It is not easy to explain why some rabbits should afford so much better a home for the growth of the bladder-worm than others; but the phenomenon is not one confined to the particular bladder-worm of the rabbit which we are considering, but has been shown to occur in the case of other bladder-worms. I will only mention here the bladder-worm of the armed tape-worm of man (*Tania solium*). This bladder-worm is found in the pig. It is of small size, and forms the so-called "measles" of pork. Haubner fed five young pigs with abundant ova of *Tania solium*. Of these, two remained quite free from infection, a third contained only forty or fifty measles, another several thousands, and the last one still more. Leuckart fed five young pigs with very numerous ova; each of them received at least a whole tape-worm, whilst some of them were fed two or three times. On dissection, after the lapse of various intervals of time, the number of measles which were found to have developed were said to be respectively a single one, a few hundreds, two or three thousand, several thousand, and twelve thousand. Even in the last instance, where the measles were the most numerous, only one per cent. of the eggs administered had developed.

3. Experiments on Carnivorous Animals with the Bladder-worm.

As I have already mentioned, the chief carnivorous animals which feed upon the rabbit in the Wairarapa are the dog, cat, ferret, and hawk; and of these it is the first three which were open to suspicion as bearers of the adult tape-worm of which the bladder-worm is the larval stage. I endeavoured therefore to ascertain by experiment whether the bladder-worm, if given to these animals, would live in them and develop into the corresponding tape-worm. Two young ferrets and a young cat were obtained and fed several times with bladder-worms, which they swallowed greedily. But in all three animals the attempt to rear the tape-worm failed.

Having already ascertained that the dogs in the district were often infested with tape-worm, it was still more desirable to try a similar experiment with dogs. It was undesirable, for obvious reasons, to do this with dogs from the district which might already contain tape-worms; and rabbits carrying bladder-worms were therefore taken up to Auckland, with the intention of experimenting there on dogs free from tape-worm. The diseased rabbits, however, died at sea, and it was found impossible to import more from the Wairarapa. At a later date I had succeeded in rearing the bladder-worms in a rabbit fed with the ova of a tape-worm found in dog in the district. Some of these bladder-worms were given to three dogs, the first two receiving each some three to four hundred heads, and the third two complete bladder-worms, each containing nearly three hundred heads. Of these three dogs, two developed the same kind of tape-worm, which agreed in its characters with the tape-worm found in the dogs in the Wairarapa, from the eggs of which the bladder-worm had been reared. To render the matter still more conclusive, proglottides of the tape-worm thus reared in the dogs were given to the rabbits, and in the majority of these the *Cœnurus* was developed.

4. Characters of the Tape-worm (*Tania serialis*) reared in the Dog.

The tape-worm thus reared in the dog's intestine from the *Cœnurus* of the rabbit has a long, narrow, flattened form (see Plate II, fig. 1). Its length may be from 16 in. to 24 in., though it may appear either longer or shorter, for the tissues of the body are contractile to a very high degree. It consists of a minute head, a somewhat narrower unjointed neck, and a series of joints or segments, which gradually increase both in length and width and their distance from the head-end increases. As the segments grow they develop the reproductive organs—a separate set for each segment—and eggs are formed and undergo their development, so that the last segments contain ripe eggs—i.e., eggs containing fully-formed embryos. The ripe segments drop off one by one at the hind end of the tape-worm, and pass out of the dog. These separate segments

segments are frequently known as proglottides. As the proglottides drop off behind, new segments are gradually separated in front from the neck, so that the tape-worm always has about the same number of joints, though it is constantly shedding proglottides behind.

The head of *Tenia serialis* is somewhat pear-shaped, when from the flatter surfaces (*i.e.*, the dorsal or ventral surfaces) (fig. 2, Plate II), tapering gradually behind to the narrowest part of the neck. Its extreme width is about $\frac{1}{2}$ in. (1mm.), but it must be borne in mind that the shape and dimensions are liable to variation with the state of contraction. As seen from in front it appears flattened in the same manner as the body, but not to anything like the same extent, its outline being rather oblong. (Plate II, fig. 3.) The head bears four suckers, of moderate size only, two on each side. They have the diameter of about 0.28mm. The extreme end of the head is armed with a crown of twenty-eight or thirty hooks arranged in two concentric circles, each circle having the same number of hooks, and with their roots imbedded in the rostellum, a circular disc of muscular tissue (0.29mm–0.32mm.) (Plate II, figs. 3 and 4.) The hooks of the inner circle (Plate II, fig. 12*b*) are the larger (0.145mm.–0.153mm.); those of the inner arc shorter and more strongly curved (0.096mm.–0.101mm.). Both suckers and hooks, of course, serve for the attachment of the head to the walls of the dog's intestine. The unjointed neck is about $\frac{1}{2}$ in. in length. The total number of segments or joints is from a hundred and fifty to a hundred and sixty. This number includes all. The first small and short joints can be distinguished in the neck with the aid of the microscope. The character of these first joints will be gathered from enlarged drawing (fig. 2, Plate II). Each joint in the tape-worm is in a slightly more advanced stage than the one in front of it, so that the whole series presents some hundred and fifty or more stages in the development of the segment.

In each segment a complete set of reproductive organs, both male and female, is present, the male maturing rather earlier than the female. It may be well to add here, as more or less distinctive characters of this tape-worm, that traces of the *vas deferens* appear about the sixtieth segment, but it is first distinct about section 70. The rudiment of the genital pouch appears on the average at segment 82. The numerous roundish testes are discoverable in segment 80, but are most distinct and definite in segments 91–100. The first branches of the uterus appear in segment 102, and by segment 115 the uterus-branches cover the whole of the genital area. In the following segments the eggs may be seen passing through the stages of their development, which it is unnecessary to describe here. The first appearance of the chitinous egg-shell is in segments 130–135. These segments of a tape-worm in which the uterus of a tape-worm has assumed its full number of branches are sometimes termed "ripe," and the number of ripe segments is used as a character in the discrimination of various forms of tape-worms. By other writers the term "ripe" is apparently restricted to those segments in which the eggs are fully developed, and contain a mature or nearly a mature eubryo within the thick chitinous egg-shell. As already observed, each joint is slightly more advanced than the one in front, so that there is a certain amount of difficulty in drawing the line between ripe and unripe segments. If we employ the term in its narrower sense we may say that *Tenia serialis* has about half a score, sometimes more and sometimes fewer, for the ripe joints do not appear to detach themselves very regularly, so that the same tape-worm may have at one time a larger and at another time a smaller number of ripe segments.

As the segments grow they change their form, for they increase more rapidly in length than in breadth. The details will be best understood by a reference to the illustration in Plate II, fig. 4. The last few segments are rather less than $\frac{1}{2}$ -in. in length (more exactly, 10mm.–12mm.).

The proglottides, when separated from the tape-worm, still retain the power of locomotion for a while. They leave the intestine of the dog, passing outward with the fæces, or sometimes independently. They possess great contractility, by means of which they crawl away and hide themselves under grass, sticks, or any shelter which may be available. If the ground be damp they may be able to crawl to the distance of a foot or more, but exposure to very dry air soon brings them to rest. I have frequently found them lying under the shelter of straws. They evidently recognise the value of shelter, for when the straws or similar objects are very scanty the proglottides may still be found under them. On several occasions I have seen the proglottides mount the blades of grass and remain attached there as they dried up. A striking difference is shown in the form of the proglottis whilst crawling, according to its state of contraction. These changes of form are shown in fig. 5, Plate II.

If a proglottis be placed on a plate of glass, and the trail left by it be examined under the microscope, it will be seen to be marked by vast numbers of eggs, which appeared to be squeezed out of the proglottis by its powerful contractions whilst crawling, and so are left behind. Indeed, I have examined proglottides in which almost all the eggs were thus lost whilst crawling, not more than a few score, and in one case only about a dozen, being left inside. It would seem to be a provision which secures a wider distribution of the eggs, and is a point of some importance in considering the possibilities of the natural infection of rabbits. The proglottides of the tape-worm were first obtained seven or eight weeks after administering the bladder-worm. If we allow fifty days as the time necessary for the growth of a hundred and fifty joints, we shall have the joints produced at the rate of three per day.

5. *Resemblance of Cœnurus of the Rabbit to the Cœnurus producing a Disease in Sheep. Evidence of its Distinctness.*

The only species of bladder-worm of the Cœnurus form—*i.e.*, one producing a large number of heads in connection with a single bladder—which is generally and definitely recognised, is the one known as *Cœnurus cerebralis*. This is found in the sheep, and receives its specific name of *cerebralis* from the fact that it is found in the brain. The tape-worm stage of the parasite is found in the dog. This parasite is, or used to be, exceedingly common in certain parts of Europe, and produced serious ravages in the flocks of sheep, and occasionally even in cattle. The disease it causes is known as "gid," or "sturdy." Leuckart states, on the authority of the famous stock-breeder Von Nathusius-Hundisberg, that a loss from this parasite amounting to 20 per cent. of the flocks was reduced to 1 and 2 per cent. by exercising the necessary supervision over the sheep-dogs.

Before we can discuss any proposal to use the Cœnurus of the rabbit as a remedy against the rabbit-pest, we must decide clearly and definitely whether the Cœnurus of the rabbit is identical with that of the sheep, or whether it is altogether distinct.

Cœnuri have been found not only in the sheep and rabbit, but also in several other animals. *Cœnurus cerebralis* is said to occur in the brain of the sheep, ox, mouflon, antelope (sp.), roebuck, reindeer, dromedary

dromedary (all of which are ruminants), and horse. Cœnuri have also been found outside of the brain in the rabbit, hare, a squirrel, jerboa, coypu, spalax (all rodents), a lemur, and once each in the sheep, calf, and cat. Sometimes these have been attributed to *C. cerebralis* and sometimes to distinct species.

The earliest mention of the Cœnurus of the rabbit is that by C. B. Rose, who, in a letter to the *London Medical Gazetteer*, 9th November, 1833, after speaking of *Cœnurus cerebralis*, stated that he had seen another Cœnurus in the muscles of the rabbit. He says, "When the warroner meets with a rabbit thus affected he punctures the tumour, squeezes out the fluid, and sends the animal to market with its brethren." As he could detect no difference in structure between this Cœnurus and the *Cœnurus cerebralis* of the sheep, he was unwilling to consider it a different species. In France the Cœnurus has been found in the rabbit by Gervais, Rousseau, Prince, Baillet, Bailly, and Davaine. In 1847 Gervais described a Cœnurus of the rabbit under the name of *Cœnurus serialis*, because the heads were arranged in series. A Cœnurus of the rabbit is preserved in the Oxford University Museum under the name of *C. cuniculi*, a name which was adopted by Cobbold. The name *C. serialis*, however, appears to have the right of priority. Baillet (1858) gave the Cœnurus of the rabbit to his dogs, in which he subsequently found a Tœnia, which he called *T. serialis*. He described the characters of the tape-worm; but they differed so slightly from those of *Tœnia cœnurus*—the tape-worm corresponding to the *Cœnurus cerebralis* of the sheep—that zoologists do not seem to have been in any way satisfied that the *Tœnia serialis* was a good and distinct species. The Cœnurus of the rabbit has also been found in Germany, and in Italy its occurrence is recorded by Perroncito.

It may, I think, be said that the existence of a second Cœnurus in the rabbit, which is distinct from the *Cœnurus cerebralis* of the sheep, has not yet been demonstrated. In support of this statement we may quote Küchenmeister and Zürn, who refer the Cœnurus found by Perroncito in the abdominal cavity of the rabbit to *Cœnurus cerebralis*.* Leuckart says, with reference to Cœnuri found outside the brain, that they may "in part, perhaps, represent distinct species." Moniez† refers to experiments of Perroncito (whose paper, I regret to say, I have been unable to procure) on rabbits and sheep with eggs of *Tœnia serialis*. The rabbits died accidentally a few days later, and were not dissected, and the sheep gave a negative result. Moniez was of opinion that further experiments were necessary before a definite conclusion could be arrived at. W. H. Jackson, in the most important text-book of zoology‡ recently published, says that *Cœnurus cerebralis* is "found most usually in the brain of the sheep, though sometimes in other parts of the body of this ruminant, as also of rodents." But on page 664 of the same work there is a footnote as follows:—"It is possible that there is more than one species of Cœnurus. The identity of the two forms occurring in the sheep and rabbit has not been established, and there are others known." Many other references might be given having the same purport, but the above will suffice.

I propose, therefore, to give here the evidence I have collected showing that the *Cœnurus serialis* of the rabbit is distinct from the *Cœnurus cerebralis* of the sheep. The evidence, from five sources, is arranged under as many heads:—

(a.) The *Cœnurus serialis* of the rabbit is abundant in many parts of the Wairarapa; but, so far as I could hear from the sheep inspectors and farmers, there is no trace of "gid" or "sturdy" amongst the sheep which feed on the same ground with the rabbits. Nor, indeed have I been able to hear of the existence of this sheep-disease in New Zealand. The freedom of the sheep from the Cœnuri, whilst the rabbits are so frequently attacked, is in itself the strongest presumptive evidence that the Cœnurus of the rabbit cannot develop in the sheep.

(b.) The Cœnurus of the sheep and other ruminants is confined to the brain, whilst that of the rabbit is found only in the muscles. It should be mentioned that Eichler found a Cœnurus about the size of a goose-egg in the subcutaneous tissue of a sheep. This, however, appears to be quite an exceptional occurrence.

(c.) Anatomical evidence is obtained from the structure of the Cœnuri of the rabbit and sheep respectively. The *Cœnurus serialis* of the rabbit has the heads arranged in linear groups, the arrangement in lines being specially marked in the less advanced stages, but still traceable in the oldest. Again, these series radiate from a centre. In the *Cœnurus cerebralis* the groups are not linear, and are arranged irregularly. Again, the *Cœnurus serialis* is remarkable for the formation of daughter-bladders by budding, both externally and internally; the *C. cerebralis* does not show this character, though it often has a more or less irregular outline.

(d.) Further anatomical evidence is obtained from the comparison of the tape-worm (*T. serialis*) reared from the rabbit's Cœnurus with *Tœnia cœnurus*. I have not been able to procure specimens of *Tœnia cœnurus*, but I take for the comparison the description given by Leuckart, who will be recognized by all zoologists as a sufficiently accurate authority. The characters of the *Tœnia serialis* are taken from my own examination of the tape-worms reared in dogs fed with the Cœnurus of the rabbit. At first sight the two tape-worms seem to be singularly alike; but careful measurements show a sufficient number of differences. As is well known, there is often considerable difficulty in distinguishing the different species of tape-worm, owing to such resemblances, so that the apparent similarity of the two now under consideration need not be deemed to prove their identity.

T. cœnurus is said to be 30cm.—40cm. (12in.—16in.) in length. I have found *T. serialis* 40cm.—60cm. long, and sometimes longer. *T. serialis* has not more than a hundred and fifty segments before the first ripe one, using the term "ripe" in its narrower sense (*v. supra*): *T. cœnurus* has nearly two hundred. The number of hooks in *T. serialis* is twenty-eight to thirty, more frequently thirty: in *T. cœnurus* it is usually twenty-eight, but varies from twenty-four to thirty-two. The larger hooks are smaller in *T. serialis* than in *T. cœnurus*, being 0.15 mm. long in the former and 0.16 mm. in the latter; the small hooks are much the same size in both, being from 0.096mm.—0.101mm in *T. serialis* and 0.1 in *T. cœnurus*. A comparison of the hooks of *T. serialis* (see plate II, fig. 12) with those of *T. cœnurus* (fig. 11, reproduced from Leuckart), shows that they differ both in curvature and in other minor points. In *T. serialis* the curved and pointed end is not so nearly in the same straight line with the posterior root of the hook, and there is a constriction near the base of the curved part. The points described as specially characteristic of the hooks of *T. cœnurus*—viz., the heart-shaped form of the anterior root of the large hook, and the slenderness of the posterior root of the small hook, are not characteristic of the corresponding parts in *T. serialis*. It must be mentioned, however, that the hooks show some variety in these minor points. The ripe segments appear

* "Parasiten des Menschen," 2te auflage, p. 59.

† "Essai Monographique sur les Cysticerques," 1880, p.

‡ "Form of Animal Life," Rolleston and Jackson, 1888, p. 323.

appear to be distinctly larger in *T. serialis*, and the uterus with its branches, covers a smaller proportion of the width of the segment than in *T. canurus*. (Compare fig. 10, Plate II, a segment of *T. canurus* magnified 10–15 diams., after Leuckart, with figs. 8 and 9, of segments of *T. serialis*, magnified $6\frac{1}{2}$ diams.)

The above points will be sufficient to show that anatomical differences do exist; but we cannot expect to find very wide differences between the two tape-worms, for the fact that both have larval forms of the *Cœnurus* type proves that they are closely allied, and may therefore be expected to show a general resemblance to one another.

(e.) The most conclusive evidence, however, is to be derived from feeding experiments on the sheep. If *T. serialis* is really identical with *T. canurus*, then the eggs of *T. serialis* should, when administered to a sheep, give rise to a bladder-worm in the brain, and produce the disease known as "gid."

Cœnurus cerebralis is more particularly found in young sheep. I obtained, therefore, the youngest sheep available at the time of the year, which was just before the lambing-season. The sheep must therefore have been ten to twelve months old. It received at different times some forty to fifty proglottides of tape-worms reared from the *C. serialis* of the rabbit—i.e., it must have received over a million eggs. Nevertheless the sheep showed no sign of "gid," and when finally dissected some three or four months later, showed no trace of bladder-worm in brain, muscles, or any other part of the body. A few months later another lamb, four or five months old, was obtained, and eggs of *T. serialis* were given to it. At the time of writing the lamb is still perfectly healthy. It appears to me that the evidence brought forward is amply sufficient to demonstrate that the *Cœnurus* of the rabbit is specifically distinct from that of the sheep.

6. *Smaller Bladder-worm of Rabbit (Cysticercus pisiformis).*

It will be desirable to make a brief reference here to this small bladder-worm, though it was only found by me twice in rabbits from the Wairarapa, and always in small numbers. But in wild rabbits captured in the Waikato for the purpose of experiments, this well known *Cysticercus* was almost always found—generally only from one to half a score specimens in a rabbit. One rabbit, however, formed a marked exception, for it contained over four hundred small cysts, of which over two hundred were counted on the great omentum. This bladder worm is round and about the size of a pea—hence its name of *pisiformis*. It is a very familiar form in Europe, and is the larval or cystic stage of *Tania serrata*, a tape-worm of the dog. I have found the tape-worm in dogs in the neighbourhood of Auckland.

The earlier stages in the development of the *Cysticercus pisiformis* are passed in the rabbit's liver; it then makes its way out of that organ, and after passing a certain time free in the abdominal cavity, it becomes encysted and attached to the peritoneum, especially that forming the great omentum and that covering the rectum. Whilst present in small numbers it causes very little injury to the rabbit, but there is reason to believe that when very large numbers develop simultaneously serious disturbance is produced in the liver. It must be seldom, however, that this parasite can, under conditions obtaining in nature, cause the death of a rabbit.

7. *Liver-coccidia of the Rabbit.*

I have already stated in my Interim Report that a considerable proportion of the rabbits examined by me in the North Wairarapa were more or less affected with a disease caused by minute animal parasites belonging to the group of Gregarinida, and known as Coccidia (*Coccidium oviforme*). It will be unnecessary for me to repeat here the description already given in a previous report.

The Coccidia undergo development in water or in moist places, the contents of each *Coccidium* breaking up and transforming into four oval spores. Each spore has a delicate membranous wall, and contains a curved rod-like body, with thickened ends, whilst against the concavity of the curve rests a round granular mass, which, with osmic acid and picrocarmine, stains more deeply than the rod-like body. The rod-like body is believed to be the true germ.

So far as I am aware, no experiments have been hitherto recorded to show in what form the liver-coccidia enter the rabbit. From experiments of Waldenburg on the *Coccidium perforans* (Leuckart) of the intestine of the rabbit (a species distinct from the liver-coccidia) it seems probable that the spores in the condition just described are capable of developing further when given to a rabbit. Three rabbits obtained from the Waikato, where the disease is not known, were fed with large numbers of Coccidia which had been kept in water until the spores were formed as above described. When the rabbits were dissected several weeks later all were found with perfectly sound livers. This result must, however, be considered as purely negative evidence; the experiment may have failed because the rabbits were unsuitable subjects. I should have preferred to experiment with younger rabbits; but it was winter time, and the youngest rabbits available were some eight months old.

Want of material has prevented me from investigating the matter further, but this is of the less importance because the disease, though frequently fatal to rabbits, is not one which could be recommended for the object now in view, as it has been known to affect human beings.

8. *Disease due to Scab or Louse-mites and Lice.*

Two external parasites were found in the rabbits in the Wairarapa—namely the scab or louse-mite and a kind of louse. As these are readily distributed by the contact of the rabbits in their burrows, they are not uncommonly found together on the same animal. The scab or louse-mite is a minute species of mite, just visible to the naked eye. I have not been able to find any description of this species in the books available in Auckland, but it is probably a species of *Symbrites*. It is clear, however, that it does not burrow into the skin like the true itch-mites, but lives upon the surface. This mite is therefore distinct from the true itch-mite (the *Sarcoptes cati* of Hering and Gerlach, or *S. cuniculi* of Gerlach, or *S. minor* of Furstenberg) found on the cat and rabbit, which burrows in the skin and causes a much more formidable injury. The *Sarcoptes minor* is not uncommon on the Continent of Europe, and is especially destructive to cats in the larger towns. The intensity of the malady produced varies from time to time, sometimes causing very severe epidemics. The mite found on the Wairarapa rabbits, confining its attacks to the surface, seems to be comparatively harmless, though all the rabbits which have any large number of the mites show scabby spots.

The

The rabbit-louse (*Haematopinus ventricosus*) is a much larger animal than the mite, being readily seen by the naked eye. Sometimes it is found in considerable numbers. It may be seen with its beak buried in the skin, whilst its abdomen becomes round and distended with the dark-coloured blood it has sucked up. In a majority of the rabbits seen by me in the Wairarapa I found a larger or smaller number of either lice or mites, or both. As a rule, the number of parasites was small, and the injury done to the rabbit was insignificant. A few of the rabbits carried greater numbers, and these were marked by scabby patches. Mr. Orbell states that he has found rabbits showing scabby symptoms of a similar kind, but in a much higher degree, with the hair falling off over large areas of skin. Some of the rabbiters, too, state that they have found rabbits largely denuded of hair, and with scabby patches, and so thin as not to be able to run more than a few yards at a time. More recently the same mite has been noticed by Agent H. Hull in Southland. On the Sunnyside Station a diseased rabbit was dug out of a burrow; the skin showed scabby patches outside and dark spots inside, and it adhered to the flesh. Mites were discovered by the aid of a lens, and some of these were afterwards identified by me as belonging to the species found in the Wairarapa. It is not improbable that a rabbit may occasionally succumb to these parasites; but I am of opinion that the combined effects of the mites and lice are seldom so serious as to lead to the death of the rabbit.

III. VALUE OF THE DISEASES AS A MEANS OF DEALING WITH THE RABBIT-PEST.

1. *General Conditions.*

Any disease, to be suitable for this purpose, must fulfil the following conditions: (1) It must be sufficiently destructive to rabbits; (2) It must not be injurious to man or any of the animals useful to man.

When we know that these conditions are satisfied we have still to consider the economical aspects of the question—i.e., whether the good effected would be commensurate with the cost of the employment of the disease; for, be it observed, what is really required is a cheaper means of destroying rabbits than the customary poisoning, rabbiting, &c. Of the five parasitic diseases found in the rabbits in the Wairarapa only two cause a disease of such intensity as to at all satisfy the first of the above conditions; the other three seldom cause death to the rabbits. The two parasites which concern us here are the bladder-worm and the liver coccidia.

Before discussing to what extent the two diseases are valuable, it may be well to observe that evidence of the injurious effects of a disease may be adduced from the following considerations: (a) The disease may be shown to be more or less widely prevalent. It is clear that it is not enough that a disease should have an intensive character and have the power of causing death; it is also essential for our purpose that it should affect a large proportion of the rabbits in the district. (b) The intensive or destructive character of the disease may be shown by the fact that rabbits are found dead or clearly suffering a serious amount of injury from the presence of the parasite. (c) The character and power of the parasite may be gathered from the results of experiments on rabbits in the laboratory. But here we must bear in mind that the conditions in the laboratory are not quite the same as those in nature; the mere confinement of rabbits in hutches introduces a condition very different from that of the full freedom of the wild rabbit. Nevertheless, the detailed knowledge of the natural history of the parasites will give us a fuller knowledge, and enable us to form a sound judgment on many points which it is difficult to observe in animals in a state of freedom.

2. *The Bladder-worm.*

A comparatively small proportion of the rabbits examined by me in the Wairarapa were affected by the bladder-worm—not more than 5 per cent. The rabbiters, however, state that it is no uncommon thing to find 20 per cent. of the rabbits with one or more bladder-worms. The men would only notice the advanced stages of the disease, so that a larger percentage of the rabbits may really be affected. But it is important to notice that this does not apply simultaneously to the whole of the Wairarapa district. There is a great deal of difference in the prevalence of the disease in different localities, and even in the same locality the disease may be common at one time and scarce at another. In one instance during my visit four out of six rabbits shot in one day were found to contain bladder-worms. It should be observed, however, that the time of my visit—shortly after the close of some months of dry summer weather—was not the time at which we should expect to find the greatest number of rabbits affected with the disease. The rabbiters, too, at the Dry River Run and elsewhere, I found, were in the habit of giving their dogs medicine to expel their tapeworm—a measure calculated to reduce the prevalence of the disease.

I could not obtain any positive evidence that rabbits are ever found lying dead on the ground, or in a dying condition, from the disease. The rabbiters state that they sometimes find rabbits lying dead on the ground, but the hawks have always been at them, so that it is too late to find out what the cause of death may have been. I was able to observe for myself the great number of hawks in the district, and their activity in attacking rabbits caught in traps or lying on the ground. We must remember further that many of the rabbits will probably die in their burrows.

Most of the affected rabbits obtained by me in the Wairarapa contained only a single bladder; some had two, and in one instance I found three. The rabbits were for the most part still in moderately good condition, but not equal in this respect to their brethren free from the bladder-worm. When we remember that the parasite frequently attains the size of a fowl's egg, weighing, with the included fluid, 1½ oz. to 2 oz., and occasionally reaches double the size, we can see that even a single specimen must, to some extent at least, act as a drain on the strength of its host, whilst two or three or more will have a still greater effect. The addition of some ounces of weight to a rabbit means a tax on its powers, and must hinder it in escaping from its enemies, especially if the parasites are in a position in which their bulk interferes with the rabbit's power of locomotion. That even a single bladder-worm weakens a rabbit is shown by the fact that I have not been able to have any infected rabbits brought alive from the Wairarapa to Auckland, all having died on the voyage, though other rabbits, free from the parasite and sent at the same time, have arrived safely. Still, though a single bladder-worm weakens a rabbit, it is clear that the rabbit may live a very long time notwithstanding the presence of a bladder-worm, and even of two or more.

We may now with advantage consider the results obtained with rabbits artificially infected with the bladder-worm. It may be well for me to state that in order that my results may more fairly be taken as a basis in estimating the effects of the disease on rabbits in a state of nature, I endeavoured to keep the rabbits under conditions approaching the natural ones.

I have found that when the rabbits are fed with large quantities of eggs some of them may die within the first two or three weeks. These are the rabbits in which the largest proportion of the eggs develop. But the number of bladder-worms developed is by no means simply proportional to the number of eggs which a rabbit swallows, but depends far more on its constitutional power of resistance. Even in cases where the greatest number of bladder-worms have appeared, and the rabbits have died at an early stage of the disease, the number of parasites present did not correspond to more than about 1 per cent. of the eggs administered. Usually the percentage of eggs which developed was far lower, and over 30 per cent. of the rabbits failed to take the disease at all, though some of them were fed several times with the tape-worm eggs.

The development of the bladder-worm is, as we have seen, slow; so that if a rabbit contains only a small number of bladder-worms it may live a considerable time. But as the bladder-worms grow older they become larger and larger, and so, of course, the ill effects of their presence become more marked. One of my experimental rabbits died at a date which was 104 days after the first infection with one proglottis, and forty days after a second infection with two proglottides. It was found to contain twenty bladder-worms. Most of these dated from the first infection, three from the second infection. The largest bladder-worm was $1\frac{1}{2}$ in. long by 1 in. in width; most of the others were about 1 in. in length. Another rabbit died at the same stage of the disease from the presence of seven bladder-worms. A third died forty-eight days after infection, and contained seventeen bladder-worms, the largest being $\frac{3}{4}$ in. in length.

Avoiding unnecessary details, we may say that the effect of a single bladder-worm will, as a rule, hardly be shown during the first three or four months, but that afterwards, as it continues to increase in size, it may be a source of weakness to the rabbit; but I have not been able to find any evidence that a rabbit affected with a single bladder-worm only might not live till death came to it from some other natural cause. But with the increase of the number of parasites the tax on the strength of the rabbit becomes greater than it can bear, and it succumbs to the burden, sometimes directly, sometimes indirectly, being brought into a low and weak condition, in which it readily falls a victim to other adverse influences, such as weather, scarcity of food, or enemies.

We must add, however, that the bladder-worm sometimes settles in a position in which its mere presence is more than an inconvenience, and interferes with some of the essential functions of life. The bladder-worms, as commonly found in the muscles of the limbs or trunk, are in a position in which they do not interfere with other organs; but I have seen them in a good number of instances in positions where they must have been distinctly hurtful. Thus, I have several times found them in the muscles moving the eyeball, producing displacement of the eye. In one case a bladder-worm was growing in the tongue, and by producing a swelling at its base had rendered it difficult for the rabbit to swallow. In another instance a group of tape-worms was found on the outside of the jaw. Their pressure had caused absorption and perforation of the jaw-bone, and subsequently the weakened bone had been broken. Again, I have found the bladder-worm pressing on the larynx and windpipe. In three cases they were present in the muscular walls of the heart; in one of these the bladder-worm was nearly the size of a marble, and was already developing the head-sacs of the future tape-worms; but at this stage the rabbit had died. In one instance I found a large bladder-worm in the diaphragm, one half projecting into the cavity of the chest and pressing on the lungs, the other half projecting into the cavity of the abdomen and displacing the liver.

We have already seen that the rabbits in the Wairarapa are usually found with only a single bladder-worm, and that this was the largest number found by me. We have also seen that the presence of a single bladder-worm, though more or less injurious, will seldom be fatal to a rabbit. We are therefore naturally led to inquire whether rabbits in a state of nature are frequently infested by a larger number of the parasites. The rabbiters state that they have observed rabbits with more than three bladder-worms, and it is possible that the scarcity of such observation is due to the parasites causing the death of the rabbits at a relatively early stage before their size would attract an unskilled eye. An examination of the conditions for the spread of infection will aid us at this point of our inquiry. The infection is due to rabbits swallowing the eggs of a tape-worm with their food. These tape-worms live in the intestines of the dog, and produce proglottides containing the eggs. When the proglottides are ripe—*i.e.*, contain eggs with embryos, ready to cause the infection—they drop off from the tape-worm and pass out of the dog. I have calculated that each tape-worm may produce three proglottides a day. An estimate of the bulk of the uterus and its branches gives the result that each proglottide will contain a bulk of 0.745mm. of eggs. I am indebted to my colleague, Professor Aldis, for the mathematical calculation of the quantity of eggs of the given size and form which would fit into one cubic millimetre. From these data I estimate that an average proglottide will contain about thirty thousand eggs. Now, a single dog may harbour from one to forty or more tape-worms. Allowing that a dog contains ten only, it will distribute thirty proglottides a day, each containing thirty thousand eggs—*i.e.*, it will distribute nine hundred thousand eggs. If we could insure that all the eggs should reach the race of rabbits and develop within them, there would be no further trouble with the rabbit question. But we cannot do this, and the chances are immensely against any particular egg reaching a rabbit; and if it does reach a rabbit the chances are a hundred to one against its developing there. In my experiments I could, of course, secure the proglottides, and insure that a rabbit should swallow as large a number of eggs as I pleased. In nature the proglottides are usually distributed with the droppings of the dog. If the weather is dry and the droppings fall in a dry place the proglottides cannot move away. But if the weather be wet, or, at least, the ground is moist, the proglottides crawl away and hide themselves in the grass, or sometimes climb up the stalks. As the proglottides crawl along, the eggs are squeezed out and smeared over the ground. If rain comes, or the spot be marshy, water may further distribute the eggs. If the eggs are in a moist place they retain their vitality for some days: I have infected a rabbit with eggs which had been kept in water for seventeen days. It is not necessary that the eggs should be actually in water—all that is needful is that the air around should be saturated with moisture. Hence the eggs will keep good during the cooler part of the year so long as the surface of the ground is moist; but exposure to a current of dry air or to the full rays of a hot sun is quite sufficient to destroy their vitality. It will be seen, therefore, that the chances of infection during hot, dry summer weather are but small unless the proglottides are deposited in the neighbourhood of springs or on marshy places. Moreover, at all times of the year the chance of infection is greatest on moist ground, though in broken country, where the hill-tops are quite dry, the presence of moist patches of ground on the hill-sides and in the gullies is sufficient to allow the spread of the infection to a certain extent.

The

The spread of the eggs by the proglottides, whilst it may favour the extent of prevalence of the bladder-worm, is less favourable to the occurrence of cases of infection by large numbers of the parasites. Sometimes, however, the proglottides retain a considerable number of eggs within them, and a rabbit may, by eating a whole proglottide, incur the risk of multiple infection. I have seen that rabbits will eat the proglottides attached to grass or green food. Of the nine hundred thousand eggs which may be distributed by a dog in a day, but a small proportion will be picked up by rabbits whilst they still retain their vitality. And even after they have got so far as the rabbit's stomach their dangers are not at an end. Some will have insufficient vitality to resist the digestive action of the rabbit's gastric juice; others will fail in boring their way through the walls of the stomach. Of those which succeed in passing from the interior of the stomach many will go astray in various parts of the body, only a small number securely establishing themselves in the muscles of the rabbit. Even then the tissues have a certain power of resistance, and the bladder-worm may die at various stages. The power of resistance in some rabbits, especially older ones, is so great that some individuals enjoy a complete immunity. No wonder, then, that so great a fertility on the part of the tape-worm is necessary in order to contend with the great risks to which the continuance of the race is exposed.

It will be readily understood that where the conditions for the spread of the disease are more than usually favourable the immense fertility of the tape-worm permits (within certain limits) a greatly-increased prevalence. The bladder-worm disease, like so many parasitic diseases, is eminently liable to variation, and, if the conditions are favourable, considerable epidemics are likely to occur. But such epidemics, though they may depend on causes having a wider influence, such as the character of the weather in any particular season, will, as a rule, be due to circumstances which have a local extent only. Hence the epidemics will not be experienced in equal measure throughout a whole district, but only in those localities where there is a recurrence of the favourable conditions. For a hot and dry climate like that of the greater part of Australia the disease would be of far less value than in the moist climate of New Zealand.

To what extent, it will be asked, can the prevalence or severity be increased? The only means which can be adopted to secure the maximum destruction by the disease is to increase the chances of rabbits swallowing the tape-worm eggs. We must keep as many tape-worms as possible in the neighbourhood—that is, we must make sure that each dog carries his due complement of tape-worms, and we must see, further, that the dogs pass frequently over ground where the rabbits feed. It would be useless, of course, to keep the dogs chained up at home. The rabbitter's pack of dogs will obviously be the most suitable for the purpose, though any dogs will do which are kept under supervision. It will not do to liberate dogs to run wild and keep down the rabbits, as has been done in the case of cats, ferrets, &c., for dogs would quickly learn to attack the sheep.

The disease, of course, can be encouraged largely, though not indefinitely, by increasing the number of dogs in the neighbourhood; but here the question of cost and other practical matters demand consideration. The rabbitter's dogs and any other dogs already kept could, of course, be employed to disseminate the disease without incurring any special expense (always supposing the dogs do not suffer—a point to be considered later on). But these dogs have already been unconsciously used in the way indicated, and, though some of them have had their power of distribution restrained by medicine to cure the tape-worm, it will, I believe, be necessary to increase the number of dogs to secure any much greater prevalence of the disease. With the increase of the dogs expenses will arise, though it will clearly be desirable to use the dogs for rabbitting also. If the dogs are not made useful in other ways, I doubt if the results they produce in disseminating the bladder-worm disease would, as a rule, be commensurate with the cost of maintaining and supervising them.

We have seen above that the bladder-worm that we are now considering has been found in various parts of Europe, and we are therefore naturally led to ask, what are its effects there? Has it been found to cause any destructive epidemic among rabbits? I have not been able in the literature of the subject to find any statement of any serious epidemic of the kind, and, though the disease has been long and firmly established in various parts of Europe, I do not find any record of its occurring anywhere so commonly as it appears to have done in the Wairarapa.

The greater prevalence which the bladder-worm has shown in the Wairarapa is probably due in part to the moisture of the climate during a considerable portion of the year, in part to the abundance of both rabbits and dogs, many of which are used chiefly or entirely for rabbitting, and are allowed to feed upon uncooked rabbits, and so are generally infested with the tape-worm. In England the rabbit is valuable for the market; in the rabbit districts in New Zealand it is at best looked upon as food for dogs. There can be no doubt that the disease has been introduced in the Wairarapa from Europe, and probably England, where it has been found in Norfolkshire, near Oxford, and in Ayrshire. It is most probable that the disease has been brought by a dog infested with *Tania serialis*.

In the "Transactions of the New Zealand Institute," Vol. xx., p. 457, will be found a statement by Sir J. Hector "that in America he had seen large tracts of country cleared of rabbits in a few months by the propagation of this disease"—namely, bladder-worm. In the absence of detailed evidence, I think it highly doubtful whether the disease which is said almost to exterminate the Canadian rabbit (not the same species as the English rabbit) is due to a bladder-worm. The statements made by Mr. C. N. Bell, of Winnipeg, do not bear out any such idea. The two known bladder-worms of the rabbit (the *Cœnurus serialis* and *Cysticercus pisiformis*) are most certainly not likely to effect such sweeping destruction. Although known so long in Europe, nothing of the kind has ever been observed there.

It may be asked why the *Cœnurus* is more injurious to rabbits than a good many other bladder-worms are to their hosts. The injury is partly due to the size which this bladder-worm attains and partly to the positions it sometimes occupies. The *Cysticercus pisiformis*, the other bladder-worm of the rabbit, is of very much smaller size, and I have found over four hundred examples in a single rabbit, which was not obviously suffering from its load of parasites. But a single *Cœnurus* may have a bulk greater than two hundred of the *Cysticercus pisiformis*, and the latter, though they may create a good deal of disturbance in their early development in the liver, subsequently settle in a position in which their presence does little harm. We are, however, acquainted with bladder-worms which do create injurious epidemics in other animals—for instance, the other species of *Cœnurus* (*C. cerebralis*), which formerly caused serious losses amongst flocks of sheep. This bladder-worm was probably more hurtful than the *Cœnurus* of the rabbit, for it occurred in the brain, an organ specially susceptible to injury. The Echinococcus, or hydatid of

man

man and some of the domestic animals, is also an example of a large form of bladder-worm, causing severe injury to its host. As is well known, it is very prevalent in the Colony of Victoria, and is often fatal to human life.

Second Condition.—The disease must not be injurious to man or any of the animals useful to man. The best evidence showing that the bladder-worm satisfies this condition is that, although from time to time it has been so common in the Wairarapa, yet the stock feeding on the same ground have never suffered. The *Cœnurus* of the rabbit, however, bears a certain resemblance to the *Cœnurus* producing a disease in the sheep, and I have therefore taken considerable trouble to find out whether the two species are distinct or not. The results are detailed above (II., 5), and the evidence there given shows that the *Cœnurus* of the rabbit is distinct from that of the sheep, and that sheep fed with the eggs of the *Tenia serialis* remain free from bladder-worm.

There remains, however, one point to consider, and that is, what is the effect of the tape-worm on the dog? Do the dogs suffer when harbouring the tape-worm? I do not think they suffer to any serious extent: the dogs which I have seen as hosts of the tape-worm have been in apparent good health. Of course, the parasites require to be fed, and the dogs may be a little thinner and consume rather more food than they would otherwise do; but if at any time a dog seems to suffer from its parasites it will be easy to secure a little rest for it by administering a dose of medicine to expel the whole or a portion of the tape-worms. In some animals, it is true, the presence of tape-worms is distinctly injurious—as, for instance, the *Tenia expansa*, which I have found in New Zealand on several occasions, as a cause of debility in lambs. On the other hand, dogs seem to suffer less from their tape-worms, of which no fewer than eleven species are recorded, some being of very common occurrence. The natives of Abyssinia are almost without exception infested by the unarmed human tape-worm (*Tenia mediocanellata*). So far from regarding this as a cause of weakness or disease, they say that in many ways its presence exercises a beneficial influence on the health and if they have the misfortune to lose their parasite they take measures to obtain another.

3. Value of the Liver-coccidia.

Although the disease caused by the liver-coccidia does not satisfy the second of our conditions—namely, that the disease must not be injurious to man or any of the animals useful to man—it will be necessary to refer to it here, because it is a disease capable of inflicting serious injury on rabbits, and has, I believe, been operative in some degree in reducing the rabbit-pest in the Wairarapa. I have not had the opportunities of acquiring sufficiently ample data to enable me to decide to what degree it has been operative, but I found the coccidia present in a larger percentage of rabbits than the bladder-worm. Near Masterton, out of nineteen rabbits dissected in one morning, eleven of them were affected by this disease, and five of them badly. I may add here evidence from other sources as to the destructiveness of the disease. A few years ago, whilst investigating the natural history of the liver-fluke for the Royal Agricultural Society of England, I paid some attention to the parasitic diseases of rabbits. The rabbits in certain localities near Oxford had, after a series of wet seasons, been greatly reduced in numbers, and were found lying about dead on the ground. Some of these were brought to me for examination. One of them proved to have been killed by the liver-fluke; in another the liver was extensively invaded by the coccidia, which had been the cause of death.

Leuckart says of the liver-coccidia of the rabbit that the disease is endemic in many warrens, so that scarcely a sound rabbit is found. "As soon as the disease reaches a considerable development, the rabbits are constantly seen to perish. After passing, perhaps, a few weeks in a sickly condition, they become very thin, lose the desire to eat and their former activity, begin to breathe more quickly and violently, and die at last in convulsions."

The disease has been found in man on at least four occasions; in one case it was the cause of death. On this account the artificial encouragement of the disease could not be advocated. Nevertheless, the disease has been introduced into the district, and it would be a difficult matter to stamp it out if it were desired. It seems not improbable that it will develop further, and, whether we wish it or not, may prove the cause of death to a certain proportion of rabbits. Men, however, are very seldom exposed to the risk of infection with the liver-coccidia, and that only where uncleanly habits prevail; so that their presence in the district threatens little danger to human life.

4. Possibilities of Destruction of Rabbits by Parasitic Disease.

Surprise is often expressed at the rapid rate of increase of rabbits in Australasia. This is not to be attributed to the greater fecundity of the rabbit here, but rather to the absence of those checks upon its naturally rapid increase which operate in keeping down the rabbits in other parts of the world. Every living being in a state of nature is subject to an active or passive struggle for existence. It constantly endeavours to increase its kind and extend its area, whilst it meets with various adverse influences or checks to its increase, against which it may be said to struggle. Even in Europe the rabbit sometimes increases to such an extent as to become a nuisance; but there the checks to its increase are much greater.

These checks may be grouped as follows: (1) Action of man; (2) scarcity of food (this is chiefly due to climate, for there are few of the herbivorous animals who can compete with a rabbit); (3) destruction by carnivorous animals; (4) effects of climate, both direct and indirect; (5) parasitic diseases. It must be admitted that in New Zealand, where population is scanty, the climate mild and generally favourable, where there are large areas of natural grasses and no indigenous carnivorous animals to prey on the rabbits, and no indigenous parasitic diseases to thin their numbers, that the rabbit escapes the most of those adverse influences which keep it in check elsewhere. The population, however, is increasing rapidly, and carnivorous animals have to a certain extent been established, whilst several parasitic diseases have (though unintentionally) been introduced. The climate here is sufficiently moist to encourage the spread of some of these parasites. Wherever the population is moderately thick the rabbit difficulty is not felt, for the action of man easily keeps the rabbits in check. There are, however, many districts in New Zealand which are not likely to attract a considerable population for very many years to come; but where there is a wholesome though not a rich pasturage for sheep, the land carrying perhaps a sheep to one, two, or even three acres. It is here particularly that the injurious effects of the rabbit-pest are felt, for, though the rabbits could of course be kept down by human agency, this result could only be attained at a cost which would more than swallow

swallow up the whole of the profit of sheep-farming on such land. It is here, then, that the destruction of rabbits by carnivorous animals or parasitic disease would be most welcome.

The parasitic diseases of the rabbit which we have been discussing would have a limited but appreciable influence in this direction. It must not be expected, however, that they will prove the means of suddenly or completely exterminating all the rabbits in a district. Many infective diseases possess great powers of destruction, but there is no instance known of any infective or parasitic disease in nature which possesses the power of absolutely exterminating any species of animal. Any parasitic organism which should mercilessly cause the death of all the members of a species would thereby defeat its own object, for with the extinction of all suitable victims the existence of that specific parasite would come to an end. If we read through the records of destructive epidemics which have occurred in man and the domestic animals we shall find that, though the number of deaths may be large, yet it is but small as compared with the number of individuals left alive. The disease takes its proportion of victims—it may be a very high proportion in certain localities—but if we extend our views so as to take in a wide district, we find that the tax seldom amounts to 10 per cent. of the species affected. I may mention here, as an example of a destructive epidemic, that the losses of sheep from liver-fluke in the British Isles in the winter and spring of 1879–80 was estimated at three millions, or about 10 per cent. of the total number of sheep. But that season was one of a succession of wet years, and the disease was unusually prevalent, the losses in an average year being one million, or about 3½ per cent. These losses were unequally distributed, for in some localities the disease was not known, in others it was severely felt.

One of the most prominent characteristics of parasitic diseases is their unequal development in different localities and in different seasons. So with reference to the diseases due to the bladder-worm and liver coccidia, we may expect in some localities a more extensive development and useful results, whilst in other localities the diseases may not meet with necessary conditions, and little or no good may result. Further we have seen that moisture is favourable to the spread of these diseases; we may expect them, therefore, to be more prevalent in moist or ill-drained localities, and to be more useful in wet seasons and climates than in dry ones. Hence over a great part of Australia the diseases would be less effective than in New Zealand.

When animals of the same kind are densely crowded together on the same ground, as is the case with the rabbits in the infected districts, one of the conditions for the spread of a parasitic or infectious disease is best fulfilled. When the number of animals is reduced the danger of infection will diminish.

5. Summary.

1. The reduction of the rabbits in the Wairarapa has been chiefly due to measures adopted by man. The most valuable of these measures has been the winter poisoning, which has been followed up during the rest of the year by trapping, &c. Cats and ferrets, too, seem to have done good work.

2. Certain parasitic diseases have appeared in the district, and have been widely though unequally prevalent.

3. Of these parasitic diseases two only—those due to bladder-worm and liver coccidia—deserve special notice as being capable of destroying rabbits. There is reason to believe that these have assisted to a small extent in destroying rabbits in the district.

4. The employment of the liver coccidia for the destruction of rabbits cannot be advocated, as in rare instances the parasites have been known to attack man. They are, however, present in the district, and it would probably be impossible to suppress them. Fortunately the danger to human beings is very small indeed, and the disease may prove of further use in killing rabbits.

5. The bladder-worm may be usefully employed against the rabbit pest; but it must not be expected that it will destroy more than a small percentage of the rabbits in the district. Like all parasitic diseases it is variable and apparently capricious in its distribution, and its propagation is limited by conditions which will vary with locality and season. It would be more useful in a moist climate than in one which is hot and dry. It assuredly cannot be regarded as furnishing alone a sufficient means of dealing with the rabbit-pest, nor will it render unnecessary the ordinary methods of the destruction of rabbits, but must be looked upon as simply a minor and auxiliary means of destruction.

DESCRIPTION OF PLATES.*

PLATE I.—ILLUSTRATES THE BLADDER-WORM OR CENURUS STAGE IN THE RABBIT.

Fig. 1. Egg of *Tenia serialis*, showing the six hooked embryo within the egg-shell. Magnified 630 diameters.

Fig. 2. Embryo freed from the egg. As this is a view from the side, one of the lateral pairs of hooks is not represented. Magnified 630 diameters.

Fig. 3. Portion of muscle from rabbit showing the tracks made by the bladder-worms during the early stages of their development. At the enlarged end of each track a minute bladder-worm is to be seen. The rabbit had been fed with tape-worm eggs thirteen days previously. Natural size.

Fig. 4. Young bladder-worms at early stages of their development: (a) From a rabbit thirteen days after it had been fed with eggs of tape-worm; (b) three weeks after infection of a rabbit; (c) four or five weeks. All natural size.

Fig. 5. Young bladder-worm (about six weeks old), showing the "heads" in an early stage of development (about forty "heads" are present in rudiment). They show a radial arrangement from the first. Magnified 4½ diameters.

Fig. 6. Rabbit which had been infected with eggs of *Tenia serialis*. It shows a large swelling on the left side of the face, the white fur towards the angle of the jaw being brought into view by the swelling. This was subsequently proved to be due to the presence of a bladder-worm. From a photograph taken ninety-five days after infection.

Fig. 7. Two bladder-worms of small size but carrying mature tape-worm heads. The bladder-worms have been hardened in spirit and then divided by a razor longitudinally. Those halves only are shown which bear the heads. From rabbit which died one hundred days after infection. Natural size, from a photograph.

Fig. 8. A large bladder-worm, opened and pinned out to show the "heads" on its inner wall. The "heads" here are larger than in Fig. 7, and are much more numerous (about 740). Natural size, from a photograph.

Fig. 9. A group of four "heads," or "head-sacs," showing how the mouth of sac opens on the outer surface of the bladder-worm. Magnified 10 diameters.

Fig. 10. A vertical section through a head-sac, showing the tape-worm head in the position in which it is developed, i.e., inside out. At the end of the cavity of the sac (which usually has a more spiral direction than is here shown) are to be seen the rostellum, with a portion of the crown of hooks and two of the suckers. Magnified 60 diameters.

Fig. 11. Shows two head-sacs—(a) with head in position in which it is developed; (b) sac turned inside out, so that the head now assumes its proper position. Drawn with *camera lucida*. Magnified 10 diameters.

Fig. 12. A group of bladder-worms produced by budding from a single original bladder-worm. Some of them are free, others are still attached by a wide or slender stalk. About natural size.

PLATE

* These plates are not reproduced in this Report.

PLATE II. ILLUSTRATES THE TAPE-WORM OR TENIA STAGE OF *TENIA SERIALIS* AS FOUND IN THE DOG.

Fig. 1. The tape-worm (*Tenia serialis*), reared in a dog which had been fed with the bladder-worm (*Cœnurus serialis*). It consists of a head and neck, together with a series of joints or segments, increasing in size from the head towards the hind end. The joints, *a*, *b*, *c*, *d*, are shown on a larger scale in figs. 6-9. One free joint (= proglottis) is shown natural size.

Fig. 2. The head and neck and first few joints of the same tape-worm, magnified 28 diameters.

Fig. 3. The head of a similar tape-worm, showing the flattened form, the four suckers, and the rostellum with the crown of hooks, magnified 28 diameters.

Fig. 4. Crown of hooks of a similar tape-worm, drawn with *camera lucida*. Magnified 146 diameters.

Fig. 5. Free joints or proglottides of *Tenia serialis* in different states of contraction, as observed in proglottides when crawling.

Fig. 6. The ninety-first segment (*a*) of the tape-worm in fig. 1. Shows the reproductive organs shortly before the development of the eggs: *t.*, testes; *v.d.*, vas deferens; *g.*, germarium (germ-forming gland) of right side; *y.*, vitellarium, or yolk-forming gland; *u.*, uterus; *v.*, vagina; *s.*, genital sinus; *e.*, excretory vessel. Magnified 13 diameters.

Fig. 7. The hundred-and-fourth segment of the same tape-worm. Shows the first branches developed from the uterus as the primitive eggs pass into it. Magnified 13 diameters.

Fig. 8. About the twentieth segment from the end, showing the uterus with its numerous branches. This segment is slightly contracted. Magnified 6½ diameters.

Fig. 9. One of the last segments (*d*). The uterus and its branches are crowded with eggs containing mature embryos. Magnified 6½ diameters.

[Figs. 6-9 are reduced from drawings made with *camera lucida*. Much care was taken to secure accuracy in the details of the branches of the uterus.]

Fig. 10. Segment of *Tenia cœnurus*, for comparison with figs. 8 and 9. After Leuckart. Said to be magnified 10 or 15 diameters.

Fig. 11. A small (*a*) and large (*b*) hook from *Tenia cœnurus*. Copied from Leuckart for comparison with fig. 12. Magnified 280 diameters.

Fig. 12. The corresponding hooks of *Tenia serialis*. Drawn with *camera lucida*. Magnified 280 diameters.

APPENDIX IX.

Letter from Mr. Robert S. Hawkins, of North Wairarapa (N.Z.), concerning Bladder-worm Disease.

[Extract from New Zealand newspaper.]

AUSTRALIAN NEWS.

Sydney, December 21.

THE Rabbit Commissioners have adopted their report for presentation to Parliament. The report deals extensively with the various experiments, and as far as the experiments have gone, they tend to prove that M. Pasteur's remedy is totally inefficacious. Under the conditions prevailing in the interior of the continent, the microbe loses its virulence after a few hours' exposure to moderately warm weather, or when subjected to the drying effect of the wind. The disease (*sarcopites cuniculi*) discovered by Professor Watson, and others, are dealt with. With regard to the bladder-worm, it is said that it cleared the Wairarapa district of rabbits, and the Commissioners recommend that further investigations be made into this disease.

Sir,

Everton Terrace, Wellington, 22 December, 1888.

Referring to the cable message received here this morning, I think that the last paragraph indicates that the Commissioners have been seriously misled, I do not say intentionally; I have no doubt that the persons who have so persistently attempted to give importance to the rabbit-fluke disease believed that they were doing good.

But when it comes to the Commission treating the disease so seriously as to recommend further investigations, it is time that they should be informed as to the practical experience of the disease and its effects.

I and another owned, in 1881, 12,000 acres of rabbit-infested country in North Wairarapa, surrounded on all sides by other rabbit-infested country. I saw the disease myself first early in 1883, and on inquiry from the rabbitters found that it was then well known to them as a common disease among the rabbits.

I subsequently paid more attention to it, and as I was myself constantly superintending the rearing of ferrets, which were fed on dead rabbits, and often had out four good rabbit dogs with me on the run to test the state of the rabbits, I was able to see a good deal of the disease.

The sacs holding the fluke were generally on the thigh, but sometimes under the lower jaw and neck. I have seen the lower jaw puffed out to half the size of half a tennis ball. The sac always contained fluke floating in serum.

I never noticed that the rabbits thus diseased ran less fast than others, or that they were in noticeably low condition. In fact it was a matter of surprise to me that they were so little affected, apparently, by what I thought must be a considerable cause of distress.

I left the run at the end of 1886; but I am able to assure the Commissioners that, notwithstanding that during seven years every means had been used to destroy the rabbits—including the laying in the winter of many tons of poisoned grain, the employment of trappers, diggers-out, and shooters, and the turning out of large numbers of ferrets—the rabbits are just as bad as they were seven years ago; that is, that the same poisoned grain, the same trapping and shooting, has to go on now to keep them within bounds.

The fluke has exercised no influence whatever—has neither weakened the rabbits nor affected their procreative powers.

A few people in the south country having suddenly in 1887 found out the existence of the fluke, made a great fuss—got down Government scientists, and so on. They found their rabbits had largely diminished, and attributed it to fluke.

The real fact is that ferrets thrive and became acclimatized in the south, and did not thrive with us in the north. After years of turning out and feeding there are less ferrets in our country than there were in 1884. I cannot account for it, but it is a fact.

To sum up: Is it not clear that if this bladder-fluke had really been destructive to the rabbit, its effect would have been felt in the north country? Of what use is it wasting money and time in investigating a disease which has been so powerless to hurt the rabbit, as I have proved it to be?

Your obedient servant,
ROBERT S. HAWKINS.

The Secretary,
Rabbit Commission, Sydney.

(Signed)

APPENDIX X.

APPENDIX X.

Nasal Catarrh in Rabbits.

To Francis Abigail, Esq., Department of Mines, Sydney, N.S.W.

Sir,

13, Oxford-street, London, 1st December, 1887.

In response to a proclamation issued by the New South Wales Government, regarding the extermination of rabbits in that Colony, we have the honor to bring to your notice the following particulars of a scheme for accomplishing the same, which we humbly submit for your consideration.

By this scheme it is proposed to gradually exterminate the animals in question by communicating to them a fatal epizootic disease, which shall not be noxious or in any way injurious to any other animals except, perhaps, to a few other rodents which will hereafter be enumerated.

From carefully observed experiments, we are enabled at the present moment to state as our humble opinion, that a disease taking the form of, and known as, "nasal catarrh" is one that answers all the conditions of the previous statements, and one that will at once command the confidence of scientists, not only by reason of its being peculiar to the rabbit family and its non-liability to spread to or infect any other valuable animal, but also on account of its being so highly infectious and rapidly fatal to rabbits.

We have been able to obtain and to cultivate the micro-organisms of this disease, and have found that they may be easily preserved. They may be communicated to rabbits in several simple ways, but with your permission we would prefer to postpone our remarks in that direction, and to make it the subject of a future communication, in which we purpose describing the method of transmission which we would recommend should be adopted.

The peculiarity and main feature of our scheme may be said to lie in the fact that it advocates diseases which, in case an animal may recover and survive one attack, do not secure to such animal any immunity from being subsequently attacked, but which on the contrary tend to predispose it to their ravages.

It will be seen that by adopting the disease proposed by our scheme, the inoculating of any animal with attenuated virus or vaccine in order to secure immunity to it would be obviated, as also would any precaution.

We most respectfully beg to be understood that we do not claim to have originated or to have discovered the disease mentioned herein, but what we do claim as constituting the vitality of our scheme is the discovery of its complete applicability to the extermination of rabbits in New South Wales.

In conclusion, we desire again to ask permission to be allowed to address a further communication on this subject to you, which communication will contain details and particulars of how our scheme is to be carried into practical effect.

We have, &c.,

JAMES P. WEST.

HENRY J. W. RAPHAEL.

EXTRACT quoted by Dr. Bancroft, and ordered by the Experiment Committee to be printed, 1st May:—

Thus Zürn has lately come to the conviction that the infectious virulent influenza of the rabbit—an often fatal rhinitis, which usually spreads rapidly from the nose to the pharynx and tympanum, and, after perforation of the membrane, sometimes attacks the external ear, or passes to the intestine—is caused by parasites,* which can be observed in great numbers as naked gregarines and psorospermie in the affected mucous membranes and their secretions. Similarly, Silvestrini and Rivolta were able in 1872 to refer an epidemic prevalent amongst the fowls around Pisa to psorosperms.† The disease was localized, like the influenza of the rabbit, in the pharynx and nose, but sometimes affected the conjunctiva, intestine, or even the comb.—(Leuckart "The Parasites of Man," page 227).

APPENDIX XI.

Communications from witnesses relative to Statements made in Evidence.

[Evidence of Arthur R. Torrens, page 59.]

To the Secretary, Rabbit Commission,—

Sir,

Silverton, 28 May, 1888.

In my evidence before the Rabbit Commission I do not think that I laid sufficient stress on the fact that the late light rains seemed to have very greatly revived unhealthy rabbits; and that, apparently, can rabbits only get sufficient feed and water, they will recover from the disease they now appear to be suffering from.

I have, &c.,

A. R. TORRENS,

Rabbit Inspector.

[Evidence

* "The globular and egg-form psorospermie as cause of sickness in domestic animals," p. 14, Leipsig, 1878. The infectious catarrh of rabbits is described as a fungoid disease in Von Schmidt's work, "The Mycotic Diseases of the Respiratory Organs especially of Rabbits." Hofgeismar, 1877.

† "Journal of anatomy, physiology, and pathology of animals," Pisa 1873. See also Rivolta, "Parass. veget.," p. 390.

[*Evidence of H. P. Richardson, page 86.*]

To Mr. Mahon, Secretary, Rabbit Commission,—

Sir,

Silverton, 28 May, 1888.

I beg to state that, from April to December, 1887, the amounts of money paid for the destruction of rabbits was greater per month than previously, although the bonus paid per scalp was lower. A larger number of rabbits were also caught during these months.

The rabbits now alive seem to be improving since the late rains.

I have, &c.,

H. P. RICHARDSON,
Rabbit Inspector.

[*Evidence of Alexander Bell, page 85.*]

To Hugh Mahon, Esq.,—

Dear Sir,

Langawirra, 6 October, 1888.

I have yours of the 25th of last month with my evidence enclosed that I gave before the Commission on the Rabbit Inquiry.

I find by our books that I did over-estimate some things. In January, 1886, we killed 410; the rabbits increased every month to December, when we killed 3,454 rabbits. In January, 1887, we killed 4,507, increasing every month until December, when we killed 32,425. The number of rabbiters in 1886 was 14; in 1887, 32.

Rabbits drink arsenic-water freely in dry hot weather. Strychnine, 1 oz., in one bucket of water is the correct thing; not two buckets as I gave in my evidence.

All other parts of my evidence are correct, to the best of my knowledge.

I have, &c.,

ALEXANDER BELL.

[*Evidence of C. J. Valentine, page 89.*]

CARRYING CAPABILITIES.

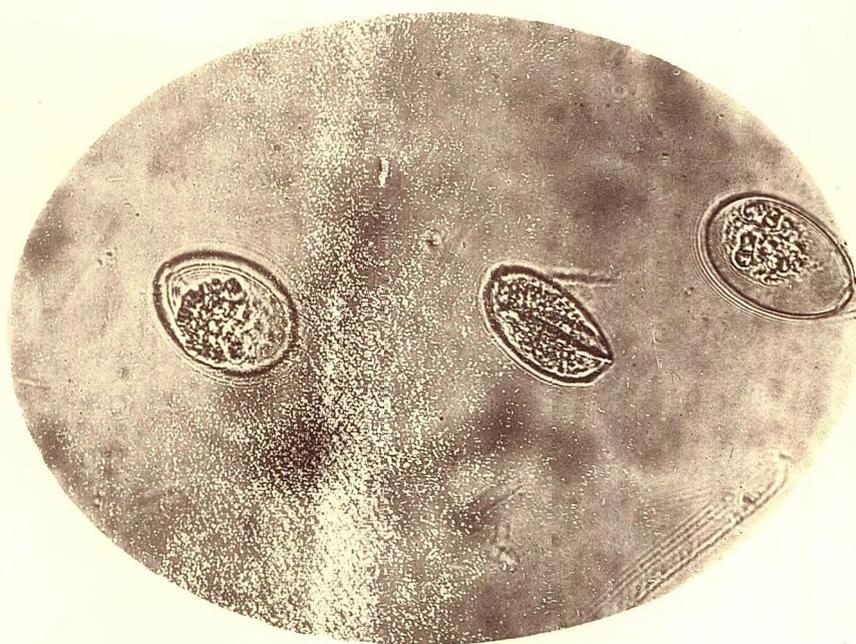

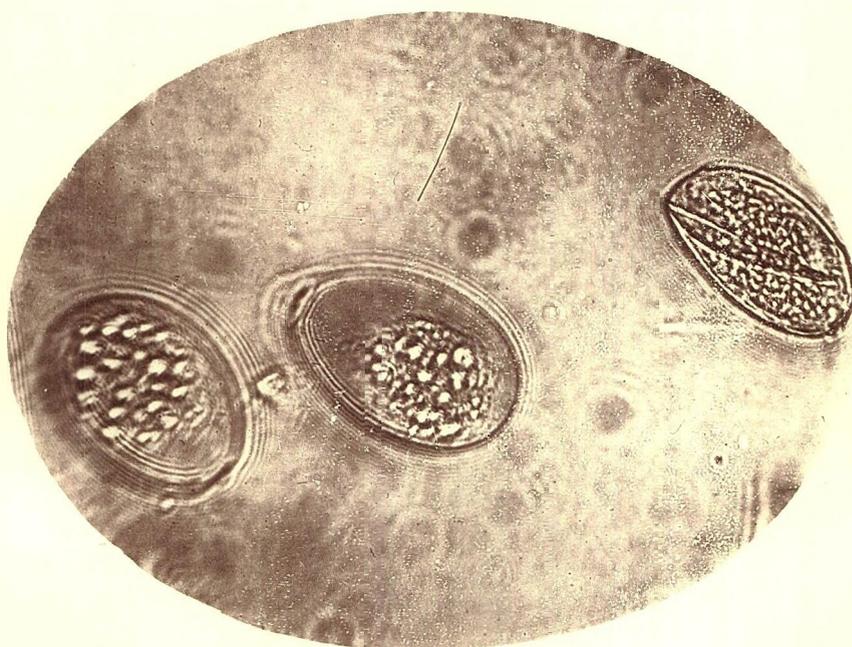

In some instances the reduction in the carrying capabilities of the runs has been very great, from 30,000 sheep to 10,000. Although the drought has reduced the carrying capabilities of the runs, that has been of a temporary nature, but where the country has been infested with rabbits, the capability has been affected by the destruction of small shrubs, which are the main source of food during dry seasons. Many of the shrubs will never recover; some of the larger shrubs may recover, but the effect on the country where the rabbits have been very numerous, will be to decidedly reduce the carrying capabilities for some seasons.

On one run the rabbits have, it may be said, completely died out, most probably from some disease caused by over-crowding. No disease was known to have been placed amongst rabbits.

Rabbits were first brought to Encounter Bay, and placed on Wright Island in 1837; but, although placed on the mainland, never increased in any numbers.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

RABBITS.

REPORT UPON METHOD OF DESTROYING—UPON THE TERYAWYNIA HOLDING.)

Ordered by the Legislative Assembly to be printed, 4 June, 1890.

RETURN to an *Order*, made by the Honorable the Legislative Assembly of New South Wales, dated 3rd June, 1890, That there be laid upon the Table of this House,—

“ A copy of the Report of the Officer who was sent to inspect and report
“ upon the method of destroying Rabbits on the Teryawynia Holding.”

(Mr. Dickens.)

Mr. H. C. Taylor to The Under Secretary for Lands.

Department of Lands, Rabbit Branch,
Sydney, 31 March, 1890.

Sir,

I have the honor to state that, in accordance with your instructions, I left Sydney on the 28th ultimo for the purpose of inquiring into the methods adopted by Mr. W. P. Wynne for the destruction of rabbits upon the pastoral holding known as Teryawynia, and for your information submit herewith a report based upon the result of my observations of the work done and being done upon Teryawynia and other holdings in the vicinity. My instructions referred principally to Teryawynia, and the data upon which I started to work were contained almost entirely in Mr. Wynne's now well-known letter, bearing date 29th January last; nevertheless, with your permission, my inspection was allowed to extend to other runs in the district, with the result that I am able to speak more decisively upon the whole question raised.

After being eight days upon Teryawynia and travelling over 250 miles of the country within the boundaries of the leasehold and resumed areas, I am enabled to assert that an immense amount of destruction can be caused among the rabbits during the dry season at a comparatively trifling cost by the use of both poisons and traps in the immediate vicinity of water. As stated in his letter, Mr. Wynne has made a special study of rabbits, and one cannot fail to be impressed with the earnestness he displays in endeavouring to cope with the pest in a cheap and effective manner. The area of the holding, roughly estimated, is in excess of 920,000 acres, and the leasehold area is watered by a river, creeks, and lakes, while on the resumed area the stock are entirely dependent for water upon the supply contained in the tanks constructed at various times by the Crown tenants.

Shortly after arrival at the homestead I determined upon making an inspection of the country in the leasehold area, and of the work being done in the neighbourhood of what may be called the natural waters, and I am ready to admit that the absence of rabbits in large numbers was to me a surprise, more especially as evidence of their previous existence was plainly manifest, a fact which also pronounced itself to a prominent pastoralist in the Western district, who accompanied me during portion of my inspection. On the frontage to the Darling the width of the run is 8 miles, but taking into consideration the devious course of the river the extent of the water frontage is 24 miles, and here the work has been completed to the lessee's satisfaction, with the exception of what Mr. Wynne describes as a “ little titivating ”; but on the Talyawalka Creek, which crosses the run from north to south,

287—

[1,070 copies—Approximate Cost of Printing (labour and material), £3 10s. 4d.]

south, the work of laying poisoned sticks is in full swing. On the way to this portion of the run the country traversed is eminently suited for rabbits, but very few could be seen, although I drove through cane grass swamps and over sandhills which looked like the home of the wily rodent. On arrival at Blantyre Hut, on the east side of the creek, indications were plentiful of the work being done, and in a short walk the carcasses of rabbits could be seen in all directions. Crossing the creek I visited a camp consisting of seven men, who were busily engaged in cutting, poisoning, and distributing lignum, which is one of the means used in destroying rabbits, and after seeing the whole process in operation, and the results obtained, I was satisfied that the method is a satisfactory one. An excellent growth of lignum is obtained in the waters of the creek, and this, after being drenched in a preparation of strychnine, is distributed at intervals of about 10 feet close to the water's edge, and although it dries very quickly owing to the heat of the sun, the results must be gladdening to those immediately concerned, as on the succeeding day the dead rabbits are to be seen in great numbers, while the medium used indicates plainly the cause of the mortality.

It may be noticed that at this camp the poison used was strychnine, in lieu of the cheaper and equally effective poison, arsenic, this being due to the fact that several men had suffered in health from the frequent use of the latter, a condition of affairs that might be obviated by the exercise of greater care on the part of those interested. The men engaged in this work are paid 20s. per week and rations, while the ganger receives an additional 5s., and it is alleged that the employment will in no case exceed three months in every two years. Again crossing the creek, and driving along the eastern side of the Tallynwalka, I arrived at another camp, where the men were busily engaged preparing and laying sandal-wood sticks poisoned with arsenic, and on the road the presence of live rabbits was more noticeable than at any previous time, and in a cane grass swamp passed through they may be described as being fairly numerous, but it must be noticed that owing to a recent fall of rain there were various crab-holes full of water which destroyed the inducement for the rabbits to journey into the creek, and in addition it was country which Mr. Wynne described as not having yet been worked. This camp is worked on the same principles as the one previously visited, and the poisoned sticks can be seen stripped of every vestige of bark in a manner similar to those recently produced for your inspection. Great results are being obtained in this locality, although the process of preparing the bait is much slower and more tedious than at the other camp, but it must be remembered that the lignum cannot be used in paddocks that are occupied by sheep. Objections have been raised in some quarters to the use of lignum as a means for the destruction of rabbits, on the grounds that it dries too quickly, and it is alleged that "the old man salt-bush" is a much more effective agent, but my observations lead me to doubt this. However, the parties immediately interested should experiment for themselves.

On the resumed area the work of destruction is done almost entirely by enclosing the tanks with wire-netting, and erecting at each one or two traps (*specimen produced*), which cost about 6d. each, within which the rabbits are caught alive, afterwards killed, the skins being stretched, dried, and preserved for market. I visited a number of the tanks, and witnessed the whole of the operations, and at one tank in "the Pine Paddock," which had been closed for the first time the night previously, it was found upon my arrival there the following morning that the result of the catch was 789 rabbits. At this place three men were engaged killing and skinning the rabbits, the carcasses being afterwards removed to a convenient distance from the water, and destroyed by fire. At the present time all the men engaged in this work are paid weekly wage, the skins remaining the property of the employer, who hopes by their sale to recoup himself for the cost of the labour. Upon the question of the commercial value of the skins I was not able to obtain in the locality any satisfactory evidence, but I have with me a fair average sample of those obtained on the run, which I have submitted to several experts in the city, who estimate them to be worth 1s. per dozen here. Mr. Wynne bases his estimate of the value of the skins upon the fact that a year ago he sold about 7,200 to the captain of one of the river steamers, for which he received at the rate of 9d. per dozen, and, although there is nothing phenomenal in two men obtaining 10,000 skins in a fortnight, it must also be remembered the skins still remain in their possession, and when they contrive to sell them at 9d. per dozen their earnings will amount to the sum named by Mr. Wynne. However, a large number of skins are at present stored at various places on the run, which will in due course be sent to market, and the carriage being by water the expense of getting them there will be trifling.

The following is a list of results obtained by trapping at various tanks on the run between the first week in January and the 28th February last:—

Christmas Wells tank	12,105
*Fords	4,190
Bleaalben	6,210
*Burndoo	4,505
*Cowarg	4,345
Wanalla	1,362
*Warlo	2,037
*Coolamarra House	1,888
Yella	1,244
*Paradise	1,740
*Surveyor	750
Government tank (26-mile)	6,412
*Coolamarra Swamp	5,570

An interesting fact, and one that affords ample evidence of the necessity for rabbits to obtain water when there is no moisture in their food, is that on Teryawynia, and other stations, where tank trapping is resorted to, the daily registers kept, showing the number of rabbits caught, discloses that immediately upon the fall of rain the number so caught are strikingly diminished, and at a tank, where, one morning the catch was 278, the following morning which was preceded by a slight fall of rain, the number of rabbits obtained was but three. I am particular in emphasizing these facts, as it is but a few years since that the highest authorities confidently asserted that the existence of rabbits was in no way interfered with

* The asterisk is intended to denote the tanks which are still being trapped.

with by the want of water. As showing the steady decline in the numbers caught each day at these traps I give below the result of the work done at the Beelparjah Dam, situated on an out station of the holding, known as Kilfera:—

Date.	Rabbits killed.	Date.	Rabbits killed.
13th January, 1890	1,600	21th January, 1890	65
14th " "	1,100	25th " "	96
15th " "	300	26th " "	6
16th " "	295	27th " "	42
17th " "	206	28th " "	16
18th " "	580	29th " "	6
19th " "	323	30th " "	16
20th " "	229		
21st " "	125	Total... ..	5,159
22nd " "	109		
23rd " "	45		

During the whole of my inspection it was a noticeable fact that the presence of rabbits was more plainly discernible in the locality of water than elsewhere; and only in one instance was evidence forthcoming that the rodents were breeding, that being on the country surrounding a lignum swamp, where, owing to the water receding, green feed was springing up, and here young rabbits were to be seen.

In his letter Mr. Wynne indulges in a rather wholesale condemnation of wire-netting, and I think without sufficient cause. There is no doubt that a portion of the wire-netting erected on Teryawynia was found after the lapse of about two years to have rotted under ground (sample produced), but this refers entirely to netting surrounding the tanks which has been erected on soft damp ground, and which, as is plainly indicated, has been subjected to the action of water, a condition of affairs which can only exist to a very limited extent in the event of a lessee deciding upon enclosing the outer boundaries of his run. In the same locality I have seen wire-netting which has been standing for two and a half years, the portion buried being as sound as it was when first erected, and in addition I have the testimony of two squatters in this very district to the effect that they had examined wire-netting which had been erected in Victoria and Tasmania for periods of twelve years and twenty years respectively, and in both instances the portion of the material buried in the ground was found to be sound.

At the deputation which recently waited upon the Honorable the Minister it was asserted that the excellent lambing said to have been obtained on Teryawynia was due to the fact that this holding had been favoured with a rainfall in excess of that obtained on neighbouring stations, and with a view to settling this point I append statistics showing the rainfall on Mr. Wynne's run, extending from 1874 to 1889, together with a statement of the fall during each month of the years 1888 and 1889. I also attach a statement, taken from the station books, showing the agistment fees paid to Wynne, Hudson, & Co. for stock depastured on Teryawynia Station from October, 1888, to January, 1889.

In bringing my remarks regarding Teryawynia to a close I desire to state that the process in operation there is, under suitable conditions, a cheap and effective means for reducing the rabbit pest, and is infinitely superior to the system in operation when the Government were engaged in subsidising owners for the work done. The millions of rabbits which were reported to exist on this run at one time are not now to be seen, but the evidence of their previous existence is plainly discernible. Acres upon acres of valueless scrub have been destroyed by the ring-barking operations indulged in by the rabbits, while indications of recent work of this description are not numerous. On the back portion of the run, 200,000 acres of which were, in August, 1887, reported to have been eaten bare, dry grass is now to be seen, and there can be no doubt that the system of rabbit destruction adopted has contributed largely to this result, assisted probably by other causes, such as starvation and migration. The chief objections to be raised to the system are that it brings about no finality, and entails constantly recurring labour and expense.

Having written so much regarding Teryawynia, I do not think it would be fair to omit making some remarks regarding the work done on various other holdings which I visited during my recent trip, more especially as an opinion appears to be prevalent that rabbit destruction is almost entirely neglected throughout the infested country. On Mossgeil Station at the time of my visit a tank close to the homestead had been enclosed with wire-netting, outside of which was a small hole filled with poisoned water and surrounded by a log fence which, however, presented no obstacle to the rabbits. The next morning the bodies of several hundred dead rabbits could be seen contiguous to the water. Several carts are also engaged distributing poisoned wheat with results which may be described as fairly satisfactory.

The next place visited was Kilfera, and here I found the leasehold area, say 130 miles round, to be enclosed with a rabbit-proof fence, while a number of horse paddocks had also been protected in a similar manner. The managing partner of this holding, Mr. B. C. Webb, is a great believer in the use of poisoned water, and at the various tanks visited the evidence of the work can be seen by the thousands of rabbit carcasses strewn about the place, and it can safely be stated that an inspection of this description on a hot summer's day is by no means a pleasant occupation. A large quantity of poisoned wheat has at various times been distributed on this holding, while, immediately on the boundaries, which have been wire-netted, dead and dying rabbits can be seen in numbers, the cause of the mortality being hard to determine, unless it be that these rabbits have been shut off from water and death has ensued consequent upon thirst and heat.

On Marfield a rabbit-proof fence is also being erected, but as to the steps taken for the destruction of the rabbits I can speak with no authority.

While passing through Albemarle I visited the back station in company with the manager, Mr. Sallior, and here again great destruction has been caused among the rabbits by laying poisonous sticks along the edge of the waters of the Lakes Victoria and Waterloo. The poison used is strychnine, and its effectiveness is demonstrated by the carcasses to be seen in all directions, and over which the wheels of the buggy went crashing. This run is also being enclosed within a rabbit-proof fence which when completed will run for a distance of about 70 miles along the southern boundaries of Teryawynia.

The next station visited was Manfred, where rabbit-proof fencing has also been erected, and in a neat manner. The use of poisoned water and sticks in the vicinity of the tanks has, I am informed, also been resorted to here, but as my examination was only a cursory one I am not able to speak confidently as to the results obtained. As noticed in other localities dead and dying rabbits were to be seen clinging to the wire-netting fence on this run.

On

On Clare Mr. Waugh has been very busy laying poisoned water outside the tanks, which, as in other cases, are protected by wire-netting. Heaps of dead rabbits are to be seen on various parts of the holding, and the owner informed me that a man was engaged for over a week in carting the rabbits destroyed at one tank to a distance remote from the waterhole. A large quantity of phosphorized wheat has also been laid on parts of Clare, and a quantity of the various poisons used is stored at the head station. It may not be out of place to remark here that a large quantity of arsenic, strychnine, and phosphorus is being used throughout the country, and some good would perhaps result if the various tins and drums containing these mediums were overhauled before they left the various warehouses, in order to guard against any leakage during carriage, and to minimize, as far as could be, the possibilities of any accident.

The Report of the Royal Commission of Inquiry into schemes for the destruction of rabbits contains some valuable information as to the use of poisons, and good would result if the pastoralists interested were to make themselves acquainted with its contents.

In conclusion, I trust that my report may place you in possession of such information as will be of value in enabling the subject of rabbit destruction to be successfully dealt with, and that in my inspection of this part of the Western District I have complied with the nature of the instructions conveyed to me.

I have, &c.,
HENRY C. TAYLOR.

RABBIT NUISANCE ACT.
(RECEIPTS AND EXPENDITURE UNDER.)

Ordered by the Legislative Assembly to be printed, 15 October, 1890.

RETURN to an *Order* of the Legislative Assembly, dated 11th June, 1890, That there be laid upon the Table of this House, a Return showing,—

- “ (1.) The receipts under the Rabbit Act from the time when it came into force up to the present time, for each year, and from all sources.
- “ (2.) The expenditure for each year during the same period, showing the total items of expenditure for each year,—
- “ (1.) For subsidies.
- “ (2.) For salaries.
- “ (3.) For fencing and netting.
- “ (4.) For salaries, travelling expenses, and otherwise, in connection with fencing.
- “ (5.) For experiments in connection with the destruction of rabbits.
- “ (6.) All other expenses apart from salaries and subsidies, and those matters mentioned in paragraphs 3, 4, and 5.”

(Mr. J. P. Abbott.)

RETURN of the Receipts and Expenditure under the Rabbit Nuisance Act, for the years 1883 to 1889, and the half-year ended 30th June, 1890, so far as can be readily ascertained from the accounts in the Department of Audit.

 LEGISLATIVE ASSEMBLY.
 NEW SOUTH WALES.

—
RABBIT NUISANCE ACT.

(PETITION FROM CERTAIN STOCKOWNERS IN COOMA DISTRICT PRAYING FOR REPEAL OF.)

—
Received by the Legislative Assembly, 17 June, 1890.
 —

To the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.
 The Petition of the undersigned, Owners of Stock in the Cooma District,—

HUMBLY SHOWETH:—

1. That your Petitioners have for several years been burdened with a grievous exaction in the form of a tax levied under the provisions of the Rabbit Nuisance Act of 1883.

2. That the amount of this tax is vastly in excess of the aggregate amount payable under the Stock and Pastures and the Sheep Assessment Acts.

3. That, unlike these lastnamed Acts, the contributions under which are payments for services rendered, the Rabbit Nuisance Act has never been, and could not have been, of the slightest benefit to the Cooma District, or to any individual therein.

4. That while your Petitioners recognise the justice of affording some help, direct or indirect, to those pastoralists in infected districts who, unaided, may be unable to cope with the evil, they consider, that the necessary cost thereof should fall on the general taxpayer, and not on a particular class which has no more direct interest in the matter than agriculturists or any other body in the community.

5. That the Honorable the Minister for Lands has repeatedly admitted the iniquity of the present law, and the necessity for its repeal at the earliest possible moment, and that this led your Petitioners to believe that the tax would not be enacted after 1889.

6. That all pretence of applying the proceeds of this tax to its intended purpose having been abandoned since 1888, your Petitioners respectfully submit that there cannot now be a shadow of moral, even if there be of legal, right to continue the levy of this impost upon them.

7. Your Petitioners therefore humbly pray your Honorable House to regard the premises, and to grant them relief by passing a Bill for the immediate repeal of the Rabbit Nuisance Act of 1883.

And your Petitioners will ever pray.

[Here follow 21 signatures.]

1890.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

FOREST CONSERVANCY BRANCH.

(REPORT ON, FOR 1889.)

Ordered by the Legislative Assembly to be printed, 24 July, 1890.

The Acting Officer-in-Charge to The Principal Under Secretary.

Sir,

Forest Conservancy Branch, Sydney, 20 May, 1890.

I have the honor to forward, for the information of the Colonial Secretary, the Annual Report of the Forest Conservancy Branch for the year 1889, which was transferred on the 1st January, 1888, from the Department of Mines to the Department of Lands, and by *Gazette* notice of the 17th April, 1889, was placed under the Colonial Secretary.

THE STAFF.

The field staff consists of one inspector of forests, twenty-four forest rangers, eight assistant forest rangers, one overseer of State forest nursery, one engineer, and one wood-cutter for the patrol steamer on the Murray River. There are also four men constantly employed at the nursery. Others are engaged from time to time, according to requirement. In addition, there are two acting rangers at Lord Howe Island, charged with the protection of the indigenous flora, one at Broken Hill, and one at Silverton, to protect certain timber reserved along the creeks in those districts, who not being wholly employed by the Department, are paid a small allowance.

The office staff consists of five clerks, one temporary clerk, and one probationer, besides the chief clerk, who is Acting Officer-in-Charge.

Twenty-seven of the forest rangers and assistants, twenty-one inspectors of stock (the latter being officers of the Department of Mines), and the Cumberland ranger (an officer of the Department of Lands) are appointed inspectors under the Prickly-pear Destruction Act of 1886.

DUTIES.

The duties of the branch may be briefly stated as consisting of—First, the carrying out the provisions of Part VI of the Crown Lands Act of 1884, as amended by the Crown Lands Act of 1889, which provides for making State forests and regulating the felling of timber, quarrying of stone, removal of clay, shells, &c., on State forest timber reserves and Crown lands; second, establishment of nurseries and plantation of timber trees, thinning out useless trees on timber reserves; third, the carrying out of the provisions of the Prickly-pear Destruction Act of 1886.

The forest rangers also inspect timber on Crown lands and report to the Local Land Boards upon applications for permission to ringbark. This duty in some districts involves a considerable amount of work, and, of course, adds to the cost of the branch by increasing travelling expenses. The fees paid by applicants to the Department of Lands covers this cost.

The steam launch purchased in 1877 to enable the rangers to protect the valuable red-gum forests on the Murray River was disposed of, having become unserviceable, and a contract accepted, through the Department of Public Works, for building a stern-wheel steamer for this purpose. Last June it was found necessary to hire a small steamer for the season for this special work.

REVENUE.

The revenue from licenses and royalty on the quantity of timber felled during the year amounted to £16,521 2s. 5d., and the revenue from other sources, viz., quarry licenses, sale of confiscated material, and rent of leases held under the Prickly-pear Destruction Act brought the total up to £17,137 0s. 11d. This is satisfactory, considering that the heavy floods for some time stopped the felling and measurement of timber on the Murray River red-gum forests, though it is less by £2,590 17s. 6d. than for the previous year. It may be noted that in 1877 the total revenue received was only £4,324 10s. 3d.

Schedule No. I to this report shows the amount received under the different heads, and Schedule No. II the revenue from State forest and timber reserves. This revenue is exclusive of pastoral rents, the reserves not being withdrawn from the holdings of which they form a part.

PROSECUTIONS.

Particulars of prosecutions by forest rangers for breach of the timber regulations or for trespass on Crown lands are furnished on Schedule III. There were 164 cases, which resulted in 139 convictions, with penalties amounting to £166 10s. 11d. In some districts the rangers report that the penalties inflicted are so low as to defeat the object of prosecution, offenders against the regulations preferring to run the risk of detection to paying license fees.

RESERVES AND TIMBER.

There are 918 reserves, notified for preservation of timber supply containing an estimated total area of 5,553,388½ acres; these are divided into different classes as shown in Schedule IV, viz.:—In class A, 643 reserves and portions of twenty-three others, of which the total area is 3,535,548½ acres. In class B, seven reserves, of which the total area is 54,745 acres. The timber upon reserves in these classes is permitted

to be felled on payment of license fees at rate of 10s. and 15s. per month respectively. In class C, 224 reserves and portions of twenty-eight others, comprising an area of 1,865,371½ acres, for which a royalty is charged in addition to the license fee. Sixteen reserves and portions of five others are proclaimed State forests, upon which the right to fell timber on defined portions, for a term, is sold by auction or by tender; the timber being subject to a royalty specified when the right is offered for competition.

This royalty is fixed according to the quality, accessibility, and other circumstances affecting the value of the timber.

The felling of trees on timber reserves, is subject to limitations as to the minimum girth and other restrictions to prevent, as far as practicable, wilful waste. It is reported that in five or six years there will be ready for felling, on the Murray River forest reserves, an immense number of red gum piles fully 60 feet in length, these will be worth to the Department at least 25s. each; and the value of this timber is shown by the fact that for beams measuring 12 in. x 12 in., and 25 feet in length mill-owners get from £4 10s. to £6; in some instances more than one such beam being obtained from a tree.

Schedule V shows the number and area of reserves under the supervision of each forest ranger.

Particulars of the situation, area, and class of each timber reserve and State forest will be found in Schedule VII, and particulars of lands exempted from operation of wood-cutters and cedar licenses are furnished in Schedule VI. The demand for timber on the forest reserves is found to increase as the Crown lands become alienated, either by sale or conditional lease giving the right of purchase, which shuts out the timber-getter from such lands. This demand is likely to be the greater because purchasers often proceed to ringbark all trees on their holdings, including even those which would prove useful, so that timber afterwards required for improvements has to be drawn long distances. It may, however, be remarked that a few isolated trees left scattered here and there on ringbarked country, do not appear to thrive, they are better left growing together in fair-sized clumps.

THINNING OUT TIMBER ON TIMBER RESERVES.

The forest rangers having drawn attention to the desirability of thinning out the young timber, which after the matured trees are felled, spring up so thickly on some of the more valuable reserves, especially the red gum and pine forests in the Murray River Districts; it was recommended that £1,000 should be placed upon the Estimates toward this work, which recommendation was approved, and the money voted for the year 1890. In some cases the Crown lessees are permitted to destroy useless timber on the reserves, their object being to improve the grazing capability of the land. This is done at their own cost, but under the special supervision of the Department.

During the year, permission was granted to thin out timber on an area of 31,450 acres situated on five reserves.

PLANTATIONS AND FOREST NURSERY.

Plantations of timber trees are situated on the Dorrigo and Nulla Nulla Creek reserves, and at Cootamundra, particulars of these and of the State Forest Nursery at Gosford are supplied by the Inspector of Forests in his report appended hereto.

PRICKLY-PEAR DESTRUCTION.

The business connected with the administration of the Prickly-pear Act of 1886 was transferred from the Ministerial control of the Secretary for Lands to that of the Colonial Secretary, by *Gazette* notice of 26th September, 1889.

Forty-eight notices were served requiring owners of "private land" within the meaning of the Prickly-pear Destruction Act to eradicate prickly-pear on their holdings.

All lands for which such notices have been served have since been frequently inspected, and the reports of the inspectors show that in a large number of cases the destruction of the growing plant has been completed; in the remainder, with a few exceptions, it is proceeding satisfactorily. It will, however, be a work of years before the pest is effectually eradicated, as seeds in the ground are continually germinating.

Nine contracts for destroying the prickly-pear on Crown lands, comprising an area of about 1,200 acres, were let at a cost of £126 19s. One contractor refused to proceed; the other contracts were satisfactorily completed. Tenderers differ widely in their estimates of the cost of such work; in one instance, the prices asked ranged from £18 to £672, none of these being satisfactory, fresh tenders were invited, which ranged up to £257; the work has since been completed for £30.

Tenders were invited for lease under the Prickly-pear Destruction Act for twenty portions, comprising an area of 6,253 acres; eleven of these portions, comprising 2,826 acres, have been let for terms varying from five to ten years, at a total rental of £20 5s. No tenders were received for the remaining portions.

Prickly-pear has spread extensively on the watershed of the Hunter River and its tributaries, on the Upper Gwydir River and on parts of the Barwon River. In the Hunter River district there are large areas of rough, rocky, or inferior land, which it has been found impossible to let on lease, the cost of eradication being estimated up to £4 per acre, and it has been represented that £100,000 would not be more than sufficient for the work. A scrub exterminator has been tried with success, but stock have to be excluded from the land under treatment, otherwise they are liable to be poisoned by eating the plants to which the exterminator has been applied;—this is a serious drawback.

Another specific which it is alleged stock will not touch is now being tested, and there is every reason to believe that it will be successful. The extensive areas of comparatively poor land on the Gwydir and the Barwon will be best dealt with by leasing in large areas. This could not be done under the Prickly-pear Destruction Act, as one of its provisions limits leases of Crown lands to areas not exceeding 640 acres; but the Crown Lands Act of 1889 provides for dealing with such lands as "scrub lands," and certain cases have been referred to the Department of Lands to be dealt with.

The plant has been used for food for a small number of stock, but there is a difference of opinion as to its value. It is giving considerable trouble in South Africa. Professor MacOwan, F.L.S., Director of the Botanical Gardens, Cape Town, makes the following remarks respecting its use as a fodder:—

"VALUE OF PRICKLY-PEAR AS FODDER FOR SHEEP AND OSTRICHES:—I am aware that the plant has been occasionally turned to account in seasons of drought, when food and water are equally scarce. But it is essential that the spicules be removed, and this necessity renders the exploitation of *Opuntia* as a food both tedious and costly. There is scarcely another way of utilizing it except by very careful singeing every section at a blazing fire. Certainly, every spicule may thus be removed, but as each joint has to be separately picked up, exposed to the flame and turned over, just as in toasting bread,

bread, the plan seems amateurish and unpracticable. Possibly two brush cylinders, running at different speeds, might clean off the spicules as aptly as the fire, but the invention has yet to be brought out. Nevertheless, I know of a small and very valuable clump of thoroughbred stock in the Karoo saved in a hard season solely by the use of the *Opuntia*, rendered harmless by being well blazed with torches of *Kersse-bosch*. After passing through the fire, the sections were thrown into a turnip cutter set to cut very coarse. A little salt sprinkled over the mass made a rapid mess, for which the imported ram and his progeny fought like dogs over a bone. I do not think one bit the more for this incident, however, that the plan is practicable on any scale but that of an experiment or a famine-dodge.

What you can do with ordinary appliances for a little lot of, say, twenty head of special stock, is as much out of your reach as a horn of the new moon when you have to find food for, say, 1,500. Still, I am far from saying the pestilential *Opuntia* may not be made, by some clever person, to pay for its footing and something more."

The Inspector of Forests' report is appended.

I have, &c.,
W. F. PIPER.

SCHEDULE I.

Particulars of Revenue—Year ended 31st December, 1889.

	£	s.	d.	£	s.	d.

Annual Progress Report for the Year 1889.

Report of the Inspector of Forests to The Principal Under Secretary.

Forest Conservancy Branch, Colonial Secretary's Department,

Sir,

Sydney, 20 May, 1890.

I have the honor herewith to submit my Annual Progress Report upon the Forest Conservancy Branch of this Department for the year 1889.

I have, &c.,

JOHN DUFF,
Inspector of Forests.

Catalpa Plantation, Railway Reserve, Cootamundra.

Arrangements were made with the trustees of Albert Park, Cootamundra, for their employees to keep this plantation (area about 6½ acres), clear of weeds, and in good condition, for the annual sum of £35, and Mr. Forest Ranger Stevenson reports that the work referred to has been properly performed, and that the trees, with few exceptions, are progressing satisfactorily. The catalpa trees in this reserve are producing seeds freely annually, and a large quantity of seeds were collected and forwarded to the State Forest nursery, Gosford, for raising a stock of young trees for planting in other forest reserves.

The sum expended upon this plantation for the year was £35 16s.

Cedar plantations on Dorrigo Forest Reserve and Forest Reserves Nos. 5 and 3,753, Bellinger and Macleay Rivers.

Owing to unavoidable causes no planting was done in any of the reserves referred to during the year 1889, the work being confined to the clearing of saplings and scrub from around the self-sown and planted cedar trees on the Dorrigo Forest Reserve, upon which one man was employed during the year.

Authority has been obtained, and arrangements made for fencing, ploughing, harrowing, and planting about 24½ acres on Coghlan's Plain, Dorrigo Forest Reserve with red cedar and alternate rows of evergreen trees, to shade and shelter the cedars from sun, wind, and frost, until they are strong enough to do without protecting; and upon this site over 100 acres of land upon which there is no timber, stumps, or scrub, is available for cedar planting.

Tenders have been invited for the fencing, ploughing, and harrowing of the 24½ acres, upon which 24,200 trees can be planted at 6 feet apart.

The sum expended upon the Dorrigo cedar plantation for the year was £125 4s.

It is proposed to continue the clearing of saplings and scrub, fencing, and planting of cedar on forest reserve No. 3,753, on Nulla Nulla Creek, Macleay River.

Plantation on Hogan's Brush Forest Reserve No. 63, near Gosford.

The catalpa trees in this plantation, area about 6 acres, were so severely injured by wallabies continuously eating off their leaves, young branches, and bark as to render them useless, were removed, and replaced chiefly with red cedar and other trees, which the wallabies do not interfere with, the number of trees planted in lieu of the catalpas being 1,300.

About 26 of the catalpa trees which were not permanently damaged were fenced around, in order to test their future growth, and the suitability or otherwise of the rich, moist, sheltered, brush forest lands for the cultivation of this tree, and I understand that they have since made satisfactory progress.

Altogether there are over 3,000 trees of various genera and species in this plantation, including 800 red cedar trees, which are growing rapidly and vigorously.

The amount expended upon this plantation in planting trees, clearing off weeds and undergrowth, &c., during the year was £64 4s., and in a few years hence, when the trees are tall and dense enough to check the growth of weeds, &c., and not be damaged thereby, comparatively little expense will require to be incurred upon the plantation.

Wattle Plantations on Southern Railway Reserves.

No expenditure has been incurred on these plantations during the year, and from an inspection recently made by me of that portion of the plantation situated between Bowral and Campbelltown, I am of opinion that although a number of the wattle trees are large enough for bark stripping for tanning purposes, it would not be advisable or remunerative to dispose of the bark of the wattles, owing to the small number of trees available, and to them being of most value as ornamental trees on the railway lines.

Proposed New Plantations.

In addition to the two reserves near Wagga Wagga, of 55 and 100 acres respectively, and the 24½ acres on the Dorrigo forest reserve, Bellinger River, authorized to be fenced, ploughed, harrowed, and planted with cedar, an area of 20 acres on forest reserve No. 6,720, Jilliby Jilliby Creek, parish of Wyong, county of Northumberland, has been authorized to be fenced, ploughed, harrowed, and planted.

The preparation and planting of the reserves named will be as much as can be proceeded with this year, and will more than absorb the whole of the available stock of trees at the State Forest Nursery. Numerous other sites for plantations have been recommended by the district surveyors, forest rangers, and myself, most of which will require to be carefully inspected, with the view of deciding whether they are or not suitable for plantations, and the kinds of trees that are adapted for the soil, climate, and situation of each area selected for planting; and as it is not desirable to form numerous small scattered plantations, owing to the large cost of preparing, fencing, and planting same, as well as to the expense of supervising and keeping same in order, which in small plantations would be disproportionate to the value of the timber grown thereon when mature. It is desirable that all plantations should, as far as practicable, embrace a large area, and be capable of being extended from time to time as required.

State Forest Nursery, Gosford.

The principal work performed at the nursery during the year, has been the construction of a deep wide drain from the lowest portion of the nursery to Narara Creek, which was rendered necessary, owing to the heavy flood in May, 1889, completely swamping a portion of the low-lying planted land, to which access was thereby rendered impossible for a lengthened period, and many of the plants were killed or seriously damaged in consequence.

Ten chains of fencing on the eastern boundary of the nursery were levelled to the ground by the strong flow of water against it, and had to be re-erected and supported with guys, but as the flood referred to was an unusually heavy one, and the large drain now being constructed to convey storm-water to the creek, no recurrence of a similar nature may be anticipated. Open drains connecting with the large main drain have also been formed outside the boundary fences wherever required, and altogether about 2 miles of drains were constructed.

About 5 acres of land have been cleared of timber, and stumped, and 1½ acres of said area trenched, and ready for rowing out cuttings and seeds of timber trees in nursery beds. A border 12 feet wide was cleared of timber and scrub, trenched, and planted, on the eastern boundary of nursery.

The road from the railway-station to the nursery has been repaired, and culverts and drains formed thereon where required.

A windmill and Douglass hand-pump were erected, and pipes laid down to convey water from two wells to the plant sheds and grounds, the wells having also been deepened, and lined with bricks.

A plant-shed or bush-house, 100 feet long by 18 feet wide, was erected, which is now full of useful and ornamental trees and shrubs.

The trees in the nursery, which are available for planting in the forest reserves, and exchanging during the present winter and ensuing spring, amount to the total number of 51,000, consisting of 31,000 in nursery rows, 15,000 in pots, and 5,000 in boxes, including the following genera and species, viz:—Gums (*Eucalyptus*), embracing most of the useful indigenous and other species of timber trees of commercial value; red cedar (*cedrela toona*); catalpa speciosa; elms (*ulmus montana*, and *U. suberosa*); oaks (*quercus robur*, *Q. suber*, *Q. virens*, *Q. ilex*, *Q. lusitanica*, *Q. pseudo-suber*, *Q. tanzin*, *Q. coccinea*, &c.); pines (*pinus halapensis*, *P. pinea*, and *P. ponderosa*); white deal or damson (*podocarpus spinulosa*); turpentine (*syncarpia laurifolia*); white box (*tristania conferta*); white cedar (*melia composita*); poplars (*populus* of sorts); olive (*olea europæa*); kurrajong (*sterculia diversifolia*); Pittosporums of sorts; figs (*ficus rubiginosa* and *F. macrophylla*); Norfolk Island and Moreton Bay pines (*araucaria excelsa*, and *A. Cunninghamii*); spruce (*abies excelsa*); sycamore (*acer pseudo-platanus*); laburnum (*cytisus laburnum*); and various other species of useful and ornamental trees and shrubs.

About 100,000 seedling trees are now ready to row out in nursery beds, pot, or plant in boxes for next year's planting out in the forest reserves. Altogether the work at the nursery and Hogan's Brush Plantation has progressed rapidly and satisfactorily, which reflects credit upon the overseer, Mr. John M'Coig, and the workmen employed under him.

The amount expended upon the nursery for labour, tools, and other materials, &c., for the year amounted to £1,044 8s.

Inspection of Forest Reserves, Plantations, and office work for the year, 1889.

During the year I inspected and recommended two town reserves, near Wagga Wagga, areas about 55 and 100 acres respectively, to be utilized for plantations of timber trees; also the Osborne and Brookong Forest Reserves, county Urana, the Ironbark Forest Reserves, Nos. 2,784 and 2,785, county of Bourke, upon the former of which reserves an area of 2,387 acres was surveyed into blocks, and recommended by Mr. Surveyor M'Kay to be revoked, and submitted for sale or selection. Upon many parts of the area referred to the ironbark timber was equally plentiful, and of as good quality as on any other portion of the reserve, although the blocks recommended for revocation embraced the best of the land for agricultural and pastoral pursuits, therefore for the foregoing and other reasons I recommended that no part of the reserve be revoked. Inspected the Bygoo Forest Reserve, No. 3,041; Kurrajong Forest Reserve, No. 1,439; Dulah Forest Reserve, No. 2,652 (all in the county of Bourke); Billabong Forest Reserve, county Goulburn (since cancelled); North East Mangoplah Forest Reserve, No. 3,293, county of Wynyard and Mitchell; Forest Reserve, No. 3,157, county of Goulburn and Mitchell; and the Gillenbah Forest Reserve, No. 1,890, county of Mitchell, the latter of which reserves the residents of Narrandera and district had petitioned to be revoked, and thrown open for settlement, but as the Narrandera-Jerilderie Railway runs through the reserve, and it contains the largest quantity and best quality of pine timber in all stages of growth in the district, in which pine timber is annually becoming more scarce and valuable, and the reserve being in the vicinity of immense treeless plains I deemed it advisable, in the interests of forest conservation and the public, to strongly recommend that the reserve be retained intact. Inspected the State Forest Nursery, Gosford; Hogan's Brush Forest Reserve, No. 63, and plantation thereon, near Gosford; Eglinton and Narara Forest Reserves, No. 128; Kincumber Forest Reserve, No. 124; Ourimbah Forest Reserve, No. 129; Teralba Forest Reserve, No. 105; Wyong Forest Reserves, Nos. 143 and 144; Belford Forest Reserve, No. 50A; Sugarloaf Forest Reserve, No. 69A; Warrawalong Forest Reserve, No. 46; Olney Forest Reserve, No. 70, all in the county of Northumberland; and Forest Reserves, Nos. 78, 112, 57, and 110, in county of Camden, upon many of which reserves I furnished reports *re* their present condition, with recommendations *re* tree-planting and their future management.

I inspected the Catalpa Plantation, Cootamundra; the sand-drifts, Newcastle and Wollongong, and the plantations at Jenolan Caves, in the latter of which I supervised the planting of about 300 trees and shrubs, the sowing of a collection of about fifty species and varieties of flowering annual and perennial plants, digging of plantations, pruning and staking of trees and shrubs therein, and the repairing of roads, &c.

Whilst at Jenolan Caves I inspected the Kowmung Forest Reserve, No. 101, county Westmoreland, where there is a large quantity of red cedar growing in the deep ravines, from which, owing to the lofty perpendicular cliffs surrounding the valleys it would be impossible to remove the cedar, unless it was previously cut into boards, and hoisted to the summit of the cliffs by machinery. The scenery at the Kowmung, about 25 miles distance from Jenolan Caves, is truly grand, varied, and picturesque, equaling anything hitherto seen by me in the Colony, and it is worthy of consideration if it would be desirable to reserve a large area for the preservation of the rich vegetation and other natural features of the locality, which

which would be a favourite resort for visitors to Jenolan Caves if a road was made from the caves thereto, an undertaking which would be easily and cheaply accomplished, as the road would pass through Council Chamber's Flat and Lippy's Creek Forest Reserves the greater part of the distance, and these reserves being lightly timbered, all that would be required to be done would be to remove the timber and scrub from the track.

Inspected Council Chamber Flat and Lippy's Creek Forest Reserves Nos. 22 and 23 respectively, county Westmoreland, upon which the timber, although not of large dimensions, is the best obtainable in the district.

My office duties consisted chiefly of perusing forest rangers and other reports, and furnishing recommendations thereon, compiling reports upon forest reserves, areas for plantations, and specifications for the work to be done thereon, as well as report upon all other subjects requiring to be dealt with; receiving, cleaning, naming, and putting in bags collections of seeds received from the forest rangers and kindred departments; preparing collections of plants and seeds to be despatched to the State Forest Nursery, Gosford; and collections of plants, seeds, and dried specimens of trees, shrubs, grasses, and fodder plants to forward to other departments in exchange for plants, seeds, and specimens received, as per lists appended.

Ringbarking useless trees, thinning out saplings, and eradicating useless scrubs in forest reserves during the year 1889.

Permission was granted to Messrs. Goldsborough & Co. to ringbark useless trees, thin out saplings, and destroy useless scrubs on forest reserve No. 2,211, area 14,720 acres, county of Cooper, the reserve being situated on the South Yalgogrin Pastoral Holding, and the work was commenced in January last.

Permission was granted to Mr. Caldwell to ringbark useless trees, thin out saplings, and destroy useless scrubs on 964 acres of timber reserve No. 2,745, county of Bland, situated on the Moonbucca Pastoral Holding, and upon which the work was commenced in March last.

Permission was granted to Mr. Pearce, upon whose conditional purchase license, No. 4,170, forest reserve No. 1,830, county Urana, is situated, to ringbark the useless trees and destroy the useless scrubs upon an area of 1,075 acres, but the work has not yet been commenced.

Permission was granted to Messrs. Edols & Co., lessees of Burrawang Pastoral Holding, county of Cunningham, to ringbark the useless trees, thin out the saplings, and destroy the useless scrubs on forest reserve No. 8,661; area, 11,520 acres, but the work has not yet been commenced.

Permission was granted to Mr. D. T. Wilson, lessee of North Bolero Block A Pastoral Holding, to thin out the pine, box, bull oak, and other saplings, and destroy useless scrubs on Forest Reserve No. 3,032, county of Cooper, area 3,200 acres, but the work has not yet been commenced.

The whole cost of ringbarking the useless trees, thinning out the saplings, and destroying the useless scrubs, as well as of paying the salary of an inspector for each reserve to be operated on, is defrayed by the pastoral lessees of the holdings upon which the reserves to be cleared are situated, these inspectors being appointed by the Department to supervise the workmen employed in clearing on the reserves, and see that only useless trees are destroyed, that the best saplings are left growing at the specified distances apart, and that only useless scrubs are eradicated.

Donations of plants, seeds, &c., received in the year, 1889.

- 22nd March, 1889.—Received from Charles Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney—1 package red cedar seeds (*cedrela toona*).
- 22 March, 1889.—Received from W. R. Guilfoyle, Esq., F.L.S., Director, Botanic Gardens, Melbourne—7 packages of oak and other seeds, 22 samples of papers, and 61 samples of fibres prepared from indigenous and other plants by Mr. Guilfoyle, also a descriptive catalogue of the above specimens.
- 25th March, 1889.—Received from J. S. Edgar, Esq., F.R.H.S., Curator, Botanic Gardens, Rockhampton—1 package eucalyptus microtheca, 1 package eucalyptus citrodora, and 1 package cassia brewsterii seeds.
- 10th April, 1889.—Received from J. E. Brown, Esq., F.L.S., Conservator of Forests, Adelaide—1 lb. seeds of eucalyptus corynocalyx (sugar gum.)
- 16th May, 1889.—Received from J. S. Edgar, Esq., F.R.H.S., Curator, Botanic Gardens, Rockhampton—1 package eucalyptus raveretiana seeds.
- 6th June, 1889.—Received from G. S. Perrins, Esq., F.L.S., Conservator of Forests, Melbourne—1 package quercus suber (cork oak) seeds.
- 19th June, 1889.—Received from Wm. R. Guilfoyle, Esq., F.L.S., Director, Botanic Gardens, Melbourne—Seeds of 7 species of oak, chiefly American evergreen species.
- 8th July, 1889.—Received from Mr. Forest Ranger Powell, Gunnedah—19 lb. seed of kurrajong-tree (*sterculia diversifolia*).
- 7th September, 1889.—Received from Charles Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney—300 plants of miscellaneous indigenous, and exotic timber, and other trees.
- 24th September, 1889.—Received from Wm. R. Guilfoyle, Esq., F.L.S., Director, Botanic Gardens, Melbourne—73 plants miscellaneous exotic flowering shrubs, &c.; also 40 species miscellaneous exotic tree and shrub seeds.

Plants, Seeds, &c., sent away during the year 1889.

- 26th January, 1889.—Sent to Professor Muller, Technological Professor, High School, Hanover, Germany—56 species Australian and New Zealand seeds.
- 1st February, 1889.—Sent to J. S. Edgar, Esq., F.R.H.S., Curator, Botanic Gardens, Rockhampton—21 species Australian seeds.
- 26th February, 1889.—Sent to Baron Muller, K.C.M.G., F.R.S., Government Botanist, Melbourne—106 dried flowering specimens of trees, shrubs, &c., from the Bellinger River, Jenolan Caves, and Lachlan Districts.
- 27th February, 1889.—Sent to the Overseer, State Forest Nursery, Gosford—22 species indigenous timber tree seeds.
- 1st March, 1889.—Sent to J. E. Brown, Esq., F.L.S., Conservator of Forests, Adelaide—25 species indigenous timber tree seeds.
- 1st March, 1889.—Sent to Wm. R. Guilfoyle, Esq., F.L.S., Director, Botanic Gardens, Melbourne—18 species indigenous tree and shrub seeds.

- 2nd March, 1889.—Sent to T. Kirk, Esq., F.L.S., Chief Conservator of Forests, Wellington, New Zealand—26 species indigenous timber tree seeds.
- 27th March, 1889.—Sent to Charles Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney—32 species indigenous tree and shrub seeds, and 12 samples of eucalypt, acacia and pine gums and resins.
- 30th March, 1889.—Sent to the Trustees, Hyde Park, Sydney—24 species indigenous tree and shrub seeds.
- 3rd April, 1889.—Sent to Charles Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney—7 species New Zealand and other tree and shrub seeds.
- 3rd April, 1889.—Sent to the Overseer, State Forest Nursery, Gosford—27 species indigenous and other timber tree seeds.
- 4th April, 1889.—Sent to the Overseer, State Forest Nursery, Gosford—16 oz. cedrola toona (red cedar) seeds, received from Mr. F. R. Brown, Port Macquarie.
- 19th June, 1889.—Sent to the Overseer, State Forest Nursery, Gosford—10 species of indigenous and American timber tree seeds.
- 21st June, 1889.—Sent to the Overseer, State Forest Nursery, Gosford—7 species of American and other evergreen oak (*quercus*) seeds.
- 15th July, 1889.—Sent to Dr. Franklin B. Hough, Ph. Dr., First Chief of Forestry Division, Department of Agriculture, Washington, United States of America—62 species of indigenous and New Zealand timber tree seeds.
- 17th July, 1889.—Sent to G. S. Perrins, Esq., F.L.S., Conservator of Forests, Melbourne—31 oz. kurrajong tree seeds (*sterculia diversifolia*).
- 17th July, 1889.—Sent to J. E. Brown, Esq., F.L.S., Conservator of Forests, Adelaide—34 oz. kurrajong tree seed (*sterculia diversifolia*).
- 24th September, 1889.—Sent to the Overseer, State Forest Nursery, Gosford—73 plants of miscellaneous flowering shrubs and plants, received from the Director, Melbourne Botanic Gardens.
- 18th October, 1889.—Sent to the Overseer, State Forest Nursery, Gosford—34 species of indigenous, New Zealand, and other timber tree seeds.
- 18th October, 1889.—Sent to Charles Moore, Esq., F.L.S., Director, Botanic Gardens, Sydney—12 species miscellaneous tree and shrub seeds.
- 18th October, 1889.—Sent to the Trustees, Hyde Park, Sydney—12 species miscellaneous tree and shrub seeds.
- 18th October, 1889.—Sent to Wm. R. Guilfoyle, Esq., F.L.S., Director, Botanic Gardens, Melbourne—25 species miscellaneous tree and shrub seeds.

1890.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

GROWTH OF CEDARS IN THE MACLEAY AND
BELLINGER DISTRICTS.

(INFORMATION RESPECTING.)

Ordered by the Legislative Assembly to be printed, 18 September, 1890.

[Laid upon the Table in answer to Question No. 4 of 16 September, 1890.]

Questions.

- (4.) Growth of Cedars in the Macleay and Bellinger Districts:—*Mr. Stevenson*, for *Mr. O. O. Dangar*, asked the Colonial Secretary,—
- (1.) What sums of money have been expended in the Macleay District during the years 1887-8-9 in connection with the planting of cedars?
 - (2.) What result has attended the attempt to encourage the growth of cedars in that district?
 - (3.) The same information in regard to the Bellinger District?
 - (4.) In view of the expenditure and results, is it the intention of the Government to continue the system hitherto adopted, or what course do they intend to adopt?

Answers.

- (1.) 1887, £16 10s.; 1888, £21 4s.; 1889, nil.
- (2.) Owing to bush-fires and floods, the result has not been so satisfactory as was anticipated, but a considerable number of the young plants are growing well.
- (3.) 1887, £282; 1888, £285; 1889, £125 4s. The heavy timber overhead has retarded the growth to a great extent.
- (4.) The matter will be decided after inspection by the Director-General of Forests.

1890.

NEW SOUTH WALES.

SECOND ANNUAL REPORT

OF THE

BOARD OF WATER SUPPLY AND SEWERAGE,

BEING FOR THE YEAR

1889.

Presented to Parliament by Command.

SYDNEY : CHARLES POTTER, GOVERNMENT PRINTER.

1890.

[1s. 9d.]

[1,453 copies—Approximate cost of printing (labour and material), £50 15s. 7d.]

1890.

NEW SOUTH WALES.

BOARD OF WATER SUPPLY AND SEWERAGE.

(ANNUAL REPORT FOR 1889.)

Presented to Parliament by Command.

To the Honorable the Secretary for Public Works,—

Sir,

The Board of Water Supply and Sewerage have the honor to submit to you their second annual Report.

2. During the past year a great improvement has been made to the supply of water to the city by laying larger trunk mains, also in removing the old-fashioned fire-plugs and inserting ball hydrants in their place; the Board have also inserted some screw-down hydrants, and contracted for the supply of 1,000 more to be placed at intervals throughout the main thoroughfares of the city.

3. The new Worthington pumps, and Babcock and Wilcox boilers, which were ordered in 1888 arrived; they are capable of forcing 12 million gallons in twenty-four hours to a height of 70 feet, and were erected under the supervision of Mr. T. H. Houghton, the engineer sent out by Messrs. Simpson & Co. (the manufacturers) for that purpose, and to superintend the working of them for six months. The foundations and buildings were designed by the Board's officers, and carried out by contract under their supervision. These engines take the place of the old rotative engines pumping to Paddington, and the Blake engines pumping to Woollahra, which are now not only inadequate to the present demand on them but are also worn out. A new 36-in. rising main will be laid from Crown-street to Paddington and Woollahra to enable the new engines to pump at their full capacity.

4. In their last Report the Board stated the advisability of having sufficient storage capacity of reservoirs to hold at least a day's supply, and have been trying to fix upon and secure a proper site; in this they have met with some difficulty owing to the fact that the site for the high-level reservoir, which had been marked out some years ago by the City Council, now forms part of the Centennial Park Reserve. The present intention is to have a 15 million gallon high-level reservoir at about 235 feet above high-water-mark level, as the Paddington and Woollahra Reservoirs are far too small for present requirements, also to construct a 20 million gallon reservoir at the same level as Crown-street Reservoir, to which the water will flow by gravitation, so that in case any accident occurred to either the present main trunk pipe or the one about to be laid the city would always have about two or three days' supply stored for distribution.

5. The daily consumption of water was 8,820,000 gallons, showing an increase of 680,830 gallons over the previous year.

6. The length of new mains of different sizes laid during the year was 86 miles 1468 yards, which, at 254 persons per mile, is equal to over 22,000 supplied with water during the year.

7. A gang of men had been continuously employed in cleaning out the old mains with the spiral borer invented by the Board's Engineer for Water Supply, and by this means with very little cost their capacity is made almost equal to new mains. Some of these mains had been laid over fourteen years, and were corroded to such an extent that they were almost useless. The length of mains so cleaned was 16 miles 907 yards.

8. A table is appended (A) showing the amount of water which flowed into Sydney by gravitation, also the amount pumped to the various reservoirs, together with the temperature and rainfall, and it is interesting to notice the effect of the two latter on the consumption.

9. During the year the Board's attention was attracted to a rumour circulated in Melbourne that the Melbourne water contained germs of typhoid, which was, after a thorough examination, proved to be groundless. Thinking that sympathetic fears might be entertained by the inhabitants of Sydney with regard to their water supply, the Board caused a chemical analysis and microscopic examination to be made of water taken from the drinking-filters at Redfern Railway Station. The chemical analysis was conducted by Mr. Dixon, and the microscopic examination by Dr. Morris, which are most satisfactory, and are as follows:—

Sir, Technical College Laboratory, 301, Pitt-street, 13 November, 1889.

Following your instructions given me on the 16th of October, I that day went and got samples of water from the upper part of the filter (viz., unfiltered water) from the waiting-room at Redfern Railway Station. Part of this water I subjected to chemical examination with the result that it contained—

Suspended matter (oxide of iron, &c.)	0.31 grs. per gallon.
Chlorine in solution	2.80 "
Phosphates	None.
Inorganic ammonia	None.
Organic ammonia	0.03 parts per million.

Chemically this water is very pure and far in advance of the old Botany supply which used to contain very notable quantities of inorganic ammonia and often five times as much organic as this does.

The second portion of the sample I gave to Dr. Morris for microscopic examination as he makes a speciality of this work, and I now enclose his report. He has gone thoroughly into the matter and his report is as satisfactory as the chemical one. I may point out that the samples were taken in a way and place so as to insure as far as possible the presence of organisms.

Trevor Jones, Esq., Engineer to the Water and Sewerage Board.

I remain, &c.,
WILL. A. DIXON, F.I.C., F.C.S.

My dear Sir,

27, Castlereagh-street, 12 November, 1889.

Herewith receive my micro-examination of the 4th, on a sample of water left by you on 16th October.

On my first examination of the water with high power I came across isolated endosporeous bacillus, resembling anthrax bacillus. After repeated examination I found this bacillus in thousands, as a colony living in decayed vegetable matter. This at once showed me that we had septic not a pathogenic bacillus to deal with.

They were in all stages of growth, from 1 to 5 spore, never exceeding 5. I kept them under observation for about fourteen days, to see whether they would take on any other form. I am now perfectly satisfied that this water does not contain any bacteria of a pathogenic type, such as would produce typhoid or anthrax; and I am of opinion that this water is a very good water for all household purposes. Trusting the enclosed report may be entirely satisfactory,

I am, &c.,
WM. MORRIS.

W. A. Dixon, Esq.

Micro-examination of a sample of water given to me by Mr. Dixon, 16th October, 1889.

27, Castlereagh-street, 12 November, 1889.

The sediment, as seen through a half-inch objective, consisted of oxide of iron entangled in minute threads like processes (Beggiatoa) of vegetable matter diatoms, sponge spicules, water fleas, rotifers, and various other animalcules, also fine crystallized grit which polarized under a Nichols' prism.

On subjecting it to a further examination with $\frac{1}{2}$ -inch immersion objective ovoid bodies (probably eggs of some minute water fleas or acari), micrococci, bacteria, and minute algae, such as cladotrix, became visible.

Having

Having prepared and stained several specimens of the sediment, also the residue left on their cover glasses after evaporation, I mounted them for special examination with higher objectives in order to determine whether the bacteria were of a septic or pathogenic nature. I found that they belonged to the septic type (those which live in decomposed or organic matter), such as bacteria termo and bacillus subtilis, all of which are considered harmless, and invariably found in water where animal and vegetable matter is undergoing decay; in fact they are the minute scavengers of Nature.

I may state that the examination of these organisms were under my observation for about three weeks, fresh specimens being selected about every third day, and this was carried out specially to ascertain whether any of the microbes might alter their form, as in many cases they display considerable polymorphism. I am pleased to state that I did not detect any pathogenic microbes (those which characterise by their presence a special disease); therefore, as far as the bacteriæ are concerned, my opinion is that the water is a first-class sample.

The diatomacæ consisted of six varieties, viz., ducyonema, synedra, coscinodiscus, epithemia, cyclotella, and pleurosigma. The sponge spicules were curved and needle pointed at both ends, but not so numerous as in the old Botany water. A good filter would intercept nearly the whole of these organisms.

The reason I have taken so long over this matter is that I wish to make it as exhaustive as possible, and if at any future time a pathogenic bacillus is supposed to be found in the water, before it is accepted as such I would advise that the said bacillus be artificially cultivated until a pure culture is obtained, then tested on some animal capable of taking the disease, then the animal ought to produce the typical symptoms and lesions of such a disease.

W. MORRIS, F.F.P.S.G. & F.R.M.S.L.

10. To enable persons who had one or two horses or cows, or who had small gardens, to obtain a supply of water for them without affixing a meter, the Board instituted the following fees, viz. :—10s. per horse or cow per annum (since reduced to 5s.), and 10s. per annum for every 750 superficial square feet of garden. This was found to work very well, being of great benefit to the ratepayers, and also a source of profit to the Board, as meters are not only an expense to the consumer but also to the Board in reading them and seeing that they are kept in proper order. There were 5,080 applications made and fees paid for horses and cows, and 419 for gardens.

11. The Profit and Loss account (B) is appended, which shows, after paying interest on the Nepean Scheme, on loans of 1888, on debentures, and also, after paying the expenses of management and maintenance of the Department, that there is a debit balance on the year's transactions of £5,718 0s. 4d. This, however, includes a sum of £2,446 8s. 8d. written off value of machinery as depreciation.

The expense of management, which has been hitherto borne by the Water Fund, will henceforth be to some extent divided with the Sewerage Fund.

12. Appended to this Report is a very interesting table (C), showing the comparative water supplies of the large towns in Great Britain and Adelaide, Melbourne, and Sydney. On an examination of this it will be seen that the rate charged the consumer by assessment is cheaper in Sydney than in any other town of similar magnitude.

13. During the latter part of the year the Water Supply and Sewerage Amendment Act No. 2 was passed, transferring to the Board all the sewerage works which had been carried out by the city and suburban Councils and by the Government, and giving the necessary powers to the Board to carry out a complete sewerage and ventilation system throughout the city and suburbs. The Sewerage and Health Board, composed of the following members, viz. :—M. P. Pell (Chairman), E. O. Moriarty, W. C. Bennett, Hon. J. B. Wilson, B. Palmer, F. Bell, and Dr. Alleyne, laid down the main scheme, which was approved of by Mr. W. B. Clarke, the construction of which will be still carried on by the Government, and when completed will be handed over to the Board, who will have to construct the subsidiary sewers and reticulation of streets with all house connections, together with the system of house and drain ventilation.

14. The Board appointed Mr. J. M. Smail, M. Inst. C.E., as their Engineer for Sewerage. Mr. Smail was Assistant Engineer of Sewerage in the Government

Sewerage

Sewerage Department, which position he had held for over ten years; previous to that he was for some years Assistant City Surveyor and Assistant City Engineer in the Corporation of the City of Sydney.

15. The Board have to record with deep regret the loss by death of one of their members, Mr. W. C. Bennett, M. Inst. C.E., who was of invaluable assistance to them in the initiation of their work, and at all times proved himself most willing to place his great professional services at the disposal of the Board, which were of incalculable benefit to them. Mr. R. R. P. Hickson, who succeeded Mr. Bennett in his position in the Government Service, was appointed by the Government to fill the vacancy thus regrettably caused.

16. During the year fifty-eight meetings of the Board were held, at which the attendance was as follows :—

	Present.	Absent.
T. Rowe, President	55	3
B. Palmer, Vice-President (City Member)	55	3
W. C. Bennett (Official Member)	22	7
R. R. P. Hickson " "	28	1
C. W. Darley " "	43	15
J. D. Young (City Member)	53	5
G. W. Lander (Suburban Member)	57	1
J. Graham " "	55	3

Mr. C. W. Darley, who was in Europe on leave of absence, returned at the end of March.

17. Owing to the repeated complaints made by the public of the position of the Board's offices at the northern end of Lower George-street being so far out of the way, and also because these temporary offices were not sufficient to accommodate the Sewerage Branch, the Board considered it desirable to request the Government to resume a piece of land in a central part of the city and build thereon suitable offices for them, which proposition, having met with the approval of the Government, was brought before Parliament and referred to the Public Works Committee; in the meantime the Board rented more favorably situated offices at 289, Pitt-street, near the corner of Park-street, to which they removed at the end of the year.

18. An analysis of accounts (D) and the report (E) of the Engineer for Water Supply, and the balance-sheet (B2) of the Accountant are attached hereto.

REGINALD BLOXSOME,
Secretary.

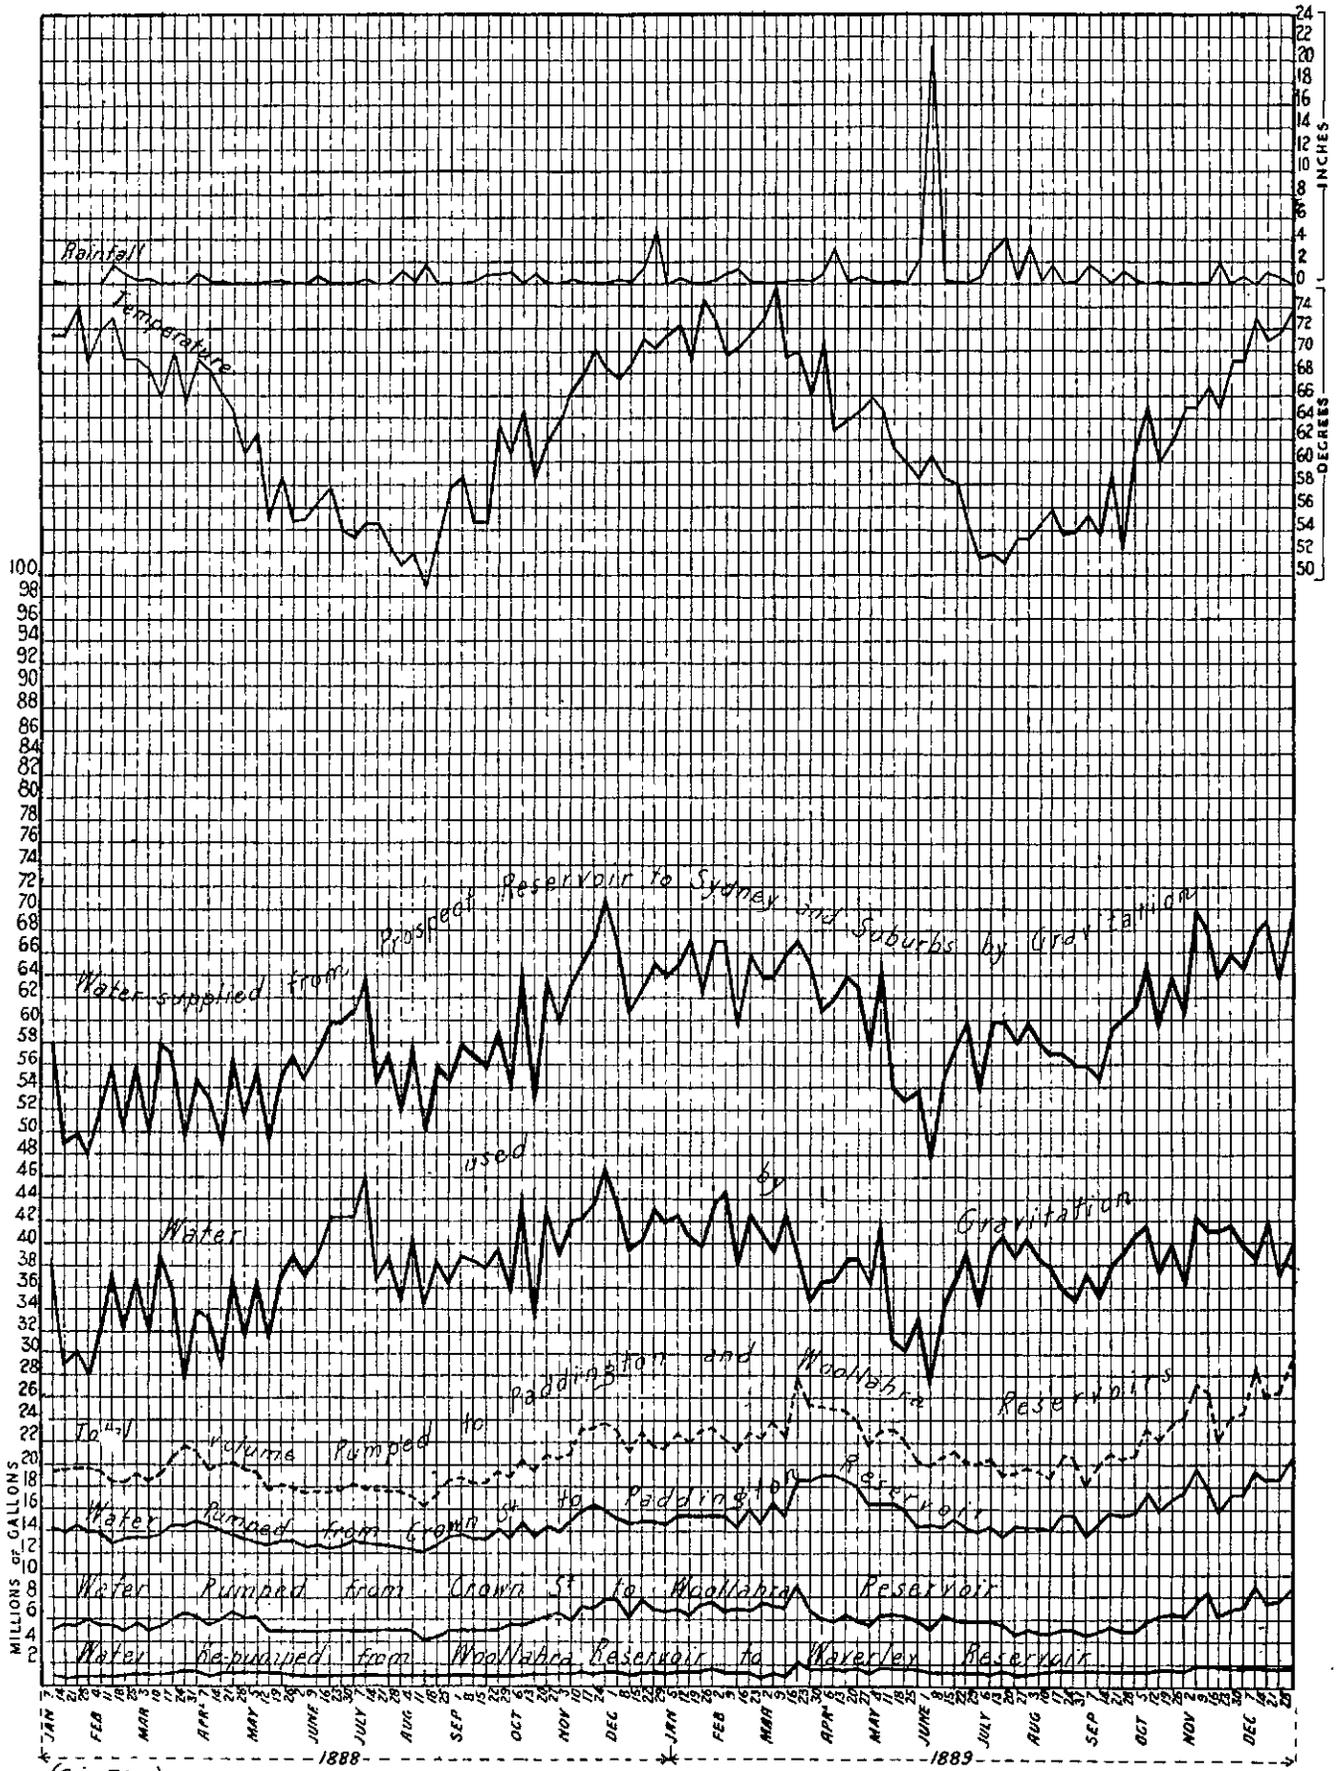

THOS. ROWE,
President.

1 March, 1890.

* The management of the Sydney Water Supply was transferred to the Board on May 12th, 1888.
 † £5,000 Debenture, which fell due during 1889.

E.

Subject :—Yearly Report, Engineer for Water Supply.

Board of Water Supply and Sewerage,

Sydney, 21 February, 1890.

I HAVE the honor to submit to the Board the customary yearly report of operations and progress of the Board's work in the above Department for the year 1889.

Pipe-laying.

The year commenced with considerable activity, which was maintained throughout the year at the average rate of $7\frac{1}{2}$ miles per month, of pipes of all sizes. By the middle of the year the bulk of the requirements of the most importunate applicants had been satisfied, after which the ordinary current extensions were proceeded with of extensions into new districts and the completion of those already commenced.

The Board's operations were occasionally impeded by the want of special castings, which evil the Board have provided for in the future by deciding to import in bulk the most generally-used types.

The pipes ordered under the Stanton Company's contract commenced to be delivered in May, a little before the contract time, and they continued to meet requirements until a consignment of pipes made for that company under sub-contract were found to be of a make much inferior to those made by the company itself, when, by authority of the Agent-General, an extension of time was given to the company, and a falling off in deliveries ensued, causing a little delay to the Board's operations.

Interruption to Water Supply from Prospect.

On the 17th February an interruption to the supply from Prospect took place, arising from a flaw previously known to exist, but which suddenly took a threatening aspect, and the water was suddenly stopped, and resort was had to the Botany pumps, but not before considerable inconvenience was felt.

This incident strengthened the determination to construct a 100,000,000-gallon reservoir at the pipe-head, and to lay a duplicate 4-ft. main from Potts Hill to the city, which will render the city and suburbs practically safe against interruption to their water supply.

New Outlet Works, Paddington.

The outlet works at Paddington, and the trunk main thence into the city, for the more liberal distribution of high-level water, sanctioned by the Board in 1888, were completed and in action by March, when a marked improvement in the supply to Darlinghurst, Surry Hills, &c., was evident, the higher levels of these localities having previously received for some time a precarious supply.

Duplicate Main, Fitzroy-street.

The work of laying the duplicate 20-inch main in Fitzroy-street, and other work to the same end, for enabling both the Board's pumps to work at the same time, also sanctioned by the Board, was completed and at work in February, without which work it would have been practically impossible to meet the demands of subsequent months, as the consumption assumed greatly-increased proportions.

New Worthington Engines.

The foundations for the new Worthington pumps and boilers were in readiness to receive that plant on its arrival, 15th September, the engineer deputed by Messrs. Jas. Simpson & Co. (Mr. Houghton) to erect the same having landed about a month previously, and by the end of the year the work was drawing to a close, the building of the engine and boiler houses and the chimney-stack, as well as the connections of the pumps to the reservoir and to the outlet pipes, having been carried on simultaneously without any serious inconvenience.

Old Engines.

In the meantime the old pumping engines at Crown-street, with careful watching and frequent repairs, were enabled to meet the wants of the Board, but their unduly elevated situation restricted the efficiency of the trunk 42-inch main, which was designed only to deliver its full quota when flowing freely into the reservoir; but in order to bring the water within reach of these engines, it was forced, by the partial closing of the valve, to a height of about 12 feet above the reservoir, which limited the amount delivered. (For particulars of repairs, &c., to these pumps see Mr. Fyfe's report). The new pumps are fixed at such a level as to feed themselves without restricting the trunk main.

Further Interruption.

On April 6th warning was received from Prospect that another interruption would take place to the supply, and immediately the Botany pumps were got in readiness to tide over the interruption, but they were only called into requisition on the 24th, when they met the temporary want without inconvenience to the public.

Screw-down

Screw-down and Ball Hydrants.

On April the 9th a trial was made of the relative value for ejecting streams of water on fires of the ball form of hydrant, as compared with the "screw-down," resulting a very little in favour of the latter, so far as length of jet was concerned; but the claims of the "screw-down" in other respects were recognized by the Board, with the result that the Board ordered, locally, 1,000 ball hydrants for immediate use, and sent to England for a further 5,000, and 1,000 "screw-down" hydrants, the latter to be placed at specially important places in the city or suburbs.

Dam, Centennial Park, carried away by heavy rains.

On May 25th very heavy rains fell, causing great damage in Centennial Park to one of the dams, but which was met by prompt measures.

Flumes.

The flumes which had been erected for the temporary supply were dismantled and sold in May, to obviate the possible danger of their being blown down and causing damage.

Ashfield supply.

There were parts of Ashfield which could not be reached by the gravitation scheme or the Paddington water; it was therefore determined by the Board to give Woollahra pressure to this locality on two or three days per week, pending the erection of a 100,000-gallon tank now about to be constructed. When this is finished, it will be filled at night, and will afford a constant supply to those elevated localities.

General.

On the 22nd November the 30" trunk main, formerly used as a Botany pumping-main, but now partly used as a Woollahra pumping-main, fractured at the corner of Fitzroy and Crown Streets, but was repaired in twelve hours without serious interruption to the water supply.

A week later the same pipe broke at the corner of Albion and Crown Streets, but was promptly repaired.

At the latter part of the year it became doubtful whether the site for a 20,000,000-gallon high-level reservoir would be granted by Government; it therefore became necessary to explore for other sites.

An accident threatening the failure of the Blake pumps occurred on the 9th December, which, from its seriousness, caused a pressure to be brought upon the contractors to complete their connections to and deliveries from the new engines, which had already been erected, but so far the evil has not caused such failure.

In discussing the sewerage question of the Western Suburbs by the Public Works Committee, some doubts arose as to the adequacy of the Nepean scheme to afford water to meet that want; but on being assured that the scheme had been designed with all such wants in view, and that such wants would be freely met, that difficulty was considered disposed of.

During the year the Board granted the use of the high-level water for actuating elevators direct from the main in nine instances, and ruled that in future such rights could only be granted if the applicant provided tanks at such elevation as would actuate the lift, into which the water could flow in an equable stream, so that such machines would not cause sudden and frequent depletion of mains, to the detriment of the domestic and other uses.

Power-lift Co.

A Power-lift Company is erecting works and laying pipes to actuate their machines, and are applying to the Board for water at a reduced rate, on account of the large quantity used; and I have thrown out the suggestion that some terms should be arranged for the Company to use water now running to waste at Botany, by using the Board's smaller pump, and connecting the Company's works with the Botany rising main, but so far no finality has been arrived at.

Campbelltown.

The water was brought into Campbelltown during 1888, but the want of pipes prevented the extension by reticulation for a time. Specification for the completion of this work will shortly be submitted.

Liverpool.

A scheme for the supply of Liverpool was approved and adopted by the Board, but while waiting for the arrival of pipes a new proposition was made by the Mayor of Liverpool, the claims of which had such merits that considerable delay was entailed in reconsidering the matter, and it has yet to be settled.

Quantity

Quantity of water pumped and coal consumed during the years 1879 to 1889 inclusive :—

J. TREVOR JONES, C.E.,

The Secretary, Board of Water Supply and Sewerage.

Engineer for Water Supply.

Sir,

The Waterworks, Crown-street, 2 January, 1890.

I have the honor to make the following report upon the working of all the pumping engines during the year just ended, 1889 :—

The main pumping engines at Crown-street works have been kept going daily throughout the year pumping to Paddington Reservoir. The western crank being completely broken through, a stronger strap had to be fitted on; and recently, to make it more secure, a strong malleable iron plate had to be fitted on to face of crank, securely fastened with steel bolts. A fracture in western fly-wheel has been made good with steel plates and bolts, well fitted and securely fastened. The ordinary examinations and repairs consistent with the constant running of the machinery have been carried out as required. It is fully three years since the main engines have had a thorough overhaul, which of course will cause it to be extensive when opportunity permits of its being done. The laying-up for general repairs is much needed, and will require to be done when the work can be taken up by the new pumps.

During the year the quantity pumped to Paddington Reservoir by these pumps was 843,068,150 gallons, showing an increase of 118,153,950 gallons on the previous year, and an increase on the corresponding quarter of the year previous of 37,137,950 gallons.

The Blake pumps have had new central valve-chambers fitted to them, also a new pump-rod; they have been working daily throughout the year; they are, however, showing unmistakable symptoms of general decay, and require careful watching to keep them up to their work; they have been doing fair work, considering their critical state, but cannot be depended on much longer to keep up the supply. During the year the water pumped by these pumps to the Woollahra Reservoir was 339,163,150 gallons, showing an increase of 39,050,910 gallons on the previous year, and an increase in the corresponding quarter of the year previous of 7,530,180 gallons. From the great increase in the quantity of water pumped it must be evident that we are in great straits to keep up the supplies with our limited resources.

The three boilers at these works supplying the main pumping engine and Blake pumps with steam—these, with their connections, were in good working order throughout the year, only requiring a limited renewal of feed-pipe.

The pump at Woollahra Reservoir was almost daily worked throughout the year, pumping to the Waverley Reservoir, and did its work satisfactorily. The repairs to this pump were of a limited and ordinary nature, necessary to its efficient maintenance.

The boiler in connection with this pump was in fair working order, and was daily in use throughout the year, with two days exception, when it had to be laid up to undergo the necessary internal and flue cleaning.

The pumps and boiler at the North Shore works have been working satisfactorily throughout the year. At the commencement of the year from two to three days' pumping per week was sufficient to meet the water requirements; but now, like other places, the demands on them have increased to such an extent

extent that it has been found necessary these last three months to pump every day. They were in good working order throughout the year, and required only the ordinary renewal of pump-valves, springs, packing, &c.

The Botany pumps were worked under steam several days on two different occasions in the early part of the year, and were turned round, each engine respectively, every week by hand. A boiler-fire has been kept banked during the whole time, and the banking changed periodically for the purpose of drying flues and keeping the external bottom of boilers dry.

J. Trevor Jones, Esq., Board Water Engineer.

I have, &c.,
J. FYFE, E.O.P.

RETURN of Water supplied and Coal consumed, January 1st to December 31st, 1889.

From	To	Water pumped.	Coal consumed.

To Board Engineer.

J. FYFE, E.O.P.

STATEMENT of Repairs effected and Material used at Crown-street Waterworks for quarter ended 31st December, 1889.

A portion of defective feed-pipe taken out and replaced by 2½" steam-pipe and bends.
Window-blinds taken down, cleaned, painted, refitted, and again put into position.
7 new junk-ring bolts fitted to B. pump buckets.
4 dozen V.I. valves used to replace defective ones, B. pumps.
2 dozen springs " " "
1 junk-ring stud to main engine pump.
1 valve main pump, replaced defective one.
1 unfinished crank-shaft, in stock.
1 strong strap for defective crank, in stock.

To Board Engineer.

J. FYFE, E.O.P., 1/1/90.

To Board Engineer.

J. FYFE,
E.O.P., 2/1/90.
Sir,

Sir,

21 February, 1890.

I have the honor to submit Annual Report of works done during the year 1889:—

Main-laying.

1. During the year pipes of various sizes laid number 48,870, giving a total length of 86 miles 1,468 yards, making an average distance of 1 mile 1,179 yards per week. Upon the whole, the contractors have executed the work in a very creditable manner.

Main-cleaning.

2. During the latter part of the year a considerable length of mains has been cleaned in the suburbs, and a small quantity in the city. The condition of some of the mains prior to undergoing the process of cleaning was very bad, some being so foul as to be reduced to a diameter of $\frac{1}{4}$ -in., and in some instances practically closed, the only supply being by percolation through the corrosion. Evidence of bad workmanship in jointing was also present; large quantities of lead were extracted from the mains. The system which I have adopted, by the introduction of an instrument while main-laying for the detection of foreign substances, practically precludes the possibility of a recurrence of such work. A marked improvement in supply has been made in localities where this work has been carried on, which has rendered the mains equal to new, thereby effecting a great saving.

Water Supply.

3. Notwithstanding the increased area reticulated, the supply has been successfully maintained.

Inspections.

4. Much useful work has been done by the Waste-water Inspectors, and a thorough system of house-to-house inspection carried on in city and suburbs, resulting in the detection of a large number of cases of evasion of payment of rates for stock, machinery, &c., also the suppression of much waste of water.

Engineer for Water Supply.

D. C. ROBERTSON,
Inspector.

SUMMARY of Work done during year 1889.

Mains laid	48,870 pipes = 152,828 yards = 86 miles 1,468 yards.

List of Resumed Properties in the hands of the Government Collector	B

PLANS.

- Plan I.—Proposed new offices of the Board of Water Supply and Sewerage, showing elevation to Pitt-street and Transverse Section.
 Plan II.—Plan of Basement and Plan of Ground Floor.
 Plan III.—Plan of First and Second Floors.
 Plan IV.—Plan of Third and Fourth Floors.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

OFFICES FOR BOARD OF WATER SUPPLY AND SEWERAGE.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of erecting Offices for the accommodation of the Board of Water Supply and Sewerage," have, after due inquiry, resolved that it is expedient the work should be carried out; and, in accordance with the provision of sub-section IV of clause 13 of the Public Works Act, report their resolution to the Legislative Assembly:—

1. It is proposed that the new offices shall be built on a piece of land, having a frontage of 70 or 75 feet, at the corner of Pitt-street and Wilmot-street, with a lane at the rear; and the cost of the building and the site is estimated at £50,000,—£30,000 for the building, £17,000 for the land, and £3,000 for incidental expenses and fittings. The plans, which will be found published with this report, show the style of the building it is proposed to erect, and the accommodation it is intended to provide. This accommodation, according to the evidence given before the Committee, will be ample for the carrying on of the office work of the Board; and the situation of the building, it is urged, will be central and convenient to the public.

Description of
the proposed
new offices.

2. At the time the Board of Water Supply and Sewerage commenced their duties under the Act which brought them into existence, premises were found for them in the offices at the end of the Circular Quay, previously occupied by the A.S.N. Co., and for some time they remained there. The position, however, was found to be exceedingly inconvenient to the public, and, as on the transfer of the Sewerage Works to the Board the accommodation was found insufficient, it became necessary that other and more suitable premises should be obtained. Representations were made to the Minister for Works on the subject, and an attempt was made by the Minister to rent other offices for the Board, but at that time no offices suitable for the purpose could be found, and it was eventually determined to invite Parliament to sanction the building of new offices. The preparation of the necessary plans was placed in the hands of the President of the Board, that course being regarded, apparently, as one more likely to result in the new building meeting requirements than if the work were in the ordinary way handed over to the Colonial Architect, and the Committee are informed that the plans, as prepared, provide for every necessity without being extravagant. In the meantime the Board, finding the inconvenience and unsuitableness of the offices at the Circular Quay becoming much greater as the operations of the Board increased, secured a lease for a year and a half of offices in Pitt-street, near the School of Arts, and it is proposed to remain there until the new offices shall have been built.

Reasons why
new offices are
considered
necessary.

Questions that arise in connection with the proposal.

3. In the consideration of this matter some important questions arise, and to these the Committee have given attention. Admitting the inconvenience of the Board's carrying on its operations in offices at the Circular Quay, it does not at first sight appear that the most advantageous change to make is to build expensive new offices and remove into them. It does not, until after careful inquiry, seem unreasonable to think, in view of the large number of suites of offices to let in Sydney, that a more economical and at the same time satisfactory plan would be to rent some centrally-situated premises rather than to build. In a similar way it would appear that instead of spending £50,000 on large new offices it would be better if the offices first occupied by the Board, which are the property of the Government, were retained as the Board's headquarters; and to meet the convenience of the public a number of small branch offices, for the receipt of rates and other business carried on by the Board, were opened in central parts of the city and the suburbs. Another question necessary to consider is whether the Government or the Board is to pay the cost of the proposed new offices if they should be erected. Each of these matters is dealt with in the evidence.

Obligation on the Government to provide accommodation.

4. In the first place, by the 29th Clause of the Metropolitan Water and Sewerage Act of 1880, the obligation is imposed on the Government of providing accommodation for the Board, and, in pursuance of this, accommodation was found for the Board in the offices which had been occupied by the A. S. N. Co., and is now being sought in the proposed erection of new offices.

Interest on the cost of the new building not greater than the rent now paid.

