal at Barracks, South Head, is blocked, or broken under ground, and as this is a matter requiring immediate action I have to request that measures may be taken, without loss of time, to have this pipe placed in a proper state of repair.

I have, &amp;c.,

CHAS. F. ROBERTS,

Colonel

The Under Secretary for Public Works to The Colonial Architect.

Sir,

Department of Public Works, Sydney, 22 March, 1887.

I am directed to transmit herewith a copy of the Final Report of the Commission appointed to inquire into the working of this Department, and to request that you will have the goodness to furnish me with your views on that portion thereof having reference to the office under your control.

I have, &c.,

JOHN RAE.

Paper with my remarks on report referred to herewith, 2 April, 1887.—J.B.

Forward to Government Printer, and attach copy to report and place before evidence.—J.S., 4/4/87.

## Remarks by the Colonial Architect on Final Report of the Board of Inquiry appointed by the late Minister for Works.

### NEWTOWN COURT-HOUSE.

THE site upon which this building is erected was purchased without reference to the Colonial Architect's Department; and, in accordance with instructions, plans were prepared to suit the site, providing accommodation considered necessary, consisting of two court-rooms, with usual offices, lock-up, and police quarters. These plans were duly approved, and tenders invited for the work, which cost £15,989. The building was completed and handed over to the authorities on 3rd June, 1885, at which time it was in every respect fit for occupation. The courts have been used, but the quarters have not been occupied, and in consequence of there being no one to look after the building, the drains became choked, causing the appearance of damp, which has now been removed; but, unless some one lives on the premises and takes care of them, this will no doubt occur again. It may be stated that the smallness of the site necessitated the cells and police quarters being provided for under the court-house. Previous to the purchase of this site, the Colonial Architect recommended a more eligible one, which would have allowed a much more convenient arrangement of the buildings, and at less cost.

### NORTH SHORE COURT-HOUSE, AND POST AND TELEGRAPH OFFICES.

THE site for this building was purchased without reference to the Colonial Architect. In accordance with instructions, a sketch plan was prepared of a building to suit the site, showing accommodation required, consisting of two courts, with necessary offices, under the Justice Department; lock-up, cells, charge-room, prisoners' yard, &c., under the Colonial Secretary's Department; and Post and Telegraph Offices, with usual quarters, &c., under the Postal Department. This sketch was not approved in time to allow working drawings to be prepared, before the vote would lapse; therefore, authority was given to invite tenders for the work, from the sketch plan referred to. Under these circumstances, there will no doubt be some extra work, chiefly for foundations; but the cost of the buildings, when completed, will not probably exceed £13,000.

### CUSTOM-HOUSE ADDITIONS.

AS stated in Colonial Architect's remarks, on progress report of the Commissioners, it was originally intended to erect a new Shipping Office, on a site of its own, and not disturb the Custom-house. Plans for a shipping office were prepared, and a vote taken for the work, but the then Treasurer decided that instead of a new building, additions should be made to the Custom-house, providing accommodation for the Shipping Office and Marine Board. Therefore, it was only on the old Custom-house being vacated that it could be thoroughly examined, as to the construction and condition of the walls and foundations; the cost of taking down and rebuilding the old portions, including foundations, was £6,845. As to erecting a new building, &c., in accordance with the views of the Commissioners, that was not for the Colonial Architect to decide. He has, however, always been averse to making additions to old buildings, especially in this case, for various reasons; but having been instructed to make these additions, here was no alternative but to have the work carried out.

FOUNDATIONS

## FOUNDATIONS OF BUILDINGS.

All that need be said respecting this subject is, that the Colonial Architect provides foundations, of the materials available in the several districts, which he considers suitable for the buildings they have to carry. In regard to the Commissioners' views, or method, as to finding the cost of buildings, &c., it may be stated that by the system adopted in the Colonial Architect's Department, the actual cost of a building may be ascertained at any time; and as to not being able to obtain information, &c., no one in his Office gave them to understand that the information asked by them would upset the Department for months.

## GAOLS.

The amount stated as to the cost of the Gaols in some cases may strike the Commissioners as being excessive, but the Colonial Architect is not aware of any that have cost £100,000—the amount named by them. It may, however, be as well to say that Gaols and Lock-ups are of necessity, and for obvious reasons, very costly buildings.

## ROOKWOOD REFORMATORIES.

These buildings appear to the Commissioners to be excessively expensive, and that much unnecessary expenditure might have been saved had more suitable designs been prepared. Perhaps so. The original designs and plans prepared by the Colonial Architect were set aside, and plans of the buildings, as at present, prepared to entirely suit the views of the late Sir Alexander Stuart.

## ADDITIONS TO BUILDINGS.

With regard so this matter, the Colonial Architect would merely state that, generally, he does not approve of making additions, especially to old buildings. Treasury buildings are referred to, for which plans have been prepared; but as to whether the work will be carried out, it is not for the Colonial Architect to decide. In regard to the Free Library additions, also noticed, as stated in previous remarks upon the Commissioners' Progress Report, the Colonial Architect is not responsible for the site of this building, or for making the additions to it, which have cost £12,380—not some £25,000, the amount named by the Commissioners.

## RECORDING.

The system adopted for recording in the Colonial Architect's Department has always been found to answer, papers are easily traced, and seldom go astray to cause inconvenience. To adopt the system proposed by the Commissioners, in giving acknowledgment of the receipt and delivery of papers, would cause much additional work, endless confusion, and necessitate a clerk to make out and record the receipts and deliveries.

## CORRESPONDENCE.

This can only be lessened by the joint action of all Departments which, directly or indirectly, are in frequent communication with the Colonial Architect. Letters when received should be replied to. In regard to trivial works, referred to under this heading, if left for every department generally to carry out, it would, I think, prove neither satisfactory nor economical.

## FURNISHINGS AND FITTINGS FOR PUBLIC OFFICES.

With regard to furniture and fittings being procured in the different townships in which the buildings requiring same are situated, or adjacent thereto, as suggested by the Commissioners, it may be stated that this is done when found to be practicable, economical, or otherwise advantageous, which is not often the case. A contract is taken annually for supply of furniture, all articles being inspected by an officer of the Colonial Architect's Department. Without supervision of this kind, the probability is that inferior articles would be obtained and no saving effected.

## TIME-KEEPERS.

One Time-keeper only is employed in the Colonial Architect's department, who visits works considered most requiring his services.

As stated in previous remarks upon the progress report of the Commissioners, all works carried out by the Colonial Architect's Department have proper and sufficient supervision to ensure faithful and sound work, as well as the use of the best materials. It is no doubt generally known that cements and other materials of an inferior kind are always on the Sydney market, and, no doubt, also, they may be more or less used, but only by those who have no experience in such matters. No cement is allowed to be used in works under the Colonial Architect's Department without being properly tested, and other materials examined thoroughly by practical men.

In

In regard to the summing-up of the Commissioners, which commences with rather a vague opinion, that minor works, consisting I presume, of repairs, alterations, furniture, &c., now carried out by the Colonial Architect, could be equally well carried out by those departments to which they properly appertain—or in other words, that they should be done somehow, by somebody—it may be stated that cases do occasionally occur when officers in country districts are authorized to have works of this kind performed, if it is considered they can be done in a satisfactory and economical manner. Respecting this matter it may be as well to point out that when buildings are occupied by three or more departments as sometimes the case, a difficulty would probably arise in regard to which of the departments should be authorized to carry out the work. Each would, no doubt, have its own view of the matter, and consider it should be entrusted with the expenditure.

#### LIGHTHOUSES.

With respect to Lighthouses it may be stated that all the Lighthouses recommended by the Intercolonial Commissioners, have been erected, and from designs prepared by the Colonial Architect, under whose supervision the erection of the buildings have been carried out. Very little more is now needed to perfect the lighting of the coast. It is therefore hardly necessary to incur the expense of appointing an engineer for this work, as proposed by the Commissioners.

#### FORTIFICATIONS.

In 1870, the Colonial Architect was appointed a member of the Commission of Defence, and all Fortifications recommended by the Commission—Sir W. Jervois, and the late Sir Peter Scratchley—have been carried out satisfactorily by him, without fee, or reward. All now remaining to be done is in connection with the mounting of improved ordnance; this being the case, there appears nothing to justify the unnecessary expense of appointing an engineer for these works, as also suggested by the Public Works Commissioners.

The Commissioners after spending a few hours in examining some of the Colonial Architect's Officers, and visiting two or three out of the great number of buildings carried out by that Department, with a view of effecting retrenchment, conclude by recommending the abolition of the Department, and that designs and erection of public buildings, should be open to competition by the architectural profession; but they do not say anything about the Commission to be paid to the profession—cost of clerks, and foremen of works, travelling expenses, &c.; or, who is to be responsible for works so carried out; also for the large number of public buildings throughout the entire area of the Colony, and for the works in progress. In addition to this recommendation, they suggest the appointment of two engineers for lighthouses and fortifications, though, as before shown, there is nothing to justify the expense of such appointments. And all this to carry out the duties now performed by the Colonial Architect. It may perhaps be noticed that these reports are somewhat contradictory. In portions of them recommendations are made which would necessitate a large and unnecessary increase of officers for supervision, &c.—showing at the same time that the Colonial Architect's Department is not overmanned—and in other portions the abolition of the Department is recommended; but in any case the recommendations tend to add considerably to the cost of public buildings, instead of effecting any retrenchment, by the reduction in the number of hands, in terms of Mr. Lyne's minute.

It is to be regretted that, before printing, the usual course was not adopted of submitting for revision the particulars, &c., furnished, as this might have rendered the information given in these reports of some value.

Colonial Architect's Office,  
Sydney, 2nd April, 1887.

JAMES BARNET,  
Colonial Architect.

## Minute of the Commissioner for Railways on Report of Inquiry Board.

THE sweeping measures of reductions recommended by the Works Inquiry Board in the Engineer-in-Chief's Branch and in the office of the Engineer for Existing Lines require a very minute and painstaking investigation, and anything like precipitate action is much to be deprecated.

I am now considering the recommendation of the Board in its entirety, and will submit proposals to the Minister in connection therewith at an early date; but it is due to myself to state that a reasonable measure of reduction in the Existing Lines Branch was initiated by me before this Board was formed or thought of, and that so long ago as 28th November, 1886, I urged the measure upon the Engineer for Existing Lines, and received from that officer definite proposals in that direction; that I submitted these proposals to the Minister, by whom they were placed at the disposal of the Inquiry Board, and although they have not acknowledged the source of their inspiration—that it was from these proposals that the Board received the cue for their recommendations, going, however, in their unacquaintance with railway business, far beyond the terms of my proposal, and making a travesty of the whole matter.

I am bound, even at this stage, to protest against the extraordinary proposal made by the Board, that notices all round should be served upon the officers of the Existing Lines and Accountant's Branches, not necessarily, they say, to be followed up by dismissal, but with a view to a reorganization of those branches. Such a measure is not essential to a reorganization or rearrangement of the staff, and would have a very disastrous influence on the Service in the paralysis of public business which would result, and in the disorganization and distrust which it would create.

The Board's recommendation that the Construction and Maintenance Branches shall be amalgamated and placed under the Engineer-in-Chief calls for some special remark from me. The Board in making that arrangement can hardly have been aware that prior to the year 1876 both the Construction and Maintenance Branches were under Mr. Whitton; that in that year he made a special and urgent application to be relieved of the duties of maintenance on the ground that it was "impossible" for him to continue to discharge the combined duties with efficiency and satisfaction; and that in view of that representation Mr. Whitton was relieved of the duties of maintenance, and Mr. Mason appointed Engineer for Existing Lines, by Order in Council, dated 2nd October, 1876.

It appears by Mr. Secretary Lackey's "minute to Cabinet" recommending the above arrangement that we had at that time 223 miles of railway under construction, and that votes had been taken for a further 265 miles.

At the present moment, while the duties of maintenance have been increased with every mile of line open, we have 263 miles under construction and a further 1,245 miles have been approved by Parliament.

Now it stands to reason that if the Engineer-in-Chief, with 223 miles of railway under construction and the contingent prospect of 265 miles more in the near future, found his construction duties so onerous, and so entirely to absorb his time as to render it "impossible" for him to continue to grapple with the maintenance, it must be much more the case now when the mileage under maintenance has been quadrupled and we have 263 miles under actual construction, and a further 1,245 miles sanctioned by Parliament, and so far as Mr. Whitton knows, to be constructed in the near future. In a word if it were necessary in 1876 for Mr. Whitton to ask to be relieved of the duties of maintenance because he was unable, for want of time to discharge them efficiently, the enormous augmentation of the business of both branches precludes the idea of his again attempting to cope with the combined duties.

While I hold this opinion very strongly, I think a partial amalgamation of the two staffs for special purposes would tend to economy. My idea is that there might be a staff of surveyors and draftsmen common to both branches, and doing work indiscriminately for both. But it must not be concluded that because the recommendations of the Board have not been given effect to that nothing in the way of retrenchment has followed upon the investigations conducted by myself and the officers of the Department. I must attach to this minute the proposals which have been made, and which are now rapidly being brought into operation. It is sufficient to say here that the working expenditure of the Railways for 1886 was £1,501,766, and that for 1887 it has been provided for at £1,476,271, notwithstanding that additional work will have to be done in consequence of the opening of fresh extensions. Calculated upon the train mileage the expenditure for 1887, if the rates for 1886 were maintained, would be £1,616,708, so that the proposed expenditure represents a saving of £140,437.

Further

Further reductions will be made in the next few months as opportunities offer—It has only within the last few days been demonstrated by a careful inquiry into the wages paid in private establishments, that the Railway mechanics, whose wages are regulated by the average rate of wages ruling in private establishments, are being paid in excess of that rate by the sum of over £18,000. This further saving must be effected, and I may point out that the whole of the Railway staff has been required to make a sacrifice for 1887 of the advancement (representing a stated annual sum), which the regulations under which they serve assured to them. I conclude this portion of my observations on the Report of the Board by pointing out that while avoidable delay is to be deprecated in initiating measures of reform in a railway service, it is necessary in the interests of the public, who are so immediately concerned, to proceed tentatively rather than by revolutionary and drastic measures to effect the purpose.

I have now to deal with some points of the evidence given by Mr. Whitton before this Board, and I regret that the necessity of doing so is imposed upon me, because I must traverse statements made by that gentleman.

And first of all Mr. Whitton states that nearly all the men in the Existing Lines Branch had been in his Department, or had unsuccessfully sought employment with him, that the former were men whom he did not consider it desirable to retain and got rid of, and that they were taken on at higher salaries by the other branch.

It is to be regretted that Mr. Whitton should have gone out of his way to cast such a slur upon gentlemen who, he knew, would have no chance of defending themselves.

The following are the facts:—

The gentlemen in the Existing Lines Branch who were formerly employed under Mr. Whitton are—Messrs. Cowdery, Stephens, Watson, Halligan, Manly, Fischer, Davidson, Melrose, and Prevost.

Mr. Cowdery was engaged for a series of years on important works under Mr. Whitton, and his health having suffered to such an extent as to preclude his undertaking new field duty which had been assigned to him, he severed his connection with that Branch.

Mr. Stephens was engaged in the Construction Branch on Trial Surveys, and his services were dispensed with on account of the exhaustion of the Vote for that service. He then took office with the Existing Lines Branch.

Mr. Watson was engaged on the survey Goulburn to Cooma, but resigned, and took service with Mr. Cowdery.

Mr. Halligan was transferred (with Mr. Whitton's consent) from the Construction to the Maintenance Branch.

Mr. Manley took service with Mr. Cowdery on the completion of the work upon which he was engaged.

Mr. Fischer was transferred (with Mr. Whitton's consent, very reluctantly given) from Construction to Maintenance in 1884.

Mr. Davidson, wishing to secure a *permanent* position in the Service, got Mr. Whitton's consent, and applied for and obtained an appointment in the Maintenance Branch.

Mr. Melrose's services were dispensed with by Mr. Whitton, on completion of the work upon which he was engaged.

Mr. Prevost, while in the Construction Branch, obtained twelve months' leave of absence on account of ill-health, and finding on his return to duty that his health was still weak, he declined to go into the field, and his services were dispensed with. He then took service with the Engineer for Existing Lines.

It is possible that there are officers in the Existing Lines who had before made application to Mr. Whitton for employment; but if the fact were so, surely that is no reason why their services when required should not be utilized by another Branch or Department.

The insinuation conveyed in Mr. Whitton's remark in this connection, that he did not know if these men "had been instructed to find fault" is one which I think Mr. Whitton, on reflection, will regret having made, and I certainly will not degrade myself by attempting to refute it.

Mr. Whitton further states that the lines have always been handed over in a proper condition for the traffic, and that alterations have immediately been made by the Existing Lines—such alterations being wholly unnecessary—and that thousands and thousands of pounds have been thrown away in this manner.

I regret that Mr. Whitton has made this charge of extravagance—of wasting money—against the Department, because it leaves me no alternative but to turn up evidence bearing upon this subject from the records of the Department, and if the documents I shall quote contain matter distasteful to Mr. Whitton the blame will not rest with me.

At the time that the maintenance and the arrangements connected therewith were in Mr. Whitton's hands the operations of the traffic were almost paralysed for want of needful appliances (which Mr. Whitton persistently refused to supply). No provision was made for augmented traffic, much inconvenience resulted, and complaints on the part of the public were incessant.

This is clearly set forth in the following extract of a minute written by yourself in January, 1878, when you held office as Minister for Public Works,—

*Extract from Mr. Secretary Sutherland's minute upon the alleged disorganization of the Railway Department in the year 1877.*

\* \* \* \* \*

And now, as regards the following paragraph in Mr. Whitton's report:—"With reference to the traffic management generally on the South and West lines, I regret to say that it has always been most unsatisfactory, the officers appointed having been, almost without an exception, lamentably ignorant of the duties they were called upon to discharge."

This indictment of the management it will be seen is very general in its terms, but the "unsatisfactory management" is, in Mr. Whitton's opinion, due to the ignorance of the officers employed. I am not prepared to admit, however, that the traffic officers are ignorant of their duties, nor do the records of the railway transactions show that the management has been so unsatisfactory as Mr. Whitton represents. In those particulars, in which it has proved to be unsatisfactory, the traffic officers may not be blamable. Any complaints that have been made by the public have been due, I believe, rather to the absence of appliances for working the traffic than to any mismanagement of the traffic itself. The facilities, for instance, for conducting the live stock traffic, have been very deficient; the want of trucks for the conveyance of sheep and cattle has been largely felt, and the papers on the subject of the accommodation afforded at the various stations to and from which live stock is sent show clearly that necessary improvements have been tardily carried out. The insufficiency of accommodation at the Newtown siding has been another great evil. I know that lines of loaded trucks, sometimes to the number of eighty or ninety, have been left standing idle on the Sydney yard, waiting to be sent to Newtown to be unloaded, but the siding there has been so full that no more trucks could be taken. The traffic officers represented this matter time after time, and at length—notwithstanding the advice to the contrary of Mr. Whitton—additional land was purchased at Newtown, to afford increased accommodation; but although the land was obtained, and directions given to put in additional sidings, the work to this day has not been carried out. The delay of trucks still continues, and the solution of the difficulty appears to be to charge the traffic officers with ignorant management. Before I left office—in fact, in July, 1874—the traffic managers, at my request, sent in their estimate of rolling-stock that would be required in the following five years, and when received they were sent to the Engineer Department for the specifications, but it was not till two years afterwards that any serious attempt was made to get this rolling-stock. The specification for the carriages (and then only an instalment) was not furnished for nearly three years, and the traffic officers have found the greatest difficulty in meeting the demand for truck and carriage accommodation.

Many of the inconveniences which the public have complained of in the conduct of the traffic have resulted from this cause. In dealing with charges of this character, I bring to the consideration of the question my own knowledge of the circumstances.

In support of his charge of wasteful expenditure, Mr. Whitton specially refers to the alterations of the stock-yards at Bourke, Hay, and Albury, to the re-arrangement of the yard at Wallerawang, to the widening of the line and putting in extra rails from the Illawarra Junction into Sydney, &c., &c.

All these improvements and alterations Mr. Whitton declares to have been unnecessary, the lines having been already in a condition to carry the traffic.

The Bourke stock-yards as they were handed over by Mr. Whitton, were utterly inadequate for the traffic. As will be seen by a *precis* of the papers, not only did the Traffic Manager recommend that alterations should be made, but the stock-owners and agents were unanimous in the same direction, and it was only at the urgent solicitation of the persons engaged in the trade, that necessary improvements were made.

At Albury again, the stock-yards as handed over by Mr. Whitton, were useless for want of sidings. Mr. Lyne, late Minister for Works, was the first to point out the omission, and the sidings had to be supplied at considerable cost, pending the completion of which the yards were useless.

Mr. Whitton makes special reference to the re-arrangement of the Wallerawang station yard, which he alleges to have been quite unnecessary, and to the interlocking carried out there, and he maintains that interlocking may be applied to any station yard, however arranged.

Now, what are the facts? The Wallerawang station yard, as handed over to us by Mr. Whitton, had within the compass of the yard no less than eighteen facing points. The danger attending facing points

points is so well established that the Board of Trade has laid it down as a rule that no facing points shall give on to the main line of any railway, and in our own experience in the years 1883, 1884, and 1885 no less than 169 accidents—derailment and so forth—were distinctly traceable to facing points.

Well, as Mr. Whitton points out, the Wallerawang yard might have been interlocked (facing points notwithstanding), but had we so arranged, four apparatus would have been necessary, with a man for each, and the objectionable feature of an inordinate number of facing points would have been retained, whereas under the re-arrangement of the yard, as carried out, nine of the facing points were done away with, and two interlocking machines only are necessary, thus reducing the cost of working by one-half.

Mr. Whitton further refers to the duplication of the line from the junction of the Molong line to Orange, which he states was only done to save junction signals, and was wholly unnecessary.

Now, this duplication was effected in the interests both of safety and economy. No argument or explanation is necessary to show that the arrangement conduced to the safety of the traffic, and as regards the question of economy it need only be stated that the cost of the duplication was £2,700, the interest upon which at 4 per cent., is £108, while the cost of maintaining the signals, if the junction had been retained, would have been not less than £323 per annum, a saving having been effected by taking the Molong Line into Orange of £220 per annum, which capitalised at 4 per cent., would represent a sum £5,500.

Another case referred to by Mr. Whitton in illustration of his charge of wasteful expenditure is the widening of the tunnel at Redfern with the duplication of the line from the Illawarra Junction into Sydney, which he characterizes as "a mere matter of work, which they could get done if they liked."

Now, I do not think that Mr. Whitton in so expressing himself can have formed a true estimate of the case. The line, as handed over by Mr. Whitton, was intended to convey the traffic of the South and West lines, and was barely sufficient for that purpose, upwards of 100 regular trains passing daily each way, to say nothing of shunting, empty engines, &c., &c., which would probably be equal to half as many more trains per diem. The line was in fact taxed to the full extent of its capabilities.

The impending opening of the Illawarra and Homebush-Waratah lines forced upon me the consideration of the question of how the traffic of those lines was to be brought into Sydney over a line which already carried more traffic than, with a due regard to safety, ought to have been put upon it.

The conclusion came to was—the fact being self-evident—that the existing line was not adequate to carry any further traffic, and with the full approval and consent of the Minister for Public Works it was determined to carry out the duplication to which Mr. Whitton objects, thus giving a separate line for the new traffic.

Mr. Whitton does not seem to understand that a line will only carry a certain amount of traffic with safety, and that beyond that point all traffic is carried at incessant risk to life and property.

The charge has been industriously circulated that in consequence of the want of harmony between the Engineer-in-Chief's Branch and that of the Existing Lines Branch thousands upon thousands have been wasted. While the charge was general in its terms it was only possible to give a general denial to it. At length the Engineer-in-Chief has furnished the instances upon which the charge is based, and, as will be seen by the explanations given, this great bladder, which has been growing in size with every fresh statement of the charge, is pricked and ignominiously and ludicrously collapses.

I was not Commissioner for Railways at the time referred to in your minute, within quoted, when you demonstrated that the loud complaints made by the public of general mismanagement were due to the neglect—the persistent refusal of the Engineer-in-Chief to afford the conveniences which the yearly increasing volume of traffic called for—but I was appointed immediately afterwards, and strove earnestly to rectify the mistakes that had been made under such a peculiar system of railway management. The reasonable conveniences which had been denied were granted—not necessarily all that were demanded, but those which were demonstrated, after a careful investigation, to be necessary for the proper conduct of the traffic. The complaints of the public ceased, but the Engineer-in-Chief, with a persistency which at least entitles him to the claim of consistency, decried these improvements and additions as unnecessary, and as involving a waste of public money.

How far the charge was correct the statement of the case which is herein furnished will clearly establish.

I do not desire to enumerate the instances in which Mr. Whitton, by his refusal to consult with the Commissioner and his officers, incurred expenditure on station buildings and appliances which were  
not

not required. I can point to the useless buildings on the Mudgee line, and at other places. I do not desire to overstate this expenditure—it is represented by a few thousands—but I am content to acknowledge that these mistakes cannot be repeated. They have not been possible for a considerable time past, because three years ago the Minister of the day gave directions that no plans of station buildings, &c., were to be adopted without they had first been submitted to the Commissioner for Railways, and received his approval under the report of the traffic officers.

It has been far from a congenial duty to criticise adversely the evidence given by the Engineer-in-Chief to the Board of Inquiry. I would gladly have been relieved from the obligation imposed upon me, but as the conclusions of the Board were more or less based upon Mr. Whitton's statements, I have been compelled from a sense of duty and justice to controvert them.

CH. A. GOODCHAP,

5/4/87.

The Honorable John Sutherland, Secretary for Public Works.

---

## Minute by the Commissioner for Railways on Retrenchment in the Railway Department.

THE Board appointed to inquire into the system of time-keeping and preparation of pay-sheets, and generally into the system of paying wages in the Railway Department, with the view to the adoption of a perfect, reliable, and economic form of payment, have not yet reported the result of their inquiry. I shall be glad to have their report not later than the 12th instant. CH. A. GOODCHAP, 2/2/87.

Report herewith.—J. VERNON, for the Board, 12/2/87. Commissioner.

### *Minute by the Commissioner for Railways.*

THE Minister will see from this report and other papers herewith, that long before the appointment of the Board selected by Mr. Secretary Lyne for inquiring into the economic working of the department, I had, as Commissioner for Railways, charged with its administration, taken measures for an effective inquiry. The Secretary, Mr. Vernon, had conducted an investigation into the merits of a proposal for a re-organization of the ticket and stationery staff. The result of which was placed before Mr. Secretary Lyne, whose sole direction was that it should be referred to the Board appointed by him.

The question of a better system of keeping the records of men's time, the compilation of the pay-sheets, and the payment of the wages had not been overlooked, and three officers of the department, with special qualifications for dealing with the subject, had been appointed to report upon, and had been engaged for a lengthened period in investigating the matter, with results, now afforded, which must be considered most valuable, as being thoroughly reliable from the outcome of a matured experience.

I had personally conducted an inquiry into the traffic and permanent way staff of the department, a report upon which I furnished to Mr. Secretary Lyne, whose sole action was likewise to refer it to the Board he had appointed. A measure for the redistribution of the staff of the Existing Lines Branch in regard to the engineering division is now approaching completion. It was by my directions, before Mr. Lyne's Board was appointed, that the investigation leading to the formulation of the measure referred to was commenced.

I merely mention these matters now to assure the Minister that the important question of the re-organization of the Railway staff, to meet the changed circumstances of its condition, has not been overlooked, that indeed for the last two years it has—in proportion to the work to be done—been gradually diminished. And by the time the Minister is engaged in considering his estimates of expenditure for the present year I shall have ready for his consideration a defined scheme of retrenchment, based upon information which may be relied upon for accuracy, and containing no empirical or impracticable proposals.

CH. A. GOODCHAP, 13/2/87.

### *Minute by the Minister for Works.*

I AM glad to find so much consideration given to the economical working of the department. I shall be glad to have the Commissioner's estimates on Friday.—J. SUTHERLAND, 16/2/87.

---

Report

## Report of the Commissioner upon his visit of Inspection of the Western Line.

In reference to the request of the Minister that before I made my contemplated inspection of the southern stations, I would make a report upon the result of my visit of inspection of the Western Line stations, I have to state that to furnish a report on this matter it has been necessary to follow up the information gathered on the actual visit, by further inquiry, which will explain the apparent delay in complying with the Minister's request.

As stated in my minute of the 8th ultimo, the object of my visit was to inquire into the business of each station, its volume, the facilities available for conducting it, the number of persons employed compared with the work to be done, and whether any retrenchment could be effected in the working expenditure.

Attached are particulars in detail of the staff employed at the various stations on the Western Line, from Seven Hills to Bourke, including the branch lines from Wallerawang to Mudgee, and from Orange to Molong.

I found that, with almost immaterial exception, the permanent staff of each station was not in excess of requirements, that the Traffic Manager had from time to time, as opportunities offered, reduced the numerical strength of the various staffs to correspond with the decrease in the traffic, and that the number of men employed had been kept well within the limit which the business transacted called for. At nearly all the stations there had been a considerable falling off in the traffic as compared with previous years, but the return of good seasons gave promise of a very considerable increase in the return of traffic within the next six months, when the agricultural produce of the soil would be brought to market. The wool was coming in slowly owing to the bad state of the roads, caused by the abundant rain which had fallen, but there was every prospect that, though from the cause stated the quantity of wool sent by rail would be considerably less this year than last, the quantity forwarded between August, 1886, and March, 1887 (which may be regarded as the wool season), would be quite equal to the quantity forwarded during the corresponding periods of 1885 and 1886. The rise in the rivers Darling and Murray, has to some extent diverted the wool to Port Victor and Port Phillip, but not to the extent anticipated, the judicious concessions recently made in the charges for carriage of wool coming from, and goods consigned to, places lying west of the Paroo having contributed in a marked degree to the continued use of the railway as a means of conveyance. There will be a falling-off of some 50,000 bales when the traffic returns of 1886 are compared with those of 1885, but this loss is apparent only, and not real, as the transport will be postponed only, and not lost altogether. There is necessarily a large staff temporarily employed in the conduct of the wool traffic, and it has been usual to send the men for this service from Sydney, a practice which has the disadvantage of the staff so employed being paid their wages, whether fully worked or not. If local men were employed it would be necessary only to pay them for the actual time they were required to be at work, and I gave directions that this course was to be followed, and that instead of these men being paid 7s. a day they should be taken on 6s. a day, the supply of labor at that wage being ample.

The Traffic Manager, I found, had initiated a plan by which at stations where more than one porter was required, the services of youths of the age of 16 and 17 years were engaged.

These youths are glad to take service at 20s. a week to commence with, and in many instances especially at small stations where there is more work than one man can manage, but not enough for two men, the plan has proved of advantage.

I directed the Manager to extend this practice wherever possible. Besides the immediate advantage of reducing the expenditure it has the distinct merit of forming, as it were, training schools at which lads of intelligence and zeal can learn the requirements of railway business, and fit themselves when arrived at manhood to take higher positions with advanced wages.

The appliances at the stations for conducting the traffic I found with little exception to be fully equal to requirements, indeed sufficiently ample for the large increase in the traffic which may reasonably be expected. In the few instances where additional accommodation was required I gave directions, subject to your approval for its supply.

The proposals have since been submitted to you and dealt with. The improvement of the stock-yards between Dubbo and Bourke received my special attention. I found that the yards in dry weather were all very well, but directly rain came in quantity they became intolerable. In order to rectify this as far as possible I directed that the yards should be ballasted with river gravel to a depth of 6 inches, and that a stock of the gravel should be kept on hand at the various stock-yards ready to fill up the bad places which the trampling of live stock would make in wet weather. I

I did not consider it necessary to go to the expense of "pitching" the yards. I also gave particular attention to the facilities for watering stock, and in those cases where the present arrangements were imperfect gave directions for improving them.

The yards at Bourke required some alteration, and the grading of the siding was authorised so as to admit of the speedy removal of loaded trucks.

The cattle-yards at Nevertire required to be enlarged, and at Narraminc a separate cattle-yard was found to be necessary. I have recommended these alterations on separate papers.

	Victoria.	N.S.W.
No. of men engaged in traffic branch .....	3,088	2,819
No. of men engaged per mile open.....	1.53	1.69
*Cost per train mile ...	1s. 3½d.	1s. 3d.
Tons of goods per each employee .....	699	1161

\* Note.—The saving of ½d. per train mile represents the sum of £13,830.

I may conclude this report upon the Traffic Branch of the Western Line service by stating generally that I found the stations were kept in fair order; some of course more creditably so than others; that the facilities for conducting the traffic were more amply sufficient than I had found to be the case on any previous visit of inspection; that with immaterial exception the numerical strength of the staff was in proportion only to the amount of work to be done; and that, except in the directions which I have indicated in this report, immediate retrenchment, so far as applied to the reduction of the number of persons employed, was quite impossible, due regard being had to the safety and convenience of the public. I may add in corroboration of the correctness of this conclusion that recent inquiries made by my direction show that as regards the Traffic Branch of these railways the number of persons employed compared very favourably with the number employed on the Victorian Railways, whether the comparison be made by the number of the train miles run, the volume of the traffic, or the number of stations requiring to be staffed and managed.

#### *Permanent Way.*

I stated in my minute of November 8th last, notifying to the Minister my proposed visit of inspection, that it would include an inquiry into the Permanent Way Branch and its staff.

I do not propose to discuss here the question of the strength of the staff in regard to the high officers of control (I refer to the district engineers and their respective staffs) as the Minister has intimated to me his intention to appoint a special Board of Enquiry which will, I presume, include this portion of the Railway service in its investigation. It will be sufficient for me to state here that I have given considerable attention to the subject, and shall be prepared to submit to the Board some important suggestions for their consideration.

I will deal, however, in this report with the inspectors and the fettling staff. On a previous annual inspection of the lines it occurred to me that the numerical strength of the fettling gangs might, without disadvantage, be reduced.

They then consisted of a ganger and three men to about 4 miles of line. The alteration I felt should be made with caution, and to a limited extent at first, and on a portion of the lines where the traffic was light, as the innovation was one which had had, as far as I could learn, no precedent to support it, the universal custom being to have gangs of four men at least. However I was not deterred by this consideration from initiating a plan of retrenchment which I thought experience would prove to be without disadvantage to the maintenance of the line. At first I confined the new distribution to the new line between Junee and Hay, and when a fairly lengthened experience proved that the plan was successful, I recommended to you its more general adoption. In March, 1886, last, you approved of the suggestion, stipulating that it should be given effect to with the least possible inconvenience and loss to the staff, and that this should be accomplished by drafting the surplus hands to the new extensions as they were opened instead of employing additional gangs. With almost immaterial exception effect has now been given to this scheme of retrenchment. Of course in places where there are double lines or where the nature of the railway banks require exceptional attention it has been found injudicious to diminish the number of fettlers, but as the banks consolidate and mature the necessity for more than the reduced number will with few exceptions be removed.

The following is the distribution at the present time:—

Between Sydney and Picton	
" " "	Springwood, Blacktown to Richmond
" " "	Waterfall
" " "	Hornsby—

48 gangs, aggregating 179 men for 179 miles; this is equal to one man per mile; but of the 179 miles 45 are double, and there are besides over 40 miles of sidings. *West*

*West.*

Between Springwood and Bourke with branches—

143 gangs, aggregating 436 men ; mileage, 565 ; equal to '77 men to the mile.

*South.*

Between Picton and Albury—Hay and Jerilderie—

183 gangs, aggregating 650 men ; miles, 709 ; equal to '91 men to the mile.

*North.*

125 gangs, aggregating 414 men for 481 miles ; equal to '86 men to the mile.

Besides these, there are in the Metropolitan District 5 inspectors and 10 sub-inspectors (including Tramways).

In the Southern District, 4 inspectors and 13 sub-inspectors.

In the Western District, 2 inspectors and 14 sub-inspectors.

In the Northern District, 3 inspectors and 10 sub-inspectors.

*Reductions.*

Commencing with the inspectors and sub-inspectors, of whom there are 61, I am of opinion that we can spare 18, viz. :—

7 in the Metropolitan District.

5 in the Southern do.

4 in the Western do.

2 in the Northern do.

This will give approximately a saving of £4,000 a year.

No reductions can be made in the fettling staff of the Metropolitan District.

In the Southern District, 35 gangers and 76 men can be spared, which give a saving of £13,850.

In the Western District, 11 gangers and 33 men, which give a saving of £4,118.

In the Northern District 9 gangers and 27 men can be spared, which give a saving of £3,350.

	18 inspectors and sub-inspectors	...	...	...	...	£ 4,000
	Gangers and fettlers, South	...	...	...	...	13,850
55 gangers } 116 men }	West	...	...	...	...	4,118
	North	...	...	...	...	3,350
	171					£25,318

The Engineer for Existing Lines is not convinced that, in the long run, there will be any real economy in these reductions of the staff ; experience only, he says, can prove that. With the Minister's approval, however, I propose seeing what experience will teach us in this respect.

I recommend that the inspectors to be dispensed with receive a full month's notice, terminating at the end of a month. This will give them to the end of February to look out for other employment. Those that are contributors to the Superannuation Fund will be entitled to compensation for loss of office. I do not see much prospect of their services being availed of on the extensions which will be opened, probably, within the next six months.

Hornsby to River	...	...	...	15 miles.
Gosford to Waratah	...	...	...	49½ „
Tenterfield to Queensland Border	...	...	...	11 „
				75½ „

But while the services of inspectors, beyond the staff employed, will not be required on these short lengths, we shall be able to absorb of the fettling gangs to be discharged :—

28 gangers and

56 fettlers

84

Out of a total of 171.

By these reductions the staff employed in the maintenance of the Permanent Way will be reduced from 499 gangs to 444 gangs, and from 1,679 men to 1,508 men, equal to 10½ per cent.

The inspectors and sub-inspectors will be reduced from 61 to 43, equal to nearly 30 per cent.

The number of men (including the inspectors) will then be '85 per mile.

I propose to make within the three next months some further reductions. I am assured that three men to the gang form but a weak and inefficient staff. It would be better to extend the lengths and strengthen each gang to four men.

It

If this be done I propose to make each length (with some necessary exceptions) 6 miles instead of the average of 4 miles as at present. This plan of working the lines will enable us to dispense with the services of 161 additional men, and result in a further annual saving of £17,710. There will be thirty-two sub-inspectors, averaging 56 miles of line, each equal to about 10 gangs for each sub-inspector to supervise. I cannot further reduce this staff.

In proposing these reductions, in deference to the strong views expressed by the Secretary for Public Works, I must point out that in the past the perfection of the permanent way of our railways has been the theme of general commendation, it has won the laudation of engineers who have been visitors to the Colony, and of all others whose experience and practical knowledge have made their opinions valuable. By a reduction in the staff we, of course, run the risk of losing some of this perfection, but it is quite possible, I think, to keep the lines in fair condition with the staff proposed.

After an inspection of the Southern and Northern Lines stations I may be in a position to speak more definitely of possible retrenchment in the Traffic Branch, but as regards the numerical strength of the traffic staff of the Western Line, I repeat that no reduction can be made.

I have, &c.,

CHAS. A. GOODCHAP.

I commenced this report on the 13th December last, but in compiling it have had to wait from time to time for information which the subject called for. I was not able to complete it till this date.

8 January, 1887.

Minute by the Minister for Works.

Received, 10/1/87.—W.J.L. Please forward to Commission of Inquiry.—W. J. LYNE, 17/1/87. Please make copy for Board of all these papers.—CHAS. A. GOODCHAP, 17/1/87. Copies herewith, 20/1/87. Sec. Inquiry Commission (with copies), 21/1/87.

### The Engineer for Existing Lines to The Commissioner for Railways.

Department of Public Works, Railway Branch, Existing Lines,

Engineer's Office, Sydney, 28 January, 1887.

*Subject*:—Retrenchment and Re-organization of Existing Lines Branch.

REFERRING to your verbal instructions, I submit herewith a scheme for proposed retrenchments and partial re-organization of the Existing Lines Branch of the Railway Department, by which an annual saving of some £7,000 will be effected in the professional and inspecting staff.

The proposal now submitted differs somewhat from that made by me on a former occasion, inasmuch as I have retained the present district divisions, instead of dividing them into short sections with a division engineer in charge of each section, but at the same time I propose to divide the districts (with exception of the metropolitan) into two or more sub-sections, with resident engineers in charge, under the control of the district engineers, the resident engineers to reside at convenient places, say Junee, Wellington, and Tamworth (or ultimately, in the case of the Northern Lines, when the Grafton-Glen Innes-Tenterfield lines and the Grafton-Tweed lines are carried out, at Armidale or Glen Innes).

By this arrangement a considerable amount of time (and consequent expense) now occupied by the district and resident engineers in travelling will be saved, while it will enable the officers to devote more time to the inspection and details of the work, thereby ensuring a more thorough supervision and efficiency of the service.

The main objects of my proposal are that all designs of new works and alterations are to be prepared and emanate from the head office, from where also the main inspection of works in progress should be made, *i.e.*, in case of proposed alterations or deviations the district engineers are to refer at once to the head office; no alterations are to be made in the plans or designs without being first referred to and approved by the engineer or his deputy, and while all works in progress or under construction are to be under the direct supervision of the district engineers, they should, at the same time, be under the supreme control of the head office until completion, when they will be finally handed over to the district engineers for future maintenance. For this purpose the Engineer for Existing Lines will, as occasion may demand, despatch officers from the head office to inspect and report on works in progress.

The

The reason for this proposal is that while a work is in progress the designer of the same is in a better position than an outsider to decide and find out whether alterations or improvements are required, or whether such modifications in details can be made as will tend to reduce the cost of the work. With the above objects in view, I have reduced the staff of the district officers, and collected the main force at the head office.

Standard lithographic plans to be prepared for bridges and buildings of different descriptions and classes, and also of such other works which are of a similar nature and frequently required (culverts, flood-openings, dock and platform walls, gates, &c., &c.), in order that when a piece of work is ordered a design may be selected at once, and the work proceeded with without delay or waiting for the preparation of plans, &c.; this, combined with a more extensive application of the reproduction of plans by means of the sun-printing processes (for doing which we have the necessary appliances to hand already) will in the course of a near future have the effect of enabling the office staff to be further reduced.

The above proposals are only carrying out an almost universal practice, and should effect a considerable saving in the office expenses, and lead to some reduction in the professional staff in a near future.

It is proposed to do away with the permanent-way inspectors, as well as the building inspectors (except in the metropolitan district), because I consider that the district and resident engineers should be considered the chief inspectors, and consequently there is no necessity for employing any intermediate hands between them and the sub-inspectors, and the necessity of inspectors is further lessened by the proposal to have the resident engineers in charge of a certain defined portion of the line.

The metropolitan district is somewhat different from the other districts, and I propose here to retain the inspector of permanent-way, and also a foreman (or sub-inspector) of building repairs, &c., (amalgamating in the latter office the present two positions of inspector of brickwork and inspector of wooden buildings, &c.) My reasons for this are that the head shops are at Redfern, and the tracks and works of this district (with the tramways) are spread in every possible direction, and most of the additions and improvements are made in this district, all of which, combined with the addition to the district of the Illawarra Line, and part of the Homebush to Waratah Line (including the Hawkesbury Bridge), and the proposed extension of the district to Mount Victoria and Mittagong, will, I think, justify my recommendation for additional inspection on this section of the lines. To this must be added that a great quantity of work for the other districts, and all the work for Store Advance Account, is done in the Redfern shops, which, all combined, renders additional supervision necessary in this instance.

It is proposed to combine the offices of foreman fitter and foreman blacksmith into one at the different workshops, except at Redfern, where, for the reasons above stated, the two positions will be retained as at present.

The position of foreman pattern maker at Redfern will be abolished, and combined with that of foreman carpenter.

The shops in each district will be under the immediate charge of a superintendent, who will also act as inspector of works throughout the district, and be the immediate superior of all foremen, he, in turn, being directly responsible to the district engineer.

The number of sub-inspectors of permanent way to be so regulated that each is in charge of about 80 miles of line, more or less, according to local circumstances and the nature of the lines; these sub-inspectors to be directly responsible to the district and resident engineers (except in the metropolitan district, where they will be responsible to the chief inspector of permanent way), and, in addition to the supervision of the permanent way, they are to examine and report on the conditions of all culverts, timber openings, fences, &c., on their respective lengths.

Resident engineers to have charge of the way and works in their respective sub-divisions, report to the district engineer at certain intervals the condition of the same, and when renewals or repairs are required, and generally represent the district engineer in their respective sections. They are immediately under the control of and responsible to the district engineers, but are the immediate superiors of the sub-inspectors in their respective sections.

Assistant engineers (or surveyors) are under the immediate control of the district engineers. They are to carry out all surveys required in their respective districts, prepare plans and sections, and generally be assistants to the district engineers in the matter of field-work.

The district engineers' positions to remain as at present. They will be in immediate charge of the employees and works in their respective districts, and directly responsible to the Engineer for Existing Lines or his deputy.

The signal engineer will be under the immediate charge of the Engineer for Existing Lines or his deputy; he will have the immediate control of all matters in connection with signals and interlocking.

The same remarks will apply to the architect and chief resident engineer with regard to their respective duties.

The Deputy Engineer to be general assistant to the Engineer for Existing Lines, to examine and check all plans and proposals for new designs or alterations before being submitted to the Engineer, and to act for him during his absence, and more particularly he is to act as inspecting engineer throughout the system of lines, and see that the staffs are doing their respective duties and the service carried out efficiently.

With regard to the fettlers, recommendations have already been made for retrenchments in this direction, amounting to some considerable saving per annum, and it will therefore not be necessary to enter into this subject again, only I would again strongly recommend that the number of men in each gang be, as a rule, increased from three to four, and the lengths correspondingly increased to from 5 to 7 miles, according to circumstances. Apart from the further saving that will thus be effected, I am of opinion that a more efficient service will be the result, because three men are not sufficient to work a length, lift the road, or change rails, &c.

I append a list showing how I propose to distribute the different officers with regard to expenditure, although in this I have not mentioned any names. The expenditure is based on present salaries, and if the above recommendations are sustained the selection of officers will of course be made out of the present staff, taking into consideration fitness and efficiency for the service to be performed. In making such selections the greatest care will be exercised, and in no case is it contemplated to take on new hands in place of old ones.

The staff recommended in this proposal is the least with which I consider that this branch of the service can be effectually and economically worked at the present time. As the system of our railways increases the inspecting staff of course will have to be augmented; at the same time it is anticipated that some further reductions can be made in the office staff as soon as the standard type drawings above referred to are completed. I am also of opinion that some considerable reductions can be made in simplifying the correspondence and the working in connection with the Stores Department, and in the way of making out time and pay sheets; but these are things which should be inquired into separately, and which I have not taken into consideration in my present proposals, as far as retrenchments are considered; at the same time I consider that they are subjects worth careful consideration.

The proposals, as indicated above, are in common with good railway practice in other countries, with some modifications in order to adapt them to existing local requirements. If they are entertained, I propose to draw out rules for the guidance of every officer in this branch of the service, in order to properly define the duties of each one, and make the service thoroughly efficient and worthy of a properly conducted business.

I also propose to submit a translation of the rules of the Associated German Railroad Companies (similar to, but more comprehensive than the Rules of the English Board of Trade), from which I think much valuable information will be gathered, as they deal with everything in connection with railway service, and the rules I propose to issue for the guidance and regulation of the staff will be based on the most approved practise of American and European railway companies.

There are several other matters which should receive attention in connection with this subject, and which I am now having under consideration, amongst which are the questions of whether it is necessary to keep sub-foremen under the classified foremen, and whether the latter should be classified at all, or paid at a daily rate and classed as leading hands. These matters, amongst others of internal working, are now under consideration, and it is expected that by due adjustment of such a still further reduction can be effected.

The question of regular yearly increases to classified officers is one which I have not taken into consideration; my proposals are based on present salaries, the matter of annual increases being outside of my scope, and one for the Commissioner and the Minister to decide upon. At the same time I think that if such increases are to be granted to any one branch of the service, they should be granted all round; but in my opinion it would be better and more satisfactory to grant increases only according to merits and efficiency, instead of making the increases generally all round, as at present.

MAX. THOMSÛN,  
Deputy Engineer.

## Enquiries made by the Commissioner for Railways, with a view to retrenchment and reduction of the Staff, with Reports thereon.

To the Secretary,—Can any reduction of the staff be made.

CH. A. GOODCHAP, 3/11/86.

I SHALL be glad if the Chief Clerk will, as early as convenient, furnish me with a statement showing the duties of the various officers employed in the Secretary's Branch, and the manner in which such duties are performed.

A. RICHARDSON,

6/11/86.

*pro* Secretary,

I ENCLOSE herein the statement requested, giving an outline of the duties performed by the various officers. Three of those on the list were temporarily taken on during the late Session of Parliament to assist in preparing Parliamentary returns, &c., and as these are now pretty well forward, it is proposed to dispense with their services at the end of the present month.

The remainder of the staff efficiently carry out the duties entrusted to them, and all are fully and profitably employed. Any further diminution of the staff will result in inconvenience and delay to the business of the department.

Assistant Secretary.

D. C. M'LACHLAN, 16/11/86.

I HAVE every confidence in Mr. M'Lachlan's statement, and as far as I can judge from my short experience in the office there is plenty of work to keep the staff fully employed.

I shall, however, be in a better position to report in some three months' time.

22/11/86.

A. RICHARDSON.

I am quite satisfied there are no idle hands at any rate—every one is fully employed.

1/12/86.

D. VERNON.

### *Minute by the Commissioner for Railways.*

INQUIRY should be made in Land Valuer's Branch. I think there is room for some retrenchment there.

As regards the staff, the Secretary's assurance that there are no idle hands is, as far as it goes satisfactory, but the real question is are they profitably employed?

Could a better system (if there be room for improvement) admit of the work being done with fewer hands?

CH. A. GOODCHAP, 2/12/86.

### *Minute by the Secretary.*

REFERRING to the Commissioner's question as to whether a better system of working could be adopted, I think that, with regard to the ticket and stationery office, an improvement is practicable which would result in a considerable saving of expense.

At

At present we have twelve hands employed in connection with this office, and the change I would suggest is as follows:—

The stationery and books, &c., to be sent to the Redfern stores, where, at a very small expense, accommodation could be found for the whole stock, and where, I think, it would be found that one clerk and a foreman, with junior assistant, would be all that was necessary to attend to the work. All manual labour required would be supplied by the present staff at the stores, and would necessitate no extra hands.

With regard to the tickets, I think this part of the branch might very well be dispensed with, and the tickets be supplied direct to the station from the Railway Printer. To a large extent our establishment in this respect is nothing but a duplicate of his, and therefore quite unnecessary.

If the above suggestions are carried out the effect will be,—

1st. The removal of the stationery and stores in connection therewith to the store branch at Eveleigh, the duties to form a portion of the work done under the supervision of the Superintendent of Stores.

This would involve the erection of a suitable building in the first place, at a probable cost of (say) £250.

One clerk, with foreman and assistant, might be transferred to Eveleigh, and would be ample, in conjunction with the staff at the Eveleigh stores, to perform the whole of the work. A good deal of labour would be supplied, especially of a manual kind, by the men employed at present at Eveleigh, without thereby increasing their number.

2nd. The dispensing with the present Ticket Branch altogether, thus letting the tickets which now come to us from the Government Printer go direct from the printer to the stations. As before observed, a considerable portion of the work, especially in connection with the registering the issues of tickets to the stations, is already done in the printer's office, and from enquiries made I think that by transferring (say) two clerks, the whole of the work could be well and securely carried out.

There would, after these arrangements were made, remain six clerks and one messenger to be provided for or dispensed with, whose salaries aggregate £859. The rent of a house, which could also be dispensed with, would give another £240, making a total of £1,099.

The officers at present employed in this branch would not necessarily be those to be dispensed with, but an equivalent number should be, and in selecting these I would propose to select from clerks who have only recently joined the Service, or are inefficient.

The result would not amount to a full saving perhaps of £1,099, as the salaries of those who may be dispensed with, would probably not exactly correspond with the amounts now paid to the officers of the Stationery Branch, but after looking into the matter, I estimate that a saving of £1,000 per annum might be effected if this change of system be adopted.

10/12/86.

D. VERNON.

*Minute by the Commissioner for Railways.*

For Minister's consideration. This matter is now ripe for action, it was initiated two months ago.

CH. A. GOODCHAP, 15/12/86.

*Minute by the Minister for Works.*

This may be referred to the Commission now sitting.

W. J. LYNE, 22/12/86.

Forward to the Board.—D. VERNON, 24/12/86.

#### CIRCULAR TO HEADS OF BRANCHES.

##### RAILWAYS.

I AM desired by the Commissioner to request that you will be good enough to report to him, at the earliest possible moment, whether any *reduction* can be made in the *clerical staff* of your branch, and, if so, in what direction? He wishes you to give this matter your very best attention.

A. RICHARDSON,

24/11/86.

*for Secretary.*

#### TO THE ENGINEER FOR EXISTING LINES.

ON examining the lists furnished to me by Mr. Cowdery of the Engineering and Inspecting Staff employed in his Branch, I am forced to the conclusion that his Branch is altogether over officered.

This appears to me specially noticeable in the Metropolitan and Southern and Western Districts. In each of these districts there is a District Engineer, two or more Assistant Engineers, Surveyors, and Draftsmen.

I am bound to express it as my opinion that in view of the fact that there is a Deputy Engineer, there should in each district be no more than the District Engineer and a Surveyor, who should also be a draftsman on the permanent staff. When works of any magnitude, such as doubling portions of the line, new bridges, or viaducts are taken in hand, temporary assistance might readily be obtained. Again, the Inspecting Staff seems altogether disproportionate to the mileage and the amount of work to be done. I would request Mr. Cowdery to take this matter speedily and energetically in hand, and I trust he will be prepared very shortly to lay before me a scheme embodying some very tangible reductions in his staff. Retrenchment must be made, and I venture to hope that it will be unnecessary to do more than indicate as I have done the directions in which I feel satisfied it can be accomplished without imperiling the safety of the Service.

Be good enough to let me have a reply to this by the 30th instant.  
B.C., 25/11/86.—Urgent.

C. A. G.

TO THE ENGINEER FOR EXISTING LINES.

I SHALL be glad to receive from Mr. Cowdery, with as little delay as possible, the following information in connection with the Staff engaged in the Permanent Way maintenance:—

- 1st. The number of men in each gang.
- 2nd. The length of line in charge of each gang, double or single line.
- 3rd. The character of work which each gang has to perform, which will vary with the character of the line.

At the same time I wish to learn if it is not possible to extend the length which each gang has to look after beyond Goulburn, Bathurst, and Murrumbidgee.

If gangs employed on busy sections are able to attend to four miles, as at present, I consider they should on less busy sections be able to look after six miles. In Victoria I am given to understand that the mileage attended to by each gang is even more than that.

I beg that Mr. Cowdery will give his most serious and careful attention to this proposal, for it involves, as he will at once see, a saving of a most important character.

B.C., 25/11/86.—Urgent.

C. A. G.

REPLIES.

*Accountant.*

I HAVE to report that the whole of the staff now employed is requisite and necessary to carry on the duties of this branch effectively, and that, notwithstanding the increased hours, another assistant could be profitably employed with advantage to the department.

To carry on the current work, and to prepare voluminous returns for Commissioner's report, returns for Parliament, answers to Parliamentary questions, and detailed information required from time to time by Ministers and by the Commissioner, it has been found necessary to work late at night. This has been done cheerfully by the clerks without extra remuneration, and I see no prospect of any diminution of labour. On the contrary, as extension of lines takes place, so in proportion will the work of this branch increase. I might also add that statistical computations are carried on by the assistant accountant in his own home (official interruptions preventing the work in the office). Pay clerks in the discharge of their duties travel day and night from seven to fourteen days each month; and the cashier, with his assistants, commence work about 8 o'clock in the morning, thus showing that 9 till 5 are not our working hours.

No minute of mine could adequately show the nature and extent of each man's work, but I am glad to hear that a Board is to inquire into the working, and confidently await the result.

F. WICKHAM,

Accountant.

13/12/86.

*Traffic Manager, South and West.*

THE question of reducing the staff has had my attention ever since I noticed that the traffic had decreased to such an extent that the revenue would fall considerably short of my estimate, and although I cannot point to men having been dismissed owing to the depression, I have, nevertheless, refrained from filling up vacancies as they occurred, and it is further my intention to carry out the same principle until I see the traffic recover.

The Commissioner himself made a visit to the Western line with me quite recently, and saw for himself that, although it might be possible for the services of one man to be dispensed with here and there, the staff was otherwise satisfactory. But I would here point out that it would not be advisable to keep a staff, at all events in the Traffic Department, at exactly the number of men required, because emergencies frequently arise, such as illness, leave of absence, &c., where it is absolutely necessary to replace them by properly qualified men.

I shall do my best to keep down expenses.

W. V. READ, 3/12/86.

*Traffic*

*Traffic Manager, North.*

I AM unable to make any reduction at present. When the wool season is over I will be in a better position to say if any saving can be effected.

J. HIGGS.

27/11/86.

*Locomotive Engineer.*

I HAVE given this matter my most serious attention, and I find it is quite impossible to reduce the clerical staff without impairing the efficiency of the department. I am endeavouring to avoid filling up a vacancy in the office of the Running Foreman, caused by promotion to the vacancy in Mr. Close's office at Junee, *vice* Lawless, resigned.

W. SCOTT,  
*per* R.J.S.

13/12/86.

*Land Valuer's Office.*

I BEG to state, with regard to the persons employed, that not one of them has been appointed to this office by any extraneous influence, but in each case at the request of Mr. Byrnes, as the exigencies of the work demanded, and then only when the Commissioner was thoroughly satisfied that the help was required.

As to reduction, while I fully recognise its importance, I beg to be allowed to point out that that policy has already been effectively applied to this branch. One land valuer has been dispensed with, and virtually two draftsmen, one having been dispensed with some months ago, and now another has been told off for special duty, which effectually removes him from the ordinary work of the office, so that the salaries of this branch, which a year ago were £3,300, are now only £2,020, or a reduction of more than 40 per cent. I therefore submit respectfully that no further reduction can be made without seriously impairing the efficiency of the branch, and that any saving effected in this way would be more than counterbalanced by the increased difficulty and consequent expense in dealing with compensation cases.

In conclusion, I beg to point out with regard to this branch generally that the work is of great importance. Claims to an average amount of £298,078 per annum for the last five years, 1881 to 1885 inclusive, have been dealt with by the land valuers, and it is submitted that operations of such magnitude obviously involve a large amount of work for both clerks and draftsmen. To show how the work of this branch has grown, I may mention that during the five years preceding the period before mentioned, that is, from 1876 to 1880 inclusive, the average amount of claims dealt with was only £17,392 per annum. Should it be found that the present staff is more than sufficient to deal with the work (and there is not as yet any reason to suppose that it will), I would be glad to recommend a reduction in its strength, as I have no desire to see this branch either over-manned or under-worked.

J. B. THOMPSON,  
Railway Land Valuer.

7/12/86.

*The Examiner.*

I HAVE given this matter my best attention, and cannot recommend any reduction in the staff. They are fully occupied, and, in fact, even with the extended office hours, some of the officers have occasionally to take work home.

J. P. FINEGAN.

8/12/86.

*The Superintendent of Stores, Eveleigh.*

THE store branch clerical staff is fully employed, and has not been affected by the new regulations, so far as the additional hour is concerned. For several years past the clerks have manifested the most laudable zeal in the performance of their duties, and have invariably worked overtime to an extent fully equal to the additional time imposed by the rule recently put into force, and I have no hesitation in saying that a lesser number of hands cannot satisfactorily perform the work of the branch. I may say that we have dispensed with the services of one clerk at Eveleigh since the resignation of Mr. Webb, on the 4th of last month.

H. CARRUTHERS,  
*pro* Superintendent of Stores.

8/12/86.

## Minute by the Commissioner for Railways.

## RAILWAYS.

*Working Expenditure.*

THE train mileage run on the railways during 1886 was 6,502,234 miles, and the expenditure was £1,501,766, equal to 4s. 7<sup>4</sup>/<sub>32</sub>d. per train mile.

It is estimated that in 1887 the train mileage will reach 7,000,000 miles, the cost of which at the 1886 rate would be £1,616,708.

The amount proposed on the estimates for 1887 is £1,476,271, which shows a reduction of £140,437.

In the reduced estimate a sum of £15,000 is provided to defray the expense of stationery, printing, bookbinding, advertising, rent, &c., the cost of which has been hitherto defrayed from other votes, but is now to be paid by the Railway Department.

## TRAMWAYS.

In the tramways the expenditure during 1886 was £205,708, and that proposed for 1887 is £202,971, a reduction of £2,737.

The division of the vote for working expenses between railways and tramways is as under:—

For railway services	...	...	...	...	...	...	...	£1,476,271
„ tramway „	...	...	...	...	...	...	...	202,971
Total as per estimates	...	...	...	...	...	...	...	<u>£1,679,242</u>

8/3/87.

CH. A. GOODCHAP.

## Final Report of the Board appointed to inquire into the Penrith Frauds, and the system of Time and Payments on the Railway Lines of New South Wales, with recommendations for an improved system of Time-keeping and payment of Wages.

In accordance with the instructions given by the Commissioner, the Board appointed to inquire into the cases of fraud which were committed at Penrith have now the honor to forward their Final Report on the matter.

In doing so, they desire first of all to express their regret that it should have been delayed for such a lengthened period, and to explain the circumstances which led to this delay.

Owing to the discovery of the frauds in connection with the carriage of wool, &c., it was necessary that one of their number (Mr. Kirkealdie) should devote the whole of his time, for many months, to the investigations which they rendered necessary, while the importance of the subjects dealt with by the Board made it imperatively necessary that each member should be present at its deliberations, and it was thus impossible for the Final Report to be sent in until now. Had it not been for the circumstance stated the Board would have presented their Report at least five months earlier.

They have come to the conclusion, after the most careful inquiry, that if the recommendations made in the following paragraphs are adopted, a considerable saving will be effected, efficiency in no way impaired, nor detailed information hitherto supplied reduced.

The Progress Report, forwarded by the Board on 21st February, 1886, dealt fully with the individuals concerned in the commission of the frauds at Penrith, and it is therefore only now necessary to point out what was the primary cause which led to the frauds in question, and the results of the investigation since made through all branch offices of the Department.

In continuation of this matter, the Commissioner some nine months since gave verbal instructions to the Board to extend the scope of their inquiry, and take into their consideration the present system of accounts in connection with the recording of time, and payment of wages, &c., throughout the Department, with the view of ascertaining whether some more perfect and economical system could not be devised.

Their

Their recommendations on these subjects will be found on the following pages :—

*Frauds at Penrith.*

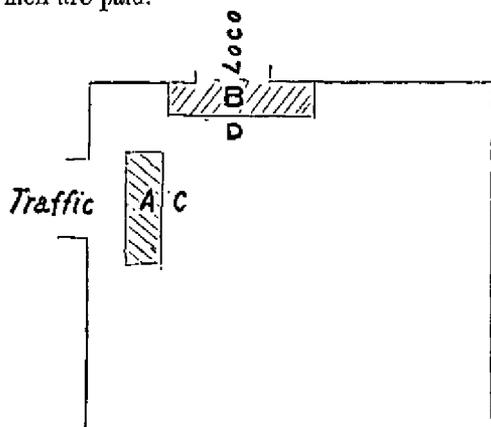

The primary cause which led to the commission of these frauds existed, no doubt, in an excess of trustfulness on the part of the Locomotive Inspector, who, it appears, was in the habit of signing the sheets while the totals were inserted in pencil only, the alleged object of the Timekeeper being to prevent erasures in the totals if any alteration was made by the Inspector when going through them. It is, however, only fair to the Inspector to state that he appears to have invariably checked the sheets through carefully, so far as regarded the individual entries therein; and it was only after they had been signed, and before the totals were inserted in ink, that Cope or Brown, the two delinquents, altered the time of some of the men in the body of the sheets, and made it greater than it should have been.

The Inspector was informed by the Board that on no consideration whatever should he sign sheets until finished in ink, and that in the future he should satisfy himself that no erasures or alterations were made without his knowledge.

Although the above was the primary cause of the frauds, there were other circumstances which facilitated the dishonest manipulation of pay-sheets by the Timekeepers, and these arose as follows :—

Owing to the limited time available for the payment of wages at Penrith it was necessary that the Pay Clerk should have someone to assist him while paying, as the locomotive and traffic men are paid together.

The method adopted will be best seen by the following rough sketch of the building in which the men are paid.

The locomotive men come to the one window, and the traffic men come to the door on the other side, as shown. A and B represent two tables, on which the sheets are placed; C, Pay Clerk; D, person assisting. The Pay Clerk takes the traffic sheets, and, the Locomotive Clerk assisting him, calls out the name of each man, and the amount due, as shown on the locomotive sheets. The Pay Clerk glances over the locomotive sheets to assure himself that the amount is correctly called, and then hands the sum to the Clerk assisting him, who in turn passes it on to the person to whom it is due. As it was ascertained, the persons who usually assisted the Pay Clerk were A. F. Cope and W. Brown—the two Clerks who originated the

frauds; it will be seen that it was easy, in the press and hurry of paying, for the Timekeeper or Clerk assisting to call out a man's name, and either sign the sheet himself, or attach an order, which might be forged.

The Board do not regard the Pay Clerk as responsible for this condition of things. He is placed in peculiar circumstances, having to leave by a certain train, and the only resource left him is to obtain assistance from the clerical staff.

On the completion of their investigations at Penrith, the Board made arrangements for the immediate examination of the various books and accounts in the Metropolitan and District Offices. For this purpose Mr. P. T. Finegan (Locomotive Engineer's Office) was detached to make similar examinations of the accounts to that made at Penrith, providing himself with full sets of time and pay sheets for various periods ranging over twelve months. The time-books were critically examined and compared with these sheets, and any irregularities noted. Statements as to the condition of the accounts were also prepared by him.

The Board then visited each office and personally inspected the books, comparing them with the completed time and pay sheets in all doubtful cases.

As the result of these inspections the Board are pleased to be able to report that they found no reasonable cause for any suspicion of attempted fraud having been made at other offices.

The only irregularity of any importance which came under notice was the payment of certain expenses to relieving station-masters on the Northern Line. It appears that in these cases nightly allowance for expenses had been granted when the officers were not actually away from their homes, and this arose in the following way :—Some of the officers reside at East Maitland and other stations on the Northern Line, but Newcastle is supposed to be their head-quarters; and in defence of the custom of allowing expenses to these officers, while relieving stations from which they could reach their homes at night, it was argued that as Newcastle was their head-quarters, and they were absent from Newcastle, expenses should be allowed.

Thus, for instance, an officer residing at East Maitland was allowed expenses (night allowance) when relieving East Maitland, West Maitland, Morpeth, and other stations where he could conveniently reach home at night, and was actually at home for the time expenses were charged.

The Board would express their opinion that in no case should expenses have been allowed, except when the officers concerned were actually absent from home during the time charged for; and it will be for the Commissioner to say whether those officers who have received such expenses should not be called upon to refund the amounts overpaid.

The Board, having satisfied themselves as to the general accuracy of the entries contained in the different time-books, then examined and considered the following subjects:—

- 1st. System followed in the recording of time worked and compilation of pay-sheets.
- 2nd. Hours of duty and overtime.
- 3rd. Allowance of travelling expenses.
- 4th. Payment of salaries and wages.

*System of recording Time and compilation of Pay-sheets.*

On examination it was at once apparent to the Board that there was a large and needless duplication of work in connection with these subjects.

In the first place the time appears to have been often kept in a rough book, and from that copied into the time-book by the Time-keeper, and again from this time-book a literal and exact copy made on to the time-sheets. The amount of work involved in making these copies is very large, especially in the Locomotive and Permanent Way Branches. In the Traffic the work is not so large, but even here there is an unnecessary amount of hand-copying. In fact the principal object appears to have been that each Branch Office should protect itself by retaining the documents certified and sent to them, and sending on fresh copies, or by insisting on every sheet being furnished in duplicate, so that one copy might be retained as their warrant for passing the account.

The Board are aware that this duplicate system is one largely favoured in the Government Service, but they fail to see its utility, when the original documents can always be obtained, as in the case of our pay-vouchers.

It would be impossible to point out within the limits of a report each individual instance of this *needless duplication* and in some cases *triplication* of work, nor do the Board regard it as of importance to do so, as their recommendations will, if approved, remedy those evils.

The Board were also impressed with the variety of forms and books in use, and with the general want of uniformity in the recording of time and compilation of pay-vouchers, and have succeeded in elaborating a system which will secure not only a uniform method of time-keeping but also simplicity in form and fulness of detail.

Samples of the new forms required are appended, with copies of the old forms which it is proposed to abolish, and they will now be described in detail.

- 1st. Improved form of Attendance Book for workshop employees. (See form A.)

The improvements consist in the addition of columns for the number of days, rate, and amount of wages, which will enable the Timekeeper to make up the pay-sheets from this source.

- 2nd. Appearance Books for running staff and station employees. (See forms B and C to replace B<sup>1</sup>, C<sup>1</sup>, and C<sup>2</sup>.)

- 3rd. Improved form of Time-book, to be called Time and Appropriation Book. (See form D.)

The improvements consist in arranging the time-book so as to provide for the insertion of not more than twenty names on each page, with space immediately below for the appropriation of the time worked. The form is one which will suit all branches and thus ensure uniformity of system in keeping time of employees. On the fly-leaf of this book full and particular instructions should be printed as to the manner in which it is to be written up.

The book recommended will supersede six existing forms (four time-books and two time-sheets) (See D<sup>1</sup> to D<sup>6</sup>.) It will not reduce the detailed information now given, but will in some cases increase it, and will show it in a simple and easily understood form, while it will ensue to the Branch as a ready means of ascertaining the cost of works, when preparing estimates.

- 4th. Book for registration of Proclaimed Holidays. (See Form E.)

This

This book is required, as owing to the exigencies of the Department it is not at all times practicable for the employees in the running staff to take proclaimed holidays on the date they are granted, and it has been the custom to allow them to accumulate for (say) one or two years. If it suits the convenience of the Department, and the employees wish it, they are paid for their work on these days instead of taking them as holidays.

There does not seem to have been a proper record kept of these different holidays in all cases, and it was ascertained that where men had received increases between the proclaimed dates and those on which the holidays were paid for, in some instances the holidays had been paid for at the increased rate. At the same time the amount so overpaid is small, and it would not be advisable to take any retrospective action in the matter. The book proposed will have the effect of preventing such occurrences.

5th. Improved form of Pay-sheet providing for Salaries, Wages, and Expense. (See form F.)

There are at present two forms of Pay-sheet (one for wages, and another for salaries; see F<sup>1</sup> and F<sup>2</sup>). It is proposed to do away with these and to substitute one improved form, which will provide for both services, and expenses as well.

In addition to the information previously given on these sheets, the improved form gives columns showing the deductions to be made for rent and fines, as well as superannuation, together with full instructions for the preparation of the sheet, the payment of the amounts shown thereon, and, on the back particulars of all expenses. A reference is also given to the time-book folio from which the sheets, so far as wages are concerned, will be compiled. It is proposed to have them printed in full and half size, the full size to contain twenty names. Spaces are also given for the signature of the Station-master or Inspector and the Timekeeper. It is proposed that this sheet be printed in patent copyable ink, and press copies taken in the Branch from which they are issued. The sample attached is full size; old forms also attached. (See F<sup>1</sup> and F<sup>2</sup>.)

It will be observed, the form of pay-sheet recommended is altogether different from the old wages form, inasmuch as it is separate from the time-sheet, which under the proposed system would be done away with. The object for which it was instituted will be now obtained in the improved time-book.

As the adoption of this new sheet would involve a considerable alteration in the mode of check and examination of time and wages payments generally, we consulted the Examiner of Accounts upon the subject, and after full and careful consideration that gentleman agrees with the Board, and has prepared forms for the improved style of appropriation rendered necessary by the alterations.

It may be considered advisable that the altered conditions which will be imposed upon the Examining Branch by the introduction of this new and improved system should be alluded to. They are briefly as follows:—

Instead of, as at present, voluminous copies of time-sheets being forwarded to the Examining Branch with the wages-sheets (which time-sheets are merely a duplicate of the time-book, and cost much time and labour to prepare), it is proposed to send the wages-sheet in immediately upon the termination of the period which it covers, together with a summary showing the amounts to be charged to Private Parties and Loan Accounts in detail; working expenses, and additions and alterations, as at present. (See form G.)

This would obviate the necessity which now exists of *anticipating* the time to be worked, the closing of the sheets before the end of the period, and probably ensure the payment of wages sooner than at present.

The abolishment of the present time-sheets will very considerably reduce the labour of appropriation now performed in the Examiner's office, and will enable that gentleman, with his staff, to devote their time more exclusively to the check and examination of wages and accounts than is at present possible. The means for this examination will be afforded by the transmission of properly prepared summaries of appropriations during the week succeeding the transmission of the wages-sheets. These summaries will show in full detail all charges covered by the pay-sheets previously forwarded, and in total amount will agree with the pay-sheets.

The Examiner fully agrees with the Board that a very large saving may be effected by the adoption of this system, which would also ensure a thorough agreement in all the account books of the Department. While at present the Examiner makes the appropriations, they will in future be made by the officer who is in charge of the work, and is responsible for the expenditure; but these appropriations will be carefully checked by the Examiner's staff and compared with the pay-sheets.

*Hours of Duty and Overtime—Running Staff.*

The Board would call particular attention to the hours of duty, as allotted to the running staff, viz., drivers, firemen, guards, and assistant guards. There has been a slight dissimilarity between the time allowed to drivers and firemen and that of guards, the former being paid at the rate of fifty-five hours per week of six days (except on the city and suburban tramways, where they are paid 110 hours per fortnight) and the latter per trip, with the exception of the Wellington guards, who are paid at the rate of fifty-six hours per week.

After full consideration the Board consider that these men, in respect to hours of labour, should be treated similarly, and they would recommend that 110 hours per fortnight should be the standard for twelve days' pay.

Circumstances may arise under which, owing to Departmental arrangements, the running men cannot be profitably worked the 110 hours per fortnight, and in that case it would be necessary to pay full time, provided they worked the twelve days; but supposing a man to have worked (say) fifty hours in six days, his working 60 hours in the second week of six days should not entitle him to overtime; that is to say, overtime should not be allowed in any period until full ordinary time for that period (110 hours) be worked. The Board are aware that in other places payment is made proportionately to mileage run, but owing to the fluctuations of our traffic and the varying grades of our lines, they consider that 110 hours per fortnight would be the more equitable arrangement.

From a calculation which has been made, taking into consideration the undertime worked and paid for as full time, and the overtime which accrues under the system of fifty-five hours per week, it is estimated that if 110 hours per fortnight be made the standard time for drivers and firemen, a saving of £4,200 per annum can be effected, without offering any justification for, or grounds of, complaint.

The alteration of the guards' time to 110 hours per fortnight will not, in all probability, effect any saving in cost; but it is recommended for the purpose of ensuring uniform treatment of all employees of the running staff working under similar conditions.

*Workshop Employees.*

The Board would recommend that it be an established rule in all cases not to pay overtime until full ordinary time has been worked. The practice prevails in the Railway Department of Victoria, and the Board consider that it is only fair and reasonable to expect full time to be made before any overtime is granted. As an example of the necessity for such a rule, it may be pointed out that under the present system, supposing an employec of the workshops to absent himself for (say) four morning quarters any week, he could, by working two hours extra on the other two days in the week, obtain the overtime allowance (which is double time for the first two hours), thus making up in four hours the time he was absent. In this case, therefore, the Commissioner would be paying a full day's rate for a half-days work.

*Gangers.*

A custom exists on the Northern Line of allowing gangers half-day overtime for walking their lengths on a proclaimed holiday, while on the South and West no such allowance is made, and the Board consider that the course adopted on the South and West should be made universal.

*Expenses.*

The Board consider that a revision of the present system for allowing expenses should be made. The present rates are liable to misconstruction, and exhibit a want of uniformity in the treatment of employees who perform similar duties.

The following will show the present and proposed rates:—

## LOCOMOTIVE BRANCH.

Calling.	Present rate.	Proposed rate.
Inspectors ... ..	7s. 6d. per day, 10s. per night.	10s. per day of twenty-four hours, or for less 2s. 6d. per meal or bed.
Foremen and Sub-Inspectors.	7s. 6d. per day and 10s. per night.	8s. per day of twenty-four hours, or for less 2s. per meal or bed.
Relieving Clerk ... ..	5s. per night ... ..	6s. per day for the first week; after that 30s. per week.
Drivers and Firemen ... ..	3s. per night ... ..	1s. 6d. for meals and 1s. for bed where quarters are not provided. To be twelve hours away from home before any allowance is made.
Mechanics and other employees.	4s. and 3s. per night ... ..	1s. for meals or bed.

## PERMANENT WAY BRANCH.

Calling.	Present rate.	Proposed rate.
Inspectors ... ..	5s. per day, 9s. 6d. per night	8s. per day of twenty-four hours, or for less 2s. per meal or bed.
Sub-Inspectors ... ..	7s. per night ... ..	6s. per day of twenty-four hours, or for less 1s. 6d. per meal or bed.
Foremen ... ..	5s. per night ... ..	Same as sub-inspectors.
Mechanics and their labourers.	1s. per night and tents ...	1s. per night and tents provided.
Gangers and labourers ...	3s. per night ... ..	3s. per night—under exceptional circumstances to be specially sanctioned.

## TRAFFIC BRANCH.

Inspectors ... ..	7s. 6d. per day, 10s. per night.	10s. per day of twenty-four hours; less than that 2s. 6d. per meal or bed.
Relieving Station-masters, 1st-class.	8s. 6d. per night ... ..	8s. per day of twenty-four hours for the first week; after that 40s. per week; less than one day, 2s. per meal or bed.
Relieving Station-masters, 2nd-class.	6s. per day under a week, 5s. per day over a week.	6s. per day of twenty-four hours for the first week; after that 30s. per week; less than one day, 1s. 6d. per meal or bed.
1st-class Clerks and 1st-class Operators.	6s. per day under a week, 5s. per day over a week. Operators (actual).	Same as 2nd-class Relieving Station-masters.
2nd-class Clerks and Operators.	6s. per day under a week, 5s. per day over a week. Operators (actual).	5s. per day of twenty-four hours for first week; after that 28s. per week.
Officers-in-charge who understand telegraphy.	3s. per night ... ..	Same as 2nd-class Clerks and Operators.
3rd-class Clerks, Porters, Officers-in-charge, Shunters, and other employees.	2s. and 3s. per night ...	3s. per day of twenty-four hours; after that 21s. per week; less than one day, 1s. per meal or bed.
Guards and Assistant Guards.	3s. per night ... ..	Same as Drivers and Firemen.

Where weekly expenses are shown, portions of a week are to be treated at weekly rates. Expenses to be entered on the wages or salary pay-sheet, and particularised on the back of same.

*Improved System of Payment.*

The present method of paying wages appears to the Board as both expensive and inelastic. The opening of any length of new line or branch necessitates the appointment of additional Pay-clerks, and this in itself is a serious item of expense.

An efficient and economic method of pay should be capable of expansion so as to meet increased requirements without undue expense. That this cannot be accomplished under the present system is evident, and the Board have, therefore, with the assistance of the Paymaster, endeavoured to arrange for an improved method which will be capable of meeting all prospective requirements, providing at the same time for economy in working and minimum of risk in the transmission of money. The Paymaster, has, at the present time, seven pay-clerks, whose duties are wholly confined to the payment of wages and adjustment of vouchers. Their head-quarters are in Sydney, and their salaries and travelling expenses amount, in the course of twelve months, to about £2,200 on South and West only. On the North the Paymaster (Mr. Burns) has clerks whose duties are not wholly confined to paying, but who travel along the line with the wages as required.

The wages due at Sydney station, and beyond suburban lengths, are paid by the Pay-clerks, with the exception of Goulburn and Bathurst, where the duty is performed by the respective Station-masters. The Pay-clerks start from the head office for their various lengths—those paying from Granville to Goulburn to Bathurst—taking their cash with them.

In the case of those who pay beyond the two stations named, a cheque is sent, in nearly every instance, to the Station-master at the stations from which they commence paying. On the arrival of the Pay-clerk the cheque is handed to him by the Station-master, and he goes to the local Bank and procures the necessary cash, paying the wages at stations and along the lines either by goods train or trolley. On the suburban lengths the wages are paid by the several Station-masters.

The Board are of opinion that an improved method can be adopted by which the cost will be very materially reduced, and further extensions of Lines provided for without increasing expense to any appreciable degree.

As already mentioned, the wages on the Suburban lengths are sent to the Station-masters, by whom the men are paid, and it is proposed to extend this method of payment throughout the whole of the Lines, with the exception of large depôts, such as Sydney, Eveleigh, Goulburn, Junee, Penrith, and Bathurst, on the South and West, and Newcastle on the North, where the men would still be paid by the Pay-clerks.

The money would be made up in the Paymaster's office and placed in cash bags, of which the duplicate keys are held by the Station-masters to whom they are addressed. These bags would contain the amount required to pay the whole of the staff in all branches employed at the Station and within reach thereof.

The method by which it is proposed to distribute these bags, taking the Southern Line as an illustration, is:—

The Pay-clerk would start from Sydney by the day passenger train for Goulburn, and on arrival at each Station hand out the locked bag for that Station to the Station-master or officer in charge, who would sign a receipt for the same on the form provided for the purpose.

On arrival at Goulburn, the Pay-clerk will take the Goulburn money and pay the whole of the staff there himself, and then proceed by the next train to Junee, handing the amounts for each Station to the Station-masters in the same way, and paying, as in the case of Goulburn, the whole of the staff at Junee.

In the case of sums due beyond Junee it is thought that a clerk might be detached from the Junee staff to carry on the process as far as Albury.

The South-western and other Branch Lines would be similarly provided for, and by a judicious arrangement of lengths to be travelled, and Stations from which clerks so detached should start, their travelling expenses would be small as compared with the present system.

On certain lengths some of the Stations are too far apart to admit of the fettlers attending at the Stations to receive their wages without serious loss of time, and in these instances it is proposed that the clerk should pay the intermediate gangs their wages, or that the Station-master at the nearest Station shall detach one of his staff for that purpose, as may be most convenient.

It is an open question whether in these special cases the Victorian system of paying Permanent Way wages might not be partially adopted, *i.e.*, making up the wages for each gang in a separate bag and throwing the bag to the ganger as the train passes, leaving him to pay his own men. The objections to this latter course are that it destroys the continuity of the check over the transit of the money from the Department to the employee, and may occasion delay in adjustment, owing to the risk incurred of loss through the receipted vouchers going astray. It might, however, in exceptional circumstances be advisable to adopt this plan, with the view of avoiding loss of time and detention of trains. The Board are aware that the system has worked satisfactorily in Victoria, and it might be worth a trial here.

All clerks employed temporarily on the payment of wages should give security, and be allowed, in addition to their ordinary travelling expenses, a small sum of money per annum, proportionately to the length of line over which they travel.

In these remarks the Southern and South-western lines have been taken as illustrating the method to be followed on all lines. It is unnecessary within the compass of this report to give the full details required for the working of this system of pay, but all its important features are given above.

If approved, a code of instructions can be prepared, informing the Station-masters that all correspondence in the matter of payments must be addressed directly to the Pay-master; that vouchers must be returned with all money unpaid within seven days from date of receipt under penalty of fine for delay; that every care must be taken to ascertain that the person receiving money and signing receipt is the one to whom such money is due; that no orders for payment of money should be recognized except upon the authorized form (see example attached marked H), with all other instructions necessary for the payment of money.

At stations where there are local Banks it would perhaps be advisable, as at present, to forward cheques drawn on that Bank in favour of the Station-master instead of sending cash by train.

By the institution of such a system of payment as is here recommended a large reduction in expenses could be made. The Paymaster would require only four clerks instead of seven, and the opening of new lines would not, as now, necessitate the appointment of any additional clerks in his office. Taking into consideration salaries and travelling allowances, the Board estimate that a saving of from £700 to £800 could be affected as compared with the method now in force.

In

In connection with the subject of the pay system, the Board desire to draw special attention to the delays in paying accounts due, which are incident to the system at present in vogue, and are to a large extent compulsory under that system. These delays in payment of accounts cause a great deal of unfavourable comment, and are also a cause of increased cost, as contractors in tendering, no doubt, provide in their schedule prices for the delays which they know will occur.

Prompt payment of accounts is a thing so manifestly important that the Board feel they are warranted in bringing the subject specially under the Commissioner's notice, with a view to the introduction of a better system, by the establishment of which the wages could be paid at least two days earlier than at present, and all other accounts (with the exception of Construction Contract Vouchers) paid immediately on the presentation of duly certified vouchers to the Paymaster.

The introduction of the system mentioned below would also effect a most important object, and that is the agreement of the Auditor-General's and Treasury books with the principal books of the Railway Department, so far as expenditure is concerned, and thus put a stop to the hostile and uncomplimentary articles which so often appear in the public Press on the subject of the differences in the Railway and Treasury accounts. These differences arise under the present system, not from any want of care in the entry and compilation of the accounts, but from the differing methods followed in the two departments mentioned, as under.

It is necessary in the Railway books to enter accounts before payments, while in the Treasury books they are only entered and charged against the votes, after they have been actually paid to the persons to whom they are due.

It often happens that persons do not apply at the Treasury for the amounts due to them for a week, or sometimes a month or two, after they have been forwarded for payment; and all that time they stand in the Railway books as actually expended and paid. This will at once be recognized as a most fertile cause of difference in the statements issued on any particular date by the two departments, and it is with the view of avoiding the discrepancies so caused, as well as facilitating payments and decreasing cost of supplies, that the Board make the following recommendations on this important subject.

1st. That on the 1st of January in each year, or during the first week in that month, a "letter of credit" be established with the Bank doing the Railway business, authorizing the Commissioner for Railways to draw upon that bank for a sum or sums amounting to at least £75,000, to be applied to the payment of wages, salaries, or other accounts, which become due in the service of the Railway Branch.

2nd. This letter of credit to hold good for the period of twelve calendar months from the date of issue, any sums repaid by the Treasury to the credit of the account to be available for reissue during the period mentioned.

The method pursued would then be as under:—

The Accountant, upon receiving duly certified vouchers, would note them in the balance books against the several votes to which they would become chargeable, and then transmit them to the Paymaster for payment. Cheques would then be drawn for the amounts shown to be due on the vouchers, and could be paid as called for.

By this system accounts could be paid on the same day, or within twelve hours of their being placed in the Accountant's hands.

On the accounts being so paid and discharged, the vouchers would be returned to the Accountant, entered in the principal books, and made up for transmission to the Treasury.

The Treasury would, on receipt of the vouchers so paid and adjusted, recoup the letter of credit to the amount indicated by the vouchers transmitted, and so restore it to its original amount.

This system of payment has been followed for many years in the sister Colony of Victoria, and has worked extremely well. It provides ample facilities for safety and minimum risk in the payment of money, and is economic, commercial, and business-like in its operation.

Any charge likely to be made by the Bank for interest on the "letter of credit" could be to a large extent, if not altogether, avoided by paying to the same Bank so much of the railway receipts as would suffice to cover the letter of credit; at the same time the Board have reason to believe that no extra charge for interest would be incurred by the introduction of this system, as they are informed that at present the Australian Joint Stock Bank charges interest on payments in excess of receipts.

The amount of £75,000 asked for is estimated to cover:—

	£
One fortnight's wages ... ..	45,000
Salaries—one month ... ..	20,000
Sundry accounts ... ..	10,000

Letters

Letters of credit have already been granted by the Treasury in more than one instance, and the extension of such an arrangement would not, in the opinion of the Board, increase the responsibility of the Railway Department in dealing with money matters, nor would it, if carried out in the manner proposed, afford any facilities for dishonest manipulation, as the accounts would be *examined daily* by the Accountant, which would afford a perfect check on all paid and unpaid amounts.

The advantages of prompt payment, which would be secured by the proposed system, are so great that the Board feel assured this proposal will receive favourable consideration.

In conclusion, the Board beg to say that the adoption of the foregoing recommendations will secure perfect and lasting uniformity in all branches of the Railway Accounts, while they will ensure a saving of £5,000, without taking into consideration that which can doubtless be effected in some of the other offices where the work will be reduced; or the saving which cannot fail to be secured in the cost of stationery under the proposed system.

DAVID KIRCALDIE.  
ROBERT J. SHERIDAN.  
JOHN VERNON.

The Commissioner.

## Minute of the Secretary for Public Works.

THE late Minister for Works, on his retirement from office, left a minute for my information with reference to the Progress Report of the Works Inquiry Board. It is apparent from the terms of that minute that Mr. Lyne did not concur on all points in the recommendations of the Board, although he does not indicate the extent to which he dissents from their views, except where he says "it would be unwise to give a general notice to all officers as suggested, leaving the Heads of Departments to reorganize the offices, and select subsequently those whom they may consider the most suitable."

So far as the Railways are concerned, a well-considered and reasonable scheme of reduction had been prepared quite independent of the action of the Board. It was initiated before the appointment of the Board, and was submitted to me soon after my assumption of office. The Estimates for 1887 have been framed upon the proposals therein submitted, and further reductions are to follow. As regards the Board of Inquiry, I found from their mode of conducting the inquiry that their operations were likely to extend over a prolonged period, and would involve a heavy expenditure. At the same time I received an intimation from the Colonial Architect that it would be utterly impossible for him to conduct the current work of the Department, and to afford, at the same time, the voluminous information required by the Board. The Government then considered it advisable to call for the Board's final report, and to terminate their labours.

There are in the report of the Board some valuable suggestions in relation to the reorganization of the Railway Department, but it appears to me from the independent reports furnished by the Commissioner for Railways that these suggestions had for the most part been made by the Department itself. The minute of the Commissioner for Railways upon the report of the Board indicates the direction in which retrenchment has and will yet have to be made, and though it may be that the recommendations of the Board of Inquiry will not in their fulness be adopted, they will have every consideration where it can be shown that they are practicable.

JOHN SUTHERLAND.

## DEPARTMENT OF PUBLIC WORKS COMMISSION OF INQUIRY.

## MINUTES OF EVIDENCE.

THURSDAY, 16 DECEMBER, 1886.

Present:—

MR. T. F. WALLER, CHAIRMAN.

MR. J. Y. MILLS

MR. J. E. FITZGERALD COYLE.

THE Commissioners visited the Department of the Engineer-in-Chief for Railways. The Chairman informed the Engineer-in-Chief that the Commissioners desired to make an investigation into the working of his department, and requested his co-operation. As head of the department it would be his province to act as a member of the Commission, so far as the inquiry related to the department over which he had control. Mr. Whitton said that he thought it better that the Commissioners should act independently of him, and that, while he was willing to render them every assistance, he would rather not take any active part as a member of the Commission.

Mr. John Whitton examined:—

1. *Mr. Mills.*] Will you inform the Commission what is the routine which obtains in the transmission of papers from your department to the Minister? The course now taken is this: Any papers which have to be sent by me to the Minister are forwarded, in the first instance, to the Under Secretary for Public Works, and recorded in his office; they are then sent to the Commissioner for Railways, and recorded in his office. Then, as a rule—I do not say all papers—papers from me are laid before the Minister by the Commissioner. Having been dealt with by the Minister they are recorded in the Commissioner's office, then sent to the Under-Secretary, where they are again recorded, and thence returned to me.
2. *Mr. Waller.*] Would you propose that that plan should be simplified, and if so, how would you remedy it? I would remedy it by requiring that the Under Secretary should lay before the Minister all papers sent to him by me for that purpose, and should then return them to me direct.
3. *Mr. Mills.*] The transmission to the Minister and return should be through the Under Secretary direct? Yes.
4. *Mr. Waller.*] How do papers come to you? They come in, as a rule, from the Under-Secretary to me.
5. *Mr. Mills.*] What is the mode by which papers first come to the office? Do they come to you by post? No; the papers to which I now refer come either addressed to the Minister or to the Commissioner. Then they have to be sent from the Commissioner, through the Under Secretary, to me. If all the papers addressed to me came to me direct I could deal with the matters to which they refer in a couple of days, whereas under the present method it some times takes weeks to get the papers passed through to any department which has to deal with them.
6. Then this method involves great delay? Yes; the business is apt to be neglected, and is very much delayed.
7. *Mr. Waller.*] Some letters are addressed to you, I presume? Yes; people write to me, and sometimes I get letters from persons outside the department who ought properly to have addressed the Minister.
8. How are they recorded? They are recorded in my office. If I think it necessary to forward them to the Minister I send them to the Under Secretary, and I think he ought to submit them to the Minister; but instead of that they are marked "Railways," and they go on to the Commissioner.
9. All papers referring to your department ought to come to you direct? Yes; direct from the Under Secretary. If anyone could give me any assistance in managing my department I should not perhaps object; but they cannot, and therefore, as all papers in connection with the railway works have to come to me, it would be better that they should come direct.
10. *Mr. Coyle.*] Your papers, I presume, have to take their chance of being dealt with in the mass of other correspondence which comes to the office? Yes.
11. *Mr. Waller.*] And you think that letters referring to your department should be addressed to the Engineer-in-Chief? Yes; but you cannot control the action of the outside public.
12. But I am speaking of letters in the department. Instead of being marked off to railways they should be sent to you? Yes; all letters should pass through the Under Secretary, and be transmitted to the officer who can give the information desired, or can act upon them, as the case may be.
13. You would leave it to the Under Secretary? Decidedly. Instead of so many papers being sent from him to the Commissioner, they should come from the Minister direct through him to me.
14. He ought to be a sort of head post office? He ought to be.
15. *Mr. Mills.*] I invite your attention to the seven heads of inquiry specifically mentioned in the minute of the Minister for Works, and I ask you if you can direct our attention to any matter in your department specially relating to them? I think the better plan would be for you to see the head of each particular branch, from whom you would more conveniently get any information you may require, and any papers which you may wish to obtain I shall be happy to have placed at your service. Mr. Quodling is the chief clerk who has to do with the clerical department. Mr. Drutt is in charge of the drafting department, and Mr. Palmer is in charge of the surveyors. Each of these gentlemen will give you all the information you may desire in reference to his particular branch.

Mr. J.  
Whitton.  
16 Dec., 1886

Mr. J. Whitton.  
16 Dec., 1886.

16. As to the appointments, what is the system which obtains? The appointments are made by the Minister. If they are what are called temporary appointments, they are appointed by the Minister direct upon my recommendation, or upon the recommendation of any other head of a department; but if the appointments are to be to the permanent staff, the persons must be appointed by the Governor and Executive Council. If so appointed, they can only be dismissed by the like authority. In the case of temporary appointments, officers can be removed by the Minister alone, without reference to the Governor and Executive Council.
17. *Mr. Waller.*] Do the temporary staff participate in the Superannuation Fund? No.
18. Do you think that retrenchment can be made in the Survey Department? Yes; I have already advised the Minister that on the 31st of this month there will be thirteen surveyors in my department waiting for employment.
19. *Mr. Mills.*] Field surveyors? Yes; they have come into the office from the field.
20. *Mr. Waller.*] Have you any reason to expect that in a short time you will have employment for them? I do not think I shall; but it will depend entirely upon whether the Government go on with further surveys. All authorised lines have been surveyed, and if the Government authorise any additional lines, we shall have to put a certain number of surveyors on the work.
21. *Mr. Coyle.*] Suppose the Government were to authorise additional surveys, are there surveyors at present in the department who would be likely at such time to be disengaged? At the present time we have a number of surveyors employed upon work that will be finished about next June. They will then come into the office, and if there should be no further work for them then, their services will have to be dispensed with.
22. If, then, there should be additional work projected, those surveyors will be available for that work? Yes; or we can re-engage any of those whose services may now be dispensed with.
23. In recommending that their services should be dispensed with; did you recommend that any compensation should be given for the loss of office? I recommended that one month's pay for every year of service should be given. I think it is only reasonable that they should receive that. Many of them have families, and it is only fair, in my opinion, to give such compensation.
24. *Mr. Waller.*] Have you any suggestion to make as to the method of performing work in your department,—as to whether the system in vogue can be improved upon? I do not think it can. It is entirely under my own direction. Whenever I find that we have more men than we require I inform the Minister, so that they can be got rid of. I think we have reduced the cost of the staff by about £9,000 lately. We have not filled up any vacancy in this department for a considerable time.
25. For how long a time? Say for the last twelve months.
26. *Mr. Coyle.*] What may be the number who have retired or died? Mr. Druitt will be able to state that.
27. Would the fact of the thirteen surveyors being out of employment reduce the drafting work in your office? No; they are finishing off the plans in hand, and by the 31st of December their work will have been completed.
28. Then they complete their own plans? Yes; but there are drafting officers as well, who are employed in getting up plans and sections, and taking out quantities.
29. *Mr. Waller.*] As to the diligence of the officers, I presume that is a question which would be better answered by the heads of the branches? Yes. So far as I know, if there is anything improper in the department it is communicated to me, and I rectify it myself.
30. *Mr. Mills.*] Would anything be gained if the power of appointment and the power of dismissal resided directly in the head of the department? The Minister very seldom refuses to adopt my recommendation with regard to dismissals. I do not know of any instance in which he has done so.
31. Are appointments made upon your recommendation? Yes. I recommend a certain officer to be appointed to do certain work, and, as a rule, my recommendation is approved.
32. Our attention has been called to a number of appointments called political appointments, which it is said have caused the Department of Public Works to be overmanned, are you aware of any such appointments in your department? I do not know of a single political appointment in my department.
33. *Mr. Waller.*] What is your opinion as to the suitability of the rooms in which the work is done? We have plenty of accommodation now. At one time we were rather cramped. We have very good office accommodation—large enough for a much larger staff.
34. *Mr. Coyle.*] And conveniently situated one office to the other? No; the offices are rather scattered. The trial surveys are all down at the Mutual Provident Society's buildings. I have a telephone there.
35. They are under Mr. Palmer? Yes.
36. And you do not require to communicate with him in the same way as you do with officers who are more immediately connected with your own business? It would be a great advantage if all the offices were together, so that I could at any time enter them and see what was going on.
37. *Mr. Mills.*] You would have the offices more concentrated? Decidedly.
38. *Mr. Coyle.*] Would there be any difficulty in having the whole of the offices in the Public Works Department in this building? If we had not to find room for the surveyors, we could give up the Mutual Provident offices; but, if we have a large staff of surveyors, we could not find accommodation for them here.
39. *Mr. Waller.*] What rental is paid for the Mutual Provident offices? I think £600 a year. When Mr. Palmer is away, he leaves some one in charge; but it is possible that his men may go out in his absence. If we had the whole staff under one roof, the business could be managed better.
40. *Mr. Mills.*] £600 a year is the rent you pay for one flat? I think so.
41. *Mr. Coyle.*] Are there any other branches of the department outside this building? That is the only one.
42. *Mr. Mills.*] In view of the probability of certain surveyors being dispensed with, have you accommodation for the establishment here? When the surveys now in hand are finished, and if no new surveys are required, we might dispense with the offices at the Mutual Provident.
43. *Mr. Waller.*] The surveys you refer to are to be finished about June next? Yes; but I believe we have taken the offices on a lease for five years.
44. *Mr. Coyle.*] Suppose the officers now employed in the Mutual Provident were drafted into this building, is it likely that there would be such an increase of work as to demand a staff equal to that which you have been employing during the last four years? I do not think it likely that I should require so large a staff; it would depend entirely upon the orders which might be given to me.

45. You do not think it likely that so large a number of lines will be sanctioned at any future time? I do not think so.

46. So that, if the officers were shifted, the work might be done here? If we had no surveys going on, these offices would be large enough; but, if we have surveys, we must have a large room for the staff somewhere.

47. *Mr. Waller.*] You think your surveys will be finished in June; and, if there are no fresh surveys undertaken, there will be plenty of room here? Yes! for the ordinary work of the construction of the lines we have sufficient accommodation here.

48. *Mr. Mills.*] Would there be any reduction in the drafting staff? I do not think so. We have made great reductions during the last twelve months. I reported the other day that two in the drafting office could be dispensed with.

49. *Mr. Coyle.*] As the sections of line now in progress are finished, will there be any likelihood of a reduction during the coming year? Not in the coming year; but, as the lines are finished, if there is no other work for them, the services of the engineers will be dispensed with as the works upon which they have been employed are completed. They do not come into this office at all. It would hardly be desirable to give up the rooms for the survey staff until we know that no fresh surveys are required, because, if we did so, there might be great difficulty in getting suitable accommodation again.

50. *Mr. Waller.*] Is there any other reduction that you deem it expedient to make in the permanent staff? I do not think so at present. All the district engineers are on the temporary staff, so that, as the works are finished, their services will be dispensed with.

51. *Mr. Coyle.*] They would, I presume, be entitled to a month's salary for each year of service? They are entitled to nothing; but I should hope that the Government would give them that compensation for loss of office.

52. Unless new works are projected during the coming session, there will be a considerable reduction in the staff during next year? I do not know that there will be many. Very few of the railways will be finished before the end of next year; but as the railways are finished, the district engineers now engaged upon the work will be dispensed with.

53. *Mr. Waller.*] I understand that there are thirteen surveyors now in that position; and in June, should no fresh surveys be undertaken, you will have how many more? I think six or eight; I am not quite sure of the number just at present.

54. *Mr. Coyle.*] And I presume that if the work were increased the staff would be increased? Yes.

55. *Mr. Mills.*] Have you made any reductions this year in your estimates? Yes, to the amount of £20,000.

56. *Mr. Coyle.*] During the time when Parliament is sitting is a large portion of the time of your officers taken up in preparing returns and other matters for Parliament? Yes.

57. I suppose this involves a great loss of time? Yes, very great.

58. Could you suggest any remedy for that? No; Members call for returns, and they will have them; we have to make returns of all trial surveys and all reports sent in to me, and these have all to be copied out and printed every year; they make huge bundles of papers. There is one person whose time is almost wholly occupied in preparing these returns, and they are not the slightest use after they are printed; I do not believe they are ever looked at by anyone, and I could never see the least use in compiling them.

59. *Mr. Waller.*] By whose authority is this work done? Under the authority of an order made by Parliament.

60. *Mr. Mills.*] Then you would recommend that the trial survey papers should not be printed? Decidedly, except such as may be called for. All the papers which pass between myself and Mr. Palmer, and Mr. Quodling, or other officers of the department, and minuted by them, have now to be copied out and printed at the end of the year.

61. I presume that the preparation of answers to questions asked in Parliament are also the cause of a great waste of time? Yes; and they occur almost daily.

62. *Mr. Coyle.*] Could you give us an estimate of the time, or the value of the time, occupied in answering questions and preparing returns for Parliament? I cannot, but a great deal of time is occupied in that way.

63. And I suppose it involves constant interruptions to business? Yes.

63. *Mr. Waller.*] Would it be well to alter any of the rooms so as to give more concentration of office work? We tried to do that, but Mr. Bennett has a large department in the building, and so also has Mr. Moriarty. I cannot complain of my offices, because they are really very good.

64. As the head of this department you are satisfied with the diligence of your officers? Yes, perfectly. If I find that any are not as attentive as they ought to be, I recommend that they be dismissed, and my recommendation is generally carried out.

Mr. William Henry Quodling examined:—

66. *Mr. Mills.*] You are the chief clerk in the Department of the Engineer-in-Chief for Railways? Yes.

67. Can you give us any information as regards the amount of work to be performed? There is a large amount of work to be performed in connection with accounts, specifications, reports, and correspondence of various sorts.

Mr. W. H. Quodling.

16 Dec., 1886.

68. Are the clerks under you fully employed? Yes.

69. You could not dispense with any of the present staff? I have had a great deal of trouble with one gentleman, but I believe he is going to leave us, and it is not intended that his place shall be filled up.

70. *Mr. Waller.*] What department is he in? He is one of the clerks under me.

71. *Mr. Mills.*] Do you think you could dispense with any other? No.

72. Not in view of the amount of work to be done? No.

73. *Mr. Waller.*] In view of the extra working time lately established, could not any reduction be made? We have dispensed with one clerk; that is about equal to the amount of extra time.

74. *Mr. Mills.*] How many do you employ? Eight.

75. Under you? Yes.

76. *Mr. Waller.*] Have you already dispensed with one? He is under suspension, and it is proposed to dispense with him. If Parliament did not move for all sorts of returns and papers, and the Minister did not call for information, which has to be got up quickly, we could do with fewer hands.

- Mr. W. H. Quodling.  
16 Dec., 1886.
77. I presume the Minister has to call for this information because Parliament requires it? Yes.
78. *Mr. Mills.*] How much time is occupied in supplying parliamentary returns and answering parliamentary questions? There is a very large amount of time consumed. All other work has to give way to that. There is also a great deal of time occupied in preparing parliamentary returns. Sometimes two clerks have to be employed upon them, and the time of one is generally fully so employed.
79. Which gives most work, the questions in Parliament or the returns to the order of Parliament? The returns give the most work, but the questions give the most trouble to the Engineer-in-Chief and myself.
80. And they must be answered at once? Yes, and that interferes very much with business.
81. *Mr. Waller.*] Are these returns of an important nature do you think? Sometimes they are not of much importance, at other times they are valuable.
82. *Mr. Mills.*] Do the questions relate mostly to personal matters or to public works? To public works; but they require that we should get out a considerable amount of information and condense it as much as possible.
83. *Mr. Waller.*] As regards the order of carrying on the work in this office, do you think it is the best that could be adopted, or could you suggest any improvement. As a rule, do you dispense with all useless work as far as practicable, or do you think a more simple method might be adopted with advantage? I do not think so.
84. What is the routine in regard to papers which come to you from other officers of the department? Papers from officers in the field come direct to this office.
85. To whom? I generally open the letters.
86. Are those papers for the Engineer-in-Chief? Yes.
87. I understood that they went direct to the Under Secretary? No, those are ministerial papers, I am now speaking of letters from officers employed in this department. I open those and I take them in to the Engineer-in-Chief, but such as require other action I send on to the officers for report in order that the business may be dealt with as quickly as possible.
88. Are they recorded in your office? Yes.
89. Have you noticed any improvement in getting through the work since you have had an additional hour? We generally had enough to do, and did not confine ourselves to the 4 o'clock. If there was work to be done we stayed in the office and did it. That has very often been the case, and many a time I have had to take work home with me.
90. That would only apply to you as a head? I find the assistants are very good in that way, with the exception of the gentleman to whom I have referred as having been rather troublesome. When there has been a press of work the others have never hesitated about stopping, and have always been willing to do their best.
91. Then you have no complaints to make as regards the diligence of your officers? Not against any, except in the case to which I have referred.
92. When the officers come in the morning is there any time-book kept? Yes, it has been recently established.
93. And in leaving during the day. Do officers leave without asking permission? Never.
94. From whom do they ask permission? From me.
95. From you direct, and not from the head of the room? Generally from me. I know when any officer is out of the premises.
96. *Mr. Mills.*] What is the check with regard to officers coming at 9 o'clock? The book is signed.
97. What grace do you give? Fifteen minutes.
98. If they are in by a quarter past 9 you allow them to sign? Yes.
99. If they are not in by that time what is the punishment? I have only had one case in which a youngster explained that he missed the steamer. I cautioned him.
100. Is there any punishment attached to being constantly late? Under the new regulations there is a penalty of 5s.; previously there was none.
101. A fine of 5s. is imposed for being how much late? Anything beyond fifteen minutes involves liability to that punishment.
102. How is that enforced? I have never seen it enforced.
103. Is there no rule for the enforcement of the penalty? I suppose the matter would have to come before the Minister.
104. *Mr. Waller.*] Do you not think it would be a good rule that the time-book should be initialled by you every day? Yes.
105. That is to show whether your officers have correctly kept their time or not? I think so.
106. Do you not think it would be better that you should initial it daily? Yes, and I will do that in future.
107. If I understand you aright, you estimate that the additional time given to you by the operation of this rule is equivalent to not more than one man a week? Yes.
108. At what hour used your staff to leave on Saturdays? At 1 o'clock, the same as now.
109. So that you have only got five additional hours per man per week? Yes.
110. Will you not be able by means of this additional time to reduce your staff by more than the one officer who is now under suspension? We have made considerable reductions already owing to the stoppage of works. Vacancies which have occurred have not been filled up. We show a reduction of forty-five officers and of salaries to the amount of £20,227 on the estimates for 1887 as compared with those for 1886.
111. That, I presume, includes the surveyors whose services it is expected will be dispensed with on the 31st of December? Yes, and in addition to that we estimate that other surveyors now in the field will have finished their work in June next year.
112. *Mr. Mills.*] As to the suitability of the rooms, have you any suggestions to make? They are very suitable, and we have sufficient accommodation.
113. *Mr. Waller.*] Can you do with less? The room occupied by the clerks is a large one, but when officers come in from the country we have to put them in there. We have had two district engineers there lately.
114. *Mr. Mills.*] Have you anything to do with the surveyors? Their accounts, payments, and correspondence to a great extent pass through my hands.
115. *Mr. Waller.*] Having in view the advantages of centralising the rooms, supposing it were practicable to

to put them on one flat, do you think that less space would be taken up than now? Perhaps so. Mr. Druiitt, who is in charge, is upstairs with his people. I do not go to see him very often, and then only on business. I go up in the lift, and I do not think such a change would make much difference.

116. Would it not be much better for the head of the department to have all his officers accessible to him on the one flat? It would be more convenient if it could be done.

117. *Mr. Mills.*] Who is beyond you? The Colonial Secretary's Department. We are both on the same flat.

118. If you were all on the one flat you would have to give up some up-stairs rooms, and another department would have to give up some down-stair rooms? Yes.

119. Then each department would be on the one flat? Yes. The Executive Council has a very large room over ours, and I do not imagine that would be given up. Then follows on the offices of the Colonial Secretary. I believe the Colonial Secretary claimed the Macquarie-street end of the building, although Mr. Bennett, the Engineer-in-Chief of the Roads Department, has the upper story there.

120. The building is divided perpendicularly, not horizontally, between the departments. That is to say, the Works Department is placed at the Phillip-street end and the Colonial Secretary at the Macquarie-street end? Yes. The offices of the Colonial Secretary's Department are on the basement and the first and second floors.

121. *Mr. Waller.*] Are there no branches or rooms of yours upstairs on the next flat? No, we are on the ground floor and on the second floor.

122. Are you quite satisfied that the system of management is as stringent as necessary? I think so. I have no complaints whatever to make about the gentlemen in the office. They are very attentive and punctual, regular in their attendance at all times.

123. *Mr. Mills.*] In transmitting papers to other offices, what is the course pursued? We send to the Under Secretary, and he sends to railways. It often involves great delay. The Commissioner submits them to the Minister.

124. Is there much correspondence? Yes, very much.

125. *Mr. Waller.*] What delay do you consider is caused by the present routine of transmitting papers? Sometimes papers are two or three days before we get the Minister's decision.

126. Suppose the papers went direct from the Engineer-in-Chief to the Under Secretary, and were by him laid before the Minister, what saving would there be? Some days occasionally. I have here a paper we sent to the Under Secretary on the 15th November, marked by that department to the Railways on the 16th November, marked as received by that department on the 19th November. There were three days lost there somehow. It was minuted by the Minister, who might not have had time to attend to it, on the 27th.

127. There was a hiatus between the 19th and 27th? Yes, the Minister might have been away. It might not have been submitted until the 27th.

128. *Mr. Mills.*] What was the course of return? The paper was marked "approved" by the Minister on the 27th November, minuted by Railways to inform the writer on the 29th, and the letter was sent from Railways on the 3rd December.

129. And when was it received by you? From Railways on the 4th December.

130. Did it come back in its proper course? Yes, papers generally come back direct.

131. Do they not send them back through the Under Secretary? No.

132. But they go through him in the first instance? Yes.

133. What is the number of the paper to which you have referred? 86-4,979.

134. What improvement would you suggest to get rid of unnecessary routine? That the papers should be submitted direct to the Minister.

135. Submitted by whom? By the Under Secretary.

136. What would be the average saving of time in that case? Perhaps two or three days. I could not say with regard to each paper.

137. But on an average? Two or three days, I daresay.

138. Are there instances of papers being delayed a long time? There are many instances of papers not being heard of for months. I have not got any cases of that kind in my memory just now, but I know of many instances in which papers have been delayed for weeks, if not months.

139. Have you had many papers lost? Not in this department. Papers we have asked for, and have been told cannot be found, I presume have been lost; but they have not been lost in this department.

140. But they belong to this department? Yes.

141. They get into other departments and are mislaid? Yes. The lease of the Mutual Provident Society has been lost and cannot be found; but it was not lost in this department.

142. Do you think the probability of papers being lost or mislaid would be much lessened if the communication with the Minister were as you have suggested? I think so.

143. Your staff consists of how many? Nine, one of whom is under suspension. Two are classed as temporary.

144. *Mr. Waller.*] Do you propose to put anyone in the place of the gentleman under suspension? It is proposed to put one of the temporary clerks in his position.

145. That is, to appoint him by the Governor-in-Council? Yes.

146. Do you think it is necessary that you should make another permanent appointment? I think so. We shall reduce the temporary staff by one. These two officers were originally on the permanent staff.

147. The salary paid to your staff is £1,802 per annum? Yes, which amount will be reduced by £150.

148. *Mr. Mills.*] Will not the reduction in the number of surveyors reduce your work? It will cause some reduction, no doubt.

149. *Mr. Waller.*] On your staff? There will not be so many personal accounts coming in—that is, the salary vouchers by so many surveyors; but the reduction in work will not be sufficient to justify any reduction in the number of clerks.

150. Suppose there are thirteen of these surveyors going at the end of the year, and that there are eight going in June, do you think that the personal accounts of these twenty or twenty-one surveyors would make such a reduction of work as would enable you to reduce the clerical staff? The reduction would not be of any great extent, because it is only once a month that we have to deal with their salaries.

151. So that you do not see your way to any further reduction? Not at present.

152. Do you consider the salaries paid are too high, or that they are fair? I think some of the officers are worthy of higher salaries.

- Mr. W. H. Quodling.  
16 Dec., 1886.
153. *Mr. Mills.*] Are they married or unmarried men? I think they are unmarried with one exception.
154. *Mr. Waller.*] Is certifying for payment done by you? I certify for the Engineer-in-Chief. I sign all the vouchers for him.
155. That is for drafting and everything? Yes.
156. The vouchers which come to you I suppose are initialled by the heads of their branches? They are all checked here. They come direct to me. The officers in the field send in their accounts and measurements in connection with construction. I submit for your inspection a progress voucher, certified to by the District Engineer. When it comes to me all prices, progress payments, and rates are checked. Most of the large certificates are certified to by the Engineer-in-Chief, but in his absence I certify.
157. Are the surveyors paid here? Their vouchers come direct here.
158. Are they checked here? Yes.
159. In cases where several surveyors work together? They each act independently.
160. Do they charge at so much per diem? No; by the year.
161. All these men are on yearly salary? Yes; they send in their journals showing the nature of the work upon which they are employed, and if there is anything I think not right, it is referred back.
162. Do the journals disclose the number of days they have worked? Yes; every day they have worked.
163. Are you able to tell whether any particular payment ought to be made or not? Suppose a surveyor is not at work, we want to know what check you have got on him when he sends in his account? When an officer sends in his salary voucher he also sends in his journal. If there is anything in it to which I object, I send it back for correction or explanation. If he has been absent from work, or neglected his work, I call the chief's attention to it, and an explanation is called for. If it is thought that a man has been an unreasonable time in preparing his plans and in surveying there is a check.
164. Are the surveyors allowed any expenses? Yes. £200 a year, which has to cover the cost of instruments, tents, and general equipment.
165. Suppose they spend more than £200, do you pay them more? No.
166. Have you a regular rate which you pay for chain-men? The leading man in each party is paid 7s., the others 6s. per diem.
167. Is there any limit to the number that you allow a surveyor to have? The ordinary number is five, four men and a cook; but in special cases extra men have been allowed to clear through thick country.
168. Has application to be made to the office? Yes; and special sanction to be obtained from the Engineer-in-Chief before the accounts are passed.
169. Does the £200 include fodder for horses? Yes. In special cases an extra allowance has been made. For instance, in making the Bourke survey extra allowance had to be made for forage, and we had to cart forage and water also. I have here the instructions issued with reference to equipment.
170. Then, is the forage supposed to be covered by £200, except in special cases of emergency? Yes.

FRIDAY, 17 DECEMBER, 1886.

Present:—

MR. T. F. WALLER, CHAIRMAN.

MR. J. Y. MILLS,

MR. J. E. FITZGERALD COYLE.

Mr. Arthur Munday examined:—

- Mr. A. Monday.  
17 Dec., 1886.
171. *Mr. Waller.*] Are you in charge of the record branch of the Department of the Engineer-in-Chief for Railways? I am.
172. As regards the amount of work to be performed in this office, do you consider that the number of officers you have here is more than is requisite? No. I consider it a very fair number indeed, in fact we could not do with less. In this room we not only deal with records, but with correspondence as well.
173. What correspondence? Writing of letters.
174. *Mr. Coyle.*] Correspondence having reference to the Construction Department? To the engineers, surveyors, and the general public.
175. *Mr. Waller.*] Have you got the whole of the correspondence of the Construction Department? Yes, it is done in this room. I merely attend to the records.
176. Are there certain of the staff in this room who have nothing to do with the correspondence, and others nothing with the records? I deal with the records, and Mr. Pugh deals with the correspondence.
177. Have you anybody under you for records? There is a lad here who makes himself generally useful, the junior clerk of the department.
178. What is his name? Pyke. He is absent in Tasmania on leave.
179. As a matter of fact the records branch consists of yourself and Mr. Pyke? Yes.
180. The other clerks in this room attend to correspondence? Yes.
181. Please explain your system of record? Our system is similar, I think, to that adopted in every branch of the Civil Service. We use the same style of printed books as they do in other departments.
182. What is the routine of letters that come to Mr. Whitton's department? Letters from our field staff engaged in construction, from surveyors, and district engineers come direct to the Engineer-in-Chief, and answers are sent back direct; but a letter addressed to the Minister for Works goes to Works, and then perhaps it would travel through Railways, before it comes to us.
183. Do these letters of which you speak relate to the business of the Railways Under-construction Department? Yes. Say a man wants a railway trial survey, or asks for a station, a culvert, or a level crossing, that has reference to railways in course of construction.
184. *Mr. Coyle.*] Does the correspondence of the District Engineer engaged in construction come direct? Yes.
185. *Mr. Waller.*] What do you consider is the loss of time caused by these letters, which relate to the Engineer-in-Chief's Department, but which go through the routine you have spoken of? I could not say; I have not noted it. There are several cases where there have been several days at a time lost, apparently unnecessary.
186. If such letters as you describe, such as petitions for level crossings, and so forth, which pertain to the Engineer-in-Chief's Office, came to the Under Secretary, and were transmitted direct to the Engineer.

Engineer-in Chief, instead of following a route of circumlocution, what time would be saved? I think at least one day.

187. You say that in some cases there has been a loss of many days? We have had instances where a week has been lost. Of course, I cannot say why the papers have been delayed.

188. Do you find that the system is the cause of many letters going astray? No, we never find any letters go astray.

189. All letters of every sort are recorded in your register? Yes, all correspondence received here is recorded.

190. What system have you adopted in recording the delivery of papers from this branch to any of the rooms belonging to Mr. Whitton's department? They are delivered by hand, by the junior clerk or by the messenger.

191. What have you got in your record books to show that documents have been received by either the junior clerk or the messenger? Nothing; but they are marked off in the register.

192. Is the marking off signed by anybody? No, there is merely the marking off to a particular officer.

193. *Mr. Mills.*] Which amounts merely to a direction that the papers should go to him? Yes.

194. *Mr. Waller.*] Is that the usual course of delivering documents? Yes.

195. Do you think it would be a safe-guard if the officer or messenger taking documents out of this room into other rooms were to initial your record book when he takes the papers, to show that he actually had possession of those documents, and has delivered them? Yes. I think it would be a very safe plan, and it would be an additional protection to prevent papers from going astray.

196. *Mr. Mills.*] Would there be time for the messenger or clerk to initial the book in the way suggested? It would not take up any extra time worth speaking of.

197. But it would be a valuable check? Yes, a valuable check, and the time would be insignificant.

198. *Mr. Waller.*] What system have you adopted for recording the delivery of more valuable documents, such as plans and books of reference? They are covered by a minute forwarding them to the Minister for Works, or to whomever they may be directed.

199. What proof have you of the delivery of these minutes and plans? The proof of delivery is that the officer who delivers them writes on the copy of the minute that he has delivered them at such a place and time.

200. Do you think it would be an improvement to have a book in which to record the delivery of such valuable documents, a book which should be initialled by the officer receiving them? Yes, it would keep all these things together, and would be more easily got at.

201. Would that take more time than the present system of recording? No.

202. Would it do away with having loose certificates of delivery? Yes, it would be a good thing, and might be done in lots of other cases.

203. How long has the system been in vogue by which papers relating to the Engineer-in-Chief's Department have been passed from the Under Secretary to the Commissioner for Railways before being sent on to the Engineer-in-Chief? About two years. I believe Mr. Secretary Wright wrote a minute establishing this routine.

204. Do you know any reason for it? The reason I believe was that the Commissioner for Railways stated that he had no opportunity of seeing the letters and minutes written by the Minister referring to railway matters.

205. In course of construction? In course of construction.

206. Has any advantage been derived from the change of the former routine? No. I believe it has been the cause of letters being delayed. One day would be about the average delay.

207. Is the time-book kept in your office? There is one book for the attendance of the whole of the clerical staff.

208. Who has charge of it? I have? It is sent in every morning to the chief clerk at fifteen minutes past 9.

209. *Mr. Mills.*] What has been the result of the additional hour per day? As far as I am concerned it makes no difference whatever.

210. Are you able to get through more work? We have not more work to get through.

211. *Mr. Waller.*] Were you able to get away properly before that extra hour? I was always pretty late.

212. *Mr. Mills.*] You were not able to get away at 4 o'clock? Very rarely.

213. *Mr. Waller.*] To do your work properly had you to remain after 4 o'clock? I had always to remain.

214. *Mr. Mills.*] What is your present system of recording papers; for example: you receive a letter from an engineer, how do you deal with it? We note in the record register the name of the person who sends the letter, the date of the letter is registered, the residence of the party sending the letter, and also the subject of the letter. The letter is then stamped and numbered with a consecutive number, which corresponds with the number in the register.

215. In the event of that letter being lost, have you any way of ascertaining what it was about? Yes; the subject is noted in the register, and afterwards transferred for easy reference to the index register.

216. Suppose you receive a letter from an engineer, which relates to three or four different subjects, what plan do you adopt? Unless ordered to extract the various subjects I register them *in globo*.

217. Suppose certain papers are called for connected with a letter, in order to get the information required, what system is adopted in the numbering? If several papers are called for I connect them with this paper that relates to three or four subjects and keep them all together.

218. Do they all bear the same number? They may not bear the same number.

219. Is there not an outside number for the whole of the package. The last number is always the outside number.

220. Is that the original number against which they are recorded in the register? Yes. I have here a paper which contains say three subjects, and there are other papers relating to those subjects previously; I would immediately connect them with this, at the same time noting in the margin of the letter whether it related to a culvert, a bridge, or waterway. I put the previous number against each so that the chief clerk reading those papers could immediately turn back and find what had been previously done.

221. When the matter was completed, would you disconnect them or leave them together? Leave them together.

Mr. A.  
Monday.  
17 Dec., 1886.

Mr. A.  
Monday,  
17 Dec., 1886.

222. From what cause do you ever change the original number? From the fact of subsequent papers being written, such a paper then becomes the top number.
223. Would that subsequent paper be from the original writer of the letter? Not necessarily; any paper written subsequently in connection with the case.
224. *Mr. Mills.*] Then your first tracing number is your last recorded number? Just so.
225. *Mr. Waller.*] Then you might have half-a-dozen numbers upon documents relating to the same case? It might be so. Our records are more complex than most, on account of the technical nature of the subjects dealt with.
226. Do you think that, where there are three or four subjects dealt with in one letter, it would be an advantage to take out each and give to it its own individual number? Certainly.
227. In all cases? Yes.
228. Would it be better? Much better.
229. *Mr. Mills.*] That would involve copying? Yes; we should have to copy out each subject on a fresh sheet of paper, register it, and give it a new number.
230. *Mr. Waller.*] Do you think that would be an advantage? Most decidedly, to keep each subject separate.
231. Would you refer to the original letter from the Engineer as number so-and-so? Here is a case in point. Paper 86-5,158. There are thirteen extracts in this case, relating to thirteen surveyors.
232. Would it not be possible, to a great extent, by giving instructions to engineers and surveyors to confine each letter to one subject, to simplify the system of recording? It would, undoubtedly.
233. Do you know of any difficulty? None at all.
234. *Mr. Coyle.*] Could it easily be done as far as your own officers are concerned? Yes; it would simplify matters considerably, and would save a lot of bother and trouble.
235. *Mr. Waller.*] The different subjects referred to in a single letter may require to be dealt with in the different offices of the department? Yes; in each branch to which the subject relates, as, for instance, trial surveys, drafting, accounts for stores. In such a case the business would not only be simplified, but would be dealt with more quickly.
236. Do you think it would be a good system that all letters which come to the department should be received by one officer—say the Under Secretary, or somebody else appointed to open them—that person having sufficient knowledge of the different branches of the office and the business to be transacted to enable him to state to what department the particular letter should be sent, and have it sent direct; do you think it would be better that letters, upon their receipt, should be recorded by such an officer, the same as they are now, but instead of being sent round through various channels, they should go direct from him to the head of the department who is to deal with them? Yes; I consider it would be a great saving of time.
237. Do you see any objection to it? I know of none.
238. *Mr. Mills.*] What is Mr. Pyke's actual work? Copying letters, making out requisitions on the Superintendent of Stores, issuing stationery forms for engineers and surveyors, distributing papers round the different offices, and the various duties appertaining to a junior clerk.
239. *Mr. Waller.*] Are these requisitions constantly required—how many of them have there been this year? The book before me begins with April. From April to December—a period of nine months—there have been a hundred requisitions.
240. Who has charge of the stores? The Superintendent.
241. *Mr. Coyle.*] Will you describe the system of issuing the stores? An application is made out at this office in triplicate for certain material. One copy is retained in the book, and the other two copies are forwarded by the Engineer-in-Chief to the Superintendent of Stores, who I believe then fills in the price on the copy which bears his name at the head of it, and he forwards it to the accountant.
242. *Mr. Waller.*] How do you procure the knowledge of these stores being required? A contractor will make an application for 10 miles of rails, which he wishes to lay down. That application is sent into this office, and after due inquiry the requisition is issued, if it is found that the contractor is ready to lay them.
243. Why could not the contractor make out a requisition on these forms, and send it to the district engineer, who could initial it, and then send it in direct to the department, thus saving all this transcription and referring? —
244. Do contractors correspond with the Engineer-in-Chief? On important questions they do, but usually through the district engineer.
245. Do you see, then, any objections to the contractors having one of these order books, and being required to fill in their own requisitions for stores, to send them direct to the district engineer, who would report upon them, and then send them direct to the office of the Engineer-in-Chief for confirmation? I do not know whether there are any objections to that plan; but it appears to me that it would be a saving of labour.
246. As to the stationery, pens, and so on, is there an unlimited supply to each room? As much as is required is issued.
247. Have you simply to make a requisition and get what you ask for,—is there no check upon the careless or extravagant use of pens, paper, or anything else? There is no check.
248. Then an honest man and a dishonest man are on an equal footing? Yes.
249. Do you think there is any unnecessary waste of paper? I do not think there is in this office.
250. Do you think it is possible there might be? I see there is a great opening for it.
251. *Mr. Mills.*] To whom does the requisition for stationery go? We get it in bulk from the Treasurer's Department; it is kept in the next room.
252. How do you get it out of the next room? We get it when we want it.
253. You have not to write any order for it? No, except in the case of the field staff,—engineers and surveyors. They have to make requisitions.

Mr. J. W. E. Pugh examined:—

Mr. J. W. E. Pugh. 253. *Mr. Mills.*] Are you corresponding clerk in the Department of the Engineer-in-Chief for Railways? Yes.

255. *Mr. Waller.*] As to the amount of work to be performed, do you find that there are more officers here

17 Dec., 1886.

- here than necessary? I have enough to do in conducting the general correspondence of the office, and the preparation of estimates and returns.
256. *Mr. Mills.*] Do you draft the letters? I sometimes write them from minutes, sometimes from drafts. It all depends upon the nature of the letter. If the subject is one which requires technical knowledge, I write the letter from a draft.
257. *Mr. Waller.*] Do you submit these letters to Mr. Quodling? Yes, and they are signed by him or Mr. Whitton.
258. *Mr. Mills.*] Have you an assistant? I have no regular assistant. When I have a lot of copying to do,—copies of reports have to be sent to engineers,—when there is a push of work, one of the clerks assist me in copying.
259. *Mr. Waller.*] Are pressed copies kept of the correspondence? Yes; the indexing I do myself.
260. How much additional time has been imposed upon each officer by the new rules? From one hour to an hour and a half, because now we have only half an hour for lunch. We used to take forty or forty-five minutes. It is equivalent to about seven hours and a half a week.
261. *Mr. Mills.*] What is the result of that rule? The work pretty well occupies my time.
262. Does it save you from getting any assistance? It has hardly been in existence long enough to tell. The work in this office fluctuates with the amount of the contracts. This is a slack time now that the contracts are drawing to a close, and new work is not coming on with rapidity.
263. *Mr. Waller.*] Previous to this extra hour and a half, how did you find your work? I had a little more time for lunch.
264. And as regards the others? For myself, I am a very rapid penman, and I could get through it.
265. Did you get away earlier before you had the extra hour and a half? Pretty well.
266. Did you get away at 4 o'clock? Generally, almost invariably. Not once in a month had I any necessity to stay.
267. Now that there is not so much work doing, and you have an hour and a half more to do it in, does that save you from the necessity of getting assistance? I have only just returned from leave, and I do not know how this hour and a half will work.
268. Do you anticipate that it will cause you to require less assistance from the other room? Not perceptibly; not to any extent that would be tangible. Five or six hours a week,—I can hardly analyse it.
269. You say you are a rapid writer, and you get an hour and a half extra working time per day? I could do a little more common copying; but as for letters where every day's work has to be completed, it would not make much difference.
270. What record is kept of the letters you write? The ordinary press letter book.
271. Is it indexed in the ordinary way? It is indexed in rather an intricate fashion.
272. Perhaps you will explain to us your system? I will take a letter that has reference to the Nyngan and Cobar railway line. It is addressed to the district engineer, giving him instructions. I first indexed it under the head of "Nyngan to Cobar railway." In the first column I write the number of the letter-book, then the page of the letter-book, then the name of the person to whom the letter is addressed, then a short epitome of the subject in consecutive columns. That is what you may call the subject index of the letter. I then indexed it under the head of the person to whom it was addressed, and the same process is gone through in what I may call the personal index.
273. Do you give the epitome in each case? Not exactly the same, but I write enough of the subject to enable me to identify the letter quickly. You must have a personal index as well as a subject index.
274. *Mr. Mills.*] Can you suggest a better system? I thought it intricate at first, but having used it for a few years, I now think it is worth all the time it takes, because of the great facility which it gives for purposes of reference.
275. Then you prefer the system of rapid reference rather than a simpler one? I do.
276. *Mr. Waller.*] Suppose several subjects were dealt with in the one letter, how would you index it? I should index it under the head of the person to whom it was addressed, and also under each of the subjects referred to in the letter.
277. Epitomizing so much of it as related to each subject? Yes.
278. Do you consider the system a good one? I consider it works well.
279. Do you think it could be improved on? I am not prepared to say that.
280. Is the time occupied in epitomizing these letters saved in rapidity of reference? I am sure it is.

Mr. H. K. Carpenter examined:—

281. *Mr. Mills.*] Are you chief in this room; and the examiner of accounts? Yes.
282. *Mr. Waller.*] What is the principal work which has to be done in this office? Examination of the accounts and book-keeping.
283. *Mr. Mills.*] In connection with the whole department? Yes, I may say that the accounts for construction amounted to more than a million and a quarter in 1884, in 1885 to £1,600,000, and up to November of 1886 they have amounted to £1,800,000.
284. *Mr. Waller.*] As regards the amount of work to be performed, do you find any difficulty in getting through it? Now that the surveys are completed, and towards the end of the month we are not so busy as we are at the beginning of the month. One clerk who has been chiefly engaged upon parliamentary returns has gone.
285. Does it take the time of one hand to do nothing else but parliamentary returns? Pretty well, together with the incidental and unforeseen work.
286. That leaves you how many hands for the work of the books? Four, including myself.
287. *Mr. Mills.*] Is this room fully occupied? Yes, always; we have no spare room.
288. What has been the result of the extra five hours per week? We calculate that Mr. Martin's removal will be equivalent to that. All the accounts come in during the first half of the month when there is a rush of work, and in the second half of the month we are occupied in posting up the books. I hold in my hand Cobb and Company's final certificate for the extension from Glen Innes to Tenterfield, and all these papers relate to that contract. We check every item of the quantities, but we have nothing to do with the measurement of the works. I have to see that every charge made is supported by proper authority. If any work is passed which the chief has not authorised, I am held responsible.
289. *Mr. Waller.*] How often are these accounts sent in? This is the final certificate. The ordinary certificates come in every month as a rule.
290. The monthly certificates would not be so heavy as the final one? No.

Mr. H. K.  
Carpenter,  
17 Dec., 1886.

Mr. H. K.  
Carpenter.  
17 Dec., 1886.

291. *Mr. Coyle.*] How are the prices for extra work adjusted? In the first instance the contractor is asked to name a rate; and that is reported on before it is approved. If there is no paper showing the authority for the charge, I query it.

292. *Mr. Waller.*] You see that the rates are according to the tenders? Yes.

293. And the other gentleman? He adds up the columns, and checks the computations. In the case of final certificates, I check them myself, because, if an error occurs in one of them, it cannot be rectified. I have here a book in which I register the accounts. The top amount is the claim and the engineer's certificate. In this case there is an excess claim of £1,200, and we ask for an explanation of the principal discrepancies.

294. How many officers have there been in this office for the last two years? Pretty well the same number. Mr. Holland and Mr. Barbour were appointed about two years ago.

295. Previous to that had you any greater number? I think the number has been about the same. There will be one less; we had a book-keeper previously who died.

296. Is the staff the same numerically now, as it was in 1884? Yes.

297. Do all the surveyors' accounts come in here? Yes.

298. As it is expected that there will be thirteen surveyors less at the end of this year, will that make a great difference in the amount of work? No. The surveyors' vouchers do not involve a great amount of work. We have to check the salaries, and the rates paid to chainmen, and for forage; and to see that the surveyors have been fully employed all the month, according to their journals.

299. Does not that take up a considerable time? I could complete thirteen surveyors' vouchers in a day and a half—check the rates and everything.

300. *Mr. Coyle.*] What is the cost of each survey party? About £40 a month for the men, and from £40 to £50 for salary and allowances. £100 would cover it; but there are incidental expenses for lock-spitting, and other work.

301. *Mr. Waller.*] Is your heaviest work with the contracts? Yes.

302. *Mr. Mills.*] How long have the contracts now in hand to run? Most of them ought to be finished by the end of next year. There are, I think twelve lines now being constructed.

303. *r. Coyle.*] From what fund are the salaries of the permanent and temporary officers paid? Out of the Consolidated Revenue Fund. There is a vote of £4,000 for the temporary officers.

304. Is any charge made against loan? The engineer and others are paid out of loan.

305. *Mr. Waller.*] Considering the work now to be done, and likely to be required up to the end of the year, do you think that you are overmanned? I do not think so.

306. Considering the extra time you have gained, and with a full knowledge that there is likely to be twenty surveyors less between this and June next, you say that you are not overmanned? Lessening the number of surveyors will not reduce our work very much.

307. Is not a gentleman, who is now on the temporary staff, to be placed on the permanent staff? Yes.

308. What advantage to the Department will be derived by that? He is a very efficient officer, and I suppose Mr. Quodling is anxious to secure his services. We have twelve or eighteen months' sure work.

309. *Mr. Coyle.*] How long has he been in the department? About one year and nine months.

310. *Mr. Mills.*] Would he not do just as much work as a temporary man as he would do as a permanent? Yes.

311. *Mr. Waller.*] The difference to the officer would be promotion and an increase of pay? Yes; and it would secure his services.

312. *Mr. Coyle.*] What are his duties? He examines all the engineers' time sheets, and enters up the office vouchers, and keeps the books.

313. What are the time sheets? They contain a list of all the employees under the district engineers, and show the rates and wages, the amounts due for incidental expenses to the end of the month. When we are rushed with the contractors' accounts, Mr. Holland assists me with them.

314. Is the checking work all of a clerical nature? Yes.

315. *Mr. Waller.*] What are Mr. Bromley's duties? Book-keeping. All the office and construction accounts pass through him.

316. Have you any other book-keeper? He keeps the books in connection with the engineers' time sheets, and the salaries and wages of the department—wages and incidental vouchers.

317. *Mr. Waller.*] Does it require two separate book-keepers to do that work? Yes.

318. *Mr. Mills.*] Can one man keep them? I do not think so; they are so different.

319. Is it a matter of difference of accounts, or a matter of difference of time? It would delay the big vouchers if one had to do the whole. Mr. Holland is virtually an assistant to Mr. Bromley.

320. *Mr. Coyle.*] Is there not a much smaller amount of this work being done now than has been done in the past? No; there is more.

321. Is there as large an amount of work under construction now as there has been? There is more. The certificates are bigger. The increase upon 1884 was £100,000, and in 1885 and again in 1886 the increase was £150,000.

322. *Mr. Waller.*] Is Mr. Bromley accountable for all that class of work? Yes; he is responsible.

323. What are the duties of Mr. Bourchier? At present he is assisting Mr. Monday, and when I have anything for him to do, he assists me.

324. *Mr. Mills.*] Is he an emergency man? It would be difficult to define his duties—he does all sorts of work.

325. *Mr. Waller.*] When Mr. Pyke returns to the office what will be Mr. Bourchier's position? He will be doing all sorts of incidental work—copying statements for the chief, and getting up returns.

326. *Mr. Mills.*] Who attends to the answering of questions, and the preparation of returns for Parliament? Mr. Bourchier would do a lot of that? The questions in Parliament are generally for a return of all correspondence in connection with different extensions.

327. For copies? For copies of the original correspondence and statements.

328. For whom? Some member of Parliament moves for it.

329. How many copies does he make? Sometimes the answer to a parliamentary question will amount to three sheets of foolscap.

330. Do you know how long the copying of returns takes? Mr. Martin has been on several jobs for months at a time.

331. *Mr. Waller.*] Have you any parliamentary returns now in hand? Not now; but we expect to have a good many in January.

Mr. H. K.  
Carpenter.

17 Dec., 1886.

332. Why? Because we always have them.
333. Have you none now? Parliament is not sitting now.
334. *Mr. Coyle.*] What other officers besides Mr. Bouchier are occupied in the preparation of returns when Parliament is sitting? If a return was called for, and had to be produced in a great hurry, and the work was more than one could do, others would have to be put on to it.
335. Have you been engaged for a considerable portion of your time in preparing returns? No.
336. What officers have been so employed? Mr. Martin, Mr. Bouchier, and Mr. Barbour.
337. Do you say that some of them have been engaged for two or three months? Yes; on one return.
338. If it takes up a considerable portion of the time of the officers in preparing returns during the sitting of Parliament, and if at the same time they are able to perform their other duties, do you not find a difficulty in finding them employment when there are no returns to be prepared? We never have found that difficulty, because as soon as one thing is done something else crops up. When Parliament is sitting we have worked overtime. We worked until 11 and 12 o'clock in getting up evidence in Amos's case.
339. *Mr. Waller.*] Do you think that any simpler method could be adopted in preparing these returns? I think not.
340. Does the preparation of these returns interfere materially with the carrying on of the business of the department? Yes; and if we had not the present staff, we should have to employ temporary hands whenever returns were called for.
341. If the staff were not taken from the business proper to the room; and if the temporary hands were supplied when necessary for parliamentary returns, could the present staff be reduced? There are other special duties. Vouchers may be called for by the Audit Office, or information may be required by the Treasury. If we were to put those fully employed on to that sort of work, they would have to neglect their proper work. We ought to have a hand to do all that sort of incidental work which cannot be specified.
342. Who does that work now? Mr. Bouchier.
343. What do you consider is the difference in time you have to work now, as compared with that before the regulations? An hour a day each man; and we get half an hour for lunch.
344. How much used you to have? We never took more than three-quarters of an hour.
345. *Mr. Mills.*] How long has Mr. Pyke been away? Three weeks. He was entitled to six weeks under the Act, but he could not be spared for more than three.
346. Who arranged the places of officers in this room? It was done mutually. We kept all the stationery here, and all the forms for the engineers.
47. *Mr. Waller.*] What is the system of supplying stores and stationery? The engineers send in their requisitions for what they want.
348. *Mr. Mills.*] Is there not accommodation for the stationery on the basement, or in some other place where room is not so valuable? The basement is occupied by the Commissioner.
349. *Mr. Waller.*] What is the size of this room? 45 feet x 25 feet.
350. Are stores also kept at the Mutual Provident? Only plans and drawing materials.
351. If any officer wishes to leave this room during the day, do you give him permission? That rests with Mr. Quodling.
352. Do you keep a record of all papers which pass through your hands? No; I get them to note. A contract is accepted and I note it in this book.
353. Where do the papers go? I give them to Mr. Quodling, and I think he gives them to the Commissioner. I take them to him personally, and he sends them, it may be to the Crown Solicitor, or to wherever they ought to go.
354. You never send the papers to Mr. Quodling? No; they are important papers and I take them direct to Mr. Quodling myself.
355. They are very valuable papers? Yes, bonds.
356. *Mr. Coyle.*] From whom do you receive them? From Mr. Quodling. I do not think that one of them has ever been lost.
357. *Mr. Waller.*] Do you not think that if you were to initial that record book and the date of delivery, it would be more satisfactory proof of when you delivered them to Mr. Quodling? As soon as one of these papers come to me, I enter it straight away and take it in. I never allow papers to accumulate.
358. Suppose some one else were in your place, and who had not as correct business habits as yourself, do you think that the system under which you deal with those papers is one which can be safely relied on? If a fellow were careless it would not do.
359. *Mr. Coyle.*] Suppose that Mr. Quodling, or anyone acting in his place, were to say "I never received this paper," what proof have you that he had received it? Mr. Monday would have it in his register.
360. *Mr. Waller.*] We are supposing the paper to have been lost before it reached Mr. Monday?
361. Would not a book of smaller dimensions than this answer every purpose? Yes; this book will probably not be filled up in ten years.
362. Well, then, if you had a smaller book would it not be easy for you to take it with the papers to Mr. Quodling and get him to initial the entry showing that the papers had been returned? Would it not be a better security for tracing the papers? Perhaps so.
363. We are not talking of you but are considering the system? I think the system is quite safe.
364. *Mr. Coyle.*] Suppose one of those valuable papers were lost, what means have you of finding out where it was lost? If I were asked about it, I should turn to my book and say that I took it back to Mr. Quodling on such a date.
365. And suppose Mr. Quodling were to say "No; I never received it?" I could swear that he had.
366. *Mr. Waller.*] If I said I gave you £20, do you think that it would be sufficient for me to say "I swear I gave you £20?" Do you not think I should show a receipt? Yes.
367. Don't you think that papers which are of much greater value than £20 should be signed for on delivery—don't you think that if the officer who receives them were to initial your book that it would ensure the safety of the papers and facilitate their being traced? It would be a perfect course to adopt.
368. If you were dealing with valuable papers or securities of your own, you would like to have a receipt for them? Yes, of course.
369. There would be no practical difficulty in the way of your getting your book initialled? No; for that matter I could get a small book in which to enter the number of the paper, and use as a receipt book.

- Mr. H. K. Carpenter. 370. *Mr. Mills.*] At present the only proof of delivery of a paper is in your own personal knowledge? Yes.
- 17 Dec., 1886. 371. *Mr. Waller.*] There is no proof which can be considered as clear and beyond doubt under the present system of delivering papers, but simply your own statement? No.
372. Do you think there could be any objection to initialling the book by way of obtaining a receipt for valuable papers? No; I do not see that it would involve any loss of time.
373. What other papers come to you? Leave of absence papers. I note them, and see when the journals come in that the leave granted has not been exceeded.
374. How do they come in? By post; and Mr. Quodling sends them to me.
375. Do you initial the journals? Mr. Quodling does.
376. Do you initial them to show that you have read them? No; the initialling of the vouchers represents the correctness of the vouchers and journals.

Mr. E. R. C. Bromley examined:—

- Mr. E. R. C. Bromley. 377. *Mr. Waller.*] Are you the book-keeper in this department? Yes.
- 17 Dec., 1886. 378. Is Mr. Holland assistant book-keeper? There is no such office as assistant book-keeper here. He keeps the journals relating to the expenses of the engineers, trial surveys, and all out-door field work.
379. As a matter of actual fact what is he? He is assistant book-keeper.
380. Is it absolutely necessary that you should have him as assistant book-keeper? I require the work to be done. Mr. Quodling gives him other work. Work in this office fluctuates a good deal. Sometimes we are slack, and at other times we have more than we can do.
381. *Mr. Mills.*] How many returns were called for by Parliament during the last twelve months? Mr. Monday will be able to tell you that.

MONDAY, 20 DECEMBER, 1886.

Present:—

Mr. T. F. WALLER, CHAIRMAN.

Mr. J. Y. MILLS,

MR. J. E. FITZGERALD COYLE.

Mr. W. H. Quodling further examined:—

- Mr. W. H. Quodling. 382. *Mr. Mills.*] What are the duties of Mr. Holland? He assists with the work generally, and more particularly he checks all the accounts of the field officers which are audited every half-year.
- 20 Dec., 1886. 383. What does Mr. Barbour do? He assists generally in copying accounts, and in doing any thing which is required.
384. *Mr. Waller.*] Then Mr. Bouchier, Mr. Pyke, Mr. Holland, and Mr. Barbour are what may be termed generally useful in the department? They assist generally as required. There is a great deal of copying to be done in the office.
385. *Mr. Mills.*] What is the system of signing the attendance-book on the departure of the clerks from the office? Each one signs the book as he leaves the office at 5 o'clock.
386. What is Mr. Dean? He is inspecting engineer.
387. *Mr. Waller.*] Is he resident in Sydney? Yes; and goes over the works as required. Last week he was at Cooma.

Mr. E. R. C. Bromley further examined:—

- Mr. E. R. C. Bromley. 388. *Mr. Mills.*] What time generally elapses before you send the contractors' vouchers to the Treasury? On an average we complete and send them away from here in three days.
- 20 Dec., 1886. 389. *Mr. Waller.*] What statement is that which you have before you? An abstract of the expenditure upon the construction of lines.
390. I see here an entry having reference to the construction of the line from Narrandera to Hay. What amount was voted for that line? £735,000.
391. Was that amount exclusive of the cost of land? Yes.
392. What is the length of the line? 106 miles 72 chains. This statement shows in parallel columns first the length of the line; then the actual cost of construction, which was £550,676 9s. 10d.; then the cost of the land, namely, £12,377 19s. 4d.
393. Where do you get that information from? It is supplied to me by the accountant's branch of this office.
394. *Mr. Mills.*] What is the information contained in the next column? The next column shows that the amount expended by the Department of Existing Lines and otherwise was £6,284 13s. 5d.
395. *Mr. Waller.*] How do you get that? I ask the accountant's branch for the total expenditure against the line. I take the amount expended by this department on construction, as shown by my books; to that I add the cost of the land, and I then deduct the amount from the total expenditure given me by the accountant's branch, which in this case is £569,339 2s. 7d. Deducting this from the vote which appears in the next column, leaves a credit balance of £165,660 17s. 5d., as shown by the accountant's books.
396. Does that balance agree with your books? It does not.
397. What is your balance? It is £184,323 10s. 2d.
398. What is the difference between your balance and the accountant's balance? £18,662 12s. 9d.

Mr. W. H. Quodling further examined:—

- Mr. W. H. Quodling. 399. *Mr. Mills.*] Do Mr. Whitton's estimates include the cost of land? Mr. Whitton never includes the cost of land in his estimate for the construction of a line.
- 20 Dec., 1886. 400. *Mr. Waller.*] Where is to be found the vote of Parliament which covers the total cost? If it turns out that the line has been constructed for a less sum than that estimated by the Engineer-in-Chief, a special vote for the resumption of land is not asked for; but, where the vote has been exceeded, Parliament is asked to vote an amount for the land, and the amount required for that purpose is ascertained from the land valuers.

Mr. W. H.  
Quodling.

Dec. 20, 1886.

401. Then you are operating upon this vote for construction in ignorance of what the land will cost you? Yes; we look upon the amount voted as our money. We do not profess to estimate the value of the land which may be required.
402. *Mr. Mills.*] You must estimate largely in excess of the amount required for construction to cover that? We made a great saving in that particular line.
403. Can you tell us what the expenditure in the column under Existing Lines represents? That is money expended irrespective of this department, and the Engineer-in-Chief has often objected to it.
404. Expended while the line was being constructed by this department? No; after the line gets into the hands of the Existing Lines Branch. I know nothing about the details of the expenditure. That information is information which we have got from the accountant.
405. *Mr. Waller.*] When you speak of the accountant, do you mean the accountant of this office? The accountant for railways—Mr. Wickham. We ask the traffic department to erect the signals, as they have a staff for that purpose.
406. *Mr. Mills.*] In this statement I observe an amount for the railway from Sydney to Wollongong and Kiama—an amount said to have been expended by the Existing Lines Branch—and that is an unfinished line? Yes.
407. What is the amount shown to have been expended to the end of 1885 by the Existing Lines Branch on that line? Up to the 24th of July it was £50,014; but I suppose the actual expenditure up to the present time is nearer £100,000.
408. *Mr. Waller.*] On what was it expended? Upon the widening of the tunnel at the Redfern station.
409. *Mr. Coyle.*] Was not this included in the estimate of the Engineer-in-Chief? No. I have a copy of a memo. which Mr. Whitton wrote upon the subject which I can hand to you.
410. *Mr. Mills.*] Here is line—Narrandera to Jerilderie—what information does your statement show about that? It shows that the mileage was 64 miles 70 chains.
411. What was the vote taken for that? £518,000.
412. And the cost of construction? £390,360 5s; and the cost of the land, £7,200 11s. 4d.
413. What was the amount expended by existing lines? £3,728 12s. 4d.
414. Was that expended during construction? I could not say with certainty.
415. What is your balance shown on that line? £127,639 15s. to the 31st of December, 1885.
416. What is the accountant's balance reported to you? £116,710 11s. 4d.
417. *Mr. Waller.*] Do you know what causes the discrepancy in the balance? I know about the cost of the land and the cost of erecting signals; but as to other works I know nothing.
418. Would the erecting of signals come to £3,728? I do not think so; nor to anything like that amount.
419. *Mr. Mills.*] Take the line from Goulburn to Cooma? The mileage of that is 130 miles, and the amount voted was £1,430,000. The cost of construction to the 31st of December, 1885, was £585,788 5s. 8d.; the cost of the land to that date was £10,383 2s. 2d. The expenditure by the Existing Lines Department was £5,180 1s.
420. What is your credit balance? £844,211 14s. 4d. on the 31st December, 1885.
421. What is the balance shown by the accountant? £828,648 11s. 2d.
422. Can you account for the difference? There is £10,383 2s. 2d. for the land, and £5,180 expended by the Existing Lines Department.
423. Expended on what? Some of it would be for signals.
424. *Mr. Waller.*] Would the cost of erecting the signals amount to £5,180? Not to anything like that amount.

Mr. E. R. C. Bromley further examined:—

425. *Mr. Waller.*] What books have you in use for the general office work? The advance journal or day book. Mr. E. R. C.  
Bromley.
426. What does that show? All the vouchers which are sent in for payment—payments to loan votes. The next book is a personal ledger; then there is the construction ledger; the final certificate journal, and adjustment journal. I also keep what I call the construction record book, which is really a summary of all the books as far as I can bring the results together in a concise form. 20 Dec., 1886.
427. What does it show? The leading lines of expenditure, as the amount expended for fencing, level crossings, and over bridges, earthworks, rails, and permanent way materials. It also shows the total cost of construction per mile. I give one sheet to each contract.
428. Did I understand you to say that in the advance ledger you only put in the advance payments, but I see here a final payment entered? Advance and other payments—all payments. It is really a cash-book and day book. In this book I keep the store returns which I debit to the extensions. These show the details of what is supplied each month. At the end of the year I write off the amount to loan votes. This book shows the charges for the carriage of railway materials, and the amount which is credited to railway revenue.
429. *Mr. Mills.*] Are you charged upon the published rate sheet or a special rate? According to the published rate.
430. *Mr. Coyle.*] What was the amount you were charged for the carriage of material on contract No. 1, Narrandera to Hay? The total amount was £53,781 7s. on 12,828 tons of material; or £503 per mile, which is equal to nearly 4d. per ton per mile for the distance carried, or 9·77 on the total cost of construction.
431. Will you give an illustration of the cost of carriage in the case of one of your bridges? I have here the particulars of the Narrandera Bridge, the cost of which was £22,169 1s. 8d. The weight of the material carried from Sydney was 767 tons, and the charge made for carriage was £2,733 3s. 7d., or nearly 11 per cent. on the total cost of the bridge. Referring to the section Gunnedah to Narrabri, you will observe that the cost per mile for rails and fastenings was £918, and the cost of the carriage of this material by railway charged against the vote for construction was £422 per mile, or 8·16 per cent. of the total cost of construction.
432. *Mr. Waller.*] Does this charge for the carriage of railway material account for the difference in the balance as shown by your books and that shown by the accountant? No; the charge for carriage is one which appears in our own books.
434. Do you get debit notes? Yes; they are in this book.

- Mr. E. R. C. Bromley.  
20 Dec., 1886.
435. When an estimate for the construction of a railway is made out, is the cost of the carriage of the permanent way material taken into account by the Engineer-in-Chief? Yes; it is part and parcel of the cost of constructing the line.
436. Do you find on the completion of a line that the cost of carriage is pretty well what the actual charge amounts to, or do the charges made exceed your estimate for that particular service? I am unable to say; I do not see the estimate.
437. Have you any other duties than those of book-keeper? Yes; I also do the general account work required in the office.
438. How does the extra hour affect you? I could generally get my work done by 4 o'clock.

Mr. Eugene Holland examined:—

- Mr. E. Holland  
20 Dec., 1886.
439. *Mr. Waller.*] What books do you keep? I keep all the books relating to the construction staff, and I also audit the engineers' and surveyors' accounts and books every half-year.
440. Do the engineers and surveyors send in their pay-sheets every month? Yes; we check them, and the accountant then passes the amounts to their credit, and at the end of the year they make up their books in this form, and I audit them.
441. Do all the accounts of the engineers and surveyors come in to you? All salaries and wages of every kind. The engineers send in time-sheets only; and from them I make up the pay vouchers. The surveyors' accounts being more simple, they make up their own vouchers, and we simply check them and send them on.
442. *Mr. Coyle.*] Do the engineers send in their diaries and journals? Yes.
443. Do all field officers keep diaries? The district engineers and inspectors have journals.
444. Do they keep diaries showing all their dealings with the contractors? As to that I could not say; but I believe they keep records.
445. Of all their dealings with the contractors? They do not send them to this office until the contracts are completed.
446. Can you show us one of them? I must refer you to Mr. Drewett for that information.
447. *Mr. Waller.*] When the accounts have gone on for payment, what do you do? I enter them into the cash-book, and into the personal ledger; and at the end of the half year I audit the accounts with the ledger.
448. Do you keep any ledger besides the personal ledger? No; I only deal with personal accounts.
449. Does the audit at the end of every half-year take place before or after the payment of the accounts? The accounts are paid monthly.
450. So that before the audit takes place, how many months' payments have been made? Six.
451. In the event of your audit not proving that the accounts were correct, what is your remedy? The only remedy would be to call upon the engineer or surveyor for an explanation.
452. Do you think that it would be a good thing to hold a month's pay in hand until you have ascertained by the audit that the accounts are correct? The engineers and surveyors have to pay their workmen, and, if they did not get the money immediately, they would not be able to do that. If any surveyor leaves before the end of the half-year his accounts are audited at once. You cannot avoid trusting them to some extent.
453. *Mr. Mills.*] What is the result of your audit? It is invariably strictly correct; but engineers and surveyors are very bad hands at keeping accounts, and they make a lot of mistakes.
454. *Mr. Waller.*] Do you find that as a rule their accounts as sent down are correct? Almost invariably. I sometimes find mistakes in the accounts; but inquiry shows that they have correctly disposed of the money, although they often make out their accounts very badly.
455. Do you find that you have to debit them with amounts overpaid? Say about once in twelve months, and that to only a small amount.
456. But do you find that you have constantly to return the accounts? Yes.
457. Do you think there would be less time lost if the audit took place at shorter intervals? No; I should have nearly six times the work to do in connection with the books.
458. Why could they not send in their books for audit at the end of every month? It could be done; but it would not be any saving of time or trouble.
459. Are any payments made specifically for rations? No; but the chief requires them to show the expenditure for rations, because there have been complaints. This is done simply as a protection to the men. In addition to keeping these books and making this audit, I have to make up all returns dealing with accounts, such as that for the Blue Book—returns having reference to salaries and wages. I do not think it is possible to cut down or shorten the method of keeping these accounts more than I have done.
460. Are surveyors' accounts made up by themselves? Yes; and simply checked here.
461. And initialled by whom? By Mr. Carpenter or by me.
462. And the engineers' accounts? I make them out. I check their time-sheets and journals, and see that there is authority for every payment.
463. Do they go back to the engineers? I send them to the paymaster who advises that he has placed the money to their credit and returns them their time-sheets.
464. Who initials the engineers' time-sheets as correct? Mr. Quodling signs them; but I check them, and am responsible for making out the accounts. I do not pass any charge until I have ascertained that there is authority for it. I have a book which shows the name of each inspector, the date of his appointment, and the nature of the work. These are the pay-sheets and the time-sheets.
465. This, I understand, is prepared by yourself? Yes.
466. In presenting it to Mr. Quodling for his signature, do you also produce to him any original document to show that the pay-sheet you present is correct? Yes; I give him at the same time the time-sheet signed by the engineer.
467. Do you invariably present the original document? Always.
468. What does Mr. Quodling do with it? He sees that they agree. He initials the original document and signs the voucher for payment.
469. *Mr. Coyle.*] Will you describe the whole routine until payment is made to the men? The time-sheet is then taken over to the accountant and entered by him in his books. It is then handed to the paymaster, who forwards it with his batch of vouchers for the day to the Treasury. The engineer then gets a notification

cation that the amount has been paid into his credit. He draws his own cheques for the payment of the men whose names appear upon the document.

Mr. E.  
Holland.

470. Is there no opportunity, so to speak, to manufacture one or two men on the time-sheets? No, because when they receive the money they are required to sign for it. With the pay-sheet is sent up the time-sheet, and the names of the men appear against the amounts each one is entitled to receive. Each man signs for his money in the receipt column; and as soon as all the men have signed this is returned to the Audit Office.

20 Dec., 1886.

471. *Mr. Waller.*] Is there any limit to the number of men who can be employed by the surveyors and engineers? The surveyors are ordinarily limited to five; but in exceptional cases that number may be exceeded. The number employed by the district engineers varies, and is fixed by the Engineer-in-Chief. No engineer or surveyor can employ more men than the Engineer-in-Chief has authorised.

472. *Mr. Coyle.*] Are there any men employed by the district engineers engaged upon construction as chainmen? Yes.

473. And do the time-sheets specify the number of men, and the nature of the work upon which they are engaged? Yes.

474. What is the number of chainmen employed? In this case, No. 4 Contract, Glen Innes to Tenterfield, two men are employed by the district engineer, and he has an assistant, who employs three chainmen.

475. What is the length of the section? Fifty-seven miles.

476. What are the duties of these five chainmen? I see that two were employed in sinking trial shafts, and two were measuring up work. One was engaged in concreting and setting out work. In some cases where we have reliable chainmen, they are put on to act as sub-inspectors, and then they are paid 1s. a day more. If a man is not shown to have been actually at work, he is not paid.

477. *Mr. Waller.*] Is your time fully occupied? Yes.

478. Does the additional hour a day make a difference to you? It makes no difference to me. I have a certain amount of work to do, and if I did not finish it by 4 o'clock before, I had to stay later.

479. *Mr. Coyle.*] Suppose you finish it at 4 o'clock now, what have you to do? Then I should have nothing to do.

480. *Mr. Waller.*] Could you finish your work formerly by 4 o'clock? Yes, generally speaking; but on some days the work was heavier.

481. As a rule, were you able to get away at 4 o'clock? Except at the end of the half-year. When I had the audit in hand I could not get away at 4.

Mr. John William Drewett examined:—

482. *Mr. Waller.*] What is your position in this office? I am assistant-engineer.

Mr. J. W.  
Drewett

483. Are you in charge of rooms Nos. 64, 66A, 67, 71, and 72? Yes.

484. Is there anybody in your own room but yourself? Yes, Mr. Bayley.

485. What are his duties? He sees to the getting up of all specifications for works in connection with the construction branch. He is an architect; but his duty has been to get out specifications.

20 Dec., 1886.

486. Is that previous to calling for tenders? Yes.

487. *Mr. Coyle.*] For engineering works? No, simply architectural works.

488. By whom are the engineering specifications prepared? Generally by Mr. Whitton, and frequently I am with him when it is done. I am in consultation with him every day, sometimes two or three times a day.

489. Is Mr. Bayley on the permanent staff? Yes.

490. Does Mr. Bayley design the station buildings? Not lately. He used to do all the designing work at one time; but the work has so increased of late years that it takes the whole of his time to get out the specifications.

491. And for contracts for building in connection with the railways? Yes.

492. *Mr. Waller.*] As regards the amount of work to be performed, is it on the increase or decrease? It has been tremendous, we could hardly keep pace with it; but we have been reducing hands lately. That was more in consequence of a paper which came round from the Treasury. Previous to that paper coming round we had discharged three or four. We have reduced the office by six hands.

493. In what period? Within the last six months.

494. What do those reductions amount to? £1,069.

495. Is that the reduction caused by the retirement of three and the dismissal of three? Yes.

496. It is not proposed to fill their places again? No, it is not. In fact, there has been a proposal to dispense with two others.

497. Do you think the work is likely to increase or decrease during the coming year? We have a great deal of work in hand still. Most of the stations from Goulburn to Cooma, from Homebush to Waratah, and from Murrumburrah to Blayney are in hand. I do not suppose there will be many on the line from Nyngan to Cobar; but the Hawkesbury Bridge will give a good deal of work in making working drawings. Then, also, there is the railway from Pearce's Corner.

498. Then you have no reason to think that the work will decrease very materially this coming year? I think not.

499. Do you see any prospect of being able further to the reduce staff? I really think not. I do not like a large staff; I like to keep the staff within workable limits.

500. *Mr. Coyle.*] As to station buildings, do you make special drawings for each station? Not always.

501. Have you first, second, and third class stations? Yes.

502. Standard drawings? Yes.

503. Will you allow me to look at them? Certainly.

504. Do you apply standard drawings also to bridges? Yes, in some cases.

505. And to culverts? In all, or nearly all.

506. Taking the general run of timber work, do you apply it there? We have a set design up to 26 feet openings.

507. Thirty? No. If we get anything beyond 26 feet we make a special drawing for it.

508. But have you timber bridges beyond 26 feet? Yes, truss bridges.

509. Have you no standard drawings for truss bridges? No.

- Mr. J. W. Drewett  
20 Dec., 1886.
510. So that special drawings have to be made for each truss? Yes. But that very seldom occurs.
511. I suppose you use iron chiefly? Yes, for 60 feet spans.
512. For thirty? We use timber.
513. And do you make special drawings for them? Yes. There are not many of them. We find 26 feet openings come in for almost any work that is required.
514. Have you standard drawings for culverts? Yes.
515. And for all general works? Yes.
516. *Mr. Waller.*] Do you consider that the method of performing such work as comes under your control is the best that can be adopted. Yes, I do think so, as I have introduced it. I have been thirty years here, and I had twenty years' experience before, in Brunell's office.
517. *Mr. Coyle.*] Have you a lithographic establishment here? No.
518. Is there none in connection with the office? There is at the printing office.
519. *Mr. Waller.*] As regards the diligence of the officers, have you reason to suppose that they work fairly during the working hours? I have indeed. I think we have a very good staff of men.
520. *Mr. Coyle.*] Have you them well under your eye? Yes.
521. Do you find the office accommodation suitable? Yes. The light is very good, and there is room for long desks, which is what is principally required.
522. Are these rooms fully occupied? Yes, pretty well. There would be room for two or three more. The staff has been reduced by the numbers you see marked out in this list. Large plans have to be mounted, sometimes 25 feet in length, and it is therefore necessary to have large rooms.
523. How are the working sections for railways completed—in sheets, or continuous rolls? On continuous rolls of mounted paper.
524. Is there any professional work done by any officers of this department, outside of their official work, in connection with the department? Not that I am aware of. I am not aware of any person in the department who has ever taken work. If that has been done it has been done unknown to me. We never work for contractors; any plans which require to be drawn or copied for contractors have to be done by them.
525. Is no professional officer of the department authorised to do work outside? No one in this department is authorised to do that.
526. You now produce a working survey plan of a railway from Murrumburrah to Blayney? Yes.
527. Do you find it more convenient to prepare these plans on continuous rolls than to put say a mile or a mile and a half on each sheet? I think this is the best way of doing it, but we never have these roll plans in actual use. We have them lithographed, and sell them to the contractors or to any persons who want them. We have a large number to supply to other offices. I think we send six to the Survey Department gratis, and the Mines Department obtain a similar number.
528. Of each plan of a railway? Yes; they are all lithographed.
529. For what purpose are they supplied to the Mines Department? I do not know. They frequently send here for information with regard to how the railway affects certain mining districts.
530. Can you give no more information about the purposes for which they are supplied? No. The Survey Office requires them, and they send them into the outlying district for their surveyors; but what use they make of them I do not know. It is done under an order made by the Government.
531. Do you refer to the Land Survey Department? Yes.
532. Who prepares the plans of land taken for railway purposes? They are done by the officer who prepares these plans, Mr. Palmer.
533. By the Survey Branch of the Construction Department? Yes.
534. And are all surveys of land required for railway purposes prepared by the officers who make the surveys for the railways? Yes, in that department.
535. Are the copies supplied to the Department of Mines and to the Survey Department lithographs of the original survey? Yes.
536. What is the cost of lithographing a plan like this? Probably £30.
537. And how much would you sell them for? Very frequently we half recoup ourselves the expense of lithographing.
538. What do you charge? It depends upon the number of sheets; sixty sheets would be £15. They rarely run up to anything like that. £5 or £10 would be about the outside.
539. How many copies would you sell to the contractors? Almost every tenderer who goes over the line has to buy a copy. We found it so inconvenient to have a number of contractors here hindering one another by trying to examine the plans at the same time, and it caused so much unpleasantness, that I got Mr. Whitton to have the plans lithographed so as to have them ready for the contractors before they came.
540. *Mr. Waller.*] Do you consider that the cost of lithographing these plans is recouped by the sale of them? I think it is.
541. *Mr. Coyle.*] Do you consider it a great convenience to the contractors and also to the department? I am certain that it is. Directly a contract is advertised they can come here, get their plans, and go away immediately on to the ground.
542. Are there any other copies supplied to any of the other departments? The Existing Lines Department have copies of all these things. I have a copy for my own use in this room, and Mr. Whitton has another.
543. Is it under the Real Property Act that the title is received for the land? I think it is.
544. *Mr. Waller.*] What is the cost per sheet of producing these plans, and what are the returns from sale? I could not tell you that off-hand.
545. If any gentleman leaves your office during office hours, whom does he apply to for leave? To me personally.
546. In the event of an officer leaving prior to the regular hour, what entry do you make in the book to show that he is absent by your authority? No officer has ever been absent without my leave. I make them sign their names, and the time they go.
547. Would it not be better, where you give them leave, for you to sign to that effect in the column. I do.
548. Are they allowed fifteen minutes' grace? Yes.
549. When the officers come in the morning, does each man sign his name? Yes.

Mr. J. W.  
Drewet.

20 Dec., 1886.

550. And when he leaves at night? Yes. I keep the book until 5 o'clock, and I have it brought in to me at a quarter-past 9 o'clock in the morning.

551. As to the diligence of the employees, are you satisfied that they do their work honestly in office hours? I am.

552. What do you think is the difference now in the amount of work done owing to the extra hour, that is, from 4 to 5? It has not been in operation long enough to know very much about it. They all do their work, I know that.

553. Is their work of such a character, no matter how the hours are extended, that the work is there to be done? Yes. Whenever the work required that they should be kept until 5 o'clock, I required them to stay in and do it.

554. Do you consider, therefore, that the reduction of the staff you have already made is equivalent to the extra hour that has been given. We have made a calculation that it comes to about one man in every eight. Do you think that you could not reduce the staff further than you have done? I think our reductions come to that now.

555. Are you satisfied that the system of management is sufficiently stringent, and that you can ascertain whether your officers are at work, and if absent, whether they are absent on public business? Yes. Of course now and again they go out on private business, but that is with permission.

556. Do they walk about the city without your knowing that they are absent from their office? I am sure they do not. I pride myself upon the management of the office, and the amount of work I get done. If a certain amount of work has to be done by a certain time I make them do it.

557. Have you valuable documents passing from one room to another? There are these drawings that you see before you chiefly.

558. Where do you send them to? The drawings come in for my approval, and I look them over, and I generally walk round the rooms. I have really very few documents coming in here.

559. *Mr. Coyle.*] Have you anything in the shape of signed contracts? No.

560. *Mr. Waller.*] Have you any system of recording documents that pass through your office? No. I have papers, which I record myself when they come and when they go.

561. Would you show me your book? Yes.

562. What do the papers relate to? Applications for level crossings, bridges, and borings. I know when a paper comes, and when a paper leaves me I enter into this book an epitome of the paper, and the name of the person who wrote the letter.

563. Do they all go to the Engineer-in-Chief in the first instance? Yes, all before they reach me.

564. Do they come through Mr. Quodling to you? Yes, and when I have finished with them I send them back.

565. Do you attend to this book yourself? I make the entry in the book when the papers are sent away; Mr. Bayley writes in the rest. I write in the date upon which I sent them to Mr. Quodling.

566. Is there nothing in the book to indicate the officer to whom they are sent? No, but they all go to the chief clerk.

567. Have you had any papers mislaid or lost? Now and then, but very seldom. It is a very rare occurrence.

568. Have you any difficulty in finding out where a paper was lost? It has not generally been with me. Sometimes it has been supposed that I have had a paper when I have known nothing about it. If I do not find the number of the paper in my book, I conclude that it has been lost somewhere else.

569. Suppose you had an officer who had to receive the papers from you, and there were cases of papers being mislaid and lost, would you not think it advantageous that he should sign your book, which would be a proof to you as showing that he actually did receive them? It would be a useful check. I have never had such a case occur, but I think your suggestion would be of some advantage.

570. Are you of opinion that it would be advantageous to have that column initialled by the person who receives the papers? Yes, and I think I shall adopt that at once.

571. *Mr. Coyle.*] What instruments does the Department supply? Drawing-boards, squares, colours, brushes; everything else is supplied by the draftsmen. They supply their own instruments. Not long ago we had great difficulty in getting stores. I think it would be better to pay every man a trifle, and let him find his own.

572. As to the issue of drawing-paper to the draftsmen, is there any check upon the supply of that. No, it is all done on boards principally.

573. Where is it kept? We have a store-room.

574. Is there nothing to prevent any draftsman going in and helping himself? Yes, it is locked-up.

575. How is it issued? I send the person who is in charge of the stores for whatever is required, and the room is kept locked-up.

576. Who has the key? At the present time I have not the key. The man who has charge of the room has it. They are cleaning it out, and are numbering some of the old drawings that have been there for years.

577. Is there a large quantity of drawing-paper there? Not such a large quantity. There is a large quantity of old plans. We do not keep a large stock here, for it only deteriorates.

578. *Mr. Waller.*] Do you make a requisition upon the general stores? Yes.

579. *Mr. Coyle.*] Do you get a certain quantity? Yes.

580. *Mr. Waller.*] As a matter of fact, I suppose they have only to ask for the paper they require and they obtain it? Yes.

Mr. Henry Barker (Room No. 72) was examined:—

581. *Mr. Waller.*] How many officers are there in this room? Eleven, inclusive of myself.

582. All they all able to do engineering, as well as architectural drawing. Yes, with the exception of the cadets.

583. Are they all fully employed? Yes.

584. As far as you know, will there be employment for them during this coming year? I have enough work on the book to go on for some time, quite independent of what may come in from day to day.

585. For how long have you employment? I should say for six months. Fresh work comes in every day.

586. What do the cadets do? Tracing.

Mr. H.  
Barker.

20 Dec., 1886.

- Mr. H. Barker.  
20 Dec., 1886.
587. What work do the three gentlemen who are on the temporary staff do? Similar to that done by those on the permanent staff—all architectural and engineering drawing.
588. With the exception that they are on what is called the temporary staff, are they equal in their ability to do the work? Yes.
589. *Mr. Coyle.*] What is the work done in this office? Architectural and engineering work.
590. Of what kind? Bridges and buildings; all that is necessary in the Construction Department.
591. Is there any drawing work done in this department for any of the other departments? No. We get out details occasionally for works in progress, but that is for our own department.
592. Do you use stencil plates for putting on the headings of plans? No, we have not done so for years.
593. What instruments do the Government supply in this room? The colours, brushes, india-rubber, and ink. The ordinary drawing instruments we are expected to provide for ourselves.
594. Any scales? We have had a few scales, but it has not been the general thing for the Government to supply them.
595. Who supplies the rulers? The Government, and also the steel straight edges.
596. Where do you obtain the paper? From the Government Stores Department.
597. After it leaves the stores a certain portion is brought in here I suppose? We have a gentleman in charge of the plans, paper, and all that. It is in a separate room.
598. When you want paper to make a plan how do you obtain it? By asking Mr. Drewett to give an instruction to the person in charge to give it me.
599. Do you consider it is more desirable to have working plans in long rolls than in sheets, with say a mile or a mile and a half in each sheet? For station arrangements it is handier to have them in long rolls.
600. I am referring more to working plans and sections of railways? We do not have them to do in this room.
601. Have you been engaged in connection with plans for a long time? Yes.
602. Do you know from your own experience that a plan is much more durable when it is lying flat than when it is rolled up? Yes.

Mr. Charles Stewart Cansdell (Room No. 64) examined:—

- Mr. C. S. Cansdell.  
20 Dec., 1886.
603. *Mr. Waller.*] How many are there in this room? Sixteen and an office boy.
604. What is the office boy's salary? 10s. Dalton is his name.
605. How many have you on the permanent staff? Eight.
606. What are their duties? They are engaged on contract drawings, working plans, sections, plans of extra land for railway purposes, alterations and additions to working plans and sections, and we do all the lithographing in here.
607. Is that for the construction branch? Yes, we do all the transfers for working plans and sections.
608. *Mr. Coyle.*] Are the officers in this room all engaged on the same class of work? Yes.
609. Is there any work done in this department for any of the other Government offices? No.
610. *Mr. Mills.*] The cadets, what do they do? They do a little tracing.
611. *Mr. Waller.*] How do they come into the service? I do not know.
612. *Mr. Mills.*] What does the temporary staff do? The same work as the other draftsmen. In addition to the work I have mentioned, there are two or three gentlemen engaged in taking out quantities of station buildings.
613. *Mr. Waller.*] If there are no station buildings in hand, what do they do? We have always had that class of work in hand. If we had none they are quite competent to take up the drawing work.
614. *Mr. Mills.*] Who has to do with additions or reductions of the number of hands in the office? Mr. Drewett. I report to him.
615. And he recommends it or not? Yes.
616. Is the same course followed if you make a requisition for additional hands? Yes; Mr. Drewett will find out by the amount or pressure of the work whether he wants additional assistance.
617. *Mr. Waller.*] What is your opinion as to the number of the staff engaged in this room? I do not think you could make any reduction at the present time.
618. Have you reason to suppose that there is work on hand to keep them going for any length of time? We have work enough in this room to keep us going for months.
619. Is that without any further work coming in? Yes.
620. All this work is independent of any other drawings which may come in? Yes, we get thirty copies of each of these plans which you see before you lithographed, and we supply some of them to the Survey Office.
621. Do you know what these plans cost per sheet, that is, for the preparation of the lithographs? I could not say.
622. *Mr. Mills.*] Have you plenty of room for the sixteen hands here? Yes; we have had eighteen at work in this room.
623. What is the result of the additional hour throughout the office? I do not know; it makes a certain amount of work.
624. That is, a little more is done? There is no stoppage of work.
625. Who keeps the time-book for the office? I have kept a time-book for the whole office. I produce it. It has been kept here independently of the time-book established under recent regulations. The record in it has been continuous for the last three or four years. It is necessary with regard to pay, and I furnish abstracts to the Civil Service Board.
626. What has the Civil Service Board to do with any of the officials here? Nothing, except that they require some abstract of their time handed down through the clerical branch to show that every man is engaged.
627. Have they nothing to do with the appointments? Not that I know of.
628. *Mr. Waller.*] When an officer is absent with leave, is his salary paid? Yes, if he is paid by monthly salary.
629. If an officer is absent without leave? If reported, his pay would be deducted under the Civil Service regulations.
630. Are you able to show how long it takes to draw the plans of any particular line? Yes.

Mr.

Mr. Robert Stonehouse (Room No. 67) examined :—

Mr. R.  
Stonehouse.  
20 Dec., 1886

631. *Mr. Waller.*] What are your duties? I do all the mounting, and I attend on Mr. Drewett. I keep a record of plans.
632. Are these plans all valuable? Yes, they are all working plans.
633. Is there any other copy of them than that which you have here? Most of them are originals.
634. Then in the event of a fire they would be destroyed? Yes.
635. Is not this room greatly taken up with presses containing valuable plans, which might all be burnt in a few minutes, whereas if they were in a proper fire-proof room, that danger would be obviated? Yes.
636. What are the dimensions of this room? 35 feet x 26½ feet.
637. And how many persons are there in it? Four. I require large table space for mounting.
638. *Mr. Coyle.*] Do you keep the level and field books here? Yes.
639. Relating to any of the lines under construction? These are the books of lines under construction.
640. *Mr. Mills.*] Where are the books relating to finished lines? Some of them are in this room.
641. *Mr. Coyle.*] In the event of a fire occurring in this room, would the whole of the working sections of railways, and level and survey books, be absolutely destroyed? Yes.
642. Are there no fire-proof rooms in this building? Only in the bottom of the building.
643. Are the field books ever used? They are referred to every day.
644. If taken out of the room, do you take a receipt for them? No, but I notice when a book is taken; I keep a record on a file.
645. Do you not think it would be better to have a record in a book? Whenever they leave the office I take a receipt, but when they leave the room I do not.
646. Would it not be advisable to take a receipt in a book? I think it would.

Mr. John William Drewett further examined :—

647. *Mr. Waller.*] How are the cadets appointed? By the Minister, I suppose. They are sent up and introduced to me.
648. Have they passed any examination? They pass no examination here, but I believe that, having passed the Civil Service examination, they are eligible.
649. Are there a certain number of vacancies every year for cadets? No; I have had eight or nine of them at different times, so thick that I have not known what to do with them. Three or four are as many as we can manage with.
650. Do you see any advantage in the system of cadets? If good, sharp lads can be obtained they may be an advantage.
651. Ought the Government to pay for the training of cadets, when, if they were in a private office, they would have to pay a premium themselves? I think it would be better that they should be here for a year or two for nothing, during which time they may be expected to be spoiling work.
652. Do you see any advantage in the present system? If boys had to wait for their pay until they were worth something, they would be at more pains to qualify themselves quicker.

Mr. J. W.  
Drewett.  
20 Dec., 1886.

TUESDAY, 21 DECEMBER, 1886.

Present:—

MR. J. Y. MILLS, CHAIRMAN.

Mr. T. F. WALLER,

Mr. J. E. FITZGERALD COYLE.

Mr. Henry Deane examined :—

653. *Mr. Mills.*] What is your position now? I have been acting as inspecting engineer since the death of Mr. H. Deane.
654. Was not Mr. Wade district engineer for the railways near Sydney? No, his position was this, that he would inspect works in progress. He was above the district engineers. He represented the Engineer-in-Chief in the inspection of works. Sometimes he used to go out with him, and at other times he used to inspect the works separately, in accordance with instructions given to the district engineer, or to make proposals for any alterations that might be necessary.
655. Was that with respect to the metropolitan district or to the whole colony? The whole colony.
656. Who was next in grade professionally to Mr. Whitton? As far as construction of works is concerned, Mr. Wade.
657. Who occupies the same position under the Engineer-in-Chief for Railways that Mr. Darley occupies under the Engineer-in-Chief for Harbours and Rivers,—if Mr. Whitton were away, who would take his duties or his place,—what is the next professional step below Mr. Whitton? I have no doubt that there Mr. Wade would be consulted. In our branch business is arranged in this way: In some respects, Mr. Quodling represents Mr. Whitton when he is away; in regard to matters of designing, Mr. Drewett; and in regard to matters of execution, formerly Mr. Wade, now myself.
658. Does it take three distinct individuals to represent three distinct classes of Mr. Whitton's work when that gentleman is away? Yes.
659. Is there no one recognised head who would come in his place? No.
660. *Mr. Waller.*] Suppose Mr. Whitton were ill for some length of time, who then would fill his position? The officer who would open the correspondence is Mr. Quodling, but in technical matters it would be quite impossible for him to act, and he would probably call in Mr. Wade under all circumstances.
661. *Mr. Mills.*] Is the work principally divided into three heads, the professional, clerical, and executive? Yes.
662. *Mr. Waller.*] Mr. Quodling, you say, would open the papers, and distribute them to the branches where they had to be dealt with? Yes.
663. *Mr. Mills.*] But there is no professional successor to Mr. Whitton if that officer were removed by death, or absent from sickness? No one in the office.
664. Is there no Deputy Engineer-in-Chief? No one bears that office distinctly.
665. *Mr. Waller.*] No one who in this office corresponds with the Deputy Surveyor-General in the Survey Office? No.

21 Dec., 1886

- Mr. H. Deane.
- 21 Dec., 1886.
666. *Mr. Coyle.*] There is no such officer as the Assistant Engineer-in-Chief? No; there is no deputy official recognised.
667. *Mr. Mills.*] Would that cause any inconvenience in case anything happened to Mr. Whitton? I think not. Mr. Whitton has been away; he has been absent at times; it has never caused any difficulty as far as I know.
668. Was not Mr. Whitton in England for a time? Yes; in 1867.
669. Who acted for him then? Mr. Mason.
670. Did Mr. Mason occupy the position that Mr. Wade filled afterwards? Yes.
671. So that the natural successor to Mr. Whitton would have been Mr. Wade if he had lived? Mr. Mason had charge of the existing lines afterwards. At that time they were combined.
672. If Mr. Whitton is away, it takes three heads of branches of his department to do his work? That is scarcely the way to put it.
673. *Mr. Waller.*] Would you say that Mr. Whitton, as the head, advises with three different departments on the whole of the work—that is, with you, with Mr. Drewett, according to business which might be before him, and that in his absence Mr. Quodling, not being a professional man, would open the correspondence, and hand it over to the particular officers to whom it should be referred? Is there no arrangement by which any single individual would undertake the whole of Mr. Whitton's work were he away for any lengthened period? —
674. Is there nobody growing up into the position? I do not think it is a matter of growing up.
675. If a man had the position of Deputy Engineer-in-Chief he would know all the work that was going on, more particularly under the Engineer-in-Chief. He would have the threads of everything in his hand. Is there nobody in such a position as that? No.
676. *Mr. Coyle.*] Do you not think it desirable that such an officer as an assistant engineer-in-chief should be appointed to take the position of the Engineer-in-Chief in his absence, and to act for him in all matters? That is a question which I should prefer not to answer.
677. Will you explain what your own duties are as inspecting engineer? My duties are to inspect the work in progress from time to time, to see that they are being carried out according to instructions given.
678. In these inspections I suppose a large number of difference between the district engineers and the contractor come before you? Yes; I have had disputes referred to me frequently for settlement.
679. Are you empowered to deal with them and to settle them absolutely yourself? Yes; all matters between the contractors and the district engineers.
680. Would you explain what are the powers of the district engineers in dealing with contractors? The district engineers sets out the work for the contractors with the assistance he has at hand. He measures up the work done, and he makes returns of it to the Engineer-in-Chief.
681. Is that in order that the certificates may be prepared? Yes; it is his duty to see that the works are carried out according to the specifications, and propose any alterations which he may consider necessary.
682. Can he make any alteration or order any extra work on his own authority, and if so, to what extent? That would depend upon the nature of the work, and what you understand by extra work. If it is a completely new work, he has no authority to do that without the sanction of the Engineer-in-Chief; but if it is a question of stability, a question of depth of foundations, of takings off the batters of cuttings to a flatter slope,—it is within his power to carry out those works without special reference to the office; but in all cases he is expected to report what has been done.
683. Has the district engineer power to order special work, for instance, as to water openings, and additional culverts, additional level crossings, or works of that kind? No; those are matters which are always referred to the head office.
684. Has he power to increase the span of water openings or to increase the size of timber culverts? No; that is never done, it is always referred to the head office.
685. Then practically he has no power to order extra or additional work, or to vary the character of the works? No.
686. Do you say that one of his duties is to set out works for contractors? There are certain classes of works, which are mentioned in the specifications, which he has to set out.
687. Do you think it is desirable that Government engineers should set out these works for the contractors? Why not allow the contractors' engineers to do it themselves, and so relieve the Government of this amount of work? I think it makes very little difference, because if the Government engineer sets out any work, the contractor is obliged to check the work, and if the contractor sets out any work the Government engineer is virtually responsible. It is his duty to see that the work is set out accurately. The system implies checking of the work by either party.
688. But would it necessarily imply checking of the work on the part of the Government engineer? The conditions of the contract provide that the contractor will execute the work properly. If he does not, he can be compelled to do so finally.
689. If the works were not properly set out in the first instance would he have to set them out properly afterwards. What we want to arrive at is this,—assuming that the Government engineer sets out the contractors' works, that he sets them out in error, or that he delays to set them out, or that he omits altogether to set them out, does the department not incur a large responsibility? No doubt they would incur responsibility.
690. If the setting out of these works was omitted from the specification altogether, and the onus of it thrown upon the contractor, would it not relieve the department of a certain amount of responsibility? I think so far the arrangement has worked very well. There have been few complaints about work not having been set out, and generally what complaints there have been have been proved groundless.
691. Do you not think it would be desirable to throw the onus of setting out of the works upon the contractors, by requiring them to set out the work themselves? Not altogether.
692. I mean generally. Of course such work as aligning a large tunnel, or some other important work, the Government would appoint an officer to do, because it would be a serious public loss if anything wrong occurred; but in the case of the ordinary works, to which I refer specially, as the positions and lengths of culverts, widths of slopes, and other like works, which the Government engineers set out at the present time? I think myself that it is desirable to keep as much control—or I would say as much of that direct authority—in the hands of the district engineer as possible. In the matter of culverts, it is impossible on a longitudinal section to know the length you would like to have it.
693. You rather mistake me. Of course the district engineer will set out the position where the culvert must,

must go; but I was referring to the length of the culvert. I would not propose to lessen his powers and responsibility in matters which should remain in his hands. I was referring to the levels, the lengths of culverts, and position of wing walls? As a matter of fact that is never done.

Mr. H. Dean.  
21 Dec., 1886.

694. Do they give the contractors the lengths of the culvert? Yes.
695. If the culvert happens to be short, or any error arises, who would be responsible? The Government would be responsible in that case.
696. Assuming that the district engineer omits or neglects to set out these works, and the contractor can show that serious loss has occurred to him by reason of this omission or neglect, then would not the Government be responsible? Yes; but I see no reason why there should be any delay.
697. Are you aware that there are large claims now being prosecuted for matters of this kind? I have not gone into the matter of these claims, and I am not aware of it.
698. Is it not the usual practice in the profession that a contractor sets out his own work? I believe it is a very common practice.
699. Are you aware of any other colony, or any other place, where it is the practice of the engineer of a company or of a government to set out works for a contractor? Not general works; I know that special works are set out.
700. Such as large bridges and tunnels, and other works that would entail a public calamity, or a great public loss, if set out in error. Would you consider that in such cases it would be the duty of the engineer to see that those works were properly set out? Yes.
701. In the event of works being set out by the contractor's engineer, would it be the duty of the Government engineer to see that the whole was properly set out? Yes.
702. The district engineers, as I understand, hold much the same position as that which a resident engineer holds in England? Yes.
703. What buildings are constructed by this Department in connection with railways? All the buildings.
704. Do you hand the line over to the Department which works the railways completely equipped in every respect? We consider them completely equipped.
705. As to the signals? We generally ask the Existing Lines Branch to erect the signals, and the telegraph is also distinct.
706. Omitting these matters, do you hand the line over completely equipped with stations, engine sheds, engine pits, tanks, everything complete? Yes.
707. As to the arrangement for keeping and storing plans, do you think it desirable that these working plans and sections of railways should be on continuous rolls—the plan on one roll and the section on another—would it not be better to have, say a mile or a mile and a half of both plan and section on the one sheet? You are speaking of the original working plan and section.
708. Yes, so that they could be put away and kept complete. Say a mile and a half of plan and section on one sheet? I think there would be considerable inconvenience in having separate sheets. I think the method of having the plan on one long roll, as it is, has its advantages. They are all kept together, and the plan being continuous there is no hunting for different sheets.
709. Would not the other be continuous, if it were bound up like the leaves of a book? We do that when we make the lithographic copies.
710. Why not keep the others in the same way, having both plan and section on the same sheet. Have you been accustomed to see them kept in that way? Yes. I had charge of Mr. Palmer's office for six months while he was on leave of absence.
711. Are you aware that a plan will not stand anything like the same wear and tear if it is rolled up, than it would if it were lying flat? I think that is the case with smaller plans, but these plans are on mounted paper.
712. Assuming the same conditions to exist in both cases? In the case of smaller drawings, it would be far better to have them laid down flat.
713. But they would all be smaller drawings, if done in sheet form? They would, but the advantage of having the plan and section continuous throughout a considerable length is great for mere handling.
714. After the gradient lines are on, what advantage is there particularly in having it continuous? They are rarely required after.
715. With reference to the storing of these plans, do you think that much economy of space would take place if they were kept flat instead of being rolled up? They would take up less room.
716. And in the making of the plan itself, would not less space be required for the draftsman? I do not think so, because, if you stretch out a long roll, you can have several men working at it.
717. Do you think that an effort in the way of reducing the size of plans to uniformity would be an advantage? I cannot say that I should agree with the cutting up of the working plan and section. I rather like the long roll.
718. Is there not great wear and tear on these plans? But there is very little wear and tear on the working section. It is mostly on the detailed drawings that there is most wear and tear, and those are nearly all double elephant size.
719. Is it not your opinion that a plan will keep better, and last longer, if it is used lying flat, than rolled up? An ordinary, unmounted plan will soon suffer by being rolled up.
720. Does that show that a greater strain is put upon it by having it rolled up, than lying flat? Yes.
721. Do you think it would be desirable to have the whole of the officers engaged in construction work under the same roof? Yes. While I was in charge of the staff at the Mutual Provident Office, it used to distress me very much, having to come up here two or three times on a hot day.
722. Do you know how the cadets are appointed? By the Minister.
723. Is it on the recommendation of Mr. Whitton? Sometimes on the recommendation of Mr. Whitton.
724. And as to the other times? I do not think there have been any appointed since I have been in the office. I could scarcely give you any reliable information about it.
725. Are you aware if any person who entered the service as a cadet holds any responsible position in the Department now? Any responsible position?
726. Yes; such an engineer in charge of works? I think there are some who are assistant engineers, or assistant surveyors.
727. Do you approve of this system of educating cadets in the public service, and paying them salaries from the time they enter it? It is a very different state of things to what prevailed when I was a boy. My father had to pay a very stiff premium. It is quite contrary to the practice in European countries.

Mr. D.  
Simpson.  
21 Dec., 1886.

Mr. David Simpson, examined:—

728. *Mr. Coyle.*] Are you a district engineer? Yes.
729. Would you explain to the Commission what are the duties of a district engineer in this department? He is appointed to the construction of a railway, he takes charge of it, and looks after everything in connection with the whole construction of the line.
730. *Mr. Mills.*] That is from the contract? From the time the contract is let until the line is completed.
731. *Mr. Coyle.*] Has he to see that the works are carried out in accordance with the contract? Yes, with the drawings and specifications.
732. Does he set out the works for the contractor? There are certain works mentioned in the specification. The works that he will set out are mentioned in the specification.
733. Do not those embrace all the principal works? No doubt.
734. Does he check the setting out by the contractor's engineer? The contractor rather checks us. Notwithstanding our setting out the contractor has to satisfy himself that we are correct.
735. Are there some works that you do not set out? There are.
736. In that case I presume you check him? No; the responsibility lies with the contractor.
737. How would you test that? I would not test it at all.
738. *Mr. Mills.*] What class of work has the contractor to set out for himself? The embankments. The centre line is marked before he undertakes the work, and from that he has to set out the embankment.
739. *Mr. Coyle.*] What other works on the line has he to set out? He would have to set out the levels of the embankment, the formation levels of the embankment; but we furnish the levels for the ballast and rails.
740. *Mr. Mills.*] As to the culverts? We set them out.
741. *Mr. Coyle.*] I believe it is also stipulated in Government contracts that the banks shall be trimmed to such level as the engineer may direct? Does that put on the engineer the onus of making an allowance for subsidence that may occur in the banks after construction? Not altogether.
742. Is it not specified that the banks shall be formed to such a level as the engineer may direct? But the engineer does not direct until he comes to give the rail levels, and during that period of construction the onus lies upon the contractor.
743. That is, the contractor should not be ordered to make any allowance for subsidence by the engineer? He would not be instructed, he might receive advice.
744. Is it stated in the specifications that the banks shall be formed to such level as the engineer may direct? I think those are the words.
745. As a matter of fact does the engineer direct the contractor to form his line to a certain level before plate-laying? Before plate-laying.
746. Are you aware if it is the practice in other places, or has it been the practice in your own experience, for Government Engineers, or the engineers of companies, to set out works for contractors at all? No. In New Zealand we set out most of the things similar to those we set out here, but I do not think it was compulsory on us to do so.
747. You were not instructed by the contract to do it? No, and had no responsibility.
748. In the home country, or in any other place than this colony, is it the practice for the Government to set out the works for the contractor? My experience is that it all rests with the contractor.
749. In the event of the works being incorrectly set out by the engineer, or in the event of the engineer omitting to set them out, or in the event of his delaying to set them out, would not a certain responsibility attach to the department? I think not. The conditions of the contract provide for that.
750. Assuming that you set out some of the contractor's work wrongly, and that he suffered loss by that, although the provisions of the contract might according to the strict letter of the law hold the department clear, would not that be an inequitable use of the provisions of the contract? It would depend upon the circumstances. I think the contractor might be entitled to receive consideration in some cases, and not be entitled to it in others.
751. In the event of contractors suffering loss from improper setting out, or in delay in setting out works, under the present system does not a certain responsibility attach to the department. I think so.
752. In your opinion as engineer would you say that the contractor should set out his own work and clear the Government of all responsibility in connection with it, that is to say generally speaking, omitting such work as large tunnels or large bridges where there would be great public loss or calamity if any mistake occurred. But in the general run of these works such as slopes, culverts, fencing and the general setting out that you have to do upon the line of railway, should not the onus of that be thrown upon the contractor, and the officers of the department relieved of it altogether? Not altogether.
753. Would not that course clear the Government of all responsibility in the matter? It would to a certain extent as far as the details are concerned.
754. I am asking you as to the setting out of the work, would it not relieve the Government of any responsibility? I think so.
755. *Mr. Mills.*] Which would be the safer plan to adopt? I think the present system is a very good one.
756. *Mr. Coyle.*] Under which the Government engineers set out the works? Yes.
757. *Mr. Waller.*] Does the fact of the Government setting out the works make it necessary for the engineers to have more hands? It puts a little more work upon them, but all the work does not come together, and there is plenty of time to do it in.
758. Has it not increased the number of hands? No; you would have still to retain a sufficient staff to look after the work.
759. *Mr. Mills.*] Would it take almost the same time in checking the work as in setting it out? Yes.
760. If it were known that contractors had to set out the whole work, and take the whole responsibility, would they not want a shade higher for their contracts? They must have an engineer, and a good engineer.
761. *Mr. Coyle.*] Is the contractor bound to wait for the setting out of the work by the Government engineer? Yes; it puts the district engineer almost at the beck of the contractor sometimes.
762. Are you aware of any case where this responsibility has caused any loss to the Government? I am not aware of any case.
763. Are you aware of any matter of this sort pending at the present time? No.

764. In the event of a contractor wanting rails, what is the course adopted to obtain them? He can apply to the district engineer or to head-quarters direct.

Mr. D.  
Simpson.

765. In the event of his applying to head-quarters direct is the application then sent back to the engineer for report? It is not sent back, but an advice is sent from the engineer's office of the issue of the rails. They may refer to me, and ask me if the contractor is prepared to receive them. They would see by the progress reports in most cases whether the contractors were in a position to receive them.

21 Dec., 1886.

766. *Mr. Waller.*] Do they as a rule send in their requisitions to the head office, or to the district engineer? I cannot say what the rule is, but as far as my experience has gone they have applied direct.

767. Would it not be a better plan that they should apply through the engineer? I think it would.

768. Could it not be done by the contractor filling up the requisition and sending it to the district engineer, who would check and initial it, and then forward it on to the head office, and so save all reference back? Yes.

769. *Mr. Coyle.*] Would it be necessary in some cases for the department to know whether the contractor really required the material for which he was applying, and in that case would they refer the letter to you? They would.

770. The contractor might apply for ten or fifteen miles of rails when he was only in a position to use five, and it might not be convenient to the department to let him have fifteen miles of rails; so that in such a case as that you think that all communications should go to you before going to the head office? I think so.

771. That is in matters referring to works under your charge? I am not aware that the contractors are led to understand that they have to apply direct. They generally address all their correspondence to the district engineer.

Mr. Herbert Palmer examined:—

772. *Mr. Coyle.*] What position do you hold in the department? I am Assistant Engineer for Railway Surveys.

Mr. H.  
Palmer.

773. What have you charge of? Of the railway survey and the trial survey.

774. *Mr. Waller.*] Is there a chief assistant engineer in the department? Not by that title. Mr. Mason occupied that position.

21 Dec., 1886.

775. If there were an officer filling such an appointment, would his position be that next after Mr. Whitton? It would.

776. In the event of Mr. Whitton's absence, upon whom would his work devolve? Such an officer would, of course, naturally take Mr. Whitton's place.

777. Do you think that such an appointment would be advantageous to the service,—do you think it is desirable that there should be some officer who would be able to carry on the work in the absence of the Engineer-in-Chief? Such a necessity has not occurred, through Mr. Whitton's strength and attention to duty. I am not aware that there has been any necessity for it so far since Mr. Mason left. In the present state of railway matters, I do not know that such an officer is necessary. The work of the department is now slack. There are only two or three extensions to finish.

778. Suppose Mr. Whitton were away on leave, and that there were a lot of work came in, how would it be done? Some would go to Mr. Drewett, and some to some other officer. I think one chief assistant engineer could very well do all the work which is now performed by all the assistant engineers. That is my own private opinion. There is no greater mistake in a department of this kind than to have it split up and scattered all over the place. Under systematic arrangement one energetic man could attend to the whole business. There was only one chief assistant engineer some years ago, and a chief draftsman. Mr. Drewett attended to all the drafting work. When I took up the railway surveys, I also undertook to conduct all the drafting part of the work; but I think that must have been voluntary on my part. In the old days all the drafting work was done in the office under Mr. Whitton.

779. *Mr. Coyle.*] Assuming that there was such an officer as assistant engineer-in-chief, could he perform the duties of inspecting engineer as well, or should his position be assistant engineer-in-chief, having supervision over the inspecting engineers? As to the office of inspecting engineer, I never could see the utility of that appointment. In the old days there was no inspecting engineer. A certain number of contracts were let, upon which a certain number of district engineers were stationed, each of whom was directly responsible to the Engineer-in-Chief for Railways. If there was any inspecting work to be done, the Chief Assistant Engineer did it.

780. *Mr. Waller.*] If any difficulty arose with a contractor which it was not convenient for the Engineer-in-Chief to investigate himself, would the Chief Assistant Engineer take the matter up? Yes; I suppose the Engineer-in-Chief would depute him to see to it, and would probably act upon his recommendation. The office of Inspecting Engineer has been brought about, I imagine, from a want of confidence on the part of the Engineer-in-Chief in the district engineers.

781. How long has the office been in existence? I cannot tell you the exact date when Mr. Wade was appointed to it, but I think it was August, 1879.

782. *Mr. Coyle.*] Was that about the time when the heavy press of work began? No; the work was much heavier after that.

782. Was the gentleman who is at present acting as successor to Mr. Wade the senior officer in the Department? No; he was junior to nearly all the district engineers, and to the heads of branches. Mr. Deane's first appointment was in 1880.

784. Was he junior to all the men who are considered to hold any position of standing in the office? I suppose his appointment came about from the fact that while I was absent for six months on leave he took my place here, and that brought him a good deal into contact with the Engineer-in-Chief.

785. I suppose your correspondence is chiefly with the Engineer-in-Chief and the officers under you? Principally with the officers under me. I keep my own letter-book and write all my own instructions.

786. Do not the surveyors communicate with the Engineer-in-Chief? Yes.

787. Do their letters go to him through you? No; they communicate with the Engineer-in-Chief, and after their letters have been registered in his office they are sent on to me to act upon.

788. Who are the surveyors immediately under? They are supposed to be under me; but Mr. Whitton insists on all correspondence going through his chief clerk.

789. Is there a loss of time caused by that? There is in many trifling things. For instance, a surveyor wants

Mr. H.  
Palmer.

21 Dec., 1886.

wants a piece of tracing paper or a letter book, and his letter applying for it is addressed to the Engineer-in-Chief. The letter is opened by the Chief Clerk, sent on to be recorded, and is then marked off to me. As soon as I get it I send off the article required, write on the letter that it has been sent, and I then return the paper to Mr. Whitton or Mr. Quodding, who directs that it shall be put by. There is all that routine about sending a level book.

790. Who actually gives the order to send what is applied for? I do it; I have all the supplies here. When the surveyor's letter reaches me I tell one of my officers to send what is asked for.

791. *Mr. Waller.*] Who has charge of all the stores required by surveyors? We have them here in this office—papers, level books, and ordinary forms.

792. If the requisition came straight to you from the surveyor, and if you were to send it on to the Engineer-in-Chief minuted to the effect that you had acted upon it, would the business be transacted as properly as it is now? Yes. The application for the paper or book may be contained in a communication which it is important should reach me quickly, but under this roundabout system it may not reach me for a day, or for perhaps two or three days.

793. Is there any advantage gained by way of security? The application for books or paper are in that sense of very little importance. I suppose the only excuse for it is that I have no clerical staff, and if it is considered of such mighty importance to have a record of these twopenny half-penny matters, that could be kept by giving me one clerk here. It is by having all these things going through the head office that they are able to run up the correspondence to 5874 or some other imposing figures which do not in any way represent the importance of the correspondence.

794. But if the letter came to you first and after you had acted upon it could it not be recorded just the same as now—the difference being that they would have the letter once instead of two or three times? The chief clerk insists that everything should go through him. It does not matter how much you complain about it, whatever Mr. Quodding does is right. Every surveyor's report and journal that comes in that contains the information which I require in connection with my work goes into that office and is kept there. They do not understand what I am doing, and they make all sorts of remarks on the journals. These come on to me, and I am blamed for this or my attention is called to that. I say that as I have to deal with these men their journals ought to come on to me; and I do not need to be told by any chief clerk what to do.

795. *Mr. Mills.*] You want to be left free to act as a professional head? Yes, and to be responsible.

796. Would that prevent the multiplication of correspondence? It would prevent a great deal of correspondence, and it would prevent loss of time to me in getting journals and reports which I often want to see the moment they come in. They will keep them at the head office until they get thirty or forty from the remotest part of the colony. Although some of them may arrive on the first of the month they are kept there waiting for the arrival of journals from other surveyors until perhaps the fifteenth of the month and then send them bound up. This delay is very inconvenient, for there may be things in the journals that I would like to have attended to a fortnight before.

797. *Mr. Waller.*] If the reports and journals came to you, would that do away with the necessity of auditing them? That part of the business might be kept separate. In a weak moment, to make these reports very full, I allowed that on the back of the journals should be stated their monthly accounts. The clerks tick these off as correct. I did not see my mistake until afterwards. Those accounts should come to me for verification. No surveyors' accounts should be passed by the clerical branch until I tell them; but they do that first before I see them, and the consequence is that I know absolutely nothing about the cost of these things.

798. Supposing that those reports and accounts came to you, would you check those accounts so as to make it unnecessary for that work to be undertaken by the clerical department? The only objection to that would be that I am sometimes absent from town. It is necessary for me to be away sometimes.

799. In your absence would there be some one acting in your place? If things had been inaugurated in such a way as to give me the proper charge of my department, I should have arranged that. The accounts occupy only three lines as a rule, then in checking them and taking them off they do not go into particulars as to whether those charges are justifiable, but they merely deal with them clerically, as to whether the figures are correct.

800. Would it be necessary for the clerical branch to examine the accounts if they came to you? All accounts require to be checked.

801. Could they be checked here? If these things had been placed in my hands properly, as I have always wished, it would have been necessary for me to have kept one clerk. I have no clerk now, everything now in the shape of correspondence is copied by the messenger, and the forwarding of parcels is done by one of the draftsmen.

802. *Mr. Mills.*] Are you speaking of parcels to the district engineers? No, only to the field officers of the survey staff.

803. *Mr. Waller.*] Do you think that under the system adopted now the professional portion of the work is not looked into as carefully as they ought to be, because of the method of dealing with the accounts? I could hardly say that. A survey party's account is merely a man's salary, and the wages of his men.

804. *Mr. Coyle.*] I suppose he must get special authority for any extra expenditure? Yes.

805. It has been proposed, I understand, that the services of thirteen officers of your branch should be dispensed with. Do you think any further reduction would be possible during the ensuing year? Yes; as far as I can see at present the whole of those remaining will have completed their work. The way in which these thirteen came to be mentioned was this: A circular was forwarded some time ago, asking each head of a department if any reduction could be made, and stating that he should recommend the way in which it could be done. I replied to that that I knew nothing whatever about retrenchment or reductions! it was merely a question of work with me, and that, unless by the end of this year instructions came in for a great deal further railway survey work, the field staff would be without work. I mentioned that by the end of the year such and such officers, to the number of about seventeen, would be waiting for instructions for new work. The reply I got to that from Mr. Whitton was that in consideration of my report he regretted that he had had to recommend that at the end of the year the services of every one of the surveyors named by me should be dispensed with. On the same date all these men got notice that their services were dispensed with. Mr. Whitton, in giving notice, I suppose, looked upon his recommendation to the Minister as final, and he said that their services should be dispensed with without waiting for an answer from the Minister approving of that. The men got their notice.

Mr. H.  
Palmer.  
21 Dec., 1886.

806. *Mr. Mills.*] How many are there on the full staff? Twenty-six, I think. One or two are occupied in the office.
807. Does that include the assistant surveyors? Yes, it does. The paper gave the names of the full staff, thirteen got their notice in any case, one or two were left off. One was a gentleman who had been injured very considerably by a fall, and who will never be able to do field work again. He has been allowed to remain in the office as draftsman. Another was a very old and a very good officer who had been employed as draftsman, and these have been kept on and did not receive the notice. I had the following communications asking what I proposed to do with the balance of the staff. To that I only had to answer that they were at work at present on the few railway surveys we had not already completed, and I gave the date upon which I thought those surveys ought to be completed. They are engaged upon work which it is very doubtful will ever be required. One of them I in effect recommended should be stopped. In referring to the survey of the line Muswellbrook to Cassilis, I said that if it was desirable that that survey should go on there would be employment for one until the end of May. All the work of this staff for the last two years has been in making the permanent surveys of railways for which Parliament granted votes in 1884. We had very nearly finished them in time to lay all the plans on the table of the House last session. We gave them a pretty good number, and out of those Parliament only passed the railway from Nyngan to Cobar. Two or three were thrown out altogether, and the rest were referred to select committees. By the commencement of next year I hope to give them the surveys from Wagga to Tumberumba, from Bega to Eden, from Muswellbrook to Cassilis, and the balance of the line from Grafton to the Tweed.
808. *Mr. Waller.*] At the end of June do you think you will have work for the surveyors? As things are now I do not think so, not for a single one.
809. Then, in a short time after that there will not be work for the draftsmen in the office? No, but there is always work coming in.
810. For about how long will there be work do you suppose? Well, things spin out sometimes longer than you expect on account of some deviation which is proposed, and which you think you will never hear of.
811. In six months the surveys will be finished; at any rate long before the end of next year (say) in September? I should think so. This is the first time in all the years that I have been in the department that there has not been a single trial survey asked for in any part of the Colony. We have no trial surveys in hand. As we finish the permanent surveys the staff are thrown out, and there is a probability that no more surveys will be required.
812. In view of the decrease of work will you have employment for cadets? I never look upon cadets as anything at all, I do not acknowledge them. What little I see of them I always tell them that they have made a great mistake in choosing this as a profession. I do not see what prospect they have. Work is so precarious that it seems to me that they are losing their time.
813. *Mr. Coyle.*] Can you state what number of miles of working surveys you have ready for contract now? There are 671 miles of railways, for which they can call for tenders any day they like. The continuance of work in this office is entirely dependent upon the authorization of new railways. If the Upper House had passed every one of the plans submitted for their approval I could have sent them forward faster than they could have called tenders for them.
814. *Mr. Mills.*] You do the pioneer work, I understand? This branch is called the Trial Survey Branch but that is a misnomer. It is really the Permanent Survey Branch as well. We get out the plans and sections, prepare plans for the approval of Parliament, and for contract, and as we have finished most of the permanent surveys there is nothing to keep us going, unless it should happen, as was the case three years ago, we got an order for new railways. £12,000,000 worth of new railways were put in hand three years ago. That necessitated the establishment of a fine staff, but we cannot keep them going without orders for 1,000 miles of railway.
815. *Mr. Coyle.*] Are you quite prepared to carry out an order for 1,000 miles of railway survey without increasing your staff? Quite; if the staff were not now dispensed with.
816. But have you no new works to go on with? None.
817. *Mr. Mills.*] Are the members of your staff, who have been engaged in the survey of railways, men who would be competent to survey canals for irrigation, or for the conservation of water? You could pick out some very good men for such work from among them.
818. *Mr. Coyle.*] Would they be the best class of men for that purpose? Yes, many of these men would do admirably for that. The only surveyor the Water Conservation Commission had was a man whom I strongly recommended to them from our own branch, whose services we did not want at the time.
819. *Mr. Waller.*] When does the lease of this office terminate? The fire at the Garden Palace was in September, 1882, it was taken next month, in October I think.
820. Then somewhere about the end of September next year the lease will terminate? Yes.
821. Will it be necessary to give notice to prevent its renewal? I do not know.
822. *Mr. Coyle.*] Would you kindly explain to us the system adopted in making these railway surveys, from the first preliminary survey down to the final working survey. Say you were asked to make a railway from Goulburn to Cooma, who would be the first person who would go over the country? I should send one of the staff, in whom I had the greatest confidence for that sort of work, with instructions to ride over the country and give me a report as to what he considered the best route over which to make the trial survey. He would take with him all the parish and county maps, and would be guided to a great extent by the natural features of the country. He would have to describe certain fixed points or gaps, that he would be compelled to make for, and as the result of his examination of the country he would recommend that such and such a route should be adopted for the first trial survey.
823. Is there any section taken over it at that time? No; I strongly object to that. I am aware that many people like to get what is called a flying survey, but I have never seen one worth a button. People will go over country with an aneroid, but they misjudge distances, and their impressions are generally misleading.
824. Having selected the general line of route, what is your next step? According to the length of line to be surveyed, we put surveyors upon it. If there are fixed points which govern the direction of the route, we send some to one and some to another, and we get in a trial survey with all plans and sections.

Mr.  
H. Palmer,  
21 Dec., 1886.

825. Do you go over the ground yourself and examine it? As a rule I used to do, but that depends very much upon what is going on. During the last few years I, being Engineer for Trial Surveys, was given the full charge of the permanent surveys, and it became my duty to get up the whole of the plans and sections, and I have therefore had a large office staff to supervise, as well as the field staff.

826. Before working surveys are made, is there an engineer of standing goes over the line to examine it? Before the final survey is made. There is not a single line that I have not examined myself. No final survey is completed until it is worked up in such a way, cross levels all over it, that it is perfectly easy to be sure you have got the best line. No portion of a survey is staked out without my instructions, every portion of the central line of all permanent surveys is laid down on the plan in this office by me before any surveyor has authority to stake out a single chain of it.