5. For the use of the A. S. N. Co.'s offices the Board paid the Government rent at the rate of £1,500 a year, and to have obtained additional premises when the accommodation in the A. S. N. Co.'s offices became deficient would have increased the rental to £2,000, and, in addition to this, caused the staff to be divided, and the public to be put to further inconvenience. Other premises were eventually rented in Pitt-street, near Park-street; but, though the best that could be found, they are not, the President points out in his evidence, designed for the convenience of the Board, and, therefore, cannot be permanently suitable. These newly-acquired premises are costing in rent £2,000 a year, and for the same amount, representing the interest at 4 per cent. on £50,000, it is urged, a new building, suitable in every respect for the wants of the Board, may be obtained, and the transaction be commercially satisfactory, for the reason that the site on which the building would be erected must greatly increase in value.

Reasons against branch offices.

6. The idea of having a comparatively small central office and a number of branch offices does not find favour with the Board. According to the evidence of the President there would not be, with branch offices, any proper control of the funds collected, and on that ground he considers it necessary that large centrally-situated premises, where the whole of the business can be carried on with proper supervision, should be erected. If a system of branch receiving offices were adopted, it must, the President states, be done with the assistance of the banks, and though the Board have approached the banks on the subject no arrangement with them has been come to. It would be convenient for ratepayers to pay their rates to the Board through the Municipal Councils, but this plan is said not to be feasible, for the reason that the municipal bodies want so much per cent. for collecting the money, and will not guarantee the collection.

Cost of new offices to be paid by the Board.

7. The cost of the proposed new offices is to be paid by the Board. The Committee are informed in the evidence that it will be included in the total expenditure on the Water and Sewerage Works, and the Board are confident that they will be able to pay the interest on the total cost of the construction of the Water and Sewerage Works and on the cost of the proposed new building.

Conclusion arrived at by the Committee.

8. Under these circumstances, though it is not quite clear that a well-devised system of small branch offices could not be brought into operation with as much advantage to the Board and convenience to the general public, as is likely to result from the erection of the proposed expensive new offices, the Committee have come to the conclusion that the proposal before them should be sanctioned, and on Thursday, 30 January, they expressed this conclusion in the following resolution which was moved by Mr. Garrard, seconded by Mr. Cox, and passed unanimously:—

“That it is expedient the proposed offices for the Board of Water Supply and Sewerage, as referred to the Committee by the Legislative Assembly, be carried out.”

J. P. ABBOTT,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 11th February, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

OFFICES FOR BOARD OF WATER SUPPLY AND SEWERAGE.

TUESDAY, 14 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq., (CHAIRMAN).

The Hon. JOHN LACKEY.
The Hon. ANDREW GARRAN.
The Hon. FREDERICK THOMAS HUMPHERY.
The Hon. WILLIAM JOSEPH TRICKETT.
The Hon. GEORGE HENRY COX.
JACOB GARRARD, Esq.

HENRY COPELAND, Esq.
JAMES EBENEZER TONKIN, Esq.
WILLIAM SPRINGTHORPE DOWEL, Esq.
EDWARD WILLIAM O'SULLIVAN, Esq.
JOHN HURLEY, Esq.
CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed offices for Board of Water Supply and Sewerage.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] Have you any statement to make in reference to this proposal? By the 29th clause of the Metropolitan Water and Sewerage Act of 1880, the obligation is placed on the Government of providing office accommodation for the Board of Water Supply and Sewerage, and in pursuance of that obligation the Government provided offices for the Board. Originally accommodation was found for them at the A.S.N. Company's old offices, but these were found extremely inconvenient. I dare say it is within the knowledge of every member of the Committee that very loud complaints were made in the papers of the extreme inconvenience of dragging people from the western suburbs and other parts to Circular Quay to pay their water rates. On the transfer of the Sewerage Works to the Board, which has now taken place, it was found that there was not sufficient accommodation at the A.S.N. Company's Offices. I must mention that the Government charged the Board £1,500 per year for the use of those offices. The Board made very strong representations to the Minister for Works as to the inconvenience of the offices, and it was attempted to rent other offices, but at that time no suitable offices could be found, and the Government eventually determined to ask Parliament to sanction the building of new offices. However, the inconvenience became so great that it was found necessary to obtain fresh accommodation, and temporary offices have been taken, and the Board have moved into new offices in Pitt-street near the School of Arts. I think they have got a lease of those offices for something like eighteen months at a rent of £2,000 per year. That will give time for the building of new offices which it is proposed to erect at the corner of Pitt-street and Wilmot-street, having a lane in the rear. I will hand in a description of the works. The estimated cost of the buildings, exclusive of fittings, at £26,500, and the land, of which 70 or 75 feet will be required, will cost about £17,000.
2. *Mr. Garrard.*] Has the land been secured? It has not. The Minister did not think he was justified in securing the land until the Committee had expressed their concurrence in the proposal.
3. *Mr. Trickett.*] Do the Board pay the Government rent at present? At first the Board paid the Government rent; now they pay it direct from their vote.
4. How is it that the Government have to build offices for them? It is an obligation imposed upon the Government by statute. This is because all the revenue derivable by the Board is paid into the Treasury.
5. *Mr. Hurley.*] The Government own a lot of land at the corner of Pitt and Bridge streets; could not this be utilised? The difficulty is that it would not be considered central enough.
6. *Mr. O'Sullivan.*] Are you aware that the Gas Company's offices are down at the end of the town? Yes.
7. And they have branch offices in the city; why cannot the Sewerage Board do the same? That might be desirable, but the President of the Board will be able to speak on that point. We are carrying out what we thought their reasonable request.
8. *Mr. Copeland.*] Can you inform the Committee what the Government are receiving from this water supply and sewerage scheme? I have not furnished myself with the particulars. I believe that something like £147,000 was paid into the Treasury last year.
9. Is it doing anything like paying interest on the outlay? I think it is.
10. Will the cost of these buildings be added to the cost of the water and sewerage works? Yes; it will be part of their capital charge.
11. So that the Government are merely advancing money for buildings the same as they have been doing for the Works? Yes.
12. The cost will be included in the total expenditure? Yes. I am sure the Minister would consider it most unjustifiable to put such a charge as this on the general ratepayers.

J. Barling,
Esq.

14 Jan., 1890.

- J. Barling, Esq.
14 Jan., 1890.
13. *Dr. Garran.*] Are you sure that that is so? I look upon it as so certain that the question has never arisen in my mind.
14. It is an important point, because otherwise the Government would be finding offices rent free for this Board? It is not to be thought of. Instead of rent being paid out of the revenue it is simply the payment of interest on a loan.
15. *Mr. Dowel.*] Can you inform the Committee what land the Government hold within a radius of a quarter of a mile of the proposed building? No; I could not answer that question.
16. *Mr. Copeland.*] Could you furnish us with information as to all the portions of land held by the Crown within the city? I think there would be no difficulty in obtaining the information, though I should have to go to other Departments to get it.
17. Will you furnish the Committee with a return on the subject? With pleasure.
18. *Mr. O'Sullivan.*] Do you know the name of the proprietor of this land? I do not.
19. *Mr. Lee.*] Has any attempt been made on the part of the Government to rent suitable offices for a long period? I know attempts have been made to rent offices for a long period, but attempts have been made to obtain suitable offices, and a good many premises have been offered.
20. Suppose these buildings were not erected would there be any difficulty in obtaining suitable offices? The present offices are answering all requirements at present, but how long they will do so I cannot say. There will be a large increase in the amount of the work.
21. Have you estimated what the annual interest on the outlay will be? We estimated the total cost at £47,000, the interest on which at 4 per cent. would be £1,880 per year. The Board are now paying £2,000 a year rent for premises which certainly are not so convenient for them as the proposed new building would be.
22. In addition to that £1,880 for interest will not the Board have to pay city taxes? I suppose they will.
23. *Dr. Garran.*] Is this proposal put forward at the instance of the Government or of the Board? The Board asked that new offices should be built, and the Government took the matter up.

Thomas Rowe, Esq., President of the Board of Water Supply and Sewerage, sworn, and examined:—

- T. Rowe, Esq.
14 Jan., 1890.
24. *Mr. Copeland.*] You are President of the Water and Sewerage Board? I am.
25. You are aware that the Committee are considering a proposal to erect offices for the Board? Yes.
26. I understand that the plans have been prepared by you? Yes; under my superintendence.
27. Did the Board suggest the erection of these offices to the Government, or did the proposal emanate from the Government? It emanated from the Board.
28. What revenue is being derived from the water supply and sewerage system? There has been about £180,000 from the water supply. The sewerage system we have only just taken charge of. The revenue from it is about £50,000 at present, but it will greatly increase.
29. What is the total revenue? About £180,000.
30. Does it approximate, the amount of interest to be paid on the cost of the construction of the works? We think it will come to pretty near 4 per cent. upon the present outlay.
31. Will the cost of this building be added to the original cost of the water and sewerage works, and will you have to pay the interest on the cost of the buildings? Certainly. We are paying £2,000 a year in rent now. We were originally paying the Government £1,500 a year for premises at the northern end of the city—very inconvenient for the public, and when the sewerage was handed over to us we knew that we should have a larger number of clerks whom we should not be able to accommodate. To get other premises would have made our rental up to £2,000 a year, our staff would have been divided, and the public would have been caused a great deal of inconvenience. We were, therefore, led to consider the necessity of getting other premises to suit the convenience of the public, and to bring the whole staff together.
32. The new premises you are now renting are in Pitt-street? Near Park-street.
33. Are not those premises suitable for the carrying on of your business? They are not designed for the convenience of the Board, but they were the most convenient that we could find.
34. Do you consider the proposed buildings will be in a central and suitable position? We do. We think that they will be convenient for the citizens and for the suburban public.
35. Then the only question to consider is whether the Government can provide new buildings at a less annual cost than the rent which you are now paying—perhaps there may be some saving? I do not think there will be any saving at present but it would be a satisfactory commercial transaction. We reckon that the land and the building, furnished, would cost from £47,000 to £50,000. Suppose it is £50,000 at 4 per cent. that would be £2,000 a year and we should have a building suitable in every respect for our wants, as the site is one which must increase in value. In fifteen or twenty years time the building may be worth 30 or 40 per cent. more.
36. Do you not think that the actual cost will far exceed the estimate? I do not. I have been very particular, very guarded in designing it, and I think I have stated the extreme cost.
37. From what you know of the Board you feel confident that they will be able to pay the interest on the total cost of the construction of the water and sewerage works and on the cost of this building? I feel very confident on that point. Although we have a very large building we cannot fairly accommodate the clerks, of whom there are about a hundred altogether. We have thirty-five or forty men in a fairly well-lighted basement which may prove not to be the most desirable place to work in, but we are obliged to put them there.
38. If you found that the Board could not with the present rates meet their liabilities to the Government I suppose you could increase the water rates? We are always in a position to increase the water rates, but we do not wish to do that unless there is absolute necessity for it.
39. Are there any complaints now with reference to the rates you are charging? I have not heard any complaints of late. When we began to strike the rate a good deal of correspondence took place on the subject.
40. I suppose you are charging about the same rates that they charge in the other colonies? No, I think our rate is lower than the rate in any of the other colonies.
41. So that you could increase the rate if you found that your revenue was not sufficiently high to enable you

you to pay the Government? Certainly, but I do not think that the building of offices would lead to that necessity. There may be works now in existence which were not complete when the system was handed over to the Board, but I cannot form an opinion with regard to them until the whole of the works are handed over. T. Rowe, Esq.
14 Jan., 1890.

42. I suppose you are aware that the Government have a piece of land in view? Of course I was a long time myself looking out for a site. A number of sites were offered, and the Board recommended the one which the Government now have in view as most suitable for their requirements. It is a site in Pitt-street below Bathurst-street. It is very central as regards the tramways, railways, and omnibuses, and it is near the Town Hall. No other position could be more suitable, and the price of the land is very much more reasonable than the land more this way.

43. Have you prepared these plans as an architect—that is, in your own professional capacity—or have you had them prepared as chairman of the Board? I have had them prepared as chairman of the Board; I got out sketches myself, then got the permission of the Board to employ a draftsman who worked in the Department under my superintendence preparing the plans.

44. I suppose you are satisfied that the building will be suitable? I thoroughly know the wants of the Board, and I could not suggest anything better.

45. *Dr. Garran.*] Will the accommodation in the new building be the same as or in excess of that which you have now? It will be in excess of it.

46. By how much? I could not tell how much, but the accommodation will be considerably greater. The basement of the present building is occupied by clerks, but the basement of the new building will be occupied with specimens of sanitary appliances for the instruction of the public and plumbers—baths, closets, and urinals, samples from the manufacturers, with illustrations of their working.

47. You will have more accommodation than you have now? A great deal more.

48. At practically the same rent? Yes.

49. *Mr. Tonkin.*] Have you a lease of the premises you now occupy? Yes, we have taken them for a year and a half, with the option of extension for six months longer.

50. Could you get a long lease of the premises? I dare say we could.

51. Would you not get them at a less rent if you took a long lease? Possibly, but I think it is an objectionable thing to employ thirty or forty clerks on the basement, where we have to use gas all day, which must be injurious to health. If we entered into a seven years' lease, at the end of that time we should be completely at the mercy of the landlord.

52. If you pay what is equal to a rent for the proposed new buildings, you think that in eight or ten years time the increased value will make the buildings cheaper than they would be if you were renting them? I think so.

53. *Mr. Dowd.*] What is the total cost of the works from which you say you derive a revenue of £180,000? I did not come prepared to answer that question. I thought I should have to give evidence solely with regard to the proposed building. We do not know the exact total cost yet, because some of the works are still in the hands of the Minister for Works.

54. I understood you to say that there was no probability of the Board not being able to pay interest on the cost of the works? Under any circumstances we must have offices.

55. *Mr. Cox.*] What staff have you now? We have 100. There are nine in the secretary's branch, fifteen in the accountant's branch, thirty-nine in the assessor's, twenty-two in the water engineer's, fifteen in the sewerage engineer's.

56. Have you taken into consideration the probability of the Board at some future time having receiving houses for rates in various parts of the city, such as the banks find it necessary to have? We have considered the matter, but I fail to see how we can have thorough control over the funds, if we are to collect money in a number of different places. I should be sorry to hold the position of President, and to be responsible, if we had not the control in the central depôt. Every penny received is checked by three persons. How we could check it if we were receiving money in different parts of the city, I cannot understand.

57. Is it not done by the banks? We have approached the banks, but have not come to any arrangement with them yet. They seem rather to avoid us.

58. It may be necessary to have these receiving houses, and that might lessen the cost of the central building? It could only be done through the banks. There are plumbers and drainers from twenty-five different districts, and the metropolis constantly coming and paying in fees; besides, the ratepayers of the city must have large offices.

59. Have you asked the Government whether they have any ground of their own which would form a suitable site? Yes. I pointed out a piece of ground in Elizabeth-street at the end of the High School building, and near Market-street, but the Government would not grant that site.

60. What would be the probable cost of the site which has been chosen? About £230 a foot. It is the intention of the Minister to resume the land at its market value.

61. You said that you could not give the total value of the works because they are not yet complete? Yes.

62. Consequently any rates that you charge can only be imposed with the belief that they will amount to so much? Yes. In considering our rate we got all the information we could possibly get from the Department, and struck our rate accordingly. The Board do not desire to strike a heavy rate; they would rather wait a year or two even if there is a little deficiency until the works are completed.

63. Do you know what per centage upon the outlay the revenue will be? We are trying to collect 4 per cent. on the outlay. We tried to form a sinking fund as well, but that has yet to be gone into. We are trying to conduct the whole thing upon commercial principles.

64. Until the whole thing is complete you can hardly form an opinion? We cannot form a correct opinion until the whole of the works are handed over.

65. *Mr. Humphery.*] Do you prefer collecting rates from ratepayers direct or through Municipal Councils. From the ratepayers direct.

66. Would it not be a great convenience to the ratepayers if they could pay the money to the Municipalities? Yes, no doubt, but the municipal bodies want so much per cent. for collecting the money, and they will not guarantee the collection. We are bound to collect this revenue, and as President I am responsible; therefore, how we could collect it through the boroughs, which are not responsible to us, seems a very great difficulty.

- T. Rowe, Esq.
14 Jan., 1890.
67. Will it be compulsory to attend at your office to pay small amounts? We take cheques. We did at one time take postage stamps, but we found a difficulty about that; some said that they sent stamps, but the stamps never reached us.
68. *Mr. Garrard.*] Will you have sufficient land to enable you to extend your premises? No; we shall build on every inch of it.
69. If your work increases you will probably want room for a larger number of hands in a few years? I do not think that our staff will increase much more. Our principal work for years to come will be extending the water supply, the connecting of all the houses with the main sewers, ventilating, &c., but that will die out in the course of time.
70. The clerical staff will not materially increase? No.
71. *Mr. Trickett.*] What do you estimate the cost to be? The building £30,000, the land £17,000, incidental expenses and fittings £3,000, making a total of £50,000.
72. Do you think £30,000 the outside price for the building? I do.
73. What do you propose to construct the building of? Principally of brick with stone facings, using as little stone as possible to keep down the cost.
74. I suppose you will occupy the building throughout? Yes. There is another point—we have no caretaker's place in the present building; in the new building provision will be made for the caretaker, which will cause a saving of £50 a year.
- 75-6. *Mr. O'Sullivan.*] The Sewerage Board for some time occupied the offices of the A.S.N. Company, did they not? Yes.
77. Is not that a commodious structure? It is fairly commodious, but there is not room enough.
78. Do you think it necessary to put the country to the expense of a new building? The public have not been satisfied with the accommodation hitherto provided. They have been put to a considerable inconvenience.
79. Do not people go to the Gas Co.'s offices in Kent-street? The Gas Company has started a branch in Bathurst-street, near the intended site.
80. Could you not do that? If we did we could not then exercise a proper check on the books. That is a very serious matter indeed.
81. Do you think it so serious as the making of another department? We are paying £2,000 a year in rent, and if we can get better buildings at the same rate, the value of which will increase, that will be an advantage.
82. The old building is lying idle, is it not? Possibly the Government have some other use for it. I understood that the military were going to have it.
83. What rent do the Board propose to pay the Government for the new structure? We shall be able to pay 4 per cent. on the cost of construction in the shape of rent at £2,000 a year.
84. *Mr. Lee.*] Has any effort been made to obtain a long lease of premises in the city? We do not know of any premises suitable for the business of the Board without extensive alterations being made at great expense; then it would be only makeshift.
85. Are there no buildings at Circular Quay which might have been available? I do not know of any.
86. Would no portion of the additions to the Lands Office have been suitable? I never heard of any accommodation there. We applied for accommodation at the Town Hall, but they could not take us there. We must have the pay office on the ground floor, as so many people have business to transact there.
87. Have you advertised for suitable premises? Yes, and we have had twenty or twenty-five offers of premises.
88. There are many large flats of offices unoccupied in the City, are there not? I have studied the matter thoroughly, and visited a number of places, but I know of no place more suitable for the purposes of the Board than the one which we have taken.
89. Would it be possible to rent premises in the city? I do not think it is possible to rent premises in a convenient position, giving all the accommodation we require.
90. As a speculation, you think it would be better to build? I think so.
91. Inasmuch as the annual increment would, in the course of a few years, amount to a rental? Yes. The land of the proposed site, which is worth £230 a foot, will be worth possibly £500 a foot in twenty years time. A few hundred yards to the north of that site the land is that price now.
92. How many years have you been in Sydney? I have been in this city forty years.
93. And you are tolerably well acquainted with the large buildings? I have built a great many of them myself.
94. Consequently you are in a position to know what buildings are likely to be suitable? Yes.
95. That being so, you have no hesitation in recommending the erection of this building? I think the thing will speak for itself.
96. *Mr. Hurley.*] In your travels through the United Kingdom, has your attention been drawn to the class of buildings used by such bodies as that which you represent? I do not think there are many such bodies as the Water Supply and Sewerage Board.
97. Have you visited the Metropolitan Board of Works in London? I have not. Not many cities in the world have Boards managing the water supply and sewerage system.
98. Is it known that the building which you have vacated is likely to be utilised by the military? I have understood that it was.
99. Do you consider that it would be suitable for that purpose? It would make a very good brigade office. It adjoins the commissariat.
100. Have the Board taken into consideration the suitability of Government land in this street for such a building as you propose? It would be unwise for the Board to recommend the erection of a building anywhere about here, because it would not meet the convenience of the public.
101. The site you recommend is centrally situated, and will suit the general body of the population? Yes; it will be the most central point of the whole city for this purpose.
102. Do you know the price at which the land can be purchased? I think it has been offered at £230 a foot.

Reginald Bloxsome, Esq., Secretary, Board of Water Supply and Sewerage, sworn, and examined:—

103. *Mr. Lackey.*] You are connected with the Water and Sewerage Board? Yes, I am the secretary.
104. Have you been secretary ever since the establishment of that body? I have—since March, 1888.
105. Have the offices of the Board been in the same place as they are in now ever since the Board was established? No; they occupied temporary offices at Circular Quay, which they left about ten days ago.
106. It is proposed to build new offices in Pitt-street, near Wilmot-street? Yes.
107. Do you think that a suitable site? Very.
108. Is it regarded by the Board as a suitable site? Yes. It is in the centre of the city.
109. The Board are unanimous as to that being the most desirable site? Quite so.
110. Have you gone into the figures, or has it transpired what the probable cost will be? Yes; I have got it from professional men.
111. Do you think the cost will be within the amount estimated? That I cannot say. The professional men think so.
112. What do they estimate the cost to be? They estimate that the cost of the land will be a little over £17,000, and the cost of the building, exclusive of the fittings, about £26,500; you may say in round numbers that the building, fittings, and land will cost £50,000.
113. What rent are you paying at the present time? £2,000 a year.
114. You employ a considerable number of hands, clerical and professional? Yes; there are quite 100 in the building.
115. You have seen the plans? Yes.
116. And the Board have seen the plans? Yes.
117. Do they all agree as to the suitability of the proposed building? Yes, they highly approve of it.
118. Who are the members of the Board besides the President? Mr. Hickson, the Engineer-in-Chief for Sewerage, Mr. Darley, Engineer-in-Chief for Harbours and Rivers, Mr. Palmer and Mr. Young of the Municipal Council of Sydney, and Mr. Lander and Mr. Graham, representing the Suburban Municipal Councils.
119. They all agree as to the necessity for the work? Yes. The Board have been forced to go in for it by expressions of opinion from the ratepayers themselves.
120. It is a rule with your Board that the people must attend at the office to pay their rates—you do not send collectors round? No, but we take cheques or post office orders. We tried postage stamps but they were a failure.
121. As a rule people come and pay their rates across the counter? Yes.
122. Therefore it is essential that the offices should be in a convenient and central situation? About the centre of the city and as close to the Town Hall as possible.
123. Having in view the growth of the city and suburbs, is it your opinion that the proposed building will meet the requirements of the future? I do not think it will, but the building is to be constructed so that another floor can be put on it.
124. How many storeys are there to be? There are to be the basement, ground floor, and three storeys, and then the caretaker's place.
125. And it will be capable of being built still higher? Yes. The architect who drew out the plans told me that he would have been glad if he could have had a few feet more in the width as he would have made a great change in the building. No doubt if the Government buy that land it will be an exceedingly good speculation. Wherever the offices of the Board are they will bring traffic and that increases the value of property; therefore if we only rented a building we should be increasing the value of the property for somebody else, and when the lease expired the landlord would raise the rent. If the land is the property of the Board they will be raising the value of the property for themselves as trustees for the ratepayers of Sydney.
126. You think that the accommodation afforded would be sufficient for a considerable number of years? Yes, as long as they confine the Board to the water supply and sewerage works.
127. Have you made any estimate as to what it will cost to build? Yes; we shall pay the Government 4 per cent. Under the Country Towns Water and Sewerage Act, loans are paid back in sixty years, but there is nothing in the Act under which the Board is established, requiring them to pay back loans within sixty years. They have been debited with the money spent on the Nepean scheme, but they certainly could not be expected to pay that off in sixty years. The Board hope to pay back the capital and interest of the loans expended in reticulation in sixty years, and the capital and interest of the loans expended on the main works at a much longer period.
128. On the whole you think it is a desirable project, and that it ought to be carried out? Yes.
129. And you think that the property will increase in value as time goes on? Yes, it will increase enormously.

B. Bloxsome,
Esq.
14 Jan., 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Offices for Board of Water Supply and Sewerage.

APPENDIX.

A.

LIST OF PROPERTIES RESUMED BY THE GOVERNMENT IN THE CITY OF SYDNEY.

Where situated.	Area.	For what purpose resumed.	Date of resumption.	No. of buildings.
1. On the eastern side of Macquarie-street, commencing on the northern side of a lane nearly opposite Hunter-street, and extending along the building line of Macquarie-street in a northerly direction to the entrance of the Government Domain.	a. r. p. 1 0 7	Sydney Female School of Industry.	1870. Dec. 5	Nil.
2. Between Macquarie-street and Outer Domain, having a frontage to Macquarie-street of 174 feet.	1 1 30	Parliament Buildings ...	1879. Oct. 17	7 houses (occupied), 21 small tenements (occupied).
3. 355 feet frontage to Elizabeth-street, 150 feet to Market-street, and 363 feet to Castlereagh-street.	1 1 1	Public Library	1880. Nov. 24	High School, 14 shops and buildings (occupied).
4. At the corner formed by the western side of Phillip-street and the southern side of Hunter-street.	0 1 20	Purchased for buildings and offices in connection with the Department of Inspector-General of Police.	1886. April	"Star Hotel" (occupied), 4 houses (unoccupied), Offices of Inspector-General of Police.
5. Fronting Phillip, Bridge, and Young Streets.	0 1 22½	Buildings and offices in connection with the Department of Public Works.	1883. Nov. 27	4 houses (occupied).

1890.

NEW SOUTH WALES.

 METROPOLITAN WATER AND SEWERAGE ACT.
 (AMENDED BY-LAWS.)

 Presented to Parliament, pursuant to Act 43 Vic, No. 32.

 Department of Public Works,
 Sydney, 17th March, 1890.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following "Amended Metropolitan Water By-laws" prepared by the Board of Water Supply and Sewerage in accordance with the provisions of the "Metropolitan Water and Sewerage Acts, 1880-1889," and in substitution of those published in the Gazette of 15th July, 1889.

BRUCE SMITH.

 METROPOLITAN WATER BY-LAWS.

[13th December, 1889.]

WHEREAS, by the Metropolitan Water and Sewerage Acts, 1880-1889, the Board of Water Supply and Sewerage is authorized and empowered from time to time to make, alter, and repeal By-laws:

Now the Board of Water Supply and Sewerage, under and by virtue of the powers contained in the Metropolitan Water and Sewerage Acts, 1880-1889, do hereby make the By-laws following, that is to say:—

1. The following rates and charges are those which the owners and occupiers of lands and tenements shall pay in respect of water supplied by the Board, that is to say:—

(For water supplied for domestic purposes otherwise than by measure.)

- (I.) On every house, tenement, or land of twenty pounds assessed annual value and under, ten shillings per annum.
- (II.) On every house, tenement, or land above the assessed annual value of twenty pounds, a rate of sixpence for each pound sterling on the amount of the valuation up to three hundred pounds inclusive; fivepence for each pound on the amount of the valuation in excess of three hundred pounds up to seven hundred pounds; fourpence for each pound on the amount of the valuation in excess of seven hundred pounds up to one thousand pounds; threepence for each pound on the amount of the valuation in excess of one thousand pounds up to four thousand pounds; and twopence for each pound on the amount of the valuation in excess of four thousand pounds.
- (III.) Vacant lands of the assessed value of sixty pounds and over shall be subject to a rate of twopence for each pound sterling on the amount of the valuation.

- (iv.) The like rates as those above-mentioned shall be charged on all lands, tenements, and hereditaments not included in any valuation by the Municipal Council of the City of Sydney or Redfern, or of any Borough or Municipal District, and on all lands for the time being valued by the said Municipal Council of the City of Sydney or Redfern, or by such Borough or Municipal District, at a sum less than the true value thereof.

(For water supplied by measure.)

- (v.) The rates to be charged for water supplied from stand-pipes shall be one shilling and sixpence per 1,000 gallons.
 (vi.) The rates to be charged for water supplied from the mains by measure shall be one shilling and sixpence per 1,000 gallons.
 (vii.) Water-troughs will be charged for at the rate of twenty shillings per annum each.
 (viii.) Gas-engines will be charged for at the rate of twenty shillings per annum each.
 (ix.) Water for steam boilers will be charged for by measure at the rate of one shilling and sixpence per 1,000 gallons.
 (x.) For water supplied to shipping, the charge will be one shilling and sixpence per 1,000 gallons. Her Majesty's Navy will be supplied free of charge.

Payment of rates.

2. Assessed rates must be paid half-yearly in advance whether a meter is used or not. In the case when a meter is used, the meter account will be rendered only when it is in excess of the assessment. Cheques and Post Office Orders will be received in payment of rates; but if the cheque tendered by any person as payment for rates due is dishonoured; the Board may cut off his service, and proceed for the recovery of the amount by Warrant for Distress. Cheques and Post Office Orders must be crossed in favour of the Board.

Minimum charge, by meter or otherwise, is the assessed rate.

3. The minimum charge for water, whether supplied through meter or otherwise, for domestic purposes and for purposes other than domestic, is the assessed annual rate. If the water is supplied by meter, and the meter account exceeds the assessment (calculated at the rate of one shilling and sixpence per 1,000 gallons), then such excess shall be charged in addition to the assessment.

Building charges, &c.

4. The Board may supply water for building purposes at the rate of five shillings per room or by meter at one shilling and sixpence per 1,000 gallons; and the minimum charge by meter shall be ten shillings and sixpence for each work, which charge must be paid in advance. The Board may supply water for the making and mixing of concrete for foundations of wooden blocks, stone cubes, or other form of permanent roadway or pavement, at the rate of £1 10s. per 1,000 square yards, by superficial measurement of road surface; and for all other concrete, brickwork or masonry, at the rate of threepence per cubic yard, as measured on the work.

Horses and cows

5. Any person who maintains horses or cows may be supplied with water, without meter, from the domestic service for the sum of 5s. per annum for each animal, in addition to the assessed annual rate of the premises on which such animal is maintained or supplied with water.

6. All lands or premises on which any one or more head of horses or cattle shall be kept or maintained, whether such lands or premises are actually supplied with water from any main water-pipe of the Board, or are otherwise ratable or not, shall be liable to an extra rate or charge (beyond and in addition to the assessed annual rate of the premises) of 5s. per head for each head of horses or cattle kept or maintained on such lands or premises.

Gardens.

7. The Board may supply water for gardens (and for such purpose may permit a hose and standpipe to be used) without meter, at the rate of 10s. per annum for every 750 square feet superficial area, or part thereof, in addition to the assessed annual rate of the premises to which such garden belongs or is attached.

Fountains and waterfalls.

8. The Board may permit a supply of water for water-fountains or waterfalls of a size, construction, and form, and in a position previously approved by the Board, without meter, from the domestic service, for the sum of 5s. per annum for each such fountain or waterfall, in addition to the assessed annual rate of the premises on which such fountain or waterfall is maintained.

Board may require any premises to take the whole supply of water through meter.

9. If the Board shall in any case be of opinion that the owner or occupier of any premises is wasting or misusing or otherwise illegally dealing with water, or that the whole supply of water to any premises should for any reason be by meter, they may give to the owner or occupier a notice directing him, within a time to be therein mentioned, to fix a meter to such premises, and to receive the whole supply of water to such premises through such meter; and after the expiration of such notice, whether a meter has been fixed in accordance therewith or not, the Board may cut off any supply of such premises which is otherwise than by meter.

Before affixing service-pipe, &c. license to be obtained from Board.

10. Before any person shall affix any service-pipe to any pipe of the Board, or alter, repair, or in any manner interfere with any pipe of the Board, or any service-pipe, cock, or fitting connected with any pipe of the Board, he shall obtain from the Board a license in that behalf to execute any such work; and any unlicensed person affixing, altering, repairing, or in any manner interfering with any such pipe, service-pipe, cock, or fitting as aforesaid, shall be liable to a penalty not exceeding ten pounds.

Licensed plumber.

11. Before any such license shall be granted by the Board, the person applying for the same shall satisfy the Board that he is a competent plumber. His competency must be certified to by three master plumbers.

12. Any person, whether licensed as aforesaid or not, who shall offend by opening any ground so as to uncover any pipe or pipes, the property of the Board, without giving two days' notice to the Board of his intention so to do, or who shall in any way tamper, interfere with, or alter any pipe, the property of the Board, without the printed permit of the Board being first obtained, or who shall wilfully or negligently break, injure, or open any lock, cock, valve, pipe, work, or engine, the property of the Board, shall be liable for each such offence to a penalty not exceeding twenty pounds.

Before pipes can be uncovered two days' notice to Board must be given.

13. The Board only, or a plumber duly licensed by the Board, under the superintendence and according to the directions of the officer appointed by the Board for that purpose, is empowered to tap the main in the streets or elsewhere and attach service-pipes thereto, or extend the same generally as the case may be. Any person infringing this clause shall be liable to a penalty not exceeding twenty pounds.

Board or licensed plumber only empowered to tap mains, &c.

14. Any person, whether licensed as aforesaid or not, who shall lay any pipe to communicate with the pipe or pipes of the Board without giving two days' notice of the day and hour when such pipe is intended to be made to communicate with the pipe or pipes of the Board, and without having obtained the official printed permit, or who shall make such communication, except under the superintendence and according to the directions of some officer of the Board, or who shall lay any leaden or other pipe to communicate with a pipe of the Board of a strength and material not sanctioned by the Board, shall be liable for each such offence to a penalty not exceeding five pounds; and, in the event of continuing the offence, to a further penalty of two pounds for each day after the notice of the offence from the Board.

Penalty for communicating with pipes of the Board without notice.

15. Every application for water must be accompanied by the payment of a fee of three shillings for the tapping of any main.

Fee for tapping main.

16. Every owner or occupier of any house, tenement, or lands, shall, for the purpose of obtaining a supply of water to such house, tenement, or lands (after receiving from the Board the prescribed notice so to do), construct such connections and fittings from and in connection with such house, tenement, or lands to communicate with the water-main of the Board as are prescribed by the By-laws and Regulations of the said Board.

Board may compel owner to connect premises with the water-mains.

17. Any person who, being an owner or occupier of lands or premises supplied with water under the said cited Act, for the purpose of taking, in a manner not authorized by such Act, any such water, uses in or places on, or affixes or attaches to, such land or premises, or to any prescribed fitting, or wilfully permits to be used in or placed on, or affixed or attached to, such lands or premises, or to any prescribed fitting, any fitting, instrument, or thing not authorized in that behalf by the Board, or who alters, misuses, injures, or removes any prescribed fitting, except for the purpose of necessary repair, shall, upon conviction thereof, forfeit and pay to the Board a sum not greater than ten pounds, without prejudice to the right of the Board to recover from him damages in respect to any injury by such owner or occupier done, or wilfully permitted to be done, to the Board's property, and without prejudice to the Board's right to recover from him the value of any water wasted, misused, or unduly consumed.

Penalty for using unauthorized fittings.

18. The owner or occupier must, at his own expense, lay down and maintain all the pipes and apparatus upon his premises. All pipes must be of galvanized wrought-iron, where possible, and where lead pipes are used they must be of equal thickness throughout, and of at least the respective weights following, viz.:-

Owner to lay and maintain services.

$\frac{3}{4}$ -in.	5 lb. per yard	Weight of lead pipes.
$\frac{1}{2}$ -in.	6 lb. "	
$\frac{3}{4}$ -in.	9 lb. "	
1-in.	12 lb. "	
$1\frac{1}{4}$ -in.	16 lb. "	
$1\frac{1}{2}$ -in.	20 lb. "	

Where wrought-iron pipes are used, they must be of the kind known as galvanized wrought-iron lap-welded steam tubes, unless otherwise permitted by the Board.

19. Any consumer's pipe, cock, cistern, or other fitting laid, fixed, or used otherwise than in accordance with these Regulations and with the provisions of the Act, or which shall in the opinion of the Board, be or become of bad or defective quality, or shall conduce to the waste, misuse, or contamination of the water, shall, upon the Board giving notice in writing, be discontinued and disused; and the Board may require the same to be removed, replaced, or repaired, and may stop the supply of water to the said consumer until such pipe, cock, cistern, or other fitting shall have been removed, replaced, or repaired to the satisfaction of the Board.

Defective fittings to be removed.

20. No person shall use, in connection with the water of the Board, any iron pipe, tee, thimble, bend, reducing coupling, plug, &c., unless it be of the best manufacture, true in section, straight, and of equal thickness, properly and truly cut with Whitworth's standard gas thread, and perfectly sound and new, and free from all defects. Every such tee, bend, tube, &c., shall be capable of withstanding a hydrostatic pressure equal to a column of water 400 feet in height.

Quality of fittings for iron pipes.

21. Every person shall make all joints between tees, bends, thimbles, couplings, elbows, and cocks, &c., with white or red lead and flax. All joints on lead pipes, and lead pipes with brass unions, shall be of the kind known as "wiped joints."

Joints.

22. No person shall lay any service-pipe on private property, below the ground surface, at a less depth than ten inches.

Depth of pipe.

- Pipes through drains to be properly protected.
23. No person shall lay any pipe or other apparatus through any sewer, drain, ashpit, cistern, or manure tank, or through, in, or into any place where, in the event of the pipe becoming unsound, the water of the Board conveyed through such pipe would be liable to be fouled, or to escape without observation—unless such pipe or apparatus be laid through an exterior cast-iron pipe or box of sufficient length and strength to afford due protection to the same, and to bring any leakage or waste within easy detection.
- Approved fittings.
24. No person shall use any tap, stop-cock, bib-cock, ball-cock, valve, closet cistern, service-box, waste-not regulator, bath tap or valve, or other fitting in connection with a supply of water of the Board which is not of the best quality, and approved by the Board.
- Cocks.
25. No person shall use any stop or bib-cock which is not loose-valve, screw-down, high-pressure cocks, made of hard brass or gun-metal, and in every respect of best quality and workmanship.
- Cisterns.
26. No person shall use any cistern or tank that is not provided with an equilibrium ball-valve, and the overflow-pipe laid and fixed in a suitable manner, open to inspection, and in a position approved by the Board.
- Service not to communicate with rain-water receptacles or underground tanks.
- Water-closets.
27. No person shall fix or use any service-pipe which communicates with any cistern, tank, or vessel intended or used for the reception of rain-water below the surface of the ground, except with the express permission of the Board.
28. No person shall construct or use any water-closet fitting not approved by the Board, or supplied from the service pertaining to the tenement through a proper closet-cistern, or service-box, fitted with approved waste-preventing apparatus. No person shall fix or use any service-pipe which communicates directly or indirectly with the basin or trap, or otherwise than with the cistern of a water-closet.
- Baths.
29. The Board will not supply any water to any bath, the outlet of which is not distinct from and unconnected with the inlet or inlets; and the inlet or inlets shall be placed above the highest water-level of the bath. The outlet of such bath shall be provided with a perfectly water-tight plug, valve, or cock. No such bath shall have any overflow waste-pipe that is not laid and fixed in a suitable manner, open to inspection, and in a position approved by the Board. No bath shall exceed in dimensions 6 ft. 6 in. long by 2 ft. 6 in. wide by 2 ft. deep unless supplied by meter. The Board will not supply water to any bath unless the same shall be so constructed as to prevent a waste of water.
- Service connection.
30. Except by the permission of the Board, every tenement shall have an independent service-pipe connected with the water-main, and such service shall be stop-cocked; and no person shall connect more than one tenement with the main of the Board from one service, except by permission of the Board.
- Urinals.
31. No person shall fix or have fixed a service-pipe so as to communicate directly with any urinal, and every urinal shall be supplied only through a cistern or service-box, fitted with waste-preventing apparatus approved by the Board.
- Water for other than domestic purposes.
32. No person shall use water supplied by the Board for other than domestic purposes, except the supply is by meter, or excepted in the manner hereinbefore provided.
- Dial of meters to be capable of registering 1,000,000 gallons. Meters registering incorrectly.
33. No person, except with special consent of the Board, shall affix a meter, the dial of which is not capable of registering (1,000,000) one million gallons.
34. If any meter shall not correctly indicate the water passing through it, the Board may charge for the supply according to the average daily consumption for any month preceding the date upon which such meter shall have been examined and found to be in order; or at the request of the consumer, or by direction of the Board, the said meter shall be tested and the charge for water supplied regulated accordingly.
- Meters not to be interfered with.
35. No person not duly authorized by the Board shall disconnect any meter or other apparatus from the service-pipes, or in any way interfere with the same.
- Steam boiler to have self-acting valve.
36. If any person shall connect any service-pipe, or branch service-pipe, with any steam boiler for the purpose of feeding or supplying the same with water, without first affixing a self-acting valve for preventing the pressure of the steam reversing or affecting the dial of the meter, he shall be liable to a penalty not exceeding five pounds; and a further penalty of two pounds for each day after notice of the offence from the Board to each offender.
- No hose to be attached to any pipe for watering garden, &c., without meter.
37. Except as hereinbefore provided, no person shall use a hose attached to any tap or pipe (used for the purpose of supplying the water of the Board for domestic purposes to any house or premises) for watering any garden, laying dust, or for any other purpose whatsoever, unless where a water-meter is fixed and the water supplied by measure; and any person offending against this By-law shall be liable to a penalty not exceeding five pounds.
- No tap to be in garden without meter.
38. Except as hereinbefore provided, no person shall place any tap in any garden or screwed tap in any yard or to or outside of any dwelling or premises supplied with the water of the Board to which a hose could be attached unless a water-meter is fixed and the water supplied by measure; and any person offending against this By-law shall be liable to a penalty not exceeding five pounds.
- Pipes, &c., to be kept in proper repair.
39. Any person using water supplied by the Board shall keep all pipes and other appliances in connection with the supply of water to such person in a proper state of repair.

40. All work at any time done or to be done on private lands or premises in connection with the water supply, whether such work consist in the laying and fixing of new services, or in the extension or alteration of existing services and fittings, shall be inspected by the proper officer of the Board, and no such work shall be commenced until after the expiration of two days' notice thereof first given to the Board, and the necessary printed permit obtained. In no case shall the water be turned on to any lands or premises where any such work shall have been executed until the said work shall have been inspected by the said officer, and certified by him, on the prescribed form. No under-ground or enclosed work shall on any account be covered up or concealed from view until the same shall have been duly inspected and passed by the inspector; and any person offending against this By-law shall be liable to a penalty not exceeding five pounds. Inspection of work.

41. The supply and use of water, whether for domestic purposes or under special agreement, shall be open to inspection and admeasurement whenever required; and such information must from time to time be afforded as will be sufficient to enable the Board to obtain a satisfactory account of the quantity of water actually consumed, and of the pipes, taps, cisterns, and other apparatus and conveniences for receiving and delivering such water. Any officer of the Board may at all reasonable times in the day-time enter on the premises of any person using water supplied by the Board, for the purpose of inspecting the service pipes or other appliances on such premises. Supply and use of water open to inspection.

42. If the service pipes or other appliances of any such person shall on any inspection be found to be out of repair, the Board may forthwith, without notice, repair the same in such manner as may be deemed necessary, and the cost of any such repairs may be recovered by the Board from the owner or occupier of such premises. Board may repair.

43. The water supply to the public parks and gardens shall be by meter, and shall be exclusively under the control and direction of the Board; and any person turning on the water, or otherwise interfering with such water supply, shall be liable to a penalty not exceeding five pounds. Board have control of water supplied to public parks, &c.

44. All notices and applications required by these By-laws are to be made upon printed forms, to be obtained at the Board's office. Notices sent by post must be prepaid. Any sums paid by the Board on account of notices sent by post and not prepaid will be charged against and recovered from the sender. Notices and applications to be made upon printed forms.

45. The Board shall be at liberty to discontinue and cut off the supply of water immediately on the discovery of any breach of these Regulations. Board may discontinue supply.

46. In the construction of these By-laws, the word "person" shall be deemed to extend to and include a corporation, or any body or number of persons, and the masculine shall include the feminine gender. Interpretation of terms.

47. Any person committing a breach of any By-law to which no specific penalty is attached, or who shall refuse or neglect to obey any injunction in any such By-law, shall, upon conviction, be liable to pay a penalty not exceeding twenty pounds, and, in case of a continuing offence, a further penalty not exceeding five pounds for each day after notice of such offence shall have been given by the Board to such offender.

48. The following shall be the form of notice to connect to water mains, prescribed under Section 16, Metropolitan Water and Sewerage Act Amendment Act of 1889:—

NOTICE TO CONNECT TO WATER MAINS.

To the Owner or Occupier.

Board of Water Supply and Sewerage,
Sydney, 18 .

NOTICE IS HEREBY GIVEN that a water main has been laid in (as the case may be), and is ready to distribute water. The Board of Water Supply and Sewerage hereby demand and require that the owner or occupier of the house, tenement, or lands at or on which this notice is left or exhibited, shall construct such connections or fittings from or in connection with such house, tenement, or lands, to communicate with such main as are prescribed by the by-laws and regulations of the said Board.

For the Board of Water Supply and Sewerage,

REGINALD BLOXSONE,
Secretary.

THOMAS ROWE,
Secretary.
President.

NOTE.—Attention is directed to the following Rules:—

The Board will pay a reward of not less than ten shillings to any person who will give such information as shall lead to the conviction of any person or persons who shall wrongfully attach (temporarily or otherwise) any pipe to any of the mains or services of the Board, or to any pipe, cistern, or apparatus connected therewith, or to or into which the water of the Board shall flow, or who shall wrongfully draw off, use or take the water of the Board, or who shall knowingly permit the said water to be wrongfully drawn off, used, or taken. Reward for information as to fittings.

The Board will also adequately reward any person (not being the person in fault) who shall communicate timely information to the Board of any leakages or waste of water, whether the same be accidental, negligently or wilfully occasioned or suffered, or who shall give such information as shall lead to the conviction of any person or persons who shall steal or cause to be stolen, or improperly appropriated, the water of the Board.—*Vide* section 73 of Act 43 Vic. No. 32. Reward for information as to waste.

- Sample fittings.** A set of standard fittings, such as are at present approved, is exhibited in the Board Engineer's office; but the Board will give due consideration to the claims of any other fitting which may be presented for approval, and if considered satisfactory the same will be purchased and placed among and become one of the standard approved fittings.
- No gratuities allowed.** The Board do not permit their officers, workmen, or agents to solicit or receive any fee or gratuity whatever, and desires to be informed of any infraction of this Regulation, and also of any act of incivility or neglect of attention on the part of such officers, workmen, and agents, or any of them.
- Attention is also directed to the following clauses of the Metropolitan Water and Sewerage Act, 43 Vic. No. 32:—*
- Meter to be supplied and maintained by consumer.** 55. Every person who shall have agreed with the Board for a supply of water by measure, shall at his own expense, unless he hire a meter from the Board, provide a meter and keep and maintain the same in good working condition to the satisfaction of such officer as may be appointed by the Board, and in the event of any repairs being required notice in writing shall be immediately given by such person to the Board and a registration of the quantity used shall be taken before such repairs are effected.
- Notice of removal, &c., of meter.** 56. Every person requiring to remove or alter the position of any meter shall give six days' notice in writing to that effect to the Board, and a registration of the quantity of water used shall be taken before such removal or alteration is made.
- Penalty for neglecting to provide meter.** 57. If any person who under the provisions hereinbefore contained ought to provide any meter, neglect or refuse, after having been required by the Board so to do, to provide such meter, he shall for every day during which such neglect or refusal continues forfeit a sum not exceeding two pounds.
- Penalty for neglecting to give notice of repairs of meters.** 58. If any person who has provided any meter as aforesaid, fail to give the notice hereinbefore required of any repairs required for such meter he shall forfeit a sum not exceeding ten pounds.
- Water may be cut off if meter not in order.** 59. If any person refuse or delay to have such meter properly repaired and put in correct working order after having been required by any officer of the Board so to do, the Board may shut off the supply of water from the premises of such person either by cutting the service-pipe or otherwise, until such meter shall have been properly repaired and certified by some officer of the Board as being in proper working order.
- Penalty for fixing uncertified meter.** 60. If any plumber or other person fix or refix any meter upon any premises supplied with water by the Board, without having first obtained a certificate from the Board that the said meter has been examined and found in correct working order, he shall forfeit a sum not exceeding ten pounds.
- For removing or altering meter without notice.** 61. If any person remove or alter the position of or in any way interfere with any meter without giving such notice as aforesaid, he shall for each such offence forfeit a sum not exceeding twenty pounds over and above the damage which he may be found liable to pay in any action at law at the suit of the Board.
- Power to officers of Board to inspect meters.** 62. The officers of the Board may enter any house, building, or lands, to, through, or into which water is supplied by the Board by measure, in order to inspect the meters, instruments, pipes, and apparatus for the measuring, conveyance, reception, or storage of water, or for the purpose of ascertaining the quantity of water supplied or consumed, and may from time to time enter any house, building, or lands, for the purpose of removing any meter, instrument, pipe, or apparatus, the property of the Board; and if any person hinders any such officer from entering or making such inspection, or effecting such removal, he shall, for each such offence, be liable to a penalty not exceeding five pounds; but, except with the consent of a Justice, this power of entry shall be exercised only between the hours of ten in the forenoon and four in the afternoon.
- Notice to lay service pipes.** 63. After pipes have been laid under the authority of this Act, for the supply of water to any street or part thereof, the Board shall cause a notice, in the form contained in the Third Schedule hereto, or to the like effect, to be published in four consecutive numbers of the *Gazette*, and in one or more newspapers circulating in the locality; and the owner or occupier of every tenement referred to in such notice shall, within three weeks from the date of the last publication of such notice in the *Gazette*, cause a proper pipe and stop-cocks to be laid, so as to convey a supply of water to such tenement. And after fourteen days from such last publication the owner or occupier of such tenement shall, unless the Board refuse to supply him with water, be liable to pay the rates and charges for such supply, although no such pipes and stop-cocks be laid, or no such water be used in such tenement.
- Pipes laid by owners or occupiers. Power to inhabitants to lay service pipes.** 64. Any owner or occupier of any dwelling-house, or part of a dwelling-house, within a Water District, who shall wish to have water from the waterworks of the Board brought into his premises, and who shall have paid or tendered to the Board the portion of water rate in respect of such premises, by this Act directed to be paid in advance, may open the ground between the pipes of the Board and his premises, having first obtained the consent of the owners and occupiers of such ground, and lay any pipes from such premises to communicate with the pipes of the Board.
- Notice to Board of laying pipes.** 65. Such pipes shall be of a strength and material approved of by some officer of the Board, and every such owner or occupier shall, before he begins to lay any such pipe, give to the Board two days' notice of his intention to do so.

70. Before any pipe is made to communicate with the pipes of the Board, the person intending to lay such pipes shall give two days' notice to the Board of the day and hour when such pipe is intended to be made to communicate with the pipes of the Board, and every such pipe shall be so made to communicate under the superintendence and according to the directions of the surveyor, or other officer appointed for that purpose by the Board. And the bore of any such pipe shall not exceed three-quarters of an inch, except with the consent of the Board.

Communication with pipes of Board to be made under superintendence of surveyor.

Bore of service pipes.

71. Any person who shall have laid down any pipe, or other works, or who shall have become the proprietor thereof, may remove the same after having first given six days' notice in writing to the Board of his intention so to do, and of the time of such proposed removal, and every such person shall make compensation to the Board for any injury or damage to their pipes or works which may be caused by such removal.

Service pipes may be removed after giving notice.

72. Any such owner or occupier may open or break up so much of the pavement, if any, as shall be between the pipe of the Board and his house, building, or premises, and any sewer or drain therein for any such purpose as aforesaid (doing as little damage as may be, and making compensation for any damage done in the execution of any such work). Provided always that every such owner or occupier desiring to break up the pavement of any street, or any sewer or drain therein, shall be subject to the same necessity of giving previous notice, and shall be subject to the same control, restrictions, and obligations in, and during the time of breaking up the same, and also reinstating the same, and to the same penalties for any delay in regard thereto as the Board are subject to under the provisions of this Part.

Power to break pavements.

73. If any person supplied with water by the Board wrongfully does, or causes or permits to be done, anything in contravention of any of the provisions of this Part, or wrongfully fails to do anything which under any of those provisions ought to be done for the prevention of the waste, misuse, undue consumption, or contamination of the water of the Board, the Board may (without prejudice to any remedy against him in respect thereof) cut off any of the pipes by or through which water is supplied to him or for his use, and may cease to supply him with water so long as the cause of injury remains or is not remedied.

PROTECTION OF THE WATER.

In case of any breach of this Part of this Act water may be cut off.

74. If any person, supplied with water by the Board, wilfully or negligently causes or suffers any pipe, valve, cock, cistern, bath, soil-pan, water-closet, or other apparatus or receptacle to be out of repair, or to be so used or contrived that the water supplied to him by the Board is or is likely to be wasted, misused, unduly consumed, or contaminated, or so as to occasion or allow the return of foul air or other noisome or impure matter into any pipe belonging to or connected with the pipes of the Board, he shall, for every such offence, be liable to a penalty not exceeding five pounds.

Penalty for waste of water.

75. If any person—

- (1.) Not having from the Board a supply of water for other than domestic purposes, uses for other than domestic purposes any water supplied to him by the Board;
- or
- (2.) Having from the Board a supply of water for any purpose other than domestic, uses such water for any purpose other than those for which he is entitled to use the same;—

Penalty for misapplication of water.

he shall for every such offence be liable to a penalty not exceeding forty shillings without prejudice to the right of the Board to recover from him the value of the water misused.

76. It shall not be lawful for the owner or occupier of any premises supplied with water by the Board, or any consumer of the water of the Board, or any other person, to affix, or cause or permit to be affixed, any pipe or apparatus to a pipe belonging to or used by such owner, occupier, consumer, or any other person, or to make any alteration in any such communication or service-pipe, or in any apparatus connected therewith, without the consent, in every such case, of the Board. And if any person acts in any respect in contravention of the provisions of the present section, he shall, for every such offence, be liable to a penalty not exceeding five pounds, without prejudice to the right of the Board to recover damages from him in respect of any injury done to its property, and without prejudice to their right to recover from him the value of any water wasted, misused, or unduly consumed.

No pipe to be fixed to consumer's pipe without permission of Board.

77. If any person, not being supplied with water by the Board, wrongfully takes or uses any water from any reservoir, watercourse, conduit, or pipe belonging to the Board, or from any pipe leading to or from any such reservoir, watercourse, conduit, or pipe, or from any cistern or other like place containing water belonging to the Board or supplied by them for the use of any consumer of the water of the Board, he shall for every such offence be liable to a penalty not exceeding five pounds.

Penalty for unlawfully taking water.

78. The surveyor or other person appointed for that purpose by the Board may, between the hours of nine o'clock in the forenoon and four o'clock in the afternoon, enter into any house or premises supplied with water by the Board in order to examine if there be any waste or misuse of such water; and if any such surveyor or other person at any such time be refused admittance into such dwelling-house or premises for the purpose aforesaid, or be prevented from making such examination as aforesaid, the Board may turn off the water supplied by them from such house or other premises.

Inspection of water.

79. If any person bathes in any stream, reservoir, aqueduct or other waterworks belonging to the Board, or wash, throw, or cause to enter therein any dog or other animal he shall for every such offence forfeit a sum not exceeding five pounds.

Polluting the water. Penalty for bathing in water of the Board.

Penalty for throwing dirt therein.

80. If any person throw or convey or cause or permit to be thrown or conveyed any rubbish, dirt, filth, or other noisome thing into any such stream, reservoir, aqueduct, or other waterworks as aforesaid, or wash or cleanse therein any cloth, wool, leather, or skin of any animal, or any clothes or other thing he shall for each such offence forfeit a sum not exceeding five pounds.

Penalty for letting foul water flow thereinto.

81. If any person cause the water of any sink, sewer, or drain, steam-engine, boiler, or other filthy water belonging to him or under his control, to run or be brought into any stream, reservoir, aqueduct, or other waterworks belonging to the Board, or shall do any other act whereby the water of the Board shall be fouled, he shall for each such offence forfeit a sum not exceeding five pounds, and a further sum of twenty shillings for each day (if more than one) that such offence continues.

Penalty for nuisance in watershed area.

82. Where any owner or occupier of any land within the watershed to be proclaimed as hereinbefore provided, or any reservoir or source of supply transferred to, or vested in the Board, does, or permits to be done on his land any act, or permits to remain thereon any matter or thing, which in the opinion of the Board is likely to injure the water supply, if notice to discontinue or remove the same be given to him in writing by the Board, and if he neglect or refuse to discontinue such act, or to remove such matter or thing, he shall for each such offence forfeit a sum not exceeding five pounds, and a further sum of twenty shillings for each day (if more than one) that such offence continues.

Provisions as to connection of closet and other pipes with mains, and as to cisterns, &c.

86. The following provisions shall take effect for the purpose of protecting the water in the mains or other pipes of the Board from all impurities from closets and other receptacles of faecal matter or urine—

No closet pipes hereafter to connect directly with the main.

(I.) It shall not be lawful for any person to connect with the main any pipe delivering the water directly into the closet-pan or other receptacle for faecal matter or urine without the intervention of a cistern or cisterns into which the water from the main shall first be received, and any person so offending shall forfeit and pay a penalty not exceeding fifty pounds.

Board may disconnect pipes in certain cases.

(II.) The Board may employ any artificers or workmen to cut off or otherwise disconnect from the main any pipe directly discharging the water into a closet without the intervention of a cistern [hereinafter termed "directly connected"], and which in the opinion of the Board may endanger the purity of the water by the absorption of noxious gases, or suction of faecal matter or urine into such pipe, or into the main, or otherwise: For the purpose of effecting such disconnection the Board's artificers and workmen may enter into and upon the premises of any person or corporation whatsoever to do, or cause to be done, anything in his opinion requisite or necessary in relation thereto.

The expense incurred by any disconnection to be paid by tenant and deducted from his rent.

(III.) Whenever the Board shall have caused any pipe to be cut off, or disconnected, or other work to be done in relation thereto, they shall forthwith serve the owner or occupier of the premises with a notice in writing, requiring him to pay the actual cost or expense incurred. And such owner or occupier shall pay the amount to the Board, and if the amount be paid by an occupier only he may deduct the same from the rent then due or accruing. Upon such owner or occupier making default in any such payment after the delivery of such notice as aforesaid the Board may sue for and recover the same with full costs of suit.

Owners of premises shall fix closet-cisterns or be liable to a penalty.

(IV.) The owner of every dwelling-house or premises which shall have therein or thereon any closet with a pipe or branch-pipe directly connected with the main, shall be required to fix and erect a cistern or cisterns for the reception of the water intended to be used for the closet, and every cistern shall be made of such materials and dimensions, and of such model or plan of construction, and with such ball-cocks, stop-cocks, waste-pipes, and other appliances as shall be deemed requisite and have been approved by the Board for securing the water from pollution through any noxious gases or matter evolved or derived from such closets or otherwise. Every owner neglecting to comply with the provisions of this section shall forfeit and pay a penalty not exceeding five pounds.

Upon neglect of owner, the tenant after fourteen days notice, to fix cistern and deduct the expense from rent.

(V.) Whenever any owner shall have neglected to fix and erect a cistern, with its appliances, as is in the last preceding sub-section provided for, the tenant or occupier of the premises is hereby authorized and required, after receiving a written notice thereof from the Board in that behalf, to fix and erect such cistern, with its appliances before mentioned, within fourteen days after the receipt of such notice, and the said tenant or occupier shall, upon payment by him of the charges and expense of such fixing and erection, be entitled either to deduct the amount so paid from the rent then due or accruing, or, at his option, to sue for and recover the same, with full costs of suit, from the owner as for money paid to his use.

Any person re-establishing any connection with the main unless authorized, or wilfully injuring any pipe, &c., liable to a penalty.

(VI.) Any person who shall, without the authority of the Board, re-establish any such connection which may have been cut off, removed, or severed by him, or who shall in any manner wilfully injure or tamper with any connection-pipe, cistern, ball-cock, stop-cock, or waste-pipe which may have been approved by the Board, so as to destroy, diminish, or endanger its efficiency, may be summoned for such offence before two Justices, and on conviction thereof shall be adjudged to pay the amount of the charges and expenses which the Board may have incurred (and which they are hereby authorized to incur) in repairing or restoring the same to a state of efficiency. Every such offender shall also forfeit and pay a penalty not exceeding ten pounds, and the amount of charges and expenses and penalty respectively shall, when recovered, be paid over to the Board.

87. Where several houses or parts of houses, in the separate occupation of several persons, are supplied by one common pipe, or where water is supplied to courts, alleys, and right-of-way by stand pipes, the several owners or occupiers of such houses, or parts of houses, or of the several houses, or parts of houses, in every such court, alley, or right-of-way, shall be liable to the payment of the same rates for the supply of water as they would have been liable to if each of such several houses, or parts of houses, had been supplied with water from the works of the Board by a separate pipe.

88. The rates and charges for water, and all sums due to the Board under this Part, shall be paid by and be recoverable from the owner of the premises or the occupier or person requiring, receiving, or using the supply of water; and all rates shall be paid in advance by equal payments on the first day of January and the first day of July in each year, and the first payment shall be made at the time when the owner or occupier of any tenement shall become liable to pay such rates and charges, and all such rates and charges may be enforced and recovered in respect of any premises in the said City of Sydney, or in any such Municipality as aforesaid, situate within one hundred and fifty feet from the alignment of any street or public highway along which a main water pipe belonging to the Board is laid, although such premises are not actually supplied with water from such main.

89. If any such person refuse or neglect to pay on demand to the Board any rate, charge, or sum due to the Board under this Part, the Board may recover the same with costs, or may order a warrant under the hand of their President or Vice-president, in the form contained in the Fourth Schedule hereto, to be from time to time issued to some constable or other person named therein to levy such rate, charge, or sum by distress and sale of goods and chattels of the person occupying the premises in respect of which such rate, charge, or sum is due at the time when the warrant of distress is executed, and in case no sufficient goods and chattels of such occupier be found on the premises to satisfy such distress, the owner of the premises, or if he be absent from the Colony, his agent shall be liable for such rate, charge, or sum, and the same may be recovered from him.

PLAN.

Sketch Plan—Southern Suburbs Water Supply.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

EXTENSION OF SYDNEY WATER SUPPLY TO SOUTHERN SUBURBS—
HURSTVILLE AND ROCKDALE.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of extending the Sydney Water Supply to Southern Suburbs—Hurstville, Rockdale," have, after due inquiry, resolved that it is not expedient the works should be carried out; and in accordance with the provision of subsection IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. In considering this matter, which was submitted to them on the 1st October, 1889, the Committee took evidence from Mr. Joseph Barling, Under Secretary for Public Works; Mr. C. W. Darley, Engineer-in-Chief for Harbours and Rivers; and Messrs. Hugh Patrick, H. E. Godfrey, and J. B. Carroll, the Mayors of Hurstville, Rockdale, and Kogarah, respectively—the municipalities directly interested in this question. The matter appears, according to the evidence of Mr. Barling, to have originated in a public meeting which was held in the Council Chambers, Kogarah, in March, 1887, at which a resolution was passed on the subject, asking Parliament to devise some scheme for the better supply of water to that and other municipalities. The Hon. J. H. Carruthers, Minister of Public Instruction, one of the Members for the district, wrote to the Minister for Works, pointing out that there had already been a scarcity of water in the southern suburbs, and urging the necessity for provision to be made for a permanent supply. After the receipt of that letter surveys were made, and a scheme was proposed for connecting the places referred to with the main water supply from the Nepean, at a cost, as originally estimated, of £75,000, but afterwards reduced to £66,000, and the matter was then referred to the Committee. Since then, however, a supply of water for the district has been provided by means of temporary arrangements, which are explained in a minute by Mr. Darley. This minute states that since the original scheme was submitted, the Water Board has extended a 15-inch and a 12-inch trunk main from Petersham to beyond Kogarah, and already most of the low-lying populated portion of the district has been reticulated, and the water laid on. A temporary scheme has also been submitted by the Board's Engineer, to pump from the end of this trunk main to an elevated tank over Hurstville, which will supply all the elevated districts for some time to come, at a cost of about £3,200. This temporary scheme will, it is considered, answer all purposes until the district is more densely populated, and the money laid out on it will not necessarily be lost when the permanent scheme shall be carried out, as the reticulation pipes will be laid to suit the permanent scheme, and the land required for the temporary tank will suit for the permanent reservoir. In his evidence Mr. Darley stated that he thought it was advisable to postpone the permanent scheme for, say, five years, by which course five

years' interest on the large estimated outlay for that work would be saved. The water for the temporary scheme will be drawn from the Petersham Reservoir, where there is an abundance of water, as the pipe is not used to two-thirds of its capacity. The permanent scheme would be supplied from Potts' Hill. The Mayors of Hurstville, Rockdale, and Kogarah are agreed that if the districts concerned get a sufficient supply of water, the cheaper and quicker they get it the better.

Conclusion
arrived at
by the
Committee.

2. Taking into consideration the statements in the evidence, and bearing in mind the present sparseness of the population of the districts in question, the Committee are of opinion that the temporary arrangement proposed will, for some years to come, fully meet the wants of the inhabitants, and they have the less hesitation in recommending its adoption, as they find that the works in connection with it can be afterwards utilized to a large extent in carrying out the permanent scheme. The Committee, therefore, on the 21st January, passed unanimously the following resolution, which was moved by Mr. Trickett, and seconded by Mr. Cox :—

“That it is not expedient to carry out the extension of the Sydney Water
“Supply to the Southern Suburbs, Hurstville and Rockdale, according to
“the proposal submitted to the Committee.”

J. P. ABBOTT,

Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 11th February, 1890.

7

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

EXTENSION OF SYDNEY WATER SUPPLY TO SOUTHERN SUBURBS, HURSTVILLE AND ROCKDALE.

TUESDAY, 14 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq., (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARLAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLBY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Extension of the Sydney Water Supply to Southern Suburbs:—Hurstville and Rockdale.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] What are you? Under Secretary for Public Works.
2. Will you tell us what you have to say in reference to the extension of the Sydney Water Supply to the Southern Suburbs? I have to ask that this proposal be withdrawn from the consideration of the Committee because since the proposal was made temporary arrangements have been made for the supply of water to Kogarah and other districts on the Illawarra line which will answer requirements for some time to come.
3. The Department cannot withdraw it; all we can do is for the Committee to report to Parliament recommending that the proposal be not carried out; Parliament sent the proposal to us, and we shall have to give reasons to Parliament why it should not be carried out. You may as well tell us why the proposal was sent to Parliament, and why it is now proposed to withdraw it? It was sent to Parliament as the result of a public meeting at which a resolution was passed on the subject. That meeting was held in the Council Chambers at Kogarah in March, 1887, and the Minister was approached and asked to devise some scheme for the better supply of water to that and other municipalities. Subsequently Mr. Carruthers, one of the members for the district, wrote the following letter on the subject:—

J. Barling,
Esq.
14 Jan., 1890.

Sydney, 25th February, 1887.

The Hon. Minister for Works, Sydney.

Sir,—I have the honor, on behalf of the residents of Arncliffe, Rockdale, Kogarah, Hurstville, Canterbury, Peakhurst, Kingsgrove, and Tempe, to request that you will be pleased to take the necessary steps to obtain from the officers of your Department a report on the expediency of connecting these places with the main water supply from the Nepean. Already in these localities there has been a scarcity of water in the late periods of drought, and a recurrence of such periods in future, with the increased population, will cause a water famine there. The requirements of the immediate future, in my opinion, necessitate steps being now taken to provide for a supply from a permanent source.

After the receipt of this letter surveys were made, and a scheme was proposed for connecting the places referred to with the Nepean water supply, and eventually Parliament was asked to refer the question to this Committee. Since then, however, temporary arrangements have been made by which the supply of the district has been provided for. The Engineer-in-Chief has written the following minute:—

Water supply to Hurstville and southern suburbs; original estimate £75,000, submitted to Public Works Committee.

SINCE this scheme was submitted originally the Water Board have extended a 15-inch and a 12-inch trunk main from Petersham reservoir to beyond Kogarah, and already most of the low-lying populated portion of the district has been reticulated, and the water laid on.

The Board's Engineer for water supply has since submitted a temporary scheme for pumping from the end of this trunk main to an elevated tank over Hurstville, which will supply all the elevated districts for some time to come, at a cost of about £3,200.

The district is very sparsely populated, and the Board's assessor estimates that at the outside the probable revenue, assuming water to be laid on, would not exceed £250 per annum. Under the circumstances I am of opinion that it will be premature to carry out the large permanent scheme from Potts' Hill for some few years to come.

The temporary scheme proposed will answer all purposes until the district is more densely populated.

Had the 12-inch trunk main not been laid beyond Cook's River, then perhaps it would have been best to have carried out the large scheme; but since the work has been done I think a postponement for a few, say five, years desirable.

The present time is not the most favourable, in any case, for placing extensive orders for pipes and machinery, seeing that iron has risen so abnormally high.

The money laid out on the temporary pumping scheme will not necessarily be lost when the permanent scheme is carried out, as the reticulation pipes will be laid to suit the permanent scheme, and the land required for the temporary tank will suit for the permanent reservoir. Under the circumstances I recommend that the scheme be now withdrawn from the Public Works Committee.

C. DARLEY.

The

J. Barling, Esq. The Minister for Works has considered this matter, and he is of opinion that good reasons have been shown for asking the Committee to be so good as not to proceed with the examination of the scheme for the present.

14 Jan., 1890.

4. What is the estimated cost of the proposed work? I have a detailed estimate of £66,000; but I see that it has been put down at £75,000. That was a rough estimate.
5. At the time it was approved by the Minister the estimated cost was £66,000? Yes.
6. And since that was submitted you say that the Board of Water Supply have laid pipes to Kogarah which will enable that district to be supplied with water? Yes.
7. The cost of that, instead of being charged to loan votes, will come out of the revenue from the water supply? I imagine that it will still be charged to the loan votes, although I cannot answer that question definitely at present. A vote has been taken for the Water Supply Department, and I should imagine that any new work will be paid for out of loans, because it will be revenue-producing.

Cecil West Darley, Esq., Engineer-in-Chief for Harbours and Rivers, sworn, and examined:—

C. W. Darley, Esq.

14 Jan., 1890.

8. Mr. Garrard.] You are Engineer-in-Chief for Harbours and Rivers? Yes.
9. And a member of the Sewerage and Water Board? Yes.
10. You propose not to go on with the scheme for the extension of the Sydney water supply to Hurstville and Rockdale at an estimated cost of £66,000? I think it is advisable to postpone it.
11. What means have been taken to supply Kogarah and Hurstville with water? The Board have extended a 15-inch main part of the way, and then a 12-inch main as far as Kogarah from the Petersham reservoir.
12. How far does the 15-inch main go—down through Marrickville to Cook's River? Not quite; but to the Marrickville Road; then from there there is a 12-inch main.
13. In what direction? It comes down through St. Peters along the Cook's River Road, through Arncliffe and Rockdale to Kogarah.
14. I want to know where it is taken—along the lower level to Kogarah or the higher level? It is taken along the lower level.
15. How far out does it go—into Kogarah? They are laying the pipes there now.
16. How far does the 12-inch main go? I think a 9-inch main goes into Kogarah.
17. What do you propose to do with regard to the higher levels of Kogarah and Hurstville? When the scheme was brought forward it was proposed to erect a pumping station, and to have a high-level tank, near Hurstville.
18. Do you look upon that as a temporary measure which will have to be followed by a fuller scheme sooner or later? I think so. It depends upon how the district grows.
19. What is the estimated cost of this temporary scheme? About £3,500. The reticulation will have to be laid down in any case, and it will form part of the permanent work.
20. From what reservoir do you get the supply for Rockdale? Petersham.
21. What is the difference between the height where the proposed branch takes place and Pott's Hill? 12 feet.
22. Then you will lose 12 feet of head by going down to Petersham? Yes.
23. And all the water going to Hurstville will have to be pumped 12 feet higher? It is only a few hours pumping, and a very small pump will do it.
24. You think this expenditure of over £3,000 will meet the requirements of those districts for some years to come? The work was originally estimated to cost £75,000; but on going carefully into it I found that we could do it for £66,000. Four per cent. on that would be nearly £3,000 for one year's interest. We can carry out the temporary scheme, and if the larger scheme is postponed for five years we save five years' interest. Nearly all the work will be permanently useful, and the cost of maintaining a small station will be very much less than that of maintaining a large one.
25. In drawing your supplies from Petersham reservoir, will not that leave less water for suburbs which you contemplated would get their supplies from there? There is abundance of water. We are not using two-thirds of the capacity of the pipe. The pipe down to Petersham will carry 1,700,000 gallons a day, and the whole quantity which we are sending out hardly amounts to 10,000,000 gallons a day.
26. Then those districts which are drawing their supplies from Petersham will not be impoverished by this scheme? Not at all. The district is sparsely populated, and the quantity of water required will be comparatively small for some time to come.
27. Has the attention of the Department been directed to the prospect of getting a supply for the southern suburbs from the Woniora River? No.
28. Has any scheme with that object been put before the Department by outside people? It has been mooted. I think we did look into a proposal to obtain a supply from the Woniora River in connection with the site of noxious trades on the south side of Botany.
29. Not with a view of supplying Hurstville and Kogarah? No.
30. You are not in a position to say what would be the probable cost of supplying Kogarah and Hurstville from the Woniora River? No.
31. Do you know whether the people of Hurstville and Kogarah are satisfied with your temporary proposal as against the more complete one? If they get all they want I think they ought to be satisfied.
32. Are you aware of a petition having been sent in to go on with a permanent supply as against your temporary one? No, and I do not see why people should be listened to in dictating a higher expenditure than is necessary, if they get what they want. I might mention that the Board's assessor was sent out to the district, and he assessed all the high level district for which water would have to be pumped, and it only came to about £250 a year; therefore, if we carried out the complete scheme we should incur an expenditure of more than £60,000 to get a revenue of £250. Had not the pipes been run out of such large size a different course might have been taken. I am averse to bringing water into the city, and sending it out so far. The laying of the 12-inch pipe was authorized when I was in England, and as it has been taken out that far it is better to postpone the complete scheme for a few years. At the same time I do not regard it as permanent system at all satisfactory. We must go back to Potts' Hill.
33. You are satisfied that it is a feasible and right thing to carry out this temporary scheme for the present? Yes.

34. *Mr. O'Sullivan.*] Do you say that this temporary work will afterwards form a portion of the complete scheme? All the pipes which are laid will.
35. So that this work will have to be done in the future if it is not done now? When the population of the district increases it will have to be done.
36. *Mr. Dowel.*] Is this proposal not to proceed with the permanent work a departmental proposal, or is it a proposal of the Water and Sewerage Board? The proposal not to proceed with it is my own.

C. W. Darley,
Esq.
14 Jan., 1890.

TUESDAY, 21 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.	JACOB GARRARD, Esq.
The Hon. ANDREW GARRAN.	HENRY COPELAND, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	JAMES EBENEZER TONKIN, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
The Hon. GEORGE HENRY COX.	JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed extension of the Sydney Water Supply to Southern suburbs—Hurstville and Rockdale.

Mr. Hugh Patrick, Mayor of Hurstville, sworn, and examined:—

37. *Mr. Garrard.*] What are you? I am Mayor of Hurstville.
38. Do you know the details of the proposal before the Committee in reference to the water supply? I cannot say that I do.
39. Are you aware that it has been proposed to bring the supply of water from Potts' Hill to a new reservoir at Laycock's Road, Hurstville? I am not aware of that. I understood that the supply was to come from Petersham.
40. Are you aware that that is the work remitted to this Committee for consideration? Yes.
41. That is the project which your Council think would serve them well? Them and the surrounding district.
42. Is the present Sydney water supply taken to Hurstville? Not yet.
43. What is the nearest point to which it is taken? Rockdale.
44. Are you aware that the mains are being extended into Rockdale and that the Water and Sewerage Board are preparing to pump the water from there to the same reservoir at Laycock's Road? I am not aware of that.
45. If you get a supply, whether it is by gravitation from Potts' Hill, or from Laycock's Road by pumping, is it immaterial to you? Yes.
46. The quicker you get it the better? No doubt; but we are a great deal higher. Hurstville is higher than Petersham; there is a difference of 214 feet. That is the reason why we think we ought to have a reservoir somewhere at Hurstville; we do not say where.
47. You think that the proposed reservoir at Laycock's Road would suit admirably? Yes.
48. It is immaterial to you whether the supply is pumped up or comes by gravitation from Potts' Hill? Yes; I have had some experience in the city, years ago, and I know that in the summer months the lower levels exhausted the pipes, and that is likely to happen when the water supply is extended to Hurstville.
49. If you are sure of a supply of water from a reservoir at Laycock's Road that is all you want, is it not? Yes.
50. Are you an engineer by profession? I am not.
51. Would you set up your engineering knowledge against that of Mr. Darley? I should be sorry to do so.
52. Then, if we are assured by Mr. Darley and others that a supply of water can be obtained from Laycock's Road by pumping, cheaper than from Potts' Hill, would that suit better? I could not say that it would suit better. If we had it we should be able to supply the district from the heights of Hurstville.
53. I understand you to say that you consider the point at Laycock's Road an admirable and proper site? Yes.
54. If it is proposed to provide a supply of water to Laycock's Road that is all you want, and the cheaper and quicker it is done the better? Yes. May I ask whether the Public Works Committee intend to recommend that a reservoir be made at Laycock's Road? If it has been decided to do that I am not needed here.
- 55-6. I want to know whether a reservoir at Laycock's Road would be sufficient for your requirements? A reservoir would be.
57. Are you under the impression that if pipes were laid from Potts' Point Hill to Laycock's Road the water would go by gravitation? No.
58. You know it would have to be pumped? Yes.
59. So far as the people you represent are concerned a reservoir at Laycock's Road is all they require? I believe that that is the site which has been recommended. We have not chosen any site. We leave it to the Department.
60. When your Council wrote a letter to the Committee were they aware that the Water and Sewerage Board were making arrangements for pumping the water to Laycock's Road? No.
61. They were under the impression that the only thing before them was to get the water from Potts' Hill the possibility of that supply not being gone on with, and your being left without water? Yes; of course we knew from the Department that they would be able to supply water by gravitation to the lower parts of Hurstville and West Kogarah.
62. They can do that now from Petersham? Yes.
63. *Chairman.*] What are the rates likely to be for the water supply? The municipal rates for 1889, at 1s. in the £, amounted to £2,750. We expect an increase this year. We were incorporated in 1887 when the revenue amounted to about £2,200. In 1888 the amount was about £2,500. The houses

Mr.
H. Patrick.
21 Jan., 1890.

- Mr. H. Patrick.
21 Jan., 1890.
- in the district are increasing in number. In 1887 there were 467 houses, and a population of 2,163; in 1888 there were 530 houses, and an estimated population of 2,415, showing an increase of 63 houses, and 252 persons; in 1889, there were 550 houses, and an estimated population of 2,500, showing an increase of 20 houses, and 100 people. During the period that the district has been incorporated times have been dull.
64. Do you think you could raise £3,000 a year to pay interest on the expenditure in carrying out this work. You are aware, I suppose, that the municipalities will have to pay for it? We are only one; I suppose the others would have to pay too.
65. I am speaking of Hurstville and Rockdale? No doubt we should be able to pay our portion.
66. It must be an onerous tax for 2,400 people to pay £1,500? That would not be the amount; there are three municipalities, of which Rockdale is the largest.
67. *Dr. Garran.*] How many municipalities will this water supply serve? Rockdale, Kogarah, and Hurstville. I do not know about Canterbury.
68. Is the revenue of those other municipalities as large as yours? The revenue of the Rockdale municipality should be larger, seeing that it has been many years incorporated, and is nearer the city. The suburbs nearest the city are the most thickly populated.
69. I should gather that a 7d. water rate at Hurstville would yield £1,500 a year. Do you think the other municipalities would give so much? I should think so.
70. If they did you have an income of £4,500 a year. Have you calculated whether that would pay the interest on the expenditure? I do not know what the expenditure would be.
71. *Mr. Garrard.*] Has your Council ever had under consideration a project for supplying water from across the George's River, as against the Nepean supply? I recollect a person, named Murphy some time ago suggesting some such scheme, but it did not come before the Council.
72. No consideration was given to it? No.
73. The Council believe in having the water from the Nepean supply? Yes. Murphy mentioned that if they could get a Bill passed they were prepared to bring water across the river to supply the district.

Mr. Henry E. Godfrey, Mayor of Rockdale, sworn, and examined:—

- Mr. H. E. Godfrey.
21 Jan., 1890.
- 73½. *Mr. Garrard.*] Are you Mayor of Rockdale? I am.
74. How long have you held that position? About eight months.
75. Were you an alderman before that? Yes, for sixteen years.
76. Of Rockdale? Yes.
77. You know the project which has been remitted to the Committee, to take a line of pipes from Potts' Hill to Laycock's Road, to supply the southern suburbs with water? Yes.
78. Would that serve your district as well as those of Hurstville and Kogarah? I believe it would; that is the very highest point.
79. At present the lower parts are supplied from Petersham? Yes.
80. How far does the water supply extend? As far as Arrow Road, on the Rocky Point Road.
81. Is there any project to extend it further? I do not know of any.
82. Is your Council in favour of the proposed reservoir at Laycock's Road? No particular point has been decided on. Only the highest point would suit our higher levels.
83. Do you think that if there was a reservoir at Laycock's Road that would be the best source to get your water from? I am positive of that.
84. And if a water supply by that means can be obtained at a cost of £4,000, as against an expenditure of £66,000, would it not be to the interest of the district to be supplied at the lower cost? Yes; if the supply at the lower cost will meet the requirements of the district.
85. Are you an engineer? No.
86. Would you put your opinion against that of the Engineer-in-Chief and Mr. Trevor Jones? I would not.
87. If we have it in evidence from Mr. Darley that the scheme I have mentioned would give an ample supply of water for years to come, you would be prepared to take his word? I should have no alternative. I have had no information from any surveyor.
88. If it can be done at a smaller cost it will be more to your interest than to have the more expensive scheme from Potts' Hill? We should not have to bear the cost as a municipality.
89. As one of the municipalities you would have to bear the cost. If the least expensive system is adopted the cost to you will, of course, be diminished? If that system will meet the wants of the people I say by all means let us have the less costly one. As I am not an engineer I do not pretend to know.
90. If it has been stated here by the Engineer-in-Chief that at a cost of something under £4,000 the water can be pumped up to the same level where it is proposed to bring the Potts' Hill water to supply your district, will it not be better to take that than the more expensive scheme which has been proposed? Yes. We have some very high points about Arncliffe. If that scheme would give us an equal pressure it would do.
91. As long as you get the same head of water it does not matter where you get it from, if you get it cheaper and quicker than by the more expensive scheme? It will not affect the ratepayers of Rockdale.
92. If we have been assured by a competent officer that all your requirements can be provided at a less cost than that of carrying out the more expensive scheme, will not your municipality be more than satisfied? Yes; we should be in favour of the less cost.
93. Has there been before you a project to supply the district from the Woinora? It was never brought before the Council. It was suggested by outside people.
94. Have you ever considered that proposal as against the Nepean supply? I have not. I talked the matter over with a man named Dallon, who, I think, was a surveyor, but I never went into it.
95. The people are in favour of getting their supply from the Nepean source, as cheaply and quickly as possible? Yes.

Mr.

Mr. J. B. Carroll, Mayor of Kogarah, sworn, and examined:—

96. *Mr. Garrard.*] Are you Mayor of Kogarah? I am.
97. How long have you held that position? This is the second time.
98. How long were you an alderman? Two or three years.
99. Are you aware that a project has been remitted to the Committee for the supply of the Southern suburbs with water from Potts' Hill, and the formation of a reservoir at Laycock's Road? No, I cannot say that I am aware of that.
100. Has the matter of water supply ever occupied the attention of your Council? It has.
101. Have they taken any steps to urge that it be carried out? We did, and the pipes are being laid in our municipality now.
102. By the Water and Sewerage Board? Yes.
103. From Petersham? Yes.
104. That will be for the lower levels? Yes.
105. But it is necessary that the higher levels should be supplied too? Yes.
106. If it has been stated confidently by the Engineer-in-Chief for Harbours and Rivers that he can provide a supply for the district from this proposed reservoir commanding the heights, at a cost of less than £4,000 as against the proposed expenditure of £66,000 on a supply from Potts' Hill direct, do you think that that would not be preferable to the more expensive scheme? I do. The cheaper we can get it the better. We are anxious to get the water as soon as possible.
107. Do you know the proposed site? I do not.
108. Do you know Laycock's Road? Yes.
109. That is the highest point in the district? Yes.
110. Do you think that a suitable place for a reservoir? I do not know of a better site.
111. It is the best place to command the whole district? Yes.
112. And if the municipality can be supplied with water more quickly and cheaply from there than from anywhere else that would be satisfactory to the people? Yes. Only one small portion of our district has that elevation, and that is the part near Hurstville Railway Station. Kogarah is only about 80 feet above the level of the sea.
113. Would you be perfectly satisfied if a supply of water were obtained the cheapest and quickest way? Yes; we are anxious to get a supply as soon as possible.
114. *Dr. Garran.*] You do not want any pumping in your municipality if it is only 80 feet above the sea level? That is one portion of the district. The portion next Hurstville has the same elevation as Hurstville.
115. Is that a fourth part of your area? No. The municipality contains 3,500 acres. The elevated portion will be about 100 acres.
116. The bulk would be supplied without any pumping? Yes.
117. A very small portion of the municipality is interested in the pumping at all? Yes, that near Hurstville.

Mr.
J. B. Carroll.
21 Jan., 1890.

[One plan.]

1890.

NEW SOUTH WALES.

METROPOLITAN WATER AND SEWERAGE ACT AMENDMENT ACT OF 1889.

(PROCLAIMING BOUNDARIES OF LIVERPOOL DISTRICT.)

Presented to Parliament, pursuant to Act 53 Vic. No. 16.

NEW SOUTH WALES, } Proclamation by His Excellency The Right Honourable CHARLES ROBERT, BARON
 to wit. } CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council,
 (L.S.) } Knight Grand Cross of the Most Distinguished Order of Saint Michael and
 By Deputation from } Saint George, Governor and Commander-in-Chief of the Colony of New South
 His Excellency : } ALFRED STEPHEN,
 Lieutenant-Governor. } Wales and its Dependencies.

IN pursuance of the provisions of "The Metropolitan Water and Sewerage Act Amendment Act of 1889," I, CHARLES ROBERT, BARON CARRINGTON, Governor aforesaid, do hereby proclaim that the following shall be the defined boundaries of the Liverpool Water District, for the purpose of carrying out the authorized scheme of Water Supply for the town of Liverpool:—

Commencing on the right bank of Prospect Creek, at Kenyon's Bridge, at the crossing of the road from Smithfield to Parramatta; and bounded on the east by that creek downwards to the George's River; and by that river upwards to a point due east from the south-east corner of Richard Guise's portion of 300 acres, parish of St. Luke; thence on the south by a line due west, forming part of the southern boundary of that portion, to its intersection with the Bringelly Road; and thence by that road south-westerly, westerly, and south-westerly to the Nepean Canal; bounded thence on the west by that canal northerly, north-easterly, and northerly to the boundary dividing the parish of Prospect from the parishes of Melville and St. Luke; thence on the north by that boundary easterly to Prospect Creek; and by Prospect Creek downwards, to the point of commencement.

The above area includes the whole of the parish of St. Luke and parts of the parishes of Cabramatta and Melville, in the county of Cumberland, and contains about 58 square miles. *Vide* Office Map of the county of Cumberland.

Given under my Hand and Seal, at Government House, Sydney, this third day of February, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,
 BRUCE SMITH.

GOD SAVE THE QUEEN!

NEW SOUTH WALES.

METROPOLITAN WATER AND SEWERAGE ACT AMENDMENT ACT OF 1889.

(PROCLAIMING BOUNDARIES OF CAMPBELLTOWN DISTRICT.)

Presented to Parliament, pursuant to Act 53, Vic. No. 16.

NEW SOUTH WALES, } Proclamation by His Excellency The Right Honourable CHARLES ROBERT, BARON
to wit. } CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council,
(L.S.) } Knight Grand Cross of the Most Distinguished Order of Saint Michael and
By Deputation from } Saint George, Governor and Commander-in-Chief of the Colony of New South
His Excellency: }
ALFRED STEPHEN, }
Lieutenant-Governor. } Wales and its Dependencies.

In pursuance of the provisions of "The Metropolitan Water and Sewerage Act Amendment Act of 1889," I, CHARLES ROBERT, BARON CARRINGTON, Governor aforesaid, do hereby proclaim that the following shall be the defined boundaries of the Campbelltown Water District, for the purpose of carrying out the authorized scheme of Water Supply for the Town of Campbelltown:—

Commencing at the intersection of the north-eastern boundary line of the parish of Narellan with the Nepean Canal; and bounded on the north-east by that boundary line south-easterly to its intersection with the northern boundary line of the parish of St. Peter; thence by that boundary line easterly to George's River; thence on the east by George's River southerly to its intersection with the southern boundary line of the parish of St. Peter; thence on the south by the southern boundary line of the parish of St. Peter westerly to its intersection with the eastern boundary line of the parish of Narellan; thence on the west by part of the eastern boundary line of the parish of Narellan northerly to its intersection with the Nepean Canal; thence by that canal northerly, to the point of commencement.

The above-described boundaries include the whole of the parish of St. Peter and a portion of the parish of Narellan, in the county of Cumberland, the area being about 25 (twenty-five) square miles.

Given under my Hand and Seal, at Government House, Sydney, this third day of February, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN!

NEW SOUTH WALES.

METROPOLITAN WATER AND SEWERAGE ACT AMENDMENT ACT OF 1889.

(PROCLAIMING BOUNDARIES OF METROPOLITAN DISTRICT.)

Presented to Parliament, pursuant to Act 53 Vic. No. 16.

NEW SOUTH WALES, } Proclamation by His Excellency The Right Honourable CHARLES ROBERT,
to wit. } BARON CARRINGTON, a Member of Her Majesty's Most Honourable Privy
(L.S.) } Council, Knight Grand Cross of the Most Distinguished Order of St. Michael and
By Deputation from } His Excellency: St. George, Governor and Commander-in-Chief of the Colony of New South
ALFRED STEPHEN, }
Lieutenant-Governor. } Wales and its Dependencies.

IN pursuance of the provisions of "The Metropolitan Water and Sewerage Act Amendment Act of 1889," I, CHARLES ROBERT, BARON CARRINGTON, Governor aforesaid, do hereby proclaim that the following shall be the defined boundaries of the Metropolitan Water District, for the purpose of carrying out the authorized scheme of Water Supply for the City of Sydney and its Suburbs:—

County of Cumberland, parishes of Alexandria, Botany, Bankstown, Concord, Hunter's Hill, Liberty Plains, Petersham, St. Andrew, St. George, St. James, St. Lawrence, St. Philip, St. John, Willoughby, and Field of Mars, area about 136,000 acres: Commencing on the shore of the Pacific Ocean, at the Inner South Head of Port Jackson; and bounded thence by that shore southerly to the North Head of Botany Bay; thence by the northern and western shores of that bay westerly and southerly to the northern shore of George's River; thence by that shore westerly and upwards to the confluence of Prospect Creek; thence by the left bank of that creek upwards to Konyon Bridge, at the crossing of the road from Sherwood to Parramatta; thence by the western boundary of the parish of St. John, being lines forming the western boundaries of Benjamin Herbert's 60 acres, W. Herbert's 60 acres, P. Farrell's 50 acres, Thomas Parkes' 50 acres, Samuel Hennell's 30 acres, and John Young's 30 acres, northerly to the northern side of the Old Prospect Road; by that side of that road easterly to the Great Western Road at the crossing of a branch of Toongabbie Creek, which forms an eastern boundary of D'Arcy Wentworth's 2,750 acres; by an eastern and a northern boundary of that land northerly and west to the south-west corner of J. J. Bohringer's 22½ acres, and by the western boundary of that land north to Toongabbie Creek; thence by that creek downwards to the confluence of the Quarry branch of that creek; and by that branch upwards to the southern boundary of William Goodin's 40 acres; thence by that boundary easterly to the Windsor Road; and by a line east, crossing that road, to the western boundary of Mr. Alderson's 100 acres; thence by part of the western and by the north-western boundary of that land northerly and north-easterly to the western boundary of Wm. Charles Wentworth's 260 acres; thence by part of the western and by the northern boundary of that land northerly and easterly to the south-west corner of John Pickup's 86 acres; thence by the southern boundaries of that land and a line easterly to the south-west corner of John Turner's 72 acres; thence by a line partly forming the south-eastern boundaries of that land, William Wright's 30 acres, Edward Quinn's 50 acres, William Sutton's 140 acres, Andrew Murray's 280 acres, and part of the south-eastern boundary of Andrew Murray's 135 acres 2 roods north-easterly to a southern branch of Devlin's Creek; thence by that branch downwards to Devlin's Creek; and by that creek downwards to the Great Northern Railway Line near Carlingford Platform; thence by a line along the northern side of Somerset-street, and the northern side of a road forming the southern boundaries of portions 418 to 421, parish of Field of Mars, easterly to Terry's Creek; thence by that creek downwards to the Lane Cove River; and by that river downwards to the confluence of Blue Gum Creek; thence by that creek upwards to the north-western boundary of Isaac Nichol's 200 acres, parish of Willoughby; thence by part of that boundary north-easterly to the southernmost corner of Thomas Boulton's 60 acres; thence by the south-western boundary of that land north-westerly to its westernmost corner; thence by a line partly forming the north-western boundary of that land and the northern side of Albert-street and its prolongation north-easterly to the southern shore of Middle Harbour; thence by that shore generally easterly to Middle Head; and thence by a line south-easterly, to the point of commencement.

All references to counties and parishes made in the above description are in connection with the maps of the same in the Department of Lands.

Given under my Hand and Seal, at Government House, Sydney, this thirtieth day of January, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN!

)

1890.

NEW SOUTH WALES.

METROPOLITAN WATER AND SEWERAGE ACT.

(BY-LAWS.)

Presented to Parliament, pursuant to Act, 43 Vic. No. 32.

Department of Public Works,
Sydney, 24th December, 1889.

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following By-laws in connection with the Metropolitan Sewerage System which have been prepared in accordance with the provisions of the Acts 43 Vic. No. 32 and 53 Vic. No. 16.

BRUCE SMITH.

BOARD OF WATER SUPPLY AND SEWERAGE.

METROPOLITAN SEWERAGE BY-LAWS.

WHEREAS by the Metropolitan Water and Sewerage Act of 1880, 43 Vic. No. 32, and the Metropolitan Water and Sewerage Act Amendment Act of 1889, 53 Vic. No. 16, the Board of Water Supply and Sewerage is authorized and empowered from time to time to make, alter, and repeal By-laws.

Now, the Board of Water Supply and Sewerage, under and by virtue of the powers contained in the Metropolitan Water and Sewerage Acts, 1880-1889, do hereby make the By-laws following, that is to say:—

1. The following rates and charges are those which the owners and occupiers of lands and tenements shall pay in respect of sewerage, that is to say:—

- (1.) On every house, tenement, or land of seventeen pounds assessed annual value and under, ten shillings per annum.
- (2.) On every house, tenement, or land above the assessed annual value of seventeen pounds, a rate of seven pence for each pound sterling on the amount of the valuation.
- (3.) Vacant lands of the assessed annual value of £40 and over shall be subject to a rate of three pence for each pound sterling on the amount of the valuation.

Notice to be given before removal or alteration of drains, &c.

2. No person shall remove or make any alteration in any drain, trap, soil-pipe, water-closet, urinal, sinks, or other fitting communicating with any sewer of the Board, unless he shall have previously given to the Board six (6) days' notice in writing of his intention to do so.

Authorized plumbers or other workmen only to be employed.

3. No builder, plumber, drainer, or other workman shall do or be allowed to do any work in connection with the drainage of any premises, unless he shall have been duly admitted by the Board as a "licensed drainer," and shall have engaged to conform to and comply with the By-laws and Regulations.

Material, &c., for drains.

4. Every person who shall erect a new building, or make additions to any existing building, or connect existing premises to any sewer of the Board, shall in the construction of every drain of such building, additions, or premises, use good sound pipes formed of glazed stoneware or of other equally suitable material.

Size of drains, drains to be laid in concrete, where necessary to have proper fall and suitable joints.

(a.) He shall cause every such drain to be of adequate size, and if constructed or adapted to be used for conveying sewage to have an internal diameter not less than four inches, and to be laid in a bed of good concrete when necessary, with a proper fall and with watertight socketed or other suitable joints.

Drains beneath buildings.

(b.) He shall not construct any such drain so as to pass under any building, except in any case where any other mode of construction is impracticable, and in that case he shall cause such drain to be so laid in the ground that there shall be a distance equal at least to the full diameter thereof between the top of such drain at its highest point and the surface of the ground under such building.

To be embedded in concrete.

(c.) He shall also cause every such drain to be laid in a direct line for the whole distance beneath such building, and to be completely embedded in and covered with good and solid concrete at least six inches thick all round.

Drains to be ventilated.

(d.) He shall likewise cause adequate means of ventilation to be provided in connection with such drain, at each end of such portion thereof as is beneath such building.

Inlets to be trapped.

(e.) He shall cause every inlet to any drain (not being an inlet provided in pursuance of the By-law in that behalf as an opening for the ventilation of such drain), to be properly trapped.

House-drains to be trapped from sewer.

5. Every house-drain shall be provided with a suitable disconnector trap at a point as distant as may be practicable from such building and as near as may be practicable to the point at which such drain may be connected with the public sewer or other means of drainage, but if possible within the boundaries of the property.

Work to be executed according to the Regulations.

6. All work connected in any way with the drainage of any premises shall be inspected by an officer appointed by the Board for that purpose, and every facility shall be afforded for such inspection. No underground or enclosed work shall on any account be covered up or concealed from view until the same shall have been duly inspected and passed by the Inspector.

Position of water-closets.

7. Every person who shall construct a water-closet in a building shall construct such water-closet in such a position that one of its sides at the least shall be an external wall.

Every water-closet to have external windows.

8. Every person who shall construct a water-closet in connection with a building, whether the situation of such water-closet be or be not within such building, shall construct in one of the walls of such water-closet a window of not less dimensions than two feet by one foot exclusive of the frame, and opening directly into the external air.

Water-closet to have additional and permanent ventilation.

(a.) He shall, in addition to such window, cause such water-closet to be provided with adequate means of constant ventilation by at least one air-brick built in an external wall of such water-closet, or by an air-shaft, or by some other effectual method or appliance.

Construction of cistern to water-closet.

9. Every water-closet hereafter erected, altered, or repaired shall be supplied with a proper supply cistern, fitted immediately over the closet. The down pipe from same shall in no case be less than 1½ inch internal diameter, and shall be fitted as straight as possible; the bottom of such cistern shall be at least five feet clear above the closet seat. Every cistern shall be made of such materials and dimensions and of such plan of construction, and with such ball-cocks, stop-cocks, down and waste pipes, and other appliances as shall be deemed requisite by the Board to prevent waste of water. In connection with every cistern there shall be provided a service box or compartment, which will discharge not less than two (2) gallons at each flush.

(a.) Every house, tenement, factory, institution or place, public or private, shall hereafter be provided with means of storing water for flushing and cleansing the pipes, drains, traps, and apparatus of water-closets and urinals connected therewith, in the event of a temporary stoppage of water supply or otherwise, and such tanks or cisterns shall be of such capacity, dimensions, and arrangement as to contain, in the aggregate, a quantity of water equal to two days' supply of two gallons per head per diem according to the possible requirements of such house, tenement, factory, institution or place. Every owner neglecting to comply with the provisions of this section will be liable to a penalty not exceeding five pounds.

Water-closet to have flushing apparatus.

10. Every person who shall construct a water-closet in connection with a building shall furnish such water-closet with a suitable apparatus for the effectual application of water to any pan, basin, or other receptacle, with which such apparatus may be connected and used, and for the effectual flushing and cleansing of such pan, basin, or other receptacle, and for the prompt and effectual removal therefrom of any solid or liquid filth which may from time to time be deposited therein. (No person shall erect or use any cistern which is not made of such materials and dimensions, and of such model or plan of construction, and with such ball-cocks, stop-cocks, waste-pipes, and other appliances, as shall be deemed requisite, and have been approved by the Board).

Water-closet to have proper basin.

(a.) He shall furnish such water-closet with a pan, basin, or other suitable receptacle of non-absorbent material, and of such shape, of such capacity, and of such mode of construction as to receive and contain a sufficient quantity of water, and to allow all filth which may from time to time be deposited in such pan, basin, or receptacle to fall free of the sides thereof, and directly into the water received and contained in such pan, basin, or receptacle.

Ventilation of house-drains.

11. Every owner of existing buildings, and every person who shall erect a new building, and every person who shall connect any existing building to any sewer or drain under the control

of the Board, shall, for the purpose of securing efficient ventilation of the drains of such building, comply with the following requirements:—

(i.) He shall provide at least two untrapped openings to the drains, and in the provision of such openings, he shall adopt such of the two arrangements hereinafter specified as the circumstances of the case may render the more suitable and effectual, that is to say—

(a.) One opening, being at or near the level of the surface of the ground adjoining such opening, shall communicate with the drains by means of a suitable pipe, shaft, or disconnecting chamber, and shall be situated as near as may be practicable to the trap which, in pursuance of the By-law in that behalf, shall be provided between the main drain or other drain of the building and the sewer or other means of drainage with which such drain may lawfully communicate. Such opening shall also in every case be situated on that side of the trap which is the nearer to the building. The second opening shall be obtained by carrying up from a point in the drains, as far distant as may be practicable from the point at which the first-mentioned opening shall be situated, a pipe or shaft, vertically, to such a height and in such a manner as effectually to prevent any escape of foul air from such pipe or shaft into any building in the vicinity thereof.

(b.) In every case where the foregoing arrangement of the openings to the drains may be impracticable, there shall be substituted the arrangement hereinafter prescribed. One opening shall be obtained by carrying up from a point, as near as may be practicable to the trap, which in pursuance of the By-law in that behalf, shall be provided between the main drain or other drain of the building and the sewer or other means of drainage with which such drain may lawfully communicate, a pipe or shaft, vertically, to such a height and in such a manner as effectually to prevent any escape of foul air from such pipe or shaft into any building in the vicinity thereof. Such opening shall also in every case be situated on that side of the trap which is the nearer to the building. The second opening, being at a point in the drains as far distant as may be practicable from the point at which such last-mentioned pipe or shaft shall be carried up, shall be at or near the level of the surface of the ground adjoining such opening, and shall communicate with the drains by means of a suitable pipe or shaft.

(ii.) He shall cause every opening provided in accordance with either of the arrangements hereinbefore specified to be furnished with a suitable grating or other suitable cover for the purpose of preventing any obstruction in or injury to any pipe or drain by the introduction of any substance through any such opening. He shall, in every case, cause such grating or cover to be so constructed and fitted as to secure the free passage of air through such grating or cover by means of a sufficient number of apertures, of which the aggregate extent shall be not less than the sectional area of the pipe or drain to which such grating or cover may be fitted.

(iii.) Every pipe or shaft which may be used in connection with either of the arrangements hereinbefore specified shall be of a sectional area not less than that of the drain with which such pipe or shaft may communicate, and not less in any case than the sectional area of a pipe or shaft of the diameter of four inches.

(iv.) No bend or angle shall (except by the special authority and permission of the Board) be formed in any pipe or shaft used in connection with either of the arrangements hereinbefore specified.

(v.) Provided always, that for the purpose of either of the arrangements hereinbefore specified the soil-pipe of any water-closet, in every case where the situation, sectional area, height, and mode of construction of such soil-pipe shall be in accordance with the requirements applicable to the pipe or shaft to be carried up from the drains, may be deemed to provide the necessary opening for ventilation which would otherwise be obtained by means of such last-mentioned pipe or shaft.

No inlet to drains within buildings.

12. Any person who shall erect a new building, shall not construct any drain of such building in such a manner as to allow any inlet to such drain (except such inlet as may be necessary from the apparatus of any water-closet) to be made within such building.

Size, situation, and ventilation of soil-pipe.

(a.) He shall cause the soil-pipe from every water-closet in such building to be at least four inches in diameter, and to be fixed outside such building, and to be continued upwards without diminution of its diameter and, except where unavoidable, without any bend or angle being formed in such soil-pipe to such a height and in such a position as to afford, by means of the open end of the soil-pipe, a safe outlet for sewer air.

Soil-pipe not to be trapped at foot.

(b.) He shall so construct such soil-pipe that there shall not be any trap between such soil-pipe and the drains or any trap (other than such as may necessarily form part of the apparatus of any water-closet) in any part of such soil-pipe.

Waste-pipes to discharge into the open air.

(c.) He shall also cause the waste-pipe from every bath-sink (not being a slop-sink constructed or adapted to be used for receiving any solid or liquid filth) or lavatory, the over-flow pipe from any cistern and from any safe under any bath or water-closet, and every pipe in such building for carrying off waste water to be taken through an external wall of such building and to discharge in the open air over a channel leading to a trapped gully grating, at least eighteen inches distant.

Slop sinks to be as water-closets.

(d.) He shall as regards the mode of construction of the waste-pipe from any slop-sink constructed or adapted to be used for receiving within such building any solid or liquid filth, comply in all respects with such of the provisions of this By-law as are applicable to the soil-pipe from a water-closet.

Openings for ventilation.

13. All openings for ventilation made in accordance with these By-laws shall at all times be kept open and perfectly free from obstruction. Every occupier shall at all times see that all openings to the drains upon his premises, whether for ventilation or otherwise, and that all traps and other fittings are at all times in good order, clean, and free from obstruction.

Officer of Board may enter premises.

14. Any officer of the Board acting under their authority may enter between sunrise and sunset any house or premises connected with the sewers, in order to examine whether the drains and other fittings in such house or premises are in proper order. Any person refusing such admission, or in any way hindering such officer in the execution of his duty, shall be liable to a penalty as hereinafter mentioned.

Notice and plan of intended new building or rebuilding.

15. Every person who shall intend to erect a building or rebuild, or make any addition or alterations to any building shall give to the Board seven days' notice of such intention, which notice shall be accompanied by plans and section of such intended buildings, or addition, or alteration, drawn to a scale of one inch to every eight feet, showing the intended lines of drainage of such building, and the details of the arrangement proposed to be adopted for the ventilation of the drains.

Drainage of subsoil.

16. Every person who shall erect a new building shall cause the subsoil of the site of such building to be effectually drained by means of suitable stoneware pipes properly laid to a suitable outfall, wherever the dampness of the site renders such precaution necessary. He shall not lay any such pipe in such a manner or in such a position as to communicate directly with any sewer or cesspool or with any drain constructed or adapted to be used for conveying sewage, but shall provide a suitable trap with a ventilator opening, at a point in the line of the subsoil drain as near as may be practicable to such trap.

Lowest story to be at level above sewer.

17. Every person who shall erect a new building shall construct the lowest story of such building at such level as will allow of the construction of a drain sufficient for the effectual drainage of such building, and of the provision of the requisite communication with any sewer into which such drain may lawfully empty, at a point in the upper half diameter of such sewer, or with any other means of drainage with which such drain may lawfully communicate. The Board may in any case in which they think proper, exempt any person from the provisions of this By-law.

Deposit of solid matters in cesspits and house drains.

18. No person shall permit any solid matter, animal, or any other matter to be deposited in closet-traps, yard-sinks, or house-drains so as to endanger the efficiency of same.

Deposit of refuse in sewer.

19. No person shall deposit ashes, house refuse, or any other solid matter in any sewer or drain; suitable provision must be made to intercept and prevent same passing into such sewers or drains.

Discharges from Hospitals, &c.

20. It shall not be lawful for any person to empty into any sewer or drain under the control of the Board, from any hospital, institution, or other private or public building, any solid or liquid discharges from patients suffering from typhoid fever or any other infectious or contagious disease, without first thoroughly disinfecting the same.

Refuse from gas or chemical works not to be discharged into sewers.

21. It shall not be lawful for any person to discharge into any sewer or drain any gaseous liquid or solid of an explosive nature.

Street gullies not to be connected to sewers without permission.

22. No person shall connect any gullies or pits for the disposal of road drainage into any sewer or drain under the control of the Board, without first obtaining the consent of the Board to such connection or connections being made.

Notices to be prepaid.

23. All notices and applications required by these By-laws are to be made upon printed forms to be obtained at the office of the Board. Notices sent by post must be prepaid. All sums paid by the Board on account of notices sent by post and not prepaid will be charged against and recovered from the sender.

"Person" includes corporation, &c.

24. In the construction of these By-laws the word "person" shall be deemed to extend to and include a corporation, or any body or number of persons, and the masculine shall include the feminine gender.

Penalties.

25. Any person committing a breach of any By-law to which no specific penalty is attached, or who shall refuse or neglect to obey any injunction in any such By-law, shall upon conviction be liable to pay a penalty not exceeding £20. And in case of a continuing offence, a further penalty not exceeding £5 for each day after notice of such offence shall have been given by the Board to such offender.

26. The following shall be the form of notice to connect to sewers prescribed under section 5, "Metropolitan Water and Sewerage Act, 1889":—

Notice to connect to Sewer under the control of the Board of Water Supply and Sewerage.

Board of Water Supply and Sewerage,
Sydney, 18 .

To the Owner or Occupier.

Notice is hereby given that a sewer has been laid in (as the case may be), and is ready for receiving sewage. The Board of Water Supply and Sewerage hereby demand and require that the owner or occupier of the house, tenement, or lands at or on which this notice is left or exhibited shall construct the drains, cisterns, and fittings from and in connection with such house, tenement, or lands, to communicate with such sewer, as are prescribed by the By-laws and Regulations of the said Board.

For the Board of Water Supply and Sewerage,

Secretary.

The following shall be the form of demand prescribed under Sub-section II to Section VI of "Metropolitan Water and Sewerage Act Amendment Act of 1889":—

Demand for Payment of Expenses of Drainage and Ventilation of Premises.

Board of Water Supply and Sewerage,
Sydney, 18 .

To the owner or occupier.

You are hereby required within twenty-one (21) days from the date of this notice to pay to the Board of Water Supply and Sewerage the sum of £ (as the case may be), being the full amount of (as the case may be)

to premises No. street, (as the case may be). And take notice that unless the abovementioned sum of £ be paid by you within the time abovementioned proceedings for the recovery of such sum will be taken against you without further notice.

For the Board of Water Supply and Sewerage,

Secretary.

1890.

NEW SOUTH WALES.

METROPOLITAN WATER AND SEWERAGE ACT.
 (BY-LAWS FOR COUNTRY DISTRICTS, COUNTY OF CUMBERLAND.)

 Presented to Parliament, pursuant to Acts 43 Vic. No. 32, 51 Vic. No. 28, and
 53 Vic. No. 16.

 Department of Public Works,
 Sydney, 20th June, 1890.

**METROPOLITAN WATER BY-LAWS.—FOR COUNTRY DISTRICTS IN
 COUNTY OF CUMBERLAND.**

HIS Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following "Metropolitan Water By-laws, Country Districts, County of Cumberland," prepared by the Board of Water Supply and Sewerage, in accordance with the provisions of the "Metropolitan Water and Sewerage Acts, 1880-1889."

BRUCE SMITH.

WHEREAS by the Metropolitan Water and Sewerage Acts, 1880-1889, the Board of Water Supply and Sewerage is authorized and empowered from time to time to make, alter, and repeal By-laws:

Now the Board of Water Supply and Sewerage, under and by virtue of the powers contained in the Metropolitan Water and Sewerage Acts, 1880-1889, do hereby make the By-laws following, that is to say:—

1. The following rates and charges are those which the owners and occupiers of lands and tenements shall pay in respect of water supplied by the Board, that is to say:—

(For water supplied for domestic purposes otherwise than by measure.)

- (I.) On every house, tenement, or land of £10 assessed annual value and under, 10s. per annum.
- (II.) On every house, tenement, or land above the assessed annual value of £10, a rate of 1s. for each pound sterling on the amount of the valuation.
- (III.) Vacant lands of the assessed value of £30 and over shall be subject to a rate of 4d. for each pound sterling on the amount of the valuation.
- (IV.) The like rates as those above mentioned shall be charged on all lands, tenements, and hereditaments not included in any valuation by any Borough or Municipal District, and on all lands for the time being valued by any such Borough or Municipal District at a sum less than the true value thereof.

(For water supplied by measure.)

- (v.) The rates to be charged for water supplied from stand-pipes shall be 1s. 6d. per 1,000 gallons.
- (vi.) The rates to be charged for water supplied from the mains by measure shall be 1s. 6d. per 1,000 gallons.
- (vii.) Water-troughs will be charged for at the rate of 20s. per annum each.
- (viii.) Gas-engines will be charged for at the rate of 20s. per annum each.
- (ix.) Water for steam boilers will be charged for by measure at the rate of 1s. 6d. per 1,000 gallons.

Payment of rates.

2. Assessed rates must be paid half-yearly in advance whether a meter is used or not. In the case when a meter is used the meter account will be rendered only when it is in excess of the assessment. Cheques and Post Office Orders will be received in payment of rates; but if the cheque tendered by any person as payment for rates due is dishonoured, the Board may cut off his service, and proceed for the recovery of the amount by warrant of distress. Cheques and Post Office Orders must be crossed in favour of the Board.

Minimum charge, by meter or otherwise, is the assessed rate.

3. The minimum charge for water, whether supplied through meter or otherwise, for domestic purposes and for purposes other than domestic, is the assessed annual rate. If the water is supplied by meter, and the meter account exceeds the assessment (calculated at the rate of 1s. 6d. per 1,000 gallons), then such excess shall be charged in addition to the assessment.

Building charges, &c.

4. The Board may supply water for building purposes at the rate of 5s. per room or by meter at 1s. 6d. per 1,000 gallons. And the minimum charge by meter shall be 10s. 6d. for each work, which charge shall be paid in advance. The Board, may supply water for the making and mixing of concrete for foundations of wooden blocks, stone cubes, or other form of permanent roadway or pavement, at the rate of £1 10s. per 1,000 square yards, by superficial measurement of road surface; and for all other concrete, brickwork, or masonry, at the rate of 3d. per cubic yard, as measured on the work.

Horse and cow

5. Any person who maintains horses or cows may be supplied with water, without meter, from the domestic service for the sum of 5s. per annum for each animal, in addition to the assessed annual rate of the premises on which such animal is maintained or supplied with water.

6. All lands or premises on which any one or more head of horses or cattle shall be kept or maintained, whether such lands or premises are actually supplied with water from any main water-pipe of the Board, or are otherwise ratable or not, shall be liable to an extra rate or charge (beyond and in addition to the assessed annual rate of the premises), of 5s. per head for each head of horses or cattle kept or maintained on such land or premises.

Gardens.

7. The Board may supply water for gardens (and for such purpose may permit a hose and standpipe to be used) without meter, at the rate of 10s. per annum for every 750 sq. ft. superficial area, or part thereof, in addition to the assessed annual rate of the premises to which such garden belongs or is attached.

8. The Board may permit a supply of water for water fountains or waterfalls of a size, construction, and form, and in a position previously approved by the Board, without meter, from the domestic service, for the sum of 5s. per annum for each such fountain or waterfall, in addition to the assessed annual rate of the premises on which such fountain or waterfall is maintained.

9. If the Board shall in any case be of opinion that the owner or occupier of any premises is wasting or misusing or otherwise illegally dealing with water, or that the whole supply of water to any premises should for any reason be by meter, they may give to the owner or occupier a notice directing him within a time to be therein mentioned, to fix a meter to such premises, and to receive the whole supply of water to such premises through such meter, and after the expiration of such notice, whether a meter has been fixed in accordance therewith or not, the Board may cut off any supply of such premises which is otherwise than by meter.

Before affixing service-pipe, &c., license to be obtained from Board.

10. Before any person shall affix any service-pipe to any pipe of the Board, or alter, repair, or in any manner interfere with any pipe of the Board, or any service-pipe, cock, or fitting connected with any pipe of the Board, he shall obtain from the Board a license in that behalf to execute any such work; and any unlicensed person affixing, altering, repairing, or in any manner interfering with any such pipe, service-pipe, cock, or fitting as aforesaid shall be liable to a penalty not exceeding £10.

Licensed Plumber.

11. Before any such license shall be granted by the Board the person applying for the same shall satisfy the Board that he is a competent plumber. His competency must be certified to by three master plumbers.

Before pipes can be uncovered two days' notice to Board must be given.

12. Any person, whether licensed as aforesaid or not, who shall offend by opening any ground so as to uncover any pipe or pipes, the property of the Board, without giving two days' notice to the Board of his intention so to do, or who shall in any way tamper, interfere with, or alter any pipe, the property of the Board, without the permission in writing of the Board being first obtained, or who shall wilfully or negligently break, injure, or open any lock, cock, valve, pipe, work, or engine, the property of the Board, shall be liable for each such offence to a penalty not exceeding twenty pounds.

13. The Board only, or a plumber duly licensed by the Board, under the superintendence and according to the directions of the officer appointed by the Board for that purpose, is empowered to tap the main in the streets or elsewhere and attach service-pipes thereto, or extend the same generally as the case may be. Any person infringing this clause shall be liable to a penalty not exceeding £20.

Board or licensed plumber only empowered to tap mains, &c.

14. Any person, whether licensed as aforesaid or not, who shall lay any pipe to communicate with the pipe or pipes of the Board without giving two days' notice of the day and hour when such pipe is intended to be made to communicate with the pipe or pipes of the Board, and without having obtained the official printed permit, or who shall make such communication, except under the superintendence and according to the directions of some officer of the Board, or who shall lay any leaden or other pipe to communicate with a pipe of the Board of a strength and material not sanctioned by the Board, shall be liable for each such offence to a penalty not exceeding £5; and, in the event of continuing the offence, to a further penalty of £2 for each day after the notice of the offence from the Board.

Penalty for communicating with pipes of the Board without notice.

15. Every application for water must be accompanied by the payment of a fee of 3s. for the tapping of any main.

Fee for tapping main.

16. Every owner or occupier of any house, tenement, or lands, shall for the purpose of obtaining a supply of water to such house, tenement, or lands (after receiving from the Board the prescribed notice so to do), construct such connections and fittings from and in connection with such house, tenement, or lands, to communicate with the water-main of the Board, as are prescribed by the By-laws and Regulations of the said Board.

17. Any person who, being an owner or occupier of lands or premises supplied with water under the said cited Act, for the purpose of taking, in a manner not authorized by such Act, any such water, uses in or places on, or affixes or attaches to, such land or premises, or to any prescribed fitting, or wilfully permits to be used in or placed on, or affixed or attached to, such lands or premises, or to any prescribed fitting, any fitting, instrument, or thing not authorized in that behalf by the Board, or who alters, misuses, injures, or removes any prescribed fitting, except for the purpose of necessary repair, shall upon conviction thereof forfeit and pay to the Board a sum not greater than £10, without prejudice to the right of the Board to recover from him damages in respect to any injury by such owner or occupier done, or wilfully permitted to be done, to the Board's property, and without prejudice to the Board's right to recover from him the value of any water wasted, misused, or unduly consumed.

Penalty for using unauthorized fittings.

18. The owner or occupier must, at his own expense, lay down and maintain all the pipes and apparatus upon his premises. All pipes must be of galvanized wrought iron, where possible, and where lead pipes are used they must be of equal thickness throughout, any of at least the respective weights following, viz. :—

Owner to lay and maintain service.

	Weight of lead pipes.
$\frac{3}{8}$ -in.	5 lb. per yard
$\frac{1}{2}$ -in.	6 lb. "
$\frac{3}{4}$ -in.	9 lb. "
1-in.	12 lb. "
1 $\frac{1}{4}$ -in.	16 lb. "
1 $\frac{1}{2}$ -in.	20 lb. "

Where wrought-iron pipes are used they must be of the kind known as galvanized wrought-iron lap-welded steam tubes, unless otherwise permitted by the Board.

19. Any consumer's pipe, cock, cistern, or other fitting laid, fixed, or used otherwise than in accordance with these Regulations and with the provisions of the Act, or which shall in the opinion of the Board be or become of bad or defective quality, or shall conduce to the waste, misuse, or contamination of the water, shall, upon the Board giving notice in writing, be discontinued and disused; and the Board may require the same to be removed, replaced, or repaired, and may stop the supply of water to the said consumer until such pipe, cock, cistern, or other fitting shall have been removed, replaced, or repaired to the satisfaction of the Board.

Defective fittings to be removed.

20. No person shall use, in connection with the water of the Board, any iron pipe, tee, thimble, bend, reducing coupling, plug, &c., unless it be of the best manufacture, true in section, straight, and of equal thickness, properly and truly cut with Whitworth's standard gas thread, and perfectly sound and new, and free from all defects. Every such tee, bend, tube, &c., shall be capable of withstanding a hydrostatic pressure equal to a column of water 400 feet in height.

Quality of fittings for iron pipes.

21. Every person shall make all joints between tees, bends, thimbles, couplings, elbows, and cocks, &c., with white or red lead and flax. All joints on lead pipes, and lead pipes with brass unions, shall be of the kind known as "wiped joints."

Joints.

22. No person shall lay any service-pipe on private property, below the ground surface, at a less depth than 10 inches.

Depth of pipe.

23. No person shall lay any pipe or other apparatus through any sewer, drain, ashpit, cistern, or manure tank, or through, in, or into any place where, in the event of the pipe becoming unsound, the water of the Board conveyed through such pipe would be liable to be fouled, or to escape without observation—unless such pipe or apparatus be laid through an exterior cast-iron pipe or box of sufficient length and strength to afford due protection to the same, and to bring any leakage or waste within easy detection.

Pipes through drains to be properly protected.

- Approved fittings. 24. No person shall use any tap, top-cock, bib-cock, ball-cock, valve, closet cistern, service-box, waste-not, regulator, bath tap or valve, or other fitting in connection with a supply of water of the Board which is not of the best quality, and approved by the Board.
- Cocks. 25. No person shall use any stop or bib-cock which is not loose-valve, screw-down, high-pressure cocks, made of hard brass or gun-metal, and in every respect of best quality and workmanship.
- Cistern. 26. No person shall use any cistern or tank that is not provided with an equilibrium ball-valve, and the overflow-pipe laid and fixed in a suitable manner, open to inspection, and in a position approved by the Board.
- Service not to communicate with rain-water receptacles or underground tanks. 27. No person shall fix or use any service-pipe which communicates with any cistern, tank, or vessel intended or used for the reception of rain-water below the surface of the ground, except with the express permission of the Board.
- Water-closets. 28. No person shall construct or use any water-closet fitting not approved by the Board, or supplied from the service pertaining to the tenement through a proper closet-cistern, or service-box, fitted with approved waste-preventing apparatus. No person shall fix or use any service-pipe which communicates directly or indirectly with the basin or trap, or otherwise than with the cistern of a water-closet.
- Baths. 29. The Board will not supply any water to any bath, the outlet of which is not distinct from and unconnected with the inlet or inlets; and the inlet or inlets shall be placed above the highest water-level of the bath. The outlet of such bath shall be provided with a perfectly water-tight plug, valve, or cock. No such bath shall have any overflow waste-pipe that is not laid and fixed in a suitable manner, open to inspection, and in a position approved by the Board. No bath shall exceed in dimensions 6 ft. 6 in. long by 2 ft. 6 in. wide by 2 ft. deep unless supplied by meter. The Board will not supply water to any bath unless the same shall be so constructed as to prevent a waste of water.
- Service connections. 30. Except by the permission of the Board, every tenement shall have an independent service-pipe connected with the water-main and such service shall be stop-cocked, and no person shall connect more than one tenement with the main of the Board from one service, except by permission of the Board.
- Urinals. 31. No person shall fix, or have fixed, a service-pipe so as to communicate directly with any urinal, and every urinal shall be supplied only through a cistern or service-box, fitted with waste-preventing apparatus approved by the Board.
- Water for other than domestic purposes. 32. No person shall use water supplied by the Board for other than domestic purposes, except the supply is by meter, or excepted in the manner hereinbefore provided.
33. No person, except with special consent of the Board, shall affix a meter, the dial of which is not capable of registering (1,000,000) one million gallons.
- Meters registering incorrectly. 34. If any meter shall not correctly indicate the water passing through it, the Board may charge for the supply according to the average daily consumption for any month preceding the date upon which such meter shall have been examined and found to be in order; or at the request of the consumer, or by direction of the Board, the said meter shall be tested and the charge for water supplied regulated accordingly.
- Meters not to be interfered with. 35. No person not duly authorized by the Board shall disconnect any meter or other apparatus from the service-pipes, or in any way interfere with the same.
- Steam boiler to have self-acting valve. 36. If any person shall connect any service-pipe, or branch service-pipe, with any steam boiler for the purpose of feeding or supplying the same with water, without first affixing a self-acting valve for preventing the pressure of the steam reversing or affecting the dial of the meter, he shall be liable to a penalty not exceeding £5; and a further penalty of £2 for each day after notice of the offence from the Board to each offender.
- No hose to be attached to any pipe for watering garden, &c., without meter. 37. Except as hereinbefore provided, no person shall use a hose attached to any tap or pipe (used for the purpose of supplying the water of the Board for domestic purposes to any house or premises) for watering any garden, laying dust, or for any other purpose whatsoever, unless where a water-meter is fixed and the water supplied by measure; and any person offending against this By-law shall be liable to a penalty not exceeding £5.
- No tap to be in garden without meter. 38. Except as hereinbefore provided, no person shall place any tap in any garden or screwed tap in any yard, or to or outside of any dwelling or premises supplied with the water of the Board to which a hose could be attached unless a water-meter is fixed and the water supplied by measure; and any person offending against this By-law shall be liable to a penalty not exceeding £5.
39. Any person using water supplied by the Board shall keep all pipes and other appliances in connection with the supply of water to such person in a proper state of repair.
- Inspection of work. 40. All work at any time done or to be done on private lands or premises in connection with the water supply, whether such work consist in the laying and fixing of new services, or in the extension or alteration of existing services and fittings, shall be inspected by the proper officer of the Board, and no such work shall be commenced until after the expiration of two days' notice thereof first given to the Board and the necessary printed permit obtained. In no case shall the water be turned on to any lands or pre-

mises where any such work shall have been executed until the said work shall have been inspected by the said officer, and certified by him on the prescribed form. No underground or enclosed work shall on any account be covered up or concealed from view until the same shall have been duly inspected and passed by the inspector; and any person offending against this By-law shall be liable to a penalty not exceeding £5.

41. The supply and use of water, whether for domestic purposes or under special agreement, shall be open to inspection and admeasurement whenever required; and such information must from time to time be afforded as will be sufficient to enable the Board to obtain a satisfactory account of the quantity of water actually consumed, and of the pipes, taps, cisterns, and other apparatus and conveniences for receiving and delivering such water. Any officer of the Board may at all reasonable times in the day-time enter on the premises of any person using water supplied by the Board for the purpose of inspecting the service pipes or other appliances of such premises.

Supply and use of water open to inspection.

42. If the service pipes or other appliances of any such person shall on any inspection be found to be out of repair, the Board may forthwith, without notice, repair the same in such manner as may be deemed necessary, and the cost of any such repairs may be recovered by the Board from the owner or occupier of such premises.

Board may repair.

43. The water supply to the public parks and gardens shall be exclusively under the control and direction of the Board; and any person turning on the water, or otherwise interfering with such water supply, shall be liable to a penalty not exceeding £5.

Board have control of water supplied to public parks, &c.

44. All notices and applications required by these By-laws are to be made upon printed forms, to be obtained at the Board's office. Notices sent by post must be prepaid. Any sums paid by the Board on account of notices sent by post and not prepaid will be charged against and recovered from the sender.

Notices and applications to be made upon printed forms.

45. The Board shall be at liberty to discontinue the supply of water immediately on the discovery of any breach of these Regulations.

Board may discontinue supply.

46. In the construction of these By-laws the word "person" shall be deemed to extend to and include a corporation or any body or number of persons, and the masculine shall include the feminine gender.

Interpretation of terms.

47. Any person committing a breach of any By-law to which no specific penalty is attached, or who shall refuse or neglect to obey any injunction in any such By-law, shall, upon conviction, be liable to pay a penalty not exceeding £20, and, in case of a continuing offence, a further penalty not exceeding £5 for each day after notice of such offence shall have been given by the Board to such offender.

48. The following shall be the form of notice to connect to water mains prescribed under section 16, Metropolitan Water and Sewerage Act Amendment Act of 1889:—

Notice to connect to Water-mains.

Board of Water Supply and Sewerage,
Sydney, 18 .

To the owner or occupier.
NOTICE is hereby given that a water-main has been laid in (*as the case may be*), and is ready to distribute water.

The Board of Water Supply and Sewerage hereby demand and require that the owner or occupier of the house, tenement, or lands at or on which this notice is left or exhibited shall construct such connections or fittings from or in connection with such house, tenement, or lands to communicate with such main as are prescribed by the By-laws and Regulations of the said Board.

For the Board of Water Supply and Sewerage,
Secretary.

NOTE.—Attention is directed to the following Rules:—

The Board will pay a reward of not less than 10s. to any person who will give such information as shall lead to the conviction of any person or persons who shall wrongfully attach (temporarily or otherwise) any pipe to any of the mains or services of the Board, or to any pipe, cistern, or apparatus connected therewith, or to or into which the water of the Board shall flow, or who shall wrongfully draw off, use, or take the water of the Board, or who shall knowingly permit the said water to be wrongfully drawn off, used, or taken.

Reward for information as to fittings.

The Board will also adequately reward any person (not being the person in fault) who shall communicate timely information to the Board of any leakages or waste of water, whether the same be accidental, negligently, or wilfully occasioned or suffered, or who shall give such information as shall lead to the conviction of any person or persons who shall steal or cause to be stolen, or improperly appropriated, the water of the Board. (*Vide* section 73 of Act 43 Vic. No. 32.)

Reward for information as to waste.

A set of standard fittings, such as are at present approved, is exhibited in the Board Engineer's office; but the Board will give due consideration to the claims of any other fittings which may be presented for approval, and, if considered satisfactory, the same will be purchased and placed among and become one of the standard approved fittings.

Sample fittings.

The Board do not permit their officers, workmen, or agents to solicit or receive any fee or gratuity whatever, and desires to be informed of any infraction of this Regulation, and also of any act of incivility or neglect of attention on the part of such officers, workmen, and agents, or any of them.

No gratuities allowed.

Attention is also directed to the following clauses of the Metropolitan Water and Sewerage Act, 43 Vic. No. 32:—

Meter to be supplied and maintained by consumer.

55. Every person who shall have agreed with the Board for a supply of water by measure shall, at his own expense, unless he hire a meter from the Board, provide a meter and keep and maintain the same in good working condition to the satisfaction of such officer as may be appointed by the Board, and in the event of any repairs being required notice in writing shall be immediately given by such person to the Board, and a registration of the quantity used shall be taken before such repairs are effected.

Notice of removal, &c., of meter.

56. Every person requiring to remove or alter the position of any meter shall give six days' notice in writing to that effect to the Board, and a registration of the quantity of water used shall be taken before such removal or alteration is made.

Penalty for neglecting to provide meter.

57. If any person who under the provisions hereinbefore contained ought to provide any meter neglect or refuse, after having been required by the Board so to do, to provide such meter, he shall for every day during which such neglect or refusal continues forfeit a sum not exceeding two pounds.

Penalty for neglecting to give notice of repairs of meters

58. If any person who has provided any meter as aforesaid fail to give the notice hereinbefore required of any repairs required for such meter he shall forfeit a sum not exceeding ten pounds.

Water may be cut off if meter not in order.

59. If any person refuse or delay to have such meter properly repaired and put in correct working order, after having been required by any officer of the Board so to do, the Board may shut off the supply of water from the premises of such person either by cutting the service-pipe or otherwise, until such meter shall have been properly repaired and certified by some officer of the Board as being in proper working order.

Penalty for fixing uncertified meter.

60. If any plumber or other person fix or refix any meter upon any premises supplied with water by the Board, without having first obtained a certificate from the Board that the said meter has been examined and found in correct working order, he shall forfeit a sum not exceeding ten pounds.

For removing or altering meter without notice.

61. If any person remove or alter the position of or in any way interfere with any meter without giving such notice as aforesaid, he shall for each such offence forfeit a sum not exceeding twenty pounds over and above the damage which he may be found liable to pay in any action at law at the suit of the Board.

Power to officers of Board to inspect meters.

62. The officers of the Board may enter any house, building, or lands, to, through, or into which water is supplied by the Board by measure, in order to inspect the meters, instruments, pipes, and apparatus for the measuring, conveyance, reception, or storage of water, or for the purpose of ascertaining the quantity of water supplied or consumed, and may from time to time enter any house, building, or lands for the purpose of removing any meter, instrument, pipe, or apparatus, the property of the Board, and if any person hinders any such officer from entering or making such inspection, or effecting such removal, he shall, for each such offence, be liable to a penalty not exceeding five pounds, but, except with the consent of a Justice, this power of entry shall be exercised only between the hours of ten in the forenoon and four in the afternoon.

Notice to lay service pipes.

67. After pipes have been laid, under the authority of this Act, for the supply of water to any street or part thereof, the Board shall cause a notice, in the form contained in the Third Schedule hereto, or to the like effect, to be published in four consecutive numbers of the *Gazette*, and in one or more newspapers circulating in the locality; and the owner or occupier of every tenement referred to in such notice shall, within three weeks from the date of the last publication of such notice in the *Gazette*, cause a proper pipe and stop-cocks to be laid, so as to convey a supply of water to such tenement. And after fourteen days from such last publication the owner or occupier of such tenement shall, unless the Board refuse to supply him with water, be liable to pay the rates and charges for such supply, although no such pipes and stop-cocks be laid, or no such water be used in such tenement.

Pipes laid by owners or occupiers. Power to inhabitants to lay service pipes.

68. Any owner or occupier of any dwelling-house, or part of a dwelling-house, within a Water District, who shall wish to have water from the waterworks of the Board brought into his premises, and who shall have paid or tendered to the Board the portion of water rate in respect of such premises, by this Act directed to be paid in advance, may open the ground between the pipes of the Board and his premises, having first obtained the consent of the owners and occupiers of such ground, and lay any pipes from such premises to communicate with the pipes of the Board.

Notice to Board of laying pipes.

69. Such pipes shall be of a strength and material approved of by some officer of the Board, and every such owner or occupier shall, before he begins to lay any such pipe, give to the Board two days' notice of his intention to do so.

Communication with pipes of Board to be made under superintendence of surveyor.

70. Before any pipe is made to communicate with the pipes of the Board, the person intending to lay such pipes shall give two days' notice to the Board of the day and hour when such pipe is intended to be made to communicate with the pipes of the Board, and every such pipe shall be so made to communicate under the superintendence and according to the directions of the surveyor, or other officer appointed for that purpose by the Board. And the bore of any such pipe shall not exceed three-quarters of an inch, except with the consent of the Board.

Bore of service pipes.

Service pipes may be removed after giving notice.

71. Any person who shall have laid down any pipe, or other works, or who shall have become the proprietor thereof, may remove the same after having first given six days' notice in writing to the Board of his intention so to do, and of the time of such proposed removal, and every such person shall make compensation to the Board for any injury or damage to their pipes or works which may be caused by such removal.

72. Any such owner or occupier may open or break up so much of the pavement, if any, as shall be between the pipe of the Board and his house, building, or premises, and any sewer or drain therein for any such purpose as aforesaid (doing as little damage as may be, and making compensation for any damage done in the execution of any such work): Provided always that every such owner or occupier desiring to break up the pavement of any street, or any sewer or drain therein, shall be subject to the same necessity of giving previous notice, and shall be subject to the same control, restrictions, and obligations in, and during the time of breaking up the same, and also reinstating the same, and to the same penalties for any delay in regard thereto as the Board are subject to under the provisions of this Part.

Power to break pavements.

73. If any person supplied with water by the Board wrongfully does, or causes or permits to be done, anything in contravention of any of the provisions of this Part, or wrongfully fails to do anything which under any of those provisions ought to be done for the prevention of the waste, misuse, undue consumption, or contamination of the water of the Board, the Board may (without prejudice to any remedy against him in respect thereof) cut off any of the pipes by or through which water is supplied to him or for his use, and may cease to supply him with water so long as the cause of injury remains or is not remedied.

PROTECTION OF THE WATER.

In case of any breach of this Part of this Act water may be cut off.

74. If any person, supplied with water by the Board, wilfully or negligently causes, or suffers any pipe, valve, cock, cistern, bath, soil-pan, water-closet, or other apparatus or receptacle to be out of repair, or to be so used or contrived that the water supplied to him by the Board is or is likely to be wasted, misused, unduly consumed, or contaminated, or so as to occasion or allow the return of foul air or other noisome or impure matter into any pipe belonging to or connected with the pipes of the Board, he shall, for every such offence, be liable to a penalty not exceeding five pounds.

Penalty for waste of water.

75. If any person—

- (1.) Not having from the Board a supply of water for other than domestic purposes, uses for other than domestic purposes any water supplied to him by the Board; or
- (2.) Having from the Board a supply of water for any purpose other than domestic, uses such water for any purpose other than those for which he is entitled to use the same,

Penalty for misapplication of water.

he shall for every such offence be liable to a penalty not exceeding forty shillings without prejudice to the right of the Board to recover from him the value of the water misused.

76. It shall not be lawful for the owner or occupier of any premises supplied with water by the Board, or any consumer of the water of the Board, or any other person, to affix, or cause or permit to be affixed, any pipe or apparatus to a pipe belonging to or used by such owner, occupier, consumer, or any other person, or to make any alteration in any such communication or service-pipe, or in any apparatus connected therewith, without the consent, in every such case, of the Board. And if any person acts in any respect in contravention of the provisions of the present section, he shall for every such offence be liable to a penalty not exceeding five pounds, without prejudice to the right of the Board to recover damages from him in respect of any injury done to its property, and without prejudice to their right to recover from him the value of any water wasted, misused, or unduly consumed.

No pipe to be fixed to consumer's pipe without permission of Board.

77. If any person, not being supplied with water by the Board, wrongfully takes, or uses any water from any reservoir, watercourse, conduit, or pipe belonging to the Board, or from any pipe leading to or from any such reservoir, watercourse, conduit, or pipe, or from any cistern or other like place containing water belonging to the Board, or supplied by them for the use of any consumer of the water of the Board, he shall for every such offence be liable to a penalty not exceeding five pounds.

Penalty for unlawfully taking water.

78. The surveyor or other person appointed for that purpose by the Board may, between the hours of nine o'clock in the forenoon and four o'clock in the afternoon, enter into any house or premises supplied with water by the Board in order to examine if there be any waste or misuse of such water; and if any such surveyor or other person at any such time be refused admittance into such dwelling-house or premises for the purpose aforesaid, or be prevented from making such examination as aforesaid, the Board may turn off the water supplied by them from such house or other premises.

Inspection of water.

79. If any person bathe in any stream, reservoir, aqueduct, or other waterworks belonging to the Board, or wash, throw, or cause to enter therein any dog or other animal he shall for every such offence forfeit a sum not exceeding five pounds.

Polluting the water. Penalty for bathing in water of the Board.

80. If any person throw or convey or cause or permit to be thrown or conveyed any rubbish, dirt, filth, or other noisome thing into any such stream, reservoir, aqueduct, or other waterworks as aforesaid, or wash or cleanse therein any cloth, wool, leather, or skin of any animal, or any clothes or other thing, he shall for each such offence forfeit a sum not exceeding five pounds.

Penalty for throwing dirt therein.

81. If any person cause the water of any sink, sewer, or drain, steam-engine, boiler, or other filthy water belonging to him or under his control, to run or be brought into any stream, reservoir, aqueduct, or other waterworks belonging to the Board, or shall do any other act whereby the water of the Board shall be fouled, he shall for each such offence forfeit a sum not exceeding five pounds, and a further sum of twenty shillings for each day (if more than one) that such offence continues.

Penalty for letting foul water flow thereinto

Penalty for nuisance in watershed area.

82. Where any owner or occupier of any land within the watershed to be proclaimed as hereinbefore provided, or any reservoir or source of supply transferred to, or vested in the Board, does, or permits to be done on his land any act, or permits to remain thereon any matter or thing, which in the opinion of the Board is likely to injure the water supply, if notice to discontinue or remove the same be given to him in writing by the Board, and if he neglect or refuse to discontinue such act, or to remove such matter or thing, he shall for each such offence forfeit a sum not exceeding five pounds, and a further sum of twenty shillings for each day (if more than one) that such offence continues.

Provisions as to connection of closet and other pipes with mains, and as to cisterns, &c.

83. The following provisions shall take effect for the purpose of protecting the water in the mains or other pipes of the Board from all impurities from closets and other receptacles of faecal matter or urine—

No closet pipes hereafter to connect directly with the main.

(I.) It shall not be lawful for any person to connect with the main any pipe delivering the water directly into the closet-pan or other receptacle for faecal matter or urine without the intervention of a cistern or cisterns into which the water from the main shall first be received, and any person so offending shall forfeit and pay a penalty not exceeding fifty pounds.

Board may disconnect pipes in certain cases.

(II.) The Board may employ any artificers or workmen to cut off or otherwise disconnect from the main any pipe directly discharging the water into a closet without the intervention of a cistern [hereinafter termed "directly connected"], and which in the opinion of the Board may endanger the purity of the water by the absorption of noxious gases, or suction of faecal matter or urine into such pipe, or into the main, or otherwise: For the purpose of effecting such disconnection the Board's artificers and workmen may enter into and upon the premises of any person or corporation whatsoever to do, or cause to be done, anything in his opinion requisite or necessary in relation thereto.

The expense incurred by any disconnection to be paid by tenant and deducted from his rent.

(III.) Whenever the Board shall have caused any pipe to be cut off, or disconnected, or other work to be done in relation thereto, they shall forthwith serve the owner or occupier of the premises with a notice in writing, requiring him to pay the actual cost or expense incurred. And such owner or occupier shall pay the amount to the Board, and if the amount be paid by an occupier only he may deduct the same from the rent then due or accruing. Upon such owner or occupier making default in any such payment after the delivery of such notice as aforesaid the Board may sue for and recover the same with full costs of suit.

Owners of premises shall fix closet-cisterns or be liable to a penalty.

(IV.) The owner of every dwelling-house or premises which shall have therein or thereon any closet with a pipe or branch-pipe directly connected with the main, shall be required to fix and erect a cistern or cisterns for the reception of the water intended to be used for the closet, and every cistern shall be made of such materials and dimensions, and of such model or plan of construction, and with such ball-cocks, stop-cocks, waste-pipes, and other appliances as shall be deemed requisite and have been approved by the Board for securing the water from pollution through any noxious gases or matter evolved or derived from such closets or otherwise. Every owner neglecting to comply with the provisions of this section shall forfeit and pay a penalty not exceeding five pounds.

Upon neglect of owner the tenant after fourteen days notice to fix cistern and deduct the expense from rent.

(V.) Whenever any owner shall have neglected to fix and erect a cistern, with its appliances, as is in the last preceding sub-section provided for, the tenant or occupier of the premises is hereby authorized and required, after receiving a written notice thereof from the Board in that behalf, to fix and erect such cistern, with its appliances before mentioned, within fourteen days after the receipt of such notice, and the said tenant or occupier shall, upon payment by him of the charges and expense of such fixing and erection, be entitled either to deduct the amount so paid from the rent then due or accruing, or, at his option, to sue for and recover the same, with full costs of suit, from the owner as for money paid to his use.

Any person re-establishing any connection with the main unless authorized, or wilfully injuring any pipe, &c., liable to a penalty.

(VI.) Any person who shall, without the authority of the Board, re-establish any such connection which may have been cut off, removed, or severed by him, or who shall in any manner wilfully injure or tamper with any connection-pipe, cistern, ball-cock, stop-cock, or waste-pipe which may have been approved by the Board, so as to destroy, diminish, or endanger its efficiency, may be summoned for such offence before two Justices, and on conviction thereof shall be adjudged to pay the amount of the charges and expenses which the Board may have incurred (and which they are hereby authorized to incur) in repairing or restoring the same to a state of efficiency. Every such offender shall also forfeit and pay a penalty not exceeding ten pounds, and the amount of charges and expenses and penalty respectively shall, when recovered, be paid over to the Board.

Where several houses supplied by one pipe each to pay.

84. Where several houses or parts of houses, in the separate occupation of several persons, are supplied by one common pipe, or where water is supplied to courts, alleys, and right-of-way by stand pipes, the several owners or occupiers of such houses, or parts of houses, or of the several houses, or parts of houses, in every such court, alley, or right-of-way, shall be liable to the payment of the same rates for the supply of water as they would have been liable to if each of such several houses, or parts of houses, had been supplied with water from the works of the Board by a separate pipe.

85. The rates and charges for water, and all sums due to the Board under this Part, shall be paid by and be recoverable from the owner of the premises or the occupier or person requiring, receiving, or using the supply of water; and all rates shall be paid in advance by equal payments on the first day of January and the first day of July in each year, and the first payment shall be made at the time when the owner or occupier of any tenement shall become liable to pay such rates and charges, and all such rates and charges may be enforced and recovered in respect of any premises in the said City of Sydney, or in any such Municipality as aforesaid, situate within one hundred and fifty feet from the alignment of any street or public highway along which a main water pipe belonging to the Board is laid, although such premises are not actually supplied with water from such main.

WATER RATES.

Rates to be recoverable from either landlord or tenant.

Rates to be paid half-yearly in advance.

86. If any such person refuse or neglect to pay on demand to the Board any rate, charge, or sum due to the Board under this Part, the Board may recover the same with costs, or may order a warrant under the hand of their President or Vice-president in the form contained in the Fourth Schedule hereto, to be from time to time issued to some constable or other person named therein to levy such rate, charge, or sum by distress and sale of goods and chattels of the person occupying the premises in respect of which such rate, charge, or sum is due at the time when the warrant of distress is executed, and in case no sufficient goods and chattels of such occupier be found on the premises to satisfy such distress, the owner of the premises, or if he be absent from the Colony, his agent shall be liable for such rate, charge, or sum and the same may be recovered from him.

Recovery of rates and charges.

Schedule.

1890.

NEW SOUTH WALES.

COUNTRY TOWNS WATER AND SEWERAGE ACT OF 1880.

(MUNICIPAL DISTRICT OF WILCANNIA.)

Presented to Parliament, pursuant to Act 44 Vic. No. 14, sec. 13.

Proclamation.

NEW SOUTH WALES, } Proclamation by His Excellency The Right Honorable CHARLES ROBERT, BARON
to wit. } CARRINGTON, a Member of Her Majesty's Most Honorable Privy Council,
(L.S.) } Knight Grand Cross of the Most Distinguished Order of Saint Michael and
CARRINGTON, } Saint George, Governor and Commander-in-Chief of the Colony of New
Governor. } South Wales and its Dependencies.

WHEREAS the Council of the Municipal District of Wilcannia have constructed works for Water Supply within and for the purpose of the said Municipal District: And whereas the said Council, in pursuance of the provisions of the "Country Towns Water and Sewerage Act of 1880," have forwarded to me a petition that I will, by Proclamation in the *Government Gazette*, declare that the 13th section of the said Act and the whole of the sections in part two of the said Act—that is, sections 16 to 62 (both inclusive), shall be applied within the said Municipal District, by and with respect to the Council and the inhabitants thereof respectively: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, in pursuance of the power and authority vested in me by the said Act, do, by this my Proclamation, declare that all and every the powers and provisions contained in the 13th section of the said Act and in part two of the said Act—that is to say, sections 16 to 62 (both these sections being included) of the said Act shall be applied within the said Municipal District of Wilcannia, by and with respect to the Council and inhabitants thereof respectively, to the intent that the said sections of the said Act, and the powers and provisions in and by the said sections given, shall, upon the publication of this Proclamation, apply to and be in force within the said Municipal District, and with respect to the said Council and inhabitants, with the same effect for all purposes as if the said Act had specifically declared the said parts, powers, and provisions to be so applied as aforesaid.

Given under my Hand and Seal, at Government House, Sydney, this thirteenth day of May, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN!

1890.

NEW SOUTH WALES.

COUNTRY TOWNS WATER AND SEWERAGE ACT.

(NOTIFICATION OF COMPLETION OF WORKS FOR THE BOROUGH OF ORANGE.)

Presented to Parliament, pursuant to Act 44 Vic. No. 14.

ORANGE WATER-WORKS.

IN accordance with the provisions of the Country Towns Water and Sewerage Act, 44 Vic. No. 14, section 125, I, Bruce Smith, the Minister for Public Works of the Colony of New South Wales, have the honor to report, for the information of His Excellency the Governor and Executive Council, that the works for the supply of water for the Borough of Orange, in the said Colony, which, under the provisions of the before-recited Act, and at the request of the Council thereof, have been constructed under the direction of the Minister for Public Works of the said Colony, have been completed.

Given under my hand, this sixteenth day of June, 1890.

BRUCE SMITH.

Copy of Resolution submitted to and passed by the Council of the Municipality of Orange, at a meeting of the Council thereof, held on the 13th day of October, A.D. 1887:—

Present:

His Worship the Mayor (in the Chair)
and

Aldermen Smith, Lorence, McFadden, Cox, Eyles, Coulson,
Finagan, and Parker.

Moved by Alderman Flanagan, seconded by Alderman Lorence, and carried,—“That the Council of the Municipality of Orange, having taken into consideration the question of Water Supply for the town of Orange, do hereby request His Excellency the Governor, with the advice of the Executive Council, to take all such steps and cause such works to be executed as may be necessary to provide a Water Supply for the town of Orange; and the said Council, on behalf of the Municipality of Orange, hereby agree to do and undertake all the liabilities and obligations mentioned in section 125 of the Act 44 Vic. No. 14; and it is hereby expressly agreed that such liability is accepted for the total amount to be expended on such works, whatever such amount may be.”