828. *Mr. Mills.*] When is the lock-spitting done? That follows the permanent survey. The line is not lock-spitted until the final pegs are in.

829. Not until it has been adopted as a route? No.

830. *Mr. Coyle.*] With regard to the instruments used by your staff, do they belong to the department or to themselves? To themselves.

831. Is there any allowance made to them? £200 a year, equipment allowance, is supposed to cover everything.

832. Does that include provisions? No.

833. What salary do the field officers receive? From £250 to £400.

834. And they have also an allowance of £200 when in the field to cover camp equipment? Yes.

835. Tools, and all that is necessary? Yes.

836. They can make no further charge against the Government? No.

837. *Mr. Waller.*] What tools do they require? They require only two or three axes and a few spades and shovels. The lock-spitting is done by contract afterwards. The actual value of the tools and cooking utensils required is very small.

838. *Mr. Coyle.*] Have you anything to do with the survey of the land required for railway purposes? Yes.

839. Do you make the survey of the land before it is conveyed to the Crown? Yes. This plan will give you an idea. These boundaries have been surveyed. All that is required is to put on the fence width, such and such ground, and the owner will be supplied with notice.

840. Are the bearings of these straights given to any meridian? No.

841. Is this survey made from a certain meridian? Yes; the magnetic meridian.

842. How is the survey of the land as you pass picked up on the ground? From the pegs as we pass. We survey everything as it exists.

843. Suppose fences do not exist on the ground? We have the pegs and marked trees to refer to. I supply every railway surveyor with the parish maps, showing every portion he has to go through. These have all the survey information upon them, and give him every information, to enable him to fix it on the ground.

844. Is there one general meridian carried through each survey, or does each surveyor adopt his own meridian? I do not care anything at all about meridians. We survey things as they exist. We have had no trouble in reference to the Real Property Act, and I have been dealing with these cases for years now.

845. Do you know if the titles to land acquired for railway purposes are under Torrens' Act? That I cannot say. If we get one distance from the centre to the corner that is the only requirement we have to meet for the Land Titles Office. They ask for that always, as far as we can give it to them, and we supply it if it is possible to obtain it. I look upon the land part of this business as being outside of our work, and it takes up the time of experienced surveyors, which could be used to greater advantage than in looking for boundary marks. I would prefer that the time of the surveyor should be occupied, say, in knocking 10 feet off a cutting, or in reducing the expense of the work in other directions.

846. *Mr. Waller.*] Do you consider that the appointment of inspecting engineer is necessary? Certainly not.

847. Do you consider the number of official heads of branches now in existence necessary? They are not necessary at the present time.

848. Do you consider that the appointment of an officer to the position of Assistant Engineer-in-Chief would be the means of having business well conducted, and that it would enable a number of official heads to be done away with? I think so. The official heads when I arrived here were the Engineer-in-Chief, the Chief Assistant Engineer, and the Chief Draftsman—those were all. Under the same arrangement the business could be as well done now. The Chief Assistant-Engineer could combine the duties of Inspecting-Engineer and Engineer for Trial Survey, as well as those of office engineer. Below him would come the chief draftsman, who would supervise the drafting now carried out in Mr. Whitton's office, and also in this office. That is the way the business would be done in any private establishment.

849. Is there any officer now holding such a position in the service, as in the event of the death or absence from illness of the Engineer-in-Chief, would by reason of his present official status naturally succeed him? No; the office might be claimed by several.

850. Do you think if there was such an appointment as that of Chief Assistant Engineer the officer occupying that position should be a man qualified to succeed to the office of Engineer-in-Chief, or to act for that officer in his absence? Decidedly; the appointment should be made on the understanding that the officer should be so qualified. It was an appointment which existed until the retirement of Mr. Mason; from that time the office has not been filled up.

851. *Mr. Mills.*] If a few railway or trial surveys were required in the future, what provision would there be for making them if the whole of the present staff were disbanded? It appears to me that the demand for railway surveys in the future is not likely to be large; and it would be easy to pick out from the present staff a sufficient number of competent men to make each survey as it is required—men who are competent to have the work left in their own hands; but if the Engineer-in-Chief were not satisfied with their report, plans, and sections, he could send out the Chief Assistant Engineer to look after the business. I have already recommended that the services of some should be retained.

852. *Mr. Waller.*] What is your reason for thinking it is unnecessary to have inspecting engineers? I think the Engineer-in-Chief should have sufficient confidence in the man whom he employs as district engineer to carry out the work. The district engineer is really responsible for the bulk of the work, and if there is some particular thing which the inspecting engineer is compelled to look to, there may be many other things defective.

Mr.  
H. Palmer.  
21 Dec., 1886.

853. *Mr. Mills.*] You think there should be more individual responsibility thrown upon competent men? No engineer should be placed in charge of a contract if the Engineer-in-Chief had not full confidence in him.

854. *Mr. Waller.*] In the event of any disagreement between the contractor and the district engineer, there would be the Engineer-in-Chief, or the Chief Assistant Engineer to settle the matter. In all other cases do you think that the district engineer ought to be competent to act? Thoroughly. He ought not to be there unless he is competent.

855. Does the present system put man over man, and after all the responsibility rests with the first? Yes.

856. What is the number of the staff you have employed now? The office staff consists of twelve.

857. What are they? Draftsmen who are finishing up the working plans and sections, and taking out quantities.

858. Your field staff consists of twenty-six? Yes.

859. And six cadets? Yes.

860. *Mr. Mills.*] As the surveyors send in their work, is it drafted here? Yes, most of it.

861. Do the surveyors come down and plot their own work in the office? Only upon the completion of a survey while they are waiting, pending their going out on the next job.

862. Do the surveyors plot their own field work, or do the draftsmen do it? We plot the whole of the levels here; everything in connection with the sections is finished here. I let the surveyors sometimes plot in the field and send their work in in pencil here to be finished up. We have allowed them to plot their own work when they come in; but that is not a part of their duty.

863. *Mr. Waller.*] Do you think that the system of recording and transmitting papers between the different offices could be simplified as far as your office is concerned? I think so; if I had one clerk or a lad, all my correspondence could come to me direct. Mr. Whitton has always had sufficient confidence in me to feel that the work is going on as he wishes that it should; and if there is anything which it is necessary should be referred to him I always do refer it.

864. What is the present routine? All reports and journals go to the Engineer-in-Chief; and when marked off by Mr. Quodling to me the papers come to me.

865. *Mr. Coyle.*] Is it the fact that sometimes the Engineer-in-Chief never sees the correspondence at all? It is not unlikely. All that it goes to that office for is to be recorded, and then marked "Mr. Palmer." I note on this that I have sent instructions; but what the instructions are they do not know, because they are in my letter-book.

866. *Mr. Waller.*] What correspondence? Everything from the time the surveyor leaves the office until he comes back to it is done under directions which he receives from me.

867. If it is thought necessary that a record should be kept at the head office would this plan meet the requirements of the case—that the correspondence from the surveyors should come to you first, and that you should deal with it and then note on it to the head office that you had dealt with it on such a day and in such a manner? I should think so. It would be sufficient anywhere else. If this were my private business I should not do more.

868. Suppose an application for leave of absence were made by one of your officers what course would it take? I should forward it direct to my superior officer, the Engineer-in-Chief. I have a paper of that sort on my table now. It is marked 86/5,119. I forwarded it to the Engineer-in-Chief on the 15th of November; he sent it on to the Under Secretary on the 30th November; the Under Secretary submits it to the Minister on the 1st December; it is marked as having been approved by the Minister on the 11th December; it was forwarded by the Under Secretary to the Commissioner on the 13th December; it was forwarded the same day by the Commissioner to the Engineer-in-Chief; and it was returned to me by the Engineer-in-Chief on the 14th December.

869. *Mr. Coyle.*] Do you find that the use of stencil-plates for title printing curtails the work? Yes; considerably.

870. Are there cases where you have to repeat the names of railways scores of times? Yes, if you see ornamental work on plans it is an indication that the man has not much to do.

871. You approve of the use of stencil plates? Decidedly.

872. Are you satisfied with keeping the plans and sections in rolls? Yes, as original documents.

873. When you have done with them as working plans? Then they are lithographed and kept in sheet form.

874. Do you think that for water openings to be constructed of timber, from the smallest (say) 8 feet or 10 feet up to the extreme limit of span, should be made from standard drawings? They have those in the Head Office.

875. Only up to 26 feet? They have made very few bridges over that. There are 40 feet trusses, but they are very few. It would be easy to lithograph a few of those.

876. In connection with station buildings, are there a large number required of the different classes? Yes.

877. Do you not think it would be very desirable to have lithographed standard drawings of each, and to use them rather than make special drawings of each? Certainly.

878. Would not the same thing apply in a greater degree to such structures as goods sheds, of which there may be half a dozen classes? Yes, up to certain dimensions.

879. Would the only objection that could be made to that be as to the foundations? Yes; the superstructure is the same from formation level.

880. Also to engine sheds, engine pits, and other structures? Yes, lithographed standard drawings might be used with advantage in all such cases.

881. Might they be used to a larger extent than they are? I have seen very little of the work in the other office lately. I cannot say much as to what they are doing there now.

882. *Mr. Waller.*] Would the difference in the contour of the ground make it desirable in any case to lay the standard drawings aside and make special plans? I should make the standard drawings available for everything above formation level.

883. Could the details, in other respects, be dealt with in each case? The standard drawing would not be affected by the ground level.

884. *Mr. Coyle.*] And would the same remark apply to the station buildings and engine sheds? Yes.

WEDNESDAY,

WEDNESDAY, 22 DECEMBER, 1886.

Present:—

Chairman—MR. T. F. WALLER,

MR. J. E. FITZGERALD COYLE,

MR. J. Y. MILLS.

Mr. H. Palmer re-examined:—

Mr.  
H. Palmer.  
22 Dec., 1886.

885. *Mr. Waller.*] Referring to your examination of yesterday as to the number of surveyors who are awaiting instructions, for whom you will have no work at the close of the year, will you kindly give us the names of each, and the salaries? A. Francis, £100; A. Vine, £250; H. Hardy, £350; J. Carter, £250; C. P. Hogg, £350; W. J. Millner, £300; T. Kennedy, junior, £250; H. E. Martin, assistant surveyor, £150; O. Lloyd, £300; E. Thornbury, £300; S. Wells, £300; W. Dyer, £300.

886. Will you have any work for these gentlemen at the end of the year? No, not with our present instructions.

887. Can you tell us when you think the other surveyors, now in the field, will come in? Some will be in in May, and the balance I think—one can never tell how many deviations may be asked for—the balance by the end of June. The work will be very satisfactorily done if they finish by that time. We have only two surveys in hand, Grafton to the Tweed, and Muswellbrook to Cassilis, upon the permanent surveys of which the staff are now engaged.

888. Who are the officers engaged upon the Grafton to Tweed line, and what are the salaries paid to each? J. Cumming, £350; J. P. Sharkey, £300; F. H. Geisow, £300; G. L. Wilkins, £300; C. H. Caswell, £250; W. A. Bullard, £150, and E. J. Pell, £150, assistant surveyors.

889. When will their work be finished? I anticipate that the whole of that survey will be finished in June. If finished between the first of January and the end of June I shall be quite satisfied. We have completed the first portion, 22 miles. If that had been thrown out by Parliament the probabilities are that the survey would have been instantly stopped. Until the whole line is finished, therefore, they can be kept at work.

890. Will not the work required to complete the plans make it necessary that the surveyors themselves should be kept in the office to do that? No, the office staff does that, that is work which properly belongs to them.

891. *Mr. Mills.*] What are the names of the surveyors employed upon the line from Muswellbrook to Cassilis, and their salaries? C. E. Edwards, £250, and J. J. Jamieson, £250. They are both juniors.

892. When do you anticipate that they will finish? They ought to have their work finished easily in May.

893. *Mr. Coyle.*] Would not the large reduction of thirteen surveyors greatly reduce the drafting work of the office? Yes; but the staff has already been reduced a great deal.

894. This year? Yes. There have been large reductions in the staff through resignations, and men going away to undertake other things. We have really a small staff. The work of the draftsmen now employed is merely dependent upon the work of the surveyors coming in.

895. *Mr. Waller.*] If all the gentlemen whom you have named were let go, how many surveyors would remain upon your staff—would you have any surveyors still left after the twenty-one gentlemen whom you have named have completed their work? Yes.

896. Remaining in the office? Yes.

897. How many? Mr. Melrose is really on the list of surveyors, and also Mr. Walker. Those are the two gentlemen that I mentioned yesterday, one of them as being an officer who has been injured, and one a very old officer. I advised that Mr. Walker should be transferred as a draftsman. He made application to that effect, and he was refused, but there was no intention to send him into the field.

898. If it were advisable to retain some surveyors in connection with the office, which would you recommend should be retained as draftsmen? We have two already named, Mr. Melrose and Mr. Walker. The other two having the longest service are Mr. Hardy and Mr. Hogg.

899. *Mr. Waller.*] Would you propose to retain Mr. Walker and Mr. Melrose for the present? Yes; Mr. Melrose is an excellent draftsman—one of the Royal Engineers' staff. We never know but that at any moment some duty or other requiring the services of a surveyor may arise, and I would therefore recommend that Mr. Walker, Mr. Melrose, Mr. Francis, and Mr. Hardy should be retained. It has been assumed all through in the office that Mr. Melrose and Mr. Walker are really on the office staff. Mr. Hogg would be senior to Mr. Francis in length of service, but I believe he has made arrangements to leave the service, and I therefore name Mr. Francis in his place.

900. Would you recommend that they be transferred to the office staff? I recommend that that should be done temporarily.

901. As regards the draftsmen? I have not recommended any reduction. These men have what is called temporary employment, and there is nothing to prevent the Government from giving them a month's notice whenever the work gets slack. In that respect their position is different from that of the men who are engaged from year to year.

902. As the work terminates, then, you would send in a report to that effect? Yes; I think that is the proper way to deal with the business.

903. How many draftsmen are there in the office? I have twelve on my list, excluding Mr. Walker and Mr. Melrose, who have been on the work all the time.

904. As to the cadets, there are six of them, are there not? Yes.

905. They get £52 a year when they are in the office? Yes.

906. Do they get extra pay when in the field? Yes; they are paid at the rate of 7s. a day, about equivalent to the forman of the chainmen's party—two guineas a week.

907. Are they under you? They are appointed in Mr. Whitton's office. They apply to be forwarded to surveyors. They are merely allowed to join the surveyors' camp as ordinary chainmen, to pick up what knowledge they can.

908. In the event of the field work being over, whom do they go to? If they are prepared to come into my office with the experience they have gained, they have the option of remaining, or if they prefer to go to Mr. Drewett, they can.

909. Have you any work for them in the present state of business in your office? There are only two in it.

910.

910. When the parties return will you have work for them? They will only return when these surveys are finished. I should think not. I consider that the men who are appointed as draftsmen have a prior claim.

Mr.  
H. Palmer.  
22 Dec., 1886.

911. Will you have work for them on their return? I have no present work in view.

912. We notice that there are six cadets on our list. When in the field you say they receive two guineas a week, and when out of the field £52 a year. There are two cadets in Mr. Drewett's department? One of them has made application to go up to the Tweed, where there happens to be work.

913. We should be glad to learn how these appointments are made? I do not think I ever recommended one.

914. Are you aware if there is a lease for your offices at the Mutual Provident Society's buildings? Yes, for five years, dating from the time of the Garden Palace fire. It took place in September, 1882.

915. Do you know the terms upon which the gentlemen on the temporary staff enter the service? I believe they are appointed on salary at the rate of so much per annum, payable monthly. It is an understood thing throughout the department that the services of such officers can be dispensed with at a month's notice at any time and it has been done before.

916. When was that? The old staff of surveyors and district engineers was dispensed with at a month's notice in 1871.

917. Was any compensation given to the officers at that time? None whatever.

918. *Mr. Coyle.*] Have all these temporary officers been appointed since 1871? All of whom you are speaking of; now have been re-appointed since 1871. I have been in the service since 1867, the majority of them have had much less service than that.

919. *Mr. Waller.*] Do you keep a time-book in your office? I do.

920. What system do you adopt for showing that the time-book has been examined by you. Suppose I came into office in your absence, how could I ascertain that? I leave that to the man I treat as chief draftsman; he looks after that. I look over it every now and again.

921. What system does he adopt? He is never there later than 9 o'clock, he is always there and sees every man come in.

922. Have you not adopted a system of initialling the book to show you have examined it? No, the book has only been in use a week or two.

923. Do you consider that it would be a better system that you should initial the book yourself? I think it would; but I always know as a matter of fact if the men do or do not come punctually. I consider the time-book a very necessary thing. Before the rule respecting it came into existence I used to be complaining every day about non-attendance.

924. Do you find it a great advantage to have a time-book? Yes, I think I have recommended one verbally for years.

925. Suppose any gentleman in your department desired to leave before the ordinary hour, to whom would he apply? To me.

926. If you gave leave what course would be adopted? They would enter it in the book, and the entry "by leave" would be initialled by Mr. Thomas. You will see that that has been done.

927. *Mr. Coyle.*] As to those 600 or 700-miles of railway to which you directed our attention the other day, will you state in what condition the working plans and sections are now? The working sections are all graded, the quantities computed and disposed in this form, *referring to plan*. They are really complete in pencil; they are exactly in the position which would enable you to call for tenders for them now.

928. And the plans? They are even more forward. They are all penned in and worked up, with the exception of areas of land to be resumed. It is better to leave that incomplete until it is absolutely determined that the land shall be reclaimed. Before the contracts are called for it is necessary to have a plan to resume the land. It would be no use finishing up plans of resumption proclamations, if the thing is to remain in obedience.

929. Do I understand that as soon as the line is proclaimed the land is taken by the proclamation? Yes.

930. And in adjusting the price of this land at a subsequent time the owner could claim interest from the date of the proclamation? That I doubt, if he had not been served with a notice.

931. As a matter of fact does the Government acquire the land by proclamation? The proclamation is not made until the plan has been approved by both Houses of Parliament.

932. Suppose that this line is not constructed for five years to come. If the land were to be proclaimed now would the Government have to pay interest from the date of proclamation up to the date when they actually required the land, is not that so? I do not think it is, unless the notice were served on the owners. The proclamation notice would not be served until after the line has been approved of by Parliament. We never take the proclaimed plan in hand until the line has been approved.

933. Suppose that nothing more were done to these plans and sections, and that it should not become necessary to construct the line for the next three or four years, are they now in such a condition that there would be no difficulty in any other officer completing them at that date? There would not be the least difficulty. They are as plain as anything can possibly be.

934. Are all the field books and level books kept on an uniform system? Yes.

935. I do not notice any water openings or culverts on this section? They are not determined until everything is finished. They are generally determined from notes we have by Mr. Whitton.

936. Does the surveyor estimate what he considers necessary? Yes, but that is not always acted upon. Lately Mr. Whitton has not been content with the surveyors notes as to what water ways are required, and before calling for tenders he has sent a special officer over the line with the worked up drawings to get his notes again as to what should be the water openings. I have always advocated that it is better that the district engineer should have more to do with the fixing of these while the work is in progress, than that they should be fixed before.

937. As a matter of fact do you know that a very large number of alterations are made in the dimensions of water openings by the engineers while the line is under construction? It is often necessary to reduce or increase them.

938. Then do I understand you to say that no loss could occur through these plans remaining in their present condition, even assuming that you yourself were not in the public service when required, and that your department was not in existence at the time when it should be necessary to act upon them?

Yes;

Mr.  
H. Palmer.  
22 Dec., 1886.

Yes; I cannot see that any inconvenience or loss of time can arise. I should not, were I to remain in my position, proceed with these plans beyond this stage until the line was authorized by Parliament.

939. *Mr. Waller.*] Why would you not finish them further now? Because it is very likely that they may be liable to alteration, and they could be more easily altered in their present stage and finished as required than if they were finished up now. If finished up now they would have to be obliterated altogether.

940. Do you consider that there would be a saving of money in not finally finishing the plans now? Quite so. If I thought there was any object to be gained by finishing them. I should have put all these surveyors on to them now.

941. Considerable stress has been laid upon the amount of time which is taken up in the Department of the Engineer-in-Chief in making copies of papers, reports, and other documents relative to trial surveys for Parliament. Are the copies, so far as concerns your office, made in your office, or do you send the original documents over to the Engineer-in-Chief's office? All that I send are copies of letters taken from my books of instructions. There are not many. Those returns are chiefly prepared in the office of the Engineer-in-Chief, and they send over to me to complete anything by supplying copies of instructions from my letter-books.

942. If plans are required to accompany these returns, are they made in your office? Yes; there have not been many plans called for.

943. *Mr. Coyle.*] Can you give us an estimate of the cost of constructing all the lines, something between 600 and 700 miles, the working surveys of which you have completed? The vote, I think was £11,000,000.

944. Has there been an estimate prepared for each line? Yes; you will find it in the Loan Bill of 1884.

945. What would be the actual cost of the survey work for those £11,000,000 worth of lines? There was a return made up for the House sometime ago. Everything for this service is taken out of the Loan Vote.

946. Would the expense of these surveys be about £40,000 a year for the last two years? Speaking roughly, that would be about it.

947. *Mr. Coyle.*] Could you give the whole cost of trial and permanent surveys for lines that have not yet been authorized by Parliament to be constructed? Yes.

948. And the estimated cost of these lines? Yes.

949. *Mr. Waller.*] Before the great rush of railway work which commenced somewhere about 1879, your office, I understand, was not in existence. My office came into existence in 1874 or 1875. At that time the main trunk lines were being pushed on more rapidly than they had been previously, and there were surveyors at work on all the different lines without any head of the Survey Department. All their work was coming into this office, and all drafting work was being done in the ordinary rooms, under the supervision of the Chief Draftsman.

950. Who is he? Mr. Drewett. I was then placed in charge of all the surveyors, and still the drafting work was done in this office in the same way as it was when we were in those small houses, before the new offices were built. It became necessary to take other offices, and I think I started with a staff of about five, and from that time the staff went on increasing until the main trunk lines were finished. The first influx of work was when branch lines were started, and the first big loan was authorized in 1881; it included the lines from Homebush to Newcastle, Sydney to Wollongong, Goulburn to Cooma, Murrumburrah to Blayney, and others. The whole of the survey work for that was on the eve of completion at the time of the Garden Palace fire. A lot of plans were lost then, and a good deal of work had to be re-surveyed.

951. *Mr. Coyle.*] Can you form an estimate of the loss through plans being destroyed in the Garden Palace fire? I believe an estimate was prepared. After that batch of railway surveys were completed, there was a large reduction made in the staff. It was considered that there was not going to be any more work; but Mr. Secretary Wright came forward with these large extensions of railways, including lines to the extent of £11,000,000, which necessitated a lot of trial surveys. That kept us going until 1884, when we commenced the permanent surveys. During the last two years all that work has been done.

952. Previous to your appointment to the head of the survey staff, what system was adopted? For the most part each party was responsible for its own work, and did it under direction from the head office, or in some cases from the direction of the District Engineer who was in that part of the country where the survey was being carried on.

953. Looking at the number of miles of line already surveyed, but not authorised, do you consider that it would be unnecessary to re-establish the staff, which it is proposed shall be dispensed with, and do you think that the staff remaining will be able to do the work as it was done under Mr. Drewett? I think that a sufficient number of thoroughly competent surveyors should be kept, who could be trusted to do their work without supervision, under instructions from the head of the office. There can be no difficulty in completing the plans under the Engineer-in-Chief.

954. *Mr. Coyle.*] How many of such officers would you consider it advisable to keep? There is work for a certain number up to the end of June; then their services will be dispensed with if they are not required. It will be seen during the next six months how many should be kept. To my mind, there is no prospect of any survey work beyond this. I have no hint of any.

955. Is the grading of the line done by you? Yes, in every case, for all sections.

956. So that practically you hand over these working drawings to the construction department ready for lithographing? Yes. From the date of a trial survey of a railway in any part of the country, from the time it is sent to me to look after it until the plan is sent over by me for lithographing, the whole thing is in my hands really, and I consider it is the bulk of the work of the department.

957. *Mr. Waller.*] Do I understand that you think that the Chief Assistant Engineer could attend to the work now performed by Mr. Drewett, and the work now performed by the Inspecting Engineer? Yes, he could with the Chief Draftsman?

958. *Mr. Palmer.*] Will you permit me to say that, in speaking yesterday morning of surveys now in hand, I omitted to mention that Messrs. F. E. Wickham and E. M. Hixson, both assistant surveyors in receipt of a salary of £150, are engaged in making the trial survey, and as each length is approved the permanent survey of a proposed line from Cohar to Wilcannia in anticipation of that extension receiving Parliamentary approval? This survey should be completed by the 30th of next June. The only other survey in hand is that of a proposed route for a line of railway from Penrith to Rylstone, *via* the Colo Valley. This survey is being made by Mr. Townsend. He was previously employed in the Existing

Lines

Lines Branch, and, after volunteering to make this survey, was instructed to carry it out by the Commissioner for Railways, but was placed temporarily under my instructions. This survey will be completed next February, when Mr. Townsend will have two or three months' occupation on his plans, and on completing everything in connection with this work, I believe he expects to resume his duties in Mr. Cowdery's branch.

Mr.  
H. Palmer.  
22 Dec., 1886.

[The Commissioners proceeded to the Department of the Commissioner for Railways.]

959. *Mr. Mills.*] We have called upon you, Mr. Goodchap, in pursuance of the commission which we hold from the Honorable the Minister for Public Works, empowering us to make enquiry, and to report to him as to the working of the Department in regard to matters specified in the letter of which you have no doubt received a copy.

Mr. C. A.  
Goodchap.  
22 Dec., 1886.

960. *Mr. Goodchap.*] I have already given instructions to the Secretary for Railways, who is immediately charged with the administration of the office staff, to prepare all information which may be necessary to enable you to form a judgment in the matter. I believe that plans showing the disposition of the rooms and of the office staff have been got ready. I noticed that there was one word in the minute of the Minister which seemed to place some limit upon your enquiry in regard to the Railway Department—that was the word "administrative"—and I therefore asked the Minister as to the extent to which he intended the enquiry should apply. I understood from the Minister that it was his intention that the enquiry should apply to the office staff as distinguished broadly from the field staff, for in one sense the traffic branch and all other branches of the Department of Railways may be said to be administrative.

961. *Mr. Waller.*] We so understand it.

962. *Mr. Goodchap.*] Then I think the instructions given to the Secretary are sufficient to obtain for you the fullest information.

963. *Mr. Mills.*] Is there any suggestion which you can make to assist us in the enquiry?

964. *Mr. Goodchap.*] By the wish of the Minister I have for the last two months been devoting my attention to the subject of retrenchment; in fact the reduction in the amount of the traffic has forced the subject upon my consideration. As our Department is one in which the amount of work to be done fluctuates, it necessarily follows that when the work falls off the staff must be diminished, and increased when the traffic increases. In a very large degree we have been reducing our staff everywhere proportionately during the last eighteen months. I do not know whether you will find that there is room for further retrenchment, but all information bearing upon that point as to the amount of work, the number of persons employed, the manner in which they do their work, the quality of it, I may say the recording and transmission of papers—will be at your disposal.

965. *Mr. Waller.*] As the head of the Department do you think that the system of registering and transmitting papers in vogue is the best which can be adopted? Can it be simplified in any way?

966. *Mr. Goodchap.*] I inaugurated the system of records here, but necessarily from my position, I have not had much to do with that in recent years. You will have the best opportunity of becoming acquainted with the subject from the heads of the branches. The system of keeping stores and stationery and railway and tramway tickets in this office which was suitable some years ago has been outgrown, and it occurred to me that it might give place to a simpler one. The Minister has now before him a scheme by which a large number of the staff of this office might be dispensed with consequent upon the distribution being from the stores of the Railway Department proper, and the tickets, under certain restrictions and regulations from the Government Printing Office. With a little assistance we think that the machinery already in existence at the railway stores will suffice to do the whole business.

967. *Mr. Mills.*] May we expect that you will avail yourself of your power to act with us as a commissioner while we go through your Department?

968. *Mr. Goodchap.*] If you will kindly consider how very full my time is occupied and that I have myself in hand an inquiry into the field staff, I shall be glad if you will relieve me of the duty. If you desire to obtain any information from me I shall be happy to afford it to the fullest extent, and Mr. Vernon, who is intimately acquainted with the management of the office staff will give you all the information you require.

969. *Mr. Mills.*] Have the estimates for your Department been made up for the coming year?

970. *Mr. Goodchap.*] We are waiting the result of the inquiry to which I have referred and of the investigation which you have in hand. Whether the scheme of retrenchment which has been formulated with reference to the distribution of tickets and stationery shall be taken up by you or not I leave to you to decide.

971. *Mr. Waller.*] Have you made any calculation as to what the effect of that retrenchment would be?

972. *Mr. Goodchap.*] I think that it would effect a saving of over £1,000 per annum immediately.

973. *Mr. Waller.*] Is that in salaries?

974. *Mr. Goodchap.*] In salaries; and I am pleased to say that certain offices which would otherwise have to be filled up can be taken by those who would otherwise have to be dispensed with, so that only three will have to retire out of a staff of sixteen who are engaged in the office.

Mr. Donald Vernon was examined.

975. *Mr. Mills.*] What is your position in the department? I am Secretary for Railways.

976. What are your duties? I am charged with all the details connected with the administration of the department and with giving effect to the Commissioner's decisions. It is my duty to see that the conduct of the general business of the department is in accordance with the rules or principles of management which the Commissioner has laid down.

977. Do you find your time fully occupied? Very fully.

978. *Mr. Waller.*] How many branches of the department are there? We have the Accountant's Branch, the Record Branch, the Examiner's Branch, the Corresponding Branch (which I may say is more particularly my own) the Ticket and Stationery Branch, the Land-valuer's Branch—in fact I hardly know where to draw the line.

979-80. *Mr. Mills.*] Also the Engineer for Existing Lines? Yes; and you will understand that those I have mentioned are not in the order of importance, but just as they occurred to me. There is the Engineer for Existing Lines Branch, the Traffic Manager's Branch, the Traffic Auditor's Branch, and the Stores Branch. These are exclusive of the tramways which also are under the Commissioner.

Mr.  
D. Vernon.  
22 Dec., 1886.

- Mr. D. Vernon.  
22 Dec., 1896.
981. Have you different sets of accounts for the tramways? The tramways came under the Commissioner and consequently under myself and the administrative branch here.
982. Is there a Superintendent of Tramways? Yes; and his business is divided among the Tramways Traffic Branch, the Tramways Locomotive Branch, and the Permanent Way Branch.
983. *Mr. Waller.*] Do the accounts all come in here? Yes.
984. *Mr. Mills.*] Will you tell us which of these branches are in this building, and the names of the heads of each? There are Records under Mr. Iredale, the Examiners under Mr. Finigan, and the Corresponding branch under Mr. Richardson.
985. Where are the store rooms? On the basement.
986. For what are they used? Stationery and records.
987. *Mr. Waller.*] Valuable documents? Yes; but the bulk of the books and stationery are not valuable documents.
988. What do they consist of? Books and forms waiting to be issued to the various stations and other offices.
989. *Mr. Mills.*] Do you consider that the rooms are suitable for doing the work of the department in the best manner? They are the best that are available. I do not say that more suitable offices could not be erected, and that more convenient arrangements could not be made.
990. *Mr. Coyle.*] Taking the building as it stands, do you consider that the rooms set apart for the work of this department are the most suitable with reference to their proximity to one another that could be obtained in the building? Those who had the allotment and arrangement of them, no doubt made the best arrangements with the rooms at their disposal.
991. Do you consider that the work could be carried on better if you had your offices more concentrated? I do not think that we suffer very much on that account, what with speaking tubes and telephones we find very little difficulty in communicating with the offices in the various rooms. Certainly it is inconvenient to have the records downstairs. There is a great deal of running up and down stairs on that account which cannot be avoided.
992. Is it practically impossible to re-arrange the space so as to get the record room placed in a more convenient position? We cannot make a more convenient arrangement with the rooms placed at our disposal. If other rooms were placed at our disposal more convenient arrangements might be made; but under existing circumstances we have done the best we could.
993. *Mr. Mills.*] If you were to shift the corresponding branch to the records would that be still more inconvenient? It would, decidedly. The work to be done in the record branch requires a large room.
994. *Mr. Waller.*] Do you consider that you have got a fair staff for the amount of work which has to be performed, or do you think that the staff could be reduced? I consider that the staff are fully worked. I do not see that we could dispense with a single officer.
995. That is taking into consideration the extra hour which the new rules imposed? Yes.
996. What has been the result of that extra hour? It has not made much difference to us because we were never able to do the day's work by 4 o'clock. It has been the common practice of officers of my staff to work until 5 o'clock, and where necessity has arisen often until 6 o'clock, 7 o'clock, and even later.
997. *Mr. Coyle.*] Until the work was finished? Yes; it was of a character which could not be postponed.
998. *Mr. Waller.*] As regards the diligence of the employees under your control, are you satisfied that they work in working hours? I am thoroughly satisfied of it, and that from personal knowledge of each man, and from inspection of the work done, each and all work well.
999. *Mr. Coyle.*] Is there any person on the ground floor having immediate control of all the rooms? No; each room is in charge of a separate officer, who supervises the work of that room.
1000. Are the different clerks in the room subject to him? Yes; he is responsible for seeing that they attend to their duties.
1001. *Mr. Mills.*] What system is employed to enforce attendance? Every branch has its own attendance book.
1002. Each room? As a rule each branch. All the various officers of the branch sign the same book. These books are produced weekly for inspection by me or by the assistant secretary.
1003. What grace do you give them? Every officer is supposed to sign before 9.15 a.m. On inspection of the books you will find that they do not take that margin.
1004. *Mr. Waller.*] If an officer desires to leave during office hours, who gives him permission—the head of the branch or the head of the room? As a rule the head of the branch. The authority of the head of room would not extend to that. As a rule none of the officers leave before 5 o'clock without my sanction; but on exceptional occasions the head of a branch would be quite authorised in permitting an officer to leave a short time earlier. That of course would be as an exceptional thing, but not otherwise.
1005. If a man wanted an hour off on private business? I should expect the head of the branch to inform me. Permission would go from me through the head of the branch to the officer immediately under him.
1006. If you were not available would the Assistant Secretary be available? On exceptional occasions I should consider that he was fully warranted in doing that.
1007. *Mr. Mills.*] Are clerks supposed to sign the book at 5 o'clock and then go? Yes.
1008. *Mr. Coyle.*] Where is the book kept—is it accessible to the officers to sign before 5, or is it brought into the room only at 5? I really could not tell you the position in which the book is placed; but my impression is that it is in charge of the head of each branch, and placed in a convenient position to be signed by the officers when they come in the morning, then removed at 9.15, and replaced for signature in the evening.
1009. *Mr. Waller.*] Are you satisfied that the management now in vogue is sufficiently stringent to keep up discipline in the office? I am quite satisfied.
1010. *Mr. Mills.*] What is the system of recording documents? Our records may differ very much from the ordinary records kept in other offices. They are simple enough, but we not only require that a paper shall be recorded when it is received in the office, but we also register the nature of the action taken upon that paper. It has also to be indexed, and the same paper may contain matter which requires three or four index entries. The indexing of records has to be much more elaborate than the mere registering of them in the first instance.
1011. Do you epitomise each subject? Yes. A decision given upon a certain paper may be a decision which will affect future action in a multitude of other cases, and consequently it has to be registered and noted.

Mr.  
D. Vernon.  
22 Dec., 1886.

1012. *Mr. Waller.*] Do letters from the public come to this office addressed sometimes to the Minister and sometimes to the Commissioner? Yes.

1013. Perhaps you will describe the course which a letter addressed to the Commissioner will take? It is opened by the Commissioner for Railways, who prefers to open all correspondence so addressed. He reads it and places it in his box which goes to records. After it has been registered it is returned for action, not necessarily to the Commissioner. It may be a matter with which I can deal, and there is no necessity that he should be troubled with it again. It is sent on to the officer to whom it is necessary that it should be referred.

1014. Is there an officer in the record branch who is able to tell when a letter should be sent to you and when to someone else? All the Commissioner's letters come back to me to be dealt with by me or by my assistant.

1015. Does the Secretary then distribute these letters through their proper channels? Precisely; he submits some to the Commissioner, deals with some himself, and refers others to the various branches as the nature of the business may require.

1016. *Mr. Mills.*] What is gained officially by the Commissioner opening all the letters addressed to him? It gives him a knowledge of what business is being done by the department. I am referring now to letters which come to the Commissioner from the public. The great bulk of official correspondence from other branches comes to me. The Commissioner is not troubled with the opening of them.

1017. *Mr. Waller.*] And do you deal with it or distribute it as the case may require. Yes.

1018. Suppose you get a business letter which requires to be submitted to the Minister, does it go to him through the Commissioner or through the Under Secretary for Public Works? All letters addressed to the Minister for Public Works go through the Under Secretary for Public Works.

1019. But in the case of letters from your own department which you think ought to go before the Minister, do they go to him direct through your department or through the Under Secretary for Public Works? They go direct. The Commissioner deals directly with the Minister.

1020. How would letters coming from the Engineer-in-Chief reach the Minister? They would be sent through the Under Secretary for Public Works.

1021. Do they not come here? Yes, they do, but not direct. We get them from the Under Secretary for Public Works after they have been laid before the Minister. Papers as between us and the Minister go direct through the Commissioner; papers between the Engineer-in-Chief and the Minister go to the Under Secretary for Public Works, and from the Under Secretary here.

1022. Do they pass through the Commissioner either coming or going? Yes.

1023. If they did not come to the Commissioner in passing back from the Minister would they in going to the Minister—would he see them one way or the other? Upon all matters affecting the department generally, certainly; but there may be matters relating to construction only which might pass between the Engineer-in-Chief and the Minister through the Under Secretary for Public Works and perhaps not reach the Commissioner.

1024. *Mr. Coyle.*] Are you aware there are any communications from the Engineer-in-Chief to the Minister which do not pass through the Commissioner for Railways either in going or returning? I cannot say as to what may have passed between them. I can only speak as to those things which have reached the Commissioner.

1025. *Mr. Mills.*] You cannot say that they do or that they do not? No.

1026. *Mr. Waller.*] Is there any rule in existence by which it is understood that all correspondence from the Engineer-in-Chief for the inspection of the Minister shall have to pass through the Commissioner's office after it has been sent to the Under Secretary? I think some regulation has been formulated providing that the Engineer-in-Chief shall communicate directly with the Minister through the Under Secretary for Public Works without its necessarily coming through the virtual head of the department, who is the Commissioner for Railways.

1027. *Mr. Mills.*] Do you know anything of a minute on the subject by Mr. Wright to a contrary effect—a minute which required that all matters should pass through the Commissioner? I do not recollect any particular minute of Mr. Wright's bearing upon it, but I may say that as a rule I have no doubt that everything does come to the Commissioner sooner or later either from the Minister or from the Under Secretary. I am also aware that as a rule the Engineer-in-Chief refuses to send papers through the Commissioner.

1028. Does he object to it? He does.

1029. Do you know why? No.

1030. Do you think he objects to it because of the delay which he thinks would arise? No. Business would be very much expedited if papers came direct to the Commissioner as in all other cases. They must come to the Commissioner before they can be finally dealt with.

1031. *Mr. Waller.*] So that in your opinion no delay would be caused if such letters came to the Commissioner before going to the Minister? No; it would expedite business. The business of the Railway Department must be done with the knowledge of the Commissioner. He is the head of the department by Act of Parliament, and his assent and approval is absolutely necessary.

1032. *Mr. Mills.*] Would public business be expedited if all communications between the Engineer-in-Chief and the Commissioner were sent direct to you for the Commissioner instead of going through the Under Secretary? It would expedite business to have papers sent direct to the Commissioner instead of his receiving them through a round-about channel—instead of their having first to go to the Under Secretary for Public Works.

1033. *Mr. Waller.*] I understand that the great bulk of the letters from the Engineer-in-Chief for the Minister go to him direct through the Under Secretary for Public Works? They go direct; but also as a rule I have no doubt that all these papers and letters do sooner or later come to the Commissioner, but they do not come to him as direct as they might do.

1034. *Mr. Mills.*] Is their going through the Under Secretary for Public Works so much unnecessary routine? Yes.

1035. *Mr. Waller.*] Have you any reason to think that many letters go astray on account of their having to pass through this office? A good many get astray through not coming direct to this office.

1036. Not because they do come through it? Certainly not; quite the reverse.

1037. Do you remember the time when Mr. Rae was Commissioner for Railways? Yes.

- Mr. D. Vernon.  
22 Dec., 1886.
1038. What was the system then ;—did the Engineer-in-Chief communicate direct with the Commissioner ?  
Yes ; Mr. Rae was also Under Secretary for Public Works.
1039. In cases where letters from the Engineer-in-Chief are sent to the Minister, do they pass through the Under Secretary's hands ;—I want to know whether the Minister sends them to the Commissioner direct or through the Under Secretary ? He might do either one or the other. Ordinarily letters and papers are brought direct to me by the messenger, but there may be some special paper which may be sent in direct to the Commissioner for Railways.
1040. Under the present system, there being apparently no regular rule as to how letters should go, is there a possibility of letters getting astray which would not arise if they came direct to you ? With regard to papers from the Engineer-in-Chief for Railways I am quite aware that he prefers to send them to the Under Secretary for Public Works, and through him to the Commissioner. I certainly am of opinion that there would be much less risk of letters going astray and a great saving of time if instead of these papers being sent to Public Works they were sent in their proper and direct channel at once—that is, to the Department of the Commissioner for Railways.
1041. Would there be less probability of papers being delayed or lost ? Certainly.
1042. *Mr. Coyle.*] Do not a large number of those communications refer to the construction of railways ?  
Yes.
1043. Does the Commissioner take any direct interest in that—does he issue any instructions with reference to it—is his sanction or authority necessary—is it necessary that he should be consulted on matters which refer purely to construction ? Matters connected with construction purely would be dealt with by the Engineer-in-Chief.
1044. *Mr. Mills.*] Has the Commissioner anything to do with the construction of goods sheds or station accommodation before the line is handed over to him complete ? Unless it were specially referred to him by the Minister, the Commissioner would not have much to say on such a matter.
1045. Does he know anything about it until the line is handed over to him complete ? As a rule he would not.
1046. Do you find that many alterations or additions are required to be made after a line has been handed over ? Yes.
1047. Alterations which might have been saved, or additions which might have been made more economically before ? Yes, in my opinion.
1048. *Mr. Coyle.*] That is, if there had been consultation between the departments ? Yes ; that is to say, if those who had to work the traffic with certain facilities were consulted as to their kind and description, there can be no doubt but that in many instances they would be more suitable and convenient than otherwise is possible. If a blacksmith had to make a plough it would only be common sense that he should consult the man who had to use it, as to whether it would be suitable for its purpose. In this case, the ploughman would not be consulted.
1049. *Mr. Mills.*] The Commissioner having a knowledge of the traffic and the appliances necessary to work it, would he be able to advise as to the most suitable and the most economical accommodation required ? Most decidedly.
1050. *Mr. Coyle.*] He having experience in that direction ? The head of the construction branch has had no experience in the working of traffic.
1051. Does the traffic department invariably receive the lines from the construction department in complete working order ? No ; it is not usual to receive them in complete working order. My impression is, that if the Commissioner for Railways were consulted more than is the case in matters of construction of railway yards and railway buildings, they would be handed over in a much more efficient and complete state than is the case at present.
1052. *Mr. Mills.*] What is the system of appointment to positions in the department ? It is reported that there is an impression that the departments are overcrowded through appointments being made from political influence—what is the system of appointing persons to the department ? The appointment of salaried officers would require to be approved by the Commissioner, who would submit them for the approval of the Minister. Minor appointments would be made by the Commissioner.
1053. If there are two or three vacancies, how do you proceed to fill them ? As a rule by promotion. Of course we are besieged with applications, and we make the best selection possible. I can only speak for the Railway Department. I do not consider that political influence disturbs our appointments. The Commissioner has virtually the decision of all appointments.
1054. Do you know of any political appointments—cases in which people are sent up to you with instructions to find them work, because they have been recommended by members of Parliament ? No I cannot say that I do.
1055. *Mr. Coyle.*] Is there any regular system of appointments and promotions in the department ? No appointment is ever made without the approval of the Commissioner for Railways. All appointments are made upon his recommendation where the approval of the Minister is necessary and not without it.
1056. *Mr. Mills.*] Are they made apart from any political influence ? As a rule in filling up a vacancy we select the most suitable man for the place. That is the first consideration. After that we take length of service into account. Strangers are not brought into the department and placed over the heads of officers entitled to promotion already in the service.
1057. *Mr. Waller.*] Would the man next in grade be appointed to a vacancy only on the condition that he was able to fill it ? Yes ; he must be fitted for the place. The position of Assistant Secretary had to be filled the other day. The Superintendent of Stores was appointed to the position because he was the best man. The Minister appointed him on that ground.
1058. In the case of temporary officers, are the appointments sometimes made with or without the concurrence of the Minister ? Occasionally they may be made without the concurrence of the Minister.
1059. In the appointment of permanent officers, would the approval of the Governor and Executive Council be required ? Yes.
1060. May temporary officers be removed at any time by the Minister without compensation ? Yes.
1061. *Mr. Mills.*] What have the Civil Service Board to do with the appointments ? The concurrence of the Board has to be obtained.
1062. Have there been large reductions of the staff during the last twelve months ? No.
1063. Have you, as far as possible, not filled up vacancies ? There is a vacancy at present which has not been filled up.

Mr.  
D. Vernon.  
22 Dec., 1886.

1064. Is it contemplated to make reductions in the department? You are referring now merely to the general establishment?
1065. Yes. A change is contemplated with regard to the ticket and stationery branch, by which a saving will be effected—a change in the system of conducting the business.
1066. *Mr. Waller.*] Are there any reductions which you personally can recommend? Nothing beyond what I have said.
1067. Presuming that that is adopted, will not the amount of work in the department be lessened by the removal of the tickets and stationery portion of the business? Yes; it is with the view of saving work that the change is proposed.
1068. Will not that enable you to do away with some of the employes you now have? Certainly.
1069. How many? I think to the extent of four or five hands.
1070. Will their services be dispensed with? Not necessarily, because four additional officers are urgently required at the present time in the Traffic Audit Branch, and we have refrained from filling them up until we could see whether we could save the appointment of new officers by rearranging the work. I hope that provision will be made for some of these four or five hands in place of making new appointments.
1071. If you remove four or five hands from the position in which they now are into another branch, are the positions to which they will be removed such as require to be filled? Yes.
1072. Would their salary in the new positions be the same, or greater, or less? So far as the new offices are concerned, the persons appointed would have to be content to take whatever pay was attached to them. I cannot say exactly what that might be.
1073. Would it be an increase upon what the officers are now receiving? Decidedly not.
1074. Probably a decrease? Yes.
1075. Beyond the transfer of four or five men to prevent the necessity of making new appointments, do you see any possibility, under existing circumstances, of making any reductions? No, I do not, and I have gone very carefully through each department.
1076. *Mr. Coyle.*] In the event of any office in the department becoming vacant during the year, will it be necessary to refill it? Yes; already we have had to keep a temporary hand at work.
1077. *Mr. Waller.*] Do you find that your business grows and increases? Yes.
1078. That, I presume, is caused by the opening of additional lines of railway? Yes; the work increases every day.
1079. Have you any cadets in the department? Yes.
1080. How are they appointed? In accordance with regulations which are drawn up for the purpose.
1081. *Mr. Coyle.*] I presume they are only in the engineering branch? Yes; the permanent way and the locomotive branches.
1082. *Mr. Mills.*] Only in the professional branch? Yes.
1083. Who appoints them? The Commissioner.
1084. Do they receive pay at once? Yes; they have to pass certain examinations, then they are admitted on probation at a nominal salary of £2 per month, for the first six months. At the end of that time, if the head of the office reports that the cadet has shown aptitude for the work, and if he has conducted himself satisfactorily, he is appointed a cadet at a salary £50 per annum, for the next six months. After that, he receives an annual increment of £20 until the maximum of his class is reached, when his salary is £150 per annum.
1085. *Mr. Waller.*] Are they classed as temporary officers until they reach the maximum, or permanent? Their services can be dispensed with by the Commissioner for Railways. They are not appointed by the Governor and Executive Council.
1086. *Mr. Coyle.*] Are they being trained for higher offices in the department? Yes.
1087. *Mr. Mills.*] How many of them are there? The number to which we are supposed to limit ourselves is sixteen. I cannot at the present moment say what the number is exactly.
1088. *Mr. Waller.*] Do you approve of the system of appointing cadets? I do.
1089. *Mr. Mills.*] And of paying them at once? Yes; the payment at first is nominal.
1090. *Mr. Waller.*] What sort of duties do they perform? They are attached to the architectural branch and the permanent way branch, and the mechanical branch of the locomotive department. These have to serve a certain amount of time in the workshops; and afterwards a certain amount of time in the head office.
1091. Do they pay any premium? No.
1092. Do you give them articles at the expiration of what might be called their apprenticeship? No.
1093. *Mr. Coyle.*] What class of the community are they usually taken from; do they come from the well-to-do class? We make no distinctions. All that we require is that the candidate shall pass the preliminary examination.
1094. Who nominates the candidates in the first instance—who brings them to the notice of the Commissioner? Sometimes the lads come themselves, sometimes their friends bring them.
1095. *Mr. Waller.*] Is there a stated time for making these appointments, or are they like other appointments in that respect? No; there are generally more candidates than there is room for; and consequently there is no difficulty in filling up vacancies as they may occur.
1096. Have you a list of applicants to which you refer when a vacancy falls in? When a vacancy does occur then the list of applicants will be referred to.
1097. In some companies—the Mutual Provident Society, for example—they advertise when they have a vacancy, that applications will be received up to a certain date, and then they chose the fittest. Do you give any such notice as that? We find no necessity for that. We simply refer to the list of candidates whose names we have noted.
1098. How then do you decide? Other things being equal, the candidates who applied first would receive the appointment to the first vacancy.
1099. Would you make inquiries about him? Yes; and it would be absolutely necessary that he should pass the examination.
1100. *Mr. Coyle.*] After his apprenticeship, I suppose he is drafted into the service as vacancies occur? They are required to spend a certain amount of time in the field, and so to acquire a knowledge of practical work. As vacancies occur they are drafted into the service.

Mr.  
D. Vernon.  
22 Dec., 1886.

1101. Does the limit of sixteen apply to the whole of the Existing Lines Branch? Yes.
1102. *Mr. Waller.*] Are you including the Engineer-in-Chief's department? No.
1103. As regards the rooms, you have four or five clerks in one room, and so many more in another; do you think it would be an advantage to the head of a branch that he should have all his clerks immediately under his personal supervision? Yes, I should prefer my staff under my own eye as far as practicable, and not distributed into more rooms than possible.
1104. *Mr. Mills.*] If the stationery and tickets were removed from the fire-proof rooms below would they be available for the storing away of plans and valuable documents? Yes; that would be one advantage from the change.
1105. *Mr. Coyle.*] Would you require to retain the use of all three rooms? We should certainly require two for the purpose of storing valuable documents which are now hampering us in other directions. I am not sure about the third; we might be able to dispense with that; but I cannot say positively because I am not quite clear as to its suitability for a certain class of work. We are much in need of room; and if one of these rooms were found to be suitable we could easily appropriate it. Perhaps it would not be light enough for drafting or clerical work. We might perhaps be able to do with two of them for storing records.
1106. What chiefly are the nature of these records? Papers from the Record Office, and various forms and returns which we have to keep bound.
1107. Are the contracts for lines under construction lodged with you? Yes, as a rule we keep them.
1108. What other documents have you of similar value to such papers as contracts? We have important plans and other documents from some of our engineering offices. Our own records are most important papers.
1109. But would they have the same value as contracts or certain plans? No; the bonds we keep in the safe.
1110. How much room should you absolutely require for the valuable records of your own department? I should be content with the two smaller ones.
1111. *Mr. Waller.*] How are the stationery and such like stores supplied? By requisitions on the Colonial Storekeeper and the Government Printer.
1112. By whom are they made out? By the officer in charge of each branch.
1113. How are they made out, single or in duplicate? I should prefer to ask the officer in charge as to that. They require my approval before they are sent on to the Colonial Storekeeper. Of course a record must be kept in each branch of all requisitions sent out, and of the various descriptions of books and forms taken in.
1114. Is there any debit against the department as to the quantity supplied? Of course we debit ourselves with quantity and value.
1115. When the pens, paper, ink, and other stationery requisites reach the various rooms, under whose charge are they? The officer who may be in charge of the room.
1116. Do you supply everything required for the working of the office from the stores branch? Yes.
1117. Is there any check upon the distribution of these stores in the rooms? No further check than the supervision of the officers in charge of the rooms. If a certain number of books were supplied, they would be filled up, and then more would be applied for, and so when the supply of paper was exhausted more would be applied for.
1118. Have you ever heard any head of a room complain that the quantity of material used was too great? My attention has not been drawn to anything of that sort.
1119. *Mr. Mills.*] Have you any idea of the value of the stores per annum supplied in that way? I cannot tell you just now; but I should have no difficulty in getting the information for you.
1120. *Mr. Waller.*] Is your letter-paper and note-paper for ordinary correspondence supplied in loose sheets? Yes.
1121. Double or single sheets? Double.
1122. Do you use double sheet where the length of the letter is only sufficient to occupy a single sheet? It would depend very much on the style of the letter. In many cases such as replies to applications for employment, acknowledgment of letters received, and licenses to sell tram tickets—in all such cases we should use a single sheet. The more important letters of the department would be written on a double sheet.
1123. Is there any objection against using a single sheet where the matter of the letter does not occupy a double sheet? I do not see any objection to it, the cost involved would be a mere bagatelle as far as we are concerned.
1124. Have you ever seen the paper sent out in pads, foolscap size? You remove each sheet as you write the letter; and the rest are kept clean? Yes; I should say that in letters where a single sheet would do we use the single sheet.
1125. If the paper were supplied in pads would not it be less likely to be wasted than when supplied in loose sheets? I do not really think it would make much difference, either in regard to waste or anything else. If a man were inclined to waste paper, he would do it whether the sheet were loose or whether it were taken from a pad. I have not found that paper as at present supplied is wasted by becoming dirty.
1126. Is your paper all headed? Yes.
1127. Would there be any objection to adopting the single sheet instead of the double? None whatever.
1128. And if the letter fills more than the sheet which has the heading on it, would you use "followers," that is to say, sheets without the heading? Yes; it is much more convenient that letters should be written on one side of the sheet only, and I see no objection to use of followers.
1129. Are you debited with the value of the goods received? I have no doubt we are, but I have no knowledge of what records are kept by the Colonial Storekeeper.
1130. *Mr. Coyle.*] Are any of the professional officers of the department allowed to engage in private practice? Not with the knowledge or consent of the Commissioner.
1131. Is there any regulation or rule to the contrary? It is an understood thing that officers in the Civil Service should not engage in private business, but whether that would extend to private work being undertaken by professional men at home, I could not say.
1132. *Mr. Waller.*] Have you now ascertained the value of the stationery supplied for this year up to date? Yes; £2,490; that is, for paper, blotting paper, pencils, pens, envelopes, &c.

1133. Does that include drawing paper? No; nor printed forms, which are obtained from the Government Printing Office.
1134. Are the requisitions made out in duplicate? Yes; we keep the duplicate in a pigeon-hole.
1135. Would it not be better to keep them in a guard book? Yes.
1136. Is the form produced the form which has always been in use in making requisitions? No; it has been introduced during the last twelve months. The requisition has now to be endorsed with the approval of the Minister.
1137. Do you obtain your supplies twice a year? Yes.
1138. Do you think it is advisable to get in such large supplies as that involves, considering the storage room you have to find for them? Is it an advantage that you are able to make your requisitions only half-yearly; it is no particular advantage to us.
1139. Would you have more accommodation for other matters, if you had not to store such large supplies? Less room would be taken up; but I do not know that it takes up a serious amount of room now.
1140. Do you think that there would be a probable reduction in the quantity used, if you could order stationery more frequently? We should not use a less quantity in the course of the year.

Mr.  
D. Vernon.  
22 Dec., 1886.

THURSDAY, 23 DECEMBER, 1886.

Present:

J. Y. MILLS, Esq., | T. F. WALLER, Esq.  
J. E. FITZGERALD COYLE, Esq.

Mr. John William Drewitt was further examined:—

1141. *Mr. Waller.*] Are your officers paid monthly? Their pay-sheet is made out every month.
1142. Where is it made out? In Mr. Quodling's office. A time-sheet is sent down a few days before the end of the month. This shows the attendance of every officer, and it is signed by me. Upon that the salaries are made out for my department.
1143. Is there no further checking after it goes from you? I think not, unless it is checked in the chief clerk's office.
1144. What has it to be checked for? All sheets for payment must go through the chief clerk's office. He sends on the pay-sheets to the Treasury I believe.
1145. Does your time-sheet show the number of days each officer has worked? Yes.
1146. And the amounts due? No.
1147. Would it not be a simpler method that the two things should be shown on one sheet? Perhaps it would.
1148. When your time-sheet goes to Mr. Quodling what is done with it? They make out the pay-sheet from it, and the officers are paid.
1149. Is there any objection to having that work done in your office, and to your signing it and sending it in complete? I see no objection.
1150. Would it be a saving of labour? Probably it would if it had not to be done over again. I believe the whole of these accounts are kept from orders given by the Treasury Branch and by the Auditor-General. I think they make up these forms.
1151. Will you send us a copy of the time-sheet and the pay-sheet? Yes.

Mr.  
J. W. Drewitt.  
23 Dec., 1886.

Mr. Alexander Richardson was examined:—

1152. *Mr. Waller.*] What is your position in this office? I am Assistant Secretary.
1153. And your duties? My duties are to work up matters in connection with the Railway Department, and the correspondence of the office, as far as ever I can, but when matters reach a certain point where I can go no further, I pass them on then to the Secretary or Commissioner for further action.
1154. Do you procure the information you know will be required? Yes. No paper is allowed to go beyond me without my sending on every paper in the department which is required in connection with it. By means of the records I deal with it as far as I can, and when I can deal with it no longer, and I find that it is a matter which requires Mr. Vernon's judgment, or the approval of the Commissioner, then I pass the papers on.
1155. Do you mean all the correspondence? Everything comes up to me from records.
1156. When—daily? Yes—hourly.
1157. Am I right in supposing that you mean that all letters that come in to-day will come to you? Yes, when once recorded, no matter what it is.
1158. Then what do you do? I then take any action upon the paper that may be necessary.
1159. Do you send the letters to the proper officers for them to report upon them? Yes.
1160. And do they return them to you? They return them to me.
1161. Letters which should go immediately to the Commissioner or through the Secretary? I have here two boxes, one for the Commissioner and one for the Secretary. If Mr. Vernon is not too busy he sees to the Commissioner's papers, and does all he can with them. He may say he will deal with this matter, and thus save the Commissioner's time.
1162. Is there any obstacle to your sending papers direct to the Commissioner, that is to say, have they not to wait? No.
1163. But if the Secretary sees that he can lessen the Commissioner's work by dealing with the matter, he does so? Yes, but some days he does not see the papers at all, because he has to go to conduct an inquiry. That is the case to-day, when he is engaged upon an inquiry about a tramway accident. I then, being his assistant, will attend to his duties, but while Mr. Vernon is here I prefer that I should have his additional authority and judgment in dealing with certain matters. When he is away all papers go to the Commissioner direct from me.
1164. In his position as Secretary is he the official head of boards of inquiry? No; he does not act unless he is appointed.
1165. As to the amount of work to be performed—is there much business to be done in your office? A very

Mr.  
A. Richardson.  
23 Dec., 1886.

**Mr. Richardson,**  
23 Dec., 1886.

very large amount indeed. I come here at ten minutes past 9 o'clock in the morning, and I work away the whole day. I turn aside to eat a bit of food, which occupies me about five minutes in the middle of the day, then I am hard at it again until twenty minutes past 5. I am then able to go away, feeling satisfied that the work for the day has been finished; but when there is a rush of work I have to take papers home with me. While the work is pretty even, I can, by working very hard continuously the whole day, satisfy myself that it has been properly done. You must know that I am in a new position here—I have only been two months in the office—but still I may say that I am perfectly conversant with the work.

1166. As to the method of performing the work, so far as it has come under your notice, do you think it is satisfactory? I think so. I do not see how it is possible to minimise the work of the correspondence; in fact, in the course of my long experience I have found that more mischief has resulted from attempts to save work, and more trouble, than can arise if one is careful to record everything. Some people call it red tape, but I consider that everything should be in writing. We will suppose that a matter is dealt with to-day verbally, and a fortnight afterwards the Minister wants to know something about it. If the question has been transacted verbally, there is nothing to show what has really been done. But under our system everything is reduced to writing, and can be accurately understood.

1167. In regard to correspondence from officers in different branches of the Department, do they, in writing their letters, deal with more than one subject in the same letter? No. They may sometimes do it, but they ought not to do it.

1168. Do you think that is a mistake? A very great mistake. What we always do here in such cases is to make an extract from the letter.

1169. Would it not be better to save that labour by giving instructions to officers that they must confine themselves to one subject? It very seldom occurs in the case of letters from our own officers, for the general instruction of the department to them is never to mix up two subjects in one paper. When it is done it is generally done through ignorance or inadvertence, and we draw attention to it.

1170. What officers have you under you? All below me in this department,—there is the Chief Clerk for Railways, Mr. McLachlan, the corresponding clerks, Mr. Pickering and four others; then there is Mr. Badham, who is assisted by six clerks. Mr. Pickering deals with the correspondence proper, and when we get complicated papers to deal with we send them on to Mr. Badham, who makes a précis. Going down below there are two rooms of records, one in charge of Mr. Weare, who has five clerks, and the other in charge of Mr. Iredale, who has five clerks. These are under the Secretary's department, but Mr. Finigan is a separate officer. He and his clerks are subordinate to us, but not absolutely under us. I do not supervise his work. He is a sort of independent officer, to report to the Commissioner any matter of irregularity. He is a perfect fence in the department, to prevent a voucher from being paid wrongly, or a contractor from getting a certificate passed through when the work is not done.

1171. Under Mr. Finigan are Mr. Skelet and Mr. Dickinson, with seven clerks? Yes.

1172. Are these gentlemen, although subordinate to the Secretary, not under the personal supervision of either the Secretary or the Assistant Secretary, but directly under the control of Mr. Finigan? That is so.

1173. As regards the clerks that you have under your supervision, do you consider that you have a greater number than is necessary to perform the work? No, I do not. We are almost short-handed at the present time.

1174. Do you not see any way of retrenchment? No, I have gone very thoroughly into the question and I do not.

1175. How much difference in time has been made by the new rule, under which officers leave at 5 o'clock? As far as I am personally concerned the rule makes no difference, nor does it in the case of the Chief Clerk. We worked just as long before the rule as we do now. As regards the other clerks it makes the difference of one hour per man per day. But will you allow me to direct your attention to the fact that we had three temporary clerks who were paid off, and we were compelled to take one on afterwards. We have one gentleman away now who is ill, and another who has just been dismissed.

1176. *Mr. Coyle.*] Then a reduction has recently taken place? A considerable reduction—a reduction of four, which I consider more than makes up for the extra hour.

1177. *Mr. Waller.*] A reduction of four out of twenty? Yes.

1178. *Mr. Coyle.*] Do you find that the clerical work increases as additional lines are opened? It has increased enormously; I can answer that from other positions I have filled. The work has not increased at quite so rapid a rate during the last two years as it was doing before that. There has been a certain amount of stagnation, and the traffic has not been so heavy.

1179. *Mr. Waller.*] Is there any intention to again fill up the four offices? Certainly not. With regard to the gentleman who recently occupied a permanent position, and who has been dismissed, I think it very likely that we shall have to have his place filled up, but we shall, if we do, have still dispensed with three temporary clerks. That would still leave us with three less than we had before the hours were lengthened. The sick one will return to duty.

1180. Would you transfer one of the temporaries on to the permanent staff? I think that would be the fairest thing that could be done.

1181. What would be the gain to the service by making an officer permanent instead of leaving him as a temporary? That would be considered?

1182. Do you know of any gain? No.

1183. Would he do more work as a permanent officer than as a temporary officer? If he were not fit for higher-class work he would not be the man for the position.

1184. If he were fit for it why could he not do it still being a temporary officer? There would be nothing to prevent him.

1185. Even supposing that he was getting the salary of a permanent officer? It would be only just that he should receive that.

1186. Would it remove the trouble of dismissing him if you found you did not require him? Yes.

1187. *Mr. Coyle.*] If an officer misconducts himself, though he is on the permanent staff, is there any difficulty in getting rid of him? No.

1188. *Mr. Waller.*] But if he does conduct himself properly, and you find that you want to reduce, there is a difficulty? There would be more difficulty. We should be careful not to fill up an office permanently from a temporary source unless we found that the man was efficient. 1189.

1189. *Mr. Coyle*] Is it desirable to increase the number of permanent officers. If additional clerical assistance is required in any branch, why should it not be temporary? That is the principle upon which we have been acting.

*Mr. Richardson.*  
23 Dec., 1886.

1190. *Mr. Waller*.] Is it desirable to continue to keep a large permanent staff of clerks now in existence on that view? I suppose you mean that we must fill up the number, but only with temporary officers. We really have not given the matter consideration. About filling up Mr. Moseley's place, we are not hurrying to do that.

1191. *Mr. Coyle*.] Having clerks on the temporary staff would it not give the department more immediate control over them? I should consider it would.

1192. You could dismiss a temporary clerk at once and he knows that? The Commissioner could dismiss any temporary hand.

1193. Without consulting the Minister? Yes.

1194. Must a permanent officer be dismissed by the Minister? Yes, and in the case of higher appointments the dismissal must be made by the Governor and Executive Council.

1195. As giving the Commissioner more immediate control over the officers, do you think it desirable that the subordinate officers should be temporary? You are supposing that this should be done as vacancies occur.

1196. Yes, as permanent officers retire, or are dismissed, or die, instead of filling the vacancies with permanent hands, temporary hands might be taken on? I do not see anything objectionable in it myself.

1197. Would it not give the Commissioner more control? Yes.

1198. Would it have the effect of doing away with any political pressure in favour of any officer who might misconduct himself? I do not know, the Minister might want to know about it.

1199. *Mr. Waller*.] Would not the Minister say the Commissioner has sole control and management of the department as regards the temporary hands, and I cannot interfere with him, because if I do I shall lessen his authority, whereas in other cases the Commissioner would have no power? The Minister's recommendation is really tantamount to the power of dismissal.

1200. Do you think there would be an advantage? He would be saved the trouble of making a recommendation.

1201. In the case of necessary retrenchment at any future time could you handle your office with greater ease if you had a larger number of temporary hands than of permanent hands? Yes.

1202. Do you see any objection to the system of filling up the permanent offices with temporary hands? I see no particular objection to it.

1203. *Mr. Coyle*.] That of course relates to the subordinate officers? Yes.

1204. *Mr. Waller*.] As regards the diligence of the officers under your immediate control? I am very hard at work here myself, and I cannot see what they are doing, but I am assured by the Chief Clerk and the clerk in charge of the room, that they are at work the whole day, that there is nothing like idling at any time.

1205. So far as the work comes under your notice do you think it is done promptly. I suppose you can judge from that whether there is laxity in the office? Everything is done very fairly indeed. You cannot expect junior clerks to work as well as men with old heads on their shoulders, but making allowance for that I think the work is done very well indeed.

1206. Do you think the salaries paid are excessive? I do not.

1207. As regards the rooms, what is your opinion of their suitability. Do you think there can be as good supervision in these different rooms as there would be suppose you had one large room, where the head was seated on a raised place in the centre and had all his officers under his eye? I prefer the separate room system, where you have a man in charge upon whom you can thoroughly rely,—who will not allow the clerks in his rooms to idle, and who will look after them as well as the head of the department can. If you have not a strong man in charge of the room it would be better to have a long room.

1208. Do you not find it difficult to get that class of man, who is able to manage others? We have one on the top floor who is especially well adapted for that in one of these rooms, and the clerk in charge of the other has very fair control over his clerk. Mr. M'Lachlan, the chief clerk, has a partition in his office, but he can hear every sound so far as his room is concerned. In the case of Mr. Badham you will find that he is an efficient and most energetic officer, and I think he thoroughly supervises the officers in that room. For myself, I could not work as satisfactorily if I had to do it in a large room as if I had a room to myself with a lot of clerks constantly making inquiries and answering questions about the conduct of business.

1209. *Mr. Coyle*.] Do you find that you require the whole of the space allotted to you in the record room on the ground floor? I believe you will find when you go down to that room that it has an enormous number of presses in it. The permanent records of the department are kept there.

1210. Do you require to go to them very often? Not for back years, but you constantly require them for a period of six or twelve months back. Beyond that you might number the inquiries on your fingers each day, still they are required every now and then.

1211. *Mr. Waller*.] Are they really valuable documents? They are valuable.

1212. Suppose there was a fire what would become of them? I am afraid if the building were burnt they would be destroyed.

1213. Would they not be safer in the fire proof portion of the building, which is now chiefly occupied with stationery and printed matter? The only objection to that would be on account of the additional time it would take the clerks to go there and make references, but, as I say, the records for back years are not so frequently referred to.

1214. *Mr. Coyle*.] The great mass of those records are not specially valuable, are they? We keep them according to number. They include important decisions upon cases which arise. In a department like this we must be consistent. Say a decision is given on a case in 1883, and a similar concession is not asked for until 1885. The case in 1885 would be governed by the decision of 1883. Then some of the documents also relate to refunds of moneys of overcharge. All those documents are called for by the Auditor General. Everything which refers to the payment of money, even though the amount be not more than sixpence, has to be kept.

1215. Do they include reports of instructions and bonds? The bonds are kept in the safe.

1216. Are the documents very bulky, that is for all the contracts in progress? No, the bond would be kept by itself in the safe.

Mr. A.  
Richardson.  
23 Dec., 1886.

1217. Would there be any more difficulty in getting at your valuable papers in any of these strong rooms than in this? I do not know that there would be if we kept the records for the current year in the record room.

1218. Suppose these presses, instead of being in the room, were placed outside? It would not be allowed.

1219. Would they not be safer in the corridor than they are in the room, seeing that the floor of the corridor is of stone, while that of the rooms is of wood? They would not allow the passages to be occupied. If any presses were left out in the corridor the Principal Under Secretary would consider it part of his duty to draw attention to them.

1220. *Mr. Waller.*] Will you describe the system in vogue in recording correspondence? Letters from the outside public are received under cover addressed to the Secretary for Railways. They are opened by the chief clerk, who passes them into a box, and a boy comes in every half or quarter of an hour and rakes them to the Records, where they are recorded. They are taken by the chief recording clerk, and he enters them into different books. There is a separate book for tramways, there is an even number book, a book for land claims, and so on. Mr. Iredale distributes them to the different recording clerks, who enter them in the different books, according to the subject to which they relate. Before they are sent up to me they must be complete. It is no use sending up a paper to me that has not all the previous papers attached to it. They examine at once to see if there has been any previous correspondence, which they attach, or if it happens to be elsewhere they make a memorandum on the face of the paper, showing where it is. Then the paper comes to me.

1221. Provided that documents which relate to the paper are in the office, are they attached to it before it comes to you? Yes.

1222. If they are in the possession of another officer, is it minuted on the letter where they are? Yes, and I use my own judgment as to whether I will send the paper on to the officer who has got the other, or whether I will write for him to return it, I may say at once or in two days, according to the importance of the business and the time required to transact it.

1223. Is that as regards the letters of the Secretary? As regards the Commissioner's letters. He opens them himself and throws them out into a box, and they pass through the same course. The Chief Clerk will put an embargo on many of these to save time. He will write something on them marking them off to the officers to whom they belong, so that a great many of them will not come to me in the first instance. The Commissioner as he opens the letters writes minutes upon those which he thinks necessary, and where he minutes a paper to an officer it goes to him and does not come to me from Records.

1224. Letters that the Chief Clerk understands and sees that he can deal with, he minutes to the proper officer after they have passed through Records, and they do not come to you at all? Yes.

1225. The letters which the Commissioner has not noted in any way, or which the Chief Clerk has not noted in any way would come direct to you back from Records, and you would deal with them? Yes. Of course you will find the number of papers which pass through Records, but on an average I have to go through a pile of papers every day about eighteen inches thick. I also sign the letters.

1226. Letters from the Engineer-in-Chief to the Minister, whom do they pass through? He sends them to the under Secretary, and the Under Secretary, before placing them before the Minister, sends them to us. They go to our records and then come to me. Then they are passed on by me to the Commissioner, either through the Secretary or direct.

1227. How do they return from the Minister? In returning from the Minister, they do not come through the Commissioner.

1228. How do they come? They come through the Chief Clerk or myself. We assume a direct method of communication.

1229. *Mr. Coyle.*] Do you send them direct to the Engineer-in-Chief? Yes, but they go through Records first.

1230. Could you suggest any method of simplifying the manner of corresponding between the Engineer-in-Chief and the Minister? If the Engineer-in-Chief addressed the Commissioner, it would save time of course.

1231. As a matter of fact does the Commissioner take any active interest in matters relating to the construction of railways, has he any executive authority? That is a question which I do not think I can answer.

1232. Are you aware if he issues any instructions, in connection with the construction department to the Engineer-in-Chief? I should imagine not.

1233. Do you think that it is necessary that the Commissioner should be cognisant of the general business of the construction department, and that all papers to the Minister should pass through the Commissioner? I think so, any matters that the Engineer-in-Chief feels it necessary should go beyond himself, should I think come within the cognizance of the Commissioner for Railways.

1234. The correspondence referred to now is correspondence from the Engineer-in-Chief to the Minister? Quite so.

1235. *Mr. Waller.*] Do you refer to general correspondence on matters of detail in the department? Officers holding far more subordinate positions than the Engineer-in-Chief have quite a volume of correspondence of their own, which never goes beyond themselves, such for example as the Traffic Manager.

1236. That is correspondence relating to the details of the branch under them? Yes. The Traffic Manager, the Locomotive Engineer, the Engineer for Existing Lines, and the Superintendent of Stores have correspondence of that kind.

1237. With that exception, do you see that any improvement can be made in the system now in use of recording and transmitting papers? No.

1238. Do you think that the transmission of papers from office to office is as good as could be devised? Papers sometimes take a little longer on the road than they ought to do.

1239. Do you see any remedy for that? The remedy is to find fault.

1240. Do you know the cause of this delay along the road? No, I cannot say that I do. It sometimes arises from one cause and sometimes from another.

1241. How long do you think it ought to take to transmit a paper from the Engineer-in-Chief to the Minister and be returned to him, always provided that the Minister is there to receive it and able to give an immediate answer? Four days at the outside.

1242. How long ought it to take to reach the Minister? On ordinary business a letter might reach the Minister the second day after it was received. If written on the 23rd it would reach the Minister on the morning of the 25th.

1243. After the Minister's signature has been appended to that document, how long ought it to be before it reaches the Engineer-in-Chief? At the very latest, the second day. It might reach him on the 26th, but it ought to reach him on the 27th at the outside.

1244. Why should it take so long to go back to him? Unless it was an urgent matter it would only go out with the evening delivery. We have an enormous business to transact, and we cannot make everything urgent. If we have anything urgent, we say "take that directly down to Records," and it can be passed on in a quarter of an hour, but with our enormous correspondence things must go through a certain routine, and the routine is that minutes written to-day go out from the office in the evening. In the ordinary course a letter from the Commissioner to another officer would reach the officer on the following day.

1245. You have given yourself an extra day? Yes; in the case of the Engineer-in-Chief in all probability a letter which left the Minister on the 25th would reach the Engineer-in-Chief on the 26th, but if it had to go before the Commissioner again it would reach him on the 27th. With regard to my duties I may add that every now and then I get a special direction from the Commissioner to undertake special inquiries, and I have a heavy one on hand now in connection with the tramway service and some others.

1246. As regards the supply of stores, that is to say, pens, paper, and other stationery—have you had control of the store-keeping department before you came here? Yes; the railway stores.

1247. The supplies of stationery I believe are obtained on requisition to the general stores? Yes; to the Treasury stores.

1248. By whom are the requisitions for stationery made out for the Commissioner's department? It is signed by the Commissioner and counter-signed by the Minister.

1249. Suppose that there are half-yearly requisitions made by each department for its own requirements, does it strike you that having to provide for six months' requirement in advance, the department would be likely rather to over-estimate than to under-estimate the supply which it might require? Certainly.

1250. Do you think from your experience in life that the effect of having everything in bulk about you is to give rise to a feeling of this sort.—Oh, there's plenty of that, and it does not matter? I do not know that it would create that feeling, but I think the having too large a stock would be likely to lead to waste, I do not say wilful waste, but waste by spoiling, which might arise from not having satisfactory places in which to put things. It is natural that it would lead to want of economy, and we should be sorry to allowance the station-masters in that way. If it could be arranged to supply it monthly or fortnightly it would be better, that is to say, if it could be satisfactorily done under the Treasury arrangements.

1251. Do you think that a monthly supply might eventuate in a lesser quantity of stuff being used? Yes; not from wilful waste, but from spoiling.

1252. Do you think that a supply monthly or fortnightly would lessen to a considerable extent the space which is now occupied by presses and so forth required to hold the six months' supply? I should think it would, but I cannot answer that because I do not know what space is occupied at present.

1253. I am speaking of the system? There is no question of it. One month's supply can be put into smaller space than six months.

1254. From your general knowledge of storekeeping, does it strike you that there would be any objection to the supplies being more frequent? No.

1255. As to the rooms, do you think it would be a better plan, if practicable, to concentrate the offices of your department as much as possible, having all the officers under their head? Decidedly; I find the gravest objections since I have been here, to having the record clerks on the ground floor. I would give anything to have them so that I could go right into their room and get what I want.

1256. Would you like to have the clerks so that you could go in among them at any time to ask any question you desired, and to exercise general supervision? It would be a great advantage, it would expedite business. When the establishment was smaller the record clerks did occupy these rooms on the top floor, but the growth of the business to be transacted has made it necessary that they should be down below.

1257. But if it could be arranged they ought to be all together? Yes, as close as you can have them. If we could get one building to ourselves it would be nice to have everybody belonging to us all round, as it would be a great saving of work and labour.

1258. Would it be a great convenience if the whole of the Railway Department were in one building? It would be a splendid thing if it could be done.

Mr. Duncan Clarke M'Lachlan was examined:—

1259. *Mr. Waller.*] What is your position in this office? I am Chief Clerk of Railways and Tramways.

1260. And what are your immediate duties? To supervise the work, that is to say generally, of all the clerks in the office, to check it, to see that it is all correct before any paper is submitted; and also to attend to all papers that come in correspondence, and accounts in their initial stages.

1261. Do you open all the correspondence addressed to the department? Yes.

1262. Are you the first person who receives it? Yes; I open it, and if the necessary inquiries have not been completed upon the paper when it comes back in the first instance, I then mark it off to the person to whom it should go for further information.

1263. Before you deal with the papers do you have them recorded? Where it is possible I mark them out so that they go down to Records, and go from Records direct, without their having to come back to me a second time.

1264. Where possible to avoid delay do you minute the papers in such a manner as will ensure their going direct to the proper office? Yes; it saves a second reference to myself, and is also convenient to the Records as well.

1265. Where then do the papers from the Record Office go? They go up to Mr. Richardson. After I have exhausted all inquiries and they are ready for submission, if I have not marked them off, they come up to Mr. Richardson, and he acts upon them where it is possible for him to do so, or he forwards them to where they ought to go.

1266. They reach him in such a condition that, if he cannot deal with them himself, and he sends them on to the Commissioner? Yes.

1267. All delay of sending papers back is avoided as much as possible by the system you adopt? Quite

Mr. A.  
Richardson.  
23 Dec., 1886.

Mr. D. C.  
M'Lachlan.  
23 Dec., 1886.

Mr. D. C.  
M'Lachlan.  
23 Dec., 1886.

so. It might occasionally happen that, after the papers are submitted to Mr. Richardson, he might think some further inquiry should take place, or something might suggest itself to him, and in that case he sends out and gets the further information he desires. The rule is to make them complete and ready for proper action when they get that far.

1268. As regards the actual keeping of the records, would it be better that we should inquire into the system directly from the officer engaged in that business, or from you? I think from the gentleman directly engaged in it. He would give you more detail, and you could see his books.

1269. How many clerks have you directly under you in this room? Five.

1270. Would you name them in the order of standing, if there is any priority? Messrs. Pickering, Duff, Martin, and Roberts. My brother is attached to our staff, and he is wholly engaged with the Minister.

1271. Is he private secretary to the Minister? Yes.

1272. Would you tell us what are the duties of Mr. Pickering? He has special duties in the office. In such a department as that of Railways we constantly have matters which require to be attended to at once, such, for example, as making arrangements in connection with the traffic, and special trains.

1273. What would you designate him? General clerk I should say. This morning the people of Hay wished to have through tickets issued at a special rate, to enable them to journey from Hay to Melbourne instead of going by coach. We had to get the consent of Victoria to issuing these tickets. This morning we got it. Mr. Pickering had to see to completing all the arrangements, to advertising in the local papers, getting tickets printed, advising the Traffic Manager, and so forth. He is also a sort of inquiry clerk. He has special calculations to make so far as details of traffic on the line are concerned.

1274. So that he is specially engaged in matters of moment which require to be attended to at once in connection with the traffic? Yes, he answers all questions in connection with rates, and further than that, he checks and supervises all time-tables which are printed, books of rates, and such calculations that are made at any time in connection with the rates or questions of traffic. There are some papers, such as when action has been finished, that have to be put away. He examines these papers finally to see that everything has been completed, he marks them off to be put away or to be sent to the proper office that may have to note them. These are matters of mere routine.

1275. *Mr. Coyle.*] Has he been long in the department? Fifteen years.

1276. Then he has acquired an intimate knowledge of the business? Yes.

1277. Is he on the temporary or on the permanent staff? On the permanent.

1278. The next gentleman is Mr. Duff? Mr. Duff is wholly engaged upon the correspondence.

1279. General correspondence? We have two corresponding clerks proper, and Mr. Duff is the senior of the two. The letters which have to be written and the papers have to be sent up to him, and he divides the work between himself and the other officer. He is responsible for seeing that the letters are written in accordance with instructions on the papers before they are sent in, and he has to initial them to that effect.

1280. Does his initialling of a letter render it unnecessary for that letter to be perused by you? Certainly not. I very often read them after they are initialled. They are read and recast where necessary.

1281. By whom? By Mr. Richardson, who sees them finally. All special letters require the Commissioner's signature.

1282. The bulk of letters not requiring the Commissioner's signature would be signed by Mr. Richardson? Yes.

1283. Is Mr. Duff on the permanent staff? Yes.

1284. Mr. Martin also? Yes.

1285. Do you consider that they are amply employed? I do, fully employed.

1286. You see no reason to suppose that your correspondence will lessen? No, it is increasing very rapidly.

1287. Do you think you will be able to keep it in hand with the present staff? Yes, now that we have got an additional hour a day. Where we are pressed the addition of the hour makes a slight difference.

1288. Do you find it an advantage in getting through the work? Certainly it is an advantage.

1289. Is yours work that must be done as far as possible within the day? The bulk of it must. We may get papers at 4.30 which it is possible to allow to stand over until the morning.

1290. But as far as possible do you endeavour to conclude the day's correspondence in the day? Yes, as a rule it is done.

1291. When letters are written are they press copied? Yes.

1292. Are they recorded before they are sent away? No, immediately they are signed they are press copied, enveloped, and dispatched. There is also a stamp book in which are recorded all the letters which have been stamped.

1293. Who undertakes the folding up, stamping, and so forth? Mr. Roberts.

1294. Do you say that Mr. Martin is on the permanent staff? Yes, but our office is peculiarly situated, inasmuch as we come under the Commissioner's classification, not necessarily the Civil Service classification.

1295. By the permanent staff, as we understand it, is meant appointments which are made by the Governor and Council, and by the temporary staff appointments made by the Minister? Under the Commissioner's classification they are recognised as permanent hands. Out of that number I suppose, then, I am the only officer that holds an Executive appointment.

1296. *Mr. Coyle.*] The Minister or Commissioner could dispense with their services by his own act? Yes, in that view they are on the temporary staff.

1297. What are Mr. Roberts' duties? He has to attend to the dispatching of all letters, and to index the letter book. He issues free passes, and he also attends to the telephone, which connects us with the Traffic Manager's office at Redfern. We do a lot of our business with Redfern through the telephone. At the present time our office is what you might term slack, on account of Parliament being in recess. When Parliament is sitting we have as much to do with parliamentary business, and probably more, than any other department of the Government service. Where one question is asked of some other departments, here some days we have ten or twelve questions to answer. I attend to that business—that is, to getting the information ready, and in that I am assisted by Mr. Roberts.

1298. *Mr. Mills.*] You have also parliamentary returns occasionally, have you not? Yes, I think we furnished more returns to Parliament than any other department.

1299. *Mr. Coyle.*] Then, is there much additional work during the sitting of Parliament from the causes which you have mentioned? A very considerable amount of work.
1300. Could you form an estimate of the value of the service in procuring information for these returns, and to answer questions. Would it take the time of one officer altogether, or half his time, or what? It would take one officer all his time, if it were possible for one officer to deal with the matters requiring attention.
1301. As a matter of fact, one officer cannot do it? No; questions of all kinds are asked, involving reference to different branches. I have to collect the information from different sources, and then prepare the final answers.
1302. So that you could not state what additional clerical assistance is required, in consequence of these matters travelling over all branches of the service? No.
1303. *Mr. Waller.*] Would it take the time of one officer to copy all the returns and questions? Yes, all the year round it would take more than one officer's time. The actual clerical work would take more than one clerk. For instance, I submit to you a return of all claims made against the Commissioner for injuries sustained on the tramways.
1304. For how long a period? Since the tramways started, until the 29th of June last. That involves a search of records for the last twelve years.
1305. How long did it take, speaking roughly, to complete that paper? Six weeks.
1306. And how many hands were engaged upon that? One part of his time, and another half his time.
1307. Had you to put on extra hands in the office on account of these gentlemen being employed on this work? We had to put on other hands in connection with parliamentary business, and this with other returns tended to make it necessary.
1308. How many temporary hands had you on? We had three on copying parliamentary returns.
1309. Otherwise, the general business of the office would have suffered? Yes, and the public would have suffered. We should not have been able to attend to their requests nearly so expeditiously.
1310. Would arrears be gathered up to a serious amount? Yes, and more than we could complete before Parliament was on top of us again.
1311. Do you consider the best way to meet this additional strain caused by questions and returns to the order of Parliament is to employ additional clerical labour during the time Parliament is sitting. I think that is the least expensive way.
1312. *Mr. Waller.*] You get rid of the temporary hands when the rush of work is over? Yes.
1313. *Mr. Coyle.*] Do they work under your direction? Yes.
1314. *Mr. Waller.*] How do you engage such gentlemen? They are usually selected by the Minister, with the understanding that they are engaged temporarily.
1315. Do you find it to your advantage to engage a smart writer to do the copying part of the work? Yes, but we must have one of our first-class clerks to compile the work.
1316. But would you put a first-class clerk to do copying? No, simply to compile. In compiling this return he had to go through a heap of papers 6 feet high.
1317. When copying is required do you engage a good writer to do it, and then let him go? Yes. I have here a case in which a man claims £55. It may be a small amount, but an experienced clerk would have to go through an enormous pile of papers to get at the exact facts, so that a considerable time is taken up in the compilation of the return. We could not afford to put on a first-class clerk to do the mere copying.
1318. *Mr. Mills.*] I suppose it would not be possible to lay the original papers on the table of the House? If we did, I expect they would never ask for information again, they would get so much of it. Then, too, there might be some valuable paper in a huge bundle which might get astray, if the papers were to be handled by a lot of people.
1319. Is this a fair sample of the business you get in connection with these returns? This is a fair sample where we have to compile a return.
1320. Have you many returns which require compilation? Yes.
1321. *Mr. Coyle.*] Could you state the number of questions called for during last session or the session before? I will get it for you.
1322. *Mr. Waller.*] May a question make it necessary that you should look through many books to get an answer? Yes; various documents and references to other people.
1323. *Mr. Mills.*] I suppose questions from Parliament take precedence of all other work, no matter how urgent it may be? We have instructions that they are to be attended to first. I think that if Members only understood what very short notice they give us, business might be very much improved. For instance, an important question appears on the business-paper of the Legislative Assembly in the morning, and the Minister is expected to be in a position to answer it in the afternoon. The trouble which is necessary to get the information some days pretty well unhinges the office: but if we had a week to get it in the information could be obtained in the ordinary way without greatly disturbing ordinary business. Sometimes we have to telegraph for information.
1324. Could hon. members get the information if they were to write to the department for it? Yes.
1325. Would it be possible on each return to minute the cost of its compilation, that is, apart from the cost of printing, which now appears? It would be possible.
1326. *Mr. Coyle.*] Do you consider the expense of preparing these returns is a proper charge against the Railway Department? I do not think it is a proper charge against the working expenses of the Railways.
1327. *Mr. Waller.*] Do you think the actual cost of getting the information required by Parliament materially adds to the expense of the department, not only in loss of time, but in increasing the number of hands you have to keep? It does in this way, that we have to employ temporary hands or to take on additional clerks, and it is a delay and a hindrance to business.
1328. As regards the dismissal of temporary clerks, who dismisses them? The Commissioner.
1329. Without reference to anybody? No.
1330. What is Mr. H. M'Lachlan in the department, temporary or permanent? He is a permanent officer, having been appointed by the Governor and Executive Council.
1331. What are his duties? His duties are entirely secretarial to the Minister for Public Works. When  
the

Mr. D. C.  
M'Lachlan.  
23 Dec., 1886.

- Mr. D. C. M'Lachlan.  
23 Dec., 1886.
- the Minister does not engage his whole time, he then assists in the office. Occasionally he gets time to draft a few letters.
1332. Does he write a large quantity of correspondence for the Minister? Yes, very large.
1333. And also brings papers before his notice when they have reached the Minister's room, and advises as to their contents? I do not know as to that.
1334. Do you find any inconvenience in having the Record Office so far away? Yes, it is an inconvenience.
1335. Would it be an advantage to have it closer to the Corresponding Branch, if possible to so arrange it? It would be a great saving of time, and it would enable us to dispense with one messenger.
1336. Do you think it would be worth going to some trouble to arrange to have it on the same floor? In all well regulated offices, the offices should be brought as close to one another as possible, so that a man could go into the record room and get the papers he required without having to wait for them while the messenger is going up and down two or three flights of stairs.
1337. Speaking as Chief Clerk, do you think that if you could go quickly into the record room you could expedite matters? Yes, I am certain of it, if the record room were adjoining.
1338. Mr. Mills.] Is not the telephone in this office a great nuisance to you? It is during the day a great bother. A large portion of my time is taken up in answering inquiries by the public, and this while all that traffic which you hear goes on through the corresponding room.
1339. Would it not be an advantage to the Corresponding Department if that telephone were placed in a room which would be non-conducting as far as sound goes? It would. The constant use of the telephone between this and the Traffic Department is very distracting. The bell is always ringing, or somebody is always shouting, and that must divert the attention of the corresponding clerks.
1340. Is it necessary that this telephone should be close to you? Yes.

FRIDAY, 24 DECEMBER, 1886.

Present:—

MR. T. F. WALLER, CHAIRMAN.

MR. J. Y. MILLS,

MR. J. E. FITZGERALD COYLE.

Alexander Richardson was further examined:—

- Mr. A. Richardson.  
24 Dec., 1886.
1341. Mr. Waller.] In your opinion would there be a saving of stationery if the paper were supplied on blocks or pads, from which you could remove each sheet; having one set with printed headings and the others plain to follow? Not having had much experience of these forms, I cannot very well answer your question; indeed, I cannot say that I have ever seen them, but provided that each sheet of paper could be readily taken off I dare say the plan you suggest might be an advantage. We are in the habit of writing our minutes on double sheets.
1342. Mr. Coyle.] Where you require to write a minute why not take another sheet? It is not so convenient as the double sheet, which acts as a cover for the papers.
1343. Mr. Waller.] You could have the double sheets supplied in blocks in the same way as the single sheets. If the sheets could be readily detached from the block without any risk of a careless clerk tearing it, then I should think that method of supplying paper would be an improvement.
1344. Would you propose to extend that to all classes of office forms? Yes, in this office we use the economical plan of tearing off the half sheets which are not written upon and use them. When I signed the letters in the evening they went from me having a very nice appearance. I believe in having things done decently and in order in an office like this. One evening I went out of my room and saw that the letters which had left me looking so nice had had the blank sheets torn from them. The edges were all rough, and I thought the letters looked very disreputable. I inquired why it was done, and I then found that the clerks had been instructed on economical grounds to tear off these sheets and use them.
1345. That would not be so under this plan? No; under your system I presume the edge would be perfectly smooth, and therefore the letter would look better.
1346. In making minutes on paper, would it not be better to have separate sheets upon which to write the minutes, and head each sheet "minute paper." Instead of turning up the corner of a sheet and writing all over the paper, back and front, would it not be better that the minutes should be written one under the other in regular order upon proper minute paper? I should recommend putting on a cover. If that plan were adopted it would be necessary to take half the sheet and commence the minute on the next sheet. The minute paper would not need to have a printed head. The minute would be attached to a separate sheet by a paper-fastener. We have made it a rule in this office that there shall be no such thing as writing across the papers. Our rule is never to allow minutes to be written irregularly, but when you no longer have ample room on the paper a separate sheet shall be attached, and the minutes be written in regular sequence upon that. If minutes were written otherwise it would be very difficult to know who had written the last minute. Our system is not confusing where the rules of the department are carried out. In reference to the writing of minutes we have sent a circular out recently upon that very subject, and we insist upon the rule being adhered to.

Mr. Donald Vernon was further examined:—

- Mr. D. Vernon.  
24 Dec., 1886.
1347. Mr. Waller.] We handed you a sheet showing the construction of railway lines—that certain sums had been expended on construction by the Existing Lines Department and charged against the loan votes—the other particulars in that sheet being an abstract from the books in the Department of the Engineer-in-Chief? Yes.
1348. Are there any accounts of these matters kept in the Accountant's Branch of the Railway Department? Yes; there are.
1349. Are all the particulars you see in this sheet to be found in the books kept by your accountant? Yes.
1350. Mr. Coyle.] Are there other particulars than those disclosed in this sheet? Yes; you have not all the information here; but you will find all the particulars in the accountant's books. They are the railway books which are kept by the Accountant for Railways. 1351.

Mr.  
D. Vernon,  
24 Dec., 1886,

1351. *Mr. Waller.*] Is it possible for the bookkeeper in the construction branch to obtain the particulars set out in this sheet without reference to the Accountant for Railways? No; not all of them.
1352. Suppose a dispute at law were to arise, and it were necessary to produce the account books in court, whose books would be produced? The books of the Accountant for Railways.
1353. Would you consider the books as kept in the Department of the Engineer-in-Chief as subsidiary to those kept by the Accountant for Railways? I would not consider them at all.
1354. Do you think it necessary that such bookkeeping should be carried on in the Department of the Engineer-in-Chief? I am quite at a loss to understand the necessity for anything of the sort.
1355. Would the keeping of such books entail a large amount of expense? Necessarily they must involve a certain amount of labour and expense.
1356. Do you consider the bookkeeping of the construction Department is unnecessary, and that it is quite uncalled for? I do.
1357. Is the staff necessary for keeping those books required? In my opinion it is not, more especially since, I may mention, the railway books are at the disposal of the Engineer-in-Chief. It has been a standing arrangement that the accountant should furnish the Engineer-in-Chief for Railways with any information he may require with regard to the construction of lines. He is required to furnish such information at any time it may be wanted, and the Engineer-in-Chief's branch of the Department has direct access to the books of the Department; I am therefore at a loss to conceive how it can be expedient or necessary that any such subsidiary books should be kept.
1358. *Mr. Mills.*] Could the information in this sheet be compiled from the books of the Engineer-in-Chief's Department? No; not without ours.
1359. *Mr. Waller.*] As regards the bookkeeping which is involved in the accounts from the district engineers and surveyors of the Engineer-in-Chief's Department, are they kept by your accountant too? Yes.
1360. *Mr. Coyle.*] Are the vouchers for the salaries and expenses of the district engineers and surveyors, and the other officers employed in connection with the construction Department all passed through the accountant's books? They all pass through the accountant's books. All accounts connected with the Railway Department, in whatever way, pass through the books of the accountant for Railways; but for information on this subject I would rather refer you to the accountant and assistant accountant, who would be able to inform you more fully than I can.
1361. *Mr. Waller.*] Are we to clearly understand that you think there is no necessity for a separate bookkeeping and accounting staff in the construction Department? That is my opinion.
1362. Do you think that those books could not be a complete record, and that reference to the accountant's branch would have to be made if it were desired to make them complete? They could never be of any use to any other persons than those who keep them? They could not in my opinion be complete.
1363. Are there accounts under Mr. Drewett? The draftsman?
1364. Yes; he has accounts for the salaries of those under him. Are those accounts necessarily kept in your head office? I have no knowledge of what accounts Mr. Drewett does keep.
1365. *Mr. Coyle.*] In connection with the payment of the office draftsmen? I can quite understand that each branch must keep certain subsidiary accounts; but the Commissioner for Railways would not depend upon any other accounts than those kept by the accountant for Railways. All payments and expenditure are entered in them; and no others can be complete.
1366. Presuming that the head of each room kept a correct record of the work performed, if he at the end of each month makes out the time sheet and signs that as being correct, do you think there is any necessity for any further bookkeeping than that in the accountant's branch? I do not think there would be any necessity for anything further.
1367. If the monthly pay sheet were signed by the responsible officer, do you think that would be sufficient? Certainly.
1368. *Mr. Mills.*] Can you give us any illustration of the cause of this additional expenditure being added to what is called the construction cost—that is to say, any information for what the expenditure by the Existing Lines branch was incurred? Perhaps you will look at the first line on the list, the extension from Dubbo to Orange. I find that when that line was opened for traffic there were stock yards at Wellington which had to be altered. Sidings had to be put into the yard at Wellington, and the cost of equipment has to be added. Equipment would include such things as tools and trollies—everything necessary for the permanent way, men to take charge and carry out their work. There also had to be provided,—water supply for engines and jib at Wellington, Kerr's Creek, and Stony Creek, and Cooper's Creek; turn-table and signals at Dubbo; approach to goods' shed at Ironbarks, and alterations to signals as well as new signals.
1369. Will you take the next item, the extension from Wagga to Albury? The expenditure which had to be incurred on account of that extension included covered platform, crossings, switches for junction, signals, siding for Victorian line goods shed, signals for Victorian line, connecting temporary and permanent roads Albury, removal of temporary bank line and bridge.
1370. Take another one? Here is the extension Dubbo to Bourke. I find such work as signals at Narromine, signals and pumper's house, siding for stock-yards, signals and pumper's house for Trangie, five level crossings, altering signals at Nevertire, stock-yards and pumper's house at Nevertire, altering stock-yards at Nyngan, making good the dam at Nyngan, where no allowance was made for overwash, with the consequence that the dam was broken away, drivers' quarters, locomotive inspector's office, stock-yards, dyke and tank at Byrock, signals, crane, weighbridge, pumper's house, and waterclosets at Bourke. Perhaps I have said enough to illustrate the general nature of this expenditure, but apart from that I may say that we have had at times to make good defective works and arrangements, additional sleepers may have had to be supplied, defective ballasting made good, and the station yards have had to be altered.
1371. *Mr. Waller.*] Who is supposed to put up the stockyards in the first instance? The construction branch, unless otherwise arranged.
1372. Do they put them up in accordance with their own ideas of what is advisable for the place, or do they obtain instructions from the Commissioner? According to their own ideas as a rule.
1373. Do you find that plan works well? Certainly not.
1374. Why not? We find that there is a deficiency of provision in many respects. Sometimes buildings and yards are placed in unsuitable positions.
1375. *Mr. Mills.*] From want of knowledge of requirements of the traffic? Yes. 1376.

Mr. D. Vernon. 1376. *Mr. Waller.*] And what is the result? They have either to be altered in cases where they are not suitable or provided in places where they have been omitted. The expense of this has of course to be charged to the votes for construction.

24 Dec., 1886. 1377. As a matter of fact, before the line is handed over from the Engineer in Chief to the Commissioner, do you enter upon the works and incur any expense? It is possible that we might in some instances, at the request of the Engineer in Chief, put up the signals before the line is actually handed over for traffic.

1378. But not any large expenditure? No.

1379. *Mr. Mills.* Have you found any lines handed over for traffic sufficiently complete? I never knew an extension yet to be handed over in a condition which could be said to be anything like complete and ready for traffic at the time it was opened.

1380. *Mr. Waller.*] Have you ever known a line to be handed over fit to work without your having to make alterations and additions? I have not.

1381. Have you had any experience which would enable you to say when a line was in proper working order? Yes; I have had a good deal of experience in connection with taking over lines and working traffic upon them; and therefore I consider that I am competent to form an opinion as to what is necessary.

1382. Were you traffic manager for some years? Yes; of the Western and Southern lines.

1383. Therefore you are not speaking from office experience, but from actual personal knowledge? Yes.

1384. Can you give us any reason why you think it would be beneficial that the Commissioner for Railways should have the plans of proposed works in connection with the construction of railways submitted to him previous to letting the same by contract? Yes; for the obvious reason that those who are responsible for working the railways are in the best position to speak as to their suitability or otherwise, and as to what the requirements of the traffic demand. As an illustration of the good effect of allowing the Commissioner a voice in such matters I may instance the case of the station yards and arrangements at Bourke. In that case the Minister for Works, Mr. Wright, before he approved of tenders being called for upon the original plans, as prepared in the Engineer-in-Chief's office, requested that they might be sent on to the Commissioner for his opinion. The result will be seen in the accompanying minute (5791) on station and yard arrangements at Bourke. The Commissioner for Railways, writing on the 12th December, 1884, says: "Our experience at several stations where the engine-shed and goods-shed are placed in too close proximity to the main line shows the necessity of some improvement in this respect at a station like Bourke. In the plans prepared in the Engineer-in-Chief's department there is not sufficient accommodation even for present traffic, and when the traffic increases and additional conveniences for working it are required it will be found that the design proposed will not admit of the necessary expansion without very great outlay. The stockyards are not sufficiently ample. There will be a great stock traffic at Bourke. The yards, which are combined cattle and sheep yards, should be separated, and provision made for two loading-places at each yard, so that two trucks at least can be loaded at the same time. If the number of facing points on the main line could be lessened the safety of working will be greatly enhanced. The traffic manager will obtain the services of a draftsman, and have drawn out an amended plan containing the improvements suggested."

The Traffic Manager, Mr. Read, writes on the 11th December, 1884, as follows: "I forward herewith a plan in accordance with the Commissioner's request, which I consider will give greater facilities for carrying on the traffic than that proposed by the Engineer-in-Chief, and will also allow of the accommodation being added to at any future time with less expense: for this latter purpose a space sufficient to lay in six extra roads has been left between the goods-shed and the main line and space for seven extra roads between the engine roads and the main line. The ground between these places will not require to be excavated at present. The goods accommodation has been increased by 34 chains of siding room, mainly by the addition of a long outside road for wool traffic. This will also necessitate some extra metalling in the yard; but these additions will be necessary to carry on the traffic. A crane should also be provided, as shown in the amended plan. To allow of additions previously referred to, the engine sidings have been placed further from the main line and the sidings remodelled, thereby reducing their length from 1 mile 23 chains to 75 chains. The outside facing points have been brought in about seven chains nearer to the station, and the total number of facing points on the main line reduced from six down and three up to two down and two up. Separate cattle and sheep yards have been laid out, and they have been placed a sufficient distance apart to allow of cattle and sheep being loaded at the same time, and also for the number of races to be increased as required. If the goods-shed lies east and west, the office should be placed in the south-east corner, so as to escape the rays of the afternoon sun, which are found to be very hot in this district in other offices placed at the west end."

To that the Commissioner for Railways added this recommendation:—"I submit that the yard should be laid out as shown in amended plan."

Mr. Wright then wrote on 13th December, 1884:—"Will the Engineer-in-Chief give effect to Traffic Manager's views?"

The last minute on the paper is that by the Engineer-in-Chief on the 4th February, 1885, namely, "The works are now being carried out as suggested."

1385. We asked you the other day as to the number of cadets you are supposed to be entitled to have in the Commissioner's Department? Our supposed limit in the Existing Lines Branch is sixteen; but we have no specified limit just at present as far as the Locomotive Engineers' Offices are concerned. As a matter of fact, there are about seven in the Locomotive Department, but they have been only recently classified as cadets. In the Department of the Engineer for Existing Lines I find that at the present time there are about twenty-one; and a recommendation is before the Commissioner for the reduction of that number by some ten or a dozen. Not having the papers by me, I cannot speak more precisely than that.

1386. Is there any limit to the number who can be appointed? It is quite within the power of the Minister and the Commissioner to exceed the limit.

1387. *Mr. Coyle.*] Are guarantees of fidelity required from officers in this department? Yes, in the case of all officers who may be charged with the receipt or disbursement of moneys.

1388. *Mr. Waller.*] Have you a large number of officers on the permanent staff, that is to say, appointed by the Governor and Executive Council? Yes; a large number.

1389.

1389. In view of reducing the permanent staff, do you think that when vacancies occur below a certain grade, there would be any objection, instead of having them filled up by officers of the permanent staff, to fill them up by officers on the temporary staff—but having the same salary, if fitted for the position, as they would receive if they were appointed by the Governor and Executive Council? Other things being equal, it would give the head of the department much larger control over his subordinates than he can at the present time possess.

Mr.  
D. Vernon.  
24 Dec., 1886.

1390. Do you think there would be an advantage? It must be an advantage as giving greater control.

1391. In the event of having to reduce the number of employees, it could be done with greater facility, and without any claim for compensation? Yes.

1392. *Mr. Coyle.*] Do you think that it is necessary to have more direct control over the employees in a department like that of railways than in any other department? I do. In view of the safety of the travelling public, you cannot make the control too effective or too direct.

1393. *Mr. Waller.*] As vacancies occur, would you fill up the appointments of station-masters in the same way? There would be no objection to filling them up in that way, always provided that the men to be appointed were qualified for the position.

1394. A station master who is on the permanent staff, we will suppose, resigns or dies; in putting in a new man, would you put him in as a temporary officer? I see no objection. It would give the head of the department more control, more power.

1395. *Mr. Coyle.*] Does the Engineer-in-Chief recognise the Commissioner as the head of the department? I do not think that the Commissioner for Railways is recognised as he should be.

1396. Has the effect of the Engineer-in-Chief not recognising the Commissioner, in your opinion, been a cause of loss to the public service? Yes; I consider that has been the result.

1397. *Mr. Waller.*] Has it been the cause of much delay in the transaction of public business? No; I do not think that it has to any serious extent.

1398. *Mr. Coyle.*] Has it been the cause of a needless expenditure of public money? To a certain extent I think it has.

1399. In what way could money have been saved, supposing that the Commissioner had been consulted? Had he been consulted before station yards had been laid out, and station buildings erected, it is quite possible that the necessity for alterations would have been obviated; the yards might have been more conveniently arranged, and have permitted of cheaper and more efficient working. In some cases more suitable appliances might have been suggested and provided, leading to greater security, safety and economy in working.

WEDNESDAY, 29 DECEMBER, 1886.

Present:—

Mr. J. Y. MILLS, | Mr. T. F. WALLER,  
J. E. FITZGERALD COYLE.

Mr. J. W. Drewett was further examined:—

1400. *Mr. Waller.*] Is this time-sheet a copy of that made out every month? Yes, it is, and this is for the month of December.

Mr. J. W.  
Drewett.

1401. Do you consider that it is the best and simplest form you could adopt? I think so. It shows the number of days each person has been at work on any particular line.

29 Dec., 1886.

1402. And then would you charge that against those particular lines? Yes.

1403. Do you see any reason why the printed form of pay sheet should not be made out in your office, and, having been signed by the head of the department, be passed on for payment? I do not know that there would be any difficulty at all, but I am not an accountant.

1404. Do you sign the time-sheet every month? Yes.

1405. And could you as well sign that? Yes.

1406. *Mr. Mills.*] Are you the only officer who knows that the time is correct? The record is not kept by me, but by Mr Cansdell. He makes out the time-sheet.

1407. *Mr. Waller.*] But are you not responsible for what he does? I am responsible.

1408. Do you see any objection to the pay-sheet being made out by your officer and signed by you? I do not think there would be any objection. We would simply have to enlarge the sheet so as to make it contain the particulars which now appear on both.

1409. Is the pay-sheet made up by your branch? No. I think it emanates from the Treasury. I have never had anything to do with accounts.

1410. *Mr. Mills.*] But are you responsible for this particular account? Yes, I am responsible.

1411. *Mr. Coyle.*] Do you prepare the drawings for engine sheds and goods sheds in your branch? Yes.

1412. Are they lithographed? They are not.

1413. Are all station drawings lithographed? Stations of the first and second class are.

1414. Are such structures as platforms, tank stands, carriage docks, and works of that nature lithographed? They are.

1415. Is that above formation level? Yes.

1416. With reference to timber bridges, how many different classes of timber openings have you on the lines, exclusive of boxes and culverts? Three,—10-feet, 15-feet, and 26-feet openings.

1417. Just three classes? Yes.

1418. Are these lithographed? Yes.

1419. Are these lithographs of the different works that you have enumerated used in putting the papers of a contract together? Yes.

1420. Are the standard drawings as we will call them used as contract drawings.

1421. Are they supplied to the contractors? Yes, if they pay for them. If not, they have to copy all their own drawings. We supply copies of all these lithographs I think at 10s. each.

1422. What is the cost per sheet of preparing these drawings generally? I could not tell you.

1423. Are they lithographed on drawing paper? Yes.

1424. On hot pressed paper? Not on hot pressed paper.

1425. The drawings for the general arrangement of stations, which show sidings, cross roads, and the different

- Mr. W. J. Drewett.  
29 Dec., 1886.
- different things for different classes of stations, do they vary for each class, or is there uniformity in the general arrangement of them? They are generally uniform, but we are obliged to make a set of drawings at each station to suit the ground. The stations are sometimes on one side and sometimes on the other.
1426. Do you prepare drawings for such structures as repairing shops? No, they are done under the Engineer for Existing Lines.
1427. Does the Engineer for Existing Lines also erect engine sheds? He has done so.
1428. And all additional extensions and accommodation which may be required on existing lines? It is all done under his supervision.
1429. And the erection of turn-tables, and tanks, and all other works? They are generally done here.
1430. I mean subsequently in the case of extensions? Yes.
1431. Are the wooden culverts lithographed? Yes.
1432. And box trains? Yes.
1433. And the masonry culverts? All are lithographed.
1434. And the lithographs are used for the purpose of putting the papers together in the contract? Yes.
1435. And also supplied to contractors if they purchase them? Yes.
1436. Do you find that there is much saving in drafting work by the use of these sheets? I have no doubt of it. We have simply to take one of these sheets out and put the title on and it is done.
1437. With regard to stencil plates; are there not a number of phrases and words such as titles to plans, the name of a railway, &c., which have often to be used a great number of times. In putting these titles on the plans, do you use stencil plates for the purpose? No, we have had stencil plates, but they got lost and injured. We simply put stump writing on the plans now.
1438. On the standard drawings, then the name of the railway and the number of the contract are written on? Yes, it does not take very long. There are only two drawings to get out generally speaking for a contract, or say three, one for the contractor, one for the office, and a set for the district engineer.

Mr. W. H. Quodling was further examined :—

- Mr. W. H. Quodling.  
29 Dec., 1886.
1439. *Mr. Waller.*] Is this a copy of Mr. Drewett's time-sheet for the month of December? Yes.
1440. What do you do with this time-sheet when it comes to your hands? We prepare the salary abstracts for the Treasury in this form
1441. Is one of these salary abstracts or pay-sheets for the temporary staff, and one for the permanent? Yes.
1442. Do I understand that the abstract which appears on the printed pay-sheet is taken from the time-sheet? Yes.
1443. What becomes of the time-sheet afterwards? I file it in the guard book.
1444. Do you think that it would be as well if a book ruled and printed the same as this time-sheet were kept in Mr. Drewett's office and filled up as he fills up the time-sheet now, and that he should then fill up the pay-sheet form and forward it to you? No.
1445. Why not? Because they are not accustomed to preparing the salary abstracts, and we should still have to check them.
1446. Is not Mr. Drewett responsible for the time-sheet being correct? He is only responsible for the time. For the pay-sheet which we send to the Treasury I am responsible. It would have to be prepared by Mr. Drewett or by us, and we are in the way of doing it, having had more experience.
1447. What is done now is done three times over, first in the book, next as a time-sheet, then abstracted on to this pay-sheet? Yes, in any case it would have to be done three times.
1448. Why could not the pay-sheet be taken direct from the time-book, and so do away with any necessity for the time-sheet? In that case we should have no record in our office.
1449. But you would have it in Mr. Drewett's office? But we like to have it here as well.
1450. Is not Mr. Drewett responsible for the employment of those under him? I do not think it would facilitate business in any way.
1451. *Mr. Mills.*] If Mr. Drewett were shown what was wanted and had the information given to him, could he not do it? I do not say that it is impossible.
1452. *Mr. Coyle.*] Would it not save the preparation of the time-sheet altogether? I do not think so. I think that in any case the Engineer-in-Chief would like to know how the gentlemen were employed.
1453. *Mr. Waller.*] Then he could see the book? I do not think it would reduce the work in any way. It might transfer it to Mr. Drewett's department from my own.
1454. *Mr. Mills.*] What checking do you do that Mr. Drewett could not do? I do not pretend to check the time of the gentlemen when this time-sheet is rendered to me. On it I am authorised to prepare the salary vouchers.
1455. *Mr. Waller.*] This time-sheet is either true or it is not true, and Mr. Drewett is responsible for it in either case? Mr. Drewett is responsible.
1456. You cannot tell whether it is true or untrue? No, not as to the time.
1457. *Mr. Mills.*] The time and the amount of yearly salary being given is all that is involved in the two sheets? I look specially after the rates.
1458. Is not the time-sheet the basis of the whole payment? For the time of the gentlemen it is.
1459. If Mr. Drewett gave the time and the amount of yearly or monthly salaries, what more would be required? He does not do that.
1460. But suppose that that were so? If he did it we should have to check it.
1461. What advantage is obtained by your checking? I have to certify for the Engineer-in-Chief, and I should not certify without having the statement checked.
1462. You could certify the pay-sheet as supplied as being according to the time-book? Not as to the rates. I am responsible for the rates, and for the authorities being in all cases satisfactory.
1463. Could not the accountant do it just as well as you? I do not think so.
1464. Why not? It is not his duty, it is the special duty of this department. He does not know what appointment every man holds.
1465. The account is checked by your accountant? I do not do the checking myself personally.
1466. *Mr. Waller.*] Then it really comes back to this, that the first man is responsible? I check it and see that the amounts are correct, but I do not check it as to each individual item myself. 1467.

Mr. W. H.  
Quodling.  
23 Dec., 1886.

1467. If the time-sheet is wrong, then the pay-sheet must be wrong? Yes.  
 1468. Is the pay-sheet made out single or in duplicate? Single.  
 1469. What becomes of it? It is forwarded to Mr. Wickham, the accountant.  
 1470. Is that the Accountant for Railways? Yes.  
 1471. What are these other forms? Shorter abstracts used where there are fewer names to enter. Mr. Wickham puts them into one abstract for the Treasury.  
 1472. Is there a time-sheet similar to this kept in each department where you have draftsmen? Yes, we receive one from Mr. Palmer every month.  
 1473. Exactly the same? Yes.  
 1474. Do you receive them from any other departments? We receive one from each district engineer.  
 1475. In the same way? The form is somewhat different for inspectors, chain men, and so forth.  
 1476. *Mr. Mills.*] And as to the clerical staff? We have no time-sheets drawn up in that way, they are personally under my own eye.  
 1477. Do you fill up a form for them? There is no time-sheet required in that case, their names appear in the monthly abstract of salary.  
 1478. *Mr. Waller.*] Here is an abstract from Mr. Drewett's department. You have a certain number of officers under your own observation, do you add them on to the same abstract? Yes.  
 1479. And also Mr. Palmer's? Yes, if there is room for it. His are on a separate sheet generally, and the money is paid into the bank to his credit. He is sometimes away from Sydney.  
 1480. Who signs the cheques for the payment of these salaries? The Commissioner and Accountant, I think. They generally draw the cash and pay the salaries. I have nothing to do with that.  
 1481. Then there is a lump sum drawn? Yes, representing the amount of the voucher. The payments are made through the paymaster attached to the accountant's branch.  
 1482. Do you think it would be an advantage in every way if the head of each department were to draw either the lump sum due to his department or to his officers, or a cheque for each officer? I do not think it would make much difference. The person who received the cheque would have to present it.  
 1483. *Mr. Mills.*] That would be in his own time? It has to be done in office time, the banks are closed at any other time.  
 1484. *Mr. Waller.*] Would it be a better system that each officer should be paid by cheque the amount due to him, or that the head of each department, say Mr. Drewett, for example, should draw in one sum the amount due to all his officers? There would be too many public accounts if each head of a branch were to operate in that way.  
 1485. Who actually pays this money? An officer in Mr. Wickham's office. The gentlemen go over to Mr. Wickham's office and receive the money there.  
 1486. *Mr. Mills.*] At what time do they go? Notice is sent over that the money is payable, and then each person goes over and receives his cash and signs the abstract. In some cases the money is paid into the credit of the gentlemen at the bank. That arrangement is made particularly in the case of officers in the country.

Mr. George Cowdery examined:—

1487. *Mr. Mills.*] What is your position? I am Engineer for Existing Lines and Tramways—the construction of tramways as well as maintenance.  
 1488. *Mr. Coyle.*] Are there any works undertaken by your department outside of the maintenance of railways after construction, and the maintenance and construction of tramways? Yes; duplication of lines when decided upon.  
 1489. Anything further? Building bridges.  
 1490. Replacing bridges? Yes, and in many cases building new ones where they have become necessary.  
 1491. Any works about stations? Yes; all the sidings and new roads which may be required.  
 1492. Repairing shops? We build all the repairing shops and workshops for the Locomotive and Traffic Departments.  
 1493. Do you make all extensions required on existing lines? Yes; I have nothing to do with rolling stock or the traffic.  
 1494. Have there been any private tramways or railway constructed by the department? Yes; tramways and private railways are now being constructed.  
 1495. By your department? No; not by my department. We may have constructed short sidings off the main line, for which the owners of the property have paid.  
 1496. What would be the greatest length of any of these sidings that you have constructed for individuals? Only a matter of 200 or 300 yards in any case. They are small sidings.  
 1497. In taking over a line from the Construction Department, do you find it necessary to execute any works in connection with it? Very frequently.  
 1498. Do you not receive the railways from the Construction Department in complete working order? I do not know where I could find a case where that was done.  
 1499. *Mr. Mills.*] Were they safe for traffic? I do not know about safe.  
 1500. *Mr. Coyle.*] They were not properly equipped? Certainly not. We have taken lines over which have had no signals.  
 1501. What are the principal works on the lines that you find are required when you take them from the Construction Branch? They are very varied.  
 1502. Will you just enumerate the principal ones? Fresh sidings, cross over roads, making roads or bridges alongside of sidings, stock-yards. We have had a great deal to do with stock-yards, particularly on the lines to Bourke and to Hay. These were mostly on flat or very low ground, but there is nothing but the soil for the cattle and sheep to walk on. In many cases the fences were so weakly erected that the pressure of the animals upon them have pushed them out in all directions, and the work has had to be done over again.  
 1503. Were they properly designed? Opinions upon that sort of thing vary very much. The squatters do not consider that they are properly designed. We have altered most of them.  
 1504. Strengthened them? Strengthened them, and changed them.  
 1505. *Mr. Mills.*] Does the Construction Branch adopt one design of cattle-yard? I do not think so.

Mr.  
G. Cowdery.  
29 Dec., 1887.

- Mr. G. Cowdory.  
29 Dec., 1886.
1506. *Mr. Waller.*] All sheep and cattle are of the same description? Squatters are not all of the same opinion as to stock-yards.
1507. Do not you think it is possible to have a standard drawing of yards for the loading of stock into trucks, which would be applicable in all cases? Not in all cases on account of the difference of the ground.
1508. *Mr. Coyle.*] The ground must be regular with regard to the formation level? Yes.
1509. Then the yards to a great extent may be uniform? Some of the yards are. A good many, however, differ in the level from which the cattle have to be shifted.
1510. But could not standard drawings of cattle-yards be generally applicable? Certainly; for all essential purposes.
1511. And any modification might be made upon the lithographed standard drawing, which might be required by the exigency of the ground, to suit any particular place which they are likely to occupy? Yes.
1512. *Mr. Waller.*] Has the Construction Branch been in the habit of building one systematic style of yard, or have they varied their style? Not very much. They do not seem to have consulted anybody as to which was the most convenient form of yard.
1513. Do they build the yards according to their own ideas? Yes.
1514. In any case have you found that they were not suitable? I do not know of one case where the yards have been really approved until they have been altered to some extent.
1515. Do you see any objection to having one class of yard adopted, and a standard drawing made of it? I do not.
1516. Would that be a saving of expense and time? There is no doubt of it. We are building some yards that most people like. There are several yards that are well spoken of, in regard to which I have not heard any complaints whatever, and some approved plans might be adopted as a general form of yard.
1517. Does the Construction Branch provide for a uniform depth to which the posts shall be sunk in the ground? That is a thing you cannot do. In some places the ground is very bad, and the soil is very soft, and in others you have to raise the soil. In some places you have to put new soil in to raise the floor of the stock-yard.
1518. Have they any limit to which posts are to be driven into the ground? I do not know that any limit is specified.
1519. You say that some are so shaky that they have had to come up? Yes; they were in level ground where there ought to have been no difficulty.
1520. As far as you know, is there any specified depth? Not as far as I know.
1521. You say that lines have been handed over to you upon which there were no signals erected; is it not a fact that the Engineer-in-Chief or his officer always leave it to you to put up the signals because you have a class of men employed who are accustomed to do that work, and means of doing it better and cheaper? Not long ago the Engineer-in-Chief asked us to erect signals. The signals he adopts are the old-fashioned signals, which we abandoned long ago. We have to alter them and improve them. We wish to make the signals all uniform, and it is much better that they should be so.
1522. *Mr. Mills.*] When the Construction Branch asked you to put up signals, have you to use the old style? They are on the ground, and we do not want to waste them; therefore we utilise them.
1523. *Mr. Waller.*] Is it an understood thing that you erect the signals? Certainly not; it is not an understood thing by any means. We are invited to do it by the Engineer-in-Chief.
1524. Regularly? No.
1525. *Mr. Mills.*] In such cases have you to erect them according to their specification or your own? If we put up the signals, we erect them where we like.
1526. As to the style of signals? We put up those supplied, but we alter the arms and improve them.
1527. When the lines are handed over by the Construction Branch do you find that the points and crossings are of the latest improved kind? I do not know that they are far behind, except in the ball points.
1528. *Mr. Coyle.*] Is there a Consulting Engineer in London to examine the material ordered? I order everything in connection with existing lines. The orders sent home by me are subject to an examination of the material when it is landed here.
1529. Who is the Consulting Engineer in London? I believe Sir John Fowler.
1530. *Mr. Mills.*] Does the Construction Branch still give you the ball points? Yes; we shift them from the main lines.
1531. Are there any in the Storekeeper's Department? I do not know.
1532. *Mr. Coyle.*] Will you supply us with information showing the different classes of work which you have been called upon to perform in order to make the lines fit for traffic after they have been handed over to you by the Construction Department? Yes, but I am not in a position to do so now.
1533. Will you also supply us with a statement showing the necessary additional works which you have had to do upon lines handed over to you by the Construction Department—that is, the alteration works? Yes.
1534. And also works which in your opinion were unnecessary to the traffic on the lines as you received them from the Construction Department? Yes.

Mr. F. J. Wickham examined:—

- Mr. F. J. Wickham.  
29 Dec., 1886.
1535. *Mr. Waller.*] What is your position in the department? I am Accountant for Railways and Tramways.
1536. And what are your duties? It would be hard to define them exactly. I may say that I have general charge of all railway and tramway accounts.
1537. Do those comprise the surveyors' accounts and the district engineers' accounts of the Construction Department? All the accounts, so far as entering them against their various votes. I have nothing to do with the preparation of those accounts.
1538. *Mr. Mills.*] But do they all pass through your hands—all disbursements and receipts? Yes.
1539. *Mr. Waller.*] Also in regard to existing lines as well as lines in course of construction? Yes, everything.
1540. Do you check them in this office? No.
- 1540½. Do you check the additions or extensions? No.
1541. What do you accept as showing that they are correct? The certificate of the Engineer-in-Chief, in the case of the Construction Branch; the certificate of the Secretary or Commissioner, in the case of existing

existing lines. Those vouchers are made out by the examiner, who initials their correctness before they are certified to by the Commissioner or Secretary.

1542. Who is the examiner? Mr. Finigan.

1543. Whom is he immediately under? The Commissioner.

1544. Does he examine all the accounts before they come over? Not accounts for construction, not in Mr. Whitton's branch.

1545. Does he examine all the accounts from the Commissioner's Branch? Yes.

1546. As an accountant, do you think he should examine all the accounts for construction as well as the others? It is only an expression of opinion on my part, but I think he should certainly do so. He would probably have to increase his staff to do so.

1547. Do you think it an advantage to have a separate accountant's branch in the Construction Department? Certainly not.

1548. Do you think it complicates the business? I do.

1549. Do you think it leaves the door open for errors? I cannot say that it does.

1550. But is it an unnecessary multiplication of work? It multiplies work.

1551. As a matter of fact, whose office do the contractors' accounts pass through? Mr. Whitton's only, and the chief clerk's.

1552. Who examines them in reality? Mr. Quodling, as far as I am aware.

1553. Are they not examined here? No.

1554. Not checked here? No.

1555. So that all the contractors' accounts are examined and checked in the Engineer-in-Chief's office? Yes.

1556. Where are they paid? From here and the Treasury, the Treasury principally.

1557. Under what authority? Under the authority of the Engineer-in-Chief's certificate, and that of the Commissioner.

1558. Do they require to be initialled by the Commissioner before the Treasury pass them? Yes.

1559. Does the Engineer-in-Chief sign them himself, or does his chief clerk do it? Not in all cases.

1560. Who signs principally? For the large contracts, the Engineer-in-Chief.

1561. Have you nothing at all to do with those accounts? No; nothing further than passing them through our books, and debiting them to the various votes.

1562. Where do you get the particulars from for that? From the vouchers themselves.

1563. Is there any occasion for these being passed through a separate set of books in the Engineer-in-Chief's office? I am not aware.

1564. Suppose they are, would there be any occasion for it? No.

1565. Are those books of the Engineer-in-Chief, supposing he keeps them, complete? Not as far as the total expenditure is concerned.

1566. Are they complete for any particular line? No.

1567. If there was any trouble or court matter, whose books would be taken as evidence? The books of this office.

1568. Would the others not be recognised? Not that I am aware of.

1569. What is the system adopted in paying salaries—how are they paid? They are generally sent over here. An abstract is prepared, and sent to the Treasury. The Treasury places that amount to the credit of the Commissioner for Railways. A cheque is then prepared by the paymaster, countersigned by the accountant—that is myself—signed by the Commissioner, and the cash drawn and paid by the paymaster, who takes a receipt in every instance.

1570. Who is the paymaster? Mr. Bryant, one of my officers whose room is down stairs.

1571. How does the money come into the possession of the officers? They come over here for it, or, if necessary, I send the money to them by one of the pay clerks.

1572. What receipt do they give you? They sign the pay-sheet.

1573. Do you think that it would be an improvement if the head of each department made out the pay-sheet for the officers under his control, signed it, and drew cheques for the amount of each officer's salary, then forwarded the pay-sheet with the cheques attached to the Examiner. The Examiner, finding them correct, would forward them to you, and you would countersign the cheque. Upon that the head of each department would pay by cheque? I cannot say at present that I see there would be any benefit derived from that. It is a matter that would require thinking over. I send a clerk to pay at Redfern.

1574. *Mr. Coyle.*] Do you pay in cash—notes and gold? Yes.

1575. Are all payments in the department made in that way? Not all payments; wages are paid in cash.

1576. As to other accounts? The majority of other accounts are paid at the Treasury.

1577. By cheque? By cheque, I presume, but sometimes by cash. I am not sure what is the principle. Our station accounts are paid by crossed cheque.

1578. *Mr. Waller.*] Suppose that in sending money out to Redfern in charge of one of your clerks anything happened so that money was lost, who would suffer? That would be according to whether there would be culpable negligence on the part of the pay clerk.

1579. Suppose there was culpable negligence? The Commissioner, I suppose, would call upon the man to make it good.

1580. But suppose the man could not make it good? There is his security bond.

1581. How much money would you entrust to him to take out there? It varies considerably. For salaries I suppose he would sometimes take up to as much as £500, but not so much as that ordinarily.

1582. Is his security bond sufficient to cover the ordinary amount? The bond is up to £400, I think. It would not be sufficient in the case of wages.

1583. Up to what amount do you send wages out in the same way? About £2,000.

1584. *Mr. Coyle.*] In cash? In cash.

1585. *Mr. Waller.*] What security have you against embezzlement, loss, wilful or otherwise, or robbery? No security further than the bond.

1586. And what do you say is the amount of the bond? £400.

1587. Would there not be greater security in the paying of salaries and wages if the cheque system were adopted; or, if it were too much trouble to pay the wages by the cheque system, would it not be better to draw one cheque payable to the responsible officer in each case? It would be very simple to arrange to pay

Mr. F. J.  
Wickham.

29 Dec., 1886.

Mr. F. J. Wickham.  
29 Dec., 1886.

- pay the salaries by cheques if each branch drew their own cheques, but the payment of wages is a different thing.
1588. *Mr. Coyle.*] Where are the wages principally paid? At Redfern, Eveleigh, Darling Harbour, and all along the line, Penrith, Goulburn, Bathurst, Albury, and all other places.
1589. Are there not banks at those places? For the payment of wages at Wagga, say, a cheque would be sent to the pay clerk at Wagga for the full amount. When the pay clerk gets up there he picks it up and cashes it.
1590. Does it require to be countersigned there? No; the cheques are crossed cheques, signed by me, and countersigned by the Commissioner.
1591. *Mr. Waller.*] Are they drawn against a number or against a name? Against wages.
1592. Are they simply crossed in ordinary form, so that they could be paid through any account? Yes.
1593. Are they countersigned at Wagga by anybody? No.
1594. Are they negotiable paper? Yes, as far as that is concerned.
1595. What is the necessity for the pay clerk to go up there? Because he has to pay all the fettlers and gangers along the line. He will pay from Junee to Albury perhaps. The gangs know that he will be there on every alternate Friday or Saturday, and they will congregate at alternate places, where the pay clerk will meet them and pay them.
1596. How many pay clerks have you got? Seven.
1597. Perhaps you will give us their names, salaries, and the lines they pay on? Yes.
1598. Has each one his distinct route? No; we change them about.
1599. Have these pay clerks to provide guarantee bonds? Yes.
1600. Up to what amount? £400.
1601. Up to how much would be entrusted to the care of each of these pay clerks? They would go the bank at Wagga or Junee, and they might then have £2,000 in their possession. The best portion of it would be paid away the same day.
1602. If you start a pay clerk from here on the Southern line, how far do you send him? Two or three will be sent away along one line, and one of them will pick up his money at Junee and start to Albury.
1603. Is the outside limit of the money with which they would be entrusted £2,000? Yes.
1604. On the other sections of the line would it be less? Yes.
1605. And their guarantee bonds amount to how much? £400.
1606. *Mr. Coyle.*] Are the payments made on the Newcastle line in the same way? Yes.
1607. Does the clerk draw the money at Newcastle? Yes.
1608. What amount will he draw there? Say £1,500.
1609. What is the mode in which he draws the money—the cheque, I presume, is sent by post to the bank? No, it is sent up as a valuable letter to the station-master to take care of.
1610. The station-master at the most convenient point? Yes. When the clerk gets up there he converts that into cash.
1611. Does the station-master hand it to him? Yes.
1612. Does he give any receipt? I am not sure that he does. If he does it will be with the station-master.
1613. Would the £2,000 consist of gold, silver, and notes, with which he would proceed on his way to disburse according to the pay-sheet? Yes.
1614. And does he take receipts for payments on that sheet, that is to say, each one who receives the money signs the sheet? Yes.
1615. Who makes out the pay-sheet in the first instance? The time-keepers in the various branches.
1616. *Mr. Mills.*] The local time-keepers? Yes.
1617. *Mr. Waller.*] What means have you of checking the correctness of a time-sheet? The inspectors send in their sheets as to who are working to the time-keepers, and the sheets are prepared in the examiner's office by Mr. Finigan. When they are taken along the line again the men are paid in the presence of the inspector.
1618. Does the inspector send in the names of the men who are working? Yes; an abstract or sheet of the men's time.
1619. Who does that come to? The examiner, who checks and compares them, and sees that all is correct. Then it comes to me.
1620. Is the man who really starts the business the ganger? Yes.
1621. All that the inspector can certify to is that a certain number of men have been there? Yes, that they are actually on the line.
1622. When the sheet goes to the examiner what does he do with it? He checks the calculations.
1623. Which have already been made out by the time-keeper? Yes.
1624. What are the inspector's duties altogether? To inspect the line generally, to see that these men keep the line in proper order, to exercise a general supervision over the whole line.
1625. Are there inspectors of permanent way, each having so many miles of line under him? Yes, they have rolling stock under them also.
1626. Are you speaking of the gangers? No, traffic inspectors.
1627. Would there be any great difficulty in a time-keeper or an inspector receiving a cheque for the amount of money actually due to the men immediately under him? As far as I can understand, there are a thousand and one objections to such a procedure.
1628. Will you mention one of them? It would open the door to great suspicion of corruption.
1629. How many men would there be under one inspector? The inspectors have long districts.
1630. How many men would a time-keeper have under him? It varies, particularly in cases where there is a locomotive dépôt. There you would have a great many. On the permanent way they are differently managed. You almost need to take the permanent way and the locomotive dépôts separately in speaking of inspectors.
1631. I am speaking more particularly of time-keepers. How many men would a time-keeper have under him? A time-keeper in the district engineer's office merely records the time-sheet sent in by the weekly inspectors. He would have 500 to 1,000 men to account for in some cases. The western district ranges from Granville to Bourke.
1632. I am talking about time-keepers? His time-keeper goes over all the time. He knows nothing about

Mr. F. J.  
Wickham.  
29 Dec., 1886.

- about it except from the sheets certified by the various inspectors along the lines. In the case of the permanent way you cannot have a time-keeper, except in the case of the ganger of each gang. A time-keeper is a special officer. If you speak precisely, he is only the time-keeper of the shops. The inspector is responsible for the gangs along his length, and he sends the sheet, showing the time of the men, to the district engineer, the sheet in the first place having been received from each ganger. There are no real time-keepers as far as the fettlers are concerned.
1633. So that really the first man you rely upon for your time being correct is the ganger? The ganger is responsible for his gang.
1634. Who is the next man who becomes responsible for these names not being cooked? The inspector, who knows personally each man in his district.
1635. If an inspector would be capable of doing that when he got the money in his hands, would he not be capable of doing wrong otherwise, of conspiring with the ganger to put men on to the gang who did not belong to it? I do not think so under the present system. There is no system in the world which will stop conspiracy.
1640. *Mr. Coyle.*] What would be the objection to paying the men by cheque? It could not be done.
1641. Is it not done in New Zealand? Mr. Fitzgerald, when he was over here from New Zealand, told us that he paid cash all along the lines.
1642. *Mr. Waller.*] Are you of opinion that it would not an improvement to pay by cheque? Not as far as I can see at present.
1643. Do you think that it would reduce the expenditure, supposing that it was feasible? If you could arrange for the inspectors to pay the wages it would do away with a certain number of pay clerks.
1644. Do you see any objection to that,—we would like you to give us your opinion? I should like to think it over a bit.
1645. *Mr. Coyle.*] Have the inspectors to provide any guarantee bond? I cannot say positively. Guarantee bonds are given where cash is handled.
1646. Would there be any reason if they paid that they should not give security? It is the rule of the service to give security.
1647. *Mr. Waller.*] Is there any limit to the bond you take from station-masters? I do not think there is any limit. I think every case is dealt with separately.
1648. Is it according to the amount of traffic and the amount which passes through the station-masters hands? Yes.
1649. Do you make a station-master find a bond equal to what you believe is the average amount of money which passes through his hands? I have nothing to do with that; each finds a bond.
1650. Who deals with that? The Traffic Manager.
1651. Do we understand you to wish to correct a statement you made previously? Yes, it is with regard to the cheques drawn out and transmitted to the pay clerks, and sent to be cashed in the country. I said that they were drawn in favour of wages, and if lost they would be negotiable. It is not so. The cheques are made out in the name of the pay clerk or order. They cannot be cashed at the bank without the pay clerk's endorsement, consequently if the cheques were lost previously they would not be negotiable.
1652. Did we understand from you that when the pay clerks were paying wages the inspectors were present? Yes.
1653. On all occasions? I believe so.
1654. Bearing that fact in mind, does it not strike you that, as the inspectors have to be present when payments are made by the pay clerk, they could be made the paying medium? They could be.
1655. But do you see certain objections to it? I do.
1656. Who are your pay clerks, and what salary do they receive? R. Ramsden, £320; F. Allworth, £265; F. Thompson, £235; J. Fitzsimmons, £235; F. Coogan, £220; F. Langley, £220; F. Farnell, £205.
1657. Is the total amount of their salaries £1,700 per annum? Yes.
1658. Are any allowances made them for travelling expenses? Yes, 12s. per night per man.
1659. Any other allowance? No.
1660. What are their other duties, take them *seriatim* if you wish? Mr. Ramsden is paymaster's assistant. He helps him with all the clerical work in the office, and travels occasionally to pay, when one of the others is sick or on leave. He always pays at Redfern, and round about Sydney in the shops. He assists Mr. Bryant in his office work. Mr. Allworth always pays the tramways, and along the line wherever he is sent. I change them about from one district to another to prevent collusion. When not engaged in paying he is in the office making out his receipts, and putting his sheets in proper order, preparing receipts for the Auditor-General.
1661. *Mr. Coyle.*] So that his whole time is devoted to the duties of paying and keeping the necessary receipts? Yes.
1662. *Mr. Waller.*] Mr. Thompson—what does he do? He is the relieving clerk in the office, who goes out when the others are on leave or absent or sick. We have to keep a spare man for that.
1663. What are his duties in the office? Clerical work, and assisting generally.
1664. Mr. Fitzsimmons, what are his duties? Pay clerk. He pays along the line, and does work in the office when not on the line.
1665. F. Coogan, F. Langley, and F. Farnell—are their duties the same? Yes, the same.
1666. How much of the time of these gentlemen does it occupy per month to pay? Those who go to the full length of the lines take a full fortnight out of every month.
1667. Could not one clerk take all the duties of arranging all the previous accounts, making them ready for the Auditor-General in the office? I think he could; it would be constant work.
1668. Would it be constant work, and sufficient employment for one clerk? I think it would.
1669. Would you tell us how the district surveyors and the engineers on the Existing Lines Branch are paid; are they paid by the pay clerks? By the pay clerks.

- Mr. F. J. Wickham.  
29 Dec., 1886.
1670. At the same time as he pays the others? Yes, unless some of them leave an order with the paymaster to pay it into the Bank.
1671. By cash in the same way? Yes.
1672. Would there be any objection to sending them cheques for their own salaries? It would take some time to prepare the cheques, that is the only objection.
1673. *Mr. Coyle.*] How many would there be in the service altogether? I cannot say, it is out of my line.
1674. As the railways are extended, will it be necessary to increase the number of pay clerks? Not necessarily. They could be dovetailed in to do the extra work.
1675. Then would it take up their whole time? Yes.
1676. As regards the district engineers on lines of construction and surveyors, how are they paid? The surveyors and district engineers are paid by the Treasury in most cases.
1677. Not through this office? The vouchers pass through this office with an order to pay to the Bank written upon them, and they are paid by the Bank. Where a surveyor or engineer asks to have his money sent to such a place we do it. We draw the money and send it by cheque.
1678. How are the chainmen paid? By the surveyors themselves.
1679. Are the chainmen's wages included in the surveyor's cheque? Yes; the surveyor's salary goes to his private account; the wages of the chainmen go to the surveyor's public account. The surveyor's public account is always paid through this office.
1680. Through what Bank? The Joint Stock Bank at Sydney.
1681. Is he informed that the money is lodged there? Yes; I advise him at once, and he pays by cheque.
1682. *Mr. Waller.*] Why could not that system operate in the same way with regard to paying wages, the cheque being put to the public account of the district engineer or inspector, whose duty it might be to pay? Some years ago the cheques were paid by the inspectors. It was before I came into the office, in Mr. Whitton's time. It was then found that the inspector—I am talking of the Existing Lines Inspector—was his own time-keeper and paymaster, and that he could manipulate the voucher whichever way he pleased, and that was the reason the system was altered back to the pay-clerk system. The Construction Surveyor is only allowed four or five men at the outside. He cannot put more men in because his voucher goes through Mr. Quodling.
1683. But do you say now that the district engineers on the existing lines are paid by the paymaster through the pay clerk? Yes.
1684. And the district engineers, assistant engineers, and surveyors, engaged on lines under construction, are paid by cheque from the Treasury? Yes.
1685. Is it placed to their credit in the Bank if they so desire it? Yes.
1686. But the wages of the men are paid to the credit of the public account of the surveyor, and also to the public account of the engineer? Yes; at the Joint Stock Bank.
1687. But in the event of the district engineers or assistant engineers or surveyors, not stating that they wish this money to be paid to any private account of their own, what do you do with it? We draw it out and send them a crossed cheque.
1688. Do you mix up the district engineers' with the assistant engineers' accounts? No.
1689. How are the cadets paid? A cadet with a surveyor on the Construction Lines Branch would be placed on the wages sheet with the chainmen.
1690. Are there cadets out with the engineers? I do not know of one; they are with the surveyors.
1691. Are these pay clerks on the temporary or the permanent staff? With the exception of one they are on the temporary staff.
1692. What we mean by the permanent staff is appointments which are made by the Governor and Executive Council, and by the temporary staff appointments made by the authority of the Minister alone? What I meant by the temporary staff was those who were paid from votes for working expenses. One man is paid on the general establishment.
1693. Do we understand that those who are not appointed by the Governor and Executive Council can be dismissed at any time by the Minister, and we therefore class them as temporary;—are those gentlemen you speak of on that staff? Ramsden, Allworth, Thompson, Coogan, Langley, and Farnell, are temporary officers in that sense. Fitzsimmons is a permanent officer—that is to say, he was appointed by the Governor and Executive Council, and he was a station-master before he came here. Station-masters are all appointed in that way. The others were appointed by the Secretary for Public Works.
1694. By whom are the payments at Darling Harbour always made? By Mr. Ramsden or Mr. Allworth. We pay at Redfern, Darling Harbour, and all these places every alternate Thursday or Friday. Immediately after those men are paid the other pay clerks start along the lines up country. One starts from Parramatta to Penrith, and he will pay the locomotive and suchlike wages at Penrith, which will keep him at work until late at night. Next day he will go on to Mount Victoria, and the next evening he will be at Bathurst. From Bathurst he will come back to Wallerawang, and pay his way along the Mudgee line; that is one section. Another section will be taken by a clerk who starts from Bathurst, and pays along the line to Bourke. Another man will pay from Granville to Goulburn on to Bungendore. A fourth section will be from Goulburn to Albury, and a fifth from Cowra to Hay—that is the South-western line—and the locomotive work-shops at Junee.
1695. Does the pay clerk who pays at Redfern and Darling Harbour carry all the money with him? One clerk will go to Darling Harbour, another to Redfern, and a third to Eveleigh.
1696. Does each one take the money with him? Yes; after they have checked it over here.
1697. Has the clerk anyone with him? Two clerks go out together.
1698. Is there anyone to carry the bag? Nobody. The inspector or time-keeper helps him when he gets it there.
1699. Does he go unguarded? Yes; there are two or three go out from here. They will go in the same cab. They carry the money in despatch boxes.
1700. Are not the engine-drivers and firemen under some head? Yes; under the Locomotive Engineer.
1701. Could he not pay the men belonging to his own branch? Yes; I do not see why not.
1702. Who are the other clerks who have to pay at Redfern? The workshops, permanent way men, and mechanics have to be paid.

Mr. F. J.  
Wickham.  
29 Dec., 1886.

1703. Is there no head over the work-shops and mechanics in the Existing Lines Department? There are foremen and a superintendent.
1704. Would there be any great objection to the heads of different branches being made the medium of paying their own hands, and taking receipts upon the pay-sheet for the money? That is a matter that would have to be thought out, to see how it would work. The money would have to start from here to begin with, and if it were not distributed by my staff, they would want some one to do the work.
1705. What is the system adopted for getting money in from different places, such as railway stations? Every station-master has two cash bags, sometimes three. He has the key to each of these bags, and so also has the cashier down here. Each station-master makes up his cash every night, and places it in an iron box in a mail or other convenient train. It is so constructed that it has a wind-mill in it, which would prevent a bag from being got out. The cashier has two assistants, and upon the arrival of the train, at half-past 7 every morning, they are there to receive these boxes as they come. They carry the iron box out of the brake van into the cashier's office where they open it. They unlock the bags and count the money. In other cases, in nearly all cases during the last two or three years, where there is a bank close by, the station-master takes his money to the bank, and pays it in to the credit of the Colonial Treasurer. His deposit receipt is signed by the manager of the bank. It goes into the cash bag in the same way as ordinary cash. We pay that in as a cheque, and the bank collect it. That, I may say, is the system that is also adopted in New Zealand.
1706. What system have you of checking the station-masters' accounts? The station-master in every bag sends down what we call a remittance note, which is in duplicate. On the form are printed the words gold, silver, notes, and cheques, and also on the duplicate. The cashier carefully checks this, counts the money, and receipts the one form and keeps the other. The form which he receipts he puts into the cash bag again, and the bag goes back with it to the station-master. The money is carefully checked and deposited in the bank to the credit of the Colonial Treasurer. The cashier prepares a large printed form of all the amounts from each station, and this statement must agree with the amount he has paid into the bank. He submits that to me every day with the duplicate portion of the remittance notes, and I carefully check them.
1707. What check have you as the accountant here against embezzlement by station-masters? I have no check whatever, that is a matter which rests entirely between the Traffic Manager and the Traffic Auditor.
1708. You have nothing to do with it? No.
1709. Is every book that is necessary for the proper keeping of accounts in the Construction Branch, kept in this office? As far as the general book-keeping is concerned, they are.
1710. *Mr. Mills.*] Not the office details? Not the office details of a contract.
1711. What do you mean by office details? The details of progress payments.
1712. Are all interim payments kept here? Yes; they come over to me as the first, fifth, sixth, or seventh advance on account, but the statement which comes at that time will not give me the details.
1713. If the details came over here, could they be kept in this office? Of course, I could keep them if they were sent here.
1714. *Mr. Coyle.*] Would you find it difficult to make out returns and abstracts without these details? I should.
1715. As far as all questions of payments are concerned, do you charge them on to the different votes? Yes.
1716. And are you aware, even better than the Construction Branch of the Public Works Department, what have been the operations upon them? Yes.
1717. Is it because there are operations on the Commissioner's Department not known to the Engineer-in-Chief at all? Yes.
1718. *Mr. Waller.*] What books do you keep in this establishment? The ledgers, expenditure cash books, receipt cash books, journals, schedule ledgers, capital ledgers, and appropriation ledgers. We have to keep two or three sets of each going.
1719. Take the line from Murrumburrah to Blayney, and show us a ledger which will exhibit the expenditure on that line, both by the Construction Branch and the Existing Lines Branch? I could not produce a ledger showing that, I could show you the capital ledger, which shows the totals against each number, according to the schedule.
1720. Is this the capital ledger you produce? Yes.
1721. It appears to show some details under the different heads? Yes.
1722. *Mr. Mills.*] From the loan votes? Not in all cases. Some of it is appropriation from revenue.
1723. *Mr. Waller.*] Where do you procure the items or details which enable you to give these totals? We get all relating to the trial surveys from the Engineer-in-Chief, the legal expenses from the Crown Solicitor, the engineering expenses from the Engineer-in-Chief, and the compensation paid for land resumed from the land valuer. The construction of bridges and sidings, we get from the Engineer-in-Chief, and also from the Engineer for Existing Lines. As to stations and buildings, some trifling amounts may come to us from the Engineer for Existing Lines, but the bulk of it from the Engineer-in-Chief. The permanent way—rails, fastenings, sleepers, and ballast, come to us from the Engineer-in-Chief. Water supply from the Engineer-in-Chief, unless in the case of defective work, and then it would come to us from the Engineer for Existing Lines, and might be authorised by the Commissioner to be charged to capital account. General salaries would come from the revenue vote for the general establishment.
1724. Have you no book which shows the details of these different amounts which you have entered under separate headings? No.
1725. If we desired to see these items where should we be able to see them? The details of the totals we get from the Engineer-in-Chief, the same from the Engineer for Existing Lines.
1726. Would there be any difficulty in having all these items forwarded to this office, and having them embodied in the general system of accounts here? There is no objection that I know of.
1727. Do you think it would be a better system? I think it would be better if we were in one building. Scattered as the offices are, I think it would involve a great loss of time in travelling backwards and forwards.
1728. *Mr. Mills.*] Suppose Mr. Whitton's books were to be lost or destroyed, would you have any record here? Not of the details.
1729. Have you any book that would show the amounts of each vote and the expenditure to the completion of the line, that is to say, in detail? No.

- Mr. F. J. Wickham.  
29 Dec., 1886.
1730. Where would you get that information? From the various branch offices.
1731. *Mr. Waller.*] Do you not think it would simplify the business, and reduce the number of book-keeping branches, if all particulars of everything connected with the accounts of the Railway Department passed through this office and were recorded here? No doubt it would.
1732. Do you think there is any reasonable objection or obstacle to having the whole of the accounts belonging to the Railway Department carried on in this office, so that not only the abstract of the expenditure but also the actual details which create that expenditure should be found here? No further than that I should want a very much larger staff.
1733. *Mr. Mills.*] Would it not then be under one head instead of three or four? Yes.
1734. *Mr. Waller.*] Would the staff you would require consist simply of clerks? I should not want all titled officers.
1735. *Mr. Mills.*] How many officers have you under you? Including myself and the assistant there are twenty-two of us.
1736. Do you find you have too many? Not one.
1737. Are they kept in full work? They are.
1738. What has been the result of the extra hour? Nothing as far as we are concerned, it is all continuous work with us. You have come here at a slack time now. If you came here in January or February you would find all my clerks working up to 7 and 8 o'clock at night, for some months.
1739. *Mr. Coyle.*] Have you a certain amount of work to do daily, and do you stop until it is done? Yes; we have never confined ourselves to a question of 9 to 5 or 9 to 4. The pay clerks are travelling all night, and they work from 5 in the morning till 10 at night. The cashiers commence between 7 and 8 o'clock, sometimes a little after 8 at Redfern. They receive the boxes and count the money up before they come down here.
1740. *Mr. Mills.*] Have there been any reductions or additions in your office during the last twelve months? No.
1741. Have you any cadets? No.
1742. Whom do you find most efficient officers,—men who have been brought up in the Government service, or men who have been trained outside? I have not a man under me who has been brought up in the service from a boy, unless it is one junior clerk, and he was in a lawyer's office before he came here.
1743. Do you find that clerks coming from outside are good and efficient men, and that you can get them as you want them? I have found it so.
1614. What is the system of appointments? Appointments are made by the Minister on the recommendation of the Commissioner.
1745. *Mr. Waller.*] How many of the officers here are permanent and temporary? Mr. Vernon and myself are permanent, and Mr. Bryant, Mr. Neale, and Mr. Glen are permanent. Mr. Ramsden, Mr. Allworth, Mr. Ogilvy, Mr. Lyons, and Mr. Thompson are temporary. Mr. Fitzsimmons is permanent, Mr. De Courcy, Mr. Coogan, Mr. Griffin, Mr. Langley, Mr. Taylor, Mr. Farnell, Mr. Kelly, and Mr. Holmes are temporary. There are seven permanent and fifteen temporary.
1746. Are the returns you have to prepare required under the Railway Act for the Commissioner's report? Yes, and also for the Statistical Register and the Blue Book.
1747. Do they take up much time? An immense amount of time.
1748. Have you supplied any returns for the past year to Parliament? They are always printed amongst the parliamentary papers.
1749. Do you supply many? A great many, and a great many answers to questions also.
1750. How do you manage to do this,—by temporary clerks? No; by our own staff working late.
1751. Do they get any extra pay for that? They have not done so for the last two years. The Commissioner allows them 2s. 6d. each for their tea, but that is not a stated allowance, it is only while they are at work late.
1752. Do you find these offices suitable for your work? Yes; very convenient, but there is not sufficient room for the paymaster.
1753. Do you find you are able to keep good supervision over the clerks? Yes; occupying a position as I do, in the centre of the building.
1754. Have you an attendance book? Yes; according to the regulations.
1755. Would you let us see it? Yes.
1756. When this book is signed in the morning what is done with it? It is brought up to me.
1757. Where is it kept? Down stairs on the counter, and signed as each officer comes in.
1758. Do you initial the sheet each day yourself, to show that you have seen the book and examined it? I look over it every day.
1759. Do you not think it would be a good thing that you should initial it every day? Yes; I think it would be a good thing, and I think I have done so some days.
1760. When clerks leave earlier than the regular hours, from whom do they receive permission? From me.
1761. Do you sign against the time they leave? I write the words "by permission."
1762. At the time when the officers are departing, where is the book? It goes down to the same place.
1763. At what time is that? 5 o'clock; it is with me until then according to official regulations.
1764. Do you find it has the effect of making the attendance prompt? I think it has, although my staff have always been fairly well-behaved in that respect.
1765. *Mr. Mills.*] What is the system of recording and transmitting papers; can it be simplified in any way? Not while the offices of the Railway Department are so scattered.
1766. *Mr. Waller.*] Perhaps you will explain the system? The papers from the Traffic Manager or Locomotive Engineer come to me under cover. The papers from over the way come to me from under the messenger's arm.
1767. What do you do with them after you have received them? To register them in the first process, then I minute them, or take any necessary action upon them.
1768. Do you get papers from the Commissioner? Yes.
1769. How would a paper come from him to you? From the Commissioner through the Record Clerk. Say the Commissioner makes a minute upon a paper to-day, it is recorded this afternoon, and ought to be with me to-morrow morning.

Mr. F. J.  
Wickham.  
29 Dec., 1886.

1770. Do you find that papers are often delayed longer than that? Not often.
1771. Do papers go direct from the Commissioner to Records? No; to the Chief Clerk or Assistant Secretary.
1772. Do they make any additional remarks upon them? No; they may write them off to the Accountant.
1773. *Mr. Mills.*] Does your department occupy this building only? Yes.
1774. *Mr. Waller.*] What is the rental paid? £260, I think.
1775. If the Inspectors were made paying clerks, would you require all the clerks you have here? No.
1776. You would not require the pay clerks? Some would still be required.
1777. But suppose one of them were detailed to prepare the vouchers and accounts for the Audit Office, then I presume you would not require the rest? I think you would want at least two assistants to the paymaster.
1778. What class of assistance would you want? The officers at present employed are qualified to do the work, though some of them are not very good writers.
1779. I see you have one gentleman down here at a salary of £320 a year. The salary of the others vary from £265 to £220? Yes.
1780. If the system of pay-clerks was swept away, what sort of clerks would you require to assist the paymaster? Clerks at from £200 to £300 a year.
1781. What is Mr. Ramsden? He has been a long time in the service, and takes Mr. Bryant's position in the case of Mr. Bryant being sick.
1782. Do you think that Mr. Ramsden with a junior clerk would be able to do the work then? I do not think so.
1783. I mean a clerk on the same footing as Mr. Farnell? You would not save any labour.
1784. To prepare the receipts for the Auditor-General, how many would you require? We should want at least two good men.
1785. That would be upon the understanding that the paymaster would be relieved of paying at Redfern and those places? The system of payment must be altered altogether.
1786. Do you think the amount of the bonds now required is sufficient in comparison with the amount which passes through the hands of these pay-clerks? In most cases I do quite.
1787. How would you recoup yourself if anything went wrong? We could only do it to the extent of the bond.
1788. Well, then, suppose you had a conscientious rogue to whom was entrusted £2,000,—could he not afford to send you £400 to pay up his bond, and then pocket the balance of £1,600? The arrangement of the bond is with the Traffic Manager and Traffic Auditor.
1789. Do you think any improvement could be suggested either in the manner of doing the work, or any possibility of reducing the number of hands? We cannot reduce under the present system of working.
1790. *Mr. Mills.*] Do you find the work increasing? Every extension adds to our work. We have had no increase to the staff for two years; but during that time there has been a great increase of work.

THURSDAY, DECEMBER 30, 1886

Present:—

Mr. J. Y. MILLS, | Mr. T. F. WALLER,  
Mr. J. E. FITZGERALD COYLE.

Mr. John Vernon was examined:—

1791. *Mr. Mills.*] What are you? Assistant accountant.
1792. Will you define your duties? My duties are rather general in their nature. I have charge of all the books and accounts; that is, not the actual working of the books; I have the preparation of the Estimates, Commissioner's reports, so far as statistics go, and the general business connected with the accounts. Mr.  
J. Vernon.  
30 Dec., 1886.
1793. Do you check the correctness of all charges, and of all balances? Yes.
1794. Have you anything to do with the paymaster? No; that is, only in Mr. Wickham's absence when acting for him. The paymaster deals with Mr. Wickham direct.
1795. Do you see the vouchers and pay-sheets? Not as a rule, unless there is anything in them to make it necessary that they should be referred to me. If an account wants looking into I get it from the book-keeper.
1796. *Mr. Waller.*] When vouchers come in for payment, do they come to you first, or to the paymaster? To the cash-bookkeeper.
1797. Who is he? Mr. Hellyer.
1798. What does he do with them? He enters them.
1799. And then what? They go down from him to the paymaster.
1800. Direct? Yes; the paymaster makes them up into abstracts to suit the Treasury and they come to the clerk here, Mr. Holmes, who enters them into a book which we keep to suit the Treasury, so that our balances may compare with the Treasury balances.
1801. What do you call that book? The appropriation ledger. It may be better described as a balance book because it shows the daily balances on the votes.
1802. Is that against each account? Against each vote.
1803. Do you keep them on the bank principle? It would be on the bank principle. The principal books of the department cannot be written up daily.
1804. Does this book show the total amount of the vote to each of these particular accounts? Yes.
1805. Can you see at a glance whether you are up to the full limit or not? Quite so.
1806. As a matter of fact do the accounts come here from all the departments of the railway, from the Traffic Manager's office and the stores? Everything connected with expenditure or receipt comes here.
1807. Are the accounts not checked here? No; they are checked prior to coming here.
1808. Do you accept the accounts that come here as being correct when they are certified to by the proper officers? Yes.
1809. Do you simply record them in your books? Yes.

Mr.  
J. Vernon.  
30 Dec., 1886.

1810. And how are your books audited? They are not audited. The accountant's vouchers as they go through are audited by the Auditor General.
1811. All the vouchers? All the vouchers; and he makes up his balances, and I presume sees that they agree with ours so far; but our books have never undergone what I should call an audit.
1812. *Mr. Mills.*] Do they represent transactions in money that require auditing, or are they not merely entries? I think you may regard them merely as entries.
1813. Do you yourself think they ought to be audited? I do not see any necessity for their being audited.
1814. *Mr. Coyle.*] Must all vouchers for the payment of money pass through the Auditor General? Yes.
1815. Of every description? Of every description.
1816. Are the paymaster's books audited? The accountant goes through all the paymaster's transactions. His books are confined to the accountant for his advance account in paying off the wages of men. He goes through all that carefully day by day.
1817. *Mr. Waller.*] When you speak of the accountant whom do you mean? The accountant for railways, Mr. Wickham.
1818. *Mr. Mills.*] Does Mr. Wickham audit the paymaster's advance account daily? Yes; to see that the paymaster is authorized in paying away what he has paid away.
1819. *Mr. Waller.*] Who is actually responsible for the paymaster—is it the paymaster himself or Mr. Wickham? Mr. Wickham. I presume he would be held responsible for not finding out anything which might be wrong, for not keeping a proper check.
1820. Does not that pretty well amount to Mr. Wickham auditing his own work? No; I think not, because Mr. Wickham does not interfere with cash in any way. He does not receive cash, and he does not pay it. The paymaster is really a subordinate officer of Mr. Wickham. Mr. Wickham's audit is simply an immediate check. Of course after that the traffic auditor comes down to see that all accounts are properly entered and accounted for, but the immediate audit is by the accountant.
1821. Is there another audit afterwards? Yes, the traffic audit.
1822. *Mr. Coyle.*] Would you define the traffic auditor's duties? The larger portion of his duty is confined to station accounts, and he also audits the paymaster's advance account.
1823. Do you refer to the paymaster in this building? Yes. He sees that all payments are accounted for, and that the balance shown by the paymaster in his books is the balance shown at the bank.
1824. Does he audit the books kept by the heads of branches as far as relates to any money transactions? I do not know of them at all.
1825. In the locomotive and other branches? So far as I know officially they do not keep any books.
1826. None at all? They may keep mere records of running, but I am not aware that they keep any books of account.
1827. Is there no auditor but one, the traffic auditor, who also has the auditing of the store accounts too? Yes.
1828. *Mr. Waller.*] Do we understand as a matter of fact that there is really a subsequent audit, that is to say quite irrespective of Mr. Wickham, but beyond all that Mr. Wickham does in connection with the paymaster's accounts? Yes, there is.
1829. *Mr. Mills.*] Would Mr. Wickham be a daily check upon the paymaster? Yes.
1830. *Mr. Waller.*] If there is anything wrong would the auditor discover it? Quite so.
1831. Are you aware of the system adopted of paying wages and salaries along the line? I am.
1832. Are they paid by the pay-clerks? Yes.
1833. Do they come under your control? No.
1834. But do you know the system? Yes.
1835. As a matter of fact has the inspector to be present when the money is being paid by the pay-clerks to the different persons who receive it? That is the rule; either the inspector, or in the case of a depot, one of his clerks.
1836. Presuming that the inspector has to be present, do you see any objection to the inspector paying the money and having the pay-sheet signed by each individual man as he receives it, and as a further guarantee, if necessary, of the money having been paid to the proper men, require the ganger to sign at the end of it? In that case you would divide the responsibility of the distribution of money very largely. That has been considered an objection. I know that that system is in vogue in other places; in Victoria, more particularly, they adopt that system.
1837. We are asking you for your own opinion? I do not know that there would be any objection, provided that they gave security.
1838. Do you think that the dividing of the responsibility in respect to these large sums of money amongst two or three different inspectors would not decrease the risk instead of increasing it? I do not think it would decrease risk, I think it would rather increase it.
1839. Why? I am looking now at the class of inspectors, that is the class of men they are—I am acquainted with most of them—and they are not men of education, or having any experience in dealing with accounts.
1840. You must bear in mind that they have not to deal with any accounts? They would have to deal with money, and take receipts.
1841. All that they would have to do would be to see that a man, say Tom Smith, received the wages due to him, and that he signed his name upon the pay-sheet? Then the system you propose would be different from the one I was thinking of in Victoria. The pay-sheet would be exactly the same as at present, would contain the receipt of each man opposite the amount due to him. I do not know that there would be any vital objection; I cannot see it at present. It is a matter that you would need to go into and think over.
1842. *Mr. Mills.*] Who prepares the pay-sheet? There are lots of them—do you mean wages pay-sheets.
1843. Yes? They are prepared at each inspector's and district-engineer's office.
1844. If they are competent to prepare the pay-sheets, will they not have ability to distribute the money? The permanent-way inspectors do not prepare their sheets, and these have to do with the men we have the difficulty in paying, those are the fettlees. Where you have a locomotive inspector, he is a man of more education than the permanent-way inspector, because he has to deal with machinery.
1845. Let us confine ourselves simply to the permanent-way men? The ganger has simply a rough book, which he sends in to the district-engineer's office. It is just a time book, and in the district engineer's office the wages sheets are made up from those time books at the end of the fortnight. 1846.

1846. *Mr. Coyle.*] How many inspectors would there be under one of the district engineers? There might be four, five, or even ten, according to the length of the line.

1847. Would there be any difficulty in sending the money direct to the district engineer, and letting him distribute it among the inspectors, who would have to pay the men, each officer taking receipts from those below him? Personally, I should not like the idea at all.

1848. What would be your objection to it? Simply the objection I mentioned before, the distribution through so many hands, and the fact that I think you would have a much simpler method of payment than that, quite apart from the present system.

1849. *Mr. Waller.*] What would that be? By the station-masters' paying.

1850. Paying the fettlees? The whole of the men, except at the large depôts.

1851. *Mr. Mills.*] Would they be nearer to the men? Yes, and they are already responsible for money. The fact is that for some time past I have been convinced that the present system is not elastic enough.

1852. *Mr. Waller.*] Are not these fettlees supplied with trollies, and would thus be able to go to the station-master's office, get their money, and sign the pay-sheet there? In nearly every case they could. There might be cases where stations were a long distance from one another, but they would be few, and in those cases you might take the inspector.

1853. *Mr. Coyle.*] Have the station-masters to provide fidelity and guarantee bonds? Yes.

1854. To what extent? They vary in amount according to the takings at the station.

1855. *Mr. Waller.*] Presuming that the change could be made in paying through the station-masters, how many pay clerks do you consider would be required? I think you would want either two or three.

1856. Is that to prepare the vouchers for the Auditor-General? Yes, and in any case to do the work at the Sydney station. The station-master could not pay there. Take Bathurst or Goulburn. We have now our station masters paying the men round those stations. The system is now in operation there, but it is found to interfere with the duties of the station-masters. At those depôts where there are 500 or 600 men to be paid, I think you would find it necessary to send a clerk to do it.

1857. Are there not officers of the Audit Office, clerical staff, and inspectors constantly travelling up and down? Yes.

1858. Could they not be made to do the work? Not so far as the audit is concerned, certainly not.

1859. *Mr. Waller.*] Coming back again to the inspectors paying. Your objection is on account of the class of men who are inspectors? Yes; but my remark had special reference to those on the permanent-way.

1860. As regards those men, is it not a fact that between those inspectors and the gangers that your time and pay-sheet is made up? It originates with them.

1861. If they are trustworthy enough, and intelligent enough for you to pass the whole of your payments on their reports, do you not think they would be trustworthy enough to hand out the money to the men, the inspector being there to pay them? He might or he might not, it is entirely a different business.

1862. *Mr. Mills.*] In the case of the large stations, is there not a sort of resident superintendent over the yards? No.

1863. *Mr. Coyle.*] At places like Goulburn, what other officers are there besides the station-master? The District Engineer is there. The station-master, and the locomotive inspector are the leading officers.

1864. *Mr. Waller.*] Why could not one of those act as paymaster—is payment made once a month? No, once a fortnight. I wish it was once a month, it would simplify matters very much. We have to pay once a fortnight, and to pay on a certain day.

1865. Is that the law? It is an unwritten law. If we do not pay on a certain day, there are half-a-dozen members of Parliament down here to know the reason why.

1866. Do you think there would be any very great obstacle in the way of bringing in a system of paying once a month? I do not think there should be.

1867. *Mr. Mills.*] Would it be a saving? It certainly would; it would reduce the work by one-half.

1868. Are the officers paid monthly? Yes.

1869. Then is it only the labourers who are paid fortnightly? Yes. It strikes me that in the event of any change being made, the first month's payment would be the only trial they would have to submit to.

1870. Do you keep any of their pay in hand up to date? At the date of paying there will be a week's pay in hand due to each man.

1871. *Mr. Coyle.*] In paying the men at such a place as Goulburn or Redfern, is their cash counted out and paid across to them? The cash is made up for each man in an envelope before it is taken out. He calls at the window and pays in his receipt, which has been prepared beforehand by the time-keeper, and the money is then handed to him.

1872. When is the money counted out? It is counted out in the paymaster's office below and made up into packages.

1873. Are the receipts made out down below? No; they are made out by the time-keeper and given to the men. There used to be serious loss of time at the window.

1874. Do all wages-men give receipt? Yes.

1875. *Mr. Waller.*] As regards the permanent-way men, where is their money paid? In parcels in the same way. The clerks take their sections of line, and they go down to the bank. They take out the number of £1 notes or £5 notes, or gold, or silver they require. They take that with them on the sections, and pay each man as they come in. In some cases a careful man as he travels from one station to another will occupy himself in making up the bundles, but that is his own business.

1876. What receipt will they take? A written receipt.

1877. A separate receipt? Very often a separate receipt.

1878. Would it not be better to have the receipt on the pay-sheet itself? It would be simpler as far as the pay-sheet is concerned, but when a man has a receipt already written out he comes with it and there is no delay. He takes the money and goes on. While the clerk is paying the wages a train may be waiting at the station for him, and that being the case we have to adopt the quickest method to get the pay-clerk off. There are some men who would take five minutes to sign their names.

1879. If you got rid of the travelling clerks and paid through the district engineers, and in some places through the station-master, would you have such delays as you refer to? If the men were paid at the station we should get rid of all that.

Mr.  
J. Vernon.  
30 Dec. 1886.

Mr.  
J. Vernon.  
30 Dec., 1886.

1880. And get rid also of what must be a great nuisance, a lot of loose documents? It is a nuisance when they have to be pasted on at the back of the sheets. I suppose you are aware of the Victorian system.

1881. *Mr. Mills.*] What is their system? They make up the bags in the office for each gang. The nearest inspector comes and signs the receipt for the whole of the bags belonging to each inspector. These bags are placed in a flat tin box, labelled with each inspector's name. He takes the whole of them and hands them out to the different inspectors, giving No. 1 box to No. 1 inspector. The ganger takes the receipt from the men and sends them back to the nearest railway station.

1882. *Mr. Coyle.*] Do you see any objection to the introduction of a similar system here? No; I cannot say that I do. Their system would merely refer to the permanent-way men.

1883. *Mr. Waller.*] Have you anything to do with the construction of lines? No.

1884. Why could not that system be extended also to the payment of the locomotive branches. You have heads of every branch, why could not the same system be adopted with them also? I do not see that there would be any objection to it, except that a man would be paying a sheet compiled by himself.

1885. But you now trust to his sheet? Yes; but you pay by an entirely different man, by a man who knows the men. If the inspector chose he could, quite unknown to the time-keeper, put a dummy name on the pay-sheet, and if he had the paying of the men on that sheet he would be in a position to reserve the money payable to the dummy for himself, and no one would be any the wiser.

1886. Why could not the time-keeper do it? The time-keeper could do it. If you are going into that I would prefer that in cases where large numbers of men were employed you should select a clerk from the Traffic Branch to go over and pay the locomotive men, and a clerk from the Locomotive Branch to go over and pay the permanent-way men. That, it seems to me, would be an additional check. In talking the matter over with Mr. Speight, of Victoria, with whom I had the pleasure of an interview, I found that that was his idea.

1887. *Mr. Mills.*] It would establish a sort of cross-check on the men? Yes; that would destroy any objection on the ground of conspiracy.

1888. *Mr. Waller.*] As regards the fidelity bonds, no doubt you have thought of that matter too? Yes.

1889. Do you consider that the amount fidelity bond, £400, for a man who must be entrusted with £2,000, is a sufficient security? No; I do not think it is, because you entrust him with the money in cash.

1890. Suppose a pay clerk at Newcastle had £2,000 in his possession, are there not a large number of ships leaving constantly, and if he were dishonest he could easily get away? There might arise circumstances in which he could get away.

1891. Have not people travelling with large sums of money been robbed sometime, robbed in reality, and in others the robberies have been put up? That is possible.

1892. And your remedy against that is only £400 as against £2,000? Yes.

1893. *Mr. Coyle.*] Assuming that some system such as we have been discussing of station-masters or engineers paying, how many of the present number of pay clerks would be required in the service still? I think two or three would be required in the office to do the adjustment of the vouchers, examine them, and send them to the Auditor-General, and also to make up the accounts for transmission to the Treasury. I think you would require three.

1894. *Mr. Waller.*] The class of clerks you would require for that would be fair ordinary clerks? Yes, it would be chiefly routine work.

1895. Very much such business as is done by what are called invoice clerks? Yes.

1896. *Mr. Coyle.*] As to the carriage of different classes of goods—heavy goods—what is the price per ton charged; is it uniform over the lines? Yes.

1897. What is the rate for wool? That depends upon the station. As we have to compete with Victoria, we are carrying wool at very low rates.

1898–1899. Say within 100 miles of Sydney, would the rate be uniform. What is the rate per ton per mile, as far as it is uniform? Wagga is distant 309 miles, and the rate per bale from there is 9s. Nevertire is distant 341 miles, and the rate from there is 11s. per bale for the whole distance. There is an arbitrary rate established for wool.

1900. What is the average weight of a bale of wool? 4 cwt. They are reckoned not to weigh over 4 cwt.

1901. As to the general run of farm produce, what is the rate? It comes under class A.

1902. What would be the rate (say) from Goulburn? That would be 12s. 4d. The rate sheet is divided into classes from one to four, and farm produce is carried under a special class.

1903. What goods go under classes one to four? I have here a pamphlet which shows the various kinds of goods which fall under the various classes.

1904. What are the rates per ton per mile, taking a distance of 50 miles? That is a little over 4d. a ton per mile.

1905. And the second-class would be what? About a 1d. more.

1906. What class does the carriage of permanent way material come under? Under the first, which is the lowest class.

1907. What will it cost you to carry it? That is a matter I could not answer.

1908. Would it cost you 2d. per ton per mile? I do not suppose it would cost more than that.

1909. What is your rate for the carriage of coal? There are varying rates for that—a penny a ton per mile from Lithgow.

1910. Then you will be running the Lithgow coal at a loss? No, we are not running it at a loss. Coal in that case is a return traffic.

1911. Have you a large number of trucks which would otherwise be running empty? Yes.

1912. What would be the value of rebate on trucks? All the trucks belong to the Government on this side.

1913. Do you make any profit out of running the coal? We do not; it appears to me to be a minor form of protection perhaps.

1914. So that out of the permanent way and other railway material carried, there will be a profit of over 2d. per ton per mile? Perhaps so.

1915. *Mr. Waller.*] Do the railway men load the permanent way material, and do the owners of coal load up the trucks? Yes.

1916. *Mr. Coyle.*] As a general rule, do you unload the permanent way material? We are bound to unload if the contractor likes to make us. When the material arrives from England our yards are generally stacked

- stacked full, and we shove it into the trucks at once, and send it up to the terminus of either line.
- 1916½. Do you consider that delivering material free of cost at a station implies delivering it stacked on the ground? Yes.
1917. Would you consider that permanent way material delivered in the trucks would be delivered free of cost? No.
1918. Does all contractor's material such as cement, timber, and other things, come under this head of charge—that is, under the first-class? You will find all particulars by reference to the published list.
1919. *Mr. Waller.*] What would be the cost of loading and unloading railway iron per ton? About 3s. I should think.
1920. That added on to the charge of 2d. per ton per mile over fifty miles is nearly a penny a mile in addition? Yes, nearly, say three-farthings.
1921. Under the present system of working the staff, do you see any way of reducing the number employed in connection with the accounts? As the accounts are in the books at present, I do not think you could possibly reduce. I have eliminated every bit of detail I could.
1922. Do you see any way of reducing the staff in the office? I see no way of reducing my staff. As a matter of fact the hour a day extra does not make much difference to us, we have always been accustomed to work during two months at least, very often until 10 o'clock at night.
1923. *Mr. Coyle.*] If you have work to do, must it be done? Yes, that is the rule, and any clerk coming in here is made to understand that.
1924. *Mr. Waller.*] If you had fewer parliamentary returns to supply could your staff be reduced. It might be if you were to do away with certain returns that we have to keep now, but I see that they go into very much the same detail in the records of private railway companies.
1925. Do you think it would be an advantage to compute the actual cost of the returns called for by Parliament? I am trying to get an estimate of the cost of the returns furnished during the last session.
1926. I mean do you think it would be an advantage to have the cost of compilation printed upon the return itself? Yes.
1927. As a matter of fact are there many cases where information asked for by a member of Parliament could be obtained by his going to the office direct, or writing to you—without the expense of compilation? Yes.

Mr.  
J. Vernon.  
30 Dec., 1886.

Mr. John James Bryant examined :

1928. *Mr. Waller.*] What is your position? I am Paymaster of Railways.
1929. Would you tell us what your duties are? All the vouchers that go through the accountant's books upstairs are sent down here to be placed in abstracts. Those we pay have to be made out in duplicate, one we keep in this guard book, the other goes on to the Treasury. When the Treasury places the amount of the voucher to the Commissioner's credit, they pass this on to the Auditor-General. The Commissioner signs the receipt printed on the back of the voucher, as having received the money.
1930. Have you the duplicate of that? Yes, and we have to adjust the amount for the Auditor-General. We have to furnish him with a receipt for every item contained in the voucher.
1931. *Mr. Mills.*] Is this money credited to the Commissioner in the bank? Yes.
1932. By whom? By the Treasury.
1933. *Mr. Waller.*] When? After they get the abstract; it may be a week afterwards, or it may be two days.
1934. How do you adjust that with the Auditor-General? We enter the total of each amount upon a special adjustment voucher, which covers the receipts we send on to him showing the payments we have made.
1935. Do you pay much money through your hands? About a million and three-quarters a year.
1936. Through this office? Yes.
1937. How;—in cash or cheques? About three-quarters of it, or more, would be cash.
1938. Do you give a fidelity guarantee bond? Yes.
1939. To what amount? £2,000.
1940. What is the largest amount of money that passes through your hands at one time? About £50,000.
1941. But not in cash? That is cash. Our wages payments amount to over £50,000 a fortnight.
1942. How many assistants have you? Seven.
1943. In this office? Yes.
1944. Have your seven assistants the handling of money also? £2,500 or £3,000 at a time.
1945. *Mr. Mills.*] Is that each individual? Yes.
1946. *Mr. Waller.*] Then each of them might have that amount at one time? Yes.
1947. That is each of the seven clerks might be entrusted with money to the amount of £2,000? Yes.
1948. What are their fidelity guarantee bonds? £400.
1949. Are they always in the office? No, they are travelling along the line. I have two in the office, and five are travelling pay clerks. I have one as a relieving clerk. They have to pay in Sydney all the money for the mechanics employed in the Locomotive and Permanent Way branches, and they have to roll up each man's money and put his name on it.
1950. Where is that done? In this office.
1951. Does that take up much time? About two days in every fortnight. The tramway employes are paid every fortnight. We pay the railway employes this week, and the tramway employes next week. We have to send to different places to pay this amount, to North Shore, to Randwick, and to the shed at the corner of Gipps and Pitt-streets.
1952. How do the clerks go out? They go by tram to Randwick, but to Pitt-street and the Station they always take a cab. I do not like them to have too much money on the tram.
1953. When they get to Pitt-street do they separate, each one goes on his own individual responsibility? Yes. There are two classes of locomotive employes, the mechanics, and engine drivers, and cleaners. Then we have to pay all the porters and goods porters at Darling Harbour, and also the permanent way men. There are generally some permanent way men working there, and the locomotive men are at Eveleigh.

Mr.  
J. J. Bryant.  
30 Dec., 1886.

Mr. J. J. Bryant. 1954. Did it ever occur to you that there is a certain amount of risk in that system? I think the risk is reduced to a minimum. If each man did not give me receipts for that money I should know something was wrong.

30 Dec., 1886.

1955. What would you do? I should report the matter at once.

1956. What would be the final result, if you were short by £2,000? I cannot say, I suppose there would be an investigation.

1957. Would you be liable? Not if I took all necessary precautions, not as long as I could show that I had carried the system out properly.

1958. Suppose £2,000 went astray where would you get it from? I cannot say.

1959. That being the case is there not a certain amount of risk? There is a certain amount of risk in everything.

1960. *Mr. Coyle.*] Is there no other means of recouping except the fidelity guarantee? That is all, to the extent of £400. The men know when they are to be paid, and if they are not paid at a certain hour they would make a noise about it. The pay clerk begins to pay at 4 o'clock, when the men leave off work, and if he was not there at a quarter to four o'clock the timekeeper would telegraph to me to know where he was.

1961. *Mr. Waller.*] Do you send the men up the line? Yes. If they do not commence to pay on a certain day the men would want to know the reason why. We should be advised by telegraph.

1962. We are not speaking of the men, but of the system? I have been carrying out the system for the last twenty years, and nothing has gone wrong. That speaks well for the system.

1963. Is it not a very expensive system? I do not know that it is. If you take everything into account I think you will find that it is not. In America they used to run pay trains, and in Queensland they tried the same thing. They wanted a pay train here, but to that I strongly objected. That I looked upon as an expense from which nothing could be gained. We pay by the goods trains, and when the pay clerks cannot travel by the goods trains they travel by the mixed trains, that is mixed goods and passengers.

1964. *Mr. Mills.*] Every fortnight? Yes; we pay the locomotive men this week, and the tramway men next week. It is a fortnightly pay.

1965. *Mr. Waller.*] Would it not be better to pay once a month? I am strongly in favour of paying once a month, but the workmen object.

1966. *Mr. Coyle.*] Would there be much objection on their part after the system was once established? I do not see that there could be the slightest objection after the first fortnight. In Victoria they pay monthly. By the present system we have to do the work twice over; the labour involved by paying once a fortnight would be lessened by one-half if we paid once a month. If the Commissioner were to determine to carry the thing out perhaps the men would not object.

1967. *Mr. Mills.*] Would you recommend it? I have spoken about it, I cannot do much in the way of recommending anything.

1968. *Mr. Waller.*] As regards your staff, have you too many hands? Not to carry out the work.

1969. Could you not do with fewer hands? We are a man short nearly all the year round; that is the reason why I have a relieving clerk. If each man in the building takes three weeks holiday in the year, you must have a man to fill his place.

1970. *Mr. Mills.*] Is that holiday allowed by the Civil Service Act? Yes.

1971. *Mr. Waller.*] Do you find the men do their works well? Yes. They do not work from nine until four, but sometimes from six in the morning to seven or eight at night.

1972. Is there one time-book kept for the whole establishment here? Yes.

1973. What difference does the extra hour a day make, is it not equal to one man in eight? That does not follow in our case. The pay clerks travelling along the line have never been in the habit of working from nine to four. They have to leave at whatever time the train leaves. Some leave at 6 o'clock in the morning, and some leave earlier during the summer months. They have to leave with the goods train and pay to the end of the day, it may be 7 o'clock at night.

1974. *Mr. Coyle.*] As to the office staff, cannot they get through more work? They cannot.

1975. Is there a certain amount of work that must be done every day? Yes.

1976. Before the extension of the office time by an hour a day had the work to be done the same as now? Yes, if we stayed until 6 o'clock it had to be done.

1977. Were you not able before the extension of hours to do the work in all cases? No.

1978. *Mr. Mills.*] Has the work increased? It increases every year. Every year there is more traffic, and there are more employees.

1979. Have you had more hands put on in this office during the last twelve months? No. I may say that I have an advance of £1,000 to pay off men and anything which may be pressing.

1980. A sort of large petty cash system? Yes; I do it differently. Instead of sending money along the line to pay accounts I pass the money through my public account and draw cheques against it.

1981. *Mr. Waller.*] Where is your public account kept? At the Joint Stock Bank; all the Railway accounts are kept there.

1982. *Mr. Mills.*] What is your system of dealing with that thousand pounds? You will see it upon examination of this book. I draw against the amount myself, and I pay anything which is immediately pressing. The sums which pass through this book amount to £80,000 or £100,000 a year.

1983. Do you draw in favour of a number or a person? Of a person; I cross the cheque, and write "bank" upon it.

1984. *Mr. Coyle.*] Are these cheques issued in payment for vouchers? Yes.

1985. *Mr. Waller.*] Do you get the voucher before or after the payment of the cheque? I send it to our station-master to pay, and he sees to the receipt being obtained. He actually pays the money.

1986. Do your cheques always go to the station-master? Yes.

1987. Do you look to him to pay the money and return the voucher? Yes.

1988. *Mr. Coyle.*] Do you think that system could be extended? The station-masters at Goulburn and Bathurst do pay wages now, but both of them complain that it takes up too much of their time.

1989. *Mr. Waller.*] But are there not other responsible officers at Goulburn and Bathurst, the District Engineer for example? I do not know that it is advisable to send the money to the District Engineer. The reason we sent to the station-master at Goulburn was that our clerks could not get into Goulburn until the Saturday afternoon. The men leave work at 1 o'clock, and they complained that it took all their time

time during the afternoon to wait for payment. The Commission then decided that the station-master should pay.

1990. Are there not some other officers of standing besides the station-masters at Goulburn and Bathurst? There are the District Engineers and the Locomotive Inspectors.

1991. *Mr Mills.*] Is there a clerk under the station-master? Yes, the clerk actually pays. The money is sent to the station-master, and the station-master is held responsible.

1992. Do you find as a rule that there is much delay in the station-master returning these vouchers? There is a good deal of delay with some of them. Some of them return them very quickly; to others I have to write three or four times.

1993. Could you suggest a system by which they could be compelled to be more prompt? The only thing I could do would be to report the matter to the Traffic Manager.

1994. Does it delay you in closing your accounts? Yes, I cannot adjust them until I get the vouchers back.

1995. Do you think this delay is of such a nature that it ought to be put a stop to? I think it would be well to have an order given.

1996. Does it open the door for laxity? Yes.

1997. *Mr. Coyle.*] What is the reason of it; is it not that the stationmaster may not have an opportunity to pay the men? That may be so in some cases.

1998. *Mr. Waller.*] Do all these payments refer to men's wages? No.

1999. Would it be a good plan to provide that if the station-master did not return the vouchers to you twenty-four hours after he had paid the money he should be fined? I drew up a circular to that effect some years ago, and wanted the accountant to get the Commissioner to sign it, but he never did. I do not think you can be too particular in these matters.

2000. Any laxity in matters concerning money opens the way to error and graver irregularities? Yes.

2001. *Mr. Mills.*] Do you pay all the accounts of the officers for the Construction and Existing Lines Branches? We put them into the abstract for the Treasury, but we do not pay them. I only pay according to an authorisation written on the voucher.

2002. What is the system of paying the Construction Branch? We pass their cheques through our books. They are sent up to Mr. Holmes to be entered against the different votes. It is then sent on to the Treasury.

2003. *Mr. Waller.*] Do you get a voucher from the Engineer-in-Chief's Department showing the salaries? Yes. When the sheet comes from the Engineer-in-Chief it is entered through Mr. Wickham's books, sent down here, and I have to place it in abstract. The voucher goes to the Treasury, and by-and-bye to the Auditor-General for adjustment.

2004. Is there any copy of these accounts kept here by you? Only the totals.

2005. *Mr. Mills.*] Are they paid by separate cheques? We pay the salaries in money over the counter. I send across to the gentlemen in each room, and they come over to receive the money.

2006. *Mr. Waller.*] Is there any necessity for any further bookkeeping with regard to these pay-sheets than that undertaken by this office? I do not see that there is.

2007. Is it necessary that the whole of these should be kept in another office? I do not consider that it is necessary.

2008. If it were done in another office, do you think it would be unnecessary? I think so.

2009. *Mr. Coyle.*] Does the Locomotive Branch prepare a voucher similar to this? Yes.

2010. Do they keep a set of books, showing in detail all these payments? They do; they are charged to each vote. It may not be altogether to working expenses; the men are engaged in repairing engines and all that sort of thing.

2011. I mean for wages and salaries? They prepare a voucher like this, and also keep detail books in each branch of the department. They have to keep their time-books. I am not aware that they keep any other books.

2012. Do you know what class of books they keep in the Construction Department? I could not say.

2013. *Mr. Waller.*] Are there other accounts besides these—accounts for surveyors,—do they come through you? Yes.

2014. On a somewhat similar form to this? Yes, I have their form here.

2015. Does it provide for payment of other amounts? Yes.

2016. Are the particulars of these sheets recorded in the books of this office? No, simply the number of the voucher. This voucher is from Henry Hardy, for men's wages it would so appear.

2017. Do you keep a copy of the vouchers? No, they go to the Auditor-General.

2018. Suppose there was a copy of them kept in the Construction Branch, would there be any necessity for booking them? No.

2019. Would there be any gain in putting them through a set of books? No. The charge is entered in our books to the vote. If they want to know the balance they have simply to send here for it.

2020. Presuming the payments of wages were to be made monthly instead of fortnightly, do you think it would be an advantage that the pay-sheets should be signed, instead of dockets being used which have to be made out by the timekeeper. Would it simplify it to have the signatures on the sheet? Yes, we used to do that, but the men complained of being kept too long waiting for the money. We pay the men in their own time, and the last man on the sheet might have to wait an hour. We used to pay 500 men in three hours and a half. I had three men reading from the sheets which were signed.

2021. Have you any suggestion to offer for simplifying or expediting the business of your department? It would greatly expedite the business of the department if an advance were given to the Commissioner for, say, £150,000.

2022. For what purpose? To pay wages and other matters.

2023. Who would operate upon it? It would be operated upon by the paymaster and one of his clerks.

2024. What security would there be against misappropriation of the money? The accounts would be examined daily.

2025. By whom? By the accountant.

2026. Whom do you mean by the accountant? Mr. Wickham, the Accountant for Railways.

2027. And would vouchers be produced to show that the amounts drawn were properly drawn? Yes.

2028. What subsequent audit would you have to prevent any collusion? —

Mr.  
J. J. Bryant.  
30 Dec., 1886.

- Mr. J. J. Bryant. 30 Dec., 1886.
2029. *Mr. Coyle.*] Would the audit go through the same form as at present? Yes, only we could operate upon the money at once.
2030. *Mr. Waller.*] What would be the great advantage derived from such a system, either to the office or to the department in general? Greater expedition in the payments. We could, as soon as the vouchers reached us, pay before they were entered up by the accountant and sent to the Treasury.
2031. What payments do you particularly refer to as having to be made from this fund? Wages, and the ordinary accounts for stores, sleepers, and different things. The public, who supply the department with material, ought to be paid as soon as their accounts are presented.
2032. Do you think that if you had such an advance fund, and could make payments to the outside public more promptly, it would result in the contractors tendering for an appreciable lower price, with the full knowledge of their being able to get prompt payment? I do, because at the present time they have to borrow money from the Banks; and they complain to me that they have to do that while the Government is owing them money.
2033. How would the having of such a sum of money placed to the credit of the the Commissioner affect the Government as regards interest on the money? The Commissioner could have a letter of credit. The Bank would not charge interest on any sum greater than that actually drawn.
2034. Would you propose to have a specific sum put to one side to an account to be operated upon by the Commissioner, on which there would be a less sustained to the Government by way of overdraft or loss of interest? No; I think a letter of credit would meet that.
2035. *Mr. Coyle.*] To what purpose would you devote such an imprest supply, if granted? To the payment of wages and accounts such as I have mentioned.
2036. What particular class of accounts? Vouchers for the supply of billit-wood, bricks, sleepers, and all material used on the permanent way, also the accounts that pass through the stores.
2037. Are not sleepers obtained in large quantities? Yes.
2038. Two or three thousand at a time? Yes; but they receive advances on the number supplied, say, monthly.
2039. Would you propose to pay that class of accounts out of an imprest supply? Yes; I would pay them all before they were entered into the accountant's books at all. Now, the vouchers pass through the accountant's books, but they might never be paid. It is a wrong system of book-keeping altogether. Under the system I propose, the vouchers would be paid before they are entered into the books.
2040. How do you make it out that they might never be paid? Some of them are sent on to the Treasury, and the money may never be claimed. Another thing is, they may be entered to one account in the accountant's book, and to another in the books of the Treasury. The majority of the accounts are small, and a delay of a month now occurs.
2041. *Mr. Waller.*] Can you give me an idea of what is the amount of wages paid on the working of the railways and tramways per month; that is, apart from salaries? The wages paid to the railway employees during the last fortnight, amounted to £40,695 3s. 7d., and to the tramway employeess, £5,686 6s. 10d.
2042. Then the total amount would be, roughly speaking, about £100,000 per month? Yes.
2043. What are the salaries per month? £19,745 10s. 5d. for the last month.
2044. Consequently, if the system of paying wages monthly, instead of fortnightly, were adopted, there would be a large saving to the Government in the way of interest? There would.
2045. Take it at 3 per cent. per annum on £1,200,000 per annum? It comes to £36,000 per annum.
2046. Do the Government receive interest from the Bank on their balances? I could not say.
2047. How much do the Railways pay into the Bank per month? Having taken out the monthly payments for December, 1885, to the end of November, 1886, I find that the total amount paid into the Bank was £1,925,375 6s. 8d.
2048. Is that an average per month of about £160,448? Yes; the expenditure I have given you is not all on account of working expenses; it also includes payments on account of loans.
2049. How much of the £120,000 odd per month would be paid out of the receipts? I could not say at present I could get it.
2050. Would there be £80,000 per month? Yes; £90,000 per month at least. Roughly speaking, there would be £100,000 per month paid out of these receipts.
2051. Presuming the system of paying wages monthly were adopted, would it reduce the work considerably in this office? It would, considerably.
2052. By how much? If I have to send men out to pay, as now, I must have the men to do it.
2053. Would there be little or nothing for them to do during the month, and, therefore, could you reduce the staff? No. I could not put one man in two places—between Bathurst and Dubbo, and Bathurst and Sydney, at the same time.
2054. But if also the proposed change were adopted, of paying through the inspectors, station-masters, district engineers, or such other officers as might be found to be the best, then would you not be able to make a large reduction? Yes. We could do with three less.
2055. Out of how many? Out of seven.
2056. *Mr. Coyle.*] In the actual matter of paying alone? Yes.
2057. Would it not reduce the clerical work? Yes. But I should want them during the month to keep up the clerical work.
2058. *Mr. Waller.*] Presuming that a further simplification of payment were made, and that, instead of rolling up the money for each man, and putting his name upon it, cheques were signed and paid to each man entitled to receive wages, and a receipt taken for the amount? You would have to write 7,000 cheques to the men alone.
2059. But suppose you write one cheque to an inspector who is empowered to pay, say, 100 men, whose wages amount to £2,000. If the payments were made to the different inspectors, station-masters, and other proper persons, and a cheque sent to them for the full amount of the number of men they had to pay, would it not simplify the work? Yes; but where are they to get them cashed?
2060. The cheque would be cashed in the same way as your pay clerks now get their cheques cashed at the Banks? Yes.
2061. Would not that simplify the clerical work, and get rid of the rolling up of notes? We do not roll up notes along the line; we only do that for the Sydney payments.
2062. Would it not be very much better? It would be very much better. What I advocated was, that the

- the Traffic Manager should let us have clerks from the different stations; instead of sending men from Bathurst to Dubbo, to get a man at Dubbo, and let him pay from there.
2063. Is that one of the station staff? Yes; but he would not do that.
2064. If such a change were made, do you think you could carry on the business satisfactorily with three clerks? I could do it with four. I should still have to pay at Sydney, Eveleigh, Darling Harbour, Randwick, and North Shore.
2065. If such a system as we have mentioned were adopted, would you require from three to four ordinary clerks? Yes; I have only ordinary clerks now.
2066. For how long a time are your clerks away during the month? It averages a week for the payment of each section—say a fortnight a month.
2067. And what would the travelling expenses come to? Say £36 10s. per month.
2068. Then the travelling allowance of five men for twelve months would be about £438? Yes; for the payment of nearly two millions of money, and the adjusting of accounts in the office. In a private firm you pay your men, and have done with it; but here we have to adjust everything to the Auditor-General, and that involves a tremendous lot of work.

Mr.  
J. J. Bryant.  
30 Dec., 1886.

FRIDAY, 31 DECEMBER, 1886.

Present:—

MR. T. F. WALLER, CHAIRMAN.

Mr. J. E. FITZGERALD COYLE.

Mr. George Cowdery examined:—

2069. *Mr. Waller.*] Can you give us a list of the names of the officers in this building? Yes. Mr. Thomson is deputy engineer; Mr. Leggatt is the architect, who designs and superintends the erection of buildings carried out by the department; Mr. Josling is the assistant architect.
2070. What are his duties? To assist in carrying out the principal works, and taking charge of the office at any time when Mr. Leggatt may be supervising new works.
2071. Who prepares the specifications? Sometimes Mr. Josling, and at other times Mr. Leggatt. He superintends in the drafting rooms.
2072. Who superintends the erection of buildings? We have an inspector on the ground under Mr. Leggatt. The inspector is constantly on the work. Mr. Parry is engineer in charge of the interlocking apparatus and signals. He designs all station arrangements. His former designation was that of resident engineer, but his duties were then the same.
2073. The arrangement of station yards—do you refer to the station yards on the existing lines? Yes; lines already opened for traffic.
2074. Is that in addition to the arrangements made by the Construction Branch? That is, any additional work carried out by our office.
2075. *Mr. Coyle.*] Necessitated, I suppose, by increase of traffic and other things? Yes.
2076. *Mr. Waller.*] Could these arrangements have been made at one and the same time, when the line was being constructed? Certainly not in all cases. New stations have been introduced—a great number of them—and new sidings have to be put in as the traffic demands them.
2077. What are Mr. Fischer's duties? He is resident engineer, and designs everything in connection with iron bridges and other works in iron. Mr. Edward Touch is assistant engineer in Mr. Parry's office. Mr. Sommerville is a surveyor, and his duties are in connection with the preparation of any plans which may be required, also with the resumption of any land by the department. He prepares the necessary tracings for resuming any lands, and also does any work in the Sydney district where people apply for a title under the Real Property Act, to see that there is no encroachment on the Commissioner's land.
2078. Is that for lines already in existence? Yes. Mr. Pind is a draftsman in Mr. Parry's office, in connection with the interlocking of signals. Mr. Iliggs is a draftsman in a similar position to Mr. Sommerville. Mr. Shute is also a draftsman in Mr. Fischer's office, engaged in preparing plans for iron bridges only. Mr. Chetwynd is in a similar position. Mr. Nixon is an architectural draftsman. Mr. Nowill is a draftsman under Mr. Fischer in the preparation of plans for iron bridges. Mr. Stoddart is a cadet in the Architect's Branch, as also is Mr. Nixon.
2079. Are these cadets exclusive of the cadets in the Commissioner's Department? Yes. They came on at first for a probationary term of six months, without any pay.
2080. *Mr. Coyle.*] Is it only in the professional branches of the Commissioner's office that these cadets are placed? We have no cadets other than in the professional branches. We have none in the clerical branch.
2081. *Mr. Waller.*] What does Mr. Stoddart do—is he a cadet? He is occupied in preparing plans, as also is Mr. Wickham. Mr. Conyers is the same; he is a gentleman from New Zealand. He is engaged in preparing plans of station yards. Mr. Moore is custodian of plans; Mr. Rothwell is another cadet in the Architect's Branch; Mr. Doyle is a cadet in Mr. Fischer's branch; Mr. Johnson is a cadet in the interlocking branch; Mr. Roberts is a cadet in the Architect's Branch; Mr. Close is a cadet in Mr. Fischer's branch; Mr. Norman Munro is a cadet in Mr. Parry's office.
2082. How many of these cadets are there, then? Eleven. They have all served their probationary period, and are now in an advanced stage. Mr. Stoddart and Mr. Wickham are now in a position to prepare plans. They can scarcely be classed as cadets, except that their salary places them in that position. Mr. Nixon is not a cadet, he is entitled to the position of draftsman.
2083. Have some of these cadets served so long in the position that they are able to make a plan? Yes.
2084. Who are they? Mr. Stoddart, Mr. Wickham, and Mr. Rothwell are cadets in an advanced stage, who are able to make plans.
2085. What is your opinion as to the system of appointing cadets—do you think it is a good system to have cadets? I think we should have some.
2086. *Mr. Coyle.*] Do you think it is desirable to pay them salaries from the day they enter? Under the old rule they served a probationary term of six months free. Under the new rules a cadet coming into the office receives two guineas a month for the first six months, and if he has proved himself to have an aptitude

Mr.  
G. Cowdery.  
31 Dec., 1886.

Mr.  
G. Cowdery.  
31 Dec., 1886.

- aptitude for the work and conducted himself satisfactorily he will then be appointed at the rate of £50 per annum.
2087. In introducing a number of cadets into the service, do you think it is desirable to pay them from the time they enter it? I do not know.
2088. For the first two or three years are their services really worth much to the department? Yes, in less than two years. As a rule we get youths who are 17 or 18 years of age, well educated, and who can do something very soon.
2089. Are they the same class of youths as those who enter professional offices outside? No doubt.
2090. Is it the intention ultimately to draft them into the service after their cadetship is over—to people the service, as it were, with these cadets? That is the idea.
2091. Are any of those who have entered the service here as cadets in high positions in the department now? Not very high certainly. There is my son, who is a resident engineer. He was in the service before I was. He served his time in the locomotive shops.
2092. With reference to the filling up of the higher offices of the department, how is it usually done—by promotion? This system has not been introduced many years. We have found our officers from outside as men have turned up and been required. We have got them in by recommendation.
2093. Are any of the officers appointed from the home country or any of the great centres of work? Not in this department. They have not been appointed at home or sent for.
2094. Do you consider that it would be an advantage to have a proportion of the higher offices, as they fall vacant supplied from the great centres of engineering in the home country and America? I do not know whether it would be desirable or not.
2095. In a progressive business like railway work, are there not a large number of new ideas constantly coming out? Yes, no doubt; but many of these men are trained at home to specialities, they are not general men. Mr. Parry is really a specialist. He came out to the Exhibition to exhibit Mackenzie and Holland's machinery. He remained in the country and we employed him.
2096. What position does he hold here? He has charge of the interlocking and laying down of lines and roads.
2097. Has his appointment been a success? Unquestionably.
2098. Are there a number of other branches specially technical connected with the management and maintenance of railways—do you think that it would be desirable that a proportion of the higher appointments in the service should be made from the home country, from America, or from any of the great centres of engineering work? I do not know scarcely what to think of it.
2099. Have such appointments as have been made direct from the home country for special positions been successful? I only know of that one.
2100. Mr. Fischer, you say, designs iron bridges and other iron works; are those bridges new bridges required on the railway? Yes.
2101. And new works? Yes.
2102. Has the Construction Branch of the department anything to do with the lines after they are handed over to you? No.
2103. Are all new works, such as bridges and crossings, goods sheds, engine sheds, and other things that may be required, designed and built by you? Yes.
2104. So that, in short, after the line is once handed over from the Construction Department, they have nothing whatever to do with it? No.
2105. Mr. Summerville, you say, is a surveyor for the resumption of land? Yes.
2106. Are the titles of land resumed altogether under the Real Property Act? No, all the lands are not under the Real Property Act.
2107. Is the title for land resumed not acquired under the Real Property Act? I do not think so, not in all cases.
2108. Are the surveyors of this department licensed under the Real Property Act? Not all of them.
2109. Have the surveys for land resumed for railway purposes to pass through the Surveyor-General's department? No.
2110. Who prepares the titles for land which is resumed? The Crown Solicitor.
2111. Is the Crown Solicitor the person who sees that the survey is correct for the purpose it is intended? No.
2112. Who writes the description of the land? The Land Valuer.
2113. Does he write the description of the land resumed from the survey? Yes.
2114. Do you see any objection in having the title for land resumed in all cases under the Real Property Act? The whole piece of land from which you resume a portion would have to be put under the Act.
2115. Then is it necessary, in order to get a title under the Real Property Act, that the whole should be under the Real Property Act? I think so.
2116. Are you aware if it is possible to get a title under the Real Property Act for land that at the present time is not under the Real Property Act? Yes.
2117. Can you bring a portion of land that you purchase from a section not under the Real Property Act under the Real Property Act? That I do not know, but I think not.
2118. *Mr. Waller.*] Where you resume land is it after the land has been handed over to you? Yes; the pieces are only small bits. Anything that we do is done by a licensed surveyor.
2119. *Mr. Coyle.*] What proportion of the time of any of your officers is taken up in making the surveys of land resumed? It would be difficult to say.
2120. Suppose that work was taken over by the Survey Department, would there be any saving? I do not think there would be much in my department, but in surveying new lines it would make all the difference in the world.
2121. Have you very little work of this kind to do? Very little.
2122. Do you prepare the whole of the descriptions? No. Mr. Thompson, the land valuer, supplies the descriptions, but I give him the bearings and lengths of lines.
2123. Do I understand that Mr. Thompson describes the land resumed from the surveys prepared by the Construction Department? Yes, and also for the existing lines, where they resume land afterwards.
2124. Our attention has been called to certain charges against the vote for the construction of railways which have been made by this department. If you will look over this sheet you will see a column containing

taining amounts against each railway, purporting to be expended by the Existing Lines Branch. Could you explain to us how these charges against the vote arise? From various causes; the duplication of lines as in the case of the Molong Junction, where the line was brought into Orange instead of being junctioned about a mile out of it. That was done before the line was handed over to us, because the work was on the main line. The Engineer-in-Chief recommended that we should do it.

2125. Why was the junction formed there in the first instance? I do not know. It was the Engineer-in-Chief's idea. Afterwards the Traffic Department found that it was desirable to bring the line into the station.

2126. Was it intended to place the station at the junction? No, the Orange station was then already in existence.

2127. Was it proposed to form the junction a mile and a half, speaking roughly, away from the station? Yes.

2128. Why did you duplicate the line into the station? For several reasons. The Traffic Manager considered that the traffic would be worked better and cheaper, and it would have to run into Orange in any case.

2129. Do you consider it desirable to have a junction of this character away from a station? No. The line does not junction away from the station now, and therefore the employment of a number of hands at the junction is rendered unnecessary.

2130. *Mr. Waller.*] When that line was proposed were you, as Engineer for Existing Lines, or was the Commissioner, aware that the junction was going to be a mile and a half from the station? I was, but not officially.

2131. Had you an opportunity of raising an objection to that junction being there? In regard to this particular case I had, and the result is that the line was duplicated into Orange.

2132. *Mr. Coyle.*] Why was not this duplication done by the Construction Department? Simply because it came on to our line, and the Engineer-in-Chief requested that we should do it as his expense. We had charge of it, but I believe his own contractor completed it at his schedule rate, and I passed the certificate instead of the Engineer-in-Chief.

2133. *Mr. Waller.*] Have you had many like duplications to make which would account for some of the charges in this paper? The Gundagai branch at Cootamundra is a similar case.

2134. Have you had many duplications? There are very few.

2135. *Mr. Coyle.*] What other works have you carried out on lines after they have been handed over to you by the Construction Department? There is one rather large item—that of making roads and bridges to sidings and stations, and alterations of roads. In the matter of station arrangements at Wallerawang very considerable alterations were made by this department. As soon as the line came into our possession, we took out nine facing points from the main line and re-arranged the sidings, thereby reducing the risk of accidents on the main line, and avoiding the necessity for interlocking. Some of the roads were not suitable; but we did not think it necessary to remove them, because we make as few alterations as possible.

2136. What other works had you to do in connection with station arrangements at this place? We had all the interlocking and signalling to do.

2137. Can you give us any other instances? On the main southern line a large number of additional waterways had to be put in. I have the particulars before me, but I have not had time to go through them.

Mr. James Bamford Thompson was examined:—

2138. *Mr. Coyle.*] What is your position? I am Land Valuer.

Will you show us a plan of land which has been resumed for railway purposes? Yes.

2139. Assuming that the land through which the railway goes is not under the Real Property Act, can you get the title for the portion resumed under the Real Property Act? No; we take the title as it exists, as it is furnished by the owner.

2140. If the title as it exists is defective, would the title of the portion taken by you also be defective? The Crown Solicitor has to be satisfied.

2141. In the case of error in surveying, could the Crown Solicitor give opinion on that? No.

2142. Who deals with this question of the accuracy of survey? It is done in the Land Valuer's office.

2143. What about the length of boundaries of land resumed—they are much more important than the area are they not? Yes.

2144. In what way are the lengths of these boundaries of land resumed checked? Only from scaling on the map in the most inaccurate way. It was only the other day that I brought under the notice of the Commissioner the difficulty there was in dealing with proclaimed plans. The lengths of boundary, the connections between the intersection of railway and boundaries and corners are not given as a rule, and where they are not given the lengths have to be scaled, and as a matter of necessity this is often little more than an approximation.

2145. Are a large number of these boundaries arrived at by scaling? They are; but I may say that the Minister has approved of these particulars being given in all cases in future. That order has been made within the last month. One or two very striking instances occurred of the necessity of having that information supplied. I brought the matter under the notice of the Commissioner, and the Minister has approved of it being supplied upon all future plans.

2146. Are all bearings given? No bearings are given.

2147. None whatever? I do not think so.

2148. Can you say whether bearings are given? I do not think they are as a rule; but I think there are other means of checking the area.

2149. Are you authorised under the Real Property Act as a surveyor? No. I never applied to be licensed, but I have done a lot of work under the Act when surveying.

2150. Do you consider that when surveying the land the whole of the work should be done by the Land Surveying Department? I cannot say. A man may be a very good land surveyor and not a good railway surveyor.

2151. I mean the surveying of the land resumed? Yes.

Mr.  
G. Cowdery.

31 Dec., 1886.

Mr. J. B.  
Thompson.

31 Dec., 1886.

- Mr. J. B. Thompson.  
31 Dec., 1886.
2152. Do you think the responsibility of accuracy of survey should rest with the Surveyor-General? There is no man who could do that work so well as a licensed surveyor. Mr. Jackson reminds me that some years ago it was found necessary to employ a licensed surveyor to check the accuracy of surveys, to tell us where the line was in connection with the land through which it passed.
2153. Mr. Byrnes, the former Land Valuer, insisted that licensed surveyors should be employed and paid specially for doing that very work. We have a lot of their plans, and we have always found them satisfactory.
2154. Would you suggest that the responsibility of all this surveying of land resumed should be devolved on the Land Survey Department? Yes; in my opinion it should.
2155. Do you think it would be an advantage to the public service? I do not think any looser method of surveying could possibly exist than that now in practice.
2156. Mr. Waller.] Would such a system enable you then to dispense with keeping surveyors here? We have none here; we only deal with the matter after the survey has been completed. It is because the surveys are so incomplete that we have ground for complaint.

---

Mr. Adam Jackson was examined:—

- Mr A. Jackson.  
31 Dec., 1886.
2157. Mr. Coyle.] What is your position in the department? I am a draftsman.
2158. Are there any bearings given on the plans of land resumed for railway purposes, or is there any notice taken of the bearings in the descriptions of such lands? Sometimes there are bearings given. The bearings are generally northerly or southerly.
2159. What do you understand by a bearing? The direction of a line.
2160. From what? From a known point.
2161. From the true meridian, or the magnetic meridian? We do not take notice of any meridian.
2162. This is a tracing of a plan of the Cooma Railway? Yes.
2163. How do the plans of land resumed for railway purposes come to you? The plans which show the lands taken for railway purposes are in Mr. Whitton's branch. We borrow them as we require them.
2164. For what? For the purpose of writing the descriptions and drawing the plans and deeds of conveyance of the land.
2165. Is the plan before us one of those supplied by Mr. Whitton's department? It is a copy of the original plan. It is supposed to be a literal copy.
2166. Take this portion of land. In what way do you prepare the description of it? We scale off the lengths of the boundaries.
2167. Are there any bearings given (say) of the centre of the line of railway, or of the boundaries of the land? There are no bearings written on Mr. Whitton's plans except in special cases.
2168. Is there no proper connection shown on this plan (Part No. 3, Goulburn to Cooma, Alexander Rynie); is there no mathematical connection between the railway survey and the land survey? No, there is not. It would have to be scaled in any case to determine where the line is with reference to the Surveyor-General's plan.
2169. The connection therefore, between the two surveys is entirely mechanical? It is.
2170. And the accuracy or otherwise of the description which you would write of the land, would depend upon the accuracy of the connection between the two? In answer to that question, perhaps you will allow me to explain that we do not know the actual distance to a link. Take this portion, for example, we do not know the distance to the corner except by scaling.
2171. Assume that the distance connecting the railway survey with the land survey were 2 chains in error, would not the railway now be on private property? It is quite possible that it would. If the line is not correctly surveyed, it is certain that it would.
2172. If an error occurred in the bearing of the line of the land surveyed, it is not possible under the conditions exhibited by this plan that such an error as 2 chains would occur from such a connection as this? It is quite possible.
2173. So that, as a matter of fact, the railways in many instances may be on private property, and the piece of land conveyed may not contain the railway at all? It is possible under the condition supposed. We take every precaution it is possible to take to verify the work. What you have stated is quite possible, and would certainly have occurred if we had not been very careful.
2174. How can you prevent it? We get the Surveyor-General's plans, and we plot the outline of the different blocks on them.
2175. Does the Surveyor-General's plan give you any mathematical connection between the railway survey and the land survey?
2176. Is it desirable that the survey for the railway should be carried out on the same meridian as the survey of the land? I should say so.
2177. Do you see any practical objection to it? Not the slightest.
2178. Do you think that it would be an advantage in this very important business that the meridians in both cases should be the same? Yes.
2179. In preparing the descriptions of the land resumed, do you think it desirable that the bearings should be given as well as the distances? I think they should be given in every case.
2180. Do you think it quite possible that the same description, as far as distances are concerned, would apply to two pieces of land having entirely different areas? Not at all unlikely.
2181. In the absence of bearings, might not the same description answer to two pieces of land of different shape and area? It might do so.