J. M. PAUL,
Mayor.

NOTIFICATION OF COMPLETION OF WATER-
WORKS FOR THE BOROUGH OF ORANGE,
UNDER 44 VICTORIA No. 14.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her

(L.S.) } Majesty's Most Honourable Privy
CARRINGTON, } Council, Knight Grand Cross of the
Governor. } Most Distinguished Order of Saint
Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, having duly sanctioned the carrying out of certain works for and in connection with the supply of water to the Borough of Orange, in the said Colony, for and towards the completion of which said works public funds were provided by Parliament; and whereas the said works have been reported to me as complete by the Minister for Works, in accordance with the provisions of the 125th section of the before-recited Act: Now I, the Governor aforesaid, with the advice of the Executive Council, hereby declare by this notification that such works are complete, to the intent that the Council of the said Borough of Orange, within and for the purposes of which the said works have been constructed, shall take over the same, and the administration and management thereof, upon the terms and conditions prescribed by the before-cited Act.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this ninth day of July, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN!

1890.

NEW SOUTH WALES.

COUNTRY TOWNS WATER AND SEWERAGE ACT.

(MUNICIPAL DISTRICT OF LISMORE—BY-LAWS.)

Presented to Parliament, pursuant to Act 44 Vic. No. 14.

Department of Public Works,
Sydney, 6th November, 1890.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following By-laws in connection with the Water Supply of the Municipal District of Lismore, prepared by the Council of the said District, in accordance with the provisions of the Acts 44 Vic. No. 14 and 51 Vic. No. 18.

BRUCE SMITH.

MUNICIPAL DISTRICT OF LISMORE.

BY-LAWS made and adopted by the Council of the Municipal District of Lismore, in pursuance of the powers and authority conferred by the Country Towns Water and Sewerage Act of 1880, 44 Vic. No. 14, and the Country Towns Water and Sewerage Act Extension Act of 1887, 51 Vic. No. 18, for regulating the forms of contract and water rates with the said Council for the supply of water, and generally for carrying into effect the purposes of the said Acts.

1. The following rates and charges are those which the owners and occupiers of all lands and tenements within one hundred and fifty feet from the alignment of any street along which the water-pipes of the Council are (or may be) laid, shall pay in respect of water supplied by the Council, although such lands and tenements may not be supplied with water from the said pipes:—

For water supplied for domestic purposes otherwise than by measure.

- (1.) On every house, tenement, or portion of land of ten pounds assessed annual value and under, ten shillings.
- (2.) On every house, tenement, or portion of land above the assessed annual value of ten pounds, a rate of one shilling for each pound sterling on the amount of the assessed annual value.

For water supplied by measure.

- (3.) The rates to be charged for water supplied by measure shall be one shilling and sixpence per one thousand gallons, either for domestic purposes or for purposes other than domestic (except a special contract be entered into between the Council and the consumer). But domestic purposes shall not include a supply of water for stables, manufacturing, irrigation, waterpower, fountains, or for any ornamental purpose, or for watering stock.
- (4.) The Council may at any time, by resolution, reduce the rate levied or assessed in respect of water supply, and likewise the price chargeable by measure, provided that the annual income derivable from the rate and charges at the reduced rate shall be sufficient to retire the yearly payments due on the waterworks and the current yearly expenditure.

2. Assessed rates must be paid half-yearly in advance to the Council Clerk or other authorised officer of the Council at the Council Chambers during office hours. In the case when a meter is used the meter account will not be rendered unless it is in excess of the assessment.

3. The minimum charge for water, whether supplied by meter or otherwise, for domestic purposes or for purposes other than domestic is the assessed annual rate. If the water is supplied by meter and the meter account exceeds the assessment (calculated at one shilling and sixpence per one thousand gallons) then such excess shall be charged for in addition to the assessment.

4. No person shall use water supplied by the Council for other than domestic purposes, except the supply is by meter, or except in the manner hereinafter provided.

5. The Council may supply water for building purposes at the rate of five shillings per room, or by meter, and the Council may supply water for the making or mixing of concrete for foundations of wooden blocks, stone cubes, or other permanent forms of roadway, at the rate of one pound ten shillings per one thousand square yards, by superficial measurement of road surface, and for all other concrete, brick-work or masonry, at the rate of three pence per cubic yard as measured on the work, the minimum in each of these cases to be five shillings.

6. Any person who maintains horses or cows, may be supplied with water (without meter) from the domestic service pipe, for the sum of ten shillings per annum for each animal, in addition to the assessed annual rate of the premises on which such horses or cows are maintained or supplied with water.

7. The Council may supply water for gardens (and for such purposes permit a hose and standpipe to be used) without meter, at the rate of one pound sterling for every seven hundred and fifty square feet superficial area or part thereof, in addition to the assessed annual rate of the premises to which such garden belongs or is attached.

8. The Council may permit a supply of water for water fountains or waterfalls of a size, construction, and form, and in a position previously approved by the Council (without meter), from the domestic service pipe for the sum of ten shillings per annum for each such fountain or waterfall, in addition to the assessed annual rate of the premises on which such fountain or waterfall is maintained.

9. The Council may erect public stand-pipes whenever and wherever it may seem to them advisable or necessary to do so, and may charge for the water supplied from the same either by measure, or may charge any person applying for use of water from the said stand-pipes the sum of one pound sterling per annum for such use, payable half-yearly in advance.

10. Gas-engines and water troughs will be charged for at the rate of one pound sterling per annum each.

11. The Council will not supply water to any bath the outlet of which is not distinct from and unconnected with the inlet or inlets, and the inlet or inlets shall be placed above the highest water level of the bath; the outlet of such bath shall have a perfectly watertight fastening; no bath shall exceed in dimensions six feet six inches in length, two feet six inches wide, and two feet in depth (unless supplied by meter). The Council will not supply water to any bath unless the same shall be so constructed as to prevent a waste of water.

12. If the Council shall in any case be of opinion that the owner or occupier of any premises is wasting or misusing or otherwise illegally dealing with water, or that the whole supply of water to any premises should for any reason be by meter, they may give to the owner or occupier a notice directing him within a time to be named to fix a meter to such premises, and to receive the whole supply of water to such premises through such meter; and after the expiration of the time mentioned in such notice, whether a meter has been fixed in accordance therewith or not, the Council may cut off any supply of water to such premises which is otherwise than by meter. The Council may let meters to any consumer at the rate of ten shillings per annum.

13. The Council may enter into any special contract (consistent with the provisions of the Country Towns Water and Sewerage Act) with any person for special or exceptional supply of water by measure or otherwise.

14. No person without the special consent of the Council shall fix a meter, the dial of which is not capable of registering one million gallons; and no meter shall be fixed until approved by the Council (or some person duly authorised on their behalf) and certified by the Mayor, Council Clerk, or other duly authorised officer of the Council; all meters to be enclosed in a strong wooden box, and the keys of all meters and boxes to be lodged at the Council Clerk's office immediately after the meters are fixed.

15. If any meter shall not correctly indicate the quantity of water passing through it, the Council may charge for the supply of water according to the average daily consumption for any month preceding the date upon which such meter shall have been examined and found to be in order, or at the request of the consumer, or by direction of the Council the said meter shall be tested and the charge for water regulated accordingly; and no person not duly authorised by the Council shall disconnect any meter or other apparatus from the service pipes, or in any way interfere with them.

16. On the application by any person entitled to be supplied with water by the Council, and subject to all the provisions contained in these By-laws, the Council will cause all necessary connections to be made with the water mains, and will provide all pipes, ferrules, and other requisites for extending the same to the kerbing or outer alignment of the footpath with which all extensions of pipes for the supply of water must be made and connected by the applicant. In every case the applicant must deposit with the Council Clerk a sum of two pounds sterling as consideration therefor before any connection with the said main will be permitted; but the pipe laid by the Council must afterwards be maintained by the owner or occupier.

17. Before any person shall have fixed any service pipe to any pipe of the Council or alter, repair, or in any manner interfere with any pipe of the Council or any service pipe, cock, or fitting connected with any pipe of the Council he shall obtain

from the Council a license in that behalf (to execute any such work), such license to be terminable on the thirty-first day of December of each year, and the charge for such license shall be one pound sterling per annum; and any unlicensed person affixing, altering, repairing, or in any way or manner interfering with any such pipe, service pipe, cock, or fitting as aforesaid, shall be liable to a penalty not exceeding ten pounds.

18. Any person who, being an owner or occupier of any house, tenement, or lands, or premises supplied with water under the said cited Act, for the purpose of taking, in a manner not authorised by such Act, any such water, or uses in, or places on, or affixes, or attaches to such lands, tenements, or premises, or to any prescribed fitting any fitting instrument or thing not authorised in that behalf by the Council, or who alters, misuses, injures, or removes any prescribed fitting except for the purpose of necessary repairs, shall upon conviction thereof forfeit and pay to the Council a sum not greater than ten pounds, without prejudice to the rights of the Council to recover from him damages in respect to any injury done by such owner or occupier, or wilfully permitted to be done to the Council's property, and without prejudice to the Council's right to recover from him the value of any water wasted, misused, or unduly consumed.

19. The owner or occupier must at his own expense lay down and maintain all the pipes and apparatus on his premises; all pipes must be of galvanized wrought iron where possible, and where lead pipes are used they must be of equal thickness throughout and of at least the respective weights following:

$\frac{3}{8}$ inch.....	5lbs. per yard.
$\frac{1}{2}$ "	6lbs. "
$\frac{3}{4}$ "	9lbs. "
1 "	12lbs. "
$1\frac{1}{4}$ "	16lbs. "
$1\frac{1}{2}$ "	20lbs. "

And no person shall lay any service pipe (where subject to traffic) below the ground surface at a depth not less than ten inches.

20. All notices and applications required by these By-laws are to be made upon printed forms, to be obtained at the Council Chambers; notices sent by post must be prepaid, any sums paid by the Council on account of notices sent by post and not prepaid will be charged against the sender.

21. The Council shall be at liberty to discontinue and cut off the supply of water immediately on the discovery of any breach of these By-laws.

22. In the construction of these By-laws the word person shall be deemed to extend to and include a corporation or any body or number of persons, and the masculine and feminine alike, and the masculine shall include the feminine.

23. Any person committing a breach of any of these By-laws to which no specific penalty is attached or who shall neglect or refuse to obey any injunction in any such By-laws shall upon conviction be liable to a penalty not exceeding twenty pounds, and in case of continuing the offence a further penalty not exceeding five pounds for each day after notice of such offence shall have been given by the Council to such offender.

Made and passed by the Council of the Borough of Lismore, and the seal of the said Council was hereunto affixed this nineteenth day of May, in the year of our Lord, one thousand eight hundred and ninety.

(L.S.) JAMES F. O'FLYNN,
Mayor.
C. A. BARRAM,
Council Clerk.

1890.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION IN CONNECTION WITH THE MANLY WATER SUPPLY.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
Council, Knight Grand Cross of the
(L.S.) Most Distinguished Order of Saint
CARRINGTON, Michael and Saint George, Governor and
Governor. Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS the Minister for Public Works is desirous of constructing a Reservoir on the land described in the Schedule at the foot hereof, for the purpose of supplying water to the village of Manly; and it is estimated that the cost of carrying out the said works will not exceed the sum of twenty thousand pounds: And whereas, under the provisions of the "Public Works Act of 1888," I, the Governor aforesaid, with the advice of the Executive Council, have in due form directed that the said works shall be carried out under the provisions of the said Act by the Minister for Public Works aforesaid, who, in respect of the said works, I have declared shall be deemed to be the Constructing Authority; and also, that the land required for carrying out the said works shall be acquired under the provisions of the said Act: And whereas the land described in the Schedule at the foot hereof is the land required for carrying out the said works: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, by this notification, to be published in the Government Gazette, do declare that the said land in the said Schedule described has been and is hereby appropriated for the purpose of constructing thereon a reservoir for the supply of

water to the village of Manly. To the intent that upon the publication of this notification in the Gazette, the legal estate in the said land hereafter described shall forthwith be vested in the Minister for Public Works, as the Constructing Authority on behalf of Her Majesty, under the provisions in that behalf in the 21st section of the said "Public Works Act of 1888": And I declare the following is the description of the lands hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Manly Cove, county of Cumberland, and Colony of New South Wales, being allotments 6, 7, and 8 of section I of the Fairlight Estate: Commencing at the junction of the east boundary of Ashley-street with the south boundary of Fairlight-street; and bounded thence by that boundary of Fairlight-street bearing east 126 feet; thence by the west boundary of allotment 9 bearing south 132 feet; thence by the north boundaries of allotments 19, 20, and 21 bearing west 126 feet; thence by the aforesaid east boundary of Ashley-street bearing north 132 feet, to the point of commencement; containing 1 rood 20½ perches, and said to be in the possession of the Fairlight Land, Building, and Investment Company (Limited).

Given under my Hand and Seal of the said Colony, at Government House, Sydney, this tenth day of April, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1890.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.
(RESUMPTION IN CONNECTION WITH THE NORTH SHORE WATER SUPPLY.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. } CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
(L.S.) Honourable Privy Council, Knight
By Deputation from Grand Cross of the Most Distinguished
the Governor: Order of Saint Michael and Saint
ALFRED STEPHEN, George, Governor and Commander-in-
Lieutenant-Governor. Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the supply of water to the Western Suburbs of Sydney and districts north of the Parramatta River, for and towards the completion of which said works public funds are available; and whereas the lands hereinafter described are required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, published in the Gazette, and in a newspaper, that is to say, in the "North Shore Times," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purposes herein-after mentioned, that is to say, for and in connection with the supply of water to the said Western Suburbs of Sydney and districts north of the Parramatta River, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee, with

the powers stated in the said last-mentioned Act: And I declare that the following is a description of the lands herein-before referred to, that is to say:—

1st. All that piece or parcel of land situate in the parish of Willoughby, county of Cumberland, and Colony of New South Wales, being part of a grant of 25 acres to John Jones: Commencing on the northern side of Mowbray Road West, at the south-eastern corner of the aforesaid grant; and bounded thence on the east by the eastern boundary of that grant bearing northerly 1 chain 3 links; on the north-east, north, and north-west by lines bearing north 75 degrees 59 minutes west 11 chains 79 links, north 86 degrees 23 minutes west 4 chains 72 links, and south 40 degrees 3 minutes west 3 chains 89 links, on the south-west by the Lane Cove River bearing south-easterly to its intersection with the northern boundary of the Mowbray Road West aforesaid; thence on the south-east, south, and south-west by lines bearing north 40 degrees 3 minutes east 3 chains 14 links, north 86 degrees 23 minutes east 4 chains 46 links, and south 75 degrees 59 minutes east 11 chains 89 links, to the point of commencement; containing 1 acre 3 roods and 14 perches, exclusive of a reserve of 100 feet from high-water mark, and said to be in the possession and occupation of Mrs. H. Whatmore.

2nd. All that piece or parcel of land situate in the parish of Willoughby, county of Cumberland, and Colony of New South Wales, being part of a grant of 31 acres to John Roby Hatfield: Commencing on the northern boundary of the Mowbray Road West, at the south-western corner of the aforesaid grant; and bounded on the west by the western boundary of that grant bearing northerly 1 chain 3 links; on the north-east by other part of that grant bearing south 75 degrees 59 minutes east 4 chains 46 links; on the south by the northern boundary of the Mowbray Road West aforesaid bearing north 89 degrees 21 minutes west 4 chains 33 links, to the point of commencement; containing 35½ perches, and said to be in the possession and occupation of John Roby Hatfield.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twentieth day of January, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN!

**NOTIFICATION OF RESUMPTION OF LAND UNDER
 44 VICTORIA No. 16.**

NEW SOUTH WALES, } By His Excellency The Right Honourable
 to wit. } CHARLES ROBERT, BARON CARRINGTON,
 a Member of Her Majesty's Most
 (L.S.) Honourable Privy Council, Knight
 By Deputation from Grand Cross of the Most Distinguished
 the Governor: Order of Saint Michael and Saint
 ALFRED STEPHEN, George, Governor and Commander-in-
 Lieutenant-Governor. Chief of the Colony of New South
 Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the supply of water to the Western Suburbs of Sydney and districts north of the Parramatta River, for and towards the completion of which said works public funds are available; and whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Gazette, and in a newspaper, that is to say, in the "River Times," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the supply of water to the said Western Suburbs of Sydney and districts north of the Parramatta River, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and

his successors on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever, and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a trustee with the powers stated in the said last-mentioned Act: And I declare that the following is a description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Hunter's Hill, county of Cumberland, and Colony of New South Wales, being part of a grant of 160 acres to Wm. Kent: Commencing at a point bearing south 32 degrees 14 minutes 30 seconds east and distant 918 feet 8 inches from the south-eastern corner of William Kent's 100-acre grant; and bounded thence by lines bearing north 9 degrees 49 minutes 10 seconds east 236 feet 8½ inches, north 1 degree 11 minutes 10 seconds west 235 feet 6¼ inches, north 27 degrees 39 minutes 40 seconds west 407 feet 6 inches; thence by a line bearing generally southerly about 888 feet, to the point of commencement,—containing 3 roods 2¼ perches, and said to be in the possession of Mary E. Bowden.

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-fourth day of January, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

a Member of Her Majesty's Most
Honourable Privy Council, Knight
(L.S.) Grand Cross of the Most Distinguished
CARRINGTON, Order of Saint Michael and Saint
Governor. George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the Conservation of Water at Paterson, for and towards the completion of which said works public funds are available; and whereas the land hereinafter described is required for the construction of the said works: Now I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Gazette, and in a newspaper, that is to say, in the "Maitland Mercury," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the Conservation of Water, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purposes of the said last-mentioned Act, for an estate of inheritance in fee-simple in possession, freed and discharged from all trusts, obligations,

estate, interests, contracts, charges, rates, rights-of-way, or other encumbrances whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee, with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the town of Paterson, county of Durham, and Colony of New South Wales, and marked on the map or plan of the lands exhibited at the time of sale "reserve of 10 allotments"; bounded on the south by a line running west from High-street of about 9 chains; on the west by Wilson's allotments by a line running north of about 5 chains; on the north partly by Lake-street by a line running east of about 4 chains to the Lagoon, and then by a line through the Lagoon still running east till it comes to Ward's allotments at the north-east corner of said Lagoon, and after that taking a course south-easterly, partly by a line running east from the said Lagoon, and dividing it from Wilson's allotments, 3 chains 15 links; and on the east by a line running south along High-street 2 chains 24 links to the commencing point,—and said to be in the possession of Herbert H. Brown.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this thirteenth day of October, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1890.

NEW SOUTH WALES.

PUBLIC WATERING PLACES ACT, 1884.

(AMENDED REGULATIONS UNDER.)

Presented to Parliament, pursuant to Act 48 Vic. No. 16.

Department of Mines,
Water Conservation,
Sydney, 10th January, 1890.

His Excellency the Governor, with the advice of the Executive Council, has been pleased to approve of the following as the Regulations for Water Trusts under the Public Watering Places Act of 1884, in lieu of those hitherto in force.

SYDNEY SMITH.

AMENDED REGULATIONS.

WATER TRUSTS.

49. Any Public Watering Place may be placed under Trustees, or vested in a Municipal or Borough Council, or in a Divisional Board, subject to these Regulations and the following conditions:—

1. The number of Trustees may be such as the Minister shall decide.
2. The Trustees shall see that the works, appliances, and appurtenances are kept in a thoroughly efficient state.
3. The Trustees shall, within two months of the notification of their appointment in the Government Gazette, frame a scale of charges for the sale of water for domestic use, or for stock belonging to residents within the limits of the Municipality, where the trust is a Municipal one, or within a radius of four miles of the watering place when not within a Municipality. Such charges, upon approval by the Minister, and notification in the Government Gazette, shall be collected by the Trustees or the person appointed by them for such purpose. In the failure of the Trustees to submit such scale of charges within the two months, the Minister may regulate the charges to be made, and after notification in the Gazette the Trustees shall be required to collect them.
4. All travellers, teamsters, and drovers entitled to obtain water at a Public Watering Place shall, on pre-payment of the charges prescribed by Regulation No. 9, be equally entitled at Public Watering Places under Trustees.
5. All watering places under Trustees will be open to inspection by the officers appointed by the Minister for that purpose; and all repairs or alterations needed for maintenance of the Watering Place in an efficient condition shall be effected by the Trustees, upon instructions from the Minister or the officer appointed by him for that purpose.
6. The Trustees must employ a Caretaker, and see that he resides in the immediate vicinity of the Watering Place.
7. The Trustees must forward to the Chief Inspector of Public Watering Places, at the end of each week, completed returns upon the forms which will be supplied to them, and such other particulars as may from time to time be required.
8. The Trustees are not empowered to let the T. L. of the Public Watering Place without the consent of the Minister being specially obtained.
9. The moneys collected by the Trustees shall be applied by the Trustees—
 - (1.) To the payment of interest upon the cost of the works at the rate of £4 per centum, or at any less rate approved by the Minister.
 - (2.) To the payment of a Caretaker's wages.
 - (3.) To the maintenance, repair, and improvement of the works.

1890.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WATER CONSERVATION BILL.

(MESSAGE No. 75.)

Ordered by the Legislative Assembly to be printed, 11 December, 1890.

ALFRED STEPHEN,
Lieutenant-Governor.

Message No. 75.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends, for the consideration of the Legislative Assembly, the expediency of making provision to meet the requisite expenses in connection with "A Bill to define and declare the respective rights of the Crown and of private persons to flowing water and other sources of water supply in New South Wales; to provide for the establishment of trusts, and in certain cases to enable the Government to carry out works of water conservation and utilization and of drainage; to empower such trusts to raise loans to be granted or guaranteed by the Government in certain cases and under certain conditions; to authorize the imposition of rates and charges for the purposes of such trusts; to provide for the leasing of Crown Lands subject to drought and floods; for the acquisition of lands and water-rights in certain cases; for the disposal thereof by sale or lease; for the licensing of works for water conservation or utilization; for granting water-rights to private persons, subject to certain conditions and reservations; and for conferring powers and making provision generally for giving due effect to and carrying out the purposes aforesaid."

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BOARD OF WATER SUPPLY AND SEWERAGE
OFFICES ERECTION BILL.

(MESSAGE No. 19.)

Ordered by the Legislative Assembly to be printed, 2 July, 1890.

By Deputation from the Governor,
ALFRED STEPHEN,
Lieutenant-Governor.

Message No. 19.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to sanction the erection of offices for the accommodation of the Board of Water Supply and Sewerage.

Government House,
Sydney, 25th June, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

RETICULATION OF THE WESTERN SUBURBS DRAINAGE SCHEME.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon "the expediency of carrying out the work of reticulation of the first section of the works in connection with the scheme of Sewerage for the Western Suburbs of the City of Sydney, and certain further works necessary to complete the said scheme," have, after due inquiry, resolved that it is expedient the proposed works should be carried out; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The proposed works are necessary in connection with the large and important drainage scheme for the Western Suburbs designed by Mr. G. H. Stayton, M. Inst. C.E., and reported upon to the Legislative Assembly by the Committee in August, 1889. In that report the works now under consideration were set forth, and in the evidence accompanying the report they were very clearly explained. The works which the Committee have already reported upon comprise the trunk sewers or main portion of the scheme; the works referred to more particularly in the present report are the necessary adjuncts or branches of the main sewers. Mr. Stayton's estimate of the cost of the scheme complete is £1,817,896, this amount being made up of £830,304, the cost of the main sewers, £713,592 for additional and subsequent works, and £274,000 for works that are part of the general scheme already executed or nearing completion. The £713,592 represents the cost of the reticulation and of the other works upon which the Committee have now to report. £340,741 is for what Mr. Stayton describes as "the first section of additional works," consisting of 300 miles of subsidiary sewers costing £300,000, the first part of the Canterbury and Enfield main sewer, £20,741, and provision for dealing with the Marrickville storm-water drainage, to cost £20,000. Then come what are termed subsequent works, the estimated cost of which is £372,851, and these comprise another 100 miles of subsidiary sewers, costing £100,000; the completion of the Canterbury and Enfield main sewer, at an expense of £65,410; the establishment of low-level systems which are to cost £119,650; the completion of the western outfall sewer, at a cost of £48,374; the completion of the Marrickville pumping station, costing £6,817; and the completion of the sewage farm at Webb's Grant, at a cost of £32,600. These works, together with the trunk sewers and the works already executed or nearing completion, include, it is stated, all that can possibly be foreseen at the present time, and the sum of money represented by the total estimated cost is believed to be ample to provide for every contingency.

2. The whole matter is dealt with very exhaustively in the report of the Committee made in August last, and in the documents accompanying that report, and

Description
of proposed
works.

The plans
relating to
the proposed
works.

and it need not be elaborated here. In their previous consideration of the general scheme for the drainage of the western suburbs, the Committee had before them the plans showing the proposed works as far as they could be shown, and inquired very fully concerning them. These plans are available in connection with the Committee's previous report. It will be found that they do not show in detail the proposed reticulation; but such a work as the reticulation of a large drainage scheme can only be carried out gradually, and as is found expedient, and it would be almost impossible to indicate on a plan or map every instance in which a connection is likely to be made from the various streets and lanes with the main sewers. It is impossible, a witness points out, for any engineer to go further into details with regard to the reticulation than Mr. Stayton has done, and it should be borne in mind that the scheme is a large one, and that its completion will extend over many years.

Examination
of the esti-
mates of cost.

3. In the former inquiry, evidence was sought as to the accuracy of Mr. Stayton's estimates of cost, and in the present the subject has not been overlooked, the result in each case being that there appears to be no reason to doubt the correctness of the figures. Absolute accuracy in an estimate of the cost of large works, the construction of which must extend over many years, cannot be expected, but reasonable accuracy can, and everything indicates that Mr. Stayton's estimates have been carefully prepared, that they are reasonably correct, and that they are not likely to be exceeded.

Objection to
the scheme.

4. The residents of Balmain, one of the municipal boroughs to be drained by the proposed system, are not all in favour of the scheme, but the objection of those opposed to it is based principally on the question of cost. The matter has been discussed by the Municipal Council, and the aldermen have been about equally divided upon it; but no formal expression of opinion upon the subject has been obtained from the people, and it is doubtful whether in view of the important advantages which would accrue to the borough from the adoption of Mr. Stayton's scheme, the public of Balmain are really unfavourable to it. Unquestionably the scheme would be advantageous to the borough, and the cost to the ratepayers would not be excessive. There is, therefore, no good reason why the objection raised by some of the residents of Balmain should interfere with the carrying out of the proposed works.

Chief reason
in favour of
the proposed
reticulation.

5. The chief reason in favour of the proposed reticulation is that without it the main sewers will be useless for the purposes for which they have been designed, and it will not be possible to collect sewerage rates. It is consequently necessary to carry out the additional works in order to make those already approved of useful and remunerative.

Resolution
of the Com-
mittee.

6. The evidence taken by the Committee was considered by them on Thursday, 30 January, and the following resolution moved by Mr. Lackey, and seconded by Mr. O'Sullivan, was passed unanimously:—

“That it is expedient the proposed reticulation of the Western Suburbs Drainage Scheme, and the construction of certain further works necessary to complete the said scheme, as referred to the Committee by the Legislative Assembly, be carried out.”

J. P. ABBOTT,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 6th February, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

RETICULATION OF THE WESTERN SUBURBS DRAINAGE SCHEME.

TUESDAY, 14 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHREY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Reticulation of the Western Suburbs Drainage Scheme.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] Have you any statement to make in reference to this proposal? This matter has been so fully discussed before the Committee, and a decision having been practically come to on it, I think the best thing I can do is to refer to that part of the report of the Committee on the proposed drainage works for the Western Suburbs which bears upon the subject. I will read a few sentences from page 13 of that report. After referring to the cost of the construction of the main sewers for the drainage of the Western Suburbs the report says:—"Other works, however, will be necessary for the drainage of the low-level areas, and for completing the scheme as a whole, so that a proper system shall be in operation throughout the Western Suburbs; and for these there is a supplementary estimate and statement by Mr. Stayton which, to a certain extent, have been under the consideration of the Committee, and will be laid with this Report before Parliament. This supplementary estimate amounts to £713,592, and is made up of £340,741 for what Mr. Stayton describes as 'the first section of additional works,' and £372,851 for subsequent works. The first section of additional works consists of 300 miles of subsidiary sewers, costing £300,000." Evidence was given on this point, and in reply to a question by Mr. Garrard, who asked "What is the estimated cost of those subsidiary sewers?" Mr. Stayton said "£1,000 a mile is the average. I have taken it at that rate, which makes a total of £300,000 for the first section." The report continues:—"The first part of a main sewer for Canterbury and Enfield, to cost £20,741; and a provision for the storm-water drainage of Marrickville, estimated to cost £20,000. The subsequent works comprise another 100 miles of subsidiary sewers, costing £100,000; the completion of the Canterbury and Enfield main sewer, at an expense of £65,410; the establishment of low-level systems which are to cost £119,650; the completion of the western outfall sewer, at a cost of £48,374; the completion of the Marrickville pumping station, costing £6,817; and the completion of the sewage farm at Webb's Grant, at a cost of £32,600. These proposed additional works, considered in connection with those included in the estimate of £830,304, and with works described by Mr. Stayton as 'already executed or nearing completion,' and meaning the northern and southern outfall sewers, which will be used for the drainage of some portions of the Western Suburbs, are declared by him 'to provide for every contingency,' and to include 'all works which can possibly be foreseen at the present time.' The total suburban area included in the scheme is 14,077 acres, and the existing population on that area is about 170,000 persons; but the scheme has been designed for a prospective population of 482,608 persons, which, at the present rate of increase, may be looked for in the Western Suburbs in from eighteen to twenty years. The comprehensiveness of the proposal is, therefore, quite apparent." At page 33 of the appendix it will be seen how the whole amount is made out.

J. Barling,
Esq.
14 Jan., 1890.

C. H. Olfson Bagge, Esq., Chief Assistant Engineer, Sewerage Department, Department of Roads and Bridges, sworn, and examined:—

2. *Mr. Garrard.*] You are an engineer in connection with the Sewerage Board? Yes; under Mr. Hickson.

3. The proposal before us is for the reticulation of the Western Suburbs? Yes.

4. Has anything fresh transpired in reference to it since you and the other officers of the department were examined on the Western Suburbs Scheme in its entirety? Nothing whatever.

5. The reticulation referred to here is the same as that shown on the various plans submitted to the Committee originally? Yes.

C. H. O.
Bagge, Esq.
14 Jan., 1890.

C. H. O.
Bagge, Esq.
14 Jan., 1890.

6. Has there been any objection from any of the local governing bodies, or any demand for an alteration of any kind? There was a request from the Balmain Council that an officer of our department should attend at one or two of their meetings to give information on the subject. I understand that there was some opposition on the part of one or two members of that council, but those gentlemen were not present when we attended the meetings. Other gentlemen examined us as to the cost of the scheme, and the possibility of altering it, and after we had given every explanation that we could, they seemed to be satisfied.

7. When you were examined last time on this matter it was said that an alternative scheme might be adopted for this particular portion of the Western Suburbs—Balmain; has anything been done in regard to that, or is the plan to be carried out as originally submitted? The intention is to carry out the plan which the Committee decided upon.

8. But is it not a fact that Mr. Stayton said that you had an alternative scheme under consideration? Yes.

9. Has anything more been done about that? Nothing has been done because the alternative plan would be far more expensive than the original plan.

10. And the proposal before us now is simply carrying out the original plan in reference to the western suburbs, Balmain included? Yes.

11. Since you met the Balmain Council has the Department received any communication from them as to this or any other proposal? I have not heard of anything of the sort.

12. And there has been no communication from any other Municipality? Not that I am aware of.

13. And there is no deviation in what is now before us from what was put before us in connection with the main scheme? None whatever.

14. *Chairman.*] If the recommendations of this Committee with regard to the important work in connection with the western suburbs are carried out, will they not be useless without this reticulation? They will be quite useless. We must have the reticulation in order to be able to collect the sewage and the revenue.

15. And to utilize the sewers the reticulation must be there? Yes.

16. What is the estimated cost of the reticulation? About £1,000 per mile.

17. You, of course, cannot go into details? It is impossible for any engineer to go further into details than Mr. Stayton has done. It is a large scheme, its completion extending over many years, and I think that an expenditure of £400,000 will suffice for the next fifteen or twenty years.

18. This work will not all be carried out at once, but as it is required? We begin at the outfall works and advance with the three main sewers, and the reticulation must be put in in order that we may collect the revenue as the main work advances.

19. *Mr. Dowel.*] How have you arrived at your estimate of £1,000 per mile? The estimates were prepared by Mr. Stayton.

20. Did you say you had satisfied yourself that £1,000 per mile would be sufficient to carry out this reticulation? I referred to the £400,000 because in an estimate of this kind, where there are so many changes involved, where there are incidental expenses, an engineer can only arrive at a certain average sum. If he put it too high he might be ridiculed; therefore he tries to put it at such a moderate figure as will be reasonable, and will, as prices go down, meet the requirements of the case. I have no doubt that Mr. Stayton thought that the prices would go down as they are doing now, and that £1,000 a mile would cover the expenditure.

21. You have made no calculation in reference to this particular matter? No; but I have in similar matters. We have been building sewers daily and our estimates vary. By way of illustration I may mention that quite recently we were inviting tenders for a sewer contract, the amount of which I estimated at £18,000. That was based upon the lowest figures, at which we all thought the contractors would lose, but when the tenders came in to my utmost astonishment the lowest tender was £11,000. If I had put down this reticulation work at £2,000 a mile, which I could easily have done, in a year or two's time I might have appeared ridiculous.

22. You are of opinion that the whole of the work can be carried out for a sum not exceeding £1,000 a mile? I can only say that on the whole I believe the estimate has been placed carefully before the Committee, that it is a reasonable estimate, and that it will cover the prospective expenditure of this work for the next twelve or fifteen years.

THURSDAY, 23 JANUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN.)

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed reticulation of the Western Suburbs Drainage Scheme.

James M'Donald, Esq., Acting Mayor of Balmain, sworn, and examined:—

J. M'Donald, Esq. 23. *Dr. Garran.*] What position do you hold in Balmain? An alderman.

24. Are you acting as Mayor just now? I am acting as Mayor at the present time.

25. In the absence of the regular Mayor? Yes.

23 Jan., 1890. 26. Are you acquainted with the proposal for the reticulation of the sewerage arrangements in Balmain? I have seen the plan of it.

27. Has the plan been before your Council? Yes.

28. Has it been discussed there? Yes.

29. Are the aldermen generally favourable or unfavourable to it? I think they are about equally divided on the subject.

30. Which are you? I am for it.

31. Although you are for it can you give me a fair statement of the objections against it? The objection J. M'Donald, Esq. against it is the cost. I believe that that is the principal objection against it.
32. Are the Balmain people unwilling to inflict the cost on the other metropolitan ratepayers or unwilling to bear their own share? We have had no public meeting in respect to the matter. It was merely before the Council. The people have not been called upon to give their opinion on the matter at all. 23 Jan., 1890.
33. I mean the Council as a Council; are they afraid that they will be more heavily taxed than other Municipalities in proportion? I do not know whether they are afraid of that, but they think it will be too heavy for them.
34. You are aware that it is not proposed to tax each Municipality separately—according to the cost of its own separate work—but to throw the whole into one sum? I understand we are to be taxed in the same proportion.
35. So that a Municipality with easy work will pay for a Municipality with expensive work? That is how we understand it.
36. If the Balmain portion will be the most expensive of the whole lot, you will rather be an infliction on the other Municipalities than they on you? Yes, in that case.
37. And you are very anxious not to inflict on other Municipalities;—is that it? I do not know that we have taken that into consideration.
38. Were you examined before the Committee on the sewerage question? No, I was not. It was Mr. Buchanan.
39. Did you read over the evidence then given? Yes.
40. Do you remember what was stated to be the cost of dealing with the sewerage under the present system? Yes; but we had some officers of the Works Department over who gave us the cost, and I think that the cost of the Balmain portion would come to over £203,000. It was stated that it would come to only £90,000 odd, but from the statement which they made at the Council meeting we understood it would cost £203,000 odd.
41. That might be a very good reason why the other Municipalities should object to go into the scheme, but is it a good reason why you should not go? If they had to pay an equal proportion I think they would object.
42. Do you know what it is costing you now to deal with your sewage matter? It is costing us about £4,600. I might mention that we are endeavouring to come to an arrangement with the Eureka Sanitary Company to establish a crematorium at Balmain which would be far better than at present, and cost about the same thing, and if we can arrange I think we will introduce that whether this work goes on or not, as if this goes on it will be some years before it is of any service to us. It is far before the present system, but the soil would remain a day or two in the buckets even then. For my own part I should prefer the underground sewerage.
43. I want to get from you what is your present cost including everything? About £4,600.
44. What is that in a rate? It comes to over £1 per closet.
45. Is that equal to a 6d. or a 5d. rate on the rateable value of your property; what does a 1s. rate give you in Balmain? About £12,000, I think.
46. Then that is about a 4½d. rate? Yes.
47. If you were to come under this system you might have a 7d. rate? We expect so.
48. And the objection at Balmain is to rise from 4½d. to 7d.? They take into account not only the cost of making the sewers but also the connections. The connections would be very expensive, Balmain being all rock, and they say that the greater portion of the Balmain ratepayers are very poor people, and they would hardly be able to pay the cost. Some of the connections would cost from £20 to £30.
49. Would the company set up the crematorium? Yes. We have at present contracts for removing the soil under the present system; one contractor's time is up next year and another's the year following, so we are trying to make an arrangement between these contractors and the Eureka Company so that they can manage till their time is up.
50. At present do you shoot it into a punt? Yes.
51. And take it away? At the foot of Adolphus-street, and they take it out to sea.
52. In the borough where I live there are great complaints of the noise and nuisance of the carts at night, and also great complaints near where the punt is moored; have you any such complaints in Balmain? Yes.
53. Your present system of removing the night-soil is a perceptible nuisance? Yes.
54. And much complained about? Yes.
55. If you had the crematorium you would still have to cart all the stuff to the crematorium instead of to the punt? Yes; but their system is so admirably managed that there is no smell. We went to Newcastle to see how it worked there, and found that it worked very well.
56. Do you mean to say that there is no nuisance at the crematorium, and no nuisance in carting the stuff? We could see none.
57. But if you could cart the stuff through the streets to the crematorium without nuisance, why cannot you cart it to a punt without nuisance? Perhaps different parties have different systems of doing it. They do not do as it is done now—take the bucket and pour the stuff into a cart, but they have a double set of buckets, and they leave a clean one, and take the foul one away, closed up, and air-tight.
58. But that is simply supposing that you are altogether behind the times at Balmain and have got a better system under your nose and will not use it? The new system will be better, because under the old system we have got now they take the buckets and pour their contents into the cart, whereas the Eureka Company have a double set of buckets.
59. I quite understand that, but why could not you carry the stuff with as little nuisance as the Eureka Company is going to carry it? It would cost us a good deal more.
60. That is to say if you diminish the nuisance of carting the night-soil through the streets of Balmain, it will cost you a little more as the Eureka Company propose to do it? Yes. What we understand is that they will do it for about the same as we pay now.
61. You admit that there is a better system of carting it? Yes.
62. And you have not adopted that system? No; but we intend to have it.
63. Do you think that if the crematorium were established you would get rid of the nuisance altogether? I am afraid not; we would still have the slops to deal with—the kitchen slops, and all that sort of thing.

- J. McDonald, Esq.,
3 Jan., 1890.
64. What are you going to do with those? Just as we do now, I suppose.
65. Suppose the Government prohibit you from shooting them into the harbour, on the ground that you foul the foreshore, as they are entitled to do, and what the Board of Health would probably do, what are you going to do? I cannot say.
66. Would you crematorium these as well? We might purify it by some means before it entered the harbour.
67. Do you think that any means you could provide would be cheaper than this rate? I cannot say at present.
68. You are aware that the larger part of the surface of Balmain could have the whole of its sewerage—house-slops as well as night-soil—diverted into the Bondi sewer to go by gravitation out to sea? I am aware of that.
69. That might cost you 7d., 8d., or perhaps 9d.; do you think, taking all things into consideration, that would be so much dearer to Balmain as not to be worth purchasing? For my own part, I would much prefer this underground sewerage, as I know it is cleaner, and would do away with all the nuisance we have to contend against—but my opinion is not everyone's opinion there.
70. Do you not think that some of this opposition is due to an imperfect acquaintance with the cost to every householder of bad smells? Some of them thought that 7d. would be too much.
71. They would rather have bad smells than pay 7d.? I do not know, I am sure, but they would rather keep the money.
72. Do they have doctors, any of them? I do not know that we are more troubled in Balmain than in any other suburb.
73. Is it a healthy suburb? Yes, a very healthy suburb.
74. But at present you admit you get rid of your slops by pouring them into the harbour? Yes.
75. Your streets are mostly very steep? Yes.
76. And the drainage that goes into the street gutters runs freely down into the harbour? Yes.
77. And you admit that wherever your culverts join the harbour you foul the foreshore? I do not think there is much foulness going down. We let the water run down pretty freely sometimes.
78. You dilute it? Yes.
79. You clean the gutters after you have sent the filth away? Yes.
80. And you do not see the filth after it is gone? No.
81. But if you were prevented from sending that filth down you would have to collect it and get rid of it somehow? I suppose so.
82. And therefore your cheapness now really arises from the tolerance of the Government in allowing you to foul the harbour; is it not so? It may be so.
83. Suppose the Government cease to be tolerant and take steps in the matter you are cornered? I think that the Government must make some provision; they have incorporated the place and should make some provision for them.
84. That is asking them to pay the Balmain rates—practically, is it not? Yes.
85. Do you think that the Government ought to pay the rates of Balmain? I do not know.
86. You say you have had no meeting of the householders generally? No. At the Council meeting about a month ago the matter was considered, and it was proposed and carried by a majority of one vote that we should adopt the scheme.
87. *Mr. Garrard.*] Was not another meeting held and that resolution rescinded? No, it was not rescinded.
88. *Dr. Garran.*] Do you think that vote of the Council is a fair test of the opinion of the householders generally? I could not say.
89. Do you not think it is very desirable that before the Committee reports you should hold some kind of meeting in the municipality? I should think so. Then we should know whether the people would be willing to pay the expense or not.
90. I see the force of what you say about the house-connections; that would depend a great deal on the depth at which the sewers are placed, would it not? Yes. In some cases they would have to be very deep, and the rock is very hard in some places.
91. Could not that be partly provided for when the main sewers are being built by carrying up pipes in certain places to receive sewerage at a higher level? Still, that would cost some money.
92. You think that it is the house proprietors, more than the tenants, who are objecting? Yes.
93. The owners of the property? Yes. In fact, I might say we have had no opinion either from owners or tenants; but that is what has been suggested in the Council.
94. All you can testify here is that there is a large amount of public opinion in Balmain adverse to this scheme? Yes. I cannot say as regards the public, but in the Council; the public has not been consulted in the matter at all.
95. But those aldermen represent a great many persons, I suppose? Yes. I may say that none of the ratepayers have spoken to me about it.
96. You have then come here prepared to say the opinion of the Council but not of the householders generally? Yes.
97. *Mr. Trickett.*] There has never been any meeting of residents adverse to it? No meeting whatever in respect to it.
98. It has been pretty well talked of throughout the borough, so far as you know? Very likely. Our meetings have been reported in the papers, and they could see what we were doing.
99. *Mr. Cox.*] Have you ever heard of a dessicating system by which they neutralise all night-soil, in some of the towns in England? I have heard something about that.
100. If that is effective, would not that be a good way out of the difficulty? If it be effective it would be.
101. *Dr. Garran.*] Taking £26 as a fair average rental of your houses in Balmain—which would cover a great many in the place—a 1d. rate would amount to 2s. 2d. a year, and a 7d. rate would be 15s. 2d., and yet you say that the present rate is £1 per house? It comes to a little over £1.
102. And a 7d. rate would be a saving of 5s. a house—on a £26 house? I cannot say. I have not gone into the matter.
103. Do you think that a great many people who are objecting, have not gone into it also? Yes.
104. *Mr. Hurley.*] As Acting Mayor of Balmain, have you studied the question of electrolysis in connection with sewerage? No, I have not.

1890.

NEW SOUTH WALES.

METROPOLITAN WATER AND SEWERAGE ACT AMENDMENT ACT OF 1889.

(PROCLAIMING CERTAIN SEWERAGE WORKS.)

Presented to Parliament, pursuant to Act 43 Vic. No. 32.

NEW SOUTH WALES, } Proclamation by His Excellency The Right Honourable CHARLES ROBERT, BARON
to wit. } CARRINGTON, a Member of Her Majesty's Most Honourable Privy Council,
(L.S.) } Knight Grand Cross of the Most Distinguished Order of Saint Michael and
CARRINGTON, } Saint George, Governor and Commander-in-Chief of the Colony of New South
Governor. } Wales and its Dependencies.

IN pursuance of the provisions of the "Metropolitan Water and Sewerage Act Amendment Act of 1889," I, CHARLES ROBERT, BARON CARRINGTON, Governor aforesaid, do hereby proclaim and declare that the provisions of the thirteenth section of the "Metropolitan Water and Sewerage Act Amendment Act of 1889" aforesaid shall, from the date hereof, come into force in respect of the works hereinafter mentioned, which have been reported complete to me by the Minister for Public Works—

1. Main Northern Outfall Sewer, from Ben Buckler on sea-board to Oxford-street and Liverpool-street, with the following branches:—

- (a) Liverpool and Kent Streets Branches and subsidiary sewers.
- (b) South-western Branch, from Oxford-street to Prince Alfred Hospital, and subsidiary sewers.
- (c) Western Branch, Carlton-street to Bay-street.
- (d) Northern Branch, from Oxford-street to Castlereagh-street, to Bridge-street, to Macquarie-street.
- (e) Overflow Branch, from Main Northern Outfall to Rushcutters' Bay.

2. Main Southern Outfall Sewer, from Sewage Farm to Nobbs-street, Surry Hills, and all subsidiary sewers flowing into same, together with all buildings, machinery, and carrier.

3. That portion of Sewage Farm now being utilized for the filtration and disposal of sewage.

4. All subsidiary sewers constructed by the Government Sewerage Department in the Boroughs of Redfern, Paddington, and Woollahra.

5. Stormwater ducts at the undermentioned places:—

- Wentworth Park.
- Pymont Bridge Road.
- Wattle or Darling Streets.
- Baptist Estate.
- Alexander-street, from Eveleigh Railway Yards to Copeland-street, Alexandria.
- Park-street, Macdonaldtown.
- Dowling-street, Redfern.

Given under my Hand and Seal, at Government House, Sydney, this eighteenth day of December, in the year of our Lord one thousand eight hundred and eighty-nine, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

Given under my Hand and Seal, at Government House, Sydney, this twenty-ninth day of July, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1890.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION IN CONNECTION WITH THE SEWERAGE TO THE WESTERN SUBURBS.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. } CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
Honourable Privy Council, Knight
(L.S.) Grand Cross of the Most Distinguished
CARRINGTON, Order of Saint Michael and Saint
Governor. George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the Sewerage to the Western Suburbs, for and towards the completion of which said works public funds are available; and whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Gazette, and in a newspaper, that is to say, in the "Suburban Times," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the sewerage to the said Western Suburbs, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever, and to the intent further

that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, and Colony of New South Wales: Commencing on the south-eastern boundary of Euston Road, at a point bearing south 37 degrees 34 minutes west and distant $14\frac{1}{2}$ links from the junction of that side of that road with the north-eastern boundary of Harley-street; and bounded thence on the north-east by a line bearing south 40 degrees 18 minutes 31 seconds east 38 chains 18 links; on the south-east by the north-western boundary of the main southern outfall sewer bearing south 35 degrees 45 minutes 34 seconds west 1 chain 3 links; on the south-west by a line parallel to the first described line bearing north 40 degrees 18 minutes 31 seconds west 38 chains $21\frac{4}{10}$ links; and on the north-west by the aforesaid south-eastern boundary of Euston Road bearing north 37 degrees 34 minutes east 1 chain $2\frac{2}{10}$ links, to the point of commencement, containing 3 acres 2 roods and $33\frac{3}{10}$ perches, exclusive of Bourke Road, and said to be owned by Sir Daniel Cooper, and occupied by James Naven, J. Corneily, C. Burgess, See War, and Wan Chun.

In witness whereof, I have hereunto set my Hand and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this nineteenth day of March, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1890.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF LAND IN CONNECTION WITH THE SEWERAGE TO THE WESTERN SUBURBS,
PARISHES OF PETERSHAM AND ST. GEORGE.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. } CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
(L.S.) } Honourable Privy Council, Knight
CARRINGTON, } Grand Cross of the Most Distinguished
Governor. } Order of Saint Michael and Saint
George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the Sewerage to the Western Suburbs, for and towards the completion of which said works public funds are available; and whereas the lands hereinafter described are required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Gazette, and in a newspaper, that is to say, in the "Sydney Morning Herald," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purposes hereinafter mentioned, that is to say, for and in connection with the sewerage to the said Western Suburbs, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the lands hereinbefore referred to, that is to say:—

1st. All that piece or parcel of land situate in the parish of Petersham, county of Cumberland, and Colony of New South Wales, being allotment 18 of section 7 in the Warren Estate subdivision, containing 11 perches, and said to be in the possession and occupation of T. & M. Fennel.

2nd. All that piece or parcel of land situate in the parish, county, and colony aforesaid, being portion of allotment 17 of section 7 Warren Estate subdivision, containing 11 perches, and said to be in the possession and occupation of W. Kay.

3rd. All that piece or parcel of land situate in the parish, county, and colony aforesaid, comprising lots 38 containing 12½ perches, 39 containing 12 perches, 40 containing 12 perches of section 10 of the Warren Estate, and said to be in the possession and occupation of Messrs. J. L. Vaughan, E. Holding, and C. Anderson respectively.

4th. All that piece or parcel of land situate in the parish of St. George, county and colony aforesaid: Commencing at a point on the centre line of the main outfall western sewer bearing 169 degrees 10 minutes and distant 5 chains 99 links from the intersection with the northern boundary of Unwin's Bridge Road; and bounded thence by a line bearing easterly 60 links; thence by a line bearing 169 degrees 10 minutes 2 chains 14 links; thence by the left bank of Wollli Creek upwards about 1 chain; thence by a line bearing 349 degrees 10 minutes 1 chain 75 links; thence by a line bearing easterly 50 links, to the point of commencement,—containing 31 perches. Also, all that piece or parcel of land situate in the parish, county, and Colony aforesaid: Commencing at a point on the centre line of the main outfall western sewer, at its intersection with the northern boundary of Unwin's Bridge Road; and bounded thence by the said boundary of Unwin's Bridge Road bearing 104 degrees 11 minutes 55½ links; thence by a line bearing 349 degrees 10 minutes 6 chains 26½ links; thence by a line bearing 13 degrees 45 minutes 17 chains 35 links; thence by the right bank of Cook's River upwards about 1 chain 10½ links; thence by a line bearing 193 degrees 45 minutes 13 chains 8 links; thence by a line bearing 169 degrees 10 minutes 6 chains 2 links; thence by the northern boundary of Unwin's Bridge Road bearing 104 degrees 11 minutes 55½ links to the point of commencement,—containing 2 acres 1 rood 21½ perches, and said to be in the possession and occupation of the trustees of the late E. Campbell.

5th. All that piece or parcel of land situate in the parish, county, and colony aforesaid, being part of the Tempe House and Grounds subdivision: Commencing on the northern side of Arncliffe-street, at a point bearing 283 degrees 10 minutes and distant 5 chains 95 links from the south-eastern corner of that part of the above subdivision, owned by Henry A. Sheridan; and bounded thence on the south by part of the northern boundary of that street bearing 283 degrees 10 minutes and distant 1 chain 9½ links; thence on the south-west by a line bearing north 10 degrees 30 minutes west and distant 8 chains 95 links to the right bank of Wollli Creek; thence by that creek easterly about 1 chain 5 links; thence on the north-east by a line bearing south 10 degrees 50 minutes east and distant 9 chains 15 links, to the point of commencement,—containing an area of 3 roods 24½ perches, and said to be in the occupation and possession of Henry A. Sheridan.

6th. All that piece or parcel of land situate in the parish, county, and colony aforesaid, being part of allotments 3, 4, 5, and 6 of Tempe House and Grounds: Commencing on the southern boundary of Arncliffe-street, at a point bearing westerly and distant 8 chains 79½ links from its junction with the north-western boundary of Bonor-street; and bounded thence by that boundary of Arncliffe-street bearing north-westerly 3 chains 28½ links; thence by a line bearing 169 degrees 10 minutes 5 chains 50 links; thence by a line bearing 103 degrees 12 minutes 3 chains 28½ links; thence by a line bearing 349 degrees 10 minutes 5 chains 50 links to the point of commencement,—containing 1 acre 2 roods 24 perches, and said to be in the possession and occupation of the Burwood Land, Building, and Investment Company (Limited).

7th. All that piece or parcel of land situate in the parish, county, and colony aforesaid, being part of allotment 25 of the Tempe House and Grounds: Commencing at the western corner of that allotment; and bounded thence by its northern boundary bearing 103 degrees 12 minutes 1 chain $62\frac{2}{3}$ links; thence by a line bearing 169 degrees 10 minutes 2 chains $62\frac{2}{3}$ links; thence by the western boundary of the aforesaid allotment bearing 324 degrees 49 minutes 3 chains $60\frac{1}{2}$ links, to the point of commencement,—containing $31\frac{2}{3}$ perches, and said to be in the possession and occupation of Agnes Fripp.

8th. All that piece or parcel of land situate in the parish, county, and colony aforesaid, being part of allotment 24, of the Tempe House and Grounds: Commencing at the eastern corner of that allotment; and bounded thence by its north-eastern boundary bearing 324 degrees 49 minutes 2 chains $57\frac{1}{3}$ links; thence by a line bearing 169 degrees 10 minutes 2 chains $85\frac{1}{3}$ links; thence by the north-western boundary of Bonor-street bearing 53 degrees 59 minutes 1 chain $17\frac{1}{3}$ links, to the point of commencement,—containing $24\frac{1}{3}$ perches, and said to be in the possession and occupation of Thomas Fripp.

9th. All that piece or parcel of land situate in the parish, county, and colony aforesaid, being allotments Nos. 15, 16, and 17 of section 2 of the Station Hill Estate, containing 1 rood $6\frac{1}{3}$ perches, and said to be in the possession and occupation of J. H. Newman, A. R. Winckler, and G. Lilwall.

10th. All that piece or parcel of land situate in the parish, county, and colony aforesaid, being part of the Innesdale Estate: Commencing on the north-western boundary of Argyle-street, at a point bearing 54 degrees 2 minutes and distant $\frac{1}{4}$ chains 784 links from its junction with the north-eastern boundary of Allen-street; and bounded thence by a line bearing 325 degrees 26 minutes 7 chains 67 links; thence by the south-eastern boundary of the Illawarra Road bearing 53 degrees 56 minutes 1 chain and $\frac{1}{10}$ of a link; thence by a line bearing 146 degrees 26 minutes 7 chains 67 links; thence by the aforesaid north-western boundary of Argyle-street bearing 234 degrees 2 minutes 1 chain and $\frac{1}{10}$ of a link, to the point of commencement,—containing 3 roods and $2\frac{1}{10}$ perches, and said to be in the possession and occupation of Edwin Godfrey.

11th. All that piece or parcel of land situate in the parish, county, and Colony aforesaid, being allotments 27, 29, 29, 30, and 31 of section F of the Innesdale Estate, containing 2 roods more or less, and said to be in the possession and occupation of the trustees of John M'Innes.

12th. All that piece or parcel of land situate in the parish, county, and colony aforesaid, being allotments 9, 10, 11, 12, and 13, section F of the Innesdale Estate, containing 2 roods 5 perches, and said to be in possession and occupation of the trustees of the late John M'Innes.

13th. All that piece or parcel of land situate in the parish, county, and colony aforesaid: Commencing on the north-western boundary of Marsh-street, at a point bearing 53 degrees 16 minutes 30 seconds and distant 4 chains $52\frac{1}{10}$ links from its junction with the south-eastern boundary of the West Botany Road; bounded thence by the said boundary of Marsh-street bearing 53 degrees 16 minutes 30 seconds 5 chains $22\frac{2}{3}$ links

and 52 degrees 46 minutes 6 chains 8 links; thence by a line bearing 275 degrees 27 minutes 3 chains $15\frac{2}{3}$ links; thence by a line bearing 233 degrees 16 minutes 4 chains $12\frac{1}{2}$ links; thence by a line bearing 326 degrees 26 minutes $47\frac{2}{3}$ links; thence by a line bearing 233 degrees 16 minutes 30 seconds 1 chain; thence by a line bearing 146 degrees 26 minutes $52\frac{2}{3}$ links; thence by a line bearing 233 degrees 16 minutes 1 chain $86\frac{2}{3}$ links; thence by a line bearing 191 degrees 57 minutes 3 chains $29\frac{2}{3}$ links, to the point of commencement, containing 1 acre 3 roods $85\frac{2}{3}$ perches, and said to be in the possession and occupation of the late John M'Innes.

14th. All that piece or parcel of land situate in the parish of St. George, county of Cumberland, and colony of New South Wales, comprising the following grants: 50 acres to George Newbolt, 27 acres 3 roods to William Beebag, 28 acres to William G. Massingham, 28 acres to Benjamin Eve, 28 acres to Benjamin Eve, 31 acres to Andrew Green, 26 acres to David Bedford, 46 acres and 40 acres to Hughes and Hosking: Commencing at the south-eastern corner of the aforesaid grant of 40 acres to Hughes and Hosking; and bounded thence on the south by the northern boundary, of Beatic-street bearing 279 degrees 3 minutes 40 seconds 23 chains $68\frac{2}{3}$ links, 279 degrees 30 minutes 35 seconds 22 chains $66\frac{2}{3}$ links, and 287 degrees 2 minutes 7 chains $34\frac{2}{3}$ links; on the west by the eastern boundary of Eve-street bearing 9 degrees 13 minutes 20 seconds 12 chains $64\frac{1}{3}$ links; on the north by a line bearing 99 degrees 13 minutes 20 seconds 2 chains $50\frac{2}{3}$ links; again on the west by the eastern boundary of Eve-street bearing 9 degrees 13 minutes 20 seconds 57 chains $80\frac{2}{3}$ links; on the south-west by a line bearing 326 degrees 25 minutes 15 seconds 6 chains $42\frac{2}{3}$ links; on the north-west by the south-eastern boundary of Marsh-street bearing 52 degrees 58 minutes 30 seconds $538\frac{1}{3}$ links; on the north by the northern boundary of the aforesaid grant of 50 acres to George Newbolt bearing 97 degrees 41 minutes 40 seconds 37 chains 50 links to the left bank of Muddy Creek, towards the east by that creek upwards to the northern boundary of the aforesaid grant of 40 acres to Hughes and Hosking; again on the north by that boundary and by the northern boundary of the aforesaid 40 acres bearing 99 degrees 12 minutes 10 seconds 39 chains $4\frac{1}{3}$ links; on the south-east by the north-western boundary of a recreation reserve bearing 224 degrees 30 minutes 5 seconds 27 chains $3\frac{1}{3}$ links, to the point of commencement, containing 311 acres, and said to be in the possession and occupation of William Beebag, William G. Massingham, Benjamin Eve, Andrew Green, David Bedford, William Winter, H. Humphreys, John Goode, and Richard Goode, and others.

In witness whereof, I have hereunto set my Hand and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-eighth day of July, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

1890.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES' ACQUISITION ACT.
 (RESUMPTION OF LAND IN CONNECTION WITH THE SEWERAGE TO THE WESTERN SUBURBS,
 PARISHES OF PETERSHAM AND ST. GEORGE.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

**NOTIFICATION OF RESUMPTION OF LAND UNDER
 44 VICTORIA No. 16.**

NEW SOUTH WALES, } By His Excellency The Right Honourable
 to wit. } CHARLES ROBERT, BARON CARRINGTON,
 a Member of Her Majesty's Most
 Honourable Privy Council, Knight
 Grand Cross of the Most Distinguished
 Order of Saint Michael and Saint
 George, Governor and Commander-in-
 Chief of the Colony of New South
 Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the Sewerage to the Western Suburbs, for and towards the completion of which said works public funds are available; and whereas the lands hereinafter described are required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification, published in the Gazette, and in a newspaper, that is to say, in the "Sydney Morning Herald," circulated in the Police District wherein the said lands are situated, declare that the lands hereinafter described have been resumed for the public purpose hereinafter mentioned, that is to say, for and in connection with the sewerage to the said Western Suburbs, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said Minister as a Trustee, with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the lands hereinbefore referred to, that is to say:—

2nd. All that piece or parcel of land situate in the parish, county, and Colony aforesaid, being allotment 17 of section 7, Warren Estate subdivision, containing 11 perches, and said to be in the possession and occupation of W. Kay.

5th. All that piece or parcel of land situate in the parish, county, and Colony aforesaid, being part of the Tempe House and Grounds subdivision: Commencing on the northern side of Arncliffe-street, at a point bearing 283 degrees 10 minutes and distant 5 chains 95 links from the south-eastern corner of that part of the above subdivision, owned by Henry A.

Sheridan; and bounded thence on the south by part of the northern boundary of that street bearing 283 degrees 10 minutes and distant 1 chain 9½ links; thence on the south-west by a line bearing north 10 degrees 50 minutes west and distant 8 chains 95 links to the right bank of Wollie Creek; thence by that creek easterly about 1 chain 5 links; thence on the north-east by a line bearing south 10 degrees 50 minutes east and distant 9 chains 15 links, to the point of commencement,—containing an area of 3 roods 24½ perches, and said to be in the occupation and possession of Henry A. Sheridan.

9th. All that piece or parcel of land situate in the parish, county, and Colony aforesaid, being allotments Nos. 15, 16, and 17 of section 1 of the Station Hill Estate, containing 1 rood 6½ perches, and said to be in the possession and occupation of J. H. Newman, A. R. Winckler, and G. Lilwall.

13th. All that piece or parcel of land situate in the parish, county, and Colony aforesaid: Commencing on the north-western boundary of Marsh-street, at a point bearing 53 degrees 16 minutes 30 seconds and distant 4 chains 52½ links from its junction with the south-eastern boundary of the West Botany Road; bounded thence by the said boundary of Marsh-street bearing 53 degrees 16 minutes 30 seconds 5 chains 22½ links and 52 degrees 45 minutes 6 chains 8 links; thence by a line bearing 275 degrees 27 minutes 3 chains 15½ links; thence by a line bearing 233 degrees 16 minutes 4 chains 12½ links; thence by a line bearing 320 degrees 26 minutes 47½ links; thence by a line bearing 236 degrees 26 minutes 1 chain; thence by a line bearing 146 degrees 26 minutes 52½ links; thence by a line bearing 233 degrees 16 minutes 1 chain 86½ links; thence by a line bearing 191 degrees 57 minutes 3 chains 29½ links, to the point of commencement,—containing 1 acre 3 roods 35½ perches, and said to be in the possession and occupation of the late John M'Innes.

14th. All that piece or parcel of land situate in the parish of St. George, county of Cumberland, and Colony of New South Wales, comprising the following grants: 27 acres 3 roods to William Beehag, 28 acres to William G. Massingham, 28 acres to Benjamin Eve, 28 acres to Benjamin Eve, 31 acres to Andrew Green, 26 acres to David Bedford, 46 acres and 40 acres to Hughes and Hosking, and part of 50 acres to George Newbolt: Commencing at the south-eastern corner of the aforesaid grant of 40 acres to Hughes and Hosking; and bounded thence on the south by the northern boundary of Bestic-street bearing 279 degrees 3 minutes 40 seconds 23 chains 68½ links, 279 degrees 30 minutes 35 seconds 22 chains 66½ links, and 287 degrees 2 minutes 7 chains 34½ links; on the west by the eastern boundary of Eve-street bearing 9 degrees 13 minutes 20 seconds 12 chains 64½ links; on the north by the southern boundary of Eve-street bearing 99 degrees 13 minutes 20 seconds 2 chains 50½ links; again on the west by the eastern

boundary of Eve-street and its prolongation bearing 9 degrees 13 minutes 20 seconds 57 chains $80\frac{1}{10}$ links; on the south-west by a line bearing 326 degrees 25 minutes 15 seconds 6 chains $42\frac{1}{10}$ links; on the north-west by the south-eastern boundary of Marsh-street bearing 52 degrees 58 minutes 30 seconds $538\frac{1}{10}$ links; on the north by the northern boundary of the aforesaid grant of 50 acres to George Newbolt bearing 97 degrees 41 minutes 40 seconds 37 chains 50 links to the left bank of Muddy Creek, towards the east by that creek upwards to the northern boundary of the aforesaid grant of 46 acres to Hughes and Hosking; again on the north by that boundary and by the northern boundary of the aforesaid 40 acres bearing 99 degrees 12 minutes 10 seconds 39 chains $4\frac{1}{10}$ links; on the south-east by the north-western boundary of a recreation reserve bearing 224 degrees 30 minutes 5 seconds 27 chains $8\frac{1}{10}$ links, to the point of commencement,—containing 311 acres, and said to be in the possession and occupation of William Beehag, William G. Massingham, Benjamin Eve, Andrew Green, David Bedford, William Winter, H. Humphreys, John Goode, and Richard Goode, and others.

NOTE.—The descriptions in the above notification are in correction of those numbered 2nd, 5th, 9th, 13th, and 14th in the notification published in the Government Gazette No. 404, of the 29th July, 1890.

The corrections are as follows:—As to the 2nd description—The 2nd line, as it appeared in the Gazette above referred to, read "County and Colony aforesaid, being portion of allotment 17 of," but instead of which now reads "County and Colony aforesaid, being allotment 17 of."

As to the 5th description—The 10th line, as it appeared in the Gazette above referred to, read "west by a line bearing north 10 degrees 30 minutes west and," but instead of which now reads "west by a line bearing north 10 degrees 50 minutes west and."

As to the 9th description—The 3rd line, as it appeared in the Gazette above referred to, read "of section 2 of the Station Hill Estate, containing 1 rood," instead of which now reads "of section 1 of the Station Hill Estate, containing 1 rood."

As to the 13th description—The 12th line, as it appeared in the Gazette above referred to, read "thence by a line bearing 233 degrees 16 minutes 30 seconds," but instead of which now reads "thence by a line bearing 236 degrees 26 minutes."

As to the 14th description—The 3rd and 4th lines, as they appeared in the Gazette above referred to, read "Wales, comprising the following grants, 50 acres to George Newbolt, 27 acres 3 roods to William Beehag, 28 acres to," but instead of which now reads "Wales, comprising the following grants, 27 acres 3 roods to William Beehag, 28 acres to." Also the 7th line, as it appeared in the Gazette above referred to, read "Bedford, 46 acres and 40 acres to Hughes and Hosking: Com-," but instead of which now reads "Bedford, 46 acres and 40 acres to Hughes & Hosking, and part of 50 acres to George Newbolt: Com-." Also the 15th line, as it appeared in the Gazette above referred to, read "20 seconds 12 chains $64\frac{1}{10}$ links; on the north by a line bearing," but instead of which now reads "20 seconds 12 chains $64\frac{1}{10}$ links; on the north by the southern boundary of Eve-street bearing." Also the 17th line, as it appeared in the Gazette above referred to, read "the west by the eastern boundary of Eve-street bearing 9 degrees," but instead of which now reads "the west by the eastern boundary of Eve-street and its prolongation bearing 9 degrees." Also the 26th line, as it appeared in the Gazette above referred to, read "to the northern boundary of the aforesaid grant of 40 acres to," but instead of which now reads "to the northern boundary of the aforesaid grant of 46 acres to."

In witness whereof, I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereunto affixed, at Government House, Sydney, this twenty-sixth day of September, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency's Command,
BRUCE SMITH.

GOD SAVE THE QUEEN!

1890.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.
(RESUMPTION OF LAND AT DOUBLE BAY, IN CONNECTION WITH THE SEWERAGE OF THE CITY OF SYDNEY AND ITS SUBURBS.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.

NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. } CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
Honourable Privy Council, Knight
(L.S.) Grand Cross of the Most Distinguished
CARRINGTON, Order of Saint Michael and Saint
Governor. George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the Sewerage of the City of Sydney and its Suburbs, for and towards the completion of which said works public funds are available: And whereas the land hereinafter described is required for the construction of the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do, by this notification published in the Gazette, and in a newspaper, that is to say, in the "Daily Telegraph," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purpose hereinafter mentioned, that is to say, for and in connection with the sewerage of the said City of Sydney and its Suburbs, to the intent that upon the publication of this notification in the Gazette, the legal estate in the said lands shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estate, interests, contracts, charges, rates, rights-of-way, or other easements whatsoever; and to the intent further that the legal estate therein, together with all powers incident thereto or conferred by the said Act, shall be vested in the said

Minister as a Trustee, with the powers stated in the said last-mentioned Act: And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land situate in the parish of Alexandria, county of Cumberland, and Colony of New South Wales, being part of the Point Piper Estate: Commencing at a point on the southern boundary of 2 acres 2 roods resumed for the Sydney Sewerage by notification in Government Gazette of the 31st May, 1881, at a point bearing south 86 degrees 17 minutes 30 seconds east, and distant 8 chains 60 $\frac{1}{5}$ links from the south-western corner of the aforesaid resumption; and bounded thence by the southern boundary of the aforesaid 2 acres 2 roods bearing south 86 degrees 16 minutes 10 seconds east 1 chain 1 $\frac{1}{2}$ links; thence by lines bearing south 13 degrees 43 minutes west 13 chains 25 $\frac{1}{5}$ links, north 76 degrees 17 minutes west 25 links, south 13 degrees 43 minutes west 6 chains 50 links, south 76 degrees 17 minutes east 25 links, south 13 degrees 43 minutes west 1 chain, north 75 degrees 17 minutes west 1 chain, north 13 degrees 43 minutes east 1 chain, south 76 degrees 17 minutes east 25 links, north 13 degrees 43 minutes east 6 chains 50 links, north 76 degrees 17 minutes west 25 links, and north 13 degrees 43 minutes east 13 chains 7 $\frac{1}{5}$ links, to the point of commencement,—containing 1 acre 2 roods and 38 $\frac{1}{5}$ perches, and said to be in the possession of Sir Daniel Cooper and occupation of Goon Hen and J. R. Watkins.

In witness whereof, I have hereunto set my Hand and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this thirteenth day of October, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

APPLICATION FOR DRAINAGE UNION AT NOWRA.

No. 1.

Minute by The Under Secretary for Public Works.

Nowra Drainage.

PETITION that certain gentlemen named, owners of land, be constituted a Union, to be known as "Greenhills Drainage Union," for compulsory drainage and contribution under Act 29 Victoria No. 1.
The Commissioner for Roads for report.

D.C.M'L. (for U.S.), B.C., 7/12/88.

Resubmit with Drainage Act.—J.W.B., 8/12/88. Drainage Act herewith, 11/12/88. There can be no objection on the part of this office, I presume. The Principal Under Secretary will deal with the issue of proclamation. Act herewith.—J.W.B., 21/12/88. Submitted.—J.B., 28/12/88. Forward to Colonial Secretary.—JOHN SUTHERLAND, 29/12/88. The Principal Under Secretary.—J.B., B.C., 29/12/88. The Under Secretary for Lands.—C.W., B.C., 3/1/89.

[Enclosure.]

To His Excellency the Governor, Lord Carrington, and the Executive Council of New South Wales.

THE petition of James Monaghan, James Graham, David Hyam, Mark Walker, John M'Arthur, Joseph Hyam, Lauchlan M'Pherson, Rev. Dr. Wm. Grant,—

SHOWETH—

1. That your petitioners are owners of certain lands situated at Nowra, in the district of Shoalhaven, in the said Colony: Commencing on the eastern side of the old Bomaderry Ferry Road, and on the southern side of the Shoalhaven River; thence along the southern side of that river about forty-five chains fifty links; thence along the western boundary of Maria Glanville and David Hyam's property about forty-six chains and fifty links; thence along the eastern side of Mosses' Creek about thirty-nine chains; thence by a line bearing east about twenty-two chains to the western side of the Terrara Road; thence by the western side of that road seventy-three chains southerly; thence along the north side of the Greenwell Point Road westerly about fifty-nine chains; thence along the eastern boundary of town section number thirty-nine northerly eleven chains; thence along north side of Jervis-street westerly ten chains; thence along eastern side of Wallace-street northerly ten chains; thence along the south side of Douglas-street westerly eleven chains; thence along the southern side of Plunkett-street westerly seventeen chains; thence by a line bearing north eleven chains; thence along the southern side of Worrigee-street easterly six chains; thence along the eastern side of East-street northerly eleven chains; thence along the southern side of Junction-street easterly seven chains; thence along the east side of town section number seven northerly eighteen chains twenty links to the southern side of Terrara Road; thence along the southern side of that road twenty-seven chains fifty links; thence along the eastern side of Bomaderry Ferry Road, to the point of commencement,—as delineated and set forth in the plan hereunto annexed.

2. That the said land is low-lying and liable to be flooded with water, which may at any time accumulate over the same to an extent of three hundred and fifty acres, more or less, the natural channel or outlet having been blocked up by certain Government roads and causes arising from the cultivation of the land between the said land and the Crookhaven River; also, owing to the fact that an existing artificial drain has been filled in by an adjacent landowner, much to the injury and detriment of your petitioners.

3. That your petitioners are desirous that the undermentioned owners of the said tract of land may be constituted a Union within the meaning of an Act intituled "An Act to promote the better drainage of lands," 29 Victoria number 1, such Union to be known by the name of the "Greenhills Drainage Union," for the purpose of compulsory drainage and contribution under this Act:—

Name.	Gross Acreage.			Acreage liable to be flooded.

And your petitioners, as in duty bound, will ever pray, &c.

JAMES MONAGHAN, Greenhills, farmer.
[Witness to Mr. Monaghan's signature—Thos. Marriott, solicitor, Nowra.]
JAMES GRAHAM, Greenhills, farmer.
D. HYAM, Terrara, hotelkeeper.
M. WALKER, Terrara, storekeeper.
JOHN M'ARTHUR, Terrara, storekeeper.
JOSEPH HYAM, Terrara, landholder.
LAUCHLAN M'PHERSON, Nowra, builder.
WILLIAM GRANT, Bolong, Presbyterian Minister.

No. 2.

3

No. 2.

The Acting Surveyor-General to The Under Secretary for Lands.

Proposed Green Hills Drainage Union at Nowra.

Ms. 89-232.

21 January, 1889.

UNDER the 5th section of the Drainage Promotion Act, 29 Victoria No. 1, it is provided that the petitioners shall pay into the Treasury such sum as shall be sufficient to reimburse all expenses likely to be incurred by the Government in the matter. The expenses indicated are such as may arise in causing an inquiry into the petition, viz., as to the private and public interests affected, especially in respect of possible damage to other holdings, public roads, reserves, &c. Viewing the conditions of the locality, which are known to me, I think that the cost of such preliminary inquiry and report, as will meet the circumstances of this case, should not exceed £25; and I would suggest that James Monaghan (the first signatory to the petition) be informed that in terms of the Act 29 Victoria No. 1, section 5, it is requisite that a sum of £25 be paid into the Treasury, on behalf of the petitioners, to meet expenses likely to be incurred; and I think it might be added that any unexpended balance of such sum will be returned.

E. TWYNAM.

Submitted, that the action suggested be taken, and that the Treasury be requested to receive the amount when tendered.—R.H.D., 1/2/89. F.H.W. S.F., 1/2/89. Approved.—W.J.L., 5/2/89. Inform Mr. Monaghan and Treasury.—R.H.D., 6/2/89. Cor. Branch,—Mr. Monaghan and Treasury accordingly, 14/2/89.

No. 3.

The Under Secretary for Lands to The Under Secretary for Finance and Trade.

Sir,

Department of Lands, Sydney, 14 February, 1889.

I am directed by the Minister for Lands to request that you will be good enough to accept, when tendered, the sum of £25 to meet expenses likely to be incurred in causing an inquiry to be made into a petition lodged in connection with the proposed Greenhills Drainage Union at Nowra.

I have, &c.,

H. CURRY,

(For the Under Secretary).

The money has been placed in Trust Fund, under the heading, "Greenhills Drainage Union, Nowra," and any expenses to be charged against it must be so marked.—G.E., B.C., Treasury, 13/6/89. The Under Secretary for Lands, to be returned. Please place this with Ms. 89-7,650, sent to Acting Surveyor-General on 17th instant.—R.H.D., 20/6/89. Mr. Briscoe,—Papers were sent to Surveyor Knibbs on 19th instant.—W.T.B., 21/6/89. Mr. De Low.

No. 4.

P. H. Morton, Esq., M.P., to The Commissioner for Roads.

Surveys for Nowra Sewerage.

Extract from M.P. 89-739 W.S.

* * * * *
I HEREWITH attach letter from Mayor of Nowra, asking me to apply to the Government for the services of a responsible officer to make surveys and levels for a sewerage.

No. 5.

Mr. J. Monaghan to The Secretary for Lands.

Sir,

Greenhills, Shoalhaven, 1 April, 1889.

I beg to acknowledge the receipt of your letter of the 14th February (No. 1,168), requesting that the sum of £25 be paid into the Treasury to meet expenses likely to be incurred in making inquiry into the petition of myself and others for a Drainage Union under the Act 29 Victoria No. 1. I wish, sir, to draw your attention to section 3 of the Act, which states that on the receipt of such a petition it should be published in the *Gazette*, and if there is not a counter-petition presented, as provided for in section 4, the Union may be proclaimed. If a counter-petition is presented by the requisite number (as in section 4), then the sum mentioned would require to be paid.

Yours, &c.,

JAMES MONAGHAN.

Writer may be informed that nothing can be done until the required deposit is paid.—R.H.D., 5/4/89. Yes.—F.H.W. (for U.S.), 8/4/89. Cor. Branch, 8/4/89. Monaghan informed, 23/4/89.

No. 6.

No. 6.

Mr. J. Monaghan to The Secretary for Lands.

Sir, Greenhills, Shoalhaven, 10 June, 1890.
 I herewith enclose draft for £25, in compliance with your request, to meet expenses of examination and inquiry for a Drainage Union, applied for by myself and others in January last. Trusting that the matter will be proceeded with at once—
 I am, &c.,
 JAMES MONAGHAN.

The sum of £25 received, and credited on the within amount this day.—W.N., B.C., Treasury, 11/6/89. F.K. (for U.S.) The Under Secretary for Lands.—G.E.B. The Acting Sur.-Gen.—R.H.D. (for the U.S.), 12/6/89.

No. 7.

The Acting Surveyor-General to Mr. Surveyor Knibbs.

Proposed Greenhills Drainage Union, near Nowra.

Sydney, 19 June, 1889.
 AN inspection and comprehensive report is required in this case in order to comply with the provisions of the 4th section of the Drainage Act, the principal object being to ascertain if the scheme be generally practicable and desirable; whether there are any well-founded objections on part of owners of adjacent properties; whether damage will be done by the proposed drainage, beyond limits of the proposed Union, to private estate, to public thoroughfares, or public interests of any sort, and, if so, to what extent; also as to what provision is intended in respect of making good the same (if any).

Of course it is desirable that inquiry be made into the premises of the petition, and the scope of draining area; and several properties affected should be shown on a tracing, together with proposed outfall, and any projected interference with roads, watercourses, or public rights.

Referred to Mr. Surveyor Knibbs for inquiry.

E. TWYNAM,
 Acting Surveyor-General.

Received 20 June, 1889.—G.H.K. Replied to by my letter of 21st June, 1889, No. 11.—G.H.K.

No. 8.

Mr. J. Monaghan to The Secretary for Lands.

Sir, Greenhills, Shoalhaven, 20 June, 1889.
 I received a notice from Mr. G. H. Knibbs, of Petersham, stating that he intends to visit this district to report upon the petition of myself and others for a Drainage Union. I hope that your Department will reconsider the order given, as any such inspection or report is premature. The proper course is clearly shown in sections 2, 3, and 4 of the Act, viz., "After publishing the petition, two months are allowed for objections to be made." If objections are made, the report should deal with them also. I decidedly object to the extra expense of the present report, as the petition and plan show all that is necessary for the present.
 I have, &c.,
 JAMES MONAGHAN.

No. 9.

Mr. Surveyor Knibbs to The Acting Surveyor-General.

Sir, Petersham, 21 June, 1889.
 In regard to your instructions of 19th June, 1889, No. 2, I have the honor to report that, in obtaining information at the Registrar-General's Office as to the ownership of properties included in the area sought to be brought under the operation of the Act 29 Victoria No. 1, I ascertained the fact that persons other than those referred to in the petition will be affected by the proposed "Drainage Union."

2. Under these circumstances, it appeared desirable that, prior to making the inquiry directed by your letter (referred to above), the procedure indicated in section 3 of the aforesaid Act be followed, viz., that the petition be published in the *Government Gazette*, and a reasonable time allowed to elapse in order to permit objectors, if such exist, forwarding counter-petitions.

3. I am informed by Mr. Monaghan, whose name appears first on the petition, that it is their desire that the petition be published in the *Gazette* prior to an official inquiry into the premises.

4. In view of the fact that interested persons should be properly informed of the existence of this petition, and allowed opportunity of fully stating any objections thereto, and that it is desirable that the inquiry should traverse not only the statements of petitioners, but those of any objectors—which cannot so satisfactorily be done by anticipation—I would respectfully suggest that the inquiry be postponed till after the action proposed has been carried out.

I have, &c.,
 GEO. H. KNIBBS,
 Surveyor.

Letter from James Monaghan attached herewith. Proposed Greenhills Drainage Union. Submitted, that the enclosed petition be published in the *Government Gazette*, as provided by section 3 of the Drainage Promotion Act, 29 Victoria, No. 1. Copy herewith. Acting Surveyor-General, 22/6/89. The Under Secretary. Submitted.—J.O.D. F.H.W. S.F., 25/6/89. Approved, J.N.B., 23/7/89.

[Enclosure.]

[Enclosure.]

Dear Sir,

Yours of the 18th instant to hand. The Lands Department do not seem to understand the Drainage Act, 29 Victoria No. 1. The report referred to in your letter is one that should not be made until the petition has been published for two months. That time is allowed for any person who may object to the Union being formed. Your report would then embrace the whole matter, whether objections are made or not. If you will look the Act up, you will at once understand the whole course of procedure. Sections 2, 3, and 4 show it clearly. The plan on tracing furnished with the petition shows all that is necessary for the present. I will write to the Department also by this post, objecting to the course they are taking. Thanking you for your considerate notice.

G. H. Knibbs, Esq.,
Petersham.

Greenhills, 20 June, 1889.

I remain, &c.,
JAMES MONAGHAN.

Mr. Monaghan has been informed that action has been suspended. That the matter was being dealt with in this way because it was understood that it was urgent, and it was thought that any objections could be investigated at time of inquiry; but as the petitioners prefer to await while the usual course is being carried out, it has been recommended by me that the inquiry be postponed until after the petition has been published, and sufficient time elapsed to permit of the presentation of the counter-petitions.—G. H. KNIBBS, Surveyor, 21/6/89.

No. 10.

Mr. J. Monaghan to The Secretary for Lands.

Sir,

Greenhills, Shoalhaven, 22 July, 1889.

Will you kindly inform me why the petition of myself and others for a Drainage Union has not been published, as directed in section 3 of the Act 29 Victoria No. 1. The matter is of great importance to us. We have suffered a great injury by the delaying of it so long. Our lands are now flooded, and we cannot proceed with the drainage till the Union is formed. Early attention to the matter will oblige.

Yours, &c.,
JAMES MONAGHAN.

Executive authority is now being obtained for publishing the petition in the *Gazette*.

No. 11.

Executive Council Minute.

Subject:—Recommending publication of petition that certain landowners at Greenhills (Nowra) be constituted a Drainage Union.

Ms. S9-8,141.

Department of Lands, Sydney, 29 July, 1889.

It is recommended to His Excellency the Governor and the Executive Council that the within petition for the constitution of certain landowners named therein as a Drainage Union, to be known as the "Greenhills Drainage Union," be published in the *Gazette*, in accordance with the provisions of the 3rd section of the Drainage Promotion Act of 1865, 29 Victoria No. 1.

JAMES N. BRUNKER.

The Executive Council advise that the petition, herewith submitted, be published in the manner prescribed by the 3rd section of the Drainage Promotion Act of 1865.—ALEX. C. BUDGE, Clerk of the Council. Approved.—CARRINGTON, 30/7/89. Min. 87-44, 30/7/89. Confirmed, 6/8/89. Gazetted, 6/9/89. J. Monaghan informed, 11/9/89.

No. 12.

Gazette Notice.

DRAINAGE UNION.

Petition under the Drainage Promotion Act of 1865, Greenhills, Nowra.

Department of Lands, Sydney, 6 September, 1889.

In pursuance of the provisions of the Drainage Promotion Act of 1865, 29 Victoria No. 1, His Excellency the Governor, with the advice of the Executive Council, has directed the publication of a petition, signed by certain landowners at Greenhills, Nowra, praying that they may be constituted a Union, to be called the "Greenhills Drainage Union."

All persons interested are invited to state, within two months from this date, their objections, if any, to the proposed Union.

JAMES N. BRUNKER.

To His Excellency the Governor, Lord Carrington, and the Executive Council of New South Wales.

The petition of James Monaghan, James Graham, David Hyam, Mark Walker, John M'Arthur, Joseph Hyam, Lauchlan M'Pherson, Rev. Dr. Wm. Grant,—

SHOWETH—

1. That your petitioners are owners of certain land situated at Nowra, in the district of Shoalhaven, in the said Colony. Commencing on the eastern side of the old Bomaderry Ferry Road, and on the southern side of the Shoalhaven River; thence along the southern side of that river about forty-five chains fifty links; thence along the western boundary of Maria Glanville and David Hyam's property about forty-six chains and fifty links; thence along the eastern side of Mosses' Creek about thirty-nine chains; thence by a line bearing east about twenty-two chains to the western side of the Terrara Road; thence by the western side of that road seventy-three chains southerly; thence along the north side of the Greenwell Point Road westerly about fifty-nine chains; thence along the eastern boundary of town section number thirty-nine northerly eleven chains; thence along north side of Jervis-street westerly ten chains; thence along eastern side of Wallace-street northerly ten chains; thence along the south side of Douglas-street westerly eleven chains; thence along the southern side of Plunkett-street westerly seventeen chains; thence by a line bearing north eleven chains; thence along the southern side of

Worrige-

Worrigeestreet easterly six chains; thence along the eastern side of East-street northerly eleven chains; thence along the southern side of Junction-street easterly seven chains; thence along the east side of town section number seven northerly eighteen chains twenty links to the southern side of Terrara Road; thence along the southern side of that road twenty-seven chains fifty links; thence along the eastern side of Bomaderry Ferry Road, to the point of commencement,—as delineated and set forth in the plan hereunto annexed.

2. That the said land is low-lying and liable to be flooded with water, which may at any time accumulate over the same to an extent of three hundred and fifty acres, more or less, the natural channel or outlet having been blocked up by certain Government roads and causes arising from the cultivation of the land between the said land and the Crookhaven River; also, owing to the fact that an existing artificial drain has been filled in by an adjacent landowner, much to the injury and detriment of your petitioners.

3. That your petitioners are desirous that the undermentioned owners of the said tract of land may be constituted a Union within the meaning of an Act intituled "An Act to promote the better drainage of lands," 29 Victoria No. 1, such Union to be known by the name of the "Greenhills Drainage Union" for the purpose of compulsory drainage and contribution under this Act:—

No. 13.

Mr. J. Monaghan to The Secretary for Lands.

Sir,

Greenhills, Shoalhaven, 26 September, 1889.

I am in receipt of yours of the 11th instant, enclosing a portion of the *Government Gazette*, containing petition for Drainage Union. I did not observe until I saw it published in one of our local newspapers that one of the names was not correct. I refer to that which reads Mary Ann Horne; it should be Mary Ann Holme. The error is an unfortunate one, and if not corrected may lead to some unpleasantness, as she is the only person from whom I anticipate any opposition. Will you kindly have the error corrected at as early a date as possible, and oblige

Yours, &c,
 S.M. (for JAMES MONAGHAN).

Regazetted, 1/10/89. James Monaghan, with a copy of notice, 11/10/89.

Gazette Notice.

DRAINAGE UNION.

Petition under the Drainage Promotion Act of 1865, Greenhills, Nowra.

Department of Lands, Sydney, 1 October, 1889.

In pursuance of the provisions of the Drainage Promotion Act of 1865, 29 Victoria No. 1, His Excellency the Governor, with the advice of the Executive Council, has directed the publication of a petition, signed by certain landowners at Greenhills, Nowra, praying that they may be constituted a Union, to be called the "Greenhills Drainage Union."

All persons interested are invited to state, within two months from this date, their objections, if any, to the proposed Union.

JAMES N. BRUNKER.

To His Excellency the Governor, Lord Carrington, and the Executive Council of New South Wales.

The Petition of James Monaghan, James Graham, David Hyam, Mark Walker, John M'Arthur, Joseph Hyam, Lauchlan M'Pherson, Rev. Dr. Wm. Grant,—

SHOWERH—

1. That your petitioners are owners of certain land situated at Nowra, in the district of Shoalhaven, in the said Colony: Commencing on the eastern side of the old Bomaderry Ferry Road, and on the southern side of the Shoalhaven River; thence along the southern side of that river about forty-five chains fifty links; thence along the western boundary of Maria Glanville and David Hyam's property about forty-six chains and fifty links; thence along the eastern side of Mosses' Creek about thirty-nine chains; thence by a line bearing east about twenty-two chains to the western side of the Terrara Road; thence by the western side of that road seventy-three chains southerly; thence along the north side of the Greenwell Point Road westerly about fifty-nine chains; thence along the eastern boundary of town section number thirty-nine northerly eleven chains; thence along north side of Jervis-street westerly ten chains; thence along eastern side of Wallace-street northerly ten chains; thence along the south side of Douglas-street westerly eleven chains; thence along the southern side of Plunkett-street westerly seventeen chains; thence by a line bearing north eleven chains; thence along the southern side of Worrigeé-street easterly six chains; thence along the eastern side of East-street northerly eleven chains; thence along the southern side of Junction-street easterly seven chains; thence along the east side of town section number seven northerly eighteen chains twenty links to the southern side of Terrara Road; thence along the southern side of that road twenty-seven chains fifty links; thence along the eastern side of Bomaderry Ferry Road, to the point of commencement,—as delineated and set forth in the plan hereunto annexed.

2. That the said land is low-lying and liable to be flooded with water, which may at any time accumulate over the same to an extent of three hundred and fifty acres, more or less, the natural channel or outlet having been blocked up by certain Government roads and causes arising from the cultivation of the land between the said land and the Crookhaven River; also, owing to the fact that an existing artificial drain has been filled in by an adjacent landowner, much to the injury and detriment of your petitioners.

3. That your petitioners are desirous that the undermentioned owners of the said tract of land may be constituted a Union within the meaning of an Act intituled "An Act to promote the better drainage of lands," 29 Victoria number 1, such Union to be known by the name of the "Greenhills Drainage Union," for the purpose of compulsory drainage and contribution under this Act:—

NOTE.—The above notice is in lieu of that published in the *Gazette* of 6th September, 1889, respecting proposed Drainage Union, Greenhills, Nowra.

No. 15.

Mr. W. Lovegrove to The Secretary for Lands.

Sir,

109, Pitt-street, 23 October, 1889.

I have the honor to enclose a counter-petition to one published in the *Government Gazette* of the 6th September, on page 6127, for a Drainage Union in the Shoalhaven district.

It will be seen that there is no wish to stop the drainage, if it can be carried out fairly as regards others, and I think it would be well for the inhabitants at large that the present drains should be carefully examined, as the river is subject to heavy floods.

I have, &c.,

W. LOVEGROVE.

Submitted, that Mr. Surveyor Knibbs be instructed to report on the petition and counter-petition, as required by the 4th section of the Act 29 Vic. No. 1. In furtherance of the Acting Surveyor-General's memo. of 19th June, 1889; on cover to misc. 89-7,650.—R.H.D. S.F., 30/10/89.

Approved.—J.N.B., 12/11/89.

The

The 4th section provides that the Governor shall appoint the officer to report; therefore Executive Council minute has been prepared in this case. Papers are now referred to Mr. Surveyor Knibbs for investigation and report.—R.H.D. (for the U.S.), 4/12/89.

Vide memo. of instructions of the 19th June, 1889, herewith.—E.T. Report by my letter of 31st March, 1890, No. 3, with which this is enclosed.—GEO. H. KNIBBS, Surveyor.

[Enclosure.]

To His Excellency the Governor and the Honorable the Executive Council of New South Wales,—

The counter-petition of the undersigned inhabitants of Shoalhaven, owners and tenants of lands affected by a petition from James Monaghan, David Hyam, and others, for the drainage of certain lands, published in the *Government Gazette* of the 6th September, 1889, on page 6127,—

RESPECTFULLY SHOWETH :—

That the lands sought to be drained are situated in the parish of Nowra, county of St. Vincent, within the Municipal District of Nowra, and that the drainage is sought to be thrown into the parish of Numba, in the Municipal Districts of Central Shoalhaven and Numba.

That the said lands were sold by the Crown in a condition of swamp, and not with any right to drain.

That such lands, therefore, can only acquire a right to drain subject to prior right of owners, and are not to be drained by turning the neighbouring lands into swamps.

That the principal mover in this petition has already tried ineffectually to drain this swamp into the main river, and has only succeeded in doing injury to the river bank without corresponding benefit.

That the ancestor of said principal mover tried to drain this swamp through lands of Mrs. De Mestre, and did so much damage that the drain was at once partially closed, so as to diminish the volume of water.

That lately said mover, without leave of the owner, reopened the said drain, and was defeated in an action at law, and now seeks to reopen said drain under cover of law.

That your present petitioners have no objection to as much of the swamp being drained as is compatible with their own safe enjoyment of their lands on a plan strictly supervised by the Government, which shall include properly constructed flood-gates and other safeguards, and be under official control.

And your petitioners will ever pray.

HUGH M'KENZIE, owner of 918 acres, lately purchased for the sum of £44,000, and about 150 acres of said land is liable to be damaged by drain alluded to. Address, Terara.

JOHN APPERLY, owner of 43 acres, purchased ten years ago for the sum of £800, of which 7 acres is liable to be flooded by said drain being allowed open. Address, Terara.

JOHN BIRRELL, owner of 34 acres, purchased eight years ago for the sum of £700, and of which 4 acres is liable to be flooded by said drain. Address, Terara.

THOS. CONNOLLY, owner of 43 acres, purchased about six years ago for the sum of £1,005, of which 4 or 5 acres is liable to be flooded by said drain. Address, Berellau.

FRAS. LORD, trustee of Mrs. Holme, the owner of the land through which the drain passes, and which said land is affected thereby to the extent of about 30 acres.

No. 16.

Executive Council Minute.

Subject :—Recommending appointment of Mr. Surveyor G. H. Knibbs to report on petitions.

Ms. 89-15,374.

Department of Lands, Sydney, 16 November, 1889.

It is recommended to His Excellency the Governor and the Executive Council that Mr. Surveyor G. H. Knibbs be appointed, in accordance with the 4th section of the Drainage Promotion Act of 1865, to report on petition for, and counter-petition against, establishment of a Drainage Union at Nowra, to be called "Greenhills Drainage Union."

JAMES N. BRUNKER.

The Executive Council advise that the appointment herein recommended be approved.—H. C. BUDGE, Clerk of the Council. Min. 89-62, 19/11/89. Approved.—CARINGTON, 19/11/89. Confirmed, 26/11/89.

No. 17.

P. H. Morton, Esq., M.P., to The Under Secretary for Lands.

Sir,

Shoalhaven, 10 January, 1890.

Kindly inform me what has been done with application of James Monaghan and others for formation of Union under the Drainage Promotion Act.

This was made many months ago, and the applicants are thinking it is time their petition was granted.

I have, &c.,

P. H. MORTON, M.L.A.

Please inform that a counter-petition against constitution of the Union proposed having been received, the papers have been referred to Mr. Surveyor Knibbs, who has been appointed to investigate the matter and report.—R.H.D., 17/1/90. F.H.W. (for U.S.), 17/1/90.

Cor. Branch. Writer notified, 29/1/90.

No. 19.

P. H. Morton, Esq., M.P. to The Under Secretary for Lands.

Sir,

Shoalhaven, 3 February, 1890.

I would thank you if you would have sent to me a copy of the petition sent in against Drainage Union at Nowra.

Yours, &c.,

P. H. MORTON, M.L.A.

The petition, of which a copy is required, is with the papers under reference to Mr. Surveyor Knibbs for report, and great delay would be occasioned by their recall for the purpose of supplying the copy to Mr. Morton, M.L.A. Mr. Knibbs may, perhaps, be asked to supply a copy of the petition, should he not contemplate making his report immediately. Acknowledge, and say that, as the papers are with Mr. Surveyor Knibbs in the field, the information cannot be forwarded at present.—R.H.D., 7/2/90. Cor. Branch. P. H. Morton, M.P., informed, 12/2/90.

No. 21.

Mr. T. Marriott to The Secretary for Lands.

Greenhills Drainage Union, 29 Vic. No. 1.

Sir,

Nowra, 18 March, 1890.

Referring to the counter-petition of Hugh M'Kenzie and others to the above drainage petition, I have the honor to draw your attention to the fact that such counter-petition is not a counter-petition within the meaning of the Drainage Promotion Act, 1865, section 4, inasmuch as it does not represent one-fifth of the owners of the land sought to be brought within the Union.

I have, &c.,

THOS. MARRIOTT.

It would seem advisable to forward this letter to Mr. Knibbs for consideration in connection with the case now with him.—J.O'D., 24/3/90. Yes.—R.H.D. (for the Under Secretary), 25/3/90. Mr. Surveyor Knibbs.—W.H. U.S. (*per* J.O'D.), B.C., 27/3/90. Lands. Enclosed with my report of 31st March, 1890, No. 3.—GEO. H. KNIBBS, Surveyor.

No. 22.

Mr. Surveyor Knibbs to The Acting Surveyor-General.

Papers Ms. 89-17,509 and enclosures, Ms. 90-4,703 and enclosures, illustrative tracing A and locality maps B, C, D, and E, and No. 3, papers marked F and G, herewith. Appendices A and B.

Sir,

Petersham, 31 March, 1890.

Subject of report.

1. In compliance with your instructions of 6th December, 1889, No. 8, and with the terms of my appointment by the Executive Council, dated 19th November, 1889, I have the honor to forward herewith a report upon the petition by James Monaghan and others for the bringing of a certain area at Nowra, parishes of Nowra and Numba, county of St. Vincent, under the provisions of the Promotion of Drainage Act (29 Victoria No. 1), and upon the counter-petition of Hugh M'Kenzie and others relating to the same area.

2. An illustrative tracing, A, locality maps, B, C, D, and E, copies of press reports on case *Monaghan v. M'Kenzie*, F, and further representations in form of counter-petition, G, are enclosed herewith.

Drainage Union, area about 888 acres.

3. The area to which the petition refers is practically that, the boundaries of which are shown by an edging of red tint, on the accompanying tracing (A), and embraces an area of about 888 acres, exclusive of several short lengths of road in the town of Nowra, being situate almost wholly in the parish of Nowra, county of St. Vincent, a portion of about 35 acres only, viz., that in Mrs. Holme's area, being in the parish of Numba.

Premises of petition.

4. In the petition for the Drainage Union it is urged (in the second section) that (I) the land is liable to be flooded with water, which may accumulate to the extent of 350 acres; (II) the natural channel between the land and the Crookhaven River or Creek has been blocked by certain Government roads, and in consequence of the cultivation of the land intermediate; and (III) an artificial drain has been filled in by an adjacent landowner, to the detriment of the petitioners.

Proprietors not signing petition.

5. The petition is signed by all the parties immediately interested, excepting Frederick Moore, J. Smith, (Mrs.) Mary Ann Holme, and Maria Glauville, whose interests are small compared with those of the other persons signing.

Objections advanced against petition by persons affected by proposed union.

6. The allegations of the counter-petition are that (iv) the drainage from the parish of Nowra is sought to be thrown into the parish of Numba; (v) the lands were sold as swamps, without specific right to drain, (vi) in consequence of which (it is contended), in draining, the prior rights of owners of adjacent lands must not be infringed, as they would be by turning their lands into swamps; (vii) James Monaghan had already tried ineffectually to drain the swamp into the Shoalhaven, damaging the river bank, without corresponding benefit; (viii) the ancestor of James Monaghan tried to drain through the lands of Mrs. De Mestre, but the drain was at once partially closed, so as to diminish the volume of water flowing into the Crookhaven Creek; (ix) lately the said James Monaghan reopened the drain, was defeated in the attempt to keep it open by an action at law, and now seeks to reopen it under cover of law; (x) there is no objection to the drainage into the Crookhaven, provided it is prevented from damaging the lands of the counter-petitioners by control with flood-gates and other safeguards under official supervision.

7. The premises of both petition and counter-petition will be reported upon *seriatim*. The attached further objections (C) do not require special notice.

Petitioners' case—Condition of land.

8. The statement (i) is substantially correct. The swamp shown on tracing A is the accumulation referred to. In wet seasons it is extensive, but after a long period of fine weather is quite dry. Its surface generally is but slightly raised above the mean tidal height of the Shoalhaven River, and some portions are below that height. On the occasion of my inspection (after heavy rains) the water in the swamp was about $4\frac{1}{2}$ feet above this mean tidal level. This runs off very slowly.

Watershed of swamp and annual rainfall.

9. The watershed draining into the swamp is about 2,150 acres, representing an annual fall of 1,556 million gallons, each inch of rain being about 48 million gallons.

Effect of inundation.

10. Those parts of the swamp where water lies for any length of time are covered with a grass known as "swamp couch," which is not killed by excess of water, but whenever rain falls heavily many acres (owing to the flatness) of ordinarily-grassed land are covered, resulting in the rotting of the grass.

Present conditions a nuisance to inhabitants of the whole district, and occasion of loss to proprietors.

11. This decay gives rise to a very disagreeable effluvia, sometimes almost intolerable, and in consequence is an offence, if not also a menace, to the health of the residents of Nowra, and as the foetid water finds its way down the Crookhaven Creek it causes the people along its banks much annoyance, and (it is alleged) occasionally sickness.

12. The decay of the grasses is not only offensive, but is a loss to the owners of the land, the grazing capabilities of which are diminished, and the liability of the area to suffer repeated accumulations of water make its agricultural value very low, though the land is rich.

Rapid drainage necessary to ameliorate—Importance to town of Nowra.

13. These facts explain the desire on the part of the owners to drain the land, and exhibit the desirability of draining rapidly, the slow drainage now existing being insufficient to secure the land against the damage referred to. They also demonstrate the public importance of the drainage, that is, to the town of Nowra.

Position of original natural drainage—Evidence of its insufficiency.

14. (ii) That the natural channel between the land and Crookhaven Creek has been blocked by a Government road is admitted by both parties to be true. The original channel, marked 1 on tracing A, is its old site, but at the present time the water on the east side of the road is higher than that on the western. The blocking by this road was not adverted upon by the petitioners (so they informed me), because of the existence of the drain running into the Crookhaven Creek, viz., the easterly drain (2). It is important to observe that they evidently deemed the drain to confer superior advantages to those of the natural channel at this time; and further, that this natural channel could never have effectually drained the swamp, otherwise this drain would not have been cut, which was done about 1853 or 1856 (as I understand) by Monaghan's father.

Drainage at present into Crookhaven Creek not adequate.

15. (iii) This easterly drain (2 on tracing), referred to in the preceding paragraph, has been in use since the date mentioned, that is, for a period of about thirty-five years, and runs through Mary Ann De Mestre's (now Mrs. Holme's) 100 acres (as per tracing). It was cut under some old agreement, which, it is alleged, by the attorney of Mrs. Holme, was not properly observed; but it is neither sufficiently large nor deep to drain the swamp, and is at present in fair repair only.

Attempt by Monaghan and others to deepen and to clear drain into Crookhaven Creek—Attempt resisted and defeated.

16. The statement that it has been filled in is *ex parte*, and requires explanation. The drain proving inadequate, the flow being controlled by its smallness, and by the reeds growing in it, Monaghan and others had it cleared and deepened, entering upon the land of Mrs. Holme, in order to carry this out, which power, they contend, is conferred by section 21 of the Act 29 Vic. No. 1. M'Kenzie, under the authority of Mrs. Holme's attorney or trustee, had the stuff (removed by Monaghan) thrown again into the drain. This was done because the rise in the Crookhaven, consequent on the influx of this swamp water, flooded lands otherwise fairly dry—that is, lands in the De Mestre subdivision, on Crookhaven Creek, of which M'Kenzie is a large purchaser.

Easterly drain does not cause serious injury at present.

17. The drain, as it is, carries off a considerable body of water, but not sufficient to cause serious injury by rising the Crookhaven.

Objections not strictly a counter-petition within meaning of Act.

18. Before dealing with the allegations of the counter-petition, it is proper to observe that it is perhaps not strictly a counter-petition within the meaning of the Act, inasmuch as it represents less than one-fifth of the number of holdings (*vide* section 4, 29 Vic. No. 1), being signed, generally speaking, only by people whose holdings are without the area sought to be constituted a Drainage Union. The petitioners affect to regard it as irregular, a fact which is testified to also by their communication to the Minister for Lands (1890, 4,703 Misc.).

The

The Crown may consider objections to Union—Petitioners' scheme—Its cost to petitioners slight.

19. (iv) Deeming the Government quite entitled to consider the consequences of granting the Union, either *per se* or in regard to any alleged objections, I turn now to the statements of the counter-petition, and in regard to the first statement, it is, by admission of the petitioners, true—that is to say, the drainage which petitioners propose to effect is that in an easterly direction into Crookhaven Creek. The length of the drain would be small, the cutting is not deep, the fall is good, and altogether the cost would be slight. And this is clearly the reason why petitioners adopt this scheme, and seek to carry it into effect.

Effect of scheme on objectors' lands to be considered—Petitioners' condition at present better than heretofore.

20. (v) That such a procedure will affect the counter-petitioners is true, and this demands the consideration of the extent and value of involved interests. The lands of petitioners have been swampy to a large extent as long as history dates back—as long as there has been any record. When they were bought they were swampy, and so far from being under any disability of modern development, the petitioners have, since the cutting of the existing drains, been better off than heretofore.

Rights of owners of adjacent lands should not be assailed—Petitioners' scheme seriously affects objectors.

21. (vi) It may, therefore, at once be conceded, apart from any inquiry into law, that in draining those swamps the rights of owners of adjacent lands should be respected, and not set at naught by turning their lands into swamps. The implication in this (vi) statement of counter-petitioners is to some extent true, viz., that the uncontrolled outflow of this swamp into the Crookhaven will seriously affect them (the counter-petitioners) by the back-flow resulting from the rising of that creek swamping some portions of their lands, which portions would otherwise be comparatively free from water.

Drainage by Crookhaven Creek conditions—Fall of Crookhaven Creek about 3½ feet in 6¼ miles (from where drain runs into it)—Effect of drainage into Crookhaven Creek upon objectors' lands and generally—To clear Crookhaven of reeds would make it brackish.

22. To understand this it is necessary to remember that Crookhaven Creek is a narrow reedy creek, with a very sluggish, indeed almost imperceptible, flow for the first 3½ miles. When inspected, the water, at the point where petitioners' easterly drain runs into it, was 3½ feet above the mean tidal level at T of the Shoalhaven River (see lithograph B), and consequently is very little more than that above the mean tidal level at the point where it empties itself into the estuary called Crookhaven River, a distance of about 6¼ miles. Although the height was, as stated, so slight, it was sufficient to fill many small channels or hollows (by the back-flow), causing the grass to rot, as before explained. A few inches difference is a matter of some moment in this locality, and it is clear that if a large drain, such as would rapidly empty the swamp, were cut in the position of drain 2, it would, seeing the small fall and the reedy nature of the creek, make the flow along it (Crookhaven) very slow indeed, and cause it to rise, to the detriment of the lands along its course. And if this creek were cleared of the reeds, the water would become brackish by the tidal action, an injury to the grazing capacity of adjoining lands, seeing the owners rely on this creek for watering their stock.

Monaghan's drain (3) in bad repair and dangerous

23. (vii) The reference to Monaghan's drain applies to that marked B, which, like 2, is inadequate. This has been cut only a few years (about thirteen, I understand), and is in a bad state of repair. If not attended to, it may, when the Shoalhaven River is in flood, disastrously affect not only the petitioners' properties, but also those of the counter-petitioners, as the river in flood, if it once burst through the dilapidated flood-gates, will probably make an immense channel in the loose alluvium and carry everything before it. The great changes in the course of the river effected by the 1860 and 1870 floods show what may be anticipated.

Inference from the construction of this drain.

24. It is worth noting that petitioners would not have involved themselves in the large expense of this drain if they had been satisfied they could more effectually drain into the Crookhaven, with the unqualified rights which they now protest they have by existing law.

Actual effect of drainage into Crookhaven Creek.

25. (viii) The reference to the original partial closing of the drain is, so far as I can ascertain, correct. The effect of the rapid flow into Crookhaven Creek was to back it up, and flood lands otherwise comparatively free from water, as pointed out.

Motive of petitioners in seeking to drain into Crookhaven Creek—Inexpensiveness (*per se*) of petitioners' scheme.

26. (ix) It is obviously because Monaghan, through defeat in the District Court action (Monaghan and another v. Mackenzie) was prevented opening this drain (2) that the petitioners seek power, under the Drainage Promotion Act, to effectually drain their land, and they are anxious to do this, not by improving the northerly drain (3), but by enlarging and deepening the easterly one (2), the former being a matter of considerable outlay, the latter not at all costly (*per se*).

Objectors do not oppose limited flow into Crookhaven as at present or by nature.

27. (x) The counter-petitioners raise no objection to the limited flow into the Crookhaven, and there can be no doubt that although originally the whole of the water that escaped from the swamp, other than by evaporation or percolation, found its way into this creek, it did not so prejudicially affect the lands of the counter-petitioners as it now does.

28. I have now to report the attitude of the petitioners in the matter. They hold that they have a right to the easterly drain by user, and, by section 21 of the Act 29 Vic. No. 1, the right to enter upon any lands through which the drain may pass to cleanse and repair. That the counter-petitioners and any other persons have already effective remedy at law in cases where they suffer loss or injury (see section 22 said Act), which remedy they allege will remain equally whether Union be granted or not. That they seek to be constituted a Union in order to properly deal with the *pro rata* contribution by the benefited parties toward the expenses of drainage, and so efficiently set about the undertaking. That they have a natural right to drain into the Crookhaven Creek, seeing that the swamp water originally flowed therein, and that the remedy of the counter-petitioners is to free the 3½ miles of creek of reeds, and otherwise facilitate the flow.

Rejoinder

Rejoinder by objectors, who seek protection against being obliged to defend their interests by actions at law.

29. The counter-petitioners urge that although the petitioners are entitled to receive the benefit of the outflow through the easterly drain, they are not justified in widening or deepening it, or in any way increasing the natural flow, to the detriment of them (the counter-petitioners). That although the remedy at law is always open to them in cases of damage by the action of petitioners, yet the privilege asked for by said petitioners should not be conceded under the Act, excepting under such restrictions as defend their interests, or, in other words, that the concession of privileges by granting the Union should carry with it qualifications protecting those interests palpably and immediately threatened.

Scheme of drainage recommended—Conditions of outfall—Flood-gates required—Drainage would repay for outlay by enhanced value of land.

30. In regard to the best mode of draining, I beg to report that without doubt the swamp can most rapidly and effectively be drained by a sufficiently large cutting in the position of Monaghan's northerly drain (3). Here there is an available fall of 5 feet from water-level at date of inspection in a mile at mean tidal level, a foot less at mean high tide, and a foot more at mean low tide. This cutting would have to be tunnelled through the high river bank (as at present), and proper gates erected to keep back flood-waters in the Shoalhaven. The whole of the work is through soft alluvium, and, if done effectively and well, would, I believe, well repay its cost.

Conditions of outfall into Crookhaven—Damage to Lands along Crookhaven Creek—Protest of objectors reasonable, and objections valid.

31. It is not possible to drain as rapidly by turning the flow into Crookhaven Creek. Here the available fall is 5 feet from water-level at date of inspection in over 7 miles instead of 1 mile. Moreover, the damage to the valuable properties along the creek would be considerable. The attitude of the counter-petitioners appears to me reasonable and fair, and from my calculations of the effect of the outflow into Crookhaven on their properties, and my inspection upon the ground, I feel justified in strongly recommending their protest against granting the Union unlimited powers to your favourable consideration.

Proposed Union a general benefit if limitation urged by objectors be imposed. Petitioners strongly object to limitation—Unreasonableness of protest against the limitation of flow into Crookhaven.

32. With the suggested limitation there is no reason why a Union should not be granted. It would be a public benefit, as well as an advantage to the petitioners. In regard to the suggested limitation, I should report that the petitioners altogether decline to consent to the idea of flood-gates at the easterly drain, inasmuch as it prevents them getting the water off the swamp before it has rotted the grass; but they propose, really, to get rid of this nuisance at the expense of the landholders along the Crookhaven Creek. They deny that this is the alternative, but having given the matter my most careful consideration, having taken the necessary levels, and computed the effects, I am strongly of opinion that the protest against unlimited flow along drain 2. and the request for flood-gates or other limitation, is reasonable.

Date of examination.

33. The examination, survey, and general inspection was made by me during the period of 3rd to 5th March, 1890.

34. The petitioners were permitted to take a copy of the counter-petition, the persons signing the latter being agreeable.

35. I saw every person in the district immediately interested, and heard the allegations of both sides, before making the survey, which was, therefore, undertaken with a comprehensive knowledge of the scope of examination required.

I have, &c.,
GEORGE H. KNIBBS,
Surveyor.

Forwarded. Mr. Knibbs' report is of an exhaustive character, and from the thorough manner in which he has evidently considered every detail, it appears that the conclusion he has arrived at is a just one.—D. M. MITTLAND, 8/4/90.

[Enclosures.]

F.

Extract from the *Shoalhaven Telegraph*, of Wednesday, 29th August, 1888.

Shoalhaven District Court—Before His Honor Judge M'Farland—James Monaghan and another v. Hugh M'Kenzie—Destruction of property, £200.

MR. DAVIES, instructed by Mr. Marriott, with Mr. Whittell, for plaintiff; Mr. Bennett, instructed by Mr. Richards, for defendant.

Jury:—W. Strong, Jas. Ryan, J. D. Caines, and J. Caffery.

Mr. Davies, in opening the case, pointed out to the Jury that it was rather a peculiar one, and would demand their closest attention. The case had been brought under the Drainage Promotion Act, which was a very useful one, and dated from the year 1865. This Act was passed to enable persons whose land was liable to be swamped to cut a drain leading to any running stream in the neighbourhood, no matter if the land of some other person intervened. The object of the Legislature was that land might be reclaimed which was liable to be swamped, and they thought that people who might own land between that requiring draining and a running stream should not be allowed to act in a dog-in-the-manger sort of way by preventing the drainage of the water to a running stream. Messrs. Monaghan, Hyam, and Graham owned the land at the foot of the town, which was exceedingly good land if it were only drained; there was a running stream of water called the Crookhaven Creek, into which the water could be drained, but there was a strip of land lying between that stream and the land to be drained which belonged to a Mrs. Holme, and in which Mr. M'Kenzie had an interest. This slip of land was higher than that owned by Messrs. Monaghan, Hyam, and Graham, and it was found necessary to cut a drain through it: this was the object of the Act. [He here read sections 21, 23, and 25 of the Act.] Mr. M'Kenzie, through his servants, had interfered with that drain, and prevented the water flowing into the Crookhaven Creek; it was a most extraordinary action, and thoroughly inexplicable to him. [He here read an agreement signed by Patrick M'Manus, who at the time occupied the strip of land through which the drain was cut, stating that he was agreeable to the work being done, as Mrs. De Mestre had given her consent.] The drain was cut in the year 1856, and now, after the lapse of all those years, Mr. M'Kenzie tried to prevent the water being drained into the creek. The two men who had been employed by Mr. M'Kenzie to fill in the drain were brought before the Bench of Magistrates, but they (the Magistrates) dismissed the case, as they did not consider the men were liable for the action of their master. On that occasion Mr. M'Kenzie went into the witness-box and took all the responsibility upon himself. The jury should take into account the damage already resulting by the closing up of the drain. Should rain come there were 500 acres of land rendered useless if there was no drain to carry off the water.

Defendant pleaded not guilty—that the work had been done by the authority of the owner.

James

James Monaghan deposed : The land requiring to be drained is known partly by the name of the Greenhills Swamp, and partly by the name of the Greenhills Estate ; Messrs. Hyam and Graham are adjoining owners ; between the swamp and the Crookhaven Creek there is a piece of land in which defendant has an interest ; the drain was cut through the Greenhills Swamp, commencing at the corner of the town and running through the swamp and Ferrara Estate to the Crookhaven ; the drain was cut to drain land owned by Messrs. Hyam, Graham, and myself ; it was cut thirty-three years ago.

Mr. Davies pointed out the Drainage Promotion Act was passed in 1865.

Mr. Bennett here contended that the plaintiff must prove that the drain which had been cut previous to the passing of the Drainage Prevention (Promotion) Act came under the provisions of that Act, and he proceeded to read certain clauses of the Act. The defendant (query, plaintiff) must prove that the Drainage Prevention (Promotion) Act was in existence so far as this drain was concerned, and that the formalities of the Act had been complied with. He applied for a nonsuit.

After hearing arguments, His Honor held that as the drain had been cut some years before the passing of the Act it could not have been cut in contemplation of the Act, and therefore did not come under its provisions. There was nothing in its provisions that placed a drain cut previous to the passing of the Act on the same footing as a drain subsequently made. He, therefore, nonsuited plaintiff.

Mr. Davies asked His Honor to make a note that he objected to His Honor's ruling—that the drain did not come under the provisions of the Act.

His Honor allowed defendant four witnesses' expenses.

Extract from *Broughton Creek Register*, of Saturday, 1st September, 1888.

Shoalhaven District Court—Friday, 24th August, 1888—Before His Honor Judge M'Farland.

Lord v. Monaghan.

In this case the plaintiff, as a trustee for Mrs. M. A. Holme, claimed £200 from James Monaghan for damage to property.

Mr. Bennett, instructed by Mr. Richards, for plaintiff ; Mr. Davies, with Mr. Whittell, instructed by Mr. Marriott, for defendant.

Mr. Bennett said that plaintiff merely claimed for interference with the drain, and not for any damages.

Mr. Davies argued that plaintiff, as trustee, had no possible right to sue there at all. Mr. Monaghan did not claim the right to go upon the land to cut the drain, but he claimed the right, under an agreement made in 1853, to have the drain cleared out and repaired. He claimed the right of the drain by user, and when he set up that bona fide title the jurisdiction of the Court was ousted.

After hearing the evidence of Thomas Robson and James Monaghan, which was similar to that given in the case heard before the Bench of Magistrates,—

His Honor held that sufficient evidence had been adduced to show what defendant had done was by right of user. He accordingly struck the case out, as that Court had no jurisdiction in the matter. No costs allowed.

Enclosed with my report of 31st March, 1890, No. 3.—GEO. H. KNIBBS, Surveyor.

G.

To His Excellency the Right Honorable Charles Robert Baron Carrington, Governor-in-Chief, and to the Honorable the Executive Council of New South Wales, the petition of the undersigned,—

RESPECTFULLY SHOWETH,—

1. That on the 6th day of September, 1889, a petition was published in the *Government Gazette*, on page 6127, for a Drainage Union, to be known as the "Greenhills Drainage Union."

2. That an inquiry has been ordered into the merits of the said Drainage Union.

3. That your petitioners are owners of lands in fee a reversum, which will be adversely affected by the said drainage, should it be unskillfully carried out, or should the fall prove insufficient to effect a quick drainage.

4. Your petitioners trust, therefore, that as by the wording of the Act it is not necessary to grant their prayer, their petition may only be acceded to on their signing a bond to execute their work under scientific direction, and with such safeguards as may prevent the Drainage Union from transferring their water to your present petitioners' land.

And your petitioners will ever pray.

H. de M. Williams.

F. H. Williams.

P. F. Williams.

A. de Mestre, landowner.

Mary Ryan, landowner.

John J. Emery, freeholder.

Daniel Walsh, leaseholder.

Michael Lenehan, leaseholder.

Joseph Forsyth, jun., leaseholder.

James Pollock, leaseholder.

Edward Connolly, leaseholder.

Thomas J. Connolly, farmer and leaseholder.

John East, farmer and leaseholder.

P. Manning, leaseholder.

Alex. Fleming, landowner.

James Condon, farmer and leaseholder.

John Caffery, farmer and leaseholder.

Jacob Hewett, farmer and leaseholder.

H. Wheatley, landowner.

Enclosed with my report of 31st March, 1890, No. 3.—GEO. H. KNIBBS, Surveyor.

No. 23.

Memo. by The Acting Surveyor-General.

Petition for Greenhills Drainage Union, parish of Nowra, county St. Vincent, within Municipal District of Nowra.

THIS is an application by certain proprietors to be constituted a Drainage Union, by name of "The Greenhills Drainage Union," under the Act to promote the better drainage of lands, 29 Victoria No. 1.

The petition has been duly published, and a survey made, with levels ; and a comprehensive report is herewith.

The tract of land to be drained is shown by red edging on the accompanying tracing or sketch plan marked "A." It contains about 888 acres, comprising thirteen holdings, of which the owners, excepting three, concur in the petition ; and one of these three, viz., Mrs. Holme, has subscribed to a counter-petition.

The counter-petition is lodged by five owners, one having a holding within, and the others having holdings without, the said tract of land proposed to be drained. This counter-petition may not perhaps be regarded as in conformity with the law, which prescribes that a counter-petition may be presented by other owners of such tract of land being not less than one-fifth in number of holdings, nevertheless it should probably receive due consideration on public grounds.

A part (about half) of the said tract of land is known as Worrigea Swamp, and is subject to inundation to a greater or lesser extent, according to rainfall. The watershed of the swamp is about 2,150 acres, including part of the town of Nowra.

For enclosure
see No. 22.

The

The swamp, under present conditions, is shown to be an offensive nuisance to inhabitants, and the better drainage thereof would be beneficial to the promoters of the Union and to the public.

As before stated, there is a counter-petition by certain owners (which may, perhaps, be informal), representing objections, and alleging that their interests would be detrimentally affected by the scheme of drainage intended to be adopted by petitioners. It is shown that such objections are reasonable, and are tenable under the circumstances.

Under the Act 29 Victoria No. 1 there are provisions for compensation for any damages consequent on drainage; and therefore it might be held that those objecting (by counter-petition, possibly of informal character), who are apprehensive of probable damage, should be left to such remedy as the law allows.

It is shown that considerable damage to vested interests would result from the scheme of drainage desired by petitioners, viz., *via* Crookhaven Creek.

Referring to the Act above mentioned, section 4, it is provided that the person authorized to survey shall report on the best mode of effecting the drainage of such tract, whence it may be inferred that a Drainage Union may be constituted conditionally, *i.e.*, subject to adoption of a means or scheme of drainage to be indicated as the best.

For the reasons set forth at length by Mr. Surveyor Knibbs in his report, a scheme or means of drainage northward to the Shoalhaven River, indicated by Monaghan's drain marked "3" on sketch plan, is, in my opinion, the best, and is recommended for approval—its principal feature being a sufficient outfall, about 5 feet in 1 mile, by a drain about midway through the aforesaid tract of land; whilst, by the means proposed by petitioners, viz., *via* Crookhaven Creek, a like outfall may be obtained in 7 miles. The effect of such latter discharge of storm-waters would be to cause damage to other lands, the proper protection of which would involve considerable expenditure in works, possibly as much as by the more direct drainage or discharge suggested northward into the Shoalhaven River.

I have briefly summarised the results of Mr. Surveyor Knibbs' inquiry and report, which is of comprehensive character.

E. TWYNAM,
15 April, 1890.

In view of this report, it is submitted that Executive authority be obtained for proclamation of Greenhills Drainage Union, under the 3rd section of the Drainage Promotion Act of 1865, as applied for by petitioners (*vide* petition published 1st October, 1889), the drainage to be effected by drain known as Monaghan's northerly drain, No. 3 on plan, discharging into the Shoalhaven River. Attention is invited.—R.H.D., 26/4/90.

Submitted for approval.—W.H., 2/5/90. Approved.—J.W.B., 6/5/90. Inform Mr. P. H. Morton, M.P., of proposed action.—W.H., 2/5/90. Mr. Morton, M.P., informed.—12/5/90.

No. 24.

The Under Secretary for Lands to Mr. J. Monaghan.

Sir,

Department of Lands, Sydney, 23 April, 1890.

Referring to your letter of the 1st instant respecting the sum of £25 to be paid into the Treasury to meet certain preliminary expenses in connection with the proposed Greenhills Drainage Union of Nowra, I have the honor to inform you that nothing can be done until the required deposit is paid.

I have, &c.,

W. H. CAPPER
(For the Under Secretary).

No. 25.

The Acting Mayor, Nowra, to The Secretary for Lands.

Hon. Sir,

Council Chambers, Nowra, 25 April, 1890.

I have the honor to inform you that at a meeting of this Council, held on Tuesday last, it was unanimously resolved, "That the Minister for Lands be respectfully requested to take immediate steps to have the Drainage Union applied for a few months back proclaimed." In transmitting the foregoing resolution, I might point out that the portion of land sought to be drained is termed the Greenhills Swamp, and is situated on the easterly side of the town of Nowra, and covers a considerable area. The stench from this at the present time is intolerable, owing to the large quantity of decaying vegetable matter. To this is attributed the great amount of sickness at present prevailing in our midst, during the last few months there having been nine deaths amongst children in and adjacent to the town. In the interests of the public health it is hoped that you will not lose any time in having the Union referred to above proclaimed.

I have, &c.,

R. PATTERSON,
Acting Mayor.

No. 26.

The Acting Surveyor-General to The Under Secretary for Lands.

Greenhills Drainage Union at Nowra, Shoalhaven, under 29 Victoria No. 1.

1 May, 1890.

In compliance with provisions of the Drainage Promotion Act (section 5), a sum of £25 was paid into the Treasury as a fund to meet expenses incurred. An inquiry and survey in respect of the petition for this Drainage Union was lately made by Mr. Surveyor Knibbs, the cost of whose services amounts to £22 14s., which sum is chargeable against the fund.

E. TWYNAM.

[Enclosure.]

[Enclosure.]

Greenhills Drainage Union at Nowra.

It will be requisite to arrive at the expenditure incurred for this survey and report, to be charged against the fund.
Mr. Maitland is requested to supply statement in detail.

The cost of this survey was as follows:—	£ s. d.	E.C.T.
Mr. Knibbs, 6 days in field)	16 1 0	
Do. 4½ do office {	1 8 0	
Labourers' wages	4 10 0	
Travelling allowance for 6 days	0 15 0	
Coach fares.....	£22 14 0	
	D. M. MAITLAND,	30th April, 1890.

No. 27.

P. H. Morton, Esq., M.P., to The Under Secretary for Lands.

Sir,

The Southern Club, Sydney, 7 May, 1890.

I would thank you if you could supply me with a copy of the report sent in by Mr. Surveyor Knibbs on the application for Drainage Union at Nowra.

I am, &c.,

P. H. MORTON, M.L.A.

Submitted, as to whether Mr. Morton, M.P., should be supplied with copy of Mr. Knibbs' report respecting proposed Drainage Union at Nowra.

No. 28.

The Under Secretary for Lands to P. H. Morton, Esq., M.P.

Sir,

Department of Lands, Sydney, 12 May, 1890.

Referring to the petition, as per copy enclosed, I have the honor to inform you that the Secretary for Lands has approved of Executive authority being sought for the proclamation of the Greenhills Drainage Union, under the 3rd section of the Drainage Promotion Act of 1865, the drainage to be effected by a drain known as Monaghan's northerly drain, discharging into the Shoalhaven River, this route being reported by the surveyor as preferable to the one by way of Crookhaven Creek, suggested in the petition.

Copy of petition
as published in
Gazette.

I have, &c.,

WM. HOUSTON,

Under Secretary (*per* R.H.D.)

No. 29.

Mr. J. Monaghan to The Secretary for Lands.

Sir,

Greenhills, Shoalhaven, 14 May, 1890.

I am in receipt of yours of the 12th instant to P. H. Morton, Esq., M.P. I will put it before the other petitioners as soon as possible, but for myself I hereby give you notice not to include my name or property in any such proclamation, as I will not accept of any substitute for what has been asked for in the original petition.

Yours, &c.,

JAMES MONAGHAN.

Misc. Branch,—Please connect the previous papers.—R.L. (*pro* E.A.B.), 19/5/90. Required papers with Misc. 90-6,978, which stands noted to Mr. Stuart, 22/5/90.—W.T.W., 22/5/90., Mr. Stuart.

No. 30.

Executive Council Minute.

Subject:—Recommending Proclamation of a Drainage Union at Nowra, to be named "Greenhills Drainage Union."

Ms. 90-6,978.

Department of Lands, Sydney, 21 May, 1890.

It is recommended to His Excellency the Governor and the Executive Council, that, in accordance with the provisions of section 3 of the Drainage Promotion Act of 1865, the landowners (and their successors) named in the enclosed copy of petition for the constitution of a Drainage Union at Nowra, which was published in *Gazette* of 1st October, 1889, be now declared to be a Drainage Union, to be known as the "Greenhills Drainage Union," for the purpose of draining the tract of land the boundaries of which are shown by red edge on the enclosed plan A, and which shall be effected by means of the northerly drain marked 3 on plan, and discharging into the Shoalhaven River.

J. H. CARRUTHERS.

Approved.

No. 31.

Mr. T. Marriott to The Under Secretary for Lands.

Sir,

Nowra, 23 May, 1890.

I have the honor to request that a copy of the report furnished by Mr. Knibbs, Government surveyor, on the proposed drainage of the Greenhills land at Nowra, be forwarded to me, as solicitor to the petitioners seeking to constitute themselves a Union under the provisions of the Drainage Promotion Act of 1865, 29 Vic. No. 1.

I have, &c.,

THOS. MARRIOTT.

No. 32.

No. 32.

Mr. J. Monaghan to The Under Secretary for Lands.

Sir,

Sydney, 23 May, 1890.

On behalf of the petitioners for constitution of a Drainage Union at Nowra (Greenhills), I beg to request that you will be so good as to supply me with a copy of Mr. Surveyor Knibbs' report in connection therewith, and also a copy of the tracing accompanying such report, the expense thereof to be defrayed out of the deposit of £25 lodged in connection with this matter. I have further to request that all proceedings for constitution of the Union be stayed until petitioners have had an opportunity of making further representations respecting the proposals made in Mr. Knibbs' report referred to.

I have, &c.,

JAMES MONAGHAN.

Submitted, that a copy of Mr. Surveyor Knibbs' report and accompanying tracing be supplied to Mr. James Monaghan, and proceedings stayed, as requested. The sum of £2 6s. is available to defray expenses of copying, &c., being balance of deposit of £25 lodged by petitioners. Mr. Morton, M.P., also applies for a copy of the surveyor's report, which may perhaps be supplied to him. Mr. Marriott, who represents himself as solicitor for the petitioners, has also asked for a copy of the report. Submitted, as to whether the copy should be sent to him or to Mr. Monaghan.—J.O'D., 3/6/90.

Perhaps it will be well to furnish a copy to Mr. Marriott, and to inform others of such.—R.H.D., 4/6/90. Submitted.—F.H.W. (for U.S.), 5/6/90. Approved.—J.N.B., 6/6/90. Mr. Smith copied the report. The cost was 16s. 8d.—R.H.D., 9/6/90. Cor.—James Monaghan, Thomas Marriott, with copy of report, 11/6/90. Will the Chief Draftsman please state the cost of supplying a copy of the tracing accompanying Surveyor Knibbs' report.—J.O'D., 14/6/90. The Chief Draftsman. Mr. Shaw. to supply to Mr. De Low.—C.J.S., 12/6/90. A copy of the tracing would cost 10s. 6d.—M.S., 19/6/90. Misc. Lands.

No. 33.

The Under Secretary for Lands to Mr. T. Marriott.

Sir,

Department of Lands, Sydney, 11 June, 1890.

Referring to your letter of 23rd ultimo, asking, on behalf of the petitioners for constitution of a Drainage Union at Nowra (Greenhills), for a copy of Mr. Surveyor Knibbs' report in connection therewith, I have the honor to forward herewith a copy of the report, as desired; cost of copying, 16s. 8d.

I have, &c.,

WM. HOUSTON,

Under Secretary (*per* R.H.D.).

No. 34.

The Under Secretary for Lands to Mr. J. Monaghan.

Sir,

Department of Lands, Sydney, 11 June, 1890.

Referring to your letter of the 23rd ultimo, applying, on behalf of the petitioners for constitution of a Drainage Union at Nowra, for a copy of Mr. Surveyor Knibbs' report in connection therewith, I have the honor to inform you that a copy of the report in question was sent to Mr. Marriott, solicitor for the petitioners, in reference to his letter of even date to your communication.

I have, &c.,

WM. HOUSTON,

Under Secretary for Lands.

No. 35.

Mr. T. Marriott to The Under Secretary for Lands.

Sir,

Nowra, 17 June, 1890.

Referring to your letter dated 11th instant, Misc. 90-7,714, forwarding copy of Mr. Surveyor Knibbs' report on the proposed Drainage Union, I have the honor to request that a tracing of the plan prepared by that gentleman be also furnished to the petitioners, and also that the costs for supplying same, together with the cost for copying the report, be defrayed from the funds lodged by the petitioners, and now remaining in your hands.

I have, &c.,

THOS. MARRIOTT,

Solicitor for Greenhills Union.

Cost of tracing will be 10s. 6d. A balance of £1 9s. 4d. remains, from which cost can be paid. Please prepare tracing.—J.O'D., 23/6/90. Mr. McLean. Special. Mr. Shaw.—R.M., 23/6/90. Tracing herewith.—M.S., 25/6/90. Mr. O'Dwyer. Forward tracing to Mr. Marriott, please.—J.O'D., 27/6/90. Cor. Branch. Received, 27th June, 1890. Mr. Marriott, solicitor, with tracing, 4/7/90.

No. 36.

The Under Secretary for Lands to Mr. T. Marriott.

Sir,

Department of Lands, Sydney, 4 July, 1890.

In response to the request in your letter of the 17th ultimo, I have the honor to forward herewith a copy of the tracing showing proposed scheme for the Greenhills Drainage Union, price 10s. 6d., which will be defrayed from the fund in hand.

I have, &c.,

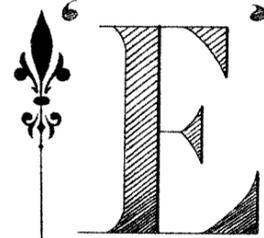

WM. HOUSTON,

Under Secretary (*Per* R.H.D.)

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

WESTERN SUBURBS (CITY OF SYDNEY) SEWERAGE
SCHEME RETICULATION AND COMPLETION BILL.

(MESSAGE No. 20.)

Ordered by the Legislative Assembly to be printed, 2 July, 1890.

By Deputation from the Governor,
ALFRED STEPHEN,
Lieutenant-Governor.

Message No. 20.

In accordance with the provisions contained in the 54th section of the Constitution Act, the Governor recommends for the consideration of the Legislative Assembly the expediency of making provision to meet the requisite expenses in connection with a Bill to sanction the carrying out of certain works in connection with the reticulation and completion of the Western Suburbs Sewerage Scheme.

NEW SOUTH WALES.

ROADS.

(EXPENDITURE ON, IN GUNNING DISTRICT.)

Ordered by the Legislative Assembly to be printed, 21 May, 1890.

Return prepared in fulfilment of a promise made by the Honorable the Secretary for Public Works, in reply to a Question, No. 1, Votes No. 11, 21 May, 1890, by Thomas Colls, Esq., M.P., viz. :—

Question.

What amount of money has been expended on the road from Wheco to Gunning, *via* Byalla, also from Gunning to Grabben Gullen, *via* Clear Hills, also from Wheco to Crookwell, from January, 1887, up to December, 1889; and what amount of money (if any) is available up to present date?

Answer.

ROADS.

Wheco Post Office, *via* Byalla, to Gunning :—

£459 16s.—Expended from January, 1887, to December, 1889.
£57 12s.—Expended during present year, 1890.
£118 8s.—Amount now available.

Gunning, *via* Clear Hill, to Grabben Gullen :—

The above-mentioned road forms portion of road from Crookwell, *via* Grabben Gullen, to Gunning.
£688 19s.—Expended from January, 1887, to December, 1889, on the whole road.
£399 15s. 6d.—Expended on portion of road referred to in the question.
£506 1s.—Now available for whole road.

Wheco to Crookwell :—

£661 6s.—Expended from January, 1887, to December, 1889.
£204 10s. 6d.—Now available.

ROADS.

(PAPERS RESPECTING REPAIR OF—FROM MILLTHORPE TO LUCKNOW, *VIA* SPRING HILL.)

Ordered by the Legislative Assembly to be printed, 17 July, 1890.

[*Laid upon the Table in answer to Question No. 19, on 17 July, 1890.*]

(19.) ROAD MILLTHORPE TO LUCKNOW, *via* SPRING HILL.—MR. DALTON ASKED THE SECRETARY FOR PUBLIC WORKS,—

(1.) Has he any objection to lay upon the Table of this House, all papers, petitions, and other documents, relative to the application of the residents of Millthorpe, requesting a grant for the repair of the road from Millthorpe to Lucknow, *via* Spring Hill?

(2.) If there is no objection, will he kindly say upon what date the said papers will be laid upon the Table as desired?

Road Millthorpe to Lucknow.

[Presented by Thomas Dalton, M.P., urging immediate report, 2/6/90. Acknowledged, 4/6/90.]

Petition.

To the Honorable The Secretary for Public Works,—

Sir,

Millthorpe, 19 May, 1890.

We, the undersigned, residents of the district and users of the undermentioned road, beg respectfully to apply to have a sum of money granted for repair of the road Millthorpe to Lucknow, *via* Spring Hill. This road is a main road, and a very large amount of traffic is carried on it to the railway stations. It passes through a large farming district, and, being at present not even cleared, is quite unfitted for the requirements. We would therefore ask you to have inquiries made in the proper quarter, with a view to speedy remedy.

And your petitioners will ever pray, &c.

[Here follow 14 signatures.]

Please send to-night for report of local officer.—J.B., 2/6/90. B.C., Commissioner for Roads.
Mr. Adams for report. Is road on schedule?—P.J.F., 4/6/90.

Have examined this road; it is in a very bad state. Would recommend that some clearing and forming be done, and that the Vote "Millthorpe to Lewis Ponds" be debited with same, as the road is common to both for some distance from Millthorpe.—J.H.A., 20/6/90. The Assistant Engineer, B.C.

Minute by Mr. Assistant-Engineer Nardin.

Road Millthorpe to Lucknow, *via* Spring Hill.

23 June, 1890.

MR. J. H. ADAMS, the local officer, reports that this road is in a very bad state, and he recommends that some forming and clearing be done and the cost charged against Vote "Millthorpe to Lewis Ponds," on the ground that, for some distance, the road is common to both places.

I advise that this be done, only Mr. Adams must furnish fuller particulars and estimate.

E. A. NARDIN,

The Commissioner and Engineer-in-Chief, Roads and Bridges.

Assistant-Engineer.

Mr. Adams for estimate.—R.H., 23/6/90. I find that there are 4 miles of road which should be formed, metalled, drained, &c. This will cost £421 per mile = £1,684. Only a small portion of this could fairly be taken from "Millthorpe to Lewis Ponds" Vote. It might therefore be advisable to place this road on schedule next year.—J.H.A., 4/7/90. The Assistant Engineer, B.C.

Mr. Adams estimates the amount required at £1,684 (?) a sum which, of course, cannot be charged in the manner he suggests. Will he say if this construction can, in his opinion, stand over until next year?—E.A.N., 5/7/90. Mr. J. H. Adams, B.C.

Yes. The work can stand over until next year.—J.H.A., 6/7/90. The Assistant Engineer, B.C., —I think some provision may be made for next year.—E.A.N., 7/7/90. The Commissioner, B.C. Recommended to stand over till next year.—R.H., 8/7/90. Under Secretary. Submitted.—J.B., 9/7/90. Approved.—B.S., 10/7/90. Inform.—J.B., 14/7/90. T. Dalton, Esq., M.P., 14/7/90.

The Under Secretary for Public Works to T. Dalton, Esq., M.P.

Sir,

14 July, 1890.

Referring to the petition presented by you from certain residents of Millthorpe requesting a grant for the repair of the road from that place to Lucknow, *via* Spring Hill, I am directed by the Secretary for Public Works to inform you that the consideration of this matter must stand over until next year.

I have, &c.,

J. BARLING.

1890.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROADS.

(RETURN SHOWING AMOUNTS VOTED AND EXPENDED ON—TUENA TO BINDA, BINDA TO PEELWOOD, &c.)

Ordered by the Legislative Assembly to be printed, 29 July, 1890.

[Laid upon the Table in answer to Question No. 7, on the 29th July, 1890.]

Question.

7. MR. BALL asked THE SECRETARY FOR PUBLIC WORKS.—What money has been voted and expended on the following roads for the years 1888 and 1889 :—Road from Tuena to Binda, *via* Junction Point; road Peelwood to Binda; road Laggan to Binda; road Binda to Wheeo; road Binda to Crookwell; road Wheeo to Old Man Ganyah Creek, on road from Goulburn to Burrowa; road Laggan to Taralga?

Answer.

Road from Tuena to Binda, *via* Junction Point :—

Vote for 1888, £160; expenditure, £159 2s. 3d. Vote for 1889, £160; expenditure, £124 12s.

Road Binda to Peelwood :—

Vote for 1888, £112; expenditure, £79 4s. 6d. Vote for 1889, £112; expenditure, £58 17s. 6d.

Road Laggan to Binda :—

Vote for 1888, £130; expenditure, £105 19s. Vote for 1889, £130; expenditure, £154 1s.

Road Wheeo to Binda :—

Vote for 1888, £180; expenditure, £180. Vote for 1889, £180; expenditure, £175 7s.

Road Crookwell to Binda :—

In the year 1888 this road was included in the vote "Goulburn, *via* Crookwell, to Binda," of which £1,550 was given to the Crookwell District, *viz.* Mount Wayo, *via* Crookwell, to Binda, and the expenditure on the Crookwell to Binda portion was £499 1s. 9d. Vote for 1889, £350; expenditure, £350.

Road Wheeo to Old Man Ganyah (portion of the road from Wheeo to Burrowa) :—

Vote for 1888, £150; expenditure, £147 6s. Vote for 1889, £150; expenditure, £144 17s.

Road Laggan to Taralga :—

In 1888 and 1889 this formed portion of the road Gullen, *via* Crookwell and Laggan, to Taralga, with vote of £850; the principal expenditure being between Crookwell and Laggan. Amount spent between Laggan and Taralga—1888, £99 2s.; 1889, £114 6s. 6d.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

ROAD BETWEEN NARRABRI AND THE QUEENSLAND
BORDER.

(PETITION FROM CERTAIN RESIDENTS OF THE TERRITORY BETWEEN NARRABRI AND THE QUEENSLAND BORDER.)

Received by the Legislative Assembly, 20 November, 1890.

To the Honorable Members of the Legislative Assembly of New South Wales, in Parliament assembled.

The Petition of the undersigned, residents of or interested in that portion of the territory of the Colony lying between the Town of Narrabri and the Queensland Border, about and beyond Angledool,—

HUMBLY SHOWETH :—

That the said Territory contains some of the best land in New South Wales ; that said land is being rapidly and extensively taken up and used under the various provisions of the Crown Lands Act ; that numerous and large consequences are involved (greater, we believe, than obtain in regard to most other routes or roads in the north-west), in the direct line of road or route starting at Narrabri, ending at the Border beyond Angledool, *via* Bulcarrol, Nowli, Bulyeroi, Colletudla, Merriwinebone, Pockataroo Old Station, Collarendabri, the 60-mile track on to Angledool, and, may be, Currawdinghi, covering some 160 or may be more miles ; that for lack of some rough but substantial bridges, culverts, embankments, drainage, water provision or storage, and sundry other reasonable works, a large and valuable portion of the Colony is periodically shut off from supplies as well as from civilization for months together ; or an immense traffic in stock, wool, and sundries has to go round some scores of miles to obtain water, which no doubt can be stored or obtained ; that these conditions involve immense losses to the State, and to the individuals, rendering steady permanent industry all but impossible ; that certain teams laden with wool from the Border stations have not yet (31st August) reached their natural output (the nearest railway station), although they have been *en route* since January ; that, in consequence, the lessces or owners of those stations purpose sending (it is reported to your Petitioners) their future fleeco to the seaboard, *via* the sister Colony ; that Her Majesty's mails have kept no time at all during the year ; that supplies for stations, townships, or families have been all the present year trying to reach their destination, which should have been accomplished in two or three weeks ; that thirty or more teams in batches of that number are periodically delayed several months, especially at the Thalaba, and thence to Collarendabri, or at other watercourses that could be easily made crossable at reasonable times.

Your Petitioners therefore pray your Honorable House to order that the abovementioned line of road be classified forthwith as a second-class road, and that the various works required to make it usable at all reasonable times be done without unnecessary delay.

And your Petitioners will ever pray.

[*Here follow 241 signatures.*]

No. 1.

The Mayor of Lismore to The Surveyor-General.

Sir,

Council Chambers, Lismore, 27 June, 1879.

I have the honor to enclose herewith copy of a motion passed at the last meeting of the Municipal Council of Lismore, requesting that you will be good enough to give the necessary instructions for the setting out of the foot and carriage ways of the Township of Lismore, in pursuance of the Acts 2 Victoria No. 2, and 19 Victoria No. 10.

2. Perhaps it is unnecessary to intimate to you that application has been made twice before this for the alignment of the streets of the Township of Lismore—once before and once since it has been proclaimed a Municipality—and I would further beg to add that several police cases have had to be abandoned in consequence of not being able to prove legally the boundary lines of the streets. The alignment of the streets are further urgently required to enable the Municipal Council to proceed with Municipal provisions for the prevention of epidemic and infectious diseases, which have often been a serious cause of alarm in this locality during the summer months.

I therefore trust the matter will receive early attention.

I have, &c.,

JAMES STOCKS.

Mayor.

In the first instance, it is recommended that the information customarily furnished to new Municipalities be supplied to the Lismore Council, and they be asked to comply with the circular letters relative to particularizing those streets they propose to form or expend money upon, and to provide alignment posts and cost of erecting them under the supervision of the surveyor.—ROBT. D. FITZGERALD (for Surveyor-General), 10th July, 1879.

Inform.—H.W., 15/7/79. The Council Clerk, Lismore, informed, 16th July, 1879. Await reply, 16.

[Enclosure.]

ALDERMAN ALBINGHAM moved, and Alderman Coleman seconded, "That His Worship the Mayor apply to the Surveyor-General, requesting that he or his deputy set out the breadth of the carriage and foot ways of the Township of Lismore, and to mark the footways by posts wherever necessary, in pursuance of the Acts 2 Victoria No. 2, and 19 Victoria No. 10." Carried unanimously.

23rd June, 1879.

WM. CARSON,

Acting Town Clerk.

No. 2.

The Council Clerk, Lismore, to The Under Secretary for Mines.

Sir,

Council Chambers, Lismore, 28 July, 1879.

I beg to acknowledge receipt of your letter of the 16th instant, together with circulars, dated respectively 1st February, 1878, and 14th September, 1876, conveying instructions of your Department as to the alignment of the streets of this municipality, and in reply thereto, beg to state as follows:—The necessary posts will be immediately provided, size 9 in. x 9 in., squared above ground, and to be sunk 2 ft. 6 in. Will you be good enough to let me know if the size of the posts herein described is in accordance with the requirements. Should no reply be received, the Council will take the necessary steps to have them prepared at once ready for the surveyor, whose arrival is anxiously anticipated by the Council.

I have, &c.,

WM. OSBORNE HARMAND,

Council Clerk.

The Surveyor-General.—G.E.H. (for U.S.), B.C., 6/8/79.

No. 3.

No. 3.

The Council Clerk, Lismore, to The Under Secretary for Mines.

Sir,

Council Chambers, Lismore, 5 September, 1879.

I do myself the honor to call your attention to a letter of His Worship the Mayor of Lismore to the Surveyor-General, dated 27th June, and your reply thereto dated 16th July (Roads No. 79-2,339), respecting the alignment of streets in the township of Lismore, and to which letter, by the direction of His Worship the Mayor, I replied on 28th July, stating that your instructions as to alignment posts would be complied with immediately, and pressing upon you the necessity of early attention to the matter. To this communication no reply has been received, and I am instructed again to request your attention to this matter, as serious inconveniences are already arising from the inability of the Council to carry out the provisions of Municipalities and Towns Police Act until the streets shall be aligned.

Will you have the goodness to say,—first, whether you approve of the dimensions of the sizes of alignment posts submitted to you? Second: How soon may the Council expect the alignment to be made?

I have, &c.,

WM. OSBORNE HARMAND,
Council Clerk.

Surveyor-General.—G.E.H. (for U.S.), B.C., 12/9/79.

It is recommended that the Borough Council of Lismore be informed that the dimensions of the alignment posts they propose to erect referred to in a previous letter, namely—9 in. x 9 in., squared above ground, to be sunk 2 ft. 6 in. in the ground, are considered satisfactory, although 3 ft. in the ground would be better; also, that Mr. Surveyor Ewing has this day been instructed to make the necessary survey of the streets needing alignment, and he will proceed to Lismore for the purpose so soon as his other professional duties will permit.—ROBT. D. FITZGERALD (for Surveyor-General), 4th October, 1879.