MONDAY, 3 JANUARY, 1887.

Present:—

MR. T. F. WALLER, CHAIRMAN.

MR. J. Y. MILLS,

[ MR. J. E. FITZGERALD COYLE.

Mr. Max Thomson was examined:—

2182. *Mr. Waller.*] Are you Assistant Engineer for Existing Lines? I am.
2183. What are your duties? It is my duty to assist Mr. Cowdery generally, and I go out and inspect the lines occasionally. I assist him in all engineering questions.
2184. Do you act for him in his absence? Yes. I always sign for him, whether he is here or not. I deal with papers which I am able to deal with without submitting them to Mr. Cowdery. Where money matters are involved, or questions of great engineering, I submit them to him.
2185. What class of questions would you deal with without reference to Mr. Cowdery? I have here a matter which will illustrate what I mean. This paper contains a complaint against burning kerosene in the signal lamps at the Granville yards, and the Traffic Manager wants gas instead of oil. I sent the matter on for report, and we find that we must burn gas. I sign that for the engineer and send it on to the Commissioner. There are other matters which I deal with from the commencement and complete them.
2186. *Mr. Coyle.*] What are your professional duties as engineer in connection with the maintenance of lines and the construction of works? My own personal duties would be to see that the works were satisfactorily carried out, and inspecting the lines to see how they are maintained.
2187. Do you design any new works? I do.
2188. Of what nature? I have designed nearly all the works which have been carried out for the last six or seven years.
2189. Will you enumerate some? The Petersham viaduct. I designed the Eveleigh workshops. In fact they are in my charge.
2190. What other works? The Redfern tunnel.
2191. Is that the enlargement of the tunnel? It is the substitution of iron girders over four lines in place of the old brick arch over two lines. I have designed several bridges along the line—four at Parramatta, and one at Rookwood.
2192. Do you design all the works which are required after the lines are handed over to you? Yes, we design them all.
2193. To whom are these designs submitted for approval? Generally to me first, and then I take them in to the engineer. I do not use the instruments now, in my present position, but all the designs are submitted to me, and I go through the calculations and see that the works are properly designed.
2194. *Mr. Coyle.*] Have you a special officer in the department who takes out the strains on the different structures? Yes; we have an architect, and then we have an engineer attached to this office, who does all civil engineering, designs girders, and so on.
2195. Are tables of strains and stresses taken out on each important structure? Yes.
2196. And kept for reference in the office? I do not think they are kept for reference in the office. The officer who takes them out keeps them.
2197. Is there any table of strains and stresses supplied from the Construction Department to you? No.
2198. None whatever? None whatever.
2199. Are all structural repairs made by this office without reference to the tables of strains and stresses ascertained when the works were originally constructed? Do you mean with regard to the girder work?
2200. Yes? We have not had occasion to do any.
2201. Have not some repairs been done to girders? Loose rivets have been replaced; no other repairs have been made.
2202. Do we understand that no table of strains and stresses is given to this department by the Construction Department when the works are handed over? None.
2203. Is there no table of these strains prepared by this department as soon as the works are handed over? It has not been the practice so far. We accept the work as good.
2204. And any repairs, such as riveting and other things, are carried out without reference to any tables of strains? Yes; but we have done very little in the matter of repairs—none that have been extensive—during the last six or seven years, which is as long as I have been here.
2205. Do you know if the Engineer-in-Chief has a table of these strains in his own possession? I do not know.
2206. How long have you been in your present position? Since May, 1886.
2207. Are you acquainted with the condition in which the various lines have been received by the department from the Construction Branch? I am, since May last. Their condition has been pretty fair, most of them.
2208. Are you acquainted generally with the condition in which they were handed over before May? I took one over before May, when I was District Engineer.
2209. In what condition generally did you receive the lines from the Construction Department? I received them in good condition so far, but after a little while the banks would go down.
2210. Were the lines properly finished and equipped for you? Yes, except signals; we have to fix them.
2211. Have you been called upon to make any alterations in stations and other things immediately after receiving the lines from the Construction Department? I could not say that we have immediately.
2212. Shortly afterwards? Shortly; that is, I believe so.
2213. Do you know the nature of those alterations? I know that at Hurstville I had to put in compound cross-over roads in order to work the traffic. That was only a few months after the lines were opened.
2214. Anything else? To my knowledge they made a lot of alterations at the Wallerawang Junction, shortly after the Mudgee line was open, but I had nothing to do with that personally.
2215. Have you made any alteration in the station arrangements or in buildings? I am not aware that we have made alterations in buildings. There may have been a few matters to attend to which have been overlooked by the Construction Department.

Mr. M.  
Thompson.  
3 Jan., 1887.

- Mr. M. Thompson.  
3 Jan., 1887.
2216. Have you always found the lines well ballasted, station yards, road approaches, and so forth? Yes, I think so; in fact in some cases I think there has been too much of it.
2217. Have you anything to do with the preparation of the plans of land resumed for railway purposes? No; only with what small cases we require after the line has been opened, such as those for station-masters' houses.
2218. *Mr. Waller.*] Under whose particular supervision does the putting up of signals come? Under this department. Mr. Parry is the officer in charge of interlocking and signals.
2219. You said that these signals were not put up when the lines were handed over to you. As a matter of fact, is it not an understood thing between you and the Construction Department, that as you have the appliances it is left for you to do, and in fact by your desire that it should be so? In the cases which have come to me we have not had notice that the line was to be opened, until perhaps within a week of the date of opening. That is all the notice we have had to put up the signals.
2220. Then you do not get timely notice? No.
2221. But if you did you would prefer to put up the signals? Yes, of course we should, because we have to work the line afterwards.
2222. Your complaint then is not in having to put up the signals, but the want of sufficient time being given you in which to erect them? Yes.
2223. Has any objection been raised by the Construction Department to your putting up the signals before you get the notice? I do not suppose there has, but we should not feel justified in going upon their line before we were invited.
2224. *Mr. Coyle.*] Is it not all one department? Of course it is, but we do not dare to go on the line while it is under construction. They might say we were interfering.
2225. *Mr. Waller.*] So that actually the loss of passengers' lives may be incurred rather than the etiquette should be broken through, for that is what it amounts to if you have not time to put up the signals? The lines that are open now have very little traffic upon them, not more than one or two trains a day.
2226. The fact remains the same? When the Illawarra line was opened we had all we could do to get up the home signals as far as Hurstville, and we were not able to get up the distance signals in time.
2227. Might an accident have occurred from the want of those signals? It might.
2228. Which would not have occurred if proper notice had been given or asked for in time? No.
2229. Would there be any difficulty in giving you a couple or three months' notice? No.
2230. And would that give you ample time? Yes; it does not matter so much about the length of the line, because we could put men on in different places.
2231. *Mr. Coyle.*] Have you the contracts in your possession in the Commissioner's Department? Yes.
2232. Could you not ascertain the time of completion from the Commissioner? I dare say we could.
2233. Would you require permission from anybody but the Commissioner to erect the signals? I do not think we should.
2234. Have you ever applied to the Commissioner when you thought it was time to erect the signals for permission to go upon the line and erect them? I could not tell you.
2235. Has such an application been made since your time? I do not think so. A matter like this I consider rather out of my province, such a matter as correspondence with the Commissioner. This would be one of those things which I should leave to the engineer. I consider that my duties lie more outside the office than in it.
2236. How many district engineers have you? Four.
2237. In the whole department? Yes.
2238. What are their names? For the Sydney district Mr. Shellshear, for the Southern district Mr. R. D. Stephens, who is stationed at Goulburn; for the Western district Mr. A. F. Watson, whose head quarters are at Bathurst; and for the Northern district Mr. G. Bowick.
2239. What are the duties of these officers? They supervise generally their allotted district.
2240. What staffs have these men got? The engineer of the Sydney district has got rather a large staff, some of them are under my own supervision. Mr. Stephens has two assistants. On the west there is a resident engineer and an assistant engineer; in the northern district there is a resident engineer. They have each a draftsman, and they have in some cases cadets.
2241. What are the duties of the resident engineers and the assistant engineers? The assistant engineers mostly do the surveys.
2242. Survey of what? Land resumptions and station arrangements.
2243. Do they prepare the drawings for any new work? They do for small works.
2244. Do they send them into this office? Yes.
2245. Why should such drawings not be prepared in this office? If the proposal emanates from the resident engineer he has to prepare the drawings to illustrate his ideas, otherwise the drawings are prepared here.
2246. Is their plan approved by the office? It may be or it may not be. Apart from this all plans are prepared in this office.
2247. Do you adopt standard lithographic drawings for the general run of your works? We have no lithographs.
2248. In forming such works as good sheds and engine sheds do you use them? No; we could not do so because the requirements vary so much at different places.
2249. Have you not a large number of goods sheds and engine sheds of the same class? I know of only one instance, and in that we have five small goods sheds alike. It is in the suburbs.
2250. Is there any objection to having uniformity in the different classes of sheds? It all depends upon the requirements of the station.
2251. Suppose you have a shed 80 ft. × 30 ft. or 100 ft. × 40 ft.,—do you have them much larger than that? I have never seen two alike, except in the case I have stated.
2252. Then are there any lithographed standard drawings used by the department? I am introducing standard drawings for girders up to 60 ft. span, girders and piers.
2253. Do you mean for a complete drawing of the bridge, or for the girders and piers. I mean for the girders and piers. I am also considering the question of getting standard plans for the different classes of station buildings.
2254. What are the dimensions of the five sheds to which you have referred? Thirty by fifteen.

Mr. M.  
Thompson.

3 Jan., 1887.

2255. How many sheds of the same dimensions would there be on the other lines? I do not think there are any so small as that.
2256. Is there not a large amount of uniformity as to the size of these sheds? All I have seen are different.
2257. Have you the drawings of them in this office? Only for what we do ourselves.
2258. I am speaking of those you build yourselves, is there any uniformity in the size of them? No when we have to put up a structure we are guided by the requirements of the station.
2259. But do you not find a great number of the stations in which the requirements of goods-shed accommodation is similar? We have not put up many goods sheds. We have put up five at suburban stations, and one or two others I think.
2260. Do you erect many water openings or timber bridges? No, we do not put up any; we always go in for iron.
2261. Are all renewals in iron? Iron or brick.
2262. Have you any plans for spans from 30 to 60 feet? That is what I am preparing now.
2263. Are special drawings made by the Department for all works that are required? Yes.
2264. *Mr. Mills.*] Are you introducing standard sizes now? Yes.
2265. *Mr. Coyle.*] What staff of draftsmen have you got in the Department—how many? Three in the architect's office, and two are cadets. Two of the three draftsmen are classed as cadets.
2266. In the whole of the Existing Lines Department what number of draftsmen will you have in the designing branch, that is to say including cadets? Eighteen including cadets.
2267. Have you used the ferro-preussiate process in preparing drawings? We use that here.
2268. Do you find it an advantage in mechanical drawings particularly? We do not do any mechanical drawings here.
2269. Where are they done? We do what is required for the permanent way, which is very little. The mechanical drawings are done in the locomotive branch.
2270. Have you anything to do with the locomotive branch? Nothing whatever.
2271. Does not a large amount of business from the locomotive branch come through Mr. Cowdery, and consequently through you? Not much. They lay their own pipes and construct their own cranks. We construct the pits for them.
2272. Is not Mr. Cowdery over the locomotive branch as well as the permanent way? No, the locomotive branch is entirely separate.
2273. As to the draftsmen, are they not simply draftsmen in your own branch? Yes, architects and civil engineers.
2274. What are the architects chiefly engaged in designing? New station buildings.
2275. How many draftsmen have you? Five altogether; that includes two cadets.
2276. How many draftsmen have you in the portion of the office for ordinary designs—for bridges and other engineering works? Eight of those, out of whom four are cadets.
2277. Do you prepare a large number of contracts? Yes.
2278. Have you ever adopted or used in the Department the system of photo-lithography for copying plans to attach to contracts where a large number is required? We did try it a few years ago, but we found it did not answer. We could only get our plans lithographed on such a small scale. Here is one of them. The original plan was twice the length of this room, and it had to be reduced to the size you see it.
2279. Why was it reduced to such a small scale? The printing office could not give it us on a larger scale.
2280. *Mr. Mills.*] Could they not do it in sheets? I believe they can do so now, but in that case you run the risk of not getting them to scale.
2281. *Mr. Coyle.*] In nearly all your working drawings are the dimensions given? Yes.
2282. Is scaling ever used? We tried it for working plans, but it got so confused that we could not continue it.
2283. *Mr. Waller.*] What is Mr. Josling in the Department? He is assistant architect.
2284. Where is he? In the next building.
2285. Where is Mr. Fischer, the resident engineer? His office is in "Lady Young-terrace," next to the accountant's.
2286. *Mr. Coyle.*] Are these the officers you told us were assisting the district engineer? Not Mr. Parry or Mr. Fischer.
2287. What other officers have you helping them? Surveyors and draftsmen.
2288. *Mr. Waller.*] What are the names of the officers in the Sydney district? Mr. Walter Shellshear is the district engineer. He is assisted by Mr. George R. Cowdery, resident engineer, who takes charge of contract works. He had charge of the duplication of the line from Parramatta to Penrith, under Mr. Shellshear. Now he is engaged upon a survey to put four lines through the suburbs. Mr. Halligan is resident engineer assisting Mr. Shellshear generally. Mr. Kendall is specially in charge of the new works at Eveleigh, under my own supervision.
2289. *Mr. Coyle.*] The locomotive sheds? Yes.
2290. Is he resident engineer in charge of repairing shops? Yes; there are about £600,000 involved in that work.
2291. Are the foundations of great magnitude? Some of them are 20 feet deep.
2292. What is the nature of the building? Brickwork, iron roofs, concrete foundations.
2293. Who prepared the drawings and designs for those shops? When I started them in 1882 I prepared the drawings myself. We got out the first portion of the building, and when I got assistance we prepared a copy of my plans.
2294. The next name on your list is Mr. T. A. Melrose? He is engaged in the resumption of land and surveys for new lines, or additions to lines. You must understand that the tramways are entirely under our control. In the case where a railway line has to be duplicated we have to carry it out. Mr. Melrose is engaged on the second line from Picton to Mittagong.
2295. What is the object of that deviation? To get an easier gradient.
2296. How long has the other line been in operation? I think about twenty-two years.
2297. Is it to be abandoned? No, it is intended to come down from Mittagong on the old line, and to go from Picton to Mittagong on the new.

- Mr. M. Thompson.  
3 Jan., 1887.
2398. What is the grade on the old line? 1 in 40.  
2399. And on the new? I think the new grade is 1 in 60. I have not seen the plans.  
2400. From your position have you any knowledge of what the grade would be; is not the matter one which comes immediately under you? Mr. Cowdery has taken that matter up himself; the proposal emanates from him.  
2401. What is the difference in length between the deviation and the old line? 50 chains in favour of the proposed new line.  
2402. Are not the district engineers immediately under you and Mr. Cowdery? Yes.  
2403. Have you not an intimate knowledge of all the work doing? This is a matter that emanated from the engineer himself, consequently I do not go and inspect the plans.  
2404. Is this a trial survey? Yes, to ascertain the cost.  
2405. Do you think that a grade of 1 in 60 may be obtained? I think 1 in 60 will be the steepest.  
2406. What is Mr. Moore? He is more particularly engaged on plans in connection with new locomotive works.  
2407. Where is he? He is at Redfern; he is placed there because of the want of space here.  
2408. You appear to have several of your offices up at Redfern now? Yes.  
2409. Do you find it objectionable having your offices so scattered? Mr. Cowdery and I generally call in at Redfern every morning and see what is going on.  
2410. Do you think it would be better if you had all your offices together? It would be much better.  
2411. Is there no distinct head of the office up at Redfern? Mr. Shellshear is the responsible head.  
2412. Then you have Mr. Pitt; is he another draftsman? He is engaged on general work, and on the workshops also. Mr. Bagshaw is styled a cadet, but he is a junior draftsman. Mr. Wells is more a surveyor's cadet. Mr. Downe, Mr. Menzies, and Mr. Mackenzie are cadets.  
2413. What are they doing? I do not know what they are doing.  
2414. Who does know? I do not think anyone knows. We have too many of them altogether; I have recommended that ten or eleven of them be dismissed.  
2415. You do not know what Mr. Downe and Mr. Mackenzie are doing? I recommended that Mr. Downe should be dismissed for throwing water on another cadet. Mackenzie, Newman, and Wray are very good lads. Wray is in the workshops.  
2416. How many cadets have you? I believe twenty-one or twenty-two in Mr. Cowdery's department.  
2417. For how many do you think there is really employment? I recommended that ten or eleven be dispensed with.  
2418. Why? Because we could not find work for them.  
2419. Are these ten or eleven you propose should be dispensed with exclusive of the one you recommended should be dismissed for misconduct? Yes.  
2420. Are these cadets all at Redfern? Yes. Mr. J. B. Thompson is also there, and a temporary surveyor, Mr. John Corbett. He has notice to leave this week.  
2421. Is this outside office at Redfern under you? It is; but there is the district engineer, who is in charge of all works.  
2422. Do you consider that you have work for all those hands? Not now; we shall not have in a short time. It has been recommended that several be transferred, or their services be dispensed with.  
2423. Who have to be transferred? It is recommended that Mr. George R. Cowdery or Mr. Halligan be transferred to Newcastle, where one is required.  
2424. Who else is to be transferred? Mr. Pitt is to be transferred to this office; Mr. Bagshaw is to be dispensed with.  
2425. Who else are to be dispensed with? I believe Mr. Downe, Mr. Menzies, Mr. Wray, Mr. Thompson, and Mr. Corbett.  
2426. Does that reduce your staff to twelve? Yes.  
2427. Does that reduce the Redfern staff to ten, and the total number of hands by five? Yes.  
2428. Is that the full reduction that you could advise, suppose the office were your own private business? I could not advise any more. I know the business at Redfern, having been in charge there for two years.  
2429. Do you think there would be ample work there for ten hands? Yes. In that office they do a lot of work for other districts. There is a lot of work done by our workshops which has to be sent to Goulburn and Bathurst, which involves the preparation of a plan, which has to be done there.  
2430. Why could not the plans be made by the draftsman you have at Goulburn or at Bathurst? They have only one at each place.  
2431. Would not an ordinary draftsman be able to do it? Yes. Then we do all the testing of cement, iron, and material up there. The district engineers send requisitions for work, which they think may be obtained in the store, but if it is not it has to be made at Redfern, and in that case a plan has to be made for it. Speaking in a general way the Redfern office and this office may be considered to be one.  
2432. If those offices at Redfern were actually in one building and under one control, would there be a lessening of the number of hands? Yes, in my opinion there would be.  
2433. Could not this establishment be better worked at Redfern? It could; but there is this objection, that the Commissioner often sends for the principal officers.  
2434. As to the Sydney district who are the staff? Henry Purton. He is Inspector of Buildings and Works; everything except the permanent way.  
2435. How far does Mr. Shellshear's jurisdiction extend? As far as Picton to the south and Springwood to the west. On the northern line as far as Gosford when it is opened, and all tramways. I have been making a proposal to extend his district to Mittagong and Mount Victoria.  
2436. Then he would not have much time to supervise the office? No.  
2437. How far does Mr. Purton's district extend? To the same extent.  
2438. Then there is Mr. Richard Waring? He is inspector of permanent way and bridges, and tramways.  
2439. And how far does his district extend? The same.  
2440. Then there is Mr. Lucas, what is he? He is really sub-inspector of all brickwork under Mr. Purton.  
2441. Not of bridges? Of brick piers and abutments, masonry, and culverts.

Mr. M.  
Thomson.

3 Jan., 1887

2442. And what is his district? The same.
2443. Then there is Mr. Hilzinger? He is supposed to be inspector of iron girders, but I have recommended that his services should be dispensed with. I never could make out what he is. My opinion is we do not want a special inspector at the rate of £310 a-year to look after iron girders. At the present time he has nothing at all to do.
2444. William Murphy; what is he? He is sub-inspector of signals under Mr. Parry for the whole colony.
2445. And William Docksey? He is sub-inspector of timber buildings, timber sheds, everything of that kind except timber bridges.
2446. *Mr. Coyle.*] Is it necessary to have that office? That is a question I am just considering. I have the idea that Docksey's and Lucas' offices should be thrown into one position. I think that Docksey's position might be dispensed with, but not Docksey personally.
2447. What about Lucas? He inspects masonry, bridges, and culverts.
2448. Ought not that to come under the engineer or assistant engineer, do you want a regular office for that? Lucas is called inspector, and he has to inspect these structures periodically, and report when he finds fault; but then the erection of new buildings in brick and stone falls under him as well.
2449. *Mr. Waller.*] Then as to Mr. Maloney? He is inspector of timber bridges. He has nothing else but timber bridges and repairs.
2450. Would not Mr. Maloney be good enough to inspect timber buildings as well as bridges, and also masonry bridges? No, Mr. Maloney is fully engaged in the work he is set on at present. Some of the bridges are 30 years old in this district.
2451. Could not the other man do all the rest of the work? I think the inspector of brickwork and timber buildings could be combined in one office.
2452. *Mr. Coyle.*] Are there officers in charge of each of these buildings working in them? Yes.
2453. Why should they not report when anything is wrong or needing repair? That is an opinion which I share with you.
2454. *Mr. Waller.*] Do you still require a man as inspector of works in brick and masonry bridges and culverts? Yes.
2455. Now there is Mr. Burncastle, what is he? He is special inspector of permanent way under Mr. Waring. He takes part of the lines—the southern and western lines.
2456. I see that Peter Dean is classed as sub-inspector of permanent way? But he has no particular length, he is in charge of all ballast trains and extra works.
2457. Thomas Wearne? He is on the suburban and Illawarra lines.
2458. Thomas Rowlands, is he another? Yes.
2459. What does Peter Dean do? He is in charge of extra work, in case we have to make up a bridge or quarry out a yard, as at Darling Harbour, or lay down a piece of tramline, or a new siding. He has charge of the men upon special works.
2460. Are an inspector and three sub-inspectors all necessary? They are. I consider that a sub-inspector on these old lines should not have more than from 70 to 80 miles of line to look after, and perhaps less.
2461. *Mr. Mills.*] Is that to ensure safety? Yes.
2462. *Mr. Waller.*] Is Mr. Rowlands sub-inspector of timber—what timber? All the timber required for renewals and repairs of timber bridges.
2463. *Mr. Coyle.*] Where does he inspect it? Darling Harbour, Hudson Brothers, or wherever we get it from, and he passes all sleepers up country.
2464. *Mr. Waller.*] Is he constantly employed in inspecting timber? He has to pass all the timber required on the railways. If he passes anything, it is accepted by the department.
2465. *Mr. Coyle.*] Suppose defective timber is found on the ground? It is never found after he has passed it; he brands it.
2466. Has not the inspector on the ground power to reject any bad material which might be sent on to the ground? It would be impossible to find a bad stick.
2467. Do you have sleepers inspected in one part of the country, and do you afterwards find that they should not have been passed? Mr. Rowlands does not inspect beyond Picton and Springwood.
2468. Have the authorities in charge of work power to reject unsound material? Yes.
2469. Can the engineer reject it? He is only for the Sydney district, but he is sent up to the other districts.
2470. *Mr. Waller.*] Have you other inspectors for other districts? Yes.
2471. Does it take him all his time in inspecting timber for the Sydney district? Yes, timber sleepers and fences. He has charge of the renewal of fences.
2472. *Mr. Coyle.*] As to the majority of new works, are they done by contract? In most cases they are done by contract.
2473. What class of works are done by day labour in the department? Repairs to station buildings whether large or small.
2474. Where the work is of any importance do you call for tenders? Always.
2475. *Mr. Waller.*] If you called for tenders, who would inspect the timber? Mr. Rowlands, he would inspect it on the ground.
2476. Now there is Mr. Neat, what is he? He is foreman carpenter in the shops.
2477. Dietz? He is foreman fitter.
2478. Minns? Foreman plumber and gas-fitter.
2479. Eckerslie? He is foreman blacksmith.
2480. Dowssett? He is foreman pattern maker. I have recommended that these two be dispensed with, and the offices brought under Mr. Neat.
2481. William Parker, what is he? Foreman painter.
2482. Have all these men others under them? Yes.
2483. Are the reductions you have named all that you can see your way to make? Yes.
2484. Under whom do the tramways come? Under the district engineer in the first instance, and under Mr. Cowdery and myself also. Mr. Richard Waring is the inspector of permanent way and tramways.
2485. What does Mr. Richardson do? He is sub-inspector of Tramways. He has all the lines going out to the Eastern suburbs.

Mr. M.  
Thomson.  
3 Jan., 1887.

2486. And Foster? He is recommended to be dispensed with. He has the remainder of the lines, but I think Mr. Richardson can do the whole.
2487. Mr. Bladen? He is stationed at Esbank, where we are re-rolling the rails.
2488. Do you say that Mr. Stephens is engineer for the Goulburn district? Yes, all beyond Picton, to Albury, Jerilderie, Cowra, Bungendore, and Gundagai. He has about 800 miles.
2489. As to Mr. John Melrose? He is a surveyor. Some of those who are called assistant engineers are really only surveyors.
2490. Is he an engineer at all? No; he is a professional surveyor. He has not been educated as a civil engineer, and he does nothing but survey work.
2491. Do you think it an advantage that a man should be called assistant engineer when he is only a surveyor? No, I do not think so.
2492. Mr. Henry Provost, what is he? I know very little about him. He has been two years in the service. I believe he is a civil engineer.
2493. What are the duties of these two surveyors or assistant engineers as they are styled? Principally making surveys through the southern district, surveying stations; We need plans of all the stations showing the roads and everything. We need to have them lithographed for reference.
2494. *Mr. Coyle.*] Simply a survey of the lines as they exist; was not that already in existence before the lines were laid down? When the lines are handed over to us all that we get are lithographs of working plans and sections if we ask for them.
2495. Do you ask for them? We always ask for the plans of station yards.
2496. Do you find that the station yards as laid down upon the plan are different from what they are upon the ground? Yes, in many cases. In other cases yards have been in use for a considerable number of years, and alterations have been made. New sidings have been put in.
2497. Things have been omitted? Yes; where we are making these surveys now are on the older lines, when we were not supplied with plans, and many of the plans were destroyed in the Garden Palace fire.
2498. Are not the plans of station arrangements in all cases supplied by the Construction Branch now? Only when we ask for them.
2499. Do you not ask for them? We always ask for them.
2500. *Mr. Waller.*] Having asked for them and got them, would it not do away with the necessity of further surveys on your own account? The plans of the old stations are perhaps not in existence now.
2501. Suppose your men surveyed up the plans of the old stations which are still wanting, and the Construction Branch gives you plans of the lines now existing or in course of construction, should you then require a surveyor to survey station arrangements? No; but it is my opinion we still require two surveyors on the southern line, because there are often questions of resumption. Alterations and additions require to be set out on the ground. The district engineer could not be expected to travel from Goulburn to Hay to do that.
2502. Suppose that on the staff in connection with the railways, the whole staff being under the Commissioner, there are competent surveyors, could they not be drafted out when required occasionally to make these surveys? You refer to the surveyors who are mostly in the office?
2503. Yes; and thus do away with the necessity of having two surveyors for this special purpose. There are men for whom the work is sometimes slack, for whom they want work; why could they not be sent out?
2504. *Mr. Mills.*] Where do these two surveyors reside? In Goulburn, but they are very little in Goulburn.
2505. *Mr. Coyle.*] Are the surveys you require only isolated surveys wanted now and again? Yes; but at the present time they are fully engaged in making up the station surveys.
2506. Is that work that requires to be done in a great hurry? The Commissioner has instructed that it shall be done.
2507. Have you had them on for many years past? It is only two years since the work was started.
2508. *Mr. Mills.*] How long will it take to finish the work? It may take the whole of this year.
2509. *Mr. Waller.*] Could it be done in a year? I think so.
2510. After that could you not do away with these assistant engineers, provided that they were competent men who could be sent out from the office as required? If we could ensure getting them from the office at the moment they were wanted that would be sufficient, but it is better to have them resident in the district, because they are acquainted with everything, and know the boundaries.
2511. *Mr. Coyle.*] Suppose you discharged the whole of your surveyors and let this work be done by the officers of the Survey Department—that is all resumptions of land for railway purposes? I dare say that would be better, no doubt it would.
2512. Have you gone into the question of the character of the surveys made, and the nature of conveyances of land to the Crown? No.
2513. Are you aware that the business is being very loosely done? I am not aware of it; I suppose you are referring to the resumption of lands for the extension of the main lines.
2514. Yes? I am not aware of it; it would be better to connect with the trigonometrical surveys of the Surveyor-General.
2515. *Mr. Waller.*] Are there very many of these resumptions of land coming on in this department? Yes.
2516. What would be the average per year, quarter, or month? I could not tell you. There is hardly a day passes but I get one or two plans of land resumed, that have to go on to the land valuer.
2517. *Mr. Coyle.*] For what purpose chiefly? For station-masters' houses. We are resuming a piece of land at Blacktown which has given us an endless amount of trouble, and sometimes we have to put in sidings for the extension of station-yards.
2518. *Mr. Waller.*] And all that land has to be surveyed? Yes. At the present time we are surveying a tramline from Kogarah to Sans Souci. Of course we have to get out plans for resuming the land along that line.
2519. *Mr. Coyle.*] Do I understand that at your level crossings there are gate-keepers' houses? Only on the main roads.
2520. How are the gates closed? They are not self-closing. There are a few which close across the line.

Mr. M.  
Thomson.

3 Jan., 1887.

2521. What is the object of closing the gates across the line? It is supposed to keep stray cattle from getting on to the line.
2522. Have you seen any of the American cattle stops? I have not seen any of them; we use the American cattle guards here.
2523. What is the general cost of the gate-keepers' houses? About £400, I think.
2524. And the gates themselves? A pair of 15-foot gates cost about £25. It is not in all cases that we keep a fixed gate-keeper; the gate is often attended to by a fettle's wife.
2525. Does she get any payment? I think some small allowance, say 1s. a day, or 7s. 6d. a week.
2526. What do you give a gate-keeper? I think 30s. a week, and a house. That is under the Traffic Department.
2527. Would there be any objection to introducing the American system of first and second class crossings, without gates and gate-keepers? I do not think there would.
2528. Where there are no gate-keepers' houses what is to prevent cattle from getting on the line? There are occupation gates in charge of the owners.
2529. What remedy have you in case they are left open? We can close them altogether.
2530. Does it occasionally happen that a mob of cattle or horses do get on to the line? Yes; I do not know that we have any remedy.
2531. Do you think it would be a great saving in the railway system if you did away with gate-keepers, and introduced cattle-stops? It would be a saving where there are only a few trains; but I do not think I should recommend it for metropolitan lines.
2532. Your whole system I suppose is founded upon the old standing orders of the House of Commons? Yes.
2533. *Mr. Waller.*] Referring to cadets, what is your opinion as to the advisability of appointing them? I think it is a good thing to have a few of them; but not too many.
2534. What do you call a few? I should say about one in each district. That would be four, and about four in the head office.
2535. Do you approve of their being paid as soon as they join the service? No.
2536. How soon after? I was a cadet for five years without payment.
2537. What is the advantage of having cadets in your opinion? You train the young generation to the profession.
2538. *Mr. Coyle.*] Do you think it is desirable that the service should be peopled by young men brought up in it? I think it is desirable to mix some outside blood in it.
2538. From the great centres of the world? Yes; if you have only ten cadets the probabilities are that some will leave the service.
2540. *Mr. Waller.*] Why should the Government find work and teach a profession to a cadet, while you and other gentlemen occupying similar positions had to pay a premium to be taught—while other persons if they wanted to go into a private office would have to pay a premium? I do not see why that should be; a cadet is not of much use for the first three years.
2541. And then his ideas must necessarily be those of his master? Yes.
2542. And his master may or may not be a man of routine and groove, a very old man? That is true.
2543. So, that instead of getting new ideas, the system simply perpetuates the old ideas of the teacher? Yes; but as Government is a large employer of professional men they should do something to assist professional training.
2544. *Mr. Mills.*] Do you think you could have been trained in this office as well as outside? I do not think it would have been possible.
2545. *Mr. Waller.*] Is it fair to outside engineers that they cannot be employed because the offices are filled up with cadets? No.
2546. Taking this view of the matter into consideration, is there any advantage to the country in the system of cadets? I do not think there is any advantage to the Government of the country, or, if there is, it is very little.
2547. Do you think it gives better men? I do not think so; but you cannot keep the profession filled without educating some to take the places of those who go.
2548. *Mr. Mills.*] Could you not fill up the ranks of the profession from competition outside? You must educate the young, not necessarily in the Government service; but if private persons do it I do not see why the Government should not do it.
2549. Has a Government officer the chance to educate these people up to the proper standard? No.
2550. And is not the influence of personal character as between the teacher and pupil lessened in the case of cadets trained in the Government office? It would necessarily be so in most offices; but in an office where you have to get out plans such as those you see before you I think that would be a good education for a cadet.
2551. *Mr. Waller.*] When he has finished his course, who presents him with his articles? Nobody.
2552. If he went into the world what would he have to show that he was a finished engineer? I do not think he would have anything to show.
2553. Do you think he would be accepted as a competent man without articles or anything to show that he was a finished engineer? I do not think so.
2554. Has he got any standing in the profession? No. As a rule outside firms do not care to employ people who have been in the Government service for a long time. Of course there are exceptions.
2555. As a matter of fact, do you approve of the system of cadets? I approve of cadets being taken on in small numbers. A cadet is useful in mixing up ink, and in dusting.
2556. How many draftsmen are there properly attached to this office? Including cadets?
2557. No, exclusive of cadets? Nineteen.
2558. Of which how many belong to Sydney proper? Sixteen.
2559. And the balance of eight? In the country districts.
2560. Do you consider that you have work for all these? It is recommended that some be dispensed with.
2561. If the draftsmen were all working at the Sydney station, would the same answer apply to them? If we had them all together we could reduce the number of draftsmen now required.
2562. Inspector Lewton, what are his duties? He is head inspector of permanent way for the southern district.

- Mr. M. Thomson.  
3 Jan., 1887
2563. What is Mr. Brown? He is inspector of timber work. He is in charge of all carpenters, joiners, painters, and plumbers in the Goulburn shop. He is inspector and foreman; but has nothing to do with brickwork.
2564. *Mr. Coyle.*] Do you keep a staff of painters and plumbers? Yes.
2565. Would it not be better to get that class of work done by contract? We keep nearly all trades.
2566. What do the painters and plumbers do? The painters paint the station gates and do odd jobs.
2567. Could that not be done by tender? It could; but we should lose by it.
2568. Do you keep the men constantly at work? Yes. We let them go if they are not required.
2569. When they are not at work, what do they do? We pay them off.
2570. *Mr. Waller.*] You have to inspect the work done by them? Yes.
2571. Why would not the same inspection do if the work were done by contract? It would not be such a close inspection.
2572. *Mr. Coyle.*] Could you not rely on first-class firms doing the work properly? No. I had a case a short time ago where we tried to let a piece of painting work. As soon as the inspector's back was turned the men whose business it was to mix the paint used water instead of oil. They were men employed by one of the biggest firms in Sydney.
2573. Would it not be to the advantage of business firms to do the work properly by contract? The Colony would lose by adopting such a course. We should have to call for tenders and write out specifications, which would mean the employment of more officers.
2574. There must be some specification of the work as you have it done now? They are told to paint a station, and told whether to give one, two, or three coats. That is all the instructions they get.
2575. Who supplies the material now? The Government always supplies it.
2576. *Mr. Waller.*] Suppose you supplied the material to other men. Could you not get a painting firm in Sydney to do the work in that way? No.
2577. *Mr. Coyle.*] Could you not get them to tender to do certain work per yard along the different lines; take, for instance, the Southern line from Goulburn, as the head station, on to Wagga and Albury? Work would cost more if we had to pay for it in that way. The contractors would charge extra for sending men out. We keep painters and plumbers pretty regularly employed.
2578. What advantage is it to the men now to get through their work in reasonable time? If they do not get through their work within a reasonable time they will be discharged.
2579. Do you think there would be a difficulty in having all that work done by contract? I think it would not pay to have these small twopenny-halfpenny jobs done by contract. For two years we have left most of our buildings in a very bad state. They want painting now, and they must be painted this year.
2580. *Mr. Waller.*] Do you call them twopenny-halfpenny jobs. Suppose there was a system adopted by which you painted a certain number of stations on a line regularly, would that be a good system? It would.
2581. Would you then have a certain amount of work that would be worth contracting for? In cases where we have a whole building to be painted the work is always let by tender. It is only for small jobs or small repairs that we employ our own workmen.
2582. If you let the large jobs, the small ones would come in at the same time. Do you think that system would do? It would entail extra expense in supervision.
2583. If a firm got two or three places to paint at once in would keep an inspector constantly going? Take the case of this inspector, John Brown. He may be at Albury when the works are going on at Goulburn.
2584. *Mr. Coyle.*] What are the buildings that you paint chiefly? Station-masters' houses and stations.
2585. Would not the station-master know whether two or three coats of paint were put on? He would not know the quality of the paint.
2586. *Mr. Waller.*] Even so, you would be in the same position as any private firm is in now. Could not your inspector say whether the work was in accordance with the specification, and your contract would provide that you did not pay until the work was done to his satisfaction? I do not think the system would answer, that is, to have everything done by contract.
2587. *Mr. Coyle.*] Could it be arranged to have the work done periodically? That is a thing that I should like to see introduced.
2588. In that case could you not have inspectors for the time-being? Yes.
2589. And dispense with them when the work was finished? Yes.
2590. Has that system ever been adopted? I do not think so. I know a case where timber work has been left unpainted for nine or ten years.
2591. What is your system of paying painters and plumbers now? Fortnightly.
2592. Speaking generally as to the mode of payment, how are they paid—from this office by cheque? No, paid in cash.
2593. Who pays them? The paymaster.
2594. I suppose through the pay clerks? Yes.
2595. Do you think that there would be any objection to the people in this department being paid by cheques monthly? I think it would be a great improvement, it would save a lot of time. If you went over to the paymaster's room on the first of the month, and saw how his room was crowded with a number of officers waiting for their money, you would see how desirable it is to change the present plan.
2596. Are there in this department any responsible gentlemen, say the head of each room, who could make out the pay-sheet for his room and draw the cheques? The pay-sheets are got out in this office now. The pay-sheets are prepared in each district, sent to the district engineer or his clerk. They are sent to the office to be re-written and checked. The pay-sheets are got out here.
2597. Why have they to be re-written? They are just copied.
2598. Copied into what? The cash-book.
2599. Press copied? Yes, not copied by hand.
2600. Would there be any serious objection to the cheques being drawn out by the officer who made the pay sheet, and in sending them down with the pay-sheet? I do not see any.
2601. They could then be signed here by the proper officer, and not negotiable until counter-signed by the officer who had made up the pay sheet; do you think there would be any objection to that? I do not think there would be. I believe some such system existed some years ago, but it was abandoned because an officer paid out a £10 note in mistake.

Mr. M.  
Thomson.  
3 Jan., 1887

2602. Do you think it would be a great saving of time? I do.
2603. *Mr. Mills.*] What is the system now? They send over here to say that they are going to pay at 11 o'clock. The officers all go over to the paymaster's office, and the last of them probably does not get his money until half-past 12 o'clock.
2604. Suppose such a system were introduced, whom would you recommend to sign the cheques? The district engineer.
2605. The accounts pass through his hands and the pay sheet? Yes. I believe in places like Goulburn the salaries are paid by the station-master.
2606. Who is George R. Webb? He is clerk in Inspector Brown's office.
2607. What does he do? He deals with the correspondence when Brown is out.
2608. Is he not able to attend to his own correspondence? He has long distances to travel. Webb, I suppose, sends his orders on to the shop, or if any information is required from the shops he gets it.
2609. Does the inspector's clerk travel with him? No.
2610. Then he must receive his instructions direct from John Brown? He opens his correspondence, and sees whether it should be sent to Brown or whether it should be given to the foreman in the shop.
2611. *Mr. Coyle.*] Where does the correspondence come from that is addressed to Mr. Brown? From the district engineer.
2612. Then he would know where Brown was as well as the clerk? I suppose he would.
2613. Then why should not the district engineer communicate with Brown, instead of Brown's clerk?
2614. I see that Webb is time-keeper; how many hands has Brown under him at Goulburn? That I cannot say just now, sometimes there would be about 100 inside and outside.
2615. Is Brown away a good portion of his time? Yes.
2616. Who would be over these men while he was away? He would have foremen, or leading hands.
2617. Why could they not do what Webb is doing? There is a clerk required in case he wants material. The leading hands could not get it.
2618. *Mr. Mills.*] I suppose the clerk keeps the time book of the men? I daresay he does.
2619. There is William Line, is he another clerk to Inspector Brown? Yes.
2620. And is he time-keeper also? Yes. Most probably he is travelling time-keeper.
2621. How can he keep time if he is travelling; if there are several branches that he is looking after how can he keep the time at all of them? He goes to the leading hand in each case and gets the time from him.
2622. Then actually he is not time-keeper. Why cannot one timekeeper in that case receive the time from the gangers, for that seems to be what the second man has to be satisfied with? I would not like to give you a definite answer; I have not enquired into the working of the clerical staff.
2623. Do you think his time is fully employed in the office? I should think it is from what I know of the office at Redfern. The fettlers send their books on to the office at Sydney. In the case of fettlers there is no variation in time.
2624. *Mr. Waller.*] How can the time-keeper know about broken time, except what the ganger tells him? He has to trust to the ganger.
2625. Would it not be possible then to do with one clerk? It has been recommended that the services of one clerk at Goulburn shall be dispensed with, but who it is I do not know.
2626. Then we come to Mr. Franklin, what is he? He is inspector of brickwork.
2627. And Rose? He is inspector of iron-work, and also foreman fettler and foreman blacksmith, and the inspector of signals.
2628. William Taylor, who is he? He is a sub-inspector. All the sub-inspectors are under Mr. Lewton. He is inspector of station buildings and level crossings.
2629. Cannot the engine-driver or guard tell if a gate were broken, or could not the ganger do it? It is the ganger's business to tell if anything is broken on the line. Mr. Lewton has a long distance to inspect, 800 miles.
2630. Cannot the people who live in the station buildings tell if the buildings want repair, and the gangers report as to level crossings? You must remember that these men are also overseers of work. The gangers should inspect the gates.
2631. *Mr. Coyle.*] Cannot the station-master report when a building wants repairs? Yes; but after he has done that there must be a man to see that the repairs are properly done. I fancy there must be some misunderstanding in the title which is given to Taylor. I think he must be a sort of assistant.
2632. *Mr. Waller.*] Who is Flood? He is an inspector. The remaining inspectors are under Mr. Lewton; they are inspectors of permanent-way. They are Wood, Flood, Conthwaite, Layton, Rollins, Harvey, Rose, Stanhope, Coleman, Giddy, Liddin, and Woodrow.
2633. Are there twelve inspectors of permanent-way on the southern line? Yes.
2634. Do you think all these inspectors necessary? I think so; there are nearly 800 miles of line in that district.
2635. Charles Ingram, what is he? Foreman of carpenters.
2636. Benjamin Webber? Foreman of blacksmiths.
2637. Mr. Watson? He is district engineer.
2638. Percy Davidson? Resident engineer.
2639. Is he an engineer, or a surveyor? An engineer.
2640. Mr. Sutton? He is a surveyor.
2641. Mr. Biddulph? He is a surveyor, a junior surveyor.
2642. Mr. Hinder? He is a draftsman; he is to be transferred to the Sydney office.
2643. Rygate? He is a cadet. Clements and Claude Watson are also cadets. It is recommended that the services of two of them be dispensed with, Clements and Watson.
2644. Who is John Hollis? He is inspector of way on the western district.
2645. Mayo? He is inspector of buildings.
2646. Then you have two inspectors of brickwork? Yes.
2647. *Mr. Coyle.*] What brickwork is going on at the present time? I do not know; repairs, I suppose, and some new buildings are being erected.
2648. Are any of the district engineers in town? No; except the Sydney engineer.
2649. *Mr. Mills.*] What length would these two sub-inspectors have to inspect? About 580 miles in the western

- Mr. M. Thomson.  
3 Jan., 1887.
- western district. Probably one looks after the buildings, and the other after the culverts and abutments.
2650. *Mr. Coyle.*] Have you many culverts to build? We have a good few.
2651. If they crack, what do you do to them? If they get too bad, we have to repair them. Some of them are cracked in the back, some have their ends pushed out.
2652. Do you refer to those with flat faces? Yes.
2653. I thought they had done away with those altogether? It is not long ago since I saw some; I saw some on the Gundagai line.
2654. Who is the general inspector of brickwork? Henry Mayo.
2655. Do you consider two sub-inspectors necessary? I could not say, until I ascertained what their duties really are.
2656. As to the inspectors of permanent way, what length have each of them to inspect? As a rule, we keep an inspector on each piece of work.
2657. If the work of the other inspectors were finished to-morrow, what would be done with them? They would be paid off.
2658. You have nine sub-inspectors of permanent way? Yes.
2659. Besides which you have an inspector of station-houses? He is inspector of works.
2660. Are all these sub-inspectors and officers required under Mr. Mayo? I do not think he has many.
2661. Is he a man for bridges only? It takes a man pretty well all his time to look after them, to keep them screwed up.
2662. What are Hartland's duties? He is foreman of fitters and machinists in the shop at Bathurst.
2663. *Mr. Waller.*] If there is a foreman carpenter and a foreman blacksmith at Bathurst, could those two positions be brought into one? The offices of fitters' foreman and blacksmiths' foreman might be amalgamated, but I do not think you would gain much by it, because you must have a leading hand in the blacksmiths' shop.
2664. *Mr. Coyle.*] What is the class of work done there? Points and crossings, switch-rods, boring and planing, signal fittings; that is about all.
2665. *Mr. Waller.*] Now we come to the northern district? Mr. Bewick is the district engineer there.
2666. *Mr. Coyle.*] Where does he live? At Newcastle.
2667. What are his duties? The same as other district engineers, general supervision of works.
2668. Over what distance? Right up north, and he will take as far as Gosford on the line from Newcastle to Sydney.
2669. What is Mr. Manly? He is general assistant.
2670. Does he make surveys and plans of new works? Yes.
2671. If he makes the plan, what is the draftsman, Edward Jackson, for? Mr. Manly only makes survey plans, he does not make plans of other things.
2672. What are those surveys of? Surveys of station arrangements when required, and resumptions of land.
2673. If the method of surveying resumptions of land were changed and the surveyor were to prepare the plans, would there be much for him to do? There would always be something in a long district.
2674. Are there not surveyors in Newcastle who could be got to do it? Outside surveyors are bad hands at railway work.
2675. I am speaking of land surveys, are there not licensed surveyors in every district available? Yes.
2676. Why not employ one of them to make such small surveys as may crop up for any portions of land which may be required to be resumed for railway purposes? I do not see anything against that.
2677. Are any of your surveyors licensed under the Real Property Act? Some of them are.
2678. Are there many in the service who are licensed under the Real Property Act? I could not say how many; I know that one is. I do not know whether Manly is licensed or not.
2679. Are you aware that there is a difference between an authorised surveyor, and one who is licensed under the Real Property Act? I know we have one licensed under the Act.
2680. *Mr. Waller.*] Do you think it would cost less to get this work done by outside surveyors than by keeping on permanent hands? These hands are not always employed on surveying. Mr. Manly looks after other works. Sometimes Mr. Bewick will send him to set out a siding. You could not get a licensed surveyor to do that.
2681. *Mr. Coyle.*] That is not properly the work of a surveyor, an inspector could set out a siding? He ought to be able to do it, but it is always better to have an engineer to give the proper location to it.
2682. The siding will first be arranged on the plan of station arrangements, will it not? It will.
2683. Then is not all that has to be done to set it out on the ground, to put in a peg at the point, and at the end of the straights; could not an inspector do that? I daresay he could.
2684. Suppose the surveying of this land resumed for railway purposes, and such works as setting out sidings were to be done outside of the department altogether, what other duties would you have for a surveyor to perform? If you take Manly, he is not simply a surveyor, he is an engineer.
2685. What are his particular duties? To make surveys, and to assist Mr. Bewick generally in his work.
2686. *Mr. Waller.*] What is Mr. Jackson? He is a draftsman. He makes general drawings, and inspects new buildings in course of erection.
2687. What does the cadet Hunt do? I suppose he does all sorts of things.
2688. Having a draftsman, a resident engineer, and an assistant engineer, do you think a cadet also is necessary? I think a cadet is very handy in the office.
2689. Is it necessary to pay £70 a year for him? Yes, as a rule. There is not much work on the northern line, but there is the smallest staff on that line of any.
2690. Do you not think that the district engineer with an assistant, could carry out all the work there? If there was a good energetic assistant and an all-round engineer, then it could be done.
2691. *Mr. Mills.*] Perhaps it could be done if Mr. Bewick were a younger man? Mr. Bewick is an active man. The work on the northern line is only just coming on now, but renewals are beginning. I do not know that you could do with a less staff for a long time, you may for a year or so, but then you would have to put them on again.
2692. *Mr. Waller.*] What is the next man on your list? Mr. Duffy, inspector of permanent way.
2693. And Morrison? He is inspector of buildings and workshops throughout the line.

Mr. M.  
Thompson  
3 Jan., 1887.

2694. Mr. Welsby? Inspector of buildings from Scone to Tenterfield, and along the north-western line. Welsby is a sort of sub-inspector to Morrison.
2695. Why does Morrison want a sub-inspector under him? Mr. Mayo, who holds a similar position in the western district, has five sub-inspectors under him.
2696. *Mr. Coyle.*] What do these sub-inspectors do? They inspect buildings.
2697. Station buildings and sheds? Yes, and station-masters' houses.
2698. Suppose all these men were dismissed and there were no inspection, what would be the consequence, could not the station masters tell when their houses were leaking? But we want somebody to say whether they should be repaired. Welsby travels along the line, stops at the different stations, and the station-masters tell him what is required to be done. If he finds the work is necessary, he will report it to the district engineer and get it done.
2699. *Mr. Waller.*] Which is the superior officer, the station-master or the inspector? I do not know how we could make a comparison.
2700. Has not a station-master a lot of responsibility? As far as traffic and money is concerned.
2701. Is his position not quite as responsible as that of an inspector? I daresay it is, as much as certain inspectors.
2702. Ought he not to be as trustworthy to tell you what is required as an inspector? As a matter of fact they have to point out the defects, and the inspector will see whether any action should be taken or not.
2703. Could not a station-master report direct to the district engineer, and the district engineer look into it himself? The report only comes verbally from the station-master to the inspector.
2704. Could not the station-master write a letter to say that his house was leaking badly, and then the district engineer at the first opportunity go and report upon it? It is often done that way now. The district engineer sends out an inspector to look at it.
2705. *Mr. Coyle.*] What would be the nature of the repairs that would be done (say) to the station-masters' houses? They range from a new pane of glass upwards.
2706. Suppose he put in a new pane of glass himself? He would pay for it.
2707. He could report that a pane of glass was broken, and might make affidavit to that effect, if necessary? Every 6d. spent has to be properly authorised.
2708. Do you think, if this were your own business, you would employ as many inspectors of buildings? I would employ one for each district.
2709. *Mr. Waller.*] Do you think it would be a sensible thing to give the station-master permission to spend money, up to (say) £5 on small repairs, and requiring him to produce properly receipted vouchers for his expenditure, and, for anything larger than that, he should report to the district engineer, who should send up an inspector? I should say that it would not be advisable.
2710. Why? There would be lots of money wasted.
2711. *Mr. Coyle.*] If the business was so arranged that the station-master's expenditure would only be sanctioned in the event of an inspector reporting that it was necessary, would it not then be admissible that he should make small repairs in the way suggested? Station-masters will always get as much done as possible, and when a thing has been repaired, who can tell whether it was necessary, or how it has been done?
2712. Do you think that if repairs were done to the station buildings at regular intervals, there would be little need of inspection between those intervals? There would not be much need of inspection, the district engineer or the chief inspector could do all the inspection himself.
2713. Do you think that would be an advisable plan? Yes, certainly.
2714. That it would be a benefit to the buildings and to the public? I do.
2715. That there would be more economy in it? Yes.
2716. Would it to a large extent do away with these inspectors of buildings? Yes.
2717. Do you think that Mr. Morrison requires inspector Welsby? Not under the system we have been discussing.
2718. There are eight sub-inspectors of permanent-way? Yes.
2719. What is their mileage? Five or six hundred miles; besides, some of the coal lines have to be looked after.
2720. What length of line generally has each permanent-way man to look after? About 60 miles.
2721. How many maintenance men have you? Three men to 4 miles.
2722. Do you know how many men are employed to the mile of railway opened in the whole service? I could not say at present—
2723. *Mr. Waller.*] There is Mr. Doak, foreman of blacksmiths at Honeysuckle Point; have you got many men under him? I suppose six or eight.
2724. How many under the foreman of carpenters? Say, six to ten. The number varies.
2725. Are they both in the same building? Yes.
2726. Could not a general foreman look after the whole? Morrison is supposed to be head of the whole building.
2727. Then, what does he want with these two foremen under him? He is away a good deal.
2728. Would not one foreman keep order and the time, and act as head of the shop? You could not well have one man foreman of carpenters and blacksmiths—two quite different trades. I daresay Mr. Morrison depends a great deal on the foreman.
2729. What work do these men do? They look after the other hands, and I suppose occasionally they take a turn themselves.
2730. Considering that Mr. Morrison is responsible, is it necessary for him to have these foremen? I think it is, considering that Morrison has a good deal of travelling to do.
2731. Have you ascertained how many men there are in the Bathurst yard? Yes, ninety-three.
2732. And in the Goulburn yard? Fifty-one, exclusive of those who are out on the line.
2733. What are their occupations? Different trades, including carpenters, iron-moulders, labourers, furnace men, blacksmiths, turners, fitters, engine-drivers, plumbers, painters, plasterers, bricklayers, tin-smiths, and others. There are no iron-moulders at Goulburn.

TUESDAY,

TUESDAY, 4 JANUARY, 1887.

Present:—

Mr. T. F. WALLER, CHAIRMAN.

Mr. J. Y. MILLS.

| Mr. J. E. FITZGERALD COYLE.

Mr. Max Thomson was further examined:—

Mr. M.  
Thomson.  
4 Jan., 1887.

2734. *Mr. Waller.*] Could you give us some information respecting the sub-inspectors of brickwork at Bathurst—Longhead and Lainson? I find that Lainson is in charge of brickwork from Springwood to Bathurst, and also on the Mudgee line; Longhead is in charge from Bathurst to Bourke, and on the Molong line. One of these can be dispensed with.

2735. When you say in charge, what do you mean? He has the inspection of brickwork that has been erected, and has charge of any new brickwork to be erected.

2736. *Mr. Coyle.*] What new brickwork is there going on along the line? I do not know that there is anything going on now, but gate-keepers' cottages have often to be erected, and alterations of station buildings to be made.

2737. *Mr. Waller.*] Which one can be dispensed with? I do not know; whichever is the best man will be retained.

2738. *Mr. Mills.*] Which is the best man? I am not able to say—

2739. *Mr. Coyle.*] What is there for them to do? We often have to build new platforms, and to lengthen old ones.

2740. *Mr. Waller.*] Are there not bricklayers living in towns handy? Yes.

2741. Could not those things be done by engaging a man for the work, and, when it is finished, let him go, and have done with it? There are many cases where we could not let anybody over whom we had not perfect control go on the line to do work. We could not let strangers repair a culvert, or build new abutments or piers of bridges. On the southern line, where there is a length more than 200 miles greater than on the western line, they have only one inspector of brickwork, but on this western line they have two.

2742. *Mr. Coyle.*] Do you know in any section of 500 or 600 miles, what quantity of brickwork would have to be put up in the course of the year, and what amount of time would be occupied in supervision? As far as Sydney is concerned, it takes one man's whole time.

2743. Take a district away from Sydney? I do not know of my own personal knowledge.

2744. *Mr. Waller.*] Do you know about what would be the value of the work done? I could not say.

2745. *Mr. Coyle.*] Does not the Construction Department construct all the brickwork? Yes. On the southern line during the year 1885-6 there was rather a heavy quantity of brickwork. There were two renewals of bridges, one at Cootamundra where the wash-away occurred, and a new bridge was put up altogether.

2746. Did you increase the water-opening there? Yes.

2747. By how much? About 50 feet.

2748. You have, I suppose, very little brickwork on the line? We have not much to do, except in the Sydney district. I do not think there is anything doing this year except a few repairs.

2749. *Mr. Waller.*] What is the number of men in the Newcastle shop? At Honey'suckle Point there are five blacksmiths and nine strikers.

2750. What is their work principally? Making points and crossings, and repairing signal fittings, making signal fittings, connecting-rods, and so on.

2751. *Mr. Coyle.*] What class of points and crossings do they make? Special points and crossings. We often use Colonial points and crossings made out of our own ordinary rails.

2752. For main lines? No, for sidings and special crossings to the compound cross-over roads.

2753. Do you use diamond crossings here? I do not think we have many of them; we have them in some of the yards. The class of points we make is chiefly for sidings.

2754. And altering the inclination of crossings perhaps? Yes, making special crossings. On the northern line there would be a good few diamond crossings, because of the number of coal lines which come in there.

2755. Is all the work in the Newcastle district done from Newcastle, or are there any other workshops or repairing-shops? At Murrurundi they have one blacksmith and one striker.

2756. Does that constitute the whole of them? Yes, on that line.

2757. Have these men constant employment? Sometimes there may be more hands on.

2758. What other work are men engaged on in connection with the line besides the alteration of points and crossings? Signal fittings.

2759. In addition to that, what other repairs are there; any repairs to the rolling stock? No; their work is only in connection with the permanent-way. They perhaps make spikes and bolts.

2760. Special spikes? No, ordinary spikes for the rails.

2761. Have you not large quantities of those in stock? Sometimes our stock may run out perhaps.

2762. *Mr. Waller.*] Would the same answer apply to the blacksmiths in the workshops on other lines? Yes.

2763. Could not all the points and crossings be made in Sydney? I do not think that would be an advantage, the freight on them would come to something, and as soon as the line is opened the freight by rail will be more than it is now. All spikes and bolts will be made in Sydney; they have a machine to make them now.

2764. *Mr. Coyle.*] What other shops have you in Newcastle? Only a blacksmiths' shop, and a carpenters' shop.

2765. Who does the work for the Locomotive Department? They have shops of their own there.

2766. Suppose you dispense with your men altogether, could the men in the locomotive shops do your work? I daresay they could if they took on extra hands.

2767. Then have you supervision over these blacksmiths of yours? That is where the question arose about the foremen.

2768. Suppose you were to transfer your workmen to the Locomotive Department, would you not be able to do away with that supervision at any rate? I do not know that we would.

2769. Would the present supervision in the locomotive shops be sufficient to overlook these men? I hardly think so.

2770.

Mr. M.  
Thomson.

4 Jan., 1887.

2770. Would you need a special man for five blacksmiths? Murdock is thoroughly well acquainted with making points and crossings, and if these men were to be transferred to the Locomotive Department I am of opinion he would have to go with them.

2771. Do you know what supervision exists in the Locomotive Department now? I have no personal knowledge.

2772. Still there might be sufficient supervision in that department to overlook the work of these blacksmiths? There may be; I do not say there is not.

2773. If there was, would you require this foreman? If there were sufficient supervision of course we should not require him.

2774. *Mr. Waller.*] Are not the tradesmen in the locomotive branch a more skilled class than blacksmiths? They would be mainly boiler-makers or rivetters. The blacksmiths that are there are of the same class that we have.

2775. *Mr. Coyle.*] The men in charge of the locomotive shops are more skilled? Yes.

2776. *Mr. Waller.*] How many carpenters are there at Newcastle? Twenty-three, and five carpenters' labourers. There are also fifteen carpenters at Murrurundi and along the line, and twelve labourers. They are engaged in repairing bridges.

2777. *Mr. Coyle.*] What are the carpenters at Newcastle chiefly engaged upon? Making repairs to wooden buildings, signal-posts, office fittings, and furniture.

2778. What else have they to do besides that work? They make trolleys and barrows.

2779. Have they anything to do with the rolling-stock? No.

2780. And the other carpenters along the line? Their duties are similar, and, in addition, they repair bridges and flood openings. That work is also done by some of the carpenters at Newcastle.

2781. How far will the work of the Newcastle carpenters extend along the line? As far as Murrurundi.

2782. What number of bridges are there along the line? Perhaps an aggregate of 2 or 3 miles. I could not tell you the exact length.

2783. *Mr. Waller.*] Are there other carpenters beyond Murrurundi? No, they go right on to Tenterfield.

2784. *Mr. Coyle.*] What proportion of the time of the men at Newcastle and Murrurundi is taken up in repairing bridges? The men at Murrurundi are mostly engaged on that work.

2785. How long have the bridges between Newcastle and Murrurundi been up? The line from Newcastle to East Maitland was opened in 1857.

2786. How long is that? East Maitland is 18 miles from Newcastle. The line was opened to Lochinvar, 26 miles, in 1860; to Branxton, 35 miles, in 1862; to Singleton, 49 miles, in 1863; to Musclebrook, 80 miles, in 1869; to Aberdeen, 87 miles, in 1870; Wingen, 106 miles, in 1871; Murrurundi, 120 miles, in 1872; to Quirindi, 144 miles, in 1877; Tamworth, 183 miles, in 1878; Moonbi, 194 miles, in 1882; to Uralla, 245 miles, in 1882; to Armidale, 260 miles, in 1883; to Glen Innes, 324 miles, in 1884; to Tenterfield, 381 miles, in 1886. Then there is the north-western line, which branches off from Werris Creek, and was opened to Gunnedah, 41 miles from Werris Creek, in 1879, and to Narrabri, 97 miles, in 1882.

2787. *Mr. Waller.*] The information you have given us with reference to the carpenters on the northern line would, I suppose, apply to those on other lines? Yes.

2788. You mentioned among the works that were being performed the making of wheelbarrows. Could you not buy barrows far cheaper than you can make them? I meant platform barrows and luggage barrows; we buy ordinary barrows.

2789. Could you not buy platform barrows cheaper than you could get them made? I could not say.

2790. You mentioned furniture,—what description of furniture? Station furniture, shelves, pigeon-holes, and occasionally, perhaps, a table.

2791. When the stations are handed over by the Construction Branch, are they not furnished? They are not fitted-up.

2792. After you have got the new stations finished, are there the new fittings to be made? There are alterations and extensions of fittings to be made.

2793. Could not these things be done by contract? —

2794. *Mr. Coyle.*] Who is in charge of these carpenters? Joseph Bewes, for Newcastle, and Sub-Inspector Barrack.

2795. *Mr. Waller.*] What salary does Barrack get? £280.

2796. And Bewes? He gets £215.

2797. As to the district engineers, resident engineers, assistant engineers, surveyors, draftsmen, and inspectors, including all the inspectors on the permanent-way, are they allowed any travelling expenses? Yes.

2798. Will you tell me the rate allowed to them, commencing at the top? The district engineer gets 15s. a night when travelling.

2799. Do they produce vouchers for the nights they travel? Yes, certified to by themselves, and that is checked by the day's journals, 15s. a night and 10s. a day. Suppose a man goes out at 6 o'clock, he would get 10s. If he gets continual night expenses for a week he gets no day expenses.

2800. Suppose he started on Monday morning, and did not get back until Tuesday, what would he be entitled to? If he gets back on Tuesday morning, he would be paid for the night only; if he gets back on Tuesday night, he would get paid for the day and night. These remarks would apply to all.

2801. Then there are the assistant engineers? They get 12s. a night, and 7s. a day.

2802. Suppose you start on Monday morning, and get back on Monday evening, at 6 o'clock? Then I would charge for a day, 10s.

2803. Suppose you start to go somewhere on Tuesday evening, at 6 o'clock, and you are back at work sometime on Wednesday, what would you get? 20s., but suppose I should not get back until Wednesday night until late, I should charge the day, that would be 30s.

2804. *Mr. Coyle.*] If you left this morning, and returned to-morrow morning, at 9 o'clock? I would charge 20s.

2805. *Mr. Waller.*] What are the rates for the other officers? Surveyors, 12s. a night, and 7s. a day.

2806. If you had assistant surveyors, would they get the same? Yes. Surveyors on suburban work get only 8s. a night.

- Mr. M. Thomson.  
4 Jan., 1887.
2807. Then as to draftsmen? Draftsmen in the head office, when sent out on service, get 12s. for the night, but nothing for the day.
2808. Now, as to architects, what do they get? The architects get 15s. for the night, and 10s. for the day, the same as district engineers.
2809. Assistant architects? 12s. a night, and 7s. a day.
2810. Now, take the permanent-way inspectors? They are all on the same footing; whether permanent-way or works, they get 9s. 6d. a night, and 5s. a day.
2811. And the sub-inspectors? 7s. a night, and nothing for the day.
2812. The foreman? The chief foreman of shops gets 9s. 6d. for the night, and nothing for the day the other foremen for the several trades get 5s. a night.
2813. Are there any other men who get travelling expenses? Yes; the cadets, when in camp with surveyors, get 5s. a night.
2814. Do the gangers get any travelling expenses? No.
2815. *Mr. Coyle.*] Is it the practice in your survey parties to make the cadet foreman of the men? We do not do that, he simply assists the surveyor.
2816. *Mr. Waller.*] Do the time-keepers get travelling expenses? No; the chief clerk gets 15s. a night, and 10s. a day.
2817. Where would he have to go? He often has to go to Goulburn and Bathurst, and Newcastle, to inspect the clerical work. My allowance is 20s. a night, and 10s. a day. The engineer's allowance is 30s. a night, and 12s. a day.
2818. *Mr. Mills.*] If he is out a day and a night does he get 42s.? No, 30s.
2819. *Mr. Waller.*] If he is out on Monday and comes back on Tuesday evening he would get how much? 42s. If he comes in before four or five on Tuesday he would not charge more than 30s. Travelling expenses may be abused if strict supervision is not exercised.
2820. *Mr. Mills.*] How long have these rules been in operation? Only two months.
2821. What was the system before that? There were no day expenses, and the night expenses were somewhat different. I could not tell you exactly what they were.
2822. *Mr. Waller.*] Who submitted the new rules? I believe they emanated from the Commissioner himself.
2823. What is the system of supervision? We can always check them by the railway time-tables and by their day book and journals, which show their absence.
2824. In your statement yesterday you said it was proposed to dispense with a considerable number of hands. What has occurred to enable you to make this reduction? The slackening off of work.
2825. What sort of work has become slack? All round, especially in the building of new stations, and in the renewal of bridges, and so on.
2826. Are they already done? No, they are in abeyance.
2827. To the danger of the traffic? No.
2828. How long will they stand in the natural course of events without being repaired; that is those bridges which have been put in abeyance? I can give you one example. On the northern line there is a viaduct over 300 feet long. We reckon it will stand three years by careful attention; but it was intended that it should be replaced in iron this year.
2829. *Mr. Coyle.*] What precautions do you take in the mean time? We prop it up in the centre of the spans.
2830. Do you test the deflection constantly? Yes.
2831. At what intervals? I could not exactly say. If there is any suspicion about a structure they test it once a month, and oftener.
2832. What is the span? 26 feet. The bridge has been up about twenty years. It is close to Singleton.
2833. Is it of iron work? I presume it is.
2834. Do you know what the deflection is on any recent testing? I could not say.
2835. Who tests these bridges? Sometimes the district engineers, and sometimes the inspectors will watch the train go over. If they think there is anything dangerous they will report it, not otherwise.
2836. Do they record each testing, and transmit a copy to the head office? No.
2837. Is there a regular system of testing deflections? There has not been hitherto. We are about introducing a regular system; we were going to do it some two or three years ago, when we were stopped by the Royal Commission.
2838. Have you any instruments for this purpose. Yes, we have.
2839. How is it you do not use them? We use them close by Sydney. I can show you testings we have made. Whenever we open a new bridge it is tested, and all iron bridges are tested once a year with the proper instruments.
2840. And timber bridges? There is no regular system of testing them.
2841. How long is it since this bridge near Singleton was tested for deflection? I could not tell you, I had nothing to do with that before May last.
2842. *Mr. Waller.*] Do you know of any record of testing? I know nothing in connection with it.
2843. In your position you would know if there were records kept of it? No, I should not, unless I made inquiries.
2844. *Mr. Mills.*] Are you going to renew that long wooden viaduct going into Wagga? We would very much like to renew it, but we are not allowed.
2845. *Mr. Coyle.*] What is the length of the spans? They are 29 feet.
2846. Is it an iron bridge? No, a timber bridge.
2847. How long is it since it was opened for traffic? Since 1879.
2848. What is defective about it? The timber and piles are defective.
2849. Was it put up by the Construction Department? Yes.
2850. Has the timber rotted? Dry rot; pipes are in the wood up to 8 inches.
2851. Has anything been done towards draining those pipes? We fill the pipes with white ant-killing stuff—arsenic.
2852. Is it very defective? The deflection is excessive, and there is a slight vibration. When you stand on it as a train passes you have to hold pretty tight on to the hand-rails to keep yourself there.
2853. To what do you attribute this? I do not know that I am at liberty to answer that question, it is one of those taken up by the Royal Commission.
- 2854.

Mr. M.  
Thomson.

4 Jan., 1887.

2854. To what do you attribute it? To the defective timber.

2855. *Mr. Waller.*] Do you know what description of timber was in it? I could not tell you from memory.

2856. As regards these officers, do you find them suitable for the work, I mean your staff? I have seen nothing to the contrary, with the exception perhaps of some of the cadets.

2857. Are they under your control and supervision? Yes.

2858. Are they as much so as if you had all the offices together? No.

2859. Are the offices suitable? They are pretty suitable, but they are rather scattered.

2860. Do you think that your officers work fairly well? I think so.

2861. What difference do you find in this additional hour that has been given? I have not had much time to make observations upon it, but I believe it does not make any difference in the quantity of work done.

2862. Why so; should it not make an appreciable difference in the course of twelve months? It ought to make some difference, but we have not had time to notice the effect.

2863. Do you think when it gets into working order it will? It may when the officers get used to it, but not at present.

2864. Who constructs the tramways? It is done by this department. The plans are made by the surveyor, and then submitted for the approval of the engineer. There is no special tramway staff, except the inspector.

2865. *Mr. Mills.*] Has Mr. Shellshear charge of the construction, or maintenance, or both? He has charge of maintenance the same as of the railways, and he would supervise the carrying out of the work while it was being constructed.

2866. *Mr. Waller.*] What officers are there at the head office? Alfred Leggatt, architect. I think the inspectors superintend the erection of buildings, but he inspects occasionally.

2867. *Mr. Mills.*] Who passes the building finally? Mr. Leggatt passes all buildings erected by contract in the Sydney district.

2868. Is this gentleman allowed a larger amount of travelling expenses than others? No, the same as district engineers.

2869. Is Mr. Josing assistant architect? Yes; he has charge of the drafting, specifications, and prepares quantities.

2870. How many would he have under him? At the present six.

2871. Would you give their names? Robert Hinder, William Nixon, William Stoddart, G. H. Wickham, William Rothwell, H. L. Roberts.

2872. Do you use printed specifications? Yes.

2873. Who are the cadets? Mr. Roberts and Mr. Rothwell.

2874. *Mr. Waller.*] What is their time taken up with principally? In preparing new plans for station buildings, and station-masters' houses.

2875. Could not designs for station-masters' houses be made from standard plans, as in the Construction Branch? As a rule they build the station-houses too large, and not suitable for the class of stations.

2876. *Mr. Coyle.*] Are the station-masters' houses which you put up different from those erected by the Construction Department? They are generally arranged with a view to the size of the family, and class of station.

2877. *Mr. Waller.*] If you build for a station-master who has a wife and six children, and servant, he may die, and be succeeded by a man with a wife and no children, then what becomes of your special arrangement? That may occur; we have a certain standard to go by.

2878. Why could you not prepare a drawing for station-masters' houses of so many rooms, different classes we may say, and have standard drawings for each? I see no objection to it. We are introducing the system both with regard to station-buildings and stations.

2879. In the event of these drawings being prepared, would not the occupation for this large staff of architects be considerably taken away? I do not know.

2880. If the system of standard drawings were adopted, would it not reduce the amount of drafting work to be done? It would, but there would be the preparation of specifications, and the taking out of quantities.

2881. *Mr. Coyle.*] Could not the quantities for each be taken out and printed on the drawing? What about the foundations?

2882. They will always be special. Could not the specifications be made to refer to all the work required above formation level? Yes.

2883. Would that not make a large reduction in the drafting? Yes.

2884. Can you say at present to what extent? No, it would take some time to prepare these standard drawings.

2885. How many classes of station-masters' houses have you to prepare? Say three.

2886. How long would it take to prepare the drawings of these three classes? About three months.

2887. Could you not prepare them in a week? He would be a smart draftsman who could do it. There are only two draftsmen in the Architect's Branch, the others are juniors.

2888. How long would it take Mr. Leggatt to prepare standard drawings of three classes of station-masters' houses? He would not have any time to do it, he has to supervise.

2889. Who prepares the drawings for buildings? The draftsmen.

2890. How long would it take him to prepare drawings for a house of three or four rooms? To prepare it for lithographing would take him two or three weeks.

2891. *Mr. Waller.*] Does Mr. Leggatt do any actual work with his hands? Except preparing specifications, and taking out quantities.

2892. Does he do the actual work himself? He does the actual writing for specifications.

2893. As to the drawing of plans? He would make a sketch, and give it to the draftsman to carry out.

2894. What objection would there be, if any, to having one architectural branch for the whole of the Railways—that is making no distinction between Construction and Existing Branches—but having all the work under one head, instead of having three separate branches of architects, as there are now? I think it would mix matters rather considerably if we had to go to the Construction Department to get our plans prepared, or if they had to come to us to get theirs prepared. The departments are quite distinct.

2895. *Mr. Mills.*] Why should they be? ———

2896

Mr. M.  
Thomson.

Jan., 1887.

2896. *Mr. Waller.*] It is really only architect's work? It requires some special knowledge in the matter of station buildings.
2897. *Mr. Mills.*] Have they not that in the Construction Branch? I suppose they have.
2898. If you gave any architect in the city an order for designs for a railway-station, could he not give you them? I do not think he could.
2899. Do you think there would be any advantage in having all the architectural work done by one department instead of three? I do not see that there would be any advantage. If the Colonial Architect did the work he would require an additional staff, and the work would be done away from our supervision.
2900. *Mr. Coyle.*] We do not propose to hand over your station arrangements to the Colonial Architect. All that the Colonial Architect would have to do would be to design the station buildings? Before we erect a station building we submit it to the Traffic Department, and see if it will suit their requirements.
2901. Why could they not do the same as you? ———
2902. *Mr. Mills.*] Does the architect draw his plan from the levels supplied by the engineer? The surveyors supply him with the levels.
2903. Could they supply any architect with them? Yes.
2904. What does Mr. Fischer do? He prepares all plans for bridges, roofs, engine-pits, piers, and abutments—all civil engineering works.
2905. For what? For all the lines.
2906. *Mr. Coyle.*] Assuming that all construction of new works on existing lines were done by the department of the Engineer-in-Chief, what difficulties would arise? The difficulty would be that the work would be taken out of the hands of the Engineer for Existing Lines?
2907. Suppose the Engineer for Existing Lines confined himself to the maintenance and the Engineer-in-Chief constructed all new works? Renewals are maintenance.
2908. A new bridge would be a new work? I always understood that as soon as a line was constructed it was handed over to the engineer for maintenance, and that he should carry out all renewals and other works in connection with it.
2909. Do you see any difficulty? I see a lot of difficulties.
2910. Are you aware if it is done in any other place? I do not know of any place where it is done.
2911. Is it not done in Victoria? I am not aware that it is.
2912. Do you know whether it is done in New Zealand or Queensland? Queensland has only one engineer, I believe. The Engineer for Existing Lines in Victoria carries out lots of new works there.
2913. Are they separate there as well as here? Yes.
2914. *Mr. Waller.*] What does Mr. Parry do? Suppose we had to lay out a station-yard, we should send to Mr. Parry to arrange it on paper; the same with any alterations which ought to be made to a yard. He has full charge of interlocking.
2915. Then, there is Edward Touch? It has been recommended that his services be dispensed with.
2916. Whom has Mr. Parry under him besides Mr. Touch? Mr. Piand, who prepares the plans; Mr. Conyers, whose services are to be dispensed with, and Mr. W. J. Johnson, who is a cadet.
2917. Do you want him in addition to Mr. Parry and Mr. Piand? We have full employment for the whole staff. If we dispensed with any of them it would be to put the work in abeyance. Mr. Munro, the cadet, is to be dispensed with.
2918. How many had you under Mr. Parry? We had five.
2919. And do you propose to dispense with three? Yes. Then Mr. Parry has charge of the signal work specially.
2920. Is Mr. Fischer Resident Engineer? He prepares the designs for all civil and mechanical engineering works required on the lines.
2921. Whom has he got under him? Mr. Sommerville, who is a licensed surveyor, and who searches through titles for information regarding land to be resumed.
2922. What does he know about titles for land? We have to prepare the description of the land. Suppose we require to take land for a station-master's house, or to enlarge a yard, we send a man out to survey it. The survey is sent to this office, and Mr. Sommerville has then to go to the Lands Office and get all the particulars about it, and prepares a description. He always prepares the tracings, one copy of which has to be kept as a record, and one attached as a transfer to the deed. We forward these on to the Land Valuer. Mr. Sommerville has also to plot out the land we resume on our working plans, and the matter then goes to the Land Valuer for valuation.
2923. When would he plot it on your working plans? As soon as the purchase is made.
2924. From what is the description made out? From information obtained from the Surveyor-General's Office or the Lands' Titles Office. The survey is sent to him by the Surveyor-General.
2925. *Mr. Coyle.*] Are any of these surveyors licensed under the Real Property Act? Mr. Sommerville is.
2926. Do the surveys come under the inspection of the Surveyor-General before they are passed? No.
2927. Are these titles to land resumed under the Real Property Act? I do not know.
2928. There is another surveyor in the Land Valuer's Office, is there not? There are two. That office is not connected with ours; it only deals with land for railways for this office and for the Engineer-in-Chief's. The surveyor for the Land Valuer's Office does not go out into the field; he writes descriptions, and obtains information.
2929. For which branch? For this and the Construction Branch.
2930. If he writes descriptions, what do you want with Mr. Sommerville? We have to supply him with the tracing.
2931. What are Mr. Higgs' duties? He assists Mr. Sommerville.
2932. What is Mr. Shaw? He is a draftsman in Mr. Fischer's office. He is under Mr. Fischer, and is employed on the same work. He does the actual drawing. Mr. Fischer takes out the quantities, prepares sketches, and makes calculations.
2933. How many men has Mr. Fischer got under him? Ten, but some of them are to be dispensed with.
2934. Whom? Mr. Chetwynd, Mr. Moore, Mr. Doyle, Mr. Close, Mr. M'Dermott, and Mr. Cassidy.

Mr. M.  
Thomson.  
4 Jan., 1887.

2935. As Mr. McDermott was put on a month ago, how is it that he has to be dispensed with immediately afterwards: why was he put on? The same way as most such appointments—chucked on to us.
2936. How was he appointed? I believe by the wish of the Minister. I am not certain whether Mr. Morley is to be dispensed with. One is to be transferred from the Redfern office down to Mr. Fischer's office.
2937. That brings them up to six? Yes.
2938. Do you think that Mr. Fischer requires six? That includes the two surveyors for the resumption of land, so that really there are only four.
2939. What is the necessity for these surveyors at all. You have to go to the head office for all your information, and you might as well get the whole thing done there as three-quarters of it? —
2940. *Mr. Coyle.*] Could you not employ a surveyor to do such jobs as could be done in a day? That is a question which may be considered.
2941. *Mr. Waller.*] Are these men working in Sydney, not in the country? Yes; but suppose we resume a piece of land in the country they have to get information from the Lands Office.
2942. Do they go up the country to survey? They do not go into the field at all, except they might have to do a survey for Mr. Fischer.
2943. *Mr. Coyle.*] Is their business in the office simply drafting work, and getting information having reference to the lands resumed? Yes.
2944. *Mr. Waller.*] Who does go out? The surveyors in the district.
2945. Do not they go out into the field about Sydney? No.
2946. Who would, then? A surveyor from Redfern, Mr. Baxter, who is licensed under the Real Property Act. Your questions involve the re-organization of the business, but as the business is now we require the services of these men. We only furnish the Land Valuer's Office with information to prepare the deeds. We are about to resume a piece of land at Blacktown, in regard to which there have been endless difficulties in finding out the real boundaries. The owner furnished us with a plan which purported to come from a licensed surveyor, but it does not agree with our railway survey at all. In such a case as that we have to go to the Lands Office to find the proper boundaries and bearings.
2947. *Mr. Coyle.*] How do you reconcile the two together? That case is not settled—the plan cannot be verified in the Survey Office. We had another instance where a man said he would give us a piece of land, but could not find anything to show that he was the owner of it for a long time; but he found it at last after much trouble.
2948. *Mr. Waller.*] Can your department tell the number of gate-houses and gates on the lines, and the value of them? Yes.
2949. *Mr. Coyle.*] I would like to get a statement showing the number of gate-houses and gates at level crossings? It would take a long time to prepare such a return. In some cases there are no houses, but simply a fletcher's hut. They were all built by the Construction Department.
2950. Could not the District Engineer give you the information, and an estimate of what the value of them is—that is, of the gates and the gate-keepers' houses? I will try to get it for you.
2951. *Mr. Waller.*] What difficulty would there be in putting up portions of a house, with a view to its subsequent enlargement, if the requirements of a station-master's family rendered it necessary to enlarge the house? As a matter of fact we often have to enlarge buildings now.
2952. Could you not make a plan for a building of eight rooms so arranged that four rooms could be built at once, if that would be sufficient for the station-master's family, and then enlarge it at any future time when it might be necessary? Yes.
2953. *Mr. Coyle.*] Do you see any difficulty in using standard drawings for the different classes of general works, such as goods-sheds, engine-sheds, and the different spans for bridges? I see no difficulty whatever.
2954. Engine pits, carriage docks, platforms, tank stands, and all the general work in connection with railways, showing everything above formation level? No.
2955. Would it be a great assistance to the department to have them? It would be a great assistance and a great saving of time. The work would be uniform throughout the lines, and parts could be duplicated. That system is in vogue in every place I know of except New South Wales.
2956. *Mr. Waller.*] You said there was a building in course of erection at Eveleigh, the work-shops; what is the contract for it? William and Morgan have the contract for the foundations, J. F. Carson has the contract for the supply of iron-work, and John Ahearne for constructing the walls and erecting the iron-work.
2957. And what is the whole contract? I can tell you the contract rates, but I cannot tell you what it will come to, because it is not finished.
2958. What do you estimate the cost will be when it is finished? About £79,000; £16,000 for the foundations, £38,000 for the iron-work, superstructure, and £25,000 for the walls and erection. These figures are only approximate.
2959. Who has charge of a building like this? Mr. Kendall is the responsible engineer for these works.
2960. Under whom? I design them, and they are under my charge.
2961. How do you obtain tenders? We call for tenders, and the lowest tender will be accepted.
2962. To whom will they be submitted? To the Engineer and myself. They are opened by the Tender Board and passed on to us for report, we make a recommendation and the Minister accepts the tender.
2963. Is that the only contract going on? There is another contract going on for the supply of iron-work for a similar structure.
2964. What amount will that contract be? About £36,000.
2965. Who passes the iron? Mr. Kendall and myself.
2966. That was also tendered for? Yes.
2967. And were the tenders dealt with in the same way? Yes.
2968. *Mr. Coyle.*] Does that Belgian firm deliver the iron here for inspection? Yes.
2969. Is there any superintending engineer at home to look after it? Everything is passed on inspection here. If we get work finished in England we do not pass it there; we get better work by passing it here. We have condemned a lot of work here.

Mr.

Mr. G.  
Landers,  
4 Jan., 1887.

Mr. George Landers was examined:—

2970. *Mr. Waller*]. What is your position? Chief clerk.
2971. What are your duties? The supervision of all clerical work in connection with the Existing Lines Branch of Railways.
2972. Does that comprise the Redfern Railway Station? Everything, including the work carried on by engineers, exclusive, of course, of the Locomotive Department.
2973. As regards the officers up the line at Goulburn and Bathurst and other places? I communicate with the district engineers, giving them instructions on papers as to what work is to be carried out.
2974. Do we understand that you also inspect these offices? I very seldom go out.
2975. Are they supposed to come under your inspection? The officers at Goulburn or Bathurst or elsewhere are responsible to the District Engineer, and he is responsible to the Engineer for Existing Lines.
2976. What number of clerks have you in this office? Six.
2977. What are their names? The first is Mr. Armstrong.
2978. What are his duties? He is in charge of the record room and the indexing of the records. There are two under him.
2979. Who is the next clerk? The next in the record room is Mr. Burcher; he has charge of the principal railway register.
2980. Register of what? Of records.
2981. Is there a record of accounts? Of all correspondence, and such accounts as pass through the books.
2982. Who is the next? Charles Landers: he is in charge of the second railway register and the tram register.
2983. Do they simply record papers passing through this office? Yes.
2984. To whom is the correspondence of this office addressed? To the Engineer for Existing Lines. Upon receipt it is numbered and the registered number placed on the paper.
2985. Where do letters go first when they come from the post-office? They come here and are opened by me or by Mr. Armstrong in my absence. They are registered and sent upstairs to me, and by me sent to Mr. Cowdery, dealt with and marked off to those to whom they have to go.
2986. Here is a paper which has reference to the traffic at Orange; after a minute has been written upon it, to whom will it be marked off? To the Traffic Manager, when it has been dealt with in our office.
2987. Why should not letters go to the record branch in the first instance? Very often they do, but not in all cases.
2988. Why not in all cases? I do not see why not, but there would be no great saving.
2989. Sometimes are there papers which go first to the record clerk? All open papers go direct to the record room.
2990. I suppose your record clerk could be trusted to see any correspondence? Yes, but very often there are letters which come to Mr. Cowdery not marked O.H.M.S., and I do not open those myself. If you are communicating with the Engineer, you might not perhaps think of addressing it O.H.M.S., which might then reach the office covered as a private letter, and it is a delicate thing at all times to open letters which come in that way.
2991. Suppose Mr. Cowdery is absent? Then I use my own discretion in opening letters. I do not suppose the postal correspondence outside the Department amounts to half a dozen letters a week.
2992. Not from the district engineers? Those letters are opened downstairs. They are marked O.H.M.S., and come from our district engineers every morning, not by post but by train. The only letters we get by post are from Mr. Bewick on the north.
2993. Then as a matter of fact I understand that letters do go direct to the record office, and are sent up here after they have been recorded? Yes.
2994. Do you think you have enough work for these clerks in the record office? Yes.
2995. Could you do with fewer? I do not believe I could. I think this is the least-manned office in the public service; although we have had repeated applications from people trying to get on, we have not employed any who were not absolutely necessary.
2996. Who is the next clerk? William Carson. He assists with the accounts, correspondence, and letters. For the stationery he makes out the requisitions, and receives it from the Government stores.
2997. How many requisitions do you make in a year for stationery? To the Government stores twice a year, unless something is specially required.
2998. What is the value of stationery supplied to this office in twelve months? I will get it for you.
2999. Does that include drawing paper? I will get that.
3000. Will it include the portion of stationery you supply to the district engineers? A great part of it.
3001. What other material do you supply? Tracing paper, drawing paper, tracing cloth, and mounting paper.
3002. Anything in the shape of pencils? Yes; pencils, indiarubber, compasses, and scales; but very few of these.
3003. Does the Government supply these? I do not think the Government supplies them. Mr. Leggatt takes charge of any of these things. Mr. Cowdery and Mr. Thomson have some; but they are not supplied to the draftsmen. I think they are only supplied with curves and scales. Immediately anything of that kind is received it is handed over to Mr. Leggatt, and he keeps them under lock and key.
3004. What accounts does Carson assist in? Making contractors' vouchers.
3005. Why do not they make out their own vouchers? We measure up the work and make up their monthly payments.
3006. Who measures it up? The district engineers. They make out the work on a form called a return of work, which shows the present measurements, the previous measurements, and then gives the total. The district engineer sends in a return of work for each month, under each of the items which go to make up the contract, and we are supposed to pay 99 per cent. It frequently happens that the returns so sent in are inaccurate; they put a wrong price against the work, or the computation may be in error.
3007. *Mr. Coyle*.] How can you tell whether the engineer's quantities are right or wrong? I have no check upon that.
3008. Can you only check his prices? Yes. The original return of work is sent on to the Examiner, and then the voucher is made up for the Commissioner's signature. That work is done here. The  
Commissioner

Mr.  
G. Landers.  
4 Jan., 1887.

- Commissioner signs it, and it expedites the passing of the certificate. These are the particulars of the Petersham station.
3009. What was the amount of the contract? £4,804.
3010. What is to prevent the district engineer from making out a voucher for the progress payments himself, leaving the final certificate to be dealt with in the ordinary way? There is nothing to prevent it; it would come on here to be checked, to be doubly checked.
3011. Would the price be all that you could check? Yes, we have to check them before the certificate can be passed as correct. I may explain that so far as the Sydney district is concerned the officer who attends to that is the architect; but not so in the country.
3012. As to those in the country? We are bound to take their certificate as to measurements.
3013. What would represent the amount of work under any of the district engineers now; leaving out the metropolitan district would it be £50,000 or £100,000 a year? It would be less than £50,000. I think from £10,000 to £20,000 would be nearer the mark. The metropolitan district is the principal.
3014. Would there be any objection if the progress certificate were made out by the engineer and signed by him, and the payments made on his certificate? Would not any error that might be made in the progress payments be adjusted in the final certificate? We should be compelled to check the progress certificate.
3015. *Mr. Waller.*] What is the examiner's duty? I understand that he examines all accounts and all pay sheets.
3016. If he is going to examine these, what further need of examination here? We are supposed to see that no accounts leave this office that are not correct.
3017. But is not the district engineer supposed to see the same thing? Yes; I have made arrangements within the last three months to simplify the work in this respect here, as you will see by the progress certificate before you, which is now made out in about five lines. I also produce the form in which the final certificate is made out, and a progress payment return. When the final payment comes I have to make up a return showing everything in detail in duplicate, one for the engineer to sign, and one for the Examiner to keep.
3018. Why should not the engineer make out these progress payment returns in the first place? He has got an assistant, a draftsman, and a surveyor, why cannot he do it? There is nothing to prevent him that I know of, although they might perhaps ask for additional assistance.
3019. Does your examination of these accounts amount simply to passing the work, after you have run up the additions and extended the prices to see that they are correct? To see that the rates are the rates named in the contract, that the computations are correct, and that the previous payments as stated are correct.
3020. *Mr. Coyle.*] Has not the district engineer a copy of the contract rates, the schedule rates, and also copies of the previous certificates showing the amount already paid, under his own hand? Immediately a contract is accepted I forward him the contract rates, the schedule specification of the rates in full, and also a copy for the inspector's guidance.
3021. *Mr. Waller.*] As a matter of fact, as regards this checking, is it not all done by the accountant, Mr. Finegan? Yes, he checks our accounts.
3022. If that is the case, why should the checking be done here by you? Simply because we have had to make out the accounts.
3023. If it is required that the district engineer should make out the accounts, could they not be checked in the Examiner's office? It could be done.
3024. Would not the Examiner discover any inaccuracies that you would discover? Yes; but he would be down upon me if I allowed any error to pass. The district engineer would be compelled, under the present rules, to send his certificate to the Engineer for Existing Lines, and if I had to pass it it would be necessary that I should go through it to see that nothing was incorrect.
3025. Where is this responsibility to end. First we have the district engineer, who is really responsible. He hands the thing over to you, and makes you responsible, and you hand it over to the Examiner, and the Examiner won't pass your work if you pass incorrect work. Why, therefore, should not these accounts go direct to the Examiner's office from the district engineer? ———
3026. *Mr. Coyle.*] Any errors in computation that would arise would be a mere bagatelle compared to what might arise in measurements. Are not all these progress measurements approximate? They are measured.
3027. Are they accurately measured? No, approximately.
3028. What is gained by all this checking here? I see no objections to these progress payments going direct from the district engineer, and his being held responsible for his own work. At the present I am held responsible, but I really know nothing about the quantities and measurements.
3029. *Mr. Mills.*] Your responsibility is not for the quantities but for the figures, and you think the district engineer ought to be responsible for both? I know nothing about the quantities further than what I see on the paper.
3030. *Mr. Waller.*] If you accept the district engineers's quantities, which is the whole basis of the payment, you might trust to the examiner to check the figures. As a matter of fact have not these district engineers clerks? Yes; more clerks than I have here.
3031. *Mr. Coyle.*] Is there only one accurate measurement of the work made, and that is on the final certificate? Yes.
3032. If there was an error of £100 or £200 in any of these progress sheets would it effect the final results? No; we retain the ten per cent. in hand, and a clerical error in measurement can be easily rectified in the final certificate.
3033. *Mr. Waller.*] Presuming that you have by some error passed in accounts as correct which are not correct, when the final documents come in would not the Examiner discover your mistake? Under the new form which I have adopted he would, but under the old form he had to check it at the time. If the final certificate exceeds the contract prices he sends a memorandum back, asking in what way the contract price has been exceeded. We have to supply him with that information for the Commissioner and to show how it has occurred.
3034. Therefore you do the engineer's work down here and checking too? Yes.
3035. Are you not doing two checkings where one only is necessary? The final certificate is the main thing. Now the progress payment sheet is made out in about four or five lines.

Mr.  
G. Landers.  
4 Jan., 1887.

3036. Do we understand that you think that this monthly certificate of work performed and the final voucher for it might be all prepared by the district engineer and sent direct to the examiner? I see no objection to them being prepared by the engineer, but I think that it should be sent to this office for record, and it is absolutely necessary that the final certificate should be examined.

3037. Is that a heavy matter examining the final certificate? No; I have often checked off a dozen of them at night myself.

3038. Who is Robinson? He is clerk to Mr. Parry in the Interlocking Branch.

3039. What are this clerk's duties? He keeps an account of the interlocking machines which come out, and cost of them. The stores could not well keep this because there is a large quantity of little fittings which are very intricate. It happens that the whole of this machinery is not utilised at one place, and the clerk has to keep an accurate account of all this material which comes through the store, consigned in bulk. If we have to give a requisition for interlocking material for Granville junction, it is all charged in one item.

3040. Why could not some of these cadets or draftsmen keep a record of the interlocking material? I believe Mr. Parry finds sufficient work for the draftsmen in preparing diagrams. There is a book giving instructions and regulations to signal men and drivers, and diagrams of interlocking at each station.

3041. Who prepares it? Mr. Parry. He makes out a fresh plan for each station interlocked. When a station is interlocked a diagram is issued to the Traffic Department.

3042. *Mr. Coyle.*] What other clerical work has he to do? Mr. Parry says he is fully employed.

3043. Has this interlocking business been brought into operation at the principal stations? At most of them.

3044. The next officer on the list is Sheridan? His duties are similar to those of Mr. Carson.

3045. What are the duties of the office boy? He takes letters to the post office, and runs messages to the different offices, which would otherwise have to be done by one of clerks.

3046. Are there no other messengers? We have one.

3047. Why could he not take the letters to the post? He has to take the letters and plans down to the station in the afternoon.

3048. Is there not a post pillar within reasonable distance of the office? It would not answer. If we were to post our northern letters in a pillar they would not go forward except to Newcastle.

3049. Could you not have a post pillar next to the office, and arranged to have it cleared at an hour to suit everybody? It would be an advantage, especially if it were cleared at a later hour. I think there should be a pillar here for the use of the department.

3050. If it were so could you dispense with a boy? Yes.

3051. Then we come to Mr. Moore? He belongs to the professional staff and is custodian of plans. He is under Mr. Leggatt.

3052. Suppose we got rid of all these progress certificates coming down from the district engineers, would that make any difference to you? No; because I only get them once a month.

3053. *Mr. Coyle.*] Are there no other papers from the district or resident engineers that require checking? The wages-sheet. Mr. Cowdery holds the district engineer responsible for all wages-sheets.

3054. Do you ever supply contractors with material? No.

3055. Do you think that you could do with a fewer number than six clerks? No.

3056. *Mr. Waller.*] What book-keeping do you do here? We do not keep any books except rough books for our own information. We do not really go into book-keeping, because if there is any information of that kind required we could get it from the accountant or examiner.

3057. Do you know the system of paying? Yes; I have seen the men paid.

3058. Do you see any objection instead of sending the money by the pay clerks to allow the inspector to be the medium of paying? I do not think the inspector should pay. I do not think any person who is responsible for the time of the men should pay the men. The ganger returns the time to the inspector or sub-inspector, and I do not think that many of these men are sufficiently qualified from an educational point of view to be entrusted to do that.

3059. Do not the gangers make up the time-sheets for their own gangs? Yes, and they return it in the time-books to the sub-inspector.

3060. And upon that you rely? Yes; in the first instance.

3061. If the ganger is trustworthy enough to make that time-sheet out, ought he not to be trustworthy enough to hand the men the money? It is rather a delicate question to answer; I would not trust them to pay the men.

3062. Would it surprise you to know that in Victoria they pay their men through the gangers? They used to pay here through the station-masters.

3063. In Victoria they throw out the bags to the gangers? That is similar to what they did with the station-masters.

3064. Suppose you disapprove of the gangers paying, are there any officers in a higher position such as station-masters, resident engineers, clerks, in fact are there not a dozen other officers competent to do the work? If there are three or four men on a length of 3 or 4 miles who had to go from their work for three or four hours to get paid, that would have to be in working hours, and you would have to pay them for their time.

3065. *Mr. Coyle.*] I suppose in a great majority of cases the payments are made at the stations? Yes; or the sidings.

3066. Why could not the men receive their money from the engineer or the inspector or the station-master, or one of their clerks? There would be nothing to prevent them, more than there is in meeting the pay clerk.

3067. *Mr. Waller.*] Do you think it would be an advantage to pay, as is generally done in large operations once a month? Speaking for myself I see no objection. I consider if the men were educated to the rule of being paid once a month they would be as well off as they are now, when they are paid twice a month, in fact they might perhaps become more provident.

3068. Do you not think that a system of monthly payments and a system of paying through other officers than the pay clerks would be an advantage? No doubt it would; it would save a great deal of labour in making up time-sheets. There is as much trouble in making up a time-sheet once a fortnight as there would be in making it up once a month.

3069. Mr. Mailer, clerk, clerical staff, Sydney District—what does he do? He is head clerk in the district office at Redfern; he supervises the work.

3070.

Mr.  
G. Landers.  
4 Jan., 1887.

3070. Supervises the work, what does that mean? Papers coming from this office contain instructions for the carrying out of work, and he has to communicate those to the inspector, whether permanent-way, or sub-inspector of station buildings.

3071. From whom do the instructions go? From this office to them.

3072. These instructions tell I presume what has to be done? Yes; if it is a matter concerning the permanent-way, Mr. Mailler communicates it to the permanent-way inspector; if connected with bridges or station buildings he communicates it to Mr. Purton.

3073. Why could not the instructions go direct to those gentlemen from this office? That would be ignoring the district engineer; the head clerk acts for the district engineer.

3074. But what does the district engineer do as a matter of fact? These instructions having been sent forward and recorded, why should they not go direct? A certain amount of work would then be carried out in a district of which the district engineer would be ignorant. The traffic manager might apply for a certain amount of work to be carried out by the district engineer. If that work were new work we would have to get the Commissioner's approval of it before we can inform him. Having obtained the Commissioner's approval, or Mr. Cowdery having approved, if the instructions went direct to the inspector of permanent-way, the district engineer would not know that the work had been approved. The work would be going on without his knowledge.

3075. It means simply to notify the district engineer that certain work has to be carried out? Yes.

3076. Then why should the clerk supervise that? He has to get up accounts, and anything of a clerical nature.

3077. What extent has the district engineer at Sydney charge of at the present time? He has the maintenance of 143 miles of railway and 36 miles of tramway.

3078. Suppose his services were dispensed with altogether, how would the work go on? I have no doubt the work would go on, but that is a professional matter out of my province.

3079. You have a chief engineer, and a deputy engineer, and I understand the district engineer exercises a sort of general supervision, and does no actual work himself. Of course he has to sign all papers, but does he do any actual measuring or direction of work on the ground? Not that I am aware of, he might for all I know to the contrary. I could not say that he does or he does not.

3080. *Mr. Waller.*] Leopold Schuler, who is he? He is clerk to Inspector Purton. He has been there before the appointment of district engineers under the system when Mr. Purton had the whole railway. He attends to the issue of orders to the sub-inspectors, special train notices, and so forth.

3081. Are they verbal or written orders? They are written orders. There is a large number of requisitions issued on the store for the Sydney district.

3082. Then we come to another, A. Prentice? He attends to the register book.

3083. Are his records very large? I do not know; they run the numbers up somehow.

3084. If you require this head district engineer's clerk to supervise the clerical work, do you require an inspector, clerk, and clerk of records. It appears reasonable that one of these two should be able to attend to records? I do all the clerical work connected with the Existing Lines Branch, where everything comes here from all the districts, with six clerks. They have more clerks than I have although their work relates only to a portion of the line.

3085. How many clerks have they in the office under Mr. Mailler? There are eight clerks besides himself.

3086. What are their names? Schuler, Prentice, Roberts, Bolger, T. Sherlock, Miles, Henry Sherlock, and A. Prentice.

3087. And the head of the office makes nine? Yes.

3088. Could not the district engineer be the head of his own staff if he requires an enormous staff like this? No doubt he is the head of it, but he requires someone to act for him in his absence. I may mention that it has been recommended that two of these clerks be dispensed with—Bolger and Miles.

3089. How far does this district extend? To Picton on the south, Springwood on the west, the Richmond Line, the Northern Line to Hornsby, and the Illawarra Line to Waterfall, 142 miles 19 chains of railway, and 36 miles 15 chains of tramway.

3090. *Mr. Coyle.*] Are all the works constructed in the district under the immediate charge of the district engineer? No, the station buildings are under the supervision of Mr. Leggatt, the architect.

3091. What stations are going on at the present time? There is a passenger station and waiting-room at Macdonaldtown.

3092. Is it a large building? No, I believe it will cost £1,200 or £1,300.

3093. What other stations are there? A waiting-shed at Summer Hill which I believe will cost about £900.

3094. What other buildings are going on in the metropolitan district? No others as far as the architect is concerned, but there are workshops at Eveleigh.

3095. What other works has Mr. Leggatt to superintend? I do not think he has any other than station buildings.

3096. What are his duties inside the office? Designing and preparing any plans for works to be carried out on any portion of the line.

3097. Are there many works proposed to be carried out now; are the drawings of many works in preparation? Drawings are in preparation, but I cannot say how many.

3098. *Mr. Waller.*] Are the Eveleigh workshops under Mr. Leggatt? No; they are immediately under Mr. Kendall, a subordinate of Mr. Shellshear, the resident engineer.

3099. But I thought they were immediately under Mr. Thomson? There is a resident engineer on the ground who attends to these particular works at Eveleigh.

3100. Does he act more under Mr. Thomson than under Mr. Shellshear? So I understand, as far as the Eveleigh works are concerned.

3101. Does he do anything else except superintend the works at Eveleigh? I cannot say that he does at the present time. He was attending to the Petersham viaduct a short time ago as well as to the workshops.

3102. Has Mr. Shellshear anything to do with the repairing-shops at Eveleigh? I think not; the certificates come through him in the usual way.

3103. *Mr. Coyle.*] Does he make the measurements? Everything is supplied to him, as I understand, by

- Mr. G. Landers.  
4 Jan., 1887.
- Mr. Kendall, the resident engineer, and as the certificate has to come from that district it comes through the head of the district to this office.
3104. *Mr. Waller.*] What real work does Mr. Shellshear do? I cannot define his duties; I have nothing whatever to do with the professional staff.
3105. J. Palfreyman, what is he? He is a time-keeper for the metropolitan district; he supervises the preparation of time and pay sheets.
3106. How many time-keepers are there? Eight are shown here, but it is recommended that two of them, Eckford and Webber, be dispensed with.
3107. How many have they to keep time for? I cannot tell you the number of the men, but it is a large number.
3108. Do you consider that there is still work for five time-keepers. I do not.
3109. How many do you think it could be correctly kept by? If they had three or four I believe it would be ample.
3110. Three good men? Three good men; I do not think any commercial man would tolerate more.
3111. Do you see why this gentleman who stands at the head of the list should not be a time-keeper himself, instead of being a general supervisor? He is a time-keeper; he did all the work single-handed at one time.
3112. Then he is not simply an ornamental man? No.
3113. Do you think that he, with two good assistants, could do the work? With two or three I think he could.
3114. Suppose the payments were made monthly instead of fortnightly, do you not think he could do with two? The gist of the work in making out time-sheets falls upon you at the last moment.
3115. But instead of making them up twice a month you would have to make them up once? Yes; but you have to get them done in a certain time, and the hardest part in preparing time-sheets is to bring in the work of the last day. You cannot always keep the time up to the last day; some will let it get behind a day or two, but, independently of that, the greater part of the work in making out a time-sheet comes on you at the last day when you have to carry out all the money extensions and additions.
3116. Do you think he would require three? I think three besides himself would be sufficient.
3117. In this matter of paying wages do you know whether the men write a receipt on the wages sheet or whether they hand in separate receipts? Sometimes they sign their names opposite the amount, but now I believe the practice is to sign an order which is attached to the sheet.
3118. Would it not be better that the sheets should be signed as the men are paid by some responsible officer? When I was time-keeper with Peto, Brassey, and Betts, we never took receipts at all.
3119. Suppose it was necessary to have a receipt, would it not be better to have it on the pay-sheet instead of as a loose document?
3120. Would it ease the paying to pay one section one fortnight and another another, and so lessen the time-keepers required? No.
3121. As to Burrows, what is he? He is employed as clerk in Mr. Waring's office. A clerk to an inspector is a very necessary adjunct. The inspector is in his office for only a short time during the day, principally from 6 o'clock in the morning until breakfast time. He may send down for materials, and it is necessary that someone should send them up to him.
3122. Who sends the materials? His clerk or the district engineer.
3123. Why should not the inspector send to the district engineer? There is no reason why he should not, that I know of.
3124. Where is this inspector's office? In the station-yard, close to the tunnel.
3125. Is it anywhere near the district engineer's office? Within about 50 yards of it.
3126. When the inspector is out on duty, why should not any requisitions go to the district engineer; why should not the inspector's office be in his office? No doubt it would be better if it were there. The closer work is kept the better.
3127. What does the district engineer's staff consist of? Fifty-four officers, on monthly salaries.
3128. What do they consist of? Three resident engineers, two surveyors, two draftsmen, eight cadets, one temporary surveyor, ten clerks, eight time-keepers, five inspectors, nine sub-inspectors, and six foremen.
3129. That being the case, does it seem to you requisite that inspector Waring should have a separate office and a clerk all to himself? No doubt it is considered necessary. They formerly made out the time-sheets, but that is done elsewhere.
3130. You do not think it is required then? I do not think so.
3131. You mention a temporary surveyor; who is he? I believe he is to be dispensed with.
3132. *Mr. Coyle.*] What had he to do? I could not define his duties.

WEDNESDAY, 5 JANUARY, 1887.

Present:

MR. T. F. WALLER, | MR. J. Y. MILLS,  
MR. J. E. FITZGERALD COYLE.

Mr. Max Thompson was further examined:—

- Mr. Thomson.  
5 Jan., 1887.
3133. *Mr. Coyle.*] What are the particular duties of a district engineer—take those of Mr. Stephens? His duties would be to see carried out all instructions from the head office.
3134. What instructions do you give him? That depends upon the work required to be done. We have to make additions to station-yards, and lay out new stations altogether, to put up new platforms, erect new buildings, and make additions to old buildings; we have to repair all works of that kind.
3135. *Mr. Waller.*] Does he draw the plans? We draw the plans, unless he makes a proposal for work, which he would accompany with a plan.
3136. *Mr. Coyle.*] So that if a new station-yard is proposed to be laid down, do you prepare plans here in this office and send them to him? Yes.
3137. Does he call for tenders for the work? No; all his work is day-work. He superintends contracts, the tenders of which are called from this office.

3138.

Mr.  
M. Thomson.  
5 Jan., 1887.

3138. What does he do in the way of supervising stations which are let by contract? He sees that the work is done according to the specification, and he makes out the certificates.
3139. Does he do anything else otherwise than certify, that is, anything that an inspector could not do. What work has an engineer to do further than certify? He must visit the works to enable him to certify.
3140. Have you inspectors at the works. Does your experience tell you that the average run of engineers are better men to put over buildings than the inspector of masonry, as far as masonry is concerned? I do not say as far as practical work is concerned.
3141. What other work has he to do? To set out work, to decide how works are to go on; that is to say, he lays it out on the ground.
3142. Does he set out on the ground? Sometimes he does, and sometimes he does not. If he does not set it out himself his surveyor or his assistant will do it.
3143. Then all the professional work he could do would be in making a survey or pegging out the position of a siding or a building on the ground, and making out certificates for the work? Often after a building has been commenced it is found that it would be desirable to alter it somewhat from the plans, and the district engineer has to give his opinion about that.
3144. Have you not inspectors to do it? I should be very sorry to rely on the opinions of inspectors in such a case.
3145. Putting aside the making out of certificates and the question of supervision altogether, what other duties will the engineer have to perform, duties peculiarly appertaining to himself? To report on the state of the various buildings and works in the district.
3146. Who gives him the information necessary to enable him to report? In the case of important matters he must ascertain the facts for himself.
3147. If any serious matter occurs is it reported to him? It is reported through our own officers under him.
3148. What would be the objection to their reporting direct to the head office? Only a loss of time.
3149. Can you see any real necessity for the office of district engineer at all? Yes, a great necessity.
3150. *Mr. Waller.*] After the district engineer gets his information does he not report to the head office for authority? Yes.
3151. *Mr. Coyle.*] Would not any man act upon his own authority in the event of anything serious occurring? It would be his duty to do so.
3152. *Mr. Waller.*] Does the inspector communicate first with the engineer, and then the engineer with the head office? If he reported to the head office we should not know where to find the accident gang, or the particular men we required in the emergency.
3153. *Mr. Coyle.*] But if everything were done from the head office you would know? It is doubtful. I should think it rather dangerous to control a line of 700 or 800 miles from Sydney.
3154. All the control that we can see exercised by the district engineer is that he makes out certificates and communicates with the head office? That is only a small part of his duty.
3155. What does he do of his own act? *Mr. Stephens* the other day sent in a very elaborate report on the water-ways of the line from personal inspection.
3156. What line was that? The Gundagai line.
3157. That is a question which has attracted attention in the newspapers. Was *Mr. Stephens* asked to furnish that report? As soon as the wet weather set in he was asked to report on the state of the works on all of the lines of his district.
3158. I suppose on the drainage areas and the catchment areas. But that is not one of the ordinary duties of an engineer; that is outside his ordinary duties. What other duties peculiar to his office does he perform? He directs and controls the working of the district work-shops, and he sees that the lines are kept in proper order.
3159. Are all of your engineers competent to control the work-shops and repairing shops? We have no repairing shops, only small work-shops.
3160. Are these officers experienced in mechanical work? There is very little mechanical work doing.
3161. What is done in the work-shops? Making parts of signals.
3162. Do you want a district engineer to supervise that? He directs and controls that; he supervises and he is responsible.
3163. But he has no power to act except in cases of emergency? Small repairs need not be submitted to the head office. It is the duty of the district engineer to draw attention to whatever may be required.
3164. What would be the objection to the inspectors communicating direct with the head office. I understand that all the men on the railway in the case of any serious accident occurring are justified and empowered in acting on their own responsibility at once? Yes, and the case is the same in every other railway in the world.
3165. Do you see any objection to the inspectors communicating direct with the head office? It would increase the work of this office three or four-fold.
3166. In what way? We should want three or four times the present staff.
3167. In what way? Because we should have to deal with all the reports of every Inspector. At present the district engineer only sends on some of the reports.
3168. Then it would increase your clerical staff? Yes.
3169. And what other operation would it involve? The engineer or myself would have to be always on the lines.
3170. Do you think there would be a large increase on your duties? I will only take one instance, that of the late floods, when parts of the northern, southern, and western lines were washed away. I could not possibly be in the three districts all at the same time. Under the circumstances which you suppose there would be no responsible officer on two of the lines.
3171. In cases of emergency the staff would have to be increased until the emergency was met. Putting aside questions of great floods, take the ordinary business and circumstances of the office, would you say that the staff would have to be largely increased,—what portion of the staff would be largely increased? The clerical more than any other.
3172. Could you give any opinion as to the number of additional clerks that would be required? Most of the clerks now employed in the district offices would have to be drafted into the head office.
3173. Suppose they were drafted into the head office, would they not be able to overtake the work? It would not be as easy as it is now, and the work would not be as well conducted.

- Mr. M. Thomson. 3174. Are you of opinion that it is necessary for the proper and systematic working of the railways that these district engineers should remain in the same position as they are? That is my opinion.
- 5 Jan., 1887. 3175. We have here two assistant engineers, one, Mr. Melrose; what are his duties? To survey and set out work, and assist the district engineer.
3176. Another is Henry Provost? His duties are the same—surveying and setting out work.
3177. Is there constant employment for both of these officers in surveying and setting out work? They are working nearly double time at present.
3178. Are they making surveys of stations? Yes.
3179. Is that urgently required? Very urgently required.
3180. Have you not done without it up to the present time? It is only within the last few years that the lines have grown to the magnitude they are now. For two or three years the work has been wanted.
3181. There is also a draftsman here—what are his particular duties? To prepare tracings and to plot the surveyor's plans.
3182. Why should not these two officers plot their own work? In all cases they have not the time. Suppose a surveyor is sent out to a particular job which is wanted in a hurry. He might have two jobs in the same vicinity. He might make a survey of one and send his work up to the office to be completed while he went on with the other.
3183. What kind of surveys? In some cases surveying for water supply.
3184. For the railways? Yes. Mr. Melrose, if he is not engaged upon that at the present time, has been so engaged up to a short time ago.
3185. Where was he employed? On surveying for a water supply, at about June.
3186. What was the nature of the surveys he was making? He had to survey the whole water-shed to see what quantity of water could be impounded.
3187. How long would that take him? He has been on that work for three months, not in one particular place, but trying to find out the best place in the district.
3188. In what way,—making a reconnaissance survey? You would take contours of country and levels, and find out all particulars about the flood-levels as well.
3189. Would that keep him two or three months? I should say it would. The question involves the laying out of a sum of £30,000 or £40,000, and requires due consideration.
3190. Is he the class of man to do it? He is the class of man to make the survey.
3191. Have you not the Department of Harbours and Rivers,—it has men specially trained to that work? That department is not under the railways.
3192. But it is under the Government, and paid for out of the Treasury? We should know the country along the lines of railway better than anybody in the Harbours and Rivers Department would. We have often to sink trial wells to see if we could obtain water. There is a great deal of that kind of work going on.
3193. How long has Mr. Stephens been in the public service? Thirteen years.
3194. Has he been connected with the railways all that time?
3195. Is he a very good man? Yes; he was chief engineer in Queensland at one time.
3196. His district, you say, extends 700 miles? About that.
3197. Are his duties entirely those of supervision? The duties of any responsible engineer are those of supervision. He has to make reports upon works to be carried out.

Mr. George Landers was further examined:—

- Mr. G. Landers. 3198. *Mr. Waller.*] Who is the engineer of the southern district? Mr. Stephens.
- 5 Jan., 1887. 3199. Can you say what his duties are? Mr. Thomson is in a far better position to tell you that; but I believe that he has to see to the proper maintenance of the line in his district, to see to all the bridges, culverts, and station buildings.
3200. What are Mr. Flood's duties? He is the leading clerk in the district engineer's office at Goulburn. They are similar to those of Mr. Mailler, at Sydney.
3201. How many clerks are there in that office? Five in the office proper.
3202. Their names are? Camden, Warne, Brown, Warne, and Harris.
3203. What are the duties of the clerks in the office proper? Camden keeps the cost of works.
3204. What is the meaning of that? Some time ago, I think in Mr. Avern's time, a system was introduced of keeping the cost of works carried out in the district.
3205. Of new works? New works and repairs. I believe that if the Commissioner required to ascertain the cost of any work he would take the accountant's figures in preference to any others which might be supplied.
3206. Which accountant? The accountant for railways, who is the recognised book-keeper of the department.
3207. Do the particulars of all costs go to the accountant? Yes; the cost of works would be furnished to the accountant by the appropriation which is made by the examiner. The detailed items are not kept separate and distinct by the accountant.
3208. Who would have those particulars? It is not like a vote for a new work, in regard to which the examiner furnishes the accountant with returns; but these are mostly ordinary repairs and renewals, of which the accountant's branch does not keep a detailed account. You could not get from him the details of expenditure upon any particular station-building.
3209. What necessity is there that there should be a detailed account of these repairs? The only necessity that I see is that it gives the district engineer or the inspector an opportunity of ascertaining that when men are working at a distance from head quarters they are not loafing.
3210. How can the clerk in the office know that? They make that out from the pay-sheets.
3211. If the pay-sheet were correct, the account made out by the clerk from it would be correct? Yes.
3212. But if the pay-sheet were manufactured, the account would be manufactured? Yes.
3213. If you have the pay-sheet have you all the information which can be got? Yes.
3214. Suppose you want to know the cost of repairs to any particular station building? It might appear in four, five, or six pay-sheets, and to get out the cost you would have to follow every man's time through each sheet. If it is necessary to take out the cost that is much more easily done as the sheets come in than after they have accumulated.

Mr.  
G. Landers.  
5 Jan., 1887.

3215. If it is necessary to take out this information, why could it not be done in a proper manner in the Accountant's Office? I suppose it has not been considered necessary.
3216. But if it were considered necessary why could it not be done in one office instead of having book-keepers all over the country? My opinion is that there is no necessity for this either in the district engineers' office or here. The accountant being the officer recognised as the one through whom the accounts should go, and he being furnished with appropriations of the cost of works by the examiner, his figures would be taken in Parliament.
3217. *Mr. Mills.*] Do you think that the returns ought to be sent in to the head office? So far as the votes are concerned, the cost of works is now kept separate and distinct by the accountant; but the expenditure on general renewals and repairs is entered up *in globo*. They would not separate the cost of a station building from that of a platform.
3218. Is it necessary that the cost should be kept separate? It may sometimes happen that the cost is called for.
3219. *Mr. Waller.*] If it is necessary to separate it could not a book for the purpose be kept in the Accountant's Office? The examiner appropriates all votes, and he could so appropriate all expenditure on repairs and renewals that all expenditure could be shown separately.
3220. Then what I suggest could be done? Yes; but I think it should be done on the ordinary appropriation.
3221. Do you mean that it should be done in the Accountant's Office? The information is supplied to the accountant by the examiner who makes the appropriation from the pay-sheets. The details of the pay-sheets are left with the examiner. Whatever we do for other departments we charge in the pay-sheets, and he debits each department with the proper cost. These are all dated and can be referred to. Mr. Finegan has them bound in book form.
3222. Then if any information were called for, it could be obtained from the pay-sheets? I think so.
3223. Which I suppose are bound in guard books? No; properly bound.
3224. Are you, therefore, inclined to think that the keeping of a clerk to record the cost of works is unnecessary? I never saw any necessity for it.
3225. Are there two Warns in the office, are they brothers? No; cousins, I think.
3226. Is one the clerk who makes up the pay-sheets? That scarcely covers his work. He does the general work of the office as well.
3227. What are the pay-sheets made out from? From the time-sheets furnished by the inspectors.
3228. Why should not both be made out by the inspectors? It would be necessary in that case that the time sheet should be extended so as to include a few more columns.
3229. Why should not the time-sheet and the pay-sheet be one and the same? The time-sheet is made out by the ganger, not by the sub-inspector.
3230. The ganger is the first man who makes out the time? Yes.
3231. When he gets the time-book, the inspector could make out the pay-sheet from that? Yes; but they would have to have clerks. While I was away upon a holiday—the first I had had for eighteen years—Mr. Avern was then deputy engineer. When I came back I found that there was a pay clerk appointed to every sub-inspector of permanent-way on the western district of which he formerly had charge. The northern and southern districts were not similarly treated. We dispensed with them at the end of last year.
3232. What other works has he to do besides making out pay-sheets? I cannot particularise it; it is the general work of the office.
3233. Is the next man on the list making out pay-sheets also and passes? Yes; but their duties are better defined as those of the general routine of the office.
3234. What are these passes? Passes for the men to go to and from home. We allow the men to visit their families once a fortnight from the Saturday until the Monday. They go home once a fortnight or once in three weeks.
3235. Is not a pass a simple thing to make out? All that has to be done is to fill in the date and the name.
3236. Are all the details of work entered upon the pay-sheet? Yes; here is one.
3237. And are appropriated in the Examiner's Office and charged to the proper votes? Yes.
3238. And are the pay-sheets bound in book form? Yes.
3239. And are they constantly available as permanent records? Yes.
3240. Then I understand that the examiner appropriates the expenditure under the different heads. He furnishes those appropriations to the accountant who enters them up in a book as a debit against certain votes passed by Parliament? Say there is a vote of £25,000 passed for some particular work. The accountant has that entered upon a certain folio. Every item that comes in on the pay-sheets expended on account of that work is entered as a debit against that vote, so that you can always ascertain from the accountant what balance there is upon the vote. The same with regard to the stores. He is supplied with a monthly summary of the stores issued, and he keeps an account of stores and wages.
3241. Should it be deemed advisable that the cost of repairs upon each individual station should be shown, would there be any difficulty in having a register in the Accountant's Office in which they could enter from the time-sheet all expenditure upon repairs, say "repairs" so much "*vide* time-sheet No. so-and-so?" I do not see that there would be any difficulty.
3242. Would it be still more practicable under a system of monthly payments than under one of fortnightly payments? It would reduce the number of pay-sheets by one-half. The pay-sheets would be slightly extended, but the work of making out each sheet would be about the same.
3243. Who are Warn and Harris? They are only young fellows; one gets £50 and the other £65.
3244. I see you have a clerk occupied in making out dockets and requisitions. What is the meaning of that? When any stores are required, instead of making out a requisition for each individual item—they have a branch of the Eveleigh stores at Goulburn—they issue a docket, that is a printed form, perforated and torn from a book.
3245. An ordinary order book in duplicate—please deliver so and so? Yes; the requisitions are made out afterwards from the order book, and must agree with the dockets sent to the store.
3246. How often are the requisitions made out? They are supposed to go in every day or every second day.

Mr.  
G. Landers.  
5 Jan., 1887.

3247. What is the use of making out first the docket and then the requisition? They must be in pretty quickly to enable the storekeeper to make up his accounts.
3248. How many dockets are made out in a day? Perhaps forty or fifty.
3249. You have five clerks here—do you think they are all required? It is proposed to dispense with Warn and Harris.
3250. Then it leaves the office with four? Yes.
3251. Is there work for four? I have always contended that if I can do the work of 2,000 miles of railways and a lot of tramways with six, those districts which have a much smaller mileage could do the work with a proportionately less number.
3252. There are two clerks at £165 a year. Is there work for more than two? There is a lot of work in the pay-sheets which does not appear on the surface, and there is a lot of communications between the district engineer and the inspectors which do not reach this office.
3253. *Mr. Coyle.*] The correspondence between the district engineer and his officer would refer to works going on? Yes.
3254. What would a clerk have to do with them beyond copying them out in a fair hand? Very often the engineer may not be at his office, and it may be necessary that the clerk should take action.
3255. Would a clerk do that? If bearing on works already sanctioned he would.
3256. Suppose an inspector finds it urgently necessary to do something, and the engineer was not in the office, what would be the consequence? I do not suppose the inspector would be to blame for acting if it were a case of urgency.
3257. Would he do what was required himself? Yes; in consequence of our financial difficulties every paper has to be sent here for approval.
3258. *Mr. Mills.*] Cannot the telephone be used now between the inspectors and engineers, and so a great deal of business be done without the labour and delay of writing letters? The inspectors may not be at headquarters for more than a day in a week. They have the use of the telegraph between each railway station. I am in communication with all our branches by telephone. The telegraph is open to them at night as well as day.
3259. *Mr. Waller.*] Do you not think that if you get rid of the system of keeping the cost of works two clerks would be sufficient? I think three would be.
3260. Not even by having the pay-sheets made out once a month? I think three are required.
3261. How many assistant engineers are there under this engineer? Two, Mr. Melrose and Mr. Prevost.
3262. Can you tell us what are the duties of the assistant engineers? I do not know that I can properly define them. I know that they are employed in making surveys of different station arrangements, which are sent down to Sydney and lithographed into a book on a small scale, so that if any new works are applied for the Commissioner can see at a glance what station accommodation exists, and determine whether an additional siding is necessary. If it is necessary it can be laid down upon it.
3263. *Mr. Coyle.*] Up to the present time has there been any such survey? Only that shown on the station arrangements of the Engineer-in-Chief.
3264. Is this a work which is urgently necessary in the mean time? I could not say as to that. I know also that there are places where land has been resumed for railway purposes, but has never been fenced in. In all cases we do not know the Commissioner's boundaries, and fence posts have to be put in.
3265. Do these two officers make surveys of land? Yes, land as well.
3266. Are they engineers or surveyors? They are termed assistant engineers.
3267. What are they? I know that Mr. Melrose was Assistant District Engineer on construction before he came to us; since he has been with us he has been employed principally on surveys.
3268. Is there a resident engineer on this section? No.
3269. How is the draftsman employed? He is employed in the office preparing plans, I presume from the surveys supplied by Mr. Melrose and Mr. Prevost.
3270. *Mr. Waller.*] Why should they not prepare their own plans? I think that is more a matter for Mr. Thomson to answer.
3271. The next grade I see is the inspectors, how many of them are there in this district? Four.
3272. And how many sub-inspectors are there? Thirteen.
3273. What are their duties? The permanent-way sub-inspectors have a certain length of line to look after—70 or 80 miles—which they go over once a fortnight. One of the sub-inspectors looks after station buildings and another after bridges.
3274. *Mr. Coyle.*] What are the duties of the four inspectors? Mr. Lewton is inspector of permanent-way over the whole district. Mr. Brown is inspector of station buildings and of all bridges. Mr. Franklin is inspector of all masonry and brickwork. Mr. Rose is inspector of ironwork and signals. Taylor is sub-inspector of station buildings under Brown, and Gidds is sub-inspector of bridges under him.
3275. How many gangers and surface men are there under these inspectors? It is something under a man per mile. Reductions have taken place.
3276. Have you a sub-inspector over each 64 miles of line? Yes.
3277. Are they good steady men, intelligent, and reasonably well conducted? Yes.
3278. Suppose you were to dispense with the services of the four inspectors, and let the sub-inspectors communicate direct with the district engineer or his officers, what would be the consequence? They are almost continually out upon the works themselves. The inspectors are not stuck in the Goulburn yard or at headquarters—they may be away from home four or five days a week. The sub-inspectors get home nearly every night.
3279. Suppose one of these sub-inspectors wished to do anything how would he act? He would communicate with the inspector.
3280. And, then, what would happen? If the work is one which has not been approved, the inspector must communicate with the district engineer.
3281. Has the district engineer full authority to deal with any details which may arise? Not involving any large expenditure. Trifling expenditures he could carry out.
3282. To whom would he apply in such a case? To the Engineer for Existing Lines.
3283. What authority has he got to spend money? He can go to a certain limit; but if it is for new work, he would seek the approval of the Commissioner.
3284. *Mr. Waller.*] What is the limit? I think £50 upon a single job on repairs; but not more than £1,000 a month.
3285. *Mr. Coyle.*] Suppose the four inspectors and the district engineers were dispensed with, and the sub-inspectors

Mr.  
G. Landers.  
5 Jan., 1887:

- sub-inspectors communicated direct with the head office, what do you think would be the consequence? That is rather a difficult question to answer.
- 3285½. These men apparently do nothing on their own authority? Unless in cases of emergency.
3286. In that case a sub-inspector would act in a similar way? Yes.
3287. Has the inspector any authority which the sub-inspector has not, further than that he belongs to a higher grade? No.
3288. Has the district engineer any authority? No; that has been withdrawn.
3289. Consequently what necessity is there to have all these officers? Do communications acquire any additional value by passing through all these officers? I think that the four inspectors are really good men.
3290. *Mr. Waller.*] We are not considering the men, but the system. As the inspectors are really good men and are constantly travelling through the district, would it not in view of the necessity for retrenchment be far better to continue them on, and dispense with some of the sub-inspectors? —
3291. Leaving personal considerations out of the question, I take it that Mr. Coyle means that if you were devising a new scheme, you would not think it necessary to have all these inspectors? I think inspectors are necessary.
3292. We do not want to do away with inspectors; but we want to find out the necessity for the different grades as inspectors? Do I understand you to mean, for example, that Joseph Lewton would still be classed as an inspector, but that instead of his over-looking a member of sub-inspectors he should do the work.
3293. Yes? Some years ago a similar position was allotted to the men by Mr. Mason. Joseph Lewton was first transferred to Goulburn twelve or fourteen years ago. He gave each man 48 miles, I think, and required him to walk the whole length every week. He forbade them to use a trolley except in cases of necessity. In this way each man examined his own particular length once a week for himself. There was then no travelling inspector. Lewton used to perform the duty from Bundanon to Goulburn, the same as any of the others. He went through the gangers and examined their work every week.
3294. How did that work? I think that it worked well as far as I can remember.
3295. *Mr. Mills.*] When was it altered? After the extension of the line beyond Goulburn.
3296. *Mr. Coyle.*] Do you see any advantage in having one inspector going over the work of another inspector—one having no more authority than the other? The inspector may take upon himself what the sub-inspector would not like to do; but if there were anything of extreme urgency the sub-inspector would do it.
3297. *Mr. Mills.*] How do the inspectors and sub-inspectors travel along the line now? The inspectors, as a rule, travel by train; the sub-inspectors are supplied with tricycles.
3298. *Mr. Waller.*] So that all the inspector can see as he travels along the line in the train does not amount to much? —
3299. *Mr. Coyle.*] Who comes next to the sub-inspectors? The gangers.
3300. How many gangers will you have on (say) 53 miles—the average distance which a sub-inspector has to examine? I suppose about 14.
3301. How many men has each ganger under him? Two, and sometimes three.
3302. *Mr. Coyle.*] Say 4 miles to each ganger, a man per mile? Yes.
3303. What are the duties of a ganger? To see that each particular length is kept in good running order. The ganger has to work with his men, and to walk over his length every day.
3304. What is the difference between the wages of the ganger and the wages of the men? One shilling and sixpence a day. The ganger is supposed to provide himself with a watch.
3305. His duties are to work with the men? Yes; and to keep the time of the men, and to see that his length is kept in good running order.
3306. Is there any person who is supposed to walk over the line after each train? Not that I am aware of.
3307. What are the duties of the gang—the ordinary fettlers? Pack the sleepers, lift the road, clear the tables, and keep the cases.
3308. If anything occurred to require the attention of the inspector, would not the ganger point it out to him, or communicate with him at once? He would communicate with him.
3309. As the sub-inspector goes along does he keep his eyes open or get his information from the gangers? Yes, to a great extent; but as each sub-inspector travels over his length on his tricycle he is able to see for himself.
3310. There are two foremen at Goulburn? One is foreman of carpenters, and the other of blacksmiths.
3311. Is Lewton a general inspector? Yes.
3312. Is there a general inspector over each of them? Yes.
3313. Is Brown inspector of bridges and station buildings? Yes.
3314. Has not a man like Lewton sufficient experience to deal with timber bridges? He has great experience as a permanent-way inspector, but I do not know that he has experience in timber bridges. Brown is a thoroughly experienced man.
3315. Does he inspect all station buildings over the 700 miles? He travels by the goods trains, and examines the different buildings as he goes along.
3316. Does Franklin inspect the brickwork and masonry? Yes.
3317. What class of work have you on the lines? Additions to station buildings, and repairs to and construction of culverts.
3318. How many culverts would be required in the course of a year? It some times happens that there is a necessity for additional water-ways.
3319. How often? Not very often.
3320. Then as to the renewal of timber work? We generally replace it with iron supported on brick piers. It does not do to contract for the erection of brick piers, because contractors cannot be made responsible for the safety of the traffic.
3321. Are any of the sub-inspectors tradesmen? I do not think so. They are all men who have worked themselves up to their present position from that of ordinary navvies.
3322. Are they not platelayers? They are all platelayers.
3323. *Mr. Waller.*] With regard to the time-sheets, from whom do you get them? From the different district engineers.

- Mr. G. Landers.  
5 Jan., 1887.
3324. What do you do with them? I initial the total of each sheet on behalf of Mr. Cowdery, and then forward them to the examiner.
3325. Do you check them? No; the district engineer is responsible. The examiner checks them, and returns them to me for the purpose of making up a summary in this form.
3326. Why should you do that? I never could see; but I have been required to do it within the last three or four months.
3327. Who used to do it before? The examiner.
3328. *Mr. Coyle.*] How long is it since the district engineers were appointed? In 1832.
3329. Before that how did you manage? With the inspectors.
3330. Had you then neither district engineers nor resident engineers? No.
3331. Nor clerical staffs other than at the head office? No; with the exception that the inspector had a clerk.
3332. Now there are district engineers, resident engineers, assistant engineers, surveyors, draftsmen, and clerical staffs? Yes.

Mr. Walter Shellshear was examined:—

- Mr. W. Shellshear.  
5 Jan., 1887.
3333. *Mr. Waller.*] What is your position? I am District Engineer in charge of the metropolitan district.
3334. How far does your district extend? It includes the Tramways, the Illawarra line to Waterfall, the Southern line to Picton, the Western line to Springwood, the Richmond line, and the line which has been opened to Hornsby.
3335. Do you know the mileage? It is 142 miles 19 chains of railway, and 36 miles 15 chains of tramway, and there is also a large amount of mileage for sidings not included in that.
3336. Whom have you got under you? There are three resident engineers, but I may explain that one of the resident engineers, Mr. Kendall, is specially appointed for the workshops at Eveleigh, and his time is to a great extent occupied by them. Occasionally I have to get him to assist me with other matters.
3337. In reality, then, you have two proper? Only one proper; the other, Mr. G. R. Cowdery, was appointed for the duplication of the line from Parramatta to Penrith. At present he is engaged in preparing an estimate for the quadrupling of the line from Sydney to Homebush.
3338. He is really connected with the head office, but it is more convenient for him to work through my office than through the head office.
3339. So that really you consider you have only one resident engineer? Yes.
3340. Have you any assistant engineers? No.
3341. Any surveyors? Two surveyors attached, and one temporary surveyor who is leaving this week. The two surveyors are occupied in work that is not strictly special district work. Mr. Baxter is a licensed surveyor, and he has been engaged on tramway surveys; and Mr. Melrose has been engaged on the proposed loop line from Picton to Mittagong.
3342. Who is the third? Mr. Corbett.
3343. What is the name of the engineer you consider really belongs to your office? Mr. Halligan.
3344. Have you some draftsmen? Mr. Moore and Mr. Pitt, and there is a junior draftsman.
3345. Who is he? Mr. Bagshot.
3346. Who else? An assistant surveyor, Mr. Wells.
3347. Then, after that, you have some cadets attached to the office? Yes.
3348. How many? Mr. Dean, Mr. Newman, Mr. Thompson, Mr. Mackenzie, and two lads working in the shops, Arthur Wray and Menzies. Newman has been transferred to the Goulburn district, and has to report himself up there next week.
3349. That will leave you five? Yes.
3350. Do you consider that you have work for this large staff? I have work for the whole of the staff. The whole of the Eveleigh plans are being prepared at my office—that is, the plans for the workshops.
3351. I thought they were prepared in this office? Mr. Thompson had the district before I took charge of it. He had the Eveleigh work given to him, and Mr. Kendall was working under him, and had charge of it. All the Eveleigh plans were got out there with the exception of those done by Mr. Thompson before he went out of the district.
3352. *Mr. Coyle.*] What drawing is there connected with the Eveleigh workshops? The plans at the present time are all but complete; there are only a few minor details now in hand.
3353. What plans have you prepared? The plans of the engine machine shops were all prepared there. That was in Mr. Thompson's time; and the carriage shops, 16 to 25, were also prepared there.
3354. Are they not all contiguous? The shops run from 1 to 25. The first work carried out was the running shed. That was designed in this office before Mr. Thomson took charge of the district. Shops one to four also were designed in this office before Mr. Thomson took charge of the district. The machine and repairing shops were carried out in my office at Redfern prior to the time I took charge, and the plans for the carriage shops, 16 to 25, were prepared there, and also the plans of the paint shop.
3355. Who is the engineer for the Eveleigh work? Mr. Thompson is responsible for it, and Mr. Kendall has charge of the works in progress.
3356. Have you anything to do with it? All that I have to do with it is that a certain portion of it is carried out by day work, and I have to look after the men who do day work, because they are attached to my district.
3357. What operations are being carried out by day work? The paint shop, and a few minor matters connected with the fittings of the locomotive department, foundation for machinery.
3358. Why could not Mr. Kendall look after all that as resident engineer? He looks after the whole lot, but I am responsible for the men who are there.
3359. You exercise a general supervision? Yes; the men are attached to the district, and I am responsible for them.
3360. Besides these Eveleigh shops, what other large works are going on? The Petersham viaduct is approaching completion.
3361. What had you to do with that? The ironwork was imported from England.

Mr. W.  
Shellshcar.

5 Jan., 1887.

3362. Who designed the bridge? Mr. Thomson. The whole of the works, with the exception of two main piers which were let by contract, were carried out by the Department.
3363. By day labour? Yes.
3364. Why was it not desirable to let it by contract? It was an extremely difficult thing to do. The difficulty we had to contend with was to carry out our works in such a manner as not to delay the traffic, and to keep everything safe.
3365. Had you the supervision and general construction of this work? Yes.
3366. And there was a resident engineer? Mr. Kendall was assisting me.
3367. What other works are there in hand? A large bridge in William-Henry-street, on the Darling Harbour branch, of two spans of 107 feet, and three spans of thirty feet.
3368. Who was immediately in charge of that? I was immediately in charge of that. Mr. Kendall exercised supervision.
3369. What other works are there besides these? We have been extending the siding accommodation down Darling Harbour, which represents a very large amount in excavation, and to put in a number of new roads and sidings.
3370. Was that done by contract? It was done departmentally.
3371. *Mr. Mills.*] On the Pyrmont side of Darling Harbour? Yes.
3372. *Mr. Coyle.*] What do you mean by doing it departmentally? By the department, by day labour.
3373. I suppose the other works which have been carried on were chiefly the construction of sidings, and maintenance? We have had several other large jobs. The building of the tunnel has only just been completed. The tunnel was only completed this week.
3374. Was the traffic going on in the meantime? Yes; both above and below—two streets crossing over. There is a very heavy street traffic, and a very heavy railway traffic there.
3375. What had you to do particularly with this tunnel? I had to supervise this work in progress.
3376. Did you prepare the survey of it? Yes; but the tunnel was carried out by day labour, with the exception of the ironwork. The plans for the ironwork were carried out in my office.
3377. Has nearly all the work which has been done under you been done by day labour? The greater portion, because we have to contend with the traffic, and it is impossible to let work by contract in such cases on account of the great risk of accident. If an accident did occur the contractor would not be able to stand the damage of it.
3378. What other works are there? There are a number of smaller bridges renewed from time to time. On the Southern Line last year we completed the renewal of three bridges near Liverpool. One bridge had 15-foot spans. We had to put iron tops on; the white ants had destroyed the timber. We have three small ones going on towards Menangle, where the timber is perishing. We had also the duplication of the line from Parramatta to Penrith.
3379. Suppose you put up a new structure, who has charge of the work while in progress? There is a leading hand on the work who receives his instructions from the foreman, and I travel up and down the line constantly to see that everything is carried on safely. If I am unable to go myself I send the resident engineer.
3380. *Mr. Waller.*] Have you not the inspectors? They travel too. If you take a large job like that at Liverpool, where there are 15-foot spans, you keep an inspector constantly on the spot. If it is renewing a small job, we keep the leading hand on it. The inspector could not be always on the job, because we have such a number of jobs in the district.
3381. *Mr. Coyle.*] In addition to the renewal of these bridges and the sidings, what other works are there? We have a good many small additions to stations to put up from time to time, and occasionally new buildings. There are extensive repairs required to existing buildings, painting, and renewing timber work. Then there are the whole of the road culverts, and bridges have to be constantly looked after.
3382. Suppose that any extension was required to a shed or platform, how would this be brought under your notice? If it is a matter affecting the safety of a line I notice it myself when I am travelling through, or it may be brought under my notice by the inspectors.
3383. Then what steps do you take? I furnish a report and estimate for what is required, and ask for authority to do it.
3384. To whom do you report? To the Engineer for Existing Lines. If it is only a very small matter authority is given; if it is a large matter the Commissioner or Minister gives the authority. The work which has to be done is marked out, the men are sent up to do it, and the inspector looks at it from time to time to see what progress is made. One of the men is put in charge as a leading hand.
3385. On the larger jobs, do you keep inspectors permanently on the work? Yes; if it is a job of any importance.
3386. In the case of a large viaduct, or this tunnel which you speak of, you have resident engineers? There are so many duties which a resident engineer has to attend to that he could not always be on the job. During the progress of the viaduct Mr. Kendall and myself were down there every day, and sometimes twice or three times a day, as the work of the office would permit.
3387. As to the three surveyors, I do not quite gather what you keep them continually employed at? They have been to a very large extent employed upon trial surveys for new train lines, and matters of that sort.
3388. What new tramways have been surveyed during the past year? Mr. Baxter has been employed on the proposed line from Kogarah to Sans Souci for some time.
3389. What is the length of it? Five miles.
3390. Does he prepare the working survey? Yes.
3391. How long was he engaged on that? There were several trial lines run. He went out in November, and was about seven weeks making the permanent survey of it.
3392. What other surveys had he to do? Mr. Baxter did any survey matters in connection with land disputes, the purchase of land, and questions of encroachment. He is a licensed surveyor, and is a particularly good hand. In any case of difficulty I get Mr. Baxter to go out.
3393. Is he licensed under the Real Property act? Yes.
3394. What about Mr. Melrose? He has been engaged on the proposed loop line from Picton to Mittagong, and prior to that he was on the survey from Springwood to Glenbrook on the proposed duplication of the line.

- Mr. W. Shellshear. 3395. What would be the length? Picton to Mittagong, I think, is about twenty-six miles, 5 Jan., 1887.
3396. Is it a new line altogether? Why could that not be done by the Construction Department? I am not aware of the reasons. The question was whether it would be cheaper to duplicate the present line or to continue to work the old one.
3397. Is he engaged at present in the survey of this duplication? He has just finished it.
3398. When it is finished, what will you have for him to do? There are several small surveys to be attended to. There is not very much at the present moment, but every week we get a number of small surveys in connection with the trams.
3399. Is it desirable to keep a surveyor to make these small surveys? The papers have to be answered immediately, and it is absolutely necessary that we should have a reliable surveyor attached to the district.
3400. Can you keep them constantly employed? They have been constantly employed up to the last few weeks. The surveying work has been rather in arrears. Mr. Corbett was taken on temporarily to relieve the surveyors.
3401. Do you think there will be full work for them in the future? There is always full work in the district for one surveyor on purely district work, but Mr. Baxter and Mr. Melrose have been employed upon what I do not consider specially district work.
3402. Now for the draftsmen, Mr. Moore, what are his particular duties? Mr. Moore and Mr. Pitt have been engaged almost exclusively on the Eveleigh work.
3403. What drafting have they to do? They have all the detail drawings.
3404. In your office? Yes.
3405. *Mr. Waller.*] What do you mean by the Eveleigh work? The work-shops on the Eveleigh estate.
3406. The contracts are now being let? Several have been let.
3407. Do I understand you to say that Mr. Thomson retains the direction of the work? He is responsible for that.
3408. Is it not in your district? I am not responsible for the work, except such portions as are done by day labour.
3409. Is Mr. Thomson the officer actually in charge? Mr. Kendall, under Mr. Thomson.
3410. How often are you called upon to visit these Eveleigh works? I go there twice or three times a month.
3411. For what purpose? To see that everything is going on satisfactorily. If there is anything special I go down very much oftener.
3412. Do you prepare the drawings for the work? They are prepared by Mr. Kendall.
3413. In connection with the Petersham viaduct, what were your particular duties? To see that the work was properly carried out.
3414. How often were you there? That was a very important and very anxious job. I was there three times every day, as often as I could spare the time. I went down every morning before coming to the office, and generally I was out there until four o'clock in the evening.
3415. You had a resident engineer almost constantly there? Mr. Kendall was there as often as his other duties would permit.
3416. And one or two inspectors, I suppose? One or two inspectors were there constantly.
3417. Did you remove the old brickwork? Yes, the old bridge, and carrying on the traffic the whole time. It was one of the most difficult jobs that I ever undertook, so many little things had to be thought of, and the traffic had to be kept open and safe. We erected one side of the permanent girders on temporary trestles, and when we had removed the old arch, we had to shift that into its permanent place. Everything had to be done with the greatest accuracy and care.
3418. You have charge of the erection of buildings? Yes.
3419. What buildings are going on at the present time? Buildings let by contract are supervised by the architect, Mr. Leggatt. The work we are doing at the present time is the new station at Eveleigh.
3420. Would you have anything to do with a building under Mr. Leggatt? Nothing, until it was handed over by Mr. Leggatt.
3421. Do you say that new works are going on now, what are they? There is a new waiting shed at Eveleigh, some platforms at Carlton on the Illawarra line, a platform at Frazer's Road, Petersham, one or two small buildings on the duplication Parramatta to Penrith. We have recently completed considerable alterations at the Zig Zag, authorised after the accident. They have increased the grade at the two ends to prevent the trains from over-running the mark.
3422. How is it that Mr. Leggatt has charge of certain buildings under construction, and you of others? I have charge of those that are being carried out by my own men, or those that are let by contract out of my own office.
3423. Could you not undertake the supervision of the erection of the whole of these buildings? There are a good many which Mr. Leggatt has charge of both in this and in other districts.
3424. Is he the Colonial Architect, so to speak, of your department? He has charge of new buildings let by contract in connection with the Existing Lines Department.
3425. *Mr. Waller.*] All station houses and so forth? Yes.
3426. Railway sheds too? He is architect of some of the sheds.
3427. Why could not the district engineers come and supervise them? Formerly they did so. It was thought that as Mr. Leggatt got up the plans and specifications it would be better for him to look after them.
3428. Does he employ his own inspectors or your inspectors? His own inspectors.
3429. There would be two classes of supervision going on, and two classes of inspectors? It is only in connection with the buildings that Mr. Leggatt is architect of that he has an inspector looking after. As far as I am concerned I have nothing to do with them until they are formally handed over.
3430. Could not the staff you have at present supervise this work? Not the staff we have at present.
3431. Suppose it was necessary to put on the same staff of inspectors as Mr. Leggatt has on, could not your assistant engineers and resident engineers supervise them? I do not see any difficulty in doing so.
3432. *Mr. Mills.*] Would it interfere with the efficiency of the supervision? I do not know that it would, formerly the district engineers looked after the buildings in progress.
3433. *Mr. Coyle.*] What is to prevent Mr. Leggatt from supervising the whole of the buildings being put up in the department, and having his own inspectors? The buildings we are putting up now, as that of the workshops at Eveleigh, are special works, more an engineer's work than of architects. 3434.

Mr. W.  
Shellshear.  
5 Jan., 1887.

3434. I refer to the general run of stations and sheds? Smaller buildings we put up more in the way of maintenance and extension of new buildings. They are just small jobs, and matters that our own maintenance men can attend to.

3435. Could you suggest any improvement in the system at present adopted in connection with the district engineers? I do not know that I could. I think that the system of district engineers is a reasonable one, because you want somebody at each centre where you have the workshops to supervise them and to see to the maintenance of the line, and in cases of accident you want somebody on the spot to direct operations at once.

3436. What authority have you to act in the event of anything occurring; I do not refer to an accident or urgent matter; say the lengthening of a platform or any work such as that;—have you authority to do it without reference to the head office? No, we have no authority, except in the case of emergency, to undertake works without reference to the head office.

3437. I presume that every person employed upon the railways has authority to act in cases of emergency? That is an unwritten law on all railways.

3438. *Mr. Waller.*] I see that you have a number of cadets here;—have you employment for all of them? For my part I think it is a great pity so many cadets are put into the Service.

3439. Do you approve of the system? I approve of cadets being appointed provided there are not too many of them.

3440. Why do you approve of them being appointed? It is the only means of bringing up youngsters in railway work. There is no other means of getting experience in this colony.

3441. Do you not think you could procure from outside as good men as you want, men with better experience than the cadets can obtain? We have a large number of lads in the colony; should not they have a chance?

3442. I ask you do you not think you can from the outside obtain as good men as you can bring up in the department? In many cases you could; some of the cadets turn out very well.

3443. What standing do you give them in the profession when you turn them out? They go up step by step.

3444. After you have turned a cadet out from the Service, what is he? He becomes first a junior, then a draftsman.

3445. We will say he leaves the Service;—what standing has he got then? A great deal depends upon what his capabilities are.

3446. Is he an engineer? He should be.

3447. Do you give them articles? We have not turned any of them out in that way.

3448. If a cadet after leaving your office wanted work, what could he show. Would he be accepted as a capable engineer by the Institution? He would if the officer he happened to be under was connected with the Institution.

3449. Would they be satisfied that he was a qualified engineer because he had been in the department for a certain time without being articulated? There are no articles given in the colony.

3450. Would he be accepted in any case where they wanted a first-class man if he had no articles? It would depend upon the man himself. I do not believe in testimonials and certificates.

3451. Do you think it is a wise and fair thing that the Government should teach young men their business as engineers, giving them pay from the time they start, when they know absolutely nothing? If you wanted to put them with an engineer outside to learn the profession you would have to pay a premium.

3452. Is it a fair thing? It is a question of policy. For my own part I cannot say that I approve of the system looking at it in that way. My pay when I started was 5s. a week.

3453. Is it to the advantage of the Service generally that there should be these cadets? The question is rather a difficult one to answer, so very much depends upon the lads themselves. I know some cadets who have turned out well, equal to any man you could get elsewhere, and I have known others that would never turn out well.

3454. Do you think it is a good thing to pay them from the start? I do not think it is altogether an equitable thing.

3455. Are they worth paying from the start? They are not worth much the first year, but if the lad turns out well he is worth the money the second year. Some are honestly worth all they get; others are not. They are only paid a small salary.

3456. *Mr. Mills.*] Are they attached to any individual engineer? They are sent into the office.

3457. Not attached during their apprenticeship to any one individual? No; they are with the district Engineer for a time. There is a certain course laid out for them to go through. Those who go through it, and who have an aptitude for the profession, when they have gone through the course ought to know as much as lads from ordinary engineering offices, if not more.

3458. *Mr. Waller.*] As a matter of fact they are put in wherever a vacancy can be found? Yes.

3459. Is there any interest taken in them individually the same as there would be if they were apprenticed outside? The question of interest, as far as my experience goes, is this: If you find a lad takes an interest in his work you take an interest in him, if he does not, you cannot. When I served my time those who took an interest in their work were pushed on, those who did not were let slide. Officers have no time to coach lads who won't work themselves.

3460. We will say you have got in the Service gentlemen well advanced in years who have certain ideas of engineering principles which they acquired in their youth. They have accustomed themselves to a certain groove, and if you send young fellows to be educated by them do you think they would be level with the time? No. Engineering is a science of progress, and unless a man sticks close to it it will soon run away from him. As far as cadets are concerned I think there is room for a couple in the District Engineer's office, and they may learn profitably to themselves and the department. If you put in too many I do not believe in it. In England everybody had to go through the usual course of pupilage or apprenticeship, and did not receive pay until tolerably efficient.

3461. Would you limit the number to two in the District Engineer's office, and not pay them for the first year? Yes; I believe that would be beneficial.

3462. Would you have any diffidence in getting rid of a cadet? It is not always an easy matter to get rid of anyone.

Mr. W.  
Shellshear.  
5 Jan., 1887.

3463. Is not the appointment of a cadet a peculiar appointment. Cadets seem to belong to that class of whom nobody seems to know how they are appointed; they appear suddenly on the scene;—would you have any diffidence in getting rid of anybody who might be presented to you as a cadet? It is not long ago that I objected to an additional one being sent into the district, and something else was found for him.

3464. In the clerical division you have nine clerks and seven time-keepers? Yes.

3465. Do you consider you have employment for that staff? There is a very large amount of clerical work done. There are a great many returns have to be prepared, and time-keeping is difficult on account of the way work is scattered, a few men here and there. There are many different charges for different works, and that makes the clerical work heavy.

3466. We have been looking at the time-sheet and it looks simple enough? It is a laborious business.

3467. How many men have you to keep time for? At present about 1,250. We have had something like 1,600 in the district.

3468. What are they? They are maintenance men on tramways and railways, gangers, and fettlers. A number of bridge carpenters have been constantly employed in removing defective timber. Constant repairs have been needed to the stations, painting here or repairing there. The straggling nature of the work makes it difficult for superintendence and to keep time.

3469. Would it not be a better system to establish a certain routine in the way of keeping these station buildings in repair, taking so many one year and so many another? A difficulty in connection with that would arise from the different degrees of exposure of certain buildings, making a great difference in attention necessary. Some buildings get shabby in a very short time, while others will last a very long time. Some stations have a large amount of traffic, and they get dirty sooner than those that have a small amount of traffic.

3470. Do you think that if there was a system of regulating the repairs and painting at proper intervals, taking one station one year and another another, you could soon lay down a table of work so as to prevent the occurrence of constant odds and ends intervening? It is very difficult to reduce these things down to a system; both the life of paint and the life of timber is most erratic.

3471. *Mr. Coyle.*] Should not your experience, extending over a number of years, enable you to arrive at an approximately correct idea? I have known a new floor to be put into a station building, and within eighteen months after it was finished it was completely eaten out with white ants, while on the other hand there are plenty of floors which have been in eighteen years.

3472. *Mr. Waller.*] But such a case as that would fall within the routine, the station would be overlooked in its turn, if not one year then the next? A great deal depends upon the station-master. Some stations almost appear to keep themselves clean; others are always out of order.

3473. *Mr. Coyle.*] You spoke of bridges; are you referring to ordinary bridges? Yes.

3474. You have timber culverts? Yes.

3475. What would be the average life of timber in a flood opening? Extremely erratic. We have timbers which have been in ever since the line was opened, others have been in only four years when the white ant has got into them. You cannot tell that there is anything wrong until you put an auger in to see. A large number of piles which look as sound as possible are little better than match-boxes when you give them a tap.

3476. With the constant supervision which exists by inspectors and gangers and fettlers would it not be very easy to transfer your men here and there, as required, to these bridges, without having those itinerant gangs making up 1,200 and 1,400 men? As soon as the work is done we invariably pay the men off. There are no men kept on the line for the purpose of making work.

3477. If you had regular gangs of men for timber work and men for brick work could you not send them up to the jobs? We have what we call our permanent hands on the railway. The fettlers, who have their lengths to attend to, and who, if they notice anything wrong in a bridge, report it at once. Then we have a small gang of men who are constantly examining the piles of the bridges. They go round the bridges about once in twelve months. That does not allow the piles time to become dangerous before they are discovered to be defective.

3478. Is not that the inspector's work? You cannot see what is the matter with the piles except by digging trenches round them. They go between wind and water. If there is anything wrong with the timber they report it at once. It takes a gang of five or six men to dig round the piles of the bridges. The end which goes into the bank is that where the timber mostly fails first. There is no abutment to the bridges, the piles are driven, and the embankments are made sloping down. It is generally the abutments at the top end that go. To examine them is a work of considerable labour. When timber is opened up the inspector examines it, and if there is anything seriously wrong I make a point of going there myself. I go through the whole district once a month, as nearly as possible, and anything of that sort I examine myself, wherever possible. The labour of opening up these timbers necessitates the employment of a staff of five or six men.

3479. *Mr. Waller.*] That does not require doing every day? I have 120 timber bridges, and two small gangs are required to go round them within the year.

3480. *Mr. Coyle.*] I suppose the greatest portion of your renewals is in masonry? If there are only one or two sticks bad we renew those, but the rule we act upon as nearly as possible is that if the annual cost of maintenance is likely to mount up to the interest of the capital in renewing we renew them in iron. All the bridges on the Western line have been renewed between Parramatta and Penrith, three at Parramatta in iron, and a good many on the Southern line.

3481. *Mr. Waller.*] Would it not be a good thing to go into the calculation of maintenance as against capital? We are renewing everything that requires renewal in iron. Several of our bridges 10 feet, 15 feet, and 20 feet spans may require a dozen or twenty pieces of timber to be renewed. That can, perhaps, be done for £100, while to renew it altogether would run into thousands. A considerable amount of judgment is required in deciding on these matters.

3482. *Mr. Coyle.*] How many men are there on the railways? 1,179—1,389 on railways and tramways.

3483. *Mr. Waller.*] What is the mileage? 142 miles, and there is a very considerable length of sidings in the district also, especially in the Sydney yard, at Darling Harbour, and in the different station arrangements—Granville junction, and other places.

3484. *Mr. Coyle.*] I suppose these 1,179 men just represent the workmen? Yes.

Mr. W.  
Shellshear.  
5 Jan., 1887.

3485. *Mr. Waller.*] You have to add on the engine-drivers, cleaners, porters, and so forth? Yes.
3486. Several large jobs having lately been completed, do you see your way to the reduction of the number of time-keepers you have? One could be dispensed with.
3487. That would leave you six? I do not think we could reduce it very much more than that.
3488. And the clerks, you have nine, what are their duties? There is a very large amount of clerical work in connection with the district. There are the district records to keep, and monthly statements have to be copied into the ledgers.
3489. What ledgers do you keep? All stores, vouchers, and requisitions for stores.
3490. What ledgers do you keep? Time ledgers are kept, and there is the record book. Last year nearly 6,000 papers came through the district.
3491. One record clerk could deal with 6,000 papers in the year? Returns are constantly required with reference to the time and the cost of doing works.
3492. That all appears on the time-sheet. You have a clerk for keeping the cost of works. What is the necessity for him? That is in the southern district.
3493. What is the necessity for keeping the cost of these works? We are called upon to supply returns.
3494. Does not the examiner dissect the time-sheet? Yes, but the information is very often asked for by the Commissioner. Several times we have had to go through our time-books to get up information. It is a matter of very great importance that we should know the cost of the different things. Very often a job extends over twelve months.
3495. Well, suppose it does? You cannot get out the cost at a moment's notice.
3496. Could not a more simple method be adopted? I have thought so.
3497. What other returns have to be prepared? They have to prepare requisitions, and keep an account of renewals for stores.
3498. As I understand it, you have an order book, upon the butt of which you enter a copy of the order, which you tear out and send to the store, and at the end of the day enter everything into a book to see that the totals tally. That cannot be a very heavy business? It is simply a question of time and labour to do it.
3499. Would you require nine clerks for the making up of requisitions and correspondence. They have nothing to do with keeping the time, you have a complete staff for that? There is quite enough to keep them all going.
3500. Is there any work that you have to do either that you think need not be done, or which could be done with advantage elsewhere? There is none that I consider could be done elsewhere.
3501. I mean the clerical work? I do not think it could be done elsewhere. There is room for improvement in the system of keeping these things, but it is a very broad question to go into now.
3502. Where is the system weak, where could it be improved? I could not venture to go into the matter. It would require more consideration than I could give it now.
3503. *Mr. Mills.*] Can you suggest any improvements? An inquiry was carried out some time ago with reference to modifying the work on the time-sheets. I think they recommended to considerably decrease the amount of the work in that respect.
3504. *Mr. Waller.*] You have not very clearly told us what these clerks have to do. Mr. Mailler is your head clerk? Yes.
3505. Then you have Mr. Schuler? He does all the clerical work for the inspector; keeps his books.
3506. Does the inspector require a clerk to himself? They are travelling about a good deal, and many of them are not very good scholars.
3507. Does he require one clerk to himself? I do not think he could do without him.
3508. Could not your other clerks do the inspector's work? Schuler's time is fully occupied.
3509. Trenwith is in charge of records; does it take one man all his time to do that? He is occupied all his time. There is a large amount of work to be done. We have to keep and note all instructions on the papers. There are 3,000 tramway papers to deal with in addition to the railway papers. Then there is the register of correspondence.
3510. Do you keep a clerk for store requisitions; surely his time cannot be filled up altogether with that? He has to issue them and enter them up into the requisition book.
3511. Inspector Purton, I see, has two clerks? Yes; he finds plenty of work for them to do.
3512. *Mr. Coyle.*] Is it not proposed to make any reduction in the staff of your office? I believe reductions are contemplated. I think there are several who it is proposed to dispense with; Bolger and Miles, clerks, and Eckford and Webber, time-keepers, are to be dispensed with.
3513. That is four out of sixteen? ———
3514. *Mr. Mills.*] Is it necessary to have the work done up there? It is immediately connected with the district. It would be very inconvenient to have it done anywhere else.
3515. Is it necessary to have so much of it done? We have to keep the proper records of the office, and to supply all district returns.
3516. *Mr. Waller.*] But if the business were your own, do you think you could cut your office expenses down, and work on a simpler process? If the business were my own, it would be a peculiar position to be in. It is not that you have charge of the whole business, but of a certain branch. To a great extent you are interwoven with the other branches.
3517. If the business were your own, do you think you could work the department with more economy? I think it is possible; but there would have to be considerable alteration in the system. I could not under the present system. It would be quite possible to introduce a system that would enable economy to be effected, but not under the present system. The officers under me are exceptionally diligent. I have not a word to say against any of them.
3518. *Mr. Coyle.*] Are there any alterations that you could suggest? I cannot say that I have gone extensively into the matter. The work of the district occupies so much of my time, that I have not very much leisure to think of these things.
3519. *Mr. Waller.*] Who has the supervision of the office? I have, when I am there. Mr. Mailler supervises the clerical staff; they look to him constantly for all matters in connection with the clerical work.
3520. You look to him too? I hold him responsible for the clerical branch of the office.
3521. What system have you got of time-keeping for yourself? There is a time-book kept at the office.
3522. Who has charge of it? Mr. Mailler.

- Mr. W. Shellshorn,  
5 Jan., 1887.
3523. Is it signed regularly? Yes.
3524. Is it initialled by Mr. Mailler every day? It is not; I examine it myself almost every day.
3525. Do you initial it? I do not up to the present.
3526. Would it not be a good thing to initial it? It may be, but I strongly disbelieve in any time-book.
3527. Why? Before the time-book was instituted I have known the staff work hours overtime, and I have never known any of them come late to the office. If a man is not honest enough to go to the office without signing a time-book he is not worth a rap. Since I have been in charge of the district I do not think I have had more than two complaints to make of anybody coming late to the office. I have never seen anybody come late.
3528. Who gives leave for the officers to be away? I do, or in my absence Mr. Mailler, to the clerical staff, but its is a very rare occasion that anyone asks for leave.
3529. *Mr. Coyle.*] What are the particular duties of the inspectors, take Henry Purton? He has charge of buildings in progress, he is chief inspector of buildings. He has charge of all the sub-inspectors in the department.
3530. Of bridges? With the exception of iron bridges, of all timber and brick work. He is a builder by trade. He is getting an old man, and has been a great many years in the service and does not enjoy good health. He is a diligent hard working man. He was knocked down by an engine at Parramatta, and has never been himself since. He is a highly respectable man.
3531. Richard Waring, what is he? He is inspector of permanent-way over the whole district.
3532. He attends simply to that? Yes, and to forming road approaches.
3533. Thomas Bladen? He is not attached to my district, he is paid through the district. He is a special inspector for rails rolled at Lithgow. For convenience sake he is paid on our time-sheet.
3534. And Peter Lucas? He is inspector for brickwork and masonry.
3535. Is he a sub-inspector? He is classed as inspector.
3536. William Holyenger? He was appointed to look after the ironwork, but there is no work of any consequence going on at present in his line of business, and he will probably be dispensed with.
3537. *Mr. Walker.*] There are two clerks to Inspector Purton in his office, and a clerk to Inspector Waring in his office; are those in separate offices from the others? There are small boxes for them.
3538. If these men were in your office pure and simple, would it not get rid of the necessity of having separate clerical staff? Inspector Waring has charge of all the fitters, and there is constantly a number of small orders that have to be sent out to the gangers, and circulars about the running of trains. There is a vast number of small matters to be attended to, and information to be circulated to the different gangers almost every day of the week, and if Mr. Inspector Waring had not the assistance of the clerks he could not do that.
3539. But here are three: Purton has two clerks, and then Waring has one. If all were under one roof do you not think that by proper administration you would get the work done by a less number of men in the office? You could simply transfer them into the office, but you would want the men themselves to assist to get through the clerical work. The work is scattered—Like maintenance work there is a great deal of correspondence in sending instructions to people.
3540. If you have a large room with a lot of clerks in it you can do more work than if you have rooms with one clerk upstairs and another down? As far as work is concerned the clerks seldom go out of the office. Their work is confined almost entirely to getting up papers in connection with their own particular duty. There is a gang every 2 or 3 miles, and all alterations of running of trains have to be reported, accounts and specifications prepared. We have to keep a record of all minor accidents on railways and tramways.
3541. Could not the reports be sent in through the ganger, the inspector, or the engineer to the head office? In the first place the report has to be copied out before it is sent on.
3542. Why? You are often referred to a report. If there were no particulars kept in the office it would be inconvenient. Occasionally a wheel is knocked off a cab. We have to keep a record of it, to know how the accident happened, so as to defend ourselves against an action should one be brought.
3543. Would not press copies of these things do? If the inspector had not the clerical assistant he could not attend to the road. To my mind it is better that he should let the reports slide than neglect the road. If there is no proper record kept of what you may call minor accidents we should have no means of defending the department in the case of law suits.
3544. How does your correspondence compare with the correspondence of the head office? There is a very large amount of correspondence in my office, though not so much as in this office.
3545. There are six clerks in the head office and you have nine, and the correspondence in this office is greater than in yours? —
3546. Will it surprise you to learn that in the head office the correspondence relating to 2,000 miles of railway, irrespective of the tramways, the correspondence from all the District Engineers, the Commissioner, the Traffic Manager, the Locomotive Engineer, the Locomotive Department of Tramways, the Traffic Department of Tramways, the Superintendent of Stores, and the outside public, all the correspondence and the papers relating to the business just mentioned is transacted through this office with a staff of six clerks? The work of my office is scattered. The papers and documents are sent up to this office, and they do not have to get out the information, which has to be got out in the District Engineer's Office, and which has often to be got from distant and scattered places.
3547. Is it not sent to you by inspectors and time-keepers, and therefore that can make no difference? In preparing correspondence many of the matters have to be dealt with by several different branches.
3548. *Mr. Mills.*] Have you found that the extra hour enables you to get more work done? It has not been enforced long enough. I believe it has made some slight difference.
3549. *Mr. Waller.*] Calculating on the basis of eight men it makes a difference of one man? I very much question if a man is equal to working the additional time with the same energy. Any man working would in proportion do more work in the first four or five hours than he would do afterwards, if his work were extended to nine or ten.
3550. Say the clerks come at a quarter-past 9 and have half-an-hour for lunch. Actually you may say they work from ten to five, that is seven hours? I do not see that the extra hour is of very much importance, but I think that a little longer time ought to be allowed for lunch, an hour for lunch would be an advantage.

Mr. W.  
Shellshcar.  
5 Jan., 1887.

3551. *Mr. Coyle.*] What are the different sub-inspectors engaged upon? They travel round and see that the men belonging to their own trade are carrying out the work.
3552. William Murphy, what is he? He is connected with the signal department. He is not under my charge, he is connected with Mr. Parry.
3553. William Docksey? He attends to the carpenters' work about buildings.
3554. And bridges? No; he belongs to the joinery trade.
3555. Have you sufficient work for this man continually? He is continually engaged. There is such a large amount of travelling to be done that much of this man's time is taken up in travelling. If you have work scattered over a great area, supervision of it becomes expensive, and without proper supervision you cannot prevent the men from wasting time.
3556. What work is William Docksey superintending now? Some work at St. Mary's—joinery work.
3557. What is it? Simply a goods shed and waiting-shed. Some waiting-sheds are going up at Eveleigh passenger station, and a verandah along the centre of the station. Then there are some waiting-sheds going up at Carlton, on the Illawarra line.
3558. You say he is constantly travelling; does he draw any allowance when he is travelling? No.
3559. Is his salary all that he gets? Yes, unless he is away at night, but as a matter of fact he never is.
3560. Then as to Maloney? He is timber bridge carpenter. He is constantly employed, and is a most valuable man.
3561. John Barncastle? He is one of the permanent-way inspectors.
3562. Deans? He is another.
3563. James Waring? He is another. James Waring is an inspector. The three sub-inspectors have to travel through and see that the fitters are doing their work properly, and to look after the men who are putting in new sidings. It is impossible to keep the road up without supervision. In bad weather roads go down a great deal.
3564. What new portions of line are there? The line from Homebush, the Illawarra line, and the duplication of the line from Parramatta to Penrith.
3565. Then as to Thomas Rowlands? He is inspector for timber and for fencing. He passes all timber purchased by the department, sleepers and so forth.
3566. I suppose you call for tenders for the supply of timber? Yes, he passes timber. He has a very great experience of timber.
3567. Then as to the foreman, Alfred Neat? He is foreman of the joiners' shop.
3568. What joinery do you do? We make all the fittings for the stations and station buildings, a good deal of the shelves, ticket racks, and notice boards.
3569. *Mr. Waller.*] Are any stations put up by day labour, or are they erected by contract? By contract.
3570. Could you not have all the fittings included in the contract? As traffic increases additional fittings are required.
3571. Why could you not hire a man to do that? These things are scattered all over the lines. There would be more trouble in letting them out by contract than doing them.
3572. *Mr. Coyle.*] Suppose you have £4 or £5 worth of fittings to put up in an office, cannot you employ some carpenter near the spot to do it? You have to superintend and see that it is done rightly.
3573. The station-master would see whether the work was done according to the specification, you surely do not want an inspector for that? No, but if the job is being made in the shop, we know it is only a question of fixing.
3574. William Dietz? He is foreman of the machine shop.
3575. What is that? Where we make the points and crossings, and different parts of signal gear, turntables, and so forth. We do the ironwork for the signals.
3576. Could not work of this description be done in the locomotive shops? At present they are very much confined for room. As a matter of fact we have had to make a large number of screw couplings for carriages for that department.
3577. What class of machinery have you in your shops? We have a number of turning lathes and turning machines. We have to make a lot of special crossings.
3578. What work do you carry out in your shops altogether? We make points and crossings for all the yards, work for signals, repairs of turn-tables, repairs of water services, and fire appliances, gratings in connection with drainage, in fact all the small things required connected with the line.
3579. Who has charge of the shop? Foreman Dietz under me.
3580. Anyone else in control besides Dietz? There is a leading hand there who looks after the work when he is absent.
3581. Does Dietz do any work himself? No.
3582. Would it not be possible to transfer the whole of the work into the locomotive department if only to save supervision? I do not think that would answer, because our work is different from the locomotive work to a large extent.
3583. But they have large repairing shops? At present they are very cramped for room. They will have more room when they get to Eveleigh, but even if we were with them our work is of a special class, such as exists on all railways.
3584. As to the ironwork, points, and crossings, are they not imported? They import a good many, but there are a number of points, and special crossings required.
3585. George Minns? He is foreman plumber and gasfitter.
3586. What particular work does he do? He keeps all the gasfittings on the line in order.
3587. Is he a practical workman himself? Yes.
3588. Does he work himself? He has to go about a good deal.
3589. How many men has he under him? At present I think he has about a dozen.
3590. Do you require that number? There is a large amount of plumbing work to be done, and we have a good deal of trouble with the gasfittings. The pipes extend for a long distance to the distant signals, and there is a good deal of work about the stations. The station roofs also are getting old, and want reflashng.
3591. Then we have Eskersley, what is he? He is foreman smith.
3592. What do the smiths do? All the smithwork in connection with the branch, and they occasionally have a good deal to do in connection with the locomotive work.
3593. *Mr. Waller.*] Does the foreman do any work? No.

- Mr. W. Shellshear. 3594. *Mr. Coyle.*] Then we have James Dowsett? He is foreman pattern-maker.  
 3595. Has he much to do? A little, not a great deal.  
 3596. How many men has he got? Two or three, sometimes six.  
 3597. Where do you get your castings made? They are done by contract.  
 3598. Does he work himself? He has to go down to the foundry and examine the castings in addition to the work, so that he does not actually work himself.  
 3599. William Parker? He has charge of the painting about the station buildings and so forth.  
 3600. Does he do any work? Not himself, but his work is very much scattered.  
 3601. How many men under him? They vary very much, sometimes a good many.  
 3602. *Mr. Waller.*] What would be the maximum number? From fifty or sixty down to four or five.  
 3603. *Mr. Coyle.*] Is there any system of periodical painting? There is no fixed time, the life of the paint varies very much.  
 3604. *Mr. Waller.*] You have an inspector of stations, could he not see the work done and pass it when it was finished? Inspector Purton has charge of the buildings. He could not devote his time to looking after a few painters here and there.  
 3605. Could you not have a leading man on at the work of each station, and Inspector Purton could see the painting when it was finished? Very often there are only one or two men on the job. It is only by looking after men every day that you can keep them at their work. If they were not looked after the cost of the work would be increased enormously.  
 3606. *Mr. Coyle.*] How does Parker ascertain whether a station wants painting or not? He has nothing to do with that. If a station is reported as wanting painting he arranges that it is done when authority is given, and he sees that the work is done properly.  
 3607. Are these painters constantly employed by the department? The numbers vary very much.  
 3608. Could you not entrust four or five men to go away with a certain amount of paint, without someone looking after them? If you are not constantly on the move the cost will be doubled.  
 3609. In the tramways there are two inspectors and one clerk apparently, are these in connection with your office? Yes.  
 3610. Ralph Richardson, what are his duties? He examines the permanent-way, and sees that the men are doing their work properly.  
 3611. George Foster? He has another section which is divided between the two of them.  
 3612. Then there is Henry Burrows, what are his duties? To keep an account of the gravel used for maintenance, and to issue dockets to the stores for the materials.  
 3613. Suppose you were running this establishment yourself, how many men could you take out of it without loss? ———  
 3614. Let us know to-morrow or the next day? ———  
 3615. *Mr. Waller.*] You have 175 miles, including the tramways, and you have now, adding your own staff at the office, 1,442 men, an average of over eight men per mile? It is a double line and there is a large number of sidings included. There is a good deal of work has to be done for other districts.  
 3616. Of these 1,442 men fifty-three are on the office staff. Will you just go into the matter and see what reduction you could make if you were working this for yourself. Also take into consideration the fact that the working time has been made longer by one hour a day than before? It is one thing working up a business yourself and another taking charge of a business as it exists. At the present I do not believe we would work the district satisfactorily if the staff were reduced more than by those men who are already marked off on the list.

THURSDAY, 6 JANUARY, 1887.

Present:—

MR. T. F. WALLER, CHAIRMAN.

MR. J. Y. MILLS,

MR. J. E. FITZGERALD COYLE.

Mr. John Parry was examined:—

- Mr. J. Parry. 3617. *Mr. Waller.*] What is your position in the department? I am engineer in charge of interlocking works and signals. I design all alterations of station-yards.  
 3618. *Mr. Coyle.*] Would you explain what interlocking is? It is a system by which the points and the signals of a station-yard are interlocked with each other. The object is to prevent the signalman from moving the points in a way which would make them antagonistic to the signals, or of moving the signals in a way which would be antagonistic the one to the other. Suppose there are two or more lines at a junction. The signalman at the junction having given the signal for the train to come upon one line, mechanical appliances are so arranged that he is unable to lower the signals for the train to come on the other line.  
 3619. The whole business is self acting? The mechanical locking is self acting. In moving the lever to lower the signal for the train to come upon line A, as shown in this diagram, the signalman thereby locks up by mechanical means all signals for line B.  
 3620. *Mr. Waller.*] The same principle would apply whether there was one line or a dozen at the junction? Yes.  
 3621. Does this book of diagrams show the interlocking arrangements which have been brought into use at the different stations? Yes.  
 3622. Are you an engineer? Yes; I have indentures from where I served my time.  
 3623. *Mr. Coyle.*] You have charge of interlocking over the railways? Yes.  
 3624. What are your duties in addition to this? My other duties consist in designing, arranging, and reporting on the station-yards—supposing a station-yard is found to require extra accommodation at it.  
 3625. Extra accommodation in the way of sidings? Yes; or of new lines. Any subject brought forward which involves the alteration of the lines is brought before me for report. In designing a station-yard, if you do not design it with a view to interlocking you may have to spend hundreds and in some cases thousands of pounds in rearranging the lines when it is decided to interlock it.  
 3626. Does the Construction Branch consult you or submit their plans of station arrangements to you before laying down new yards? No; but I understand that the Construction Branch have of late submitted their plans to the Traffic Manager for his criticism, I presume.

3627.

3627. Since when? I do not know this officially.

3628. But has it been the practice of late? Say within the last twelve months, as far as my memory serves me. Mr. J. Parry.  
6 Jan., 1897.

3629. How long have you been in the service? Seven years on the 1st of March.

3630. Are the plans of all stations now submitted to the Traffic Manager before the sidings are laid down? I believe so.

3631. And have you an opportunity of expressing your opinion, or of suggesting that alterations should be made in them in order that they may be adjusted to interlocking whenever that may become necessary? No.

3632. Have you no opportunity of doing that? No; the extent to which I have seen the plans is this: when they have been sent to the Traffic Manager he has asked me, not officially in any way, to look at them. They have not been submitted to my criticism officially.

3633. *Mr. Waller.*] Had you been asked officially to examine the plans of station arrangements would it have saved expense afterwards? All I can say is that I would not have designed some of the yards as they are.

3634. Knowing that you might have to introduce the interlocking system afterwards? Yes.

3635. *Mr. Coyle.*] Would it have been more satisfactory that, before these station-yards were laid down, you should have been called upon to suggest any improvements in the manner of laying them down? I think it would.

3636. As a matter of fact have you made alterations in station-yards within the last three or four years which have been handed over from the Construction Department? Yes; I made considerable alterations in the Wallerawang station-yard.

3637. In any others? I re-designed through the Traffic Manager the Bourke yard.

3638. Any others? I cannot think of any others of recent date. I have re-designed others which were laid down a long time ago, and which have required to be altered in consequence of the increase of the traffic.

3639. Are there any other yards constructed since you have been in the service that you have re-designed? I re-designed the Strathfield junction. Before that work was laid down I reported upon it to the engineer.

3640. You had an opportunity of doing so? Yes; I knew what was intended to be done, and therefore, without the matter coming officially before me, I reported on it. I suggested another scheme to the engineer, which was afterwards approved of.

3641. *Mr. Waller.*] Did the alterations in the two cases which Mr. Coyle has asked you about cost much money? I was called upon to report upon the interlocking of the Wallerawang yard. When I visited the place I found that to interlock the yard in its then state would cost a considerable sum of money.

3642. *Mr. Coyle.*] Could you state how much, roughly? I can get it. I found that to interlock the yard as it was would cost more money than to alter it and then interlock it. The black lines in this plan show the yard as it existed; the red lines as altered. The red squares represent the position of the signal-boxes. As it is now I work the whole of the western portion of the yard with one man. I found that to interlock it in its then existing state would have required about four interlocking machines; but by altering the yard and eliminating nine pairs of facing points I was able to do it with one machine, everything being concentrated to that position, and the risk of accident arising from the then existing facing points was eliminated altogether. A train approaching the station on a curve from Bathurst had not a clear view of the station-yard, neither had the driver of a train coming from Mudgee. If, therefore, anything should be on the line, or should be coming from one line to another in the station-yard, it would not be visible to the driver of the train approaching. By taking up the facing points you prevent any fouling.

3643. *Mr. Waller.*] If the yard had been laid out properly in the first instance would it have cost much more than laying it out as it has been laid out? Not so much.

3644. *Mr. Coyle.*] Are the plans of station arrangements as carried out by the Construction Department at the present time submitted to you officially for you to suggest alterations or improvements? No.

3645. In addition to interlocking, have you any supervision over station-yards, or the arrangements of them over the Colony? Yes; under the Existing Lines branch.

3646. Have you supervision over those? Yes.

3647. Are there any inspectors under you? One.

3648. What is he? He is sub-inspector of interlocking.

3649. Has he any other duties besides dealing with this matter of interlocking? His duties are the oversight of the shops and the gangs. We have sometimes three or four gangs in different places.

3650. Is that connected with interlocking? Yes. He sees to the making of the signals; in fact he does everything.

3651. Are his duties confined entirely to this matter of interlocking—that is, to the laying of it down and the making of signals? Yes.

3652. Are you extending the system to all the stations? It is only extended as recommended by the Traffic Manager, that is to the principal stations. The sidings where there is one person in charge on the southern and western lines have been treated as the most dangerous. The guards now work the sidings, and if they leave the points wrong—the signal may be showing all right, and the express coming along—there is great danger of an accident in such a case as that. That is the reason why it is thought that these sidings should be interlocked first.

3653. Where were you before you entered the public service? I served my time at Mackenzie and Holland's, Interlocking Engineers, Worcester, England. There are several firms which contract with the railway companies to do interlocking work. The companies say they want such and such places interlocked. These firms submit schemes and designs with their tenders, and the work is given to the lowest.

3654. And then would you or some other officer belonging to the firm do it? Yes.

3655. Have you had a good deal to do with railway work at home? Yes; with this particular branch.

3656. Are you aware whether safety-points are put in on sidings by the Construction Branch at the present time? No; they are not.

3657. Are you aware whether they have been put in on any lines constructed in the Colony? Not that I am aware of.

Mr. J. Parry 3659. Do you consider it necessary that safety-points should be put in? I consider it exceedingly important that safety-points should be provided for all sidings adjoining the main line. If safety-points are put in, it is impossible for trucks or carriages to be blown out of the siding so as to foul the main line, or to be taken out without the direct interference of the man holding the points. It is one of the conditions of the Board of Trade that all sidings should be provided with safety-points. If scotch-blocks only are provided, it depends upon the carefulness of the men whether they are used or not. Experience in railways shows that men are not careful to use them.

6 Jan., 1887.

3660. *Mr. Waller.*] Have you a clerk—what are his duties? We have to import the interlocking materials, and as the shipments come in we have to keep an account of the stock. The value of a shipment may be £5,000, but the value of anything issued from the store may not be more than 5s. or 10s. at any one time. The prices of the different articles issued from the store are recorded.

3661. Do you keep a store account of your own for interlocking? Yes.

3662. Does your clerk put the value upon each article, records when it is issued, and where it is sent? Yes, we have to account to the stores. There are 1,800 papers a year passing through my hands, and if I had to devote my time to clerical work, I could not get through the business. A single report often occupies four or five sheets of foolscap.

3663. Reports on what subjects? Relative to station-yards. When the Traffic Manager suggests that a thing shall be done; it is not taken for granted, but I have to inspect the place and write a report. Before I got this clerk it was no uncommon thing for me to have to work until 10 or 11 o'clock at night on my reports.

3664. Assuming that the interlocking system is to be adopted, do you think it necessary that before laying out any yards, the proposed arrangements should be submitted to you? Most decidedly I do.

3665. *Mr. Waller.*] Would it be advisable that the Traffic Manager and the engineer for interlocking should form a board to decide between them? I never lay out a yard without consulting the Traffic Manager. The Engineer in Charge of interlocking and the Traffic Manager should do it.

3666. What is the course adopted now by the Construction Branch in laying out roads? So far as I am aware, unofficially, the Construction Branch prepare their plans and forward them to the Traffic Manager, who returns them with his notes upon them.

3667. Do you think it would be a better plan, and also lead to a saving of expenditure, if the plans of all yards proposed to be laid down by the Construction Branch should be submitted to a board consisting of the Traffic Manager and the Engineer in Charge of interlocking? I think it would be an advantage.

3668. Would it be likely to save expense? I think it would.

3669. And to ensure greater safety? Yes.

Mr. Alfred Leggatt was examined:—

Mr.  
A. Leggatt.

6 Jan., 1886.

3670. *Mr. Waller.*] What office do you hold in the department? I am architect to the Existing Lines Department.

3671. What are your duties? To prepare plans of station buildings, sheds, goods and carriage sheds, in fact all kinds of buildings. Some of the sheds are done by the district engineer, the Eveleigh workshops were designed by him.

3672. Take the sheds at Albury, did you plan those? Yes.

3673. The waiting-rooms there? They were done by Mr. Whitton's department.

3674. Are your buildings erected subsequently by the Existing Lines Department? Yes.

3675. Could you enumerate a few that you have designed, take the southern line? I designed the Junee station and refreshment-rooms.

3676. *Mr. Coyle.*] Is there any other station in the Colony similar to Junee? Petersham will be something like it, as far as accommodation is concerned. Werris Creek is another of mine; it is much the same class of building, but it is erected on a peculiarly shaped piece of ground.

3677. *Mr. Waller.*] What others? Petersham station is now in course of erection. The boiler shops at Newcastle were partly commenced when I took it up. They started the work by day labour, but Mr. Wright had everything converted into contract.

3678. How long did it take to finish that? A long while.

3679. Is it a big place? It is a large place.

3680. What is it built of? Brick and iron.

3681. How long did it take to build? It was a couple of years from the time it started. I superintend works in the Sydney district more immediately; but if anything is wanted in the other districts I take a look at it. The Springwood station is one of mine; also the Newcastle Traffic Manager's house.

3682. What staff have you got? At present I have nine; I had a new one come in the other day.

3683. What is he? He came in as a qualified draftsman. One we call custodian of plans; he is half a messenger, and looks after the distribution of periodicals.

3684. *Mr. Coyle.*] Have you separate plan rooms? The plans of my office are all kept in my room.

3685. What are the other duties of the custodian of plans? He takes charge of all the periodicals in our library. They arrive monthly, and he sees that they are distributed to the different districts.

3686. What periodicals do you get? *The Builder, Engineer, Railway Gazette.*

3687. To whom does he distribute them? First to Mr. Cowdery, then to the other officers.

3688. Who pays for the periodicals? The Government.

3689. What other duties has this officer? He does all the messages, and assists now and then in tracing.

3690. What is his name? Fred. Moore; he gets about £1 a week.

3691. *Mr. Waller.*] How does your correspondence come to you? From Mr. Landers, unless it comes from my inspectors.

3692. Have you eight subordinates? Yes.

3693. What are their names? The first is Arthur Josling; he is assistant architect.

3694. The next? William Nixon, a draftsman.

3695. The third? William Stoddart, he is occupied in preparing plans.

3696. What sort of plans? He can do station-master's houses.

3697. I thought they were done by Mr. Nixon? There are large and small—some that a cadet can manage.

3698.

3698. Mr. Wickham is another cadet? Yes, he is third on the list; Rothwell is the senior cadet.
3699. Who is the next? Herbert Roberts; he assists principally in preparing tracings. The next is Hinder.
3700. Could you give us an idea as to the number of station plans you draw in the course of the year? It would amount to about £45,000 a year.
3701. I am not asking you as to the value, but the number. At the present time how many station buildings have you to put up? Not many station buildings.
3702. *Mr. Coyle.*] How many? Eight or ten perhaps.
3703. What are they? What I am doing now are Petersham, Summer Hill, Macdonaldtown. I am getting out plans for Lithgow, Auburn, Mulgrave, Strathfield, Cootamundra, South Creek, Wentworth Falls, Douglas Park, Morpeth, and additions to Homebush. I think that is about all the station buildings.
3704. How many of them are of similar character? Only two of them are alike.
3705. Which are they? Summer Hill and Macdonaldtown.
3706. How many of them are about the same size, and contain about the same amount of accommodation? You might get about four or five—they differ in their features.
3707. Why are they different in their features? From peculiarities as to the ground upon which they are erected.
3708. Would not that only refer to the foundations? Not always, some may be on a diminishing piece of ground, some on a wide piece and some on a narrow piece.
3709. Have you not sufficient land acquired to put up these stations in all cases? Not in all cases.
3710. Have you standard drawings in your office? No, we have not tried that; it has been tried by two or three departments. They tried it in the schools department, and abandoned it. I do not see why standard drawings should not be used to a certain extent. One objection I have to them is that most of our hands are cadets and have to learn the business. If standard drawings were used I should have no opportunity of teaching them. I am supposed to take them out on the works and instruct them.
3711. *Mr. Waller.*] Where do the cadets come from? I do not know.
3712. What class of the community do they belong to--the professional--middle, or well-to-do class? Generally.
3713. *Mr. Coyle.*] What is your opinion of this system of bringing a number of young men into the service as cadets? I think it is a very bad system.
3714. Are they paid from the beginning? They get too highly paid. Here they are started at £1 a week when they are a perfect nuisance.
3715. Who appoints them? They are appointed by the Commissioner I suppose. I do not recollect how they came in; but I shall have to get rid of some of them because the work is getting slack.
3716. *Mr. Waller.*] Do you give them indentures or articles at the end of the term? No; they are not bound in any way.
3717. *Mr. Coyle.*] Do they stop for three or four years? Yes.
3718. Do you turn them out as finished architects? If they have it in them.
3719. How many moderately good architects have you turned out? We have not turned out any; we have not had an opportunity yet.
3720. What position would they hold in the profession? Coming out of a Government office, I suppose they would be worth about £2 a week.
3721. Would they be recognised as architects? Some of them would.
3722. Would they be recognised by the Institute of Architects? If they paid their subscription. They would take anyone there. You do not want any other qualification.
3723. *Mr. Waller.*] Will you tell us how many of these station plans are actually completed? Petersham, Summer Hill, Macdonaldtown, and Auburn, Mulgrave, Strathfield, and South Creek are not finished. Cootamundra, Douglas Park, and Morpeth are finished. Homebush is not commenced.
3724. Seven are actually complete? That is not the complete list.
3725. Of those twelve stations, which would have the greatest amount of accommodation, that is, referring to outside stations away from Sydney? They would contain a general-waiting-room, a station-master's room, a ladies' waiting-room, and a porter's room. They would average about £2,000 each in value.
3726. How long would it take the department to prepare the plan of such a building? A couple of months. Our staff consists mostly of boys. There is only one draftsman in the office.
3727. With a properly constituted staff, how long would it take you to prepare plans of such a building? Not much under six weeks.
3728. Do you consider that you require all the staff you have here? Not in the present state of the office. We are rather slack of work just now.
3729. How many do you think you will require? I could dispense with three, and independent of this inquiry we should turn them out when there was no work for them.
3730. When you get through the stations you have mentioned, with a few others you may have omitted to mention, do you not think you will have completed all the station buildings which are likely to be required for some time to come? I thought that when I first came into the department, but work has always been coming in.
3731. Does the Construction Branch put up station buildings? Yes, but alterations are always required.
3732. *Mr. Coyle.*] Does it not happen that a large number of the stations to be erected are of the same class? It has not come under my notice.
3733. *Mr. Waller.*] Is it not a fact that a large number of stations of the same class could be put up? Yes.
3734. With advantage? Yes.
3735. And would they be suitable to the intermediate places where population settles? They ought to be so.
3736. *Mr. Coyle.*] So that the drawings for one station might do for fifty others, that is, for all above formation level, presuming that they were lithographed? Yes; it might work in some cases; it has been tried a great many times and abandoned.
3737. What are the names of those officers you propose dispensing with? Roberts, Wickham, and Stoddart. Moore is not much expense.

Mr.  
A. Leggatt,  
6 Jan., 1887.

Mr.  
A. Leggat.  
6 Jan., 1877

3738. Is he the custodian of plans; why should not one of the draftsmen attend to them? Moore does not get so very much pay.
3739. Why should not each man look after his own plans? Moore has to see that the plans are locked up at night; and when they are on view he has to exhibit them to the contractors.
3740. Is he a sort of generally useful man to the rest? Yes. He mounts the plans.
3741. *Mr. Waller.*] Is there any inspector in your office who reports upon the repairing of station buildings? No; it is proposed to put that under me, I think.
3742. *Mr. Coyle.*] Have you anything to do with it now? No. If the matter were one involving an expenditure of £200 it would be sent on to me.
3743. And anything below that? Would probably be done by day labour. There are some things which are more bother to call tenders for than they are worth.
3744. *Mr. Waller.*] Then anything which would require tenders to be called for would be sent on to you? Yes.
3745. *Mr. Coyle.*] Do you do any work by day labour? No.
3746. Does the district engineer call for tenders for works? No; excepting for the Eveleigh works.
3747. Now as to Moore? It would be an advantage to keep him; otherwise the more highly paid officers would have to do the drudgery.
3748. Will you have four officers then. What drudgery is there to do. William Rothwell has £90 a year—what are his duties? He is a cadet.
3749. Why not make him take up Moore's duties? You could do it if necessary.
3750. Could he not do so without detriment to his present official position? He is supposed now to be entitled to go out upon the works for a time.
3751. Is that to acquire practical knowledge of the business? Yes; and he could not do that if he had to attend to office work.
3752. Suppose you sent Rothwell out, would the other three require a man to look after them? Yes; to do odd jobs. If the Commissioner sends down for a tracing, which the boy can do, he does it. If there is a case on in Court, we send him up there to watch, and tell us when witnesses are required.
3753. How many tracings does the Commissioner want from you in the course of a week? Not many now. If Mr. Cowdery or Mr. Shellshear want a drawing they send to me for it. I send up to Mr. Whitton's office for the original drawing. He won't give up his drawings to anybody but to me.
3754. *Mr. Waller.*] What is the value of the plans of a finished building? They would be worth a great deal if they were wanted.
3755. Do you keep them in a fire-proof room? No.
3756. What is the use of having a custodian of plans which would all be destroyed in the event of there being a fire in the building? That is simply a name given to him.
3757. *Mr. Coyle.*] Do you let contracts for buildings? Yes.
3758. Where are they? Locked up in the Commissioner's department.
3759. The plans which are signed—where are they? We keep them in our room, locked up in a drawer.
3760. Would any plan other than the original, which might be destroyed, be accepted by the contractor in the event of a dispute? I suppose as a point of law he could refuse to accept them. He has his own copy.
3761. *Mr. Waller.*] Would a copy be received as evidence in case of a dispute? I do not think it would.
3762. *Mr. Coyle.*] Have you any fire-proof rooms in connection with this building? No.
3763. *Mr. Waller.*] Have you got all your clerks close to you? Yes; in the next room.
3764. Do you find that they work well? Fairly well.
3765. How does the additional hour, giving increased time for work, act? It does make a difference; but it has hardly been long enough in existence to judge.
3766. Do you keep a time-book in your office? Yes; but only lately.
3767. Do all sign it? Yes.
3768. Who initials it? Mr. Cowdery.
3769. Where does it lie during the day-time? Mr. Josling keeps it locked up.
3770. When does Mr. Cowdery get it? Mr. Landers gets it, and goes through it, and submits it for his initials once a week.
3771. Can the officers get at it before 5 o'clock? Only Mr. Josling.
3772. Does he give it out before 5 o'clock? Five minutes before 5.
3773. Who gives leave to any of the clerks to absent themselves? I do.
3774. When you give leave do you initial the book? Yes; in the remarks column. It makes no difference to our attendance.
3775. Do you consider that the rooms you have got are suitable to the work you have to perform? I am very well satisfied with them.
3776. *Mr. Coyle.*] Have you anything to do with the station buildings in the Construction Branch? No.
3777. Could you undertake the construction of buildings in both branches? I think that would be too much for me.
3778. Do you roll your plans up or keep them flat? Keep them flat. There is one duty I have to do which has not been mentioned, that is to issue stores to the district officers—instruments, paper, and that sort of thing.
3779. What instruments do you supply? Drawing pens, colours, Indian ink, brushes, pencils, and drawing paper, tracing paper, scales, rulers, set square compasses. We do not supply the draftsmen, but we do supply the cadets with instruments.
3780. *Mr. Waller.*] The cadets get everything necessary for acquiring a knowledge of their profession? Yes.
3781. *Mr. Coyle.*] What do the draftsmen supply for themselves? Drawing instruments. We find them with drawing paper. I also issue squares and parallel rulers.

Mr. George Landers was further examined:—

Mr.  
G. Landers.  
6 Jan., 1877.

- 3782 *Mr. Waller.*] What precautions are taken to prevent valuable plans, such as those of the Eveleigh workshops, from being destroyed by fire? We have no protection against fire whatever.

3783. Where are they kept? The plans of the Eveleigh works are kept at the district engineer's office.
3784. What sort of a building is that? A brick building.
3785. Are they in an iron safe? He has no iron safe that I am aware of.
3786. If they were destroyed by fire would fresh plans have to be prepared? I scarcely know the value of them but I presume it would be a loss of a considerable amount.
3787. And are there no copies made? There is a tracing for the use of the inspector on the work.
3788. Could not a tracing be used by the engineer also and the original plan be placed in a fire-proof safe? The contractor has to carry out the work by a tracing; a tracing may therefore be sufficient for the engineer.
3789. *Mr. Coyle.*] We asked you yesterday to obtain for us a statement showing the mileage of railways open for public traffic at the end of each year from 1876 to 1886 inclusive? Yes; it is as follows:—

Mr.  
G. Landers.  
6 Jan., 1887.

Year.	Mileage.	Remarks.	Year.	Mileage.	Remarks.
1876	m. c. 508 8	[opened during the year.]	1882	m. c. 1,265 58	274 m. 24 ch. in 1882.
1877	597 62	80 m. 51 ch. in 1877.	1883	1,317 34	51 " 56 " 1883.
1878	686 1	88 " 19 " 1878.	1884	1,615 39	298 " 5 " 1884.
1879	731 42	45 " 41 " 1879.	1885	1,723 45	108 " 6 " 1885.
1880	846 0	114 " 38 " 1880.	1886	1,887 17	103 " 52 " 1886.
1881	991 34	145 " 34 " 1881.			

3790. We notice that in 1876 there were 508 miles open for traffic and that in 1886 the mileage was 1887? Yes.

3791. A difference of say 1,380 miles? Yes.

3792. What was the professional staff required in 1876 for the working of all the lines then open? That is shown in the paper which you asked me for last night, and which I hand in.

Statement showing number of professional and clerical staff employed at the end of each year from 1876 to 1886 inclusive:—

Year.	Number.			Remarks.	Year.	Number.			Remarks.
	Profes- sional.	Clerical.	Total.			Profes- sional.	Clerical.	Total.	
1876	3	9	12	The locomotive branch was under the charge of the engineer for existing lines in 1876 and 1887, and was placed under separate control in 1878.	1882	23	27	50	The construction of tramways was commenced in 1879, and the professional staff employed in their construction and surveys in connection with them are included in this return.
1877	5	14	19		1883	36	41	77	
1878	6	11	17		1884	42	32	74	
1879	8	14	22		1885	59	47	106	
1880	19	16	35		1886	59	49	108	
1881	18	20	33						

3793. In 1876 there were three professional men and nine clerks, making a total of twelve? Yes.

3794. What do you mean by professional? One was the engineer for existing lines, another assistant engineer, and the third was, I think, a surveyor.

3795. And did the clerical branch consist of correspondence clerks? Yes.

3796. In 1886 the professionals were fifty-nine and the clerical forty-nine making a total of 108? Yes.

3797. Can you tell me the number of professional officers in any one district alone—take (say) the Sydney district? There are nine professionals exclusive of cadets.

3798. Inclusive of cadets and clerks what does the staff of the Sydney district number? Fifty-four.

3800. As against 508 miles of railway in 1876 and a total staff of twelve? Yes.

3801. Can you give any reason for that great jump? No; the lines since then have been divided into separate districts and placed under separate staffs.

3802. How many districts are there? Four—that is two additional districts—as the northern line was always a separate district.

3803. What are the districts, the mileage, and the staff of each? The Sydney district has a mileage of 176, and a staff of fifty-four; the Bathurst district has a mileage of 564 and a staff of thirty-seven excluding the five or six recommended to be dispensed with; the southern district has a mileage of 700 and a staff of thirty-six.

3804. Are these figures exclusive of such hands as foremen of the workshops? No; they are included.

3805. The working hands themselves are not included? No; all on salary are included.

3806. What has been the total number of persons employed on the permanent way during each year from 1876 to 1886? You will find the figures in this return, which applies to railways only:—

Year.	No of Employees.	Remarks.
1876	710	Permanent-way only. There were 725 persons in 1876 and 909 in 1877 employed in the Locomotive Branch, which was at that time under the charge of Engineer for Existing Lines. The Locomotive Branch was placed under separate management in 1878.
1877	1,056	
1878	1,545	
1879	1,461	
1880	1,808	
1881	2,470	
1882	2,853	
1883	2,787	
1884	3,057	
1885	3,695	
1886	3,643	

3807. In 1876 there were employed in the Existing Lines Department 710 men on 508 miles of railway? Yes.

3808.

- Mr. G. Landers.  
6 Jan., 1887.
3808. What was the average number of men per mile? 1.4.  
3809. In 1886 there were employed in the same department 3,643 on 1887 miles of railway; what is the average per mile? 1.93.  
3810. What was the total number of hands, including men of every grade employed upon the railways in 1876? 2,443.  
3811. In 1886 what was the total number of all grades? 10,882.  
3812. In 1876 what was the average per mile? 4.81.  
3813. In 1886 what was it? 5.76.  
3814. That is to say an increase of 8,439 in the total number of men employed, and an increase of .95 man per mile? Yes.  
3815. Turning to your list of officers, who is R. Blatchford? He is clerk to Inspector Lewton.  
3816. What are his duties? He writes all correspondence between the inspectors and the sub-inspectors of permanent-way.  
3817. Under what district engineer is he? Mr. Stephens.  
3818. Has Mr. Stephens got an office and a staff? Yes.  
3819. What staff has he? Five clerks.  
3820. Do you think that Mr. Stephens has a sufficient number of clerks to do Inspector Lewton's correspondence without Mr. Lewton having a clerk to himself? I think this man is necessary, because the inspector is the greater part of his time away travelling in the district, and it is necessary that materials should be forwarded to him.  
3821. Then is he more of a working man than a clerk? He does clerical duties.  
3822. Presuming that you are right in this, do you then think that that large staff of clerks is required by Mr. Stephens? We have already shown that two juniors, Warne and Harris, are to be dispensed with.  
3823. Do you consider that he wants the four who are left? Lewton is a thoroughly practical railway man, but he would not be well up in clerical matters.  
3824. Do you think that the district engineer requires the three others? I do.  
3825. Edgar Allen, what is he? He is put down as a clerk to Inspector Brown, but he does all the time-keeping of the yard and shops. He has as assistant, George Webb.  
3826. Do you think he requires both? I think he does. There is one time-keeper and an assistant for 700 miles as compared with seven time-keepers in the Sydney district for 140 miles.  
3827. Do you consider that it is necessary that there should be all those time-keepers in the Sydney district? I do not.  
3828. How many would be required? My opinion is that three good men ought to be ample, considering that they have not to go upon the lines to take the time. It is simply clerical work. I have had to take the time of 600 men, and then to book it when I got to the office.  
3829. In this case are the time-sheets sent to them, and is it merely a matter of clerical labour? Yes.  
3830. How long would it take to take the time of 500 men? Where men are outside the yard their time comes in weekly, but where men are in the yard their time ought to be taken daily.  
3831. We are talking of the weekly men? It would depend to a great extent upon the number of jobs they are working upon. If working upon one job there would be one letter right through; if working on more than one job, it would take a much longer time to enter.  
3832. Are these men on two or three jobs during the day, as a rule? No, not as a rule. If a man was at work on a bridge he would be there all day, unless something urgent occurred to call him off.  
3833. As a rule would they be at least one day on a job? Yes.  
3834. Well, then, what is your honest opinion as to the number required? My honest opinion is that three ought to do the work, or at any rate they ought to make a try at it.  
3835. Do you think that if there was a reduction in the number of time-keepers down to three in the Sydney yard, it would be necessary to have a time-keeper and an assistant time-keeper? I think it would.  
3836. Referring to the number of clerks in the Sydney district, do you consider that it is excessive? I do.  
3837. How many good honest working clerks would be necessary? There are nine clerks; I think they might dispense with four.  
3838. That would be within one of what you did the whole business of the railways with up to the last year or two? Yes.  
3839. Would you consider that five would be a liberal allowance? I think that five would be a liberal allowance. I have always thought that these districts were overmanned.  
3840. As to Trigione and Dingavan? It has been recommended that the services of one should be dispensed with, and one do the work of both offices.  
3841. The inspectors being absent, is it thought that one man can do their work? Yes.  
3842. Inspectors Lewton, Brown, Franklin, and Rose, do they all belong to one district? Yes.  
3843. And have they somewhat similar communications to make to their clerks? Yes.  
3844. Do they all require stores to be sent to them? Yes.  
3845. Are they all in one office, or has each man a separate office? With the exception of Lewton they are under one roof, but occupy separate rooms.  
3846. If they were all in one good sized room, could not one or two clerks do the work for them? Bearing in mind that Allen is time-keeper they have only two. Allen is assisted by Webb; and Blatchford corresponds with all the inspectors, and receives the time from them.  
3847. If all these inspectors were put into one room, would there not be a great lessening of clerical work? No doubt of it. I do not see that there is anything private in the work they have to do; it all relates to the same line, and there would be an advantage in each of them knowing all that went on. The clerks would probably be able to give them better help, and would be in a position to communicate information to the inspectors which they ought to have.  
3848. If the system were changed so that all these inspectors were in one room, do you think we could reduce the clerical staff? I think you could then get rid of one more.  
3849. Mr Coyle.] One clerk acting for three of them would be in possession of a knowledge of all the business? Yes.  
3850. Mr. Waller.] What is Robert Spence? He is office boy.

Mr.  
G. Landers.  
6 Jan., 1887.

3851. With all these clerks is it necessary that there should be an office boy? He is in the clerical office and with the draftsmen as well.
3852. Could they not do their own business without a messenger? The distance between the offices and the workshops is about 200 yards, and probably it is better that a boy should be employed than that the time of officers who are better paid should be spent in running messages.
3853. What messages would be required? The district engineer might require certain information from the inspectors.
3854. Would it not be better to obtain that by telephone? They have no telephone.
3855. Would it not be better to have a speaking tube or a telephone to make such communications, so that a telephone might answer the purpose of this boy? Perhaps so.
3856. *Mr. Coyle.*] Would it not be possible to put the district engineers and inspectors under one roof? No; there is not sufficient accommodation.
3857. *Mr. Waller.*] As you appear to have had a great deal of experience on railways we should like to know whether you consider the large number of inspectors of stations and bridges in the different districts—timber and brickwork—whether it would not be feasible to bring a large number of bridges under the supervision of one officer, who would communicate with the proper authorities to do the necessary work? There is only one inspector on 700 miles, and there is a large number of wooden bridges on the length.
3858. *Mr. Coyle.*] Would not Luton be competent to inspect timber bridges? Perhaps he might, I have no doubt he would.
3859. Is there anything to prevent him? Not that I know of, he is a practical man in timber.
3860. Have you not a large number of inspectors who are railway men, and have a good knowledge of permanent way? Probably the whole of our inspectors are of that class.
3861. Then is it necessary to keep one man on the permanent way, and another alongside of him to look after the timber-work? Where a district is 700 miles long it necessitates a great deal of travelling.
3862. Have not the gangers a certain knowledge of timber-work? You could not depend upon them.
3863. In the case of a bridge where any accident is likely to happen, how often will an inspector see it in a year? He has a sub-inspector who visits one portion of his district while he visits another portion.
3864. How often do they see the bridges? They furnish a report quarterly.
3865. *Mr. Waller.*] How long are they away from home? They are home every week.
3866. How long would it take an inspector to go over 300 miles of line and examine the bridges? A great deal would depend upon the distance between the bridges.
3867. Does he travel by rail? Yes; but he could not always depend upon being dropped at the bridges. He would either have to use a trolley or go on a tricycle. I believe Luton is competent to inspect timber bridges, knowing as I do that he formerly did inspect them. Brown is a tradesman in carpentering, and a practical man in brickwork and masonry.
3868. *Mr. Coyle.*] Does he supervise everything with regard to station buildings, brick culverts, or masonry work; what knowledge has he of permanent way? None as compared with Luton; he could not lay a bit of road.
3869. How long has he been on the railway? Seven or eight years.
3870. *Mr. Waller.*] Would it not be an advantage to get men who have a general knowledge of railway-work? They are difficult to obtain.
3871. Is not the system now calculated to prevent you from having men with general knowledge? Perhaps you are right, for the simple reason that there is an inspector for each class of work, as it debarb one man from knowing anything of the work of another.
3872. *Mr. Mills.*] Does it not necessitate a great deal more travelling? There are four men travelling as against two.
3873. *Mr. Coyle.*] Suppose Franklin and Rose were to be dispensed with, could the other two men take up their duties? I would not like to say definitely, but probably they could.
3874. Suppose one were left out would not three of them be sufficient to do the duty? Perhaps so.
3875. Have you ever imported any plate-layers? No.
3876. *Mr. Waller.*] Can you get a man who has sense enough to inspect everything in his length of line—the bridges as well as the road? I do not think you could get an all round man of the standing you require.
3877. *Mr. Coyle.*] How do you ascertain when an iron bridge becomes defective? That is found out by periodical examination.
3878. *Mr. Waller.*] By whom? By the inspector.
3879. *Mr. Coyle.*] Would not an engine-driver report if he found that his engine was jerky, would he not detect that there was something defective by the vibration in passing over the bridge? He might.
3880. *Mr. Waller.*] Is there an inspector of iron bridges? Rose, who is designated inspector of iron bridges, has charge of the workshops at Goulburn, and also of the whole of the signals. His duties are not specially confined to iron bridges.
3881. *Mr. Coyle.*] Is there any necessity for an inspector of iron bridges at all? That is a professional matter; I scarcely think I am competent to give an opinion upon it.
3882. Do you not think that the district engineers could inspect iron bridges? If they went through their districts periodically they could see what was required.
3883. Is not the deflection of iron beams tested periodically? I do not think so, but I do not know for certain.
3884. Some of them have been tested? The last that was tested was by the Royal Commission.
3885. What did you say Franklin was? An inspector of brickwork.
3886. Is there very much brickwork being done now? Not a great deal.
3887. Could not Franklin be dispensed with altogether? Perhaps three might do the work.
3888. Is not this nearly all comparatively new railway? Yes.
3889. *Mr. Waller.*] How many brickwork inspectors are there? One in the Sydney district, one in the Goulburn district, and two sub-inspectors in the west.
3890. *Mr. Coyle.*] William Taylor, what is he? Sub-inspector of station buildings.
3891. Does he do anything else? Station buildings, level crossings, gates and gate-houses.
3892. Do you think that that man is required? The inspector of station buildings goes through regularly.

Mr.  
G. Landers.  
6 Jan., 1887.

3893. Who is he? Brown. Taylor is sub-inspector for the buildings, and Giddy is sub-inspector for the bridges.

3894. Do you think the office of sub-inspector of station buildings can be dispensed with? It is not altogether the ordinary repairs that he has got to attend to, but any new work that is authorised to be carried out—anything outside of contract.

3895. Do you think that John Brown could not undertake that single-handed? I do not think he could give much time to it.

3896. Is there not always a leading hand on the job? Yes.

2897. Could you not trust him? In some cases you could, in others you could not.

3898. *Mr. Waller.*] Is there not a district engineer and an assistant engineer also to look over the works? They are in the district; I do not know if they have anything to do with the men out on the line.

3899. Do you not think that one inspector is enough for the repairs of different stations and such work as this, bearing in mind that none of it is urgent? Some is urgent, some is not.

3900. What class would be urgent? We have works of an urgent nature on the south-west, where the foundations of buildings have given way in consequence of the treacherous ground on which they were erected. You could shake hands through the walls. The only objection I see to it would be the length of district.

3901. Are there not foremen in whom you have sufficient confidence to allow of their being sent out to see to a job of that sort? Cannot the district engineer appoint such a man in any place where it may be necessary to have supervision in that way? We have that already; there is one man selected as a leading hand.

3902. Is he invariably a trustworthy man? Yes, and receives a little extra pay.

3903. *Mr. Mills.*] If you could not trust him he would not be fit for the position? No. Perhaps one of the two sub-inspectors might be able to go.

3904. *Mr. Coyle.*] What do you say Giddy is? He is sub-inspector of bridges.

3905. Suppose you take the buildings from Brown and let him stick to bridges? What would you do with them?

3906. Let them report whenever anything was required? Let one of these sub-inspectors be dispensed with, and let the bridges and stations be attended to between the two instead of three. In inspecting the bridges they would have to pass stations. I do not believe there are four inspectors in New South Wales superior to these men.