Inform.—G.E.H. (for U.S.), 9/10/79. The Council Clerk, Lismore, informed 9th October, 1879.

No. 4.

Office Memorandum.

23 September, 1879.

FURTHER application having been made relative to alignment of Lismore, *vide* Roads 79-3,332, will the Surveyor-General be good enough to say if he has determined on the appointment of a surveyor for the duty?

I have &c.,

A. J. STOPPS.

Telegraph Mr. Donaldson. Alignment of Lismore urged. Shall I send a surveyor? How long will it take him?—P.F.A., 25. Telegram sent, 25 September, 1879.

Mr. Surveyor Ewing is requested to survey for alignment such streets within the municipality of Lismore as the Council propose to form or to expend money upon, and to superintend the erection of thoroughly substantial alignment posts, to be supplied by the municipality, as also must be the necessary labour to erect them. The attention of Mr. Surveyor Ewing is drawn most particularly to the sheet of general instructions accompanying this, and also the two sheets of diagrams, a careful compliance with which is strictly enjoined.—ROBT. D. FITZGERALD (for Surveyor-General), 4th October, 1879. No. 8.

Replied to by letter of 30th October, 1880. No. 80/94.—THOS. T. EWING.

No. 5.

Telegram from Mr. District-Surveyor Donaldson to The Surveyor-General.

ALIGNMENT of Lismore. I do not think it is necessary to send up a surveyor. I can spare one in a fortnight, and the work will take about another fortnight.

P. R. DONALDSON,

District Surveyor.

Roads Branch, 26 September.—P.F.A.

Reply noted. Surveyor-General.—Should not Mr. Donaldson be asked to name the surveyor he proposes to employ in order that explicit instruction should issue to him? A fortnight appears to me inadequate for the work.—A.J.S., 25/9/79.

Yes; by telegraph.—P.F.A., 29/9/79. Mr. Landers.—A.J.S., 29/9/79. Telegram sent.—P.E.E., 29/9/79.

No. 6.

Sydney, 29 September, 1879.

PLEASE give the name of the surveyor you propose to employ in alignment of Lismore.

J. F. LANDERS.

I propose to employ Mr. Ewing on alignment, Lismore.—P.R.D., 29/9/79.

No. 7.

Telegram from Mr. District-Surveyor Donaldson to The Surveyor-General.

Grafton, 29 September, 1879.

I PROPOSE to employ Mr. Ewing on alignment, Lismore.

P. R. DONALDSON,
District-Surveyor.

No. 8.

No. 8.

Mr. Licensed-Surveyor Ewing to The Surveyor-General.

Sir,

Lismore, 30 October, 1880.

I have the honor herewith to transmit plan of streets in the Town of Lismore, proposed to be aligned under Act of Council 2 Victoria No. 2, surveyed in accordance with instructions of 4 October, No. 79-8.

The alignment posts are erected as shown. The Council have now all the streets aligned that they intend improving for some considerable time.

From plan it will be seen that Molesworth-street (though supposed to be so surveyed originally) is not on a continuous bearing. To produce the most suitable building line from the southern end of the town would not only make the road impassable near and at the foot of Zadoc-street, but would also go well into the roadway between Zadoc and Orion Streets, thus interfering with building line in the western side of street; while to adopt the most suitable bearing from northern end of Molesworth-street, and carry it through would so interfere with holdings in the most valuable part of the town that the alignment would be protested against and not be accepted. Boundaries are very little interfered with. A few fences encroach a little, and a wooden building of not a substantial nature in Zadoc-street.

The northern side of Wilson-street is all dense brush; there is nothing to guide to be found. Posts would be valueless till the brush is cleared.

I have, &c.,

THOS. T. EWING.

Roll plan and field-book, Roads 79-3636 and plan herewith.—G.W.

No. 9.

Office Memorandum.

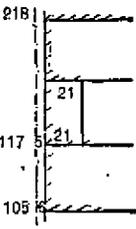

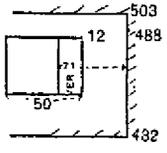

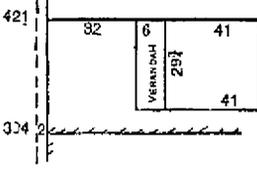

MEMORANDUM of subjects requiring explanation or completion in connection with survey and plan of alignment of Lismore, parish of Lismore, county of Ross, transmitted by Mr. Licensed-Surveyor Ewing, letter No. 80-24 of 30th October, 1880, on which Mr. Ewing's report in explanation is requested.

Subject.	Report.
1. Whether pegs have been placed at the intersection of Conway and Dawson Streets, and if Conway-street from Keen-street to Dawson-street has been aligned, no notes being given on field-book.	1. Yes; they should be shown on plan. Yes; there are no improvements to show.
2. Why building lines are in some instances shown by broken red lines.	2. This is unintentional. The lines should be firm.
3. Section 34 does not close by 4.1 links and 4.9 links; section 6 by 1.4 and 1.5; section 5 by 1.8 links and 1.8 links.	3. I have investigated the matter and herewith subjoin lengths and bearings of these sections; these are shown wrongly on plan doubtless:— Section 34.—111° 30' 631, 78° 445 $\frac{1}{2}$, 348° 10' 00, 258° 5' 41, 201° 30' 782. Close—N 1070 7, E 1023 7. S 1070 9, W 1023 4. Section 6.—111° 09' 1010 $\frac{1}{2}$, 201° 30' 1206, 291° 09' 1007 $\frac{1}{2}$, 21° 19' 1206. Close—N 1486 7, E 1381 1. S 1486 6, W 1381 3. Section 5.—111° 30' 1000, 201° 30' 1006, 291° 09' 1011, 22° 08' 1012. N 1302, E 1311 5. S 1302, W 1311 4.
4. In Zadoc-street a building is shown on plan as encroaching, but in field-book it is within the building line.	4. An offset is shown from traverse line (which is outside building line) to building the building encroaches.
5. Whether pegs have been placed at intersection of Keen and Bounty Streets.	5. On the western side of Keen-street they should be shown on plan.
6. Whether house encroaches on Orion-street as stated in schedule and shown on field-book, the plan not showing such encroachment.	6. This is erroneously shown in schedule. There is no house encroachment on Orion-street; the field-book does not show it.
7. Has the Northern side of Orion-street, between Keen-street and Richmond River, been aligned, no length being given on plan or on field-book.	7. There are no improvements thereon; any pegs put in would be over bank of river. The southern side of street is well defined by posts at intersection of Keen and Orion Streets, Orion and Molesworth Streets, and lane through section 4.
8. Meridian lines at regular distances should have been shown on plan.	8. Will put them on in future.
A. J. STOPPS (for Surveyor-General), 31/10/81.	THOS. T. EWING, 13/4/82.

No. 10.

Office Memorandum.

MEMORANDUM of subjects requiring explanation or completion in connection with the survey and plan of Lismore, parish of Lismore, county of Ross, transmitted by Mr. Surveyor Ewing, letter No. 91, of 30th October, 1880, and on which Mr. Ewing's report in explanation is requested.

Subject.	Report.
<p>FIELD-BOOK.—Page 11. No distance on chain line for offset given to southern corner of building described as "Commercial School."</p>	 <p>The distance on chain line is 140 links.</p>
<p>Page 13. No offset given to south-eastern corner of building as "Private Cottage."</p>	 <p>Offset 12 links.</p>
<p>Page 13. A building described as "Chronicle Office," not shown on plan. The length of this building, facing the road, is given as 29½, but as it is situated between 394 and 421 on the chain line.—Can it be plotted between these distances?</p>	 <p>This building may be plotted between 394 and 421; at time of survey it was very dilapidated—it has been now removed altogether—it was scarcely worth showing.</p>
<p>In several instances it is not stated of what material the houses are composed—whether of brick, stone, or wood, which should always be done. A. J. STOPPS (For Surveyor-General), Folio 208, No. 12. 27th September, 1882.</p>	<p>All buildings are wood unless otherwise stated. T. T. EWING, 20/11/82.</p>

No. 11.

The Surveyor-General to The Under Secretary for Mines.

THE accompanying plan and book of reference of the streets, as per margin, in the Municipality of Lismore are forwarded with the view to the proclamation of the streets under the Act of Council, 4 William IV., No. 11, previous to their alignment in accordance with Act of Council, 2 Victoria No. 2.

Executive Council Minute.

PRELIMINARY NOTIFICATION OF STREETS, MUNICIPALITY OF LISMORE

Department of Mines, Sydney, 12 April, 1883.

THE authority of His Excellency the Governor and the Executive Council is sought for the opening of the undermentioned lines of streets, as shown by the accompanying plan and book of reference, in accordance with the provisions of the Act 4th Wm. IV, No 11, previous to alignment, in accordance with Act of Council 2 Victoria No. 2 :—

1. Bounty-street, from Molesworth-street to Keen-street (north side only).
2. Cathcart-street, from Leycester-street to Wilson-street (west side only).
3. Conway-street, from Richmond River to Dawson-street.
4. Dawson-street, from south side of Conway-street to Orion-street (west side only).
5. Dawson-street, from Leycester-street to Wilson-street.
6. Keen-street, from Bounty-street to Wilson-street.
7. Leycester-street, from Orion-street to Cathcart-street (north side only).
8. Magellan-street, from Richmond River to Dawson-street.
9. Molesworth-street, from Ballina-street to Orion-street.
10. Orion-street, from Wilson's Creek to Dawson-street.
11. Wilson-street, from Wilson's Creek to Cathcart-street (south side only).
12. Woodlark-street, from Wilson's Creek to Dawson-street.
13. Zadoc-street, from Molesworth-street to Dawson-street.

J. P. ABBOTT.

The Executive Council advised that the intended formation of the streets referred to be notified in the manner prescribed by the Act 4th Wm. IV, No. 11.—ALEX. C. BUDGE, Clerk of the Council. Min., 83/15, 14/4/83. Confirmed, 25/4/83. Approved.—A.L., 14/4/83. Bench Lismore forwarded plans, &c., 23 May, 83. Notified, 29th May, 83. Folio 2958. C. X. C., 30th May, 83. Advertised, 31/5/83. In a month, 31/5/83.

No. 13.

Gazette Notice.

PRELIMINARY NOTIFICATION OF STREETS IN THE MUNICIPALITY OF LISMORE.

Department of Mines, Sydney, 29 May, 1883.

HIS Excellency the Governor, with the advice of the Executive Council, having deemed it expedient to open and make the several streets mentioned in the Schedule appended hereto: Notice is hereby given that in accordance with the provisions of the Act 4th Wm. IV, No. 11, plans and books of reference showing the intended lines of the streets in question are now deposited at the office of the Surveyor-General in Sydney, and at the Police Office mentioned.

It is requested that any well-grounded objections that may exist to the formation of the streets in question may be transmitted in writing to the Clerk of the Executive Council within one month from this date.

By His Excellency's command,
JOSEPH P. ABBOTT.

streets, Municipality of
Lismore.

The Surveyor-General.—G.E.H., (for U.S.), B.C., 24/7/83. Confirmation of these streets is now recommended.—A. J. STOPPS (for Surveyor-General), 2/10/83. Submitted.—G.E.H. (for U.S.), 5/10/83. Approved.—J. P. ABBOTT, 11/10/83. Minute, 12/10/83.

No. 17.

No. 17.

Executive Council Minute.

Confirmation of Streets, Municipality of Lismore.

Department of Mines, Sydney, 12 October, 1883.

It is recommended, for the approval of His Excellency the Governor and the Executive Council, that the undermentioned lines of streets, which have been duly advertised in the *Government Gazette*, be now confirmed, in accordance with the provisions of the 4th Wm. IV, No. 11, previous to alignment, in accordance with Act of Council 2 Victoria No. 2, viz. —

1. Bounty-street, from Molesworth-street to Keen-street (north side only).
2. Cathcart-street, from Leycester-street to Wilson-street (west side only).
3. Conway-street, from Richmond River to Dawson-street.
4. Dawson-street, from south side of Conway-street to Orion-street (west side only).
5. Dawson-street, from Leycester-street to Wilson-street.
6. Keen-street, from Bounty-street to Wilson-street.
7. Leycester-street, from Orion-street to Cathcart-street (north side only).
8. Magellan-street, from Richmond River to Dawson-street.
9. Molesworth-street, from Ballina-street to Orion-street.
10. Orion-street, from Wilson's Creek to Dawson-street.
11. Wilson-street, from Wilson's Creek to Cathcart-street (south side only).
12. Woodlark-street, from Wilson's Creek to Dawson-street.
13. Zadoc street, from Molesworth-street to Dawson-street.

J. P. ABBOTT.

[Enclosure.]

Department of Mines, Sydney, 6th November, 1883.

CONFIRMATION OF STREETS.—MUNICIPALITY OF LISMORE.

NOTICE is hereby given, in conformity with the provisions of the Act 4th William IV, No. 11, that His Excellency the Governor, with the advice of the Executive Council, has been pleased to confirm the Streets mentioned in the annexed Schedule (notwithstanding any objections that might have been urged), and it is hereby declared expedient to open and make the Streets referred to, according to the plan and book of reference to be seen at the Police Offices mentioned.

Any persons intending to claim compensation in respect of the said line are reminded that notice must be served on the Secretary for Mines within forty days from the date hereof, as provided by the 6th section of the Act above referred to, or they will be for ever foreclosed from such claim.

By His Excellency's Command,
JOSEPH P. ABBOTT.

SCHEDULE REFERRED TO.

Roads No.	Description of Streets.	Date of Gazette of previous Notice of intended opening of Streets	Plans, &c., lodged at the Police Office at—
83-4278 83-159-5 S. G. L. 1-2263	1. Bounty-street, from Molesworth-street to Keen-street (north side only). 2. Cathcart-street, from Leycester-street to Wilson-street (west side only). 3. No. 18.

Mr. J. Currie to The Secretary for Mines.

Sir,

Lismore, Richmond River, 23 October, 1883.

I take the liberty of addressing you regarding the road in Molesworth-street, that the local Council wants the Government to resume land so as to widen said street. I beg to state that this is a river bank road. If the Government goes to the expense of resuming land now, and the Council allows heavy traffic along this road without making some provision in the shape of a retaining wall to protect the river bank, it is only a question of time until the Government will be called upon again to resume more land. This is purely a municipal work, but, unfortunately, we have a very unworkable Council, the one end of the town fighting against the other as to sites for public buildings, to further local ends, at the expense of the general taxpayers. Were it otherwise this road would have been repaired long ago, fit for traffic; or if the town was not incorporated property-holders interested would have had the road at landslip repaired long ago, as it only involved the matter of a couple of hundred pounds. A case is now pending in the Supreme Court against the Council for neglect. I thought it my duty to bring this matter under the notice of the Honorable the Minister.

I am, &c.,

JOHN CURRIE.

No. 19.

No. 19

Mr. District-Surveyor Donaldson to The Surveyor-General.

Sir,

District Survey Office, Grafton, 26 October, 1883.

With reference to instructions of 10 July, 83-156, to report on the application of the Lismore Municipality to resume sufficient land from the adjacent allotments to give the full width to Molesworth-street where it is not that width, &c. :

I have the honor to report that the published plan of the Village of Lismore, dated 1856, shows Molesworth-street to be not only the full width, but that there is fully two chains in width between that street and the river opposite the north part of section 5 and south part of section 4.

2. From the sketch which I forward herewith it will be seen that there is no land between the street and the river at the north corner of section 5 and south part of section 4, but that there is only a width of 47 links of that part of the street at the end of Zadoc-street, and for a distance of about 6 chains no part is more than 80 links wide, and I am of opinion that the difference arises from an error in the original design of the town.

3. Until about three years ago a roadway was in existence from the principal business part of the town (which is Molesworth-street from Woodlark-street North to next street) to the wharf shown on sketch herewith, which was then the depôt of the ocean steamers, but has since in a great measure been superseded by the erection of the public wharf near the end of Magellan-street, but a landslip which took place about three years ago has rendered this roadway useless, as it has cut away the river bank up to the north-west corner of section 5, leaving a perpendicular descent of about 30 feet, and traffic is now permitted on suffrance across the corner of allotment 18 of section 5, and thence through front of allotments 1, 2, and part of 3 of section 4, as shown on sketch.

4. I am informed by Mr. Coleman, the owner of allotments 2 and 3 of section 4, that he offered to repair, pile, and guarantee the stability of the work of remaking this road when the slip took place for £150.

5. That part of Molesworth-street from Zadoc-street to corner of allotment 3 is only about 4 feet above high-water, and the ascent of Zadoc-street is too steep for wheel traffic, and could not be made practicable unless by raising the land at the water, which would be very costly, and liable to be carried away by floods.

6. The bank of Brown's Creek opposite, a part of allotment 19 of section 5, is very steep; and a fence for the protection of the persons using the road has been erected on the top of the steep bank, which leaves a width of only 31 links for the traffic, and this is further reduced in consequence of the road being on a side cutting, rendering it necessary to leave some of the land on the east side for the stability of the fence and for the slope of the cutting.

7. It will be seen from the above that as it will be necessary, if any land is resumed, that part of section 5 will be required as well as part of section 4, and that the suggestion to increase the width of the lane to a 100-link street would not meet the requirements; it would also be more expensive, as the land is higher than that in Molesworth-street, and more valuable. The Church of England would also be close on the new street boundary, and the new Government stable buildings would be on the street and required to be removed.

8. A cutting 12 feet deep has been made through the crown of the ridge in Zadoc-street and part of the lane in section 4; and the only practicable route for traffic now, without encroaching on the alienated allotments, is *via* this cutting, the lane and Orion-street, and the front of section 4. Until the slip is repaired, or resumption made, this is not only circuitous but steep on the north of section 4.

9. To resume sufficient land to make Molesworth-street the full width as applied for by the Municipal Council would, in my opinion, cause unnecessary injury to the owners of allotments 18 and 19 of section 5, by taking away so much of their land that the residue would be deteriorated in value; and as the street would have to be cut down below the level of the land left, access would be very difficult.

10. But I would submit that, if the land could be obtained at a reasonable rate, and if the proposal would meet the views of the Municipal Council, it might be desirable to resume so much of the land as is shown by red tint on the sketch herewith, which would admit of a roadway 35 feet wide at the narrowest part and a footpath on the east side of the street 8 feet wide, which would, I am of opinion, be sufficient for the traffic from this part of the town.

11. The larger depth of land to be resumed in allotments 1 and 2 of section 4 is necessary, in consequence of the land being so low on the 50 links nearest the water and steep and broken on the next 50, leaving only about 50 links of fair roadway on the highest part; but, as it is all subject to inundation, its value is less than that of the part of section 5 which is so much higher.

12. As the owners of the land which it is suggested it may be desirable to resume would be all more or less benefited by having a good street direct to the business part of the town, it would be to their interest to accept a reasonable value for the land; and I would submit whether the Municipal Council might not be invited to ascertain and furnish to the Government the amount of compensation which the several owners would be willing to accept for the land proposed to be resumed should such proposal be satisfactory to that body. The matter is one of great moment to the municipality, as the cost of reforming or reconstruction of Molesworth-street where the slip took place would be considerable.

13. The extent of the land which it is suggested may be resumed, as shown in red on sketch herewith, would be—

- (a) 2 chains to Molesworth-street, by 1 chain to Zadoc-street, of allotment 1, section 4; area, 32 perches, more or less; owner, Dr. Parker.
- (b) 2 chains to Molesworth-street, by 1 chain deep, except a small corner at north boundary of allotment 2, section 4; area, 31 perches, more or less; owner, E. Coleman.
- (c) 1 chain to Molesworth-street, by a depth of 70 at south end to *nil* at north end of allotment 3, section 4; area, 6 perches, more or less; owner, E. Coleman.
- (d) $2\frac{1}{2}$ chains to Molesworth-street, by a depth of 50 links and 40 links respectively, mean depth 45 links, of allotment 18 of section 5; area, 18 perches, more or less; owner, A. Currie.
- (e) About 3 chains to Molesworth-street, by a depth of 40 links and about 15 links respectively; mean about $27\frac{1}{2}$ links of allotment 19, of section 5; area, about 14 perches, more or less; owner, the Commercial Bank of Sydney.

I have, &c.,

P. R. DONALDSON,

District Surveyor.

Mis. 83/8665 and sketch herewith. The Surveyor-General.

This report, in connection with your B.C. minute of 10th July last on 83/8665 Mis. enclosed, is submitted. It is to the effect that so much of allotments 1, 2, and 3 of section 4, and allotments 18 and 19 of section 5, as are shown by red tint on accompanying tracing, should if possible be resumed.—Jno. J.C., 23rd November, 1883.

This being an application for the widening of a street, it should have been sent to the Roads Branch instead of the Charting Branch. It appears to be a case which might be more readily dealt with by the Municipal Council than by the Government. Referred to Mr. Stopps.—E.T. (for the Surveyor-General), 13/12/83.

No. 20.

The Under Secretary for Mines to The Surveyor-General.

Department of Mines, Sydney, 17 December, 1883.

THE period allowed by law for making claims for compensation under the provisions of the Act 4 William IV, No. 11, having elapsed in connection with Bounty and twelve other streets in the Municipality of Lismore, no claims have been received, and the papers are forwarded to the Surveyor-General for action.

GERARD E. HERRING

(For the Under Secretary).

[Enclosure.]

Executive Council Office, Sydney, 1 October, 1884.

ALIGNMENT OF STREETS, MUNICIPALITY OF LISMORE.

HIS Excellency the Governor, with the advice of the Executive Council, directs it to be notified, in conformity with the provisions of the Act of Council 2 Victoria No. 2, that the breadths of the carriage and foot ways of the streets herein specified in the Municipality of Lismore, shall be those set forth in the annexed Schedule; and that consequently it will not be lawful for any person to erect any building within the said distances so set forth from the curbstone or the exterior edge of the said footways as delineated on the plan submitted to His Excellency and the Executive Council, in conformity with the said Act, which said plan lies at the office of the Surveyor-General for the inspection of the public.

By His Excellency's Command,

ALEX. C. BUDGE,

Clerk of the Council.

No. 21.

Extract.

EXTRACT from Minute-book of Municipal meeting, held 16th April, 1883.

Present :—His Worship the Mayor in the Chair, Aldermen Barrie, Larkin, Brett, and Glasgow.

ALDERMAN BARRIE moved,—That from the unskilful manner Molesworth-street has been laid out in the original survey of this township, inasmuch as no way of access has been left to section No. 4 by that street to the great injury of those who inadvertently purchased land and built houses and business places on the said section fronting the said street, this Council is of opinion that the Government should be requested to resume sufficient land from the adjacent allotment to form the said Molesworth-street to the full width where it is shown to be in Wilson's Creek in the plan of the township of Lismore. That the foregoing resolution be forwarded to the Member for this district with the strongest recommendation this Council can give it, that the request it contains be pressed upon the Government, so that the matter may receive the earliest attention it is possible to give it.

Seconded by Alderman Larkin, and carried.

Please

11

Please post receipt to Mayor of Lismore, but find answer to me.—S. W. GRAY. For report of Survey Office.—F.H.W., 11/6/83.

Referred to the District Surveyor at Grafton for early consideration and comprehensive report. Perhaps it might be feasible to convert the lane through section 4 into a street 100 feet wide (with tracing from R. 193).— (for Surveyor-General), 10/7/83. No. 156.

The Secretary and Cashier.—Jno. C.C., 11/7/83. Replied to by 83-205.—P. R. DONALDSON, D.S.

No. 22.

The Surveyor-General to The Under Secretary for Mines.

Diagram.

THE Borough Council of Lismore desires the Crown to take land from town allotments to afford access from one part of Molesworth-street to another, on the ground that the street was so ill-designed by the Government Surveyor that the north arm of the Richmond River occupies so much of what should be street that traffic along it is impossible.

The facts are that when the allotments were measured in the town the north arm of the Richmond River was distant 2 chains to the west of Molesworth-street, which street was $1\frac{1}{2}$ chains wide, but the erosion of the river bank has not only carried away the land on the north-western side of the street, but very nearly all the street at that bend of the river.

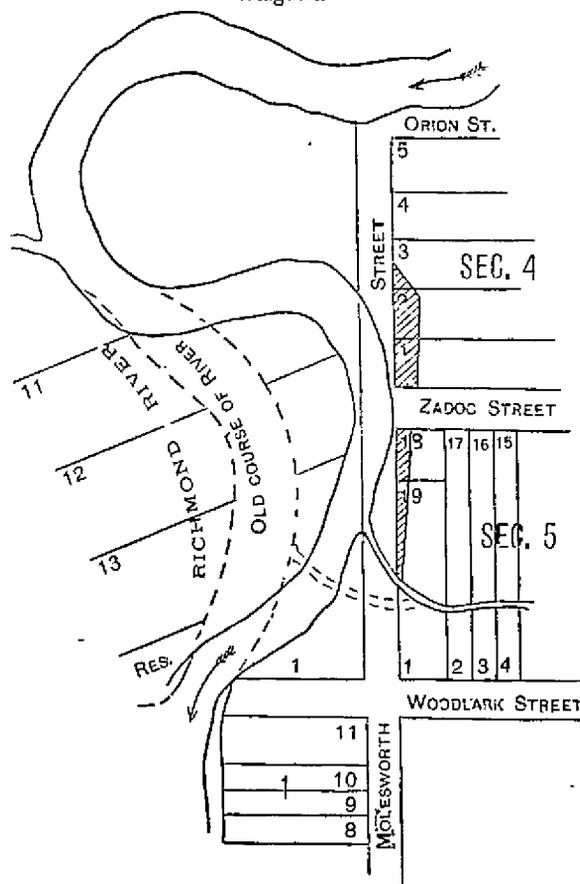

It appears that any action requisite to make a practicable thoroughfare of Molesworth-street is a work that is purely municipal, and should be carried out by the Borough Council.

The Crown might survey the deviation provided the Borough Council undertake to satisfy all claims that may be made.

Attention is invited to Mr. Currie's letter, Roads, S.G.O., 83-188 herewith.

A. J. STOPPS
(For Surveyor-General),

No. 23.

The Under Secretary for Mines to S. W. Gray, Esq., M.P.

Sir,

Department of Mines, Sydney, 19 February, 1884.

With reference to the Municipal Council's (of Lismore) request that the Crown will take land from town allotments to afford access from one part of Molesworth-street to another, as the north arm of the Richmond River now occupies so much of what should be the street that traffic is impossible, I am directed by the Secretary for Mines to inform you that when the allotments were measured in the town the north arm of the Richmond River was distant 2 chains to the west of Molesworth-street, which street was $1\frac{1}{2}$ chains wide, but the erosion of the river bank has carried away the land that formed the street, the making of Molesworth-street a practicable thoroughfare should, therefore, be carried out by the Borough Council.

I have, &c.,

HARRIE WOOD,
Under Secretary.

No. 24.

Mr. J. Currie to The Secretary for Mines.

Sir,

Lismore, Richmond River, 11 March, 1884.

I take the liberty to state that I note by the local Council's proceedings on instant, that they received a letter from the Department *re* landslip near Dr. Parker's residence to which they are not satisfied. This is purely municipal work. The Council made a beginning to fill in slip as a cover for an action against them

them now before the Supreme Court, but not yet settled. A good and true man proffered to make the road as fit for traffic as it was before slip for £200. This did not suit the Council as then formed, they had another object in view, *re* site for New Court-house, that object being to block the authorities by having no road at least on river side of site.

I am, &c.,
JOHN CURRIE.

Molesworth-street, Lismore.—Mr. Currie's letters of 23rd October, 1883, and March 11th, 1884, will be duly considered before final action is taken.—T.C.B. (for U.S.), 14/2/84. Acknowledged, 14/3/84. The Surveyor-General.—G.E.H. (for U.S.), B.C., 30/4/84.

No. 25.

Mr. District-Surveyor Donaldson to The Surveyor-General.

Sir,

District Survey Office, Grafton, 14 May, 1884.

With reference to the alignment of Lismore, plan of which was forwarded with Mr. Surveyor Ewing's letter, 30th October, No. 80-94, I have the honor to inform you that application has been made by the Municipality some time ago to resume some of the land on the east side of Molesworth-street, between Woodlark and Orion Streets, there not being sufficient land in parts between the building line and the river to permit of a roadway and footpath as well.

It would, therefore, not be desirable to proclaim that part of the street in question.

P. R. DONALDSON, D.S.

No. 26.

Mr. E. W. Allingham to The Under Secretary for Mines.

Landslip, Lismore.

Sir,

Lismore, 20 May, 1884.

Referring to your letter addressed to S. W. Gray, Esq., M.P., of date the 19th February, 1884, on the subject mentioned above, I have the honor to transmit you, under instructions received from the parties interested, declarations of Archibald Currie, John Peate, and Thomas T. Ewing, as to certain facts in connection with the circumstances of this landslip. I shall be glad to hear from you on the subject of this letter at your earliest convenience.

I have, &c.,
E. W. ALLINGHAM.

Acknowledge.—G.E.H. (for U.S.), 23/5/84. Acknowledged, 23/5/84. The Surveyor-General.—G.E.H. (for U.S.), B.C., 23/5/84.

[Enclosures.]

I, ARCHIBALD CURRIE, of Lismore, in the Colony of New South Wales, storekeeper, do solemnly and sincerely declare as follows:—

1. I have resided at Lismore, in the immediate vicinity of Wilson's Creek, and where what is now known as "The Landslip," for the past twenty-nine years, and I am consequently well and thoroughly acquainted with that creek, from its confluence with Leicester Creek, and where it traverses what is known as Molesworth-street, past the foot of Zadoc-street and site of Landslip, to lot 3 of section 4, as shown on the map of Lismore, a lithographic copy whereof is hereto annexed.

2. When I arrived in Lismore the survey was in course of preparation, and I have seen the *locus in quo* every day from that time to the present, and have never known any material erosion of either bank of the creek, excepting the landslip of one thousand eight hundred and eighty at any time during my twenty-nine years' residence.

3. The first map of the town of Lismore showed Molesworth-street a full width of 99 feet, and two allotments on the western boundary of it, of about 2 roods each, opposite allotments 18 and 19 of section 5, and lot

Whereas the said street in the plan indicated was never more than its present width, except where the said slip of one thousand eight hundred and eighty has occurred, and there never were at any time any allotments on the western boundary of Molesworth-street, opposite lots 18 and 19 of section 5, except on the plan itself.

4. The nature of the soil composing and the vegetation growing on either side of the banks of the creek, and the present width of the creek itself, precludes the possibility of a conclusion that a natural erosion of the bank would lessen the width of Molesworth-street and account for its present narrowness.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales and to substitute declarations in lieu thereof and for the suppression of voluntary and extra judicial oaths and affidavits."

ARCHIBALD CURRIE.

Declared at Lismore, in the Colony of New South Wales, }
this seventh day of April, 1884, before me,— }

JAMES STOCKS, J.P.

I, JOHN PEATE, of Lismore, in the Colony of New South Wales, storekeeper, do hereby solemnly and sincerely declare as follows:—

1. I have resided at Lismore, in the immediate vicinity of Wilson's Creek, and where what is now known as "The Landslip," for the past thirty years, and I am, consequently, well and thoroughly acquainted with that creek from its confluence with Leicester Creek and where it traverses what is now known as Molesworth-street past the foot of Zadoc-street and site of Landslip to lot three of section four as shown on the map of Lismore, a lithographic copy whereof is hereto annexed.

2. When I arrived at Lismore the survey was in course of preparation, and I have seen the *locus in quo* every day from that time to the present, and have never known any material erosion of either bank of the creek, excepting the landslip of one thousand eight hundred and eighty at any time during my thirty years' experience.

3. The first map of the town of Lismore showed Molesworth-street a full width of ninety-nine feet, and two allotments on the western boundary of it about two roods, each opposite allotments eighteen and nineteen of section five.

Whereas the said street in the plan indicated was never more than its present width, except where the said slip of one thousand eight hundred and eighty has occurred, and there never were at any time any allotments on the western boundary of Molesworth-street opposite lots eighteen and nineteen of section five, except on the plan itself.

4. The nature of the soil composing and the vegetation growing on either side of the banks of the creek, and the present width of the creek itself, precludes the possibility of a conclusion that a natural erosion of the bank would lessen the width of Molesworth-street and account for its present narrowness.

And

13.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits." Declared at Lismore, in the Colony of New South Wales, }
this seventh day of April, 1884, before me, — } JOHN PEATE.

JAMES STOCKS, J.P.

I, THOMAS THOMSON EWING, of Lismore, in the Colony of New South Wales, a Justice of the Peace, do hereby solemnly and sincerely declare as follows:—

1. I am a licensed surveyor.
2. I have resided at Lismore for the past six years, and I am well and thoroughly acquainted with Wilson's Creek, from its confluence with Leicester Creek and where it traverses what is known as Molesworth-street, past the foot of Zadoc-street and site of landslip to lot 3 of section 4, as shown on the map of Lismore, a lithographic copy whereof is annexed to the declaration.

3. I have seen the *locus in quo* every day from the time I arrived to the present, and have never known any material erosion of either bank of the creek, excepting the landslip of one thousand eight hundred and eighty, at any time during my six years' experience.

4. The first map of the town of Lismore showed Molesworth-street a full width of ninety-nine feet, and two allotments on the western boundary of it of about two roods each, opposite allotments eighteen and nineteen of section five.

Whereas the said street in the plan indicated was never more than its present width except where the said landslip of one thousand eight hundred and eighty has occurred, and there were never at any time any allotments on the western boundary of Molesworth-street opposite lots eighteen and nineteen, section five, except on the plan itself.

The nature of the soil composing, and the vegetation growing, on either side of the banks of the creek itself, preclude the possibility of a conclusion that a natural erosion of the bank would lessen the width of Molesworth-street, and account for its present narrowness.

And I make this solemn declaration conscientiously believing the same to be true, and by virtue of the provisions of an Act made and passed in the ninth year of the reign of Her present Majesty, intituled "An Act for the more effectual abolition of oaths and affirmations taken and made in the various departments of the government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits." Declared at Lismore, in the Colony of New South Wales, }

Office Memorandum.

[Urgent.]

MR. S. W. GRAY, M.P. Telegram from Mayor, Lismore:—What has been done in the matter of opening Molesworth-street, Lismore?

Will the Surveyor-General please say how the case stands.—C.E.H. (for U.S.), B.C., 29/7/84. The Surveyor-General.

Notwithstanding the declarations of Archibald Currie, John Peate, and Thomas T. Ewing (herein enclosed), it is believed that the facts as reported by the Surveyor-General on 12th February last on S.G.O. 83 ^{1/2}, cannot be controverted, and, consequently, the Crown does not appear to be responsible for securing a means of access in lieu of that part of Molesworth-street which has been destroyed by the action of the waters of the river. It is, moreover, proposed to omit from recommendation of sanction for proclamation of alignment certain streets in the town of Lismore—that part of Molesworth-street in question situate between Woodlark-street and Orion-street. A. J. STOPPS (for Surveyor-General), 8/8/84.

Submitted.—G.E.H. (for U.S.), 11/8/84. Approved. Inform Mr. Gray.—J. P. ABBOTT, 4/9/84. S. W. Gray, M.P., informed. 10th September, 1884.

No. 28.

The Under Secretary for Mines to S. W. Gray, Esq., M.P.

Sir,

Department of Mines, Sydney, 10 September, 1884.

With reference to your inquiry respecting the opening of Molesworth-street, Lismore, I am directed by the Secretary for Mines to inform you that as the facts of the case conveyed to you in my letter of the 19th February last cannot be controverted, the Crown does not appear to be responsible for securing a means of access in lieu of that part of Molesworth-street which has been destroyed by the action of the waters of the river.

I am to add that it is proposed to omit from recommendation for proclamation of alignment certain streets in the town of Lismore, that part of Molesworth-street, situate between Woodlark-street and Orion-street.

I have, &c.,

HARRIE WOOD.

Under Secretary.

No. 29.

The Mayor of Lismore to The Secretary for Mines.

Sir,

Council Chambers, Lismore, 11 September, 1884.

Referring to previous correspondence, I have the honor, on behalf of the Municipal Council of Lismore, to call your attention to the long delay which has taken place in resuming the land in Molesworth-street (in sections 4 and 5), required for the widening of that street.

I trust that I have only now to call attention to the subject to have it immediately dealt with, and thereby remove a local grievance which has been the occasion of much personal ill-feeling which the Council has felt itself powerless to remedy or allay, from its having arisen out of gross blunder in the original survey, which the affidavits supplied by competent persons amply show.

I have, &c.,

JAMES BARRIE,

Mayor.

Forward copy of letter addressed to S. W. Gray, Esq., M.P., under date 10/9/84.—G.E.H. (for U.S.), 10/9/84. The Mayor of Lismore informed, 17/9/84.

No. 30.

The Surveyor-General to The Secretary for Mines.

Alignment of Streets.

THE accompanying plan and schedule of twelve streets in the Municipality of Lismore are forwarded with the view to the alignment of the streets in accordance with the Act of Council, 2nd Victoria No. 2, the same having already been confirmed under the Act of Council 4th William IV, No. 11.

A. J. STOPPS

13 September, 1884.

(For Surveyor-General).

Plan herewith, Cat. L.I., 2,263. Submitted.—G.E.H. (for Under Secretary), 17/9/84. Approved.—J. P. ABBOTT, 18/9/84. Minute, 19 September, 1884.

No. 31.

The Under Secretary for Mines to The Mayor of Lismore.

Sir,

Department of Mines, Sydney, 17 September, 1884.

With reference to your letter of the 11th instant, drawing attention to the delay in resuming land for the widening of Molesworth-street, Lismore, I have the honor to inform you that the attached is a copy of a letter sent to Mr. S. W. Gray, M.P., on the subject on the 10th instant.

I have, &c.,

HARRIE WOOD,

Under Secretary.

[Enclosure.]

Sir,

Department of Mines, Sydney, 10 September, 1884.

With reference to your inquiry respecting the opening of Molesworth-street, Lismore, I am directed by the Secretary for Mines to inform you that as the facts of the case conveyed to you in my letter of the 19th February last cannot be controverted the Crown does not appear to be responsible for securing a means of access in lieu of that part of Molesworth-street which has been destroyed by the action of the waters of the river.

I am to add that it is proposed to omit from recommendation for proclamation of alignment certain streets in the town of Lismore, that part of Molesworth-street situate between Woodlark-street and Orion-street.

No. 32.

Executive Council Minute.

Alignment of Streets, Municipality of Lismore.

Department of Lands, Sydney, 19 September, 1884.

It is recommended, for the approval of His Excellency the Governor and the Executive Council, that the undermentioned lines of streets, which have been duly advertised in the *Government Gazette*, be now aligned, in accordance with the provisions of the Act of Council 2 Victoria No. 2, viz. :—

1. Bounty-street, from Molesworth-street to Keen-street.
2. Cathcart-street, from Leycester-street to Wilson-street.
3. Conway-street, from Richmond River to Dawson-street.
4. Dawson-street, from Conway-street to Orion-street.
5. Dawson-street, from Leycester-street to Wilson-street.
6. Keen-street, from Bounty-street to Wilson-street.
7. Leycester-street, from Orion-street to Cathcart-street.
8. Magellan-street from Richmond River to Dawson-street.
9. Molesworth-street, from Ballina-street to Conway-street.
10. Molesworth-street, from Conway-street to Woodlark-street.
11. Orion-street, from Wilson's Creek and Molesworth-street to Dawson-street and Leycester-street.
12. Wilson-street, from Wilson's Creek to Cathcart-street.
13. Woodlark-street, from Wilson's Creek to Dawson-street.
14. Zadoc-street, from Molesworth-street to Dawson-street.

J. P. ABBOTT.

The Executive Council advise that the streets referred to be now aligned in terms of the Act of Council 2 Victoria No. 2.—ALEX. C. BUDEN, Clerk of the Council. Min. 84-40, 23/9/84. Confirmed, 30/9/84. Approved.—A.L., 23/9/84. For alignment notices see *Gazette* of 3/10/84. Advertised, 9/10/84. The Surveyor-General.—T.C.B. (for U.S.), B.C., 9/10/84.

It is recommended that the accompanying tracing showing streets in the Municipality of Lismore be forwarded to the Municipal Council of Lismore, and that they be informed that the streets shown thereon, having been confirmed and aligned, are now in their charge.—A. J. STOPPS (for Surveyor-General), 13/11/84.

Submitted.—G.E.H. (for U.S.), 15/11/84. Approved.—J. P. ABBOTT, 15/11/84. The Council Clerk, Lismore, with tracing informed, 17/11/84. The Surveyor-General.—G.E.H. (for U.S.), B.C., 18/11/84. Records.—H.W., 19/11/84.

No. 33.

Memo. from Mr. District-Surveyor Donaldson to The Surveyor-General.

In connection with the Molesworth-street, Lismore, resumption case.

District Survey Office, Grafton, 21 September, 1884.

THE original papers of the owners' claims are returned herewith. They became inadvertently detached from the papers (Roads S3- $\frac{1}{2}$) when my report of the 16th instant (86-124) was forwarded to the Surveyor-General.

P. R. DONALDSON,

District Surveyor.

No. 34.

No. 34.

Memorandum by The Secretary for Mines.

29 September, 1884.

Ask the Surveyor-General to send a surveyor to report upon the necessity of widening Molesworth-street in sections 4 and 5 in the town of Lismore. I want this done as quickly as possible.

J. P. ABBOTT.

Obtain papers from the Executive Council and forward to the Surveyor-General.—G.E.H. (for U.S.), 29/9/84. Papers herewith.—A.C.B., 30/9/84. The Surveyor-General.—G.E.H. (for U.S.), B.C., 30/9/84.

The matter of suggested widening of Molesworth-street is being dealt with as a separate matter, and need not delay the proposed alignment of the streets approved of by the Executive Council. The papers are therefore returned to allow of the action relative to them to be carried out.—A. J. STOPPS (for Surveyor-General), 30/9/84.

Return papers, with thanks, to the Clerk of the Executive Council.—G.E.H. (for U.S.), 1/10/84. The Clerk of the Executive Council.—G.E.H. (for U.S.), B.C., 1/10/84.

No. 35.

The Surveyor-General to The Secretary for Mines.

Molesworth-street, Lismore.

10 October, 1884.

REPORTS in this case have already been made and decision given, *vide* S.G.O., 83-1, 2, herein.

The previous minutes of the Surveyor-General are based on the assumption that the course of the river has shifted since the land in question was surveyed twenty-eight years ago. This view is supported by the fact that the side lines of allotments on the right bank of the river and opposite to the part of Molesworth-street referred to are shown by more recent surveys to be greatly in excess of the length by the original survey and as given under the deeds, while the left bank at the particular place appears to have been eroded, and the area of the land greatly lessened, and there has been a landslip of late years, which is admitted. If this view be incorrect, and so far there is nothing to prove that it is, then the plan of survey by which the village was designed must be grossly and exceptionally incorrect, and it then becomes a question whether it would be advisable to comply with the request herein contained, and by doing so to virtually admit that the Crown is responsible for claims made on the ground of inaccuracy of survey when the alleged inaccuracy has not been proved.

It is very probable that other and considerable discrepancies of a similar kind, where the land shown by original survey does not correspond with the land as it now is, occur in the same village.

A. J. STOPPS

(For Surveyor-General).

Tracing of a lithograph is herewith, which shows the lands measured for sale in Lismore at the time of the publication of the lithograph, namely, 1856.—A.J.S. (for Surveyor-General), 10/10/84.

Secn. Send Mr. Gray, M.P., a copy of the lithograph with an explanation.—J. P. ABBOTT, 12/11/84.

Tracing of lithograph, showing allotments of land for sale in 1856, is herewith for comparison with a lithograph of the town compiled from more recent data (also herewith) for the information of Mr. S. W. Gray, M.P.—A. J. STOPPS (for Surveyor-General), 12/11/84.

S. W. Gray, M.P., informed, 14/11/84, with litho. and tracing. Submitted.—G.E.H. (for Under Secretary), 18/10/84.

No. 36.

The Under Secretary for Mines to S. W. Gray, Esq., M.P.

Sir,

Department of Mines, Sydney, 14 November, 1884.

With reference to the matter of the opening of Molesworth-street, Lismore, I am directed by the Secretary for Mines to forward you the accompanying lithograph and tracing, which show the lands measured for sale at Lismore at the time of the publication of the lithograph, namely, in the year 1856. The decisions already given in the case are based on the assumption that the course of the river has shifted since the land in question was surveyed, twenty-eight years ago. This view is supported by the fact that the side lines of allotments on the right bank of the river, and opposite to the part of Molesworth-street, are shown by more recent surveys to be greatly in excess of the lengths by the original survey, and as given under the deeds, while the left bank at this particular place appears to have been eroded and the area of the land greatly lessened, besides which there has been other slips of late years. Under these circumstances, there appears to be no reason why previous decisions in the matter should be altered.

I have &c.,

HARRIE WOOD,

Under Secretary.

No. 37.

The Under Secretary for Mines to The Council Clerk, Lismore.

Sir,

Department of Mines, Sydney, 17 November, 1884.

I am directed by the Secretary for Mines to forward you the accompanying tracing, showing Bounty and thirteen other streets in the municipality of Lismore, and to inform you that as such streets have been confirmed and aligned they are now in charge of the Borough Council.

I have, &c.,

GERARD E. HERRING

(For the Under Secretary).

No. 38.

No. 38.

The Mayor of Lismore to The Under Secretary for Mines.

Sir,

Council Chambers, Lismore, 12 December, 1884.

Referring to your letter of the 14th November, 1884 (4,357 Roads), addressed to S. W. Gray, Esq., M.P., in referenc to the claim made by this Council to have Molesworth-street opened to its proper width, which it has never been, owing to an error in the original survey, I now enclose survey and report by Mr. Licensed-Surveyor Arnheim in support of the position taken up by the Council, which, I trust, will finally settle the question of the liability of the Government to resume the land necessary for forming the said street to its proper width.

To any one on the spot the evidence is so complete that to question it, no one having the use of his senses would entertain for a moment so self evident an absurdity, and to which self evident, evidence, has already been added the sworn testimony of two old residents who knew the land before it was surveyed, and have resided in the district ever since.

And these can be supplemented by at least six others, if necessary, of equally competent persons.

Surely all this ought to be sufficient to settle the matter.

I have, &c.,

JAMES BARRIE,

Mayor.

Acknowledge and forward to the Surveyor-General.—G.E.H. (for Under Secretary), B.C., 15/12/84. Acknowledged. The Surveyor-General.—T.C.B. (for the Under Secretary), B.C., 16/12/84. For Surveyor-General's Report see other side.—A.J.S.

Although it is difficult to believe that the original survey of the town of Lismore could be so inaccurate, I regret that it seems from the testimony now given that the position taken by this officer, based upon the original surveys, can no longer be maintained. I am scarcely prepared to recommend resumption or the widening of the road, and meeting claims for compensation.—P. F. ADAMS, 22/12/84. Under Secretary for Mines.

Submitted.—H.W., 30/12/84.

Will the Surveyor-General be good enough, having regard to the present and possible future importance of Lismore, say what course ought to be taken, and the probable cost of complying with the request of the Council.—J. P. ABBOTT, 31/12/84.

Will the Surveyor-General please expedite his report upon this matter.—H.W., B.C., 24/12/84. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 2/1/85.

[Enclosure.]

Sir,

Lismore, 1 December, 1884.

In accordance with instructions from the Municipal Council of Lismore, I have the honor to inform you that I made the requisite survey necessary to determine the position of Wilson's Creek, between Woodlark and Orion Streets, showing its encroachment on Molesworth-street, in the town of Lismore, and herewith transmit sketch showing the same.

Wilson's Creek between these streets has well defined banks, and any change that has taken place since the original survey of town of Lismore, in 1856, can only be of minor importance. There are evidences of land slips, but they only affect the position of the creek in detail.

In evidence that there can be no possibility of the creek, in 1856, being in the position as shown on the plan of original survey of town of Lismore, I determined the position of several very old dead trees on the opposite bank, which at that time must have existed.

I have, &c.,

C. T. V. ARNHEIM,

Licensed Surveyor.

No. 39.

Memo. from The Surveyor-General to The Under Secretary for Mines.

Deviation of Molesworth-street, Lismore.

18 February, 1885.

WITH respect to the minute of the Secretary for Mines on S.G.O. 83-4² herein, it might be thought desirable to invite the Borough Council of Lismore to obtain from the several owners of land the terms upon which they would allow a deviation of Molesworth-street to be taken through their properties in accordance with the accompanying tracing, with a view to consider whether the cost should be incurred by the Crown, either wholly or in part, and if in part to what extent the Borough Council might be required to contribute.

The Borough Council ask to have the deviation made 66 feet wide, but to do so would inflict much injury on the owners of the lands, and the District Surveyor reports that a less width would be sufficient. (*Vide* tracing herewith.)

P. F. ADAMS.

Submitted.—G.E.H. (for Under Secretary), 23/2/85.
The Mayor Lismore, with tracing, informed, 25/2/85.

Approved.—J. P. ABBOTT, 25/2/85.

No. 40.

The Under Secretary for Mines to The Mayor of Lismore.

Sir,

Department of Mines, Sydney, 25 February, 1885.

I have the honor to forward you the accompanying tracing, and invite you to obtain from the several owners of land the terms upon which they would allow a deviation of Molesworth-street to be taken through their properties in accordance with such tracing with a view to consider whether the cost should be incurred by the Crown either wholly or in part, and if in part to what extent the Borough Council might be required to contribute.

I am to add that to have the deviation made 66 feet wide would inflict much injury on the owners of the lands, and the District Surveyor reports that a less width would be sufficient.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 41.

No. 41.

The Mayor of Lismore to The Under Secretary for Mines.

Sir,

Council Chambers, Lismore, 29 May, 1885.

I have the honor, in reply to your letter of February 25th (No. 85-623, Roads), and forwarding tracing *re* resumption of land in Molesworth-street, Lismore, to state that the whole question was referred to the Improvement Committee of this Council for report. The following is a copy of the report as adopted by the Council, viz. :—

"That application be made to the Government to resume without delay an area required for a street one chain wide in accordance with surveyor's report. The amount of compensation could not be obtained by your Committee through the absence of some of the owners of the land about to be resumed."

I am further to add, for the information of the Minister, that there is no prospect of the Council being able to effect any satisfactory arrangement with the owners of property for its resumption, as every possible means has been exhausted since the receipt of your letter to accomplish this object. The Council, after very full inquiry and deliberation, leave the whole matter in the hands of the Government, with the urgent request that immediate steps be taken for the resumption of such portion of land as the officers employed have reported to be necessary for the purpose of giving reasonable means of communication in that portion of the town.

I have, &c.,

JAMES BARRIE,
Mayor.

Acknowledge.—G.E.H. (for Under Secretary), 5/6/85. Acknowledged, 5/6/85. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 6/6/85.

The Borough Council of Lismore in this letter declare their inability to effect any arrangement with the owners of land, to allow of the widening of Molesworth-street, and from their representation it does not appear that any other person would be successful. The question of widening Molesworth-street appears, as before stated, to be a Municipal matter, and as the Council has a knowledge of the ownership of ratable property in the Borough, it seems to be desirable that it should, if desiring assistance of the Crown in the matter under reference, make a definite proposition as to the course to be adopted, and a statement of the cost of effecting it. In view of all the circumstances of the case as previously reported, interference of the Crown cannot be recommended, unless a definite proposal and the cost of effecting it is submitted for consideration, as it is thought very undesirable that the Crown should, as desired now by the Council, accept the sole responsibility of widening the street, by taking land from allotments that might be supposed to have been already injured by being provided with a street of insufficient width, that is if the statements made are correct.—A. J. STOPPS (for Surveyor-General), 16/7/85. Submitted.—G.E.H. (for the Under Secretary), 20/7/85. Approved. Let the Council know.—J. P. ABBOTT, 21/7/85. The Mayor of Lismore informed, 22/7/85. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 12/11/85.

No. 42.

T. T. Ewing, Esq., M.P., to The Under Secretary for Mines.

Sir,

Parliament, 12 December, 1885.

I have the honor to transmit herewith tracing showing necessary improvements in Molesworth-street, Lismore. Tracing
herewith.

The merits of the case are already understood by your Department.

I am informed by Council Surveyor that £600 will be the amount required to complete purchase.

I have, &c.,

THOS. EWING.

Acknowledge.—G.E.H., 18/12/85. T. T. Ewing, M.P. Acknowledged, 21/12/85. The Surveyor-General.—G.E.H. (*pro* Under Secretary), B.C., 18/12/85.

It was decided by the Minister on the 21st July, 1885, that a definite proposal as to the widening of Molesworth-street, and the cost of effecting it be submitted by the Borough Council of Lismore before consideration of the Crown should be given in the matter. The letter of Mr. Ewing, as Member of Parliament for the Richmond, does not represent the Borough Council, and is a mere statement that £600 would be required, with no definite proposal as to who is to be compensated and to what amounts, and for what land severally.

It is recommended that there be no departure from previous decision of 21st July, 1885.—A. J. STOPPS (for Surveyor-General), 12/1/86. Submitted. H.W., 13/1/86.

The Borough Council of Lismore may again be invited to submit a definite proposal as to the widening Molesworth-street. Particulars of cost and names of owners of land to be compensated.—R.M.V., 14/1/86. Letter to be sent to Mr. Ewing, M.P. Thos. T. Ewing, M.P., informed, 16/1/86.

No. 43.

T. T. Ewing, Esq., M.P., to The Secretary for Public Works.

Resumption in Molesworth-street, Lismore.

Sir,

Parliament House, Sydney, 19 December, 1885.

I desire that this letter be placed with case, noted above, now being considered, and duly noticed.

Yours, &c.,

THOS. EWING.

Acknowledge, 22/12/85. This is a matter, I think, which requires to be dealt with by the Mines Department, to which I accordingly forward it.—W.J.L., 22/12/85. The Under Secretary for Mines.—J.R., B.C., 23/12/85. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 30/12/85.

[Enclosure.]

Dear Mr. Ewing,

Lismore, 14 December, 1885.
 In forwarding you a tracing of land requiring to be resumed for Molesworth-street, I omitted to send you a resolution passed at last meeting of Council, which reads, *re* Dr. Parker's letter:—"Your Committee beg to recommend that a fresh application be made to Government to resume sufficient land in Molesworth-street North (east side) as would permit to form a street one chain wide, the basis of compensation to be the amount asked by Dr. Parker, which appears to your Committee reasonable."

This, I presume, will be all you require.

I am, &c.,
 JAMES MOORE,
 M. Engineer.

T. T. Ewing, Esq., M.L.A.

No. 44.

The Under Secretary for Mines to T. T. Ewing, Esq., M.P.

Sir,

Department of Mines, Sydney, 16 January, 1886.

With reference to your letter of the 12th ultimo, respecting the resumption of certain land for the formation of Molesworth-street, Lismore, I am directed by the Secretary for Mines to inform you that the Borough Council of Lismore has been invited to submit a definite proposal as to the widening of Molesworth-street and the cost of effecting it, together with the names of the owners of the land to be compensated. Further action in the matter is stayed until such information has been received.

I have, &c.,
 HARRIE WOOD,
 Under Secretary.

[Enclosures.]

Dear Sir,

Esmond House, Point Piper Road, Woollahra, Sydney, 3 November, 1885.

In reference to the resumption of land 1 chain broad of lot 1 section 4 of the township of Lismore, according to the sketch forwarded by you to me 20th September.

I beg to inform you that the price for the portion required would be at the rate of £2 per foot, Zadoc-street frontage.

I am, &c.,
 ARTHUR F. PARKER.

St. Hillier Pearce, Esq., Council Clerk.

Re Resumption of Bank Land.

Commercial Banking Company of Sydney, Lismore, 11 March, 1886.

Gentlemen,

Reverting to yours of 1st September last my Board desire me to inform you they are prepared to accept £100 (say one hundred pounds) for the 11 perches you require, provided you will undertake to put the bridge over Brown's Creek in perfect order after making the necessary alterations to the road in front of our allotment.

Yours, &c.,
 E. B. BACKHOUSE,
 Manager.
 Sir,

The Municipal Council, Lismore.

Sir,

Lismore, 25 September, 1885.

In reply to yours of 1st instant I beg to state that, as far as I am concerned, the price I put upon land opposite slips in Molesworth-street is ten pounds (£10) per foot of the frontage in Zadoc-street. This is what I told the district surveyor some two years back. Swamps have been selling since drought set in, in Lismore, at from £5 to £10 per foot, and other portions up to £20 per foot.

The eyes and lungs of Lismore ought to be worth £10 per foot. I would respectfully beg to state that I look upon it as a waste of public money, any resumption of land at place proposed, until such time as the Council devise some means to prevent any future landslips.

To the Council Clerk, Borough of Lismore.

I am, &c.,

JOHN CURRIE.

Gentlemen,

Lismore, 3 September, 1885.

Yours (1st instant) to hand re amount required for land in Molesworth-street to enable the Government to open said street. In reply I am prepared to give the frontage marked red on plan herewith at the rate of £1 per foot; or, if I might be allowed to suggest, I would give more land for a less sum on your leaving me the frontage marked red, and take a chain higher up marked blue, this would take nearly $\frac{1}{2}$ an acre of land, for which I would take £200; or I would take the frontage in exchange for the chain marked blue.

Yours, &c.,

His Worshipful the Mayor and Aldermen of the Municipal Council of Lismore.

EDMUND COLEMAN.

No. 48.

The Under Secretary for Mines to T. T. Ewing, Esq., and P. Hogan, Esq., Ms.P.

Gentlemen,

Department of Mines, Sydney, 19 April, 1886.

I have the honor to acknowledge the receipt of your letter of the 12th instant, forwarding a letter from the Municipal Council of Lismore, giving the names of the owners of the land proposed to be resumed for Molesworth-street, and the amounts they are willing to accept, and to inform you that the matter shall receive immediate attention.

I have, &c.,

HARRIE WOOD,

Under Secretary.

No. 49.

Office Memorandum.

86-1263, 83-159—Molesworth-street, Lismore, to Surveyor-General, 27/4/86.

Will the Surveyor-General please return the papers in this case.—E.V. (for the Under Secretary), B.C., 5/5/86.

There is no definite proposal in the letter of the Mayor of Lismore, the only inference to be drawn from it is that the Crown is expected to bear all the expense of widening Molesworth-street. It has not yet been determined that the Crown shall incur any cost or responsibility in the matter. The enclosed letter is a mere statement of the sums said to be required by reputed landowners in compensation for loss of land, but there is no undertaking on their part to accept the sums quoted, neither is it stated to what extent the street shall be widened, nor how much land each person is willing to give up for the purpose named, and no opinion can therefore be formed as to the reasonableness or otherwise of the demands. It has previously been stated that the widening of Molesworth-street appears to be solely a municipal matter.—A. J. STORRS (for Surveyor-General), 6/5/86.

The Mayor of Lismore has now supplied the information asked for; perhaps the papers should be again referred to the Surveyor-General for report, as to the reasonableness or otherwise of the claims. Mr. Ewing, M.P., is very anxious that this matter should be dealt with speedily.—G.E.H. (for Under Secretary), 17/5/86.

The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 20/5/86. Approved.—J.F., 20/5/86. The Minister for Mines wishes these papers to be returned to him with as little delay as possible, as he is very anxious to deal with the case.—G.E.H. (for Under Secretary), 20/5/86.

Mr. District-Surveyor Donaldson is requested to report as soon as possible on the reasonableness or otherwise of the demands made by the several landowners in view of the suggested widening of the present Molesworth-street. A tracing is with Mr. Coleman's application.—A. J. STORRS (for Surveyor-General), 21/5/86. Mr. District-Surveyor Donaldson, Grafton.

Nature of instructions, Roads No. 104, received in Grafton District Survey Office, 25/5/86. Replied to by 86-72.—P. R. DONALDSON, District Surveyor.

No. 50.

Mr. District-Surveyor Donaldson to The Surveyor-General.

Sir,

District Survey Office, Grafton, 31 May, 1886.

With reference to your instructions of 21st May, 1886, N. 86,104 to report as soon as possible on the reasonableness or otherwise of the demands made by the several land owners in view of the suggested widening of the present Molesworth-street, Lismore, I have the honor to inform you that I consider the demands of Messrs. Coleman, Parker, and the Commercial Bank as reasonable, but that the sum asked by John Currie, which is £10 per foot or £330, is excessive. I am of opinion that £150 would be a fair price for the land to be taken from him (one hundred and fifty pounds).

I have, &c.,

P. R. DONALDSON,
District Surveyor.Roads 83- $\frac{1}{2}$, and all papers herewith.

Within

Within is a statement showing the dimensions and areas of land required from each owner for the widening of Molesworth-street. The District Surveyor reports that the claims of Mr. Coleman, Dr. Parker, and the Commercial Bank, are reasonable. The lands are not of equal intrinsic value and those of the Commercial Bank and of Mr. Currie might be of greater proportionate value than Dr. Parker's land, but estimated on the same basis, viz., £660 per acre, it would be worth £71. Mr. Currie's claim, however, is £330, which the District Surveyor considers excessive, he being of opinion that £150 would be a fair price for the land. It has not been determined yet that the Crown will meet these claims or any proportion of them.—A. J. STOPPS (for Surveyor-General), 7/6/86.

[Enclosure.]

Memo. in reference to claims for compensation for land proposed to be resumed for widening Molesworth-street in the Town of Lismore.

ASSUMING the price asked by A. F. Parker (which equals £660 per acre when the land has two frontages), the sum to which each claimant would be entitled would be, omitting fractions:—

Commercial Bank,	13 × 218 = 11 perches	at £660 per acre =	£45; no loss of frontage.
J. Currie,	33 × 158 = 17½	„ „	= £71; loss of 33 ft. frontage.
A. F. Parker,	66 × 132 = 32	„ „	= £132; loss of 66 ft. frontage.
E. Coleman,	53 × 172 = 33½	„ „	= £137; no loss of frontage.

It does not appear that Currie's land is more valuable than Parker's, as both allotments are opposite to one another in Zadoc-street, and having both double frontages.

The demands actually made are:—

Commercial Bank,		=	£100 (as against £45 per above valuation.)
J. Currie, £10 per ft.,	Zadoc-street,	=	£330 („ £71 „)
A. F. Parker, £2 per ft.,	„	=	£132 („ £132 „)
E. Coleman, £1 per ft.,	Molesworth-street,	=	£172 („ £137 „)

NOTE.—All dimensions are approximate, fractions having been omitted. Some of the dimensions are means between two numbers.

No. 51.

Mr. J. Currie to The Secretary for Mines.

Re resumption of land for widening Molesworth-street, Lismore.

Sir,

Lismore, Richmond River, 1 June, 1886.

I again take the liberty of addressing the Department *re* resumption of land in Molesworth-street, I do so in good faith, as I am interested in property where landslip took place and roadway wanted. The work is purely a municipal one, no doubt in that. If public money is used to resume land, it will be a sheer waste of public money unless conditions laid upon the Council to have a retaining wall so as to prevent future slips.

This is a river bank road. If the old wet seasons come back again, which no doubt they will, and heavy traffic, *i.e.*, on this road, only a question of time until another slip will take place, and the Government will be called upon to resume more land. Besides a low level bridge across Brown's Creek next to useless, as with any ordinary freshet in the river the connection between both sides of the town is cut off. With such a bridge, and the facts stated above *re* retaining wall, resuming of very little use unless conditions made to remedy above. We have a most unworkable Council, of course that is the fault of those who give them the position. A cutting, or rather a gravel pit, going on for the last five years in Zadoc-street, right opposite Court-house; stuff carted away to fill up the low lying parts of the town, that at a very moderate sum, would have made a good road where slip took place without making a demand upon the public treasure.

I have, &c.,

JOHN CURRIE.

Acknowledge, 7/6/86. Acknowledged, 7/6/86. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 7/6/86. Submitted. See the Surveyor-General's Minute on 86-1,823.—H.W., 15/6/86.

In view of Mr. Currie's representations respecting the washing away of the street, the Commissioner of Roads may be asked for a report as to the advisability of laying out a street in the position proposed.—J.B., 22/6/86.

The Under Secretary for Public Works.—G.E.H. (for Under Secretary), B.C., 24/6/86. Roads.—J.R., B.C., 25/6/86.

No. 52.

Mr. District-Surveyor Donaldson to The Surveyor-General.

Widening Molesworth-street, Lismore.

I HAVE carefully considered this question with the Assistant Engineer for Roads, Mr. Statham, who has embodied our views in the memorandum herewith of this date.

I doubt whether the interests involved, that is, the affording direct access from Molesworth-street (the business part) to section No. 3, and the western half of section 4, are sufficient to justify the expenditure which will be necessary, viz., about £1,254, for the resumption of land, and £1,000 for the erection of bridge, &c., and I think the Municipal Council will hesitate to expend the latter sum, there being the alternative but circuitous route open, *via* Keen-street.

P. R. DONALDSON,

District Surveyor.

16th September, 1886.

It will be seen from the report of the Commissioner and Engineer of Roads, obtained at the request of the Secretary for Mines (see his Minute of June 22nd, 1886, on papers 83-1,582, S.-G.O.), that he is of opinion that Molesworth-street should not be widened in the position proposed; that to do so would ultimately cost several thousands of pounds, and he suggests a possible alternative of widening a lane, a way from the river bank, and the seeking of the opinions of the District Surveyor and the District Engineer on the

the subject. The reports of these two officers have accordingly been obtained by the Surveyor-General, by which it appears that they do not approve of either of the previously suggested ways of affording access, but are more favourable to a third, which they describe, and also express their doubts that the interests involved would justify the expenditure that would be required to effect it, viz., £2,254, that is to say, £1,254 for land, and £1,000 for a bridge, and think that the Municipal Council will hesitate to expend the latter sum. It is pointed out that access is open by way of Keon-street, and the circumstances of the case do not appear to warrant of necessity, any participation in the expense by the Crown.—A. J. STOPPS (for Surveyor-General), 15 December, 1886.

Submitted for approval.—H.W., 17/12/86. Approved.—J.F., 20/12/86. T. T. Ewing, M.P., and P. Hogan, M.P., informed 22 December, 1886. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 22/12/86.

[Enclosures.]

Minute Paper.

Purchase of land to widen Molesworth-street, Lismore.

Sydney, 26 June, 1886.

THROUGH not in any way dealt with previously by this Department, I have made myself acquainted with the case as far as the papers admit.

I am disposed to concur with the supposition in the Minute of the Surveyor-General, dated 12th February, 1884, that the river has changed, as suggested very recently if not absolutely since the original survey, the differences between the tracing from lithographs of years 1856 and 1883, quite bear this out, though denied by the declarations which in one instance, if taken literally, prove too much as queries in pencil as to the every day inspections. However, though the Minute of the Surveyor-General of 22nd December, 1884, admits that the original survey may have been incorrect, and that the Government should assist,* there can be no doubt that such a change in course of river is going on here, and it is only a question of time how long the river will take to eat away the additional width now proposed, no matter what the protection given may be. The High-street embankment at West Maitland is an instance of what such protection may cost to construct and maintain.

In reply to the question of the Minister for Mines, I am of opinion that it is not desirable to lay out a street in the position proposed, along the river bank, without further inquiry. It would cost the Government £550 for land and the municipality quite £1,000 for road-making and bridge, independent of the indefinite sum for protection of bank, so that the cost would be probably £4,000, with an additional outlay every flood. I would venture to suggest, before deciding on encountering such difficulties, it would be better to reconsider the question of widening the lane, which, as Mr. Donaldson says, is higher than Molesworth-street, and therefore more valuable; but as the additional width could all be taken on the west side, the improved change of front would greatly compensate for the more valuable land taken. It would be no great disadvantage to the church to be near the street, and, compared with the other evils, the removal of the Government stable is but a trifling matter.

The continuation of widened lane, by resumption of lots 15 and 14, section 5, would also probably improve the position for bridge over Brown's Creek, and open a really good permanent thoroughfare from Orion to Woodlark-street. I would therefore suggest that Mr. Donaldson be asked to confer with Mr. Statham, the Assistant Engineer for Roads at Grafton, on this, and that they be authorized to ask the officers of their respective departments at Lismore for further reports on any detail they require.

If the Government do make a change, and the really permanent improvement can be done at a cost at all within reason, I think it much better to do it than have to carry on an expensive and never ending contest with the river, during which interests may grow up which would prohibit the change now proposed, if ultimately found desirable.

WILLIAM C. BENNETT.

* MEMORANDUM by Mr. Stopps:—This seems to be a mistake. The Surveyor-General said he was not prepared to recommend resumption of land, and the consequent expense involved in satisfying claims for compensation.

The Under Secretary for Mines.—J.R., B.C., 1/7/86. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 3/7/86. Forwarded to Mr. District Surveyor Donaldson, with view to carrying out the recommendation of the Commissioner for Main Roads.—P.T.A., 5 September. Replied to by, 86-124.—P. R. DONALDSON, District Surveyor.

Purchase of Land to widen Molesworth-street, Lismore.

I HAVE had the opportunity to obtain some personal acquaintance with this question which was mentioned to me by Mr. Williamson, Road Superintendent, when I last visited Lismore, and he pointed out the localities.

There does not appear to have been any recent erosion of the river bank, nor does there seem to be any probability that such is likely to take place in future. The slips are due rather to concentration of drainage, in consequence of tracks which have been cut at various times for access to the wharf. This has gone on till little, if any, of the original road remains at south-east corner of Zadoc-street, and traffic is now on sufferance across the corner of lot 18.

The bridge across Brown's Creek is an old low-level structure of rough construction and very narrow. The erection of a suitable bridge, raised to the level of Molesworth-street and of proper width, would cost fully £1,000, including the necessary embankments and road approaches.

The whole of the properties north of Brown's Creek are very awkwardly situated as regards access.

To erect a longer and wider bridge on the site of the existing one is scarcely to be recommended. The site is a very bad one. I agree in principle with the views of the Commissioner, but there are difficulties in the way of carrying out his suggestions which, I fear, cannot be got over. In the first place, the lane through section 4 is built on up to the frontage, some of the buildings being large and expensive, so that the proposed widening would involve a heavy expense. Again, the cutting in Zadoc-street would be intersected, and that is 10 or 12 feet deep. Then, to resume lots 14 or 15 is out of the question, as the Court-house, a large new building, stands on them. Again, there is no practicable way of getting through to Woodlark-street. That street is the principal business centre, and the frontage is worth at least £20 per foot, irrespective of the consideration that it is all built upon, and that a row of two-storey new brick shops stand in the way where it would be necessary to open the road through.

The only practicable alternative between the Commissioner's proposal and that of widening Molesworth-street is shown on tracing, and is to resume lot 17 of section 5. This lot is 66 feet wide, which would be sufficient. It would also be necessary to resume portion of lot 19 and a piece on south side of Brown's Creek. I have ascertained that lot 17 is valued for assessment at £500, and that is probably worth £700. The other resumptions, being for the most part low-lying land would be less valuable and could probably be obtained for £250.

There would then remain question of access to the northern portions of section 4, as to which I agree with Mr. Donaldson that the best way is to widen that portion of Molesworth-street through lots 1, 2, and 3, as tinted red on tracing, involving claims for compensation amounting to £304.

The whole, it would thus appear, represents £1,254 for compensation, and, irrespective of maintenance, £1,000 for works. It is questionable whether the interests involved warrant such an expenditure.

E. J. STATHAM,
14/9/86.

To the Surveyor-General, with 86-124.—P. R. DONALDSON, District Surveyor, 16/9/86.

No. 53.

The Under Secretary for Mines to T. T. Ewing, Esq., and P. Hogan, Esq., Ms.P.

Gentlemen,

Department of Mines, Sydney, 22 December, 1886.

With reference to the matter of Molesworth-street, Lismore, I am directed by the Secretary for Mines to inform you that from reports obtained from the Commissioner and Engineer for Roads, the District Surveyor, and the District Engineer, it appears that direct access from Molesworth-street (the business part) to section No. 3, and the western half of section 4 is the most favourable, but it is doubtful whether the interests involved would justify the expenditure that would be required to effect it, viz., £2,254, that is to say £1,254 for land, and £1,000 for a bridge, which latter sum it is thought the Municipal Council will hesitate to expend.

I am to add that access is open by way of Keen-street, and the circumstances of the case do not appear to warrant of necessity any participation in the expense by the Crown.

I have, &c.,
HARRIE WOOD,
Under Secretary.

Returned herewith are original papers left by the Mayor of Lismore.

No. 54.

Thos. T. Ewing, Esq., M.P., to The Under Secretary for Mines.

Sir,

Parliament House, 13 January, 1887.

I have the honor to inform you with reference to letter herewith returned that it should be unnecessary to again explain this case. Briefly it is this: The Government sold land in Molesworth-street, Lismore, showing a frontage to this street which also gave access to allotments to the north.

The street is now proved never to have existed.

The Government, therefore, has sold under a design now acknowledged to be erroneous, sold frontages to a road $1\frac{1}{2}$ chains wide not in existence, and sold other allotments to which street (shown in design, never existing on ground) was the easiest and best means of access.

I think I am justified in saying that both Mr. Abbott and Mr. Fletcher, when Ministers for Mines, saw the position at a glance and accepted as inevitable the position in which the Government had been placed, and the matter resolved itself into a question as to how the Government could best extricate itself from the position by providing a road.

The Municipal authorities and private owners have been under the impression for the past year or two that the details were being arranged, and have patiently awaited a termination.

I return the enclosed again for your perusal, before informing the inhabitants, knowing that when proceedings at law are commenced the Government will find itself in a position impossible to defend, and be exposed to the ridicule of endeavouring to gain a case which no ordinary man would even dream of testing at law.

I have, &c.,
THOS. EWING.

Acknowledge.—H.W., 18/1/87. Acknowledged The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 18/1/87. There appears to be nothing further for the Surveyor-General to add to his previous report on this matter, or to cause any departure from previous decision.—A. J. Stopps (*pro*. Surveyor-General), 4th February, '87. Submitted.—In view of the reports herein the previous decision may stand.—H.W., 9/2/87. Approved.—F.A., 10/2/87. T. T. Ewing informed, 12 February, 1887. The Surveyor-General.—G.E.H. (for Under Secretary), B.C., 15/2/87.

No. 55.

The Under Secretary for Mines to T. T. Ewing, Esq., M.P.

Sir,

Department of Mines, Sydney, 12 February, 1887.

With reference to your letter of the 13th ultimo, respecting the matter of Molesworth-street, Lismore, I am directed by the Secretary for Mines to inform you that, in view of the reports in the case, it is not the intention to depart from the previous decision.

I have, &c.,
HARRIE WOOD,
Under Secretary.

No. 56.

T. T. Ewing, Esq., M.P., to The Under Secretary for Mines.

Sir,

Parliament House, Sydney, 19 March, 1887.

I have the honor to request that this letter may be placed with others in connection with resumption in Molesworth-street, Lismore, respecting which I will shortly call to see the Minister.

I have, &c.,
THOS. EWING.

Acknowledge.—G.E.H. (for Under Secretary), 21/3/87. Acknowledged, 21/3/87. The Surveyor-General for return of papers to Mines.—G.E.H. (for Under Secretary), B.C., 21/3/87. Papers herewith returned to Mines Department as requested.—A. J. Stopps (for Surveyor-General), 28/3/87.

[Enclosure.]

[Enclosure.]

Sir,

Lismore, 17 January, 1886.

Having recently purchased the house and ground, once the property of John Currie, of Lismore, and formerly the residence of Dr. Parker; and having heard that the local Municipal Council endeavoured, through your aid, to induce the present Government to resume a portion of said land for the improvement of Molesworth-street; and might have succeeded were it not for the opposition of the late owner, I do myself the honor to acquaint you that I, as present owner, will not only not object, but will willingly agree to, or fall in with, whatever proposition has been so submitted to this Government, or which may yet be so submitted to any future Government for such purpose.

I have, &c.,

C. COGHLAN,

Clerk of Petty Sessions.

T. T. Ewing, Esq., M.L.A., Sydney.

No. 57.

The Mayor of Lismore to The Secretary for Mines.

Sir,

Council Chambers, Lismore, 26 July, 1887.

I have the honor, by request of the Council, to forward the enclosed petition of the residents of Lismore, *re* resumption of land for a street.

This matter was so long and often under the consideration of the Department, that I trust a speedy and favourable decision will be arrived at.

I have, &c.,

LOUIS BERNSTEEN,

Mayor.

Forward to the Department of Lands and inform.—G.E.H. (for Under Secretary), 17/8/87. Informed, 17/8/87. The Under Secretary Department of Lands.—G.E.H. (for Under Secretary), B.C., 19/8/87.

No. 58.

Petition.

[Presented by Thos. Ewing and F. G. Crouch, 12th August, 1887.]

To His Worshipful the Mayor and Aldermen of the Municipal Borough of Lismore,—

We, the undersigned ratepayers in the Municipal Borough of Lismore,

HUMBLY SHOWETH,—

That some little time ago the Honorable the Minister for Mines had approved of certain resumption of land in Molesworth-street North, with a view of opening up the traffic of the said street, that the said land, up to the present, has not been resumed, that the delay is a great hindrance to the general traffic of the town.

Your Petitioners understand that the obstacle in the way at the time, was the exorbitant price asked by Mr. Currie for his land at the corner of Zadoc and Molesworth Streets. Your Petitioners wish to point out that this obstacle has been removed, in as much as the land then owned by Mr. Currie, is now the property of Mr. Coghlan, and we feel sure the present owner would be willing to take a fair price for his land, if resumed.

Your Petitioners trust that your Honorable Council will take this matter in hands again, and we feel sure your efforts will be crowned with success, and your Petitioners, as in duty bound, will ever pray.

Peter Dawson, Freehold; John Maher, Ratepayer; Mathew Ruan, Freehold; and 129 other signatures.

No. 59.

Petition.

[Presented by Thomas Ewing and F. G. Crouch, 18 August, 1887.]

To The Honorable the Minister for Mines, Sydney.

The humble Petition of the undersigned Residents of Lismore

SHOWETH,—

That the roadway on the northern side of Brown's Creek, in Molesworth-street, is, on account of its abutment to Wilson's Creek and the steep nature of its banks, unsuitable for traffic, and also because of the continued erosion of the banks of that creek any resumption previously denied of land there for the purpose of widening that street would be of little practical use.

That, in considering the resumption of land in order to give the residents of that part of Lismore commonly known as Newtown access to the southern and business part of the town, the Government should consider the practicability of resuming the allotment of land adjoining the eastern side of Lismore Court-house, extending from Zadoc-street to Brown's Creek, and a strip of land from Brown's Creek to Woodlark-street, as shown in the sketch sent herewith, for the following reasons:—

Firstly: It would afford people a means of access, in time of flood, from the town to the high ground on which the Court-house is built.

Secondly: It would form a continuation of Coleman's-lane.

Thirdly: It would afford the residents access to the Court-house when both bridges over Brown's Creek in Molesworth-street and Keen-street are covered with flood-waters.

Fourthly: The price for the resumption of land at this place would be cheaper than that asked for the frontages in Molesworth-street.

Fifthly: It would be of far greater convenience generally to the residents of Lismore.

That a report be asked for from some responsible person as to the suitability of the place indicated in the sketch for the purposes of a roadway.

And

And your Petitioners therefore pray that you will cause such inquiries to be made as to the suitability of this land for a roadway, the price required by the owners of the land proposed to be resumed, and on such other matters as the Honorable the Minister may deem necessary. And your Petitioners, as in duty bound, will ever pray, &c.

LOUIS BERNSTEEN, Mayor of Lismore, M.D.
J. E. GLASGOW, J.P., Timber Merchant.
GEORGE LARKIN, J.P., Storekeeper, Lismore.
And 61 other signatures.

Forward to Lands Department and inform.—G.E.H. (for Under Secretary), 22/8/87. Messrs. Ewing and Crouch, Ms.P., informed, 22/8/87. Refer to Mr. Donaldson for future report.

No. 60.

A. F. Parker, Esq., M.D., to The Secretary for Mines.

Sir,

Lismore, 7 October, 1887.

A Petition, signed by many ratepayers of the municipality of Lismore, praying that certain portions of land in Molesworth-street of that town might be resumed was forwarded to your Department July 26, 1887. Could you inform me whether any reply has been given to the letter forwarded by the Mayor with the Petition, and whether your Department recommended that the land should be resumed or not?

I have, &c.,

ARTHUR F. PARKER, M.D.

This, I think, refers to land required for street. Refer to Lands Department, and inform.—G.E.H. (for Under Secretary), 12/10/87. A. F. Parker, 12/10/87. The Under Secretary for Lands.—G.E.H. (for Under Secretary), B.C., 20/10/87.

No. 61.

A. F. Parker, M.D., Esq., to The Secretary for Lands.

Sir,

Lismore, 7 October, 1887.

A Petition signed by many of the ratepayers of the municipality of Lismore was forwarded to the Mayor and Council of that town praying that certain lands in Molesworth-street might be resumed so as to form a passable road.

This Petition was sent, July 26, 1887, on by the Mayor to the Department for Mines, and since then, I believe, nothing has been heard of it. As I am one of the most interested parties, holding a portion of the land it is prayed may be resumed, I should be glad if you could inform me whether it is the intention of the Department to recommend the resumption or not.

I have, &c.,

ARTHUR F. PARKER, M.D.

No. 62.

Thos. T. Ewing, Esq., and F. G. Crouch, Esq., Ms.P., to The Under Secretary for Mines.

Sir,

Parliament House, Sydney, 12 October, 1887.

We hope you will kindly look into this matter. The correspondence has been very lengthy.

We have, &c.,

THOS. EWING.

F. G. CROUCH.

Forward to Lands Department and inform.—G.E.H. (for Under Secretary), 13/10/87. Messrs. Ewing and Crouch, Ms.P., informed, 15/10/87. The Under Secretary, Department of Lands.—G.E.H. (for Under Secretary), B.C., 14/10/87.

[Enclosure.]

Sir,

Lismore, 7 October, 1887.

About seven months ago I took the liberty of writing to you in reference to the question of the resumption of certain land in Lismore, for the improvement of Molesworth-street; and you were good enough to acknowledge the receipt and promised to inquire about it. Since then, about the prorogation of Parliament, a numerously signed petition for the second time from the ratepayers, urging the necessity for said resumption, was forwarded through the Municipal Council, but nothing has been heard of it. Dr. Parker and Mr. Coleman have requested me to bring the matter under your notice, and request you to be so good as to inquire whether anything has been, or is likely to be, done. My fence is in a very dilapidated condition—portions being on the street—but I cannot replace it until this question of resumption be settled one way or the other. Both the Council and ratepayers have been in favour of resumption for years, and would have been successful were it not.

T. T. Ewing, Esq., M.L.A., Sydney.

No. 63.

A. F. Parker, Esq., M.D., to The Under Secretary for Lands.

Sir,

Lismore, 28 October, 1887.

On the 7th instant, I addressed a letter to you asking certain information relative to a Petition that was forwarded by the Mayor of Lismore to the Under Secretary for Mines.

Since then I have received a communication from the Under Secretary for Mines informing me that the Petition of the residents of Lismore for the resumption of certain land in Molesworth-street had been forwarded to you. Having had no reply from you, I should be obliged if you would now give me the desired information, viz., whether it is your intention to recommend this resumption or not.

You

You can understand that I am particularly interested in this matter, as it is impossible for me to build on the allotment of land belonging to me until I know whether a road is going to be made through it or not.

I have, &c.,

ARTHUR F. PARKER, M.D.

It is recommended that Dr. Parker be informed that it is not intended to comply with the request of Petitioners to widen part of Molesworth-street in the town of Lismore.—A. J. Stopps (for Surveyor General).

See 83- $\frac{1}{2}$ ² for approval. A. F. Parker, M.D., informed.—H.L.T., 8/11/87.

No. 64.

The Acting Surveyor-General to The Under Secretary for Lands.

Proposed Resumption of Land to provide a Street in lieu of widening part of Molesworth-street, Town of Lismore.

THE petition (paper No. 46) is a renewal of an application for the widening of part of Molesworth-street. The whole question has been fully reported upon and considered, and the application has several times been refused. See Mr. Abigail's decision (paper 42), Mr. Fletcher's decision (paper 41), and Mr. Abbott's decision (paper 11).

The petition registered 47 points out that Molesworth-street at the point in question is unsuitable for traffic from the steepness of the ground, and because of the continued erosion of the river bank, and suggests the resumption of land elsewhere (as shown on sketch). This possible course has been previously under consideration as an alternative to widening Molesworth-street, and is embraced in the Ministerial decisions that the Crown declines to accept any responsibility in providing improved access in this case (beyond mere survey), leaving the Municipal Council of Lismore to deal with the matter as strictly a municipal one.

Departure from previous decisions cannot be recommended.

E. TWYNAM.

See also paper 51.—A.J.S. Submitted.—S.F., 5/11/87. I cannot sanction a departure from or reversal of previous Ministerial decisions on this case.—T.G., 7/11/87. T. T. Ewing, M.P., and F. G. Crouch, M.P., informed.—H.L.T., 8/11/87.

No. 65.

The Under Secretary for Lands to A. F. Parker, Esq., M.D.

Sir,

Department of Lands, Sydney, 8 November, 1887.

With reference to your letter of the 28th ultimo, respecting a petition of the residents of Lismore for the resumption of certain land in Molesworth-street, I am directed by the Secretary for Lands to inform you that it is not intended to comply with the request of the petitioners to widen the street in question.

I have, &c.,

STEPHEN FREEMAN

(For the Under Secretary).

No. 66.

The Under Secretary for Lands to T. T. Ewing, Esq., and F. G. Crouch, Esq., Ms.P.

Gentlemen,

Department of Lands, Sydney, 8 November, 1887.

With reference to the petition of certain residents of Lismore (presented by you) for the resumption of land to provide a street in lieu of widening part of Molesworth-street, Lismore, I am directed to inform you that the Secretary for Lands cannot sanction a departure from, or reversal of, previous Ministerial decisions in this case.

I have &c.,

STEPHEN FREEMAN

(For the Under Secretary).

No. 67.

T. T. Ewing, Esq., M.P., to The Under Secretary for Lands.

Sir,

Parliament House, Sydney, 12 November, 1887.

I have the honor to inform you that I desire to see Secretary for Lands in this matter.

I should be glad if you could have a *précis* of case submitted to him.

I will call when you inform me, papers are in a position for his consideration.

Yours, &c.,

THOS. EWING.

It is thought that the Surveyor-General's reports upon papers Nos. 11, 23, 25, 39, and 41, afford the information required for the understanding of the case, unless a personal explanation of it might be considered to be more satisfactory.—E. TWYNAM, 18/11/87.

The Under Secretary.—S.F., 19/11/87. Inform Mr. Ewing, M.P., I will see him on Wednesday at 2 p.m.—T.G., 21/11/87. Mr. Ewing, M.P. informed, 21/11/87.

Mr. Ewing, M.P., saw me on day arranged, and pointed out that the difficulty is caused in this case by an error in the original survey of the town as far as it concerned the portion of Molesworth-street, and not by the erosion of the river bank. He points out that trees, a growth of great age, are now on the edge of the river bank, and within the boundaries of the allotments, and that the site of the street is actually in part in the course of the river. This statement should be thoroughly tested, and when result is known the case may then be resubmitted.—T.G., 26/11/87.

No. 68.

The Under Secretary for Lands to T. T. Ewing, Esq., M.P.

Sir,

Department of Lands, Sydney, 21 November, 1887.

With reference to your letter of the 12th instant, requesting an interview with the Secretary for Lands, respecting the desire of certain residents of Lismore, that land be resumed to provide a street in lieu of widening part of Molesworth-street, Lismore, I have the honor to inform you that Mr. Secretary Garrett will see you on Wednesday next, at 2 p.m.

I have, &c.,

STEPHEN FREEMAN
(For the Under Secretary).

No. 69.

The Acting Surveyor-General to The Under Secretary for Lands.

Proposed widening of Molesworth-street (at Zadoc-street), Lismore.

Surveyor-General's Office, Sydney, 6 December, 1887.

THIS part of Molesworth-street is shown to be impracticable for traffic, being partly in the North Richmond River and partly on the river bank, and it is subject to the eroding action of the river. (*Vide* sketches 83 ¹⁸⁰ _{10 and 21}.)

The allotments fronting this part of Molesworth-street were purchased as marked on the ground, and probably at that time the land was supposed to have a special value in view of frontage to navigable water.

As shown by the local Roads Engineer, the action of wheeled traffic along this part of the street has contributed greatly to the destruction of the surface, and instead of the widening of the street, as suggested, along the entire frontage, he advises a diversion through alienated land (section 5) up to Zadoc-street, and thence northward resumption of land for widening. The incidental expenditure is estimated as follows, viz. :—Compensation for land to be resumed, £1,254; bridge over Brown's Creek, approaches, and other works, £1,000.

The Chief Engineer points out that the site is not suitable for a road, also that after construction further outlay to an indefinite extent will probably be requisite for protection of the river bank and road, and he cites, as an instance, High-street embankment at West Maitland as a case presenting similar conditions.

The argument advanced by Mr. Ewing, M.P., and others, is that because this part of Molesworth-street was projected perhaps injudiciously, and possibly partly within or too near the river frontage, therefore the Government is responsible for its present impracticable state, and is bound to improve it. This view of the case altogether ignores certain facts, viz., that parties purchased allotments as defined on the ground and with the knowledge of their position; also that at time of sale the land may have been supposed to have special value, on account of its proximity to water frontage; and also that such water frontage has been utilized to advantage by crection of a wharf; and further that the aid of the Government is now sought on the plea that Molesworth-street is an important thoroughfare. It appears to me that the improvement of this street is a matter so deeply affecting the value of the allotments abutting on it that it is somewhat a matter of surprise that the proprietors do not offer to contribute largely to the work; and moreover the municipal rating on the enhanced value of business places might in a considerable measure provide interest on the outlay.

I would beg to submit that the only ground advanced, viz., injudicious projection of the street too near the river is not of such weight as to constitute an exception to the recognized practice of the Government, viz., that the maintenance of streets within an incorporated area is a duty devolving upon the Council, to which an annual subsidy is paid by the State, thus to relieve the Government from further demand in this respect.

Apparently the only exceptional circumstance in this case is the comparatively large expenditure for the work which would naturally be regarded as of some magnitude in a small municipal district (the population being about 6,000).

It would not be judicious to treat this case as one of expenditure in the guise of compensation for error in design of the town, as it might incur numerous similar claims on grounds more or less doubtful, which it would be most difficult to rebut.

Moreover, it is to be borne in mind that there are alternative proposals for opening another street in lieu of Molesworth-street, which, if properly supported by the inhabitants concerned and those who would be benefited thereby, would doubtless have been entered upon by the Council by this time.

Under all the circumstances it is submitted that the previous decision (supported by three Ministers) be not departed from, viz., that this is purely a municipal matter, and one of a character which the Government at present is not bound to support or assist, especially in view of impending legislation.

E. TWYNAM.

Submitted that Mr. Ewing, M.P., be informed in terms of this report, or that a copy be sent to Mr. Ewing, with an intimation that Mr. Secretary Garrett concurs in the views expressed therein.—S.F., 17th December, 1887.

Inform.—T.G., 20/2/87. T. T. Ewing, M.P., with copy of report, 22/12/87.

No. 70.

The Under Secretary for Lands to T. T. Ewing, Esq., M.P.

Sir,

Department of Lands, Sydney, 23 December, 1887.

I am directed to forward the accompanying copy of Mr. Acting Surveyor-General Twynam's report on the proposed widening of Molesworth-street (at Zadoc-street), Lismore, and to inform you that Mr. Secretary Garrett concurs in the views expressed therein.

I have, &c.,

STEPHEN FREEMAN
(For the Under Secretary).

[Enclosure.]

[Enclosure.]

Proposed widening of Molesworth-street (at Zadoc-street), Lismore.

Sydney, 6th December, 1837.

THIS part of Molesworth-street is shown to be impracticable for traffic, being partly in the North Richmond River, and partly on the river bank, and it is subject to the eroding action of the river (*vide* sketches 83 ¹⁵⁹ ~~16 and 21~~).

The allotments fronting this part of Molesworth-street were purchased as marked on the ground, and probably at that time the land was supposed to have a special value in view of frontage to navigable water.

As shown by the Local Roads Engineer the action of wheeled traffic along this part of the street has contributed greatly to the destruction of the surface, and instead of the widening of the street as suggested, along the entire frontage, he advises a diversion through alienated land (section 5) up to Zadoc-street, and thence northward resumption of land for widening.

The incidental expenditure is estimated as follows, viz:— Compensation for land to be resumed, £1,254; bridge over Brown's Creek, approaches, and other works, £1,000.

The Chief Engineer points out that the site generally is not suitable for a road, also that after construction further outlay to an indefinite extent will probably be requisite for protection of the river bank and road, and he cites, as an instance, High-street embankment at West Maitland as a case presenting similar conditions.

The arguments advanced by Mr. Ewing, M.P., and others is that because this part of Molesworth-street was projected, perhaps injudiciously, and possibly partly within or too near the river frontage, therefore the Government is responsible for its present impracticable state, and is bound to improve it. This view of the case altogether ignores certain facts, viz., that parties purchased allotments as defined on the ground, and with the knowledge of their position; also at time of sale the land may have been supposed to have special value on account of its proximity to water frontage; and also that such water frontage has been utilized to advantage by erection of a wharf; and further that the aid of the Government is now sought on the plea that Molesworth-street is an important thoroughfare.

It appears to me that the improvement of this street is a matter so deeply affecting the value of the allotments abutting on it, that it is somewhat a matter of surprise that the proprietors do not offer to contribute largely to the work, and moreover the Municipal rating on the enhanced value on business places might in a considerable measure provide interest on the outlay. I would beg to submit that the only ground advanced, viz., injudicious projection of the street too near the river, is not of such weight as to constitute an exception to the recognized practice of the Government, viz., that the maintenance of streets within an incorporated area, is a duty devolving upon the Council, to which an annual subsidy is paid by the State thus to relieve the Government from further demand in this respect.

Apparently the only exceptional circumstance in this case is the comparatively large expenditure for the work which would naturally be regarded as of some magnitude in a small municipal district (the population being about 6,000.)

It would not be judicious to treat this case as one of expenditure in the guise of compensation for error in design of the town, as it might incur numerous similar claims on grounds more or less doubtful, which it would be most difficult to rebut.

Moreover, it is to be borne in mind that there are alternative proposals for opening another street in lieu of Molesworth-street, which, if properly supported by the inhabitants concerned, and those who would be benefited thereby, would doubtless have been entered upon by the Council by this time.

Under all the circumstances it is submitted that the previous decision (supported by three Ministers) be not departed from, viz., that this is purely a municipal matter, and one of a character which the Government at present is not bound to support or assist, especially in view of impending legislation.

E. TWYNAM,
Surveyor-General's Office.

The Under Secretary for Lands.

No. 71.

T. T. Ewing, Esq., M.P., to The Secretary for Lands.

Resumption Molesworth-street, Lismore.

Sir,

Parliament House, 3 January, 1838.

In my interview with you it appeared that the point really to be decided in above case was simply—

1. Was Department in error in relative positions of Richmond River and Molesworth-street, in early surveys.
2. (And incidentally upon that) had early plans of town of Lismore under which land was sold course of river shown wrongly?

I think I am right in believing that you concede the Government is bound by same responsibilities as obtain between individuals, and that if Department had been in error it should be remedied. I am aware that as is the case with all river and creek banks, there is always slight erosions and makings up going on, but these usual changes cannot affect this case, it being not a matter of a few feet, but of chains.

I enclose seven declarations from old residents, all respectable men, and can obtain the same statement from every old resident. But the vegetation on other side of river—may be, hundreds of years old—proves so conclusively that river course could not have been there thirty or forty years ago, that it has always appeared incomprehensible that Department could have made such a contention.

In order to place the matter at once and for all beyond doubt, I shall be glad if you would kindly request your district surveyor to reply to the following questions. Mr. Donaldson's large experience in these districts is well known to you.

After the matter of the justice is conceded, will be sufficient time to consider the remedy.

I trust you may be able to obtain a speedy reply.

I have, &c.,
THOS. EWING.

Questions.

- (1.) Was an error made by Mr. Surveyor Peppercorn in placing Molesworth-street in position with relation to Richmond River as shown by early maps of town of Lismore?
- (2.) Were early maps in error?
- (3.) Is it a fact that river was shown with reference to some allotments some (300) three hundred feet out of its course—(notably, North Lismore)?
- (4.) Is it a fact that some of the divisional lines between allotments in North Lismore (directly opposite) come some 4 chains (264 feet about) beyond where bank of river was shown in early survey?
- (5.) Is it a fact, where course of river is thus shown, timber, at least 100 years old, growing on firm alluvial flat, is in existence?
- (6.) Is it possible since occupation of Colony by whites, Richmond River course can have been as shown?

[Enclosures.]

[Enclosures.]

I, EDMUND ROSS, of Ballina, do solemnly and sincerely declare that I remember the survey of the town of Lismore, as made by Mr. Peppercorn, particularly sections 4 and 5 on each side of Zadoc-street, Wilson's Creek, and I distinctly remember that the said Wilson's Creek has not changed its course since the said survey was made by Mr. Peppercorn. And I make this solemn declaration, conscientiously believing the same to be true, and in virtue of the provisions of an Act made and passed, in the ninth year of the reign of Her present Majesty, intituled, "An Act for the more effectual abolition of oaths and affirmations taken and made in various departments of the Government of New South Wales, and to substitute declarations in lieu thereof, and for the suppression of voluntary and extra-judicial oaths and affidavits."

Made and signed before me at Lismore, }
this 7th day of November, 1888. }

No. 72.

The Council Clerk, Lismore, to The Secretary for Mines.

Sir,

Council Chambers, Lismore, 21 September, 1888.

By direction of the Borough Council of Lismore, I have the honor to transmit the following resolution, viz. :—"That owing to the increased traffic in that portion of Molesworth between Orion and Woodlark Streets, this Council take immediate action to communicate with the proper authorities to have the necessary land resumed so as to make that portion of the street the full width, viz., 99 feet." I am further

further directed to call your attention to your letter No. 86-1263 (83- $\frac{1}{2}$ P.) roads in which you stated this matter would receive immediate attention. The owners of the land proposed to be resumed are all willing to sell at a reasonable price, and the Council hope that the Government will favourably consider their request, as the resumption asked for is of vital importance to the welfare of the district.

I am, &c.,
C. A. BARHAM,
Council Clerk.

This is a matter for the Lands Department, 25/9/88. The Under Secretary for Lands.—G.E.H.
(for Under Secretary), B.C., 25/9/88.

No. 73.

The Surveyor-General to The Under Secretary for Lands.

Proposed widening of Molesworth-street, Lismore, sought by Borough Council of Lismore.

4 October, 1888.

THE object sought in the Council's letter has been repeatedly urged by the Borough Council of Lismore, by petition of residents, and by representations of Mr. Ewing, M.P., and the facts have been fully reported upon and submitted to several Ministers, who have agreed in the opinion that the object sought is one for municipal action, and not one which the Crown is bound to support or to assist in, especially in view of impending legislation.

A. J. STOPPS
(For Surveyor-General).

Submitted that the Council Clerk be informed in terms of this minute, and that the determination already arrived at will not be disturbed.—S.F., 9/10/88. C.O. Submission approved.—J.N.B., 10/10/88. Council Clerk, Lismore, informed.—H.L.T., 12/10/88.

No. 74.

T. T. Ewing, Esq., M.P., to The Under Secretary for Lands.

Sir, Parliament House, 9 October, 1888.

I should like an interview with you respecting resumption, Molesworth-street. The case was a Mines, and is pretty voluminous. I will call in a day or two, and hope you will have the papers.

Yours, &c.,
THOS. EWING.

Mr. Brett.—Previous papers are now in Correspondence Branch for letter to be written to Borough Council, declining to reopen the question; please see if the letter can be written to-day, in order that the papers may be sent to the Assistant Under Secretary as soon as possible.—A.J.S., 12/10/88.

Mr. Stopps.—The papers, with letter for signature were left by Mr. Thompson with the Assistant Under Secretary this morning.—W.B., 12/10/88. Mr. Ewing to call.—S.F., 24/10/88.

No. 75.

T. T. Ewing, Esq., M.P., to The Secretary for Lands.

Sir, Parliament House, 11 October, 1888.

I intended sending you the information in my possession, respecting Molesworth-street, Lismore; but it is voluminous, and I do not think it right to expect you to go through it. If you can give me a quarter of an hour about next Wednesday, I can explain matters, and accept your verdict.

I hope you will suspend judgment till then. I undertake to prove the Department is in error.

Yours, &c.,
THOS. EWING.

Mr. Stopps.—Is this a roads case?—C.O., 12/10/88. Plan herewith, viz., Cat. J. 1, 2,263. Submitted.—G.E.H. (for U.S.), 17/9/84. Approved.—J. P. ABBOTT, 18/9/84. Minute, 19th September, 1884.

No. 76.

The Under Secretary for Lands to The Council Clerk, Lismore.

Sir, Department of Lands, Sydney, 12 October, 1888.

With reference to your letter of the 21st ultimo, transmitting a copy of a resolution of your Council in regard to the widening of Molesworth-street, Lismore, I am directed by the Secretary for Lands to inform you that upon the petition of residents and the representations of Mr. Ewing, M.P., the facts have been fully reported upon and submitted to several Ministers, who have agreed in the opinion that the object sought is one for municipal action, and not one which the Crown is bound to support or to assist in, especially in view of impending legislation, and that the determination already arrived at will not be disturbed.

I have, &c.,

(For the Under Secretary).

No. 77.

The Council Clerk, Lismore, to The Secretary for Lands.

Sir,

Council Chambers, Lismore, 23 November, 1888.

By direction of the Borough Council of Lismore, I have the honor to again bring under your notice the resumption of the northern end of Molesworth-street with the Borough.

You have had this matter a very long time under consideration, and in view of the very great importance of the work required to be done, and the fact that people have to trespass on private property (which the owners threaten to close) to avoid this dangerous portion of road, and that the Council are anxious to make this part fit for traffic, request that you will take such action in the matter to get the said portion of road resumed at an early date.

I have, &c.,

C. A. BARHAM,

Council Clerk.

Inform that the Lands Department deal with such cases, and send this to Lands Department.—F.A., 27/11/88. Council Clerk informed, 30/11/88. The Under Secretary for Lands.—G.E.H. (for Under Secretary), B.C., 1/12/88. Let this await return of papers from Under Secretary.—A.J.S.

No. 78.

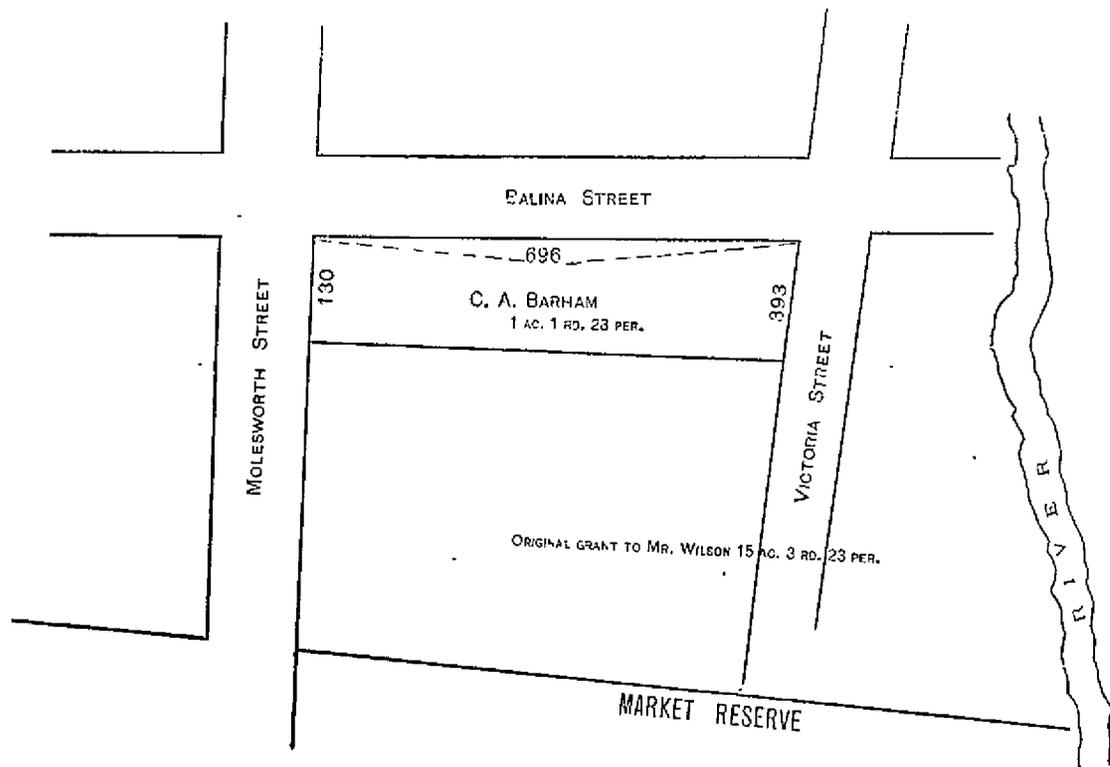

Mr. C. A. Barham to The Secretary for Lands.

Sir,

Lismore, 11 January, 1889.

In the matter of the confirmation of streets in the Municipality of Lismore, and in accordance with the notice in the *Government Gazette*, of the 4th ultimo, I herewith respectfully beg to claim compensation for loss and damages of the undermentioned land through which there was no right of making roads reserved in the original grant made by the Crown.

The land is a subdivision of a grant made to William Wilson on 25th January, 1859, and contained 15 acres 3 roods and 23 perches, and situated in the county of Rous, parish of Lismore, and village of Lismore: Commencing on the north-west side of Molesworth-street at the southern corner of the Market Reserve; and bounded thence on the north-east by a line, and dividing it from that reserve north-westerly at right angles to Molesworth-street, 9 chains 10 links to the Richmond River; on the north-west by that river downward to Ballina-street; on the south by that street easterly 13 chains and 50 links to Molesworth-street; and on the south-east by 11 chains and 40 links of the north-west side of Molesworth-street, north-easterly to the point of commencement. The following is a rough plan of the portion of the subdivision which is my property, and on which I think I am entitled to compensation.

The land taken from me in the alignment is the whole of my Ballina-street frontage to a depth of about 2 feet. The frontage is 696 links long, and fenced with a two-railed fence, and a portion laid out into a garden. If I am entitled to compensation I will leave the amount entirely in the hands of whom you may appoint to inquire into the matter.

I have, &c.,

C. A. BARHAM.

The building line of Ballina-street as surveyed follows the correct position of the boundary of the grant referred to, and does not encroach on private land, but if Mr. Barham's fence is outside that boundary or building line it is an encroachment on the road, and should be placed back to correct position. It is recommended that Mr. Barham be so informed.—A. J. Storrs (for Surveyor-General), 22nd January, 1889.

For approval.—S.F., 24/11/89.

Approved.—W.G.L., 25/1/89.

C. A. Barham informed,

5/2/89.

No. 79.

No. 79.

The Under Secretary for Lands to Mr. C. A. Barham.

Sir,

Department of Lands, Sydney, 5 February, 1889.

With reference to your letter of the 11th ultimo, respecting the matter of confirmation of streets in the municipality of Lismore, and claiming compensation by way of damages, and for loss of certain land in connection therewith, I have the honor to inform you that the building line of Ballinastreet, as surveyed, follows the correct position of the boundary of the grant referred to, and does not encroach on private land; but if your fence is outside that boundary or building line it is an encroachment on the road, and should be placed back to the correct position.

Sub-division of grant issued to William Wilson on January, 1859.

I have, &c.,

F. H. WILSON

(For the Under Secretary).

No. 80.

The Acting Surveyor-General to The Under Secretary for Lands.

Molesworth-street—Town of Lismore.

1 March, 1889.

PART of Molesworth-street, near Zadoc-street, in the town of Lismore, is impracticable for traffic, and for several years past the Municipal Council have urged upon the Government the resumption of alienated land in order to construct a safe and permanent road; the expenditure to be incurred in resumption of land and necessary works would be very large; it is estimated at about £2,250.

The matter has met with careful consideration, and the action desired by the Council has been refused by four Ministers successively on the grounds that it is of the character which brings it within the functions of Municipal Government, and that beyond facilitating proceedings by survey, &c., the Government was not bound to assist.

This view of the case is contested by Mr. Ewing, M.P., on behalf of the Council, who alleges that the difficulty has arisen through original faulty design of the town, in that Molesworth-street may not have been of the width represented, viz., 99 feet, but may have been partly in the river, and, therefore, not available as a street; and he now propounds a series of questions which he desires shall be submitted for reply to the District Surveyor, in the belief that such replies will support his contention. I have to state that full particulars have been obtained touching this matter; every point has been considered, and I think that further reference to the District Surveyor is unnecessary, and might be even embarrassing if he were required to answer certain questions put in such form as to suit one side of the case, and every one of which admits of argument.

Touching Mr. Ewing's special argument, I may be permitted to make a short rejoinder in pointing out that no matter what was the former limit of the river relatively to Molesworth-street, part of that street opposite section 5 is only about 4 feet above ordinary water level, and, together with the bridge thereto, leading over Brown's Creek, is liable to inundation, and, consequently the conditions are very unfavourable for construction of a road, and so far support the opinions of the Local Road Officers and their estimates of probable expenditure. Under these circumstances I submit that Mr. Ewing's contention has met with due consideration, and that the case is fully and fairly set forth in my previous report (83-159); therefore, I would beg to advise that there be no departure from the decision previously arrived at. I think that in reply Mr. Ewing might be informed that due weight has been given to his contention as to the probable relative positions of Molesworth-street and the river in the original alignment of the town; but there is evidence of traffic over Molesworth-street for many years, in fact, until obstruction from natural causes, and it would appear to have been the duty of the Council to execute from time to time such repairs or works as may have been necessary to maintain thoroughfare; consequently, it is held that the matter is one for municipal action, and not of the character demanding special interference or support on the part of the Government.

E. TWYNAM.

Submitted.—F.H.W., 4/3/89.

No. 81.
Synopsis.

Synopsis of correspondence received and action taken relative to Molesworth-street, Lismore. (Roads 83,159.)

Paper No. 9.—A letter from the Borough Council of Lismore states that from the unskilful manner Molesworth-street was laid out, inasmuch as no way of access has been left to section No. 4 by that street, to the great injury of those who inadvertently bought land and built houses and business premises on the said section, fronting the said street, they request the Crown to acquire land from the neighbouring private properties for the purpose of providing a street.

Paper No. 6.—Mr. John Currie, an old resident of Lismore, in a letter to the Department, objects to the expenditure of public moneys for the purpose, and states that landslips have occurred; and, as this is a river bank road if the Government goes to the expense now of resuming land and the Council allows heavy traffic along the road, without making some provision in the shape of a retaining-wall to protect the river bank, it is only a matter of time when the Government will again be called on to resume more land. The Council, he further states, should have had the road at landslip repaired long ago, and that a case is pending in the Supreme Court against the Borough Council for neglect.

Paper No. 10.—From the District Surveyor's report it appears that a road along Molesworth-street had been in use to a wharf on Molesworth-street, the terminus of the ocean-going steamers until a landslip occurred (about 1880), to make it useless.

Paper No. 11.—The Department took the view that, as official plans showed the river to have been easterly of its present course, that a change of position must have occurred. Recent landslips and the condition of the river banks strengthened this opinion, and the decision arrived at was, that to make a practicable thoroughfare of Molesworth-street was a municipal matter, to be carried out by the Borough Council, and declined to accept the responsibility.

Paper

Paper No. 12.—Mr. Currie writes in similar terms to his first letter.

Paper No. 20.—Borough Council of Lismore renews applications and furnishes declarations of old residents that the river has not shifted its course during their time of residence at Lismore.

Paper No. 23.—Minute of Surveyor-General, stating that departmental action had been based on the assumption that the course of the river had shifted, and pointing out the danger of accepting the responsibility, even should it be proved that the original design and surveys were erroneous.

Paper No. 25.—Borough Council renews application, and furnishes a plan of survey made by a licensed surveyor employed by themselves, showing the river at the place in question. By this plan dead trees are indicated in positions where the river was shown to be on the official plans and design of village of Lismore, the object being to prove that the trees must have existed thirty years ago, and as they could not grow in the river the official survey and maps are consequently inaccurate.

Paper No. 25.—Upon this testimony the late Surveyor-General expresses the regret that the position taken up by the Department, based on original surveys cannot be maintained, although it is difficult (he states) to believe that the official surveys could have been so inaccurate; but at the same time he cannot recommend resumption of land to widen the street if that course would involve the Crown in the settlement of claims for compensation.

Paper No. 25.—Mr. Secretary Abbott requested the Surveyor-General to ascertain what the costs would be of complying with the Borough Council's request.

Paper No. 26.—On a minute of the Surveyor-General's, Mr. Secretary Abbott approved of the Borough Council being invited to ascertain from the various landowners the terms on which they would allow a deviation of Molesworth-street to be opened through their properties, the information to be furnished with the view to consider whether the cost should be incurred by the Crown, either wholly or in part; and if in part, to what extent the Borough Council might be required to contribute.

Paper No. 27.—The Borough Council express themselves unable to affect any satisfactory arrangements, and leave the matter in the hands of the Government.

Paper No. 27.—Mr. Secretary Abbott declines to accept the responsibility, and will sanction nothing further being done unless a definite proposal be made by the Borough Council, together with an estimate of costs and arrangements for carrying out any proposed course.

Paper No. 32.—In reply to communication as above the Mayor states the sums of money the several persons will accept, but he makes no definite proposal; but on the suggestion of the Under Secretary for Mines, the District Surveyor is asked to report whether the items are reasonable amounts or not. The report is obtained and submitted by Surveyor-General, who points out that the Crown has not undertaken to meet the claims, or any part of them.

Paper No. 38.—Mr. John Currie again writes that to resume land for Molesworth-street would be a sheer waste of public money, unless a retaining wall were constructed to prevent future landslips, for should wet seasons recur, as no doubt they will, and there be heavy traffic on the road, other landslips will occur, and further resumption of private estate will be necessary. Upon this statement of Mr. Currie's the Minister for Mines directed that the Commissioner and Engineer of Roads should be asked to cause inspection of the land to be made, and a report to be furnished.

The Commissioner's report should be read. He is of opinion that the river has shifted and is still shifting its place, notwithstanding the declarations to the contrary, and he does not recommend that any attempt be made to open a street near the river, as it would always be liable to erosion by the waters of the river, and would entail endless expense on repairs, and he instances the case of the embankment, High-street, Maitland, and suggests that the District Engineer, Mr. Statham, and the District Surveyor, Mr. Donaldson, should visit the ground, consult together, and report.

Paper No. 40.—This suggestion was acted upon, and the opinions of the two inspecting officers are embraced in the report of the Assistant Engineer, Mr. Statham. The Assistant Engineer is of opinion that the landslips which have occurred are attributable less to erosion of the river bank than to the concentration of drainage along tracks which have been cut at various times for access to the wharf. This has been going on for some time, till little or any of the original road remains at south-east corner of Zadoc-street.

Paper No. 40.—On this report the Surveyor-General submits a minute to the effect that the inspecting officers do not approve of either of the previously suggested ways of affording access, but are more favourable to a third, which they describe, and they also express their doubts that the interests involved would justify the expenditure that would be required to effect it, viz., £2,254, that is to say, £1,254 for purchase of land, £1,000 for a bridge, and think that the Municipal Council will hesitate to expend the latter sum. The Surveyor-General also points out that access is open by way of Keen-street, and the circumstances of the case do not warrant of necessity any participation in the expense of providing a new street by the Crown. This minute met with the approval of the Secretary for Mines, and the Borough Council was informed of the decision.

Papers Nos. 46, 47, and 52.—Further renewals of application were made, and an alternative course suggested; but applicants and petitioners were informed that the Crown declines to accept the responsibility of providing improved access in this case.

Paper No. 54.—Further agitation of the matter by Mr. T. T. Ewing, M.P., elicited a report from the Acting Surveyor-General, and the submission that the previous decisions supported by three Ministers be not departed from was concurred in by Mr. Secretary Garrett. Mr. Ewing, M.P., was informed accordingly.

Paper No. 56.—Further renewal of the matter by the Borough Council was received, and the decision arrived at by previous Ministers was upheld by Mr. Secretary Brunker.

Paper No. 68.—The last communication is from Mr. Ewing, M.P., who requests that certain questions, which he gives, should be referred to the District Surveyor, for him to furnish replies to them. The subject of this letter, and the case generally, is dealt with by the Acting Surveyor-General in his report of the 1st instant.

A. J. STOPPS.

16th March, 1886.

No. 82.

T. T. Ewing, Esq., M.P., to The Secretary for Lands.

Sir,

Parliament House, 6 April, 1889.

Some time ago I had the honor to inform you that I asked you to procure me certain information from District Surveyor, Grafton, with reference to Molesworth-street, Lismore.

I believe that you are desirous of having fullest information before deciding the case, and am sure it must be in the interest of a correct decision that the opinion of your local officer should be obtained. I cannot imagine why it is thought necessary not to have the opinion in a definite way of the only officer who has enough information to give authoritative advice. If my questions do not cover the whole ground, it is quite within province of District Surveyor to fully report. I hope you will give instructions that answers should be obtained.

Yours, &c.,

THOS. EWING.

Urgent. Papers, please.—S.F., 8/4/89. Mr. Stopps.

No. 83.

Memo. by The Under Secretary for Lands.

Molesworth-street, Lismore.

THE questions formulated by Mr. Ewing, M.P., are of an *ex parte* or one-sided character, and cannot apparently be replied to satisfactorily or conclusively by anyone. I see no reason, however, for refusing to send them to the District Surveyor, as Mr. Donaldson can only state what he knows, and the Department has no object in keeping back any knowledge within its power.

The Government has invariably declined to accept any responsibility in the matter of Molesworth-street, and this reference will not necessarily weaken the position.

S. F., 8/4/89.

Approved.—J.N.B., 10/5/89. The questions that Mr. Ewing, M.P., is desirous should be answered by Mr. Donaldson, are contained in Mr. Ewing's letter registered No. 68 herewith, of the series 83—¹⁵/₁₀ Roads.—E.T. The District Surveyor at Grafton.—A. J. STOPPS (for Surveyor-General), 11/5/89. Nature of Instructions, 53. Received in District Survey Office, Grafton, 16/5/89. Replied to by 89-13.—P. R. DONALDSON, District Surveyor.

No. 84.

Mr. District-Surveyor Donaldson to The Surveyor-General.

Sir,

District Survey Office, Grafton, 12 June, 1889.

In accordance with instructions of 14th May, 1889, No. 53, I have the honor to furnish replies to the several questions which Mr. Ewing, M.P., is desirous of having answered by me with reference to the Molesworth-street Lismore case.

1. Was an error made by Mr. Surveyor Peppercorn in placing Molesworth-street in position with relation to Richmond River, as shown by early maps of town of Lismore?

I am of opinion an error was made.

2. Were early maps in error?

I think so.

3. Is it a fact that the river was shown with reference to some allotments, some 300 feet out of its course, notably North Lismore?

I think the river was shown considerably out of its course, but cannot say to what extent.

4. Is it a fact that some of the divisional lines between allotments in North Lismore, directly opposite, come some 4 chains (264 feet about) beyond where bank of river was shown on early surveys?

Some of the divisional lines between allotments at North Lismore now extend a considerable distance beyond where the bank of the river was shown by early surveys; but, in the absence of any measurements, I am not prepared to say how much.

5. Is it a fact that where course of river is thus shown, timber at least 100 years old, growing on firm alluvial flat, is in existence?

Well-grown timber is in existence in or near where course of river is shown. I am not prepared to say 100 years old, although it is possible some of the trees are that age.

6. Is it possible, since occupation of Colony by whites, Richmond River course can have altered as shown?

In view of alterations which do take place in rivers, I am not prepared to say that it is not possible, although I do not think it is probable.

I have, &c.,

P. R. DONALDSON,

District Surveyor.

Roads, 83—¹⁵/₁₀, and all papers herewith. The replies of the District Surveyor at Grafton to questions propounded by Mr. Ewing, M.P., respecting Molesworth-street, Lismore, are submitted.—A. J. STOPPS, 21/6/89. Mr. Ewing, M.P., may perhaps be furnished with a copy of this report.—S.F., 23/6/89. Yes. I see no objection.—J.N.B., 1/7/89. Copy herewith.—F.S., 3/7/89. T. T. Ewing, M.P., with copy of report.—H.L.T., 9/7/89.

No. 85.

The Under Secretary for Lands to T. T. Ewing, Esq., M.P.

Sir,

Department of Lands, Sydney, 9 July, 1889.

With reference to your letter of the 6th April last, asking that a full report be obtained from the District Surveyor respecting Molesworth-street, Lismore, I am directed by the Secretary for Lands to forward you a copy of Mr. District-Surveyor Donaldson's report upon the subject

I have, &c.,

H. CURRY

(For the Under Secretary).

No. 86.

T. T. Ewing, Esq., M.P., to The Secretary for Lands.

Sir,

Parliament House, Sydney, 13 July, 1889.

Will you kindly inform me when it will be convenient to see me respecting Molesworth-street, Lismore?

You will observe that District Surveyor agrees that Department was in error.

Yours, &c.,

THOS. EWING.

Mr. Ewing, M.P., seeks an interview with the Minister *re* Molesworth-street, Lismore. Submitted.—A. J. STOPPS, 24/7/89. Mr. Ewing, M.P., has seen the Minister on this matter.—F.H.W., 26/7/89. Mr. Stopps. Records. Resubmitted for further consideration in view of promise to Mr. Ewing, M.P.—W.H., 14/1/90.

No. 87.

T. T. Ewing, Esq., M.P., to The Secretary for Lands.

Re Molesworth-street, Lismore.

Sir,

Parliament House, 23 May, 1890.

All I desire in this case is that your Local Land Board would inquire into the position of Richmond River at date of survey.

I am sure there can be no objection to this point being settled, and feel confident you will realize the reasonableness of the request.

Yours, &c.,

THOS. EWING.

Land Board will be in Lismore almost at once.

Mr. Ewing's request cannot be complied with.—J.N.B., 23/5/90. Inform.—H.L.T. T. T. Ewing, M.P., informed, 29/5/90. Copy of all papers in the case asked for. See minute 90-6,450.—A.J.S.

No. 88.

The Under Secretary for Lands to T. T. Ewing, Esq., M.P.

Sir,

Department of Lands, Sydney, 29 May, 1890.

In reply to your letter of the 23rd instant, applying for an inquiry by the Local Land Board, into the position of the Richmond River at the date of survey of Molesworth-street, Lismore, I am directed by the Secretary for Lands to inform you that your request cannot be complied with.

I have, &c.,

WM. HOUSTON,

Under Secretary

(per F.H.W.)

No. 89.

A. F. Parker, Esq., M.D., to the Under Secretary for Lands.

Sir,

Lismore, 12 June, 1890.

I have the honor to inform you that having leased a portion of my property in Molesworth-street, Lismore, for a period of three years. I am compelled to withdraw any offer that may have been made as regards compensation for the proposed resumption of a portion of the said property, for the purpose of widening the street.

I might add that it is not my intention or desire to put any obstacle in the way of the proposed resumption, but that this is simply to protect myself from any legal difficulty that might arise from having leased a certain portion of the property in question.

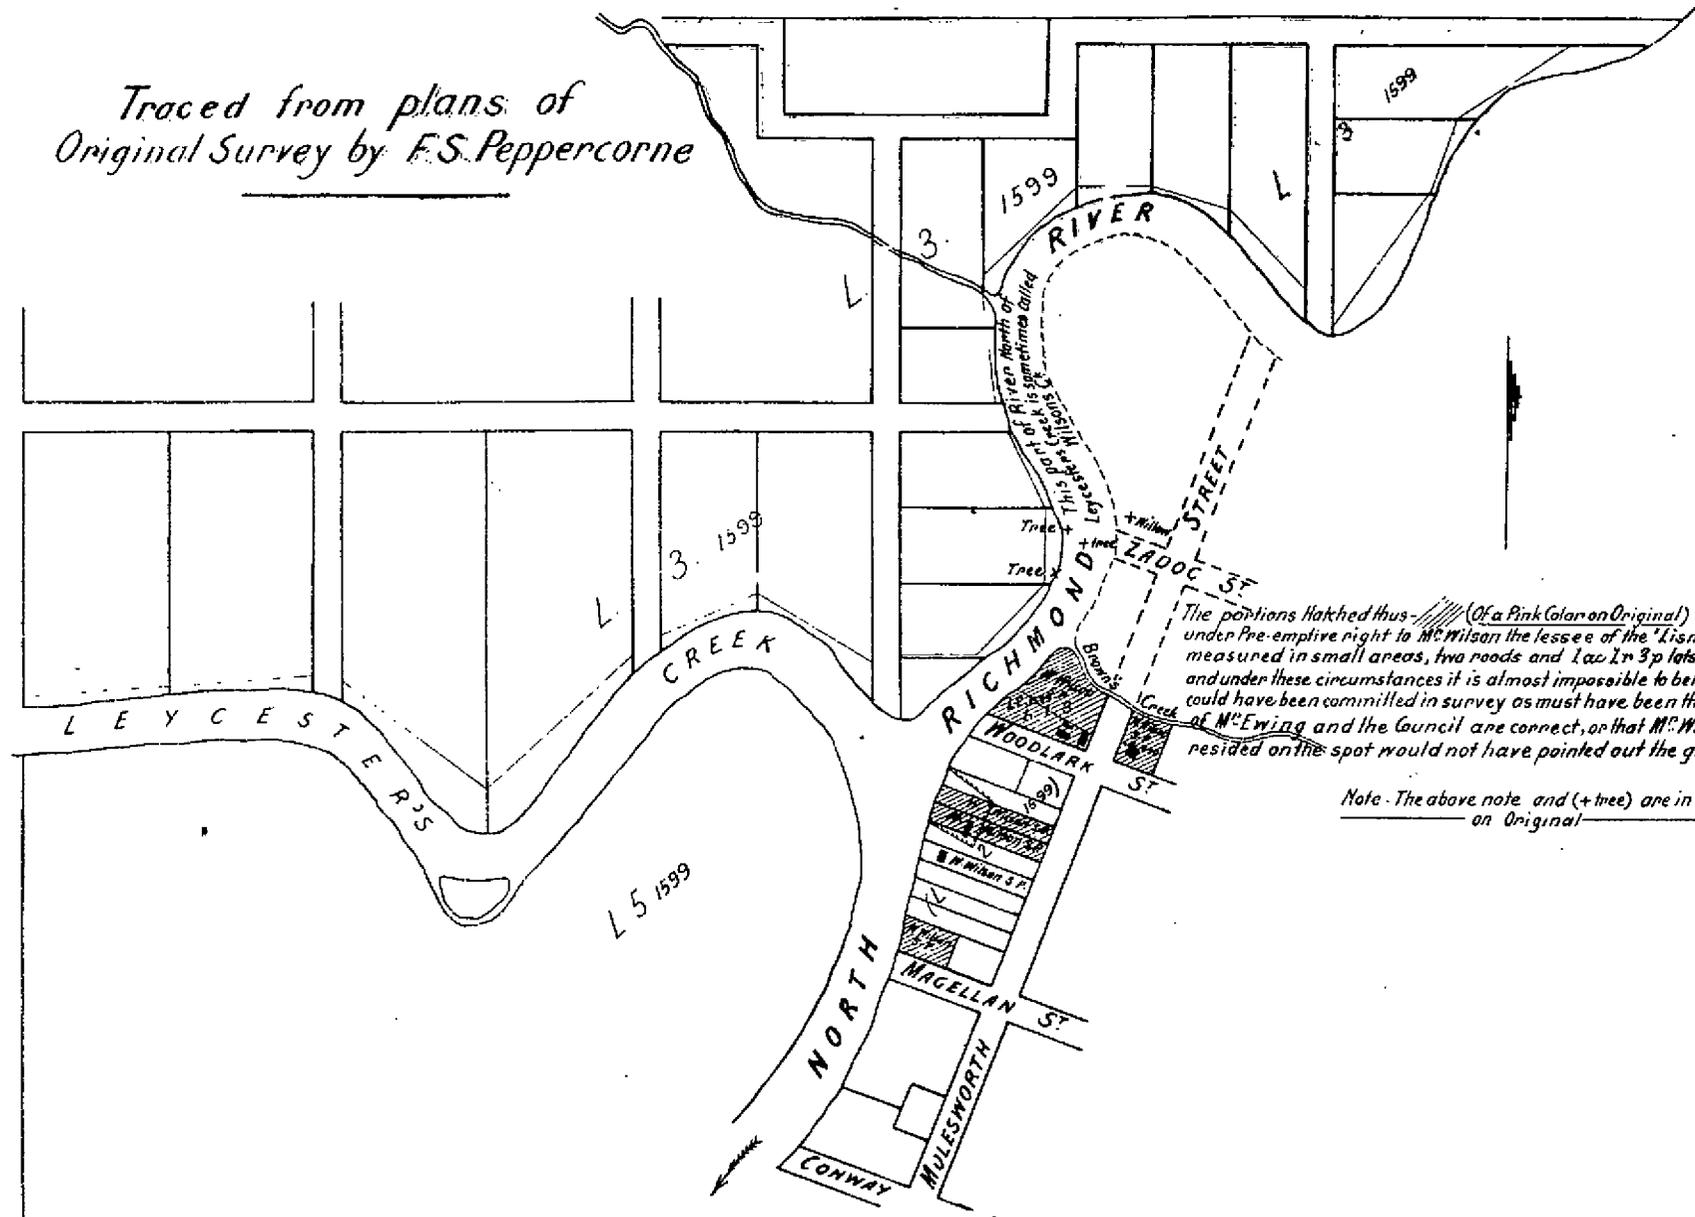

I have, &c.,

ARTHUR F. PARKER, M.D.

NEW SOUTH WALES.

LANDS FOR PUBLIC PURPOSES ACQUISITION ACT.

(RESUMPTION OF ROAD APPROACH TO TARREGANDA BRIDGE, PARISH OF BEGA.)

Presented to Parliament, pursuant to Act 44 Vic. No. 16, sec. 6.NOTIFICATION OF RESUMPTION OF LAND UNDER
44 VICTORIA No. 16.

NEW SOUTH WALES, } By His Excellency The Right Honourable
to wit. } CHARLES ROBERT, BARON CARRINGTON,
a Member of Her Majesty's Most
Honourable Privy Council, Knight
(L.S.) Grand Cross of the Most Distinguished
CARRINGTON, Order of Saint Michael and Saint
Governor. George, Governor and Commander-in-
Chief of the Colony of New South
Wales and its Dependencies.

WHEREAS I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, have duly sanctioned the carrying out of certain works for and in connection with the construction of a Bridge over the Bega River, at Tarreganda, in the said Colony, for and towards the completion of which said works public funds are available, and whereas the land hereinafter described is required for the eastern approach to the said works: Now, I, the Governor of the said Colony, with the advice of the Executive Council of the said Colony, in pursuance of the powers in this behalf given to or vested in me by the "Lands for Public Purposes Acquisition Act," do by this notification, published in the Gazette and in a newspaper, that is to say, in the "Bega Gazette," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described has been resumed for the public purpose hereinafter mentioned, that is to say, for and in connection with the eastern approach to the above Bridge, to the intent that, upon the publication of this notification in the Gazette, the legal estate in the said land shall forthwith be vested in the Minister for Public Works and his successors, on behalf of Her Majesty, for the purpose of the said last-mentioned Act, for an estate of inheritance in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other encumbrances whatsoever; and to the intent, further, that the legal estate therein, together with all powers incident thereto, or conferred by the said Act, shall be vested in the said Minister

as a trustee, with the powers stated in the said last-mentioned Act. And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

All that piece or parcel of land being part of the Eastwood Estate, situated in the parish of Bega, county of Auckland, and Colony of New South Wales, containing 4 acres and 10 perches: Commencing at a point on the north boundary of portion 40, where the south side of a road one chain wide intersects the eastern side of another fenced road 75 links wide, leading from Bega to Nelson; and bounded thence on the north by the south side of the said road one chain wide, bearing north 88 degrees 30 minutes east 30 links; thence on part of the east by a line bearing south 27 degrees 50 minutes west 285 links; thence again on part of the east by a curve of 950 links radius, distant 520 links; thence again on part of the east by a line bearing south 7 degrees 20 minutes east 760 links; thence on the south-east by a curve of 1,050 links radius, distant 1,114 links; thence on the south by a line bearing south 57 degrees 30 minutes west 1,780 links to a fence on the left bank of the Bega River; thence on part of the west by that fence being a line bearing north 33 degrees 40 minutes west 100 links; thence on the north by a line bearing north 57 degrees 30 minutes east 1,780 links; thence on the north-west by a curve of 950 links radius, distant 1,000 links; thence on part of the west by a line bearing north 7 degrees 20 minutes west 760 links; thence again on part of the west by a curve of 1,050 links radius, distant 280 links to the east side of the aforesaid road 75 links wide; thence on the remainder of the west by the east side of that road bearing north 27 degrees 50 minutes east 610 links, to the point of commencement; and which parcel of land is said to be in the possession of Henry Wren.

In witness whereof I have hereunto set my Hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this second day of June, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-third year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR THE PURPOSE OF IMPROVING THE PARRAMATTA ROAD, PARISH OF PETERSHAM.)

Presented to Parliament, pursuant to Act 51 Vic. No. 37.

NOTIFICATION OF RESUMPTION OF LAND UNDER THE "PUBLIC WORKS ACT OF 1888."

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
(L.S.) } Council, Knight Grand Cross of the
CARRINGTON, } Most Distinguished Order of Saint
Governor. } Michael and Saint George, Governor and
Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS the Minister for Public Works of the Colony of New South Wales is desirous of erecting a Retaining Wall on the land described in the Schedule at the foot hereof, for the purpose of improving the Parramatta Road, at the University Cutting; and it is estimated that the cost of carrying out the said works will not exceed the sum of twenty thousand pounds: And whereas the land described in the said Schedule is the land required for carrying out the said works: Now, therefore, I, CHARLES ROBERT, BARON CARRINGTON, the Governor aforesaid, with the advice of the Executive Council, in pursuance of the provisions of the "Public Works Act of 1888," do hereby direct that the said works shall be carried out under the "Public Works Act of 1888," by the Minister for Public Works aforesaid, who, in respect of the said works, I hereby declare shall be deemed to be the Constructing Authority: And in further pursuance of the powers on this behalf given to or vested in me by the said Act, I do by this notification, published in the Gazette and in a newspaper, that is to say, the "Sydney Morning Herald," circulated in the Police District wherein the said land is situated, declare that the land hereinafter described in the Schedule at the foot hereof, has been resumed for the purpose hereinafter mentioned, that is to say, for the purpose of constructing and erecting thereon a retaining wall and other works and conveniences, to the intent that upon the publication of this notification in the Gazette, the land hereinafter described shall forthwith be vested in the Minister for Public Works, as the Constructing Authority, on behalf of Her Majesty for the purposes of the said Act, for an estate in fee simple in possession, freed and discharged from all trusts, obligations, estates, interests, contracts, charges, rates, rights-of-way, or other encumbrances whatsoever; and to the intent that the legal estate therein, together with all powers

incident thereto or conferred by the said Act, shall be vested in the said Minister for Public Works as such Constructing Authority as a trustee: And I declare that the following is the description of the land hereinbefore referred to, that is to say:—

SCHEDULE.

All that piece or parcel of land situate in the parish of Petersham, county of Cumberland, Colony of New South Wales, being portion of suburban allotments 21, 22, and 23 of the original subdivision of the Grose Farm: Commencing at the south-east corner of allotment 23; and bounded thence on part of the south by the southern boundary of such allotment 23, being a line bearing westerly along the north alignment of the Parramatta Road 72 feet more or less to the south-west corner of that portion, now the property of the said Sebastian Fehrenbach; thence on the remainder of the south by the southern boundaries of allotments 22 and 21, now the properties of the said Sarah Wenden and the said William Kerridge, being a line bearing westerly along the north alignment of the Parramatta Road 119 feet more or less to the south-west corner of portion 21; on the west by the western boundary of the said allotment 21 bearing northerly 14 feet 6 inches; thence on part of the north by a line bearing easterly and parallel to the southern boundary of allotments 21 and 22, 45 feet; thence south-easterly 11 feet to meet a line parallel to and 8 feet 6 inches distant northerly from the southern boundary of allotments 21 and 22; thence on the remainder of the north by a line parallel to the southern boundary of allotments 21, 22, and 23 aforesaid, being a line bearing easterly to the eastern boundary of allotment 23; thence on the east by the eastern boundary of said allotment 23 bearing southerly, 9 feet to the point of commencement, and which parcel of land is said to be in the possession of W. Kerridge, Sarah Wenden, and S. Fehrenbach.

In witness whereof, I have hereunto set my hand, and caused the Great Seal of the Colony to be hereto affixed, at Government House, Sydney, this twenty-ninth day of August, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

NEW SOUTH WALES.

PUBLIC WORKS ACT OF 1888.

(RESUMPTION OF LAND FOR THE CONSTRUCTION OF AN APPROACH ROAD TO MEADOW BANK RAILWAY PLATFORM.)

Presented to Parliament, pursuant to Act 51 Vic. No. 37.

NEW SOUTH WALES, } Proclamation by His Excellency The
to wit. } Right Honourable CHARLES ROBERT,
BARON CARRINGTON, a Member of Her
Majesty's Most Honourable Privy
Council, Knight Grand Cross of the
(L.S.) Most Distinguished Order of Saint
CARRINGTON, Michael and Saint George, Governor and
Governor. Commander-in-Chief of the Colony of
New South Wales and its Dependencies.

WHEREAS it is expedient that the Public Work hereinafter mentioned shall be constructed, that is to say, an Approach Road to Meadow Bank Railway Platform, the estimated cost of which Public Work will not exceed twenty thousand pounds: And whereas it is expedient that the said Public Work shall be carried out under the provisions of the "Public Works Act of 1888": Now, therefore, I, the Governor aforesaid, with the advice of the Executive Council of the said Colony, and under and by virtue of the powers and authority vested in me by the said Act, hereby direct that the said Public Work shall be carried out under the provisions of the said Act, and that the carrying out of the same shall devolve upon the Minister for Public Works, who shall in that behalf be deemed the Constructing Authority: And I hereby further direct that the land described in the Schedule hereto, being in my opinion required for the purpose of the aforesaid Public Work, shall be acquired for the said purpose, under the provisions of the said Act.

SCHEDULE.

All that piece or parcel of land situate near Ryde, in the parish of Hunter's Hill, county of Cumberland, and Colony of New South Wales, containing 1 acre and 1 perch: Commencing at the south-west corner, and being also part of Anne Thorn's grant of 20 acres, and on the eastern side of a subdivision road 50 feet wide; and bounded thence on the south-west by a line bearing south 61 degrees 40 minutes east 664 feet to the south side of Nancarrow's Road, 66 feet wide; thence on the south-east by a line bearing north 30 degrees 15 minutes east 66 feet to the north side of Nancarrow's Road; thence on the north-east by a line bearing north 61 degrees 40 minutes west 664 feet to the first-mentioned road 50 feet wide; thence on the north-west by that road bearing south 30 degrees 20 minutes west 66 feet, to the point of commencement,—and which parcel of land is said to be in the possession of Robert Shepherd.

Given under my Hand and Seal of the said Colony, at Government House, Sydney, this thirteenth day of October, in the year of our Lord one thousand eight hundred and ninety, and in the fifty-fourth year of Her Majesty's Reign.

By His Excellency's Command,

BRUCE SMITH.

GOD SAVE THE QUEEN!

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

BRIDGE TO CONNECT BULLOCK ISLAND WITH THE MAINLAND AT NEWCASTLE.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon the expediency of "erecting a bridge to connect Bullock Island with the mainland at Newcastle," have, after due inquiry, resolved that it is not expedient the proposed bridge should be erected, and in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly :—

1. The proposed bridge appears from the evidence to have been recommended by the late Commissioner and Engineer-in-Chief for Roads and Bridges, as a work which would fit in with the reclamation of a part of Newcastle Harbour, between the mainland of Newcastle at Honeysuckle Point and Bullock Island, and with the dredging of a new channel there, which reclamation and dredging form portions of certain works for the improvement of Newcastle Harbour that have been under the consideration of the Public Works Committee, and are about to be carried out by the Harbours and Rivers Department. The bridge was intended to be one of iron having two spans with lattice girders about 100 feet, one on each side, and showing two openings of 65 feet each, with a swing span in the centre giving two swing openings, the deck to be of iron, with tarred metal on the top.

Description of the proposed bridge.

2. At the present time Bullock Island is connected with the mainland at Newcastle by a wooden bridge which has been erected for about twenty-five years, and is now very much out of repair, and unsafe. This bridge, which was built by private enterprise and afterwards purchased by the Harbours and Rivers Department, occupies a position to the east of the site of the proposed new bridge, and while the present bridge extends across a waterway which passes the southern end of Bullock Island and leads into Throsby's Creek, the proposed bridge would, if erected now, be built on dry land, the water channel which it is expected to cross being a matter of the future when the intended reclamation and dredging works shall have been completed.

Bridge at present in use.

3. The Department of Public Works proposes that the erection of the new iron bridge be deferred until the reclamation and dredging works have been carried out. The present Commissioner and Engineer-in-Chief for Roads and Bridges explains that it will probably be from five to ten years before the reclamation and dredging works are completed, and he contends that it is not necessary to erect the proposed bridge at the present time. Its erection, he states, would mean an annual expenditure of £2,000 for interest and cost of maintenance, whereas a temporary wooden bridge, sufficient to meet all requirements until the proper time arrives

Proposal to postpone the erection of the bridge.

arrives for the erection of the proposed iron bridge, might be built alongside the present one for about £3,000. A further reason put forward for the postponement of the erection of the iron bridge is a desire expressed by the Railway Commissioners that the bridge should be a high-level one, in order that, if they can obtain for railway purposes the land which it is intended to reclaim, the bridge may be high enough not to interfere with the movements of rolling-stock, this desire being accompanied by an offer to contribute £17,000, the amount estimated as the extra sum which would be required to make the bridge a high-level instead of, as at present intended, a low-level one. The new temporary wooden bridge would be built on the west side of the present structure, the old bridge being kept in use until the new one was completed.

Opinions of
the people of
Newcastle
and Bullock
Island.

4. The proposal to build a temporary wooden bridge, and to defer the erection of the permanent iron structure until after the completion of the reclamation and dredging works, does not find favour with the people of Newcastle and Bullock Island. They contend that the present traffic between Newcastle and Bullock Island, the importance of Bullock Island as the locality where most of the coal-shipping trade of the port of Newcastle is carried on, and the general claims which Newcastle has to be liberally treated in the matter of Government expenditure, are strong reasons why the iron bridge should be erected at once; and they further urge that the suggested postponement for a few years will probably prove a postponement indefinitely, and that in such case the bridge may never be erected.

The inquiry
by the Com-
mittee.

5. The Committee have spared no effort to obtain a clear insight into the matter. The evidence obtained from the departmental officers was followed by the appointment of a Sectional Committee, who visited Newcastle, inspected the present bridge and the sites of the proposed bridges, and took evidence from a number of local witnesses. After the return of the Sectional Committee to Sydney, further evidence was taken from the Commissioner and Engineer-in-Chief for Roads and Bridges; and the Hon. J. N. Brunker, Minister for Lands, who is well acquainted with Newcastle and Bullock Island, and expressed a desire to be heard, and Mr. Alexander Brown and Mr. James Fletcher, two of the Members for Newcastle, were also examined.

Decision of
the Com-
mittee.

6. The Committee, after carefully considering the whole of the evidence and the Report of the Sectional Committee, are of opinion that it is not expedient the bridge, as referred to them for inquiry, should be constructed; that, instead of this bridge, the more expensive high-level structure recommended by the Railway Commissioners should be erected as suggested by the present Engineer-in-Chief for Roads and Bridges; and that, pending the erection of this high-level bridge, a temporary wooden bridge, adjoining the present one, should be constructed, at a cost not exceeding £3,000. This temporary bridge will certainly be sufficient to meet the requirements of the traffic between Newcastle and Bullock Island for some years, and the high-level bridge, which it is proposed shall follow the completion of the reclamation works, can very well be postponed. To erect the high-level bridge now, would be to prematurely incur a heavy annual charge for interest and maintenance, and provide a structure beyond what is necessary to accommodate the present traffic, and which, until the intended harbour improvements in its vicinity are carried out, would, in a large measure, be useless. On Wednesday, 19th March, 1890, at a meeting of the Committee,—

Dr. Garran moved,—“That, in the opinion of the Committee, it is not expedient that the proposed Bridge to connect Bullock Island with the mainland at Newcastle, as referred to the Committee by the Legislative Assembly, be carried out, because the evidence shows that a bridge to cross the railway at a high level, at a cost of about £17,000 more, would be preferable.”

Mr. Lackey seconded the motion.

Mr. Dowel moved,—“That the motion be amended by the omission of the word ‘not,’ before the word ‘expedient.’”

The

The amendment was seconded by Mr. Hurley, and negatived, on the following division, upon the question "that the word proposed to be omitted stand part of the clause":—

Ayes, 10.	Noes, 2.
Mr. Abbott,	Mr. Dowel,
Mr. Lackey,	Mr. Hurley.
Dr. Garran,	
Mr. Humphery,	
Mr. Trickett,	
Mr. Cox,	
Mr. Garrard,	
Mr. Copeland,	
Mr. Tonkin,	
Mr. O'Sullivan.	

Mr. Trickett moved,—“That the motion be amended by the addition of the words ‘but that pending the erection of the permanent structure, so as to provide for the traffic, a temporary bridge adjoining the present dangerous one, should be erected at a cost not exceeding £3,000.’”

The amendment was seconded by Mr. O'Sullivan, and passed, and the motion, as amended, was then agreed to.

7. The Committee direct attention to the fact drawn out in evidence, and referred to in the Report of the Sectional Committee, that the proposed dredging above the bridge would be largely in the interest of the frontage-holders in Throsby's Creek, the value of whose holdings would be thereby increased threefold, and that the opinion was expressed by witnesses that it would be policy on the part of the Government to resume possession of this part of the foreshore prior to incurring the expenditure.

Suggested
resumption of
frontages to
Throsby's
Creek.

J. P. ABBOTT,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 29 April, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC
WORKS.

MINUTES OF EVIDENCE.

BRIDGE TO CONNECT BULLOCK ISLAND WITH THE MAINLAND AT
NEWCASTLE.

TUESDAY, 25 FEBRUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKET.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee proceeded to consider the proposed Bridge to connect Bullock Island with the Mainland at Newcastle.

Robert Hickson, Esq., Commissioner and Engineer-in-Chief for Roads and Bridges, sworn, and examined:—

1. *Mr. Humphery.*] What is your position in the Government service? Commissioner of Roads.
2. Have you any statement to make in connection with the proposed bridge at Bullock Island? It was proposed to construct a bridge at an estimated cost of £33,000. For reasons which will be explained hereafter, the department considers it premature to build that bridge at present, and it is proposed instead to erect a small bridge, at a cost of about £2,500, or £3,000 at the outside, to meet the present traffic. This is necessary because the old bridge is absolutely unsafe.
3. Where is the old bridge to which you refer? The old bridge is under the black strip on the map. The proposal in connection with the harbour improvements was to reclaim a piece of land, shown on the map, and to excavate a channel west of the new dock, with the view of making a channel to a future basin which may have to be made near the railway bridge. But it will be a very considerable time—I should say, putting it at a minimum, five years, but probably ten—before that reclamation will be completed, and to put a bridge up there, at a cost of £33,000, would mean an annual expenditure of £2,000 a year for interest and cost of maintenance. Therefore I think it is premature to erect the proposed bridge now, and would suggest that a bridge alongside the present one be built, at a cost of about £3,000.
4. When was the old bridge built? It must be twenty-five years old.
5. Do you know what it cost? It was built by private enterprise and was afterwards purchased by the Harbours and Rivers Department, in whose care it was for a great many years.
6. Do you know the price they paid for it? I think it was between £700 and £800.
7. And you think a bridge built at a cost of about £2,500, or £3,000 at the outside, will meet all the requirements for some years to come? Yes.
8. Will you state under what circumstances it was proposed to build a costly bridge such as that placed before the Committee for its consideration? This costly bridge will be necessary. It is only a question as to when it will be required. When the proposal was brought forward it was thought that the reclamation would be completed in a short time; but the Committee will see at once that the reclamation is a very extensive piece of work, and will occupy some years. Therefore, I think the proposal to build a bridge which would entail an annual expenditure of £2,000 a year is premature, when we can get a bridge to last for some years at a cost at the outside of £3,000.
9. Who recommended the construction of the bridge now before the Committee? It was recommended by my predecessor, Mr. Bennett.
10. Have you any papers in connection with Mr. Bennett's recommendation? Yes, but I have not brought them with me.
11. You say that the bridge originally proposed is unnecessary at the present time? Yes.
12. And is the bridge that you propose to substitute absolutely necessary? Yes, it is; the present bridge being unsafe.
13. *Dr. Garran.*] Will you kindly tell the Committee how many cranes there are on this wharf? Twelve.
14. When you build the large basin which you propose to construct how many cranes will you have all round? It is proposed to put seven there.
15. That will only occupy the eastern side of the basin? Yes.
16. Then you will have all the western side and the northern piece? Yes.
17. How many ships will you be able to accommodate in the basin? The proposal before the Committee with regard to these harbour improvements will accommodate nine vessels loading at the cranes.

R. Hickson,
Esq.
25 Feb., 1890.

- R. Hickson, Esq.
25 Feb., 1890.
18. Then you will have all the rest for wharfage? Yes.
19. You will have nearly double the wharfage accommodation that exists at present? Yes, when the basin is completed.
20. If you double the existing accommodation by making the large basin you will not want the little basin at all? Yes.
21. How many years do you think it will be before double the accommodation will be too little for the traffic? It is very hard to say. A great number of years.
22. In addition to the shipping accommodation there will be wharfage accommodation along the south bank of the river all the way from Merrywether-street to the bridge? Yes.
23. That will more than double the existing wharfage? Yes.
24. But until the existing wharfage turns out to be too little you will not want any more wharfage? No; the Government will not want any more wharfage.
25. So that this bridge really will not be wanted until you require to make this inner basin? It is not a question of making the inner basin. It is all private land, and we should, I think, give access to the wharf built by private enterprise.
26. But this land is not available for wharfage purposes now, because you have your bridge, which prevents its being available? That is so.
27. And until you move that bridge away these people cannot use the land for wharfage? No.
28. Then they have not really got a wharfage frontage? No.
29. You propose to create a new water frontage for them at the Government expense? Yes. We propose to give them access to their water frontage.
30. To create, in fact, a new water frontage? Yes; practically to create a new water frontage.
31. They could not get a single schooner up to the water frontage now? No; only a boat.
32. If you were to build this bridge at the present time you would really be building it on dry land? Yes.
33. And then you would make the scour afterwards underneath it? If we were to build the large bridge at a cost of £33,000 we would cut the channel and make the bridge at the same time.
34. Still you would build it where there is dry land now? Yes.
35. And where there would be no channel until you scooped out the basin? No.
36. But for public purposes the basin will not be wanted until you have used up all the existing wharfage, and require more? No.
37. That is to say you will have to more than double all the present wharfage requirements before the inner basin can be wanted? Yes.
38. And then that inner basin will be all private water frontage? Yes.
39. *Mr. Garrard.*] Is it a fact that during the last few years the whole of the coal-shipping appliances in connection with the A. A. Company's ships have been shifted from Newcastle to Bullock Island and Carrington? Yes.
40. Making Carrington a busy place? Yes.
41. And settlement is going on there very rapidly? It is.
42. Is it true that the town was recently incorporated? Yes; I think a couple of years ago.
43. And it is making very rapid progress? Yes.
44. And there is a great deal of traffic over the present bridge which you say is dangerous? There is a good deal of traffic over the present bridge, and that structure is absolutely dangerous.
45. I suppose, as additional facilities for the shipment of coal are given, a very much larger traffic may be anticipated? Yes.
46. I presume the £33,000 bridge was designed to work in with the complete scheme of works carried out by the Harbours and Rivers Department? Yes.
47. Do you know what portion of the works will be completed first by the Harbours and Rivers Department? The wharf on the inner side of Bullock Island.
48. You know that from consultation with the present engineer of the Harbours and Rivers Department, and also because you were acting as engineer under that department? Yes. Before I left the department a commencement was made on the south wharf at Bullock Island, and one of the new sand pump dredges is excavating there now.
49. Then knowing exactly how it is proposed to carry out the basin works you believe that the new bridge will not be required for at least five years? Yes.
50. Where is the site of your proposed new wooden bridge? Alongside and to the west of the old one. The object of this is that we may have the use of the old bridge until the new one is completed, and when we come to build the more expensive bridge, as we shall no doubt do in time, this bridge will still afford means of getting across the river to Bullock Island.
51. And your permanent bridge of the future will be even further west than the proposed temporary bridge? Yes.
52. You will make use of your present roadway, I suppose, for your temporary bridge? Yes.
53. Both sides? Yes.
54. What is the width of the proposed temporary bridge? About 22 feet.
55. Are there any footways besides, or is that all the carriage-way? It is only the carriage-way. It is not a very long bridge.
56. Are you going to put a camel's back on it, the same as at present? I think it will be necessary to allow the lighters to go underneath.
57. And you think that will last and serve all purposes for five years, when the larger structure will be taken in hand? I do. I think a very considerable saving will be effected by adopting that plan.
58. Has your temporary project been put before the people of Newcastle and Carrington? I do not know.
59. I do not suppose they will like it? I do not know; what they want is to get a proper bridge to enable them to get across the river.

John Alexander McDonald, Esq., M.I.C.E. and M.I.M.E., Engineer for Bridges, sworn, and examined:—

60. *Mr. O'Sullivan.*] You are the designer of the proposed bridge between Carrington and the mainland at Newcastle, are you not? Yes. No detailed drawings for it have been got out yet.
61. Then what stage has it reached? A survey has been made, but no detailed drawings have been got out yet.
62. Can you tell the Committee what character of bridge is proposed? When the Harbours and Rivers Department had their scheme before the Committee it was proposed that our department should erect an iron bridge with two openings of 65 feet each, and the estimated cost, without any detailed drawings or detailed quantities, was £33,000.
63. That estimated cost then is only approximate? Yes. It could not be guaranteed as being within 10 per cent. of the actual cost.
64. Then you have only proceeded as far as the preliminary stage in making a survey for the bridge? Yes. We have been waiting to see what action the Harbours and Rivers Department would take in reference to the reclamation, because the bridge as proposed would be on dry land.
65. Have you now received orders from the department to abandon this bridge? No. The matter has been left in the Commissioner's hands so far as to what should be done. I have no definite instructions from him what to do in the matter.
66. Would this bridge correspond with the iron bridge at Nowra over the Shoalhaven? No. There would be two spans with lattice girders about 100 feet, one on each side, a swing span in the centre giving two swing openings.
67. With a timber deck? No. It was proposed to have an iron deck, with tarred metal on top.
68. *Chairman.*] What proceedings were taken in your department with reference to the construction of this bridge before the matter was referred to Parliament? I had taken no proceedings at all myself.
69. I am asking you what steps were taken in your department? This work was referred to the Committee by Parliament on the 3rd October, 1889, at the instance of the Minister. I am asking you now what proceedings had been taken in your department in connection with this bridge, as to the preparation of plans and estimates of expenditure prior to the 1st October, 1889? None.
70. Had the matter been before you at all? I think not—before the 1st October.
71. Then, so far as you know, the matter was presented to Parliament without any consideration by the department at all? So far as I know, yes.
72. And the evidence which is given now as to the inadvisableness of building the bridge could have been obtained just as well before the work was referred to the Committee? Yes.
73. But it was not obtained, was it? No, it was not.

J. A.
M'Donald,
Esq.,
M.I.C.E.,
M.I.M.E.

25 Feb., 1890.

THURSDAY, 6 MARCH, 1890.

Present:—

The HONORABLE JOHN LACKBY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPPLAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Bridge to connect Bullock Island with the Mainland at Newcastle.

Hugh McLachlan, Esq., Secretary to the Railway Commissioners, sworn, and examined:—

74. *Vice-Chairman.*] You are Secretary to the Railway Commissioners? Yes.
75. You are aware that it is proposed to construct a bridge at Bullock Island, and you have volunteered some evidence on the subject on behalf of the Commissioners? Yes.
76. *Mr. Garrard.*] The Railway Commissioners understand that the proposal now before the Committee is for a low-level bridge? Yes.
77. And in view of the possibility of their requiring to use the reclaimed land for railway purposes they would like to have a high-level bridge, to the cost of which they are willing to contribute £17,000? Yes.
78. And they recognise that it will be some time before this bridge will be required—in fact not until the reclamation is carried out? Yes.
79. *Dr. Garran.*] It is not absolutely certain that the Railway Commissioners will get this reclaimed land? Of course they will make that condition. They would not give £17,000 without getting the land.
80. The reclamation is to be made out of the land dredged from the proposed channel? Yes.
81. Therefore you cannot possibly use it until the mud has been dredged up? No.
82. The question for us to consider is whether, as it will probably be five years before that dredging is finished, we should not, for the immediate convenience of the Bullock Island people, renew the present dilapidated bridge *pro tem*? That is the idea of the Commissioners—that an inexpensive bridge might be erected to meet present requirements, in view of the larger scheme which will be necessary when the reclamation is carried out.
83. Then the Commissioners have nothing to say against a temporary bridge? Certainly not. They recognise that the convenience of the people must be met, and that it is absolutely necessary to renew the existing bridge for the present.
84. And it will be time five years hence to discuss the question of a permanent bridge? Five or six years. The Commissioners think it would be most unwise to make a low-level bridge, because the land would be cut off into two parts and it could not be worked for railway purposes.
85. And the opinion of the Commissioners is against a low-level bridge at the present time? Yes.

H. M. Lachlan,
Esq.

6 March, 1890.

WEDNESDAY

WEDNESDAY 12 MARCH, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN.)

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Bridge to connect Bullock Island with the Mainland at Newcastle.

Robert Hickson, Esq., Commissioner and Engineer-in-Chief for Roads and Bridges, sworn, and further examined:—

- R. Hickson, Esq.
12 Mar., 1890.
86. *Dr. Garran.*] With regard to your first estimate for a temporary bridge at Bullock Island, will £3,000 be a sufficient sum for the work? We can do it for that amount.
87. How soon can you get the bridge open for traffic from the time you get orders to begin the work? In six months.
88. Will the construction of that bridge interfere with the traffic over the existing bridge? No. I will make it so that it will not do so.
89. What is your opinion, after examining the old bridge, as to what it would cost to make that safe for three, or four, or five years? I think it would be just as cheap to put up a new one as to make this one safe. We would practically have to re-make it, and during the time we were doing so it would be very inconvenient for the traffic.
90. The proposal for a new bridge is not more expensive, and much more convenient to the public? Just so.
91. How long will it take to complete the reclamation on the shore line of Newcastle and to construct the proposed high-level bridge? The reclamation works I cannot answer for, as they are under another department; but the bridge ought to be erected in from eighteen months to two years.
92. You can go to work at once, I presume, without the approach, or the railway enclosure? Yes.
93. If you did that, would you make a channel over which the swing-bridge is to go before sinking your piers, or would you do it afterwards? If the bridge was to be built at once, I think I would commence sinking cylinders at once on the land.
94. And leave the excavation to be done afterwards? To be done by the Harbours and Rivers Department; our department would not do it in any case.
95. You could put your piles down so that they would not be interfered with by the excavations? Yes.
96. They could make the excavations without knocking the piles about? Yes.
97. You could build the bridge even if the other works were never carried out? Yes.
98. You could do your part of the work in two years? Yes.
99. Does that refer to the bridge as you have put it to the Committee, or to the bridge as the Commissioners have suggested? To the bridge which I put before the Committee.
100. With a high-level bridge it would take a little longer? Yes, a little. I suppose two and a half years would be the outside. I would point out a very great difficulty in making the bridge as suggested by the Commissioners. I do not see very well how it could be done until the reclamation has been carried out, except at a very considerable cost. If we had the reclamation done we should have the foundations, to a very great extent, in for the structure—it would be across the railway; but if we were to put these piers down now we should have to go right into the present channel and make them very much deeper.
101. These piers will all go into soft earth, you must go below that considerably to get solid ground? It would not be very soft, it would be sand. If you can keep sand from the action of water, and of the weather, it is a very good foundation. Most likely we shall place iron piers on concrete beds to carry the superstructure.
102. If you put down your piers after the reclamation is made you will not go so deep as you would go now? No.
103. It will be quicker and cheaper to make the bridge after reclamation than before? Yes.
104. On the whole you would prefer the reclamation to be made first? Yes, I would.
105. But you can do it without the reclamation? Of course we can.
106. You are aware that the Railway Commissioners have estimated that a high-level bridge will cost £17,000 more than the low-level bridge will? That was an estimate I gave Mr. Eddy in the course of conversation, but it was only an approximate estimate.
107. It is not one you would permanently abide by? No.
108. The extra expense would be caused by the greater height and large number of iron girders? The greater height and the greater length.
109. Do you see any difficulty in rising from the level of Hunter-street to the level of your bridge? No. We can do that. It would involve shifting the rails further north, on to the proposed reclamation.
110. Is this reclamation work done with borrowed money? Yes.
111. The country goes into debt to make this new land? Yes.
112. And when the Railway Commissioners get possession of that will they be charged with the cost of reclamation, or will they get it as a present? That I cannot say.
113. The intention is that they shall then sell the frontage they have in Hunter-street? That is the idea.
114. When they sell that land will the money be credited to their account, or to the Government account? To their account I presume.
115. If they get for nothing what the Harbours and Rivers Department have reclaimed, and then pocket the proceeds of the sale of this frontage they will do a very good thing? Yes; they get now for nothing all that the Harbours and Rivers Department reclaim. All their wharves are made for them and not charged to them.
116. The Railway Department gets all the revenue from them? Yes.
117. They pay no interest? No.

118. Every crane has been put up with borrowed money? Yes; and the Railway Department gets the revenue from the cranes.
119. And from the whole wharfage of Newcastle in the same way? Yes.
120. If the railway had been in the hands of a private company they would have had to do all that at their own expense? Yes.
121. As it is it is done for nothing by your department? Yes; as far as they are concerned.
122. So far as you are able to form an opinion, do you favour the construction of a high-level bridge over a low-level one? I think a high-level bridge would be the best. If the piece of reclamation was to be used as a railway yard, it would be necessary that the traffic should be carried overhead.
123. There will be seven or eight parallel sidings? At the least.
124. And any one of these being used would stop the traffic on the bridge? Yes.
125. Do you think it would be any serious inconvenience to the island to have that ascent and descent? Not unless there is a tramway made. When I was there there was some talk of a tramway being made. It would be difficult to get a tramway over the island bridge except it were a cable tram.
126. One or two of the witnesses there intimated that a high-level bridge might be inconvenient in the case of heavy girders wanting to be taken to the foundry on the island—would not that be quite avoided by taking them round by Wickham Bridge? They could get a level approach by going over that bridge.
127. You would not consider that to be a serious difficulty? Not at all.
128. You know the site of the Wickham Bridge—the one below the railway bridge? Yes.
129. The Mayor gave it as his opinion that that bridge could be shifted nearer to the railway bridge, with very great advantage—do you agree with that? I do not think there is any necessity for shifting it now. The time may come when it will be wanted for shipping purposes, and it could be shifted then.
130. You don't think there is any immediate demand for more wharves inside of Throsby's Creek. The evidence there went to the effect that when the excavations are all completed there will be something like three times the present accommodation? There are at present twelve hydraulic cranes. This Committee last year passed a proposal which was laid before them for seven more. There is room in that basin for about fourteen more.
131. Including the jetties? Yes.
132. I suppose you cannot predict when these thirty-four cranes will all be in full work? No; it will be a long time, I think.
133. And for public purposes shall we want any Crown wharf frontage above the bridge? Not until these thirty-four cranes are fully employed.
134. The deepening of the basin above the bridge will not be for a public purpose? No.
135. But for the advantage of holders of land on the Wickham shore? Yes.
136. As far as the Harbours and Rivers Department is concerned you have frontage enough at the present? Yes, and for a long time to come.
137. But the object of the swing is to get at this inner basin? Yes.
138. How much extra cost does the swing involve in the construction of the bridge? I cannot tell you exactly; but I should think it will not be less than £8,000 or £10,000.
139. It is only wanted for the purpose of improving private properties, and if it were not for those properties being improved you would be content with a fixed bridge? Yes.
140. *Chairman.*] On the other hand the bridge, when constructed, interferes with private property as it exists at present, doesn't it? They cannot get to it now.
141. *Mr. Hurley.*] What would be the cost of a temporary bridge? £3,000.
142. How long would it take to construct it? About six months.
143. And how long to construct an overhead bridge? Probably two years and a half.
144. At a cost of how much? About £50,000.
145. Towards which the Railway Commissioners propose to contribute £17,000? Yes.
146. Would not the present bridge accommodate foot passengers and light vehicular traffic until such time as a more permanent bridge could be erected? I do not think it would be advisable to leave the present bridge, it is positively unsafe now.
147. Would it be a source of danger to foot passengers? No.
148. Would it not be to the interest of the people on Bullock Island if they were to suspend heavy traffic over the bridge and divert it round by Wickham so that they might secure in time a more permanent structure? I do not think so. It would be a very great inconvenience to the people of Bullock Island to have to go round by that bridge.
149. Suppose the proposed temporary structure is erected, might it not postpone the construction of a more permanent one for a considerable time? I do not think that affects the question.
150. You know the Railway Commissioners have recognized the fact that a low-level crossing is a source of great danger to a large number of people? Yes.
151. You are also aware that the Commissioners propose in connection with the reclamation to straighten out their line between Wickham and the Newcastle terminus? It will be desirable to do so.
152. Therefore they are interested in the reclamation? Very much.
153. And they show their interest by contributing £17,000 towards the erection of a permanent bridge? Yes.
154. You are also aware that it is contemplated that there shall be a tramway between Bullock Island and Newcastle? I heard it mentioned for the first time in Newcastle the other day.
155. Would this temporary structure not carry a tramway? Oh, yes. It could be used for that purpose if the Commissioners decided to make a tramway.
156. You admit that they would be greatly inconvenienced in having a low-level crossing? Yes. A high-level crossing would be best undoubtedly. The present level crossing I understand is not such a great inconvenience for it only crosses two lines.
157. Would not the present hydraulic cranes and the works which are being pushed forward in connection with the inner basin accommodate the shipping, even if the trade were to increase 50 per cent.? It gives them seven more cranes than they have.
158. If the trade of the port were to increase 50 per cent. there would be no necessity to provide additional accommodation for ships to the west of the bridge? Not as far as the Government are concerned.
159. As far as you can see if the trade were to increase 50 per cent a swing bridge is not actually necessary? Not for the shipping.

E. Hickson,
Esq.
12 Mar., 1890.

- R. Hickson,
Esq.
12 Mar., 1890.
160. What is the distance from the extreme northerly end of Bullock Island to the main street of Newcastle? I think it is about 2 miles.
161. Seeing that the people have to travel 2 miles it would be advisable that they should be able to reach the city by tram? There are no people at the top end of the island, that is a reserve. If you mean from where the people live at present—that is only about one mile and a quarter.
162. You are aware that a great number of people have settled on Bullock Island during the last five years? Yes.
163. And that the price of land has advanced considerably since the population settled there? I believe so.
164. Have you not heard that there would be ready purchasers for any reclaimed land, or any land which the Government may put up for auction there? I have no doubt there would be.
165. That would necessarily increase the population? Yes.
166. It would be to their advantage to have a tram right into the city? I suppose it would.
167. In view of that contingency is it not advisable to erect a more permanent structure than the proposed bridge? I do not think so, if the temporary structure will meet the requirements of the place, or of the tramway, if it is made, for the simple reason that we should be expending £50,000 on a bridge which would not be required for a great number of years.
168. How long will the temporary bridge last? I should make it last about fifteen years.
169. At a cost of £3,000? Yes.
170. In point of fact you are opposed to the erection of the more permanent structure and in favour of the temporary structure? Yes.
171. What leads you to infer that the one is suitable and will provide all the necessary accommodation as against the other? They will both meet the accommodation, but one at a very much less cost than the other.
172. Would you be favourable to the construction of a tramway over this temporary structure? Yes; Perhaps the word "temporary" is a misnomer. It is a good substantial wooden bridge, practically the same as the bridges we are putting up all over the country.
173. What gave rise in the department to the idea of preparing plans for the more permanent structure? I can hardly answer that. It was all done before I took charge of the department.
174. I suppose you recognize the fact that the Commissioners are favourable to the erection of the more permanent structure? Not that I am aware of.
175. Does not the fact that they are willing to contribute £17,000 towards the cost of the work show that they must be favourable to a high-level crossing? I think the object of making the contribution, as far as I could make out from Mr. Eddy, is to get the land; they will not contribute that sum unless they get the land.
176. If they get this piece of land will they give £17,000 towards the erection of the temporary structure? No.
177. They would not contribute anything towards the temporary bridge? No.
178. Practically, they are giving £17,000 towards the construction of the more permanent structure? They are giving £17,000 for the piece of land that they hope to get. But if they do not get that land they will not give anything at all.
179. If it should be decided to put up a more permanent structure, would it not be to the advantage of the people on Bullock Island to suffer for two years the inconvenience of going round by Wickham, until the work is completed? I do not think so. I do not see what advantage these people could get from the more permanent structure over the temporary one. All they want to do, I presume, is to get across in the most convenient and shortest way to Newcastle. I do not see that it makes any difference to them whether it is a swing bridge or not. The only people that are affected by the question are the people further up Throsby's Creek.
180. But you know that Bullock Island is one of the chief outlets for the population of Newcastle? Yes.
- 181-2. And that they can secure leases or freeholds there to make homes for themselves? Yes.
183. In view of the prospective population of that island, should not a bridge be constructed which would last for all time? So long as they get a structure which will carry them over safely I do not see that it makes any difference to them whether it is a swing bridge or a closed bridge, whether it costs £3,000 or £50,000.
184. What induced your department to construct permanent iron bridges in other parts of the colony with less population and 50 per cent. less traffic? Because they could not be put up at a less cost.
185. Supposing you had constructed wooden bridges instead of iron bridges over the Gwydir, the Hunter, and other rivers, would you not have saved a considerable sum? Yes. In the light of subsequent events there is no doubt that we could have put up some of the iron bridges at a less cost.
186. You consider that a considerable saving could have been made if some of these iron bridges in the interior had been constructed of local timber? I could not speak in a general way without looking through each bridge. There may be some special reasons why iron bridges would be cheaper and more advisable than wooden ones.
187. Mr. O'Sullivan.] The people of Newcastle appear to dread that if they get a temporary bridge now they will not get a permanent bridge for many years; is there any ground for that apprehension? Not that I know of.
188. How long will it be before they start the erection of a permanent structure? I should say whenever the necessity demands it.
189. That may not be for years, if the basin they are now constructing suffices for the trade? It will not be for years, so far as the Government are concerned.
190. Do you not think the railway authorities will press for the reclamation of this land for their accommodation? If they get the land no doubt they will.
191. They appear to be in want of such a place for the trains? Yes. Their present intention is to get that accommodation out at Hamilton, but they would prefer to have it here, no doubt.
192. You would not start the construction of this permanent bridge until the reclamation is made? I do not think it would be advisable to do so until then.
193. I suppose that if the railway authorities press for the reclamation it will be carried out? I cannot say; that is a matter which rests with the Harbours and Rivers Department.
194. Mr. Garrard.] Is it true that the whole of the works at Newcastle, such as dredging, and the construction of wharves and cranes have all been paid for out of loan votes? No, the dredging is paid for out of revenue.
195. Excluding the dredging, all the improvements, such as wharves and cranes, have been provided out of loan funds? I think all, without any exception.

196. And when the works are completed they are handed over to the railway authorities? Yes, as regards wharves, cranes, and reclamations. R. Hickson,
Esq.
197. Do you know if the railway authorities pay any interest on the cost of any of these works? I do not think it enters into their books at all. 12 Mar., 1890.
198. Do you not think it would be a fair thing to charge them with the interest in respect of these works? I suppose it would.
199. What has caused Bullock Island or Carrington to become an important place;—is it not the fact that it is the railway shipping place for coal? Yes, certainly.
200. Do you not think, therefore, that inasmuch as the traffic is created by the railways and for their own benefit, the whole cost of this proposed bridge should be borne by the railway authorities the same as they bear the cost of any overhead bridge over any portion of their lines? No, I do not.
201. Why? They do not benefit in any way by this proposed bridge.
202. The Railway Department does not benefit by the erection of any overhead bridge, but because the absence of a bridge interrupts the traffic they have to provide a bridge for the accommodation of the public. Is not this bridge in exactly that position? I do not think it is quite the same; that would only apply, I think, to that portion crossing their rails. They might say “after you cross our rails we do not care what you do;—you need not erect a bridge at all.”
203. You think that the £17,000 which they offer is intended to defray the cost of that portion which would cross their rails? That is what it is intended to do.
204. I think you expressed the opinion that they would not give even that sum unless they got a large piece of reclaimed land for their own purposes? In the conversation which I had with Mr. Eddy over this matter he said that they would be willing to bear the extra cost the department would be put to in carrying a high-level bridge across this portion of reclaimed ground, on condition, of course, that they got the reclaimed land, and to that I replied, “I cannot give you any promise.”
205. They have a large area of land at Hamilton which they propose to use for shops and shunting arrangements? I believe so.
206. If they got this reclaimed land they will not require to use the other land? I do not suppose they would to such an extent.
207. In other words they will be able to sell the land at Hamilton and put the proceeds of the sale to their credit? I cannot say; they might want both.
208. *Mr. Copeland.*] This structure is spoken of as a “temporary” bridge; I suppose the idea is simply to construct a wooden bridge of a permanent character? A good substantial wooden bridge which will carry the traffic over the place until it is necessary to put up a larger structure.
209. It would have the same life as the ordinary wooden bridges put up throughout the country? Practically the same.
210. There is nothing temporary about it at all—the word is a misnomer? Yes. The bridge will be as safe and just as serviceable as an iron bridge would be.
211. Just as serviceable. Just as safe? Yes.
212. *Dr. Garran.*] It will have to be pulled up if a swing is to come into use? Yes; it would not be wanted then.
213. *Mr. Copeland.*] You would only build an iron bridge when it became necessary? Yes.
214. *Mr. Hurley.*] The difference I take it between a temporary bridge and a high-level bridge would be that there would be no traffic over the railway lines with a high-level bridge? On the level, no.
215. But with the proposed temporary structure you would have to carry all your traffic over the railway lines? You would carry it over the present two lines.
216. Or over any increased number? They cannot increase the number until the reclamation is made.
217. If the reclamation is carried out there is a probability of more lines being laid there? No doubt.
218. Therefore, with a low-level temporary structure all the traffic would have to cross these lines? Yes; if they carried it right through the present workshops. The proposed approach to the new bridge would be in the centre of the reclamation; the present approach is right at one end of it. It is very questionable whether they will carry these lines right through into what is their present workshop, or whether they will make them dead ends. If they make them dead ends none of these lines will cross the proposed approach at all.

THURSDAY, 13 MARCH, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

<p>The Hon. JOHN LACKEY. The Hon. ANDREW GARRAN. The Hon. FREDERICK THOMAS HUMPHREY. The Hon. WILLIAM JOSEPH TRICKETT. The Hon. GEORGE HENRY COX.</p>		<p>JACOB GARRARD, Esq. HENRY COPPLAND, Esq. WILLIAM SPRINGTHORPE DOWEL, Esq. EDWARD WILLIAM O’SULLIVAN, Esq. JOHN HURLEY, Esq.</p>
CHARLES ALFRED LEE, Esq.		

The Committee further considered the proposed bridge to connect Bullock Island with the Mainland at Newcastle.

Hon. James Nixon Brunker, M.P., Minister for Lands, sworn, and examined:—

219. *Dr. Garran.*] What is your position in the Government? I am Minister for Lands.
220. You have long been a resident in the Hunter River district? I am a native of the district.
221. You are thoroughly well acquainted with Bullock Island? Yes.
222. And with the existing communication and what is proposed? I do not know so very much about what is proposed, except that a bridge is proposed to be erected to connect the mainland with the island. Hon. J. N.
Brunker,
M.P.
13 Mar., 1890.
223. You know that the present bridge is really unsafe? I could not say that from my personal knowledge, but I believe it has been said.
224. You know that the engineer has refused to allow loads of more than 3 tons to go over it? I was not aware of that. 225.

- Hon. J. N. Brunker, M.P.
13 Mar., 1890.
225. We have it in evidence that that is the case, and that it will cost as much to make that bridge safe for the next two or three years as it would to construct a new bridge at a cost of £3,000. Under these circumstances do you think it better to tinker up the old bridge than make a stronger and safer one by the side of it? I think that would depend very much upon circumstances, and the conditions under which the Public Works Department intend to act with regard to the construction of a permanent bridge. I think the importance of the place demands that the facilities for traffic should be made as easy and as good as possible, and if it is their intention to build a bridge the sooner it is done the better.
226. You are of opinion that communication with the island ought to be maintained by the present road? Yes, for several reasons. The Government have a very large area of unalienated land there. This plan shows the portions of unalienated land. These lower portions when reclaimed would be equal in value to, if not greater in value than that of those which have been already alienated. Then on the opposite side—the Newcastle side—there is a very large area, a portion of which is now being reclaimed, belonging to the railways, which is also of considerable value. The values of all these lands will be very considerably increased by the construction of a permanent bridge which would have allowed full facilities for traffic, and the people wish means for getting to and fro, which they do not possess at present. I believe the present bridge for very many years has been an anomaly so far as the importance of the place is concerned.
227. A large part of the unalienated land is at present too low and swampy for occupation? There is a very large area which is unfit for occupation, but as the Government are continuously dredging the harbour, the silt might be utilized in reclaiming the land, the same as is done at Cook's River, where land is not nearly so valuable.
228. Would it not pay to reclaim this land with silt from the harbour? Yes.
229. It is the policy of the Government to reclaim the swampy portions, and bring them into the market, and so recoup themselves the cost of the reclamation? That is the intention.
230. The portion remaining unsold will represent a handsome surplus after paying the expenses of the reclamation? There is no doubt about it. Bullock Island, in some places, is worth from £2,500 to £4,000 an acre.
231. You will have practically to pile all the water margin round? I do not know whether that will be necessary—it has not been done at Cook's River.
232. Is there the same wash at Cook's River as at the Hunter River? The wash in that part of Throsby's Creek is not very great.
233. On the river side? That would be protected by the dyke.
234. It does not run to the full north end of the island? It runs very nearly to the end of the island.
235. Do you know, as Minister for Lands, whether any portion of that island is reserved? I see there is a small reserve of 15 acres.
236. That is the full amount you propose to reserve? That is the amount already reserved.
237. And taking that out you have enough land left to leave a handsome balance? A very large one, I should think.
238. So that the cost of the bridge could be paid for out of the proceeds? Yes, and leave a large margin besides.
239. No special account, I presume, is intended to be kept of the proceeds of the sale? I cannot say.
240. You are aware that on the Newcastle frontage it is proposed to make a large reclamation? That is being made.
241. Which the Railway Department desires to have for sidings when it is completed, and which would be on the east and west sides of the bridge road? Yes.
242. You are aware that at present the road is a level crossing? Yes.
243. Which is often inconvenient to the inhabitants, and often inconvenient to the Railway Department? There is considerable delay there at times.
244. If these sidings were put in the use of any one of them would block the crossing? Yes.
245. So that with seven lines of sidings the need of an overhead bridge becomes far greater than it is now? It would prevent considerable delay, and of course assist the Railway Department very much.
246. With seven parallel sidings would it not be very undesirable to have a level crossing? It would be unsafe.
247. Would it not be much to the advantage of Bullock Island and Newcastle that the bridge should go overhead? I do not know. I should like to know something more about the construction of the bridge, and what it is like, before I give a definite answer.
248. Would you go to the expense of constructing an iron bridge to cross all these sidings? I think we have sufficient engineering skill in the colony to devise a scheme for the construction of a bridge which would suit all kinds of traffic, and if they could construct a bridge which would prevent the inconvenience that would arise from interfering with the railway traffic, and also afford facilities for general traffic to the island, I think their advice might very well be accepted. They could give a much better opinion on that subject than I could.
249. Could any engineering skill make a level crossing across seven lines of rails without interfering with the road traffic or the railway traffic? A high-level bridge could be constructed, but it might interfere very materially with existing rights; not only so, but it might tend to impede rather than increase the traffic from one point to another.
250. In what way would it interfere with existing rights? It would depend where the landing would be on each side. On the north side it would not matter, because it is all Government land, but on the south side large existing rights are concerned.
251. The entrance to Bullock Island will be where it is now. On the other side it is proposed to shift a little more to the west, and come straight in line with Union-street. Would that be interfering with anybody's rights? I could not say without I saw a plan of the proposed bridge.
252. It is supposed to be much more convenient to Newcastle to erect it in a line with that street? It will be much better.
253. It would not interfere with anyone's rights? It would depend on where the landing was and on the gradient.
254. The gradient would have to be safe enough to carry you 15 feet clear over the head of the rails? That would be a very heavy lift.

Hon.
J. N. Brunker,
M.P.

18 Mar., 1890.

255. The evidence from Bullock Island was that for ordinary traffic they would rather submit to that gradient than suffer the delay which must necessarily take place if they have a level crossing, and that the inconvenience would only be when there was specially heavy iron goods, and which might be avoided by crossing Wickham bridge. Have you anything to say otherwise? No. The objection I would have to the high-level bridge is that it would prevent any heavy traffic at all.

256. Granting that occasionally very heavy loads would have to go round a mile, would that be less inconvenient than having to cross on the level? It would be safer. I do not think it would be less inconvenient.

257. If the people of Newcastle on the whole are more favourable to a high than a low-level crossing you would not wish it otherwise, would you? I should not be guided by the people of Newcastle in my opinion. I should be guided by the opinion of the engineer.

258. The engineer says that it would be practically impossible to take the traffic over that number of crossings? It would be no use building a bridge, then.

259. I am asking the questions because the engineer's decision is decidedly in favour of a high-level bridge, and the feeling both in Bullock Island and Newcastle acquiesces in that decision, notwithstanding the little gradient that will be involved. Under these circumstances do you not think that a high-level bridge is to be preferred to a low-level bridge? I think so, if the gradients are regulated to meet general requirements.

260. You have nothing to urge against that decision? I think a bridge is absolutely necessary and ought to be constructed at once, or as soon as possible, if they are to have one at all.

261. Do you see any objection, as the Minister of the department interested in the reclaimed land, to that land being vested in the Railway Commissioners?—Will the fact that the Railway Department owns the present frontage vest in them the land which is to be reclaimed? I do not know whether the Railway Department will have to adopt the same course as a private individual would, but if they did the application would be dealt with in the usual way by the Lands Department.

262. The work of reclamation is being done at the expense of the Harbours and Rivers Department, and if the Railway Commissioners take possession of this land, will they compensate that department for the expense, or will they simply take possession and say, "thank you"? That will be a matter between the Railway Commissioners and the Works Department—not the Lands Department.

263. The Railway Department will get the benefit of the expenditure of capital? All persons who get the right to reclaim have that benefit.

264. Do they not reclaim at their own expense? I suppose so.

265. The Railway Department is not reclaiming at its own expense? No; but that will be a matter for consideration between the Harbours and Rivers Department and the Railway Department.

266. Does it not affect the capital account of the Railway Department? I think it will increase it a good deal.

267. It would not increase it if they were charged nothing for it? No. If they get the Harbours and Rivers Department to make the reclamation and the land falls into their hands afterwards it would increase their capital very considerably, because the land would be very valuable.

268. Is not the Railway Department at the present time enjoying the benefit of the dyke and all the cranes which have been erected? Yes.

269. Where not the whole of those works constructed at the expense of other departments? No. A great deal was constructed at the cost of shipowners.

270. They have paid the interest on it, but they have not paid the capital? No, they bought the material with which the wharves were made.

271. Except that portion which they had to put out somewhere, the shipowners contributed nothing to the capital? No, but that was a very heavy charge on them.

272. They had to leave the ballast somewhere, and it was convenient for them to put it out at the dyke? Yes, but it was a considerable charge on them. These works were constructed at a small cost originally.

273. The Government has gone into debt for the dyke? Yes.

274. And the Railway Department is getting the revenue from that expenditure without having contributed any of its own capital towards it? I cannot say that, because they have constructed railways which lead to the dyke, and which afford facilities for shipping coal.

275. They have constructed a branch line to the island? They have made a branch line and several sidings.

276. Beyond constructing their own access they have not built the dyke itself? No.

277. Therefore to a large extent they are working on the capital of the Harbours and Rivers Department? Yes, as far as the dyke is concerned.

278. In connection with this new bridge it is proposed to have a swing and to deepen the channel to enable vessels to get to the inner basin. It is also proposed to erect additional cranes, and it is estimated that when the whole of these works are completed the accommodation for shipping will be three times as large as it is now;—do you think that such accommodation will last Newcastle for a considerable period? I should like to see where three times the accommodation is to come from.

279. It is proposed to increase the number of cranes from twelve to thirty-five, do you think that that accommodation will last Newcastle for some time? I think it will meet the demand for shipping facilities with the two miles of wharfage already available.

280. Do you think there is any immediate demand, on public grounds, for making the inner basin? I do not think there is, beyond deepening the channel for vessels of light draught.

281. You observe that it is intended to improve the wharfage on the west side of Bullock Island at the south-west point, but the evidence goes to show that we shall not want that for public purposes for a very long time to come? I do not think we will. I do not think that the channel ought to be stopped; these people ought not to be deprived of their water rights.

282. We are told that there is a frontage of 1,000 feet on the Wickham shore, the owners of which desire the inner basin to be excavated with the least possible delay in order that they may make timber wharves;—do you know anything of that? I do not. I think that in making this reclamation the channel might be so deepened as to give as much water as they require to carry on a business of that kind.

283. We are told that the original grants of these 1,000 feet of land on the Wickham shore were issued with a 100-foot reservation, and that some of these reservations have been cancelled and purchased? They have been purchased.

Hon.
J.N. Brunker,
M.P.
13 Mar., 1890.

284. What proportion of the 1,000 feet has been purchased as a frontage right? I cannot tell you from memory. I know that a great many rescissions have been made. I do not see why the people who bought land in the locality should be treated differently from those who reside in other parts of the colony. If they are to contribute to the improvements that are to be made in the harbour I suppose it will be done by a rate the same as it is in other ports.
285. The improvements will be specifically for the benefit of the owners of the frontages? I think they would be for the public benefit.
286. More so to these persons than to any one else? Yes.
287. We are told by the Mayor of Wickham that it will increase the value of these frontages three-fold if the improvements are carried out? It will increase the value.
288. Do you think it will be a wise course to pursue? Yes; you cannot contribute to individual wealth without conferring general benefits.
289. If this dredging would turn land that is worth £15,000 into land that is worth £60,000, do not you think it would be worth while for the Government to buy it first and make the improvements afterwards? I would not like to be a party to the speculation.
290. Do you think it is necessary, for the purpose of making these people's water-frontages very valuable, to go immediately to the expense of that excavation? I think it will improve the whole locality very much. If the Government intend to deepen this channel so far, I do not see why it should not be done a little farther.
291. The demand for it is made on the part of the holders of the water-frontages. Do you think we should spend an extra £10,000 on a swing-bridge, and go to the expense of the excavation? I do not think the cost would be very great. It is simply a matter of dredging.
292. The Mayor of Wickham thought it would be an advantage to remove the Wickham Bridge altogether and place it by the side of the railway bridge, and extend the water-frontage on both sides. Do you agree with that? I do not think it is necessary.
293. *Mr. Trickett.*] Suppose a bridge that would answer the purposes of the traffic could be constructed for £3,000, would that be sufficient? If a bridge can be constructed that will meet the present requirements of the traffic the smaller cost the better.
294. If the engineer (Mr. Hickson) has stated on oath that a bridge as large as, or larger than the present bridge can be built for £3,000, would not that be sufficient for the present? My idea is that if a bridge is to be built it is a waste of money to erect a bridge for £3,000. I think the present structure might be made available for all purposes until a new bridge is completed.
295. Mr. Hickson has stated on oath that it would cost as much to repair the old bridge as to build a temporary bridge, the life of which would be fifteen years? My idea is that if they are to have a bridge they ought to have a permanent one erected at once. £1,000, I suppose, would make the present bridge suitable for all requirements until the new bridge is completed.
296. A costly bridge would take, I suppose, three years to construct, and in the meanwhile something must be done to keep up the present means of communication? I should imagine that the present bridge will do that, if repaired.
297. I understand your views are that a costly structure should be built to work in with the reclamation works? I say a structure should be erected equal to the importance of the place, and such as they ought to have.
298. That would be a bridge, I suppose, sufficient to meet all the traffic between the mainland and the island? Yes.
299. Have you considered this question of the bridge in connection with the reclamation works that are now actually going on there? Yes. I don't think the reclamation works should delay the construction of the bridge. I think Mr. Darley would agree with me on that point. I know he said some years ago that if they intended to erect a permanent bridge, or such a bridge as they should have, they might have temporary piers until this channel was cut, even in erecting a new bridge.
300. You clearly think that, if the bridge is to be a permanent structure, there should be a swing leading into Throsby's Creek? That would depend on its height to a very considerable extent. The channel should be cleared.
301. Would not improving the entrance to Throsby's Creek be largely for the benefit of private holders? It would be for the benefit of the country generally.
302. And for the benefit of these people in particular? Yes.
303. Do you not think that the outer basin below the bridge would give sufficient wharfage accommodation to Newcastle for many years to come? I think it will for some years at any rate. They have very large wharfage accommodation already—2 miles, I think. During last year the tonnage increased very considerably. The outwards showed an increase of something like half a million tons of coal.
304. I suppose you do not think it desirable to divert the traffic round by Wickham whilst the new bridge is being constructed? Certainly not.
305. So that if an expensive bridge is to be built, and it will occupy three years, you are of opinion that something must be done to keep up the present means of communication? I think the present traffic ought to be maintained.
306. *Mr. Hurley.*] You are aware that the Commissioners have promised a sum of £17,000 conditionally on the permanent and high-level structure being erected? I heard so.
307. Do you think the people should be subject to the inconvenience of having their traffic diverted *via* Wickham for two and a half years while a bridge is being erected? I should not like to be the Minister who suggested it.
308. Considering that they have temporary accommodation which would suffice probably for foot passengers and light traffic during the construction of a more permanent structure, do you not think they would be acting in the best interests of all concerned if they were to consent to be put to that inconvenience, so that they might secure the more permanent structure? I have said already my opinion is that the present structure could be utilized for all purposes until the main structure was completed. Knowing how these matters are generally carried on, I am clearly of opinion that if this new temporary bridge is erected, there is no probability of the other bridge being erected for very many years. It is absolutely necessary that it should be erected at once. Apart from that, I think it would be an unnecessary expenditure to erect a temporary bridge. I suppose that, in three months, the present bridge could be made just as strong as a new bridge.

309. Taking into consideration the probability of the number of railway lines being increased, and the consequent inconvenience to passengers going over a low-level crossing, you recommend that in the interests of the public safety a high-level bridge should be erected in preference to the proposed temporary bridge? I think it will be freer from danger.
310. Knowing the extent of the trade of Newcastle, and knowing that the proposed reclamation will give seven additional cranes, thereby increasing the wharfage crane accommodation 50 per cent., it is not likely that this inner basin will be required for the next ten or twenty years? Not to any great depth. While these improvements are being carried out, I think, as a point of economy, it will be better for the Government to deepen this channel. I think it will be just as well that it should be deepened to a certain point—that is to that point where they might obtain a water traffic. I think sufficient water traffic could be made from the end of the reclamation into the deep water of the harbour—it would be of great service and benefit to the public. Dr. Garran has suggested that there may be a large timber traffic above the railway crossing on to Bullock Island. There are other manufactures springing up about Tighe's Hill, and the whole of the traffic there might be carried by water. There is a large extent of land occupied by the Railway Department, by large soap and candle works, and by other manufactories.
311. You will admit that Bullock Island and Newcastle are well supplied with train accommodation at the present time? I think they have the best facilities for shipping coal that exist in any part of the world.
312. With seven additional cranes there will be ample accommodation, even if the trade were to increase 50 per cent.? Yes.
313. That amount of accommodation being given in the outer basin, probably the inner basin will not be required for ten or twenty years to come? They will not require the same facilities there.
314. That being so, they will not require a swing in that bridge, which, by the way, will cost £10,000 extra? The point to be considered is whether they should not look to the future, and whether, if eventually that channel has to be deepened, an opening should not be left in the bridge.
315. It is in anticipation of the wants of the future that you recommend a high-level bridge in preference to a temporary structure? I recommend a high-level bridge for the purpose of freeing the people from danger.
316. Have you considered the probability of the extreme end of Bullock Island being connected by tramway with Blane-street, in the city? No.
317. Would not a moment's consideration of that point convince you that a temporary bridge would not carry a tramway. Would it not be inconvenient in every sense to have a low-level crossing? Yes.
318. Therefore that fact alone almost necessitates the erection of a high-level bridge? If it is suggested to have a tramway there.
319. You know that during the last three years the population of Bullock Island has increased marvellously? I know I was offered land there over and over again for £8 an acre, and that I have sold the same land for £3,000 an acre.
320. So high values are placed on land there, and land is to be reclaimed there by the Government? Yes.
321. There is everything there to warrant the construction of a more costly structure? Yes.
322. *Mr. O'Sullivan.*] From your evidence I gather that you are in favour of the construction of a bridge at once, irrespective of the reclamation works and the channel to Wickham? I think it ought to be proceeded with.
323. *Chairman.*] Has not the growth of population on Bullock Island been extraordinary? Yes.
324. And the value of land has increased there very much? Yes. I was offered land there over and over again within the last thirty years for £8 an acre, and I sold the same land for over £3,000 an acre.
325. You think there is plenty of room there for further expansion? Yes.
326. And the effect of this reclamation will be to provide greater space, because a large area of the land is low-lying, and might be made available for building? Yes.
327. Will the proposed bridge give them better facilities than the existing bridge—is it a better site? The site is a very good one.
328. You are of opinion that the present population and the present value of the place would justify the erection of a permanent bridge in preference to a temporary structure? Unquestionably.
329. To say nothing of the prospective increase in population and in the value of property? Unquestionably.

TUESDAY, 18 MARCH, 1890.

Present:—

The HONORABLE ANDREW GARRAN (TEMPORARY CHAIRMAN).

The Hon. FREDERICK THOMAS HUMPHREY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Bridge to connect Bullock Island with the mainland at Newcastle.

Alexander Brown, Esq., M.P., sworn, and examined:—

330. *Temporary Chairman.*] Are you one of the Members for Newcastle? I am.

331. Are you aware of the tenor of the evidence given at Newcastle on this proposal? I am.

332. Have you now any statement to make to the Committee in the matter? The first portion of my statement will be, as far as it can be, in direct contravention of the evidence of the Mayor of Newcastle, as voicing the wishes of the citizens of Newcastle. I say the citizens are unanimously of opinion that the bridge should be constructed; that the delay is unsatisfactory as far as they are concerned; that I see no reason, as a business-man, and as connected with the business operations of the city, why the work should not be proceeded with; that, if a temporary structure is necessary, the existing bridge can be repaired for something like £1,000, or for even less, so as to serve all the traffic; that the Government lands in the immediate vicinity are large and valuable; that the volume of traffic is very considerable between the two places,

Hon. J. N.
Brunker,
M.P.

13 Mar., 1890.

A. Brown,
Esq., M.P.

13 Mar., 1890.

A. Brown,
Esq., M.P.
18 Mar., 1890.

places, and that a permanent structure must be erected there, and on the low-level principle. I do not believe that a high-level bridge can be constructed there, because the approaches absolutely prevent it. I believe that the approaches to the bridge can be better constructed now than they could after the dredging; that the dredging operations which must necessarily take place to provide wharf accommodation could be better done now than later on. It is very much easier to construct abutments and buttresses, and all that, on dry land than to sink cylinders. I believe in the interest of the city and of the traffic a bridge ought to be constructed.

333. Are you aware that some of your statements are in direct contravention of the evidence of the engineers? I am aware of that, and it does seem extraordinary to me that at this particular time—after the estimates for the construction of the bridge had been prepared, and the proposal has been submitted to Parliament and referred to this Committee for consideration—at almost the last stage, these reasons should be alleged by the Government officers. The knowledge which they possess was just as much in their possession a few months ago before the estimates were prepared as it is now, and it seems most extraordinary that the time of the public, of yourselves, and of the whole of us should be wasted in this manner. If it was not necessary to construct the bridge five months ago, these gentlemen knew it. Why was it submitted to Parliament, and why does it take the form it has taken? I say that the work is a necessary one, although my opinion may be in contravention of the engineers'. Of course it must be borne in mind that the present head of the Roads Department is not the gentleman who prepared the estimates for the bridge; but his predecessor thought that the bridge was necessary, or else the item would never have appeared in the estimates. My individual opinion is, that the cost of the bridge would be amply repaid by the increased value it would give to the lands in the immediate vicinity, the bulk of which belong to the Government. I have no hesitation in saying that if the port were under a Harbour Trust, and this matter came within the scope of our functions, we should not scruple about building the bridge, if the land to be reclaimed were part of the result.

334. Differing as you say you do from the engineers, do you think your opinion on an engineering point is more to be trusted than that of the engineers themselves? I cannot say that. I should be very sorry, as a civilian, to set my opinion up in opposition to the engineers; it would be unwise on my part to do so. I only say that the circumstances incidental to it are somewhat extraordinary.

335. You say the bridge could be better built now than after the proposed reclamation has been made, but the engineers say that it can be better built than now—is your opinion better than theirs? On that point I am prepared to put my opinion against theirs.

336. You are aware that the reclamation of Newcastle shore is much desired by the Railway Commissioners? Yes.

337. As a Newcastle man, you admit that they want more room for sidings? Yes.

338. And that it will be a great advantage to Newcastle if they can sell the frontages they now occupy to the main street, and push their works more to the north, so as to give a larger shop-frontage to the main street, and a larger revenue to the municipality? Yes.

339. Therefore you quite concur in that piece of reclaimed land being handed over to the Commissioners? It is partly reclaimed—water or not, it is the property of the Railway Commissioners.

340. The Minister for Lands says not? I am speaking of the piece which is partly reclaimed, alongside Honeysuckle Point.

341. If you turn to the map on the easel you will see the piece which it is proposed to reclaim is situated to the east and west of the bridge? Yes.

342. The bridge lines with the road—crosses it about in the middle? Yes.

343. The whole of that reclaimed portion it is intended to use for sidings and other purposes connected with the terminal station at Newcastle? Yes.

344. And as a business-man you know that if the line of sidings—which we are told will consist perhaps of seven or eight parallel rows of rails—were obstructed by the road crossing on the level, either the use of the sidings or the use of the road must frequently be stopped. The evidence at Bullock Island and the evidence at Newcastle was all against the interruption, and on both sides of the water all the evidence was in favour of a high-level bridge. I understand you to condemn a high-level bridge? I say for railway purposes it is impossible to construct a high-level bridge.

345. How do you mean "for railway purposes"? I say the abutments of the railway-bridge cannot possibly be in Hunter-street, it must be carried into another part of the city, because the configuration of the country will not allow it to be done.

346. They propose to make the new road in line with Union-street, and then rise at practical gradients, and cross on girders, and descend to the existing causeway to the island—is that impracticable? I do not think it is.

347. They are going to sell some allotments facing the street on the northern side, which will have a depth of perhaps 100 feet. The whole of that will be available for the rise from Hunter-street to the level part of the bridge, and the engineers say they can make a practical grade for traffic, starting from the level of Hunter-street, reaching the level over the line, and descending near to the causeway—are you prepared to set your opinion against theirs? No.

348. I understand you did? Not on that point. I was speaking on the supposition that it remains where it is.

349. You began by saying that it must be a level crossing? As it is now situated.

350. You are arguing against a plan which you are not acquainted with? I am not.

351. *Mr. Hurley.*] You must admit that you were labouring under a mistake? I say that unless some fresh arrangements are made in connection with the moving of the street on the other side it is impossible to make a high-level bridge there.

352. You have stated that since you have said you were against a low-level bridge? I say a low-level bridge must be provided as it stands at present.

353. *Mr. Trickett.*] You are talking in connection with Blanc-street? Yes.

354. *Temporary Chairman.*] A certain plan is before us, you complain, and when it is explained you say you did not understand what the plan was, and you thought the line of approach was to follow exactly the existing line of road—that was your impression? It is not.

355. Do you now entertain any objection to the proposed plan? I do not.

356. You withdraw your objection? If the engineers can construct the high-level bridge and move the site

site of the street so as to make it easy of access, it is certainly better in the interests of all parties concerned.

357. That is what they tell us they can do. You have no objection to a high-level bridge now. As your objection on that point is removed, what other objections have you? I say that there is nothing to prevent the bridge from being proceeded with at once, either on a high or a low level.

358. The engineers tell us that, although it can be done at once, it can be done more advantageously if the reclamations were made first—do you dispute that opinion? No.

359. Then, pending the delay, they propose to make a better bridge than the existing one, and within six months from the time of getting orders, so that the existing bad communication will only be wanted pending the construction of the better bridge. Have you any objection to that? I should prefer the old bridge being repaired, because once we get a temporary bridge the other bridge will be simply relegated to limbo—we shall never get a permanent bridge.

360. That seems to be the opinion of the people of Newcastle? That is my conviction.

361. If you know that the Railway Commissioners are exceedingly anxious to have this reclaimed space, and will use all their influence to urge on the reclamation, do you really think there is any danger? I do, most assuredly. As far as my experience of Newcastle is concerned, in its dealings the central Government has been exceedingly slow and very uncertain.

362. Would not a bridge such as they propose to build give you 50 per cent. more roadway than the present bridge, and answer the immediate purposes of the island now? I should prefer to see the present bridge repaired to getting a moderately permanent structure, because once we get a bridge of that sort it will have to do for the next twenty years.

363. I ask you if a bridge that would give you 50 per cent. more roadway than the present bridge does will answer the immediate requirements of the island? I do not think it would.

364. If the temporary bridge were made half as broad again as the present bridge, that would be wide enough? My opinion is that it would stop at that.

365. Suppose it did, what objection could there be? I think both the works might be going on together.

366. If the new bridge were sufficient for the next five years for the wants of the island, where is the reason for spending more? I should prefer to be without it, because I think the character of the two places warrants something better than a temporary bridge.

367. What I ask is, would not a bridge such as it is proposed to make be sufficient for the traffic for the next three, four, or five years? I do not think so.

368. We had accounts of the quantity of traffic going over, and the evidence was to the effect that there was no traffic which would not be amply accommodated by a bridge of that sort? I do not think it would.

369. That is merely an opinion? That is all.

370. You would not set your opinion against the statistics of traffic? No.

371. Is it not a fact that iron is particularly dear just now? I daresay it is—the market is high.

372. Suppose we were to order the ironwork of the bridge, and it really is not wanted for two years, would we not be spending money unnecessarily? I do not know that you would. I do not know that you have any assurance that the present value will not obtain for some time to come.

373. It is certain that the price is unusually high now? It was unusually low some time ago, and if the colliery strike in Staffordshire continues for some time it will make a further difference in the value.

374. Your contention is that the new bridge should be made at once, whether it is wanted for railway purposes or for the convenience of the island? I say it is wanted for the ordinary traffic between the two places.

375. How many houses are there on Bullock Island? Some hundreds I should say.

376. We were told 400. Do you think that if a bridge costing £3,000 would meet the wants of these 400 houses, a bridge costing £33,000 is immediately necessary? I do think so. I think that as far as your 400 houses are concerned it is a low basis on which to put the connection between two large centres of increasing importance. Newcastle is rapidly rising.

377. You are aware that it is proposed within five years to have this larger bridge? I do not believe it.

378. You are simply putting your belief against the positive statement of the officers? I do not believe it will be constructed, once the temporary bridge is put up.

379. Do you believe that the reclamations will not be made? I do not.

380. You believe that the railway people will not get their sidings at all? I do not believe the reclamations will be made.

381. Your attendance is simply to plead against delay? Yes; the thing is urgent, and it should be done at once.

382. *Mr. Trickett.*] You say that the reclamation will not be done;—are you aware that the work of reclamation is now going on in the basin? They have a sand-punt there, but I hope we shall soon have a Harbour Trust to deal with the reclamation. I do not suppose it will be done for some years to come—not with the Government stroke.

383. Have you considered that if this expensive bridge were authorized it would take three years to construct—that is the evidence given by the engineers? They are extraordinary engineers who would take three years to construct that bridge. It is time they were removed from the Government service.

384. Suppose it were to take from two and a half to three years, are you, as one of the representatives of Newcastle, willing that the people should put up during that time with the present rickety bridge? If sufficiently repaired, so as to make it available for traffic. I may tell you that Mr. Thomas Brooks, a gentleman largely connected with bridge-work, is prepared to undertake to put the existing bridge in order for £1,000, and to guarantee that it will carry a reasonable amount of traffic for the next two or three years.

385. Will you state that in the face of the evidence of all the officials that it will be better to build a new bridge than to repair the old one? I state that in the face of their evidence.

386. Until the reclamation works are carried out, this bridge, if constructed, would really be in a great measure a bridge over dry land? No; the larger portion is water space. Our water space at Newcastle is exceedingly limited, and we do not want to make dry land.

387. A large portion would be over dry land? Yes.

388. Do you think there should be a swing-opening in the bridge? I do, so as to enable the traffic to pass up and down on that side.

- A. Brown,
Esq., M.P.
18 Mar., 1890.
389. Up to Throsby's Creek? Up in that direction, towards Wickham.
390. Is it not nearly all private land at Throsby's Creek? A portion of it is.
391. We have had evidence to the effect that the greater portion of it is private property, and that it is all shallow? It will have to be dredged out. At present all the timber business is being transferred there; it will be the future shipping-place for timber. At present the water accommodation is so limited that they will not allow people to put their timber on the wharves—they have to raft it up there, bad as it is.
392. Where does Mr. Thomas Brooks live? In Newcastle.
393. He says he could make the present bridge a good substantial one for £1,000? He says so. He builds wharves for the Government frequently.
394. *Mr. O'Sullivan.*] It is the opinion of the Roads and Rivers Department that the present bridge cannot be fitted up to carry the traffic? I beg respectfully to differ from them.
395. Have you heard that it is also their opinion that it would be cheaper to erect a temporary bridge? I have not.
396. Have you heard that it is their opinion that this permanent bridge can very well wait for five years, in order that the reclamation works may be carried out? I have read it in the newspapers.
397. Would it be to the interests of the country to construct an iron bridge at a cost of at least £50,000 when the officers are of opinion that it will not be required for five years? I say you are spending £5,000 on a bridge unnecessarily, and that you may as well go on with the permanent structure at once.
398. The interest on £50,000 for five years at 4 per cent. would be £10,000, and if a temporary bridge costing only £3,000 will carry the ordinary traffic, will it not be to the interests of the State to have a temporary bridge put up for that period? It might be, but as far as Newcastle is concerned it is not to the interests of Newcastle.
399. The people of Newcastle appear to have an idea that the temporary bridge will be too good and last too long? That's true.
400. *Mr. Hurley.*] Do you think the people of Newcastle and Bullock Island would consent to go round by Cowper-street in preference to having a temporary bridge, so that they might secure a permanent structure? I don't think so. I think the citizens would prefer the erection of a bridge at once.
401. Suppose the present bridge could be repaired for £1,000, do you think, with regard to the heavier class of traffic, the people of Bullock Island and Newcastle would consent to travel the additional mile and a half by Cowper-street in order to secure a more permanent structure? I do.
402. Thinking that it will take only two and a half years to put up a permanent structure, you believe they are quite willing to wait until it can be done? I think so.
403. You have watched the growth of population on Bullock Island during the last few years? Yes.
404. It is extending very rapidly towards Newcastle? Yes.
405. There is sufficient Crown land on the island to accommodate a very large population? Yes.
406. The population of the island, judging by the experience of the past few years, is likely to increase? Very rapidly.
407. Seeing that a large population is likely to be located there, have you considered the necessity of providing tram-service communication to the city? I think there ought to be a tram service later on.
408. Suppose the temporary bridge were made, could a tramway be carried over that structure to Newcastle? No.
409. In your opinion it would be necessary to have an overhead bridge of a permanent character to carry the tramway? I think so.
410. Are you aware that the Railway Commissioners have offered to contribute £17,000, providing the Government will agree to construct a high-level bridge? Yes, through the newspapers.
411. The people of Newcastle, and you as one of their representatives, were led to believe that the Railway Department are in accord with the demands you are making? I think so.
412. Besides being a great convenience to all those interested in the shipping of coal, and the carrying of goods on the railway, would not a high-level bridge be a preventative against the loss of life which would probably occur with an increased number of rails, if it were a low-level crossing? I think so.
413. Therefore the construction of a high-level bridge is in every way very much desired, to meet the convenience of the general public, and to afford protection to life? I think so.
414. Knowing the rapid growth of Newcastle and Bullock Island, and seeing that there is no other outlet but Bullock Island for the suburban population, you consider, looking ahead twenty years, that a permanent structure is actually necessary? Looking ahead only ten years, I say it is very necessary that the structure should be proceeded with.
415. Have you a knowledge of the value of land on the island? I have.
416. Have you heard of the evidence given here by the Minister for Lands on that point? I have.
417. Can you ratify his statement? I do, without any hesitation.
418. There will be a large area of land reclaimed by the proposed works? A very large area of very valuable land.
419. And when these reclamations are completed there will be no difficulty in finding purchasers at good prices? None whatever. I will undertake to build the bridge if the Government will give me the reclaimed land.
420. Do you know the area of land that will be reclaimed? About 60 or 70 acres, I believe.
421. What value per acre do you put upon the land? It would be very hard to say what the value would be with such a frontage. It would be very valuable—it would be worth some thousands and thousands of pounds.
422. You believe that the proceeds of the land would defray the cost of a high-level bridge? Twice over, at any rate.
423. Do you anticipate that the Railway Commissioners are likely to give that £17,000, in the event of the low-level structure being carried out? I do not think so, because they would get no advantages unless they had a high-level bridge.
424. Therefore the construction of a high-level bridge would not only be a great convenience to the people of the island, but would also be of great benefit and advantage to the Railway Commissioners? Yes.
425. *Mr. Dowel.*] What are your reasons for stating that the construction of an iron bridge would increase the value of the Crown lands? It would give means of access to these lands. A valuable approach of this character must increase their value very considerably.

426. Can you say, of your own knowledge, if there is any considerable demand for land on Bullock Island? Yes, land will always sell there. Allotments that you could have bought there for almost a few pounds a few years ago are worth £1,200 and £1,500 to-day. Within the last few years the Government themselves have sold land there at £10, and bought it back at £1,500.
427. Do you think it desirable that the Government should reclaim this land at the island? I do.
428. Having in view the necessity of constructing a bridge, do you think a temporary structure would answer the purpose? No.
429. For what reason? A temporary structure is never satisfactory, with all the copra and other things we have in that water.
430. Would a composite structure answer the purpose—iron cylinders, with a timber superstructure? It might; but the question is, whether you would not be better off with an iron bridge than with one of wood, which you would have to repair from time to time, for the white ant is very bad with us.
431. At any rate you are of opinion that the bridge should be erected forthwith, in spite of the evidence which has been given by the departmental officers—that it would cost more to repair the existing bridge than to construct a new one? I am.

A. Brown,
Esq., M.P.
18 Mar., 1890.

James Fletcher, Esq., M.P., sworn, and examined:—

432. *Temporary Chairman.*] Are you one of the Members for Newcastle? I am.
433. *Mr. O'Sullivan.*] Will you be kind enough to make a statement to the Committee of your views with regard to the construction of a bridge to Carrington? I wish to state that in my opinion the construction of that bridge is absolutely necessary, and that it should be proceeded with as early as possible.
434. Are you aware that the Mayor of Newcastle holds a different opinion? Yes; but I do not know that he is very competent to give an opinion about the construction of bridges. I should not take him as an authority on bridge construction.
435. Was he not authorized to voice the opinion of the citizens of Newcastle? Not that I am aware of. At all events the people of Newcastle have requested me to give evidence before this Committee in the opposite direction.
436. You are aware that the cost of this bridge, if it is a high-level one, will be £50,000, and that the Department are of opinion that it might wait for about five years until the reclamation works are carried out? I think some of the Department are.
437. The interest on £50,000 at 4 per cent. would amount to £10,000 in five years;—would this Committee be justified in recommending that expenditure when, according to the opinion of the Department, a temporary bridge costing £3,000 would carry the traffic for that time? Yes, because I am not in harmony with the statement that it is going to take five years to do the reclamation works. The area of land which may be sold would bring four times the cost of the bridge, and the interest on that sum should be considered as a set off against the interest on the money laid out on the bridge. The reclaimed land will realize at least four times the value of the bridge. If it is fair on the one side to consider the amount of money which the Government will lose as interest, how much fairer is it to consider the loss they will experience if the land is not sold.
438. You think, then, that one matter would counterbalance the other? Much more.
439. Do you think the present bridge can be put in good working order? I think that if it were repaired—in fact, one tradesman in Newcastle said to me, "I will make it safe for £1,000"—it can be made to carry the traffic for a time at an expenditure of £1,000.
440. Would it then carry the heavy traffic? It would carry the traffic which is likely to pass over it until the new bridge is erected.
441. For how many years? I should think two or three years. I do not think it would take longer than two years to erect the bridge.
442. Is there not heavy traffic from Newcastle to the ironworks and shipping at Bullock Island? There is a heavy traffic.
443. Could that be accommodated by the present bridge if it were repaired? I think it could until the new bridge is erected, if it is erected within a reasonable time.
444. You think then that the importance of the traffic between Bullock Island and Newcastle justifies the immediate erection of a high-level bridge? I say, positively, in my opinion the work can be done very much cheaper before the dredging is done than it can be done afterwards, as you will have a surface upon which to lay your materials, which will save the cost—£1,000 or £1,500—of putting up staging. I suppose the foundations will consist of cast-iron cylinders.
445. Is there not a dread in the minds of a number of the Newcastle people that the temporary bridge is to be too good a structure, and will last too long? I do not know whether there is any such fear as that. I think myself that it would be a positive waste of public money, as long as the old bridge could be repaired to carry on the traffic for a couple of years, by which time a new bridge could be erected.
446. Is it important that these reclamation works should be carried out? It is.
447. Is the demand for water-frontages in Newcastle sufficiently strong to justify that work? I think that if the land were reclaimed the Government would readily sell it for £2,000 an acre, but as it is now it is not worth £10 an acre.
448. *Mr. Hurley.*] Looking at the question of the temporary bridge, and looking at the service which they have now across Cowper-street from Wickham, do you, as one of their representatives, think that the people of Newcastle would be willing to put up with the present structure, with some slight improvements of course, in preference to being subjected to a mile and a half additional haulage, in order to secure the more permanent structure? I think they would be prepared to put up with the inconvenience, whatever it may be, for a time, so long as they know that a permanent structure has been commenced, and with an intention to carry it out.
449. You are aware that the Railway Department anticipate extending their lines northward, in order to remove the bend from Wickham into Newcastle? I have heard that.
450. Have you heard that they intend to contribute £17,000 towards the cost of the construction of the more permanent bridge? I heard that also. When I know that they will get about 40 or 50 acres of very valuable land I am not surprised at them giving it.

J. Fletcher,
Esq., M.P.
18 Mar., 1890.

- J. Fletcher,
Esq., M.P.
18 Mar., 1890.
451. Will not the people of Newcastle benefit in a very great measure by such extension? They will get a corresponding benefit, but the Commissioners will get the lion's share.
452. Will not the municipality of Newcastle benefit by bringing into the market a lot of land, upon which buildings will be erected, and from which taxes will be received? No doubt the municipalities would benefit proportionately from every acre of land that is made taxable.
453. In view of the increased number of railway lines that are likely to be laid down, will not a low-level crossing be a great inconvenience as well as a danger to the travelling public? I am decidedly in favour of a high-level bridge, provided that the grades are of such a character that traffic can pass up them safely, but if they make steep grades merely to get a high-level bridge I should certainly condemn it.
454. If they can construct a high-level bridge upon which they can carry a tramway, will not that satisfy all the demands of the people? No. We must never stop the vehicular traffic.
455. The construction of a tramway will not interfere with the vehicular traffic? The present road is too narrow altogether for vehicular and tram traffic to travel upon, unless they make it wider.
456. You think that if an easy grade were given to a more permanent structure it would give satisfaction? If they make very steep grades the people of Newcastle will not like it.
457. In a high-level permanent bridge, do you think it will be necessary to have a swing? I think so. I think we should give the people the advantage of a channel, so that wharves may be constructed alongside the channel.
458. I suppose you admit that the port is fairly well supplied with steam-cranes for the export of coal? At the present moment, unfortunately, it is, but when the demand is great we find that large vessels have to wait a considerable time before they can get under the cranes, while at the same time collieries are idle, waiting for trade.
459. Seeing that the Government are now reclaiming this inner basin, and are going to give the people of Newcastle a third more wharf accommodation than they already have, will not that serve them for many years to come? A third more accommodation, and taking advantage of the whole length of the dyke, will no doubt serve for a time, but the rapid growth of the coal trade swallows up a great deal of the facilities, and, more than that, it wants a great improvement made in the harbour to take advantage of the cranes which are now being erected.
460. Notwithstanding that you are going to get seven additional cranes you believe it is necessary to open up with a swing bridge Throsby's Creek for the future supply of coal? I do, indeed.
461. You have watched the growth of Newcastle? I have known it for thirty-seven years.
462. Have you noticed the rapid growth of the population on Bullock Island during the last five years? I have.
463. Has not that been built up chiefly within the last five years? Not within the last five years. I think the first person went there about 1870 or 1872, but the last ten years have added very much to the growth of the buildings on the island.
464. Would you say more than 50 per cent.? I would say 400 or 500 per cent. I can remember when the whole of the island could be bought for less than £20 an acre.
465. Are you of opinion that the population will move up to that portion of the island which is now unoccupied—the north-west? I do. I think the Government will be able to dispose of that land at handsome prices.
466. Have you any idea as to how much land would be reclaimed? I think it would be over 100 acres.
467. You believe that the whole of that reclaimed land will realize on an average £2,000 an acre? I think it will, especially if they give facilities in the way of wharves, which I understand it is the intention of the Government to do.
468. *Mr. Copeland.*] Do you know how many houses there are on Bullock Island? No.
469. It is reported, I believe, there are some 400 houses there—how long do you think the old bridge would last, suppose £1,000 were expended in repairing it? I think it would last two years—sufficiently long until the new bridge was erected.
470. It would be of no further use then? I do not think so, then.
471. The country would be paying £500 a year for providing accommodation for Bullock Island? I do not look upon it in that light. I look upon it as a work of necessity. The bridge is fit to tumble down now, and I only look upon the repairs that will be made to it as a means to tide over the period which will elapse before the permanent bridge is erected.
472. But £1,000 would be expended in giving accommodation for two years? I think it would.
473. If a new bridge—a wooden structure, which is termed a temporary bridge—can be constructed for £3,000 that would last for fifteen years, the country would be paying £200 a year to give accommodation; do you not think the country would be more justified in reducing the cost of that accommodation to £200 than in spending £500 a year? If you look at it merely from a bridge standpoint your calculation is correct; but the people of Newcastle are not going to be satisfied for fifteen years without getting a bridge.
474. Would there be anything to prevent Newcastle growing, or traffic from taking place, if the bridge were made of wood instead of iron? No; they could travel as well over a wooden bridge; but you would not give people the same facilities to go there and make property valuable. If you look ahead, in all probability, when the Government get short of money they will be selling that land which is to be reclaimed at its present value, instead of letting the country realize the full benefit when the improvements are effected.
475. Do not you think the land is likely to be of more value after they get it level? I do not think so, because in the meantime they may drive population in another direction altogether.
476. How can that happen if they have accommodation for all that traffic over a wooden bridge? They will have accommodation for traffic over the temporary bridge, but what is really wanted to give that property a value is to cut a fresh channel where wharves can be made. The accommodation itself will give an additional value to the land, and induce people to go there.
477. You are speaking of Throsby Creek? Yes.
478. The bulk of the land on the Newcastle side is private property? Yes. Where the channel is being cut now there will be a very large area of land reclaimed which will be the property of the Government. In fact there is no definite boundary, scarcely, now. At a place where you can swim a boat, I can remember well when it was high and dry. This is simply because the water spreads all over. When a little channel

J. Fletcher,
Esq., M.P.

18 Mar., 1830.

is cut the water washes away the sand and makes a channel, and by defining it a great area of land, which is now claimed by private individuals, but which in many cases does not belong to them, will become the property of the Government.

479. Would a wooden bridge in any way impede the traffic? Taking the cost of the present bridge as a guide to the life of the wooden bridge which is to be erected, it would not last very long.

480. How long is it since the present bridge was erected? I cannot exactly say, but I remember it being erected. It has been dangerous for a long time, and I have brought the matter under the notice of various Ministers.

481. I suppose you are aware that the life of a wooden bridge is reckoned at fifteen years, and that the majority of our wooden bridges have already lasted much longer than that period? Yes. This bridge has had a much longer life than fifteen years, although it has been frequently repaired.

482. Do you know of any stop to traffic, prevention of increase of population, prevention of despatch of coal, or any other disadvantage which would accrue from having a wooden bridge instead of an iron bridge, so long as the wooden bridge was wide, and solid, and strong enough to carry all the necessary traffic? I do not think that would prevent people from living at Bullock Island. I do not think a ton of coal less would be shipped now, but I say, considering the life of an iron and the life of a wooden bridge, it would be a wilful waste to erect a wooden bridge in a place like that, when it is intended to ultimately erect an iron one.

483. *Mr. Trickett.*] During the erection of this expensive structure, if it is to be erected, there must be some means of communication between Newcastle and Bullock Island? Certainly.

484. It is admitted that the present bridge is in a dangerous state? I say it can be made safe enough until the new bridge is erected, at an outlay of £1,000 or £1,500.

485. Do you set up that opinion even if the officers of the Department have stated that such is not the case, and that to repair the old bridge would mean really a new bridge—lock, stock, and barrel? I set up that opinion, not exactly in opposition to the opinion of the officers of the Department, but on the fact that gentlemen are prepared to take the work at that price and do it. That is a better proof than calculation.

486. Do you mind giving the names of these persons? Mr. Thomas Brooks, of Newcastle, has told me that he will make the bridge perfectly safe, to last two years, for less than £1,500.

487. During the time the bridge is being repaired there must be, I suppose, a stoppage to traffic? I suppose they will do the work with as little inconvenience as possible. It is no unusual thing to see a railway-bridge being repaired and traffic at the same time going on. I do not see why the traffic on this bridge should not be carried on without very much inconvenience to the public whilst the repairs are being made.

488. Taking it for granted that the expensive structure is to be ultimately carried out, you would sooner have the old bridge repaired than a new bridge erected? I would sooner have the old bridge repaired, provided the Department are prepared to go on at once with the erection of the new bridge. I say, notwithstanding what the Department may say to the contrary, that they will put the bridge up at a very much less cost before they dredge the channel than they will do afterwards.

489. *Mr. Humphery.*] I think you said that if a high-level bridge were erected the reclaimed land would be enormously valuable? I think so.

490. Could not the channel be cut and the reclaimed land be realized at full prices without a high-level bridge being built? But it would be necessary to put a portion of the stuff taken from the new channel to fill up the old one in the reclamation works. You cannot close the old one until the new one is cut.

491. That is what you mean by saying the high-level bridge should be built before the reclaimed land should be realized? I think so.

492. *Mr. Tonkin.*] Has there been any public meeting held in Newcastle to condemn the Mayor for the evidence which he gave before this Committee? Well, there is a universal difference from the Mayor's opinion.

493. There has been no public meeting held? There has been no public meeting held that I am aware of, beyond the fact that a majority of the people think differently from the Mayor on this matter.

494. The Mayor, of course, is a representative of the citizens? He is.

495. If the citizens were dissatisfied with his evidence, would they not have taken the usual course if they had called a public meeting and condemned his action? I think it is premature. I think they are relying more upon the Public Works Committee than upon anything which Mr. Christie said.

496. They know very well that the Committee goes according to the evidence? No doubt they do, but I do not think they paid very much attention to Mr. Christie's evidence.

497. He, as the representative of the citizens, is supposed to voice the opinion of the majority of the citizens, but if it is at variance with the opinions of the citizens there should be some demonstration, but none has taken place? Not that I am aware of, nor do I think the citizens of Newcastle view it in that light. I think they only took his evidence for what it was worth, and certainly not as representing the voice or the wish of the people of Newcastle.

498. But the mayor of a city is the mouthpiece of the citizens? You know there may be mayors and mayors.

499. *Mr. Dowel.*] Are you aware that it has been reported by the officers of the Department that the present bridge is unsafe? I have known that for a long time.

500. Are you aware that the Department have stated that it would be much better to build a temporary bridge at a cost of £3,000 than to repair the old bridge? I am not. I believe they recommend the erection of a temporary bridge in preference to repairing the old bridge; but, notwithstanding the very high estimate I hold of the gentleman at the head of the Roads Department—and I look upon him as second to none in the Government service—I beg to differ with him.

501. If it is their opinion that it will cost more money to repair the present bridge than to erect the temporary bridge, you would not endorse it? Certainly not, for the reasons I have given. If Mr. Brooks and others are foolish, their money is not, and they are prepared to do the work.

502. Are you aware that the officers of the Department recommend that the reclamation should be made first? Yes; and I believe they will take about seven years to do it. I have no sympathy with red-tapeism.

503. What are your reasons for proposing that the bridge should be erected first? I, perhaps, have had more to do with the sinking of cylinders than any man under the Government. I know the difference between

J. Fletcher, Esq., M.P.
18 Mar., 1890.

between starting with a surface upon which to lay my material and starting where I have to make staging. That being the case, I say that the bridge will be erected at less cost with the sand as it now lies than it will be after the channel is dredged.

504. You are in direct opposition to the opinions of the officers of the Department? I am decidedly in direct opposition to them, and I speak from practical experience. I have had to do with the sinking of every shaft in the Newcastle District with cast-iron cylinders—they were all sunk on my plans and specifications. I think I have had more experience than most people in sinking cylinders.

505. What was your reason for stating that you do not think a tramway could be laid down over this bridge? I did not say so. I said I did not think it was possible to carry on tram and vehicular traffic at the same time if the road were of its present width. Unless they widen the road it would not be safe for the two to be carried on at the one time.

506. You are referring to the road over the old bridge? I am speaking of the road across the island.

507. Did I understand you to say that the bridge was going to take five years to build? I have read in the newspapers that they are going to take seven years to erect the bridge and to make the reclamation. I venture to say that the whole thing could be done within three years.

508. You are strongly of opinion that the bridge should be constructed forthwith? Yes.

509. And that the reclamation should still proceed? Yes.

510. And that the whole of the works should finish, if possible, simultaneously? I would finish the bridge as soon as I could, and I would do the same with the others.

511. What saving would it be to the Railway Department to have a high-level bridge? I suppose it is a very important crossing. They have there the interlocking system established, which means the employment of three men every day, and by having a high-level bridge they would save the wages of these men, besides the inconvenience which naturally takes place when trains are passing to and fro.

512. From your experience in the sinking of cylinders, do you think it would be advisable to build a bridge of a composite character in preference to an iron structure—iron cylinders, for instance, with a timber superstructure? I would not have any timber, because the white ants are too bad down in that district.

513. Do they attack the various descriptions of timber that are used there? All but turpentine, and I am not sure about that.

514. Do they attack tallow-wood? I believe they attack all the same. The white ants are playing havoc with the various timbers that the Government have used in erecting their buildings.

515. You think that the construction of a high-level bridge would materially increase the value of existing Crown lands, that the Government should reclaim these lands at once, and that in all probability they would meet with a ready and good sale? I believe that if they cut that channel, and give people facilities by erecting wharves, no doubt the land will sell rapidly indeed.

516. Do you anticipate a very considerable increase in the population on the island? There is no doubt that as wherever you offer facilities so do you get people to locate.

517. You have recently come from Newcastle, and I presume you have been in contact with a large number of its citizens? I have.

518. What is the consensus of opinion in reference to this bridge? The general opinion is that the bridge should have been erected, and they are very much surprised and disappointed that a block should have been put to it after the money was voted.

519. By their own mayor? I would rather not offer any opinion about the mayor.

520. *Mr. Cox.*] Is not the new bridge to be erected on the site of the old one? No.

521. Therefore it would not interfere with the traffic? Certainly not.

522. *Temporary Chairman.*] You say a large quantity of the reclaimed land would be available to pay the cost of the bridge—where do you consider it will be—at the southern or the northern end? At the northern end there will be a very large area of land which is now covered with mangroves.

523. That will require to be reclaimed before it can be sold? Of course; if the Government were to sell it now it would go at a very small price indeed; I do not think you would get more than £8 or £10, certainly less than £20.

524. The Government must do some dredging to find sand to reclaim? In the event of dredging there when the Horse-shoe is dredged out, instead of taking the silt outside, as they have hitherto done, they will no doubt deposit it there, and thereby reclaim the land.

525. You are aware that it is proposed to use new sand-pumps to lift the sand on to the reclaimable land? I remember Mr. Sutherland telling me about it.

526. A certain portion of the unsold land on the island is at present wholly unfit for sale? Absolutely.

527. And even some portions which have been sold are rather low? In the case of many of the allotments which have been sold, the houses have been erected where there is an ebb and flow of the tide.

528. Would it not have been much better if that land had been reclaimed and raised a foot or two? It would have been an improvement, and would have enhanced the value very much indeed.

529. Looking at that mistake, you would not recommend selling any more land until it is reclaimed, and raised well above the water-level? Not one acre.

530. That will take some time? It all depends on the way they go about it. If it were in the hands of a private company, I know how long it would take.

531. If it will take some time, you could not lay your hands on the money that the reclaimed land will fetch until you have reclaimed it? Certainly not.

532. You would have to be out of pocket for the bridge? You would have to be out of pocket for the actual outlay. You could not get a return from the land until it was ready for the market.

533. So, even with your scheme, if it were in a private company's hands, you must advance the money for the bridge first, and get the reclamation done as fast as possible afterwards? Certainly. If a syndicate gets a block of land, they generally borrow money and lay out streets, and the Government would have to adopt the same principle in regard to this land.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

BRIDGE TO CONNECT BULLOCK ISLAND WITH THE MAINLAND AT NEWCASTLE

REPORT.

THE Sectional Committee appointed to "inspect, take evidence, and report on the proposed bridge to connect Bullock Island with the Mainland at Newcastle," beg to report as follows:—

The Committee left Sydney on Thursday evening, 6th March, arriving at Newcastle the same night. On the following morning they drove round Newcastle to inspect the wharfage arrangements, drove over the existing bridge to Bullock Island, and visited the works and wharfs on that Island, and the Wickham bridge. In the afternoon they took evidence in the Municipal Council Chamber, and examined Mr. Christie, the Mayor of Newcastle; Mr. Morrison, the Mayor of Carrington; and Mr. Myers, the Mayor of Wickham; and several other gentlemen.

On the afternoon prior to the departure of the Committee to Newcastle, Mr. McLachlan, the Secretary to the Railway Commissioners, gave evidence before the Parliamentary Standing Committee to the effect that the Railway Commissioners desired to get possession of the area to be reclaimed along the Newcastle shore, for the purpose of sidings and other conveniences, which they greatly need; but as this would necessitate an overhead bridge they were prepared to contribute £17,000 towards the cost of the more expensive structure.

The Committee found that the opinion in Newcastle and at Bullock Island was decidedly in favour of a high-level bridge, as the present level crossing is often inconveniently obstructed, both for the road and the railroad traffic, and this would be still more the case if the reclaimed area were occupied with sidings. Under these circumstances the low-level iron bridge, as submitted to the Parliamentary Standing Committee, is not to be recommended; but as no plans for the high-level bridge have been prepared, and as there is no exact estimate of its additional cost, nothing can be said as to the exact contribution it will be proper for the Railway Commissioners to make.

It is estimated by the engineers that the reclamation, together with the construction of the high-level bridge, will take about five years, and during that period the communication between Newcastle and Bullock Island must be maintained. The traffic is considerable, and is increasing, and though there are two other bridges across Throsby Creek, the use of them involves a detour of not less than a mile between the centre of Bullock Island and Newcastle.

Under these circumstances the proposal of the Department to erect a sufficient, though temporary, bridge by the side of the existing structure, at a cost not exceeding £3,000, is reasonable, because the present bridge is unsafe, and any attempt to repair it effectively, so as to make it serviceable for two or three years, will probably cost more money than it is proposed to spend on the temporary bridge.

Altogether apart from the communication between Newcastle and Bullock Island, is the question of the swing in the proposed bridge, and the deepening of Throsby Creek, so as to give access by sea-going vessels to a basin to be excavated above the bridge. So far as public wharfage is concerned this work is not immediately urgent, because the basin to be constructed below the bridge will, with its jetties at the north end, give nearly three times the accommodation at present furnished along the dyke; and it is scarcely possible to conjecture when it will be necessary, for Government purposes, to increase the wharf frontage on Bullock Island by bringing into use the shore line above the bridge, and on the south-west side of Bullock Island. On the western shore of Throsby Creek, and in the parish

of Wickham, is a private water frontage, which the owners are exceedingly anxious to see improved. From the limit of the reclamation to Wickham Bridge there is about 1,000 feet of land fronting Throsby Creek. In the grants of this land there was a reservation of 100 feet; but the cancellation of this reservation has been purchased by some of the owners. It was admitted in evidence that if the Government deepens the channel as proposed it would add three-fold to the value of this land, and the Mayor of Wickham testified that it would be advantageous to the district, and to the Government, if the whole of these frontages were resumed, so that the Government might reap the reward of the investment of its own capital in improvements. He also expressed the opinion that it would be better if the Wickham Bridge were removed, and replaced close to the Railway bridge across Throsby Creek, so that a larger space might be deepened out, and the wharfage on both sides of the creek extended.

Until the Railway Commissioners are in the position to utilise the land to be reclaimed, the low level temporary bridge will answer the traffic requirements of Bullock Island, but the high level bridge ought to be ready for use by the time the Commissioners are prepared to lay down their sidings.

Mr. Hurley dissents from that part of the Report which recommends the construction of a temporary bridge.

Sydney, 11 March, 1890.

ANDREW GARRAN,
Chairman.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

BRIDGE TO CONNECT BULLOCK ISLAND WITH THE MAINLAND AT NEWCASTLE.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

FRIDAY, 7 MARCH, 1890.

[The Sectional Committee met in the Council Chambers, Newcastle.]

Present:—

The HONORABLE ANDREW GARRAN (CHAIRMAN).

The Hon. WILLIAM JOSEPH TRICKETT. | EDWARD WILLIAM O'SULLIVAN, Esq.
JOHN HUBLEY, Esq.

The Sectional Committee proceeded to consider the proposed Bridge to connect Bullock Island with the mainland at Newcastle.

Colin Christie, Esq., Mayor of Newcastle, sworn, and examined:—

1. *Chairman.*] What position do you occupy in Newcastle? The Mayor of the city.
2. How long have you been a resident here? Forty years.
3. Will you be good enough to make a statement as to the interest of Newcastle in this proposed work? I would much rather that you would put me under examination, although I will say a few words if you wish it. I think that the bridge is of great importance, and is much needed. Bullock Island has risen from nothing during the last twenty years. I have with me documentary evidence, in the shape of cuttings from newspapers dating as far back as 1869, to show what Bullock Island was twenty-one years ago. At that time a request was made for a school—of course this has nothing to do with the bridge, but I mention it for the purpose of showing the littleness of the island at that time. There were about twenty children on the island, and it was urged that a school should be erected in consequence.
4. Confine your statement to the interest of Newcastle in this work? Bullock Island has risen from insignificance to be a place of much importance. That importance is shown by the amount of coal shipped from Bullock Island. The amount of trade between Newcastle and Bullock Island is so great that a temporary bridge in my opinion, and the opinion of the public as expressed in public meeting, would not be equal to requirements. Observe the number of houses which have been built there within the last fifteen years, since the bridge was opened for traffic. I do not possess documentary evidence to show the exact date of the opening, but the first pile was driven in 1870, and it remained for five years after that before a cart could cross over in consequence of the gap between the two ends. It was contemplated that a drawbridge should be constructed. Afterwards that idea was abandoned, and it was planked over, but it was at least five years before any cart traffic could reach the island. The island then was simply nothing, but it has grown to the dimensions which you will have noticed to-day—a place of immense importance, a place of large population, and a place now incorporated.
5. *Mr. Trickett.*] Let us come to the question at issue. I presume it is granted on all hands that the bridge is insufficient for present requirements, and is in what may be described as a dangerous condition? That is so. For some time a man has been stationed at the bridge to prevent heavy traffic crossing it. It is dangerous to take a load of bricks over it. Heavy loads are forbidden to cross it.
6. The proposal to erect a bridge to cost £33,000 is, I understand, a proposal which must be considered in connection with the dredging out of the inner harbour of Bullock Island? That is not for me to say.
7. But do you not look at the two matters as being connected? It would require a man skilled in the works contemplated—a skilled man like Mr. Hickson—to express an opinion on that point.
8. The erection of a bridge which would cost £33,000, would necessarily be a work of some duration? It would.
9. And the present requirement is that something should be done immediately? Just so.
10. Therefore, do you not think that instead of patching up this present dangerous structure, it would be better for all purposes that a bridge, sufficient for present requirements, should be built alongside the existing one? I know it would be a great inconvenience to Bullock Island and Newcastle also, if traffic between the two places were to cease, which it seems it must do unless the proposed bridge or some other is built.
11. Therefore, for present requirements, something is urgently required to be done? Yes. Either this bridge should be made more safe or, if it is impossible to make it thoroughly safe, that something else should take its place.
12. During the time this large structure is being built—if it is built at all—something must be done to keep up constant communication between the mainland and Bullock Island? It must.

C. Christie,
Esq.
7 Mar., 1890.

- C. Christie,
Esq.
7 Mar., 1890.
13. Looking at the matter in that light, do you not think it would be better to put up a bridge alongside the present one for the purposes of present traffic, rather than patch up this dangerous old structure, which Mr. Hickson has told us would cost almost as much as a new bridge, requiring new lock, stock, and barrel? Yes.
14. If the proposed bridge were built at the present time it would be built on dry land, so to speak? That is so.
15. And the drawbridge part of it would really at present be of no use at all? Of no use at all.
16. It would be no use until the harbour works which are contemplated in connection with the proposed bridge are completed? Just so. It would be of no use simply because the drawbridge would be crossing land instead of water.
17. You will have heard that the Railway Commissioners propose, if a large bridge is constructed, that it should even be of a more expensive character than the one suggested a few months ago? Yes, by raising the bridge higher. I noticed in yesterday's papers that it was suggested that £17,000 should be added to the money the Government contemplate spending on an ordinary drawbridge at ordinary level. For the extra £17,000, it is required that the bridge should be raised, so that the railway could pass under it, and so that shunting operations might be carried out under it.
18. What do you think of that suggestion? I am of opinion that the grade would be too great, and would necessitate more horse-power for loads going to Bullock Island or coming from Bullock Island. If the grade were not too great the bridge would be of great advantage, especially as our traffic would never be interrupted by passing trains.
19. Seeing how the traffic is inconvenienced between the custom house and the wharves, you consider that such a bridge would be desirable? Yes; I speak from experience.
20. Under these circumstances the work will be even larger than that the Committee have recently been considering? Yes.
21. That being so, do you not think there is still greater urgency for some good temporary structure being erected, to prevent any dead-lock in the traffic, whilst the new bridge is being put up? I am of opinion that we cannot do without traffic between Bullock Island and Newcastle.
22. At its present crossing-place? At its present crossing-place. It is impossible to do without it.
23. *Chairman.*] The great interest of Newcastle in this work is communication with Bullock Island? Yes.
24. And as you must have one or other inconvenience of crossing the lines on the level, or by means of a gradient—you think the gradient the least evil of the two? It depends on the nature of the gradient. If the gradient were 1 in 1 it would not do. If it were 1 in 40 or 60 it would be all right.
25. Any such grade as an engineer would lay out? I would say an easy grade.
26. *Mr. Trickett.*] What is the width of the present bridge? About 16 feet.
27. That is rather narrow, is it not, even for the present traffic? It is. It is dangerous, particularly if passengers are on it at the time two vehicles meet.
28. Even if a temporary structure were built, it would be better to have it a little wider for the present traffic? It would.
29. You think 22 feet would be wide enough for a year or so? It might do for a year or so, especially if it had a footpath connected with it.
30. *Mr. O'Sullivan.*] It is suggested by the Department that the construction of this bridge should stand over for about five years, and in the meantime they will erect a temporary bridge to give the accommodation you require. The cost of this proposed iron bridge would be £53,000, and the interest on that at 4 per cent. would be £2,120. Therefore five years' interest will amount to £10,600. On the other hand a temporary bridge will cost about £2,000. Which work do you think, in the public interest, should be carried out? That which is the most economical. In my opinion the temporary bridge would be the better, because the other would be of no use, seeing that it would cross a place which is at present dry.
31. Are we to understand that you are in favour of the temporary bridge being constructed? Yes; seeing that the erection of the other bridge is contemplated within a short period of time—that is twelve months or three years. This temporary bridge is absolutely necessary for the present traffic while the other is in course of construction.
32. Do you think, from your knowledge of Bullock Island and Newcastle, that a temporary bridge would prove equal to the growing traffic during those five years? Bullock Island is growing very rapidly.
33. Do you think a temporary bridge, to cost £2,000, would prove equal to that growing traffic? I am afraid it would not, and yet it would be a pity to spend more money on it. It would almost seem wrong to spend a great amount of money. It depends entirely on the length of time. If the bridge could be built within two years the present structure, with a little patching, would be sufficient for our present requirements. Piles should be driven in to strengthen it, and new girders put in where they are defective.
34. But you understand from the evidence of Mr. Hickson that the Department prefer to put up a temporary bridge? Yes.
35. They believe that the present bridge is not safe; therefore they propose to erect a temporary one? Yes, it would be better to have a temporary one than none at all.
36. You have been forty years in the district, and I want to know whether from your observation of the traffic between Bullock Island and Newcastle a bridge to cost £2,000 would prove equal to all growing requirements? There are those who know more of Bullock Island than I do. I know probably more than any of them as to what it has been.
37. And you think the temporary bridge would not prove equal to the growing traffic of five years? I would not say that it could not, neither would I say that it would.
38. *Mr. Hurley.*] You were chairman at the meeting held a short time ago, when certain resolutions were passed and forwarded to the Committee? Yes.
39. Resolutions were passed to the effect that you protested against the erection of a temporary bridge? Yes.
40. Will you state what the opinion of that meeting was? The opinion was decidedly against the erection of a temporary bridge. The expressions of the speakers were to the effect that the permanent bridge should be gone on with forthwith.
41. You are aware that it is contemplated to reclaim a large quantity of Government land in close proximity to Bullock Island? Yes.
42. Do you not think it would be to the advantage of the Works Department, and to the interest of the public

public generally, to defer carrying out any large works such as you propose to have carried out, until that reclamation is finally dealt with? That is a question which would need to be answered by Mr. Hickson. Not being an engineer, I cannot answer engineering questions.

C. Christie,
Esq.
7 Mar., 1890.

43. Did not one of the main questions raised at the public meeting have reference to the fact that the value of the land would more than compensate for the expenditure? So it will.

44. That is the land you contemplate reclaiming? Yes, it will double and treble the actual expenditure.

45. But, rather than be without a bridge, you would approve of the erection of a temporary bridge, pending the erection of a larger one? I think so. I think that the public even would be in favour of that, rather than of no bridge at all.

46. You are also aware that the Railway Department are desirous of contributing towards the cost of the construction of the bridge, providing it is an overhead or a high-level bridge? I am aware of that from the newspapers.

47. Do you not see that it will take a considerable time before a site for an overhead bridge can be decided upon? Yes, I see it will take a long time, and an expenditure of something like £50,000—£33,000 and £17,000.

48. Therefore, the work of reclamation, and the construction of a high-level bridge, would cause a delay which would be almost dangerous to the interests of Bullock Island people? Yes; unless they had a bridge of some sort. They must have a bridge of some sort.

49. Therefore, you actually fall in with the idea and suggestion of the Commissioner for Roads and Bridges, that a temporary bridge would be the thing? It would be the thing.

50. Instead of repairing the present bridge? I believe so. As Mr. Hickson has pointed out, the present bridge would require new stringers, new piles, and new lock, stock, and barrel. Those were the words he used. He has more knowledge of the real state of the bridge than I have, and I believe he speaks the truth.

51. You are aware that the population of Bullock Island and Newcastle are chiefly interested in this expenditure? Yes.

52. Do you think the people would stand paying the interest on the construction of this bridge? It would be a waste of money.

53. Are you aware that in former times, in this country, the people who gained an advantage by having a bridge over a given place had to pay a toll? I am.

54. Do you think the people would find fault if a toll were placed on a bridge of large dimensions, erected at a cost like that which has been mentioned. Do you think they would pay sufficient tollage to compensate the Government, and pay interest on the cost of construction? They would not like that.

55. You do not think they would? I do not think they would. Of course, I speak only as one person, and not as a Bullock Island resident.

56. *Chairman.*] You are aware from the plan you have seen, that it is proposed to make a large reclamation on the northern side of the railway line? Yes.

57. And to hand it over to the Railway Department for them to do their shunting upon? Yes.

58. Would it not be a great convenience to Newcastle if the Railway Commissioners could do that, and sell the frontages to Blane-street? It would be a great convenience from a municipal point of view, for we would then have a street of two sides. At present Blane-street is one-sided, and the other side is occupied by railway workshops.

59. Then it is to the interest of Newcastle that the reclamation scheme should be carried out? It is the finest thing we could have.

60. And when it is done, you would have a high-level bridge across? Yes; if it can be constructed, and I believe it can.

61. Then this latest proposal is really the one most in the interest of Newcastle? I believe so.

62. But it would be a waste of money to make the high-level bridge before there is anything to cross? Yes.

63. And if a substantial bridge, equal to all the present or prospective traffic for five years, is made between the Island and the mainland, it will meet all necessary emergencies? I think it will, so long as it does not exceed five years.

64. Then the plans of the department as they stand now meet with favour from you, as Mayor of Newcastle? Yes.

James Morison, Esq., Mayor of Carrington, sworn, and examined:—

65. *Mr. O'Sullivan.*] You are Mayor of the Municipality of Carrington? Yes.

66. How long have you resided at Carrington? About sixteen years.

67. I suppose you are well acquainted with the character of the traffic that is likely to go across the new bridge? I have a pretty fair knowledge of it.

68. What is the character of that traffic? Machinery, boilers, waggon-wheels and axles, rails, pipes, pig-iron, and general merchandise, and you can also include stone and sand, and piles.

69. There is a good deal of heavy freight? Yes; there are loads from 1 to 8 tons.

70. Has that traffic hitherto gone across the old bridge before it was condemned? Yes; some of it has gone over.

71. Do you think a temporary bridge, constructed for about £2,000, would carry the traffic of the nature which you have mentioned? I think it would not meet the requirements of the place, for it is growing very rapidly.

72. But do you think it would do as a temporary bridge for five years? I could not say, because the traffic is increasing so greatly.

73. What is your reason for saying it would not suit the traffic,—would it not be wide enough? The traffic is increasing in quantity.

74. Why do you think the bridge would not carry this heavy traffic,—is it because the bridge would not be wide enough or strong enough;—I am alluding to the temporary structure? Of course I do not know what the nature of the bridge would be, so I could not give you an answer.

75. It would be about 22 feet wide, and something after the style of the present bridge, or perhaps a little stronger? I suppose if you put a bridge down to carry the traffic, it will have to be erected so as to carry heavy traffic.

J. Morison,
Esq.
7 Mar., 1890.

- J. Morison,
Esq.
7 Mar., 1890.
76. I am asking you as a gentleman who has had some experience about heavy traffic, to give us a common-sense opinion? I may state that there is a good deal of sand there, and unless you went down to the bed-rock the sand round the piles would, by the ocean swell and tides, be washed away, and be made unstable and unfit to support a bridge properly.
77. Is it a fact that the present bridge has been there twenty years, and has carried the traffic? It may have been there twenty years, but it has not been open for traffic. About sixteen years ago, when I first went to reside at Carrington, the bridge was not completed. The central part was left open, being originally intended for a swing bridge, and all the means of getting across at that time were by walking on the longitudinal girders. Six months after I was there, two planks and rails were attached. I think you may say it has been open about 15 years.
78. But were there any piles put down for that bridge? Yes; it rests on piles to some extent, but the approaches are well shingled.
79. Do you know what reason the Department has for desiring to postpone the erection of this bridge for five years. Do you know they contemplate carrying out some reclamation work on the south side of Throsby Creek, and cutting a channel on the other side? I am aware that is the intention. It has been the intention for some twelve years, so we are given to understand. We are in the engineering business in Carrington, and when we purchased the present site we were given to understand that the reclamation for the excavation of the inner dyke would be proceeded with and completed in ten years. As a member of the Carrington municipality I may say we have discussed the question of the erection of this bridge for something like two years. We have been holding correspondence with the Minister for Works in reference to the instability of the present structure, and we were given to understand first that £22,200 was to be spent on the erection of a new one. Again, twelve months ago, the question cropped up in respect of tram communication going from Lambton, Waratah, and round by Carrington, connecting with the bridge, and at the other end connecting with the loop line to Wallsend. We had an answer then from the Minister for Works, to the effect that he would get the proper officers to investigate the matter. Subsequently we got a reply that there would be a bridge put up of the value of £33,000, and we have been given to understand that this iron bridge was to be proceeded with at once.
80. You are aware that the £33,000 was to be for a low-level bridge? It was not stated to us what style of bridge was to be put up. We understood it was to be a swing bridge.
81. Have you heard since that the Railway Commissioners suggest that a high-level bridge should be constructed, and that if that is done they will contribute £17,000 towards the work? I have read of it in the newspaper.
82. That would make a total of at least £50,000 for the new bridge? Yes.
83. And the interest on that for five years at 4 per cent. would be £10,000? Yes.
84. Do you think, as a citizen and as a taxpayer, that it would be better for the State to incur that expenditure in interest only, instead of erecting a temporary bridge at a cost of £2,000 or £3,000 for a period of five years? The exigencies of the case, and the rapid growth of Carrington in trade and traffic will justify the Government in putting up a large bridge. A large revenue is being derived from the port of Newcastle, and I think we have a right to expect that a bridge of strength and utility will be put up—a good, strong, substantial bridge—not merely to last five years, but for a lengthened period, so that there may be an inducement to persons to erect premises which will further increase the traffic.
85. Then you think it will be better for the State to incur this expenditure in interest only, than to build a temporary structure? I think so. As I have already stated the exigencies of the case warrant it.
86. You are also aware that the department say that they cannot well erect this bridge until these reclamation works and the new channel are carried out? They could be proceeded with to a certain extent.
87. If these works were started and left in an incomplete state they would be of no use whatever to the people? I should imagine that the Government would see the necessity of proceeding with all possible speed.
88. You say they can be carried out to a certain extent. That implies that they cannot be completed? I do not mean that they should be commenced and stopped. I understand, your question is as to whether it will be waste to spend this money until the reclamation is gone on with. The bridge can be continued and carried on together with the reclamation.
89. Then the construction of the bridge would not, in your opinion, impede the carrying out of the reclamation, and the cutting of the channel? No, I think not.
90. That would go on irrespective of the bridge? I think so.
91. What is the area of land which would be accommodated in your municipality by this bridge? I have not gone into that matter.
92. Do you know how much land is in private hands at Bullock Island? I could not say, without referring to the municipal plans.
93. You are a partner in large foundry works? Yes.
94. Which way do you send your heavy material to the railway? By all means available—sometimes by rail, sometimes by water, and sometimes by the bridge.
95. But which route do you take to reach the railway? We generally go over the bridge.
96. Over the old bridge? Yes, or the Wickham bridge. Both are used. I have an estimate of the quantity of pig-iron we carted from Newcastle to our premises during the last year—488 tons.
97. Why do you not use the branch railway which goes down to Carrington near to your place? It is not always practicable, and, besides, we can get our goods delivered much cheaper by cartage than by using the railway.
98. Then if this iron bridge is constructed the Government will be making a competitor to take away the trade of their railway? I think not. You must put up a bridge for the benefit of the whole district. The whole district, not merely Carrington, will be affected by this bridge. It is the only outlet to the whole of the municipalities.
99. You were going to make a statement with reference to the traffic in pig-iron? I was going to say something about the vehicular traffic. We are undergoing an exceptionally dull time at present, but during last week there was a traffic of something like 500 vehicles and horses per day. In busier times we would perhaps have two-thirds more than that.
100. *Mr. Trickett.*] And it goes over the present bridge? Yes. That is the traffic from Carrington to the different districts.

101. *Mr. O'Sullivan.*] By the condemned bridge? Yes. Of course you can go either by the Wickham bridge or the other. We have to use both on account of this bridge being bad.
102. Do you think the figures you are giving may be applied to the old bridge? Yes, I believe so.
103. And would they apply to the new bridge? Yes, and the traffic is largely increasing. Besides an engineering establishment there are two collieries, which use piles, timber, and iron work to a large extent. Again some of the vessels at the dock discharge the balance of their cargoes, such as pig iron. Instead of taking in coal ballast they carry this up to the wharf and discharge. Previous to getting in their lightering that has to be carted away. In fact, you can scarcely average the trade, it increases so fast. Especially during these last two or three years it has been increasing very largely.
104. Have you any further remark to make? I would only state that in the Carrington Municipality at the present time, there are about 400 houses, 4 churches, 7 hotels, 2 collieries, and 1 engineering establishment employing 120 hands. The collieries—Wickham and Bullock Island—at present employ 370 hands; the Hutton about 300, and they estimate that in a year or two, when they get their workings opened out, they will employ from 1,500 to 2,000 men.
105. Do the majority of the men who work at Bullock Island live there? Not at present. They come from different parts, but as they get regular employment houses are being erected.
106. What do you estimate the population of Bullock Island to be? I should say it will be about 2,500.
107. Have you got the valuation of the property? No.
108. Can you state the amount of rates received? About £1,100 last year.
109. The Wickham and Bullock Island colliery has its works on the main land? Yes.
110. Then they only have an air-shaft on the Bullock Island? No, they have their colliery as well.
111. But still their main works are on the main land? Yes, they go under Throsby Creek.
112. *Chairman.*] Their interest on the island is rather under-ground than above ground? Yes.
113. *Mr. Hurley.*] Do you believe that if something is not done to repair the present bridge or to erect a new one, some serious accident may happen to some of the inhabitants, either of Newcastle or Carrington? It is probable.
114. The dangerous condition of the bridge is likely to bring about an accident of a serious character? It has been considered unsafe for these last five years.
115. You have represented that to the Government through letters from the Municipality of Carrington? The municipality has been in operation for two years and ten months, and we have represented it during that time. Previous to that we saw Mr. Darley. We wanted a foot-bridge, attached to the bridge but he objected, on account of the unsafeness of the structure.
116. On account of these representations were you not informed that £33,000 would be placed on the estimates to satisfy the demands of the municipality? The first offer, I think, was £22,000. We have had many offers. At one time there was an offer of £7,000 to make a new bridge. Then we were told it was contemplated to put up an iron bridge. There has been nothing else but a series of promises.
117. You believe that the development of the place warrants the construction of an iron bridge? I do.
118. And you think the future outlook warrants the construction of a tramway into the midst of your district? Decidedly.
119. That has been foreshadowed by representations from your municipality, as well as by promises made by the Government? Yes.
120. Therefore, if a bridge of a permanent character were constructed, and a tramway laid into the harbour at Carrington, it would be a reproductive work for the Government? Decidedly.
121. Have you any knowledge of the value which would accrue to the Government in regard to the lands which would be reclaimed? I think I have. I could not say the quantity, but there is a considerable quantity of property. I could give you an idea of the value of the land. Some twenty years ago half-an-acre was bought for something like £20, and other pieces were bought for less. Now, in one instance, £1,200 and £1,700 have been given for half-an-acre of ground. This shows that the Government will be amply recouped by putting up this bridge.
122. Do you know the value of a piece of land (say) near Blanc street. Have you ever heard talk of a piece of land there being valued at £67,000? No.
123. Have you any knowledge of the acreage which it is expected will be reclaimed when these works are carried out at Bullock Island? Yes.
124. I am told that it is anticipated that in one strip there will be about 120 acres reclaimed. Can you tell us what the value of that land would be per acre? From £2,500 to £3,000 per acre. That would be the present value, and when the bridge is completed I should think it will be double.
125. So that the construction of the bridge would be of national importance to the Government in advancing the value of your own land? Decidedly.
126. You have heard of Mr. Hickson's objection to the construction of a permanent iron bridge at the present time? Yes.
127. I presume you took part in the public meeting held a short time ago? I did.
128. Can you give a synopsis of the objections made by the various speakers to Mr. Hickson's scheme? They had been promised so often by the Government that this iron bridge should be made, that they considered they had a right to that bridge, and that the Government should put it up. The impression is that if the temporary bridge is erected the matter will be left there, and no further action will be taken in reference to the iron bridge.
129. In fact you imagine that you have been deceived by the Department so often that you are doubtful as to their intention to carry out the more permanent structure? We can look upon it in no other light, as we have had promise after promise.
130. Do you think the construction of a more permanent bridge would lead to an increased population settling there? I think so. Then the swing-bridge which we are looking forward to will open up the communication towards Wickham.
131. Do you think the trade of Newcastle is likely to increase materially during the next ten years over the past five years? I think so. It has been making rapid strides during the last five years.
132. In what direction? Every direction.
133. What is your chief export? Coal.
134. Do you anticipate that the coal export will increase materially during the next five years as against the past five years? I think so, as we have been undergoing difficulty in getting it away. Owing to the vessels not arriving here, heavy orders have been in and they have not been sent away.

J. Morison,
Esq.
7 Mar., 1890.

- J. Morison,
Esq.
7 Mar., 1890.
135. Is not the accommodation sufficient to satisfy all present demands? Yes, so far as the wharfage is concerned, but not so far as the bridge is concerned.
136. I am now speaking about the probable trade? Yes.
137. It is anticipated that the reclamation of land, the construction of bridges, and other works, would be likely to develop the place. I want to know how it is going to develop in the future, as compared with the past? The place is growing in population, and its requirements will therefore be greater. It is only by increase of population that any city will rise. Moreover, being so close to the seaboard, we have every facility for increasing and carrying on trade.
138. Has not the Government amply provided for all the demands necessary for shipping in connection with Bullock Island? They have, in connection with the exportation of coal, and they see the necessity of increasing it further.
139. Are not many of the berths erected by the Government now vacant owing to the want of ships to take the coal away? There seems to be a scarcity of ships, but I have known the time when they have been double banked along the wharf, and when vessels have had to wait as much as nine and eleven weeks to get loaded. The Government saw the necessity for more accommodation then, and they have gone forward. I think the Government would be wise to have more wharfage and every other accommodation for the purpose of encouraging an increase of trade.
140. But still you will admit that there is at the present time twice the amount of accommodation necessary and workable? The present is an exceptionally slack period.
141. Have you taken into consideration the probability of the development of the southern mines in close proximity to the metropolis? I have.
142. Do you think that will interfere very materially with the future development of your mineral resources here? I think not. Our coal is superior.
143. Is there any likelihood of any industries, apart from your own, springing up on Bullock Island? I should think so. I look forward to the time when we will have an ironworks there. We have iron ore at Dungog, and we can have water accommodation to fetch it down.
144. Has it ever been represented by any of your deputations, or through your Municipal Councils, that great advantages will be gained by the reclamation of certain portions of Bullock Island? The great benefit to be derived by the reclamation will be the amount of area and frontage to the water. We all know when anyone has a water frontage that it always increases the price and value.
145. If a proper channel is made through Throsby Creek, and reclamations are carried out on a permanent basis, do you think the Government will meet with purchasers for what they reclaim? Decidedly so.
146. You think there will be no difficulty in finding purchasers? No: in fact we, as a Council, have asked the Government to put up some ground they have now for sale, and they have withheld it for some purpose of their own which they have not revealed to us.
147. *Mr. Trickett.*] Mr. Hickson has stated that it would be very undesirable to do anything to the old bridge—that it has gone so far that it is beyond repair. Do you agree with him in that idea? There are various opinions in reference to that matter. Of course I respect Mr. Hickson's opinion, but at the same time there are other experts who have stated that it can be repaired.
148. Do they state at what cost? I heard one gentleman say from £1,000 to £1,500.
149. Would it be better to repair it or to build a new temporary bridge? Well, the bridge is so narrow that unless it were made wider it would scarcely meet the requirements of the increasing traffic.
150. It will necessarily take some time to construct a costly bridge of £33,000 or £50,000? Yes.
151. What time do you think it will take? I have not seen the plans. Then this question of the expenditure of £17,000 by the Railway Commissioners would mean an alteration in the plan. But I should think if the whole scheme, including the bridge, were carried on with all despatch, there would be nothing to hinder its being completed in seven or eight years.
152. Are the people between Newcastle and Bullock Island prepared to put up for seven years with the present tumble-down structure? I suppose they will have to be content, as they have had to be those last five years.
153. They would be content? I don't say they would be content.
154. Would you be content, during the six or seven years it will take to construct the bridge, to go on with the present unsafe structure? It is very undesirable.
155. Therefore it is absolutely necessary to do something to make good the present bridge, or to erect a temporary structure near it? The question is this:—are we to get the iron bridge that has been promised so long, or are we to accept the statement that a temporary bridge will be put up to carry us through, until the iron bridge is completed. I have heard a great number say they would rather wait until this bridge tumbles down, than do without an iron bridge.
156. Do not the people fear that if a temporary bridge is put up the erection of the big one will be blocked? No doubt there is a great deal in that argument, and they believe it will be the case.
157. If the expensive bridge is put up where do you think it should start from on the Newcastle side? From Union-street.
158. I mean how near to Newcastle should it start—close to Blanc-street near the site of the present bridge or north of the present bridge? It should go to the west side.
159. But if we construct an expensive bridge, where would you commence the end of the bridge nearest to Newcastle? It would have to be started sufficiently near to allow of a proper gradient from the street.
160. Over the railway? Yes. When this reclamation takes place it is contemplated to shift this line to allow of another frontage of shops to come in on the other side of Blanc-street, which will give us a better chance of having an easy gradient over the railway shunting ground. This will allow the swing to take place, as it were, on the level part. We have plenty of room on the Carrington side.
161. But this idea of building the bridge right up to Blanc-street has only been started since the Commissioners decided that there should be a high level bridge? I could not say. I was not aware of what the intention was in regard to this iron bridge. The correspondence has referred to an iron bridge—a swing bridge.
162. But seeing that there is such a large traffic between Newcastle and Bullock Island, do you not, as a business man at Carrington, think some temporary measure should be taken in hand to give safe communication across the structure to Carrington? Unless traffic is to be blocked. One or other will have to take place—I should say repair the present bridge.

J. Morrison-
Esq.

7 Mar., 1890.

163. Do you not think that building the bridge before the exact locality of the stream where the swing is to be, is fixed, would be putting the cart before the horse? I think not. The Government should have their plans of what the bridge is to be, and both works should be carried on at the same time.
164. The reclamation of the inside of the dyke is a large work? Yes.
165. And it will take many years? Well, at the present rate of doing work it will.
166. Has any money being voted to it? I am not aware.
167. At any rate, nothing in a large way is being carried on at the present time? No, the excavator which you saw to-day has only just commenced operations.
168. Do you think a substantial bridge, 22 feet wide, capable of carrying the heavy traffic which would go between Newcastle and Bullock Island, would answer for the next three or four years? There is the Wickham interest to be considered. There are many people on the Wickham side, and it will be to their detriment unless a swing bridge is erected.
169. For what purposes? To get their lighters in.
170. But the lighters go under the present bridges, don't they? Yes, with great difficulty.
171. But if a bridge were built with a sufficient camel-back to enable the lighters to go in, there would be no inconvenience? I would rather allow the Wickham representatives to answer the question.
172. But, as far as you are concerned, if a bridge were erected 22 feet wide, capable of carrying any load which might be required to be taken over, that would be sufficient for two or three years, pending the construction of the larger structure? It will do, providing we get that structure. That is the main thing, and that is what we wish to enforce on the Government. There is a great necessity for this bridge, and the worst feature is that its construction has been delayed so long that it has become almost painful to talk about it. We think we are entitled to the bridge, owing to the many professions which have been made to us. We have had our hopes raised and raised, until, at last, hope deferred has made the heart sick. We have just grounds for complaint.
173. At any rate you must have means of communication of some kind? Decidedly.
174. *Chairman.*] Your present bridge is on the level, crossing the railway? Yes.
175. That is often an inconvenience to that traffic? When the railway gates are closed it is.
176. And also an inconvenience to the railway? I daresay.
177. And if this reclamation is made, and a great number of parallel lines are laid down for shunting purposes, a level road will be more inconvenient than at present.
178. As a Carrington man, and looking at the inconvenience of the level crossing, and setting against it the inconvenience of a gradient up and down, which is it most to the interest of Carrington to have, a high-level bridge or a low one? A high-level bridge.
179. You clearly think that is so? Yes.
180. It certainly will be to the interest of the railways? Yes.
181. It would be very inconvenient to have all that shunting done on a level crossing? Yes; if it were a level crossing the traffic would have to wait until the shunting was finished.
182. Then on public and private grounds you think a high-level bridge is the best of the two? Yes.
183. Then if the work is carried out, you will, after all, be better off with a high-level bridge than a low-level bridge made four years ago? Yes.
184. So that this delay, which has caused so much vexation of spirit, may after all turn out to your advantage? According to the present outlook, it may.
185. If a low level bridge had been made at a cost of £33,000, even you would hardly have advocated pulling it down, to put up another at a cost of £50,000. No.
186. You would have been inconvenienced with a low-level bridge? I suppose so.
187. And you are going to be better off, after all, with a high-level bridge? Yes.
188. So that patience will have added a perfect work, after all? It is to be hoped so.
189. As Mayor of Carrington, you are largely interested in the coal trade, and you think the present wharfage is sometimes deficient? Yes.
190. You know that money has been voted to deal with the eastern side of the inner basin? I am not aware that the money has been voted.
191. The proposal has been settled? Yes.
192. When carried out, the southern end of this dyke and the eastern side of the Newcastle basin, will give accommodation to 10 more cranes? About that.
193. That will nearly double the present accommodation? Not quite; I think they have 12 or 15 cranes.
194. When the whole of the reclamation is carried out, and the wharf is made at the northern end, and the two long jetties proposed by Mr Hickson are put up, there will be nearly three times the present accommodation? That will all depend on the number of cranes erected.
195. But putting the cranes at the same distance from each other as they are now? Yes.
196. How many years do you think it will be before three times the present accommodation will be too little for Newcastle trade? It is hard to say.
197. Will you live to see it, do you think? I could not say, but I hope so.
198. At any rate it will be some time hence? Yes.
199. Then the Government can, having this swing bridge, make wharves on the western side of Bullock Island, and that will give additional room, if wanted, for coal ships? Yes.
200. But until the Government wants that bit of wharfage on the western side of Bullock Island, it has no special need for this swing bridge? I do not suppose the Government has any special need for it.
201. There is already a large frontage to deep water on the eastern side of this bridge? Yes.
202. So that for Government purposes alone, the swing bridge will not be wanted until they want to utilize the frontage beyond the bridge? The Government may not want it, but the public has to be considered.
203. So far as you are concerned, there is a possibility of three times the present accommodation being provided in your municipality alone? About that.
204. And it would take some little time before Newcastle uses it all up? On the Newcastle side they have diverted a good deal of their export of coal, on account of the coal shoots or staiths. Then there were steam cranes down towards the pilot sheds which have been taken away, and they will have to put others in their place.

- J. Morison, Esq.
7 Mar., 1890.
205. But the whole of the coal trade is now concentrated on the dyke? Yes.
206. And the accommodation there will be trebled within the Carrington municipality when the excavation is completed as far as the bridge? I do not say it will be quite trebled.
207. But pretty nearly? Yes.
208. So that there will be an immense additional accommodation given to coal ships coming to Newcastle? Yes.
209. So far as your municipality is concerned there are no private frontages to the water? There are a few.
210. Whereabouts? On the eastern side—on both sides.
211. They were all killed by the Government proposed new wharfage? They have them, anyhow.
212. But in the previous case, when the Government made the dyke, they disregarded all private frontages? There are residents who will require to be recouped before the Government claim it now.
213. But the water frontage will be a Government frontage when the work is completed? Yes.
214. So that the Government money spent in making these frontages will make public and not private frontages? Yes.
215. There will be no private frontages improved by the expenditure by private money. The public will get the benefit of its own expenditure? Yes, and it will improve the property in close proximity.
216. But it will not improve any private wharf frontages? No.
217. The Government will have all the improved wharf frontage which its own expenditure creates? Yes.
218. Of course it will give greater additional value to the whole of the land in Bullock Island? Yes.
219. What additional value do you think the expenditure of this quarter of a million will give. Do you think it will add 25 per cent. to the land? I think so.
220. Do you think the value of this bridge alone would add 25 per cent. to the value of the land? Not far short.
221. You, as Mayor, look to have far better rates when the bridge is completed than you get now? Yes.
222. You expect a high valuation? Decidedly.
223. And the Government expenditure will make your revenue greater than it is now? Yes.
224. And of course it will make the private incomes of land owners greater too? Yes.
225. Presuming the bridge costs £50,000, do you think it will add £50,000 to the value of private property in Bullock Island? I think it would, in the course of time.
226. You think your assessment would go up £50,000? I think so. Of course, it will take time to do it.
227. But you quite expect it? Well, it will be the most valuable municipality in the district, owing to its close proximity to the shipping interests.
228. You have said that there is a great demand for land, and that industries are going to develop upon the island. What is the special advantage for industries on Bullock Island over those on the mainland? Their close proximity to the water frontage.
229. But although it is all public frontage, do you think that would still give an advantage over private frontages? It will not be all public right round the island, but only where wharfage is included.
230. But the Government is not likely to sell any of its water frontage to private people? There are some properties sold, I think, on the Throsby Creek side.
231. With frontage? With frontage, I think.
232. The northern part of the island is public property, is it not? Portion of it is. There is a reserve.
233. If this bridge is made, and the reserve is raised by silt, will it not make a valuable property for sale? Yes.
234. It would be a good speculation for a private person to make the bridge if he could be recouped by the grant of the land on the reserve? It would.
235. The reserve alone would more than pay for the bridge? It would.
236. And pay for the reclamation too? Yes.
237. So that the Government really has in its own hands the power of recouping itself for the expenditure on the bridge? Yes.
238. If it goes to the double expenditure of the bridge and reclamation it can pay the whole? I believe it would.
239. You talk about a tramway. Do you want to connect the tramway from Bullock Island with the existing tramway to the mining township? Yes; there is a tramway at present to Wallsend, and we propose joining at Lambton.
240. Which bridge do you propose to go over? The iron bridge, to connect with the city tramway.
241. But your tramway there would simply go to Newcastle station and go out again? Yes.
242. Practically, then, you only want a tram connection with Newcastle? Yes.
243. But if you want the bridge and new road, do you want a tram for such a distance as that? It would take in Lambton, Waratah, and Calcine Flat.
244. But your connection is with Newcastle; you will have to go to Newcastle? Yes.
245. You have already two other bridges connecting the island with Newcastle? Yes.
246. But the principal bridge is the one which connects you with Newcastle direct? Yes.
247. There is more traffic over that than the other two put together? Yes, at the present time.
248. But from your works you could cross the Wickham bridge and go to Newcastle, even if the other fell down? We have had to do that. The other bridge has become rather unsafe.
249. All your bridges are shaky then? They are. In fact we are badly bridged all the way. They have all been of a temporary character.
250. You are getting tired of temporary bridges? Yes.
251. Is the more northern one a shaky bridge? It is a light temporary bridge. There could be a good deal of traffic across there to the smelting works, and out to Waratah. There is a soap works out there.
252. Do you know what the Wickham and William-street bridges cost? No. I do not think they cost more than £1,000.
253. Causeway and all? With a causeway it would cost more. It is only narrow and short.

254. *Mr. Trickett.*] The northern end of the island, which Dr. Garran has asked you about, and which belongs to the Government, is marked on the plan as "Mangrove Sand, covered at spring tide"? Portions of it are.

J. Morison,
Esq.
7 Mar., 1890.

255. What is it worth an acre at the present time? Taking a prospective view, I think it would be sold for £1,000 an acre.

256. Could you give an idea as to what it would cost to make it all level country above spring tides? No, I could not say.

257. I suppose it would be very expensive? Well, if they had the excavator working in the creek, it should soon fill up the part desired to be reclaimed, and make it of benefit, so that shipping might go down at the northern end. If it were made up above the level of the water, its value would be increased by one-half. It would be worth about £1,500 or £2,000 an acre.

258. Do you know how many acres there are? No.

259. *Mr. O'Sullivan.*] You have stated that it would take seven years to complete the work. Do you refer to the bridge alone, or the reclamation and the bridge combined? I alluded to the bridge in connection with the other work.

260. Do you, as an iron-master, tell us that it will take seven years to construct the bridge? To make it, and sink the cylinders, and make it fit for traffic. I am only in a measure speaking at random, as I have not seen the plans or the quantities.

261. But as an iron-master, you speak with some authority when you say it would take seven years to construct that bridge? I am only basing my calculation on the manner in which they generally carry out Government work.

262. Are the people at Bullock Island to rely for seven years longer upon this defective bridge? Well, they should not.

263. But how do you propose to remedy it, if you prefer the iron bridge to the wooden one, and the iron bridge will take seven years to put up? The present bridge will require to be repaired, so as to enable a limited traffic to pass over.

264. But the Department say it cannot be repaired—what then? If it cannot be repaired I suppose they will have to put up a bridge to carry the traffic until the iron one is made.

265. You have come to the opinion, then, that a temporary bridge will have to be erected whilst the iron one is being constructed? It is quite evident that we require a bridge to get across, and if it is possible to repair the present bridge it would, as a matter of economy, be wiser to do that than to erect another bridge of a temporary character.

266. We have it in evidence that the present bridge cannot be repaired, and that it is dangerous. If you wait for the iron bridge you would wait for seven years, and be in danger all the time by crossing the present bridge? It is a matter of inspection, I suppose, as to whether the bridge can be sufficiently repaired or not. I do not think the bridge has been inspected with the object of showing whether it is worth repairing, or whether another bridge should be erected.

267. Has any wool ever been shipped from Bullock Island? I do not think so.

268. Are there indications showing that it is likely to be a place for wool shipping? Not unless the Government allow it.

269. *Mr. Hurley.*] Do you not think you might modify the seven years you have spoken of. You are aware of the magnitude of the bridge over the Hawkesbury. Have you any idea of the time that enormous bridge took to construct? No; I do not know how long the bridge took to construct.

270. Do you not think it took less time than the time you put down for the construction of this small bridge? As I said before, I referred merely to the slow mode in which Government work is carried on in Newcastle.

271. Here is a plan [*producing it*]. That will give you an idea of the difference between a low-level and a high-level bridge. Do you think that would suit the requirements as foreshadowed by the Chairman. You will see the level of the rails at the present time. That would give you a certain height above the railway crossing. I should like to know whether you would be in a position to put in a tender for the construction of a bridge manufactured from iron. You say there are large mineral deposits near Dungog? Yes.

272. Would you be in a position to take a contract for the construction of that bridge, manufactured out of the raw material of that district? We have not the iron works. We want the iron manufactured. It is not at present manufactured in the colony.

273. Would you be in a position to put in a tender for the construction of a bridge such as is foreshadowed? This is merely a sketch plan. There are no particulars.

274. Do you not think a high class iron bridge could be constructed in less than two years? When I said seven or eight years I was alluding to the slow method of doing work—not to a contractor undertaking the work in a certain time, but to the whole scheme.

275. But if tenders were invited, do you not think a work of the description foreshadowed on the plan, could be carried out in two years? Do you mean the excavation as well?

276. I mean an actual completion of the bridge, so that it may be ready for traffic. Supposing you had to send to England for the parts, could you not put the bridge up in less than two years? I doubt it. You see that an excavation has to be made. What I was referring to was the completion of the bridge, with the reclamation going on at the same time.

277. You admit the necessity of a temporary structure in order to avoid the dangerous character of the present bridge? A temporary structure must be built, or this bridge must be, as a matter of economy, sufficiently repaired.

278. Therefore a repairing of the present bridge, or the construction of a temporary bridge, is an actual necessity? It is, if we are to have the traffic.

Mr.

Mr. Morison subsequently amended his evidence by forwarding a letter to the Chairman, as follows:—

To the Hon. A. GARRAN, M.L.C.

Carrington, March 7, 1890.

Dear Sir,—My attention has been drawn to a portion of my evidence given at the Newcastle Council Chamber before the Sectional Committee this afternoon, in answer to Mr. J. Hurley's question,—“How long will it take to make an iron bridge to go over to connect Newcastle with Carrington?” My answer should have been, viz., “About two and a half years.” I must admit I was confused at the time, and understood it to mean the reclamation and building and erection.*

James Myers, Esq., Mayor of Wickham, sworn, and examined:—

J. Myers,
Esq.
7 Mar., 1890

279. *Chairman.*] What is your official position? Mayor of Wickham.
280. How long have you been a resident of Wickham? About eight years.
281. What is the special interest of Wickham in the work under the consideration of the Committee? The special interest of Wickham is to get an opening, and a navigable opening, into the waters of Throsby Creek.
282. You are more interested in the deepening of that creek, and in better access to that water, than in a bridge to Carrington? Yes.
283. So that the two municipalities have two separate interests in this matter? Yes.
284. According to the map before me the frontage on the western side of Throsby's Creek, from about the soap-works to the bridge, is about 1,000 feet? Yes.
285. And between Hannell-street and the water it is subdivided into allotments? Yes.
286. What sort of water frontage have they at the present time? It is very shallow. You can scarcely get a small boat up to it.
287. Not even a lighter? No; at low water they are simply muddy flats.
288. It is not a frontage at all? No.
289. And the private right goes only to the high-water mark? That is all. I believe there are a few who have bought a water frontage. I believe the late Mr. Henderson, whose business is now worked by Mr. J. F. Ellis, bought the water frontage, and some other residents as well.
290. The bridge, as it stands at present, is practically no hindrance to these people, because if there were no bridge they could not get a lighter up at low water? No.
291. It is only the high-water frontage? Yes.
292. And then it is only a few feet? About 4 feet.
293. At high water it is 4 feet, and at low water it is a mud frontage? Yes.
294. So that the present bridge is no hindrance to navigation? Not at present.
295. And what the owners of this 1,000 feet want is an improved frontage and a good access. As Mayor, you know what these properties are rated at. What are these properties supposed to be worth per acre or per foot, between Hannell-street and the water? The frontages on from Hannell-street are worth from £15 to £16 a foot.
296. And if this deepening is carried out, and the swing-bridge is erected, you, as Mayor, will expect that they will be rated more highly? Yes.
297. What do you think it will add to their value? It will nearly double them. Where there is access to the wharf it would treble them. The amount of traffic which will be brought on the wharves will be something enormous.
298. Do you not think it will more than treble the value? I believe it would.
299. Won't it make a first-class water-frontage of what is practically no water-frontage at all? Yes.
300. What is the value of that 1,000 feet of land between Hammil-street and the bridge? I could not tell you.
301. I am talking of the soap-works to the bridge? That is from Henderson's place to the Wickham bridge. That is 1,000 feet at about £15 a foot.
302. And that would be quadrupled in value? I think so, quite.
303. The Government expenditure would add a value of £45,000 to private property? Yes.
304. Would that £45,000 pay the cost of the deepening and the swing-bridge? I do not think it would. We should require a depth of 20 feet to get ships up.
305. Have you formed any estimate as to what the cost of the deepening of Throsby Creek would be? No. I was under the impression that that reclamation was included in the general reclamation scheme. I was altogether at sea when Mr. Hickson told us it was not so.
306. We have been told by Mr. Hickson that the reclamation scheme only comes up to the bridge? Yes.
307. You heard the Mayor of Carrington say that for public wharfage purposes, the Government would hardly want this swing-bridge, until all the new wharf they propose to make is occupied? Yes.
308. And after that they would want to get into Throsby Creek? Yes.
309. You agree with that? Yes; for public purposes the swing-bridge is not wanted for coal purposes at present, but the amount of land the Government hold on the western side of the bridge up to Wickham bridge is very valuable.
310. If they want to utilise the western side of the island, they must have a swing-bridge and improve their frontage? Yes.
311. Meanwhile, you want the swing-bridge and the deepening to improve these private frontages? Yes.
312. Do you think the owners of the private frontages would pay the cost of deepening? I do not think they would.
313. Do you think it would be right for the Government to go in for this expenditure for the sake of adding £45,000 to the value of the property of private people? If it is not done in this district, it is done in others. I know the Government have spent a lot of money for private enterprises.
314. But that is more of an incidental character. Public works, incidentally, give a value to private property? I believe there are a great many private wharves in Sydney which have had much money laid out upon them for the benefit of private individuals, and I think the Government would be justified in dredging and reclaiming that portion of the land.
315. So far as I know, all private dredging done in Sydney for private purposes is paid for at a stipulated rates? I was not aware of that.

316.

* NOTE (on revision):—I desire to make this addition to my evidence. I wish it distinctly understood that in all the questions bearing on the time it would take to complete the bridge I was mentally including the whole scheme complete—reclamation, dredging, building bridge and approaches—hence my answer, seven or eight years. During my cross-examination I lost sight of the point, the time to complete the bridge alone. My mind was occupied with the desire to have the iron bridge built, and not the temporary wooden structure—the object assigned me at the public meeting. Not having any plans or specifications to guide me of the proposed iron bridge, I could not give any correct estimate of the time to complete the same. But as I now understand the proposed iron bridge foreshadowed by the Chairman of the Sectional Committee, having reference to high-level bridge, swing and approaches, I should say, approximately, the time ought to be from two to two and a half years.

J. Myers,
Esq.

7 Mar., 1890.

316. You do not know the amount which will be required to carry out this work? No.
317. But you have an idea of the value of the land for private property? Yes.
318. It is an unknown expenditure, but a known increase in value? Yes.
319. As Mayor of Wickham, do you think it would be a good speculation for the Government to buy all these private properties, and come in for the benefit of its own expenditure? I believe it would pay them, and they would benefit by it.
320. To buy out these people at £15 a foot? I would not say it would do that.
321. You think the price would jump up if the Government wanted to buy it? Yes.
322. You know the Government is able to take land at a valuation? Yes.
323. I suppose the value would not be much above what you placed on the assessment as a reasonable approximation? No.
324. It would not be enormously above it? No.
325. Say it was £20,000;—do you think it would be a good speculation for the Government to buy all that frontage below Wickham bridge at £20,000, and then deepen Throsby Creek? I believe it would. There are plenty of persons there now who hold a water frontage, and who make back yards of it.
326. Do you think the people of Wickham who are not interested personally in these water frontages would be willing to see the Government do a thing of that kind? Yes.
327. It would improve the township generally to have a public wharf? Yes.
328. And you think it would pay? I believe it would.
329. And you think there would be a large business done? Yes; there is a large number of timber yards, &c., along that frontage.
330. You mean trade is waiting for a better frontage? Yes.
331. What sort of trade? Principally timber.
332. Not manufactures? No.*
333. Is that the best natural site near Newcastle for it? Yes. Hudson Brothers have a piece of land, and also Bibby and Cook, and they are erecting a large sawmill at present.
334. If it were made Government land, the Government could make a little railway between Hammil-street and the water frontage, and accommodate the whole of the wharf? Yes.
335. It would be more utilised as a Government frontage than a private one? Yes.
336. Whilst it is a private frontage there is no likelihood of a private railway? No.
337. So that the railway traffic, as well as the utility of the site, would be greatly increased by converting that into public property? Yes.
338. Is there no other part near Newcastle equally convenient for timber? I don't think so.
339. Is Stockton not so convenient? No.
340. Nor any part of Bullock Island? Yes, but it would have to go across the bridge. Most of the timber trade is out that way.
341. Do you think any advantage would be gained by the Government deepening the northern end of Throsby Creek? Not at present. There is no demand for it.†
342. The trade is all down near Newcastle? Yes.
343. You think this deepening is wanted in the interest of local trade? Yes.
344. Though not in the interest of coal shipping? No; You must have other accommodation besides the coal wharfage.
345. This Wickham bridge is not a valuable structure? If the Government were to buy property right up to the Wickham bridge across Throsby Creek, and deepen the whole up to the railway bridge, and give you a transit across the railway, would it be quite as convenient? Yes.
346. And it would be in the public interest? Yes; in fact there was a hard fight when that bridge was built, as to whether it should be put alongside the railway, or where it is now.
347. If the Government repossessed themselves of the whole of the private frontage between the Soap Works and the railway bridge, and ran a railway along, it would be an immense public improvement? It would.
348. And would pay for itself? I believe it would.
349. The Committee is to understand that the Wickham interest in this matter does not concern the bridge at all? No; we want a swing-bridge and deep water.
350. *Mr. O'Sullivan.*] What is your business? A builder and contractor.
351. How long do you think it would take to construct the iron bridge as proposed by the Department? I have never had anything to do with iron, but making a comparison between that bridge and the Hawkesbury, which was constructed in three years, I think it ought to be built in eighteen months. It is not a quarter or a tenth as big as the Hawkesbury bridge.
352. Do you mean to say that all the ironwork could be prepared, and the bridge erected within eighteen months? From that time to two years.
353. How long would the reclamation work take? Another three years. I presume they would be slow to start the reclamation work, and would not commence until the bridge was nearly finished.
354. How deep do you imagine the Throsby Creek to be? Twenty to twenty-five feet.
355. At that depth you could bring large vessels up to Wickham wharves? Yes. We have had a wharf at Wickham for seven years, and there has been no boat alongside except the waterman's boat. They have not been able to do it.
356. Is it a Government wharf? Yes. It was built in some one's interest, but I have failed to find out whose. It cost about £700.

357.

* NOTES (on revision):—No 322. There are at present several manufactories on the shores of Throsby Creek, as well as other industries; but, in consequence of the shallow state of Throsby Creek, land carriage has to be substituted for water.

† No. 341. The north and north-western portion of Throsby Creek carries the drainage of all the area on the east side of the hills and ranges about Adamstown, Lambton, and Waratah, also the Hamilton, Newtown, Islington, Tigue's Hill, and Wickham drainage; and during the last visit of Dr. Ashburton Thompson, Health Officer, in our last dry season, that gentleman found the creek in the vicinity of Tigue's Hill in a filthy and dangerous condition; so much so, that there was an outbreak of sickness in that locality of a serious nature. All this the Health Officer attributed to the fact that the creek being remarkably circuitous at Islington and Tigue's Hill, and the currents being impeded by shoals, mud banks, snags, and other obstructions, caused quantities of filth and refuse from tanneries, slaughterhouses, &c., together with town matter and refuse, to accumulate about the windings and mud flats of the creek, which, when left exposed to the sun's rays, emitted a foul and dangerous odour, so much so, that persons travelling past were compelled to fly as it were from a pestilence. The unusual wet season has, however, removed a deal of filth. At the same time, it only remains for a return of dry weather to set in, when the public health will assuredly be assailed.

- J. Myers,
Esq.
7 Mar., 1890.
357. *Mr. Trickett.*] Which do you think would be desirable, a high-level bridge over the railway, or a level bridge starting near the present one? I never knew what sort of a bridge it was to be until this morning. I was surprised to think it should be a low-level bridge at any time. Any one who stands at the corner where the Bullock Island bridge crosses the line will say that it ought to be a high-level bridge.
358. I was always under the impression it was to be a high-level bridge. Was that the general impression? I believe it was.
359. Would the construction of this bridge be any advantage to your municipality? As a bridge, no. It is simply to get an opening.
360. All your traffic comes now by direct road to Newcastle? Yes, independent of the water.
361. You know the Carrington Municipality, and the Island as well? Yes.
362. Do you not think that if this expensive structure is to be erected it will be absolutely necessary in the meantime to erect a good temporary bridge? There should certainly be some way of getting across. I fail to see any obstruction to the commencing of the erection of a big bridge. They could go down with the cylinders, and reclaim after the cylinders are in.
363. But even if that were done it would take three years to erect the bridge, and in the meantime something is necessary to keep up communication? Yes.
364. And there must be a repairing of the present bridge or the construction of a temporary one? Something must be done.

Thomas Bibby, Esq., timber merchant, sworn, and examined:—

- T. Bibby,
Esq.
7 Mar., 1890.
365. *Mr. Trickett.*] What are you? A timber merchant.
366. Where do you reside? Wickham.
367. How long have you resided there? Five years.
368. You are well acquainted with the district and its requirements? I am.
369. You know all about the question of connecting Carrington with Newcastle by bridge? I do.
370. Will you give us your views on the subject as it affects Wickham? The population of Wickham, of course, are desirous of having a large bridge built with an opening, so that craft would be able to get through to take merchandise, timber, &c., up to Wickham. At present we have no wharfage accommodation at all. If I get a cargo of timber from New Zealand, or any where else, I have to go to Captain Patten's office to sign a document to the effect that I will remove it as it comes out of the ship. There is not room at present for more than two or three small timber crafts. It is very necessary that we should have better accommodation. We have been told that certain plans have been approved of by the Government, and that we were to have a wharf extending as far as Honeysuckle Point.
371. Is that beyond Wickham? No, it is on this side of Wickham, on a line with Wickham. We were told that we were to get this bridge with an opening, and that a large portion of land was to be reclaimed along by the railway line, and that wharves would be built to which we could take our small craft, and land our timber, so that we would not be hunted about from pillar to post as we have been for the last five years.
372. To what point was this reclamation promised? I do not know that it was promised at all, I was only told so. We were told by some of our members that it was to go past the railway station. We were told it was intended to dredge as far as the soap works, and that the wharves were to be extended as far as Redmond's cordial works.
373. Would that be of great advantage to you? Yes, to all importers. We should have some accommodation then, whereas at present we have none.
374. Has everything to be carted up now? Yes, within the last year I have imported, in timber alone, 2,673,271 feet.
375. Of sawn timber? Yes, and 1,145 doors.
376. Is your place of business close to the water? Yes.
377. With a water frontage? It is close on the water. I am building a large mill at Wickham, and if this bridge is erected, and there is anything like a channel, I could come up close to the mill. I could import logs. I intend to import logs, and the mill is being built with the idea of cutting them up there.
378. Your idea in having the swing in the bridge is that sea-going vessels should come up to the wharves? I do not see why they should not.
379. Would you have any cartage from the Honeysuckle Station, or would that be close to your place of business? It would be very close. If we went to the Wickham wharves my cartage would be very little.
380. At present the only timber which can be taken up the creek is log timber? Yes, I have taken as much as 200,000 feet, in rafts, right up to Wickham.
381. Would this wharfage construction improve the value of property? There is no doubt about it.
382. Have you given any thought as to the necessity or character of the bridge under consideration? Yes.
383. Independent of the swing part of the question? Yes.
384. Will you tell us what you think should be done? I think the bridge is very desirable.
385. What character of bridge? A permanent bridge.
386. Starting from Blane-street? Yes; I should be in favour of a high-level bridge over the railway, starting from Blane-street. It is very necessary that the bridge should be a high-level one, seeing that the railway traffic is so very great.
387. You know that certain reclamation works are contemplated in the creek? Yes.
388. Do you think those works should be carried out before the bridge is commenced? I think they should be commenced together.
389. You think they could be commenced together? I do think they could; I know they could, and I think they should.
390. There would be no difficulty in erecting the swing-bridge you speak of, so that the two works should be carried on together? No.
391. Have you thought how long the works would take to carry out? I think a bridge might be made in two years. I cannot say much about the reclamation.
392. Have you had any experience in bridge-building? Not personally, but I have seen them built. I have taken a great deal of notice of the Hawkesbury bridge, for instance.
393. What do you think of the present bridge over the creek between Newcastle and Carrington? I think it is unsafe.
- 394.

394. Do you think it could be repaired? I could not say. I have not examined it; but I have felt it shake and tremble whilst going over it. If I go over in a vehicle I like to go slow.
395. Even if a costly structure is erected, it will be necessary to repair the present bridge or build a temporary one? I should think something should be done to repair the bridge, and to put it in a safe condition during the time the other one is being erected.
396. *Mr. O'Sullivan.*] Where is the timber you import landed? On the Market Wharf.
397. That is a Government structure? Yes.
398. This wharf was constructed by the Government for the general commerce of Newcastle, other than coal? Yes.
399. Do you think it would be right to expect the Government to make a channel to Wickham to land cargoes which should be landed at the public wharves? I presume the Government would make their own wharves if they dredged the channel. At the Market Wharf we have no accommodation whatever.
400. You say you float your timber up? If it is large timber we have no other alternative.
401. Therefore, if you float it up in rafts, the cost of carriage cannot be very great? There is a large quantity of timber which will not float, and we must cart it.
402. How far is it from Wickham to the Market Wharf? About a mile and three-quarters or 2 miles.
403. But you are no worse off if you have only to go 2 miles with timber than a large number of builders and contractors in Sydney or Newtown and other suburbs? I think I am a great deal worse off. Most people in Sydney have every facility for landing timber, but here we have none.
404. Have you not a wharf at Wickham? No, I have not. There is one there.
405. Do you know how it was obtained? No, I do not.
406. Then you think it is highly desirable, in the interests of the people of Wickham, that this channel should be constructed and a wharf made there? I do. In doing this you will reclaim a large amount of land on both sides of the channel, and in my opinion it will more than compensate the Government for the work.
407. You think it would be a reproductive expenditure? I am quite sure of it.
408. You have said you think it would take two years to construct this bridge? If the material is to come from home I dare say it will, but if the material is in the colony I do not think it will take anything like that time.
409. In saying that you have in view the idea that the work will be let by contract, and not done on the Government stroke principle? I hope not. If it is done on the Government stroke principle, I am afraid it will take a little longer.
410. Would you advise that the old bridge should be patched up, or a temporary bridge constructed, whilst the iron bridge is being erected? I do not think that is a fair question to put to me, because I am not an engineer.
411. I only ask you as a taxpayer who will have to bear a portion of the cost? If the engineers say that it will be more saving to repair this bridge, by all means have it repaired. If you are going to give us a temporary bridge let it be as temporary as possible. I should not propose expending any great sum of money on a temporary bridge, if we are going to have the bridge which has been proposed.

Henry Joseph Brown, Esq., solicitor, sworn, and examined:—

412. *Mr. Trickett.*] You are a solicitor? Yes.
413. And an old resident of this district? Yes.
414. Do you hold any civic office at the present time? No; I have never done so.
415. You know the subject of our inquiry? Yes; as to the advisability of constructing a bridge between Newcastle and Bullock Island.
416. Do you think it would be desirable, at the present time, to erect a low-level bridge or an overhead one? An overhead bridge would certainly be desirable, if it could be constructed with convenient gradients of approach.
417. That would be a bridge starting from Blane-street? Yes; I think an overhead bridge would be highly desirable. The inconvenience to traffic caused by the shunting of trains is very great. I know of one company which has its office some little distance away, and the shunting of the trains is a perfect nuisance to them. It is also a source of danger.
418. There appears, recently, to have been some indignation in Newcastle at the prospect of a temporary bridge being erected to connect Newcastle with Bullock Island? Can you give us the particulars of that agitation. Were you at the public meeting? No, I was otherwise engaged.
419. As a public man, knowing something of the opinions of the people;—what is the real reason of the agitation? The idea was that if a temporary structure were put up the construction of a permanent one would be indefinitely postponed.
420. Are you aware whether this costly bridge over the crossing has been promised from time to time by the Government? I cannot say I know much about it, I have heard of it.
421. Do you know anything about the reclamation works there? I know there are works of great importance being carried on with the view partly of reclamation and partly of excavation.
422. Do you think they are desirable works? I think so.
423. With what object? I may say they are desirable from a sanitary point of view. These low mud flats, even with a few inhabitants upon them, must be very hurtful, but when there is a large number of people about them they will become the receptacle of filth of all kinds, and they are likely to breed pestilence.
424. What other advantage will the reclamation give? It will give further accommodation for shipping. The trade is increasing very rapidly, and would increase more rapidly if the present regulations for shipping coal were altered. It will also give a large area of land of great value.
425. Do you think the proposed basin is a suitable place for such costly works? I think so. I should, myself, have thought it better to have carried them to the west of the Bullock Island Bridge, along the Newcastle side. That is apparently part of the present scheme, or it might ultimately be worked in with it.
426. That would carry the reclamation and the deepening of the creek more to the west? Yes.
427. Do the people of Wickham suffer any inconvenience by not having wharfage accommodation nearer to them? I have no doubt about it, and I think as a matter of justice to the water-frontage owners, something should be done. The water-frontage land was originally sold by the Crown by the acre. I know

T. Bibby,
Esq.
7 Mar., 1890.

H. J. Brown,
Esq.
7 Mar., 1890.

H. J. Brown, Esq. know this professionally, but as usual in those days, and without knowledge on the part of the purchaser, the usual reserve of 100 feet from high-water was included improperly in the grant. The result has been that recently a large number of property holders, who had paid for their land, have had to pay the Government again for it, and that on the presumption that they had a water-frontage.

7 Mar., 1890.

428. *Chairman.*] What proportion of these have been purchased? A good many that I know of. Some within the last year or two.

429. Out of 1,000 feet how many feet do you think have been purchased? I am not prepared to say. I know that one client of mine paid £2,000.

430. For the purpose of getting back what he had already paid for? He bought the whole of the land, but the Government who prepared the deed erroneously inserted a condition.

431. Do you mean that different terms were inserted in the grant to those named at the auction mart? Yes.

432. *Mr. Trickett.*] The greater part of the coaling takes place at Carrington? Yes, practically the whole of it, with the exception of that of some special companies, such as the A. Company, and the Waratah Company.

433. Is the wharfage accommodation at the foot of the town ample for loading purposes? There is not enough of it for present requirements.

434. What business is carried on there, seeing that the coal is loaded further up the river? There is a large timber traffic. There are direct shipments from England. There is also a good deal of wool laden there, and cattle are frequently exported, besides passenger and other traffic exists to a very considerable extent.

435. And that kind of traffic usurps, so to speak, the whole of the old wharfage? Yes, and there is considerable delay in many instances for want of more accommodation.

436. And you think this proposed reclamation would be of great advantage to the port generally? It will be of great advantage to the port generally, and to the Government as property-owners.

437. And it would be availed of directly it was constructed? No doubt.

438. If the accommodation for shiploading were doubled at the present time, do you think a sufficient number of ships would come to take up the tonnage? I think so. At all events it would be the case in a very short time.

439. Is the population of Newcastle increasing year by year? Very much. When I first came here, thirty years ago, the population of the whole district could not have been more than 6,000 or 7,000, and now it is between 60,000 and 70,000.