3907. Taking these inspectors of permanent way, do you consider they are all required? I do, in view of the safety of the public.

3908. And out of the total number of inspectors under Mr. Stephens, do you think he could dispense with more than one? I do not know whether he is of opinion that three would do the work.

3909. Prior to the appointment of the district engineers, what was the system of construction and maintenance on the lines of this colony? We had an engineer for existing lines.

3910. Prior to that appointment in what way were they managed? By the Engineer-in-Chief as head of the Construction, Existing Lines, and Locomotive Branch.

3911. Was he Engineer-in-Chief over the whole system? Yes.

3912. Who was immediately under him, in charge of existing lines? Mr. Mason.

3913. *Mr. Mills.*] Was Mr. Mason's title that of assistant engineer? Yes.

3914. *Mr. Coyle.*] Is there any officer in the Construction Branch corresponding to Mr. Mason, under Mr. Whitton? I do not think so.

3915. Did Mr. Whitton keep direct control in his own hands? Yes.

3916. Who were the other officers under Mr. Mason when Mr. Whitton was Engineer-in-Chief? Myself and two lads, and three or four inspectors.

3917. In what year was that system done away with? In 1876.

3918. At that time you had 508 miles of railway constructed, and the head office staff amounted to how many persons? Twelve, I think.

3919. How did the system work then under Mr. Whitton? There were never any complaints, the work was done quickly and well I believe.

3920. Did the general business of the department go on smoothly? Yes, as far as the work was concerned.

3921. What is Charles England? He is foreman in the carpenters' shop at Goulburn.

3922. And Benjamin Webber? He is foreman of the blacksmiths.

3923. Are both these men required? I think so; I think they are absolutely necessary.

3924. What do they want anybody over them for? It is necessary that there should be some competent man over them. The inspector is not only inspector of the whole district, but of all the work manufactured in the shops.

3925. You have an engineer, an assistant engineer, and all these other officers over the shops—why, therefore, do you need to have an inspector responsible? The district engineer is responsible. In Goulburn there is no resident engineer. The two assistant engineers are occupied in surveying. This foreman of carpenters acts during the absence of the inspector, and the same with regard to the foreman of blacksmiths, who acts in the absence of his inspector. Their inspectors are travelling round their districts once a week. Anything required for the district is attended to by them in the absence of the inspectors. Thus, for example, Brown writes down to England that certain material is required to be forwarded to a certain station for repairs, and England sends it of his own accord after he has got a requisition furnished him by the district engineer's office, which enables him to get the material from the stores.

3926. Cannot the inspector write direct to the district engineer and let him give the authority? Yes, but the foreman is required to see that the men perform their work. The inspector is nominally the head of that branch.

3927. Who instructs the foreman? The inspector; the foreman takes all his orders from the inspector.

3928. *Mr. Waller.*] Why should the foreman not take his orders from the engineer? The inspector takes his orders from the engineer.

3929. Why should not the inspector report that certain things are required at certain bridges, and the engineer then give the instructions?—

Mr.  
G. Landers.  
6 Jan., 1887.

3930. *Mr. Coyle.*] Is it a pretty large shop? Yes, there are about 93 hands there, I think.
3931. What is Brown by trade himself? A carpenter.
3932. What is England? England is foreman carpenter.
3933. And Webber? Foreman blacksmith.
3934. *Mr. Waller.*] Do the foremen work? I do not think they do. I think their duty is to see that the men perform their work.
3935. Have you some knowledge of these workshops? Yes.
3936. Do you think there is a lot of work done there that could be contracted for in Sydney and supplied up there, so as to reduce the number of hands? No, I could not recommend that. The cost of conveyance between Sydney and Goulburn would make it dearer.
3937. What about making spikes? They can make them as cheaply at Goulburn as we can here.
3938. *Mr. Mills.*] You must carry the material up for them? There are a great number of things that come under different classes and at different rates. We can buy local timber at reduced prices, and we can get lime and various things locally for less money than it would cost to take them from Sydney. You must have blacksmiths on the railway.
3939. How many blacksmiths are there? I think only five and a foreman, four fitters.
3940. How many boiler-makers? Only one, and one turner, two tinsmiths, one foreman plumber and three plumbers.
3941. What real work is there for this large staff of men in the Goulburn workshops? I consider that we want every man for a district of 700 miles.
3942. *Mr. Coyle.*] Is that immediately in charge of the district engineer? Yes.
3943. Is the district engineer possessed of special knowledge of these trades? I cannot say, but I rather think he has.
3944. Are the other district engineers possessed of sufficient knowledge to overlook workshops? That I could not say. Mr. Bewick I know has had the sole management of the northern line since it was opened.
3945. Assuming that the district engineer has no special knowledge, who then takes charge of the shops? The inspector.
3946. Is the inspector an experienced man? As a rule he is.
3947. Who employs the men and discharges them in these shops? At the present time the approval for the employment of men has to be obtained from the Commissioner. Prior to that they had authority to put men on when they were required, and to submit the papers to Mr. Cowdery. For some time now they cannot put men on without approval from this office, and we obtain the approval from the Commissioner.
3948. *Mr. Waller.*] Bearing in mind that you have to carry iron up to Goulburn, would it not be better to get iron-work done in Sydney? They have quite as much to do in Sydney as they can contend with. You would have to increase the quantity of machinery.
3949. *Mr. Coyle.*] You could bring the machinery from Goulburn? Then there would be the delay in sending the material to Goulburn.
3950. But it would do away with supervision? The experiment was tried and found to be objectionable. I think the workshops are the best thing in the district.
3951. *Mr. Waller.*] I see from this telegram from the district engineer at Bathurst that there are fifty-one men employed in the yard there, and forty-two upon the coal stage—what are they all doing? As a matter of fact there are only forty-two in the workshops at Bathurst. They were building a coal stage, but I am not certain whether it is completed or not.
3952. What is Deputron? He occupies a position similar to the leading clerks in the other districts.
3953. What is the Bathurst staff? Forty-five.
3954. Does that include resident engineer, assistant engineers, surveyors, draftsmen, clerks, time-keepers, cadets, inspectors, sub-inspectors, foremen, and office boy? Yes.
3955. How many clerks has this gentleman got? Four.
3956. And how many do you think he has employment for; do you think he requires more than three? I think four are necessary in the southern district, and I would therefore leave him four.
3957. There are two time-keepers; are they both necessary? Yes.
3958. How many inspectors' clerks could be got rid of without injuring the efficiency of the service? I do not see what Read is required for.
3959. Are all these men in the one office under one roof? When I was at Bathurst last the inspector's office was in the engineer's office, but Mr. Mayo was at the workshops.
3960. Seven office boys to the different sub-inspectors, what are they required for? They have been dispensed with.
3961. In the northern district there is the head clerk and clerks to Inspector Duffy. There is the district engineer's staff and a messenger. How many of these do you consider necessary? Mr. Bewick has one resident engineer, one draftsman, and a cadet. He has one clerk and two junior clerks in his office; he cannot do with less. Matthews is clerk to the inspector of permanent way. There are three inspectors, James Duffy, Peter Morrison, and James Welsby. He cannot do without them. It is a very poorly manned district. Nobody could man a district with a less number than Mr. Bewick has done.
3962. What about the office boy? If he is there, you may depend upon it Mr. Bewick considers him necessary, or he would not be there. Mr. Bewick will not have a man more about him than what is absolutely necessary.
3963. Would a telephone do instead? I do not know the situation of the workshops and his office.
3964. How many miles of line has he got? 484 exclusive of sidings, and including himself and office boy he has got a staff of twenty-three.

Mr. Alfred Leggatt was further examined:—

3965. *Mr. Coyle.*] What is the cost of preparing one of these station plans for a building like Lithgow, to cost, say, £2,000; how long would it take to prepare complete working drawings of that? Five or six weeks perhaps. After the drawing is prepared we have to take up the specifications and take out all the quantities.

Mr. Alfred  
Leggatt.  
6 Jan., 1887.

- Mr. Alfred  
Leggatt.  
6 Jan., 1887.
3966. How many officers would you have engaged upon it? A man drawing the plan and Mr. Josling. The only thing I would have to do would be to examine the specifications and check them.
3967. What would be the cost of the preparation of this drawing? £15, and Mr. Josling's time for three or four days.
3968. Have you a number of smaller stations similar to Lithgow? Yes, at present young Stoddart is doing Lithgow.
3969. Assuming you had a system of standard drawings with quantities taken out on each one, and you had another station to build similar to Lithgow, what would be the expense of that, or would any expense be incurred at all? You would have to revise the specifications to suit the place, there is sure to be some difference in the foundation. It might cost half the money.
3970. These standard drawings are simply above formation level? It would cost about half the money, I think, if you had standard drawings to prepare the plans and specifications ready for tender from lithographed plans.
3971. What would you have to do? Take out the foundations and extra quantities, alter the specifications, and they would have to be printed. The contract plans would have to be coloured, to indicate what the material is.
3972. Why could you not write it down, "this is brick," and so on? You cannot see it so well as when it is coloured.
3973. *Mr. Waller.*] What is the cheapest class of buildings you put up? At a value of about £300 say.
3974. Do you call for tenders for that? Yes.
3975. Do you draw an original plan for that? Yes, if we have not a plan suitable.
3976. How long would it take to draw it? A week.
3977. What would be the value of that plan when it was finished? £8 or £9.
3978. Do you get many plans to draw running from £300 to £2,000? Yes.
3979. Is that a fair average of the different amounts? Yes.
3980. Suppose you put up twenty buildings in the course of a year, would a fair proportion average what you have said? Yes.

FRIDAY, 7th JANUARY, 1887.

Present:—

MR. T. F. WALLER, CHAIRMAN.

Mr. J. Y. MILLS, | Mr. J. E. FITZGERALD COYLE.

Mr. D. H. Armstrong was examined:

- Mr. D. H.  
Armstrong.  
7 Jan., 1887.
3981. *Mr. Waller.*] What system is in vogue for proving the delivery of papers from one office to another, or one officer to another. What is there beyond the mere statement of delivery on one side and denial of receipt on the other? I do not know that there is any system except that they have to trust to our books as correct.
3982. Suppose you are a correct clerk and I am a very incorrect clerk, would you like to be held responsible for my statement that I had given documents to you that you had not received? No.
3983. Under this system is not that the case? It is.
3984. Have you any views of your own by which you could get over that difficulty? I think it would be impossible in dealing with large correspondence to obtain a receipt for every paper. If you sent papers, as we do, to Bathurst, Goulburn, and Newcastle, and to numerous other places, I think it would be impossible to obtain receipts.
3985. I am now referring to the distribution of papers in the city? I send them away enveloped, by the messenger. He places those which are for the district engineer, Sydney, in a box for the reception of correspondence at Redfern; those for Bathurst in another box, and so on with all the correspondence to the different stations.
3986. That is the same as posting? Yes. I think it would be impossible to obtain receipts for all the different papers.
3987. Do you think there is a looseness in the system you describe. Do you say you put valuable documents which you send to the district engineer, at Bathurst, into an envelope, and that you have no check to show whether you really have put the papers in or not. He says he did not receive them, you say you sent them. Do you not think if when you sent certain documents to Bathurst, say documents numbered one to fifty, you were to call one of your officers to check the papers off, and then initial the record register, that that would be a check? That would only be an additional check in this office, it would not be a receipt for the papers. But I think it would be a good thing.
3988. Would it not show that you have sent the papers and checked them off? That could be done.
3989. *Mr. Coyle.*] Is there any note taken of papers which have been posted? They are treated the same as other papers, except that they are posted instead of being sent by a messenger.
3990. Has the messenger any box in which to post them? No.
3991. *Mr. Waller.*] If a messenger says he never received an envelope from you for the district engineer at Bathurst, what would you do? We could only point to our books, in which the papers are written off as having gone to Bathurst.
3992. Do you not think it would be a good thing for your messenger to have a book, and write in that book the date and the number of envelopes given to him to post or deliver at the Railway or any particular office. You then to inspect the book and sign it, whereupon your responsibility would cease? Yes.
3993. Would it not be advantage that there should be some proof of the delivery of valuable papers from the messenger to the person to whom they are addressed? Yes.
3994. Have you any system by which you can prove the sending from this office of papers, and the delivery of them to the officer who has to receive them? No other than the word of the messenger.
3995. Do you think it would be well to adopt a system whereby you could actually ensure proof of delivery? I have no doubt it would.
3996. Do you think there would be any serious obstacle to the messenger having a book in which he would enter the number of the papers he was to deliver, or in case of an envelope containing several papers he would receive a receipt for that envelope? I see no objection.

3997.

3997. Would it involve any difficulty? No.

3998. Would it give greater facility in tracing lost papers? It would be a certainty as to their delivery.

Mr. D. H.  
Armstrong.

7 Jan., 1887.

Mr. J. P. Finegan was examined:—

3999. *Mr. Waller.*] What are your duties? I have to examine all wages and accounts in the different branches of the department, except that of the Engineer-in-Chief.

Mr. J. P.  
Finegan.

7 Jan., 1887.

4000. Where do the Engineer-in-Chief's accounts go? To the accountant.

4001. Do you mean all the Engineer's accounts, those of draftsmen, surveyors, &c.? They all go direct to the accountant.

4002. Do you know why the Engineer-in-Chief's accounts do not go through you? No.

4003. Is there any particular authority for it? No. I may mention this branch was established in 1878.

4004. *Mr. Coyle.*] By what authority was it established? By the authority of the Commissioner. Prior to that, Mr. Whitton had charge of the locomotive and permanent way engineering works altogether. He consequently checked his own wages accounts, and made out his own appropriations irrespective of the Commissioner. When Mr. Mason took charge, he did the same. The Commissioner had no independent check over the expenditure of moneys by the engineers or by the Traffic Manager. In 1878, he decided that he would have an independent check on all works carried out, so as to see that they had proper authority for charging the expenditure to the various votes, and that the appointments and classification of men was made according to the regulations.

4005. *Mr. Waller.*] How could that exclude the Engineer-in-Chief's Department? I do not say it excluded it, but their accounts were never forwarded here.

4006. *Mr. Coyle.*] Suppose any of the other branches of the department declined to send their accounts to you? The Commissioner gave instructions to the branches to forward their wages sheets and vouchers, and also wrote a minute to the effect that no payment was to be made unless it bore evidence of having passed through the Examiner's Branch.

4007. Were these same instructions issued in reference to the Engineer-in-Chief's Branch? I do not know whether the Commissioner's minute ever went to the Engineer-in-Chief's Branch.

4008. Did the minute cover all? It was, I believe intended to cover all.

4009. *Mr. Waller.*] Did that refer to all wages of every description? The wages of all branches under the Commissioner.

4010. *Mr. Coyle.*] Was this minute forwarded to the different branches under the Commissioner? It must have been.

4011. Was it not forwarded to the Department of the Engineer-in-Chief? I am not aware.

4012. Have you a copy of this minute, or could you get one for the Commission? I will endeavour to get you a copy of it.

4013. *Mr. Waller.*] From your experience, do you think it would be advisable that all accounts for expenditure should pass through the Examiner's Branch; I am not speaking of you personally? My opinion is that if there is an examining branch, everything which the Commissioner has to sign should pass through it.

4014. To be effective there should be no exceptions? No.

4015. Do you think that the office of Examiner is necessary? Yes.

4016. Do you think that there is any necessity for the very large amount of recopying and checking off accounts that takes place through the different branches, prior to the account coming to the Examiner? Yes.

4017. Why? No matter what check the head of each department may have, when the papers come to us they are checked again.

4018. You do not understand me. Before the accounts come to you there is an immense amount of recopying of vouchers and statements made by different departments with signatures attached to them. Is that all of no value when they come to this office, that is to say, do you think that all this prior examining and copying is unnecessary waste of time? I think that any responsible head of a branch or department, before he certifies to his voucher, should endeavour to satisfy himself that the voucher he sends is correct.

4019. Do you think it is possible without detriment to the conduct of the business that an inspector should make out the original pay-sheet from the time-book supplied by the gangers? I do not think it is advisable that an inspector should do it.

4020. Do you think it ought to be made out as it is now by a clerk in the engineer's office? Yes.

4021. Why? Because he possesses more intelligence in dealing with papers.

4022. To ensure its being correctly made out as to the computations, additions, extensions, &c.? Yes.

4023. Do you find that the papers which come down to you are correct? There are errors every fortnight.

4024. Do they cause you a large amount of additional work as an examiner? Necessarily so, because I immediately advise the heads of branches of errors in their sheets with a view to reprimanding the officer.

4025. What class of errors are they? Errors in additions or computations.

4026. If the inspectors are not sufficiently educated to make out the sheets correctly, that excuse cannot hold good for errors where there is an officer told off for the purpose? Undoubtedly not.

4027. What remedy would you suggest for these continual mistakes in the pay-sheets? I would fine those that prepared them.

4028. If that is not sufficient then what? I would dismiss them.

4029. What is the pay? Generally their salaries range up from £50 to £150.

4030. *Mr. Mills.*] What pay do the inspectors get? The sub-inspectors get from £200 to £280, and the inspectors from £290 to £400.

4031. *Mr. Waller.*] Does it not seem a rather strange thing that men who get such good salaries as inspectors get should be incompetent to prepare these sheets? Their work is not of a clerical nature, it is inspection, and they are continually on the line.

4032. *Mr. Mills.*] But they do no work themselves, it is all inspection? Yes.

4033. *Mr. Waller.*] Are there any other errors in your sheets besides clerical that give you trouble? Yes, we have to take exception to payments on account of unauthorised works.

4034. How do they come about? Very often it may be that papers are delayed in transmission, and that the authority has not been received in time, or it may be that the works have not been authorised. It may be that the Commissioner is trying to find out the necessity for works that have already been commenced.

4035.

- Mr. J. P. Finegan. 7 Jan., 1887.
4035. Do you think that it would be an advantage that no work should be permitted to be undertaken without authority, unless works of an urgent character? Those are the Commissioner's instructions.
4036. Why are those instructions deviated from? I do not know.
4037. Are those instructions constantly deviated from? Not so much latterly, since the Commissioner's attention has been frequently called to it.
4038. But were they before? Yes.
4039. How long is it since the Commissioner's attention has been frequently called to it? Since the branch has been started.
4040. Do you get cases still coming to you? Yes, but they are not so numerous.
4041. How many cases would you get in a month? They vary, sometimes two or three and sometimes as many as twenty, but after the papers have been submitted to the Commissioner we find that authority has been given, or that the expenditures are such that the Commissioner approves of them.
4042. Do they amount to anything serious? You cannot tell, because the jobs are continuous.
4043. Then they may amount to large sums? Yes.
4044. What sort of work are they? They would include additions to stations.
4045. *Mr. Coyle.*] From whom would come the application for an addition? From the Traffic Manager.
4046. To whom? Originally the Engineer for Existing Lines.
4047. What would he do? After consulting with the Traffic Manager he would probably accede to his desire in putting up the alterations or additions.
4048. Would he not ask for authority to do that? Cases have occurred in which he has not done so, and the Commissioner minuted within the last twelve months that the authority must be asked for from him, and he would direct the Engineer for Existing Lines whether the work should or should not be done.
4049. In asking the authority what is it for? To erect works required by the Traffic Manager; he gives an estimate of the cost, and the reason why they are required.
4050. Then what does the Commissioner do? He satisfies himself that the work is necessary, and that the cost will not be exceeded, and he approves of it.
4051. Before his approval are the works commenced? That I could not say in all cases.
4052. Are they sometimes? Sometimes they are, or they have been, I cannot say as to latterly.
4053. In a case where works are not commenced until approval is given, what does the Engineer for Existing Lines do? He gives instructions for the work to be done.
4054. To whom? To the district engineer.
4055. Does the district engineer carry out the work? He is supposed to do so.
4056. Is he aware of the amount of money allowed by the Commissioner for this work? Yes; he would see it on the paper.
4057. Is he instructed to confine himself to that amount? I should think so. The instructions frequently are that the amount is not to be exceeded.
4058. Does the district engineer confine himself to that amount? Yes, in most cases.
4059. In the event of his not doing so, what then? I draw the attention of the Commissioner to it, and he directs inquiry to be made. It may be found that owing to bad foundations or something else he was obliged to exceed the estimated cost.
4060. Would it not be the proper course in cases where the estimated cost is likely to be exceeded to apply for proper authority? Yes; minutes from the Commissioner are numerous directing that his authority should be obtained, and I am under the impression that excepting works of a very urgent nature there are no works being carried on where his authority has not been first obtained. When the Traffic Manager wants anything done he immediately reports the matter to the Commissioner.
4061. During the last six months has any case occurred except that of urgency? I do not believe there has.
4062. During the last twelve months has there? There have been very few out of the total number of jobs.
4063. *Mr. Waller.*] Do you know the amount which the Engineer for Existing Lines is permitted to spend without authorisation? £1,000 per month, and not more than £50 on any particular job.
4064. For what sort of works are these? Works of an urgent nature.
4065. What would you call urgent works? Anything which affects the safety of the travelling public.
4066. Would you call increasing station accommodation urgent? Yes, very often it would be. In the opening of a new station where it is found that the requirements of the public have not been met, such a work might be urgent.
4067. What do you mean by a new station? A station where before very long the increased traffic has grown up and the Traffic Manager finds additional accommodation necessary. It would be a matter between the Engineer for Existing Lines and the Traffic Manager.
4068. *Mr. Mills.*] To what extent does the Engineer exercise his power in regard to the expenditure of £1,000 per month before authorisation? According to the last returns he spent £318 in a fortnight. I send these lists up to the Commissioner and he goes through them. If papers had to be submitted in every case the loss of time would be considerable.
4069. *Mr. Waller.*] If that return came in certified to him there should be no more difficulty? But there are works chargeable to construction, capital, and revenue which would not be included. I should not query such small things as are to be found in this list.
4070. What do you find fault with? I raise queries in the case of larger jobs.
4071. Do works of some magnitude as regards expense appear on the pay-sheets coming to you upon which authority has not been given before they have been undertaken? Yes, they come to me before I receive the information of the authority.
4072. Is that conformable with the instructions of the Commissioner or against them? He has written minute after minute against it.
4073. Do you know anything about the forms which are made out for the payment of surveyors, architects, and draftsmen in the different branches? Yes.
4074. By whom are they made out in the first instance? In Mr. Cowdery's office by his clerks.
4075. Who makes out the pay-sheets of the architect's office? Mr. Cowdery's clerks.
4076. From what information? From the knowledge of the men who are in the office.
4077. How does he know that the men are there? If they were absent he would be aware of it.

4078. How many copies do you require of the salary sheets? Only one and the original.
4079. Must both necessarily be on thick paper or would a press copy be sufficient? A press copy; in fact press copies are supplied from some of the offices now.
4080. Is it a saving of labour? Yes.
4081. From your knowledge of accounts and the vast amount of time that is lost over them would it be better that all accounts should be paid monthly instead of fortnightly? Undoubtedly.
4082. Would it be a simplification of work and a saving of time? Yes.
4083. And perhaps your experience would show that the large sum of money that would remain to the credit of the Government at the end of the month instead of the fortnight would represent a considerable saving in the way of interest in the course of a year? There is no doubt about it; it would in fact be a great retrenchment.

Mr.  
J. P. Finegan.  
7 Jan., 1887.

Mr. Charles Edward Hogg examined:—

4084. *Mr. Mills.*] What are you? I am a railway surveyor. I have been one for nearly ten years.
4085. Where did you acquire a knowledge of your profession? In Victoria, under Mr. Higginbotham.
4086. Have you been employed on trial surveys? Trial and permanent surveys.
4087. What is the system of surveying for lines? You mean from the time we received instructions until the work was complete?
4088. Yes? I received instructions to survey a line from one point to another. If it was a trial survey I would go up and examine the country, and make my report to the Engineer-in-Chief. That report I never saw again.
4089. Then would you make your surveys? Yes; I would come down and get my camp if I was to carry out the survey.
4090. Have you ever been examined or had any personal interviews with the Engineer-in-Chief with regard to the surveys you have made? I have never spoken to the Engineer-in-Chief on the subject.
4091. Would you be sent out to stake out the lines? Not necessarily, but probably I should be sent back.
4092. Have you been sent back? Yes. A surveyor making a report, if he were a senior man, as I am, would probably be called upon to do the work, with perhaps others under him.
4093. *Mr. Waller.*] If you had been examined personally could you have given any information that would have been valuable with regard to your report? Yes.
4094. *Mr. Mills.*] When you staked out what you considered the best line, have you found that it has been altered? Yes, in this way. The section on being sent to Sydney has been graded in such a way as to make the line in some cases, you might say, practically useless.
4095. *Mr. Coyle.*] When you made your reconnaissance survey do you take any measurements? No, aneroid levels.
4096. Did you report to the head office the result of your examination? Yes.
4097. In the event of its being decided to go on with the permanent survey, would you receive instructions to go on with it? Yes.
4098. Then would you take your camp and equipment on to the ground and proceed to work? Yes.
4099. What general instructions would you get with regard to setting off the lines? There are no standard instructions in the Department.
4100. Before the permanent survey was decided upon was there any officer of standing, like the Engineer-in-Chief or Inspecting Engineer, who would go over the line and examine it? Not in all cases. I think in most cases Mr. Palmer went over the trial surveys.
4101. Was Mr. Palmer's examination an entirely engineering examination, or was it more with reference to the setting out of the line itself? He would not go with a view to finding a better line or suggesting deviations; he would go with a view to suggesting local alterations, or alterations of a minor character.
4102. Are you aware if in any case one of the superior officers of the Construction Department, such as the Superintending Engineer or the Engineer-in-Chief, examined a line with a view of determining if the best route available had been selected? I have never seen anyone but Mr. Palmer.
4103. Has Mr. Palmer been engaged upon construction in this country. Never since I have been here. I think never, but of that I cannot speak positively.
4104. What position did Mr. Palmer hold before that? He was just in my position before he was promoted to be Engineer in Charge of Surveys.
4105. Has he ever been on construction? He was in Ireland, I think, for some time, but not in this Colony.
4106. What position did Mr. Palmer obtain when he came to this Colony? He received the appointment of railway trial surveyor. The term is a bad one, because his branch includes permanent surveys as well as trial surveys. It really does all the railway field-engineering.
4107. Has the Superintending Engineer or the Engineer-in-Chief ever examined the lines before calling for tenders. None of my lines.
4108. Are you aware that they have examined lines in other cases? I am satisfied that they have not.
4109. Then in setting out a line of railway what assistance do you get from the head office? None.
4110. In fixing curves are you limited in radius? There is a limit given.
4111. What is the limit? In exceptional cases we make 8 chains the minimum.
4112. On the main lines? No, 12 chains has been the maximum curve.
4113. Are you limited to any grade? To one in forty, but in exceptional cases one in thirty-three. Have not lines with gradients only one in thirty been constructed? On the Glen Innes line to Grafton the line was for a distance of 3 or 4 miles laid out in a grade of one in thirty, and curves of 8 chains radius.
4114. In pegging out the line upon the ground, did you plot any sections in the camp? Yes, trial sections, in all cases.
4115. Any sections of the working surveys? The first survey.
4116. Do you make for your own guidance a preliminary survey slightly in advance of the working section? Yes.
4117. After determining the route, staking out the permanent line, and taking the levels of it, do you complete a section in the camp? No.

Mr.  
C. E. Hogg.  
7 Jan., 1887.

4118.

- Mr. C. E. Hogg.  
7 Jan., 1887.
4118. What do you do with your level book? The books are sent down as every five or ten miles are permanently staked. They are sent to the head office and plotted in Sydney.
4119. Do I understand you to say that you do not plot any section yourself? No permanent section.
4120. Has the person who puts the grade upon the section any knowledge of the conditions existing on the ground? In my own case, he has never seen the place.
4121. Who puts the gradient lines on? Mr. Palmer. As a rule, Mr. Palmer has a general idea of the country, and he is very quick at grasping it; he may have been over the line only once.
4122. Do you note the width of water openings required? Yes.
4123. Do you estimate it as you go along? Yes.
4124. Do you make any survey of the catchment or drainage area? I do, but we are not encouraged to do it.
4125. Is there any specific instruction given as to measuring the discharge of streams, or their drainage area? No.
4126. Do you estimate the width of water opening simply by rule of thumb? Yes.
4127. Is there any officer appointed by the department whose duty it is to fix the width of waterways? None whatever. The constructive engineers, as the works are in progress, have the right to alter them as they think fit. If any heavy rains come they can see the discharge of water.
4128. After the level-book leaves you, have you anything more to do with the section? Whenever our work terminates we might come into the office to work it up, but we might be sent to the other end of the colony on some other work.
4129. In carrying out the survey of railways in what way do you connect with the existing land survey on the ground? We stake it. We have parish plans put together.
4130. Are they lithographed maps? Yes, we have them to assist us in finding the corner pegs.
4131. What information is given on them in the way of distances and bearings? We mark on the parish plans the approximate position of the line.
4132. Do you sketch it on? Yes. We then send it to Sydney, where the measurements of the various blocks are put on; that is, the length of the boundaries and the bearings.
4133. What are these bearings from? They are purely local magnetic bearings.
4134. Determined locally? Determined locally.
4135. Each man by his own instrument? Yes.
4136. What class of instruments do you use? Five-inch transit theodolite, or six-inch.
4137. In the Survey Department what class of instruments do they use? I think the same. I am speaking now of modern surveys. I do not think we find much trouble with them, but we connect with surveys old or new.
4138. What variation do you find between the needles of two theodolites, which have been in use for about three years? Two or three degrees.
4139. Do I understand that in a line of railway passing over a considerable distance you will find different magnetic meridians in use in the land survey—that is, that the land surveys will have been carried out upon different magnetic meridians? Entirely different.
4140. According as the work has been done by different surveyors? Yes.
4141. And are the bearings you receive on the survey plans magnetic bearings determined by the surveyors who carried out the work? Quite so.
4142. In going over country that is not fenced, how do you pick up the corner-pegs of sections. The difficulty is sometimes tremendous.
4143. Have you ever found any instance where for a mile or a mile and a half you could not find any mark on the ground? Frequently.
4144. For a greater distance than that? Yes, much more. I know cases of this kind where the blocks shown on the parish plans had never been surveyed. There is not a mark on the ground, there is not a marked tree or peg, and the people have told me that the land has never been surveyed, people who have been there for a long time.
4145. But has the land been sold? Yes.
4146. What distance might you go without finding a marked tree or peg? Sometimes two or three miles.
4147. Does it often occur that your surveyed line will not coincide with the land survey as laid down upon your plan, it may be entirely protraction? They might be out several chains.
4148. Are you in a position to say from your experience that in many instances the line is actually out of the position shown on the plans by two or three chains? No, I do not think it has ever been proved.
4149. What is your opinion of it? My opinion is that it is impossible it can be right.
4150. Is it the inevitable result of the present system of surveying that the line may in such cases be out of the position shown on the plan by two or three chains? Yes.
4151. Would it follow in such cases as we are speaking that the piece of land conveyed to the Crown would not be the piece of land containing the railway? No doubt.
4152. And, as a matter of fact, would the railway be running on private property? Yes, if the outside survey was done over again to prove it.
4153. Could you suggest any remedy for this condition of things? I have often thought of a remedy, but it would entail a great deal of work. Where we can find a tree marked properly having the bearings and lines right through, if we resurveyed portions adjoining the line and repegged them entirely, then we could get them correct, but there would be no guarantee that our resurvey would coincide with the original survey.
4154. Have you had any experience in the higher branches of surveying? I have done triangulation when I was in the navy, but never in Australia.
4155. Do you not consider that before any reliable system of survey can be established, it will be absolutely necessary to adopt a uniform meridian? Yes.
4156. And that it is impossible to carry on any system of survey on a scientific basis without a uniform meridian extending over a certain circuit? It is perfectly impossible.
4157. *Mr Waller.*] Who decides on the best line after the trial survey has been made? The Engineer-in-Chief.
4158. Upon what advice is he able to decide that? By the written reports of the surveyors.
4159. Has he any personal interview with them? Never.

Mr.  
C. E. Hogg.  
7 Jan., 1887.

4160. Who decides upon the ability of the surveyor to go out and select a line? I suppose Mr. Palmer, or the Engineer-in-Chief.
4161. Are surveyors chosen for a locality of which they have some knowledge? Never.
4162. Are they sent to a locality without any previous knowledge of it? Yes.
4163. How do they acquire a knowledge of the locality? Some never do it. A man may be taken from New England to-day and sent down to Hay to-morrow. He is rarely left in his own district except by accident.
4164. *Mr. Coyle.*] What means do they take to discover the best route? If a man works hard he examines it in every direction. The trouble with us is that we have never been given proper time.
4165. In receiving your instructions to ascertain the best route for a line between Glen Innes and Inverell, have you a full description as to the route you should select, or are your positions fixed in any way? I suppose you may say we have full discretion.
4166. *Mr. Waller.*] Did it ever occur within your experience that after a line had been surveyed and approved a surveyor was subsequently sent up who got authority to run another and an entirely different line? Yes.
4167. Could you give us an example of such? Yes, I have done it myself.
4168. *Mr. Coyle.*] To what case do you refer? To the permanent staking of a line from Glen Innes to Inverell.
4169. Who staked it? It was trial staked by Mr. Francis.
4170. Did anyone go over it? I should fancy Mr. Palmer never saw it.
4171. Was the line permanently staked? No, trial staked and sectioned. The money was voted on the Estimates for that line. I had just concluded a line from Uralla to Inverell, and I got verbal instructions from Mr. Palmer to proceed and permanently stake the line voted from Glen Innes to Inverell.
4172. What was the character of this line? It contained a great many tunnels and exceptionally sharp curves and steep gradients, one of one in thirty, and the works were very heavy.
4173. *Mr. Waller.*] What did you do? I said I was satisfied that there was a much better route to be got if we went by the township of Wellingrove. Mr. Palmer said, "Very well, go through where you will get the best line, and telegraph to me the result." I rode over it in one day, 45 miles. I telegraphed at once that from what I had seen of this line it was infinitely superior, and should be staked and substituted for the one decided upon. I then received instructions to make a trial survey of this second route. I had an assistant with me, and I made two or three trial surveys in fragments at the pinches, and I satisfied myself that at all the crucial points the line was thoroughly practical and very superior to that which I had been sent in the first instance to stake out. I began and made a short trial survey of 15 miles. Mr. Palmer then went to England, and Mr. Deane was left in charge. The practice is to cross-section the line thoroughly and send it up for the curves to be put on by Mr. Palmer. Mr. Palmer puts on the curves and straights, but as Mr. Palmer was not here I put on the curves and straights.
4174. *Mr. Coyle.*] What is the length of the cross sections? It varies with the steepness of the ground.
4175. Do you ever run gradient lines with an inclination on the vertical arc of the instrument? Yes, we do.
4176. Then what is the use of these cross sections? I think the surveyors are not trusted sufficiently to put on their own curves and straights.
4177. Does it not seem to you an absurd system, that of sending in cross sections, and going to the great expense of taking them, to enable a man in an office to put them on? It is a frightful waste of time.
4178. Are you aware whether in any other civilised country it is adopted? I never heard of it: it is a frightful waste of money.
4179. *Mr. Waller.*] What difference would it make in the cost of surveying a line of say 45 miles? It would double it.
4180. Would it make it more accurate? It would not affect the accuracy of the survey, but it is supposed to be done to put the Engineer-in-Chief in possession of all the information which a man in the field possesses.
4181. *Mr. Coyle.*] Do you not consider it would be a great saving of public money if, instead of going to the expense of supplying all this information to the Engineer-in-Chief, the Engineer-in-Chief visited the ground himself? Unquestionably.
4182. *Mr. Waller.*] Referring to the line which you have described, and which was set aside by that you yourself discovered, was any action taken by the Engineer-in-Chief with regard to the very improper route selected in the first instance? None: I do not suppose he ever knew of it. I do not suppose he knows now that two surveys were ever made between Glen Innes and Inverell. I am not sure, but I should think, from my knowledge and experience of him, that he does not know even now.
4183. What was the cost of the first survey? It took about 18 months.
4184. And as to the second survey which you made? The trial and permanent surveys of the line which I picked out were done in ten months.
4185. What would be the cost of the surveys on the first line? £3000 or £4000.
4186. Have you known of any other cases of that kind? I have never known such an extraordinary case as that.
4187. Have you known cases where surveys have been made and adopted when, had a little more care been taken, and time for the examination of the country given, better lines could be found than those adopted? Yes. You do not refer necessarily to lines constructed, but lines that have been permanently staked and intended to be constructed?
4188. I am not limiting you as to that? Yes, most certainly. I can give you an instance. The plan has been approved and passed of the Glen Innes to Grafton Railway. The line has not been constructed, but so far as the Department knows it is to be constructed. If proper time had been taken, or even if the surveyors who recommended alternative lines had been listened to, £30,000 or £40,000 which have been spent on that survey would never have been spent.
4189. Does the want of interest shown by the Engineer-in-Chief in work as done by the surveyors create in the staff a want of heart in their work? Yes; there is no heart in it.
4190. Is it likely to make surveyors a little careless? It is most disastrous in its results.
4191. *Mr. Coyle.*] They do not receive proper recognition of any care and pains they take in selecting a route? Not the slightest.

- Mr. C. E. Hogg.  
7 Jan., 1887.
4192. Is the rapidity with which they get over the work the first consideration? That, and the way they print. I can conscientiously say that in my department no man ever received a word of praise.
4193. *Mr. Waller.*] Referring to the lines already surveyed but not authorized could the expense have been lessened, and if so to a material degree, if the surveyors themselves had laid out the curves and gradients? To a very material degree.
4194. Are they competent to do it? Thoroughly.
4195. If the line after it had been surveyed had been visited by the Engineer-in-Chief, or the Inspecting engineer, would objectionable grades where possible be avoided? Quite so; if they took the trouble to go into the question.
4196. *Mr. Coyle.*] Has it been the practice to survey lines and let the contracts, the lines being frequently in an advanced stage of construction before any superior officer of the department visited them? Certainly; except Mr. Palmer and the district engineer, who would have charge of the work. I have been ten years in laying out railway work, and I never met the Engineer-in-Chief yet.
4197. *Mr. Mills.*] Have you had anything to do with cadets? I have had them sent to me, but I refused to take them.
4198. What is your opinion of the system? They are independent, they are cheeky; they do not pay for their indentures; I will not take them, and I have refused to do so for the last five or six years. Here they get 7s. or 8s. a day to learn their business.
4199. Will the system give rise to a class of men of no ability? Some of the cadets who have developed into surveyors are very good, but they would have developed under any circumstances.
4200. *Mr. Waller.*] Do you know the system of sending in statements of account; in your opinion ought the surveyors to be able to send in accurate accounts? I think they could.
4201. Do you think it is necessary that these accounts should all go through a separate system of book-keeping in the Construction Branch before they go to the accountant? I am not able to say.

Mr. W. H. Quodling was further examined:—

- Mr. W. H. Quodling.  
7 Jan., 1887.
4202. *Mr. Coyle.*] How many district engineers have you? Ten; we had eleven; but one, Mr. Small, has resigned, and we did not replace him.
4203. On the northern railway extension from Tenterfield to the Queensland border, roughly speaking a distance of 11 miles, how many officers have you? Two; Mr. Wright, and Mr. Owen, his assistant. Mr. Wright is the district engineer. He has six inspectors and five chainmen.
4204. Are the works exceedingly heavy on that section? I think the cost runs up to £14,000 a mile. The reason for having two engineers in that length is that we have just completed a heavy contract adjoining it, and have not yet completed the final certificate. There were two assistants under Mr. Wright; one was dispensed with some time ago.
4205. When the final accounts are settled will you require the same staff on this 10 or 11 miles? I dare say that Mr. Wright will be able to manage the whole of the work.
4206. In that case? The assistant might be dispensed with, and a couple of chainmen but not the inspectors. We always dispense with the inspectors also, as soon as the work is finished.
4207. In the Homebush junction railway, I see that you have 7 miles under Mr. Burge? That is just the termination of the line from Hornsby to the Hawkesbury. The other portion of the contract has just been opened; but the final measurements for the whole length have not been completed.
4208. Are the works on that section exceptionally heavy? Yes; there are six tunnels. Mr. Small who had charge of that work has resigned, and Mr. Burge has been transferred to the work in his place.
4209. Is the Hawkesbury bridge under the same engineer? Yes.
4210. Are the inspectors on No. 1 section employed on this work also? As required, some of the other inspectors will be sent there.
4211. Who has charge of contract No. 3—13 miles 68 chains? Mr. Nicholas is the district engineer.
4212. He has an assistant, seven inspectors, and five men? Yes; that is a very heavy contract.
4213. Is the tunnel not almost finished? Yes; the lining is going on now.
4214. How long will it be before this section is finished? I think that above four months and a half ought to finish it.
4215. When this section is finished will there be work for Mr. Nicholas? No.
4216. Or for Mr. Gray and the inspectors? No; they will be all discharged as fast as the works upon which they are engaged are completed.
4217. On section 4, Gosford to Hamilton, 49 miles, there is Mr. Mann, an assistant engineer and six inspectors? That is a very heavy section.
4218. As to section 2, Young to Cowra, and section 3, Blayney to Cowra, 91 miles—when will they be completed? In about six months.
4219. Mr. B. C. Simpson with two assistant-engineers, seven inspectors and nine men are employed in this section? Yes.
4220. Goulburn to Cooma, section 2, Bungendore to Michelago, 47 miles,—there is Mr. Francis, district engineer, Mr. Dunn, assistant engineer, seven inspectors, and four men,—is this still under construction? Yes; but the length to Bungendore has been opened.
4221. Will it take long to complete the line to Cooma? Will it take two or three years? Not so long as that. The first section ought to be finished in six or eight months.
4222. Section 3, Michelago to Cooma, 48 miles, when do you expect this length to be finished? I forget the specified time, probably eighteen months.
4223. Are the works on the Illawarra railway, section 2, very heavy? Yes.
4224. When is it expected that they will be completed? In eight or nine months. A good deal depends upon the weather. Lately they have not been able to make bricks.
4225. How many of the tunnels have met? I think they are all met.
4226. Sections 3 and 4, Wollongong to Kiama,—they are in charge of Mr. Alexander, district engineer, Mr. Stuart, and seven inspectors? Yes.
4227. What is Mr. D. C. Simpson doing just now? He has been making out the final accounts in connection with the Gundagai line.
4228. When will that be finished? It is just about finished now, and he is going to take charge of the line

Mr. W. H.  
Quodling.

7 Jan., 1887.

- line from Nyngan to Cobar, the tenders for which have been invited and are to be opened in February.
4229. Could you say what proportion of the time of the engineers is engaged in setting out the work for contractors? I have no knowledge of it.
4230. Are there any of your district engineers in town? None in the office.
4231. I should be glad if you would let us know when one of them comes in? They seldom come in unless we send for them.
4232. Have you any cadets out with these engineers? I do not think so.
4233. Are there any in the office? Yes; about a dozen including those who are out with the surveyors.
4234. Who appoints the cadets in the first instance? They are frequently nominated by the Minister.
4235. And how do they come to your office? A paper is sent on to us about them. Sometimes they are recommended by the Engineer-in-Chief.
4236. Does he nominate as well as the Minister? He recommends.
4237. Then I suppose they are taken on on probation? Yes.
4238. What do you put them to do as soon as they come into this office? I think that Mr. Drewett sets them on to tracing and copying plans.
4239. Suppose he has no useful work to put them to? I expect they would be only practising.
4240. Have you a knowledge of all the business that goes on in the office, and can you tell us what the particular duties of the Engineer-in-Chief are? He has the general supervision of all the works, and everything comes before him.
4241. What practical part does he take in selecting the routes for railway lines? Occasionally he visits the districts; but latterly he has not been able to do that, in consequence of their great distance from Sydney; but all plans are submitted to him by Mr. Palmer. All the plans and returns of the different surveys are submitted, and he gives general directions which way the lines are to go.
4242. Does he examine the lines before they are let by contract? Not always.
4243. Do any of the superior officers of the departments, construction engineers, or any of the district engineers, examine the routes before tenders are called? Yes; in order to ascertain the water-ways.
4244. Is that after the final survey? Yes.
4245. *Mr. Waller.*] Are they examined before the final survey is passed? Mr. Wade used to do it. Mr. Deane does it, or a district engineer, if available, is detached for that duty. Sometimes they are examined two or three times.
4246. What is the nature of the examination made? I could not describe it; it is a professional matter.
4247. Do they fix the water-ways? Yes, subject to the approval of the Engineer-in-Chief.
4248. Is there any survey made of the drainage or catchment area? I think it is estimated; I could not speak positively.
4249. Then the duties of Engineer-in-Chief are general supervision over the whole of the works, and direction of the business of the department? Yes.
4250. What are the duties of the inspecting engineer? He assists the Engineer-in-Chief when he is in the office and inspects the works as required.
4251. Has he any specific duties of his own to perform, is he really assistant engineer? I could scarcely designate him in that way. We refer all papers to him upon which it is necessary to obtain information in the first instance. When reports come in for the Engineer-in-Chief upon which information is required, I refer them to Mr. Deane.
4252. How do you know that Mr. Deane is the proper officer to send them to? From my knowledge of the business of the Department.
4253. Are the duties of the inspecting-engineer to assist the Engineer-in-Chief? Yes.
4254. What are his duties as inspecting engineer over works in the country? To overlook the works generally, to give any instructions which may be necessary, and report what he has done to the Engineer-in-Chief.
4255. In case of a dispute between the contractors and the district engineers? We try to arrange matters.
4256. Is Mr. Deane empowered to settle disputes? Yes.
4257. Does he do so? Yes.
4258. What real authority has he to make any alteration or change in works of which he disapproves? Any alterations he may make are subject to the approval of the Engineer-in-Chief.
4259. If he disapproves of the manner in which the work is carried out? I thought you were referring to an alteration in the character of the works. If he sees work that he disapproves of, he would order it to be taken out.
4260. Can he make any alteration without reference to the Engineer-in-Chief? I do not think it has ever been done; the Engineer-in-Chief must be informed.
4261. *Mr. Coyle.*] Has he any authority to make any alteration he may think necessary, and sign "approved by the Engineer-in-Chief," without consulting the Engineer-in-Chief? I think that in all minor cases he would order that the work should be done, and report to the Engineer-in-Chief.
4262. Has he power to act at once for the Engineer-in-Chief? I consider he has.
4263. Do you know whether he has? I could not say positively. There are no written instructions that I am aware of. All that Mr. Deane does is subject to the approval of the Engineer-in-Chief, and ought to be reported to him.
4264. What positions do the district engineers hold? They are generally in charge of the works on the different contracts.
4265. What are their powers? Their duty is to see that the work is done properly, and where it is not, to condemn it, and report to the Engineer-in-Chief.
4266. To what extent does their authority go in altering works or in ordering new works? I do not think that they can do anything of that sort without authority from the Engineer-in-Chief.
4267. Have they power to condemn material or workmanship? Certainly; and if the contractor is not satisfied he can appeal to the Engineer-in-Chief.
4268. Have they any power to order new works? Not without authority.
4269. If a district engineer found that an additional opening was required would he have the power to put it in? In every case he reports and recommends before ordering anything.
4270. Has he any power to fix prices with the contractor? Subject to the Engineer-in-Chief, all prices are sent in to the office for the approval of the Engineer-in-Chief.

Mr. W. H.  
Quodling.  
7 Jan., 1887.

4271. Has he power to order extra works to any extent, or at all; additional works or alteration of works? No, certainly not; all that is done by Mr. Whitton.

4272. *Mr. Waller.*] So that if the District Engineer thought a water-way was not large enough he would have no power to alter it himself? It would be his duty to report to the Engineer-in-Chief. The engineers are instructed to examine the country after every heavy fall of rain, and to recommend any alteration in the water openings they may think necessary.

4273. *Mr. Coyle.*] They do not seem to have authority to do anything except to see that the work is carried out in accordance with the plans and specifications? That is all.

4274. And as to anything outside of that? It must be submitted for the approval of the Engineer-in-Chief.

4275. As to the special duties of the district engineer, apart from the general supervision of the work, what does he do? He sets out the work, measures up, makes out the certificates, and attends to the correspondence.

4276. What are the particular duties of the assistant engineers? They assist the district engineers generally; I could not specify their exact duties. The journals show day by day what they are employed upon.

4277. *Mr. Waller.*] How many inspecting engineers are there? Only one.

4278. Is he supposed to approve or disapprove of the work of the district engineers? If he found anything wrong, he would no doubt report it, and take steps to have it remedied.

4279. Is that what his duties are? To see that the works are carried out according to the plans and specifications. He is an extra check.

4280. Ought not the district engineers be competent to do that? Who is to judge if the works are not inspected?

4281. *Mr. Mills.*] The Engineer-in-Chief? He cannot go over all the lines as frequently as may be necessary.

4282. *Mr. Waller.*] Is the experience of the inspecting engineer greater than that of the engineers who are supervising the construction of the lines? He is a very experienced engineer.

4283. *Mr. Mills.*] Is he senior to the district engineers? I dare say their service is about the same.

4284. *Mr. Waller.*] What is the difference between his service and that of Mr. Firth's? Very little. Mr. Firth resigned, and was out of the service for some time. Mr. Deane entered the service, and Mr. Firth rejoined about the same date. Length of service is not the only qualification. A man must be active, and one who is not predisposed to quarrel with the contractors.

4285. *Mr. Coyle.*] Are all alterations arranged and prices fixed by the Engineer-in-Chief himself? Yes.

4286. It must take a large proportion of his time? It does take up a good deal of time.

4287. It must take up the whole of his time? He has a great deal more work to do than that. If you look at our contracts you will find that there are not many extravagant prices.

4288. Does not the adjustment of accounts take up a good deal of time? It does.

4289. Are all accounts squared up monthly as the work goes along? We cannot get the statements from some of the contractors.

4290. The district engineers, you told us, have not the power to arrange with the contractors as to prices? No; they must be submitted to the Engineer-in-Chief.

4291. Not even in small matters? A trifling thing may be done on report to the office. If proper authority were not shown for every expenditure the Auditor-General would take us to task.

4292. The whole authority in the department is centred in the Engineer-in-Chief? Yes.

4293. And in no one else? No; he is the responsible officer.

4294. *Mr. Waller.*] If the inspecting engineer was not able to go over the works of the district engineers, who would go over it? I suppose somebody would be deputed to do it. I would not say who. The Engineer-in-Chief might do it himself, or he might detach a district engineer and send him if he could be spared.

4295. Is it considered to be absolutely necessary to inspect the work of the district engineers? Yes; from the very beginning. Mr. Wade was ill, and during that time Mr. Deane was acting for him.

4296. As a rule are there many alterations which have to be made in consequence of the examination of the inspecting engineer? I do not think so.

4297. *Mr. Coyle.*] I suppose he is required chiefly in cases where any complication arises between the district engineer and the contractor? I think the inspecting engineer often smoothes over little difficulties in cases where there is a difference of opinion between them.

4298. *Mr. Waller.*] In the event of the illness of the Engineer-in-Chief who would represent him? Mr. Deane would take any engineering matters, and all reports, vouchers, and documents would be signed by me for Mr. Whitton.

4299. Who would take charge of all business and letters for Mr. Whitton in his absence? I always take them.

4300. And would you give them to those whom you thought were the right officers to deal with them? Yes.

4301. Who inspects the surveyors' work? Mr. Palmer.

4302. The surveying itself? Yes; trial and permanent surveys.

4303. And who is it says what way the line shall go where two or three lines have been examined? I think Mr. Whitton decides that from the sections and plans.

4304. Who inspects the ground? I do not know that anybody does. Mr. Palmer goes over the lines at various times, and reports to the Engineer-in-Chief. He submits plans and sections, and Mr. Whitton decides.

4305. *Mr. Coyle.*] Has Mr. Palmer been engaged in construction in the Colony? No.

4306. What has he been engaged upon? Surveys.

4307. *Mr. Waller.*] What guarantee is there that the line determined upon is the best in every case, the least expensive, and the best grades? Comparative estimates are prepared, showing the estimated cost of each route.

4308. *Mr. Coyle.*] Are different trial surveys made of routes between the two points? The instructions given are to get the best possible line between two points.

4309. Is that the instruction given to the surveyor? Yes.

4310. I believe we have it in evidence that there is no superior officer of construction who examines the country before the contract is let? The lines are examined before being let to determine the waterways.

4311. Before the permanent survey is made is there any person in authority who examines the route, or is the whole matter left to the surveyor? The surveyor acts under Mr. Palmer's instructions. 4312.

4312. Does Mr. Palmer visit the country on all occasions? I think so.  
 4313. Is Mr. Palmer a man who has had experience in construction? He has never had charge of construction work in the colony.  
 4314. When he came out to the colony was he a young man? Yes.  
 4315. Do you consider that the whole of these officers, with the exception of Mr. Small, are required at the present time? Yes; and all the assistant engineers whom you mentioned, with the exception of Mr. Owen. I do not think that he will be required for a very much longer time.  
 4316. Have you full employment for all the rest? Yes.

Mr. W. H.  
 Quodling.  
 7 Jan., 1887.

TUESDAY, 11 JANUARY, 1887.

Present:

MR. T. F. WALLER, | MR. J. Y. MILLS,  
 MR. J. E. FITZGERALD COYLE.

Mr. William E. Dunn was examined:—

4317. *Mr. Waller.*] What is your occupation? Assistant district engineer.  
 4318. In the Construction Branch? Yes.  
 4319. How long have you been in the Service? Since April, 1883.  
 4320. What line have you been on? The line from Goulburn to Cooma.  
 4321. Since when? September, 1882.  
 4322. Under whom? Mr. Glover, and during the last year under Mr. Francis.  
 4323. Has any portion of that line been handed over to the Commissioner as complete? Yes, as far as Bungendore.  
 4324. When was it handed over? In March, 1885.  
 4325. Have you any experience of the construction of any other lines in New South Wales? No.  
 4326. Have you any knowledge of the condition in which that line was handed over to the Commissioner? I ought to know as well as anyone, and as far as I know it was in first-class condition.  
 4327. Have you any knowledge of the requirements of the line for traffic? Yes; in consequence of a memorandum sent up from the Minister for Works in 1884, I went round and took the number of sheep and cattle on the different stations, and also the population, in order to ascertain what the probable requirements of the traffic would be.  
 4328. For what purpose? To see what accommodation was required, and to arrange the stations accordingly.  
 4329. Do you consider that as that line was handed over it was sufficient for the requirements of the traffic? I think more than sufficient.  
 4330. You do know the state in which other lines have been handed over? I have not been on any other excepting that.  
 4331. *Mr. Coyle.*] Is it the case that the engineers set out the works for contractors on construction? It is.  
 4332. What particular works do they set out? Pretty well everything except the side cuttings.  
 4333. Is the manner in which the side cuttings shall be taken out specified? Yes.  
 4334. What are the duties of the district engineer? As I should understand them, they would be to see to the proper carrying out of the works, and certifying as to the monthly measurements.  
 4335. Anything else? Not as far as I know.  
 4336. Does he set out the works himself? As a rule he requires an assistant; but on a line where the work was light he would do the setting out himself.  
 4337. What proportion of the time of the district engineer is taken up in seeing that the work is properly carried out and in making up the certificates? If he attends to his duties thoroughly he should be on the works pretty well all the time until they are nearly completed. When there are no large works on hand, such as culverts and bridges, he does not require to be about so much.  
 4338. Does he go over the section from one end to the other every day? With some I have known them to be almost constantly on the works; others not so.  
 4339. Would you explain to me exactly what this business of supervision is? He would have to see that the inspectors were constantly at their posts, wherever their duties lay.  
 4340. Looking after the inspectors in fact? Yes; and also in seeing that the inspectors thoroughly understand their work.  
 4341. Would their duties be to look after the inspectors? I should understand it so.  
 4342. And to make up the certificates? Yes.  
 4343. Suppose the class of inspectors was such that they did not require this constant looking after, how long would it take the engineer to make up his monthly certificate of measurement? As a rule, I should think about a week or ten days. It would depend upon the amount of work done and the length of the section. When I have been fulfilling the duties temporarily it has taken me that time.  
 4344. How long does it take the district engineer to measure off the works on 20 miles of line? I took from two to three days on the Cooma line.  
 4345. Is it an accurate measurement which is made? Simply a progress measurement? Yes.  
 4346. How long would it take him to prepare the certificate? I should think it would take four days perhaps, and dealing with papers.  
 4347. For the progress measurements? Very often after the certificate has been made up there is a day and a half's work to make up the detailed sheets. After the contractor and engineer have arranged the quantities, there are detailed sheets which have to be made up and sent in, and which take up a great deal of time.  
 4348. When making his measurements at what time would the district engineer commence work in the morning? I used to commence about 9 o'clock.  
 4349. What time does the district engineer commence work in the morning? Mr. Glover would commence between 8 and 9.  
 4350. That is to say, he would leave his office about that time? Yes.  
 4351. And what time would he get on to the ground—10 or 11? About that.

Mr.  
 W. E. Dunn.  
 11 Jan., 1887.

4352.

- Mr. 4352. What time would he arrive at his office in the evening? About 6.  
W. E. Dunn. 4353. Knocking off probably about 4? Yes.  
11 Jan., 1887. 4354. So that he would be from 4½ to about 5½ hours measuring during the day? Yes.  
4355. What would he do after that? In many cases they would commence cubing in the evening.  
4356. That is taking out the quantities? Yes.  
4357. Could not the district engineer take out all the quantities in the evening for which he had made the measurements in the day? I am speaking of progress measurements? In some cases he could. I have known Mr. Glover very often to do it.  
4358. Suppose he were able to do that how long do you think it would take to enable him to make out the certificate? If he cubed as he measured, it would take him about three days.  
4359. That would be about six days out of the month? Yes.  
4360. What would he be doing the rest of the time? Supervising the work on the line, answering correspondence from the head office, which takes up a large portion of his time.  
4361. What is the nature of this correspondence? Reports very often upon questions referred to him, answering various questions from the office.  
4362. Mr. Waller.] Reports to whom? To the Engineer-in-Chief upon local subjects, such as where any one on the line applies for an over-bridge or crossing.  
4363. Mr. Coyle.] Where a person applies for a crossing, does he apply to the district engineer or to the Engineer-in-Chief? I believe he arranges with the land valuator first of all.  
4364. In fixing the value of the land does he make certain conditions as to accommodation? Yes; and then the district engineer has to report whether the crossing can be made.  
4365. Is not provision made in the first instance for a large number of crossings and roads? Yes.  
4366. How many additional crossings will turn up in the course of constructing the line—take a 20-mile length? Three or four additional ones may be applied for.  
4367. So that the correspondence about crossings would have reference to those? Yes.  
4368. How much time would that probably take up? It is difficult to say; reference has to be made first to one person and then to another.  
4369. Could not the district engineer deal with such a matter in an hour?  
4370. Would he have more than a week's consecutive work during the whole contract about crossings? It is possible he might. He might have to examine the sites.  
4371. Could he not do that in the ordinary course of his inspection? Yes.  
4372. Would the time taken up in dealing with level crossings aggregate ten days all through the contract? Yes.  
4373. Would it occupy a fortnight? It might.  
4374. And the measurements? One week in a month.  
4375. All the rest of his time would be taken up in seeing that the inspectors carry out their work? Yes; and that the different matters asked for by the contractors were attended to.  
4376. Referring again to this matter of setting out the work for the contractor, have you had experience on railways outside the colony? I have not.  
4377. Have you had anything to do with surveying land required for railway purposes? No; I have not.  
4378. Mr. Waller.] How often did the Engineer-in-Chief visit the line while it was in course of construction? I think three times.  
4379. In how many years? In four years, roughly speaking.  
4380. Going all over the ground? Yes; as far as work was going on.  
4381. That is the only line you have been on? Yes.  
4382. Are you engaged with the district engineer now? I am at present; I shall shortly be leaving the department.  
4383. Was the district engineer constantly engaged, day by day, in his official duties? Yes; as far as I was able to judge. I am not always where the district engineer lives.  
4384. Was there sufficient employment for the district engineer and yourself? In many cases more than sufficient, in others not so.  
4385. Assuming that the inspectors were able to look after their own business—the inspector of masonry after the building, and the inspector of permanent way after platelaying, and so forth—what would the district engineers have to do except to measure the work, and make out the certificate? He would have the correspondence, and many necessary details to arrange with the contractor, the general supervision of the earthworks, to see that the banks were not tipped in an uneven manner, and that other works were not carried out in a slovenly way.  
4386. What is the total staff of the district engineer? He is allowed one chainman, unless when he is setting out the works, then he has two.  
4387. And yourself? I am allowed two chainmen and a cook.  
4388. Has the district engineer a clerk? No.

Mr. Whitton was further examined:—

- Mr. Whitton. 4389-90. Mr. Waller.] We wish to ask you some questions with regard to the condition in which the rail-  
11 Jan., 1887. ways are handed over to the Existing Lines Branch. We see a great many charges made in the Existing Lines Department against the Construction Branch, which are said to have been rendered necessary owing to the incomplete manner in which the railways are handed over—in view of the requirements of the traffic? I have only to say this that the railways are handed over to them in as complete a state as is necessary, and that every accommodation is provided for the traffic. But as soon as the lines get into their hands the first thing they do is to take up the stockyards and rebuild them, and they set about all kinds of work which I say is utterly unnecessary. This state of things arises from there being two departments instead of one. The maintenance of the lines should have been under me. There is no question about it; but they are not. As the Commissioner does not know what ought to be done he trusts to his subordinates, and they do what they please. As almost every man in the Existing Lines Branch has either been in my department and has been removed by me, or has made application to me for employment, which I did not give, you can see the result. Men that left me were taken on there at higher salaries. Whether instructed to find fault or not I do not know, but they do it. 4391.

4391. *Mr. Mills.*] Did they leave you because they were dismissed? They are men that I did not consider it desirable to retain in my department. I got rid of them, and they have gone into the other branch. Mr. Whitton.

4392. Are they men whom you considered it desirable to weed out? Yes.

11 Jan., 1887.

4393. *Mr. Waller.*] As a matter of fact do you say that the lines were handed over by you in fair working order, both as regards the public convenience and the working of the traffic? Yes; with probably some exceptions, such as that the stations may not have been finished in time; but if the Minister decides that a line shall be opened for traffic before all the station buildings are finished, I finish them afterwards. As a rule they are in good working order.

4394. And are the stations in proper places? Yes; it might be advisable that you should get the correspondence which has taken place between myself, the Minister, and the Commissioner with reference to those incomplete stations. I wrote a report some time ago pointing out that as soon as the line was handed over the first thing they did was to pull the work to pieces and to re-arrange the stockyards. I have written several reports calling attention to this great waste of public money, which I say is perfectly unnecessary; and as strong evidence of that I may refer to the report of the bridges commission.

4395. Has there been any objection raised by you to the Existing Lines Department going into the lines under construction before they are completed, so that they might erect the signals? There has been no objection of that kind. They keep men for the express purpose of erecting signals, and I have raised no objections to their erecting them. They have men for that special purpose, and I have not.

4396. Would you object to their going on the lines in ample time to erect the signals? Certainly not. We order the signals to be delivered and they have generally erected them.

4397. Would you have any objection to arrange the station-yards in any particular way, so as to suit traffic arrangements, if they had a particular desire to have them laid out in a certain way? No; but I think that I know far more about the way in which station-yards should be laid out than anybody connected with the Traffic Branch here. I have arranged all the station-yards in existence here. When the Minister came into office some time ago he sent down for me to complain that I would not submit the plans to the other branch. The plans were handed by him to the Commissioner, the Commissioner sent them to the Existing Lines Branch, and the Existing Lines Branch sent them to the Traffic Branch, then to the station-masters, and finally they came back to me. Delays of months have taken place in this way, but very few alterations have been suggested.

4398. Suppose there was communication between you and the Existing Lines Branch, and they pointed out to you that they wanted a certain arrangement, with a view to interlocking, would you object to make your designs for the yards suit their ideas? Not in the slightest. Interlocking can always be put in no matter what the yards are.

4399. *Mr. Coyle.*] We have had it in evidence that large alterations have been made at two stations,—one I think at Wallerawang, and that the alterations were necessary. Will you state that at the time the line was handed over that station-yards were, in your opinion, properly arranged, and could you express any opinion on the alterations made by the existing lines—or do you know what they are? I believe the station-yards were properly arranged, and as far as I know no alterations have been made in them. Perhaps you are alluding to Strathfield. With respect to that station I am of opinion that they have made a very extravagant arrangement for the junction. If there are two departments, and one has the power to interfere with and alter the work of the other, there is no knowing what they may not alter. There is nothing which, by any possibility, can be satisfactory with the feeling which exists between the two departments. I say that they have thrown away thousands and thousands of pounds unnecessarily.

4400. *Mr. Waller.*] Do you remember where the line from Molong junctions with the main line? Yes.

4401. How far out was it from Orange? I think about three-quarters of a mile.

4402. *Mr. Coyle.*] Was that the junction shown on the line authorised by Parliament? Yes.

4403. *Mr. Waller.*] In your opinion was that the correct place for the junction? It was the correct place for the junction so far as the line from Molong was concerned. We could not get nearer to it conveniently. It does not follow that in all cases the junction should be at the station. If they thought proper to make another line into Orange to avoid putting up junction signals of course they can do so.

4404. Do you consider it was necessary? It was done to save junction signals.

4405. Was it necessary for the safety of the traffic? Certainly not.

4406. If you had thought it necessary for the safety of the traffic would you have carried the line straight into Orange? If I had thought it desirable I would have done so, but I did not think it was.

4407. You did not think that it was desirable or necessary? No. There is a similar instance in the junction of the Illawarra line, which is about a mile from the Sydney station. To bring that into Sydney they have widened the tunnel and put in a double line. It is a mere matter of work which they can get done if they like.

4408. *Mr. Coyle.*] Are you aware of the alterations which have been made in the Wallerawang yard by the Existing Lines Branch? I am not aware. The line was safe to work as it was handed over, and I believe the yard was very satisfactorily arranged. What alterations they have made, I do not know.

4409. Are you acquainted with the system of supervision of the lines by the working railways department district engineers, resident engineers, inspectors, and so forth? I am acquainted with it.

4410. Do you consider that it is necessary to divide the lines of the colony into four districts for the purpose of maintenance? No; I do not. I think that one person should be appointed to take charge of each line as resident engineer, and that the only officers he should have under him should be inspectors.

4411. *Mr. Waller.*] Ought the inspectors to be fairly well educated? It does not matter so much about their education if they have had sufficient experience on railways to perform the duties—if they are competent to carry out any instructions which may be given to them.

4412. *Mr. Mills.*] We mean educated sufficiently to make out the pay-sheets? Yes; if necessary you could give them a time-keeper for that purpose.

4413. *Mr. Waller.*] Then I gather that you are of opinion that district engineers, resident engineers, assistant engineers, and so forth, are not required? No; I think there should be one resident engineer for each line.

4414. Do you think it necessary that such an officer should have attached to him a large staff such as now exists, and comprising surveyors, inspectors, sub-inspectors, draftsmen, clerks, time-keepers, cadets, and messengers? Nothing of the kind. It is the most extravagant system of working railways that I ever heard of in my life; and you have the most incompetent men to take charge of the railways. 4415.

- Mr. Whitton. 4415. *Mr. Mills.*] Is it possible to make them pay under the present system? They never will pay under the present management.
- 11 Jan., 1887. 4416. *Mr. Waller.*] Referring to the bridges which you have constructed other than iron, have you taken any steps to have the best class of timber used in them? Yes; always.
4417. Timber least liable to be attacked with the white ant, and least liable to decay quickly? In some instances, in order to get work done in time, we have been obliged to take such timber as we could get, as in the case of the Wagga viaduct. There is some timber in that rotten, no doubt. The timber for the piles had to be cut in the summer instead of the winter; and we had to take some blackbutt, mountain ash, and other timbers which are not the best.
4418. So far as time and circumstances have permitted have you used every precaution against accepting inferior timber? Certainly; always. The timber should always be cut in the winter.
4419. What do you consider the best timber? Ironbark.
4420. Is it liable to be attacked by white ants? They will attack everything; but ironbark lasts longest, and is the strongest.
4421. *Mr. Coyle.*] Is it less liable to be attacked by white ants than other timbers? They attack all timbers alike. Turpentine, they say, is a very good timber; but it is very brittle and very difficult to drive.
4422. Is it suitable timber for girders or beams? No. I have used it for piles; but it splits too much, and I have been obliged to give it up.
4423. What would you estimate to be the life of a good timber structure on the line? About twenty-five years.
4424. Is it necessary that there should be appointed a number of inspectors for bridges only? Not for bridges only. Inspectors should go over the whole length of the line, and should examine the bridges continually to see if anything is the matter with them.
4425. Could not an inspector take a great number under his charge? Certainly.
4426. Would one inspector for bridges be sufficient on each of the lines constructed within the last ten years? Quite sufficient.
4427. Do you consider that such an officer as inspector of station buildings is necessary? No.
4428. Or of goods-sheds and engine-sheds? No. They have a larger staff in that department than I have in mine. With my office staff here and one or two assistants all the work done there could have been done here—that is, I mean all the work which it is necessary should be done.
4429. *Mr. Mills.*] Would your remark apply to the building of stations also? Yes. You must have inspectors of brickwork and timber-work on large jobs, where you are building stations.
4430. *Mr. Coyle.*] But after the brickwork is up, do you require an inspector of brickwork to look after it? Certainly not.
4431. Is it necessary, in your opinion, that there should be an inspector of iron bridges? No; certainly not. It would have been the simplest thing in the world to have tested the iron bridges by running the heaviest engines they have got over them at any speed they liked. If there was no permanent set in deflection the bridges would be proved to be perfectly safe.
4432. *Mr. Waller.*] There is an inspector for timber. Where contracts are let for supplying timber for bridges, do you not think that it would be sufficient that the inspector on the spot should see that the timber supplied was good? As a rule when we buy timber we do not examine it on the ground, but when it is delivered to the Government. Wherever it is delivered there it is inspected and passed. Beyond that there is no occasion for inspection; but if you buy timber from a contractor it is necessary that it should be inspected.
4433. Do you think that an intelligent inspector, who was equal to the duty of inspecting wooden structures, would also be equal to the duty of inspecting brickwork—such as culverts? Certainly; any man of ordinary intelligence could tell whether a structure was giving way or not.
4434. *Mr. Coyle.*] Anything likely to happen to a masonry culvert would be trifling? Yes; cracks occur, but there would be no danger.
4435. *Mr. Mills.*] Could the ordinary inspector be trusted to report in such cases? Certainly.
4436. *Mr. Waller.*] There are a lot of workmen kept in the shops—painters, carpenters, plumbers, and others,—whose duty it is to a considerable extent to repair all these station buildings—do you think that if a system were adopted of doing up these stations at regular intervals these frequent intermittent repairs might be done away with, and that in the case of many stations the work could be done by people in the town tendering for it? Decidedly. One thing which might be usefully inquired into is the system of having work done by day labour. Nothing can be more extravagant than that. Having a large staff of men, it is probable that one third of their time will be occupied in travelling from station to station whereas if the work were let by contract an enormous saving would be effected.
4437. Under the system we have sketched out the contract would not be for one station but for several—they could be taken in groups and painted for so much at a lump sum? Yes; you could measure the work and so arrange a fair price. It would be far better than having men travelling backwards and forwards half their time waiting for this, that, and the other.
4438. In buildings panes of glass get broken and roofs become leaky, so that repairs are required to be done promptly to prevent greater damage,—in such cases would you allow stationmasters to spend £5 or £10 on repairs on the condition that they should be recouped if what they had done was judged to be necessary and if not that they should be left to pay for it themselves? I should prefer that the power to spend money upon repairs should vest with the resident engineer who should be constantly travelling along his line. Anything required should be reported to him, and he should take steps to have the work done.
4439. *Mr. Coyle.*] In cases where the work was urgent and the expenditure required small might not the stationmaster be allowed to get the work done, explaining the circumstances, and asking for special authority afterwards? I should prefer that in all cases the power should be with the resident engineer.
4440. Would matters requiring urgent attention be few? I know of nothing which would be likely to be urgent except bridges.
4441. We are speaking of buildings? I do not think the repairs need be urgent.
4442. *Mr. Waller.*] We are suggesting that the station master's power to expend money should be limited to say £5. Under existing arrangements, if a pane of glass is broken such a number of officers have to inspect

inspect and report that it becomes quite a heavy item before the pane is replaced by someone who may take a day to do it when at length it is determined that it shall be done? To send men 200 or 300 miles to lay a few bricks to make a small repair is simply nonsense.

4443. Is there a good deal of that going on? Yes. Where a staff of men are kept on they must find employment for them, or pay them for doing nothing, and therefore I have no doubt they are often sent out on small and ridiculous errands. The work should be done by contract. Where there is a possibility of letting it by contract, it should be done by contract. Day work is the most expensive system you can adopt.

4444. *Mr. Mills.*] As to the architectural and drafting work, do you think it is necessary that two establishments should be kept up in the Railway Department to do that? Certainly not; one branch should do the whole. There must be a certain number of draftsmen kept in the construction branch, and with a slight addition they would be able to do all that would be required.

4445. *Mr. Coyle.*] Should there be one office throughout? Yes; and one person held responsible.

4446. *Mr. Mills.*] With regard to the stock yards made by the construction department, it is said that the design usually adopted is not the most suitable for the requirements of the traffic? We have planned all sorts of stock yards, and have obtained advice from all sorts of people. The last one we built was on the Junee line. In that case I gave permission to the Traffic Manager to put the yards exactly as he liked. I furnished the drawing and Sandy the contractor put them up to suit the ideas of the Traffic Manager. They had not been up four months before they were all pulled to pieces and re-erected for no other purpose than to alter them.

4447. Have you kept to one stereotyped design? No; we have been altering them to suit different people's ideas. The first stockyards we put up were at Wallerawang, and Shaw tells me that he can load more sheep in the same time with those 3-foot races than at any other stockyards on the line. They are continually altering the stockyards. Whenever a stockyard is put up somebody is sure to say they ought to be altered. They were altered at Albury for no earthly reason except to suit the whim of some man on the Existing Lines.

4448. *Mr. Waller.*] As regards architects, do you think it is necessary to have such a branch in the Department at all—bearing in mind that the stations are of such a character that with the exception that at Albury, Wagga Wagga, and places of that character, the buildings required are such as could be designed and put up by engineers? There is no occasion for a separate branch in my office. I have men who can do all that.

4449. *Mr. Coyle.*] Have you one or two architectural draftsmen? Yes.

4450. As a matter of fact, could all the buildings, or nearly all, be dealt with by the engineer with the assistance of an architectural draftsman? Yes; they are merely called architectural draftsmen because their time is occupied in that way. When not so employed they do other drafting work.

4451. *Mr. Waller.*] Do you think an architectural branch in the Existing Lines is necessary? It is not at all necessary. You have referred to the round-about system of doing business, let me give you an illustration. I have here a minute which I wrote to the Minister. I said,—

“To show the Minister the way in which public business is conducted in the Railway Department I enclose a letter from Messrs. Monie and Makinson, the contractors for the Mudgee extension, and dated 22nd October, 1880.

This letter contained a request to be allowed to lay in a short siding in the Wallerawang station yard, and was addressed to me.

On the 26th October I recommended that their request be granted, and sent the paper to the Minister. It does not appear to have been seen by the Minister, but was forwarded to the Commissioner on the 27th October. On the 28th October the Commissioner sent it to the Engineer for Existing Lines, who reported on the 30th October: ‘I see no objection to this being granted.’

On the 3rd November the Commissioner forwarded the letter to the Traffic Manager for report. On the 4th November the letter was sent by the Traffic Manager to the Station-master at Wallerawang. On the 6th November the Station-master reported favourably, and sent the letter back to the Traffic Manager. On the 8th the Traffic Manager reported to the Commissioner, and on the 12th November the Commissioner wrote:—‘Inform and then return paper to the Engineer-in-Chief.’ So that for permission to lay in this temporary siding after I had recommended that the contractor's request be granted, the consent of the Commissioner, the Engineer for Railway Lines, the Traffic Manager, and the Station-master at Wallerawang, had to be obtained before the work could be carried out. ‘Inform’ having been written on the papers by the Commissioner, I assumed that Messrs. Monie and Makinson had been informed that their application had been granted, until I received their letter of 30th November, asking for a reply to their letter of 22nd October, to which I replied on the 1st December. Thus a reply to a simple question took nearly five weeks to furnish.”

That is a fair sample of the way work is done in this Department. No man in a private business could carry on for a week under such a system. There is another matter which I may refer to and that is the very little attention paid by the Existing Lines Branch to preserving the timber bridges on the lines. I was down at Bowral the other day and there I saw a timber bridge which has never been painted from the day it was put up, some twenty years ago or about that—a bridge of six spans, I think, of 26 feet each. It ought to have been painted years ago, but it does not appear to me ever to have been touched.

4452. *Mr. Mills.*] Painting would lengthen the life of a bridge very much? Undoubtedly, if properly painted. If kept in good order by painting the timber bridges would last much longer than when exposed to the sun and rain.

Mr. Henry Deane was further examined,—

4453. *Mr. Waller.*] Have you any knowledge of the condition of the lines when handed over by the Construction Branch to the Existing Lines Department? Yes; since I have been acting in my present capacity I have been over them with Mr. Whitton, or if he has been unable to go I have gone through myself.

4454. In your opinion, so far as your experience has gone, have the lines been handed in a complete state, fit

Mr. Whitton.  
11 Jan., 1887.

Mr. H. Deane.  
11 Jan., 1887.

Mr. H. Deane. fit for working, both as regards the convenience of the traffic and the safety of the public? I should like to point out that in some cases the lines have not been quite complete, because there has been a hurry about the taking over, the other branch has pestered us to hand the line over, so that there have been some works still incomplete at the time of handing over in some instances, but mostly of a trifling character.

11 Jan., 1887.

4455. *Mr. Coyle.*] In what respect might they not be complete? The ballasting might not be quite complete, the banks and cuttings not quite cleaned out and made up.

4456. *Mr. Waller.*] But has there been anything to hinder the traffic? There has been nothing to hinder the working of the traffic.

4457. Have you completed the work which may have been incomplete at the time of handing the line over? Yes, we have always done that; we require the contractor to complete his contract.

4458. Then where the lines have been incomplete when handed over to the Traffic Department, has their incompleteness arisen from the desire of the Traffic Department to get possession? Yes.

4459. Do you hand over a line and say that everything has been done when it has not been done? No.

4460. As regards the station yards, are they of a description suitable for the traffic, both as regards safety and convenience? Certainly.

4461. *Mr. Coyle.*] It has been stated by the Existing Lines Department that they have been compelled to make large alterations to the station arrangements in order to insure the safety of the traffic after the lines have been taken over from the Construction Department—can you say whether your station arrangements were of such a nature as to warrant the traffic being carried on—can you say that the lines were properly and completely finished? Yes, I am certain they were. I have noticed some additions they have occasionally made in the way of wool stages in the western district; but that is a matter merely of convenience to themselves.

4462. We are referring more particularly to the alteration of station arrangements such as pulling down the work of the Construction Department; has the arrangement of stations, the character of sheds and buildings put up by you been suitable for the proper working of the railways? Yes; so far as I have had to do with them I am certain that they were.

4463. *Mr. Waller.*] Have the yards other than station yards, I mean stock yards, been strong enough to contain the stock without wobbling, caused from the posts being insufficiently deep in the ground, and have they been erected at the proper height to admit of the loading of the trucks; have they been as suitable for the work required as they could well have been? The construction of stockyards is a matter that has received a great deal of consideration, but if you consult half a dozen men from different parts of the country I do not think you will find any two of them of the same opinion as to what is convenient. I am aware that slight alterations have been made since the lines have been handed over. Only the other day I noticed up at Bungendore that they have removed one of the rails from the sheep races to enable a man to reach over from the outside to drive the sheep on. I know of no alterations except such as have been of a trifling character; nothing that I know of but what has been after all a matter of opinion.

4464. Have you any knowledge of the alterations made to the Bourke yard and the Wallerawang yard? I have never studied those yards; I know Wallerawang merely from passing through, and I have never been to Bourke.

4465. Have you noticed that stations have been put up in the wrong places so as to be utterly useless, that yards also have had to be taken from the position in which they were erected and removed to other positions? Nothing of that sort has come officially to my knowledge.

4466. As to the erection of signals, would you raise any objection to the Existing Lines Department going on to the line before it was handed over to the Traffic Department to enable them to erect the signals, or have you any knowledge of any objection ever having been made by the Engineer-in-Chief to that being done? We put the signals up ourselves, or we ask the Existing Lines Branch to put them up for us. We are supposed to supply the signals.

4467. As a rule do you put them up? We do not, we request the Existing Lines to put them up for us. We get the signals and have them in stock. We send them to them and give them an opportunity to put them up as they like; we ask them to do it.

4468. Have you as Inspecting Engineer, or has the Engineer-in-Chief, or have any of the district engineers raised any objections to the Existing Lines going on to the railways to erect these signals prior to handing the line over in order that the signals might be up and in proper working order before the line was opened? I certainly should not object, and I know of no instance where an objection has been raised. I do not understand the reason of your question.

4469. The reason that we put the question is that we have it in evidence that in some cases the time allowed for the erection of the signals was so short as to make it impossible to get the work done properly prior to the opening of the line, that as a matter of fact owing to that it was within the bounds of probability that an accident might have occurred. We therefore wish to ascertain whether there was any feeling shown by the Construction Department which would prevent the Existing Lines Branch going on to the railway before it was handed over? I say no, distinctly no; so far as I am aware there never has been any intention to prevent them from going on to the line for that purpose.

4470. Then is it your opinion that the lines are handed over in perfect order, both as regards efficiency and safety? Yes.

4471. Do you consider that there is any necessity for the large outlays which are constantly occurring on the lines just handed over by the Engineer-in-Chief? No.

4472. Are you aware that large sums are expended by the Existing Lines? Yes.

4473. And you do not think that there is any need for it? No, I do not.

Fredrick Henry Small was examined:—

Mr. 4474. *Mr. Walker.*] What is your position? I have been District Engineer.

F. H. Small. 4475. Where? On the line, Homebush to Waratah, No. 1 contract.

4476. How long were you there? Two years and a month.

11 Jan., 1887. 4477. Since when? December, 1884.

4478. Have you been on any other lines? Not as Government District Engineer.

4479. Has any portion of that line been handed over to the Existing Lines Branch? Yes as far as Hornsby.

4480.

4480. What contract is that? No. 1.

4481. What state was the line in as regards efficiency and safety for traffic? First-class, as good as it ever could be.

Mr.  
F. H. Small,  
11 Jan., 1887.

4482. Were the stations in good order? The only stations then were Eastwood or Dundas and Ryde. They were not quite finished but they were finished a month afterwards. Ryde was taken possession of on the day of the opening, and Dundas a month afterwards.

4483. Are there any station-yards or sidings? There is one siding at Dundas, and three roads and one at Ryde, with a goods shed and everything complete.

4484. Are there any stock-yards along that line? No.

4485. Suppose alterations were deemed necessary in the work by the Existing Lines Branch now completed by the Engineer-in-Chief under your supervision, would you consider those alterations necessary? It all depends on the work. I do not think anything was necessary at the time of the handing over.

4486. What can be necessary since? They are doing some works there which may be useful at some future time, but they are not needed at present.

4487. What class of works are they doing? They are now I believe enlarging the station-yard at Dundas.

4488. *Mr. Coyle.*] In what way? I heard that they were going to put up a cattle loading stage. The future will tell whether it was requisite or not, but I think it is doubtful.

4489. *Mr. Waller.*] Is it necessary at present? If there have been any cattle to load they would know; I do not know. They tell me it is for Mr. Bennett's horses.

4490. What is the length of that line? 35 miles to the Hawkesbury, that is, reckoning from Sydney.

4491. Have you any knowledge of any other lines handed over by the Engineer-in-Chief to the Commissioner? I was contractor's engineer for the line from Albury to Wagga, and also for the line from Guyra to Glen Innes, and from there I came to the Homebush-Waratah Line as Government engineer.

4492. As contractor's engineer can you say in what condition those lines were when they were handed over? I have never seen lines handed over in better condition in my life.

4493. Have you had experience elsewhere? I have had twenty-one years' experience as contractor's engineer before coming to the Government.

4494. In this country? No, only ten years in this country.

4495. Where were you employed before coming to this country? In Prussia, Austria, Roumania, and England, of course.

4496. Was not Mr. Firth also contractor's engineer on that length from Albury to Wagga? For a short time I believe he was. I came after Mr. Firth.

4497. Can you say from an experience of twenty-one years, twelve years as regards railways constructed by the Engineer-in-Chief, that the railways have been handed over in good order and condition? Yes, in first-class condition.

4498. Do you know that large sums have been expended by the Existing Lines Branch on the lines which have been handed over? No.

4499. Presuming such is the case, would the lines necessarily require large sums to be expended on them immediately they have been handed over to the Existing Lines Department? It may happen that a line has been made in a dry season, and that afterwards the floods come and the roads go down.

4500. *Mr. Coyle.*] But that is ordinary maintenance, we are speaking of new buildings, alteration of yards lengthening of sidings, shifting of buildings? That has never happened on the lines I have been on.

4501. You say that the railways in New South Wales are well constructed? Very well constructed.

4502. Have you seen them on the Continent better constructed? No.

4503. Or in England? In England we do things a little bit neater, we sod the slopes and sow grass on them. It makes a railway look better but it is quite unnecessary to do it for railway purposes, and it is a saving of money not to do it. These railways are as solid and as good as any that can be constructed, except perhaps that timber openings are put in, but that is for cheapness.

4504. In what way? A timber opening is supposed to last from ten to twenty years, and then it has to be altered to something else.

4505. Would you then substitute for timber iron or brick? Taking all the things into consideration it is wiser to build the openings in timber at present. You could not get the brick or iron up to the places where they were wanted on the long lines up country while in course of construction.

Mr. George Cowdery was further examined:—

4506. *Mr. Waller.*] Referring to the statement of the expenditure by the Existing Lines Branch upon the lines handed over by the Construction Branch, in your opinion is such expenditure absolutely necessary in order to make the lines workable for the convenience and safety of the public? Certainly.

Mr.  
G. Cowdery,  
11 Jan., 1887.

4507. Have you had many lines handed over to you that were not in complete working order? I do not think I could instance one that was really in good working order.

4508. What is the result? There is very often a good deal to do, all the signals, for instance, altering sidings, putting in new ones in some cases. Sometimes the station arrangements are more than is necessary. We have not had latterly to make any complaints about station buildings.

4509. As to the yards? We have had a good deal to do metalling them. In some cases they have been metalled with river gravel, 15 inches have been put on, and we have had to take it off again to allow the teams to get along. In some cases the side cuttings have been taken out to make up the roadway, and filled up with loose stuff, and the gravel put on the top. As soon as a shower of rain comes the teams get bogged in all directions. I have seen a good deal of that.

4510. *Mr. Coyle.*] Then the station and road approaches and yards were not properly ballasted and metalled? Yes; even on the Illawarra Line there has been a good deal of pitching and metalling done to the yards. Roads are put in in many places where they are not required, and where they are required we have to metal them. Some wharves have been made, but the people will not use them while they can back their waggons up against the trucks, and load comfortably. These wharves are metalled, but the sidings are not.

4511. *Mr. Mills.*] By a wharf I suppose you mean platform? Yes.

4512. *Mr. Waller.*] As a matter of fact have you been forced to expend money in almost every case upon the lines when they have been handed over? Yes; I do not think one shilling has been charged to construction

Mr.  
G. Cowdery  
11 Jan., 1887

construction that was not necessary to the safe working of the line. Many of the things that have been charged to the traffic as maintenance should have been charged to the construction vote.

4513. Have you had occasion to remove sidings, stations, or other buildings on account of their having been placed in improper positions? I know some that might be removed.

4514. Why? Because they have not been used since the lines have been opened.

4515. For what cause? There is no traffic whatever where they have been put up. Station-masters' houses and sidings and everything fairly complete have been put up which have never been occupied. Sometimes you may see an odd passenger at one of these places, but all that has ever been required there is not more than could have been done by the guard of the train in passing. We have removed sidings from one place to another, and we have removed stock-yards from one place to another.

4516. Why? Because they were erected where they were not wanted.

4517. Have you any experience of stock-yards being placed so that it is impossible to load stock from them? Some of them are very difficult; we have had an instance of that I think too.

4518. Have you had an instance where stock-yards were so badly put up that they swayed about when the cattle passed through them? Yes; several of them have also been in a frightful state after every shower of rain. There has been nothing to prevent the cattle almost burying themselves in mud.

4519. Perhaps you will supply us with particulars of these matters? Yes.

4520. Returning to the expenditure of the existing lines from the construction vote, had the two branches of the department conferred together when these lines were being constructed would the expenditure in many cases have been rendered unnecessary; and obviated, if not altogether to a large degree, by the Construction Branch doing what was necessary in the beginning? I have no doubt that in very many cases it might be. It may be that they would have been better constructed if there had been consultation.

4521. Do you think that one expense would have done and saved the necessity for alterations and additions afterwards, the alterations especially? In very many cases I think it would have been better and the work would have been done at one expense.

4522. Would your answer apply to the additional roads and sidings? Yes; to the sidings more particularly.

4523. To alterations of yards? More particularly to the alteration of sidings, and also alterations of yards.

4524. Are these expensive items? They are very expensive. The Construction Department does not take the slightest notice—at least I do not see that they have in many cases—to the considerations involved in the working of these yards by interlocking the points and crossings, and signals. They do not seem to take that into consideration at all. We are gradually bringing the whole of the lines under the interlocking system, and it is pretty nearly time some notice was taken of it, so that the roads could be so laid down that they could be interlocked without adding anything to the expense. If the roads were laid down by experienced men a great deal of money would be saved.

4525. Would you approve of a conference between the authorities of the Construction Branch and the Existing Lines Branch on these matters before finally settling the laying down of the yard? Yes; I should approve of that as a system.

4526. Do you know anything about the changes made in the Wallerawang yard? We knocked out nine facing-points there, and changed a great many things.

4527. Why was that done? Because the facing-points were unnecessary and dangerous.

4528. Were not the yards constructed in the first instance with a due regard for the safety of the traffic? We do not consider that they were. We found that there were nine facing-points which were not necessary. They would have all had to be interlocked. The expense of interlocking would have been greatly increased if we had not removed them.

4529. Then, owing to the curves on the road, the engine-driver could not see the station as he approached? Yes, and with all these facing-points on the main line any shunting that would be going on would be particularly dangerous. As the yard was arranged the shunting had to cross the main line, but now all the shunting is done away from the main line.

4530. The alterations on that yard amounted to £1,400 and upwards—do you think that if the yard had been laid out in the first instance with a due regard to the safety of the traffic that expense might have been saved? Yes, and more too, because some of the roads there were very badly planned.

4531. *Mr. Coyle.*] Were they necessary at all? I can scarcely answer that without looking at the plan carefully. Some of them I believe were unnecessary, but we did not want to alter the yard more than was necessary to make it safe.

4532. *Mr. Waller.*] Do you consider that the alterations at that particular station were absolutely necessary for the proper working of the traffic? I do decidedly.

4533. And should the yards have been planned as you have arranged them from the beginning? Yes.

4534. Have you had any other cases of a similar character where you have had to make alterations of a like nature? We have.

4535. On the northern line, going to Hornsby, have you been making alterations? Yes.

4536. Do you know the nature of them? There is next to nothing done in the way of station accommodation, except the roads leading down. There were no gates by which the people could get to the station.

4537. Have these been made by the Existing Lines Branch? Yes.

4538. Have any cattle-yards been put along that line? I do not think there are any on it.

4539. Are you not making some now? No; I do not think so.

4540. Would you enquire, so as to ascertain? Yes.

4541. What we mean is some places from which to load horses? They generally load them from the platforms.

4542. Will you give us a statement of the expenditure you have had to incur on the northern line, from Strathfield to Hornsby? Yes.

4543. Do you remember the matter of the junction of the line from Molong to Orange? Yes.

4544. Why had you to duplicate the line into the Orange station? It was thought better by the Traffic Branch and everybody concerned that the junction should be at Orange.

4545. Why were the alterations made—were they for the due safety of the traffic? Yes, and for the convenience of working more particularly.

4546. *Mr. Coyle.*] Why did not Mr. Whitton form the junction? He asked us to supervise it, his contractor did the work.
4547. *Mr. Waller.*] If that was a necessary thing ought not the contract of the line from Molong to Orange have been up to where you have brought the line now? Yes, but it is not advisable to have contractors running alongside a line which has been open for traffic.
4548. Suppose the line had been all under one head, would the contractor have carried it out to where it is now? I daresay he would.
4549. Would it have been cheaper to do it right out? In this case it amounted to the same thing, because the contractor for the section did it at schedule prices.
4550. *Mr. Coyle.*] Was there any work to be undone? There was an overbridge that had to be lengthened.
4551. *Mr. Waller.*] Would it not in most cases be better to have that done under one contract? I do not think it would make much difference as far as that case goes.
4552. *Mr. Coyle.*] If the Existing Lines Department had been consulted before letting the contract would they have suggested that the line should start from the station? Decidedly.
4553. *Mr. Waller.*] Why should there be two contracts for the same work? Because the Construction Department proposed to place the junction a mile off.
4554. *Mr. Coyle.*] What would be the length of the over-bridge? The cost was not very heavy.
4555. *Mr. Waller.*] Roughly speaking, what would it cost? One pier had to be taken out. It may have cost £700 perhaps.

Mr.  
G. Cowdery.  
11 Jan., 1887.

Mr. George Landers was further examined:—

4556. *Mr. Waller.*] Do you see any objection to having a post pillar for the public offices in the lane between this office and the Public Works Department, or if necessary two or three pillars, to be cleared regularly by special carriers daily? I see no objection to it, provided they are cleared by 6 o'clock.
4557. Do you see any objection to a box being placed in the trams going to the railway station for the conveyance of plans and large letters for the district engineers and others, to be taken out by the tramway or railway porters at Redfern and placed in the train, as is done by your own messengers? I think there would be very great objection to it.
4558. Why? I do not think it would work. If we had a check upon the conductor of the tram it might do, though we would have no check upon the men who would receive them at Redfern.
4559. Would it not be possible to telephone to the station-master at Redfern when you sent off the boxes by the train for Bathurst or Goulburn, asking him to appoint someone to take delivery? There would be no difficulty in telephoning. The letters would be passing through the hands of three different branches, and we should have no check upon them from the time they left here.
4560. Ought not these three branches all to be under the discipline of the head of the Railway Department, that is to say, under the Commissioner? Yes.
4561. If the Commissioner gave those instructions, what difficulty would there be in having them carried out? None.
4562. Do you not think a little strictness in discipline would be an advantage sometimes? No doubt.
4563. Would that system result, in many cases, in lessening the number of messengers now required? Yes.
4564. *Mr. Coyle.*] What are the letters you send away? The usual correspondence.

Mr.  
G. Landers.  
11 Jan., 1887.

FRIDAY, 14 JANUARY, 1887.

Present:—

MR. T. F. WALLER, CHAIRMAN.

MR. J. Y. MILLS,

MR. J. E. FITZGERALD COYLE.

Mr. Thomas Rhodes Firth was examined:—

4565. *Mr. Waller.*] What is your occupation? District engineer.
4566. On what line are you engaged at present? On No. 2 contract, Illawarra Line.
4567. How long have you been in the service of the Government? With the exception of a year and nine months I have been in their service since 1863.
4568. At what work were you engaged during the year and nine months? Part of that time I was engaged by the contractors for the Wagga and Albury Line.
4569. You are then in a position, I presume, to advise us as to the general condition of the lines which have come under your supervision during the last few years? Yes; I should think so.
4570. We ask you first as regards your personal knowledge concerning the state of the lines constructed under the Engineer-in-Chief, what is your opinion as to their efficiency, both as regards their working condition and safety? Well, I do not think that at the present time they could be improved upon. As far as I am aware, everything that has had to be done has been done in connection with the working of the lines.
3571. Roughly speaking, how many lines have you been engaged upon as construction engineer? First I was engaged upon the Blacktown to Penrith Line; then on the line from Lochinvar to Singleton; then I was in charge of the works from Penrith to Blackheath, and on the line from Goulburn to Wagga. The line from Wallerawang to Mudgee was also under my supervision, and before that was completed I was put on to the Illawarra Line.
4572. Do you say that all these lines were handed over in proper working condition? I believe everything was done by the contractors with the exception of putting up the signals. That is all that was required to be done when the lines were opened.
4573. Are you aware that numerous alterations and additions were made to those lines to make them in proper working condition, and to meet the requirements of the Traffic Department, and do you think that all the expenditure which has taken place was necessary? No; I do not.
4574. Would you say that you are satisfied that it was unnecessary? Yes; quite unnecessary at the time the lines were handed over.
4575. What have you to say as regards the station buildings, bridges, &c.? To the best of my knowledge they were in a satisfactory condition.

Mr.  
T. H. Firth.  
14 Jan., 1887.

- Mr. T. R. Firth.  
14 Jan., 1887.
4576. Were the railway stations in convenient positions? Yes; they had been chosen at those points which were thought to be most convenient to the public.
4577. In your opinion, bearing in mind the number of years you have been in the service, and the importance of the railways you have helped to construct, do the works, such as wooden culverts, brick culverts, station buildings and bridges, require a great amount of inspection in order to keep them in proper repair? No; I should think they would require very little inspection for several years. Timber bridges, the first year, would require some inspection.
4578. Why? Because the timber shrinks and requires bolting up.
4579. If you knew that a large staff of inspectors was kept permanently employed looking after these particular works would you think it unnecessary expenditure? Yes.
4580. *Mr. Coyle.*] We want some information from you as to the length of time timber bridges ought to last? They ought to last about twenty years with ordinary inspection. Of course that ought to be the minimum I think.
4581. *Mr. Waller.*] That is provided proper timber is used? Yes; and that they have been kept painted and tarred and bolted up. A great deal would depend upon that being done. I think twenty years ought to be the minimum.
4582. Have you any experience as to the best kind of timber you can use for bridges? I do not think you can get anything to beat ironbark.
4583. *Mr. Coyle.*] Do you approve of double planking on bridges? In some cases; it is not in any way necessary.
4584. Is there any question of strength involved? No; I do not think so.
4585. Do you think it a bad practice to put one row of planks on another? Yes, if it is not required for strength.
4586. Why? Because the moisture is almost bound to get in between the two rows of wood and rot the timber.
4587. Do you see any object in double planking? No, only to give stiffness.
4588. Do the bridges you have constructed require stiffening by means of double planking? Not at all.
4589. Have you any experience of bridges erected by your department requiring stiffening in that way? No.
4590. Is that the proper way to stiffen a bridge? No, I do not think I should adopt that method. I might stiffen an old bridge by putting on double planking, but I would not adopt that plan in the case of a new bridge.
4591. Is it not considered bad engineering to put one layer of planks on another? I think so.
4592. *Mr. Waller.*] Have you had experience of the cattle-yards put up on any of the lines? Yes.
4593. In your opinion have those yards been as satisfactory as they might be, and met all requirements? I know this, that when we have put up cattle-yards we have tried to get from people of experience their ideas, and then put up the yards as well as we could. When I was at Wagga I had an opportunity of inspecting the cattle-yards at Wodonga, which were thought a great deal of, and I recommended that we should adopt the plan which had been carried out there, and that met with the approval of the Engineer-in-Chief.
4594. Would you be surprised to learn that yards have, in at least one instance, been put up so as to make it impossible to truck cattle from them, the yards being too high, and above the level of the trucks? I should be surprised to hear of such a thing; I should say it was a gross mistake of the engineer.
4595. Would you be surprised to learn that yards have been placed in such a position as to make it impossible to use them for the purposes for which they were intended, and that they had to be shifted to other places? Yes, I should be very much surprised.
4596. Would you be surprised to learn that yards were so carelessly put up as to be utterly useless on account of their being no hold in the ground for the posts? Still more so.
4597. Would you be surprised then to learn that yards have had to be taken up from the places in which they were originally erected, because those places were found to be unsuitable? To answer that question you really want to know who does these things. Some people might do things I should not be surprised at, but I can only say that such things ought not to be.
4598. Would you not be surprised at these things being done under the present management of the existing lines? No.
4599. *Mr. Coyle.*] The Commission have had throughout their investigation a large amount of evidence as to the great friction and antagonism existing between the Construction Branch and the Existing Lines Branch, and they would be glad to get from you your opinion upon this matter. It is proposed to make certain recommendations with a view to remedying this state of affairs, and it is with that object that I ask the question? I have said, in answer to previous questions, that I should not be surprised at certain things being done. I wish to qualify my previous answer. Knowing as I do the professional heads of the Existing Lines Branch, I am no longer surprised at such mistakes being made through that branch of the department.
4600. *Mr. Waller.*] Do you know of your own personal knowledge that a feeling of antagonism does exist? I do.
4601. Do you consider that that feeling of antagonism has been, and is likely to be, detrimental to the public service? I do.
4602. In your opinion, has it caused large and unnecessary expenditure of money? Yes.
4603. From your knowledge of the branches, do you think that they ought both to be under one professional head? Most certainly I do.
4604. Why? Well, at the present time, directly we have finished a work, a staff of men are sent over the line to examine it, and as a rule they begin finding fault with work that I know to be good, and they begin pulling work to pieces that I know ought not to be pulled to pieces. In fact, it has been reported to me that these men have boasted how they are going to pull to pieces such and such work.
4605. Do you consider it necessary to have such a large staff of resident engineers, assistant engineers, inspectors, sub-inspectors, draftsmen, clerks, and surveyors under the district engineers? No, I do not.
4606. Do you consider that a staff of inspectors, with a properly manned staff of gangers, would be sufficient for all the work that has to be done? Yes, I do.

Mr.  
T. R. Firth.  
14 Jan., 1887.

4607. Have you had much experience of maintenance? I have had a few years experience in France.
4608. How many? About three years.
4609. Do you consider that by doing away with the district engineers, assistant engineers, resident engineers, and a portion of the inspectors, sub-inspectors, surveyors, and draftsmen, that a large and unnecessary expenditure would be saved, and that it would be in no way detrimental to the proper maintenance of the line? Most certainly, I do.
4610. Do you consider that having such large staffs creates an amount of unnecessary clerical work? Yes, most certainly it does. I believe that there should be one district engineer for each district, and a staff of inspectors under him.
4611. Do you think the railways would be better managed under one professional head, who would be responsible for making all the lines and keeping them in proper working order, having under him two officers of high standing, say an assistant engineer-in-chief of construction and an assistant engineer-in-chief of existing lines; would that be a better system? Most certainly, much better than the present one.
4612. And save a great deal of useless expense? Yes. To a great extent the clerical work could be done in the office of the construction engineer—the head office.
4613. Do you see any necessity for the clerical staffs in each district? No.
4614. Do you know anything about the workshops? No.
4615. *Mr Coyle.*] What is your opinion as to the necessity for such an officer as inspector of brick-work for existing lines? I do not think he is at all necessary.
4616. What can he find to do in the course of a month? I really do not know.
4617. What would he be likely to find to do? He might discover an occasional crack in a culvert.
4618. Would he be expected to putty it up himself? No; he would do the finding, and it would be his duty to report the matter to head-quarters.
4619. Then, you think the duties of that officer are not onerous? No.
4620. There is an inspector of iron bridges also? I do not think that that should be a permanent office.
4621. From your experience of iron bridges in this Colony and elsewhere, have you found it necessary to have an inspector constantly inspecting them? I should think it not at all necessary; I believe it is necessary to test the bridges periodically.
4622. Do you consider such an officer as inspector of station buildings necessary? Not at all.
4623. Taking these three officers, do you consider that they are needed at all? I do not.
4624. What do you consider to be the duties of a competent inspector of permanent way? His duties would be to see that the lines and everything on his section of the railway were kept in good and safe order; to report whenever repairs were needed, and to superintend anything that wanted looking after. He ought to be a man who would thoroughly understand when anything wanted repairing or renewing, excepting of course rolling stock; he would have nothing to do with that.
4625. Would you consider that an inspector of permanent way if he saw anything wrong with the brick-work of a culvert or with an iron bridge should report upon the matter? Yes; and he ought to be able to do as well as a man appointed especially for the purpose.
4626. Now, taking the average run of inspectors of permanent way, are those men qualified to examine a timber bridge, for instance? Yes.
4627. And would they understand when a culvert was choked up or a fence broken down? Most certainly.
4628. Would you go so far as to say that any competent inspector of permanent way could do these things? Yes; if he could not he is not fit for his position; and at the same time he does not require to be an engineer to do that.
4629. With regard to the station-yards that have been designed; from your experience could you say that they were well designed, having regard to the accommodation required? I think so.
4630. If you considered that any modification or improvement could have been made would you have suggested it to the Engineer-in-Chief? Decidedly.
4631. And would he have given effect to your recommendation? Yes.
4632. Is the Engineer-in-Chief always ready to consider any suggestions made by his responsible officers as to improvements that might be made in the design of works? Yes; any suggestion that I have ever made has always been adopted.
4633. Is it not a recognized thing in the profession that an engineer would very carefully consider any suggestions made by a responsible officer on the ground? Most decidedly so.
4634. Have you ever found the present Engineer-in-Chief depart from that practice? No.
4635. What are your duties as district engineer? To set out work, measure the work, supervise it, and see that everything is carried out according to the plans and specifications.
4636. Do you make out the certificates? Yes.
4637. It is specified I understand in Government contracts that the Government engineer will set out certain works for the contractor? Yes.
4638. What proportion of the district engineer's time would be taken up in setting out works? That would depend entirely on the nature of the works.
4639. On a line with, say, seven or eight culverts to the mile, and heavy earth-works and so forth? It takes up a considerable portion of the time at the commencement of the works; it takes up seven-eighths of the engineer's time.
4640. Have you not found that it places the engineer as it were at the beck and call of the contractor? It might; but the engineer ought not to allow himself to be put in that position. I generally set out work before it is required; I do not wait to be asked by the contractor.
4641. Take such works as the width of slopes, fence widths, and matters of that kind; do you think it is necessary to take up the time of the Government engineer on such matters as these? I do. The contractor when he takes the contract estimates everything he has got to do, and he will charge for it unless the work is set out for him. Besides, I think it is more satisfactory for the engineer to set out the work because he gets a better knowledge of it.
4642. But suppose the engineer neglects to set out the work, and the contractor claims damages against the Government in consequence of his neglect, do you not think that if that were the case it would be desirable to expunge that clause from the contract. I do not refer of course to very large works, but to the ordinary run of works; would it not be desirable to relieve the Government of that responsibility? No; I still think that it is the cheapest and most desirable method for the engineer to set out the work.

- Mr. T. R. Firth.  
14 Jan., 1887.
4643. *Mr. Waller.*] If the contractor sustain a claim for negligence on the part of the engineer, would that make you alter your opinion? No.
4644. *Mr. Coyle.*] Taking an ordinary contract of 10 miles in length, with thirty or forty culverts, how long would it take the engineer to drive a peg into the centre of the line showing the position of a culvert? If it is level country it is a question of two minutes; if it is ordinary country he could get over three or four miles a day.
4645. And do you maintain that the system at present in vogue of the Government engineer setting out contractors' work is a proper one? Yes, I should not care to have it changed.
4646. Have you had much experience of setting out railways? In ordinary surveys, no. I had charge of the survey from Yass to Wagga for about eighteen months.
4647. Is it over very rough country? Yes, very rough.
4648. Were you the actual surveyor? I was in charge of the surveys; I laid out the line on the ground.
4649. But did you cross-section that line at intervals of a chain apart? Yes.
4650. And did you send the cross-sections down to the office, or did you yourself decide which would be the best line? A trial survey was run, and I put down what I thought was the most suitable gradient. Then the permanent staking went on after that, and as nearly as possible the same gradients were adopted as those suggested by me.
4651. Did you select the line yourself before the permanent survey was proceeded with? Yes, on the ground.
4652. Did you send down cross-sections of three or four chains in length to the office and allow them to be manipulated by an officer there, who placed the line upon the plan in what he considered a proper position? No; the permanent cross-sections were not taken until the line was staked.
4653. What is your opinion of a system by which a line is approved of by an officer who is never within 100 miles of the ground, the position of the line being determined by him? Well, I think the officer ought to be conversant with the ground.
4654. Do you consider the officer in charge of the survey ought to be competent to set out the work? Yes.
4655. And that this work of sending down cross-sections is waste of time? I think the officer ought to see the ground before he lays out the line. A permanent officer might be able to alter and improve the line if the information was sent down to him, but I think in any case he ought to be on the ground.
4656. What is the length of the section you have charge of at present? Only about 10 miles.
4657. What assistance have you on that line? I have an assistant engineer.
4658. What are his duties? To stake out works, assist me in measuring, and make out tracings or drawings, and assist me generally.
4659. Have you any cadets with you? No.
4660. Are you aware that there are a number of cadets in the Government Service? Yes.
4661. Do you approve of the system of young men going into the Service in this way? I approve of a limited number.
4662. Do you think they receive proper training in it? Not as good training as if they were properly articulated. No one takes any great care or interest in them.
4663. What has your experience of them been—have they turned out competent professional men? Most decidedly not. I think the system of taking in such large numbers is most reprehensible, although I believe it would be advisable to have a limited number of cadets.
4664. Have you ever found any difficulty in getting draftsmen, assistant engineers, and so forth outside of the Public Service? I have had no experience.
4665. How many inspectors have you on your section? Four.
4666. Are they in charge of the different culverts? Yes, fences and bridges.
4667. Have you full employment for this assistant engineer? Yes, I have.
4668. Do you think you could overtake the work yourself without him? No, I could not, because the country is so rough.
4669. Then do we understand from your experience in this country that the railways have been well built, well designed, and handed over properly finished and complete in every way to the Existing Lines Department? I think, so as far as my experience goes, and as far as the money voted for such lines would allow, I believe that has been the case. I would not say that the lines could not be improved upon.
4670. Do you know anything of the Wallerawang yard? Yes.
4671. Did you lay it down? Yes.
4672. How many sets of facing points were on the main line? I do not recollect, quite.
4673. Were there sharp curves going in? Yes, some 20 chain curves going from Mudgee.
4674. What distance would the engine-driver be away from the yard before he could have a view of it? Ten, 12, or 15 chains I should think, he would see the first point at 10 or 12 chains. Then the engine-shed would block his view probably, and after that he would be able to see right through the station-yard.
4675. Do you recollect the number of facing points that were on the main line? No, I really do not.
4676. Do you know what alterations were made in that line after it was constructed? I do not.
4677. Have you had anything to do with the designing of station-yards? No.
4678. Has your work been entirely on construction? Yes.
4679. From the Sydney side was the view interrupted in going into the Wallerawang yard? The approach was by a deep cutting, and there is an over-way bridge.
4680. At what distance would the engine-driver be able to see the points? On the Sydney side I think he could see them for a long distance. I think the points are outside the bridge.
4681. It has been stated that nine sets of facing points have been taken out of that station-yard by the Existing Lines Department? Of course I am not in a position to deny that.
4682. Would you consider that if it was possible to reduce the number of facing points in a station-yard by nine, that that yard had been originally well laid out? No, most decidedly not.
4683. Have you had any experience of the interlocking system? No.
4684. Do you consider it would be advisable, seeing that the interlocking system is recognized and made compulsory

compulsory by the Board of Trade, that the engineers should consult with the interlocking officer in arranging station-yards, so that the system could be applied with as little expense as possible? I think that would be advisable.

Mr.  
T. R. Firth.  
14 Jan., 1887.

4685. *Mr. Waller.*] From your knowledge of the Wallerawang station-yard do you think that it was absolutely necessary for the safety of the travelling public that great alterations should be made there? I think that could scarcely be possible.

4686. With regard to the Inspecting Engineer of Lines under Construction, do you consider that there is any necessity for such an officer, bearing in mind the fact that the district engineer is presumed to be qualified to supervise the line? Yes, I consider such an officer is necessary. The Engineer-in-Chief cannot possibly go and inspect those lines himself. The engineers in the different districts have ideas of their own as to the manner in which the work should be carried out, and it is desirable that the Inspecting Engineer should have the opinion of all, and then form his own opinion afterwards. His report upon the work would probably be very different from a report written by the person in charge; besides, he is in a position to settle and report upon any difference that might occur between the contractor and engineer. He could receive complaints from the contractor which he did not care to put in writing. He is an impartial judge, and can see whether the engineer is doing his duty.

4687. Holding these views, then, is your opinion that the gentleman occupying the position of Inspecting Engineer should be a professional engineer of high standing, whom the district engineers would look up to as an authority? Most decidedly.

4688. He ought not to be junior to the district engineers? Certainly not.

4689. Do you consider that if the Inspecting Engineer is not qualified to command the respect of the district engineers, that fact would be likely to create friction, and do more harm than good? Yes, there is that feeling. I think the Engineer for Existing Lines is an officer who is not necessary.

4690. Why? I think one officer over each line directly under the Engineer-in-Chief would meet all requirements.

4691. From your experience of the lines made in New South Wales, have you noticed that by a very careful inspection of the contour of the country a better line could have been selected when the trial survey was being done? In some instances, but there is not a line anywhere that could not be improved upon.

4692. Is not that a patent fact? Yes.

4693. From your knowledge do you know of an instance where the railway was actually surveyed and approved of, and that was not the line constructed, but a subsequent line was selected by another surveyor who saw the impropriety of making the railway according to the first survey? I am not aware of that having been done after the contract was let.

4694. Do you think it possible that under existing circumstances such things might and do occur? Yes.

4695. And can you tell us why they occur? I suppose through a want of practical knowledge on the part of the engineer in charge of surveys.

4696. Who is he? *Mr. Palmer.* I think he does not understand the work thoroughly.

4697. *Mr. Coyle.*] Has he been engaged on construction at all? Never in this Colony that I am aware of.

4698. *Mr. Waller.*] Do you think that an officer in charge of a large office like that would have the time to devote to outside work? It is of more importance than sitting down and writing reports.

4699. *Mr. Coyle.*] Do you consider that it is the duty of some high officer in the department, such as the Engineer-in-Chief or Superintending Engineer, to examine these lines before they are let by contract? Yes, if they go through difficult country. The officer in charge of the surveys ought to be kept doing that himself.

4700. In matters where hundreds of thousands of pounds are involved is it not the duty of the highest officer in the department to make sure that all means have been exhausted in endeavouring to get the best line? Yes, but you cannot expect the Engineer-in-Chief to go exploring country.

4701. Do you consider that an officer of undoubted knowledge and experience should critically examine each line in the event of the Engineer-in-Chief not being able to do it before the contract is let? Yes, by all means, and I think the engineer in charge of surveys ought to be an officer experienced in construction.

4702. Then you consider that an officer who has only been engaged on surveys all his life is not an engineer? Most decidedly not.

4703. *Mr. Waller.*] Do you think that if the surveyors had personal communication with the Engineer-in-Chief, a great deal of time might be saved? Yes, but I do not think the Engineer-in-Chief could spare the time.

4704. But in the event of their not being able to have personal interviews with the Engineer-in-Chief, should they confer with the engineer in charge of surveys? Yes.

4705. Do you think a system whereby surveyors in charge of such important works have not seen the Engineer-in-Chief for ten years is a good one? If such is the case, the system is certainly not a good one; but I think the officer in charge of surveys ought to be sufficiently capable without having to consult the Engineer-in-Chief.

4706. From your knowledge of surveys do you consider that the amalgamation of the two branches would be of great value? It would be a very great saving to the country, and would mean simplification of work and the reduction of the staff.

4707. Do you not think that the work might be decreased by having the whole of the staff under one roof? Yes, and there is no reason why they should not be.

4708. Do you consider the Service in a satisfactory state? No.

4709. Do you know that there is considerable friction between the Engineer-in-Chief and the Commissioner? Yes, that is a public matter.

4710. Is it a mistake to allow that to continue any longer? Yes.

4711. Ought whoever is the real head of the Railways to be so recognised by every officer of the Department, high and low? Yes, most decidedly.

4712. Are you a permanent officer? No. I am on the temporary staff, and have received notice that my services will not be further required.

4713. Have you contributed to the Civil Service Fund? No.

4714.

Mr. T. R. Firth. 4714. Do you approve of the system of having permanent officers, or prefer a system whereby all would be on the same footing in regard to compensation on retirement. Say, for instance, that each officer contributed 4 per cent. of his salary into the fund, and when he died his widow to receive that contribution, or when he retired he himself to receive it? I think that would be a very fair system.

14 Jan., 1887.

4715. I mean the introduction of a similar system to that in vogue amongst many of the insurance companies, whereby a man, having insured his life, may after a certain time obtain the surrender value of his policy if he does not care to carry out the agreement? I think that a preferable system would be that each officer, on entering the Government Service, should be compelled to insure his life in some society, the Government paying the premiums, and the amount of insured corresponding to the amount of salary received. I believe that every officer should be compelled, as soon as he enters the Service, to make some provision for himself, but that the Government should provide for the officers who are about to retire, or will retire in a few years.

4716. Do you think it would be beneficial to the Civil Service generally that gentlemen attaining a certain age should retire? No, I do not think they should. I think they should retire as soon as their services are not commensurate with the duties they have to perform.

4717. Do you not think it would be of advantage to the Civil Service that officers, upon reaching the age of 60 or 65, should be bound to accept their retiring allowances or share of the compensation fund? I do not think that should be done without very careful inquiry, and should be done by the Executive Council. I would not leave it in the power of any one or two men to do that.

Charles A. Goodchap, Esq., examined:—

C. A. Goodchap, Esq. 4718. *Mr. Waller.*] We want to ask you, Mr. Goodchap, a few questions regarding the differences of opinion that exist between the Construction Branch and the Existing Lines Branch. As you are no doubt aware, there are a good many charges appearing in the accounts relative to certain works performed in the Existing Lines Branch of the Service after the lines are handed over; and we would like to have information from you as to whether the expenditure appearing in the schedule to which I refer is necessary or otherwise? I think quite necessary. I have only to say that a great number of items were those which the Engineer himself admitted were absolutely necessary, but he preferred leaving them to the Existing Lines Branch to carry out; such, for instance, as signals, weighbridges, and cranes. Sometimes the stations were handed over without any provision being made for the carrying on of the business, simply shells as regards the conduct of the business.

14 Jan., 1887.

4719. I may say that we have an acknowledgment from the officers of the Engineer-in-Chief that occasionally the stations were not completed owing to the necessity of handing over the lines on account of the exigency of the traffic, but that the works were subsequently completed by them, and not by you? I am not sure upon the point, but I think there are a great number of fittings and other things that were found to be necessary. Of course buildings that were not completed at the time they were handed over would be completed by them; but I think if my memory serves me there were many cases in which no provision was made for the conduct of business.

4720. We have evidence from the Existing Lines Department that the railways in no instance have been handed over fitted for the traffic, either as regards the necessary convenience or the safety of the public? Well, I have always understood that signals have to be put up, and other conveniences necessary for the proper conduct of the traffic, and I always understood also that Mr. Whitton had no objection to these appliances being obtained and charged to the Construction Vote.

4721. They only acknowledge the signals, but we have from the Existing Lines Branch evidence stating that in many cases the yards and sidings were not of a character which the traffic required? That could not have been within recent times, because within the last two years it has been the practice of the Engineer-in-Chief to submit the plans of the yards and station buildings, which are referred to the Traffic Manager to say whether they are sufficient to meet the requirements.

4722. We inquired upon that point, and asked whether it would not have been possible to save a great deal of money and time by holding conferences between the officers of the two branches of the department? Within the last two years those conferences have taken place.

4723. You know the interlocking engineer? Yes.

4724. Well, we asked him, and he says that so far as he is concerned the question of interlocking in the yards never comes before him? That would be a question for the Traffic Manager to decide. The interlocking engineer is an officer of recent appointment, and he carries out works which are decided upon by the Traffic Manager as being necessary. He would not have power to say whether such and such work should be done, but he would carry out the work if the Traffic Manager suggested it.

4725. *Mr. Coyle.*] Cannot the interlocking officer suggest alterations in the positions of the points and crossings? Yes, and he has been very useful in that respect. Because of his usefulness, I recently approved of his occupying the position of almost an independent officer in regard to the interlocking and the laying out of yards, with a view to doing away as far as possible with facing points. I wish to give him every encouragement.

4726. *Mr. Waller.*] We have noticed that there is a certain feeling of antagonism between the Construction and the Existing Lines Branches? I am not aware that the antagonism is mutual. I rather believe that while one is quiescent the other is hostile and aggressive. I have certainly discouraged in every possible way any feeling of antagonism or hostility on the part of the officers under me. I have prohibited anything of the kind, so that the harmony which might prevail should not be disturbed by them.

4727. We would ask you whether you are not of opinion that there is a want of that harmony which should exist, and that consequently a great deal of the expenditure which now takes place is caused by that want of harmony, and that it is also subversive of discipline in the Service? I have no doubt that there is something in that; but I also hold that this antagonism is not without its good effect, that a knowledge on the part of both departments that their respective works are being jealously watched and criticised will keep both class of officers up to the mark, knowing that anything which they may do will be severely criticised.

4728. We noticed that in some degree there was a non-recognition of the position of the Commissioner? The Engineer-in-Chief is the only officer in this department who has shown a disposition to ignore the Commissioner

Commissioner for Railways. I cannot say that in any other branch of the department, or even amongst Mr. Whitton's own officers, has there been any disposition to ignore my position, and there has been a perfect feeling of harmony existing between the Commissioner and all officers of the department, with the exception of this one high officer.

4729. We noticed, in going through the investigation, that the railway accounts up to a certain point passed through the examiner's hands, but we find the construction account did not do so. Why is that? That is not with my concurrence.

4730. Have you raised any objections? I protested from the first against this independent position that Mr. Whitton set up, which has not been justified by the Act of Parliament, nor has it been recognised, as far as I know, by any Minister, but is a position which he has assumed and maintained in spite of directions to the contrary given by different Ministers of the Crown.

4731. Are you legally responsible for all accounts? For all accounts. Construction votes are no more under the Engineer-in-Chief than any other votes are under any other engineer. They are, properly speaking, under the Commissioner for Railways, who himself cannot operate upon them without, of course, Ministerial authority.

4732. We noticed also that owing to this apparent determination to disregard the Commissioner, there seems to be a second book-keeping department in the Construction Branch, which we thought uncalled for and unnecessary? I was not aware of the existence of such a branch. It must be altogether unnecessary. There can be no pretence for its necessity, because the Engineer-in-Chief, for the purpose of facilitating his work, and in order that he might have a proper knowledge of what is being done in regard to the votes for the construction of lines, has been placed in direct communication with the accountant, and he can call upon him for any information, and can inspect the books and have as much access to them as the Commissioner himself.

4733. That being the case, can you explain to us how it is that when we inquired as to certain expenditure, which appeared in the book-keeping department of the Construction Branch, they were unable to give us any information, and said they could not obtain it? I can only say that the Construction Branch would at any time obtain the fullest information on the subject, but I believe, from information given to me by the assistant accountant, that they have obtained that information.

4734. *Mr. Mills.*] Would it be possible for books kept by the Construction Branch to be complete? Yes, they might be complete, because they have the power of getting abstracts from the accountant's book.

4735. But without assistance from the accountant? Certainly not.

4736. Would it be possible for them to be of any value except as a daily record? I can see no object in keeping such books.

4737. *Mr. Waller.*] Would they be accepted as evidence in a court of law? No; only the accountant's books, which are the standard books of the department.

4738. Is it your opinion that all book-keeping appertaining to the Construction Branch should be carried on in the book-keeping department of the railways? Undoubtedly.

4739. Do you approve of having a multiplication of different offices? I do not; it is altogether unnecessary and undoubtedly expensive.

4740. Do you know anything about this department at all? I was not aware that such a department was in existence.

4741. As regards the manner in which the offices are now scattered about the city at Redfern, here, and across the road, do you think it is the cause of having to keep a larger staff and more expense than if you had the whole of the staff under one roof? Well, I think not. I do not think the staff could be lessened if it were under one roof.

4742. Supposing there was an engineer-in-chief of the railways of New South Wales, who had not only to build the lines but to keep them in perfect order, having under him competent officers for construction and maintenance, would that be advantageous? It would be a most unusual thing for the construction engineer to be also the maintenance engineer. I do not know of any railway in the world in which such an arrangement is followed.

4743. The Engineer-in-Chief to have under him the engineers for construction and maintenance? I think the offices ought to be distinct. I think the construction and the maintenance engineer should be altogether separate.

4744. Do you not think there would be any simplification in the working generally or in the number of hands employed? No; their works are so distinct that I do not see in what way the construction engineer could be employed for maintenance.

4745. *Mr. Mills.*] Could you not have one chief competent to supervise construction and maintenance? It would all depend upon the amount of construction going on.

4746. Suppose there were high-class officers of construction and maintenance under the Engineer-in-Chief, he being the professional head of all the engineers? I can see some very grave objections to the engineer for maintenance being under the engineer for construction.

4747. *Mr. Waller.*] But he would be under the Engineer-in-Chief? If you introduced the term "Consulting Engineer," I think it would be advisable to have a consulting engineer, who might be applied to in the event of any large question arising, who might be consulted in reference to any Government work.

4748. *Mr. Mills.*] Suppose we had a consulting engineer, an engineer for maintenance, and a construction engineer, do you not think that would be a much better system? Yes, perhaps so.

4749. *Mr. Waller.*] All working in harmony? It seems to me that the provision made by the Act of Parliament carries out that view. The Commissioner is by Act of Parliament the head of the department, and the Engineer-in-Chief is as much under the Commissioner as the Engineer for Existing Lines is.

4750. We presume that what you mean is that our system is actually carried out now, with the exception that the harmony does not exist? I still think it undesirable that all communication between the engineers should come to the Commissioner through the Engineer-in-Chief. I think the engineer for maintenance should be in direct communication with the Commissioner, as also the engineer for construction. I can see that the engineer for construction might in carrying out his works do so in a manner which would not be the most effective for giving facilities for the conduct of the traffic, and having made a mistake he would be slow to correct it, and it would be impossible for the Commissioner to know what the defects were.

4751. *Mr. Mills.*] Would you dispense with the title of engineer-in-chief? I never understood what the title

C. A.  
Goodchap,  
Esq.  
1 Jan., 1887.

title meant. There may be an engineer for construction and an engineer for maintenance, but I am not aware that the Railway Act contemplates an engineer-in-chief.

4752. Could you bring those two officers in direct communication with the Commissioner and have, if necessary, a consulting engineer to refer to? A high-class engineer, who need not necessarily belong to the railways, but who might be consulted by the Government on all engineering matters.

4753. *Mr. Waller.*] That is, you would bring the railways under one head, and that head would be the Commissioner? Undoubtedly, I am not aware that at the present time any other arrangement is legally made.

4754. There seems to be a certain delicacy exhibited by the officers of the Existing Lines Department in going on the construction lines before they are handed over to you? I should describe it as a feeling of fear rather than of delicacy.

4755. A matter arose in regard to signals, and a statement was made that owing to the short time given by the Construction Branch to the Existing Lines Branch the necessary signals were often not completed in time for the opening of the line. We asked the question why they did not erect them before, and they said that they would not do it until the line was handed over. We asked the head of the Construction Branch why there should be such a feeling, but he repudiated it? Well, I see no objection to their doing so, in fact I distinctly approve of their doing so; but it should be quite unnecessary for the Existing Lines Branch to go upon a line in course of construction; because I contend that a railway should be handed over by the construction engineer in perfect condition and fit for working.

4756. *Mr. Mills.*] Have you heard anything about an old class of signals being in use instead of the modern kind? Yes, I have written a minute on the subject, and obtained the Minister's approval to all the signals being on the modern principle.

4757. Is that the class which the Existing Lines Branch use, but not the kind put up by the Construction Branch? No, they put up the old style.

4758. Do these require to be altered? As the traffic grows it is necessary that the signals should be split. I do not think that in any case we should ruthlessly take down a signal or anything else until necessity arose for it.

4759. *Mr. Waller.*] Then you consider evidence to the effect that you do pull down signals and other things is not a fact? It is a malicious fabrication if anybody said so.

4760. *Mr. Mills.*] Do you know anything about the same system being adopted with a class of ball points? I directed that in certain stations ball points should be taken up on the main line.

4761. Were they put in by the Construction Branch? I believe they have given over that.

4762. *Mr. Waller.*] Are you aware of yards being so badly constructed that in one case at least stock could not be loaded from them into the trucks, and in other cases placed in such awkward positions that they had to be removed and placed in other positions? I know that stock-yards have been placed in most inconvenient positions. They have been placed in the midst of the shunting. I have given instructions that in every case they should be removed from all shunting operations, so that the cattle can be loaded in quietness. I think it possible that these defects may be exaggerated, and I should like the Commission to accept *cum grano salis* any statement made in that regard. I am not aware that there has been a great deal to complain of in that respect.

4763. We have evidence to the effect that it is a constant complaint, and also that stations are erected where they are utterly useless? No doubt on the Mudgee Line stations were put up which were not required.

4764. *Mr. Coyle.*] Does that line run through a sparsely settled country? Yes. These mistakes were made over two years ago, and I am satisfied that they will not be repeated. For the future I shall have an opportunity of knowing what yards are to be erected, what station buildings to go up, and where they are to be situate. I am placed in a position now to say whether they are of too extensive or too limited a character, and whether they are properly designed for the purpose.

4765. *Mr. Waller.*] Do you find any difficulty in getting papers from the Construction Branch brought before you for perusal? No, I cannot say that I do. There has been some difficulty, but that is incidental to all departments.

4766. Is it a fact that papers having to come before you cause a great deal of delay? Yes. I can say that there has been a certain amount of circumlocution in sending papers. Instead of coming as they should do to the Commissioner for Railways, they are sent to the Under Secretary for Public Works, and although I have never recognised the Under Secretary for Public Works as an intermediary between myself and the Engineer-in-Chief, yet I never get any papers except through the Under Secretary. In fact this is a system by which the Engineer-in-Chief has attempted to ignore the Commissioner for Railways. It has certainly caused some delay in acting upon cases, but I have refrained from taking any notice of the irregularity.

4767. Do you think the delay might be caused as much by your department as by the other? I know there is no delay in my department, because I do not send papers through the Under Secretary, but direct to the Engineer-in-Chief. When they are returned, however, even the most urgent papers are sent to me through the Under Secretary.

4768. The evidence given to us shows that the papers coming up here causes an immense amount of delay? I do not know who made that representation, but I have only to say that every paper should go through the Commissioner's office.

4769. *Mr. Mills.*] Must it receive his sanction? Any expense must receive his sanction before being paid. All contracts must be accepted by him.

4770. *Mr. Waller.*] Shortly, I ask you if it is your opinion that if the Engineer-in-Chief acknowledged your position as Commissioner there would be a saving to the country in the carrying out of works under his control? I think that in the past the fact of his not doing so has been the means of some expense being incurred which might have been saved. I have had no complaint to make recently, because, by the direction of the Minister, no station buildings or yards are constructed without the plans being first submitted to me, and I am enabled to make inquiries and get the opinions of the officers who are intimately acquainted with the traffic.

4771. When a vote is given for the construction of a railway, is it supposed to include the cost of the purchase of land? The Minister decides that question. The Engineer-in-Chief submits the item for the construction of the line, and he expressly states that it does not include land, but the Minister, and several

C. A.  
Goodchap,  
Esq.  
14 Jan., 1887.

several Ministers in their turn, have decided to place that amount of money on the estimates, in the expectation that Mr. Whitton's estimate will not be exceeded, even if the land be paid for out of the vote, and in very many instances this is the case. In some instances there has been a surplus.

4772. Is your operating upon that vote an infringement of the rights of the Engineer-in-Chief? The vote is in no way under the Engineer-in-Chief.

4773. Do you consider that the vote belongs to the Commissioner for Railways? The vote belongs to the Government, and the Commissioner is the only officer who can operate upon it, and Mr. Whitton's vouchers would not be accepted by the Treasury unless they were countersigned by the Commissioner.

4774. It is stated that the vote belongs to the Engineer-in-Chief? I have heard a contention of that kind set up, but such an idea is perfectly visionary. I would like to say that there is no operation on the vote without Ministerial sanction. I do not consider that these sums are voted by Parliament to be expended at the discretion of any public officer, but that every item should be approved by the Minister. I do not mean to say that every very small item should be approved, but the Minister should approve of all large works being carried out, and no work should be undertaken without Ministerial sanction.

4775. You know the system of having district, resident, and assistant engineers, now in existence, for the existing lines, do you think it necessary to have that staff? I think that a reduction of that staff is necessary. I think that in some instances the districts are officered to too great an extent, and I have under consideration now a proposal for diminishing the field staff.

4776. And in the same way do you think it possible to decrease the staff that belongs to these officers, such as surveyors, draftsmen, and numerous clerks? I think this also possible, but I cannot speak definitely on the subject until I have made further inquiries.

4777. You think the diminishing of one would naturally cause the diminishing of the other? That is my expectation.

4778. There is also a large staff of inspectors and sub-inspectors? I have already recommended to the Minister that a reduction of 30 per cent. be made in the inspectors' and sub-inspectors' staffs, the permanent-way inspectors.

4779. *Mr. Mills.*] What is the cause of some district engineers having under them larger staffs than the head officer of the Existing Line Branch? It depends very much upon the extent of the work. The engineer on the southern line has 705 miles under his charge. It depends very largely on the amount of work to be carried out.

4780. Could not a great deal of that work be carried out in the head office, such as the drafting? It was considered that it could be done more economically and more expeditiously by the employment of these district engineers. The experiment has not been of long duration.

4781. *Mr. Coyle.*] How long has the system been in existence? Three or four years; previously to that the work was more centralised.

4782. Who looked after the permanent-way. The district engineers had that under their charge.

4783. But previous to their appointment, whom were the inspectors immediately under? The engineers in Sydney, but as soon as the lines became more extended it was thought that they required more supervision.

4784. Was the object to localise the administration? Yes, to decentralise it.

4785. *Mr. Mills.*] Why is it necessary to have such large staffs of cadets and clerks? I think that the cadets are in greater number than they should be, and more than were ever contemplated. The object in having cadets was to train up a staff for the future of our railways, and to have men who would acquire engineering knowledge on our railways, and who having grown up with the railways, and having had an intimate acquaintance with them, would when they arrived at a certain age be enabled to take charge of the lines, and would be better able to do so than now men.

4786. *Mr. Coyle.*] Do you think that men bred in the Colony would be more suitable than men from the great centres at home? Yes, I think so, under the method I proposed. I do not know whether you have seen the regulations for the existing lines, and for the training of cadets, and the necessary examination of the various officers. I think it desirable for the proper understanding of that question that you should have before you the regulations.

4787. It occurred to us that in a progressive business such as this, which diverges into so many separate branches, that we should take advantage of the knowledge acquired in the older countries? I think that should be done in the case of the highest officers, but not necessarily in the case of the rank and file of our engineers.

4788. *Mr. Waller.*] Do you approve of the system of cadets? I think it desirable, but I think it ought to be curtailed.

4789. Do you think the district engineers are able to give the necessary attention and instruction to them? I am quite certain that they are able to give that attention.

4790. Have they got the time? Yes, I think they have.

4791. Do you find that you are able to manage these young fellows; have the engineers got sufficient control over them? Yes. I think the number should be limited to two or three in each division.

4792. *Mr. Mills.*] Are they articleed? No.

4793. And when they have completed their time have they any standing at all? I should like you to have the regulations for the promotion of the engineering staff before you.

4794. *Mr. Waller.*] Would it be a good thing if there were a limited number of cadets, and they were to receive their articles, and be properly trained? I think that if the regulations were properly carried out that they would be attended to.

4795. Do you think it a good thing paying them from the beginning? Well I think in an institution like the railways, which are public property, it is undesirable that employment in them should be limited to the wealthy classes, who could afford to get their sons into positions which are not paid. The practice has been to give a lad sufficient to maintain him at his parents' residence, and to give him no salary until his services are of sufficient value. I do not call £2 a month a salary; we give a preference to those persons who take the degree of B.E. at the University.

4796. But would not that confine employment to the class you speak of? Well in these days of bursaries, even the families least provided for can get their sons to the University.

4797. The evidence we have received up to the present has not been in favour of the cadet system. There seems to be a disinclination on the part of the engineers to have cadets. The evidence shows that they would

C. A.  
Goodchap,  
Esq.  
14 Jan., 1887.

would not have been taken into these departments by the engineers if they had been consulted. They say, "if we wanted men we would not take these cadets after they had finished their cadetship"? Well that implies one of two things, want of capacity on the part of the cadet, or want of performance of the engineer's duties.

4798. They said that there were bright exceptions to the rule, but that as a rule they did not seem to care about work, and there was no way to insist upon it? The regulations make provision for the immediate dismissal of any cadet who does not show aptitude for work.

4799. We are not referring particularly to the Engineer's Department, but we refer to all cadets. We cannot get any evidence as to how they get into the department. We are told that they turn up at the office and say that they have been sent? I think that must be an extravagant statement. I do not think that any cadet comes into the office without being duly accredited, or without sufficient authority for his appointment.

4800. Now with regard to the system of paying wages along the line, do you see any objection to paying monthly instead of fortnightly? From a departmental point of view it would be a simplification and an advantage, but in response to an effort made in that direction the men complained so bitterly of the hardship they were subjected to that we had to go back to fortnightly payments.

4801. What was the hardship? Most of them had been accustomed to live from hand to mouth, and they could not live without money.

4802. Do you know that the system in Victoria is to pay monthly? I believe that they do pay monthly, and that was one of the arguments used in support of our proposal.

4803. Putting the men's feelings out of the question do you think that the advantage that would be derived by the department would be very great? I have no doubt that it would effect a large saving to the department.

4804. Do you think that a month's notice of the change would give the men ample time to make arrangements? It would give them time to organise opposition to the system. I should not hesitate if I had supreme power to make the change.

4805. If you were working the concern as the manager of a private railway company would you then take that step? I would

4806. You know the system of payment besides being fortnightly is to have pay-clerks, who cost the country £2,000 a year, can you see any objection to the gangers or inspectors or some other responsible persons paying the men, the money being sent up in the train in bags, and put down as the train goes along? I think there would be a great deal of insecurity in that; the ganger might assert that he did not pick the money up; he might assert that the money sent was not there.

4807. Do you know that they pay that way in Victoria? I am told that they do not take receipts at all; that two men go along the line, one paying and the other witnessing.

4808. Is there not a very large amount of money paid by private firms without receipts, at least three times as much without receipts as with them. Is it not unusual to get receipts for wages? I know it is, but I am not certain about the requirements of the Audit Office; if they were not what they are I should not think of taking a receipt.

4809. There must be a lot of unnecessary clerical labour? Yes, I think so; I think it is quite sufficient that two officers should pay.

4810. *Mr. Coyle.*] How many men has every ganger under him? Three or four; I tried the system of two men to every ganger and I found it is not as effective as three men to the ganger. I propose now that these gangs take 6 miles instead of 4 miles.

4811. Would that be a reduction of about 20 per cent. in gangers and fitters? Yes.

4812. *Mr. Waller.*] Do we understand that you do not see any grave objection to the monthly system, and also to paying without receipts, provided it is not illegal? I see no objection; in fact I see every advantage to the payment being made monthly, and I should be glad to see that carried out if it could be done with satisfaction to the men. I see no necessity to take acquittances from the men, and but for the official necessity of producing acquittances for each item I should greatly prefer a system by which payment by witnesses could be introduced.

4813. *Mr. Coyle.*] Is that acquittance system established by Act of Parliament, or by order in Council? I am not certain that it would be necessary to get an Act passed to do away with it. I do not know whether the Audit Act states in detail the obligations of the Auditor-General, and says that he shall require an acquittance.

4814. *Mr. Mills.*] Would not the receipt of the payor be sufficient to meet all requirements of the Audit Act? I think payment ought to be witnessed.

4815. *Mr. Coyle.*] The inspector has about seven or eight gangers under him? He will have about ten under the new arrangement.

4816. So that he would have about 40 or 50 miles to look after. Yes.

4817. Then do you consider that an inspector can undertake the duty of paying? Yes; I should prefer that, and he could pay in the presence of the ganger.

4818. As a matter of fact station-masters do make some payments? Yes.

4819. Would you be in favour of as far as possible making the payments by cheque. Some of the officers of the department say that they have to go across to the accountant's office and stand there waiting and wasting a considerable portion of their time before they are paid their money? I think it is most desirable that they should be paid by cheque.

4820. Are you aware that thousands of pounds are kept in the office at one time? Yes, but not over night.

4821. The system we thought of is that the vouchers should be made up in the office, counter-signed by the head of the department, and the cheques paid away by him? I dare say there may be room for some improvement, but it would require to be thought out.

4822. *Mr. Mills.*] Would you be in favour of paying by cheque in preference to cash? Yes.

4823. *Mr. Waller.*] Are you aware that the amount of guarantee given in the department by officers who have the handling of thousands of pounds is only £400? Yes.

4824. Do you think it a good system, and fair even to them? Well, you could never make the guarantee equal to the amount at the disposal of the person.

4825. We allude particularly now to paying-officers being sent about with a lot of money paying wages,  
and

and we think that there is unnecessary temptation placed in their way? Of course if the men were not paid you would hear of it the next morning. You might as well say that a bank exchange clerk has great temptation in his way.

4826. We are supposing even that these men might be attacked and robbed, and there are men who would be equal to murder if they could get the money? Yes, but there have been no mistakes so far as I know, no loss of money.

4827. *Mr. Coyle.*] What class of works are executed at the locomotive branch workshops? Very light work indeed. As we get further afield of course it is necessary that the repairs should be rather larger in their character, but certainly we never go to the extent of large repairs in the branch shops, because I hold it is better to run vehicles down to Sydney.

4828. Have you got sufficient workshop accommodation about Sydney? We shall have, but up to the present time it has been very unsatisfactory.

4829. Do you anticipate that when the Eveleigh workshops are complete the work will be reduced in the branch shops? The simple repairs must be made at the outside workshops. I would not call them workshops, they are simply running sheds with some machinery for the purpose of effecting light repairs.

4830. Who is in charge of them? A foreman.

4831. Is he a workman? No.

4832. *Mr. Mills.*] Do you consider it necessary to have a supervising foreman? Yes, for the outlying places. The locomotive foreman is not only superintendent of repairs but conducts the running of the engines.

4833. In the branches are there some foremen carpenters instead of leading hands? Yes.

4834. *Mr. Coyle.*] What class of work do these carpenters do? All classes of work; they carry out a large quantity of work. They make all the stock required in the shape of small houses, platforms, and so forth.

4835. Renewing platforms and planking them? Yes.

4836. What would be the difficulty in letting the great majority of these works by contract, would it be practicable? The objection seems to be that while the traffic is being carried on there is some danger in responsible contractors carrying on work on the line.

4837. *Mr. Waller.*] Are you endeavouring to have the contract work instead of day labour? If it is possible.

4838. Suppose you had half-a-dozen stations to paint, could that be done by contract? Yes, no doubt. We have tried contract work on several occasions, but generally speaking, comparing it with work done by the department, we have found it more costly.

4839. *Mr. Mills.*] Do you think it right to charge the cost of preparing large returns for Parliament to this department? It is a working expense.

4840. Is it not a parliamentary expense? All this work is a serious item, but I think it is a cost inseparable from a state railway system.

4841. *Mr. Waller.*] Would it lessen the evil if all the returns called for had the cost of preparing and printing printed at the bottom as it is done in Victoria? Of course I could not say.

4842. Are there many returns asked for the information contained in which could be supplied if it was asked for in the office? No doubt.

4843. *Mr. Mills.*] Do you consider the cost of preparing these returns a legitimate cost of working the department? Yes, I do as a legitimate cost of working a state railway department.

Mr. William Vero Read was examined:—

4844. *Mr. Waller.*] Are you the traffic manager of the southern and western lines? Yes.

4845. How long have you been in that position? Nearly seven years.

4846. How long have you been engaged upon the railways? Since their commencement.

4847. Have you had any experience in other countries? In England for about a year or so.

4848. In the Traffic Manager's Department? No; in the Superintendent's Department.

4849. Have you had some experience during these seven years as to the condition in which the lines were handed over by the Construction Branch? Yes.

4850. We would like to know if, in your opinion as Traffic Manager, these lines have been handed over in a satisfactory condition, both as regards convenience of working, and the safety of the public? I know that the Engineering Branch for Existing Lines have kept a number of men employed on the lines after the lines were opened, notably on the Mudgee line. In many cases we have had to ask for extra accommodation for the Traffic Branch, although that has not been so much the case lately.

4851. For station-yard room? Yes.

4852. What do you mean by lately? Perhaps within the last eighteen months or two years.

4853. Was that owing to any particular cause? No, I think more accommodation has been given recently.

4854. Have you as Traffic Manager, and those directly under you been consulted more freely during the last two years, as to what the requirements of the Traffic Department are? Yes, plans of the yards and buildings have been sent through the Commissioner to the Traffic Manager to report upon.

4855. And previously was that not the case? No.

4856. Was the result that previously many alterations and additions had to be asked for? Yes.

4857. In what condition generally do you find the station arrangements, are there the proper number of sidings, cranes, and so forth? We have had to ask for cranes, which are never put up by the Construction Branch. In many cases we have had to ask for additional roads.

4858. What about station approaches and cattle yards, have they been handed over to you in good condition? Usually, yes; but many of these places were handed over before they were completed.

4859. When the contract was finished was the line handed over complete in the way of station arrangements, and in the way of sidings? I really do not remember any case where we have had to alter the approaches.

4860. But I refer to altering the accommodation already provided, do you know of cases in which alterations of sidings have had to be made? Where the siding accommodation was inconvenient it has had to be altered.

C. A.  
Goodchap,  
Esq.

14 Jan., 1887.

M. W. V.  
Read.

14 Jan., 1886.

- Mr. W. V. Read. }  
14 Jan. 1887. }  
4861. Have you found the station accommodation provided by the Construction Department sufficient for the requirements of the traffic? Yes: I do not remember at the present moment instances where we have been pushed for station accommodation.
4862. *Mr. Mills.*] Have you found stations put up in places where, if you had been consulted, you would not have put them up, or put up where they were not required? Yes, stations have been put up where they were not required.
4863. If you had been consulted, would you have put them up in different places, or not at all? Yes.
4864. *Mr. Waller.*] Would you think that the statement, that it was an exception to the rule, that the Construction Branch handed over railways in working condition, an overdrawn statement? I may say that few of the lines of late years have been constructed and left complete. They have been opened long before the contractors have given them up.
4865. *Mr. Coyle.*] But when the contractors had finished, in what condition were the lines left as regards the accommodation? The accommodation of late has not necessitated any alteration.
4866. *Mr. Mills.*] Have you found stock-yards well designed? The designs were fair; but the construction not good in many cases.
4867. Have alterations been necessitated by ill-construction? Yes, I think so.
4868. *Mr. Waller.*] Has there been a disregard of the requirements of the Traffic Department by the Construction Department? I think not, especially of late.
4869. Are you aware that there is a certain amount of friction existing between the Construction and the Existing Lines Department? I have heard so.
4870. From your experience do you think that had there been a more friendly disposition between the two branches money would have been saved to the State—that alterations and additions, and so forth, would not have been necessary? I think it would have been a great advantage if there had been harmonious working between the two branches.
4871. *Mr. Mills.*] Do you think it would be well if there were more temporary stations put up until the requirements of the traffic were better understood? In some cases it might be an advantage; but the buildings now being put up are not, I think, of too permanent or extensive a character.
4872. *Mr. Waller.*] May we understand from you, that if it has been customary to make serious alterations, additions, and actually to pull down structures erected by the Construction Branch, that these alterations and additions, if made, were not made by the Traffic Department, but must have been made by the Existing Lines Branch? I should like to know the places you refer to.
4873. We have it in evidence that a very large number of alterations, which we cannot specify, have continually to be made? Without knowing what the alterations were I could not say.
4874. Have you been in the habit of asking that serious alterations should be made in the lines when handed over? Not of late.
4875. Have you been in the habit of reporting that the sidings in some cases were not properly constructed? Not of late. Two or three years ago we had to ask for extra siding accommodation on the new extensions.
4876. Notably where? Wellington, Dubbo, and Nyngan.
4877. Had you been in communication with the Engineer-in-Chief would these alterations have been required? We should most likely have seen that we required extra accommodation.
4878. *Mr. Coyle.*] Were not material alterations made at the Wallerawang station? Yes; I had to have some facing points taken out at Wallerawang, on the Mudgee line.
4879. Are safety points now put in as a general thing? Yes.
4880. Does the Construction Branch put them in? No, I think not.
4881. Not in any case? No.
4882. *Mr. Waller.*] Do you confer officially with the engineer for interlocking in regard to any new station-yards laid out by the Construction Branch before the line is handed over? In several instances I have conferred with him.
4883. *Mr. Coyle.*] Have you done so officially? I have merely asked his opinion.
4884. *Mr. Waller.*] Do you think the office of interlocking engineer is necessary? Someone well-experienced must have charge of the interlocking.
4885. That being the case would it not be advantageous that that engineer should be consulted officially in the laying out of yards, so as to get all requirements? I think so. The present interlocking engineer has a very good idea of the laying out of yards.
4886. As a matter of fact, if there were any gross cases of inconvenience of station-yards, &c., would they have come under your notice? Yes.

## COLONIAL ARCHITECT'S DEPARTMENT.

MONDAY, 17 JANUARY, 1887.

Present:

MR. T. F. WALLER, CHAIRMAN.

Mr. J. Y. MILLS.

Mr. J. E. FITZGERALD COYLE

Mr. James Barnett examined:—

- Mr. J. Barnett. }  
17 Jan., 1886. }  
4887. *Mr. Waller.*] Is your position in the service that of Colonial Architect for New South Wales? Yes.
4888. What duties have you to perform in regard to your business of architect? That is a big question. I have 1,300 or 1,400 buildings under my charge altogether. There are court-houses, gaols, Government House, printing office, land offices, light-houses, lock-ups, lunatic asylums, military buildings, police buildings, post and telegraph offices, public buildings generally (excepting schools and railway buildings), reformatories, walls, railings, and fences round buildings and parks; and, in fact, all public buildings with the exceptions I have mentioned.
4889. We would be glad if you could supply us with a schedule of the buildings in course of erection, and

and the value of them ; also a list of the plans you have prepared for work that is not yet in course of erection ? I think that information has been already supplied to the Minister. The amount of contracts out is £1,130,800, out of which has been spent £528,596, leaving a balance still due of £611,294.

4890. Then as regards the list of works for which plans are now being prepared, can you let us have that ? Yes. A list of the work which is done in the office is made out from week to week, and it shows the progress of the work. (*List handed in.*)

4891. *Mr. Mills.*] We notice here that the Balranald public buildings are being fenced ; who is in charge of that work, and how long has he been at it ? That is done by a boy named Mactaggart, who receives £50 a year.

4892. Has he done the whole of it ? Yes ; the drawings as well as the tracings.

4893. *Mr. Waller.*] What is the number of your staff in the head office ? The names of all the officers and their positions are furnished on this plan. (*Plan produced.*)

4894. *Mr. Mills.*] Who is directly under you ? Mr. Coles. He is away on leave of absence at present. He is the Chief Clerk of Works.

4895. By whom is his place taken ? By Mr. Robertson, who does all the clerical work, and I manage to do the other work myself.

4896. And who comes under the immediate control of Mr. Coles ? Mr. Perdue.

4897. What is he ? He is a clerk.

4898. Is he a record clerk ? No ; he is an assistant to Mr. Coles, and keeps his papers.

4899. Who is the next officer to Mr. Coles ? Mr. Spencer.

4900. What is he ? Clerk of Works.

4901. For works in Sydney ? Yes.

4902. Does he go up the country ? No ; he has no country work at present. Under him he has got Mr. Dougherty.

4903. What is he ? A draftsman. He has also got Mr. Rigg, Mr. Nevin, and Mr. Baxter under him, who are all draftsmen.

4904. Does Mr. Spencer do any drafting ? Yes.

4905. Does he prepare drafting work for buildings which he would superintend as Clerk of Works ? Yes. The term, Clerk of Works, is not a correct one. The Clerk of Works here is literally an assistant architect.

4906. *Mr. Coyle.*] What are his particular duties as assistant architect ? To prepare plans for the different buildings.

4907. Has he anything to do with the construction outside ? Yes ; he has to attend to the construction.

4908. And the gentlemen who come under him, are they architectural draftsmen ? Yes.

4909. Is he head of the room ? Yes.

4910. Are all the others subordinate to him ? Yes.

4911. What particular class of buildings does Mr. Spencer deal with ? There is no one clerk of works who undertakes any particular work. Any one of them might be at work in the country or in the city. At present he is attending to the Post Office and the Registrar General's Office.

4912. In what state is the Registrar General's Office—nearly completed ? Yes. The amount of the contract was £10,000, and there has been £10,900 paid on account.

4913. What other works has he to look after ? Paddington Post and Telegraph Office, band house, Botanic Gardens, and the Waverley lock-up, and the Waverley Post and Telegraph Office.

4914. Is the Waverley Post Office an extensive building ? £1,500 is the contract price.

4915. What other buildings has Mr. Spencer charge of ? He has no other building at present under his charge.

4916. Has he any control over draftsmen in any other room but his own ? No.

4917. Who has he under him as Assistant Clerk of Works on buildings ? Mr. Kay ; he is foreman of works at the Post Office, and at the Registrar General's Office.

4918. Who would Mr. Kay have under him ? No one.

4919. Is he immediately over the contractor ? Yes.

4920. Then the Waverley Post Office, who looks after that ? Mr. Telfer is the foreman of works.

4921. Has he any other duties to perform ? Oh yes, he is foreman of works at the new Medical School at the University.

4922. Any other buildings ? Yes, a new court-house at Campbelltown.

4923. Has the Clerk of Works at the Post Office any other work to look after ? Yes, the Custom House, and the Fire Brigade Office.

4924. *Mr. Coyle.*] Is there anyone at the Post Office under Mr. Kay ? No.

4925. So that he has to look after three or four buildings ? Yes.

4926. Has he the whole of the supervision of the contractor ? Yes.

4927. You mentioned light-houses, how many have you put up along the coast ? Ten or twelve.

4928. Have they been all on shore ? Yes, all on shore.

4929. Have you erected any on submerged rocks, or on any places subject to the action of the sea ? No.

4930. Have you anything to do with the survey of land in the country ? No.

4931. Has Mr. Spencer any general charge over the office ? No, I am the only one in charge.

4932. In your absence who would act for you ? Mr. Coles.

4933. *Mr. Waller.*] I notice, then, that you have in this office Mr. Coles, Mr. Spencer, Mr. Colley, Mr. Rumsey, Mr. Edwards, Mr. Cook, Mr. Purkis, and Mr. Peattie, who are all clerks of works ; in other words assistant architects ? Yes.

4934. Are there foremen under them ? Yes. In other departments clerks of works are supposed to belong to an inferior grade, and I have endeavoured to have the name altered, in fact the alteration has been on the Estimates once or twice before, but we have always got back to the old term. In the Railway Department clerks of works are foremen of works.

4935. *Mr. Coyle.*] Through whom do applications come to you for buildings ? Through the Minister for Works.

4936. Suppose a court-house or a police-station is wanted at Bourke or Albury, how do you hear of it ? From the Minister for Works, and the application would come to him through the Justice Department.

4937. Then would the residents make application to the Justice Department, and you hear of it through the Minister for Works ? Yes.

4938. What would you do then ? If an estimate was asked for I would furnish it.

Mr. J.  
Barnett.

17 Jan., 1887.

- Mr. J. Barnett. 4939. Would you send an officer to examine the place? I would not do so until there was something more definite.
- 17 Jan., 1887. 4940. Supposing a police-station was asked for, would you send in an estimate, and if you were instructed to go on would you prepare plans? Yes.
4941. Before that would you inspect the ground? Yes; or perhaps a local officer would furnish a plan and report.
4942. How many district officers have you in connection with this establishment? I can give you a list by referring to the map. There is Mr. Farrell, assisted by Mr. Roylands, as foreman of works in the southern district. Mr. Roylands is at present stationed at Cooma. Mr. Thorn is assisted by Mr. Macgregor, who is at Deniliquin.
4943. What is Mr. Thorn's district? South-western. Mr. Murray is a foreman of works, and his headquarters are at Young. Mr. Roberts is a clerk of works, and is stationed at Bathurst.
4944. What assistance has he? Mr. Pringle is his assistant.
4945. Are all these gentlemen foremen of works, and is Mr. Roberts a clerk of works? Yes. Then at Dubbo there is Mr. Nelson, and at Bourke, Mr. Linn.
4946. *Mr. Waller.*] What is Mr. Roberts' district? The western.
4947. Then there is Mr. Lewis? Yes, he is at Newcastle, and is assisted by Mr. Moulán. Mr. Henry is in the New England district. Mr. Goddard was his assistant, but he has come to Sydney, as there is no further work for him. Mr. Fitzpatrick visits the northern coast district, and further north Mr. Laing is at Grafton. Mr. Lewis is clerk of works.
4948. *Mr. Coyle.*] Have these gentlemen offices in the various districts? Some of them. Mr. Lewis has not; Mr. Roberts has a temporary office. Most of them do their work in their own houses.
4949. Does the Government provide office accommodation for any of them? Mr. Laing has an office at Grafton.
4950. What rent does he pay? 10s. a week.
4951. What salaries are paid to these officers? Mr. Roberts has £415; Mr. Linn, who is the oldest officer, receives £600; and the other salaries range from £200 up to £600.
4952. What salaries would be paid to the assistants of those clerks of works? They vary from £200 to £250.
4953. What are the duties of these clerks of works in their respective districts? To inspect the various works, and to report to me weekly.
4954. On buildings during construction? Yes, upon the work going on in their district.
4955. Suppose such a building as police quarters was going up, would it have to be inspected, and have these gentlemen any person immediately under them? No.
4956. Do they find themselves in a position to be able to inspect the buildings frequently? That would depend a great deal upon the locality, and the means of getting to it.
4957. In a number of cases it would be very difficult to exercise close supervision? Well, of course, they cannot remain long in one place.
4958. *Mr. Waller.*] Have they anyone under them to represent them while they are away? No.
4959. *Mr. Coyle.*] Do you think it is a desirable thing to have these district officers at all? Yes, we could not do without them.
4960. Is it possible for them to exercise close supervision over the work? Well, sufficiently close I should think.
4961. Could they not be supervised as well from Sydney? No, it is necessary that someone should be in the locality.
4962. What number of buildings are really going on in Mr. Thorn's district? There are buildings at Hay, Quirindi, Mulwalla, Jerilderie, Hillston, and Wagga Wagga.
4963. What is the nature of the buildings? At Hay there are gates and railings to be put round the post and telegraph offices; at Quirindi there is a new court-house.
4964. What is the estimated cost of it? £1,990. At Hay the contract price of the work is £368; at Mulwalla the court-house is to cost £1,978; and the Jerilderie police buildings, £260.
4965. Do these clerks of works in the country prepare drawings for themselves? They are first sent up the general drawings, and any details they prepare afterwards.
4966. Have they any clerical assistance at all? No, they perform all their own clerical work.
4967. Are there more than two at any one place? No. Taking Bathurst, for instance; Mr. Roberts and Mr. Pringle are there, and they do the whole of the work.
4968. Do you prepare a yearly return of the cost of these buildings? Yes.
4969. What has been the general cost per cent. on the construction of public buildings? Here is a paper which will give you all the information you require. (*Paper handed in.*)
4970. *Mr. Waller.*] How long would it take to prepare the plan of a building costing £2,000? What kind of building?
4971. One like that at Cawarra? About three weeks.
4972. Have you built a great number of court-houses? Yes.
4973. Is there any great difference necessary in the construction of court-houses? It depends altogether upon what is required. There are different courts, such as supreme and district courts, and police courts.
4974. I am talking of country courts? Well, they vary very much.
4975. Could not a court which is suitable for a supreme court be made to contain the rooms necessary for the holding of police-courts in the district? Yes.
4976. Are not the rooms occupied by supreme and district courts only used for a limited time? Could not they be made use of in the interim? Yes, but the supreme court people object to that. The district and supreme courts are held in the same room; but different accommodation has to be provided for the police courts.
4977. Are the rooms used for the supreme court also used for the district court? Yes.
4978. Would it be necessary to have two separate buildings for supreme and district courts, and police courts? They might be under one roof.
4979. What I want to know is this: if, where several districts require supreme and district courts, and police courts, with all the necessary rooms for the different offices, would it not be possible to have a uniform building, the plans of which might be kept in the office, and always used? Yes, provided the land is the same shape in every case. At Wollongong the court-houses are on the side of a hill, and half of the building is underground. The jury use the down-stair portion. 4980.

Mr. J.  
Barnett.

17 Jan., 1887.

4980. Have you standard designs and drawings of the various classes of buildings required? No, we tried that system, and found it a great failure. No two members of Parliament would have the same buildings; they all want different patterns.

4981. Apart from the wishes of the members for the districts, do you see any objection to using a uniform design for buildings of a similar size? The only objection I see is the architectural one. We tried the system in the case of telegraph offices, lock-ups, and buildings of that sort, but it does not answer very well.

4982. As regards police barracks, land offices, and telegraph offices, is there any objection to using the same designs? What might suit one site would not suit another. As I say, we tried a uniform plan with telegraph offices, but in some cases the buildings have had to be pulled down, or so altered that you would not know them.

4983. Have you got designs suitable for telegraph offices? No two of them are alike.

4984. But if you have one design that would do for one telegraph office, why would it not suit another? The general arrangements are the same, but the architecture is different. My experience is that the parties who want the buildings will not have them all of the same kind.

4985. Would it be a matter of convenience to your department and a saving to the country if separate designs were prepared? Very little indeed. The system has been tried, and did not succeed.

4986. What was the reason? Because we tried to get too much for the money.

4987. Can you see any objection to the system except the architectural objection? No.

4988. As a matter of fact, would it not be a great saving if you prepared a design, and after some experience you obtained a good one, and then had it lithographed? It would save a little drawing, but the saving would be a mere nothing.

4989. *Mr. Mills.*] Do you remember what the Deniliquin court-house cost? It is not finished yet.

4990. What regulates the cost of buildings, the requirements of those who occupy them, or the wants of the member for the district? The requirements. If the building is a lock-up, the Inspector-General of Police says what he requires; if it is a post-office, the Post Office people say what they want.

4991. What is the reason of such an extensive court-house being put up at a place like Deniliquin? The Justice Department is responsible for that; besides which the judges have to be consulted. I believe that court-house cost £12,104.

4992. Will that cover the lot? No, there have been great alterations made.

4993. *Mr. Coyle.*] Is it necessary to carry out the instructions of the judges? They come to me through the Minister.

4994. Would it not be as well that the designs should be first submitted to the judges? They always are.

4995. Then why did they not express an opinion upon the Deniliquin plans? Well they change their views, and the site in that case was changed.

4996. In what way would lithographed plans not come in? The sites vary. A court-house is wanted of a particular kind, and a site selected which is not big enough to contain the building.

4997. But with reference to the general class of buildings in small places? As a rule they are nearly all on the same plan. We can reproduce them by the sun process. Where we can use the plans of existing buildings we do so, but as a rule we get the worst possible sites.

4998. Would your greatest difficulty be in the settled districts? Yes.

4999. In the outlying districts does any question of sites arise? There is always a great fight about the site.

5000. Do you prepare special specifications for each building? Yes. Of course, the materials in each building vary.

5001. Have you one type of specification? Yes, but it is not safe to take a general specification.

5002. *Mr. Mills.*] I notice that your department has a number of petty duties thrust upon it, such as cleaning windows and carpets, sweeping chimneys, emptying privies, providing coffins for paupers, providing ballot boxes, providing and repairing furniture and window blinds for 1,500 buildings, attending to elevators, providing material for repairs, &c.; do you think you should be relieved of these small duties? Yes, I certainly do. It is not architectural work. We have also to repair drains and water pipes, light the lamps in the different parks, and lay on gas. Last year we had the repairs and alterations of 500 buildings to look after, and that cost a sum of £40,000.

5003. *Mr. Coyle.*] Have you to light the lamps? The gas company light them, but they are all under my care, the lamps in the parks and at the Circular Quay. We have numbers of small matters to attend to which have not been mentioned. Everything connected with Callan Park Asylum and Government House. Repairs are constantly going on there. If they want saucepans tinned they send to me. I provide cooking stoves for the soldiers, and every little thing that they require I am responsible for. I have to keep their buildings in repair. I am constantly receiving applications from barracks for small repairs, and complaints of all sorts.

5004. *Mr. Mills.*] Do you approve of the work being decentralised, and having one head for general supervision? Yes.

5005. *Mr. Waller.*] As regards the necessaries for the office in the way of paper, are they provided by the Government? Yes, by the Store Department.

5006. And how often are the requisitions sent in? Every six months.

5007. Does that make it necessary to get in a large stock? Yes.

5008. Do you think that is an objection? That is the Treasury arrangement. Unless we ask a long time in advance we do not get supplies. If we could get the supplies as we wanted them it would be more convenient.

5009. *Mr. Mills.*] What is the system which causes the delay? The requisition has to be sent to the Treasury, and they send it to the Stores Department. The Stores Department has contracts with certain people, and sometimes they have not got the particular articles required.

5010. Is it your opinion so far that these very large requisitions cause unnecessary waste and expenditure? No doubt it would be an advantage to get the supplies when we wanted them.

5011. *Mr. Coyle.*] Are your requirements chiefly in the way of drawing paper? Yes, and writing paper. We have to supply all the offices in the country with writing materials, and my officers write to me once a week at least.

5012. Do we understand that these officers in the country, the clerks of works, and foremen have staffs under them? No, they have not.

- Mr. J. Barnett.  
17 Jan., 1887.
5013. As regards these offices of your own, are they suited to your requirements? They are very convenient. They were all built originally for pig styes, but they certainly are convenient. This is part of the original barracks, and the land has been set apart for different objects at different times. On the last occasion it was set apart for a free library.
5014. What area of land is there? Two acres three roods nine perches.
5015. Have you full control over the department? Yes, capital; I am in the very centre.
5016. Have you the whole of your officers here? Yes, the whole.
5017. *Mr. Waller.*] One of the returns you hand in gives an estimate of the cost of preparing plans of buildings? That would include the total cost to the department.
5018. What would be the cost of preparing plans for a £2000 building? Two-and-a-half per cent., and two-and-a-half per cent. for supervision.
5019. Do you consider that your costs are under the usual charges? Yes, I do.
5020. What difference, if any, have you found with this extra hour that you work? My experience is that there is less work done. I know that my men would work for me day and night, if the necessity arose; but I think it is a cruelty, and an injustice to old officers, who perhaps live a long distance from their work, and who have to leave home at 7 in the morning, and not stop work until 5 in the evening. Even before the new regulations they never did get the full dinner hour. My rule was that they were to get their lunches as best they could, and waste no time about it. Some of the officers who have been here twenty or thirty years feel these new regulations very much, especially those who live out of town.
5021. Do you keep a time book in your office? A time book is kept in each of the different branches. The clerical branch sign in one book, and there is a book in Mr. Cole's room, one in Mr. Cook's, and one in Mr. Rumsey's.
5022. *Mr. Coyle.*] In what way are most of the buildings paid for out of revenue or out of loan? Some out of revenue, some out of loan, and some out of surplus revenue.
5023. And when there is no surplus revenue? Then out of the revenue proper.
5024. Are the principal buildings paid out of loan? The Post Office is partially paid out of loan, partially out of consolidated revenue, and partially out of surplus revenue.
5025. *Mr. Waller.*] Is there much time taken up in the preparation of Parliamentary returns? Yes.
5026. Are they of such a nature that the information could in many cases be obtained by applying at the office for it? Some of it might be.
5027. Do you think that it would be an advantage that each return should have the name of the member asking for it, and the cost of the return printed on it? Yes; no doubt it would be an advantage. We have to keep a staff to meet these demands. You cannot put a stranger on to that particular class of work.
5028. Do you approve of the cadet system? Yes, to a limited extent; but it is rather overdone, I think.
5029. What number have you here? There are eight of them. They are draftsmen now, but they were originally cadets. There have been no end of applications for appointments as cadets. At one time they used to come in for two years without being paid, but now they get £50 a year.
5030. Is it a good system to pay them before they can do anything? I do not believe in it.
5031. *Mr. Coyle.*] How do they come to you? They come by recommendation of the Minister.
5032. Does he nominate them? Yes, in all cases.
5033. *Mr. Waller.*] Do you give them a diploma or anything of that sort at the end of the term? No.
5034. What professional standing would they have? Well, two or three of them started as architects on their own account and succeeded very well. They get nothing to show that they have been here.
5035. Do they get the close attention and supervision that would be required to make them efficient architects? The chief draftsman is also instructor of cadets.
5036. If you were working a private concern of your own, are these the class of men you would give employment to? No.
5037. Would you prefer people from outside? Yes.
5038. Do you think it is a system calculated to be of little benefit to the state, or to the individual? Exactly, I do not think it is. It is nobody's business to look after these cadets. In some of the departments, the heads used to get a bonus for receiving cadets.
5039. Is it not objectionable that the heads of the departments should get bonuses? Well, if a young man wants to get into a private office, he must pay a bonus.
5040. It appears to me that the fact of the Government taking these cadets for nothing, and paying them from the start is going against the rules of the profession? I have always fought against it myself, but they have been forced upon me.
5041. The general impression as far as we can find out is against the system of cadets; it is said that there is no control over them? Yes, that is so.
5042. You cannot get them to take the necessary interest in their work to make them good men? Yes, that is what I complain of; they come and go like machines.
5043. It may be that they have no aptitude for the work? That is often the case. In fact quite recently one man came to me and said that he had found he had made a mistake, and he would have to give up as he was not fit for the work.

Mr. Louis Robertson examined:—

- Mr. L. Robertson.  
17 Jan., 1887.
5044. *Mr. Waller.*] Are you a draftsman, Mr. Robertson? Yes.
5045. What position as a draftsman do you hold? I rank next to the chief draftsman.
5046. Who is that? Mr. Cook.
5047. Are you on the permanent staff? Yes, I was appointed by the Governor-in-Council.
5048. Is your salary £415 a-year? Yes.
5049. How long have you been in the service? 22 years.
5050. What class of work are you particularly engaged in? My work has been general work, sometimes preparing specifications, plans, estimates, and such things.
5051. Of what sort of buildings? Well, I prepared the plans for the works in connection with the Rookwood reformatory.
5052. *Mr. Coyle.*] What was the amount of the final certificate for that? The work is not yet finished, the contract is now going on. It was for four cottages, which were to cost £11,422. Then there was the superintendent's residence, £2,198; dining hall and kitchen, £2,130.
5053. *Mr. Waller.*] What sort of building are they? One-storied brick buildings. 5054.

Mr. L.  
Robertson.

17 Jan., 1887.

5054. *Mr. Coyle.*] What other buildings besides these have you had to do with lately? I prepared a number of plans in connection with the proposed additions to the Treasury.
5055. Are there any similar buildings to those at Rookwood in the colony? I do not know of any.
5056. In what state is the reformatory? It is nearly finished. There are several large rooms in it; two dormitories 24 ft. 6 in. × 17 ft.; sitting room, 18 ft. × 29 ft. 9 in., and other rooms, 10 ft. × 13 ft. 3 in.; 8 ft. × 13 ft. 3 in.; 17 ft. × 13 ft. 3 in.; a passage 4 ft. wide, and one building 15 ft. 6 in. × 14 ft.
5057. What would be the cost of the building? £11,274 15s. 4d. is the contract price.
5058. Are there not some extras? I think there will be about £1,500 worth.
5059. What are the extras? They are partly occasioned by the change of the site. Originally it was intended to have two separate buildings erected in different parts of the ground, but the arrangement was afterwards upset, and we had to prepare fresh plans. We have had to go in for extra foundations, and in some parts we have had a large fall in the ground.
5060. What would be the cost of preparing these sets of plans? The architect's way of estimating the cost would be about 2½ per cent.
5061. But what was the actual cost to the office of preparing them? I cannot exactly tell.
5062. Are all the four cottages the same? Yes.
5063. How many rooms are there in the Superintendent's house? Nine.
5064. What is the cost of it? £2,198.
5065. Will that be furnished by the Government? That I know nothing about.
5066. Who is the superintendent of the building? No one has been appointed.
5067. Who is in charge of the house? It is not yet out of the contractor's hands. There is one room in that house set apart for a general store for the establishment.
5068. Would it not have been cheaper to have had these buildings two stories high? Probably it would. A great deal depends upon the idea which the Minister may have had about the purpose to which he intended to apply the buildings.
5069. What Minister did these buildings come under? Sir Alexander Stuart. The plans were prepared and submitted for his approval.
5070. What other buildings besides this one have you had in hand? There are some small buildings; additions to the reformatory at Rookwood.
5071. What is the estimated cost of those additions? About £4,000.
5072. What other buildings have you had to put up; what do they generally consist of? Court-houses police buildings, post and telegraph offices, and gaols.
5073. *Mr. Waller.*] What is the highest class building for which you have prepared plans? For some contemplated additions to the Treasury, which would cost about £70,000; but they are not going to be carried out just now.
5074. Are plans commenced before it is decided whether the work is to be carried out? Yes. When we receive instructions to prepare plans, we are obliged to do so.
5075. Are you given any idea as to what amount is likely to be expended? We get instructions that a certain amount of accommodation is wanted, and of course we have to provide what is asked for.
5076. *Mr. Coyle.*] What was the nature of the instructions received for the additions to the Treasury? I have not got the papers. The plans were submitted to the Treasury, and were never returned to this office.
5077. Are there many instances in which plans are prepared for work that is never carried out? We do not very often have to prepare plans for such expensive building as that.
5078. *Mr. Waller.*] But for moderate sums, £10,000 and upwards? No, I do not think so.
5079. *Mr. Coyle.*] Have there been any plans prepared during the last ten years that have not been carried out? Yes, plenty of them.
5080. Can you give us a list of the principal ones? That comes under Mr. Cole's department. Here is a paper containing a list of plans that have been prepared. (*Paper produced*).
5081. When were the drawings for the Wagga gaol prepared? They were made during the year 1885.
5082. What was it intended to cost? £19,160.
5083. Has anything been done to that yet? No.
5084. When were the plans for the additions to the Treasury buildings prepared? They were finished about the 12th June, 1885.
5085. What was the estimated cost? About £74,000. The alterations consisted of the extension of the buildings along Macquarie-street, and an additional story on the old building.
5086. Are there many other plans in the same state as this? Not of large buildings of any importance.
5087. *Mr. Waller.*] What would be the cost of the completion of the Lands Office? I have nothing to do with that. Mr. Spencer could tell you. I could tell you if I had the plans with me.
5088. Have you a rough idea of it? The preparation of the plans has not been in my hands.
5089. *Mr. Coyle.*] Who has been in charge of that building? Mr. Kemp first, and Mr. Vicars afterwards.
5090. What are Mr. Cole's duties? He has general supervision over nearly all the country works, and under his special direction the draftsmen prepare the plans, and he is the responsible officer.
5091. For buildings of every description? Not for all buildings. He has special charge of lunatic asylums.
5092. Has Mr. Coles to prepare plans for all country buildings? Not for all. He is the head officer, and is responsible for the proper preparation of plans for the draftsmen.
5093. Has he got any particular district to look after? Most of the interior is under his care.
5094. And all the coastal districts are under some other officers? Yes.
5095. Have the draftsmen under them? No, Mr. Cook and his staff are under Mr. Coles.
5096. Is Mr. Coles inspecting architect? Yes, he comes next to the chief.
5097. Does he prepare any plans himself? No, he is not a draftsman. Of course he is able to draft, and he does prepare sketches.
5098. It appears to me that he is a sort of travelling inspector of buildings? No, he is not exactly that.
5099. *Mr. Mills.*] Does he pass the work and give the final certificates? Yes, and if any final inspection is to be made in connection with an important building Mr. Coles would inspect it.
5100. Does he travel about all over the district? He does periodically, but he is not what you might call a travelling inspector.
5101. *Mr. Coyle.*] Then what is he? Well, he is first Clerk of Works.

- Mr. L. Robertson.  
17 Jan., 1887.
5102. *Mr. Waller.*] Is he the Approver General of the plans; in what way would plans of the buildings in the interior come under him? He instructs the draftsmen to prepare them. These plans are submitted to Mr. Coles for approval, and he submits them for the final approval of the Colonial Architect.
5103. When he has done that what does he do? Every matter connected with the construction is referred to him for decision.
5104. Is that to decide disputes? Yes, disputes about any matters that may crop up. It was proposed at one time that Mr. Coles should be called Assistant Architect, and I think that that is his proper designation.
5105. Then Mr. Coles has no staff under him except one clerk? He has only one clerk immediately attached to him, and he takes charge of all his correspondence.
5106. What correspondence has he got? Most of the correspondence is conducted through the Chief; but of course any minor matters Mr. Coles is at liberty to act upon.
5107. Do the letters go from Mr. Coles or from the Chief? From Mr. Coles.
5108. Can you show us a letter book? He keeps no letter book. Most of the correspondence goes through the usual channel.
5109. Then what about that which does not go through the usual channel? Those letters are more in the shape of private notes.
5110. Are your duties those of draftsman? That is particularly my duty.
5111. Are you over a room? I have no one under my charge.
5112. Is Mr. Rumsey under you? No; he is what may be called the engineer of the establishment.
5113. Then have you a room to yourself, and prepare plans, and do the plans that you prepare come under the supervision of Mr. Coles? Yes, they do.
5114. Who prepares plans that do not come under the supervision of Mr. Coles? Mr. Spencer, Mr. Rumsey, and Mr. Colley.
5115. Are you kept constantly employed preparing plans and other matters? Sometimes I prepare specifications and make out estimates.
5116. Are there many of the plans that you have been preparing during the last five years that have not been adopted? Not many. I cannot speak from memory. I find I am able to answer your question now with reference to the cost of the Lands Office: its cost was £168,000.
5117. *Mr. Coyle.*] According to the list you have shown us, you are £178,000 worth of plans ahead of requirements? Yes.
5118. *Mr. Mills.*] Is it the system for certain of the clerks of works to be told off to study one particular class of buildings, so that they shall get proficient in that style? At present no particular person has any particular work set out for him.
5119. Do you not think it would be better that one man should study the designs for one particular class of buildings? Of course if a person confines himself to one particular thing he is more likely to become proficient. In the case of lunatic asylums, Mr. Coles always prepares plans for them.
5120. *Mr. Coyle.*] What special training has Mr. Coles had for preparing such buildings as gaols and lunatic asylums? Well, he has had over thirty years' experience in the office here; and if he had no previous training, I should think that was ample to qualify him.
5121. But of late years has not gaol and lunatic asylum building grown into a science? Yes, I am aware of that; but Mr. Coles has had the advantage of consulting with Dr. Manning, and those who have made a special study of asylums.
5122. Has Mr. Coles been to Europe since he has been in the office? No, not that I am aware of.
5123. Could you get us the drawings of the Bathurst gaol? Yes, I will get them for you.
5124. *Mr. Waller.*] Do you keep your plans rolled in the office? Yes, we do.
5125. Would it not be better if you were to keep them flat, as the Colonial Architect keeps his? Yes, perhaps it would be better.
5126. If you kept them flat in a fire-proof safe would they not last longer, and show less wear and tear? I think perhaps they would.
5127. *Mr. Mills.*] Is the Bathurst gaol the principal gaol for the whole of the western district? Yes.
5128. *Mr. Waller.*] Is it finished yet? No, there is about £20,000 to spend yet.
5129. Have you drawn plans for many of the minor court-houses? No, I cannot say I have.
5130. Have you drawn plans of the gaols or police quarters? I have drawn police quarters; but I have been connected with the lunatic asylums more than anything else.
5131. Which one? I had to prepare the details of the Callan Park Asylum.
5132. What do you mean by the details. Who prepared the plan? Mr. Edwards did; but in a large work like that there are constantly required many small drawings in the shape of details to instruct the contractor.
5133. What others have you prepared? The Treasury job took some time.
5134. How long would that take? I dare say it took something like three months.
5135. How long would it take to prepare the plans of the Bathurst gaol? Supposing everything was plain sailing, I do not think they could be prepared much under three months.
5136. *Mr. Mills.*] Do you think they could be done in three months? That I am doubtful about.

Mr. Archibald John Purdue examined:—

- Mr. A. J. Purdue.  
17 Jan., 1887.
5137. *Mr. Waller.*] Are you a clerk on the temporary staff? Yes.
5138. What are your duties? I have all kinds of work to do. I am Mr. Coles' secretary, and look after all his papers. I have charge of the contract plans and all the plans that are kept here for the public to use. I also have charge of the extra accounts, and various other work.
5139. What do you mean by extra accounts? Well, every paper that goes through Mr. Coles' hands I have to look after.
5140. Have you to make up the certificates for progress payment of all the buildings going through his hands? Yes, for all the country buildings with the exception of those in Mr. Linn's district. They come direct to Mr. Coles, and he deals with them.
5141. Then do all the progress and final certificates go through Mr. Coles for all country works? Yes.
5142. And most of the town work? And some of the town work.

5143. And before they go through Mr. Coles' hands, do they go through your hands? Yes.
5144. What do you do with them? I compare them with our foreman of works' accounts, and if I find any irregularity in the shape of sums charged I draw Mr. Coles' attention to it.
5145. Having done that, what does Mr. Coles do? He has to deal with the matters, and rectify any errors; he certifies to the accounts.
5146. *Mr. Coyle.*] Where does Mr. Coles get the certificates? From Mr. Barnet, through me.
5147. Taking the certificate for the Bathurst Gaol, who made that up? I did. When the reports come down, I gather the previous papers together, and put them all before Mr. Coles, who examines and initials them.
5148. Then does the officer at Bathurst send down the certificates to this office? Yes; and all the vouchers pass through me.
5149. *Mr. Waller.*] Do you know anything about the quantities in this particular case? No.
5150. But you know how to check quantities? Yes; I had four years' experience with contractors.
5151. I see a paper here, No. 86-391; now, I want to know what that paper refers to? I can tell you by going into the other room.
5152. Can you tell me where that paper has come from? I can give all the information referring to it by turning up the register book kept by Mr. Stack.
5153. But do you keep in your own room a book of records? Yes; I keep a record of all papers that come to Mr. Coles, and I can always tell where they come from.
5154. As a matter of fact, this paper has come into your hands, and what do you do with it? I find all the other papers dealing with the subject, and lay them before Mr. Coles to deal with.
5155. Would it not be better if your book gave the number of the letters as they are received by you, so that you would have no difficulty whatever in turning up the number, and finding all the information required? Perhaps it might be.
5156. I see a number "0451," what is that? That is the number of the paper you have in your hand.
5157. Well, I will ask you to turn up that paper in your book? I cannot find it by the number. If Mr. Coles asked me for the papers concerning that matter, I could turn them up.
5158. Do you not think it would be an advantage to enter in your book the original numbers of the papers as they come from other offices, together with the Colonial Architect's number, and a short *résumé* of what the paper contains? No; Mr. Coles writes his report, and it is sent into Mr. Stack's room.
5159. What do they do with it? They read it, and it contains the substance of what is required, and they write the letter upon that.
5160. Would any other clerk coming into your place to-morrow be able to take up your business without any difficulty? Yes; he could take up the clerical part of it. I have been here fifteen months, and it took me three months before I knew the run of the place.
5161. Do not you think it would be a simplification to adopt the suggestion I have made? The way you propose is the correct way, I admit.
5162. Do not you think a strange clerk coming into the office would get into the business much more quickly if you adopted that system? Yes; very likely he would.

Mr. Edmund S. V. Spencer examined:—

5163. *Mr. Waller.*] What is your position in this office? I was gazetted an assistant architect, but that arrangement seems to have fallen through. I am a clerk of works, though properly speaking assistant architect.
5164. What are your duties? I prepare plans. I have had the Post Office work, and I have had a number of suburban post-offices and lock-ups to attend to. Then I have had the Registrar-General's Office.
5165. The additions to the Registrar-General's Office cost how much? £4,900.
5166. *Mr. Mills.*] Is that a fire-proof building? Yes.
5167. *Mr. Waller.*] Had you the whole preparation and designing of the Post Office? It was already designed when I came into the office, that is, the original portion of it. At one time it was contemplated taking in more ground than the building at present occupies.
5168. Then what had you to do with it? I had to prepare specifications and working plans, also the details. It would be impossible for one man to do more than a limited portion of it. The whole of the outside portion had to be laid out, and new details given for it. The tower had also to be re-designed, for the reason that the dimensions had been altered; in fact everything required re-modelling; the interior is entirely different.
5169. So that it was like preparing new plans? Yes, the old plans were set aside.
5170. How much of the Post Office then did you prepare the plans of? I had the finishing trades under my hands; that is, the carpenters' works, the plasterers' works, and the fittings within the building. These were alterations which took time. We had to put up an additional story, and there were many alterations and additions which I cannot well specify.
5171. What would be the value of all the works you have had under your hands? Something like £200,000.
5172. How long have you been employed upon the Post Office work? Off and on, for something like twelve years.
5173. Has it pretty well taken up all your time? No, I have had other work to do. I am engaged now upon the Garden Palace gates.
5174. *Mr. Coyle.*] What is that entrance supposed to cost? About £900.
5175. When is it proposed to go on with the work? Well, it has not been gone on with on account of funds being rather low. Then I have had a band house in my hands also under preparation, and the Waverley Post and Telegraph Office.
5176. *Mr. Waller.*] Have you prepared many plans, and the work has stopped there, the buildings not having been gone on with? There are some at present under consideration, but I think there is a list of the works now in progress.
5177. How long will the buildings on that list take to complete? If we had nothing more in hand we would probably finish in three or four months, but we expect to be rushed with a lot of work very soon.
5178. Are there not a lot of plans prepared which are laid aside and never heard of again? Well, yes.

We

Mr. A. J. Purdue.

17 Jan., 1887.

Mr. E. S. V. Spencer.

17 Jan., 1887.

- Mr. E. S. V. Spencer. We prepared a plan of a library and art gallery, which was to be on the site of these buildings. The plans were prepared for the basement only, but the building was taken objection to on account of the cost. The total cost of the building would have been nearly a million pounds.
- 17 Jan., 1887. 5179. *Mr. Coyle.*] What was it to have included ultimately? A technological museum, a library, and an art gallery; the rooms in connection with all these, and general rooms for public meetings.
5180. How long is it since the department commenced to prepare those plans? About three years ago. The object was to start the building, so that it might be used for Centennial purposes.
5181. What time did the preparation of the designs take? Probably about two months. Only the basement portion of the building was prepared.
5182. *Mr. Waller.*] Do you think it a good system to have plans of buildings prepared before anything has been determined, either as to the site of such buildings or the amount of money which will be available for their erection? I think it is necessary to prepare a sketch plan.
5183. On what minute did you commence the preparation of the plans for this Garden Palace? It was at the instance of the late Sir Alexander Stuart. I think Mr. Barnet can produce the minute. Mr. Reid, who was then Minister for Education, I believe, instructed Mr. Barnet verbally, and that was how the design originated. Mr. Barnet prepared the design.
5184. *Mr. Coyle.*] Does not Mr. Barnet act under instructions from the Public Works Minister? Yes; but on this occasion the Minister for Works instructed him to place himself in communication with the Minister for Education.
5185. We understand that drawings were made of some contemplated additions to the Treasury? Those were not mine.
5186. What works have you prepared in the suburbs? Waverley and Paddington lock-up, and a lock-up at the foot of Wolloomooloo-street, in addition to plans of a great number of minor works, which are always being required, and for which plans and estimates have to be submitted. When an estimate is arrived at it is submitted to the Minister, and, if approved of, the work is carried out. These small jobs take up a great quantity of time, otherwise it might be possible for the general work to be done with greater celerity.
5187. Are there not a tremendous number of alterations and additions made to the different buildings? No, not that I know of. Occasionally there are alterations, but nothing to speak of.
5188. How long have you been in the Service. I entered it in February, 1867.
5189. Do you keep a time-book in this office? Yes.
5190. For this room only? Yes.
5191. How many have you in this room? Mr. Rigg, Mr. Doherty, Mr. Nevin, Mr. Baxter, and myself. Then I have the assistance of two foremen of works outside.
5192. Do the four draftsmen carry out your designs? Yes.
5193. Who initials the time-book? I look it over myself every day.
5194. You do not initial it? No, I have not done so.
5195. Would it not be better to initial it to show that you have looked over it? I have no doubt it would. Of course I am not always present to see that it is signed.
5196. In what way can you arrive at the cost of preparing plans of any one building? I suppose the usual method, 2½ per cent. upon the amount.

TUESDAY, 18 JANUARY, 1887.

Present:—

MR. T. F. WALLER, CHAIRMAN.

MR. J. Y. MILLS,

MR. J. E. FITZGERALD COYLE.

Mr. Edmund S. V. Spencer, further examined:—

- Mr. E. S. V. Spencer. 5197. *Mr. Waller.*] I understand you wish to make a correction of your evidence of yesterday? Yes; I estimated the cost of the proposed Art Gallery and Library at £1,000,000, but I understand from Mr. Barnet that it was to have been £400,000; then again, with regard to the works in connection with the Post Office, I wish to say that Mr. James Kay rendered very valuable assistance as foreman of works, and also at the new public offices which were under my charge. I do not think I enumerated half of the buildings which have come under my care. For instance, there were the Glebe Island Abattoirs, with the erection of extensive sheds, walls, and iron gates. Then the present iron gates at the Botanic Gardens are mine. The Newtown Court-house was under my charge.
- 18 Jan., 1887. 5198. Did you prepare the design for that? Mr. Barnet gave the suggestions for the design, and I carried it out. I had the assistance of Mr. Farrel as foreman of works. Then the Barrenjoey light-house, a work costing £12,000, was under my charge, and also the Seal Rocks light-house.
5199. *Mr. Coyle.*] Did you provide all fixtures and lanterns? We manufactured the lanterns. The lights are specified to be of a certain class, and the contractor has to provide them.
5200. What description of reflectors has the Barrenjoey light-house? It is a fixed light, and the Seal Rocks light is a revolving light.
5201. What was the cost of the reflecting apparatus? I think £2,000.
5202. Who supplied it? I forget the name of the firm, but those who supply the principal light-houses in Great Britain.
5203. Had the contractor to supply the apparatus? Yes; that is in the contract, and he takes all responsibility for its safety on the way out.
5204. Is there any person acting for the Government in London to look after these things? Yes; I believe the Agent-General performs that work, and if he requires professional assistance he is empowered to employ it.
5205. Did the Agent-General get these lanterns for the contractor? Well, the specification provides that the work shall be approved of by officers appointed by the Government.
5206. Has the apparatus for this light-house and for others been approved of by the Agent-General in London? Yes in each case. I have also undertaken the preparation of plans for a residence for the Director

- Director of the Botanic Gardens with the out-buildings, and also the Propagator's residence and plant-house. Then again the Newcastle Custom-house was carried out under my charge.
5207. Who did the Newcastle Post Office? I think that was Mr. Lewis. The design was prepared by Mr. Cook. I also designed the arcade of the Supreme Court with the cornice and parapet, also the porch at Government House with the tracery over the door. After that the Government House arcade, and the School of Industry was another building carried out under my charge.
5208. *Mr. Waller.*] Is the work you mention work performed between the years 1868 and 1886? Yes.
5209. When you describe the works as being under your charge, do we understand that you made out the designs for them in this office? Yes; the working plans.
5210. Was the outside supervision in your hands? Yes; but of course I had under me a foreman of works.
5211. Was he the man really on the spot? Yes; he should be there always.
5212. *Mr. Coyle.*] If it is considered necessary to have a foreman of works, do you consider it necessary to have him constantly on the works? I do.
5213. If it is a sufficiently large building to make it necessary to have a foreman of works, ought he to be always present? Undoubtedly, otherwise the work is not satisfactorily performed.
5214. Are you able to detect bad work after you have been absent from the work for a week? No; not as a rule.
5215. Slumming and scamping go on? Yes, they do.
5216. Can you tell us what work you are just now engaged upon? A sketch plan has been submitted to the Post Office showing a remodelling of the Postmaster-General's rooms and those connected with it.
5217. Are you drawing plans for it? Yes, I can show you the sketch plan.
5218. How much would be the cost of the alteration? Probably £1,500.
5219. Now who proposes these alterations? In this case the ideas were suggested by the Secretary of the Post Office, and then the matter is put together in a sketch. It is then submitted to Mr. Barnet for his approval.
5220. In all other buildings where designs have to be submitted, do we understand that you draw a sketch plan? Yes, of the general internal arrangements.
5221. Who prepared the plans of the Newtown Post Office? I made the sketch, and the young man who sat with me would take my ideas and put them into form. [*Sketch of Library and Art Gallery produced.*]
5222. *Mr. Waller.*] What was to be the cost did you say of this proposed building? £400,000.
5223. But was not the original plan estimated to cost a million? Well, Mr. Barnet said I was wrong in that. I think when I said a million I was rather over the mark.
5224. *Mr. Coyle.*] Was there any memorandum communicated to the Minister as to what the actual cost would be? There might be something of that kind; but I do not think the estimates were kept.
5225. *Mr. Waller.*] Then the revised plan was to be for £400,000? Yes.
5226. Was it carried out? No.
5227. Has any of it ever been carried out? No, it was thought that the amount was too great.
5228. Was any other plan drawn up by an outside architect? Not that I am aware of.
5229. Has there been any other design? There has been an art gallery designed. [*Plans of the Newtown Court-house produced.*]
5230. *Mr. Waller.*] Who designed that building? Mr. Barnet, and it was drawn according to his direction. Mr. Barnet revised the drawings.
5231. Did Mr. Barnet's revision reduce or increase the cost of the buildings? If anything it would reduce the cost. The first plan provided for large police quarters.
5232. What was the cost of that building? £10,900. The tender did not include the completion of the building; but afterwards it was considered advisable to complete it, and that brought the cost up to £12,500. There were additional fittings that would make it go up to nearly £13,000.
5233. Was that within the amount of money proposed to be expended upon the building? I think the amount of money voted in 1882 was £10,000. The police at present consider that the quarters provided for them at Newtown are not as convenient as they might be, because they are in the basement.
5234. How many policemen would live there? Three or four.
5235. What buildings do they occupy? They do not occupy this one.
5236. Why? Mr. Fosbery did not consider the accommodation was sufficient. The police like very large quarters, and the question is whether it is advisable to have the wives and families of policemen living at these buildings. That is a difference of opinion between Mr. Barnet and Mr. Fosbery.
5237. Do you know what building is at present occupied by the police; is it a Government building? Yes.
5238. At what distance from the court-house is it? It is on the other side of the road.
5239. Then what are the basement rooms used for? They are not occupied at all.
5240. What sort of quarters were they that were provided for the police? They were very good indeed. The rooms were lofty and well lighted.
5241. *Mr. Mills.*] What height were the rooms? About 12 feet 8 inches.
5242. *Mr. Waller.*] Are they partly beneath the ground? Yes; but the rooms are quite well lighted, and very cool. Mr. Fosbery, I believe, got some doctors to report that they were damp, and unfit for occupation; but that certainly is not the case.
5243. *Mr. Coyle.*] What number of prisoners would be in the building generally? I question whether they have had any there at all.
5244. *Mr. Waller.*] What is done with the building? Nothing is done with the basement floor. One room is used as a record room.
5245. What is done with the rest of the building? It is used as a court-house.
5246. How long would prisoners be kept there in any case? Not more than twenty-four hours.
5247. What accommodation have you made for prisoners? For about seventy.
5248. What is the accommodation for prisoners in the place now being used? There is only accommodation for nine at the outside. They may possibly use the new buildings now in cases of emergency.
5249. *Mr. Mills.*] How long has the building been finished? About nine months.
5250. *Mr. Waller.*] Does it not strike you as somewhat peculiar that a building costing £13,000 is found, when completed, to be so inadequate that the police, through their Inspector-General, decline to take it over? This building was not erected solely for the Inspector-General of Police.

- Mr. E. S. V. Spencer. 5251. But as regards the portion erected for the police? Well, it certainly is not strange when you consider the purposes for which the building was erected. If they had been erected for the accommodation of policemen and their families it would be a different thing.
- 18 Jan., 1887. 5252. *Mr. Mills.*] Who approved of the plan? The Inspector-General of Police is consulted; then, again, the magistrates who use the court must be consulted.
5253. *Mr. Waller.*] As a matter of fact, do you think that if a private individual were having such a building erected, he would not see that it suited his requirements before it was erected? If there are two or three persons with different views, you have to strike a mean between them.
5254. And has the Colonial Architect to receive the instructions of the stipendiary magistrates and the Inspector of Police? Yes.
5255. And who else have you got to please? No one else. There is another element, and that is the cost. We are obliged to limit the accommodation to the cost.
5256. *Mr. Mills.*] Did the Inspector-General of Police approve of these plans before the contract was made? Yes.
5257. And now he will not have the buildings? No.
5258. *Mr. Waller.*] Buildings having to be erected to please so many different people, the result being that they do not suit any, shows that there must be something wrong surely? It is not possible that you can satisfy the full demands of each party, they must make a compromise.
5259. Did the Inspector-General of Police agree to sacrifice his portion of the building? No; he has since made his objection. I cannot say that there was any agreement. The question is, is there to be a limit to the number of families dwelling in these houses? If there is to be a limit, then the accommodation for families had better be eliminated altogether.
5260. *Mr. Mills.*] Are there any baths connected with the building? No.
5261. For prisoners or anybody else? No; there are no bath-rooms; but one of the cells could be used for that purpose very easily.
5262. What are the cesspit arrangements about the building? We do not use them; we have tried earth closets. The waste water system is very complete.
5263. Do you find that one of the causes for the expensive sort of buildings that have to be put up is that members of Parliament wish to have certain designs carried out? I have not had much to do with country work; but there is no doubt that influence is exercised.
5264. Would it materially interfere with the drawing of a plan within circumscribed limits? It would change it to some extent.
5265. *Mr. Waller.*] Are there any other plans which are prepared in the Colonial Architect's Office, which are not carried out because of the cost of the buildings? Well, in every architect's office that is so. I am not aware of many cases of that sort. The only one I know of is the Public Library.
5266. When you prepare a sketch do you prepare it with a fixed notion as to the cost of the building? Yes, generally.
5267. Are you told what sum of money is to be expended? Not in all cases. In such a case as the Public Library the plan was commenced with an idea of giving accommodation for an exhibition building, and there was no actual estimate made. The first I did was to ascertain what accommodation was required.
5268. But as a rule are you told what amount of money has to be expended? Yes, we are. There is a singular instance of the difference between the estimated and the actual cost in the case of the Town Hall. The estimate was for £50,000, but I think the actual cost will be somewhere about £300,000.
5269. What work are you engaged on at the present time? There is a roof at present being tendered for for the north-west wing of the Post Office that will cost £1,500. We are also altering the first floor of the Postmaster-General's Department. We propose to make at the entrance a vestibule which will form a pleasing architectural feature of the building, and we also have to construct a grand staircase. Then another work that I have in hand is the plans of the gates of the Garden Palace, and no doubt we shall have a great quantity of work rushed in upon us in a short time.
5270. Will the work you have in hand take you about three months? To complete the Post Office and roof will take from six to nine months.
5271. What would be the cost of that? About £3,000.
5272. How long have you been upon that work? Probably a fortnight.
5273. Surely it will not take from six to nine months to do work entailing an expenditure of £3,000? It would take us that time to finish the work.
5274. Do you look after the outside work too? Yes, of course I do.
5275. And what would your officers be doing? They are preparing details. They have not a minute's spare time. We have also a requisition for an iron shutter for the Registrar-General's Office, and at the Post Office they want windows to keep out the dust.
5276. Is it necessary to draw plans for simple work like that? It is unless we do the work in a jerry way.
5277. I am not a professional man, but is there no way in which to avoid having so many different things to do after buildings are completed? In the case of the Registrar-General's Office the position of clerks was changed, and that necessitated a good many alterations.
5278. In point of fact the architect's design is utterly lost sight of after a certain time, is that true? To some extent the original idea is sometimes departed from, especially when the head of the department has a building before him, and is able to see that he can make an improvement.
5279. It is not everyone who can comprehend what a building is likely to be from the plan, would it not be cheaper and simpler to build a model at once and let them see that? Well, the Astronomer, Mr. Russell, had a model of a clock made.
5280. *Mr. Coyle.*] Supposing the Postmaster-General wants an alteration made, how does he set about it? They send in a requisition. That goes to the Minister for approval, and it comes back here with authority to prepare plans. There is a vote for repairs and additions to public buildings, which can be operated upon when necessary.
5281. I notice you have a minute-book here, which I presume is kept for the purpose of showing the work performed in the office? It is kept to show what work the officers are engaged in.
5282. Here is an entry, "Friday, 14th, Mr. Spencer inspecting at General Post Office, and Registrar-General's Office." Were you engaged upon any other work upon that date? Yes, I had to do some writing work in the office.

5283. What were the staff engaged in on that day? Mr. Rigg was engaged upon the iron-steps with prismatic lights to light and ventilate the basement of the General Post Office. Mr. Baxter was finishing the plan for fittings of stores, General Post Office, and drawing a chimney through the roof plan. Mr. Doherty was engaged upon details for iron-work in connection with the Garden Palace gates.
5284. How is it that is not shown in the book? Well, it ought to be entered daily, but when they have completed the work they generally enter it.
5285. Is that a good system? Supposing the diary had to be brought into court as evidence of the daily work performed, would that be sufficient evidence? Well, of course, seeing that they are engaged upon the same work without interruption it would be literally correct. If you are engaged for a week on particular work, and you put that down at the end of the week, that is the same as putting it down daily.
5286. I do not see that it is. Supposing while you were away someone put down that he had been engaged from the 19th to the 25th on certain work; and supposing that you knew for a certainty that he was not in the office on the 23rd? There is no question that it is better to enter work daily.
5287. For a book to represent facts ought it not really to be a strictly kept document? No doubt it would be better.
5288. Now, taking another item, "Saturday; Mr. Spencer engaged in inspecting post and telegraph office, Waverley, also at Hodgson's turner's shop. Mr. Rigg was engaged at the General Post Office details." What was the other work going on? Mr. Baxter was tracing the roof lights of the General Post Office, and also drawing in the chimneys.
5289. What were the other gentlemen doing? Mr. Nevin was drawing a fire-proof safe.
5290. What was he doing on the 14th? He was on the details for the tower of the Post Office and store-room at the top of the building. It has become necessary in consequence of shifting the store-room to the top to provide urinals and lavatories.
5291. Was that not provided for in the original plan? It was not supposed that that portion of the building would be used for the purposes of store-room.
5292. I do not see Mr. Nevin down here on Thursday, 13th. I see Mr. Spencer was inspecting the Registrar General's Office, reporting upon tenders for lock-up, and reporting on account of Mr. John Fry for a notice board. Now, what were the others doing? Mr. Rigg was engaged upon the details of the Post Office extension.
5293. Then there are three gentlemen not down at all. A great number of entries are missing from the book. I think this book ought to be kept more regularly, if it is kept at all? I admit it, but sometimes the gentlemen would be engaged upon a work up to within a few minutes to 5 o'clock before they were aware of the time, and they would then rush away, forgetting all about making the entries.
5294. Now, what is the arrangement in this branch about the payment of salaries? They are all monthly salaries.
5295. What is the system? At the beginning of each month—the first or second of the month, the different officers are paid by cheque.
5296. Who draws the cheques? Mr. Barnet.
5297. Who signs them? Mr. Barnet, and Mr. M'Shane counter-signs them.
5298. Who prepares the pay-sheets? They are prepared under Mr. M'Shane's superintendence.

Mr. W. E. Ellard, examined:—

5299. *Mr. Coyle.*] Do you produce the monthly pay-sheet? Yes.
5300. What is the amount paid in this room per month? Here is the pay-sheet, it shows each item. (*Pay-sheet produced.*)
5301. Who compiles this? I do.
5302. Are all the staff down here? Yes, all the permanent officers.
5303. By whom is this pay-sheet prepared? By Mr. Neale, the Accountant.
5304. Does he prepare it from his knowledge of the gentlemen in the office? From the previous sheet.
5305. Would he be advised of any gentlemen having left? Yes.
5306. Then how is the money paid? By cheque.
5307. Who certifies that the pay-sheet is correct? Mr. Barnet.
5308. Are these cheques drawn on the Treasury? Yes, the Treasury draws a lump sum, and Mr. Barnet draws the cheques.

Mr. Edmund S. V. Spencer, examination continued:—

5309. *Mr. Waller.*] With reference to the minute-book, is it kept for the purpose of showing how long any particular man has been on the job? Yes.
5310. Is any charge made against a particular vote for the different work done? No, it is not charged against the vote.
5311. *Mr. Coyle.*] Is it a direct charge on the revenue? Yes.
5312. *Mr. Waller.*] If one gentleman were this month on one piece of work you would not charge it to the vote? No, we would not. If we required extra outside assistance we should charge the salary of the gentleman employed against the vote.
5313. *Mr. Coyle.*] What furniture do you provide in this office? We provide all furniture when it is required and when requisitions are sent in.
5314. Supposing you wish to furnish the Post Office, how is it done? A requisition is sent in to Mr. Barnet by the Secretary for the Post Office. If the item is a small one it is approved of at once, but if it is above £5 we make an estimate and submit it to the Minister.
5315. Is there an annual contract for the furniture? Messrs. Hudson Brothers have the contract, and they provide furniture according to schedule rates. (*Schedule produced.*)
5316. What are the presses and book-cases that are supplied? They are the usual pieces of office furniture.
5317. And who prepares them? Mr. Wills.
5318. Then are the principal designs for the furniture prepared in this office? We prepared all designs for the Post Office fittings, but the ordinary furniture comes under the schedule.

Mr. E. S. V.  
Spencer.

18 Jan., 1887.

Mr. W. E.  
Ellard.

18 Jan., 1887.

Mr. E. S. V.  
Spencer.

18 Jan., 1887.

- Mr. E. S. V. Spencer. 5319. Do you prepare any designs for cedar couches? No, there is a description of them. All these items are prepared by Mr. Wills himself, or under his supervision.
- 18 Jan., 1887. 5320. In what particular office do they require cedar wardrobes? Well, they may be required at Government House, or by the Admiral.
5321. A schedule is prepared in this department? Yes.
5322. And tenders are called for the supply of these particular articles? Yes.
5323. What description of table is a cedar pedestal table? A table with only one pedestal in the centre, and a base supporting it upon runners. They would be used by the superior officers. I believe the Under Secretary, Mr. Critchett Walker, has one.
5324. Well, suppose they want a large quantity of furniture for the Post Office, who makes the application? Mr. Lambton, the Secretary, or some of his subordinates. They would send in a description of what they required, and that would be sent to Mr. Barnet. The estimate would be prepared, and it would be returned for the approval of the Postmaster General.
5325. Do they come to you, and then what do you do? We make an estimate, and if necessary a design. A great deal of the furniture consists of partitions and presses.
5326. After you have prepared the drawing what does Mr. Lambton do? He approves of it, and then it comes back to Mr. Barnet, who sends it up to the Minister to whose department it belongs. I think in the majority of cases the requisition comes through the Minister for Works. It would be approved of by the Minister for Works, and then come back through this office. Then we would call for tenders. If we wanted an article which is mentioned in the schedule we should obtain it directly from Hudson Brothers & Co., but if it was a large work we should obtain three or four tenders.
5327. Mr. Waller.] How do you apply for the tenders? We write to three or four persons and ask them to submit tenders.
5328. Do you advertise? If the article costs over £50 we would probably advertise.
5329. Mr. Coyle.] From what persons do you invite tenders? From persons who have previously given us satisfaction.
5330. Then it is entirely optional with the office? Yes.
5331. Are you bound to invite tenders in the public papers if the cost is over a certain amount? It is only for small works that we would ask for tenders from different firms.
5332. Is there any order upon that point? I do not think so.
5333. Mr. Waller.] Is it then Mr. Barnet's province if he likes to accept tenders without advertising? No.
5334. Mr. Coyle.] Why not? The Minister would send the tenders back again, which he has done occasionally, and tell us to call for public tenders.
5335. Mr. Waller.] Are all tenders, small or great submitted to the Minister before being accepted? Yes, they are in every case.
5336. To what Minister? To the Minister for Works.
5337. So that no tenders are accepted by Mr. Barnet without the Minister's sanction? No, nothing over £5. We are also engaged upon an alteration to the telegraph despatch room in George-street, lately occupied by the Money Order Office. The work consists of making an opening through a wall, removing and re-erecting counters and platforms, and increasing the light and ventilation in George-street. Another matter is the alteration of the receiving room. There is a vote to the extent of £200 for that. I produce a list of the tenders, which will show you how much per cent. is deducted by each firm. In the case of Hudson Brothers 25½ per cent. is deducted for furniture supply; Marshall and Company, plumbers, 56; Briscoe, 37½; Gorman, 38 per cent.
5338. Then is any office requiring furniture compelled to go to your department? Yes. The requisitions are sent to Mr. Wells, who is in charge of furniture.
5339. Supposing Mr. Whitton wants a revolving chair for his room, does he send here for it? Yes.
5340. Mr. Waller.] And who receives the accounts for this furniture? The accounts are sent in here, and the deductions are made before they are paid.
5341. But when the requisition is made of the furniture showing the amount that would be required, do you deduct the amount of the discount in the first place? I deduct it myself, and I think that is the rule.
5342. Does an account come in from the contractor for the full amount, and do you deduct the discount? Yes.
5343. How often are changes made in the schedule price? Every four or five years.
5344. Do you find that during the last four or five years prices have remained at about the same rate? No, they have gone down lately.
5345. Is furniture as dear now as it was four or five years ago? No.
5346. How much has it fallen? Something like 15 per cent.
5347. Do you not think that it has fallen 25 per cent? Perhaps it has.
5348. Consequently the schedule list made out four or five years ago with 25 per cent. allowed off would now not be anything like a fair allowance for discount? But then the contractors did not allow so much at that time.
5349. When was the 25 per cent. first allowed off? That is the largest percentage I have seen taken off for furniture.
5350. What was the usual percentage allowed before that? Last year 20 per cent. was allowed.
5351. Now, do you think it is a proper system to have a charge made for supplying articles of furniture with a large discount allowed, or would it be better for tenders to be given for the net amount in each case? I think it is better as it is.
5352. Why? Because in the other case they would have to tender for each individual item. They would put their price to each item, but they do not do so now.
5353. Was Hudson Brothers tender for furniture the lowest? Yes.
5354. How many tenders did you receive for furniture? I cannot say.

Mr. Edwin Colley examined:—

- Mr. E. Colley. 5355. Mr. Waller.] What is your position in the service? I am fourth clerk of works.
- 18 Jan., 1887. 5356. What do your duties consist of? Designing and carrying out public buildings, and general attention to a number of buildings, carrying on fortification works all over the colony—at Port Jackson, Botany, and Newcastle.] 5357.

Mr. E. Colley.

5357. Are there any works in progress? Yes, at Bare Island, and in Sydney Harbour.
5358. Are they fortifications? Yes. Mr. Purkis, I think, has charge of some of them.
5359. *Mr. Coyle*] What particular works are going on just now? There are some alterations going on at the suggestion of Major Penrose, at South Head.
5360. Is he a military officer? Yes.
5361. What does Major Penrose do in connection with the fortifications? He makes certain recommendations.
5362. Does he make out the working drawings of batteries? No.
5363. Who prepares them? We have had none since he came.
5364. What is the nature of the alterations being made now? At the South Head there is an opening at the rear of one of the large guns, which will give the men 7 feet of cover instead of 4.
5365. What will that particular alteration cost? About six or seven hundred pounds. There is another work of cutting an extra passage to connect with the magazine.
5366. What is the length of the passage? About 15 feet.
5367. What are the dimensions of it? About 4 feet wide and 6 feet high.
5368. What will the cost of that be? About 5s. a yard.
5369. Is that being done by day labour? No, contract work.
5370. Was the contract price 5s.? Yes, I can refer to the schedule. (*Schedule produced.*)
5371. Is this a tunnel? No.
5372. Have they carried out any tunnelling work? No. We did some tunnelling at George's Head, but we paid extra for it.
5373. So that what you have to do is in connection with the small alterations of the fortifications? They are not small.
5374. What other works have you in hand? We have to extend the walls and ditches at South Head, and finish off other work, so that there may be no concealment from the fort.
5375. How many men are employed at that work? Thirty-one.
5376. Are these men on wages? Yes.
5377. Then the work is not being done by contract? Yes, it is.
5378. You pay the contractor? Yes.
5379. What was the contract amount for that work? There is no lump sum.
5380. How much will it run into? About £5,800.
5381. What other works are there in hand? At Bare Island we are just now altering the machinery of a large gun, which would not go together. The platform upon which it works would not fit together. We have had several cases of that sort.
5382. Does any one look after the purchase of those things? I believe the Agent-General does.
5383. Have you had other cases of the same sort? Yes, at South Head.
5384. How long ago? Five or six years.
5385. Under whose notice was it brought? The artillery engineer.
5386. Will the people who supply the gun and platform be paid the full amount for it? I have not the slightest idea.
5387. Is it not the War Office authorities who select this ordnance at home? I do not know.
5388. *Mr. Waller*.] What works are you particularly engaged upon now? Fortifications, but there is not much doing in that way at present.
5389. Are you preparing any actual drawings? No, we do not require drawings for that work.