440. Have you also seen the rapid growth of Carrington? Yes; twenty years ago half-acre allotments were sold for not more than £20. Now many of them must be worth £2,000 an acre.

441. If this costly bridge is constructed, to connect Carrington with Newcastle, what will be the best thing to do in the meantime to keep up communication? Of course that would depend on whether a practical man would say it would be better to repair or strengthen the present structure. Of course it might be strengthened, even if it could not be repaired.

442. But something must be done—either the present structure must be strengthened, or a new temporary bridge erected? Yes.

443. Even if the costly structure is to be carried out? That, undoubtedly, would have to be done. At the same time I do not think there is any reason for postponing the erection of the new bridge. The bridge ought to be very strong, judging from what I have noticed of the nature of the traffic which would go over it, and a temporary bridge would not be strong enough.

444. *Chairman.*] I understood you to say that the feeling of Newcastle against a temporary bridge is lest it should not be temporary enough, but should be too durable? Practically that.

445. But is not that fear groundless, from the fact that the project at present is for a high-level bridge across the reclamation, which is to go to the Railway Department. If that reclamation is made, and comes into use as a shunting-yard, is it not certain that you must have a high-level bridge over it? I do not know exactly what is proposed to be done. The authority to make the new bridge should not be delayed till the temporary structure is worn out, otherwise at some time there would be no bridge at all.

446. It is proposed to reclaim certain ground, and to turn it into a shunting-yard, in which case a high-level bridge must go over it. Therefore the fear of the Newcastle people, that the temporary bridge would last too long, must be groundless? When this reclamation work is completed, we may have to wait a number of years before we get the vote for the new bridge.

447. Do you think that it is at all likely? Yes, I think so, from past experience. For many years we were promised a new Court-house, and tenders are about to be accepted for one which is too small for the purposes required of it.

448. With regard to the Wickham frontage, you have informed us that part of it is still a Government frontage? Yes.

449. And part of it has recently been repurchased under the Land Act? Yes.

450. Are you of opinion that it would pay the Government to buy back what it has sold between Hannel-street and the water, and make a public wharf on that side? No doubt a public wharf here and there is required; but I think it would be to the advantage of the community if certain portions of the water-frontage were in private hands.

451. But where it is close to the railway, and where it is necessary that the portion which is to be utilized requires the expenditure of a large amount of public money, do you not think, in a case like that, a resumption would be to the advantage of the public? I think so.

452. There is all the frontage to Throsby Creek north of the railway-bridge which would be available for private use, if the Government thought fit to sell it? Yes; that would be rather high up.

453. But do not you think it would be impolitic on the part of the Government to spend a large sum to deepen Throsby Creek, and so make this a wharf for seagoing ships, simply for the purpose of adding threefold to the value of private property? Undoubtedly; but under existing circumstances some deepening ought to take place, so that those who bought land with water-frontages a second time should be able to use them to some extent. But if a large expenditure is made, to fit it for seagoing vessels, I think more would be done than the purchasers would have a right to expect, and they could not complain if the land were resumed.

454. But you know the Government sold this land with the existing water-frontage as it was? Yes.

455. And that is mud at low water and 4 feet at high water? Yes. 456.

456. If the Government is going to turn that into a frontage for seagoing ships it will add enormously to the value of the property? Exactly. H. J. Brown,
Esq.

457. Then do not you think the Government should receive a *quid pro quo*? Yes.

458. Do you think the Government is entitled to spend citizens' money in adding threefold to a private person's property, when it could buy the property first, make the improvement, and come in for the benefit of its own expenditure? No; but considering that the people have had to pay twice over for their land, something in the way of giving them water-frontage should be done. At the same time, if the excavation makes the place fit for seagoing vessels, you will do more than the owners have a right to expect. When the improvements are completed, the Government should sell what is not required for public purposes, as experience shows private enterprise would utilize the rest to a greater extent than the Government would.

459. You think it would be advisable before deepening Throsby Creek to resume that frontage? It depends on the extent to which it is proposed to be deepened.

460. And if they resume that and make it fit for seagoing ships, it will be an immense addition to the value of the harbour of Newcastle? Undoubtedly. This small deepening I speak of, for the benefit of property-holders, is also necessary for sanitary purposes.

461. But the Government has it in its power to make this improvement and recoup itself of the cost? No doubt.

462. And you think it would be better to do that than throw the property into private hands? Yes, if it were considered desirable to make a deep channel.

463. *Mr. O'Sullivan.*] Do you think, if this bridge were constructed, and the reclamation works and channel carried out at an expense of £130,000, the Government would get a return for that expenditure in the shape of the lands they would have to sell at Bullock Island? They would get a return in a variety of ways. The land at present belonging to the Government would be greatly increased in value. They would get a large return for the use of the cranes or other appliances at the wharf.

464. But would the land reclaimed on the Bullock Island side be more in value than the expenditure upon it? That would depend on the amount of reclamation and the position of the land. I have no doubt the Government would be in pocket by making a large expenditure there.

465. And you think that, though it may seem a large expenditure, it may be a wise one in the end for the Government to incur? I have no doubt about it. For instance, the net revenue from eight or nine cranes only would certainly be over £20,000 a year, supposing they were constantly going. The seven steam cranes which used to be on the wharf on this side used to produce £15,000 net at the least.

466. *Chairman.*] Do you think it would be fair to Newcastle to put on tonnage dues to pay the interest on this expenditure? Certainly not, because, practically, this is money belonging to the port.

467. How? Because the difficulty in getting things done here is not a recent one. Tonnage dues were imposed thirty years ago to make improvements. A considerable sum was raised from them, and under the Act money was borrowed. The Act provided that all moneys raised by means of the dues should be paid into separate accounts: instead of that they were paid into Government accounts. The works which were produced from the tonnage dues and the money borrowed were so enormously profitable that they paid off the debt and enabled more works to be constructed. These again yielded a large revenue, and if an account were properly taken it would be found that there is a large sum to our credit.

468. But did not the tonnage dues at that time clear off the debt, principal and interest, about the time Mr. Lloyd moved for their abolition? I should think so.

469. Since then the debt has been enormously increased, and there have been no tonnage dues? Yes, but the works have been increased, and have been still more profitable, and have more than paid for themselves.

470. But do you mean to say the money received from these cranes will pay off the interest on all the public money spent here? Yes; and repay the principal as well.

471. Have you gone into the figures? I went into the matter some time ago, and came to the conclusion that there must be a large sum due to Newcastle.

472. That is only an opinion? Yes. I must also point out that when the tonnage dues were stopped other dues were put on in their place, and a considerable sum is received for pilotage and for other purposes.

473. Does the sum received for pilotage more than cover the cost of the service? Yes.

474. Does the money received from the wharf more than cover the cost of the depreciation of the wharf? I do not know, positively, what the difference is between the gross and net earnings.

475. You would not like to commit yourself? No.

476. *Mr. Hurley.*] You say you think there is a credit due to Newcastle? Yes.

477. From that I suppose you intend to convey that Newcastle has been somewhat neglected, compared with other portions of the country? I do not think there can be much doubt about that.

478. Are you aware that the Government proposes to spend £112,000 upon one work alone in Newcastle? No; what work is that.

479. In the reclamation? Yes; but that is not for the benefit of Newcastle, but for the benefit of the Government in improving land which would otherwise be valueless.

480. The improvement of the land is surely an improvement for the people of Newcastle? Yes; but it will be an improvement for the Government revenue when they sell the land.

481. Will not the erection of seven more cranes be an advantage? Undoubtedly, and it will also be an advantage for the Government in increasing the revenue.

482. How, then, can you say there has been any neglect on the part of the Government, or that there is a credit balance, as it were, due to you now? I may mention one fact which has been brought to my knowledge to-day. A vessel came in, the draught of which ought certainly not to have been too much for this port; but, as it was, she took the ground, and remained there for a few hours. If there had been a proper expenditure this would not have happened.

483. Do not you think the abolition of harbour dues was a great concession to the port? The abolition of tonnage dues was an act of justice. You are under a mistake. The harbour dues have not been done away with. At the time the harbour dues were imposed there were tonnage dues as well, and none in Sydney. The abolition of these tonnage dues put us in one respect in the same position as Sydney was. I have just had placed in my hands some information which the Committee might like to have. In 1879, the revenue of Newcastle was £57,477; and in 1889 it was £132,000. 484,

- H. J. Brown, Esq.,
7 Mar., 1890.
484. Have you any idea as to the export of coal from Newcastle? I believe nearly 2,000,000 tons.
485. And you think it is likely to increase? I think so. It would have increased long ago if we had had better regulations.
486. You think, for the want of accommodation, ships have been forced to take their cargo elsewhere? There is no doubt of that, and the accommodation which exists is not used to the best advantage, owing to the nature of the regulations.
487. Are you of opinion that the work in connection with the wharves would be more satisfactorily carried out by a Board of Trust? That would depend to a considerable extent on whom were appointed, and the extent of the endowment. If they had to impose fresh dues to carry on, the Trust would be an injury to the port.
488. *Mr. O'Sullivan.*] You have given us figures showing a large increase in the revenue in the port of Newcastle? Yes. In 1889 the sum of £103,000 was derived from haulage and shipping—that is to say, haulage from the various mines. A minimum of 10d. a ton is charged upon all coal brought from the mines.
489. *Chairman.*] That refers to the railway service mostly? Yes; but these are railway works.
490. But you are crediting Newcastle with revenue from railway works,—you are crediting the railway with nothing? This is what has been paid to the Railway Department practically for the use of the wharf, which is a railway yard; all the wharves belong to that department.
491. It was for the use of carriage as well as the wharf? Only the carriage from the pits, along private railways, principally.
492. Not all? Part of it, of course, is public.
493. *Mr. O'Sullivan.*] Can you give the figures indicating the revenue derived from the use of the cranes? The Government charges 10d. a ton for the use of the locomotive from the pit to the wharf, and dropping the coal by means of cranes into the ships.
494. Then you are unable to separate the railway figures from the crane figures? It is all in one sum, as the cranes belong to the Railway Department, and their earnings are included in the railway revenue.

James Curley, Esq., M.P., sworn, and examined:—

- J. Curley, Esq., M.P.,
7 Mar., 1890.
495. *Mr. Hurley.*] You are one of the representatives of Newcastle? I am.
496. Have you been long in the district? For something like fifteen years.
497. You are conversant with the subject matter before the Committee? Yes.
498. Can you give us an opinion in regard to the necessity for a bridge, and as to what character of bridge would be suitable for the future requirements of Newcastle? Before going into the matter I would like to refer to certain figures to show the importance of the port, and the progress which has been made. I have obtained certain statistics from official sources. The revenue collected in 1879 was £57,477 18s. 9d., and in 1889 it was £132,018 0s. 1d. The total value of exports, including coal, to foreign and intercolonial ports in 1879 was £648,427. The total value in 1889 was £1,894,321. The railway revenue for haulage and shipping in 1879 was £76,602.
499. But are you crediting Newcastle with that amount of money as being receivable through Newcastle? This is simply haulage and shipping from the coal mines, that is the item of £76,602.
500. It is purely in reference to coal? Yes. In 1889 the revenue for haulage and shipping was £103,824. The shipments in regard to foreign and intercolonial exports were, in 1879, 830,675 tons, and in 1889, 2,091,557 tons. I mention these figures simply to show the expansion of the trade, and what may be anticipated in the future.
501. What year did you quote from last? I am making a contrast between 1879 and 1889.
502. And what does it average? 2,091,557 tons for last year.
503. We have it in previous evidence that the exact figures are 1,658,386 tons of coal? If that is so there must be some mistake, because I got my figures from the Collector of Customs this morning.
504. Do you think that Captain Newton's evidence on oath would be accurately given? I can verify my statement by again referring to the customs officer.
505. What is your object in referring to the question of imports and exports, and the traffic of the railway department, as we are met to discuss the necessity of the construction of a bridge to Bullock Island. I suppose you merely quote the figures to show the importance of the place? To show the importance of the reclamation works being carried on and so forth.
506. And you believe that the works foreshadowed by the Works Department—the reclamation of certain land, and the erection of new cranes—is a necessity? I do.
507. And the construction of a bridge to connect Newcastle with Bullock Island is also a necessity? Yes.
508. You have visited the bridge which connects Newcastle with Bullock Island? I have.
509. What is your opinion of it? I consider it is both unsuitable and dangerous.
510. You have heard the evidence in reference to a high-level and a low-level bridge, and the project the Railway Commissioners have in view of reclaiming a certain area of land, in order to avoid the crossing of the line by persons proceeding from Carrington to Newcastle? Yes.
511. Can you give us your opinion in regard to that matter? A high-level bridge may have its advantages, and a low-level bridge may have its advantages as well, because if you reclaim this ground going towards Wickham, and it is made a public wharf, you may, perhaps, have heavy goods landed there which you would require to get away to Carrington over this bridge. If it were a high-level bridge we might not be able to get over it, unless you had a crane to lift the goods up.
512. *Chairman.*] Could not they go over the Wickham bridge? They could go over the other way, but if this bridge were a low-level bridge they could take the goods off the wharf at once.
513. You are speaking of an exceptional case, when a very heavy load might be required to be taken to Carrington? I am looking well into the future.
514. Could not there be heavy loading at the Carrington wharf. Why load goods on the Wickham wharf, and take them over the bridge? I have no doubt, as far as appearances go at present, that a high-level bridge will be the best.
515. Very heavy girders could be landed by the cranes at Carrington wharf more easily than they could be carried by the road over the bridge? Possibly the difficulty might be met in that way.
516. *Mr. Hurley.*] I suppose you recognize the fact that an overhead bridge would afford greater safety for the public, and that it will also give facilities to steamers travelling to Wickham, which a low-level bridge would not give? Yes.

J. Curley,
Esq., M.P.

7 Mar., 1890.

517. And that it would also be a greater convenience to the Railway Department generally, if they had no low-levels to contend with? I conceive that you must have a low-level crossing somewhere, or how can the people get to the wharf with the goods.

518. But as far as the people of Carrington are concerned, you have sufficient wharf accommodation on this side already, for the purposes of the merchandize of the city? With regard to the merchandize of the city, I suppose the people have to come here over the bridge, and go down to town with it.

519. But surely you do not anticipate a wharf alongside every man's dwelling? Certainly not.

520. Looking at the convenience it would be for the Railway Department, and the safety it would afford to the general public, do you not think an overhead bridge would be the best and most suitable? I daresay it would.

521. Have you formed any estimate as to the improved value of land through the construction of a first-class high-level bridge to connect Carrington with Newcastle? I suppose that would take in the reclamation of the land there. I think it would double the present value of land.

522. Do you think the people of Carrington have cause for complaint of the negligence of the Government in not providing suitable accommodation to enable them to reach their holdings at Carrington? I do not think it is the people of Carrington alone, but the general public around who have cause for complaint.

523. *Mr. O'Sullivan.*] I understand you prefer to have an iron bridge constructed instead of the temporary wooden bridge? You must either repair the present bridge or put up some kind of expedient in its place. I should say that the present bridge ought to be inspected for the purpose of ascertaining whether it can be repaired for a year or two or not.

524. You know that the departmental officers have condemned the bridge, so much that they had issued an order that no loads above three tons in weight shall cross? Yes.

525. That being so, it is no good relying on the old bridge much longer for traffic of that kind? No.

526. Then you think an iron bridge should be constructed? I think it should be commenced as soon as possible.

527. In the mean time would you suggest the construction of a temporary bridge? I certainly would, if the old one cannot be repaired.

528. What renders it absolutely necessary that a strong iron bridge should be constructed to Bullock Island;—what heavy freights are there beyond those coming from Morison's establishment, and which often go by the Wickham bridge? Occasionally, heavy building material goes over the bridges.

529. I suppose that will go in drays? Yes.

530. A dray will not carry much more than 2 or 3 tons. Therefore the loading would not be very weighty so far as building material is concerned? It is possible that boilers which may be landed at Bullock Island may be brought from there.

531. You mean for the mines? Yes.

532. Would they not be likely to take the Wickham bridge instead of the one proposed? That would depend upon where they wanted to get to.

533. Would not the majority of the mines be served by the Wickham bridge? Some would and others would not.

534. Is it not a dread amongst the people that if a temporary bridge is constructed, the construction of the iron bridge may be indefinitely postponed? I believe that is one of the reasons assigned by the public.

535. And you think a bird in the hand is worth two in the bush? Yes.

536. And that it is much better to insist on the Government carrying out their promise to construct an iron bridge? Yes; the public think that it is a desirable work, and that it should be done at once.

537. And you think an iron bridge is absolutely necessary for the heavy freights which go to and from Carrington? Yes; and also for the purpose of getting on with the reclamation. If a swing bridge is put up a dredge could be utilised for the purposes of reclamation.

538. That is another reason why you desire the work pushed on? Yes.

539. You think that if a wooden structure is put up, no dredge could be used, and that the channel will not be used for some years in consequence? Yes.

540. That sways you in preferring to have the iron bridge constructed without delay? Yes.

Alexander Sheddton, Esq., sworn, and examined:—

A. Sheddton,
Esq.

7 Mar., 1890.

541. *Mr. Trickett.*] You are an alderman in the city of Newcastle? Yes.

542. Have you lived here long? I have been fully twenty years here.

543. And you have taken an active part in public affairs? I have.

544. And you have noted the advance and the requirements of the city? Yes.

545. You know the matter under consideration? Yes.

546. Were you present at a public meeting held here recently? I was.

547. Can you tell us what was the feeling on that occasion in regard to the proposal not to construct this expensive bridge from Newcastle to Bullock Island? It was really thought that the construction of what we may call the permanent bridge was about to be shelved by the Government. We lost no time in calling a public meeting to ascertain the feelings of the people.

548. And the result was that the people thought an expensive structure should be constructed? Yes. It had long been promised. I held a seat in the Wickham Council up to the last term, and I can say that promises of that kind had been held out to us for two years.

549. If this permanent structure is erected, it will be necessary to take some immediate steps either to repair the old bridge or to put up a temporary one? I did not know that the present bridge had been condemned; but if it is only to serve for a moderate time until the permanent structure is built, I cannot see why, at a slight expense, it cannot be strengthened so as to enable traffic to pass over.

550. Have you thought what expense would be required to make it answer the necessary purposes for a year or two? Not myself, but I have heard a great deal from others—men holding good positions—who understand the work, and they say it would cost from £1,000 to £1,500. To find out it would have to be examined properly. If I were to examine it I could tell you exactly.

551.

- A. Sheddon,
Esq.
7 Mar., 1890.
551. Do you think the Government would be justified in spending £50,000 in the construction of a bridge from Blane-street over to Carrington? I am sure they would.
552. What makes you think that? Because of the importance of the two places. They have grown very rapidly during the last few years. Seeing that the Government is about to reclaim the foreshores, there is no doubt that if they were to sell the land it would far more than recoup them.
553. What is the interchange between Newcastle and Carrington which makes such a permanent structure necessary? We say that when you build anything you should build a good thing. It is most profitable to build a good, firm structure.
554. But is it necessary to go to this large expense? No doubt the Railway Commissioners see the benefit of a high-level bridge.
555. And you think such a bridge would be desirable? There is no doubt of it, because the two places will, in a manner of speaking, be one town in a very short time. I look upon it that there is only the matter of a bridge between the two places. If the land is reclaimed and sold you will see that buildings will go up to the bridge on both sides.
556. Do the supplies of Carrington go from Newcastle, or are they mostly landed at Carrington? They are mostly landed from Newcastle.
557. And taken over the bridge? Yes; I do not think there is accommodation for taking goods to Carrington by water.
558. Have you had any experience in bridge building? I have?
559. What time do you think it would take to construct an overhead bridge from Blane-street to where it is proposed to take it? About three years from the acceptance of the tender.
560. If ordinary expedition is exercised the bridge can be used in three years? Yes.
561. Meanwhile, the present bridge must be repaired, or a new structure put up? I hold it would be better to spend more money to make the present one safe. It could easily be done. It never was a strong bridge.
562. It has lasted a great number of years? Yes, 15 or 16 years.
563. Could you tell us what it cost? I could not.
564. Have you ever heard that it only cost £600 or £700? No.
- 564½. Has there ever been an accident on the bridge? Not to my knowledge.
565. Or a blockage of traffic? The bridge is narrow. One vehicle has to stand while the other passes.
566. It is only 16 feet wide at present? About that.

James Frank Ellis, Esq., timber merchant, sworn, and examined:—

- J. F. Ellis,
Esq.
7 Mar., 1890.
567. *Mr. Trickett.*] In what business are you? I am a timber merchant.
568. Have you any evidence to give in addition to what has already been given? I believe the previous witnesses have been under a disadvantage, because they were not fully acquainted with the circumstances of the case. They are not fully acquainted with the circumstances connected with the £112,000 vote which has been placed on the estimates.
569. The question before is as to the expediency of building this bridge immediately or not? That, I believe, is part of the £112,000 vote. I could give evidence as to how the money should be expended in erecting the iron bridge proposed, instead of a temporary one.
570. You mean the high-level bridge? Yes.
571. Give the reason? I think the bridge should be erected immediately, because there are certain works proposed to be carried out in regard to reclamation, &c., in connection with Throsby Creek. That is on the western side of the present bridge. I believe the public would be willing that the traffic should go over the Wickham bridge until the permanent one is erected.
572. I understand you to say your principal reason for a high-level bridge with a swing is the urgency of improving the Wickham water frontage? Not necessarily so, but it has something to do with it, because the proposed reclamation works will more than recoup the Government for its expenditure on this new bridge. The old bridge has stood requirements for the last sixteen years, and for the last three or four years no heavy traffic has gone over it. I maintain that the public would sooner be put to the inconvenience of running their traffic over the Wickham bridge, than that a temporary bridge should be erected.
573. Do you not think the public themselves are the judges of their own convenience? I should imagine so, but they have been put to an inconvenience because they have not seen a plan of the Government proposal.
574. The evidence hitherto has been to the effect that they would rather have a temporary bridge than none at all. You were saying they would rather have no bridge than a temporary one? They say so, because they have not been put in possession of the proposals of the Government. I maintain that the population would sooner be put to the inconvenience of running their traffic over the Wickham bridge, and have a permanent bridge erected, than have a temporary structure put up.
575. And that is the statement you wish to make? Exactly.
576. You bring all your timber over the Wickham bridge and down Hannell-street. Where do you land your timber from the ships? I deliver it at Newcastle.
577. At the Government wharf? Yes. If I could get my vessels to Wickham with logs, it would pay me better to cut up my own logs than import the sawn timber as I do now. At the same time, I do not look upon this as a personal matter, but from a public point of view.
578. It is for the sake of improving the Wickham frontage that you wish to see the swing-bridge made? To a certain extent. I think if these reclamation works were carried out, the Government would be recouped ten-fold.

George William Webb, Esq., sworn, and examined:—

- G. W. Webb,
Esq.
7 Mar., 1890.
579. *Mr. Trickett.*] You are an alderman for the city of Newcastle, and an ex-mayor? Yes.
580. How long have you been living in Newcastle? All my lifetime, close upon forty years.
581. You know the subject of inquiry? Yes.
582. What are your views in respect of the matter? I was cognizant of the plan which was laid down by the Government during the time I occupied the position of mayor, that was in 1889.
- The

The old bridge is certainly not fit for heavy traffic, and has been condemned for some considerable time. My opinion is that the Government ought to resume the land on the south side, in a direct line with the A. A. Co.'s wharf, as far as Throsby Creek, a width of 300 feet, and the inner line with Union-street. I have been over the old bridge several times, and it rocks about a good deal. My opinion, as a practical man in the building trade, is that if a few piles were driven in, the bridge would serve while the new one is being built. I know a good many bridges which have been built, and I think the whole of the work could be done in three years, more especially if the Government were to start on the south side.

G. W. Wobb,
Esq.
7 Mar., 1890.

583. That is on the Newcastle side? Yes. It will be a waste of money to spend £1,500 on that old bridge. If piles were put in to strengthen it, it would last two or three years while the new bridge is being built. By reclaiming the land the Government will reap great advantage. The sale of the land will recoup them for all they lay out upon it. Land in Blane-street is at present worth £40 or £50 a foot.

584. Near the site of the proposed bridge? Yes, and it is increasing in value every day. The population of the district is increasing every day, and the coal traffic is also increasing. We have had a slack time, and that has been not only on account of the strike but on the account of the scarcity of shipping, but at the present time, however, there are a large number of orders for coal in hand, and we cannot get the shipping to take it away.

585. Do you approve of a high-level bridge from Blane-street? I do.

586. Do you think there would be any difficulty in getting an easy gradient? No, if my memory serves me correctly, you have a gradient of 1 in 25 from the Newcastle side.

587. Would a gradient of 1 in 25 be an obstacle to heavy traffic? Certainly not.

588. Do you think the future traffic between Newcastle and Carrington would justify such a large expenditure as £50,000 upon a bridge? I do; the more cranes there are started in the Carrington direction the more traffic there will be.

589. You say you have seen the rapid growth of Carrington? I have, it has been something wonderful. The lower end of Newcastle has also grown wonderfully during the last two years.

590. That is at the lower end and in the vicinity of the bridge? Yes; in the part I live in there were seven years back only two houses, now there is not a piece of vacant land in the place.

591. What is to make Carrington become a large population, seeing that the land is low-lying, and that it is at present almost under water? People are going there in large numbers, they are filling in the land, and it is becoming very valuable there.

592. There is no obstacle to people living there? Not the slightest.

593. Has it proved to be an unhealthy place to live in? It is no more unhealthy than any other place about Newcastle. There are very few deaths over there.

594. And its low-lying character does not make it unhealthy? Not to a great extent. I presume there is sickness over there.

595. Is your opinion in regard to the repair of the old bridge a practical one? The bridge has been condemned for three or four years. There has been no heavy traffic over it, and it is no worse now than it was then.

596. But that is by reason of the heavy traffic having been stopped? Certainly, and the traffic has gone the other way through Wickham.

597. Has there been much cause of complaint by reason of the traffic having to go through Wickham? Certainly. All heavy traffic must go round or be punted across to Bullock Island.

598. That is a serious inconvenience? Yes.

599. *Chairman.*] What is the extra distance if you go round, say from the foundry? It will make a good mile difference.

James Frank Ellis, Esq., sworn, made a further statement, as follows:—"Of course the value of the frontages at Throsby Creek has a lot to do with the voting of the money by the Government for the proposed improvements. I have just come into possession of a property in Wickham. It has recently been leased to me. The property is worth £20 a foot to Hannell-street. The late owner of the mill bought the reclamation right of the frontage to the creek from the Government, and paid over £2,000 for that property, and there being 100 feet frontage, more or less, gives a valuation of £20 per foot to the water frontage.

J. F. Ellis,
Esq.
7 Mar., 1890.

Mr. Joseph Henry Collier, land agent, sworn and examined:—

600. *Mr. O'Sullivan.*] What is your business? A land agent.

601. Do you desire to make any statement in regard to the proposal under consideration? I would like to point out that the Government owns a large amount of land about Bullock Island, and by so doing they deprive the Carrington Council of a large amount of rates, and retard the improvement of the place. If they carry out the work of building the bridge, and reclaiming the land, it will be at least some compensation for the amount of rates of which the people of Carrington are deprived. This applies not only to the Carrington, but the City Council. The Government have all the frontage to Blane-street, and the amount of rates the Council is deprived of, is rather more than £1,500 a year—£2,000. Three years ago the side of Blane-street, occupied by private individuals, yielded a rate of £1,500 a year.

Mr. J. H.
Collier,
7 Mar., 1890.

602. How is the Council deprived of these rates? Do you mean that they would get the rates if the land were private land? Yes; by the land being kept as it is at present, without being improved, the local Councils are deprived of a large amount of rates. The erection of the bridge, and the reclamation of the land, will compensate them, to some extent, for the large amount of rates of which they are now deprived.

603. Is communication ever cut off from Bullock Island by floods? The water runs over the approaches to the Wickham bridge.

604. Does it cover the roadway? Yes.

605. Is there any traffic across whilst the roadway is covered? Yes; any traffic which possibly can go, goes through the water.

606. Do the people suffer much inconvenience? Of course you cannot go across on foot.

607. And you think that would be a reason why a high-level bridge should be constructed through Carrington? This does not apply to the bridge in question. I am speaking of the Wickham bridge.

608. Traffic by the old bridge is not cut off by floods? No.

609.

Mr. J. H. Collier.
7 Mar., 1890.

609. Do you desire to make any other statement? I may point out that the population has grown enormously. The bridge should be a permanent one. It should not stand merely for ten or twenty years, but should stand for 100 or 200 years. The channel proposed to be bridged is about 400 feet wide, and 24 feet deep at low water. Therefore the bridge would have to be of a permanent and costly nature. It should carry a tramway, and should be a swing-bridge, so as to allow ships to pass through. On that account it ought to be a permanent and substantial structure.*

* NOTE (on revision):—I am more than ever of the opinion that tenders should be called at once for the construction of the permanent bridge and the dredging out of the channel towards and above Wickham.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS

Bridge to connect Bullock Island with the Mainland at Newcastle.

APPENDIX.

A.

PRECIS OF PAPERS RELATING TO THE PROPOSED BRIDGE.

THE papers in this case, as they have been referred for *précis*—and inquiries for earlier papers have been fruitless,—enter on the subject in *Medias res*, nothing being shown of the circumstances which led up to the proposal to rebuild the bridge.

21/1/87.—The first paper on the file is a report from Mr. W. A. Smith, stating that he had made inquiry as to the cost of widening the road from Newcastle to Bullock Island Bridge from 20 feet to 40 feet, and that it could be done for £3,000.

25/2/87.—The same officer reported that the road was dangerously narrow, being on an embankment, and not fenced in, and that it could be metalled and patched up for £580.

24/8/87.—Mr. Ellis, M.P., forwarded to the Minister a letter which he had received from the Mayor of Newcastle, in which the latter stated that he had been informed that it was in contemplation to build a timber bridge, and that he thought an iron bridge was in every way preferable.

Mr. Ellis was informed that the bridge would be of iron, and that the idea of erecting a wooden bridge had never been entertained.

7/9/87.—Mr. Smith reported that he had ascertained that Harbours and Rivers did not propose to open up Throsby Creek from the New Bridge to Wickham Bridge. The depth of water was from 2 feet to 4 feet, and dredging would be expensive. The land along the frontage was becoming very valuable, and he anticipated objections from owners of property when it became known that the design of the bridge was such that the creek would be close to future navigation. Mr. Smith added that the approach on the Newcastle side would have to be widened to 40 feet.

20/9/87.—The Council Clerk, Wickham, referring to the proposed closing up of Throsby's Creek, wrote asking if it was proposed to make the bridge a drawbridge. There were, he said, numerous industries established within a short distance of the water, and other industrial establishments were in contemplation along the foreshores of the creek. It was, therefore, of vital importance that the navigation of this arm of the Hunter should not be intercepted by an impassable bridge. No action seems to have been taken on this remonstrance.

23/10/87.—Mr. Smith now submitted specification of the approaches to the proposed bridge, and there is also an unsigned and undated estimate—by whom prepared is not shown—of £13,681 13s. for a bridge.

For some months the papers do not record anything, but in March, 1888, a new feature was introduced. Mr. Smith submitted a plan for an extensive reclamation of land involving an alteration in the site of the proposed bridge. It is not necessary here to give details of the proposed reclamation, as they can be given separately if required, and it may suffice to say, that the scheme if carried out would result in creating an area of 45 or 50 acres of most valuable land now useless mud-flat, and in making a navigable channel of Throsby Creek, and enable the Railway Department moreover to utilize a valuable strip of land opposite Blane-street, said to be worth £67,000.

In reply to Mr. Bennett, Mr. Smith further reported that the scheme was originated by Mr. Scott, of Carrington, and that he had reported upon it because the question of the bridge and the road was so materially affected by it. He had proposed to increase the span of the bridge to 125 feet in order that cylinders might be sunk in the centre of the channel for the bridge to swing upon, with 50 feet openings. If, however, the scheme were only partially carried out an opening might not be required for fifteen or twenty years.

Mr. Bennett thought the papers should be referred for report to Harbours and Rivers and the Railway Department, and they were referred accordingly.

The Commissioner for Railways minuted that the Minister would remember that when they visited Newcastle together this reclamation had been decided upon, and as regarded the Blane-street frontages that the policy in the interests of Newcastle of disposing of them had been recognized, and directions had been given for the sale of some of them, and that tenders were to be invited for filling in the frontages to road level. The filling would cost 1s. 3d. a cubic yard, but perhaps the silt from the dredging might be used for this purpose.

Mr. Hickson considered that the scheme had many points to recommend it, and he thought all future work, such as the erection of the bridge, should be carried out with a view to the adoption of this scheme.

3/7/88.—The Under Secretary requested Mr. Hickson to report for the Minister's information with reference to a letter on the subject of the proposed land reclamation which had appeared in the *Evening Call*, and which had been handed to the Minister by Mr. Ellis, M.P., who warmly advocated the proposal. The letter referred to—from Mr. Jno. W. Scott,—urged the adoption of the reclamation scheme, and pointed out that every year 1,040,000 tons, or 780,000 cubic yards of silt were carried out to sea, and this was sufficient to reclaim, at an average depth of 4 feet, 120 acres of land; the cost of removing this silt being £17,333 per annum for simply throwing the material away. Mr. Scott proceeded to demonstrate the enormous gain to the country which would result from the adoption of this system of reclamation.

Mr. Hickson referred the Minister to Mr. Smith's report of March, 1888, and intimated that he had that day made a proposal to the Minister in connection with the proposed reclamation. The Roads Department he said should be moved with reference to the bridge over Throsby Creek, the position of which would have to be altered if the proposed scheme were carried out.

26/9/88.—Mr. McDonald submitted statement of additional amount (£10,200) required for the bridge, and Mr. Bennett minuted in explanation that in consequence of the change of site, and the substitution of a movable for a fixed bridge this amount would be required in addition to the £7,500 already voted.

The amount was voted for the Loan Estimates.

6/11/88.—Mr. McDonald submitted an amended Estimate (to suit greater width of channel) of £22,200, and the amount was duly noted.

9/4/89.—The Council Clerk drew attention to the unsafe condition of the existing bridge. The sum of £33,000 was placed on the Draft Loan Estimates for 1890, and the bridge was described as consisting of an iron or steel swing span with an opening on each side of 65 feet, roadway 28 feet wide footways to carry tramway. Swing worked by hydraulic power, Approach span of iron and deck throughout, iron covered with tarred metal. Piers iron and concrete sunk to rock.

The

The bridge was referred by the House for the consideration and report of the Public Works Committee, but subsequently

10/2/90.—Mr. Hickson reported that he thought the erection of the large structure should be deferred pending a consideration of the question of the development of the shipping and railway traffic there. The swing-bridge to accommodate vehicle and tram traffic, crossing the Railway land at a high level and giving space for for vessels to pass up and down the creek, would cost £3,300, involving an annual charge of £1,300 to £2,200, and he was of opinion that a wooden bridge on present site, at a cost of £2,500, would meet all the requirements of the traffic for some years.

The Minister minuted to withdraw all the iron bridges except Cowra, and explain the change.

C.A.B., 16/2/90.

B.

MINUTE BY THE COMMISSIONER AND ENGINEER-IN-CHIEF FOR ROADS AND BRIDGES.

Bridges referred to Public Works Committee.

Sydney, 10 February, 1890.

WITH reference to the four bridges which it was proposed to refer to the Public Works Committee, I have the honor to state that the design for Cowra Bridge will be ready by Tuesday next.

With regard to Bullock Island Bridge, I am inclined to think the erection of the large structure should be deferred for the present pending a consideration of the whole question as to the future development of the shipping and railway traffic of this place. A swing-bridge, capable of accommodating vehicular and tram traffic, crossing over the Railway land at a high level, and leaving ample room for vessels passing up and down Throsby Creek channel, would cost about £33,000, the interest and working expenses of which would range from £1,800 to £2,200 per annum. A wooden bridge on site of present one would cost about £2,500, and would, I believe, meet all the requirements of the traffic for some years.

Jerry's Plains and Tarban Creek Bridges should also be withdrawn, as they can be erected for an amount under £20,000; and, in any case further investigation is necessary as to whether any expenditure at these places is justifiable.

ROBERT HICKSON.

WITHDRAW proposal for all the iron bridges but Cowra from Public Works Committee, and explain change of proposal from iron to composite, costing less than £20,000. Alter proposal re Cowra to composite at £26,537 cost.—B.S., 11/2/90.

C.

RESOLUTIONS PASSED AT A PUBLIC MEETING IN NEWCASTLE.

The Chairman of the Public Works Committee, Sydney.

Sir,

Newcastle, 1 March, 1890.

I do myself the honor, on behalf of my colleagues, Messrs. Fletcher and Curley and myself, to transmit herewith resolutions arrived at in a large and enthusiastic public meeting held last night in this city, having reference to the construction of the Newcastle and Bullock Island Bridge, and I hand you under another cover a full report of the proceedings as reported in the local press. The decision of Mr. Hickson has come with great surprise to the citizens, and evidence will be tendered, if it is now admissible, to show the Committee that Mr. Hickson has not judged the opinions of the citizens rightly, and that the carrying out of the original structure to the Government themselves, in the increased value of their own land, will more than compensate for the expenditure.

I have, &c.,

ALEXANDER BROWN.

The Newcastle-Bullock Island Bridge—Proposed Temporary Structure.

The Mayor of Newcastle in the Chair.

Moved by Alderman Rodgers, seconded by Mr. H. E. Stokes, and supported by Mr. William Grahame, a resolution as follows:—"That, as in the opinion of this meeting, the erection of a temporary bridge to connect Newcastle and Carrington would be a waste of public money, and inadequate to the requirements of the district, we therefore protest against its erection."

Moved by Mr. J. H. Collier, seconded by Alderman Morrison, and supported by Mr. Alexander Brown, M.P.:—"That, in the opinion of this meeting, the necessities of public traffic and growing requirements of the district demand and warrant the erection of a substantial and commodious bridge. We therefore urge that the original plans should be adopted and carried out."

Moved by Mr. Blackiston, seconded by Dr. Morgan, and supported by Aldermen Sheddon and Lloyd:—"That the foregoing resolutions be conveyed to the Works Committee by the Members for the city and county."

Moved by Mr. Grahame, and seconded by Mr. Bibby:—"That the Mayors of Newcastle, Carrington, and Wickham proceed to Sydney, with such evidence as they desire fit, on Tuesday next, and give evidence before the Parliamentary Committee."

[Two plans.]

1890.

LEGISLATIVE ASSEMBLY.
NEW SOUTH WALES.

BRIDGE CONNECTING CARRINGTON WITH
THE MAIN LAND AT NEWCASTLE.

(PETITIONS FROM RESIDENTS OF NEWCASTLE, HAMILTON, WICKHAM, AND CARRINGTON, IN FAVOR OF.)

Received by the Legislative Assembly, 29 April, 1890.

To the Honorable the Speaker and Members of the Legislative Assembly of New South Wales, in
Parliament assembled.

The Petition of the undersigned residents of Newcastle, Hamilton, Wickham, and Carrington, of
New South Wales,—

HUMBLY SHOWETH:—

1. That Parliament having voted the sum of £33,000 for the erection of a bridge connecting Carrington with the main land at Newcastle, and the question of the expenditure of this sum on the contemplated structure having been referred to the Public Works Committee for consideration and report, and the recommendations of such Committee being diametrically opposed to the expression of opinion given at a public meeting of the citizens held at Newcastle with reference to this matter,—

2. Your Petitioners, in consideration of these facts, desire that your Honorable House will take into consideration the prayer of your Petitioners for the erection of the proposed iron bridge of a permanent character, which has been estimated at £33,000, will be proceeded with as soon as possible.

3. That your Petitioners cannot too strongly urge the attention of your Honorable House to the fact that the present antiquated structure is in imminent danger of collapsing, and has been reported upon by various officers of the Works Department with a view of having a more permanent structure erected.

4. Your Petitioners therefore respectfully pray that the consideration of the matter for the carrying out of a permanent structure may be proceeded with without delay.

And your Petitioners, as in duty bound, will ever pray, &c.

[*Here follow 422 signatures.*]

Similar Petitions were received:—

29th April, 1890, from residents of Newcastle, Hamilton, Wickham, Waratah, and Carrington; 59
signatures.

Do. from residents of Newcastle, Hamilton, Wickham, Waratah, and Carrington; 255
signatures.

Do. from residents of Newcastle, Hamilton, Wickham, and Carrington; 994 signatures.

PLAN.

Plan showing site of Bridge over Hunter River at Jerry's Plains.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

BRIDGE OVER THE HUNTER RIVER AT JERRY'S PLAINS.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon the expediency of "constructing a bridge over the Hunter River at Jerry's Plains," have, after due inquiry, resolved that it is not expedient the proposed bridge should be constructed, and in accordance with the provision of subsection IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The information regarding the proposed bridge, as it was placed before the Committee, is somewhat meagre and contradictory, but the object in proposing the work was that the structure should replace at Gee's Crossing on the Hunter River, at Jerry's Plains, a low-level bridge washed away by flood from another crossing-place on the river, known as Bowman's Crossing, and also to give the west side of the river access to the Great Northern Railway at Liddell. The bridge, as far as can be ascertained from the papers in the case, was to be an iron continuous girder bridge 560 feet long, with timber deck roadway of 18 feet, the piers to be iron and filled with concrete, and it was to cost £20,000.

Description of
the proposed
bridge.

2. At the opening of the inquiry, the Under Secretary for Public Works expressed to the Committee the desire of the Minister for Works that the proposal should be withdrawn, on the ground that it had been ascertained the bridge could be erected for a sum less than £20,000, a circumstance which would make it unnecessary for the work to be inquired into by the Committee. The bridge having, however, been referred to the Committee by the Legislative Assembly, the inquiry was unavoidable, and it proceeded, with the probability, at the commencement, of the proposal being reported against for the reason put forward by the Under Secretary for Public Works. Then came evidence from responsible officers of the Roads and Bridges Department which, while it strongly advocated a cheaper bridge than the one proposed, appeared to raise a doubt whether any bridge at all was required; and the inquiry had no sooner reached this point than representations were made to the Committee by residents of Jerry's Plains, questioning the accuracy of the information upon which the officers of the Works Department had given their evidence, and urging the construction of the bridge as at first proposed. In this position of matters the Committee saw no course to take but to appoint a Sectional Committee to visit the district and take the evidence of local witnesses. This was done, with the result that the Committee have decided to negative the proposal for the construction of a bridge at a cost of £20,000, their decision being based on the evidence of the departmental officers and of local residents that a cheaper bridge could be constructed, and that the cheaper bridge would be adequate for the wants of the district.

The
Committee's
inquiry.

3.

Circumstances
connected
with the
proposal.

3. The proposal to erect this bridge was made in the first instance with the object of meeting the requirements of the stock traffic of the district; but since railway communication between Sydney and Newcastle has been established, much of the northern stock traffic has been conducted by railway, and this circumstance led the present Commissioner and Engineer-in-Chief for Roads and Bridges to doubt whether the bridge was required, and to decide that at any rate it was not desirable to erect a bridge of a costly character. When the present Commissioner took charge of the Roads and Bridges Department he found that considerable difference of opinion existed in regard to the bridge. It was not definitely known where it was best the bridge should be put—whether it should be erected at Jerry's Plains, or further up or down the river; and it appeared doubtful whether it should be erected at all. In this uncertainty, the Engineer for Roads and the Engineer for Bridges were sent to the locality, and the former wrote a report, which was to the effect that the stock traffic being very different now from what it had been, the bulk of it going by railway, the proposed bridge was not necessary. Upon this the Commissioner advised that the proposal for the erection of the bridge should be withdrawn, he having come to the conclusion that if any bridge were constructed it should be cheaper than the one proposed, and that in any case further investigation was necessary to determine whether any expenditure at all was justifiable.

Evidence of
local residents.

4. The local residents say the stock traffic at the present time is much greater than represented in the official report, and is such as to make a bridge necessary; but according to the evidence given before the Sectional Committee the general opinion among those interested is that a structure considerably less expensive than the one submitted to the Committee would be sufficient to meet requirements.

Decision of the
Committee.

5. From all the circumstances of the case, the Committee have arrived at the conclusion that a cheaper bridge than the one proposed might with advantage be erected. The district is one of importance; the main stock-road from the north and north-west to Richmond and Sydney passes through it; and a bridge over the river at Gee's Crossing, though not absolutely necessary, would be a great convenience. The Sectional Committee, as will be seen from their report, were of opinion that a suitable bridge might be erected for £10,000; but the opinion of the Commissioner is that it would not be advisable to construct a bridge of a kind that would cost less than £15,000. The Committee took the report of the Sectional Committee and the evidence before both the Committee and the Sectional Committee into consideration on Wednesday, 19th March, and again on Tuesday, 1st April; and the following is the record in the Minutes of Proceedings of the resolution adopted:—

On Wednesday, 19th March:—

Dr. Garran moved—

“That in the opinion of the Committee it is not expedient that the proposed Bridge over the Hunter River at Jerry's Plains, at a cost of 20,000, as referred to the Committee by the Legislative Assembly, be carried out.”

Mr. Trickett seconded the motion.

Mr. O'Sullivan moved—

“That the motion be amended by the addition of the words—‘but they recommend the erection of a high-level bridge at Gee's Crossing, in the same locality, at a cost not exceeding £15,000.’”

On the motion of Mr. Garrard, seconded by Mr. Dowel, the further consideration of the motion and the amendment was adjourned.

On Tuesday, 1st April:—

Dr. Garran moved the following amended motion:—

“That, in the opinion of the Committee, it is not expedient that the proposed Bridge over the Hunter River at Jerry's Plains, at a cost of £20,000, as referred to the Committee by the Legislative Assembly, be carried out, inasmuch as the Departmental Officers report that a cheaper bridge could be constructed that would be adequate for the wants of the district.”

The motion was seconded by Mr. O'Sullivan (whose amendment, previously moved, was withdrawn), and passed.

J. P. ABBOTT,

Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 15 April, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

BRIDGE OVER THE HUNTER RIVER AT JERRY'S PLAINS.

THURSDAY, 20 FEBRUARY, 1890.

Present:—

The HONORABLE JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.	JAMES EBENEZER TONKIN, Esq.
The Hon. FREDERICK THOMAS HUMPHREY.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
JACOB GARRARD, Esq.	JOHN HURLEY, Esq.
HENRY COPELAND, Esq.	CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Bridge over the Hunter River at Jerry's Plains.

Robert Hickson, Esq., Commissioner and Engineer-in-Chief for Roads and Bridges, sworn, and examined:—

1. *Vice-Chairman.*] You know the proposal to construct a bridge over the Hunter River at Jerry's Plains? Yes. R. Hickson,
Esq.
2. You have been examined by the Committee with reference to the proposal to construct a bridge over Tarban Creek? Yes. 20 Feb., 1890.
3. For similar reasons to those which you gave why that bridge should not be constructed you recommend the withdrawal of this proposal? Yes—to some extent similar reasons.
4. Are there any other reasons which you would like to add? This case is not quite on all fours with the other. When I took charge of the Department I found a considerable difference of opinion existed, first as to where this bridge should be put; whether it should be erected at Jerry's Plains or further up or down the river; and secondly, as to whether it should be erected at all, and I did not feel justified in going on with the plans until I obtained some further reports. Accordingly I instructed Colonel Wells and Mr. McDonald to go up and examine the place carefully and submit a report. Colonel Wells submitted a report, which has been laid on the table here, and as I do not know the place myself very well—I have been there, but a great many years ago—I would suggest that Colonel Wells be asked to give evidence. I can say very little, except that, judging from the reports I received, I did not think it was desirable to go on with such a costly bridge.
5. Under these circumstances you wish to withdraw the proposal before the Committee? Yes. Perhaps I ought to say that the circumstances which led to the proposal in the first instance are totally altered now. At that time the Northern Line was not connected with Sydney, and there was a very heavy traffic at this place which warranted the expenditure, but that has nearly all ceased now.

Colonel Frederick Wells, Engineer for Roads, sworn, and examined:—

[*The Report made by witness with reference to the proposal to construct a bridge at Jerry's Plains was read by the Secretary.*]

6. *Dr. Garran.*] At what places are the two bridges to which you refer in your report that were washed away? One was at Denman, and the other at Bowman's crossing. Col. F. Wells,
Esq.
7. How much did they cost to construct? I can scarcely tell you now. They were low-level bridges, and not very costly. 20 Feb., 1890.
8. Where do you propose to construct this bridge? At Gee's crossing.
9. That is the nearest point to Jerry's Plains? Yes; the nearest available point.
10. When these two bridges were in existence were they much used for stock purposes? Yes.
11. At that time stock went by the Bulga Road? Yes, and a good many went by Sir Thomas Mitchell's route and crossed at Alford's. They made straight tracks for the Cockfighter Bridge at Warkworth.
12. The whole of that traffic has now ceased? It has very much diminished.
13. It consisted of cattle from the far north, not of cattle in the district? Yes, of cattle from the Company's herds, I imagine, and cattle down the Goulburn and through Merriwa.
14. At that time both these crossings were high roads? Main stock routes.

- Col. F. Wells. 15. The demand for bridges for high road traffic has ceased? Almost, at this locality.
- 20 Feb., 1890. 16. The demand now is for local traffic? Yes, more than for stock. I judge by my local observations of the tracks upon the old travelled stock route, which I have known for years. It used to be travelled considerably; but there was not a hoof-mark on Sir Thomas Mitchell's line, and on the other, by Jerry's Plains, there was scarcely any evidence of cattle traffic.
17. Very little ever goes down the Bulga-road now? There is traffic still; but I do not think that it can be so much as it was, judging from what I saw at Jerry's Plains, and from what I heard when there. I have another paper here, which I wrote after making an inquiry in Sydney with regard to the stock. [*Read by the Secretary*]. I may mention that Alford is the proprietor of the land through which Sir Thomas Mitchell's line goes.
18. Is there a ford at Bowman's crossing? Yes.
19. Passable except in flood? Yes.
20. Are there fords at Gee's crossing and at Denman passable except in flood? Yes. There is also a bridge at Denman—not at the same place, but still available for stock traffic.
21. What is the nearest township for the residents on the north side of the river when they cannot get across? Do you mean at Denman?
22. Yes? They go to Muswellbrook.
23. They have an accessible road in all weathers? Yes.
24. The settlers on the south can go to Jerry's Plains, Warkworth, and Singleton? There are no settlers there. The land is held in large estates.
25. But can the holders on the large estates get a dry road? They would go to Liddel.
26. But can they get to a township? Yes.
27. As things are no one could be cut off from communication? No.
28. Then it is purely for local convenience that they want a bridge to go backwards and forwards? Practically so.
29. They can get backwards and forwards at any time except for the few days during which a flood lasts? They can.
30. The bridge that it is proposed to build will be a low level one? No; it must be a high-level bridge.
31. You would not recommend us to go in for cheap low-level bridges? Decidedly not.
32. You think that our experience on the whole has been against them? Everywhere.
33. The bridge at Richmond has answered? Yes, but it was built under somewhat different circumstances.
34. Does less timber come down there? Less timber would come down the Nepean, and the bridge is a very strong one, with a better holding than could be got here. The bed of the Hunter is very loose.
35. The Richmond bridge is built on rock? No; on good sound hard driving.
36. Do you know what it cost? I forget; but it was something enormous. I believe it cost, from first to last, nearly £20,000.
37. It was constructed at first by private enterprise? Yes.
38. What is the difference in the height between a low-level bridge and one built above the highest flood? It would depend upon the height of the flood. I could not say without seeing the sections.
39. The extra expense would be in the piers? Not alone. A low-level bridge would land between the banks, while a high-level bridge would need approaches and spans, and would be longer in every way.
40. Then you get extra expense on every account in a high-level bridge—more in piers, spans, approaches, and in everything else? Yes.
41. Do you think that at Gee's crossing a high-level bridge could be made for £10,000? I think it could in timber of the olden style. In the way that I used to estimate bridges, when they were under my own design and construction, I think that it could be carried out for less than £10,000; but in the improved style which has been brought in by Mr. McDonald it would cost more than that—it would have a wider roadway, for instance. With such a bridge as I put over the Williams River at Dungog it could be done for the money I state.
42. What would be the life of a timber bridge? I believe a timber bridge could be made to last forty years.
43. What would be the weakest part of the bridge? Its liability to decay, and the attacks of the white ants.
44. Would the part under water be weaker than the rest of the structure? No. In fresh water wood will stand a long time.
45. You do not think that the piles will be weaker than the top work? I do not think so. Our experience is that the piers, if properly cared for, will outlast the superstructure.
46. Do you ever soak the piers in oil? No; they are tarred and left until a new coat is required.
47. Does the tar penetrate into the wood, or does it merely form a skin? It penetrates the wood, and I believe that sometimes, like paint, it is detrimental, because it confines the sap.
48. Supposing a bridge were put up at Gee's crossing, and a toll were charged, would anyone go across the bridge while there was a ford? The tolls on Gee's Bridge would not be worth collecting.
49. There is no possible revenue derivable from a bridge there? No.
50. If the bridge were paid for out of loan money, there would be no revenue from it to pay off the principal and interest? I do not think any revenue could be derived from the bridge.
51. *Mr. Trickett.*] What was the original estimate for this bridge—how did it come to be submitted to the Committee? That I cannot tell. I believe that at one time £6,000 was put down for the bridge. That would have been for the bridge alone, without counting the land or approaches, and would come near to the estimate that I myself since made.
52. Is Jerry's Plains a township? A small township with very few inhabitants.
53. You state that the full cost of the composite bridge would be only £17,000? I am given to understand so by Mr. McDonald.
54. *Vice-Chairman.*] In reference to the matter of wooden bridges, to which the department seem to have given some consideration lately, you have had some experience of the very old bridges constructed in the early days of the colony? I have for thirty years.
55. Can you form any estimate as to how long those bridges have lasted—what is the longest period? I have known some of them which must have been twenty-five years old, and were still good. I know bridges that must be older than that.

56. *Mr. Dowel.*] The bridge over the McDonald River? That at Bendemeer is about thirty years old. Col. F. Wells.
57. *Vice-Chairman.*] You have heard of ironbark lasting for fifty years? I have seen timber under the ground fifty years old, and still sound. I cannot say that the whole of the structure would last that time. 20 Feb., 1890.
58. Is it possible to get as good ironbark now as was obtainable in those days? I think it is as good if it is treated with consideration—though it is not so plentiful now. First-class ironbark may still be obtained near Dubbo and at some places where the timber has not been so much cut, though I do not think it can be got of the same size.
59. There is a considerable quantity of ironbark about the Hunter, and on the ranges between Molong and Parkes;—do you think that that ironbark is as lasting as that which used to be got from the ironstone country on the coast? No.
60. It is not so robust? No, nor are the trees so large. I have seen ironbark at Eugowrn, near Forbes, not fit to put in any structure. I am not altogether an advocate of ironbark. In some places the ironbark is not so good as other timber growing near it.
61. Have you given attention to the merit of any specific for keeping away white ants? We have tried three or four remedies for it. I think the best is that with which your name is associated. We have also tried anti-aut.
62. That has been used throughout the Railway Department? We have used both in our department, but I know of nothing that has proved more effectual than arsenic and tallow.
63. *Mr. Lee.*] Could you enumerate the bridges upon which tolls are levied at the present time? I do not know one.
64. If a bridge were constructed at the site proposed, would it not be open to the public free of charge? Of course I cannot say; that would be a matter for the higher powers.
65. Can you tell me whether such tolls have been abolished by special Act of Parliament? I think it was done by a resolution of the House.
66. Applying to any individual bridge, or to the whole of the bridges? To all Government bridges, and I believe the Government purchased all private bridges—the last being, I think, either the Pymont bridge or the Wagga bridge.
67. At the present moment no tolls are levied on any bridges in the colony? I do not know of any.
68. If an estimate was submitted to this Committee showing the value of the traffic over a proposed bridge, it would be of no practical benefit? I really do not see how that affects the question.
69. If an estimate were given to the Committee showing the probable return from tolls from any proposed bridge, would that estimate be of any value? I do not think so.
70. For the reason that no tolls are collected? Yes.

WEDNESDAY, 12 MARCH, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Bridge over the Hunter River at Jerry's Plains.

Robert Hickson, Esq., Commissioner and Engineer-in-Chief for Roads and Bridges, sworn, and further examined:—

71. *Dr. Garran.*] In the design put before the Committee for the bridge at Gee's crossing what was the width of the roadway which was provided? 20 feet clear. R. Hickson, Esq.
72. The evidence of all the practical drovers, given before the Sectional Committee, was to the effect that a roadway 15 feet in the clear would be ample for all their purposes; what would be the reduction in cost if the width were reduced to 15 feet? Very little, as there would be the same piers and the same girders. Only just the cost of the roadway and cross-girders. 12 Mar., 1890.
73. Sufficient to be worth while making? I don't think it would.
74. Could you make a substantial bridge there which would be likely to be safe for the sum of £10,000? I don't think so. There are really two bridges in this place: a bridge over the main river and a bridge over the ana-branch which has to be crossed. The cheapest bridge we can put up there with our own timber would cost £12,000.
75. Is that exclusive of the cost of resuming the road to Gee's crossing? That is the mere cost of the two bridges, with the approach.
76. If you have to make a bridge over the ana-branch it is told to the Committee for the first time. The cost of a bridge over Gee's crossing would be greater than the cost of one over Bowman's crossing? No; there is a little ana-branch to be crossed there.
77. Was there a bridge over the ana-branch when the old bridge was in existence? I do not think so. I have not been there. I think they depended on crossing when the flood was not so high. It was not so deep as at Gee's crossing.
78. The local residents all admitted that they do not want an expensive structure, but they thought that the cheapest possible bridge would come within a price which the Government can easily afford? The cheapest possible bridge I could recommend would cost £15,000 and that does not provide any footway. With the footways it would cost £18,000.
79. *Mr. O'Sullivan.*] What breadth? 20 feet in the clear.
80. *Dr. Garran.*] What percentage off that if you reduce the width to 15 feet? I do not suppose it would make a difference of more than £1,000.
81. It would be only in the planking? Practically the girders would be slightly reduced, but not much.

- R. Hickson,
Esq.
12 Mar., 1890.
82. Is your plan for wooden piles throughout or for iron piles? For wooden piles, except in two instances.
83. No iron girders? No.
84. What is the largest span you propose? There are three of 160, and six of 35; and over the little ana-branch one of 90 and five of 35 feet.
85. Three of 160 would be sufficient to let all the drift go through? I think so.
86. We had it in evidence that the reason why the previous bridge washed away was because the piles had no bite in the ground? I could not say. I know nothing of the old bridge.
87. You are perfectly clear that you could not put anything over there that would be safe at a cost of £10,000? No. We could put a bridge over, but I do not think it would be advisable to put one across for less than £15,500 or £16,000.
88. *Mr. O'Sullivan.*] What led your department to believe that there was more stock driven across Bowman's Crossing? That is the evidence we got from the two officers who went up there to inquire.
89. Were they officers of the Stock Department or officers of your own department? Officers of our own department.
90. Are you aware whether the evidence points to the fact that 20,000 head of cattle cross Bowman's Crossing every year? I have seen by the newspapers that that is the case.
91. What is the width of Gee's crossing in flood time? If it is high flood it is about 1,000 feet.
92. Would that be above the highest flood level? That is the highest.
93. How much would the bridge be above that? 18 inches.
94. You think that a lower bridge would be unsafe in flood time? I do.
95. Of course you know that the bridge which was swept away was a low-level bridge? Yes.
96. Have you heard any reports about the scamping of work in connection with that bridge? No. It was made before I took charge of the department.
97. Who was the officer who supervised its erection? I do not know, but I can find out if the Committee wish it.
98. I suppose that a bridge across the ana-branch would be indispensable? Yes, it is quite as necessary as the other one.
99. How far is the ana-branch from the river? It depends on what state of the river you mean; if you mean at low water, I suppose it is about 500 feet from it. At high flood, it is practically a portion of the river.
100. You do not see your way to erect a substantial high-level bridge under a cost of £15,500? No.
101. *Mr. Hurley.*] The erection of a bridge there has been agitated for chiefly on account of travelling stock? Yes.
102. Since the completion of the railway from Newcastle to Sydney has not a very large number of stock travelled by train? There has been an enormous increase. I laid before the Committee the returns from the Muswellbrook station.
103. So, in a great measure, the stock trains have got over the difficulty and inconvenience caused by driving them by Bowman's Crossing to Sydney? I think so.
104. Have you considered the probability of the Railway Commissioners eventually giving facilities in the west, north, and south, for conveying dead meat to market in chilled vans? I have read in the newspapers that such a thing is contemplated; I have not given it any attention.
105. If that were carried out, especially at the various points along the northern line, would it not dispel in a great measure the necessity for a bridge over Bowman's Crossing or Gee's crossing? I presume there would be less cattle travelling along the roads if arrangements were made to carry dead meat by train.
106. By this means meat would be delivered to the consumer in a much better state than it is now, when cattle are driven along the roads? I believe so.
107. Or even when cattle are carried by train? I think so.
108. Do you know if the proposed bridge will tend to serve any large population other than drovers? The reports I have had certainly go to show that it would not.
109. On the northern side of the river they could reach a station 9 miles distant? Yes, at Liddel.
110. Even when the river is high a large number from Jerry's Plains, in order to reach the market in Sydney, would have no need to use the river at all? From Jerry's Plains they have a high-level and a low-level road. They have a high-level road 22 miles long, clear of all floods, to Singleton; and they have also a low-level road, which is subject to floods, and which I think is 16 miles long.
111. As regards the people of Jerry's Plains proper there is actually no necessity to erect a bridge for their accommodation? All the evidence I have had goes to show that.
112. And, practically, this bridge would be constructed solely in the interests of pastoralists or drovers? I think almost entirely.
113. Which may be overcome by the facilities which the Commissioners will offer for conveying their cattle to market in another form? It may be.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

BRIDGE OVER THE HUNTER RIVER AT JERRY'S PLAINS.

REPORT.

THE Sectional Committee appointed to "inspect, take evidence, and report on the proposed bridge over the Hunter River, at Jerry's Plains," beg to report as follows:—

The Committee arrived at Singleton at 1.30 a.m. on Saturday, March 8th, and at 10 o'clock met in the Court-house to take evidence. Six witnesses were examined. In the afternoon the Committee visited the Singleton Bridge, and inspected the roadway, which is largely used for stock traffic as well as for general traffic, and the available breadth of which does not exceed 12 feet. On Monday morning, March 10th, at 7 o'clock, the Committee left Singleton for Muswellbrook, and took evidence in the Court-house from 11 until 1, resuming the sitting in the afternoon from 3 until 5. Eleven witnesses were examined. As regards the proposal originally submitted to the Standing Committee for a bridge to cost £20,000 or upwards, the evidence was almost unanimous that so expensive a structure is not required. But the testimony was equally in favour of a bridge with a roadway of about 15 feet, if a stable structure could be erected at a moderate sum. The local demand for a bridge is not very great, as both on the north and the south side access is obtainable even in flood times to a railway station. The district immediately north of the Hunter, in the neighbourhood of the proposed bridge, is principally devoted to fattening cattle, and it was admitted that though to those occupiers a bridge would be of very great convenience, it was not a matter of extreme urgency, because they seldom start their cattle for market unless they know that the river is passable. But the crossing at Bowman's is on the great highway from the north and the north-west to Richmond and Sydney, and even in competition with the facilities offered by the railway the number of cattle now crossing is estimated at not less than 20,000 a year. This is exclusive of sheep, which would be more sent by this route were it not for the difficulty of the crossing. There is also a moderate traffic in ordinary vehicles and by horsemen. For nine or ten months in the year it is admitted that, in ordinary seasons, the river is fordable with but little delay, but when the flood is up the delay and the inconvenience are greatly complained of. The stock is often sent back through Denman to Muswellbrook, and compelled to make the detour on the metalled road through Singleton to Warkworth. One drover testified that the crossing at Bowman's was the worst between Warrego and Sydney, and several drovers testified that it was the only serious difficulty on the road to Sydney.

Looking at the importance of the district, and the great convenience that a bridge would be, the Committee think that if a high level bridge, likely to be stable, with a 15 feet roadway, could be erected for £10,000, the expenditure would be justifiable.

The Committee made several inquiries as to the relative merits of Bowman's and Gee's crossings. They found the evidence to be in favour of the latter on engineering grounds, while for stock purposes both would serve equally well. But a bridge at Gee's would have the additional advantage of putting the people of Jerry's Plains within 11 miles of the Liddell platform; and that, according to the evidence of one fruit-grower, would facilitate the sending of orchard produce to northern markets.

The selection of Gee's crossing will necessitate some resumption of private land, but even including that the expense could probably be kept within £10,000.

Mr. Hurley disapproves of spending money on the bridge, considering it is not necessary.

ANDREW GARRAN,
Chairman.

Sydney, 11 March, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

BRIDGE OVER THE HUNTER RIVER AT JERRY'S PLAINS.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

SATURDAY, 8 MARCH, 1890.

[The Sectional Committee met at the Court-house, Singleton].

Present:—

The HONORABLE ANDREW GARRAN (CHAIRMAN).

The Hon. WILLIAM JOSEPH TRICKETT. | EDWARD WILLIAM O'SULLIVAN, Esq.
JOHN HURLEY, Esq.

The Sectional Committee proceeded to consider the proposed Bridge over the Hunter River, at Jerry's Plains.

John Brown, Esq., sworn, and examined:—

1. *Mr. Trickett.*] Where do you reside? At Jerry's Plains.
2. How long have you resided there? About thirty years, but I was in Singleton during five years during that time.
3. You represented the district of Patrick's Plains once in Parliament? Yes.
4. Do you know the site the Government has suggested for erecting a bridge over the river at Jerry's Plains? Three sites were surveyed, but I do not know the one which was suggested by the surveyors.
5. Do you know Gee's crossing? Yes.
6. Do you think that is a good position for a bridge? It would not be a bad position, but it would have to go through private property. On this side of the river you would have to go through a portion of Mr. Parnell's lands. You would have to go about 3 miles through Pearse's land, and about half a mile through Parnell's.
7. That would be $3\frac{1}{2}$ miles which would have to be rented or purchased? Yes, before the top of Bowman's Hill is reached.
8. Would either of the other routes avoid the necessity of going through private property? Yes.
9. Which one? Bowman's crossing, on the main Northern road, passing through Jerry's Plains.
10. How far is that from Gee's crossing? Nearly 3 miles. There is another site at what they term "The Rocks."
11. How would that convenience the public generally? That would go over Government land mostly.
12. The crossing known as Bowman's is the one which could be used without any new roads being arranged for? Yes; we should not require any compensation for a new road there.
13. Is the road fenced? Yes, on both sides.
14. Would it be easier to erect a bridge at Bowman's crossing, or at Gee's crossing? I am not an engineer, but I do not think it would be so expensive to erect a bridge at Gee's crossing as it would at Bowman's crossing, but perhaps the difference would be made up in compensation which would have to be paid.
15. What is the width from bank to bank at Gee's crossing? About 70 yards.
16. How about Bowman's? It is not quite so wide there, but there is a gravel beach extending out from the river.
17. Upon which the foundation of the bridge could be erected? Of course, the foundation could be put in there.
18. You state that if a bridge is erected at Gee's crossing we should have to go through private property and compensation will have to be paid? Yes.
19. Do you think, taking all the circumstances into account, that the expense of erecting the two bridges would be about equal? Yes.
20. Would Bowman's crossing be as good a place as Gee's crossing? I think it would for travelling stock, but not for all purposes. The only advantage Gee's crossing would have would be that people would use it to go to Camberwell Railway station and Muswellbrook.
21. Are the people of Jerry's Plains unanimous as to where the bridge should be? They are all unanimous that a bridge should be erected. I do not think they care, so long as they get a bridge, whether it is at Gee's crossing at Bowman's, or at the Rocks. Perhaps the majority of people in the township might like it at Gee's crossing.
22. Do you know of any actual objections to the bridge being erected at Gee's crossing? I do not think anyone would object.

J. Brown,
Esq.
8 Mar., 1890.

- J. Brown,
Esq.
8 Mar., 1890.
23. Does not Mr. Pearse object? He might object, but I do not know. I know he would expect compensation, but what amount I cannot say.
24. Do you not know he objects, because it would have the effect of cutting off his property? Yes.
25. How are the people inconvenienced through the want of a bridge? Very badly. This is on the main cattle road, and people, for hundreds of miles out into Queensland, send their cattle down this road.
26. What course would the cattle which would use the bridge, if it were erected, take? Some come through Liverpool Plains, and others by different routes. There are three or four different routes.
27. *Chairman.*] Is it a stock route? Yes. The cattle can come down the main road to Muswellbrook, and they can go to Bowman's crossing and swim there.
28. *Mr. Trickett.*] I suppose a great quantity of stock for market concentrate at Bowman's Crossing? Since the river came up the horned cattle have averaged from 150 to 200 a mob. There have been two or three lots a week or more; sometimes four lots go past in a day.
29. And they all come to Bowman's crossing? Yes; for the purpose of getting to market. There is a boat there, but I am certain you would not attempt to go into it at the present time. It is dangerous. The cracks are stuffed up with bits of rag.
30. Do the cattle cross Jerry's Plains? Those coming from Denman do. To avoid Bowman's crossing others would have to go over the Goulburn, through Hungerford, and Mr. White's land, on sufferance.
31. How does the traffic in cattle and stock generally compare now with the traffic before the railway was opened? Last year there must have been an average of from 400 to 500 cattle a week passing.
32. Did many more than that pass before the railway was opened? There were more cattle in the northern district at that time.
33. Do I understand you to say that it is not the construction of the railway which has lessened the number of cattle travelling by road, but the falling off in the cattle themselves? Yes; but you must remember that when the river is fordable a large number of sheep cross, but it is impossible for them to do so now. The river has been up for six or seven months. Mr. Richards sends all his sheep by road if the weather will permit, because it is cheaper to do so, in the first instance, and in the second instance, the meat arrives at its destination in a far better condition than it would if sent by train. Butchers will give 5s. a head more for cattle sent by road as against cattle sent by train.
34. That is all very well in good seasons, when there is feed along the road;—what is done when there is no feed? When there is no feed they might make use of the railways if there was a rise in the market.
35. You are in the habit of observing the stock traffic along the road every day? Yes.
36. And have done for a number of years? Yes.
37. What do you think of an opinion of this kind. The question asked the witness examined was as follows:—"The demand now is for local traffic?" The answer was: "Yes, more than for stock. I judge by my local observations upon the tracks upon the old travelling stock route, which I have known for many years." What is your idea as to that opinion as to the traffic;—is it in accordance with your own observation? No, it is not. In the driest times stock has come by road.
38. And the route is constantly used? Yes. I do not believe there was a single week during the drought but what cattle and horses came by road.
39. Do you know the Bulga Road? Yes.
40. Does that converge into this crossing? Yes, that is the reason the cattle come that road. All the cattle going to Maitland come that road, too.
41. Do you think the traffic along that road for cattle and stock is as great as it used to be? Perhaps not, for there is not the same amount of cattle now, but it is always used.
42. Is there a bridge at Denman still? Yes.
43. Does not that bridge suit the Jerry's Plains people? No, only so far as the cattle coming to Bowman's crossing, and going no further.
44. What is the population of Jerry's Plains? It is a small township; I could not say what the population is, but within 5 miles round there will be about fifty houses, and I think the families will average from four to six.
45. Are there any selectors or small holders? Yes.
46. Is it not mostly held by people with large estates? No; there are a good many small holders.
47. Could you tell us the names of the holders of the large estates within that radius of 5 miles? I am nearly the largest landowner there. I have about 1,800 acres on this side of the river, and I think Bowman has about five sections.
48. These are the largest? Yes; the rest would not average much over 500 to 600 acres.
49. I suppose the real advantage of constructing this bridge would be to give an easier and a shorter approach to the railway line than at present exists? Yes; that would be the real advantage to the local people, but it would also be an advantage to stock-owners and graziers. Nearly every stock-owner in the northern district sends cattle, at times, by that road.
50. Have you known of any large number of cattle or stock being stuck up at the river? Yes; several have had to stop on the reserve for three or four days. The other day a man had to ask Mr. Miller to allow his cattle to stay in his paddock. In swimming them across next morning he lost one bullock.
51. Do you think stock-owners would pay a toll if a bridge were erected? I believe so; I would do so myself rather than swim them.
52. That means, I suppose, that they would only use the bridge when they could not use the river? If a bridge is built, people cannot evade toll. At Wiseman's Ferry you have to pay, even though you may have to swim your stock.
53. Looking at the matter in all its aspects, apart from the mere local aspect of the question, you think the bridge is an absolute necessity to enable you to get stock to market? Yes.
54. *Chairman.*] So far as cattle coming from the north are concerned, they can, if they like, make for Singleton or Denman? They make for Denman first, and then go through Jerry's Plains.
55. They cross the Goulburn River? No; 8 or 9 miles on the other side of Denman they turn off, and they have to go through Hungerford's land; there is not any road that way, only on sufferance.
56. If you were bringing a mob from Queensland and the river was up here, you could strike for Denman or Singleton? You would have to go over at Denman and then go to Singleton.
57. And from Singleton you can get to the Bulga Road? Yes.
58. So that the want of a bridge here does not prevent cattle from Queensland from crossing the river? No.
- 59.

J. Brown,
Esq.
8 Mar., 1890.

59. If you were coming down with cattle, at what point would you go off the road to strike Singleton, if you heard the river was up? I would be compelled to go to the bridge if I did not wish to swim them.
60. Where would you leave the main road? At Denman, and go back 14 miles to Muswellbrook.
61. But if you were coming from Queensland? The chief of the cattle go to Denman before going to Muswellbrook to be sold. If fat cattle are coming from Queensland they go to Denman and on to Jerry's Plains and swim. Otherwise they have to go 14 miles back to Muswellbrook; there are no reserves upon the Muswellbrook line for stock, until after they cross the river from Singleton.
62. Then the fat cattle route from the far north is through Denman? Yes, through Jerry's Plains also.
63. There is a bridge at Denman? Yes.
64. Then fat cattle have no inducement to come through Bowman's? Yes, they have. That is the shortest road. If they do not wish to swim the cattle they follow up the road to Muswellbrook; then they come back 14 miles. It is 14 miles from Denman to Jerry's Plains, and 14 to the Bulga.
65. But instead of aiming for Denman could not they make tracks to Singleton? Not without going back to Muswellbrook.
66. I mean when they are north of Muswellbrook altogether? There is a road called Sandy Creek which they can turn off upon. There is a road that way to Muswellbrook.
67. If you were bringing cattle down yourself to the Sydney market, and you heard the river was up, and you could not cross at Jerry's Plains or Bowman's crossing, which road would you take? I should prefer to wait on the reserves.
68. What kind of cattle cross here most, locally fattened or cattle from the north? Cattle from the north chiefly, but of course there is a great number of local cattle. All coming from the north prefer swimming to travelling on the metalled road down to Singleton.
69. And that is the reason they prefer Bowman's crossing? Yes.
70. But if that becomes an important road it is likely to be metalled, too? I don't know.
71. Is it because there is no bridge that the road is not metalled? I don't know.
72. If you get a bridge, it is very likely to become a good road? Well, we shall still have the reserves for our stock. We must have grass.
73. This line is a stock line for that reason? Yes, there are several reserves for stock.
74. The bridge is as much wanted for through stock as local stock? Yes, more so. The local people could keep their cattle back a day or two in the paddocks, but travelling stock can only stop a certain time on the reserves.
75. How long does it take for the river to go down? If it were up at the bank to-day, and were going down, you could swim the cattle to-morrow.
76. If there is no more rain now, the river will be crossed at the usual places in three days? Not without swimming at Jerry's Plains. It is over a week since the river was at its full height.
77. In a season like this, when the river is not fordable, would you get stuck up between here and the Bulga Road? No, there is a bridge at Warkworth, and another at Bulga.
78. This is the one difficulty, then? That is the only one.
79. Between the north and Sydney? Yes. If they think proper they can join the Wollombi, and cross at the ferry, where they can swim the cattle.
80. One bridge between Singleton and Denman would be sufficient for the whole of this district? Yes.
81. At any one point? Yes.
82. How many times within the last ten years, and for how many days a year, has this place been impassable? I could not say. We have had a good many dry seasons, but during the last six months I do not think it has been fordable for a man on horseback above a week or ten days at a time. A vehicle could not well cross it.
83. Do you think, if a bridge were made, it would take any quantity of stock from the railway traffic, and induce travelling by road? If a bridge were made, I believe the traffic, more especially for sheep, would return to the road.
84. And the building of a bridge would be rather against the interests of a railway? Yes; but you must consider the interests of the public. I know there would be a great number of sheep come along that road if the river were fordable, for this reason: A drover would drive 2,000 sheep from Breeza to Sydney for £50. From Jerry's Plains he would drive 2,000 sheep for £20. If you look at the railway charges you will find that after the drover is paid the owner would save about £75.
85. You are within easy reach of the railway, and would send by road? I have never yet sent a beast by rail.
86. The railway is only useful to you as a passenger and for goods? That is all.
87. During the last six months the river has been up a good deal? Yes, nearly every week.
88. And it has practically diverted all sheep traffic? Yes; only two lots have been able to go, and some of them were drowned in swimming.
89. The cattle business has been reduced about one half? I could not say, but there is not the same amount of cattle.
90. I mean of through cattle coming from the north? I do not think it has been reduced one half; but it has been reduced to some extent. On the average there would be 500 cattle a week travelling that road. If a bridge were up, I believe there would be something like 4,000 sheep. There is seldom less than 200 in a lot, and the average would be over two lots a week.
91. Do you think the convenience afforded would be such as to justify the expenditure upon this bridge? I think so.
92. Upon a high-level bridge? Yes. It will have to be substantial, and not liable to be swept away.
93. You think it would be a proper investment of public money to put £20,000 in an iron bridge? I believe so. There will be a greater demand for meat and other things every year as the population increases.
94. But the population of this district will not increase very much? I do not think it is decreasing. There is no doubt, if there was a bridge here, more people would settle down. I do not look on it as a local requirement, but as one for the whole of the people throughout the whole of the northern part of the colony.
95. You look at it as a high road? Yes.
96. *Mr. Hurley.*] You put this bridge down as a sort of squatters' bridge? I put it down as a bridge for the use of the public in general.

- J. Brown,
Esq.
8, Mar., 1890.
97. What class would benefit by the construction of a bridge at either of the three points named? The whole of the people travelling in the northern district.
98. Would any agricultural population benefit by it? I think so, in the course of time.
99. Would general merchandise be taken over? I think so. I think it would be used by the public in general.
100. You referred to the value of meat brought by road to market compared with the cattle that are trucked? Have you ever taken into consideration the probability of cattle being slaughtered inland and taken to market by refrigerating cars? There has been some talk about it, but I do not think it will ever pay.
101. Supposing facilities were given by the Railway Commissioners for taking meat to market in a chilled condition, would it not be more beneficial to the consumer and producer to send it by rail? I cannot say, for I do not know what they would charge per truck.
102. But I mean if the charges are favourable? In that case they might prefer to send by rail, but if they could get it cheaper by driving they would drive.
103. Would it not be better to the consumer that cattle should be killed inland and brought to market in the way suggested? It might, if the market could be regulated.
104. Are you aware they can take cattle and sheep from here to England with perfect safety and sell it? I think they take sheep, but not many cattle.
105. You admit it will be more advantageous to the consumer in the metropolitan market to have his meat conveyed to him through the chilled process, than by driving? I daresay it would.
106. Therefore, if refrigerating cars are used, there will be no great necessity for the construction of a bridge at either of the points named? I think there would. All the people in the locality would require the bridge.
107. What is the population of the district? There will be between 400 and 500 people.
108. The holdings are of a large character? No; they are small, with the exception of about four.
109. Is the land suited for anything else but pastoral purposes? You cannot have better agricultural land in the colony.
110. You only require population to make the place reproductive? That is all.
111. You said something about the bridge paying for itself, how do you make that out? I said the people would be satisfied to pay a toll. If the bridge were a wooden one, and did not cost much money, a toll might pay the interest on the cost of construction.
112. You are aware that the life of a wooden bridge would be only about twenty-five years, whilst an iron bridge would probably last four times that length of time? Yes.
113. You are aware that tolls, generally, are abolished, and that people have an aversion to paying them? Yes.
114. This bridge would only be used for travelling stock? Lots of people going up north travel on horseback. They do not all go by train. It is the high road to the north-west and the north. It is the travelling-stock road, and the road for everything else besides, right up to Cassillis and out north. At the present time there are no teams coming round Jerry's Plains for want of a bridge, but years ago I have seen twenty or thirty teams come round.
115. How many times was the river impassable last year? I could not rightly say. I suppose it must have been impassable three months out of the year for people not on horseback. People come over at the risk of their lives. If we had seasons in the future like that we had last year, there would only be three months in the year in which the river would be passable.
116. And you would only have the bridge used three months out of the twelve? It is a hard matter to get sheep to go through water; therefore sheep would always use the bridge at any time.
117. You have, in reality, not paid any attention to the question of cattle and sheep being brought to market in a chilled condition? I cannot say I have.
118. If that system were carried out and facilities for conveyance were given by the Railway Commissioners, the meat would be sent to market by rail? I expect so.
119. In the event of that system being carried out, a bridge would practically not be used by sheep? I do not expect the whole of the sheep in the northern district would be chilled. There would have to be more chilling places than one to do so.
120. Have the people of the northern district been looking for this bridge? When I was in the House, £10,000 was placed on the estimates for a bridge at Bowman's crossing, and one at Denman's. The Denman people got a bridge, and the Jerry's Plains people did not.
121. Do you not know that in those days members asked for most outrageous things on the slightest provocation? I do not think, during the time I was in the House, I asked for anything outrageous. I asked for what I considered was a public benefit.
122. And not to please your constituents? No.
123. *Mr. O'Sullivan.*] Do the people send a large number of cattle from this district down to Mr. Richards, at Riverstone? Yes.
124. I suppose he is likely to continue his works there? Yes.
125. And, probably, he will add the chilling process to his works? I cannot say.
126. Then the road is likely to be required to send cattle to Riverstone? I think so.
127. You seem to advocate the construction of a bridge at Bowman's crossing? I have no particular spot to advocate.
128. Are you aware that Bowman is opposed to this bridge being constructed there? No; I had no conversation about it. I do not think he is against the bridge at what is termed Bowman's crossing. Perhaps he is against the bridge at the Rocks, or at Gee's.
129. Why is Mr. Parnell opposed to the bridge at his crossing? I cannot tell you unless he considers the roads through his property would do an injury.
130. Do you think the people generally who use that road would prefer to have a bridge at Gee's crossing? No doubt the local people might.
131. The local people do not appear to be the most interested in this proposal? No. The public in general are in favour of a bridge being erected; but they do not care where, so long as they get one.
132. Can you state the number of cattle which went down the road last year? From 400 to 500 horned cattle a week, and a number of horses as well.

133. And all these crossed without a bridge? Yes, by swimming, and running the risk of being drowned.
134. Did they go down to Wiseman's Ferry? Yes; they take that road after leaving Jerry's Plains.
135. They would have to swim these, then? Yes; there is a punt there, but they prefer swimming. They have conveniences there; but here we have only a little boat, and the current is four times stronger here than there.
136. Do you think a good punt here might suit you? Yes; it might suit at Bowman's crossing for the sheep, if they are taken care of, and perhaps for the carts and people on horseback.
137. In view of this chilling process becoming general, and special cars being constructed, there is a prospect that these travelling routes will not be required, excepting at places like Mr. Richards', at Riverstone? I think the Government will do an injustice if they ever shut the reserves or roads up, for we do not know whether the experiment will pay or not.
138. If the chilling process is successful and the necessity of travelling stock to Sydney is dispensed with, the chief argument in favour of a bridge would be removed—In view of the chilling process being successful, would it not be better to have a good punt and boat at Bowman's crossing for the present? A bridge would be far better, but a punt might suit local requirements.
139. Is there sufficient justification, from the point of view of local requirement, for the construction of this bridge? I think there should be. There are bridges at other places which do not so much require them as this.
140. But this bridge is to cost over £20,000—Is there strong enough argument in favour of the construction of a bridge to cost as much as that, for local purposes, when possibly a punt or wooden bridge would be sufficient? We want some way of getting over the river in time of flood, either by punt, a good substantial bridge, or otherwise.
141. What do you think it would cost to construct a fairly good wooden bridge? I am no judge of these matters, but I think £6,000 or £7,000 ought to make one.
142. In view of the probability of the chief argument in favour of the construction of this bridge being removed in the course of a year or two, do you think a bridge costing £6,000 or £7,000 or a good punt would serve the requirements of the district? I daresay it would serve them, but not, perhaps, as well as a bridge.
143. Have you ever been to Wilcannia? No.
144. You know how sheep are crossed over some of those wide rivers out there? No.
145. You know there is a strong fall down the Darling River? There is more fall in the Hunter than any other river. If the river is more than half bank high here, you cannot take a punt across. You cannot take a punt across if the river is anything more than 8 feet high.
146. You know that enormous flocks of sheep and herds of cattle, 2,000 in number, cross at Wilcannia? Yes, but I do not think there is such a strong current there.
147. They cross the sheep there with a pontoon, with rails stretching across the river, and it seems to serve as well. You think the current of the Hunter would be too strong to allow of that being worked here? Yes.

J. Brown,
Esq.
8 Mar., 1890.

Edward Parnell, Esq., sworn, and examined:—

148. *Chairman.*] Are you a resident on the Hunter River? I was for a number of years, but I am living in Newcastle now.
149. But you retain your interest in property there? Yes.
150. You know the traffic of the locality well? I do.
151. During the time you were resident there, was there a bridge? Yes, for a short period.
152. Where? Bowman's crossing.
153. And that was swept away by flood? Yes.
154. Was that a low-level timber bridge? Yes.
155. What height above the bed of the river was it? I think about 10 or 12 feet.
156. It was available for all freshes which did not raise the water more than 12 feet? Yes.
157. But in heavier floods it was closed? Yes; the debris collected and lifted the bridge away.
158. Would you again recommend the erection of a low-level bridge? No; it is a waste of money.
159. When that bridge was in existence was it a great convenience? Yes.
160. And has its absence been much felt? Yes.
161. What has been the effect of the destruction of the bridge on the cattle traffic? It has caused it to deviate.
162. Where to? To the railway.
163. You think it has thrown traffic on to the railway? Yes.
164. And the reconstruction of that bridge would take traffic a little [from the railway? It would. At the same time it would confer great public benefit.
165. Do you think one bridge between Singleton and Denman would be sufficient for the whole of the district? Yes, it would for cattle and sheep, but for people wanting to come to Singleton, a bridge is necessary at Wiseman's crossing-place, a place called Maison Dieu. Otherwise one bridge would be sufficient.
166. You think there should be a bridge at Maison Dieu, as well as at Jerry's Plains? Yes.
167. That is the shortest track to Singleton? Yes.
168. When the river is down they take the ford there? Yes.
169. It is only in flood-time they go round by water? Yes, it is 16 miles from the post office, Jerry's Plains to Singleton, and to go round in flood it is 25.
170. Has there been any attempt to have a punt on the Hunter River? Yes.
171. Where at? Bowman's crossing.
172. How did it work? Badly, and dangerously.
173. In what way? In the first place, the current was so strong I have seen drovers refuse to go over, although there was real necessity for so doing.
174. At what height of water? About the usual level.
175. When it is 10 feet high it begins to be useless for a punt? Yes, and it is useless when it is very low. When it is very high the stream is too strong for a punt to work, and when it is too low a punt will not move, and sheep are very difficult to get over in winter time. I have been stopped when it has been only a foot deep.

E. Parnell,
Esq.
8 Mar., 1890.

- E. Parnell,
Esq.
8 Mar., 1890.
176. If the crossing were near Gee's crossing, it would enable people south of the Hunter to get at one of the railway stations? Yes.
177. Which would they go for? Liddell or Camberwell.
178. Is there a good cross-road? No; one would have to be made.
179. And the idea of making a bridge for that purpose would necessitate a new road from Jerry's Plains to the railway? Yes.
180. Is such a road wanted for the traffic of the district? Individually, I do not want the road, but I think the people at Jerry's Plains would benefit by it.
181. It would have to go through your property? Yes.
182. And you would rather not have it there? Yes.
183. Would you prefer the bridge to be at Bowman's? Yes, I wish it to be understood I was opposed to the erection of a bridge at Gee's crossing-place, believing Bowman's was the best, but when I understood that the site at Bowman's was objectionable I withdrew my opposition, and I say now that if a bridge at Gee's is beneficial to the public, I do not think I have a right to stand in the way. It would do me a considerable amount of harm, because it would go through my cultivated property, and it would also do Mr. Pearse harm.
184. But still you admit the banks are better at Gee's crossing? I am not an engineer.
185. And it would also be a short cut for the Jerry's Plains people to the railway? It would.
186. Do you think the traffic crossing here is important enough to justify this large expenditure? I am inclined to think so. I think the traffic would grow.
187. During nine months of the year you can get stock across without trouble? No, not sheep.
188. Are there many sheep come down this way? I have been at Newcastle a good deal this last three years, but I go up country occasionally, and I think there would have been more come down if they could have crossed.
189. Do you think sheep suffer as much from being carried by rail as cattle? I do not think they do. I think the wool prevents them from being bruised.
190. Sheep do not travel so much on foot to Sydney now, since the railways were opened? I think that if the railway only took 100 there would be 100 less travelling by road. I do not think it has made any perceptible diminution in the number going to Sydney.
191. Do you think this bridge is mostly wanted for the locally fattened stock, or for stock coming from the north? For stock coming from the north.
192. You advocate the construction of the bridge more as a national than a local work. Yes.
193. And you think it is really wanted? Yes.
194. And although it would be a decided advantage to the local people, it would be a greater advantage to the through stock people? Yes, it would be scarcely any advantage to myself.
195. That is because your land would be cut up? Yes.
196. But to you, as a person sending stock to market, it would be a convenience? Yes.
197. It will lead to a great deal more communication between the north and south bank? Yes.
198. In wet weather like this people do not travel stock unless obliged? If there is a good market they will travel at any time.
199. What I want to know is whether the stoppage of traffic for three or four days materially affects business? I think so, because there is no place to feed sheep upon, unless they trespass.
200. There are reserves? Yes, a little distance back.
201. In wet weather like this the reserves have plenty of grass upon them? Yes.
202. So that when it is too wet to cross the river, there is always food to be had? Yes.
203. If you are stuck up you have something to eat? Yes, unless the river comes down suddenly, which is unusual.
204. For how many days at a time have you known the river to be impassable? Two or three days for cattle, and at least a week for sheep.
205. *Mr. Trickett.*] If a bridge is built at Bowman's crossing will it be absolutely necessary to erect another at Maison Dieu? Not absolutely necessary, because a bridge at Maison Dieu would only be for the benefit of the people at Jerry's Plains.
206. If a bridge were erected at Gee's crossing, would it be absolutely necessary to have one at Maison Dieu? No, because I think the people would then go up to Liddell railway station, if a road were made, or to Camberwell.
207. Do you think that if a wooden bridge could be built for £6,000 or £7,000 it would be a desirable work to carry out? No, because I have heard it said that an iron bridge would last four times as long as a wooden one.
208. Have you known of frequent stoppages of traffic up the river? Yes. I know of one person who suffered whilst endeavouring to cross. He suffered from hernia, which became strangulated, and he died in consequence of an operation. I know of one person who, six or seven years ago, was killed or drowned there, and it would not have happened if there had been a bridge. The other day, at Jerry's Plains, a man told me he had been nearly washed off his horse in endeavouring to cross.
209. Where do the people of Jerry's Plains make for,—Singleton or Muswellbrook? Singleton as a rule, but occasionally they go to Muswellbrook. If they go to buy cattle at the sale yards they go to Muswellbrook, and then the bridge will be a great convenience.
210. Do you regard the district as one for settlers? I do not know a better district in the colony for settlers, if produce was selling at a paying price.
211. Is there a large area of land open for settlement? No; it is an old settlement.
212. Since the old bridge was washed away, there has been serious inconvenience? Yes; I have experienced inconvenience myself.
213. Do you know Krust's lane? Yes.
214. Did you ever hear of Mr. Lawrence recommending the construction of a high-level bridge at that place? Yes.
215. Would that meet a public convenience? It would.
216. If a bridge were constructed there would the people use Liddell station? Yes.
217. Can you give us an idea of the distance from there to Liddell? About 9 miles as the crow flies. It would pass through a large quantity of cultivated land, even by that road.

218. You know the bridge at Denman? Yes; it was at Denman that the unfortunate case of the man suffering from hernia arose.
219. You do not think that that district is likely to give occupation to an agricultural class, unless they have more easy access to market for produce? Yes; until we have a railway, which was promised by the Government. I believe the last Government promised a survey. A deputation, of which I was a member, was promised by Mr. Sutherland that there should be a survey, and we have heard nothing about it.
220. Promises of surveys for railways were made in a very indiscriminate fashion some years ago? I did not value it much.
221. There is not a sufficient population to justify an expenditure of that kind? It would be a great feeder for the Singleton line.
222. From what you say there seems to be no probability in the immediate future of an increase in the agricultural population of the district? I do not think so.
223. So that, practically, this bridge you are asking for will be for the benefit of the pastoral class? Yes; but if the bridge were erected at Gee's I have no doubt that produce would go to Liddell, and it would grow in consequence.
224. *Mr. O'Sullivan.*] Are most of the lands about here private holdings? Yes.
225. You are in the Eastern Division, are you not? I think so.
226. Are there any leasehold areas to be thrown open? None, that I am aware of.
227. Do none of the pastoralists about here own leasehold areas? I think none. It was all taken up at once.
228. Then there does not seem to be much scope for an agricultural population? No; unless the present proprietors chose to let their land.
229. What is the land in this district most suited for? At Jerry's Plains' the other day, I saw the finest corn and onions and other products I have ever seen. It is not only good for agriculture, but for fattening. Three years ago I had some heifers taken to Maitland sale-yard, and Mr. Brunker, a good authority, said they would have done as exhibits in England. I had as many as 40 bushels to the acre of wheat. The wheat was exhibited in Collins-street, Melbourne, but it does not pay to cultivate it. I think it costs 6d. a bushel to bring it to the Singleton market alone. Nature intended this district, I believe, for an agricultural and grazing one.
230. You think, then, there is scope in this district for agriculturists? If they could get a better price for their grain. People will not grow grain at 3s. per bushel when they can get £5 and £6 for bullocks.
231. *Mr. Hurley.*] You have heard the examination of previous witnesses in regard to the probability of chilled meat being conveyed to the markets? Yes.
232. You recognise the fact that beef or mutton taken to market in this state is more acceptable to the consumer than if driven or conveyed by train? Yes.
233. If the system were carried out successfully, could you not reach market at the same cost? Yes.
234. Would not the necessity for this bridge be then done away with in a great measure? If all the sheep and cattle were killed and frozen up country and sent to market, it would do away with the necessity of it a great deal. But I agree with Mr. Brown when he says he does not think the experiment will pay. I am told, what with the room which will be occupied by ice, &c., the sheep will take up more room than they do at present. Consequently, the railway would have to charge more.
235. It is all a matter of cost? Yes.
236. The difficulty of reaching market and the high rate of charges by railway—Are these the reasons why there is not an agricultural population on the soil? Yes. If they opened the road to Liddell the difficulty would not be so great—25 miles to bring a bushel of wheat from Jerry's Plains, and 17 miles when the river is low.
237. The construction of a first-class road to Liddell would probably lead to a larger population? Yes.
238. And it would be remunerative to the Department? Yes. I may mention that there are a number of young men who supplement what they get from small farming by droving, and I think if the bridge were not erected, these persons would lose their occupation. The result would be that they would become discontented and would probably join the ranks of the unemployed in Sydney.
239. What will become of your cattle if, because the bridge is not constructed, these men leave the district? The people will have to look after them themselves.
240. You will be forced into the position of sending them by rail? Yes. Of course, the railroad is a most important interest, but I do not think it should be carried on at the expense of all other interests.

Mr. Benjamin Harley, storekeeper, sworn, and examined:—

241. *Mr. Hurley.*] What are you? A storekeeper.
242. Where do you reside? At Jerry's Plains.
243. Have you lived there long? Close on twenty-five years.
244. You know the district well? Yes.
245. You know the subject-matter before the Committee? Yes.
246. You have heard of this crossing? Yes.
247. Which do you think would be most favourable for the construction of a bridge? Gee's.
248. Why? Because it is nearer to Liddell and nearer to Muswellbrook, and travelling stock could come that way, by a road being made through Mr. Pearse's.
249. Do you look on the construction of the bridge as being chiefly in the interests of the pastoral class? No; it would be for the benefit of the public at Jerry's Plains.
250. Would not general merchandise be taken along the road? Probably grain and corn would.
251. How do you get your other goods? I have to go round to Singleton, whereas I could go to Liddell if the bridge were constructed.
252. Are there any other storekeepers in the district save yourself? Only one at present.
253. What population do you generally serve? Almost all who are in Jerry's Plains. They number something like 400 or 500.
254. What do you pay for the freight of your store goods? £1 per ton.
255. And if you could reach Liddell it would be 50 per cent. less? Yes.
256. Is there any probability of a settled agricultural population raising itself there? Yes; there is a lot of Crown land, called the temporary common, available.

E. Parnell,
Esq.

8 Mar., 1890.

Mr.
B. Harley.

8 Mar., 1890.

- Mr. B. Harley.
8 Mar., 1890.
257. Are there any reserves? Yes, at this end of the town.
 258. A large area? Yes.
 259. Suitable for agriculture? Not the reserves, but the temporary common is suitable.
 260. Do the people of the district follow any other vocation than that of droving? Yes; there are a few farmers, and at Doyle's Creek there is a lot of them.
 261. Where do they send their produce? To Singleton.
 262. Is it of a productive character to them? Yes, they make a living by it. I was farming there myself for seventeen years.
 263. What is the produce? Principally wheat.
 264. Looking beyond the fact that the bridge is asked for chiefly on behalf of the pastoralists, you believe it would be of great advantage to the general public otherwise? Yes.
 265. Which crossing do you think is the best? Gee's. It has the best banks, and is the best site I know of.
 266. Have you noticed how many times the river was impassable last year? Of late it has been impassable a good deal. Within the last year I have come three times to Singleton across Maison Dieu, and I have had to travel 26 miles additional by Warkworth.
 267. You think the bridge is absolutely necessary in the interests of the general public? Yes.
 268. Is the road good or bad? Very bad in places.
 269. Are the roads generally ill-attended to? Very badly, especially from Bulga to Jerry's Plains.
 270. Mr. O'Sullivan.] If a bridge were constructed at Gee's crossing, and a road were made to Liddell, the railway traffic between Singleton and Liddell would develop? Yes, there is no doubt about that.
 271. Would it be better for the people of Jerry's Plains to be served that way or by way of Maison Dieu? Better by Liddell, I think.
 272. Is that a reason why you advocate a crossing at Gee's? Yes, and it would convenience the public travelling up country.
 273. If the river is up you have to go away from Singleton 26 miles to go up country. How many people would be served locally by the construction of the bridge at Gee's crossing? The whole of the public, I think.
 274. What about their number? Somewhere about 500.
 275. A bridge constructed at Bowman's crossing, then, would serve you as well for the purpose of reaching the railway as one across Gee's? No; in fact there is no site at all at Bowman's for a bridge.
 276. But a bridge at Bowman's would better serve the travelling stock? Perhaps it would.
 277. Is Bowman's crossing on the through stock route? Yes.
 278. You mention that there would be some Crown land—partly of the temporary common—open for selection. Where is that? Close on Jerry's Plains, in the Muswellbrook district.
 279. How many acres do you think are available for settlement on the temporary common? About 4,000 acres.
 280. Is not this temporary common required by the public? No.
 281. You think they have commonage enough in the permanent one? Yes; we had a meeting the other night, and decided to try and get it thrown open.
 282. Who uses the temporary common at present? The inhabitants of Jerry's Plains.
 283. Is it not leased to one man? No.
 284. You spoke of some reserves; are they not required for public purposes? Some of them.
 285. What are they? Travelling stock and timber reserves, and church and school reserves.
 286. Have these timber reserves any timber upon them? Yes, some of them.
 287. Are they leased for any particular purpose? I could not say.
 288. Do you think these timber and water reserves are useful for travelling stock? Not all of them.
 289. You think some might be thrown open for selection? Yes.
 290. If a bridge were constructed it might induce persons to take up land around Jerry's Plains, and become permanent settlers? Yes.

Mr. Henry Parker, grazier, sworn, and examined:—

- Mr. H. Parker.
8 Mar., 1890.
291. Chairman.] Where do you reside? At Jerry's Plains.
 292. What business are you engaged in? I am a publican and grazier.
 293. Do you rent Crown lands? No.
 294. Do you occupy your own land? Yes.
 295. How long have you resided there? Seven years.
 296. During the time you have been there, there has been no bridge? No.
 297. Is it your opinion that the want of a bridge has been much felt? Yes.
 298. By what class of society? Mostly by the graziers.
 299. Graziers on the north or south side? On the north.
 300. Wanting to get south with their fat stock? Yes.
 301. Is the district north of the Hunter, between that point and Muswellbrook, given up to fattening stock? Yes.
 302. And when it is fattened it has to be brought to Sydney? Yes.
 303-4. Does it generally prefer to go by road? Yes.
 305. It does not go by railway? Sometimes it does.
 306. And the bridge is needed as the shortest cut to Sydney? Yes.
 307. During the time you have been here, how often has that river been unfordable for stock? In the whole time it has been unfordable for seven or eight months altogether.
 308. And this year it has been more unfordable than ever it was before? Yes.
 309. And has the inconvenience been very great this year? Yes.
 310. Are there many agricultural producers north of the river? Not many.
 311. The land is principally in fairly sized estates? Yes.
 312. It is nearly all given up to grazing? The greatest portion is.
 313. And mostly for cattle purposes? Yes.
 314. Very little sheep? Yes.
 315. Have you the opportunity of seeing the travelling stock come down from the north? They come past my door.

Mr.
H. Parker.
8 Mar., 1890.

316. Which is the greatest—the travelling stock or the local stock? As a rule it is mostly northern stock.
317. It is principally as a high road that this road is used? Yes; it is the high road from the northern district to Sydney.
318. And it is to improve it that you want the bridge? Yes.
319. When you want to get to Sydney which way do you go? I should go to Singleton.
320. You do not go to Liddell? No.
321. It is a shorter journey to Liddell? It is, but it is a rough road.
322. Then even if a bridge were made, you would not care if the road were no better to go to Liddell to get to Sydney? No.
323. Then the bridge would not throw much passenger traffic on the railway—It would all go to Singleton—The chief value of this bridge, at present, would be that it would be a stock bridge? Yes; at present.
324. Where would the market for wheat be? It would come to Singleton to go to Sydney.
325. Would Sydney be the best market? Yes.
326. It is no good sending it north? No.
327. It is better wheat land up there than here? I do not think so.
328. How about Glen Innes? That is right enough.
329. You have wheat-growing land in the north as good as here? Yes.
330. Do you think it would pay to grow wheat here and send it to Sydney? Not with the present state of the haulage.
331. You would want cheaper railway freights? Yes.
332. If the Government spent money to make this bridge, they would have to reduce railway freights to enable farmers to live? Yes.
333. Are there many farmers at work? Yes.
334. And they make a living? Yes.
335. Could not a still larger number make a living? It is only a hand-to-mouth living that they make.
336. Would Maitland or Singleton be the market? Yes.
337. How much would you have to pay for that distance? I do not know.
338. Do you get goods by rail to Singleton? Yes.
339. How much a ton do you pay for them from Sydney to Singleton? I could not tell you.
340. How much from Singleton here? £1 a ton from here to Jerry's Plains.
341. Is that nearly one-half of what you pay for all the rest of the way to Sydney? No.
342. And the 26 miles costs you as much as all the rest of the way from Singleton to Sydney? No. We mostly get our goods from Maitland.
343. You do not deal with Sydney? Not of late.
344. *Mr. Trickett.*] Which do you think the best site for a bridge? I should be in favour of the old site. I consider the old site suits all the north-western requirements.
345. That is Bowman's crossing? Yes; it is the main stock route from the north to Sydney. To give you an idea of the number of sheep crossing, I may mention that 47,000 left one station alone in 1888, and they all went over Bowman's crossing. If they cannot get over they come by Singleton, which is a great deal further round.
346. Has the stock traffic fallen off much during the last few years? Not a great deal. Last year it fell off on account of the dryness of the season.
347. And on account of the diminution of stock generally? Yes.
348. Has it fallen off much by reason of railway competition? I do not think so; not a great deal.
349. Do stock-owners prefer the road to the railway? As a rule.
350. That is in favourable seasons? Yes.
351. Why is that? Because they seem to think that the cattle go to market better and they are not knocked about and bruised. I know that butchers would rather give from 4s. to 5s. a head more for road-driven cattle than for trucked cattle. There is a great deal of loss in cattle going by trucks.
352. How do you view the idea of sending the carcasses of cattle down under the freezing process? I fancy myself that that would be in favour of stock. I think it would suit better than taking them by road.
353. Will this bridge be of any local advantage? Yes.
354. In what way? For people in the neighbourhood of Jerry's Plains. A number of people who live just over the north of Bowman's crossing would come this way if there were a bridge.
355. They would come to Singleton? Yes.
356. Do you think stock-owners would pay a toll on a bridge? I should think they would be willing to do so. I think it would be a fair thing to charge a toll.
357. Supposing the Government decided to erect a bridge at Gee's crossing, do you think that the stock-owners would always go by Bowman's crossing if they could get over for nothing? I do not know. I expect they would if the river was down; but I do not think it would be right to allow them to come so close.
358. That could be dealt with by regulation? Yes. I know that we had to pay to go over the Richmond bridge. Some people went a mile to avoid it, and were charged all the same.
359. A bridge over Gee's crossing would necessarily interfere with Pearse's property? Yes.
360. Would it injure it much? I think it would cut a great deal of his frontage off.
361. Have you ever heard him say what he would want for compensation? No.
362. Could you give us any idea what the compensation would be? I could not.
363. Is there anyone who could give us information of that kind? Mr. Cousins might.
364. Is Mr. Cousins a landowner? Yes.
365. *Mr. O'Sullivan.*] If a bridge were constructed at Bowman's crossing it would have a tendency to take the local traffic to Muswellbrook, instead of Singleton? I do not think so.
366. Would it not bring the local people nearer to Muswellbrook than Singleton? Not the Jerry's Plains people.
367. If they had to cross at Bowman's they would be nearer then to Muswellbrook than Singleton? No, nearer to Singleton. It is 25 miles round by Bowman's crossing to Muswellbrook, and only 17 to Singleton—that is by way of Maison Dieu.

- Mr. H. Parker.
8 Mar., 1890.
368. Do you think the wants of the district and of the travelling stock proprietors would be better met by having one large high-level bridge, or a fair sized bridge at Bowman's crossing, and a fair sized bridge at Maison Dieu? I think the public would gain an advantage by having the two, because it would give them the privilege of coming straight on, whereas they have now to come round.
369. One bridge might cost £25,000;—if a good bridge were constructed at Bowman's for £8,000 or £10,000, and another at Maison Dieu for £7,000—£17,000 in all—the latter work would be cheaper to the State, and give more accommodation to the residents generally? By far.

Mr. Walter Young Cousins, grazier, sworn, and examined:—

- Mr. W. Y. Cousins.
8 Mar., 1890.
370. *Chairman.*] Where do you reside? Singleton.
371. What is your occupation? I am a grazier in the Upper Hunter, and a wine-grower in the Lower Hunter.
372. Where is your land on the Upper Hunter? Four miles distant from Denman.
373. Is the bridge at Denman much used by travelling stock? Yes, while the river is impassable.
374. Where does that stock come from? Mostly from the interior—from the north-west. It crosses the river at Denman.
375. What route does it take, then, to get to Sydney? *Via* Jerry's Plains.
376. Does it cross the Hunter again? Yes.
377. Then it crosses the Upper Hunter once at Denman and the Lower Hunter at Bowman's? Yes.
378. There is a bridge at Denman? Yes.
379. Is it a high-level bridge? Yes.
380. A good bridge? Yes.
381. Do you know what it cost? No.
382. Is it wood or iron? Wood.
383. Would a bridge of that quality be sufficient at Jerry's Plains? I think so. If the people get a bridge of this description at Jerry's Plains they ought to, and will, probably, be satisfied.
384. Do you think the cheapest description of high-level bridge which the engineers could put up would satisfy the people of Jerry's Plains? I would not say that. I do not know sufficient about bridge-making to form an idea.
385. All you want is the narrowest bridge which will take a vehicle across? Yes. We do not want it too narrow, because travelling stock require room; they do not require to be hemmed in.
386. What is the narrowest bridge which will suit travelling stock? About 15 feet or 16 feet.
387. They go through less than that to get into the yards? Yes; but stock, as a rule, when they get on a bridge, commence to rush, and if they have not room they might be injured.
388. But still you think a 15-foot bridge above flood would meet the requirements? I do.
389. Do you think a bridge of that kind at Jerry's Plains and another another at Maison Dieu would be preferable to one expensive bridge? I think it would suit the public better.
390. When you are coming from Denman to Singleton, do you pass through Jerry's Plains? Yes.
391. And in dry weather you go by Maison Dieu? Yes.
392. Looking at the question of convenience to Singleton, and the people of the north-west, two small bridges would be better than one big one? Yes.
393. If you live at Denman you know more of the traffic from the north-west than of that which comes from the north? Yes.
394. Have you heard people from the north complain of the crossing? I have heard complaints, and I have seen people who have had occasion to complain.
395. Do you really think there is any serious obstruction to the traffic to Sydney? I really do.
396. We are told that the cattle are seldom detained more than three days;—is that a serious matter on a long stock journey? Yes.
397. Would it not give the cattle a little spell? Yes.
398. It is no great harm to wait three days? But they are often inconvenienced by not being able to get on to a reserve. They may have to go back 10 miles or 12 miles to the nearest reserve.
399. But if a reserve is handy a delay does not hurt them? Yes, it does. The travelling backwards and forwards would do them harm.
400. That is if they had to go back? Yes.
401. If they are near a reserve three days' rest would not hurt them? I think not; but the owner might be affected by not being able to get to market.
402. The want of a bridge is more inconvenience to a man travelling sheep than cattle? Yes.
403. And as a rule the sheep take the railway more than cattle? Yes; but I do not think they would if they were not obstructed by the river. I do not think anyone would travel sheep by train in preference to the road.
404. You have not had much experience in travelling stock yourself? I have,—both cattle and sheep.
405. By this route? Yes.
406. Have you ever been stuck up at any time? Never. I never started if I thought there was a chance of being stuck up.
407. But the people coming long distances have to take their chance? Yes.
408. And if they know that the river is up cannot they stay at the nearest reserve? They can.
409. And they always do know in these telegraphic days? They certainly would know at Denman.
410. A man knowing that the river was impassable at Bowman's, would not start from Denman? I think not. Under the Reserve Act they are only allowed to remain a certain time on the reserve.
411. But if a man stays two or three days with cattle that is enough? I think twenty-four hours is the limit.
412. Still, even on the main roads, there is a good deal of grass? I do not think you will find much on a travelling stock road.
413. Not even in a season like this? I daresay you could find it now, simply because there is no traffic on the road on account of the river.
414. When you have once got across the Hunter, there is nothing to stop you between that point and Sydney? Nothing that I know of.
415. Do you think the traffic in this district is such as to justify an expenditure of £20,000 on a bridge or two bridges? I think so.

416. Do you prefer two bridges at £10,000 each, or one at £20,000? Considering that there was one bridge washed away at Bowman's crossing, I do not know how to reply to you.
417. *Mr. Trickett.*] Do you think the stock traffic has diminished during the last few years? I believe it has during the last twelve months.
418. For what reason? Owing to the impassable state of the roads and river.
419. Not by reason of the road being a bad one? I do not think so.
420. Do you know whether much stock is sent by train now? I believe there is not.
421. Sheep or cattle? Principally sheep.
422. It was given in evidence in Sydney that there was hardly a hoof mark to be seen on Sir Thomas Mitchell's line, and that on the other road, *via* Jerry's Plains, there was no evidence at all of stock traffic. What do you say to that? A statement of that kind would not be correct. I think Mr. Brown and Mr. Parnell know different.
423. Are you of the same opinion? Yes.
424. Any person who has been in the habit of going there frequently would not hazard such a statement? No.
425. You know Mr. Pearse's property? Yes.
426. And a bridge at Gee's crossing would necessarily involve the taking of some of his land? I believe it would.
427. It would be an advantage to us to know what the cost to the country would be. Could you give us any idea? I could not.
428. About 3 miles of road I believe would go through his place, and he would be deprived of some water frontage? He would.
429. Could not you give us an idea of the amount of compensation which would be required? Not the slightest.
430. Is Mr. Pearse in town? I really could not say.

Mr. W. Y.
Cousins.
8 Mar., 1890.

Edward Alford, Esq., Inspector of Stock, sworn, and examined:—

431. *Chairman.*] What position do you hold in the Public Service? Inspector of Stock for this district.
432. How far does it run? From Hall's Creek to Branxton.
433. And this is about the centre of your district? Yes.
434. Are you stationed here? No, at Warkworth.
435. You know the proposed sites for a bridge? Yes, I have heard of them.
436. Have you crossed Gee's crossing and Bowman's? Yes, hundreds of times.
437. Which do you think is the best for a bridge? I should think Bowman's. It has a good road to it, and is good on each side.
438. You do not profess to speak from an engineering point of view? No.
439. For stock purposes either would do equally well? Bowman's would be the best.
440. So far as the Jerry's Plains people require quick access to the nearest railway station, would not Gee's crossing suit better? Yes.
441. There is some advantage on that account? A little.
442. If the engineers said they could put up a cheap bridge better at Gee's than at Bowman's, you would accept that as a sufficient reason why their opinion should be carried out? I suppose it would have to be accepted, but I do not think it would be as good for stock traffic.
443. You know the stock passing down? Yes, when I am on the roads.
444. Is it mostly local stock, or stock from the north? It is decidedly not local, but from the north.
445. Then the bridge is not so much wanted for local purposes as for the stock road? No, it is wanted for general purposes for the northern district.
446. Has the stock traffic this season been much injured by the rise of the river? Yes, they had to come round by Singleton.
447. They can get round? Yes; by going to Muswellbrook round by Singleton, and then back again almost to Warkworth, which is a distance of 60 miles extra journey to Sydney.
448. Has much stock had to go that distance this year? Yes.
449. If a high-level bridge, 15 feet wide, were made, would it not be enough for all purposes? Yes.
450. For one buggy to drive over? Yes.
451. You do not want a magnificent bridge? No.
452. Simply a way across the river when the floods are up? Yes; and one which will not wash away.
453. The needs of the district do not require anything more than that? I do not think so.
454. Does much timber come down the river? Yes.
455. The span must be wide enough to let it through? Yes, or it will wash the bridge away.
456. What do you think "wide enough" means? I could scarcely tell you; but it would have to be some considerable width. Sometimes huge trees, 60 or 70 feet long, come down.
457. They go end on sometimes? Sometimes they go straight.
458. For purely local purposes would this bridge be any considerable convenience? It would indeed. There is a great lot of stock from Muswellbrook, Denman, and other places, which has to go all the way by Singleton and down this metal road, and it plays the mischief with them.
459. But the bridge is not so much required for the mere local traffic? It is not so much required as for other purposes, because they can get over by boat.
460. When you say that these people have to go round 60 miles, you do not mean that they have to go all the way to Bowman's crossing to find the river unfordable? They may. It rises very suddenly sometimes. I have known stock come there and then go back to Muswellbrook.
461. Do not you think the Muswellbrook people know, in these telegraphic days, whether it is passable? They do not come by Muswellbrook, but by Denman.
462. Would not they know it at Denman? I have been caught myself at Denman. The Goulburn has risen so rapidly that I have had to turn back and go to Muswellbrook.
463. You know as a fact that this season's stock has been turned back from Bowman's crossing to Muswellbrook? Yes.
464. Are they obliged to go all the way back to Muswellbrook? They cannot go any other way.
465. Why cannot they go across country? Because they have no road. It is all private property—Bowman's, Pearse's, and Parnell's property.

E. Alford,
Esq.
8 Mar., 1890.

- E. Alford, Esq.
8 Mar., 1890.
466. They are obliged to stick to the stock roads? Yes.
467. Do you think the traffic is sufficiently important to justify the building of a bridge? From my experience, as a public officer, I think a bridge is really required.
468. Do you know the crossing at Maison Dieu? Yes.
469. Do you think a cheap bridge is required there? Yes; they cannot go over there with anything like a load on.
470. It is good enough for stock and buggies? Yes, when the river is down.
471. Buggies can get across? Yes.
472. But not teams? No, not if they are heavily laden.
473. You think, then, for the accommodation of the district, two bridges are wanted? Yes.
- 474-5. *Mr. Trickett.*] Have you any records of the stock which cross the river? Not here.
- 476-7. Where is your office? Twelve miles from here, at Warkworth.
478. You supplied some figures for Mr. Bruce? Yes.
479. Are they correct? They are. In fact they are under the estimate, if anything.
480. You stated in your telegram it was an estimate. Is there any check kept on stock? Yes; I know of lots of stock which I never see at all.
481. You gave the returns for 1888-9. Were the numbers for the preceding year more or less? That all depends on the season. In the bad seasons the stock traffic was very small indeed, but of course during these last two or three years it has increased wonderfully. But in the bad seasons there was nothing left up country to come down.
482. Do you see any indication of this being abandoned as a stock route? I cannot see it at all.
483. You say that it is still required and used? Yes, and will be used.
484. Do you see much diminution in the stock traffic since the railway was built? This last year it has not been so great, but of course the seasons are not so good up country.
485. You think that is the chief diminution? Yes.
486. Do stock-owners prefer the road or the railway for sending their stock? I think the road, because it is too expensive the other way. Of course, small stock-owners have to send by rail, because it will not pay them to send by road. Where they have considerable quantities they prefer the road, as being cheaper.
487. Any other reason? The butchers seem to like the road stock the best. It does not get so bruised and knocked about as stock carried by rail.
488. Do you think the stock-owners would pay a toll on the bridge if it were erected? I do not think they would have any objection, because there are reserves on both sides.
489. I suppose sheep are not so much sent this way, on account of having to cross the river? They must come round this way.
490. But even if the river has only 12 or 18 inches of water in it, it is difficult to get sheep across? It is.
491. Do you think more sheep would travel by this road if the river were bridged? Yes.
492. As a person having special knowledge of these matters, do you think the bridge would be of permanent utility? I do.
493. And it would not be merely for local people, but for the public generally? It is not for the local people at all, so far as I can see, because they can manage without it.
494. But, in conjunction with the stock routes, you consider it a necessity? I do.
495. *Mr. O'Sullivan.*] Why do you give preference to Bowman's crossing as a site for the bridge? Because it is on the main track.
496. Is there any other reason? Only because of the reserves at different places.
497. Are there any reserves near the old bridge? About 6 miles on one side and 5 on the other.
498. If they went to Gee's crossing would they have to go through private lands? Yes.
499. The Government would have to resume some land there to find accommodation for travelling stock? A great quantity. They would have to go 3 or 4 miles through Pearse's and also through Bowman's.
500. You are aware that one bridge has been already carried away at Bowman's crossing? I do not wonder at it.
501. Why? Because one thing was called a bridge which was not worth calling one. As soon as the first bit of fresh came it turned over.
502. Do you think if a bridge were constructed with iron pillars, with a good space between, to allow the logs to pass through, it would stand? Yes.
503. Do you think a safe bridge could be constructed there for £8,000 or £10,000? Yes.
504. How long ago is it since the bridge was last washed away? Twelve years.
505. Was it a very heavy flood? No.
506. It was a low-level bridge, I suppose? Yes. Two or three days after it was built I said to one or two gentlemen who were with me that when the first fresh came it would turn over like a table, and so it did.
507. A good high-level bridge, constructed with good approaches, would stand? I think so.
508. It would afford ample accommodation for travelling stock, as well as for people living in the district? Yes.
509. *Mr. Trickett.*] Could you tell us what compensation would be required if roads were taken through Bowman's and Pearse's property? I could not tell you. They would go through a lot of valuable land.
510. Do you think it would be a large amount? Yes.
511. Would it run into thousands? Yes, some thousands of pounds.
512. That is if it went over Gee's crossing? Yes; roads would also have to be made to allow Pearse's cattle to pass under the approaches—*i.e.*, bridges over the gullies and creeks which would have to be erected.
513. So that the other would be the cheaper as well as the better? I think so.

Mr. William Gillett, drover, sworn, and examined:—

- Mr. W. Gillett.
8 Mar., 1890.
514. *Chairman.*] What is your occupation? A drover.
515. How many years have you been a drover? About twenty-five.
516. During that time you have frequently crossed the Hunter River? Yes.

Mr.
W. Gillett,
8 Mar., 1830.

517. Where has your usual crossing-place been? Bowman's.
518. Do you know Gee's crossing? Yes.
519. Have you crossed there with stock? Yes; but it is private property, and we are not allowed to cross.
520. If a public road were made there, would it be as good a crossing as Bowman's? I do not think it would; Bowman's is the place for the bridge.
521. Do you remember the old bridge at Bowman's? Yes, I crossed it with stock.
522. Was it a great convenience? It was. It is the worst crossing-place on the Hunter, and it is the deepest water. You cannot cross sheep at any time very well.
523. Could a punt be worked there at flood time? I think so.
524. You do not think the stream is too strong? No.
525. You have crossed in punts many times? Yes; I think, however, the current would be rather strong for punts. I do not understand much about them.
526. Have you found any difficulty in crossing rivers with punts, owing to the strength of the current? Yes.
527. What is the longest time you have been delayed in consequence of the water being up? I was delayed at Bowman's ten days with sheep.
528. And how long with cattle? Two days, and then I had to go and cross at another place. Cattle have been there five and six days, and could not get over.
529. What is the nearest reserve to Bowman's crossing? There are none about there.
530. If you are stuck there, what do you do with the cattle? We pay for the feeding, or go back to Ogelby's Hill, 8 miles back.
531. If you go back 8 miles you get a reserve, but if you stop you have to pay for the feed? Yes.
532. Would a bridge with a 15-foot roadway be wide enough for cattle to cross? Yes.
533. They would take no hurt? I think not.
534. Did you know the bridge at Denman which was washed away? Yes.
535. Was it a good bridge? It did not stand very well. It was not a good bridge for cattle. It was too narrow.
536. What was the width? I could not tell you, but I know it was in a bad place. You could not get cattle upon it. There was a house close to it, and that is a bad thing for sheep.
537. In your opinion Bowman's is the best crossing-place? Yes.
538. Where have you brought cattle from—the north or the north-west? I have been bringing cattle for thirty years from all directions. I have crossed every crossing-place on the Hunter for 50 miles around.
539. There is no other place that stock could cross with more advantage than Bowman's? No.
540. If you cannot get across there you have to go round to Singleton? Yes, if you cannot get over there you have 35 or 40 miles to go further. You would have to go to Muswellbrook.
541. Is the Jerry's Plains Road still much used for stock? Yes.
542. And there is great business going on along there? Yes; I came with 2,000 sheep last night and had to go through Singleton.
543. Where were you when you first knew the river was impassable? At Muswellbrook.
544. You knew it there? Yes, and I had to come to Singleton.
545. If you know at Muswellbrook that you cannot get across you have not to go 30 miles out of the way then? No.
546. How much out of the way would you have to go? About 15 miles.
547. Have you any feed upon the road, then? No, it is nearly all lane and no reserves. There are good reserves at Bowman's.
548. Is the track from Singleton to the Bulga Road as good a track as Bowman's? No, Bowman's is the best and has more reserves.
549. In spite of the railway the stock sticks to this road? Yes, this is the proper road for stock.
550. When you have crossed at Bowman's what is the place you make for next? Jerry's Plains, and then Warkworth.
551. When you get to Warkworth you are pretty near to Singleton? 8 or 9 miles away.
552. Where do you go to from Warkworth? Straight on to Maitland, and then by Bulga.
553. You go by Warkworth in any case? Yes.
554. From Muswellbrook to Warkworth, by way of Bowman's crossing, is nearly as long as Muswellbrook to Warkworth by way of Singleton? From Muswellbrook to Bowman's is about 16 miles; from Bowman's to Warkworth is about 9 miles. That is 25 miles altogether.
555. If you go from Muswellbrook to Singleton, how much is it? 30 miles.
556. What is it from Singleton to Warkworth? 10 miles.
557. That is 40 altogether? Yes.
558. It is a long way round then? Yes.
559. If you go that extra distance that is the worst that happens to you? Yes.
560. If you are forced to go by Singleton the drawback is simply a journey of 10 miles with no reserves on the road? Yes; and it is all lane.
561. *Mr. Trickett.*] How many stock cross Bowman's crossing per week? I could not tell you that; but it is the best road for stock. All the Muswellbrook people send their stock that way, because it is the cheapest and has good reserves.
562. You are up and down the road continually? Yes.
563. Have you noticed any marked falling off in travelling stock during the last year or so? No.
564. Do you think that the road is as much used now as it has been all the time you have been on it? Yes, I think it is as much used now as ever.
565. Which method of getting stock to market do graziers and others prefer—road or rail? The road.
566. For what reason? Because the train knocks stock about, and it is more expensive.
567. The butchers prefer stock that has travelled by road? Yes, any cattle driven by road always bring a better price at the yards.
568. *Mr. O'Sullivan.*] Where do you bring stock from? From wherever I can get it.
569. How far back into the country do you go? From 100 to 500 miles.
570. Do you bring any from Queensland? Yes.

- Mr. W. Gillett.
8 Mar., 1890.
571. Is this the proper route for Queensland stock, and for stock in the north and north-west? Yes, it is the proper road for any stock to Sydney or Maitland.
572. After you go over Bowman's crossing you have two roads—one to Sydney and one to Maitland? Yes.
573. And this is the proper road leading to those two places? Yes.

MONDAY, 10 MARCH, 1890.

[The Sectional Committee met at the Court-house, Muswellbrook.]

Present:—

The HONORABLE ANDREW GARRAN (CHAIRMAN).

The Hon. WILLIAM JOSEPH TRICKETT. | EDWARD WILLIAM O'SULLIVAN, Esq.
JOHN HURLEY, Esq.

The Sectional Committee further considered the proposed Bridge over the Hunter River at Jerry's Plains.

James Cobb White, Esq., sworn, and examined:—

- J. C. White, Esq.
10 Mar., 1890.
574. *Chairman.* Where do you reside? At Edinglassie.
575. How far from Muswellbrook? Four miles.
576. Have you resided here many years? About 13.
577. Are you thoroughly familiar with the stock traffic across the Hunter at or near Bowman's crossing? Yes.
578. Is it your experience that the railway has so completely taken the stock traffic off the road as practically to render Bowman's crossing of no high value? From this district about 1 per cent. of the large stock goes by rail, and the balance by road, excepting, of course, in a drought.
579. Why do the squatters give preference to the road? Because of its cheapness, and in a good season the cattle would arrive in Sydney almost in the same condition as when they left here.
580. Would it require a considerable reduction in railway rates to induce you to leave the road and take to the railway? It would in a good season, but in a bad season, of course, they have to pay the present rates rather than go by road.
581. Then all the stock fattened in this district north of the Hunter want to cross the river to get to the Sydney market? Yes.
582. But we have been given to understand at Singleton that the great need for this bridge is on account, not so much of the locally fattened stock, as the stock coming from the north and going to Sydney? All the stock coming from the north have to go by Denman, and in flood times they have to come round here and go to Singleton.
583. If they got as far as Denman, could they, by keeping to the westward of the Hunter cross to Goulburn easily? They cannot cross the Goulburn as easily as the Hunter. The Goulburn is a worse river than the Hunter in flood time. You can swim in the Hunter and get out, but you cannot in the Goulburn, because it is boggy.
584. Then it is not correct to say that the Goulburn is easy to cross in flood time? It is very incorrect.
585. And there is no open stock road that way? I think they only go that way on sufferance.
586. If a road had to be opened out there, it would have to be through private property? I believe so, but I am not acquainted with the locality.
587. There is a prescribed stock road from the north? Yes, through Muswellbrook.
588. And through Denman also? Yes.
589. Are there two roads then? Yes.
590. And reserves on both? Yes.
591. If fat stock is being brought down, the drovers know very well when they approach Aberdeen whether they can get across Bowman's crossing? They seldom come by Aberdeen. They turn off before getting to Aberdeen, and go round on the opposite side of the river, so as to utilise the bridge here.
592. On the western side? Yes, they save all the metalled road coming down. There is no metal on the other road, and more feed and reserves.
593. It is a great point to keep from the metalled road? Yes.
594. But if they knew the river was unfordable at Bowman's, they would make for Singleton? In very few cases. They would mostly remain on the reserves until they could get over the river, because it knocks the stock about going through the town of Singleton.
595. Are there any reserves upon the main road from Muswellbrook to Singleton? There are vacant spaces. I do not know whether they are reserves or not, but they can always get a feed.
596. Without paying for it? Yes.
597. What is the inconvenience, apart from the extra distance of going by Singleton? There is the metal through the town of Singleton. It is impossible when you get over the bridge at Singleton to avoid the town.
598. Then for the sake of keeping the stock in good condition on the road, it is better to go through Bowman's crossing than through Singleton? Yes. Mr. Richards buys most of the stock about here, and never thinks of sending his cattle by Singleton, but always by Jerry's Plains.
599. Is he the principal purchaser from the fattening people here? Yes, he buys about two-thirds of all the stock fattened about here.
600. Have you any personal knowledge of the quantity of stock crossing at Bowman's? No, I see a great many stock going by, but I do not stop at the river to count them. I have a good idea how many cross.
601. But if you live so near to Muswellbrook you are some distance from the stock route? I am constantly in Denman, where they pass through.
602. And they must go as far west as Denman? There is no road for them to go between Muswellbrook and Denman.
603. It is all private estates? Yes.
604. Are you of opinion that a bridge over the Hunter is required for the existing traffic? Yes.

J. C. White,
Esq.
10 Mar., 1890.

605. Do many sheep come down by way of Denman? Yes, all except those that are trucked.
606. Will flood delay them longer than it will delay cattle? Yes, some days longer. Cattle can swim if the river is half a banker, but sheep have to wait until it is very low before they can cross.
607. Do you know anything of the relative merits of Bowman's crossing and Gee's crossing. I do not quite know the difference between them. The crossing I have been talking about all along is the one on the road between Denman and Jerry's Plains. That is Bowman's crossing. Where is Gee's crossing?
608. It is further down the river nearer to Jerry's Plains? I do not know anything about that one. That is not on the main stock road at all. I should not think you could get a much worse place than Bowman's crossing for a bridge, because it is very wide, and the bridge will be very costly.
609. There was a bridge there once? Yes; but it is not there now.
610. *Mr. Trickett.*] It was a low-level bridge? Yes; you would have to make a high bridge to get out of reach of the flood.
611. You yourself, though not an engineer, said that it would be difficult to cross? Yes.
612. Still the stock drovers seem to prefer the old place to the new one. Is there any reason for preferring Bowman's crossing, other than that it is the customary place? I do not see any objection to the other place. If they could get from the present road to the bridge, they could not have any objection to it.
613. We are told it would require a road to be made through private property? Yes.
614. Do you think there is any local necessity for a bridge apart from the stock traffic? No.
615. Do you think the people could always get into the town except in very bad weather, and then they could wait? I should think that not more than one person goes over the river a day, excepting those connected with stock traffic. Comparatively speaking, there is no traffic between Jerry's Plains and Denman.
616. They can always get into Muswellbrook or Singleton by going round? Yes.
617. Still, from your long experience of this road, you state that there is sufficient stock traffic to justify the Government in building a bridge? Yes. Until they can slaughter the cattle in the country, and get it conveyed to town in cooling cars, a bridge will be necessary.
618. What are your views as to the proposal to kill cattle in the country, to chill the meat, and send it to Sydney. Do you think it is desirable? I think it is most desirable, both for producer and consumer.
619. Is that the general opinion amongst stock-owners? I believe so.
620. If that were done the necessity for this bridge would be almost nil? Almost; unless the main slaughtering-place was at Singleton, or somewhere about there; and even then they could cross at Singleton. Of course you could not have slaughtering-places everywhere. There would have to be a main one.
621. In that case would the bridge be of utility? Only for the local traffic, because people would not hawk their stock to Sydney when they could get it killed here.
622. Have you thought as to how far these slaughtering-places should be apart? I should think they would not want to be nearer than 200 miles. That is 100 miles each way; and that is not much of a drive. If they were close together it would cut up the business, and make it too small to pay the companies running them.
623. I suppose you are of opinion, if a bridge is built at all, that it should be a high-level bridge? A low-level bridge would answer the purpose if it would stand; but I am not sufficient of an engineer to know whether it would stand or not.
624. Experience here has proved that the bridges have been washed away? All the low-level bridges we have had have gone.
625. Have you known of any great personal inconvenience to drivers of mobs of cattle, or herds of sheep, by reason of their being no bridge? Yes; I have seen drovers there for days trying to cross, and then they have had to turn back and go round to Singleton.
626. Is there any stock reserve near the river at Bowman's crossing? There is one between Denman and the crossing.
627. How many miles from the river? I do not know exactly, but I suppose about 6.
628. Then if they are stuck up at the river, the cattle have to be driven back 6 miles? Yes.
629. That is a detriment to them? It is a bad road, and in wet weather it is very heavy. There is no other reserve when they get across the river; but, of course, there is no stock coming back to use it. If they are stuck they have to go back to Denman.
630. Do you think the stock-owners would pay a toll for the use of the bridge? Yes, I should think so. We have to pay toll now to cross at Alford's.
631. They would pay whether they used it or not. Regulations could be framed to the effect that if they went within a certain distance they would have to pay toll? I think it would be quite fair. It would be far better to pay a toll than to go around 20 miles.
632. It has been stated by witnesses in Sydney that if a bridge were erected and a toll imposed, the toll would not be worth collecting, as so little stock pass over,—Is that correct? I should not think so. You could charge upon all stock going within a certain distance of the bridge. I suppose you could prevent owners of land from allowing stock to go through their property.
633. You stated a short time ago to the Chairman that you had a pretty good idea of the number of stock that went over the river,—What is your idea as to the number crossing per week? I have seen something like 1,000 fat cattle cross there in one week.
634. What about sheep? I have seen 4,000 stuck at the river at one time.
635. Was that during the late rains, or some time ago? About eighteen months ago.
636. Have you noticed any great diminution in the stock traffic there since the railways were opened? There is no perceptible diminution.
637. We are told that there has been a certain diminution in the stock traffic, but that it is attributable to bad seasons,—I suppose stock has fallen off a good deal in this district as in others? Bad seasons are the times when the railways ought to pay, the roads are then so badly off for grass that the stock go by rail. I truck all my stock in bad seasons, but now I send them by road.
638. You only use the railway when you are compelled to by the difficulty of travelling the stock? That is all.
639. *Mr. O'Sullivan.*] I suppose you may be considered as one of the large stock-owners in this district? I have about 5,000 cattle, usually.

- J. O. White, Esq.
10 Mar., 1890.
640. Can you state how many cattle you send every year to the market? It depends on the season. Some seasons I send 6,000 and others not more than 2,000.
641. I suppose about 3,500 would be a fair average for ten years? About 4,000 a year, taking one season with another.
642. Are there many other stock-owners in this region who send about the same number as you do? There is Mr. Edward White, of Martindale.
643. But away to the north-west? There are plenty up there who send a good many more than I do.
644. You always take this road when grass can be obtained? Yes.
645. Do you think a bridge 15 feet wide would accommodate the stock traffic? Yes; I do not see why it should not.
646. You know the railway bridge at Singleton? Yes.
647. That is 14 feet wide on the traffic portion; I suppose a bridge as wide as that would do? Of course the cattle would have to pay toll, whether they passed the bridge or not. Cattle would not always have to use the bridge—only in floods,—and it would be quite wide enough for sheep at any time.
648. You said just now that you had to pay toll to Mr. Alford? Yes.
649. What is that for? Because the river bank is washed away, and we have to go about 100 yards on his land to find a crossing.
650. How much toll do you pay him? £1 for 200.
651. If you cross Mr. Alford's land, do you go off the ordinary stock route? Yes, for about 100 yards.
652. Then, if this bridge were constructed at Bowman's crossing, would it divert the toll? Alford would not get any of that, because it is a better crossing than that at Jerry's Plains. In preference to crossing at Jerry's Plains we go that way, and pay him the toll. The only reason for going there is to get a good crossing.
653. Why do you keep to the west bank of the river, and cross at Denman, instead of going across the Goulburn? There is no road.
654. The reason is, there is no stock route across the Goulburn? Going from here you would keep on the other side of Denman.
655. But the Goulburn runs close to Denman, does it not? About a mile away; but the lower Goulburn can never be crossed in flood-time. You cannot cross it for 3 miles up, except when the river is low, because it is so boggy.
656. Then there are two reasons why you do not cross the Goulburn—the first is, that there is no stock route across it, and the second is, that it is a dangerous crossing? Yes.
657. Then the natural stock route, which has been used for years past, is the one going by way of Bowman's crossing? Yes.
658. If you cross at Jerry's Plains, you have to deviate from the stock road? You cannot cross at Jerry's Plains; there is no road.
659. You cross at Bowman's? I have not a plan before me, but that is what I should say.
660. But if a bridge were constructed at Jerry's Plains, you would have to deviate from the stock road to reach it? Yes.
661. Would that lengthen the journey to Singleton or shorten it? It would not make more than a mile difference.
662. Do you know the crossing-place at Gee's? No. I have often crossed from Plashett's Homestead to Jerry's Plains. If that is Gee's crossing I do not know it by that name.
663. Do you think it would be a difficult work to put a bridge over Bowman's crossing? It would be rather expensive to make such a long bridge there.
664. What is the width of the river? I could not say to a hundred yards. I know the width of the water; but the banks are very low on either side for a long way back.
665. I suppose the banks have been worn by the river,—how long did the low-level bridge erected there last? I suppose about twelve months.
666. Do you know the reason why it gave way? I heard that it was because the bolts had heads and tails, and no middles.
667. And the bridge was badly constructed? Yes.
668. Do you not think a strongly constructed bridge, about 10 feet or 15 feet higher would be sufficient to ensure you against floods? It might stand, but I do not know sufficient about the matter to give an opinion.
669. Can you give a rough estimate of the number of stock which cross there in a year? I have been reading Mr. Alford's estimate for 1889. I think his estimate must be a long way under the right number. He numbers the cattle at 13,507, the sheep at 35,000, and the horses at 84. Fully 84 horsemen must have gone over the crossing in a month or two months in charge of stock. He gives 84 horses for the whole year. I have known of mobs of more than 84 go over last year at one time, so that he must be out of his reckoning. I should think that 20,000 cattle must have gone that way last year.
670. Mr. Hurley.] Then, practically, if this bridge were constructed at either of the places named, it would be merely in the interests of travelling stock? That is all. If people want to go in for the doctor or the post, there is a boat which they can use.
671. It would be little used by agriculturists, or any other class? If a bridge were made for agriculturists, a road would have to be made as well, because it is in such a bad state.
672. Leaving stock out of the question, there is no immediate necessity for a bridge at the present time? No; and there will not be at any time that I know of.

Mr. William Wood, drover, sworn, and examined:—

- Mr. W. Wood.
10 Mar., 1890.
- 672½. Chairman.] What is your occupation? A drover.
673. How long have you been engaged in that business? About six or seven years.
674. Where do you mostly bring cattle from? Off the Hunter.
675. Cattle fattened in the district? Yes.
676. What is the natural stock road to the Sydney market for the cattle you drive? By Jerry's Plains—Bowman's crossing.
677. Do you know Gee's crossing? Yes.
678. Did you ever cross with cattle there? No; I have crossed on horseback.
- 679.

Mr.
W. Wood.
10 Mar., 1890.

679. Can you judge whether that is as good a place for a bridge as Bowman's crossing? I think it should be better for cattle.
680. But it would need a special road to be made for it? Yes; from Bowman's crossing, through Mr. Pearse's private property, and through Mr. Alford's.
681. If a bridge were built there it would be as convenient for stock traffic as one at Bowman's? More so.
682. And it would give the Jerry's Plains' people other access to the Liddell station? It would.
683. Do you think it would suit the district better than one at Bowman's? Far better.
684. Have you any idea of the quantity of cattle which crosses the Hunter at Bowman's in a year? I should think between 20,000 and 25,000.
- 685-6. How often in the year do you think people are stuck up because of the floods? I could not say. I have been stuck up twice at Bowman's.
687. How long had you to wait? A day and a night, and I had to swim it next morning.
688. Do you think the delays caused are so great that the country would be justified in going to the expense of a bridge? I do.
689. As a practical drover, do you think a 15-foot roadway would be sufficient? Yes, for stock, because you would have only to cross stock in time of floods. You could cross below when the river was passable.
690. Would there be much difficulty in getting the cattle to face the narrow roadway? Not with gradual approaches on each side.
691. Do you think the persons interested in stock would willingly pay a small toll to have the bridge available in bad weather? I should think so. It would be to their interests to do so.
692. If it pays them to go through a man's private land for a short distance it would pay them still better to have a bridge in wet weather? I should think so.
693. The cost of the toll would be less than the delay of three or four days? Yes.
694. And in the case of sheep a delay of more than a week? Yes.
695. You do not think the effect of the toll would be to send the traffic away from the district? No.
696. When you are once across the river at Bowman's is there anything to stop you on the road to Sydney? Yes; there are two rivers—the Branch and the Colo.
697. If you could not get across here you could not get across there? If you could cross the Hunter you could cross them.
698. How many days will it take between Bowman's and the Colo? About ten days.
699. Is that the first obstruction? No.
700. Which is the first? The Branch.
701. How far is that from Bowman's? Between 35 and 40 miles.
702. So that if there were a bridge at Bowman's, and the water was up, you would have five days for the water to go down in before you reached the first difficulty beyond Bowman's? Yes.
703. And except in continuous rainy weather you could always get across? Yes.
704. Is there any bridge over the Colo? No.
705. Is it often up? Yes.
706. Are you often delayed there? I have been delayed there once. You run a great risk in swimming cattle there, because of the current. You have to pay a woman, who keeps a boat there, to enable you to get across.
707. And you have to pay as much without a bridge as you would with one? More. You have, perhaps, to pay £1 or 15s.
708. What do you think would be a fair toll for a bridge? 1d. per head. Stock-owners would willingly pay. It would be to their interests to do so.
709. You say that as a practical man? Yes.
710. Do you know anything about crossing the Goulburn River, near Denman? Only on horseback.
711. Is it a boggy crossing? Yes; it is very bad.
712. You think that the taking of stock round Denman and crossing the Goulburn instead of the Hunter is not practicable? No.
713. You cannot avoid this bridge by adopting that route? No.
714. The better plan is to make a bridge over the Hunter? Yes.
715. And that would be an immense convenience to this district? Yes.
716. *Mr. Trickett.*] Do you meet with many difficulties between Bowman's and Gee's, and Singleton, after you cross the river? We do not go near Singleton, but by Jerry's Plains.
717. You go by way of Warkworth? No; you can miss Warkworth. If there is a bridge you can miss Jerry's Plains also.
718. You do not have to cross the Hunter River again? No.
719. Would it be an advantage if you could get through Singleton? No.
720. The reason I ask is because some of the witnesses have spoken of a bridge over Maison Dieu? I know it.
721. That bridge would only be for the benefit of the Jerry's Plains people who want to get into Singleton? Yes; it would be of no benefit to stock at all. A bridge at Bruncker's crossing would be of more advantage to stock; but that is out of the way too.
722. Do you know the number of stock which travel? Between 20,000 and 25,000 cattle a year. I could not say how many sheep, as I have not had much dealing with them; but in my time I have seen 12,000 or 15,000, or more.
723. At any rate, a large number of sheep go over Bowman's? Yes; all the sheep cross there, unless it is flood-time, and then we have to drive 75 miles round to get across the Singleton Bridge.
724. The Stock Inspector said that eighty horses went over in 1889;—is that an under-estimate? Yes; he would have been nearer the mark if he had said 800.
725. It would take over eighty horsemen to deal with the cattle? I should say it would take close on 200 horsemen to deal with the cattle and sheep.
726. *Mr. Hurley.*] Have you travelled to Sydney many times? Yes; over 100 times.
727. During that 100 times you have only been detained twice by the river being up at Bowman's crossing? Yes; but if I had stopped until it went down I might have been there a week. I risked my cattle, my horses, and myself.
728. But it is a fact that you have only been detained twice? Yes.

Mr.
W. Wood.
10 Mar., 1890.

729. Do you think it is absolutely necessary, in the interests of those connected with stock, that a bridge should be built? Yes; if I had stayed every time the river was up, I might have been detained fifty times. I have gone by way of Singleton Bridge, 75 miles round.
730. How often have you had to do that? Three times.
731. You have done that three times in seven years, and twice you have been detained at the river at Bowman's? Yes.
732. In your conversation with pastoralists and others, have you ever heard anything said as to the probability of chilled meat being conveyed to market in cars? Yes.
733. Do they look upon it as being more advantageous to the consumer and producer to have it conveyed by that means? Yes.
734. If the idea is carried out, will there be any necessity for a bridge? I do not think there would.
735. If facilities are given by the Railway Department for conveying meat to market, it would be better for the purchaser? It would.
736. And it would be more lucrative to the producer? Of course it would; the meat would be fresh and the cattle would not be harassed on the road.
737. Therefore there would be absolutely no necessity for the erection of a costly bridge? I do not think there would.
738. *Mr. O'Sullivan.*] Have you ever had to pay toll to Mr. Alford? Yes.
739. How often? Every time I go through.
740. Why do you cross his land? Because you cannot avoid it;—you must cross it. There is a crossing, but you cannot get up the bank, because it is all washed away. The water under the bank must be 12 or 13 feet deep.
741. You cross his land to get to a better crossing-place on the river? Yes.
742. What is the width of the crossing-place which you get to on the river after paying Mr. Alford? It is a very wide place, over 100 yards, but there is a good beach across.
743. What is the width of Bowman's crossing? About 200 yards.
744. What is the width of Gee's crossing? Not half that width.
745. Which do you think would be the best place to fix the bridge? I believe Gee's is the best place.
746. Would you have any reserves along that route? Not until you get across the river.
747. Will the system of chilled meat do away with the necessity for droving? Not altogether.
748. You will still require to drive cattle to the places where the meat is chilled? Yes.
749. Therefore, you will want these stock routes and bridges? Yes; that is if we are to drive stock, but if there is no stock going that way we should not require it.
750. *Mr. Trickett.*] You could not say whether it would be absolutely necessary or not until you knew where the stock would be slaughtered and chilled? No.
751. Supposing the stock were slaughtered at Liverpool Plains, there would be no necessity for driving beyond this place? No, not fat stock.
752. *Chairman.*] So far as the fat cattle of this district are concerned, the owners would not start them if they knew the river was up? I have started them when the river was up, expecting it to be passable when I got there, but it was higher.
753. But still you started in the expectation that it would be down? Yes.
754. If you knew the river were up you would not start? I have started when it was up, but it was inclining to fall. The night we left we had heavy rain.
755. Most of those who fatten stock in this district are within 20 or 25 miles of Bowman's? Yes.
756. And they would know pretty well the state of the river? I should think so.
757. Then it is really more for the through stock from the north that you want the bridge than the local stock? I should think the local stock want it as well as the north stock.
758. But they are not so likely to be stuck up? If there is a good market the owner likes to get his cattle there quickly.
759. But now that the markets are supplied by rail, the variations in the market are not so great as they used to be? I could not tell you.
760. *Mr. Trickett.*] Do you know of any low-level bridges which have stood the floods? I know of only one low-level bridge, and that was at Singleton, and it did not stand.
761. And the one over the Hunter, near Jerry's Plains, was washed away? Yes.
762. It was badly constructed? Yes, the piles were only 2 feet in the ground.
763. Do you think it desirable to erect a low-level bridge? No, I do not think it would stand.
764. Is the current very strong near Bowman's? Yes.
765. *Chairman.*] Do you think it would be possible to work a punt if the river were up 10 or 12 feet? I should think so.
766. The current would not be too strong? I do not think so.
767. Do you think a punt would do instead of a bridge? It would not be so convenient for stock. You could not punt stock very well. You would have to swim them.
768. But you could go across yourself in a punt? Yes.
769. *Mr. O'Sullivan.*] How much toll do you pay Mr. Alford? 10s. for 100.

Mr. Charles Smith, drover, sworn, and examined:—

Mr.
C. Smith.
10 Mar., 1890.

770. *Chairman.*] What is your occupation? A drover.
771. How long have you been a drover? Nearly thirty years;—over twenty years in this district.
772. Do you mostly take cattle fattened in this district? Yes; I have taken 2,000 in one year.
773. In the course of your journeys you have met a great many drovers who have come with cattle from the north? Yes.
774. You know their trade as well as your own? Yes.
775. Do you think the quantity of stock now crossing the Hunter is large enough to justify the building of a bridge? I think so. I think there would be more stock go that way if they had a bridge.
776. Which way do they go now? The best way they can. They have to go wherever they can cross best.
777. Where have you always crossed? At Jerry's Plains, and Alford's.
778. Do you know Gee's crossing? No; not well. I know there is a crossing there. 779.

779. Do you think it would pay stock-owners to pay 1d. a head to cross their cattle over a bridge? Yes.
780. Even if they did not use the bridge? I think so. It would pay them well. They might be stuck up there for four days. The cattle get knocked about and get into a state of perspiration. They are put into the water, and when they get on the opposite side the chances are that some of them die. When they get into the market they die as black as a coal, and are almost unfit for use.
781. They get chilled? Yes.
782. You think the cost of the delay is a great deal more than the 1d. a head? Yes.
783. If you were only delayed twice in the year it would pay you to give 1d. a head? I would freely do it myself.
784. For all you cross during the year? Yes.
785. Do you think 20,000 head of cattle is an excessive estimate of the number crossing Bowman's per annum? I could not tell you exactly, but I have been given to understand by a constable that he had instructions from head quarters to make an entry of all stock which passed through the valley. They could not pass without going from 200 to 300 yards of his house.
786. What was his estimate? He did not tell me; but he told me he could not understand the estimate given into the Government. He was prepared to show from his books that the number of cattle and sheep which had passed were far more than what were given in to the Government.
787. Presuming 20,000 cattle crossed at Bowman's every year, would it pay to pay 1d. a head on the whole number? I think so.
788. What is your next difficulty after crossing Bowman's? None that I am aware of.
789. One witness says the Branch and the Colo are troublesome? I have never had any trouble.
790. Is the Colo River difficult? Not very.
791. That is the greatest difficulty? Yes.
792. If there were a bridge here you would consider the route to Sydney practically open in all weathers? I would.
793. *Mr. O'Sullivan.*] Which ford have you been in the habit of using? Alford's.
794. Alford's lies between Bowman's and Gee's? I know nothing about Gee's.
795. Alford's Crossing, then, is nearer Singleton than Bowman's? Yes.
796. How far is it from Bowman's? I could not tell you exactly, but it is a good way.
797. You say you drive about 2,000 stock a year? I have done, but not a present.
798. Would that be a fair average for a year's work if you were fully employed? Not for me.
799. Do you think 1,500 would be a fair average? Some go by train.
800. How many drovers beside yourself follow this route? A great number. They are nearly all away now with stock.
- 800½. How many do you think? I could mention a good few. There are five or six here now. I know of one or two who were drowned at the crossing.
801. You think there are twenty drovers using that road every year? I daresay, but I would not like to swear it.
802. I suppose we can take it as a fair estimate that 20,000 or 25,000 cattle are driven down that stock route every year? I should say so.
803. *Mr. Hurley.*] Would this bridge, if erected, be used by any other class but drovers? I think so, by people going to and fro.
804. By farmers? Yes, and by Denman people.
805. Denman people would use the bridge in order to reach where? Going from Denman to Jerry's Plains.
806. Is there much trade between Denman and Jerry's Plains? There is not much at present, because they cannot get there.
807. Do any drays travel along that line now? There would be if a bridge were erected.
808. But do they do it at the present time? They cannot do it, it is impossible.
809. Practically the bridge would be in the interests of the persons interested in stock? And the general public as well.
810. Have you heard any talk as to the probability of meat being killed beyond here, or in Muswellbrook, and conveyed by rail to market? No.
811. Supposing that were done, would it not be carried to market in a better state? No, I don't think so.

Mr.
C. Smith:
10 Mar., 1890.

Reginald White, Esq., sworn, and examined:—

812. *Chairman.*] What is your occupation? I manage my father's estate.
813. Do you fatten cattle on the estate? Yes.
814. Do you send them to the Sydney market or sell them on the ground? We have lately sold them on the spot to Mr. Richards.
815. Then you do not trouble yourself about the droving? Yes, we do. Two or three years ago we did not sell any through Mr. Richards, but had to send them all by road.
816. If you are now selling to him, he takes the responsibility of the droving? Yes, but we would have to keep them for him if he could not get them across the river.
817. How far are you from the crossing? About 15 miles.
818. You would not start your cattle if you knew the river was impassable, so that the want of a bridge is not so much inconvenience to you? Well, we would be losing the market.
819. How many days' journey is it between here and Sydney? Fourteen.
820. Does the market keep steady for fourteen days? I think so.
821. Does not the market sometimes go up and down, like the river? Yes.
822. If the market were high, and you were fourteen days' journey from it, you could not guarantee to deliver the stock before it fell.
823. You have no knowledgo of the quantity of stock coming down by rail? No.
824. You could not tell whether a glut was likely to arise in fourteen days? No.
825. Excepting for the risk of losing the market, the keeping of the stock for two or three days on your land would not be any material hardship? No, not for that time, but if you keep them back you want other cattle to come on. The other cattle would come in and fill our paddocks and eat us out.

R. White,
Esq.
10 Mar., 1890.

- R. White, Esq.
10 Mar., 1890.
826. If the rain was so heavy that you could not cross at Bowman's, you would not get the other cattle round very quickly? No.
827. So that these very heavy rains check traffic altogether? Yes.
828. It is a check all along the line? Yes.
829. Supposing you were sending stock to market, would you be willing to pay a toll of 1d. per head for a bridge? Yes.
830. Whether you use the bridge or not? Yes.
831. Do you think the other stock-fatteners in the district would be willing to do the same? I think so.
832. Do you think the estimate of 20,000 to 25,000 cattle crossing per annum is a fair estimate? Yes; we alone sent 4,000 within the last twelve months.
833. Have you ever heard your father speak on the subject of a toll? No; not lately.
834. Like most of the people of New South Wales, you would prefer a bridge without a toll? Of course.
835. But you would rather have the toll and the bridge, than no bridge and no toll? Yes.
836. And that, even though you only live so short a distance from the crossing, and need not start your stock unless you like? Yes.
837. Even then you would rather have the bridge? Yes.
838. From what you know of Mr. Richards, do you think he would pay toll? Yes.
839. When he buys he wants to get stock down pretty quickly? Yes. I know of an instance in which he had cattle drafted at my father's place, and the river came down, and we had to let him keep his stock there. I think he was a week before he got them away, and no doubt that was a great inconvenience to him.
840. How often have you known Mr. Richards stuck up after starting with stock? That is the only time I know of.
841. Then the number of times the stock are delayed in the course of a year are not so many, but the inconvenience is very great each time? Yes.
842. I suppose the river is passable about ten months in the year? Well, it has been, but in wet seasons it will be more frequently blocked.
843. Would you like to see more wet seasons? Yes.
844. Would you like to see the river impassable? Not altogether.
845. Are you well acquainted with the stock traffic from the north? No.
846. You only know the local traffic? Yes.
847. *Mr. Trickett.*] Do you know anything about the sheep traffic? I have seen sheep go through Denman very often.
848. Have you heard of them often being stuck up? Yes, I have heard of lots of sheep being stuck up at Bowman's, but I have never seen them.
849. Sheep are more trouble to get over a river than cattle? Yes, it must be a very wide crossing to get them across properly, and there must not be any banks about. If they get on each other's backs they drown.
850. Do you think Bowman's or Gee's the best place to cross the river? I don't know Gee's at all.
851. *Mr. Hurley.*] Do you think the bridge, in the event of its being constructed, will be used by many people besides drovers? I think so. In dry weather teamsters sometimes go that way.
852. What do the teams convey? Merchandise.
853. There is no wool conveyed to market? No.
854. Do you know anything about the routes spoken of across the Goulburn beyond Denman? Yes.
855. Do you think that would be a suitable route? No. I cross the Goulburn almost every day. You never put a valuable horse in there without being liable to get him drowned. It is very boggy. As long as he can swim he is all right. As soon as he gets a footing he is bogged.
856. Then the difficulties there are more than at the other places named? Yes. Besides, if you go that way you have to cross Gregg's Creek, which is more boggy, I think, than the Goulburn.
857. Would you prefer to have meat conveyed to market in cool cars, than by means of the present mode of driving? Yes.
858. Are you likely to avail yourselves of reaching market if it is introduced? Yes.
859. Then that bridge, excepting by a small number of the population, would not be used very much? I do not think it will be used so much when the chilled meat process is carried out.
860. *Mr. O'Sullivan.*] I suppose if the crossing over the Goulburn had been available to drovers, it would have been used and a track laid out. It goes through private property, and it would cost a lot of money to open a road.
861. But it has not always been private property. Do you not think a track would have been laid out before the ground was sold by the Crown? Of course it could have been laid out. There were not many cattle going that way when the ground was first purchased, so that it was not necessary to open one.
862. Do you think the cattle drovers generally, or those whom they represent, would be willing to pay a toll if the bridge were constructed? I think so.

Mr. Michael M'Taggart, drover, sworn, and examined:—

- Mr. M. M'Taggart.
10 Mar., 1890.
863. *Chairman.*] What is your occupation? A drover.
864. How long have you been a drover? Going on for nine or ten years.
865. Do you take down cattle mostly fattened in this district? Yes, from here to market.
866. Have you brought cattle from the north? Yes.
867. And crossed them at Bowman's? I have not crossed them at Bowman's, but my brothers have. I have taken local cattle and crossed them at Bowman's.
868. How often have you been stuck up with the river? Not many times myself, but I know there are plenty who have been.
869. Do you think it will be worth while for the drovers to pay 1d. a head to cross their cattle over a bridge rather than do without it? I believe it would.
870. As soon as the river begins to fall, I suppose you are in a hurry to get across? Yes.
871. Do you find that you damage the stock in rushing them over the river? Yes, and it will damage cattle.

Mr. M.
M'Taggart.
10 Mar., 1890.

872. In what way? They get knocked about.
873. Do they suffer at all from getting wet? They do in winter time, when it is cold.
874. They fall off in condition? Yes.
875. But you have never had any of them die from getting cold? Not from swimming the river, but they go off in condition.
876. They suffer a great deal more than 1d. a head? I believe they do.
877. Do you think the traffic is sufficient to justify the building of a bridge? Yes, the traffic to the bridge would go from both roads if the river were up.
878. Do you think a 15-ft. roadway would be sufficient to get cattle across? Yes.
879. Would you only want it when the flood was up? That is all.
880. And you could push them across a roadway of that breadth? Yes.
881. You know the bridge at Singleton? Yes.
882. You know that stock often cross there? Yes.
883. There is no great difficulty? I do not think so.
884. *Mr. Trickett.*] Have you ever seen sheep stuck up at the river, and unable to cross? Yes.
885. Often? Not very often, but I have seen them. I have known them stuck up a few days, perhaps a week.
886. Are many sheep driven along that road? A good many.
887. In mobs of how many? I could not say, but I have known a good many come down.
888. When did you see the last mob? I could not say that I have seen any sheep going across the river since the last flood. That is within the last two months. They could often be there without my knowing any thing about it.
889. Have you not met or passed flocks of sheep on the road frequently? Yes; but I have not seen any sheep stuck up since the last flood.
890. When was that? Almost within the last month or so.
891. But you used to see them before that? Yes; I have known them stuck up at the river two or three days, and then, when they started to cross, they would run a great risk by swimming.
892. I suppose the bridge would be more used for crossing sheep than cattle? Yes.
893. Sheep are always difficult to get across water? Yes; cattle could walk when sheep would have to swim.
894. And your difficulty is to get them to take the water? Yes.
895. Could you tell us what number of sheep cross in a year? No.
896. How many have you seen on the road at a time? Of sheep travelling homewards there are generally from 1,500 to 2,000 in a lot.
897. You have seen droves of sheep of that number? Yes.
898. What would be a fair toll to charge for sheep crossing the bridge? I could not say.
899. *Mr. O'Sullivan.*] Do you know the crossing at Krust's lane? I do not know the crossing by that name.
900. Do you know any other crossing between Bowman's and Gee's? No, I do not, not for stock. The only crossing I know of is at Mr. Pearce's place.
901. That is called Gee's crossing, is it not? Yes, that is the only one I know of.
902. Were you one of the local residents who signed a memorial in favour of Bowman's crossing for the reasons stated? What was that for?
903. It says here, "In 1883 Mr. Gould forwarded a memorial from the residents in favour of a bridge at the old site (Bowman's crossing), because (1st), it was well known; (2nd), it was a direct route; and (3rd), that at that site only the direct expense of a bridge would be required." Were you one of those who signed that? I think I did sign something of that kind, but that was before this bridge at Gee's crossing was thought of.
904. You give your preference now to Gee's crossing? Yes.
905. What sort of a road leads from the stock route to Gee's crossing? Does it go over hills and gullies? There are hills and gullies down either ridge, but the traffic would go on to the bridge from both roads.
906. Did you sign a petition in 1887, asking for the re-erection of a bridge at Bowman's crossing? I could not say. Some of my brothers might have done that.
907. *Mr. Hurley.*] How many times do you think you visit Sydney with stock in a year? Do you go there six times a year? Some years I may go more, and some not so much.
- 908-9. Have you been there five times a year during nine years? I believe I have.
910. How many times have you had to remain at the river with your stock—Have you been delayed ten times—Do you think you have been delayed five times? I could not say that I have.
911. Could you say whether you have been delayed over five times through the river being up? Yes; I believe I could.
912. You have been delayed more than five times, but you are positive you have not been delayed ten times? Not during the year.
913. Of course you would not be stuck up ten times during a year; but have you been delayed at that river ten times in nine years—Have you been delayed once a year? It is like this; I am not going in every year.
914. Have you not gone to Sydney a score of times, and not been delayed by the river? Yes.
915. Then in ten years you may have been delayed ten times. Have you been delayed more than ten times in nine years? I could not say that I have; my brothers have been delayed more than I have.
916. In nine years you have not been delayed more than nine times, and you have been to Sydney with cattle at least 100 times in that nine years? Yes; somewhere about that.
917. Is that route used for any other purpose than for stock. Have you seen teams upon it? I could not say that I have seen teams, but I have seen other vehicles—carts and buggies—coming from Muswellbrook and that part of the district.
918. Light travelling? Yes; I could not say there have been teams travelling there.
919. The absolute necessity of this bridge is for the benefit of travelling stock? Yes, and for the traffic from Jerry's Plains to Muswellbrook, and Muswellbrook to Jerry's Plains.
920. Looking at the matter as a general tax-payer, would you feel warranted in recommending the construction of a bridge to cost £20,000 for the benefit of stock-growers? (No answer.)

- Mr. M. M'Taggart.
10 Mar., 1890.
921. Have you ever given any consideration to the question of conveying stock to market by frozen meat cars? (No answer.)
922. Have you ever heard anything about that system being likely to be brought into operation? (No answer.)
923. Have you ever thought about it? I do not understand what you mean.
924. Have you heard squatters or drovers speak about the building of railway cars to convey dead meat to market in a frozen condition? No; not that I can recollect.

Alexander Rawson, Esq., manager of Woodlands, sworn, and examined:—

- A. Rawson, Esq.
10 Mar., 1890.
925. *Chairman.*] What is your occupation? Manager of Woodlands.
926. What is the area of that property? About 9,000 acres.
927. How far is it from here? About 17 miles.
928. Between here and the Hunter? It is on the Hunter.
929. Do you send much fat stock to market? Yes.
930. On your own account, or do you sell it on the place? I send a great many in on my own account.
931. Where do you cross them? At Bowman's.
932. Have you been much inconvenienced at any time by the want of a bridge? Not myself.
933. Do you think there has been any inconvenience in the district? Yes; great inconvenience.
934. Sufficient to justify the Government in going to the expense of a bridge? Yes.
935. Would a bridge with a 15-foot roadway be sufficient for your purposes. Could you get your cattle across? You could; but it would be very narrow, I should think.
936. You would rather put them across a bridge of that character in flood-time, than keep them standing? Yes.
937. You would have no difficulty in crossing? You would have difficulty, but it would be better than waiting for the river.
938. Would you be willing to pay 1d. a head on your cattle if there was a bridge there, whether you crossed the bridge or no? Yes.
939. If you crossed 6,000 cattle in a year, and you only used the bridge for 500 cattle, would you be willing to pay on the whole quantity? Yes.
940. At 1d. per head? Yes; when the river is up.
941. I mean whether the river is up or not? Not when the river is down.
942. You would only pay when you wanted to use it? Yes.
943. And you would not at other times? No.
944. Do you think that would pay for a bridge under those circumstances? I do.
945. You only want to use it twice in a year? It has been wanted ever since I was there, or nearly so.
946. Once or twice in a year? Since May it has hardly been passable, except for vehicles.
947. But this is an exceptional year? I have only been here fifteen or sixteen months, and my experience is that it is badly wanted.
948. *Mr. Trickett.*] You said just now that personally you had suffered no inconvenience? With stock.
949. Your drovers have been able to get over? I have been able to cross, but I have seen numbers of drovers delayed for days, and then they had to swim their stock at a risk.
950. Have you ever seen any sheep delayed? Yes, I have seen sheep which have had to turn back and come round by way of Muswellbrook.
951. What quantities of sheep have you seen there? 2,000 or 3,000.
952. In one mob? Yes.
953. Can you say what quantity of sheep have gone over there during the time you have been here? No, I could not.
954. The property you manage adjoins Bowman's crossing, does it not? No; it is a bit above it. It joins Harrowfield.
955. The traffic is constantly under your observation? Yes, our property is on both sides of the river.
956. Could you not give us some idea of the number of sheep that cross? No, I could not. I do not see half the sheep that pass.
957. Will there be a mob a week? Yes, when they can cross, but there are not so many coming now, because they cannot cross.
958. Have you noticed much other traffic besides cattle and sheep crossing the river? There would be lots of other traffic if they could cross.
959. Of what character? There are vehicles constantly going between Jerry's Plains and Denman, but they have not been able to cross for months.
960. Which do you think the best crossing—Bowman's or Gee's? I could not state.
961. *Mr. O'Sullivan.*] Are you well acquainted with the various crossing places on the river? No, I know little about them.
962. Are you anywhere near what is called Gee's crossing? No, I am higher up the river.
963. Do you know Gee's crossing? No.
964. Do you know a place where there was once a wine shop? I have heard of it, but I have never been there.
965. Do you know Krust's lane? No.
966. The only crossing place you are acquainted with is Bowman's? Yes.
967. How wide do you consider that is? I could not say. It is a good width in flood-time.
968. Is it 200 yards wide in flood-time? Hardly that, but I have never seen the crossing at top flood. I have often seen it when it has been swimmable, and I have had to swim it with a horse.
969. Do you know any better place than Bowman's? Not myself.
970. You have not been there long enough to be thoroughly acquainted with the place? No, I am not acquainted with the crossings.
971. *Mr. Hurley.*] Why do you not avail yourself of conveyance by rail to market? It is too expensive.
972. What does it cost you per day to get your cattle to Sydney, by droving? That all depends.
973. Give us an average? I have never sent any stock to Sydney. I always send to Maitland.
974. You know the cost of sending 100 bullocks to Sydney? From our place we generally give the drover £30 a trip.
- 975.

975. That will embrace a good number of cattle? Yes, any number you like up to 200.
976. Have you given any consideration of sending stock to market by means of frozen cars? No.
977. If the Commissioners were to introduce a system of frozen meat cars, whereby you could reach the market safely and expeditiously, would it not be to the advantage of the producer, provided that the freights were of such a character that they did not come too much beyond the coast of droving? Yes.
978. If that were done would the necessity for a bridge exist? They want the bridge all the same.
979. Why? Heaps of stock must constantly go that way, no matter what methods are adopted of sending stock away by rail.
980. You will not be forced to the position of using any other facilities for market than the old system of driving over land? We may be. I cannot say. I think a bridge will always be wanted there, because there will be always stock going in.
981. Leaving stock out of the question, will it be used for any other purpose? Yes.
982. By large numbers? Yes, constantly and daily.
983. What for? For people travelling backwards and forwards.
984. Where to—between what places? Denman, Singleton, and Merriwa.
985. Do drays travel on that line now? They do not now, because they cannot.
986. Have they ever done so? Yes; when I first came there they were constantly driving.
987. Going to where? To Denman.

A. Rawson,
Esq.
10 Mar., 1890.

James Cobb White, Esq., sworn, and further examined:—

988. *Chairman.*] What is the cost of sending stock by train from Muswellbrook to Sydney? About £5 11s. 6d. per truck. J. C. White, Esq.
989. How much per head would that be? It depends on how many you put in a truck.
990. Say per cwt.? You can put 77 cwt. in a single truck.
991. Take it by bullocks? I send about eleven bullocks in a truck, but they would only be of moderate size, and would weigh about 7 cwt. If you put larger cattle in, you only put nine in a truck.
992. What is the cost of sending them by road? Mr. Richards pays £20 for sending 200 head from here to Riverstone. I pay £25 from here to Sydney,—that is about 2s. 6d. per head.
993. What do you estimate as a fair allowance for damage by train compared with travelling by road? Going by road the cattle deteriorates to a certain extent, but the butchers in Sydney prefer them to cattle travelling by train.
994. How much more is a bullock which travels by road worth than a bullock travelling by train? If it comes by train it loses nothing in weight, but if it comes by road it does.
- 994½. So that the two systems are pretty well balanced? The only difference is between the road and rail charges.
995. Will 2s. 6d. cover the difference? There is a difference between 2s. 6d. and 11s., of 8s. 6d. That is where the difference is.
996. You think there is a saving of 8s. 6d. in sending by road? Yes.
997. And unless the drought is very bad it is worth while to stick to the road? Yes. I sent by train all through the drought, and when it broke up I sent by road.
998. How many times in the course of the last ten years would the difference of 8s. 6d. be met by the drought? Seven years out of ten.
999. Then during only three years out of ten would this bridge have been of great importance? It is only in seasons when we can send cattle by road that the bridge is of importance.
1000. In spite of the fact that during the last ten years the bridge would have only been required for three years, you think the stock-owners would pay the toll of 1d. a head for a bridge? The last ten years have not been ordinary years. We have had a general drought during the last ten years. In ordinary years you would only, perhaps, want the train one year out of the ten.
1001. You think the chances for the next year are that the people who want to use the bridge would be willing to pay for it? Yes; if we cannot get our meat conveyed to Sydney in frozen cars. If we get that we shall not want the bridge, as far as I can see. The local traffic will only want the bridge.
1002. *Mr. Trickett.*] If the bridge went by way of Gee's crossing, the land would have to be resumed through Mr. Pearse's property? Yes.
1003. Could you give us any idea of what the cost of the resumption would be? About 30 acres would be required; but it is not the cost of the land so much as the damage done by cutting him off from his water frontage. I could not estimate what the damage would be.
1004. What would the land be worth? It is ordinary ridge land, I suppose it is only worth about £3 an acre.
1005. Is the portion which would be required improved land? It is only ringbarked. There are pretty rough ridges along there, and deep gullies.
1006. *Chairman.*] The ridges would be no obstruction to a cattle track? No; it would make the land cheaper to resume.
1007. And if there was water on the back part of the land, the cutting off from the river frontage would not be of importance? No.
1008. Would the whole cost of opening that road be £1,000? Of course the Government would have to fence it.
1009. Would it cost £1,000 altogether? There would be 6 miles of fencing that would cost about £400.
1010. Will the purchase of the land and compensation cover another £600? Hardly, I should think.
1011. Then £1,000 would really be an outside price? I should think £1,000 would set him right.
1012. If the engineer says it will cost £1,000 more to make the bridge at Bowman's than at Gee's, the extra cost of the road would be more than saved by the diminished cost of the bridge? Yes.
1013. And the bridge will be available for Sir Thomas Mitchell's Road very conveniently? If you look on the plan, I think you will see there is a road from Sir Thomas Mitchell's Road to Gee's crossing.
1014. Would not the road continuing due north from Gee's crossing hit Sir Thomas Mitchell's track? I should think it would.
1015. Would that be a convenient part of the road on towards Liddell platform? It would not be much of a round for the Jerry's Plains people to get to Liddell to go across Gee's crossing. It would be a great deal better than not having a road at all, and they would have only to use it in flood-times.
1016. Which way do they go now to Liddell from Jerry's Plains? They keep below my property. I do not know where they go exactly.

J. C. White,
Esq.
10 Mar., 1890.

Mr. John Frith, drover, sworn, and examined:—

- Mr. J. Frith. 1017. *Chairman.*] Where do you reside? In Muswellbrook, at present.
1018. What is your occupation? I have been a drover all my lifetime.
- 10 Mar., 1890. 1019. For how many years? Between thirteen and fourteen years.
1020. Have you frequently driven sheep or cattle? Both.
1021. At which place have you crossed the Hunter? At Bowman's.
1022. Do you know the present extent of the trade? Very little.
1023. Whilst you were conversant with the droving trade how many cattle crossed at Bowman's in a year? I have myself driven as many as 1,800 in twelve months.
1024. Would you think 20,000 an excessive estimate? Yes.
1025. You think there would be 20,000? I think there would be that, and more.
1026. How many sheep do you think crossed there in a year? I could not say.
1027. Where do the sheep mostly come from? From all stations on the Plains, and from the north-west and north.
1028. Do you think, since the railway has been opened across the Hawkesbury, and direct communication has been given to Sydney, sheep come here to cross? They would if they could cross the Hunter, but the Hunter has been in a very bad state.
1029. You think, ever since the Hawkesbury Bridge has been opened, the river has not been favourable? Very seldom.
1030. The stock-owners have an idea that if they send by road there is a chance that they may be stopped for weeks at the river, and for that reason they think it best to truck their stock? Some of the squatters have told me they would send more by road, but for the rivers.
1031. Do you think sheep suffer as much as cattle in the trucks? That depends on whether their fleece is on or off. If it is on, I think they suffer more.
1032. Do you think the gain of sending sheep by road is as great as the gain of sending cattle by road? I think it is.
1033. You think that for both kinds of stock the road is the best if there is feed? I am certain of it.
1034. If the road was good it would pay them to return to the road again? Yes; the butchers have told me at Homebush that they would allow almost 1 cwt. on every bruised beast.
1035. Do they allow anything for bruised mutton? I do not know, but I know that a lot of sheep going by road will not bring as much as a lot, equally as good, going by train.
1036. Do you think it would pay the owners of stock to pay a toll over the bridge? Yes.
1037. Would they pay 1d. per head on cattle? Yes; a drover would be willing to pay that himself.
1038. Do you think they would pay more? I am certain they would be satisfied to pay more.
1039. One penny per head on 20,000 head would only amount to £83 6s. 8d. in the year. That would not pay the toll-keeper's salary? No, I think they would not mind paying 2d. per head.
1040. Have you brought cattle down from Warrah? Yes, for twelve years.
1041. Long before you get within reach of Denman you know whether the river is passable? Yes, but you cannot stop to perish cattle on the road. You have to go on, to go round or to swim it.
1042. But if you knew the river was impassable at Bowman's, would you make for Singleton? You would have to go to Denman to do that.
1043. Cannot you go from Muswellbrook to Singleton. Do you mean to say that going from Warrah you would have to go altogether to Denman, and then north-east to Muswellbrook? Either that or travel along the metal road.
1044. The extra distance would not be so bad for stock as going on the metal? No.
1045. It is a great point to keep clear of the metal? Yes; I would rather go 15 miles on an ordinary road than 7 miles on metal.
1046. If you go from Muswellbrook to Singleton is it metal all the way? No, at odd places you can get off the metal a little, but not for long. I do not suppose you can get off more than 3 or 4 miles the whole distance.
1047. Is the metal as bad for sheep as for cattle? Hardly.
1048. How many miles a day do you travel cattle? That depends on the kind of country. If you are in lanes, or country where there is no feed, it is an advantage to go as far as possible, but the general average is about 9 miles.
1049. And for sheep? About 7 miles.
1050. Are there any feeding stations between Muswellbrook and Singleton? Not many. There are one or two little places.
1051. No reserves? There are one or two, but they are very small and badly situated. You cannot use them as you want to use them.
1052. Your evidence is that it is very inconvenient to be forced into the road from Muswellbrook to Singleton? Yes.
1053. And that this other route ought to be kept open in all weathers? I know of many men who would rather swim than go round.
1054. But you cannot swim your sheep? You can, but it is a great trouble to do so. I have known men stuck for four days at Bowman's trying to get 2,000 sheep over. They got them over, but the man had to swim and risk his life.
1055. Is there any accommodation at the crossing itself? No.
1056. Have you to go back? There is not a place where you can hobble your horse for a feed; there is no hotel or accommodation.
1057. Have you ever crossed the Goulburn near Denman? Yes.
1058. Is that a good stock crossing? Not as good as the others.
1059. Why not? Generally it is boggy and you have to go through Denman, and it knocks your stock about to get them through. The thistles are very bad on the road.
1060. Is the Goulburn often in flood? Yes; it has been impassable for some weeks.
1061. Is it at present as troublesome to get over there as Bowman's? Yes; it is worse, because there is bog and quicksand there.
1062. There is nothing to be gained by trying to make a road round there? No.
1063. You do not know any better stock route from the north than the one now used? No.

Mr. J. Fritch.

10 Mar., 1890.

1064. Do you know Gee's? Yes; I have been over it.
1065. Is it as good a place for stock as the other? I daresay it is, a little better if anything.
1066. If the engineers state that that is the best site for sheep, you, as a drover would have nothing to say against it? No; I myself would rather have it there.
1067. What is the highest toll you think it would pay a stock-owner to give for a bridge? I do not think any stock-owner would grumble at paying 3d.
1068. That is when he used it? Yes.
1069. But not if he did not use it? I don't think he would agree to it then.
1070. How often in the course of a year do you think he would want to use it? The A Company would want to use it a great many times if they sent their stock by road—I believe they have sent as many as 60,000 in twelve months.
1071. They have got regularly into the habit of using the railway? Yes; more on account of the river than anything else.
1072. You think if the bridge were put up, they would go back to the road? Yes.
1073. Even if there was a toll of 3d? Yes, they do not look at 3d. or 1s. on a lot of stock. They have told me to pay for whatever grass I wanted, and not to spare money in any way.
1074. Anything to get the stock to market in good condition? Yes.
1075. It pays better to get the stock to market in good condition than to save 1d. per head.
1076. What is the average depreciation of a beast travelling from Warrah to town, as compared with killing on the spot? That depends on the season. The better the season the less they lose.
1077. What is the greatest diminution you have known of? A great deal also depends on the drover. I suppose a lot of cattle, if they were not well driven from Warrah to Sydney, would lose 1½ cwt.
1078. That is the maximum loss you have known? Yes.
1079. What is the least? A lot of cattle should go down without losing ½ cwt.
1080. That is in a good season, if well driven? Yes.
1081. Do you lose anything by having to stay two days when the river is up at Bowman's? Yes; because you often have to stay when there is nothing to feed on.
1082. How much do they lose by that? By the time they get to the end of their journey, each beast would lose about ¼ cwt.
1083. Then you think they might lose 3s. or 4s. a head? Yes.
1084. Then you think it would be very little for a squatter to pay 3d. or 2d. per head to save 3s. or 4s. a head? I think no squatter would grumble to pay 3d. per head; if they did, the drovers would be glad to pay it.
1085. Do you think they would pay it on all stock crossing the river whether they used the bridge or not? I think they would be satisfied to pay for using the bridge.
1086. In dry seasons you would not use the bridge? No, we would rather not use it, on account of letting the cattle get a drink.
1087. Do you think your employers would willingly pay 3d. a head to know there was a bridge there if it were necessary to use it? Yes.
1088. Can you get your cattle over a bridge 15 feet wide? Yes, over 10 feet, if there are rails on each side.
1089. Fifteen feet would be ample for all requirements? I believe it would. It is not like a place where a lot of vehicles are travelling about. We could see each other and wait for each other.
1090. The river, in wet weather, is the principal obstruction between the north and Sydney? Yes.
1091. Is there any other place equally bad? There is the Colo River, but it runs down in a couple of days. At Bowman's it is different. If a lot of sheep get stuck at Bowman's, you have to take them back 8 or 9 miles before you can get anything to eat.
1092. If the Government were to build a bridge here, there would not be a clamour for one at the Colo River? No, there is a boat there, and it runs down very quickly. I have been within 20 miles of it with a lot of sheep when it has been half bank high, and when I got there it has been passable for a horse, and in two days more you could swim a sheep.
1093. You think the want of a bridge is a serious obstruction to the stock traffic of Sydney? Yes.
1094. Does a large quantity of sheep come down by this route? Not lately, because the rivers have been too high.
1095. How do they get to market? Most of them by train now, because they cannot get over the rivers.
1096. If there were a bridge the owners would sooner send by road where they can get plenty of feed? Yes, when the roads are good they benefit a lot.
1097. Can you tell us what number of sheep in any one year have gone down by road? No.
1098. Can you tell us the number that has gone from Warrah? I suppose about 60,000 have left there in twelve months.
1099. Would that be a fair average from that one place? I think an average of about 45,000 from there.
1100. When did you leave off droving? In July of 1889, I think.
1101. Were you often blocked at the river with your cattle? I have been blocked, not at the river, but further back, waiting for the river to go down. I always looked out to see that I did not get blocked. I have had to swim the river several times, and have had a lot of difficulty in getting across. I have had to pay men to come from Jerry's Plains to help me over. When I was living at Jerry's Plains I helped dozens of people across the river. I have never charged anything for helping sheep across the river, but others have done so.
1102. Would a punt be of any use across the river? It would be of use, but nothing like a bridge. When the river is up to any height at all you cannot work a punt.
1103. But it would be of no use for taking large quantities of stock over? It would take from daylight until dark to get 2,000 over, even supposing the punt would hold eighty sheep.
1104. You say that if a bridge were erected the traffic would be taken away from the train? Yes, a good deal would.
1105. From certain figures submitted to us, it appears that in 1888, 5,000 sheep, cattle, and horses went by train from Muswellbrook, and in 1889, 14,690 went. What is the reason of the large increase in the numbers sent by train in 1890, as against 1888? I think a great deal of it is due to the rivers being up. They could not get them across the river, and to have run them round to Singleton would have put them out of condition. I have known a man drown as many as twenty sheep when crossing Bowman's crossing.

- Mr. J. Frith. 1106. What is the charge for a truck of sheep? I do not know.
1107. You think, then, that it is not by reason of the railway being available that the traffic by rail has increased, but because of the want of direct communication over the river at Bowman's crossing? That has a good deal to do with it. I know Mr. Cooper, of Jenagong, has trucked a large number of sheep on account of the river.
1108. Where was your place of residence when you were a drover? At Redbank, and Hall's Creek, half-way between Warkworth and Jerry's Plains.
1109. Do you think the erection of a bridge there would be of any advantage except as a means of conveying stock over the river? Yes, it would, because when the river is up the Doyle's Creek, people cannot get across from Muswellbrook at all. Then there are the people going from Denman to Jerry's Plains, and they cannot travel when the river is up.
1110. What would you say to a statement of this kind. "From inquiry and present observation of the tracks it is plain that there is little or no traffic from Muswellbrook," and that the traffic from Denman has altogether dwindled into insignificance? Well, the traffic has gone off a good deal lately.
1111. Why? Simply because they cannot get across the river. I have been wanting to go down to Jerry's Plains during the last two months with a dray, but I could not get there.
1112. And you, as a practical stock-drover, maintain that if this river was at all passable, the stock would again go to the road? A great deal of it would.
1113. In preference to the railway? Yes, a great deal of it.
1114. *Mr. Hurley.*] You say that on account of the river being swollen, you could not get across the river to Jerry's Plains? No.
1115. Could not you get round by Singleton? Yes, but look at the distance.
1116. What would the distance be? To go from my place direct to Jerry's Plains would be 31 miles. It would be 74 miles to go round the other way.
1117. You have been droving on the roads for thirteen years? Yes.
1118. How many times during those thirteen years have you been detained at Bowman's crossing? I never was detained at the river myself, but I have been kept back waiting for it to go down. I have often been detained at the station for a week on account of the river being up.
1119. Have you been kept back once a year during the thirteen years except on the station? Yes, more than that.
1120. Have you been detained twenty-six times? I cannot say, of course I drive more cattle than sheep, and if the river is a good height, I would rather swim than be delayed.
1121. It would not average twice a year? No, it would not.
1122. The road is exclusively used, is it not, for taking cattle to market? Yes.
1123. You have never seen any waggons or drays on it? Yes, plenty.
1124. What doing? Travelling up and down.
1125. Carrying general merchandise, store goods, or station supplies? I cannot say they were store goods, but I have seen dealers and people travelling from Jerry's Plains, and so on.
1126. There is not a great deal of traffic? There is a good deal.
1127. Could you count ten vehicles a week upon it? No.
1128. Could you count five vehicles a week upon it? Yes, on an average you could. Then there is a good deal of traffic from Jerry's Plains to Muswellbrook.
1129. Did you ever see anything other than drovers and cattle beyond Jerry's Plains to Colo Valley? Yes.
1130. What? Teams.
1131. What did they do? The people who live along there have to come over for their provisions, and the produce they grow there has to be brought away to be sold.
1132. They are small farmers? Yes.
1133. Would they use the bridge at Bowman's? No.
1134. There would be no necessity for the bridge for them? No.
1135. Therefore the bridge, apart from the cattle it would accommodate, would be of use to about five persons in the district? Yes, but that does not include teams or horsemen.
1136. You know the depreciation in the value of beef taken by rail to Sydney, and conveyed by road? I consider the rail knocks 1 cwt. off every beast trucked.
1137. Therefore the meat driven to market is better for the consumer and purchaser than that taken by rail? Yes.
1138. Have you read, heard, or thought of the question of taking meat to market in a chilled condition? I have heard of it.
1139. Have you heard that it is likely to be successful, and that it will give facilities to the pastoralist to get his meat to market in a better condition than if it is taken by rail or driven? I believe it would be better.
1140. If it is taken down at 8s. or 10s. per head, do you not think it will be more to the advantage of the pastoralist? It might for the big squatters, but not for the smaller ones.
1141. Do you not think it would be better in the interests of the consumer, and that the beef would be more healthy? I do not think it will make any difference if the stock are driven.
1142. If cattle are driven in wet weather, and put into rivers, do not some of them die? An experienced drover, who understands anything about his business, would not put the cattle into the rivers when they were warm. He would wait until they were cold.
1143. It would be injurious on the part of the drover to do such a thing? Yes.
1144. Supposing there was a chilled meat industry here, and another up the line, and others at several places where cattle could be brought, and supposing they were put into trucks and carted direct to Sydney, would it not be better for the consumer and the seller? If it did not cost them too much to get them chilled and carried down, no doubt it would be better for the butchers.
1145. Supposing that they took them down at 8s. a head from here. You charge 5s.? Yes, but I drive them nearly 100 miles further than here.
1146. But supposing that were done, there would be no necessity for a bridge? Yes, there would, for the Jerry's Plains, and other people, would travel backward and forward.
1147. You think it is necessary for the general public? Yes.

1148. You stated just now that twenty sheep were lost crossing Bowman's. Do you mean by that Bowman's crossing on the Hunter River? Yes. Mr. J. Frith.
10 Mar., 1890.
1149. Have not the Government a man stationed there? Only in flood-time. I have known that number of sheep to be drowned there when the river was only up to the saddle-flaps.
1150. What is the man doing when he is not engaged at the crossing? Maintaining the road.
1151. Would he have to be in the district if he had not to attend to the crossing? He would have to be kept on the road. When he is at the river for weeks the road is neglected.
1152. The watching of the crossing is an intermittent source of expenditure to the Government? Yes.
1153. If a bridge were constructed the man's pay for attending the bridge would be saved? Yes.
1154. Do you know the Jerry's Plains district well? Yes.
1155. How many people are residing on the south side of the river—say within 10 miles of Gee's crossing? I could not say.
1156. Are there a number of farmers there? Yes, a good many.
1157. Where do they go for stores? They often get them at Jerry's Plains and Singleton, but they have to go a long way round to get to Singleton.
1158. Then the people who live on the south side of the river would be greatly accommodated if a bridge were constructed to give them access to the railway station at Liddell? Yes; it would be a lot nearer for them and more convenient.
1159. You have stated that trucked cattle would sometimes lose 1 cwt.? Yes; they allow that. Sometimes a whole bullock is lost.
1160. I suppose it would depend on the state of the market what the amount of loss would be? Yes.
1161. Sometimes it might be 12s., and at others, 25s.? Yes.
1162. Have you noticed that since the opening of the Hawkesbury Bridge there has been a large increase of cattle sent down by rail? Yes.
1163. I understand you to prefer the crossing at Gee's to Bowman's? I believe it would be better for the Jerry's Plains people, but no better for travelling stock. It would be more handy and more direct for the Jerry's Plains people to go to Liddell or Ravensworth.
1164. Do you think the travelling stock is likely to cross at Gee's if the bridge is constructed there? Yes, they would go there.
1165. Would they go there if the river was down? If there was a man to collect the toll, he would catch them one way as well as the other.

Mr. William Hobden, grazier and farmer, sworn, and examined:—

1166. *Chairman.*] Where do you reside? Between Jerry's Plains and Singleton. Mr.
W. Hobden.
10 Mar., 1890.
1167. What is your occupation? Grazing and farming.
1168. As you live on the south side of the river, is this bridge of any great importance to you? I have an interest on both sides. On the south side particularly, because I have a great lot of fruit which requires to be taken to market.
1169. What kind of fruit? All kinds.
1170. Do you send it to Singleton? Yes, to Singleton, Sydney, and out as far as Armidale.
1171. When you send it northward what station do you deliver at? We have to deliver at Singleton.
1172. But in dry weather you can get across Gee's crossing? No.
1173. Not with a cart? Not with any safety. It would be far better to go round than run the risk.
1174. Are you likely to get stuck in the bed of the river? Yes, and the bank is not safe.
1175. How many miles is it from your place to Liddell platform? About 15.
1176. And what is it to Singleton? 16 miles.
1177. Then you only save a mile by going to Liddell? Yes.
1178. And then you save the extra trainage? Yes.
1179. Is there any considerable demand on the part of the Jerry's Plains people for a bridge to enable them to go north? Yes, I think so. I think if they could get to the Liddell platform, or station, they would do most of their business there.
1180. In any case a storekeeper at Jerry's Plains would lay in his stocks from Singleton? Yes; at the present time.
1181. But even if there was a bridge? I could not say.
1182. How many people are living at or near Jerry's Plains? There are between thirty and forty houses. There may be more.
1183. Are you on the main road from Bowman's crossing through Jerry's Plains? Yes.
1184. Do you see all the stock which comes down? I live within 2 miles of the road, and the road goes through our land. I see a great deal of the stock coming down.
1185. Do you think on an average there are 20,000 cattle a year coming down? I think there are.
1186. How many sheep? Not so many as there have been.
1187. What do you attribute that to? I don't know. Some people say one thing, and some another.
1188. Then, in wet weather, you can always get to Singleton by Warkworth? Yes, by going 23 miles.
1189. Would a bridge at Maison Dieu be a great help to you? Yes.
1190. But only in wet weather? Yes; it is a bad crossing.
1191. You can get your fruit carted across there in dry weather? Yes.
1192. Is there any worse crossing there than at Gee's? It is better.
1193. Gee's is a bad crossing even in dry weather? Yes, at any time.
1194. If a bridge is to be built at all, which site would suit Jerry's Plains best—Gee's or Bowman's? I think Gee's would be the best.
1195. Do you really think there is any need for a bridge at all? I think so.
1196. Altogether apart from the fondness of people generally for getting money spent in their district? Yes; I think so. People will not go 20 miles round if they can get to a railway by going 9 miles.
1197. Is there any road laid out at present from Jerry's Plains to Liddell or Ravensworth? Yes; part of the way.
1198. And you have to trespass on people's property? Yes.
1199. Is there any trouble about it? Well, neighbours are very agreeable.
1200. If you do not do damage, they do not grumble? No. 1201.

- Mr. W. Hobden,
10 Mar., 1890.
1201. If a bridge were made here there would be a demand for a straight road through? No doubt.
 1202. Would it go through Liddell or Ravensworth? Liddell.
 1203. How much new road would have to be made? About 2 miles at the most.
 1204. Is it a fairly good road? It is only a bush road.
 1205. Is it boggy in many parts? Yes; at the present time.
 1206. Even in wet weather that would scarcely be a practical track for vehicles? It would be very bad.
 1207. It would do for horsemen? Yes.
 1208. When the weather is wet, does not everybody stop at home and put off their journeys as much as possible? They do if they have to go a long distance round, and they often lose a great deal by that.
 1209. People only turn out if it is a case of necessity? That is all.
 1210. So that, practically, until the river is down, people stay at home? Yes.
 1211. But when you are taking stock to market, you go along in very bad weather? Yes.
 1212. It does not make any difference to you? No.
 1213. *Mr. Trickett.*] For obtaining access to Singleton is not the road by Maison Dieu better than any other? Yes, it is 5 or 6 miles shorter.
 1214. The distance is only about 12 miles is it not? Yes; from Jerry's Plains to Singleton by Maison Dieu.
 1215. What is the distance from Jerry's Plains to Liddell? Nine miles or a little more.
 1216. How often do you go or send in to Singleton? Nearly every day in the fruit season, or about twice a week on an average.
 1217. Are there many other people there who grow fruit and produce? There are small farmers with orchards.
 1218. Where does their produce generally go to? Singleton.
 1219. Is the district likely to increase as an agricultural district? I think so—I do not see what is to prevent it. It possesses as good cultivation land as any on the Hunter.
 1220. Have you had any experience of river bridges? Not much.
 1221. Was the bridge which was built at Bowman's crossing a good one, or a bad one? It was badly constructed. Low-level bridges will not do here.
 1222. You do not think it is advisable to build low-level bridges? It is not advisable.
 1223. The river is very rapid? Yes; and there is so much drifting timber about.
 1224. Do you think a high-level bridge, about 15 feet wide, would be sufficient to answer requirements? I think so.
 1225. *Mr. O'Sullivan.*] Upon which side of the river is the polling-place for Jerry Plains? On the south.
 1226. How many votes are recorded at an election? Over eighty, I think.
 1227. Are there not some German farmers down there? There are all kinds, I think.
 1228. But is there not a German settlement? Not that I know of.
 1229. Who carries on the fruit business besides yourself? It is carried on by all classes.
 1230. Has vine cultivation been started? Yes; by the Germans. They started it, and they give instructions to others as to how to carry it on.
 1231. Then we can regard Jerry's Plains as a permanent and growing settlement? I think so.
 1232. Is there much room there for agricultural settlement? Yes.
 1233. Is there more land to be taken up? There is more to be cultivated. There is not much Government land available there now; only on the town common.
 1234. You have a very large town common? Yes; about 3,000 acres.
 1235. A temporary common? Yes; and permanent, too.
 1236. Have you petitioned to have it thrown open to selectors? I am not interested in it at all.

Mr. Richard T. Keys, grazier, sworn, and examined:—

- Mr. R. T. Keys,
10 Mar., 1890.
1237. *Chairman.*] Where do you reside? At Bengalla. I am the owner of the Bengalla estate.
 1238. How far from this township? About 5 miles.
 1239. What is your occupation? A grazier.
 1240. Do you send your own stock to market at your own risk? Very frequently, if it is not sold privately to Mr. Richards.
 1241. Have you any interest in the proposed bridge? None, beyond the fact that it will be a great convenience to me in sending stock to Sydney and Maitland markets.
 1242. How long have you been sending stock to market? About thirty years.
 1243. How often have you been inconvenienced, and stuck up by floods? I have never made a proper calculation, but it has been very frequently. It must have occurred about a couple of times a year. Last week I sent a drove of 100 cows to Maitland, and they were stuck up at this very spot, and had to be brought along the metalled road to Singleton.
 1244. Do you not know before they leave your place, whether the river is fordable or not? No. It was the Goulburn River. The Goulburn is more subject to floods than the other.
 1245. Then you may sometimes be deceived when you start your stock from your place? Yes.
 1246. Do you think it would be worth the while of the stock-owners of this district to pay a toll on the bridge? Yes, it would. I would willingly pay 8d. a head.
 1247. Would that be only when the bridge was used, or for all that crossed the river? The stock would always cross the bridge if it was there.
 1248. The evidence is that they would not. They would prefer to go through the water for the sake of a drink, and to avoid being knocked about on the bridge? Probably they would. I, of course, speak more from the grazier's point of view, but I do not suppose I could add anything to what Mr. Frith has stated.
 1249. You only know it would be a great convenience to you? Yes.
 1250. You would always like to know when the road is open? Yes.
 1251. It would be worth something to you? Yes; we frequently send stock to catch a certain market, and they are stuck up at the bridge.
 1252. Would it be £10 a year in your pocket to have a bridge there? Yes; no doubt it would.
 1253. Would it be £50 a year in your pocket? I do not know that it would. No one is more concerned in the matter than Mr. Richards. He takes three-fourths of the stock from this district. I should say he takes about 10,000 stock a year.

1254. And if there was a toll he would pay the most? Yes.
1255. And he would be the best witness as to what it would be worth his while to pay? He would. I know he is constantly hindered by the crossing.
1256. Speaking as a citizen, apart from your personal interest in the matter, do you think it would be a fair national work to put up a bridge? Decidedly. It would be a benefit to the whole of the population from here to Moree.
1257. And enough people would be benefited by it to justify the expenditure? I do not think there is any place on the waters of the Hunter where a bridge is more required.
1258. And one bridge between Denman and Singleton would be sufficient? I think so.
1259. You do not think there would be any need of a second at Maison Dieu? I do not think so. When they once cross Bowman's the road is free to Maitland and Sydney.
1260. And it would only be the people who want to go from Jerry's Plains to Singleton who would be greatly benefited by a bridge at Maison Dieu? Yes.
1261. That is a much smaller population than those who are interested in getting to Sydney straight? Yes; living at Muswellbrook. I am not acquainted with the exact position of Maison Dieu and Gee's.
1262. You have no notion as to what are the relative merits of Bowman's or Gee's crossing? I certainly think Gee's site would be the best to the greatest number, because it would benefit the people of Jerry's Plains; they would get from Jerry's Plains to the railway, and the stock could use that crossing equally as well as the other; the position would suit both residents and graziers.

Mr.
R. T. Keys.
10 Mar., 1890.

Mr. John Mason, drover, sworn, and examined:—

1263. *Chairman.* Where do you reside? Denman.
1264. What is your occupation? Drover.
1265. If you live at Denman you know the Goulburn River, where it joins the Hunter? Yes.
1266. Have you ever crossed that river with stock? I have.
1267. Would it make a good crossing-place for stock in bad weather? No; it is bad.
1268. Why is it bad? It is boggy.
1269. It would not save the making of a bridge at Bowman's crossing to open a stock route that way? I think it would cost as much to make a bridge there as at Bowman's.
1270. Is the Goulburn a difficult river to cross? Very bad.
1271. As bad as the other? Worse. There is more timber in flood time.
1272. And you do not recommend it as a crossing-place for stock? No.
1273. You think the present stock route is as good a one as we can have? It is.
1274. You think it would be a pity to divert stock from the present road? Yes; you would have to purchase property to do so.
1275. All that is wanted is to make the present route available in all weathers? Yes.
1276. Do you think the quantity of stock coming down is sufficient to justify the building of a bridge? Yes; 6,000 stock go over from within 10 miles of my neighbourhood yearly, and more.
1277. Do you think a bridge 15 feet wide would be sufficient? Yes.
1278. You only want a bridge above flood-water? Yes; the bridge we had before was only an artificial bridge. I was the second to take cattle across it, and it shook the moment I went on it.
1279. Then it was not a bridge built to live? No.
1280. Do you think a fairly well-built bridge would stand the timber drift which comes down? Yes; it is a bad crossing at Bowman's at any time. It is a very wide crossing. It is a good crossing in one way for cattle when the water is low, but when it is high it is very bad; and when it is low—at summer level—it is bad for sheep.
1281. Is Gee's a good crossing? Yes, in one sense; but Bowman's crossing is the worst I have ever crossed.
1282. You would rather cross Gee's than Bowman's? Yes.
1283. If a bridge were made at Gee's, would it serve stock as well as at Bowman's? Yes; but Bowman's is more direct.
1284. If it is a bad season you get stuck up at many other places besides the Hunter? I think you can travel from here right out to the Warrego, and there are bridges everywhere.
1285. Then this bridge is the worst between Warrego and Sydney? Yes, I am certain it is. More stock have been delayed and turned back there than anywhere else.
1286. Of course in dry weather you are never stuck up? No, unless there is a fresh. I have known sheep to be stuck up there.
1287. Even in a bad season? Yes, it must be 80 yards across there at any time.
1288. Then if it is 2 feet deep you are stuck up? Yes, with sheep. On the banks of the Goulburn River there is quicksand, and it is very bad.
1289. There is no road open that way at present? No, you would have to go through Mr. White's property, and through Mr. Ellis' property. You have a good reserve on the other road, and it is only 2½ miles from Denman to the reserve.
1290. If the country were unfenced and unpurchased as in the early days you would not in a bad season try to take your stock across from Denman over the Goulburn? Well, it would be a good road, but you would not have the same feeding ground as on the other road, and it would be a great deal further round.
1291. The banks would be boggy? Yes; and I believe there would be a great difficulty in putting a bridge there.
1292. You could not dodge the river altogether by getting round to the west of Denman? I often have got permission when the Hunter has been up, and the Goulburn down, to go round that way with sheep.
1293. Then sometimes one river is up and the other not? Yes, but the Goulburn is very bad in flood.
1294. If the Goulburn is up, it is practically as impassable as the Hunter? Yes.
1295. *Mr. Trickett.* Would you prefer Gee's crossing to Bowman's? I would prefer Bowman's crossing.
1296. You think it is the better crossing? Yes, it is the shortest and best road.
1297. You would not have to go through much private land to go across Gee's crossing? Yes, you would have to go through purchased property. Years and years ago we used to go that way with stock, and I did not prefer it at all. Three years ago I got 300 or more signatures in favour of Bowman's crossing—from every stock-owner and drover in the district.
1298. They were all in favour of Bowman's crossing? Yes.

Mr. J. Mason.
10 Mar., 1890.

- Mr. J. Mason
10 Mar., 1890.
1299. Have you heard what is the feeling lately? I hear that some of the Jerry's Plains people want it at Gee's crossing, but I think the other crossing is the better one.
1300. Because it is on the main road, and follows the stock route? Yes; a large quantity of stock passos through Denman. This last week, seven lots of fat cattle passed through. I have left a lot to come to this meeting, and I will cross them at Bowman's to-morrow.
1301. Mr. Hurley.] Can you give an idea of the number of stock which pass over Bowman's? I suppose there must be some thousands yearly.
1302. Over 20,000? Yes.
1303. Have you suffered any inconvenience between the Hunter, Bowman's crossing, and your market? The Colo River is a bad place, and it wants a bridge, but you can get over it better than you can over Bowman's.
1304. Have you ever been detained there at all? Yes; I was detained there the other day.
1305. You have been twenty-eight years on this route? Yes.
1306. How many times have you been stopped through the river being flooded at Bowman's? I was detained there with a lot of Mr. Douglas' cattle for five days, and had to bring them on the Ogilvie's reserve. They were store cattle going to Goulburn. They were very weak at the time, and if I travelled them down the main road I might have lost half of them. I have been detained with Tyson's cattle on another occasion. I had 200 bullocks, for Martindale, going to Sydney, and we drowned five bullocks at £9 a head at Bowman's. We had to bring the rest back and put them in the paddock. I have been detained seven or eight days.
1307. In how many years? Seven or eight years.
1308. Have you been detained once a year during the time you have been droving? I would not say that.
1309. There were years when you were not detained at all? Yes, when we know the river is up, the drover engages men, and it costs him a good deal to get the stock over.
1310. So that on an average you have not been detained once a year in twenty-eight years? I would not say that, but I have helped stock over which have been detained, many times.
1311. At any rate some years you are not detained at all? Yes, some years we have had nothing to detain us, but when we get a season like this we are detained very often.
1312. Have you heard anything about chilling meat and taking it by rail to Sydney? Yes.
1313. Do you think that will interfere with your vocation? No.
1314. Why? Because they charge too high for everything on the railway. People send stock to market to make a little profit out of them.
1315. What do you receive per head for taking stock to market? Generally 6d. a head for sheep from Liverpool Plains, and 3s. a head from this district for cattle.
1316. Do you think if the Railway Department made low charges on meat taken to market in a chilled condition, there would be any necessity for a bridge, or that there would be any droving on the road at all? You would do a lot of poor men out of work. I have driven stock for agents in Sydney for many years, and I know they like to get them to market as cheaply as possible.
1317. It would interfere with your trade? Yes.
1318. Since the railway has been opened across the Hawkesbury, have not a large number of the stock been sent by rail? Not from here.
1319. Leaving outside the question of the stock traffic which would be served by a bridge, is there any other public convenience which would be served? Yes. There are the squatters about Jerry's Plains, and the cattle buyers who come in and by cattle. When the river is up they cannot take them over without going down to Singleton.
1320. But the population of Jerry's Plains is not sufficient to warrant the construction of a bridge for the purposes of the cattle they purchase? There are a good many people around Jerry's Plains and Denman, who would not come to Muswellbrook if they could get a bridge erected to take them to Jerry's Plains.
1321. Did you ever lose any bullocks? Yes, I drowned five on one occasion, and they cost £9 a head.
1322. Mr. O'Sullivan.] Why do you prefer the bridge at Bowman's crossing, because you tell us it is the worst crossing between the Warrego and Sydney, and then you say you prefer it to the one at Gee's? I do prefer Bowman's crossing, if a bridge is erected.
1323. Which one do you prefer? Bowman's crossing.
1324. Why do you prefer the bridge at Bowman's crossing? Because it is only about 7 miles from the reserve, and if you take them off the reserve, and have to drive them 3 miles further, they do not look as well.
1325. But all this time you say this is the most dangerous crossing between the Warrego and Sydney? It is.
1326. Then why do you want the bridge to be put over this most dangerous crossing instead of it being at a less dangerous place lower down? It is a very wide crossing, and that makes it dangerous. You can get sheep over a narrow crossing. I have been there for days with 6,000 sheep, trying night and day to get them over.
1327. But why do you prefer the bridge to be at Bowman's, instead of at Gee's crossing? Because it is on the straight route.
1328. Then you prefer it because it is the ordinary stock route? It is, and it is the oldest route in this part of the colony.
1329. That is your chief reason for wishing the bridge to be there. You want to follow the old route? Yes, by going the other way you would have to cross the ridgy country as well as private property, and you would have more lanes.
1330. Then you prefer the present stock route because you are nearer the reserves, and would have more room to drive your cattle on the route? Yes, it is a good road to Jerry's Plains crossing and to Bowman's crossing, and when the bridge is erected there it is good travelling. We were detained there, and I think it is the proper place for a bridge.

Mr. Thomas Cook, grazier, sworn, and examined:—

- Mr. T. Cook.
10 Mar., 1890.
1331. Where do you reside? At Turanville, near Scone.
1332. What is your occupation? A grazier.
1333. Are you well acquainted with the stock travelling from your place to Sydney? Yes, with my own stock traffic.
- 1334.

1334. Do you send your own stock across at Bowman's? Yes, when I send any down. A few years ago I used to send 3,000 a year. Mr. T. Cook.
10 Mar., 1890.
1335. Do you give a preference to the railway since it has been opened? Yes; for small lots.
1336. What do you call small lots? Thirty or forty. They go in very much better. I pay 2s. per head droving 200 head to Homebush--over 10s. per head by rail.
1337. On the whole, you make more per beast if they go by road? Yes; the butchers prefer them.
1338. What difference does it make to your pocket if you get them down by road? I could not say, but the butchers have a preference for road cattle. Stock are considerably bruised in trucking.
1339. Butchers are apt to express their preference in money? I suppose so.
1340. How much more do you reckon you would gain? It would be difficult for me to say.
1341. Do you think the opening of the railway has superseded the necessity of a bridge over the river? I should think the bridge is necessary for every kind of traffic. There is no way of getting over. My cattle, years ago, were stuck at the bridge nearly a week in flood-time.
1342. Do you find that cattle owners and drovers complain very much? Yes.
1343. You look upon the road as one of the great high roads to Sydney? Yes.
1344. Looking at the extent of the traffic, do you think the expenditure of £10,000 on a bridge would be reasonable? I do, it would be an expenditure for all time.
1345. As a cattle-owner, and a resident in the district, do you think a bridge with a roadway, 15 ft. wide, would be sufficient for all purposes? That is rather narrow.
1346. It is wider than the bridge at Singleton by the side of the railway? It would possibly do, if the cattle were taken over carefully.
1347. Practical drovers say it would suit them? If it would suit them it would suit me, so long as cattle could go over it.
1348. The project, as originally put before the Standing Committee, was for a bridge to cost over £20,000. If a bridge, 15 feet wide, could be built for £10,000, do you not think that would satisfy the legitimate wants of the district? Quite so.
1349. There is no need to waste £10,000 extra on a grand structure? No.
1350. If it is above flood-level, a buggy at a time can go across, and that is all that is wanted? That is all. Cattle can be taken over in little lots at a time. They need not be crowded unless they liked.
1351. You are further away from this place than most of the local witnesses. I suppose the bridge would not be of so much importance to you as to many living nearer? It is of importance to me in regard to the stock traffic generally.
1352. Do your stock come down there now? Yes, occasionally.
1353. How often have your stock been stuck up there? The drovers could tell you better, I had four going continually a few years ago.
1354. You do not go into details as to how they are stuck up? I suppose they have been stuck up hundreds of times. Of course, it is a matter of thirty or forty years droving. They have often been stuck there a week, and sheep have been kept a fortnight or three weeks.
1355. *Mr. Trickett.*] Have you a special knowledge of the locality? Yes.
1356. Which do you think would be the best site for the bridge--Bowman's or Gee's? I do not know Gee's crossing; others can speak of it, the most suitable place would be the best one for everybody.
1357. *Mr. Hurley.*] You prefer to send your stock to market by the route spoken of, on account of it commanding a more ready market? It cost me less money. It costs me over 10s. a head to take cattle to Sydney, and I can get them driven in for about 2s. to 3s., according to number.
1358. At all events, the buyers prefer driven stock to those sent in by rail? Butchers prefer driven stock to train stock which get fearfully bruised, if taken only a short distance.
1359. What is the cost per head for taking stock to market by the Colo Valley? 2s. to 3s.
1360. I suppose you have heard that the Railway Commissioners have been thinking of constructing chilled meat cars for the conveyance of meat to market? Yes.
1361. Have you given the matter any consideration? I have thought about it.
1362. You know that in other parts of the world--America for instance--the system is practised to a large extent. Do you think that if chilled cars are built, and the freights are lower than the present freights, the pastoralists and graziers are likely to send their meat to market in that way? It will all depend on the question of carriage.
1363. You recognise the fact that you would reach the market more speedily than otherwise? The idea would be very good if it were carried out.
1364. It would be better for the consumer as well as for the producer? Yes.
1365. If the freight charges were sufficiently reduced you would always prefer to send your meat by train? Yes, if it were convenient to do so.
1366. *Mr. Trickett.*] But even if that means of carriage were provided, the stock would have to be driven to some centre for slaughter? Yes.
1367. That would not do away with the necessity for a bridge? Apart from the chilled meat question, the bridge is required for the general traffic of the public.
1368. *Mr. Hurley.*] Outside the question of droving you think the bridge is a national necessity? I think so.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Bridge Over the Hunter River at Jerry's Plains.

APPENDIX.

A.

PRECIS OF PAPERS IN RELATION TO THE PROPOSED BRIDGE AT JERRY'S PLAINS.

BRIDGES erected for the accommodation of the traffic at Denman and Bowman's Crossing were carried away by a heavy flood in the year 1879.

The bridge at Denman was replaced, and steps were also taken in the direction of rebuilding the other bridge, either at the old or at a better site.

17/3/81.—Mr. Laurensen, Road Superintendent, reported on a proposal to place the bridge at Krust's lane, stating that a high-level bridge, with road and fencing, would cost £5,600; and that compensation for land required would cost £2,000 or £3,000 more.

4/4/81.—Mr. John Brown, M.P., wrote to the Minister in advocacy of the same site, intimating that it would be a great convenience to the residents if the bridge were re-erected as near the Jerry's Plains township as possible. At present the people had to go to the station at Singleton, 20 to 26 miles away, whereas if the bridge were put up on the site suggested they could get to Liddell Station (9 miles).

Mr. Wells reported that the site recommended by Mr. Brown had, as he had supposed, much in its favour; but its chief advantage—ready access to the railway—would not justify the payment of the heavy compensation mentioned by Mr. Laurensen.

22/4/81.—Mr. Bennett minuted that, with a view to avoid the heavy compensation referred to, it had been decided to rebuild the bridge on the old site.

So far as the papers show, the matter then slept until June, 1883, when Mr. A. J. Gould wrote to the Commissioner for Roads, asking what steps had been taken with reference to the erection of the bridge across the Hunter River, at Jerry's Plains.

Mr. Bennett replied that Mr. Wells had been instructed to visit the locality and make a final report, and when that was received definite action would be taken.

Mr. Gould thereupon forwarded a petition from residents of Jerry's Plains, Warkworth, Singleton, Ravensworth, Camberwell, &c., setting forth that a road had been opened from Liddell Station, for several miles, in the direction of Jerry's Plains; that the Minister had favourably received a petition for an extension of such road, to join the main road from Denman somewhere near Gee's wine-shop; that to render this road of use to the public, a bridge across the Hunter at or near Gee's was required; that a sum of £6,000 was placed on the Estimates for a bridge at Bowman's Crossing; but that the site at Gee's was in every way better, as it would admit of a high-level bridge which would avoid the flat which was almost impassable in bad weather; the expense of a second bridge also would be saved. They therefore prayed that steps might be taken towards the erection of a bridge at Gee's.

Mr. Wells reported that some years before he reported in favour of this site, but the heavy compensation demanded for the land was too extravagant to be entertained. Time, however, might have changed the views of the persons concerned, and the local officer might make inquiry on this point.

Mr. Earngey, the local officer, reported strongly in favour of the site at Gee's, and intimated that he had arranged to go over the ground with Messrs. Pearce and Parnell, the land-owners concerned, and would report further.

16/10/83.—Mr. Gould, M.P., forwarded a memorial from residents of Jerry's Plains, in favour of the erection of the bridge at the old site (Bowman's Crossing), because—(1) It was well known; (2) it was the direct route; and (3) at that site only the direct expense of a bridge would be required. They also protested against the Gee's and Krust's lane sites, because the road leading thereto would be a most expensive one, passing over numerous creeks and gullies, and through private properties, to which latter, moreover, it would do much injury in cutting them off from access to the water.

10/12/83.—Mr. Earngey submitted his promised report. He had, he said, been over the various roads with Mr. Pearce, and had proved to him the indisputable advantages of the site at Gee's; but he still stoutly objected to any resumption of a road through his property, maintaining that no money would compensate him for the severance of his land and cutting him off from the water.

14/12/83.—Mr. Wells, in view of the manifest advantages of the site at Gee's, recommended that inquiry should be made at the Surveyor-General's office whether, under the terms of the grants, a road could not be forced through.

18/12/83.—Mr. Wells minuted further that he had ascertained that the terms of the grants admitted of roads being made through the land, with interdict presumably of passage within 200 yards of main homestead, and that Mr. Earngey should ascertain whether severance close to the river was absolutely necessary, and if the road could be kept 200 yards away from the homestead.

Mr. Earngey replied that it was absolutely necessary for the road to follow a leading range through Mr. Pearce's land, which would therefore of course be subdivided, and that the road could be kept 200 yards away from the homestead.

Mr. Wells suggested that the papers should be sent to the Surveyor-General for his opinion. Mr. Bennett minuted for the plans of the bridge to be put in hand; but what further action (if any) was then taken the papers do not show, and nothing more is recorded until November, 1884, when Mr. Narden reported that he had examined the various sites proposed for this bridge, and that at Gee's was better than Krust's, but the site near Rock's was better still. If the latter were adopted the properties of Mr. James Bowman and Mrs. John Bowman would be interfered with instead of those of Messrs. Pearce and Parnell. The expenditure required on the road was hardly justifiable in view of the smallness of the interests involved, and it was to be borne in mind that if a railway were made from Muswellbrook to Cassilis a good deal of the sheep traffic, upon which so much stress had been laid, would be diverted from this route.

19/1/85.—Mr. Gould drew the attention of the Minister to the necessity for a bridge at Maison Dieu or Dight's Crossing; also asked when a bridge would be erected across the Hunter at Jerry's Plains.

25/9/85.—Colonel Wells reported that Maison Dieu was the best site in respect of shortness of span, but for suitability for traffic lines Dight's Crossing might be preferable. Probably an intermediate site might be better than either, but the erection of a bridge at Jerry's Plains had a bearing on this question, and a proper judgment could not be formed until the river had been examined from Dight's Crossing to Bowman's Crossing.

November, 1889, to April, 1897.—Several letters of reminder in regard to proposed bridge at Jerry's Plains were received from Mr. Gould, M.P.

20/10/87.—The same gentlemen submitted a petition, praying for the erection of this bridge, and pointing out that although so many years had elapsed since the destruction of the two bridges, only the one at Denman had been replaced.

9/1/88.—The annual report of Mr. W. S. Wells spoke in favour of the Bowman's Crossing site, as much less expensive than the others and equally serviceable.

In the Draft Estimates for the year 1890 the sum of £20,000 was entered for this bridge*, and the Minister minuted as follows:—"Jerry's Plains bridge, to replace low-level bridge at Bowman's Crossing washed away by a flood, and to give access from the west side of the Hunter to the railway at Liddell."

1/10/89.—The Minister moved in the House,—“That the bridge in question be referred to the Public Works Committee for consideration and report.” The motion was carried.

10/2/90.—Mr. Jackson minuted, referring to four bridges which it had been proposed to refer to the Public Works Committee, that Jerry's Plains and * * * bridges should be withdrawn, as they could be erected for an amount under £20,000, and in any case further investigation was necessary as to whether any expenditure at these places was justifiable.

11/2/90.—The Minister minuted to withdraw the proposals for all the iron bridges except Cowra from the Public Works Committee, and to explain the change of proposal.

C.A.B., 14/2/90.

B.

REPORT BY COLONEL FREDERICK WELLS, ENGINEER FOR ROADS.

Bridge over the Hunter at Jerry's Plains.

THE demand for a bridge over the Hunter at or near the locality of Jerry's Plains arose in 1876, when, contrary to the opinion of the late Commissioner and Engineer for Roads, it was decided, at the urgent instance of the Member for the district, to build two low-level bridges, one at Denman and the other at Bowman's Crossing, to meet the requirements of the then existing large stock traffic which came from the north and north-western country through Jerry's Plains to cross the bridge at Warkworth over the Cockfighter Creek, and travel by the Wollombi-Wiseman's Ferry Road or the Bulga Road, *via* Richmond Bridge, to the Sydney market. These two low-level bridges have both been swept away, as was anticipated—that at Bowman's Crossing in 1879, that at Denman standing two years longer.

No low-level bridge will, under ordinary conditions, stand in the bed of the Hunter River, which is quite unsuitable to afford holding under the extreme pressure of the heavy rafts of timber that come down in flood, the first one erected from my design at Luskintyre being the only one that has stood of all those seven in number that have been built. This is due to its very low-level, and the fact of its piles being driven through a solid stone weir that had been a crossing for many years. The plea put forward for the Denman and Bowman's Crossing bridges was for stock accommodation principally, and on the proposal for re-erection another element was introduced, *viz.*, if possible also to serve the interests of Jerry's Plains town and settlement, by securing the residents short access to the railway at flood seasons. With this view, after inspection of many sites, that at Gee's Crossing was selected as most suitable for the stock traffic from Muswellbrook and Denman, as also for the access from Jerry's Plains to the railway at Liddell, causing no material difference in stock route from Muswellbrook and that from Denman. The selection of this site (Gee's) was long debated, and much impeded from the first inception by the opposition of land-owners, which has since been mollified.

The site at Bowman's Crossing would only have served the stock routes and was a most unsuitable one for a bridge of any kind on the ground of construction. It was then finally proposed to build a high-level iron bridge at Gee's, for which purpose a vote of £20,000 has been taken; but circumstances connected with the principal factor, *viz.*, the travelling stock, have changed so much that, after my late inspection, I do not think the large outlay above quoted is warranted. From inquiry and personal observation of the tracks, it is evident there is little or no traffic from Muswellbrook by Sir Thomas Mitchell's line, and the traffic from Denman has also dwindled into comparative insignificance. Since the opening of the Great Northern Railway Bridge over the Hawkesbury, the bulk of the stock traffic is taken by rail from Muswellbrook. I append a return from the Railway Department, showing stock sent down from the Muswellbrook Station during the past three years, the result since opening of the railway bridge over the Hawkesbury being 14,690 in 1889 against 4,992 in 1888, and 6,775 in 1887. It must be remembered that the Hawkesbury Bridge was only opened in May, 1889, so that the increase is due only to about half of that year.

The other grounds on which a bridge is demanded, *viz.*, for facility of communication with Jerry's Plains township, certainly are not sufficient to warrant an expensive bridge. The distance from Jerry's Plains, by way of a bridge at Gee's Crossing to Liddell Platform, would be some 13 to 14 miles; by the fair-weather road, *via* Mason Den, it is only 17 miles to Singleton and would always be preferred. In flood the access to Singleton is always maintained by the Warkworth route, the distance being 21 miles. The northern communication from Muswellbrook and Denman to Jerry's Plains cannot at present be very important, still it is worth while considering whether the opportunity now afforded of dealing with landholders for roads of access to a bridge should not be taken advantage of, and whether a timber bridge might not be erected, the cost of which I estimate at £6,550; road approaches and resumption would probably cost £3,450 more; or a total of £10,000 in all.

This estimate is for a timber bridge, 15 feet roadway; but the cost of a composite bridge on iron piers, with 20 feet roadway, approaches, &c., included, Mr. M'Donald estimates at £17,000.

F. WELLS,
Engineer for Roads.

SUPPLEMENTARY REPORT BY COLONEL FREDERICK WELLS.

Re Jerry's Plains Bridge, at Gee's Crossing.—Stock traffic.

SINCE writing my last report, I have made further inquiry as to the stock traffic likely to use a bridge over the Hunter, near Jerry's Plains, if one were erected; and the result is confirmation of my opinion that the Northern cattle traffic is now principally conducted by railway, and that all the A.A. Company's stock is now so travelled. I hear of a large increase, however, in the number crossing Richmond Bridge. This is, I believe, owing to the Riverstone Meat Works, and a large proportion probably travels Bell's Line from the West. It is hoped by the Stock Department, that ere long, fat cattle will be slaughtered in the country, and still further diminish the droving of stock. It might be advisable to take the evidence of Mr. Alford, Stock Inspector, of Singleton District.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

IRON BRIDGE AT COWRA.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic. No. 26, to whom was referred the duty of considering and reporting upon the expediency of "erecting an Iron Bridge at Cowra," have, after due inquiry, resolved that it is not expedient the proposed bridge should be erected, but that a composite bridge, as since recommended by the Department of Public Works, should be constructed; and in accordance with the provision of subsection IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. The bridge referred to the Committee by the Legislative Assembly was to be constructed of iron, the estimated cost of the structure being £69,971, but since that reference the Department of Public Works has placed before the Committee, as a result of a revision of the system of bridge construction in this colony, a proposal for a composite bridge of iron, steel, and timber, to cost £26,538. This composite structure consists of three truss spans of 160 feet, four truss spans of 90 feet, and four 35 feet, and two 30 feet, plain beam approach spans, measured from centre to centre of piers and abutments. The minimum clear carriage-way is 20 feet, and the maximum 21 feet 6 inches, the two footways having each a width of 5 feet. A technical description of this bridge is given on page 5 of the evidence before the Committee, but it may be stated here that the piers carrying the 160-ft. spans are composed of wrought-iron cylinders, 4 ft. 6 in. and 6 ft. diameter, respectively, in land and river piers, stiffened with wrought-iron diaphragm bracing, and founded on cast-iron cylinders filled with cement concrete, the land and river piers being 7 ft. 6 in. and 6 ft. diameter, respectively, at base. The piers carrying 90-ft. spans are built of timber, piers 4 and 5 consisting of nine vertical piles arranged in groups of four, and piers 3 and 10 consisting of five vertical piles arranged in pairs under heels of trusses and one in centre; there are also two short vertical piles to carry up-and-down stream struts; the piles to be rigidly stayed with wales, braces, and compression struts. The piers and abutments carrying approach spans are of timber, each pier consisting of four piles (two vertical and two with a rake of 1 in 12) 18 in. diameter, stayed with wales and braces; the abutments to consist of five vertical piles and two wing piles 17 in. diameter. Piles of piers carrying truss spans will be driven 25 ft.; piles carrying approach spans 20 ft. The bridge has been designed to carry a live load of 84 lb. per square foot of carriage and foot way; the cross girders and longitudinal girders have been designed to carry a traction engine of 16½ tons.

2. The estimated prime cost of the design for the composite bridge complete, and including carriage (which totals £3,386), is stated as £26,538, assuming the life of the steel chords and cross girders to be one hundred and fifty years, the timber

Description of the bridge.

Estimated cost of the bridge.

in

in trusses at twenty-five years, and in decking at twelve and a half years, and the money borrowed at 4 per cent. Extending the cost over 150 years, it would mean, it is represented, an annual charge of £1,735 against the revenue, and this charge would provide for keeping the bridge in thorough repair, the timber in trusses being renewed every twenty-five years, and decking every twelve and a half years, and it would provide also for a sinking fund and for interest on capital. It is further stated in the technical description referred to that by substituting timber piers for the iron piers carrying 160-ft. spans, the prime cost would be reduced to £20,822, and the annual charge to £1,565; that by omitting footways, and still retaining the iron piers, the prime cost would be £23,894, and the annual charge £1,529; that by omitting footways, and substituting timber piers for iron piers carrying the 160-ft. spans, the prime cost would be £18,178, and the annual charge £1,359; and that, should it be possible to obtain the money at $3\frac{1}{2}$ per cent., the annual charge, with cylinders and footways included, would be reduced to £1,624. Omitting footways, if money could be obtained at $3\frac{1}{2}$ per cent., the annual charge would be £1,427. The annual charge of the same design with timber piers instead of iron would be, including footways, £1,486; and by omitting footways, the annual charge would be £1,289.

Nature of
the inquiry.

3. The inquiry into this proposed bridge has been one of more than ordinary importance, inasmuch as the composite structure is put forward as a type of bridge likely to be preferable in many instances in which, under the system hitherto followed, iron bridges would be erected. The value of timber as material for bridge construction is in this proposal specially considered, and though in some cases of bridge-building in the future iron bridges will doubtless be found most suitable, timber or composite will under the new plan be substituted for iron wherever practicable, by adopting which course both durability and economy will be secured. These considerations led to the inquiry assuming a more elaborate form than under other circumstances it would have done, and the amended proposal representing the composite bridge was explained to the Committee in a very comprehensive paper, which is included in the evidence given by the Engineer for Bridges, Mr. J. A. McDonald. Another feature in the inquiry has been a special examination of the proposal before the Committee by an engineer outside the Public Service (Mr. A. S. Hamand), and a report, with accompanying estimates and plans, from that gentleman, to enable the Committee to understand whether masonry would be a cheaper and better material for the proposed bridge than either iron, timber, or composite, an offer to furnish this report, together with estimates and plans, having been made by Mr. Hamand to the Committee at an early stage of the inquiry and accepted by them.

Necessity for
a new bridge.

4. The site of the proposed bridge is the Lachlan River, at Cowra, and the necessity for a new bridge arises from the old and practically worn-out condition of the present structure. The present bridge, a wooden one, is not beyond repair, but inasmuch as the piers and the approach spans are in a very bad state it would not be economy, it is considered, to repair it. In 1886 it was ascertained that to properly repair the bridge the main piers in the river and the approach piers and spans would have to be renewed, the deck of the bridge widened, and footways fixed to provide for increased traffic; and as the cost of this was estimated at £12,550, and there was a probability of other portions of the bridge requiring to be renewed within ten years, it was decided to prepare designs for a new structure.

Types of
bridges
submitted
to the
Committee.

5. Admitting that to provide a new bridge is preferable to repairing the old one, it becomes necessary to consider whether the new structure proposed will be suitable for requirements, and is the best type of bridge to erect. It will be seen from the evidence and from the plans appended to it that three designs, each representing a certain type of bridge, were submitted to the Committee by the Engineer for Bridges, and that a carefully-prepared comparison of the three is given, in order that their individual and relative merits may be properly understood. No. 1 design is for an iron bridge of the lattice type, the estimated prime cost of which, with an iron deck, is £69,971, and with a timber deck £54,959; the annual charge against revenue, calculated on an assumption that the life of the bridge would be 150 years, the money expended in its construction borrowed at 4 per cent., and the cost extended over the period representing the bridge's life, £3,054 with iron deck, and with

with timber deck, £2,811. No. 2 design, which is that recommended by the Department, is for the composite bridge, already described in a previous part of this Report. No. 3 design is for a timber bridge of nine 90-ft. truss spans and four 35-ft. and three 30-ft. plain beam approach spans; the minimum clear carriage-way being 20 ft., and the maximum 21 ft. 6 in.; the two footways having each a width of 5 ft. The estimated prime cost of this design is £21,392, and the annual charge, £1,576.

6. From a consideration of these estimates of cost, the Engineer for Bridges concludes that the Department would not be justified in recommending the construction of the iron bridge shown in design No. 1, the annual charge connected with which would be £2,811, when the traffic can be equally well served, or nearly so, by the composite bridge (design No. 2), at an annual charge of £1,735. The timber bridge, he states, would, in flood-time, be liable to have its piers carried away by drift timber, and, in addition to this, at the end of twenty-five years, the whole bridge would have to be renewed, the renewal of the bridge rendering it necessary to stop the traffic for about twelve months, unless the new bridge were built on a different site. The composite bridge would provide sufficient waterway for drift timber to pass, and, therefore, the risk of damage from floods would be obviated. Permanent piers are provided for the main spans in order to facilitate renewals, and, with a similar object, provision is made for a permanent lower chord; and it is contended that the estimated cost of the bridge is not extravagant, considering the large traffic which the bridge is required to carry.

7. The Engineer-in-Chief for Roads and Bridges states in his evidence that the composite type of bridge is an outcome of consultations with the Engineer for Bridges, with a view to economy in future bridge construction. The Engineer for Bridges says the composite structure is the cheapest, and that a bridge of the size represented in the design for this composite structure is necessary for the traffic. The Superintendent of Roads and Bridges in the district of Cowra is of opinion that a good and substantial bridge is necessary, independent of questions arising out of railway construction; and the evidence generally is in this direction.

8. A Sectional Committee having been appointed to inquire into the proposed railway from Molong to Parkes and Forbes, and it being therefore necessary for them to visit Cowra, they were authorized to inspect the site of the proposed bridge at Cowra, and take evidence respecting it from local residents. This they did; and the evidence taken, together with the Sectional Committee's report, is published with this Report of the Committee. The Sectional Committee strongly recommended the construction of a new bridge, but did not express an opinion in favour of any design, as at the time their report was written Mr. A. S. Hamand had not carried out the commission entrusted to him by the Committee.

9. In consequence of certain letters to the Committee, Mr. A. S. Hamand was authorized to proceed to Cowra, and report with reference to the proposed bridge. On the 10th February, 1890, he wrote to the Chairman as follows:—

59, Castlereagh-street, Redfern, 10 February, 1890.

Dear Sir,

In view of the Public Works Committee having presently to consider some bridges proposed by the Works Department, I should like to be allowed to remind you that they have been hitherto almost exclusively constructed of either iron or timber, and that both these materials entail expensive maintenance.

Iron girders require periodical cleaning and painting, and their floors of timber need frequent renewal.

It seems a pity that with such abundance of excellent material for masonry that structures composed of stone, brick, or concrete are not designed and erected. In respect of prime cost they generally stand between timber and iron; they cost nothing for annual maintenance; they present a more solid and artistic appearance than either wood or iron; and they have the additional merit that the materials and labour are wholly within the colony.

With respect to the use of cast iron for piers and columns, its use has been abandoned in Great Britain for the last ten or twelve years, the Board of Trade requiring the substitution for it of wrought iron in all piers and weight-carrying positions.

There may be positions where masonry cannot be used, or wholly used, but in nine cases out of ten that I have seen I should have used it in lieu of timber or iron.

I can imagine the official answer to questions on the subject. The same arguments apply to bridges and viaducts on the railways.

This

Reasons of the Department for recommending a composite bridge.

Evidence in support of the proposed bridge.

Visit of a Sectional Committee.

Mr. A. S. Hamand's examination of the proposal before the Committee.

This is how it appears to me to affect the colonial pocket :—

Assume a bridge, on a given site, to cost—in	Timber	£40,000
	Masonry	60,000
	and Iron	80,000
The annual charge on the colony for each would be :—			
Timber (extreme life twenty-five years)—Renewals	£1,600	
	Interest at 3½ per cent.	1,400
			3,000
Masonry—Interest at 3½ per cent.	2,100
Iron—Repairs and renewals	£200	
	Interest at 3½ per cent.	2,800
			3,000

I am very doubtful if twenty-five years, as an average life for the whole of the timber in a bridge, is not at least five years too long.

Anyhow, if I am correct in my views, masonry is a more judicious material, and saves the colonial pocket nearly one-third the annual charge entailed by iron or wood.

I do not intend this as an official letter, but you will use the contents in your discretion, the main point being to improve the engineering economy of the Government.

I am, &c.,

ARTHUR S. HAMAND.

J. P. Abbott, Esq., M.L.A., Wentworth Court, Elizabeth-street, Sydney.

This letter was brought before the Committee, and acknowledged. Subsequently a second letter was received from Mr. Hamand, offering to inspect the site of the proposed bridge, and, if in his opinion a masonry bridge was feasible, to prepare, in the course of from ten to fifteen days, a working drawing, specification, and estimate, without making any professional charge to the Committee. Upon this it was resolved that the offer be accepted "on the understanding that only his travelling expenses be charged to the Committee"; and Mr. Hamand thereupon undertook his proposed commission. The result of his visit to Cowra, and his examination of the proposal of the Department before the Committee, will be seen in his report, which is published in the Appendix, and in two plans with which his report was accompanied. A careful consideration of these, and of evidence in reference to them given by the Engineer for Bridges, has led the Committee to the conclusion that the proposal, as submitted by the Department, should be adopted.

Question of site.

10. Some difference of opinion exists amongst those interested in the bridge as to the site where it should be erected. The site of the present bridge faces a street called Bridge-street, which is not the best to meet the requirements of the traffic; and if it were adopted for the new bridge the traffic would have to be provided for elsewhere while the old bridge was being removed and the new one erected. The proposed site faces Kendal-street, the main street of the town, and this, it is generally considered, is preferable to any other.

Decision of the Committee.

11. Viewing all the circumstances of the case, the Committee are of opinion that the composite bridge proposed by the Department should be constructed, and on Wednesday, 7th May, 1890, they expressed this opinion in the following resolution, which was moved by Mr. Tonkin, seconded by Mr. Lee, and passed unanimously :—

"That, in the opinion of the Committee, it is not expedient that the proposed Iron Bridge at Cowra, at a cost of £69,971, as referred to the Committee by the Legislative Assembly, should be carried out; but in the opinion of the Committee a composite bridge, at a cost of £26,538, as now recommended by the Department of Public Works, should be erected."

J. P. ABBOTT,

Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 21 May, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

IRON BRIDGE AT COWRA.

WEDNESDAY, 12 FEBRUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).	
The Hon. JOHN LACKEY.	HENRY COPELAND, Esq.
The Hon. ANDREW GARRAN.	JAMES EBENEZER TONKIN, Esq.
The Hon. FREDERICK THOMAS HUMPHREY.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
JACOB GARRARD, Esq.	CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Iron Bridge at Cowra.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Mr. Lackey.*] You are Under Secretary for Public Works? Yes.
2. And have been for some time? Yes, for about two years.
3. What is the estimate for the proposed bridge over the Lachlan at Cowra? The estimate given to Parliament, and which was really referred to this Committee, was £69,971, but as the result of the revision which has taken place in our system of bridge making, we now wish to put before the Committee a proposal for a composite structure of iron, steel, and timber, at an estimated cost of £26,538. We have also prepared an estimate for a timber bridge amounting to £21,392, but there are very cogent reasons, which I think our engineer will be able to give, showing why it is not desirable in this particular place to build simply a timber bridge. The bridge recommended by the Department is a composite structure, consisting of 3 truss spans of 160 feet, 4 truss spans of 90 feet, and 6 plain beam timber approach spans; the carriage-way is 20 feet, and each of the two foot-ways has a width of 5 feet. The piers under the heels of the 160-ft. spans are of iron filled with concrete, the remaining piers and abutments being of timber.
4. This is to take the place of the bridge at present in existence at Cowra? Yes.
5. Do you know if that is a wooden bridge or an iron bridge? That is, I believe, wholly timber. I have a *précis* of the case, which I now hand in. [The *précis* was read by the Secretary.]
6. Does it state in that *précis* the approximate cost of the bridge? Yes, the estimate is given—£26,538.
7. That is for the alternative project? That is the project before the Committee now—a composite bridge, the description of which I read a short time ago.
8. I suppose the Department considers the present bridge a timber bridge only? Yes.
9. That has been up about twenty years? It is stated in the *précis* of the case.
10. How long ago did the Department come to the conclusion to adopt wooden bridges instead of iron bridges hitherto recommended? It would be misleading to answer the question put in that bold way—viz., that we have cast aside iron bridges and have determined to build timber bridges in every case.
11. Is not that the purport of the recommendation you are making in withdrawing these bridges? In these particular cases.
12. Then it applies to these bridges specially and not to bridges generally? It applies in this way—that in view of the desirability of substituting timber for iron where practicable, we should consider in every case of a proposed bridge whether timber would not answer all the requirements; but it does not follow that in every case we should come to the conclusion to adopt timber. In this case it is proposed to have a composite bridge.
13. In some instances I see that wooden bridges have been built heretofore by the Department? Yes.
14. That is as in the case of the Cowra Bridge? Yes; but, as I pointed out, in many cases where before we would have constructed iron bridges, we would now, under the revision alluded to, substitute timber or composite.
15. That would be for ordinary traffic only; I take it you would not include railway traffic? No, I am not dealing with railway traffic at all.
16. Is it fair to ask if this is the recommendation of the professional head of the Department? The professional officer will follow me, but I think I am correct in saying decidedly yes. There is one other thing I wish to add, as being interesting to the Committee with regard to the existing Cowra bridge, and which has been ascertained by actual observation. I thought the Committee might like this information, and I therefore asked the Engineer for Roads to obtain it. In the week ending 25th December, 1889

J. Barling,
Esq.
12 Feb., 1890.

- J. Barling, Esq.
12 Feb., 1890.
- the following traffic passed over the bridge:—Foot passengers 2,092, daily average 300; horse-back passengers 1,057, daily average 150; carts and buggies 709, daily average 101; drays 186, daily average 26; waggons 63, daily average 9; sheep 450, daily average 65 (much below the average for the year—about 200,000 sheep pass over annually, being a daily average of 600).
17. Are tolls collected at the bridge? There are no tolls collected anywhere now.
18. How were the figures ascertained? I asked Mr. Hickson to send an officer to take special observations with regard to it. I thought the Committee would like to have some definite statistics before them, and I suggested to Mr. Hickson the desirableness of taking them.
19. *Mr. Copeland.*] This officer was there all the week? These statistics are for the week ending 26th December, 1889, and they were ascertained by actual observation that week. The number of cattle and horses that passed over the bridge was 1,818—daily average, 260; bales of wool, 382—daily average, 55; bags of grain, 1,321—daily average, 190; general goods, 41 tons—daily average, 6 tons. In regard to the bales of wool, bags of grain, and the general goods, there is a foot note, which says: "This is also much below the average for the year." As a further index to the amount of traffic passing over the Cowra Bridge a return has been obtained from the Railway Department of the tonnage received at, and sent from, the Cowra Station in the year ending 31st December, 1889, viz.: Inwards, 6,603 tons; outwards, 4,633 tons, nearly all of which comes and goes by way of the bridge.
20. *Mr. O'Sullivan.*] Is that bridge intended to carry a railway as well as the ordinary traffic? No.
21. Are you not aware that there is an agitation for a railway from Cowra to Forbes? I am aware there is such an agitation.
22. Would it not be well to keep this back and see if you will have to build a railway bridge as well? I can hardly answer that question immediately. The officer who will follow me has the requisite local knowledge to do so.
23. I suppose you are aware of the big blunder made at Nowra by constructing a bridge that will not carry a railway? I think you will not ask me to make an admission that the Department made a blunder there.
24. *Dr. Garran.*] Can you tell me whether this wooden bridge was built out of revenue or out of loan money originally? I suppose it was built out of loan money, but I should like to verify that statement.
25. Can you tell me whether at the time the vote was submitted to Parliament the Minister promised that there should be a toll to pay interest upon it? We know that tolls are abolished.
26. Was there ever a toll collected on this bridge? That I cannot say for certain. I will find out.
27. Is the old crossing passable now? The old bridge is used now.
28. I mean the old ford? That I cannot answer. I have not the local knowledge to enable me to answer.
29. The railway crosses the river at Cowra now? Undoubtedly.
30. Was there ever a proposal for combining a traffic bridge with that at the time it was made? I cannot answer that question, but I will ascertain.
31. Do you know what that railway bridge cost? No.
32. The traffic that you spoke of as passing over the bridge now is coming from the west into the town of Cowra? Undoubtedly.
33. Supposing there were a platform on the other side of the bridge would not all the heavy traffic be taken to the railway there? That would practically be making another station and town there.
34. We have got to build a bridge, costing £26,000, to bring the traffic across the river into Cowra when the railway crosses the river to the other side from which the traffic comes,—is it not so? Yes, I think so.
35. We have got one railway bridge that takes the traffic and have got to build another bridge to bring the traffic to the railway? Quite so.
36. You do not know whether there is possibly any accommodation on the other side of the river for the traffic? I cannot say for certain, but Mr. McDonald will be able to answer that question.
37. Do the sheep and cattle that come there come to take the train at Cowra and go on to Bathurst or Sydney—those large mobs of sheep you spoke of? I see in the railway traffic returns which I have that is not specified. I have merely the details of tonnage, &c.
38. If these sheep are going to take the train at Cowra, they could all be put in trucks on the other side of the river? I should imagine they could.
39. If less than £10,000 built a bridge originally, which lasted over twenty years, and which is still big enough to take the traffic if it were strong enough, why do we want to spend £20,000, when the railway will relieve the traffic? It is of immense inconvenience to the traffic to have to renew a bridge, and a timber bridge would require renewing after a certain number of years, whereas this bridge would last a much greater number of years.
40. This will be a timber bridge on iron supports? Under the wide spans there will be iron supports.
41. It will want repairing? Yes.
42. Where would the money for that come from? From the general revenue.
43. There is no toll to be collected? No.

THURSDAY, 13 FEBRUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHREY.

The Hon. WILLIAM JOSEPH TRICKETT.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Iron Bridge at Cowra.

J. A.
M'Donald,
Esq.

John Alexander M'Donald, Esq., M.I.C.E. and M.I.M.E., Engineer for Bridges, sworn, and examined:—
44. *Dr. Garran.*] What position do you hold in the Public Service? Engineer for Bridges in the Roads and Bridges Department.

13 Feb., 1890. 45. Have you any statement you wish to make before being examined? Yes.

46.

46. Will you kindly read it, so that the members of the Committee can all hear it? Yes. It is as follows:—

J. A.
M'Donald,
Esq.

13 Feb., 1890

COWRA BRIDGE.

Introductory.

AFTER consultation with the Engineer-in-Chief for Roads and Bridges it has been decided to submit the following designs to your Committee. It may be thought at first sight that the time of the draftsmen of the Roads and Bridges Branch has been wasted in preparing so many designs, and that the Department should have brought forward only the one design recommended. It is not desired that the Committee should form the impression that every—or, in fact, any—bridge designed by the Department has involved so many calculations and designs, but this being a comparatively large bridge, and one for which some provision must shortly be made, it was found necessary to investigate carefully the merits of various types; and having done so, it was thought the information accumulated should be submitted in full to your Committee.

The main point I wish to give prominence to in my evidence is not only a technical one, but one of commercial economy, and a point that requires careful consideration in a new country. I refer to the relative costs of construction and maintenance of timber, composite (timber and metal), and metallic (iron or steel) bridges. The timbers in these colonies differ so much in character from those of other countries, and are so much superior for bridge-work; and the cost of iron bridge-work delivered *in situ* is so high, that it becomes a matter for careful investigation as to when it is advisable and economical to use timber or composite structures, and when to use iron and masonry. It is in roadway bridges in these Colonies inadvisable to blindly follow the practice of English and American Engineers, as the materials and costs are so different.

It is usually considered where the traffic is large and heavy that a permanent structure should be erected (by "permanent" I mean a structure that should last at least 100 years). But I would argue that if the "capital value" of the permanent structure far exceeds the "capital value" of a "temporary" structure (I here use the term "temporary" to refer to a structure lasting not more than 25 years); then for the country districts the "temporary" structure should be adopted, and it is this point I would wish to bring prominently before your Committee.

Old Bridge.

The cost of the Cowra bridge completed in 1870, and built entirely of timber, was £9,120. The funds provided were £5,000 on 1862 loans and £3,000 on 1866 loans, and balance from road votes. It consisted of three M'Callum truss spans, each 130 ft., and the remainder simple beam spans. Four months after completion several of the simple beam spans were carried away by flood, and were then replaced by three truss spans, each 65 feet, at a cost of £1,715.

The cost of repairs previous to 1885 have been charged to the general vote "Repairs to Bridges," and so cannot be separated, but from 1885 to date the repairs have amounted to £1,220—(see *Appendix 1*)—or at the rate of £244 per annum. Excluding repairs for the fifteen years, 1870 to 1885, the value of which are unobtainable, the total expenditure on this bridge to date has been £12,055.

In 1886 it was reported by the Local Road Superintendent that the timber piers were in a very unsafe condition, due to decay, and an amount of £3,000 was placed on the 1887 Estimates for renewing the main piers in the river. Borings were then taken, and further examination showed that the approach spans and piers would have to be renewed, and the deck widened and footways fixed to provide for the increased traffic; the only sound timber remaining in the structure being the M'Callum trusses. An estimate was got out for this work, and it was found that the new iron piers and concrete abutments would cost £6,750; and the renewal of approaches, widening deck and fixing footways, would cost £5,800, or a total of £12,550. It was then decided to get out designs for an entirely new structure, as at the end of ten years the M'Callum trusses would probably have to be renewed also.

Survey.

Survey plan No. 4 was then made, and sections taken.

Selection of site.

The previous papers of this Department do not show the reasons which led to the adoption of the present site for this bridge. A road—Bridge-street—10 chains long and 50 feet wide, was specially resumed as an approach, and this street has of course since been considered as a permanent main thoroughfare. Now that a new bridge is required the question of site has been reconsidered, and four distinct sections have been taken, viz.:—On line of old bridge, on line of proposed bridge as marked on plan, and two lines intermediate. Sections have not been run on any line down stream of present bridge, as not only would such a line still further divert the traffic from a direct line, but as a heavy flood might at any time carry the old bridge away, it would be dangerous during construction to erect the new structure on the down stream side.

From an engineering point of view, and apart from land resumption, the four sites surveyed are fairly equal as to length and cost, and the main point then to consider is the most convenient and direct route for the traffic. The site recommended and marked on plan at the foot of Kendal-street forms a direct and almost straight line from the Railway Station to the opposite bank of the river. The present route takes two right angle turns on to a road only 50 feet wide, whereas Kendal-street is 99 feet wide, and no alienated land need be encroached upon on either side of the river. Again, if the old route were adhered to, the old bridge would have to be removed and the traffic completely stopped for about eighteen months. In addition, the roadway would have to be raised about 9 feet, which would probably lead to litigation with the owners of properties on each side of the road. The narrow width of the road, however, is the most fatal objection to retaining the present line of traffic. Viewing the matter as one of public convenience rather than of private interests, there can, I think, be no doubt that the Kendal-street site is by far the best of any in the town.

Traffic.

Returns of the present traffic over the Cowra Bridge have been obtained from the local Road Superintendent for one week [*Appendix 2*], and this has been taken as the average traffic, and worked out at per annum in *Appendix 6*.

As

The cost of above design could be reduced by omitting footways, which would bring the prime cost to £65,196, the annual charge to £2,862, and the capital value to £71,550.

Should it be possible to obtain the money at $3\frac{1}{2}$ per cent., the annual charge, footways included, would be reduced to £2,711, and that capitalized would be £77,457.

Omitting footways, if money could be obtained at $3\frac{1}{2}$ per cent., the annual charge would be £2,543, and that capitalized would be £72,657.

J. A.
M'Donald,
Esq.
13 Feb., 1890.

Timber Deck.

The prime cost of same design, with timber deck instead of iron, and money borrowed at 4 per cent., would be, including footways, £54,959, the annual charge £2,811, and the capital value £70,275.

By omitting footways (£4,385), the prime cost would be £50,574, the annual charge £2,540, and the capital value £63,500.

Should it be possible to obtain the money at $3\frac{1}{2}$ per cent., the annual charge, footways included, would be £2,552, and that capitalized would be £72,914.

Omitting footways, if money could be obtained at $3\frac{1}{2}$ per cent., the annual charge would be £2,301, and that capitalized would be £65,743.

DESIGN II.

No. 2 design is for a composite structure, and consists of three truss spans of 160 ft., four truss spans of 90 ft. each, and four 35 ft. and two 30 ft. plain beam approach spans measured from centre to centre of piers and abutments. The minimum clear carriage-way is 20 ft., and the maximum 21 ft. 6 in., and the two footways have each a width of 5 ft.

The 160 ft. spans are 27 ft. deep, between centres of triangulations. The top chord principals and diagonal bracings are of ironbark timber, the bottom chord is of steel formed of stringer-plates and L bars top and bottom, stringers to be laced together with flat bars. The suspension bolts are of wrought-iron, placed in groups of four, and connected with wrought-iron washer-plates.

All the timber members are adjustable by means of wedges, so that any shrinkage that occurs can be taken up.

The cross-girders, spaced 20 ft. apart, are of steel, to be "fish-bellied" and formed of web-plates, connected to flange-plates top and bottom by double-angle bars; the ends of cross-girders to project so as to form cantilevers for carrying footways; the webs of cross-girders are stiffened by T bars and packing-plates, and the whole rivetted with wrought-iron rivets.

Longitudinal girders, forming carriage and footway, to be of sawn timber resting on the cross-girders as shown.

Deck on carriage and foot way to be of tallow-wood, laid diagonally on carriage-way, and transversely on footway.

Top and bottom booms to be stiffened with wind-bracing, formed of timber transverse struts and diagonal wrought-iron tie-rods.

The 90 ft. truss spans to be built of timber, the main cross-girders to project so as to carry the deck of footway, the clear width of carriage and foot ways being the same as on the 160 ft. spans.

Piers carrying the 160 ft. spans are composed of wrought-iron cylinders, 4 ft. 6 in. and 6 ft. diameter respectively in land and river piers, stiffened with wrought-iron diaphragm bracing, and founded on cast-iron cylinders filled with cement concrete, the land and river piers being 7 ft. 6 in. and 6 ft. diameter respectively at base.

The piers carrying 90 ft. spans are built of timber, piers 4 and 5 consisting of nine vertical piles arranged in groups of four, and piers 3 and 10 consisting of five vertical piles arranged in pairs under heels of trusses and one in centre; also two short vertical piles to carry up and down stream struts. The piles to be rigidly stayed with wales, braces, and compression struts.

The piers and abutments carrying approach spans to be built of timber, each pier consisting of four piles (two vertical and two with a rake of 1 in 12) 18 in. diameter, stayed with wales and braces. The abutments to consist of five vertical piles and two wing piles 17 in. diameter. Piles of piers carrying truss spans to be driven 25 ft. Piles carrying approach spans to be driven 20 ft.

Pressures.

Pressure on foundations of river cylinders (on rock)	...	14.6 tons per square foot.
" " land pier (on clay)	6 " "

Calculations.

The bridge has been designed to carry a live load of 84 lb. per square foot of carriage and foot way. The cross girders and longitudinal girders have been designed to carry a traction engine of $16\frac{1}{2}$ tons.

Cost.

The estimated prime cost of this design complete, and including carriage (which totals £3,386), is £26,538, assuming the life of the steel chords and cross girders to be one hundred and fifty years, the timber in trusses at twenty-five years, and in decking at twelve and a-half years, and the money borrowed at 4 per cent. Extending the cost over one hundred and fifty years, it would mean an annual charge of £1,735 against the revenue. This charge would provide for keeping the bridge in thorough repair, the timber in trusses being renewed every twenty-five years, and decking every twelve and a-half years; also for sinking fund and interest on capital. This annual charge capitalized would represent £43,375. By substituting timber piers for the iron piers carrying 160 ft. spans, the prime cost would be reduced to £20,822, annual charge to £1,565, and the capital value would be £39,123.

By omitting footways, and still retaining the iron piers in above design, the prime cost would be £23,894, the annual charge £1,529, and the capital value £38,225.

By omitting footways, and substituting timber piers for iron piers carrying the 160 ft. spans, the prime cost would be £18,178, the annual charge £1,359, and the capital value £33,975.

Should it be possible to obtain the money at $3\frac{1}{2}$ per cent., the annual charge, with cylinders and footways included, would be reduced to £1,624, and that capitalized would be £46,400.

Omitting

J. A.
M'Donald,
Esq.
18 Feb., 1890.

Omitting footways, if money could be obtained at $3\frac{1}{2}$ per cent., the annual charge would be £1,427, and that capitalized would be £40,771.

The annual charge of same design with timber piers instead of iron would be, including footways, £1,486, and the capital value £42,457.

By omitting footways, the annual charge would be £1,289, and the capital value £36,829.

Alternative Piers.

These timber piers, consisting of thirteen piles 14 in. x 14 in., arranged in groups of six under heels of trusses, and one in centre, also one up-stream and two down-stream short vertical piles to carry wales and up and down stream struts, the whole pier to be stayed with wales, braces, and internal compression struts. Pressure per square inch of pile will be 439 lb. Cost of piers complete, £2,450, as against the cost of iron and concrete piers, £8,160—or a reduction of £5,710.

DESIGN III.

No. 3 design is for a timber bridge of nine 90-ft. truss spans and four 35-ft. and three 30-ft. plain beam approach spans.

The minimum clear carriage-way is 20 ft., and the maximum 21 ft. 6 in.; the two footways have each a width of 5 ft.

The cross-girders are of timber throughout, the main cross-girders projecting so as to carry deck of both footways.

The river piers (piers 8 and 9) carrying 90-ft. truss spans are formed of wrought-iron 4 ft. 6 in. diameter, stiffened with wrought-iron diaphragm bracing, founded on cast-iron cylinders 4 ft. 6 in. diameter filled in with concrete. The remaining piers are of timber. Piers 4, 5, 6, 7, 10, and 11, carrying 90-ft. truss spans, consists of nine vertical piles, arranged in groups of four, and piers 3 and 12 consist of five vertical piles, arranged in pairs under heels of trusses, and one in centre, also two short vertical piles carrying up and down stream struts; the whole pier stayed with wales, braces, and compression struts.

Piers 1, 2, 13, 14, and 15, and abutments A and B, carrying plain beam approach spans, to be of round timber 18 in. and 17 in. diameter respectively. The piers to consist of two vertical and two piles with a rake of 1 in 12, stayed with wales and braces. Abutments A and B to consist of five vertical piles and two wing pieces.

Pressures.

Pressure on river pier cylinders	14.5 tons per square foot.
" " piles	385 lb. per square inch.

Calculations.

This bridge has been designed to carry a live load of 84 lb. per square foot of carriage and foot way.

Cost.

The estimated prime cost of this design is £21,392; the annual charge being £1,576, and the capital value £39,400.

By substituting timber piers for iron the prime cost would be reduced to £19,531, annual charge to £1,543, and capital value to £38,575.

By omitting footways, and still retaining iron piers, the prime cost would be £18,690, annual charge £1,363, and capital value £34,075.

By omitting footways, and substituting timber piers for iron, the prime cost would be £16,830, annual charge £1,330, and capital value £33,250.

Should it be possible to obtain the money at $3\frac{1}{2}$ per cent., the annual charge with cylinders, footways included, would be £1,495, and that capitalized would be £42,714.

Omitting footways, if money could be obtained at $3\frac{1}{2}$ per cent., the annual charge would be reduced to £1,290, and that capitalized would be £36,857.

The annual charge of same design, with timber piers instead of iron, would be, including footways, £1,473, and the capital value £42,086.

By omitting footways the annual charge would be reduced to £1,268, and the capital value £36,229.

Recommendation.

It will be seen from the cost diagram that:—

The cheapest iron bridge has capital value of	£70,275
The composite design recommended has capital value of	£43,375
The cheapest timber bridge has capital value of	£38,575

Iron.

It will therefore be seen that the cheapest iron bridge, *i.e.*, with timber deck, would be 63 per cent. above the capital value of the composite structure; and that the capital value of the composite structure would be about 13 per cent. more than the cheapest timber bridge that could be built over this river suitable for traffic.

I think it will be patent from these figures that the Department would not be justified in recommending the construction of an iron bridge at this place, and incurring such a heavy annual charge as £2,811, when the traffic can be equally well served, or nearly so, at an annual charge of £1,735 with a composite bridge. If this be admitted, there remain then only two for consideration.

Timber.

The timber bridge diagram No. 3 is not considered suitable for this site, as the spans not being more than 90 ft., there would be a risk every flood of the piers being carried away, as large quantities of drift

drift timber come down during flood-time, and in great lengths. In addition, at the end of 25 years the whole bridge would have to be renewed, and the traffic completely stopped for about 12 months, unless the next new bridge were built on a different site. Though this design is not considered suitable, it was thought advisable to submit it for the sake of comparison only.

J. A.
M'Donald,
Esq.
13 Feb., 1890.

Composite.

The design recommended by this Department is the composite one shown in elevation on diagram No. 2.

The piers for the main spans are permanent, the remaining piers, which can more easily be renewed, are of timber.

The bottom chord is of steel, the suspension bolts of scrap iron, and the remainder of the superstructure is of ironbark timber.

It is found in truss bridges that the bottom chord or tension member is the first to decay, consequent on the number of joints and keys required to give the necessary tensile strength, and the chances thereby given for water to find its way in. When any part of this chord decays it is most difficult to renew it, without expensive staging under the whole truss, and again, on the completion of the life of the truss, scaffolding has to be erected, the whole of the old truss removed and new truss complete erected in its place. This work causes considerable and lengthened interruption to traffic.

To overcome this difficulty to a great extent, I have on the design before you provided for a permanent steel chord, which, of course, slightly increases the cost, but with this arrangement any part of the timber-work in the truss can be renewed with only very slight interruption to the traffic; and when the renewal of the whole of the timber in the truss is necessary only very slight staging will be required to support the chord during re-erection, the traffic going on all the time.

Strength and Cost of Ironbark and Iron.

At this point it might be of interest to give a few facts bearing on the relative strength and cost of ironbark and iron in construction.

Best ironbark half tensile strength of bridge iron for same area.

Weight of bridge iron $3\frac{1}{4}$ times weight of best ironbark for same strength in tension.

Best ironbark $\frac{1}{4}$ compression strength of bridge iron for the same area.

Weight of bridge iron $1\frac{1}{2}$ times weight of best ironbark for the same strength in compression.

Taking ironbark erected at 5s. per cubic ft. and bridge iron erected at £24 per ton, then—

In tension a ton of ironbark costing £7 10s. is equal in strength to 3.23 tons of bridge iron costing £77 10s.

In compression a ton of ironbark costing £7 10s. is equal in strength to 1.61 tons of bridge iron costing £38 12s.

The above give the comparative *ultimate* strengths, viz.:—Tension, ironbark 11 tons, iron 22 tons; compression, ironbark $4\frac{1}{4}$ tons, iron 17 tons.

Conclusion.

To recapitulate, the cost of the design recommended No. 2 is 13 per cent. above the timber design No. 3, and the advantages claimed are:—

1st—Sufficient waterway for drift timber to pass, and risk of damage from floods obviated.

2nd—Permanent piers to facilitate renewals.

3rd—Permanent lower chord to facilitate renewals.

The annual charge for this design is £1,735, and under the head of "traffic" I have argued that the value of the convenience given by the bridge exceeds £3,000. I would therefore submit that the design recommended is not extravagant in cost considering the large traffic the bridge is required to carry.

Summary of Appendices.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed iron Bridge at Cowra.

Robert Hickson, Esq., Commissioner and Engineer-in-Chief for Roads and Bridges, sworn, and examined:—

47. Mr. Copeland.] You are the head of the Roads and Bridges Department? Yes.

48. Have you personally inquired into the necessity for the building of the Cowra bridge? Yes.

49. And you are satisfied that it would be better to build a new bridge than to attempt to patch up the old one? Yes; I examined the old one very carefully.

50. Have you personally inspected it? Yes.

R. Hickson,
Esq.
19 Feb., 1890.

R. Hickson,
Esq.
19 Feb., 1890.

51. I suppose you did not happen to notice the letter in one of yesterday's morning papers with reference to this bridge, in which the writer attempted to make it appear that a very slight expense in repairs would make the existing structure a serviceable bridge for a good many years? No, I did not notice the letter.

52. Are you satisfied, from your own inspection, that the bridge has gone beyond repair? It has not gone beyond repair, but I do not think it would be economy to attempt to repair it. It cannot be said to have gone beyond repair, but I do not think it would be economy to attempt to repair it.

53. You think it would be cheaper, as a matter of expenditure, to build a new bridge? Yes. The great difficulty in connection with repairing that bridge is that the piers—the most important portion—are in a very bad state indeed. If it were only the girders and the top work it would not matter so much, but the piers are in a very bad state.

54. The reason it is proposed to build a new bridge is not that the present bridge will not accommodate all the traffic, but because it is practically worn out? Yes, that is the reason.

55. I suppose if it were not worn out the present bridge would be sufficiently large for all traffic purposes? I think it would, except that it has no foot-way, the absence of which is a great inconvenience.

56. Do you remember how long the bridge has been built? It was built in 1870.

57. Is a period of twenty years considered the usual life for a wooden bridge? It is a long life I think for the piers of a wooden bridge.

58. But have not some repairs to this bridge already taken place? Yes, considerable repairs.

59. Have any of the piers been replaced? I do not think any of them have been actually replaced, but several props have been put up alongside the piers.

60. What do you say is the usual life for a wooden bridge? For the piers of a wooden bridge twenty years is a long life, but that period is a short life for the superstructure.

61. Do you know of what kind of timber the piers are composed? As far as I could judge they were ironbark, but it is very hard to say, because they are in a very bad state, and quite hollow.

62. What part of the piers is found to be the most decayed—between wind and water? Along the edge, where the pier enters the ground.

63. And is all above that sound? No, not all sound. The decay in some of the piers extends upwards for a considerable distance.

64. About how far? As far as I could strike the pier with my stick; I suppose 7 or 8 feet high. I could feel that the wood was quite hollow. The piers had gone altogether, and especially in one span.

65. Do you find that these piers generally go at the junction with the ground? Yes; that is the place where they are more liable to go.

66. Would it not be possible to protect them in some way by coppering them, or burning them? I do not think that would have any effect in preserving the timber, unless where it is attacked by cobra, which of course is not the case here.

67. Is not that generally the place where they go first, between wind and water, or where they enter the surface of the soil? This is not exactly between wind and water. The reason why piers go between wind and water is that they are sometimes dry and sometimes wet. In this case, where they meet the natural surface of the ground, they are, except in times of flood, always dry, so that coppering them, or putting any outside coating on, would have no effect in preventing decay taking place.

68. Are these piers painted or tarred? They are tarred.

69. Have you tried soaking them in oil? I am not aware that that has been tried.

70. Then, so far as this bridge is concerned, you are quite satisfied that a further expenditure is necessary in the form of a new bridge? I am.

71. And a bridge that would give more accommodation than the old one? Yes. When we are putting it up it is just as well to give a little more accommodation than that afforded by the old one.

72. Do you approve of the suggested position for the new bridge as being more convenient than the site of the old one? Yes. The old site is very inconvenient on account of the narrow street approaching to it. The railway station is up here [*pointing to the map*], and this is the main street of the town. The principal traffic is down Kendall-street and across the bridge, out in this direction. They have now to turn up here to Lachlan-street, past this narrow street—Bridge-street—and then get across the bridge. It is proposed now that the bridge should practically be a continuation of Kendall-street, though it will not be exactly in the same line. I propose moving the position of the bridge slightly, so as to avoid destroying certain frontages, for which compensation would have to be given.

73. On the question of the composition of the bridge, I suppose you are satisfied that a composite bridge would be better than either an iron one or the old wooden one? Very much better than the old wooden one, and, I think, under the circumstances, considering that it is so much cheaper, quite as good as an iron one.

74. Can you say what has been the cause of this sudden new departure by the department in favour of wooden bridges, considering that for many years past all the bridges that have been constructed have been made of iron, notwithstanding the fact that plenty of timber was in the immediate neighbourhood? All the bridges formerly were not of iron. There were a good many, no doubt. I think this new departure, if it may be called so, is mainly due to conversations that have taken place between the Engineer for Bridges (Mr. M'Donald) and myself, with the view of economising, if possible, in the construction of these bridges.

75. And are you quite sure that it will be economy? I think so.

76. I suppose you cannot inform the Committee how it was that when they were building a railway bridge they did not make it capable of carrying traffic? I do not know. I may say, from my own observation, that it would have been a very inconvenient site for a traffic bridge. It is too far away from the town, but I do not know whether or not that was the reason they did not make it capable of carrying traffic.

77. What distance is the railway bridge from the site of this proposed bridge? About 3 miles. I drove up to it, and I think that is about the distance.

78. What distance is the railway bridge from the town? About 3 miles.

79. You are satisfied, I suppose, that this is the best site for the new bridge? Undoubtedly.

80. And you are equally satisfied that it is a necessary expenditure, and that a new bridge should be built? I am.

81. As the permanent head of the department, you favour this proposal for a composite bridge? Yes.

R. Hickson,
Esq.
19 Feb., 1890.

82. *Mr. Cox.*] You said that some of the timber in the piers was hollow;—must it not have been hollow when it was first put up? Not necessarily. I presume it was not.

83. Can the timber get hollow after it has been erected? Yes.

84. *Mr. Copeland.*] What form does the decay assume—dry rot? Yes. The outside surface appears all right, but if you tap the pier, or insert a knife into it, you can see that it is perfectly hollow.

85. Was the timber cut from young trees? I could not say. It was covered with tar, and it was impossible to say what the timber was originally.

86. Do you think it likely that the piers were made out of small trees with heart in the middle? It is quite possible they may have been.

87. Because an ironbark log would scarcely decay above the surface in twenty years? If you get a thoroughly sound log—a thing it is most difficult to ascertain when you are putting up a structure—it will not decay; but it is practically impossible when you are erecting a bridge like that, to say that every log is thoroughly sound right through, and if there is the slightest symptom of unsoundness, dry rot will of course ensue.

88. But would you not be able, when a squared log was lying on the ground, by looking at both ends, to say whether or not it was sound right through? I have seen logs which have been passed as sound timber by some of our best inspectors, and which in three and a half years' time have been attacked with dry rot, and become almost entirely shelled.

89. Was that redgum or ironbark? Ironbark.

90. *Mr. Cox.*] The decay was not owing to the white ant? No. You can easily tell the difference.

91. *Mr. Dowel.*] When were instructions received to prepare plans and specifications for the iron bridge? I could not say when the instructions were originally given. The Engineer for Bridges would be able to give you that information.

92. Can you say when steps were first taken in the department to prepare plans and specifications? I could not.

93. Had they been commenced before you took charge? I do not know exactly how far the work was in progress before I came, but I know there was some work done in connection with it.

94. How long have you had charge of the department? Since the 1st of July last.

95. Then something had been done before then in the direction of preparing plans and specifications? I could not say with any degree of accuracy.

96. Can you say how long it generally takes in your department to prepare the plans and specifications for a bridge? It depends altogether on the magnitude of the work.

97. Such a work as this iron bridge at Cowra? The survey had to be made, the section had to be made, and the borings had to be taken in the first instance.

98. Can you say how long it generally takes to get that preliminary work done? It is very hard to lay down a rule, because there are so many contingencies. For instance, you may not be able to get to work for some time on account of the flooding of the river. If everything went right, I suppose the preliminary work ought to be done in two months or two and a half months.

99. Or three months? Yes, if everything went right.

100. How long after that would it take to prepare the calculations and the strain sheets? A month ought to do the plans after that.

101. After your calculations and strain sheets were prepared, how long did it take you to prepare the plans and specifications for this iron bridge? It would take longer than a month to prepare the strain sheets for the iron bridge. The plans would involve two months' work.

102. Did it not really take over three months to prepare the calculations and the strain sheets? I could not say.

103. How long did it take to prepare the plans and specifications? I could not tell you from memory, but Mr. M'Donald will, no doubt, be able to give you the information.

104. And you cannot say whether twelve months have elapsed since instructions were first received to prepare the plans and specifications for this bridge? I could not.

105. How many draughtsmen have you in your office engaged upon bridge work? I could not tell you the exact number without looking at the pay-sheets.

106. What test do you employ in regard to the wrought iron and steel used in the construction of these bridges? The tests are all in the specification. I have not a copy here, but I can get a copy.

107. By whom are the tests made? If the ironwork is obtained from home the test is made under the supervision of the superintending engineer in England. If the test is made here it is done by the University, under Mr. M'Donald.

108. At the University, by Professor Warren? Yes.

109. Does the Government or the contractor pay for the tests? I could not tell you without looking at the specification. I think the contractor pays for them, but I am not sure.

110. In your specifications for the bridge I notice that you have inserted certain sizes of iron, and I wish to refer you to one or two of them, for the purpose of ascertaining whether it is desirable or absolutely necessary that these particular sizes should be used, or whether they are marketable sizes, as sold by general ironmongers. For instance,—for your main girders you specify that the channel iron bracing shall be 8 in. x 3½ in. x ½ in. Is it absolutely necessary that that particular piece of iron should be 3½ in. Would not 3 in. have answered the purpose? 3½ in. gives the sectional area we require, and that is a very marketable size. I might say that, generally speaking, we try as much as possible to arrange that all our iron shall be of marketable sizes.

111. Is this a marketable size—6½ in. x 2½ in. x ½ in.? I think it is.

112. There is also specified another size of iron for the channel iron bracing, namely, 5½ in. x 2¾ in. Is it absolutely necessary that these unusual sizes should be specified? I am not prepared to say that they are unusual sizes. As I said before, as far as possible, we make all our iron of marketable sizes. There may be a few exceptions to that rule, and perhaps the few instances you have named may be exceptions, but I could not tell you whether they are or not unless I saw the trade list.

113. Take another instance—longitudinal girders to be rolled, 9½ in. x 4½ in.—is not that an unusual size. Is not 9 in. x 4 in. a trade size? 9½ in. is not an uncommon size to use at home. I have used it.

114. Then take the wrought-iron rolled girders. Is not this an unusual size—20 in. x 7½ in.—is the one-eighth put in for any special reason? Yes, you want the proper strength.

- R. Hickson, Esq.
19 Feb., 1890.
115. It is absolutely necessary that the one-eighth should be there? That is in thickness; the iron increases in thickness by sixteenths.
116. But the girder you have in your specification is 20 inches deep by $7\frac{1}{2}$ inches, and the flanges are 7 inches thick—is that a usual marketable size? I should say that was a very usual size.
117. $7\frac{1}{2}$ inches? Yes.
118. Do you think it is good policy on the part of the Government that the expensive tests applied to the iron should be paid for by the contractor—do you think it is desirable? I think the contractor should bear the total expense of putting up the bridge.
119. But, with regard to the tests applied to the iron before it is used, do you think it desirable that the contractor should be called upon to bear that expense—would it not be better for the Department to pay for the test? My opinion is that it would be better for the contractor to pay; but it is a matter of opinion.
120. You visited the site of the proposed bridge? Yes.
121. And your Department recommend the composite bridge, with piers of wrought-iron, and timber superstructure? Yes.
122. Is there any stone in the locality suitable for the construction of piers? I believe there is no stone about there at all suitable for piers.
123. No stone within a reasonable distance of Cowra suitable for the masonry required for that bridge? Not as far as I am aware.
124. Would the cost be increased to any considerable extent by the use of stone piers instead of iron cylinders? Yes, the cost of the main piers would be increased. It would be a very difficult thing to put in stone piers in the river.
125. For what reason? You would have to build cofferdams, and pump the water out.
126. Could not a foundation be obtained by driving piles and piers, and then build on the piles? It could be done, but I do not think it would be desirable to put a stone structure on a timber foundation, which would be liable to decay. I think the stone and the iron works should be brought down to the solid.
127. Can you say to what depth the cylinders would be taken down? It is shown on the plan.
128. Is it a rock bottom? Yes.
129. You would not recommend that a foundation of piles should be used in the construction of the bridge? No.
130. And you say there is no stone in the locality suitable for building the bridge? Not as far as I am aware.
131. Did you make any calculations as to the difference in the cost of wrought-iron cylinders and stone or brick work for the piers? I did not, because I thought it would be utterly useless, as nobody would attempt to put in stone piers when constructing a bridge like that.
132. You have informed the Committee that it takes a considerable time to prepare the calculations and strain sheets for these iron bridges? Yes.
133. Would it not be possible to adopt a certain type of bridge and have all the strain sheets already prepared? Yes; if you had all the spans the same.
134. I mean a strain sheet applicable to a variety of spans—a table? It is not at all a desirable thing to do. I may say I have had a great deal of experience in bridge-building at home, and it is the universal practice of engineers there to take out the strains for all bridges, unless of course there happen to be some of exactly the same design. But if the span varies the strains are always taken out afresh.
135. Do you consider the lattice girder type a good type? It is considered the best.
136. The department having determined that that is the best type that could possibly be used, would it not be just as well to have a table of strain sheets prepared so as to obviate the necessity of taking them out for every separate span? I have just said that I do not think it would. It is not the custom at home for engineers of standing in connection with bridge work to do it, and I do not think there would be very much gained by it.
137. The practice at the present time is then, that if a span varies by 1 or 2 feet, entirely fresh calculations have to be made? No, not at all.
138. What is the difference in span which necessitates a fresh strain sheet? You cannot lay down a definite rule. Nobody would be stupid enough if there was only a difference of 2 feet in a span of 100 feet or 200 feet to calculate a fresh strain, but when you come to a difference of 50 feet in a span of 100 or 150 feet the custom is, and I think it is the proper course to adopt, to calculate your strain out afresh.
139. Have there not been numerous complaints to your department about the delay that has occurred in the designs for these bridges? Some complaints have been made, but they have been fully met by the fact that there were not sufficient hands in the office. So far as I am aware, no complaints have been made since we have increased our bridge staff.
140. *Mr. Trickett.*] Is it your opinion that the present bridge might be washed away at any time by a heavy flood? I think it is most unsafe.
141. It is liable to be washed away by a flood at any time? If a heavy flood occurred, bringing down any quantity of timber, I think it is more than likely that the bridge would be carried away.
142. Is it proposed to erect the new bridge above or below the site of the old one? Above.
143. Would not any attempt to improve the present bridge cause great inconvenience in regard to levels, for Mr. McDonald in his evidence says: "If the old route were adhered to, the roadway would have to be raised about 9 feet, which would probably lead to litigation with the owners of properties on each side of the road." Have you inquired into that matter? If we adhered to the old route we would have to provide for the traffic during the time occupied in the erection of the new bridge, and that would be a most inconvenient thing; but, quite apart from that, supposing the old bridge were a mile away, the new site is by far the better one.
144. Mr. McDonald in his evidence says:—"Again, if the old route were adhered to, the old bridge would have to be removed and the traffic completely stopped for about eighteen months. In addition, the roadway would have to be raised about 9 feet, which would probably lead to litigation with the owners of properties on each side of the road;"—have you considered that question? Yes, that is one of the reasons, though I do not know that it is a very important reason. The new bridge is higher. But there would be great complications in making a bridge on the present old site, and the main complication would be that provision would have to be made for the traffic during the erection of a new bridge.

145. One of the reasons I presume why the present bridge might be washed away at any time is because the piers are close together? Yes, and the bridge is not high enough. The piers are in the bed of the river, which is a great mistake.

R. Hickson,
Esq.
19 Feb., 1890.

146. Will that objection be obviated by the proposed composite bridge? To a great extent.

147. And you have made the openings as wide as is consistent with safety? Yes.

148. Are the approaches on either side of the proposed new bridge easy or complicated? Quite easy. The grade on either side is 1 in 25. The earthwork approach would have to be constructed.

149. Could it be made perfectly safe with no possibility of it being washed away? Yes. It will be pitching, and the material will be obtained from Kendall-street, where some levelling work has to be done.

150. Mr. McDonald says that £12,550 would be required for the purpose of making the present bridge anything like serviceable;—do you agree with that? The estimate is right, but I do not think the bridge would be very serviceable after the work was done.

151. You even think that that would in a great measure be money thrown away? Yes, I think it would be. Nearly every pile is more or less decayed, and very little pressure on the top would break them.

152. You say that when that was done the M'Callum trusses would be the only sound part of the bridge left? Yes.

153. And how long do you think they would last? They ought to last for eight or ten years.

154. Not more than that? I do not think so.

155. They would then have to be renewed at considerable expense? Yes.

156. Mr. Tonkin.] Are we to understand that if the piers gave way the M'Callum trusses would support the bridge for eight or ten years? No.

157. Dr. Carran.] Does this line on the plan denote the flood level? Yes.

158. Does it show the highest flood level? Yes.

159. And if another flood of that kind occurs the bridge will be impassable—even the new bridge? Yes. In a big flood the approaches are under water, and to make a bridge that would be passable in a high flood you would have to spend thousands of pounds in carrying the structure a considerable distance back.

160. Then it is just a question of how far you should go in regard to the cost of the bridge? These floods occur so seldom that it would be hardly worth while to go to the expense of so much filling up on the town side, and on the other side, where an embankment would have to be made for a great distance.

161. Suppose you were to build the bridge and let the water go over it, would an open approach of that kind be liable to be carried away by the flood? Yes.

162. Then your object in putting it above the flood-level is to secure the safety of the bridge? Yes.

163. Or you could not make it approachable except at an enormous expense? No.

164. With regard to the two piers in the composite bridge—one goes down to the rock, but the other is not marked as going to the rock? It would have to go to the rock.

165. Can you tell us how often these very high floods occur? I could not say without looking up the records. Not often.

166. Can you tell me for how many months in the year the river is fordable there? I could not say. It is fordable during the greater portion of the year.

167. Nine months? Perhaps so.

168. And for nine months in the year the people could do without an approach at all? I do not think they could, because the ford is very bad for heavy teams. Very heavy teams go across with wool, and it would be most inconvenient for them to go down the bank and cross the river, even if it were dry.

169. It would not be an absolute obstruction to the traffic? Well, I think it would, because you can never tell when a flood may come. It may come in the middle of the season, and stop the whole traffic for weeks.

170. When one of those heavy floods does occur how long does the river remain high? It goes down very quickly; that is to say, the top water goes down very fast, but it may be a fortnight or more before the river is fordable.

171. Then if one of these floods were to occur again the traffic on the bridge would not be stopped for more than three or four days? That would be the outside, I should think. I should say not more than two days.

172. Do you know what is the nearest railway station to Cowra on the other side of the river? I do not remember.

173. Suppose the bridge were not usable at a time of flood, could the teams unload at the railway station on the other side of the river? There is no railway station on the other side of the river.

174. But supposing a platform were placed at the bridge on solid ground above flood reach, could the teams unload there and cross the river? Of course they could.

175. Teams coming from that side of the country—from the west? Yes.

176. The principal traffic crossing the bridge now consists of stock, wool, and other produce coming from the west, and going to Sydney? Yes.

177. Could not all that traffic hit the railway at some other point on the west of the river? No doubt it could.

178. Are we not making a very expensive bridge simply for the sake of taking traffic across the river to a railway station, which traffic could hit the same railway on the western side of the river? That is looking at it from the point of view only of the railway traffic. Yes, a station could be made there, no doubt.

179. Would the cost of such a new station be more than the cost of a bridge? No, not so much.

180. Supposing it were so made to ease the traffic from the bridge, would a lighter bridge then do? I do not think so, because you want the span. This bridge has a span of 160 feet, and you must have a certain height of girder to correspond.

181. But that would only apply to the central span? No, it would apply to the whole. The great object, of course, is to have as few piers as possible, so as to offer the least obstruction to the river, and if you have a span of 160 feet the upper structure must correspond in strength.

John Alexander M'Donald, Esq., M.I.C.E., and M.I.M.E., Engineer for Bridges, sworn, and further examined:—

- J. A.
M'Donald,
Esq.
19 Feb., 1890.
182. *Dr. Garran.*] From your printed statement it appears that £8,000 was provided out of loan for the construction of the existing bridge? Yes.
183. And the bridge is now worn out? Yes, with the exception of the M'Callum trusses.
184. The debentures being issued for thirty years the bridge for which the money was borrowed has disappeared, we may say, in twenty years, and the loan will fall due ten years hence? Yes.
185. And there has been no revenue from the bridge to pay either principal or interest? The revenue has been very small. Tolls were collected for nine months, and that was all the revenue.
186. And it is now proposed to add £26,000 of loan money on the top of £3,000. That will debit this bridge with £34,000 in our books? Yes.
187. And I understand you to say that the woodwork will require replacing in twenty-five years, and the decking in 12½ years? Yes.
188. And we have no provision at all for meeting either interest or principal unless it is done out of some local vote, or road and bridge vote? Yes.
189. To make these loan-built bridges sound in their finance we ought to have some replacement fund, ought we not? Well, I suppose to make them sound in their finance, we ought, properly speaking, if the composite design were adopted, to borrow £43,000 odd. That is the capital that is required to carry on the bridge.
190. But why do you want to borrow all that money? That will repay the capital required to carry it on without taking money from any road vote or special vote.
191. But if £26,000 is enough to build the bridge, all we want is revenue from some source—either local rates or road votes—to pay the principal and interest during the life of the bridge? Certainly.
192. I understand that the paper you read to the Committee is a review of our policy in the light of finance? Not exactly that.
193. And that your opinion is that wherever a replacement would be cheaper than going into a heavy loan vote, a replacement is the true policy? Yes.
194. And it is for that reason that you recommend this composite bridge? Yes.
195. Because you think it comes nearest to that idea? It is the cheapest.
196. You say you reckon that the iron piers will last for 120 years? I put the period down at 150 years.
197. Do you include in that all the other ironwork of the bridge? Yes.
198. The girders, stringers, plates, bolts, nuts, and everything? Yes; all the ironwork.
199. And the woodwork will last for twenty-five years? I have no doubt that timber-work like that will last for more than twenty-five years, but twenty-five years has been the average life of the timber bridges built in this country, and I have taken that period in this case.
200. You stated that the existing bridge was under water very shortly after it was built? No. I stated that some of the spans were washed away by the flood of 1870, which was the high flood.
201. Do you know if there has been as high a flood since? I do not think so.
202. Have you any idea what it would have cost to build the original bridge 6 feet higher? It would not have cost anything very considerable. But I do not imagine that the spans were carried away because the water was over the bridge, but because the spans were too small to allow the drift timber to pass through. They were 30 feet spans at that time, and the timber coming down in the flood formed a raft above these narrow spans which carried the piers away. Still, if the bridge had been 6 feet higher, and if the spans had been larger, very likely nothing would have been carried away.
203. If the bridge had been higher it would have been out of danger? Not necessarily. The timber could have formed a raft up against the narrow spans just the same.
204. You mean if the trees brought down by the flood had been longer than the span? Yes, which they generally are.
205. It was not done by the battering of the timber? No; a raft was formed against the bridge, and the pressure thus caused carried it away.
206. Since then you have widened the span? Yes, we have put larger spans in.
207. At a cost of £1,715? Yes.
208. And if that £1,715 had been spent on the original bridge the damage would not have been done? Probably not. We have not had such a flood since.
209. How many broad spans do you think it is necessary to have in a bridge of this kind to keep clear of the timber? I think three is a suitable number for a river like that, where there is an enormous amount of drift timber coming down with the floods.
210. But does not the drift timber generally come in the deep channel where the current is strongest? No. It comes under the three spans, as shown in the design.
211. Do you think it necessary to have three broad spans, to make sure? Yes.
212. The approach to the proposed bridge is much longer than the approach to the existing bridge, is it not? About 200 feet longer.
213. But practically the extra water-way would not be of much use in letting the drift timber go that would be concentrated in the length of the old bridge? Yes, there is great risk, even with the old bridge, in regard to timber coming down. Whenever there is a flood they have to have men down on the bridge with ropes and grappling irons, to guide the timber through the big openings.
214. Do you think there will be any necessity for that with the larger openings you now propose? No, I do not think there will be any risk then.
215. With these broader spans you increase the expense of your bridge in proportion to the width of each span, do you not? Yes, within certain limits. When you get beyond a span of 30 feet the cost of the bridge increases according to the width of the span.
216. But you are obliged to go to that extent here, for the sake of safety? I consider so.
217. Otherwise it would be cheaper to have shorter spans and more of them? Yes.
218. You give a preference to iron piers over wooden piers? Yes.
219. But if it is cheaper to make an iron pier would it not be cheaper to make an iron pier just a foot above the ground, so as to keep your wood out of the ground altogether? But the iron piers are not cheaper than wood.
220. Is it cheaper to renew your timber piling all through? It is cheaper to renew the timber piling
221.

221. Even if the iron pier only just comes above the level of the ground? Yes.
222. The weak part of your timber pile is just where it comes out of the ground, is it not;—I mean for decay? Yes, generally.
223. And if you could avoid putting any of your timber into the ground at all you would get rid of that element of decay? Well, the timber would have to rest on something, and if it were resting on a concrete wall, or sunk into a concrete box, the timber would begin to decay just at the junction with the concrete or stone.
224. In any case, whether it was above ground or not? Yes.
225. You cannot get rid of that element of decay? I do not think so. The decay in the Cowra piers themselves is chiefly at the scarfs. The piles were driven to a great depth, and the timber was not long enough to stand a sufficient height out of the river, and they had to be scarfed.
226. How high above the ground? About from 4 to 8 feet.
227. And the wet got in at the junction? I presume it was the wet that caused it.
228. Do you think that the wet of an occasional flood, which we are told only lasts three or four days, is more injurious to the timber than the wetting of heavy rain? No.
229. Not a bit? No.
230. And if the wood is properly painted or tarred the wet ought hardly to get at the fibre of the timber at all? No; but if the timber is painted or tarred when it is green it is very likely that dry rot will afterwards occur.
231. Do you think that any part of the decay in the present bridge is due to the timber having been cut in the wrong season? The timber in the piers is very poor timber, and in the bridge spans it is very poor, but the McCallum trusses consist of what was undoubtedly well-picked timber, and it is to a great extent owing to that fact that they have lasted so much longer than the rest of the timber.
232. Did you think that if the piles had been as well selected as the trusses they would have lasted longer? They certainly would. The piles themselves are too small, and they are not well braced. The piers were weak when they were new, considering the weight they had to carry.
233. What timber are they? I do not know.
234. But you know that the trusses are ironbark? No; I do not know that; I believe they are.
235. Should a truss made of ironbark which is quite out of flood reach decay in twenty-five years? I do not think it should if the timber is well picked; but I have given twenty-five years because that has been the average life of our bridges.
236. When you compare the cost of iron with wood, and give the preference to the former, largely on account of the cost of carriage, do you recognize that in a case like that of the Cowra Bridge, where you have a railway, the cost of carriage is minimized with regard to your iron? The railway carriage comes to something considerable.
237. If you were building a bridge in a part of the country far away from a railway the cost of your iron would be much greater than the cost of local timber? Yes.
238. But where you are putting up a bridge at Cowra and can carry everything by railway the cost of your iron is proportionately less than that of timber? Whether we put up an iron bridge or a timber bridge there, we shall have to get the material through from Sydney.
239. Where will you get the timber for this bridge from? From Sydney.
240. And you have the same length of railway carriage for both material? Yes.
241. Have you taken all that into consideration? Yes.
242. And you are quite of opinion that short iron cylinders will be much dearer than driving in piles and replacing them every twenty-five years? When you speak of short cylinders I presume you suppose that there is rock for them to rest on, or a sufficiently solid bottom, so that even piles would not have to be driven far to reach a solid bottom. The cost would be pretty well proportionate whatever was the length of the cylinder.
243. You mean that you would not have to drive piles as far as you would have to push the cylinders down, if the rock is a considerable distance below? The third cylinder on the plan from this end is sunk a great deal deeper than we should have to drive piles if we were to put a timber pier there.
244. You mean that you do not want to drive your pile upon the rock? No.
245. You do want to drive the cylinder to the rock if it is within reach? Yes, if it is within reasonable reach.
246. What girders have you in the No. 2 plan for the composite bridge. I refer to the cross-girders resting on the piles? The cross-girders at each of the intersections carry the longitudinal girders.
247. And over the piers themselves you put in strong cross-girders? Yes. The truss carries the cross-girders, and the cross girders carry the roadway.
248. And it is cheaper to make all that girder work of iron than to attempt to dispense with iron in that part of the bridge? It would be a little cheaper to use timber there, but there would be considerable difficulty in renewals, and the putting in of new cross girders would involve a serious stoppage of traffic. The main object I have had has been to facilitate renewal, though the expense might be a little greater.
249. So that twenty years hence, when it becomes necessary, you can make the renewal bit by bit without disturbing the general construction of the bridge, and without stopping the traffic? Yes.
250. You can do half at a time? Yes.
251. And you could not do that if the bridge were all wood? No, we should have to take it down completely.
252. Is not a very great part of the traffic now going over the bridge—traffic which comes from the west to reach the railway at Cowra? Yes.
253. On the west side of the river how far have you to go before you get on solid ground out of flood reach? I think at about a mile distant we get beyond the flood level.
254. Is the railway bridge approach over the flooded country on an embankment or on piles? Partly on piles and partly on an embankment.
255. Then even in flood time if there was a platform on that side the traffic could be put on the railway? I have not followed the railway line a sufficient distance to judge.
256. You know the railway bridge? Yes.
257. Is that an iron bridge? Yes, it is an iron bridge with timber approaches.

J. A.
M'Donald.
Esq.
19 Feb., 1890.

- J. A. M'Donald, Esq.
19 Feb., 1890.
258. Has it one span over the river? No, I think there are three main spans.
259. Is the bed of the river covered in one span, the same as is proposed in this case? I really forget.
260. When that bridge was being built could a traffic bridge have been easily attached to it? It would have altered the design very considerably and increased the cost enormously.
261. Would it have been cheaper than making a separate bridge for the road traffic? Yes, I suppose it would have been a little cheaper, but the bridge would have been right away from the traffic of the town.
262. It would not have been so convenient to the town people? I should think not.
263. Looking at the traffic, do you think that this is an unnecessary expense, or that a cheaper bridge could be made to suit the purpose? I do not think a cheaper bridge could be made to suit the purpose,—not one that would afford a guarantee against flood risks.
264. You say that a £12,000 bridge, with, say, £2,000 added to put it out of flood danger, lasted for twenty years and served all the purposes of the township. Is bridge building now dearer, or why is it that you are going to expend £26,000 on the proposed bridge? The present bridge has a 14 feet roadway. It is not so substantially built, except as regards the trusses themselves, as the timber bridges that are built now. The water-way is not so large, the roadway is only 14 feet, and for the proposed bridge it is 20 feet, and we are giving, besides, two footways of 5 feet each. That gives 30 feet width of roadway as against 14 feet, which is more than double, and very nearly doubles the cost.
265. I ask you whether the traffic requirements are such as to justify twice the expenditure on a bridge now that we spent twenty years ago on a bridge that has practically met the requirements? The present bridge being only 14 feet wide it is almost impossible for one vehicle to pass another.
266. It is really too small for the traffic? Yes. It is very difficult for two buggies to pass one another.
267. *Chairman.*] There are no sideways? No.
268. *Dr. Garran.*] If all that western traffic has to come in at the railway-station at Cowra, a traffic bridge, I suppose, would be necessary? Yes; I think so.
269. Suppose that the railway is extended hereafter to Forbes and Parkes, would not that somewhat diminish the traffic over this bridge? I suppose it would in time, but I am hardly in a position to give an opinion on that question.
270. *Chairman.*] Does not the railway at present running from Cowra lessen the traffic in some way? The traffic returns which I have given were taken in December, a long time after the railway was completed.
271. *Dr. Garran.*] But is not this heavy traffic only for one or two months during the wool season? The average traffic has been given, but at times the traffic is congested.
272. So far as you have been able to form an estimate from personal inspection, you do not think this bridge is an extravagant bridge beyond the necessities of the case? No, I do not.
273. *Mr. Humphery.*] I think you say that the total cost of the bridge will be £26,000? £26,538.
274. What portion of that will have to be renewed within twenty-five years? The whole of the timber work.
275. What is the total cost of the portion that will have to be renewed within twenty-five years;—I think you say in your paper that the estimated cost of the iron-work is £15,000? Yes. The cost of the timber-work will be £8,000, and the planking £3,380. This material would have to be renewed within twenty-five years.
276. So that there would be about £14,500 to be expended again within twenty-five years to replace the wooden portion of the bridge? Yes.
277. That is exclusive of maintenance—exclusive of the cost of painting? Yes.
278. I do not understand some of the figures you have given. In answer to Dr. Garran you said that the capital value meant the capital cost—the actual cost of the bridge with interest, is that right? No; it is an assumed cost. It is the capital that a company would have to invest to build that bridge and carry it on indefinitely.
279. Why should you have to find more if you borrow your money at 3½ per cent. than if you borrow it at 4 per cent.? If you take the annual charges given on the last page of the Appendix, the annual charge at 4 per cent. is greater than at 3½ per cent.; but if you capitalize the annual charge at 3½ per cent., it comes to more capital than if you capitalize the same amount at 4 per cent.
280. Do you think those figures are at all necessary in considering the cost of the bridge? Yes; because I think that a comparison of the different designs should be made on the capital value as given in my statement rather than on the prime cost; because the capital value takes into consideration all maintenance, working expenses, and renewals for all time.
281. According to the calculations you have furnished to the Committee, if we borrowed the money at 2 per cent., it would cost us considerably more to build a bridge than if we borrowed it at 4 per cent.? Yes; but you are only realizing 2 per cent. on the capital you use for the bridge.
282. Our object is to ascertain what the bridge will cost us and not what capital we shall get by investing our money at so much per cent. We do not want to see what the bridge will cost, if we borrow our money at 4 per cent., and what the cost will be if we borrow at 3½ per cent. According to your statement if we borrow the money at 4 per cent. the bridge will cost us £43,000, and if we borrow it at 3½ per cent. it will cost us £46,000? I do not wish particularly to bring forward the difference between 4 per cent. and 3½ per cent. I first of all had it got out at 4 per cent.; then I thought that the Committee might wish to know what it would be at 3½ per cent. I do not want to draw any comparison between 4 per cent. and 3½ per cent., but my object in making this table up was to show the capitalized value of the different types of bridges, including maintenance, repairs, and renewals, so that the actual cost to the country, of permanent and temporary structures, could be compared.
283. *Mr. Dowd.*] How long have you resided in the colony? A little over ten years.
284. What was the first work you were engaged on? The erection of the Parramatta Bridge at Gladesville.
285. What experience had you in the construction of bridges before you came to the colony? I had been with Messrs. Appleby Brothers for about four years. I got out all the working drawings in the workshops for the Parramatta Bridge at Gladesville, and I superintended the work.
286. Then you had considerable experience in bridge-building. How long have you held the appointment of Engineer for Bridges? Since July last.
287. What was your position in the Department previously? Assistant Engineer.
288. Can you inform the Committee when instructions were first received for the preparation of the plans for No. 1 design? No instructions were ever received.

289. How did you come to go to work at it? As soon as I find that money is available for a bridge or any other work, I pass the work into the drawing office if there are men available to do it. I believe this work was referred to the Committee about the 10th October, and on the 16th October I sent a surveyor into the field to make the necessary surveys, and take the sections.

J. A.
M'Donald,
Esq.
10 Feb., 1890.

290. When were the borings taken for this bridge? The borings were taken when it was anticipated that we should go in for renewals rather than for reconstruction.

291. How long ago is that? About two years.

292. After you had the borings taken and local investigations made, what was the next step taken with regard to the construction of this bridge; did you prepare calculations and strain sheets? Yes. But we had them going on pretty well simultaneously. We were four months getting out all the drawings, calculations, and sections, and everything in connection with this work.

293. Then virtually, the bridge has been dealt with by the department during the last two years? It has been before the department, but nothing definite has been done. There were not sufficient funds to do anything.

294. But you took the borings for the piers two years ago? Yes.

295. Have you made any calculation as to the cost of substituting stone piers for iron cylinders? There is no suitable stone in the locality.

296. Have you made inquiries? Yes. The stone is suitable for the concrete we should use in the piers, but it is very difficult stone to dress, and not adapted for masonry.

297. Would the construction of stone piers involve a larger cost? In the majority of cases it would. By using iron cylinders we do away with the necessity for cofferdams or timbering of any sort, except a light stage for carrying the cylinders and platforms; and, when the pier is sunk, we can go down to a greater depth with an iron cylinder to get on the rock than we can with timber.

298. But could you not build stone piers on top of the iron cylinders? Yes, but we keep the size of the cylinders down as low as possible, to give the necessary resistance, and we must have some rigid bracing between the two cylinders. If we built up in masonry we should have to carry the masonry across from one cylinder to the other. The cylinders are erected in pairs—one cylinder to each girder.

299. What is the space between the two cylinders? About 25 feet.

300. Would it not be possible to put an iron girder across, or some iron foundation to receive the stone piers? Iron bracing for masonry is always liable to give. It is not so rigid as bracing the ironwork itself together, and these piers have to resist very heavy floods which rise to a great height.

301. If it were decided to adopt the design for the iron bridge, what would be the total amount of the contract that would be expended outside the colony? The contract might be let in the colony.

302. But would the iron be prepared in the colony? It might be—we have had several bridges built in the colony.

303. Of local iron? Not local iron—imported iron.

304. If a tender were accepted for this iron bridge, can you inform the Committee how much of the expenditure would go out of the country? I cannot tell you.

305. You have drawn up your specification in two separate parts—one for the supply of iron work, and one for the supply of labour—what is the relative proportion of these two? They are generally about equal. If the iron bridge were manufactured in the colony, of course the labour would preponderate.

306. How many iron bridges have you manufactured in the colony? I could not tell you exactly, but I could name some of the principal ones. There was one made about five years ago—a bridge about 300 feet long, with iron lattice girders somewhat similar to that shown on the top plan, and it was manufactured by D. and W. Robertson. There was another, about 280 feet long, manufactured about three years ago by R. F. Ritchie, of Auburn. There is one being manufactured now by Vale, of Auburn, and we have small iron bridges, up to about 30 feet span, for which there is an annual contract. These latter have to be manufactured here on account of the shortness of time allowed for delivery.

307. But no iron bridge of any magnitude has been manufactured in the colony? Well, 300 feet is a fair size for a bridge.

308. What is the length of the proposed Cowra bridge? It is 1,000 feet, but it is an exceptionally long bridge.

309. Do you expect to obtain tenders for this bridge in the colony? I presume that tenders will be invited here first as they always are. If no reasonable tender is received, then tenders are usually invited in England.

310. You have informed the Committee that 50 per cent. of the cost of an iron bridge has to go for the ironwork itself; in other words, that half the amount of the contract for an iron bridge goes for material alone? The material complete, ready to be erected. The whole bridge is erected in the contractor's yard before it is sent up to the site.

311. *Mr. Garrard.*] Then it would be 50 per cent. for transit and erection? I did not say so. I said that the erection of the bridge on site would cost about the same as the supply of the whole bridge ready to be erected.

312. *Mr. Dowell.*] Suppose the bridges were designed with brick or stone piers and timber, would not nearly the whole cost be expended in the colony, or a much larger proportion than is the case as the bridges are designed at the present time? It would involve a considerable increase in cost.

313. Have you made the calculations? No; but I know from previous experience of the cost of masonry and brick. I can give you an idea of the cost of masonry as compared with timber. Lately a design was prepared for a bridge with 27-foot span, to be constructed of masonry walls and iron top. The detailed estimate gave a cost of over £1,200. The funds were not sufficient, and a design was got out for a similar bridge to be built of timber, the estimated cost of which was £250. The span of the timber bridge was 25 feet; and, to give you an idea of the cost of brick culverts, I may state that a bridge with a brick arch, the span being 20 feet, cost £572.

314. Then the brick bridge bears a favorable comparison as regards cost? Yes. This particular brick structure was built at a place where bricks were pretty cheap. It comes out a good deal better than the masonry.

315. Is it not a fact that the expense of maintenance of brick and stone bridges is very much less than in the case of iron or timber bridges? Certainly the maintenance is less.

316. Is not that a very considerable item? Yes, but hardly sufficient to cover the enormous difference in cost.

J. A.
M'Donald,
Esq.
19 Feb., 1890.

317. In drawing out the specification of this bridge, have you selected iron of sizes that are marketable? Yes.
318. Are there no unusual sizes specified? No.
319. None, whatever? None. I presume by marketable you mean obtainable—not iron of merchants sizes, because bridge iron is very seldom kept by merchants. Bridge iron is nearly always rolled to order.
320. Is there not a special additional rate for the sizes of iron you have specified for this bridge? In some cases—as for instance, 9 x 6 T iron, which is a special size—we have to pay a special rate. But we save in material by using that section. If we did not use that section we should have to use double-angle iron and a stringer plate, and we should have to put in a larger area on account of the loss of section due to rivet holes. Therefore, we find it more economical to pay a higher rate and use the special section.
321. Take, for instance, the channel iron bracing in your main girders, was it absolutely necessary that 5½-in. x 2½ x ¼ should be specified;—would not 5 inches have been sufficient? The size of those channel bars varies, and it depends upon what weight of sectional area you require in your bar. You can have it rolled to ¼ longer or ¼ less.
322. Are you not aware that it has been stated that by using these unusual sizes the cost of the bridge is very materially increased? We do not use any unusual sizes in the bridges in our department. The sizes are obtained from special lists—merchants lists chiefly—which have been obtained direct from the Agent-General.
323. But you have already stated that these special sizes for which you have specified in the Cowra bridge entail additional cost? I spoke of one section.
324. I ask you as an engineer, whether by specifying usual marketable sizes, such, for instance, as 5 x 2 x 5½, the cost of a bridge would not be materially reduced? In many cases it would be impossible to get these even sizes. The rolls are made, and very often after a few years those rolls are turned up again, and a section made a shade larger. The result is that the section books are changing, and you get odd dimensions in your section book. If you take an ordinary section book from any of the rolling mills you will find that the same thing runs through them—odd dimensions.
325. What was the cause of the delay in bringing this bridge before the Committee,—had you not a sufficient staff in the office? The work has only taken four months. I do not think that is extraordinary, considering the number of drawings and calculations that had to be made.
326. But it has virtually been in hand for two years? The work was not put in hand until the funds were available.
327. How many draughtsmen have you in your department employed in bridge work only? Twenty-seven.
328. *Mr. Cox.*] You said just now that the life of a timber bridge was twenty-five years? I have assumed it to be that.
329. Does that refer to all qualities of timber? That is assumed as the life of the bridge for the sake of argument in my evidence. But of course in some parts of the country where we cannot get good timber the life of a bridge may be only ten years, while in other parts, where we get exceptionally good timber, a bridge may last for thirty or thirty-five years. But from what I have seen of the bridges built by the Roads Department the average life of the timber bridges is about twenty-five years.
330. Are you aware that first-class timber like red gum or ironbark will last for forty, fifty, or sixty years? Yes. I have seen piles drawn from the ground that have been in for fifty years, and they have been as sound as when they were first put in.
331. Do you think it possible that the timber piles used in the Cowra bridge could have been sound when they were first put in? I think they were composed of very poor timber. They were too light to carry the weight that was put on them.
332. And you think that the persons in charge of the works must have been somewhat lenient to the contractors in allowing such timber to be used? Yes, I think so.
333. *Mr. Tonkin.*] Has the present bridge gone beyond repair? All except the M'Callum trusses.
334. It would be impossible to repair it? It would be possible to repair the piers, but they would always be uncertain. In some places the timber is almost a skin, or from ¼-in. to ½-in. thick, the rest being almost gone with dry rot.
335. Would there be no possibility of replacing those piles with new ones? If a start were made to do it, I am afraid the whole of the piers would have to be renewed.
336. What would it cost to renew the whole of the piers? I could not say on the spur of the moment.
337. The superstructure is sound? Only a part of it. All the approach spans are thoroughly gone. We have been patching them up. We have put trestles in the middle of the 65-foot spans, because they would not carry their own weight, and if a heavy flood came, the whole of the trestles and the approach spans might be carried away, because we have now reduced the width of the spans down to the 30 feet that they were originally in 1870, when they were washed away.
338. At a rough calculation do you think it would cost £2,000 to put the present bridge in good order? It could not be done for anything near that.
339. Did you see a letter which appeared in yesterday's *Daily Telegraph*? Yes, I read it.
340. Do you agree in any way with what is stated in that letter? Certainly not.
341. Do you know the gentleman who wrote the letter? No.
342. You do not know whether or not he is an engineer? I do not know him by name or otherwise.
343. Then without any hesitation you recommend a new bridge instead of repairs to the old one? Yes. I think it would only be throwing good money after bad to do anything more to the old bridge.
344. You would do so even if you considered that the traffic, on account of the railway construction, was not so great as it was when the bridge was constructed? Yes. If we had not to make provision for the increased traffic, I should recommend a new bridge.
345. *Mr. Garrard.*] You stated just now, in answer to Mr. Dowel, that you had plans and estimates made for a bridge the abutments of which would be of stone, and which was estimated to cost £1,200. You said that the estimate was so high that you determined to substitute wood. Was the stone in the locality where the bridge was to be erected handy? Yes, fairly so, but the foundations were so bad.
346. And was the wood available too? Yes, within 10 miles.
347. What would have been the life of the stone abutments? I think it would be a safe thing to put it down at about 150 years.

348. The wood, which was one-fifth of the cost of the stone structure, would have had to be renewed, some of it in twelve and a half years, and some in twenty-five years? Yes.
349. I suppose the planking would be common to both? One was to have an iron top with tarred metal.
350. Therefore we may say in regard to the wooden bridge that the planking would have had to be renewed in twelve and a half years, and the rest of the woodwork in twenty-five years? Yes.
351. Where stone is available do you favour its use in preference to wood or iron? Certainly, if you can put it in cheaper. It is generally a matter of cost; whichever is the cheapest is used.
352. But you are clearly of opinion that where there is likely to be much traffic an iron structure would be better even than composite bridge such as that now proposed? No, I do not think I can say it would be better. The only risk I see at all in the timber structure on such a large scale is that some of the timber might decay without the officer in charge knowing it; there is a certain amount of risk in that way.
353. It would require very careful supervision from time to time? Yes.
354. And, of course, owing to the very frequent repairs of a composite or wooden structure, traffic would be more often interrupted? Yes. The interruption would not be very great with a 20 feet roadway.
355. Is it not a fact that of late years where the traffic would justify it the Roads Department have gone in for iron bridges exclusively—that there has been a tendency of late years to have more iron bridges than wooden ones? I do not exactly know what you mean. We put up about ten or twelve iron bridges a year and about eighty timber bridges.
356. Then there has not been a disposition on the part of the department lately to construct more iron bridges than wooden ones? No, the same average proportion has been maintained for several years.
357. Then are we to understand that when the department has heretofore used iron bridges they will in future use composite bridges; or will each case rest upon itself? Each case will rest upon itself.
358. So that a bridge may be brought before the Committee next Session of Parliament which will be exclusively of iron under certain altered circumstances? Yes.
359. *Mr. O'Sullivan.*] What load does this bridge carry? 84 lb. to the square foot distributed all over the bridge, or an ordinary traction engine going over. That is the greatest load you could have with cross-girders.
360. Do you know the bridge at Nowra across the Shoalhaven? I only know it by seeing the drawings.
361. That is built entirely of iron is it not? I think it has a timber deck.
362. Do you know the deflection of that bridge—on the centre span? No, I do not.
363. *Mr. Copeland.*] Do you think there is any danger as regards wooden bridges getting burnt? I believe the existing Cowra bridge has been on fire twice.
364. Have you taken that risk into consideration in making your calculations? I do not remember a bridge having been burnt down, so that I think the risk is very small.
365. Would there not be some danger if a bush fire occurred in the summer time? There is no bush on either side of this bridge. One end is right in the town, and the other is on a large common.
366. *Chairman.*] Would not danger from fire arise from travellers camping under the bridge rather than from bush fires? Yes; that is generally the way the fire occurs.
367. *Mr. Dowel.*] With reference to No. 3 design, what do you estimate the cost of that wooden structure? With iron cylinders, and a footway on both sides, £21,392.
368. Would that answer all the purposes of traffic the same as the other two bridges? Yes. There would be a considerable risk during flood time, owing to the small openings.
369. But it would answer the same purposes as regards traffic that the other two designs would? Yes. It would accommodate the traffic, but it would not give the same openings for flood water.
370. What do you estimate is the life of that No. 3 bridge? Twenty-five years.
371. Could you not estimate the life of that bridge for a longer period if it were constructed of good iron-bark timber, and there was careful supervision? Yes; we might lengthen the life of the bridges all round. The iron bridge, I daresay, would last more than 150 years, so that I think the proportion would remain practically the same.
372. Have you not got a better gauge or guide to form an opinion in the case of wooden structures than of iron? The average life of timber bridges hitherto has been about twenty-five years.
373. I heard you say that ironbark would last very much longer than twenty-five years? Under some circumstances and in some places, but I do not think you could depend upon the whole structure lasting longer.
374. I am referring to this particular bridge;—you would not undertake to say that the life of the bridge would be longer than twenty-five years under any circumstances? No.

J. A.
M'Donald,
Esq.
19 Feb., 1890.

WEDNESDAY, 30 APRIL, 1890.

Present:—

THE HONORABLE JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHREY.

The Hon. WILLIAM JOSEPH TRICKETT.

The Hon. GEORGE HENRY COX.

JACOB GARRARD, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Iron Bridge at Cowra.

John Alexander M'Donald, Esq., M.I.C.E., and M.I.M.E., Engineer for Bridges, sworn, and further examined:—

375. *Vice-Chairman.*] You have a paper which you desire to read to the Committee? Yes; I have written out the few remarks which I wish to make. They are as follows:—

I should like first to make a few remarks on the evidence given by Mr. Hamand, at Cowra:—

To question 193, Mr. Hamand states that "he is a little surprised at a 90 ft. span being put before you at all. They are evidently not big enough, having regard to the floods." So far he entirely concurs with the department. However, in submitting a design he only increases the span about 30ft., giving a waterway of 6,000 square feet, as against 4,350 square feet with the 90 feet span. The department cannot recommend river spans giving less waterway than on design No. 2, or 8,060 square feet.

J. A.
M'Donald,
Esq.
30 April, 1890.

J. A.
M'Donald,
Esq.
30 April, 1890.

To question 196, he states that the advantage of a concrete bridge is that "its life is practically for ever, and it does not cost sixpence for repairs." These statements are both assumptions, and cannot be proved any more than the Department can prove the life of an iron bridge to be only 150 years. I may state that if in design No. 1 the life had been taken at 300 years instead of 150 years, the annual charge would only have been decreased by £7 per annum due to this longer life, and if then the life is still further increased to last for ever, the annual charge would only be decreased by £8 per annum, or a difference in the annual charge of only £1 between 300 years' life and an infinite life; showing that an assumed life of 150 years is practically equivalent to infinity.

To question 217, I may state that the Roads and Bridges Department have and use type designs for the following:— 1 type, 1st class timber culverts; 1 type, 2nd class timber culverts; 3 types, iron-decked culverts, with concrete, brick, or masonry walls; 1 type, timber-top culverts, with concrete, brick, or masonry walls; 3 types, low-level bridges; 2 types, plain beam bridges; 2 types, timber truss bridges, 65 ft. span; 2 types, timber truss bridges, 75 ft. span; 2 types, truss bridges, 90 ft. span; 3 types, lift bridges; 1 type, compound beam bridges.

For iron bridges generally, it would be a waste of time to get out a table as suggested, as every iron bridge designed is kept in the office as a type, and as soon as a chance occurs of reproducing it, it is done.

Mr. Hamand states he does not see the reason for centre span, No. 1 design, being 216 feet, and says he supposes it might as well be 200 feet. How would he propose to divide up his bays? At present the cross-girders are shown 12 feet pitch, but if he gave the same number of cross-girders the pitch would be 11 feet 1½ inches, which arbitrary dimension would certainly confuse mechanics accustomed to work to eighths of an inch.

In general the span is ruled by the economical pitch of cross-girders, of which pitch the span of main girders must be a multiple. In continuous girder bridges the spans of main girders must be so proportioned that the shearing and bending stresses are fairly equal respectively in each span. For small spans, such as design 1, this is practically done by making the outside spans $\frac{2}{3}$ of the centre span; if all spans are equal there is not much saving in continuity.

In answer to question 224, Mr. Hamand states that he has seen the plans now under consideration for the first time. I may state that your secretary sent for these plans, and personally exhibited them to Mr. Hamand before the latter gave evidence at Cowra.

Question 236 implies that the Department do not recommend concrete or artificial stone for the piers and cylinders. In each of the three designs submitted the iron piers are filled with concrete, the iron cylinder simply forming a thin shell so as to sink the concrete to a solid foundation. The concrete columns carry the weight of the bridge, and not any weight is put on the iron cylinders.

I might now be allowed to proceed to discuss design No. 1, submitted by Mr. Hamand to your Committee, and which was forwarded on to the Roads and Bridges Department by your Committee.

In the design submitted by Mr. Hamand for bridge over the Lachlan River at Cowra the width of deck is 5 feet less, and the sectional area of waterway between abutments (taking the flood-level as a datum) is 4,086 square feet less than provided in Departmental design No. 2. It is, therefore, necessary for the sake of comparison, to assume the deck and waterway to be similar in each design.

ESTIMATED COST OF CONCRETE.

<i>Cost of Materials.</i>		£	s.	d.	
Local granite, machine broken to 2½-in. gauge		0	7	6	per cubic yard.
Gravel screened and broken		0	4	6	do
Clean coarse sand		0	2	6	do
Cement		0	17	6	per cask.
Railway carriage on cement to Cowra		2	0	10	per ton.
Carriage—Cowra Railway Station to bridge site		0	3	0	do.

For carriage—Six casks of cement weigh 1 ton.

For measurement—One cask cement contains 4 cubic feet.

The proportion specified by Mr. Hamand is four parts stone, two parts sand, and one part cement.

If five parts of stone are used to two parts of mortar, the proportion of mortar, two of sand to one of cement, is just sufficient to fill the interstices of the stone when broken to a 2½-in. gauge. If less stone is used the strength of the concrete is not increased, as the strength is proportionate to the adhesive strength of the mortar; but the cost per cubic yard is increased, as where the proportion—5 cubic yards, 2 cubic yards, 1 cubic yard—produces practically 5 cubic yards of concrete, the proportion 4 cubic yards, 2 cubic yards, 1 cubic yard produces 4½ cubic yards of concrete.

I will first give the details of the estimated cost of concrete given by the Department, and then on the same basis give the detailed estimated cost of concrete as specified by Mr. Hamand.

1. AS SPECIFIED BY THE WORKS DEPARTMENT.

	£	s.	d.
Gravel screened and broken, 20 cubic feet = $\frac{4}{6} \times \frac{27}{7}$	0	3	4
Sand, 8 cubic feet = $\frac{2}{6} \times \frac{27}{7}$	0	0	9
Cement, 1 cask = 4 cubic feet	0	17	6
Carriage to site of 1 cask cement = $\frac{43}{10} \times \frac{1}{4}$	0	7	3
Total cost for 20 cubic feet of materials	1	8	10
$\frac{28}{10} \times \frac{27}{7}$ = total cost 1 cubic yard of material	1	18	3
Labour per cubic yard	0	10	0
Allowed in departmental estimate for contingencies, plant, and profit per cubic yard	0	11	9
	3	0	0

2. AS SPECIFIED BY MR. HAMAND.

Local granite, 16 cubic feet = $\frac{7}{6} \times \frac{12}{7}$	0	4	5
Sand, 8 cubic feet = $\frac{2}{6} \times \frac{27}{7}$	0	0	9
Cement, 1 cask = 4 cubic feet	0	17	6
Carriage to site of 1 cask cement = $\frac{43}{10} \times \frac{1}{4}$	0	7	3
Total cost for 17½ cubic feet of materials	1	9	11
$\frac{27}{11} \times \frac{27}{7}$ = total cost materials for 1 cubic yard	2	5	10
Labour, per cubic yard	0	10	0
Contingencies, plant, and profit per cubic yard	0	11	9
Departmental estimate of cost of concrete per cubic yard, as specified by Mr. Hamand	3	7	7

The item above of "plant" includes board frames (but not centring), cranes, skips, punts, staging, measuring boxes, and all tools required for the work.

If the broken granite be taken at 10s. (the present local price for hand-broken) the price of the concrete, as specified by Mr. Hamand, would be increased to £3 9s. 9d. per cubic yard.

The price for concrete given by Mr. Hamand is 44s., whilst in the departmental estimate 60s. has been allowed. Taking the latter price (60s.) as a basis, the proportion and materials specified by Mr. Hamand would fix the rate of concrete proposed to be used by him at 67s. 7d. per cubic yard.

"Excavation in rock" and "other than rock" have been taken at the rates adopted in estimating cost of No. 2 departmental design.

It would appear that no provision has been made in Mr. Hamand's estimate for the floating over, and lining up, of the exposed faces, and in my estimate of his design I have shown the estimated cost of same.

The total sectional area of waterway provided in departmental design between abutments, is 24,108 square feet, against 20,072 square feet, in Mr. Hamand's design. Supposing the deck to be run out level from the centre of end span it would be necessary to add twelve extra arch spans to Mr. Hamand's design to make up the difference in sectional area of waterway between the departmental design and the design submitted by Mr. Hamand. The

J. A. McDonald, Esq.

30 April, 1890.

The length of Mr. Hamand's bridge would then be 1,716 lineal feet; the departmental design showing 1,040 lineal feet of bridge. It will thus be seen that to give the same sectional area of waterway, the arch bridge would require to be 676 lineal feet longer than the composite design.

The following table shows the obstruction to flood caused by the massive piers so necessary in bridges of the arch type to be 15 per cent., whilst in the departmental design the obstruction is only 4 per cent. of the total waterway.

Flood Areas :—

Design.	Total length of bridge between abutments.	Total sectional area of flood between abutments.	Sectional area of flood obstructed by piers.	Percentage of obstruction by piers to flood waters.
Mr. Hamand's	924 feet.	23,625 square feet.	3,553 square feet.	15
Department No. 2	1,040 do	23,087 do	979 do	4

The estimated cost of Mr. Hamand's design as submitted by him, with concrete taken at 44s. per cubic yard, is	£ 37,487
The cost of same design, with the concrete run out, at 67s. 7d., is	54,650
By making the deck on arch bridge, the same width as on departmental design, the cost would be increased by	8,614
The floating and lining up of exposed faces of walls would also add to the cost of Mr. Hamand's bridge	2,100
And to build Mr. Hamand's bridge with the same sectional area of waterway as provided in departmental design, viz., the cost of twelve extra spans, would mean a further expenditure of	27,360
Thus, it will be seen, that if the design submitted by Mr. Hamand was modified, so as to provide all the advantages of the departmental design, the total cost would amount to	92,724
Then for comparison, admitting Mr. Hamand's assumption that life = infinity, and maintenance and repairs are nil, then capital value of his design is	92,724
Departmental design I, capital value	76,350
" II, " (that recommended)	43,375
" III, " 	39,400

The Commissioner for Roads did not think it necessary to go into detail with regard to No. 2 design, submitted by Mr. Hamand, as it was practically a dam across the river. The deck level is too high for a low-level bridge, and it is just the height to catch all the timber that would come down in a flood and bank the water up, and to a great extent cover the town of Cowra.

376. *Mr. O'Sullivan.*] Then this bridge would be useless in flood-time? All the bridges, departmental or otherwise, would be useless in times of highest flood.

377. *Dr. Garran.*] And the bridge would be under water? Certainly.

Some reference has been made to British Board of Trade rules, and it would be as well here to state that this department do not adhere to those rules. The British Board of Trade rule for the safe working stress on iron in bridgework is 5 tons in tension and 4 tons in compression per square inch of section. I do not think any engineer would take the responsibility of designing bridges on this assumption, as it makes no allowance for alternating or variable stresses; it assumes that, if one application of a strain of 20 tons will break a bar, that it is safe to load it in an indefinite number of times with one-fourth or with 5 tons. The diagram (*produced*) shows the rule adopted by this Department, the black line being plotted from Weyrauch's formulæ. The full red line represents Board of Trade rule for tension, and the dotted red line represents Board of Trade rule for compression. Weyrauch's formulæ were deduced by Professor Launhardt and J. J. Weyrauch from the investigations which Wohler carried out during eighteen years at the instance of the Prussian Government, and have been practically confirmed by other experimenters during the last twenty years. I think that that fully justifies the Department in not adhering to the Board of Trade in that particular. For timber structures the British Board of Trade rules are equally vague; but no rule made for British timbers could apply to the timbers of this Colony. I may add that the rule of this Department for large timber structures is to allow a factor of safety of 5 in compression members after calculating the breaking weight by Gordon's or Rankin's formulæ for long columns, but adopting the constants as ascertained by Professor Warren in his exhaustive experiments on New South Wales timbers. However, if taken out without treating as long columns, the factor of safety would be about 7 in this case. If all the stresses on a structure have been carefully considered, and the behaviour of the material employed under the stresses imposed is known, a large factor of safety is not required, but can only lead to a waste of material. As showing the unreliability of the British Board of Trade rules, it may be stated that the Tay Bridge was passed by that Board a year before its failure. The Board of Trade also do not adhere to their own rules, for in the Forth Bridge they have allowed 7½ tons per square inch on the steel when their rule is 6½ tons.

Mr. Hamand, in his criticism of the departmental design, considers a calculated load of 84 lb. per square foot does not allow sufficient margin for safety for large highway bridges, but gives no reason for his opinion. On one of the 160-foot spans of the composite design the greatest load that could possibly be packed on the roadway (including boilers and machinery) would be 95 tons. This has been ascertained by actual experiment on Temas Bridge. The departmental calculated load is 180 tons, leaving 85 tons for passenger loading on the two footways, or at the rate of 120 lb. per square foot. It would be useless to calculate for a compact crowd on the roadway in addition, as it would be the duty of the police to prevent such a thing, even if it was possible to obtain sufficient people around Cowra. As previously stated, the maximum concentrated moving load calculated for is a traction engine or other load of 16½ tons.

When giving evidence before this Committee on 19th February, questions were asked me in reference to certain sizes of iron specified by the Roads and Bridges Department, and I now submit a few typical sheets of iron sections. My reason in submitting merchants' lists instead of makers' lists is, that the merchants' lists are more complete, being a compilation of the sections rolled at, perhaps, fifty different mills. The lists submitted are as follows:—Ostermeyer, Dewez, & Co., D. and W. Robertson, Jules Renard & Co., C. C. Dunkerley & Co. It will be seen by reference to these lists that the channel and girder sections mentioned by Mr. Dowel are all given on at least two of them. That odd dimensions are rather the rule than the exception is at once apparent. Take for example Dunkerley's list, and commence at column 3 or channel irons; they run:—

6½ × 2 ⁵ / ₁₆ × ½ × 16½ lb. per foot run.
6½ × 3 ¹ / ₁₆ × ¾ × 15½ lb. " "
6½ × 2½ × ¾ × 12½ lb. " "
6½ × 2½ × ¾ × 19 lb. " "
6½ × 2 ⁵ / ₁₆ × ¾ × 12½ lb. " "

And again, in the girders similar odd dimensions occur. To illustrate the reason for some of these odd dimensions I have had the section of a girder 20" × 7" × ¾" web × 90 lb. per foot run drawn on diagram (*produced*) and coloured blue. The breaking weight of this girder for a 27 feet span is 37 tons at the centre. With the same rolls the section may be increased ¼" without any extra cost per ton, as shown by the portion coloured red. This then gives a thickness of web of ¾", a width of flange of 7½", and a weight per foot run of 100 lb., and the strength is increased from 37 tons to 39 tons. Without extra cost per ton this section could be rolled to any weight between 90 lb. and 100 lb. per foot run, which would give smaller fractions than ¼ inch. The above illustration applies in the same manner to channel irons as to girders. Another reason for the odd dimensions found on all merchants lists is, that a large percentage of girders and channel irons are rolled on the Continent, where the metrical system of measurement is used. For instance, a girder in English measurement 19½" × 7½" would, according to the metrical system, read 500 × 180 millimetres, which are fairly even dimensions. It is useless for the engineer designing bridgework to assume that the sizes of channels and girders increase in size by a certain fixed and even increment, for such is not the case, and he must be content to specify the nearest size obtainable on some reliable merchant's

J. A. M'Donald, Esq.
30 April, 1890.

merchant's lists, even though it may run to odd fractions, as for instance a girder $11\frac{3}{16}$ " deep \times $4\frac{1}{8}$ " wide \times $\frac{7}{16}$ " thick \times 39'7 lb. per foot run (metrical measurement—300 millimetres \times 125 millimetres \times 11 millimetres \times 59 kilogrammes) may be thought an odd size, but it is obtainable to order. I think the foregoing remarks will entirely clear the Department from any suspicion that unmarketable sizes of iron are specified, and I would draw the attention of the Committee to the fact that this question of sizes of iron is not involved in the design now recommended by the Department for Public Works, as in this design no rolled girders and no channel irons are shown, the only sections required being steel angle bars $4" \times 3" \times \frac{1}{4}"$ flat plates and round iron for bolts and suspension rods. I hand in detailed estimate of Mr. Hamand's design at the rates adopted by the Department.

COWRA BRIDGE.

Estimated Cost of Mr. Hamand's Design at rates comparative with those adopted in Departmental Designs.

Total estimated cost of bridge with width of deck and waterway equal to that provided in Departmental design No. 2.

£92,724

378. Mr. Tonkin.] According to the report which you have just read, the Department are entirely against concrete bridges? Against bridges built altogether of concrete for such a site as this, certainly.

379. Have you any idea of using concrete for any other site, or in any bridges at all? We do not often use concrete in the form of arches on account of the expense of centring, and of the difficulty of getting the centring done well, but we are constantly using concrete for abutments, and the cylinder piers of all the iron bridges are filled with concrete.

380. Has there been a bridge built in New South Wales entirely of concrete? I do not know of one.

381. Dr. Garran.] The Bondi sewer is concrete? Yes.

382. Mr. Tonkin.] What would be the span of that? About 20 feet, I think.

383. You say that Mr. Hamand's estimate of the cost of the concrete per yard is something like 16s. below the departmental estimate? Yes.

384. Does Mr. Hamand in his report give the quantities of material used? Yes, and they have been taken as a basis.

385. It is on them that you base your estimate of a higher price? Yes. His concrete is made up of four of stone to two of sand and one of cement. The stone costs at the very least 7s. 6d. a cubic yard for quarrying and breaking. There is very good gravel to be obtained near the site of this bridge which could be got for 4s. 6d. a cubic yard, and which the Department intend to use, so that that makes a saving of 3s. Again, by using so much more sand and cement per cubic yard than the Department have specified the cost of the concrete is increased.

386. Do you know the cost of the sand per cubic yard there? Yes; it is given. It is the same in both cases. Mr. Hamand uses broken stone instead of gravel, and for his cement a proportion of four of stone to two of mortar where we use five of stone to two of mortar, and that increases the cost of his work.

387. How does he make out that his cost is 16s. per cubic yard less than the departmental cost? I cannot answer that.

388. Does he do it? His estimate is 44s.

389. And yours is £3? For our concrete; not for his.

390. According to you, his concrete would cost £3 7s. 7d.? Yes.

391. Can you inform the Committee how he makes it 44s. after he has specified the ingredients of the concret? I cannot.

392. Do you think that there is a possibility of the Department having overcharged for any material—for stone, gravel, sand, or whatever may be used? The estimate for these three designs is liberal all through, in order to insure that the contract when let shall not exceed it, and also because the detailed drawings are not yet completed, and modifications may have to be made. There would, however, be the same proportion between the designs.

J. A.
McDonald,
Esq.
30 April, 1890.

393. That would be with regard to the quantities used ;—I am speaking of the cost of one yard of concrete ;—you say it is £3 or £3 7s. 7d., according to the ingredients used ;—I want to know whether it is possible that the Department may have over-estimated the value of some of these ingredients ;—I ask you this because we have found in other investigations that the departmental estimate for the fencing of railways has been nearly double the actual cost ? There is very little chance of that occurring with regard to the estimate for iron bridges in our Department. As a rule, they are very close indeed to the tenders accepted, both for supply and erection. We alter our prices according to the distance from Sydney. The distance of carriage is always considered, as you will see in the detailed estimate given in the appendix.
394. But where you can get good gravel or stone very easily it surely makes a difference in the cost ? Certainly. I cannot carry all these prices in my head ; but on the Tamworth bridge, which is an almost parallel case with Cowra, we paid £3 15s. a yard for concrete, and used river gravel.
395. In the erection of a concrete bridge, would the material used be superior to that used for filling up the cylinders of an iron bridge ? No. The strength of material is equally important in each case.
396. You say that Mr. Hamand's design No. 2 would be a dam to the water ? Practically a dam.
397. Can you tell the Committee to what height the country on the western bank would be flooded before the water rose to the deck of Mr. Hamand's bridge ? Six feet.
398. If there were 8 feet of water on that large flat would it be worth while to have the bridge above the level of the water ;—could it be used in any way ? No.
399. Then if it were not above flood level nothing would be lost, as the height of the water on the flat land would render it inaccessible ? Quite true—with regard to the matter of traffic only.
400. Could the bridge be used at the time of one of these extraordinary floods, if it were above the flood-level ? No.
- 401-2. Then in what manner would it be a dam, because the water would be all over the level country ? It would reduce the sectional area of water-way, and tend to compel it to run across at some other place and make a new channel. The piers and arches would offer considerable obstruction to the water, and the tendency of that would be to scour out the present channel or to make a new one.
403. You say in your report that Mr. Hamand has taken exception to the 90 feet span in your design, and then you say that his design is only 120 feet ;—is there not some difference between the water-way of the span of 120 feet and that of 90 feet ? There is a good deal of difference.
404. Could not a span of 90 feet be an absolute failure as far as the water-way is concerned when a span of 120 feet would meet all requirements ? That might be so.
405. Then there is nothing in your remark ? What I wanted to point out is that the Department do not propose a 90 feet span—they recommend nothing less than a 160 feet span.
406. You have no hesitation in condemning the construction of the concrete bridge for this particular spot ? I think the cost would condemn it.
407. You think that the cost of a concrete bridge would be more than that of an iron structure or of a composite structure ? Of course, if a low-level bridge was considered necessary, a concrete bridge might be built for less perhaps than the design recommended by the Department ; but it would not give the same facilities.
408. What is your opinion about a low-level bridge ? That it must be below the level at which the timber comes down.
409. You do not advocate one because you think it would not meet the requirements ? Yes.
410. Do you condemn the construction of a high-level concrete bridge ? Yes ; because of the price.
411. You favour an iron bridge—entirely of iron ? No ; a composite bridge.
412. Such as was suggested by yourself ? Yes ; by the Department.
413. You think it would meet all requirements, and be in the end a cheaper bridge than the concrete bridge suggested by Mr. Hamand ? Yes.
414. You do not think that it would last longer ? Of course, in the comparison which I have made, I have given the capital values, and compared them on that. If they were compared on the prime cost the difference in favour of the Departmental design would be greater.
415. I take it that those calculations are carefully worked out, and that, consequently, the difference between 150 years and eternity is not worth considering ? No.
416. You have no hesitation in saying that an iron structure would be preferable to a concrete one ? No.
417. In your design there would be a wooden deck ? Yes.
418. That, I suppose, you will allow, will only last 20 years ? We have allowed 12½ years for it.
419. The other structure would have a concrete flooring ;—would not that last longer than a timber decking ? The question of life has been taken into consideration in regard to the capital value on which the two are compared.
420. The capital value of the high-level bridge is put down at £92,000 ? Yes ; and of the composite one at £43,000. That is allowing a sinking fund for paying off the cost of the deck in twelve and a half years, so that it would bring them both on the same basis for comparison.
421. Do you think that if it were decided to build a concrete bridge, there would be any difficulty in constructing it according to Mr. Hamand's specifications and estimates ? It certainly could be constructed, though I am not aware of any bridges having such a large span being constructed of concrete, and it is possible that there may be difficulties in relation to expansion and contraction. However, I do not think that that need be much feared, if the foundations are solid.
422. Do you think that there would be much difficulty in constructing such bridges where rivers are so liable to heavy floods and freshes as ours are ? I do not think there would be much risk in this case.
423. Do you think that on account of the novelty of the construction, the estimated cost would be greatly under the actual cost ? No.
424. *Mr. Lee.* Do you know whether the flood level taken by you in No. 2 design, is the same as that taken by Mr. Hamand in No. 1 design ? I have not compared them, but I presume that they are the same, because Mr. Hamand was supplied with a tracing of the river, giving the flood level and the depth of borings to the rock.
425. You have drawn the No. 2 design taking into consideration the highest flood level, and you presume that Mr. Hamand has done the same ? Yes.
426. In the event of other floods occurring at the same level, the approaches to your bridge would be covered to a depth of about 8 feet, although such a flood would be unusual ? Yes.

- J. A. M'Donald, Esq.
30 April, 1890.
427. Is not the Lachlan River subject to partial floods? Yes.
428. Do not considerably more floods reach the bank of the river than pass over it? Yes.
429. Would a partial inundation of the country completely block all traffic on your bridge (No. 2 design)? Not unless the river were up to the banks. At the highest flood it is 8 feet over the flat.
430. Supposing the water were 2 feet over the flat, could the traffic get to your bridge? Yes; but it would be dangerous.
431. Supposing the water were within 6 feet of your flood level, would it be possible to get on to, and make use of, the bridge called No. 2 in Mr. Hamand's design? No, there would be 4 feet of water over it.
432. In your No. 2 design do you intend to carry traffic under ordinary circumstances only, or under extraordinary circumstances such as an unusually high flood? It is not designed to carry traffic at the highest flood; but it is necessary to keep the bridge up in order to ensure its safety.
433. But it is designed, I presume, to carry on the traffic as long as possible? Yes.
434. Mr. Hamand in his report, page 11, says:—"With regard to comparative estimate, I consider that No. 2 design if increased to the proper standard of strength would cost £30,000, instead of £26,500." Are the Committee to infer that you have used iron of less strength than the Board of Trade rules require, and have so reduced the price? Yes and no. The diagram which I have produced will show that in some cases we have gone above the Board of Trade rules, and in others below them.
435. You do not profess to have used material equal to that prescribed by the Board of Trade standard in designing your bridge? We have used material above the Board of Trade standard.
436. But taking the uniform rule, as laid down by the Board of Trade? No; we have not adhered to their rules.
437. In your design you have used above and below that standard to suit the purposes of the Department? Yes.
438. *Mr. O'Sullivan.*] You recommend No. 2 design;—what is the cost of it? £26,538.
439. And Mr. Hamand's amended design would cost £22,581? Yes.
440. What do you say is the departmental estimate for that design? We have not gone into it at all.
441. Did you not give the departmental estimate for Mr. Hamand's design? For his No. 1 design,—not for his No. 2.
442. I am talking now of Mr. Hamand's No. 1 design? Taking his design as it stands the Department estimate it at £54,650.
443. That is enlarging his design? Taking his design as it is there, without any enlargement.
444. By an enlargement of the dimensions of his design what would be the cost of it? £92,724.
445. Do you think it is requisite that a bridge of those dimensions should be built in order to accommodate the traffic? I think that there are many objections to a bridge of that type, and one of the principal is the risk of the scouring out of the foundations of the piers. The banks there are very liable to scour. When boys go down to dig up worms for fishing, and a fresh comes, holes several feet deep will be scoured out, and I think it would be a risky thing to construct such a bridge there unless the foundations were carried down further than shown on the plan. The piers would form a great resistance to the water, and the tendency would be to create a scour.
446. What do you estimate would be the life of your bridge? One hundred and fifty years for the iron work, twenty-five years for the main timbers, and twelve and a half years for the decking—that is, capitalised out with a sinking fund, it brings the capital value to £43,000. I think that that amount should be taken, in order to compare the bridge with a concrete bridge, and not the prime cost.
447. At £92,000? Yes.
448. Mr. Hamand in his report says, "I have only examined the No. 2 design, and that, so far as the information supplied to the Committee permits, and I observed that it is pervaded by the same error of over-straining timber;"—is that a fact? No. My reply to that is what I stated about the Board of Trade rules. We have actual data to go upon that the Board of Trade know nothing about in regard to the timber here.
449. Later on Mr. Hamand says, "Colonial timbers possess great strength, but they are correspondingly heavy, and in all large spans the weight of the material used is a very large component of the total weight to be sustained. I doubt if timber can be used, even for road bridges, economically when the spans exceed 60 or 70 feet?" Well, I must say in reply to that that we now use it economically with spans of 90 feet.
450. Mr. Hamand also says, "I am sure that the idea of corrupt benefit is impossible, and may be dismissed. The rolled joists referred to are more used by architects than by engineers, and are generally sold guaranteed to carry quiescent loads rather than to fill particular dimensions which are given for information more than for calculation purposes. The bracings, 5½ in. by 2¾ in. by ½ in., are somewhat an unusual size to specify. I am quite satisfied, however, that there is no corrupt motive underlying this matter, but that these unusual dimensions are rather due to the hair-splitting accuracy of some draughtsman more theoretical than practical?" I think that what I have already said as to the sizes of iron is a complete answer to that.
451. You consider that in your reply you have answered all the objections made by Mr. Hamand? Yes.
452. And you speak from the standpoint of experience in this colony? Yes.
453. *Mr. Trickett.*] What test is made of bridges in these colonies before they are used? It is not usual to test the road bridges, because there is a very great difficulty in obtaining sufficient weight to do it. A few years ago, when the Thomas bridge was completed, for my own satisfaction I asked for authority to have it tested, as it was of a very light construction, but we had very great difficulty in getting sufficient loading. We required 100 tons, and it was as much as the district could do to find sufficient carts.
454. Do they not generally test them with live stock? Yes; both moving and stationary. They test them with three or four carts going over at a trot, and they also test them for the full load.
455. Do you not think that it is desirable to test the bridges here? The material is all very carefully tested, and the construction is very carefully watched, so that there is not very much to be gained by testing the bridge itself.
456. I suppose that these tests by soldiers and cattle being taken over the bridge are only applied in towns where there is a large concourse of people? Even near towns it is rarely that the bridges are built to take 120 lbs. to the square foot.
457. You do not think that it is necessary? No.

458. *Dr. Gavran.*] You say that the iron cylinders are merely skins for the concrete, and that the weight of the bridge rests upon the concrete? Yes.

459. So that if the iron skin were to die away the support would not be diminished in the slightest degree? No; but the bracing between the two cylinders, which is above water, would have to be maintained.

460. Is it braced into the solid part of the iron or on to the cap? It is riveted to the outside of the cylinder.

461. Supposing that the lower part of the cylinder were to wear away, what would become of the bracing? The top part can be kept clean and painted, and so long as that is done it forms a bracing between the columns, even if the lower part wears away.

462. What is the life of these iron skins, as you call them;—I suppose none have ever died? No.

463. If the support is on these concrete pillars, you use very much less concrete than Mr. Hamand would do in his old-fashioned concrete supports? Yes. We can go to greater depths.

464. And you have a less solid pillar—his would go right across the stream? Yes. We have only two cylindrical pillars.

465. Then the concrete you would use is less than what he would use? Yes.

466. He has to give a support underground instead of the girder above ground? Yes.

467. Is not that more wasteful? Yes.

468. Will he have to make proper dams for his foundations? He proposes to build the concrete caissons on a cutting edge of iron, and to sink them down in that way.

469. Do you think that that is trustworthy? Well, his specification is not complete enough for me to see exactly how he will do it. He does not say how he intends to model the concrete to form the piers.

470. Would you be able to see without the aid of a diver how these are settling on the ground? It would be simply an enclosed ring lowered down and the excavation would be carried on inside of it, just as we sink the iron cylinders—it would be a concrete caisson.

471. It is a concrete cylinder practically? Yes; it would be hollow inside, though not cylindrical. It would be more suitable for the superstructure which he intends to make. Of course, arches could not be very well struck off iron piers like these.

472. Do you think that an arched bridge is as suitable for a flooded river as one with horizontal girders? No; because of the obstruction which it gives.

473. It would offer very much more resistance to the water? Yes.

474. It would give less space for the water and timber to pass through? Yes.

475. Whatever merits concrete arches may have in certain places, you think that in this country they are quite unsuitable for flooded rivers? Generally—yes. In regard to an estimate for a suspension bridge I may say that when I concluded my evidence at Cowra, the Chairman of the Sectional Committee informed me that an estimate for a suspension bridge would not be required, and I have therefore done nothing further in the matter.

476. *Mr. Tonkin.*] You have been to Cowra and seen the bridge there, and you know, from what you have read, the amount of traffic that goes over it. Do you not think that the bridge that you propose to erect would be larger than is absolutely necessary, taking into consideration the fact that a railway will be constructed to Parkes or Forbes which will take away a very large amount of the traffic? I do not think so, for where the traffic is at all large a 20-foot roadway is not too wide. The only saving that would be made, if it were thought advisable, would be to leave out one of the footways.

477. Would that make much difference in the cost? No, only £3,000 or £4,000.*

* NOTE (on revision) :—The actual cost of omitting one footway would be £1,322, not £3,000 or £4,000 as stated.

J. A.
McDonald,
Esq.
30 April, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Iron Bridge at Cowra.

APPENDIX.

A.

PRECIS OF PAPERS IN RELATION TO THE PROPOSED BRIDGE OVER THE LACHLAN RIVER AT COWRA.

THE existing bridge at Cowra, which is a timber one, was opened for traffic in the year 1870. The first cost was £9,170 5s. 5d., and a considerable sum of money has since been expended upon it in maintenance and repairs.

In 1886 it was reported that considerable repairs and renewals had become necessary, that supporting tressels or cylinders were required, and that for the increasing pedestrian traffic a footway addition was desirable. For these purposes a sum of £3,000 was placed on the Estimates for 1887.

2/9/87.—Mr. Garland, M.L.A., drew attention to the circumstance that, although the money had been voted no steps had been taken to initiate the work. Mr. Bennett replied that the question was receiving consideration and that the swollen condition of the river precluded active work from being undertaken. It would appear that although the money had been voted for extensive works, only absolutely necessary repairs were carried out.

24/1/88.—The Road Superintendent reported that a portion of the bridge required an extensive overhaul, and that the structure was in so unsafe a condition that he had had to prohibit loads of over 7 tons from coming on to it.

26/3/88.—Shortly after, Mr. Secretary Sutherland visited Cowra, and was interviewed by a deputation regarding the bridge. They stated that it was in a dangerous condition and liable to collapse at any moment, in which case the trade of the town would be seriously crippled. A sum of £3,000 had been voted for iron cylinders; but little, if anything, had been done. The Minister inspected the bridge, and pronounced it to be insecure and too narrow for the traffic. He made a promise that on his return to Sydney some definite action should be taken.

A report accordingly was furnished by Mr. M'Donald to the effect that the main spans were sound and serviceable, but the 65 feet spans were unsafe and might fall over if heavy weights were placed on the bridge. Mr. Bennett gave instructions to execute absolutely necessary repairs, and to place tressels under the deflection spans, which was done, and with good results.

20/8/88.—Succeeding August, Mr. G. Campbell wrote, requesting that such repairs might be executed as would enable teamsters to use the bridge with safety and confidence.

25/9/88.—Mr. M'Donnell submitted an estimate, as under, for the reconstruction of the bridge:—

Amount of estimate	£12,550
Less 1887 vote	3,000
Amount for Estimates	£9,550

But the amount apparently was not placed on the Estimates.

27/11/88.—Mr. Bennett minuted the Under Secretary to alter the amount on the Draft Loan Estimates for the bridge at Cowra from £24,000 to £19,600,* as it was considered desirable to have timber approaches.

5/3/89.—The Mayor of Cowra forwarded a copy of a report upon the bridge, prepared by the Municipal Works Committee, to the effect that they had inspected the bridge, and found one span and about 20 feet in fair condition, and that the remainder would have to be redecked, it being in many places unsafe for traffic. The tressels which had been placed under the three spans had, they said, been the salvation of the bridge. They appeared, however, to apprehend the possibility of mishap, for they recommended that, in anticipation of any emergency, the old ford should be made passable.

Mr. Bennett minuted that, pending a decision as to the erection of a new bridge, only repairs necessary for safety should be carried out. A memo. is on this paper to the effect that a sum of £19,600 had been placed on the Draft Estimates for a new bridge.

24/6/89.—The Mayor of Cowra wrote that the question of a new bridge had been under the consideration of the Works Department for a long time; that the existing structure had been so far condemned that notices had been posted, prohibiting loads of over 7 tons from passing over it, with the result that a quantity of wool had to be kept back, and that Mr. Sutherland had given a definite promise of a new bridge. The necessary levels had been taken, and he (the Mayor) believed £20,000 had been placed on the Estimates. He would be glad to know if a sufficient sum had been provided, and the Works Department should be urged to prompt action.

24/7/89.—In reply to categorical inquiries made by Mr. Macdonald, the Road Superintendent reported that the traffic over the river at Cowra was such as to justify an expenditure of £30,000 or £40,000 on a permanent iron bridge; that as the municipality was divided by the river, and a great portion of the traffic must pass over the bridge to and from the railway station, the new structure should be of iron, and should be built while the old bridge was available. That the construction of a railway to Forbes would tend to reduce the traffic over the bridge; but the extensive settlement which would inevitably take place would more than replace this; and that the width of deck, exclusive of footways, should not be less than 20 feet. The Superintendent added that two years previously he had reported that the bridge might collapse at any time, under stress of ordinary flood, and he felt bound now to repeat the warning.

A sum of £36,000 has been placed on the Loan Estimates for 1890 for a new bridge, which is thus described:—Main bridge, steel or iron; approaches, iron. Main bridge, continuous girder of three spans, 112 feet, 140 feet, and 112 feet; roadway 20 feet wide, with footway on each side; deck, iron, covered with tarred metal; approaches, similar class of deck; piers, iron, filled with concrete. C.A.B., 9/12/89.

Since the foregoing was written the details of the bridge have been determined, and the above description has been departed from in the following particulars:—The main bridge will consist of three spans of 169 feet, 216 feet, and 169 feet, and there will be four approach spans of 111 feet. Iron piers, filled with concrete, will be used for the main bridge. For the approaches, piers of concrete only. Footways will be 5 feet wide.—C.A.B.

The matter has since been reconsidered, and plans and estimates have been prepared for a composite bridge, to cost £26,537, and this is the scheme which will be submitted for the consideration of the Parliamentary Standing Committee on Public Works.—11/2/90.

* There is nothing in the papers to lead up to this.

B.

[To Evidence of John Alexander M'Donald, Esq.]

APPENDICES TO PAPER READ BEFORE THE COMMITTEE, AND PUBLISHED WITH MR. M'DONALD'S EVIDENCE.

1.

COWRA ROAD DISTRICT—COWRA BRIDGE REPAIRS.

RETURN of expenses incurred in repairs to Cowra Bridge, from January 1st, 1885, to December 31st, 1889.

	£	s.	d.
1885—January 1st to December 31st	262	16	3
1886— Do do	216	16	6
1887— Do do	128	12	0
1888— Do do	283	3	7
1889— Do December 8th	168	5	0
1889—December 8th to December 31st, work in progress	160	0	0
	£1,219 13 4		

Forwarded in conformity with instructions from the Commissioner and Engineer-in-Chief for Roads and Bridges of 18/12/89.

Roads Office, Cowra, December 20th, 1889.

J. V. BARTLETT,
Road Superintendent.

2.

TABLE showing traffic over Bridge, from December 19th to 25th (both inclusive), 1889.

Description of traffic.	Dec. 19th.	Dec. 20th.	Dec. 21st.	Dec. 22nd.	Dec. 23rd.	Dec. 24th.	Dec. 25th.	Totals.	Averages, daily.
Foot-passengers	161	243	315	258	258	475	382	2,092	300
Horsemen and women	126	119	177	43	135	242	215	1,057	150

4.

Department of Public Works, Sydney, 22 November, 1889.

AMENDED rates of tolls to be levied on all Ferries from 1st January, 1890.

	s.	d.
For every foot passenger (excepting children going to or returning from school)	0	1
For every horse, mare gelding, ass, or mule, drawing or not drawing	0	3
For every gig, buggy, waggon, dray, or other vehicle	0	6
For every ox or head of neat cattle, drawing or not drawing	0	2
For every sheep, lamb, pig, or goat, not exceeding 100 in number	0	0½
For every sheep, lamb, pig, or goat, exceeding 100 in number	0	0¼
Goods (not conveyed in vehicles)	per cwt.	0 3

One charge to include passing and repassing once a day.

Persons riding or travelling in vehicles not to be charged toll as foot passengers.

5.

RATES of Tolls levied at Bridges.

The following tolls were levied at the undermentioned bridges until abolished, 31 December, 1882:—
Penrith (abolished 1874), Pitnacree, Belmore, Dunmore, Windsor, and Richmond.

	s.	d.
Foot passengers, each	0	1
Vehicles, each	0	6
Horse, &c., drawing or not drawing, each	0	3
Ox or head of neat cattle drawing or not drawing, each	0	2
Sheep, lamb, pig, or goat, each	0	0½

On payment of one toll this bar can be passed any number of times on same day.

Dubbo and Wellington Bridges.

	s.	d.
Foot passengers, each	0	2
Vehicles, each	1	0
Horse, &c., drawing or not drawing, each	0	6
Ox, &c., drawing or not drawing, not exceeding 20 in number, each	0	4
Ox, &c., drawing or not drawing, exceeding 20 in number, each	0	2
Sheep, lambs, pigs, goats, each	0	0½

Persons riding or travelling in vehicles not to be charged as foot passengers.
Tolls to be charged on Sundays.

Roset's Bridge and Balranald Bridge.

	s.	d.
Horse, &c., drawing or not drawing, each	0	4
Ox, &c., drawing or not drawing, each	0	3
Ox, &c., drawing or not drawing, exceeding twenty in number, each	0	2
Vehicles, each	1	0

Hay Bridge Bar.

This is the only bridge under Department where tolls are now levied, by arrangement with the Hay Municipal Council. They have lately applied to have tolls abolished. Matter is under consideration.

	s.	d.
Horse, &c., drawing or not drawing, each	0	2
Vehicles with two wheels, each	0	3
Vehicles with four wheels, each	0	6
Ox, &c., drawing or not drawing, each	0	2
Sheep, lambs, pigs, goats, at rate of per thousand	10	0

Albury Bridge.

Proclamation of amendment of tolls, 27 March, 1872.

	s.	d.
Vehicles	1	0
Horses, &c., drawing or not drawing, each	0	6
Ox or head of neat cattle, drawing or not drawing	0	4
Sheep, pig, goat, each	0	1

Gundagai Bridge.

Proclamation of amendment of tolls, 1 January, 1875.

	s.	d.
Vehicles	1	0
Horses, &c., drawing or not drawing	0	6
Oxen, drawing or not drawing, each	0	4
Oxen, drawing or not drawing, after first twenty	0	2
Sheep, &c., each	0	0½

Cowra Bridge.

Tolls proclaimed 30 October, 1871, to be collected from 1 December, 1871. Tolls abolished 27 September, 1872.

	s.	d.
Foot passengers, each	0	2
Vehicles, each	1	0
Horses, &c., drawing or not drawing, each	0	6
Oxen, &c., drawing or not drawing, each	0	4
Oxen, &c., drawing or not drawing, after first twenty, each	0	2
Sheep, &c., each	0	0½

Persons riding or travelling in vehicles not to be charged toll as foot passengers. Toll to be charged on Sundays as on other days.

6.

TABLE showing Estimated Value of Traffic at Cowra Bridge.

Description.	Daily.	Per annum.	Rate.	Amount.
Foot passengers	300	109,500	1d.	£ 456
Horsemen and women	150	54,750	3d.	684
Spring carts and buggies	100	36,500	9d.	1,368
Sheep	200,000	½d.	208
Cattle and horses	260	94,900	2d.	791
Total				£ 3,507
Deduct wages of two collectors, printing tickets, and sundry expenses				507
Balance to credit				£ 3,000

The above does not include 10,000 tons of goods conveyed in waggons or drays.

APPENDIX.

27

7.

DESIGN No. 1.

ESTIMATED cost, with iron deck and two footways.

CONTRACT I.

Quantities.		Item.	Rate.	Amount.
Main Bridge = £32,000.	262 tons	Cast-iron in cylinders, handrail brackets, and ladder-bracing	£12 per ton	£ 3,144 0 0
	40 "	Cast-iron in bed-plates, saddle-plates, rollers, and caps	£30 "	1,200 0 0
	70 "	Wrought-iron in cylinders and bracing, including rivets	£21 "	1,470 0 0
	957 "	Wrought-iron in main girders (including steel L covers), cross-girders, and wind-bracing	£21 "	20,097 0 0
	281 "	Wrought-iron in rolled girders, buckled-plates, deck-plates, and bulb T irons	£17 "	4,777 0 0
	10 "	Wrought-iron in handrail-standards and black bolts	£25 "	250 0 0
	3 "	Wrought-iron in turned bolts and set screws	£30 "	90 0 0
	2 "	Steel in pins	£32 "	64 0 0
	9½ "	Gas-pipe handrails	£30 "	285 0 0
	1 "	Pig lead	£1 per cwt.	20 0 0
	10 cwt.	Sheet lead	3d. per lb.	280 0 0
		Paint, two coats, bulk sum		300 0 0
	4	Lamp-posts	£8 each	32 0 0
	Footways = £2,478.	37½ "	Wrought-iron in cantilevers	£21 per ton
61½ "		Wrought-iron in buckled plates and bulb T iron	£17 "	1,045 10 0
19 "		Wrought-iron in gas-pipe handrails	£30 "	570 0 0
3 "		Wrought-iron in handrail-standards	£25 "	75 0 0
Total			£	34,487 0 0

Total cost of bridge complete, with footways { Contract I. £34,487
Contract II. 35,484

Total cost £69,971

By omitting footways (£4,775) the cost of bridge would be reduced to £65,196

7A.

DESIGN No. 2.

COMPUTATION of Annual Charges on Design with Timber Piers. Interest, 4 per cent.

With Footways—	
Estimated cost of ironwork and steel	£6,982
Do timber in trusses and piers	10,561
Do do planking	3,380
	per annum.
Interest and depreciation on £6,982, life 150 years = 4·01 %	= £280
Do 10,561, life 25 do = 6·40 %	= 676
Do 3,380, life 12½ do = 10·33 %	= 349
Painting every four years, at 20s. per foot	= 260
	£1,565
Total annual charge	
Capital value at 4 % = £39,125.	

Without Footways—	
Estimated cost of ironwork and steel	£6,836
Do timber in trusses and piers	9,103
Do do planking	2,340
	per annum.
Interest and depreciation on £6,836, life 150 years = 4·01 %	= £274
Do 9,103, life 25 do = 6·40 %	= 533
Do 2,340, life 12½ do = 10·33 %	= 242
Painting	= 260
	£1,359
Total annual charge	
Capital value at 4 % = £33,975.	

15.

DESIGN No. 2.

COMPUTATION of Annual Charge on Proposed Design, with Cylinders. Interest, at 3½ per cent.

With Footways—	
Estimated cost of cylinders and ironwork	£15,147
Do timber in trusses and piers	8,111
Do do planking	3,380
	per annum.
Interest and depreciation on £15,147, life taken at 150 years = 3·52 %	= £533
Do do 8,111, do 25 do = 6·07 %	= 492
Do do 3,380, do 12½ do = 10·03 %	= 339
Painting every four years, at 20s. per foot	= 260
	£1,624
Total annual charge	
Capital value at 3½ per cent. = £46,400.	

Without Footways—	
Estimated cost of cylinders and ironwork	£15,000
Do timber in trusses and piers	6,654
Do do planking	2,340
	per annum.
Interest and depreciation on £15,000, life taken at 150 years = 3·52 %	= £528
Do do 6,654, do 25 do = 6·07 %	= 404
Do do 2,340, do 12½ do = 10·03 %	= 233
Painting	= 260
	£1,427
Total annual charge	
Capital value at 3½ per cent. = £40,771.	

16.

DESIGN No. 2.

COMPUTATION of Annual Charges on Design, with Timber Piers. Interest at 3½ per cent.

With Footways—	
Estimated cost of ironwork and steel	£ 6,982
Do timber in trusses and piers	10,561
Do do planking	3,380
	per annum.
Interest and depreciation on £ 6,982, life taken at 150 years = 3·52 %	= £246
Do do 10,561, do 25 do = 6·07 %	= 641
Do do 3,380, do 12½ do = 10·03 %	= 339
Painting every four years, at 20s. per foot	= 260
	£1,486
Total annual charge	
Capital value at 3½ per cent. = £42,457.	

Without Footways—	
Estimated cost of ironwork	£6,836
Do timber in trusses and piers	9,103
Do do planking	2,340
	per annum.
Interest and depreciation on £6,836, life taken at 150 years = 3·52 %	= £241
Do do 9,103, do 25 do = 6·07 %	= 553
Do do 2,340, do 12½ do = 10·03 %	= 235
Painting	= 260
	£1,289
Total annual charge	
Capital value at 3½ per cent. = £36,829.	

17.

JOHN A. M'DONALD,
Engineer for Bridges, M.I.C.E., M.I.M.E.

C.

REPORT BY ARTHUR S. HAMAND, Esq.

Cowra Bridge.

Sydney, 31st March, 1890.

Gentlemen,
Early in this month I visited Cowra. I carefully examined the existing bridge, its situation, and that of the proposed new bridge, and investigated what materials were obtainable in the district for the erection of a new bridge.

The existing bridge is in a most unsatisfactory state. The only sound part of it is that portion of the superstructure forming the three 130 feet trusses, and the design of this bridge and its present condition are a timely commentary upon the middle paragraph in the "introductory" part of Mr. M'Donald's statement relating to timber work.

These three 130 feet trusses are in every particular exact copies of a type very common in the United States, in use for single track railway bridges. The timber in these trusses must have been carefully selected, and, I am informed, was stacked on the ground two years prior to being used. All the parts have been carefully fitted and put together, and the bolts have been tightened at every opportunity to take up shrinkage; and the point to which I particularly desire to draw attention is that no member of these trusses has ever been overstrained, and consequently the trusses retain the shape in which they were originally built, and are now apparently as good as they were twenty years ago.

The rest of the bridge is a great contrast to these trusses. There is a surplus of timber in one place, and a great deficiency in another. I might go over the whole bridge with the same result, but confine myself to two instances.

The piers carrying the 130 feet spans are of no greater scantling than the piers supporting the 65 feet spans, yet, in addition to having about three times the weight to carry, the piers of the larger spans are twice the height of those carrying the 65 feet openings. Either the piers of the 65 feet spans are of six times the strength required, or the river piers are of only one-sixth the necessary strength. Another example I take from the 65 feet trusses: The working stress on the stretcher beam at top of the queen truss is 36 tons, while the safe stress on the timber used is 15 tons. What wonder that these trusses have gone quite out of shape and have to be propped? The natural consequence of straining timber so severely is that the ends give way, throwing the beams out of line, and inducing new and abnormal stresses, which open splits and shakes in the timber, and cause rapid destruction of it.

I have considered the possibility of renewing and widening the existing bridge; but its position, and the angle at which the piers stand to the current of flood water are not in its favour. I think also, to do it effectually would involve an outlay not far short of £20,000; but on account of the excellent condition of the 130 feet trusses it is only with reluctance I have concluded it is better to build a new bridge.

In reference to the three designs submitted to the Committee, it seems desirable to point out that the spans in each of the three designs being different, no comparison of their cost can be made without taking the variation in the spans into account. The use of different materials can only be compared fairly when the spans are the same. Assuming design No. 2, the one recommended by the Department, as a basis, the difference in the size of spans would, in the same material, alone account for a decrease in cost of design No. 3 of about 15 per cent. on design No. 2, and an increase of about the same for No. 1 over No. 2 design.

I have only examined No. 2. design, and that, so far as the information supplied to the Committee permits, and I observe that it is pervaded by the same error of over-straining timber. For instance, in the polygonal trusses, the middle members of the top boom provide for a stress (according to the strength of ironbark given by Mr. M'Donald) not exceeding 89 tons, whereas they should carry 120 tons. The 89 tons is based on the ultimate strength of ironbark under compression, given by Mr. M'Donald in his statement as 4½ tons = 9,520 lb. per square inch of section, and taking the factor of safety at 8, as allowed for timber by the British Board of Trade. Professor Rankine, a good authority, recommends 10 as the factor of safety in timber structures. If, however, the usual practice is followed, the constant for ironbark would be taken as 7,140 lb. only per square inch as a fairer average, and then with 8 as the factor of safety, the section of timber in the top boom which should carry 120 tons, is only capable of bearing a load of 67 tons.

The subject is of so much importance that I may explain that "8 as a factor of safety" means that in order to provide for, not so much the absolute security as the safe endurance of timber structures, they should never be loaded with more than one-eighth of the average breaking weight of the particular kind of timber being used. In the case of timber, the tests for determining strengths are mostly carried out on small specimens which are carefully selected. Timber varies so much in strength that pieces taken from opposite sides of the same log will often give results differing in amount 50 per cent. To allow for these differences, knots, and other defects, which it is impossible to discover in timber of large scantling, it is usual for engineers to take as a constant for rupture the breaking-weight as determined from small pieces, or picked specimens diminished by one-fourth; so that for ironbark the 9,520 lb. would be reduced to 7,140 lb. as a working average, and all timber is dealt with in the same practical way.

It has further been determined by a series of practical experiments that if a given breaking-weight ruptures a material when applied within a short period, a very much smaller weight will produce rupture if applied repeatedly, or for a longer period, and one of the chief points aimed at in well considered designs is the apportionment of the stresses in such a manner as to prevent what is termed the "fatigue stress" from ever being reached. With the load so limited, or the material so apportioned, the load may be applied to any material an indefinite number of times without injury. For timber used in all permanent and important works, it is the general practice to limit the load to one-eighth of the determined average breaking-weight.

The live-load provided for in the submitted designs is only two-thirds of that allowed for in British works of a similar nature. It is considered that the most trying strain on road bridges is occasioned by the passage of a regiment of soldiers, and 112 lb., sometimes 120 lb., is taken as the working load per square foot. I am disposed to think that a team of bullocks, with their rhythmical tread, and a load of 10 or 11 tons, is a much more severe trial to a bridge, especially a wooden one.

On the whole, then, it would seem that, in addition to providing only for a light working load, that reduced load is permitted to produce much heavier stresses on the section of timber used than is customary with engineers of experience. This is sufficient to account for the difficulty in finding a timber bridge which has not gone out of shape, or which does not give unmistakable evidence of being over-strained. Over-straining timber probably shortens its life by at least one-half.

Colonial,

Colonial timbers possess great strength, but they are correspondingly heavy, and in all large spans the weight of the material used is a very large component of the total weight to be sustained. I doubt if timber can be used, even for road bridges, economically when the spans exceed 60 or 70 feet.

With regard to comparative estimate, I consider that No. 2 design, if increased to the proper standard of strength, would cost £30,000 instead of £26,500, and that for a fair comparison with No. 1 design, £4,500 should be added, making it £34,500; and to compare No. 2 with No. 3, £4,500 should be deducted, making it £25,500, on account of the variation in spans. No. 3 design would, no doubt, also, require more timber to bring it up to standard strength.

In relation to the iron bridge, when before the Sectional Committee at Cowra, I was asked some questions about the dimensions of some of the iron, and it has been plainly intimated that some of the iron is specified of peculiar dimensions, with the object of throwing the contract for it into the hands of particular firms, for the corrupt benefit of someone within the Department. Perhaps it will come with more weight from me, as an outsider, when I say that I am sure that the idea of corrupt benefit is impossible and may be dismissed. The rolled joists referred to are more used by architects than by engineers, and are generally sold guaranteed to carry stated quiescent loads, rather than to fulfil particular dimensions, which are given for information more than for calculation purposes. The bracings, $5\frac{1}{2}$ in. \times $2\frac{3}{4}$ in. \times $\frac{5}{8}$ in., are somewhat an unusual size to specify. Each brace increases in stress as its distance from the centre of the girder increases; but it is not usual to vary the section of iron used for differences involving only a pound or two of iron, as the change is very troublesome to the manufacturer, involving fresh templates, &c. Rather than do this the manufacturer would prefer to continue the stronger section at his own cost until a difference was reached, making it worth while to alter the section; that is to say, the drawing would not be strictly adhered to, as being unpractical. I am quite satisfied, however, that there is no corrupt motive underlying this matter, but that these unusual dimensions are rather due to the hair-splitting accuracy of some draughtsman more theoretical than practical.

I now come to the design, which I submit herewith, together with an estimate and summarised specification for a bridge at Cowra, which, for the most part, will speak for themselves. I have provided a width between the parapets of 25 feet, which may be divided into an 18 feet carriage-way and 7 feet footpath.

The aggregate width of water-way in the existing bridge is 710 feet, and as the fastest current during flood time has been timed at 6 miles an hour, the existing water-way, so far as extent goes, may be considered sufficient. The designs submitted by the Department provide for 960 feet of water-way, and for raising the roadway 9 feet higher than at present.

With a raised bridge, I consider 840 feet ample water-way, and have so drawn it; and, having regard to the spans and their disposition, I think the water-way of my design is fully equal to that provided in No. 2 design. As the specification shows, I propose to build the whole bridge of concrete, part in mass, and part in block concrete. The blocks would be used in those parts where it would be inconvenient to wait for the hardening of the concrete where deposited in mass.

Although I submit this design, it is only to enable the Committee to compare its cost, &c., with iron and timber. I do not recommend it, because I think a concrete bridge at a lower level will answer all the purposes of the traffic of the district, and cost very much less. In a few days I will send in the design for the smaller bridge.

To the Chairman and Members of

the Parliamentary Standing Committee on Public Works.

I have, &c.,

ARTHUR S. HAMAND.

Cowra Bridge.

Abridged Specification.

THE work to which this specification relates is the erection, completion, and maintenance, during the stipulated period after completion, to the satisfaction of the engineer, of a bridge for carrying the main road over the River Lachlan at Cowra. It includes the provision by the contractor of every sort of material, plant, &c., that may be requisite or incidental to the due execution of the work as well as the imposition of such tests of the strengths of cement and concrete as in the judgment of the engineer may be required.

The foundations are intended to be carried to the several depths shown on the drawing; but the contractor will have to sink the foundations in all cases to such depth as, in the opinion of the engineer, the nature of the ground renders necessary. The river piers are intended to be founded upon the rock.

The river pier foundations are to be built in the following manner:—A curb is to be formed, of the shape of the outside of the pier, with a cutting edge of wrought-iron 12 inches deep by $\frac{1}{2}$ inch thick, to the inside of which plate is to be riveted iron plate 3 feet broad and $\frac{1}{2}$ inch thick, with the lower edge so bent that the $\frac{1}{2}$ inch plate is set at an angle of 45 degrees with the vertical $\frac{1}{2}$ inch plate, as per sketch of section V. Upon this V-shaped curb is to be built a wall of concrete 2 feet 6 inches thick, forming a hollow pier, and is to be continued to such height as may be necessary. The whole hollow pier is to be then sunk gradually by excavating the interior, when its own weight will cause it to descend until a hard bottom is reached. Pumping will not be insisted on either during excavation or filling the pier solid with concrete after the bottom is reached. If necessary, the descent of the concrete caisson must be guided and regulated in the usual manner, and when an approved bottom is reached the centre of the pier is to be carefully filled with concrete, which, if the foundation is free from water, is to be specially well rammed. The base of the pier should be rather larger than the part above, to diminish friction in sinking.

The whole of the bridge is to be built of concrete of the same kind and proportion of materials. Approved cement one part by measure to four parts of either hard granite or trap broken to approved size, and two parts of clean coarse sand. It is of great importance that the stone and sand should be as free of dirt, dust, and earthy or clayey particles as possible, and every possible precaution to attain this end must be taken by screening, washing, or otherwise.

The materials, after being measured, are to be mixed upon a platform twice, dry, and, after being slightly wetted, again twice mixed before being deposited in place, which is to be done where mass concrete is used, in even layers, not exceeding 6 inches thick, in order to secure facility for tight ramming of it. The concrete, in all cases, is to be mixed with as small a quantity of water as is workable, and special attention will be insisted on to its effectual consolidation by heavy ramming.

That part of the arches which stands at an angle exceeding 40 degrees with the horizontal will be built of concrete blocks, made in moulds six months previously. These blocks will be of convenient dimensions, and of regular sizes throughout; but so that each block is the full depth or thickness of the arch.

The centering of the river span must be made strong enough to carry the arch when supported from the ends only, for which purpose corbellings on the piers may be made. Generally, the design and structure of the centerings, as well as the arrangements for slackening them, must be approved by the engineer. The contractor will be required to provide, at his own expense, all moulds, centerings, timbering, &c., required, and no payment will be made to him in respect of anything but the net quantities of work actually executed, at the rates set out in his schedule of prices,

Cowra Bridge.

Gentlemen,

Sydney, 8 April, 1890.

As proposed in my report dated the 31st ultimo, upon this subject, I now beg leave to submit an amended design for a concrete masonry bridge over the River Lachlan at Cowra, which will be equally available for traffic at all times as the bridges of which the designs have been previously submitted. In times of flood this bridge will remain dry as long as the lower part of the town of Cowra and the main roads approaching it from the west remain above water, and there appears to be no advantage to the locality or the traffic in raising a bridge above this level; although, no doubt, for a timber structure with its buoyancy, and for an iron bridge with its lattice net-work, it would be prudent to build them with their superstructures raised above flood-level, which course would be adopted for the greater security of the structure, and not for any benefit to the traffic.

In the design now submitted it will be observed that the western half of the bridge is at a lower level than the eastern half. This is to allow one half to become submerged before the other half, in case of extremely high floods. It is not intended to furnish the bridge with parapets, but a light railing on either side which, when required, can be laid flat by withdrawing pins from its stays. The roadway throughout the bridge would be finished in concrete, so that there would be no metalling to be washed away.

At the site of the existing bridge the river is narrower, and the banks are much steeper, than at the position selected for the erection of the new one which I have marked upon the plan, and I recommend to be a little further south than where proposed by the Department. There will consequently be much more waterway in the new bridge than is afforded by the existing one, and at the same time less obstruction to the current caused by the piers being set parallel with its flow. The river at the point recommended is both wider and shallower (as the presence of the ford indicates) than at any other point within some distance either up or down the stream, so that there would be in any case less velocity and pressure of water here than elsewhere.

Accompanying the drawing is an estimate of cost of the amended design, amounting to £22,581, while the cheapest design for a bridge with footways put before the Committee by the Department is of the capitalised value of £42,056.

The bridge can be built in sandstone masonry for about the same amount as in concrete; but I prefer the latter for two reasons: Within twelve months from its erection the concrete will be twice as strong as the sandstone, and the use of concrete does not entail the necessity of employing so much skilled labour, the difficulty of obtaining which in the country districts sometimes causes delay and loss to contractors.

In making this amended design I have endeavoured to discard the ideas embodied in the previous plans, and have thought the matter out with a simple regard to the actual necessities of the situation.

To the Chairman and Members of the

Parliamentary Standing Committee on Public Works.

I have, &c.,

ARTHUR S. HAMAND.

D.

STATEMENT FROM THE COMMISSIONER AND ENGINEER-IN-CHIEF FOR ROADS AND BRIDGES ON MR. A. S. HAMAND'S REPORT.

Dear Sir,

Roads and Bridges Department, Sydney, 6 May, 1890.

I am sorry I am not well enough to go in and give further evidence on the Cowra Bridge, but I expect Mr. McDonald has said all that is necessary on the subject, and given sufficiently strong reasons against the adoption of either of Mr. Hamand's designs. His high-level bridge, even on his own figures, is very costly; but I am satisfied his estimate is quite wrong. For an ordinary structure, without the risk and difficulties of erection in a river subject to floods, at least 50 per cent. would have to be added to his estimate; but, when the latter is taken into account, it is very difficult to say what the cost would be. Sinking a concrete foundation in the bed of a river is a very costly operation, and subject to such risks that a contractor would require a very large sum to cover "contingencies."

With regard to his low-level structure I cannot see how any sane man could propose such a thing.

Granting, for argument's sake, that a low-level bridge would be the proper one to erect (a supposition which, I think, it is not likely will be endorsed), it is, I think, patent to any one that the design should be of such a character as to offer the least possible obstruction to the current; in fact, to be as spider-web like as possible, to enable, as far as possible, all floating timber and other debris to pass on.

The design submitted is to all intents and purposes a dam, or certainly would, after the first flood, become one, the natural consequences of which would be either the flooding of the town, the carrying away of the bridge, or, more than likely, first one and then the other.

I am still of opinion that the composite design would be the best one to adopt, and trust the Committee will view the matter in the same light.

The Secretary, Public Works Committee.

I am, &c.,
ROBT. HICKSON,
Commissioner and Engineer-in-Chief,

E.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

SECTIONAL COMMITTEE.

IRON BRIDGE AT COWRA.

REPORT.

Your Committee, appointed on the 18th February, 1890, to inspect, take evidence, and report upon the proposed iron bridge over the Lachlan, at Cowra, arrived at that town on the 8th March, and on the same day had interviews with the Engineer for Bridges, and also with Mr. Hamand, C.E. At 2 p.m. they visited the present bridge and the site suggested for the proposed new structure. The bridge is of the McCallum truss type. The superstructure, with the exception of the decking, is in good repair, and appears to have been constructed in a workman-like manner and of proper material. The piers, which to an amateur would appear ridiculously light, having regard to the superstructure, and which could scarcely have been designed by the same engineer, were in a state of decay positively dangerous. The pier on the right bank, or Cowra side of the river, stated by the Engineer for Bridges and the Road Superintendent of the district to be in a worse condition than the opposite pier, was, on account of a fresh in the river, not available for our examination. The pier on the left bank, the base of which had been exposed to view, under instructions from the Superintendent of Roads of the district, showed that one of the piles was entirely decayed. In other cases the scarfs of the piers were so badly constructed that the Committee were surprised that they should have been passed by the Inspector. The remaining timber also, with few exceptions, was in a state of decay, and the Committee have no hesitation in condemning the piers of the bridge as being entirely unsafe for traffic. In one instance the ravages of the white ants were evident. The approach spans, which were in an exceedingly dangerous condition, have been strengthened by the erection of large trusses, which, in the event of a heavy flood, would in all probability be carried away.

Your Committee proceeded to take evidence at the Court-house, Cowra, at 2 p.m. on the 11th March, and examined six witnesses. Mr. J. V. Bartlett, the Road Superintendent, who had already furnished the General Committee with statistics relative to the traffic on the bridge, said the structure in its present state was absolutely dangerous, and that it might at any time, in the event of a flood, be washed away. He enumerated eleven absolutely rotten piles, and spoke favourably of the site of the proposed new bridge at the foot of Kendal-street, within a very short distance of that of the present bridge. He admitted that 90 per cent. of the heavy traffic to the railway would be cut off if the proposed line from Molong to Parkes and Forbes were constructed, although he contended that even then a new bridge would be necessary, in view of local requirements. He condemned not only the workmanship of the piers of the present bridge but also the plan of construction, as being wholly inadequate to carry the existing superstructure. The Engineer for Bridges, Mr. McDonald, corroborated Mr. Bartlett's statements as to the dangerous condition of the present bridge, and urged the construction of a new bridge from the foot of Kendal-street. Mr. Hamand, C.E., was of opinion that the present bridge had not been designed by an engineer, and said that with the exception of the McCallum truss an ordinary carpenter would be ashamed to acknowledge the work. He proposed to build a

bridge of masonry, brick, or concrete, or of the three combined. Although the cost of construction might reach that of an iron structure he urged that a bridge so made would be practically everlasting, and would cost nothing for maintenance. The spans of the bridge, he said, determined in a great measure its cost; for example, a span of 200 feet would cost four times as much to construct as a span of 100 feet. The local evidence consisted principally of that of persons interested in the maintenance of the site of the present bridge. They said that their property would be depreciated if a new bridge were erected on a new site.

Your Committee would strongly recommend the construction of a new bridge at the site selected, having regard to the expense attending the repair and necessary alterations of the present erection. This would involve the outlay of a large amount of money, and would be at the best patch-work—not likely to last more than fifteen years. The Committee do not feel in a position to recommend a design until Mr. Hamand, C.E., has fulfilled the commission entrusted to him by the general Committee.

March 19th, 1890.

JAS. E. TONKIN,
Chairman.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

IRON BRIDGE AT COWRA.

[TAKEN BEFORE THE SECTIONAL COMMITTEE.]

TUESDAY, 11 MARCH, 1890.

[The Sectional Committee met at the Court-house, Cowra, at 2 p.m.]

Present:—

JAMES EBENEZER TONKIN, Esq. (CHAIRMAN.)

The Hon. GEORGE HENRY COX.

WILLIAM SPRINGTHORPE DOWEL, Esq.

CHARLES ALFRED LEE, Esq.

The Sectional Committee proceeded to consider the proposed Iron Bridge at Cowra.

John Vigar Bartlett, Esq., sworn and examined:—

1. *Chairman.*] What is your position in the service of the Government? I am Superintendent of Roads and Bridges for this district. J. V. Bartlett,
Esq.
11 Mar., 1890.
2. What are your qualifications for that position? I am a surveyor and a road engineer. I have practised since 1862. I was articled from 1858 to 1862 to Mr. Prowse, of Geelong, architect, civil engineer, and surveyor. I was afterwards district road engineer of Corio, and also district road engineer of Colac. I was subsequently shire engineer of Colac. From 1866 I was authorized surveyor for the Colac district. At the end of 1882 I resigned.
3. How long have you been in the service of the New South Wales Government? Since August, 1884. I was first in charge of a portion of the Metropolitan district. Since December 8th, 1884, I have been in charge of the Cowra district.
4. You are well acquainted with the site of the present bridge over the Lachlan at Cowra? I am.
5. Have you at various times made reports to the Department with reference to the condition of that bridge? About ten or eleven times, I think.
6. What was the purport of those reports? First, I was instructed to give the bridge a thorough overhaul superficially, to see if anything was required, with a view to its maintenance in proper order and the prevention of decay. The first report I sent in was as to the condition of the queen trusses on the other side. It was in a most deplorable condition. After sending in that report, when the water admitted of it, I made a thorough inspection of the place as far as I could get down. I reported then that some of the piles were defective, and sent in a sketch pointing out the exact position in which the defects could be found.
7. Have you a copy of that sketch which you could place before us? Yes. Here is my report of July 25. It does not go into the matter quite fully, because at that time I could not get below the walings. The report I sent in then was as follows:—

Sir,

Roads Office, Cowra, July 25, 1885.
In conformity with your instructions, I beg to submit sketch of the eastern pier of the Cowra bridge, showing by arrowheads the portions of the two piles that are decayed. The depth of decay is from 6in. to 9in. deep and 2ft. to 4ft. along the piles.

The decking of the bridge will require replacing with new throughout, within two years. Repairs are being effected with old planks cut in two, and the worn parts put outside, but the supply will be exhausted in a few months.

The piers should be replaced within two years, or strengthened, as they have stood about seventeen years, and if you approve of this, provision will have to be made.

I have, &c.,

J. V. BARTLETT,

Roads Superintendent.

The Commissioner and Engineer, Roads and Bridges Department, Sydney.

Subsequently I made an inspection. The caretaker of the bridge got down alongside the piles. He had to get into about 4 feet of water. In the eastern pier on the up stream side four piles are defective under the walings—that is to say worse than above. I found these to be much worse than anything I had previously seen.

8. In what year was that report made? In 1885.

9. At that time how many piles do you suppose were in a defective state? At the time I made my first report two piles only in the eastern pier were, as far as I could see, in that state.

10. Then I take it that since that time you have made several examinations? On the 31st December following I made a more critical examination.

11. What did you discover then? I reported that the planks were being repaired, but that the old planks were of little value having to be frequently renewed. The superstructure of the three large spans was I said in good repair, a few cracks in the upper chord required filling. I gave a sketch showing the position of the several piles which were defective.

- J. V. Bartlett,
Esq.
11 Mar., 1890.
12. Can you give us the exact number of piles which were at that time in a defective state. I want to show, if possible, the progressive decay of the bridge—we shall by that means be able to show to some extent the life of the piers? That would depend upon my not missing any defective piles, and at the time to which you refer I could not get below the walings on account of the water.
13. I understand that in 1885 there were only two piles apparently defective—how many more piles were rotten when you sent in your next report? I have not the exact date of it, I have searched everywhere for the document, but cannot find it. I think at the same time I can show you something leading up to it. In my report of December 31st, 1885, I made some notes with regard to the piles commencing on the other side of the abutment Nos. 1, 2, and 3, were sound—that is to say no defects were observed. I refer to the piles of the piers. In the case of No. 5 the piles below the walings was three-quarters decayed. No. 9 was also three-quarters decayed. That is one of the piles on the down stream side—it had been buried in concrete before my arrival here.
14. That concrete was not put there to stop the rotting of the piles, it was put there, I take it, to stop the scour from the bottom? Yes. At No. 11 three piles had vertical stripes from 3 feet to 5 feet long, and these were decayed 2 by 6 inches in depth. At mark A it is hollow. Then at No. 12, 5 piles were decayed, more or less, at the ground line.
15. What date is that? December 31st, 1885. I bring the total up to 11 piles, more or less decayed at the ground line.
16. Are there any more than 11 at the present date? Not visible above the surface.
17. You think that these 11 piles upon which you then reported are the only piles in such a rotten state at the present time? Yes, above ground. I subsequently found that under these piles on the up stream side there were defects far worse than anything else I had seen.
18. What did you discover? I found in various places just a mere shell.
19. You have had a great experience of timber work in culverts and bridges—do you think that this timber could have been sound when it was put into the bridge? I should not like to say that it was all in a sound state; in fact I could not say so.
20. Is it not evident that that must have been the case when you see some timber now perfectly sound, and then again a lot of it in a decayed state? From my experience I should assume that the care exhibited in the selection of timber for the superstructure had not been exhibited in the selection of the timber for the piles.
21. Did you ever see a bridge constructed in that form before with the M'Callum truss? No.
22. Do you consider that the piers are sufficiently substantial to carry the superstructure they now bear? Certainly not.
23. They would not be even if the timber had been ever so good? Certainly not. To quote language which I have used before, I should describe it as a sparrow-legged top-heavy concern—those are the words I used, I think, in my original report.
24. You have no hesitation in condemning the plan of the piers of the bridge? In the first place, I should like to say that the design of the superstructure is adapted to American lumber, soft-wood timber, and not to Australian hardwood.
25. Did you notice the workmanship of the piles and scarfs? I noticed it in some instances.
26. Will you give us your idea of it? I do not know how matters were managed in those days, it would take us back seventeen years. All that I can say is that the management and supervision at the present day is very different.
27. Would the supervision of the present day pass such work as that? Not as far as my experience leads me to believe. From what I have seen of the work of the Department, such work would be condemned at the present day.
28. Did you notice an instance where one of the main piles from 12 to 14 inches square had the whole of its upper part scarfed on to about 5½ inches—bearing on to the lower pile? Yes, but I could scarcely dignify the work by the name of scarf.
29. Did you ever see any such work in your life at any other place? No, I never saw a joining of that description.
30. From your knowledge of timber, could you not say that it would have been better to put it on to a 6-inch pile rather than upon half of a 12-inch pile cut that way. Has not the joint as made a tendency to split the pile? There is a great deal of unnecessary strain on the bolts and the bracings.
31. Do you think it is possible at an economical cost to replace these piles, and so utilize the present superstructure? No.
32. You think the timber is too far gone for anything of that sort? Well, you would require a new lock, stock, and barrel to begin with.
33. The superstructure, however, would last for years? The M'Callum trusses, but not the queen trusses.
34. I am speaking of the main truss; is it possible at a reasonable expense to put in new timber piers? No, I should not recommend it. I may mention that an application was made in consequence of the large increase of traffic to have a footway put on the bridge. I prepared an estimate of the cost of the footway together with sections. These were sent down and approved, but owing to the defectiveness of the piers the matter had to stand over. I am of opinion that to take out these piles and to renew the old bridge would be such a costly undertaking that it ought not to be done. Of course you must have regard to the great increase in the traffic, and the narrowness of the bridge. I do not think that for the sake of having a few years of life for the bridge such great expense should be incurred; it would not, in my judgment, be an economical undertaking.
35. Do you think that the gentleman who designed the superstructure of the bridge also designed the piers? It does not look like it; it looks as though two persons had been at work—that is of course only an expression of opinion on my part.
36. Supposing a railway were made from Cowra to Forbes, do you think that if the bridge were made safe, narrow and all as it is, it would be sufficient for the district. You must remember that the whole of the Forbes traffic would be brought down by railway. Under those circumstances would not the bridge be sufficiently large? I do not think so. We have five scheduled roads on that side; over one half of the district is there. Over one half of the local traffic radiates that way and must come over the bridge.
37. Is not the principal traffic over the bridge, at least three-fourths of it, from the valley of the Lachlan towards Forbes and Condobolin? No.

J. V. Bartlett,
Esq.
11 Mar., 1890.

38. Where does the traffic come from then? The whole of the surrounding district. They have to come over this district from down the Lachlan 20 or 30 miles, and half way between here and Young, and then on to Grenfell. The Forbes traffic is a little more than that of Grenfell.
39. But the Young traffic would not come here? I mean the local traffic on the road. There are farms on the road and there would not be a railway station opposite every man's door; he would have to take his grain to the nearest market or siding.
40. Do you wish the Committee to understand that a large portion of the traffic would be drays loaded with grain? Not altogether. I am referring to the local traffic to and fro. It is not all grain and wool. We have a growing district which has doubled itself within the last few years.
41. I have a return of a traffic over the bridge showing a daily average of 300 foot passengers; is that all local? Yes.
42. And would the horse waggons and bullock waggons be local? Some of them would be.
43. It is very strange. We have heard that an enormous traffic would be done on a railway from Condobolin and Forbes down the river Lachlan, and now when we are investigating another work we find that all the traffic coming from that direction is purely local? I do not say that it is all local traffic. The principal traffic is from the Lachlan with the exception of three stations. It comes chiefly from the Lachlan and Grenfell.
44. We were told this morning that £85,000 had been taken at the railway station for traffic in, I think, three years and one month; are we to understand that a great portion of that £85,000 is local traffic—that people have paid that freight for things they require themselves. What is the proportion of local traffic? Would it be 25 per cent.? That would be a matter of opinion. I should say as regards tonnage that 10 per cent. would be local, and that the other would go over the bridge.
45. Do you not think, therefore, that if 90 per cent. of the present traffic on the bridge is cut off it would be sufficiently large to accommodate the traffic? That was not my statement. I was referring to tonnage not to traffic.
46. Is not the tonnage in the traffic? Yes; but there is a good deal of traffic besides.
47. Let us get at the passenger traffic—does much of that traffic go to Forbes, Condobolin, and Parkes? Do you wish to include swagsmen, coaches, and buggies?
48. I am speaking of anything that goes over the bridge. Take foot passengers, equestrians, carts, drays, and coaches—what would be the proportion of traffic across that bridge that would be beyond purely local traffic? I could not hazard an opinion on that matter.
49. Give me an approximate estimate—what would be the proportion of local passenger traffic? The coaches go up one day and come back the next—they may average three or four passengers. There is one coach to Grenfell and two to Forbes. I have not taken a note of the coach traffic, but when I have travelled by coach there have been three or four passengers generally. Sometimes there is a crowd; sometimes I have not seen one passenger in a coach—that, of course, does not often happen.
50. But you must have some knowledge of what is local in the shape of passengers in drays, carriages, and buggies. Taking an average, what would be a fair proportion to allow for the local traffic? It would be only a leap in the dark if I were to give you an estimate. You must excuse me when I state that if I had to be bound by what I say it is not fair to ask me to give an answer to a question when I could not arrive at one even approximately. I have taken no notice of the traffic. What I said just now had reference to the tonnage. I have no doubt that about 90 per cent. of the teams coming over the bridge to the railway station would be between Grenfell and Forbes—that I have taken notice of. I have noticed the heavily-laden vehicles because they have cut up the road.
51. Do you think that 50 per cent. of the ordinary traffic would be beyond local influence? I do not like to hazard an opinion—it would be only hazarding an opinion, I could not be stating a matter of fact.
52. Then you will not answer the question? I would, but I cannot answer it.
53. Suppose that 25 per cent. of the traffic now crossing the bridge were discontinued on the construction of the railway, do you think that the superstructure of the bridge would then be sufficient to meet the requirements of the place? We should have to renew the western portion, which is the greater length.
54. If you were to knock off 25 per cent. of the ordinary traffic and 90 per cent. of the heavy traffic, do you think the bridge when repaired would be sufficient to meet the requirements of the place? I did not say that 90 per cent. of the heavy traffic would be discontinued. I spoke of 90 per cent. of the railway tonnage. I have already said that I think there will be a considerable grain traffic over the bridge.
55. Do you believe that if a large percentage of the present traffic over the bridge were taken away by the construction of a railway, the bridge would, when repaired, be sufficient to meet requirements? If the bridge were put in a thorough state of repair there would still be the inconvenience to be considered in connection with its width. It would be necessary to add one footway, at least, on account of the stock crossing the bridge.
56. How many footways are there now? None.
57. How many years has the bridge been in that state? Since 1870.
58. Then it has not met the requirements up to the present time? It has not met requirements. At the instance of the Progress Committee, meetings have been held year after year demanding alterations, but they have been put off because we cannot load the piers with any additional weight. My recommendation was that iron cylinders should be put in to strengthen the structure, and I believe it was approved.
59. Suppose a new bridge were to be constructed, would you suggest the present site, or the site at the foot of Kendal-street? Viewed as a national work, and apart from any localisms, there can be no two opinions about the matter. The direct route for the through traffic is at the foot of Kendal-street.
60. *Mr. Dowel.*] Is it a fact that there are a large number of residents on the south side of the river? Yes, there are some residents there. There is also a large quantity of suburban land sold there, and some yet to be sold.
61. Do you know if the residents there have to come to this particular part of the town to transact their business? They have, undoubtedly.
62. In your opinion is it not necessary that there should be always a good and substantial bridge across the river, quite independent of questions arising out of railway construction? Certainly, otherwise the place would be divided, and people would be debarred from getting supplies. Business would be paralyzed if the traffic to and fro were cut off.
63. Have any accidents or losses of stock occurred on the present bridge? Accidents have occurred several times. Whenever bullock teams or horse teams are going across, persons travelling in the opposite direction have to wait until they get off the bridge before they can pass over.

- J. V. Bartlett, Esq.
11 Mar., 1890.
64. You recommend the erection of a bridge of a more modern type, rather than the repair of the old one? Yes.
65. *Mr. Cox.*] How often in the year was the river impassable by reason of floods or freshes? With the exception of one year it has been frequently flooded. Water comes down from the Fish River in a bank of from 4 to 6 feet without any notice sometimes.
66. Evidence was given before the General Committee in Sydney to the effect that from nine to twelve months in the year the river is fordable, is that the case? There must be some slight misunderstanding, I think. A fresh often comes down when there has been a heavy downpour on the Abererombie ranges or on the Fish River. It may stop the traffic for a week, but it then gradually subsides.
67. It is not the case then that for nine months of the year the river is passable? During the last twelve months we have sometimes not been able to get across for more than two or three days in a month.
68. Take five years—what would be the average time per year when the river would be crossable? Traffic has often been impracticable at the ford for two or three weeks at a time. Taking it altogether, I suppose heavy traffic there would be stopped for from four to six months in the year.
69. *Chairman.*] Do you consider that the bridge is at present in a dangerous state? It is in a dangerous state.
70. If a flood came down the river what do you think would be the result? If a flood came down I should not be surprised to see the whole affair swept down the river. I have seen two severe floods since I have been here; I have been on the bridge for over thirty hours, snagging. Nearly all the timber strikes the eastern pier. On one occasion I had thirty men there with me. I have seen the water up to within 4 ft. 3 in. of the lower boom. When Mr. Fishburn was erecting a railway bridge, a flood came down and swept away all his staging and his timber bridge. The engineer, to save our bridge, let go the fishplates in several places.

John Alexander M'Donald, Esq., M.I.C.E. and M.I.M.E., Engineer for Bridges, sworn and examined:—

- J. A. M'Donald, Esq.
11 Mar., 1890.
71. *Mr. Lee.*] What is your position? Engineer for Bridges in the Roads and Bridges Department.
72. You are conversant with the plan submitted for a bridge across the Lachlan to Cowra? Yes.
73. Do you know No. 2 design? Yes.
74. That design was prepared under your supervision? Yes.
75. During your recent visit to the place you prepared plans. Have you since had occasion to alter or modify those plans? No. I visited the district two or three times before preparing the plans.
76. And you still adhere to your original idea as regards the most suitable bridge to construct at this place? Yes.
77. Since preparing your design have you taken into consideration the life, adaptability, and cost of a stone or a brick pier bridge with a wooden superstructure? That matter was considered before getting out these designs.
78. And you have not considered the matter since? No. I have seen no necessity to open it up again.
79. Have you re-examined the old structure since you arrived in the district? No; I have not had the same opportunity to examine it that I had when I made an examination three years ago in conjunction with Mr. Bartlett, when the river was lower.
80. I believe the Sectional Committee were unable on Saturday to see the worst pier in the bridge, owing to the height of the water? Yes. That is the pier that gets the greatest force of the water in flood.
81. You have already given evidence upon this work before the General Committee? Yes.
82. You are familiar with the estimated cost of the repairs of the bridge? Yes.
83. Have you made any further estimate as to the probable cost of repair? I have made none, except what has been already laid before the Committee.
84. In your estimate-in-chief I notice that you gave an appendix as to the value of the traffic on the Cowra bridge? Yes; £3,000.
85. You were not, in making that estimate, considering that the bridge was going to return anything? No. It was simply made to reduce the detailed table of traffic to something more easy to grasp.
86. The object of the table was to more fully inform the Committee of the actual extent of the traffic? Exactly, so that they could see at a glance what it was.
87. When you gave evidence before the General Committee you said you had men preparing borings on the site of the proposed bridge? Yes.
88. Have those borings been completed? No; detailed borings are being taken right through, so as to ascertain the exact depth at the site of the proposed piers. Previously there were only three bores taken, and on those three bores the depths for the piers were assumed. Before any detailed drawings were got out and before calling for tenders the exact depth would have to be ascertained.
89. Have you now ascertained the exact depth? They are proceeding now.
90. Do you propose to place these cylinders on a rock foundation? Most probably three out of the four will be on rock.
91. Have you had any borings made in the fair way of the stream? Yes; you will see it shown on one of the drawings, it shows a rock bottom.
92. At a depth of 37 feet? It is not 37 feet—it is about 20 feet from the mud.
93. Have you any doubt as to the nature of the bottom? None at all.
94. No bridge could be constructed until you were thoroughly satisfied? No.
95. The Department would not be liable for any expense in the shape of further excavations? None beyond a few feet in sinking the bridge piers. Of course we cannot be certain to a few feet. The rock may not be so solid as the small bore shows it.
96. Now, as to the repairing of the old structure;—do you think it could be repaired in a less expensive manner than has been estimated by the Department? Yes. But it will still be an old bridge. We could repair it with timber piers, but it would be an expensive work, proportionately to putting in a new bridge.
97. Could you not repair the bridge by putting in brick or stone piers? That would be still more expensive.
98. Than iron cylinders? Yes.
99. As a matter of fact it would be an easy matter to repair it, strengthen it, and widen it? Yes; that was the proposal for which an estimate was given of which I spoke in my previous evidence. The proposal

J. A.
M'Donald,
Esq.
11 Mar., 1890.

proposal was to put down iron piers, to put a strong cross girder from one cylinder to the other, to carry the M'Callum trusses on, and then open them out, putting in 20 feet of deck. The piers were supposed to be put in sufficiently strong, so that when the M'Callum trusses required renewal they would carry an iron superstructure and footway.

100. What was the difference between the cost of repairing, and the cost of the proposed new bridge? £12,550 was the estimated cost of the repairs, and £26,538 was the estimated cost of the new bridge. There would be a difference of £14,000.

101. That design provides for a footway on both sides? Yes.

102. And a roadway of 20 feet wide? Yes. If the footways were omitted the cost would be reduced to £23,894.

103. And by omitting the footway and substituting wooden piers for iron piers, the cost would be reduced to £18,178? Yes.

104. Having taken all matters into consideration the Department is of opinion that the bridge now prepared is the most suitable for the purpose? Yes.

105. As to the necessity for this new bridge at all;—have you taken into consideration the fact that it is proposed by the State to extend our railway system to the western country, tapping Forbes? I have not taken that question into consideration. The Department has not gone into that matter. Whatever railway arrangements are made the country must grow, and the necessity for a bridge to connect this side of the river with the other will be permanent.

106. If a railway were taken to Forbes would not a certain proportion of the Lachlan trade be taken to this place? I do not know enough of the country about here to give an opinion.

107. Your Department is strongly impressed, however, with the importance of the district, and is satisfied that the bridge is required? Yes.

108. You have recommended its construction irrespective of existing or prospective railway arrangements? Yes.

109. Do you think the local traffic itself demands an outlay of this kind? It has appeared so from the returns we have had.

110. Has any pressure been brought to bear on your Department? I am not aware of any; it would not come before me.

111. *Mr. Cox.*] If the old timber bridge cost in round figures £9,000, why should this new bridge cost £26,500—the one bridge lasting twenty years and the other only twenty-five years? In the first place, in the new bridge the total width of the roadway and footway combined, will be over double that of the present one—that of itself would almost double the cost. In the second place, the whole chord, right through, and the river piers, will be permanent. The chord of the main spans is supposed to be permanent.

112. If the Department were told that a railway was about to be constructed, and that it would take a great part of the traffic off the bridge, would it not be advisable to reconsider the erection of this expensive bridge, and to see whether one less expensive would not meet the traffic? I do not think that it would lead to any other result. The question has been dealt with in that way previously—that is to say, the Department has considered whether a less expensive bridge would meet requirements. In view of the stock traffic the necessity for a footway has been for a long time apparent.

113. That would cease, however, with the railway to some extent? Then it would become a question of dispensing with the footway only.

114. Your Department has not considered the question of the construction of a railway. You are building a bridge to accommodate all the traffic that now exists? Yes.

115. In the event of the Department being informed that a railway would be made, would it not reconsider the question of the expenditure of this large sum of money? The bridge recommended is to some extent a permanent structure, and therefore the width of the roadway is left large—it will provide for traffic for the next 150 years.

116. The cost per annum to the country will be about £1,735? Yes.

117. Irrespective of maintenance? That includes everything.

118. The bridge is supposed to last only for twenty-five years? The table to which you refer institutes a comparison between permanent, semi-permanent, and temporary structures, instead of comparing them on the prime cost only.

119. It is proposed to build a new bridge on another site? Yes.

120. You are aware of the flood level? Yes.

121. The flood has come up to the floor of the present structure? Above the floor.

122. What provision have you made for that in the new structure? The new structure will be clear of the highest flood known.

123. And to get up to a bridge on the new site you would have a considerable embankment? Yes.

124. Would that interfere with private property in any way? If we keep the embankment close up to some of the properties we should cut them off. If the owners objected to that we could leave a space between the embankment and the present buildings.

125. *Mr. Dowell.*] Do you think the site of the present bridge is the best that can be obtained? No; I do not.

126. You consider that there is a better site where you are making borings at the present time? Certainly.

127. The best that can be selected? Yes.

128. After a careful examination of the banks of the river? Yes.

129. In 1888 you reported on the old bridge? Yes; about then.

130. You reported then that the main spans were sound. Are you of that opinion now? That the M'Callum trusses are sound and serviceable—Yes.

131. When you said that the main spans were sound and serviceable, did you point out that only the main piers carrying those spans were defective? As far as I can remember I reported pretty fully on the question of the piers. If I did not do so in writing I did so verbally to the Commissioner.

132. Having seen the bridge, and having to a certain extent inspected it, are you of opinion that these main spans are sound and serviceable? The M'Callum trusses—yes. There has been two years further wear on the deck.

133. In your opinion, is the old bridge sufficiently wide? No.

134. When do you anticipate that the borings will be completed? In about six weeks.

J. A.
M'Donald,
Esq.
11 Mar., 1890.

135. No. 3 carries out, does it not, the principal dimensions of No. 2 as regards lengths and widths? The full length of the bridge is almost exactly the same in each design.
136. And the width? And the width also.
137. In your opinion, is No. 3 design sufficient to carry all the traffic which exists at the present time? For the road traffic—yes. There is the same width of decking and everything as in the other two designs, but for the flood-waters it is risky.
138. You propose in both your designs to have iron cylinders? Yes. But I have given in the appendix an estimate of the cost if timber piers are adopted.
139. What would be the cheapest price for which No. 3 could be constructed? The cheapest with timber, and without footways, would be £16,000.
140. In your opinion, would that carry all the existing traffic with perfect safety? It would carry the traffic with perfect safety, providing it receives no damage from a heavy flood. At the end of its life there would be almost a complete stoppage of traffic for renewal.
141. Have you not, in your design No. 3, materially improved structures for the piers? Yes; they are very different.
142. Do you not consider them sufficiently sound and substantial to stand any amount of flood-waters? Not in the main river, if a lot of timber were to come down.
143. Then you claim considerable advantage for the iron cylinders? No, the longer spans.
144. What is the width of the principal span of the existing bridge? 130 feet.
145. What is the width of the principal span in No. 3 design? 90 feet.
146. And your composite span? 160 feet.
147. Both piers, then, would be out of the present river course? No; in No. 3 design the iron pier on the right hand side is almost in the fairway of the river.
148. But both piers would be placed well on the river bank? Yes.
149. And that is some considerable advantage? Considerable.
150. Are you aware that there is much timber coming down the river? I cannot speak from personal knowledge, but I understand from Mr. Bartlett that a considerable amount comes down in a flood.
151. I understood you to say to Mr. Lee just now, that you were not in favour of the construction of brick or stone piers in substitution for iron cylinders? No, on the score of cost.
152. Under other circumstances, would you approve of that? We do put them in in some places where we find that it can be done economically.
153. Would it be possible to construct a bridge over this river entirely of brick and masonry, doing away with timber altogether? It would not be impossible.
154. Would there be a great deal of difference in the cost? A great deal; I have made no estimate.
155. Yet you are prepared to say that there would be a large difference in cost? I am.
156. If a brick or stone structure were erected, would not the cost of maintenance be much less than the cost in the case of an iron or timber bridge? It would be much less than in the case of a timber bridge, but not very different from that of an iron bridge. An iron bridge requires very little maintenance, and the increased life sometimes assumed for stone, means a very small item in reducing the value of the sinking fund.
157. Is not your timber decking in the iron and composite bridges a considerable charge on renewals? I was speaking of an iron bridge, then I was referring to the bridge in the list in the appendix at about £70,000—that has an iron deck and a tarred metal roadway.
158. But is not the renewal of timber-decking a heavy item? Yes.
159. You estimate an iron bridge to cost £70,000? Yes.
160. Do you not think that a bridge could be constructed of masonry or brick-work for about that amount, or something less? At this site—no.
161. Knowing what you do about this place and the particular site at which you propose to erect the bridge, do you not think that all interests would be served by the erection of your No. 3 design, more especially as it has been pointed out to you that there is a probability of a railway being constructed from Cowra to Forbes, which would materially relieve traffic on the bridge? The question of traffic is provided for in both bridges. I think that one ought to look forward a little beyond the present day. Take No. 3 design—in twenty-five years, when it has to be renewed, it would be an enormous inconvenience to Cowra to have to stop the traffic completely for twelve months.
162. Do you propose to stop the traffic in the construction of the new bridge? It will be on a different site.
163. Have you not known instances where timber structures if erected properly of good sound timber, and under good supervision have lasted longer than twenty-five years? They do in some cases, but the average is about twenty-five years.
164. Under all the circumstances you do not recommend the construction of No. 3 design? Most strongly—no.
165. You do not recommend the construction of a brick or masonry bridge? No.
166. The only objection you have to that is on the score of cost? That is all.
167. Setting aside your No. 1, 2, and 3 designs, and the masonry and brick bridge, would it not be desirable and possible to erect a suspension bridge which would answer all purposes? It is not a suitable site for a suspension bridge. The foundation on the west side would make the fixing of the cables very expensive.
168. Have you made any estimate of the cost of suspension bridges? I have not. I do not think them suitable for heavy traffic. They are being done away with in other parts of the world for that very reason.
169. Do you know of any suspension bridges over the Thames? I know them all.
170. Does not very heavy traffic pass over some of those bridges? Yes, and they have had to strengthen them up on account of the heavy traffic within the last few years.
171. Is it not a fact that other suspension bridges are being erected in England at the present time, and was not one recently erected at Battersea? The Battersea bridge has been erected for many years.
172. But was not a bridge recently erected there? Not that I know of.
173. Do you still hold the opinion that suspension bridges will not carry heavy traffic? They can be made to do so at great cost.

174. Would they not be more desirable structures to erect over rivers liable to floods than bridges with a large number of piers? In some special sites they are suitable.
175. On a site like this for instance? I do not think so.
176. You prefer in your designs a large number of piers to a very few? As a matter of cost, yes. The longer the spans at this site the greater the cost would be.
177. Could you furnish the Committee with an estimate of the cost of a suspension bridge suitable for the traffic here? It would take some little time to prepare it, but I could do so if you wish.
178. *Chairman.*] You consider the present bridge as it stands as highly dangerous? I do.
179. And that it is liable at any moment to collapse? Yes.
180. Did I understand you to say that in the case of a composite bridge the cost, on account of interest on capital invested and maintenance, would amount to £1,735 a year? Yes.
181. And that the life of the timber portion of the bridge would be twenty-five years? Yes.
182. That would amount in twenty-five years to £43,375? Yes.
183. Added to the original cost, £26,500, it would make the actual cost of the bridge at the end of twenty-five years £69,875? No. The total cost would be £43,375. There is a sinking fund. In comparing the lives of these bridges the sinking fund provides for the cost being paid off by the end of its life—that is what I have shown in the appendix.

J. A.
M'Donald,
Esq.
11 Mar., 1890.

Arthur Samuel Hamand, Esq., sworn and examined:—

184. *Mr. Cox.*] You are a civil engineer? Yes.
185. You have heard the evidence just given as to this bridge? I have.
186. Do you endorse the statements made as to the present structure being unsafe? I should decline to be responsible for the safety of the existing bridge.
187. Do you think that the bridge in its original state was a properly-constructed bridge for the purpose? I do not think that it was designed by an engineer at all. I think the main truss, called the M'Callum truss, is a *fac simile* copy of a single track railway bridge very much used in the United States, and called there the Pratt truss. For the rest of the bridge I do not think a good carpenter would own it—certainly not an engineer.
188. Do you think the timber used can have been good and sound timber originally? I am told that the chief trusses, the 150 feet spans, are constructed out of timber carefully selected and stored for two years in order that it might be matured. The rest of the bridge is constructed out of sap timber cut down hurriedly.
189. Some of the piles you observe on the other side could hardly have been sound timber when erected, or they would not have been in such a rotten state in twenty-five years? I think not.
190. The fact that some of the piles are still sound would seem to show that other piles must have been of inferior timber? In choosing timber it is difficult to determine what will last and what will not without knowing something of the growth of the timber itself. Anyone coming into the district without knowing anything of the growth of the timber there would very likely make a mistake.
191. In building a bridge for the future requirements of Cowra, considering that sooner or later a railway will be constructed, so relieving the present heavy traffic on the bridge, to what extent do you think the country would be justified in spending so much money—in other words what is the cheapest bridge that could be built in order to meet the present requirements? I think the district is entitled to a bridge that will carry two lines of traffic—one in either direction. I think it ought to have, also, one footway, at least, that is if it is constructed on girders as a timber bridge.
192. What would be the material employed in such a bridge? I should endeavour to build a bridge of masonry, brick, or concrete, or perhaps the three combined.
193. And a bridge such as you describe would meet the requirements of traffic, and could be erected for how much? That is a very large question. I would point out first that the three designs at your back are designs which contain very different spans. The relative cost of bridges is determined more by their respective length of spans than by any other consideration. It is almost impossible to compare these three bridges because the spans are so different. There is one with a 90 feet span, another with a 160 feet span, and then there is an iron bridge with a span 216 feet and no small spans. The cost of a span varies nearly as its square, that is a 200 feet span, so far as the main girders are concerned, will cost nearly four times as much as a 100 feet span. I am a little surprised at a 90 feet span bridge being put before you at all. They are evidently not big enough, having regard to the floods.
194. Especially having regard to the fact that one flood came over the decking of the bridge? I understood that one flood came up 4 feet over the bottom of the bridge. I doubt whether we will have so tremendous a flood again.
195. Could you, off-hand, say what a bridge of the three materials you have just mentioned would be likely to cost, knowing the spans required? I could not say without preparing plans, and making an estimate in the usual way. Upon general principles, everything else being the same, you ought to be able to build a bridge of masonry, brick, or concrete, or the three together, for at least as little as an iron bridge, and probably less.
196. What advantage would it be to build a bridge of brick, masonry, or concrete if it cost the same as an iron bridge; would its life be longer? Its life is practically for ever, and it does not cost 6d. for repairs.
197. In the case of either of the bridges now under consideration the annual cost of depreciation amounts to a large sum? Yes.
198. Of course the bridge will cost the country nothing to maintain, but if a wooden bridge after twenty-five years costs £43,000 we should be quite justified in building a stone bridge at a cost somewhat over that amount, provided the sum were reasonable? Yes. In building a stone bridge you do not put quite so much weight in your foundations as you do with iron cylinders. The consequence is that it might not be absolutely necessary to go down to the solid ground. By spreading the base over a large area, and distributing the weight upon each square foot of the base, it is not always necessary to go down to the rock. I have no doubt you all know that not a single bridge in London is built on rock—they are built on clay.
199. I suppose there is no rock? No.

A. S. Hamand,
Esq.
11 Mar., 1890.

- A. S. Hamand,
Esq.
11 Mar., 1890.
200. I do not know whether you will be asked to prepare any estimate of the bridge, but we should be guided a good deal by what you say, having regard particularly to the information you have now obtained as to the probability of a large traffic being removed from this bridge, and our requiring a bridge to meet common local requirements? I think Cowra is destined to grow, and to grow very rapidly, to become an important centre, and if you do get a line of railway from Forbes I think it will only tend to increase the rapidity of the town's growth.
201. Is not that the reverse of what has happened in many country towns when the railway has gone beyond them? Yes, it is so in some cases.
202. But you think that in a district with material wealth in its immediate surroundings that is not likely to be the case? No.
203. *Mr. Dowel.*] Have you made any examination of the stone in this locality? I have not finished my investigation upon those points, and I would rather not be asked any questions upon them because I could not give complete information.
204. Have you made any observations as regards the quality of bricks? I have looked at some of them.
205. Can they be made at Cowra suitable for the construction of a bridge? I think so.
206. Have you any experience of the construction of iron bridges? It extends over thirty years.
207. In forming a specification is it absolutely necessary to take channel iron bracings at $5\frac{1}{2}$ inches by $2\frac{3}{4}$ inches by 5-16ths? I have no doubt it is when specified.
208. Would not a piece of iron 5 inches by 2 inches answer all the purposes required—would it not be a more marketable size than that specified;—is not the size specified one which would have to be specially rolled for this particular purpose? I think $5\frac{1}{2}$ inches is a little extraordinary in size. I do not think it will be kept in stock by most manufacturers. I think the size would be 6 inches. Certain manufacturers might always keep it in stock, but I do not think it would be generally kept in stock. They might have it in their lists, but it would not be kept in stock, I think.
209. Then I will take wrought-iron rolled girders 27 inches by $7\frac{1}{2}$ inches—is the $\frac{1}{2}$ put in for any special reason? I can only imagine that it is put in to secure the next inch below it being a full inch.
210. Is it the custom, so far as your experience goes, to specify these peculiar sizes of iron in the construction of iron bridges? We generally put in the size that happens to be in the trade list. I have had manufacturers come to me and say, "I have none of that particular iron in stock, will you alter the dimensions?" I have altered the dimensions accordingly.
211. I am referring more particularly to the $1\frac{1}{4}$ th and 5-16ths? When it comes to thickness it is a different matter, of course.
212. But taking the iron-work to which I have referred is the $\frac{1}{4}$ th and 5-16ths necessary? That depends upon the particular section.
213. Would not a specification of certain sizes other than these peculiar ones have a tendency to cheapen the cost of the bridge? I think I ought to explain that there are certain manufacturers who occasionally do supply an extra 1-16th or an extra $\frac{1}{4}$ th. They tell you that they are prepared to do so. Sometimes the rolls are a little bit worn and they turn them down to get the requisite dimensions. For ordinary purposes it is best to keep to more simple figures.
214. In preparing designs is it a very difficult thing to make calculations and proper strain sheets for certain spans? I should think an ordinary draughtsman ought to do it very quickly.
215. Take the No. 1 design for instance? Well, I should not like him to be much more than a week about it.
216. Then if the chief of the Department said it took two months, you would consider that a considerable time? That would refer to every detail, not to the main girders alone.
217. Would it not be an economy if the Department were to adopt a certain type of bridge and to have tables prepared—is it not practicable? I think in many cases it would be practicable. For instance, I do not know that a 216 feet span is necessary, I suppose it might as well be 200.
218. Suppose you started with a 500 feet span and came down to a 30 feet span, could not a table be prepared showing at a glance the calculations and strains for the various spans? If the weight you were going to carry per superficial foot were identical in all cases, and the width of the bridge would be identical it might be useful.
219. Do you recommend the adoption of any type? If I were designing bridges, and had one with 100 feet span to design I would endeavour to make any designs that followed, whether a 90 feet or 110 feet agree—that is I would endeavour to alter the spans to 100 feet—that would save me the trouble of getting out the design for a 90 feet or a 110 feet span.
220. Do you know that it is the practice to call for tenders for iron bridges in England? I do.
221. Are you aware that in nearly all cases tenders are accepted in England for the iron-work? I suppose it would be so in all cases.
222. Would the cost be cheapened if some modification were made in the specifications in regard to the sizes of iron I have been asking you about—would the matter be simplified? If you were to show me a whole girder bristling with these odd dimensions, I have no doubt an alteration could then be made which would reduce the cost.
223. Supposing I were to show you a whole bridge, would not that be more to the purpose? I think if you could I should tell you that it ought to be altered.
224. I take it that you have examined the plans now under consideration by the Committee? I have seen them on the walls to-day for the first time.
225. You are not prepared to give the Committee an opinion as to their suitability? Not having had any opportunity to examine the designs I am unable to give you an opinion.
226. What is the nature of the information you desire now to give to the Committee? I was requested by the General Committee to prepare the design of a bridge of brick, stone, or masonry—that I am about to do. Knowing that the Sectional Committee were sitting here, I thought that they might like to put some questions to me.
227. You have no special information you wish to give us? None at present.
228. Now as to the construction of suspension bridges—are you aware that they are considerably used in other parts of the world? Yes. They are much used on the Continent and still more in America.
229. Do they carry heavy traffic? They carry railway trains. It is simply a question of stiffening the girders.

230. If it were not a matter of such excessive cost might it not be desirable to span the Lachlan with this description of bridge, in view of the timber coming down in flood-time? If I could build a suspension-bridge for the sum of money some of the designs are to cost I should prefer the suspension-bridge, because it affords more freeway for the water.

A. S.
Hamand, Esq.
11 Mar., 1890.

231. Do you see any particular difficulty in the way of the construction of a suspension bridge, having regard to the banks of the river? No difficulty whatever.

232. Have you made any comparative estimate of the cost of a suspension-bridge and a brick bridge? I have not done that yet. I had already considered the question of a suspension-bridge before you mentioned it. I know of so many places where they are usefully employed that I thought it just possible one might come in here.

233. As an engineer, do you not think that the construction of light suspension-bridges across our rivers generally would be a material gain? Wherever the banks are deep, or wherever the depth of rock for a foundation for the cylinders is great, wherever the length of pier is tremendous, a suspension-bridge would come in cheaply.

234. You have seen the banks of this river—do you think there should be any great difficulty in putting down foundations of timber pile-driving for the purpose of carrying stone piers or iron cylinders? Pile-driving and timber work are more suitable for places where the foundations are swampy, or where perhaps the clay is soft, or where there is a quicksand or something of the kind—then you may rely on the friction of the piles partly to sustain your base. There is no difficulty in making a foundation in a place like this.

235. Can you give the Committee any instance where stone piers are erected on iron cylinders? I suppose the Hawkesbury bridge is erected on those foundations. There are numerous instances. The Royal Albert bridge, at Saltash, was put down on similar foundations.

236. So that if local stone is to be obtained here it will not be undesirable or impossible to construct stone piers on foundations of iron cylinders? No; it will not be impossible at all.

237. There would be no engineering difficulties? No. It is a question of relative cost.

238. I take your evidence to show that it is necessary that a new bridge should be constructed at Cowra? I think so.

239. And that the construction of that bridge should be carried out in brick, stone, or cement, or concrete? I should say this, that I am influenced to some extent in my judgment from the fact that the existing bridge stands at a considerable angle with the flow of the water, and that the pier on the Cowra side of the river is almost immediately in the centre of the current. It is a kind of trap to catch anything that might come floating down the river. On that ground it is dangerous. That, and the width of the bridge, made me come to the conclusion that you ought not to try and patch up that bridge, and that the new one ought not to be erected on that site.

240. Do you think that the site selected by the Government is a desirable one for the new bridge? I think it is better than the old one; but I should still bring the bridge further south—almost in a direct line to the angle of the two streets—let us say, the angle opposite Murray's store. I should like to bring the centre line of the bridge exactly at right angles with the flow of the stream, down the piece of straight there is in the river. The river, at that point, is fringed by rows of trees, and those trees would have the effect of training anything that came down the river, into a straight line projected from them.

241. What is the custom adopted in other countries for testing the iron and steel used in bridges—is the cost of a test paid by the contractors, by the parties employing them, or how is it paid? Generally by the contractor. He is bound to provide just as many tests as the engineer thinks necessary.

242. You think it is desirable that the custom should prevail of allowing the testing of the iron and steel to be made by parties in the employ of the contractor? Not by parties in the employ of the contractor—certainly not. The usual course is this: Assuming that you wish a particular piece of iron tested, you say to the contractor, "test this specimen for me—put on such and such a strain." The contractor provides the assistance, the labour, the iron and all the surroundings for you to see it done. That does not make you in the employment of the contractor.

243. That would be quite as far as you would go? It is; and I think it is as far as anybody would go.

244. *Mr. Lee.*] Is not the object of your mission here at the present time, to collect information to enable you to prepare plans, and submit specifications with an estimate of the cost of a bridge of either brick, masonry, or concrete? Yes.

245. And up to the present time you have not completely supplied yourself with that information? No.

246. When you have finished and prepared your estimates and plans, they will be submitted to the General Committee? That is so.

247. Will you require any soundings or borings to be made in the river? I think not. I think I know sufficient from what I have seen.

248. *Chairman.*] Have you ever seen any of these brick or masonry structures—that is, arched bridges—in a country where floods are so strong as they are in this country? I think the river Po, in Italy, rises as much as this river—in fact rather more. It drains 500 miles frontage of the Alps; it has a fall of only 2 inches a mile for the last 100 miles of its length. Nearly all the bridges there are of brick or stone.

249. Arched bridges? Yes.

250. What would be the result if a flood came up above the arch of one of these bridges—would it affect the structure? I do not think so, if it were properly built. It might obstruct the water a little; but there would not be the slightest fear of its being carried away.

251. There is a great deal more resistance in a brick and stone bridge than in an iron or wooden bridge? Not only that, but there is a greater dead weight to move.

Mr. Robert Daly, innkeeper, sworn and examined:—

252. *Chairman.*] What are you? I am an innkeeper at this end of the present bridge.

253. How long have you been there? Over thirty years.

Mr. R. Daly.
11 Mar., 1890.

254. I suppose the evidence you wish to give would be in favour of the bridge remaining where it now is? I have an objection to any change, of course, in the site of the bridge, on account partly of its effect upon my trade.

255. Do you think that the site of the present bridge facing, as it does, a narrow street, and being out of the line of the main traffic, is as good as the proposed site at the end of Kendal-street? Of course it is not, at the present juncture, but there are some buildings which could be pulled down. I remember that

- Mr. R. Daly. in 1862 and 1863, when I was one of the chief agitators for a bridge over the Lachlan, the floods were far more usual than they are now. A gentleman came up from Sydney and made an estimate for a bridge somewhere near where it is proposed to erect one now. He made an estimate of £26,000. Some diggings were breaking out at the time, and we had to shift everything by boat. We had three boats carrying goods across the river. The next man who came up made the estimate £16,000 or £20,000, taking the bridge two chains lower down the river. The next man who came up was Mr. Meldrum. He pointed out that where the bridge is now it was two chains narrower to span over the river than at the other points. He brought the estimate down to £10,000 or £12,000, and the first contract was £9,000.
- 11 Mar., 1890. 256. We want to know why you object to the bridge being shifted? I object to it because it will be the ruin of me; it will drive all trade away from my place. Then I want to show that by putting the bridge where it is now on this side of the river there will be an advantage so far as the putting in of piles is concerned. I remember that when the piles were put in before they dug a trench, and when the flood came down two months afterwards it washed all the material out. The bridge, however, remained firm, and the trench was filled up with concrete. The alteration of the site of the bridge would injure several others besides myself.
257. You consider that if this bridge is shifted to the end of Kendal-street it will materially affect your business? Of course.
258. Are there any other business people in that street who will be affected by the alteration? Yes, several.
259. And you wish to enter your protest against the site being shifted? Yes, and if they wish to pull down any building of mine, I shall be quite willing to accept any value which may be placed upon it by arbitration.

Mr. Henry Dennis, innkeeper, sworn and examined:—

- Mr. H. Dennis. 260. *Mr. Cox.*] You are an hotelkeeper at Cowra? Yes.
- 11 Mar., 1890. 261. You have heard the evidence just given as to the new bridge to be erected over the river? Yes.
262. You have heard that it is proposed to start from Kendal-street, instead of from where the old bridge stands in Bridge-street? Yes.
263. Do you approve of the site of the new bridge? No, I do not.
264. What objection have you to it? Well, in the first place, as Mr. Daly has already stated, it will generally reduce the value of my property; in the second place, the expense of the bridge would be increased because the spans would be longer and the approaches greater. I see that an official states that there are two curves in Bridge-street, but neither of them are greater than the one curve in Kendal-street.
265. In the event of the old site being chosen for the erection of a new bridge you would have no bridge for twelve months? I have been fourteen years a resident of Cowra, and it is not often that the floodwaters of the Lachlan have stopped all traffic. They might stop it for team traffic, but not for ordinary traffic.
266. How often in the course of the year is a bridge necessary over the river? For heavy traffic it is always necessary.
267. How did you get on before a bridge was built? I cannot say, I was not a resident here then.
268. In the event of a railway being taken to Forbes from here would not all the heavy traffic be stopped? In the event of that line being made it would, of course, take all the heavy wool traffic off any bridge in existence.
269. Then do you think there is any occasion for a bridge at all? I understand that in view of the state of the present bridge it is necessary that a new bridge should be made, or that the old one should be repaired, so as to render the traffic safe. Some bridge is necessary in any case.
270. You think your property would depreciate in value if the site of the bridge were removed? I do not think it would be any great benefit to the travelling public to have the bridge shifted from its present site. Of course, if it were shifted, the value of my property would be depreciated.
271. You would prefer to have the other bridge repaired then? Yes, according to the evidence of the engineers, if cylinders were put under it, and it were widened, there would be a saving to the State of some £15,000, and the bridge would meet all requirements for many a day. I believe it has been stated that there would be a saving of from £18,000 to £20,000 if the old structure were repaired, and having regard to the necessity for retrenchment in our public works expenditure, I think that is a great consideration.
272. Have you anything further to state? Well, it is a well-known fact that if the bridge were taken from Kendal-street across the approach would be up to the roof of Murray's frontage.
273. Would not that embankment tend to save the property from being flooded in time of flood? Yes. But when the embankment is made, the property will be as it were inside a wall. If we get a railway from here to Forbes I unhesitatingly state that all the local traffic could be carried over the repaired bridge. The heaviest local teams that will come over it will not be from more than 3 or 4 tons. The 9 or 10 ton wool teams will cease, because the wool will come by rail.
274. *Mr. Dowel.*] Do you anticipate any increase of traffic from the southern side? Yes.
275. And do you think the present structure will accommodate the increased traffic? Not in its present state.
276. Is the present bridge wide enough? No.
277. Have you known accidents or loss of stock to occur on that bridge? Yes, from the narrowness of it. You have to be careful to allow two buggies to pass one another, and it is not safe to drive alongside a team when it is coming over, indeed it is positively dangerous. The loss of the stock on the bridge has been very little, but it is unquestionably too narrow.

Mr. Dennis Cornelius Joseph Donnelly, storekeeper, sworn and examined:—

- Mr. D. C. J. 278. *Mr. Dowel.*] You are a resident of Cowra, engaged in business as a storekeeper? Yes.
- Donnelly. 279. You have resided here for some time? Yes; I remember the river before the bridge was built over it.
- 11 Mar., 1890. 280. You know the position of the present bridge, and the proposed site of the new one? Yes.

281. In your opinion which is the more desirable position for a bridge? The new site would be of more service to the public generally. There are some vested interests in Bridge-street. I should not care to interfere with those interests, but common-sense would suggest that a straighter course than the present would be better. I shall be quite willing to take the bridge round by Bridge-street if it could be done profitably to the country.

Mr. D. C. J.
Donnelly.

11 Mar., 1890.

282. In the interests of the general community, which proposal do you favour—that to construct a bridge on the new site or that to repair the bridge on the existing site? The new site would be shorter for the travelling public, although for my part, I do not object to going round the other way.

283. In your opinion is the present structure a suitable one for the requirements of the district? It is not; I have no hesitation in saying it is not. It is in no way fit for the present traffic.

284. Do you anticipate any increase of settlement and traffic on the south side of the river as time goes on? Yes. I think that in building a bridge we should remember that we are building for the future. When I came here twelve years ago there was not one-sixth of the population that is here to-day. If we continue to increase at the same rate this place will be six times as big as it is now in twelve years time. I have heard it stated to-day that in the event of a railway being taken from here to Forbes a great amount of the heavy traffic would be taken off this bridge. Now I say that that is not the case, and it never will be the case. Of course it will take some, but the bridge is a means of communication cementing Cowra with Burrowa on the extreme left. Then there is Marengo, Koorawatha, and the whole of the country between here and Grenfell. Not only that, but there is a large tract in the Bland country. At the present time there is traffic going in that direction. Then there is all the trade between here and Goolagong 30 miles down the river—that the railway will not touch at all. All that traffic must come in here across the bridge unless we have a railway from every point of the compass, and that is not at all probable. The railway must to some extent relieve the traffic on the bridge, but the relief so given will in a short time be more than compensated for by the produce of the increased acreage under crop. A great deal of land on the other side is under cultivation. There is the whole of Morongolo under cultivation; then there is Back Creek, and the slopes of Broula Range, and Neila Creek and its tributaries. There is no other way for all these people to come here with their produce except by the bridge. I am quite sure in my own mind that the traffic cut off by the railway will be superseded by the new traffic caused by the very railway itself.

285. *Mr. Lee.*] From the tenor of your evidence, I gather that, you are perfectly satisfied that the traffic is of such a nature that a serviceable bridge is demanded? Yes.

286. Do you consider the present structure sufficient for the purpose? I do not.

287. What is your opinion as regards the repair of the present structure, and the erection of a new one? I think the erection of a new one would be the better course. I think the repair of the present structure and the keeping of it in repair afterwards would be as expensive as a new bridge. Then the narrowness of the existing bridge is dangerous to life and limb. Two months ago a daughter of mine almost lost her life on the bridge. I have had to rush in front of horses to save my own children on the bridge. Even when people drive carefully, with skittish horses it is dangerous to be on the bridge. When you meet cattle on the bridge there is invariably danger and confusion.

288. You think that the new bridge should be on the new site? Precisely.

289. As a townsman of long residence do you know of any valid reasons against the new site selected? I know of nothing but the vested interests in Bridge-street.

290. But apart from those? I am not aware of anything.

291. You have heard previous witnesses refer to the approach on this side, I suppose you are aware that it will commence flush with Kendal-street, and graduate up to the floor of the bridge? Yes; I think the wall of which I have heard the witnesses speak would be more a protection than otherwise.

292. If the present bridge is as much used as you say it is for heavy teams and for sheep and cattle, must it not be extremely inconvenient at times to bring the traffic through that narrow street round into Lachlan-street? I have experienced some little inconvenience myself in coming round that corner.

293. I was speaking more particularly of lots of sheep and cattle and long teams having to come along that narrow street? I should imagine it would be rather inconvenient.

294. Would it not be a greater convenience to all parties concerned to have a better get-away in Kendal-street. Would not that be better than the traffic crossing the bridge, coming upon the ordinary traffic suddenly? Common sense suggests one answer, and it is—yes. At the same time if it were possible to so arrange matters that the bridge could be erected without doing injury to the property to which I have referred, I should like to see it done.

295. But how is it possible to have the new structure in Bridge-street, and at the same time to give a proper approach to it? I can see the difficulty very well. I have often been on the present structure in flood time helping to get logs away from the bridge with grappling irons, but if the river were in flood again, as I have seen it in the past, I should think twice before I went upon the bridge to do what I did there before. I think there would be some difficulty in getting volunteers to go upon that bridge to clear logs after the investigations which have been made within the past few days.

PLAN.

Plan of Bridge Sites at Parramatta River, Lane Cove River, and Tarban Creek.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

BRIDGE OVER TARBAN CREEK, PARRAMATTA RIVER.

REPORT.

THE PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS, appointed during the first Session of the present Parliament, under the Public Works Act of 1888, 51 Vic. No. 37, and the Public Works Act Amendment Act of 1889, 52 Vic., No. 26, to whom was referred the duty of considering and reporting upon the "expediency of erecting a bridge over Tarban Creek, Parramatta River," have, after due inquiry, resolved that it is not expedient the bridge should be erected; and, in accordance with the provision of sub-section IV, of clause 13, of the Public Works Act, report their resolution to the Legislative Assembly:—

1. No plan of this proposed bridge has been submitted to the Committee, and no definite description of the bridge has been put before them. A few words of description will, however, be found in a *précis* of the proceedings relating to the proposal for the bridge; and from these it will be seen that the intention has been that the bridge should "either be an arch, in steel, of 370 feet span, with steel approaches, or iron lattice bridge, 600 feet long, on iron piers," and that "until borings are taken, the most economical of the two designs cannot be ascertained." It is also stated by the Engineer for Bridges, in his evidence, that it was proposed to use iron piers and a composite structure at one site, and a timber bridge higher up the creek. The object in erecting the bridge is explained in an extract from a minute written by the present Minister for Works last year, to be to complete the line of communication by the shortest route between the Parramatta Iron Bridge and the Bridge over Lane Cove, giving access to the North Shore, and saving a distance of one mile and a half.

Description of the proposed bridge.

2. The cost of the bridge, as put before the Committee, would be £26,000; but the accuracy of this estimate is very doubtful. The estimate, the Engineer for Bridges states, is not guaranteed in any way; "it is simply an idea of the probable cost."

Cost of the proposed bridge.

3. Immediately the inquiry respecting this bridge was opened, the Committee were met by a desire, expressed by the Under-Secretary for Public Works, on behalf of the Minister for Public Works, that the proposal should be withdrawn, on the ground that a bridge could be constructed for a sum under £20,000; and that, therefore, it was not necessary, under the Public Works Act, for the proposal to construct the bridge to be inquired into by the Committee. It was considered, however, that, as the matter had been referred to the Committee by the Legislative Assembly for inquiry and report, the inquiry must proceed, and the request that the proposal for the bridge be withdrawn could not therefore be acceded to.

Proposal to withdraw the bridge.

4. The Committee then examined Mr. Robert Hickson, Commissioner and Engineer-in-Chief for Roads and Bridges, and he gave evidence to the effect that the bridge ought not to be constructed, as, in his opinion, it was not required. "Soon after I took charge of the Department," he says, "my attention was called to a sum of money being placed on the Estimates for this bridge, and I therefore visited

Evidence of officers of Roads and Bridges Department against the bridge.

visited the site. After a very careful examination of the place, I came to the conclusion that the Government would not be warranted in spending any money there at all, and I reported to the Minister accordingly." Evidence from the Engineer for Bridges and from the Engineer for Roads is also to the effect that the bridge is not required. This opinion on the part of the responsible officers of the Department of Roads and Bridges, it will be observed, is a contradiction, first to the information which led the Minister for Works to cause the Legislative Assembly to refer the bridge to the Committee for inquiry; and secondly, to the idea on the part of the Minister, as expressed in his desire to withdraw the proposal, that a bridge should be erected at a cost less than £20,000. The peculiar position in which, by the evidence of the officers of the Department of Roads and Bridges, the Minister was placed, was subsequently explained in a letter to the Committee from the Under Secretary for Public Works, in which it was pointed out that the evidence upon which the Minister determined to submit the proposal to Parliament was that of the late Commissioner for Roads, who was then the official adviser of the Government on such matters. "As, however," the letter proceeded, "the Minister finds that the present Commissioner holds opinions differing from those of his predecessor, he is desirous of reviewing the matter, not only from the standpoint of cost, but also from the more radical one of necessity," and on this further ground it was requested that the proposal be negatived.

Visit of the
Committee to
the site of the
bridge.

5. The Committee, in view of the nature of the information before them, decided to visit the site of the proposed bridge and make themselves personally acquainted with the locality; and on Wednesday, 5 March, the visit was made. Accompanied by the Commissioner and Engineer-in-Chief for Roads and Bridges, they proceeded by vehicle to Tarban Creek, and inspected the site for the bridge and the surrounding locality, inquiring, at the same time, respecting the facilities for travelling afforded by the roads in the district.

Evidence in
favour of the
bridge.

6. The only witnesses who have come before the Committee to give evidence in favour of the proposed bridge are three:—Mr. C. E. Jeanneret, Mayor, and Mr. A. Tornaghi, resident, of Hunter's Hill; and Mr. Frank Farnell, M.P., one of the Members for the District. Mr. Jeanneret considers the bridge would be of very great benefit to the municipality of Hunter's Hill, and to the municipalities on the North Shore, a saving of distance in getting to Hunter's Hill being effected to the extent of a mile and a quarter, and that it would also benefit adjacent Government lands; but the evidence which he gives in support of his advocacy of the bridge is very weak. He admits that the bridge is not required as a means for enabling the residents of Hunter's Hill to get to Sydney by road; that it would not be used by them in preference to the steamers if it were constructed; and that they have not agitated for it in any way; but he considers it would be of service to persons "who like to drive about and see the country," or who may convey goods of one kind or another by vehicle to Hunter's Hill, and he thinks it should be erected if only because Hunter's Hill has not hitherto had the advantage of Government expenditure. Another reason put forward by him in favour of the construction of the bridge is, that the district has a distinct claim upon the Government in connection with the proceeds of the sale of the Field of Mars Common, that common having been given up to the Government, he contends, on condition that the proceeds were to be kept as a separate account and appropriated for local works. Mr. Farnell advocates the construction of the bridge in the interests of the general public, and states that an informal promise that the bridge should be erected was made by his late father when Minister for Lands; but he does not consider the work to be of a pressing nature. Mr. Tornaghi also speaks of a promise in connection with the sale of land at the Field of Mars Common, and states that he was a large purchaser because of his understanding that there was to be a bridge and a tramway constructed.

The Field of
Mars Common
in its relation
to the bridge.

7. From the nature of the evidence given by the three local witnesses, as well as of that from the officers of the Department of Roads and Bridges, it became clearly apparent that the only reason of any weight put forward in support of the proposal for the construction of the bridge was that represented in the assertion that the bridge had been promised in connection with the sale of land at the Field of Mars Common; and it thus became necessary for the Committee to ascertain definitely whether such a promise had been made. This they did by an

examination

examination of the "Field of Mars Common Resumption Act of 1874," and by obtaining evidence from certain persons specially acquainted with matters relating to the Field of Mars Common. An examination of the Act showed that it contains a provision for defraying, out of the proceeds of the sale of the land, the cost of a bridge suitable for general traffic across the Parramatta River, which bridge has since the passing of the Act been erected; but it contains no reference to any other bridge. That being so, evidence was obtained from the auctioneer who sold the land at the Field of Mars Common, from the officer of the Lands Department who, in his official capacity, attended the sales, and from the Consulting Accountant at the Treasury, who is specially acquainted with the manner of dealing with the proceeds from the sale of the land at the Field of Mars Common; and the statements made by those witnesses are conclusively to the effect that no promise respecting a bridge over Tarban Creek was ever made. A promise was made at one of the sales that a tramway should be constructed, and this was afterwards repeated in Parliament; but with the exception of the bridge mentioned in the Field of Mars Common Resumption Act, which has been erected, there is nothing, so far as the Committee can ascertain, to indicate any intention on the part of any Government to provide bridge communication in connection with the Field of Mars. It is also shown by the evidence of the Treasury officer that no separate account of the money derived from the sale of land at the Field of Mars Common has been kept at the Treasury, and that it has been carried to the General Revenue Account, under the heading of Auction Sales of Crown Lands.

8. The Committee, therefore, have no difficulty in coming to the conclusion that the bridge ought not to be erected. They arrived at a decision in the matter on Tuesday, 18 March, 1890, on which date the following resolution, moved by Mr. Hurley, and seconded by Mr. Humphery, was passed:—

Decision of the
Committee.

"That, in the opinion of the Committee, it is not expedient the proposed Bridge over Tarban Creek, Parramatta River, as referred to the Committee by the Legislative Assembly, be carried out."

J. P. ABBOTT,
Chairman.

Office of the Parliamentary Standing Committee on Public Works,
Sydney, 15 April, 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

MINUTES OF EVIDENCE.

BRIDGE OVER TARBAN CREEK, PARRAMATTA RIVER.

WEDNESDAY, 12 FEBRUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).	
The Hon. JOHN LACKEY.	HENRY COPELAND, Esq.
The Hon. ANDREW GARRAN.	JAMES EBENEZER TONKIN, Esq.
The Hon. FREDERICK THOMAS HUMPHERY.	WILLIAM SPRINGTHORPE DOWEL, Esq.
The Hon. WILLIAM JOSEPH TRICKETT.	EDWARD WILLIAM O'SULLIVAN, Esq.
JACOB GARRARD, Esq.	CHARLES ALFRED LEE, Esq.

The Committee proceeded to consider the proposed Bridge over Tarban Creek, Parramatta River.

Joseph Barling, Esq., Under Secretary for Public Works, sworn, and examined:—

1. *Chairman.*] You are the Under Secretary in the Department of Public Works? Yes.
2. Can you give the Committee any information about this proposal to construct a bridge over the Tarban Creek, Parramatta River? I have to ask, with the permission of the Committee, that I may be allowed to make a short statement with regard to the whole of the bridges before the Committee.
3. You may make a statement, but we will have to have an inquiry about each one of them? Quite so. But if you will permit me to make a statement it will open up a new line of inquiry with regard to each of the bridges. There are four bridges now before this Committee, viz., a bridge over Tarban Creek, Parramatta River, a bridge over the Hunter River at Jerry's Plains, a bridge to connect Bullock Island with the mainland at Newcastle, and a bridge over the Lachlan River at Cowra; and I am to ask that the Committee will have the goodness to negative the first three proposals—that is to say, for the bridge over the Tarban Creek, Parramatta River, the bridge over the Hunter River at Jerry's Plains, and the bridge to connect Bullock Island with the mainland at Newcastle. I wish to explain shortly why it is I ask this, and I also have to bring under the Committee's notice the fact that with regard to the last bridge named—the bridge over the Lachlan River at Cowra—the Committee will be asked to consider a modified plan—a plan different from what was intended when the proposal to construct a bridge was submitted to the Committee by Parliament. The reason why I am asking that the first three proposals for bridges over the Tarban Creek, Parramatta River, the Hunter River at Jerry's Plains, and from Bullock Island to the mainland at Newcastle—should be negatived, is that each one of these bridges can be built at a cost of less than £20,000, and therefore it is not necessary to refer them to the Public Works Committee under the Act. Shortly after Mr. Bruce Smith took office, estimates for three bridges were brought under his notice. The first was a bridge at Narrandera, estimated to cost £17,280, the second was a bridge over the Darling River at Wentworth, estimated to cost £26,248, and the third was for a bridge at Cowra, estimated then to cost £69,971, or a total sum of £113,499. When these estimates came before Mr. Bruce Smith he was struck with their magnitude in comparison with what he thought were the justifiable requirements of each case, and he was the more inclined to question them because he was aware that even in the old country, centres of population were continually changing so that what at one time was a populous place became, owing to change of circumstances, almost untenanted. This was specially shown to be the case in the history of England, where many old boroughs, which were once populous towns, became, after the lapse of years, reduced to very small numbers. Applying this principle to this new country, where of course the chances of change are very much greater than in old countries, and looking well ahead, Mr. Bruce Smith felt perfectly certain that no one could foretell what would be the requirements of places in this new country fifty years hence; the roads would probably have to be changed, and all requirements incidental to population would be completely altered, and he thought therefore that it would be most desirable to build bridges as cheaply as possible so as to meet the immediate requirements of each case; and therefore when these estimates came before him he directed that the whole question should be remitted to the Roads Department with the view of ascertaining whether wooden structures would or would not answer all necessary requirements, more especially as he was aware that we have the finest timber in the world. I think I may refer to the Hon. the President of this Committee in verification of what I say, because one of these bridges—the Wentworth Bridge—affected his constituency, and he expressed his very strong approbation of the steps the Minister was taking in reviewing the whole question of our bridge construction. The Roads Department, of course, at once took up the lead of the Minister, and as a first result of this revision, the Narrandera Bridge, which was estimated to cost £17,280, was let for £3,555 13s. 1d.; that is, a timber bridge was substituted for the iron one at

J. Barling,
Esq.
12 Feb., 1890.

J. Barling,
Esq.
12 Feb., 1890.

first proposed, and it was pointed out, and is very clearly proved I think, that this much smaller expenditure has answered all the requirements of the case. Then, with regard to the Wentworth Bridge, it was found that, by substituting timber, the estimated cost could be reduced from £26,248 to £12,000. The actual cost I cannot tell at present because tenders have not yet been invited, but the relative cost will remain the same. Supposing the timber bridge be found to cost more than the £12,000, from having to go deeper for the foundation, the cost of an iron bridge would be increased in the same proportion. The fact remains that a very large saving is effected by substituting timber for iron. I may also remark that in many cases it can be shown that the accumulated interest on the difference between the cost of timber bridges and iron bridges would be sufficient to renew the timber structures for periods varying from ten to fifteen years. So everything shows most conclusively that the action the Minister has taken has resulted in a very large saving to the public purse. I have therefore, for the reasons stated, to ask that the first three proposals mentioned may be negatived, because we can construct each one of these bridges for less than £20,000—the Tarban Creek Bridge, the bridge over the Hunter River at Jerry's Plains, and the bridge to connect Bullock Island with the mainland at Newcastle.

4. Can you give us a *précis* stating the reasons for the proposal to construct a bridge over Tarban Creek? I was under the impression that the Cowra Bridge was the one under consideration to-day, consequently I have not brought any papers with regard to the other bridges. For the reasons I have stated, we have no plans to submit to the Committee with regard to those three proposed bridges.

THURSDAY, 20 FEBRUARY, 1890.

Present:—

The HONORABLE JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

JAMES EBENEZER TONKIN, Esq.

WILLIAM SPRINGTHORPE DOWEL, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

CHARLES ALFRED LEE, Esq.

The Committee further considered the proposed Bridge over Tarban Creek, Parramatta River.

Robert Hickson, Esq., Commissioner and Engineer-in-Chief for Roads and Bridges, sworn, and examined:—

R. Hickson,
Esq.
20 Feb., 1890.

5. *Mr. Garrard.*] You know the proposal before the Committee to construct a bridge across Tarban Creek, so as to give more direct access to the metropolis from the North Shore? Yes.

6. Has the project been reported upon by yourself or by other officers of the department? It was reported upon by me.

7. What is the estimated cost of the bridge? It would cost £26,000. The project was reported upon in the first instance by my predecessor, Mr. Bennett.

8. Since then has the department reconsidered the advisability of erecting a bridge here, or has it thought that one of a less permanent character would do? Soon after I took charge of the department my attention was called to a sum of money being placed on the Estimates for this bridge, and I therefore visited the site. After a very careful examination of the place, I came to the conclusion that the Government would not be warranted in spending any money there at all, and I reported to the Minister accordingly.

9. Do I understand you to say that there is no necessity for a bridge of any kind at this place? I think there is no necessity, considering the cost.

10. And if a bridge were necessary, a less expensive one could be put up? A bridge could not be put up at the proposed site—that is, the continuation of Joubert-street—for less than £26,000, but one could be put up at the site coloured green at a cost of about £10,000.

11. That will not be so direct a route from the Parramatta Bridge to the Lane Cove Bridge? No; there will be very nearly half a mile difference between the two routes.

12. What is the distance between the Parramatta River Bridge and Joubert-street, where the Gladesville Road meets Joubert-street? The distance between those two points, if the proposed bridge were made, would be as nearly as possible half a mile—46 chains; by a bridge at the termination of Demilhaus-street it would be as nearly as possible a mile—77 chains; and by the present road it is a mile and three-quarters.

13. So that if the bridge which it is proposed to construct were constructed, it would save a mile and a quarter of travelling between Sydney and Willoughby? Yes.

14. Is there very much traffic on that road? There is a good deal of traffic across the Parramatta Bridge, but I think that I am within the mark when I say that three-fourths of it goes to Ryde; it does not come back towards Hunter's Hill.

15. Are you aware whether the people on the Field of Mars gave up their rights to a commonage on the condition that the money realized from the sale of it should be spent on bridges in the district? I do not know anything about it.

16. Do you know why this proposal has been put before the Committee? I do not.

17. And the department now wish to withdraw it, or to get the Committee to negative the work, on the ground that there is no necessity for a bridge there in the public interest? Yes.

18. *Mr. O'Sullivan.*] Of what kind of construction would the bridge be? It would be very much the same as that which we propose to put up at Cowra.

19. Composite? Yes; that would be the cheapest structure.

20. If any bridge is to be erected here you purpose erecting one higher up the creek at a lesser cost? Yes. If it is decided at any future time to erect a bridge, a cheaper structure would undoubtedly be better.

21. What kind of bridge would you erect then? A timber bridge would do. The water is shallow and the bridge need not be any great height.

22. *Dr. Garran.*] Do you know what municipalities as they now exist had a right in the Field of Mars Common? I do not.

R. Hickson,
Esq.
20 Feb., 1900.

23. I suppose Hunter's Hill had? I do not know anything about the Field of Mars Common.
24. You do not know what the supposed value of the unsold part of that common is? I do not.
25. You do not know how much has been spent on existing bridges there? No.
26. There is a scheme for extending a tramway to this district;—do you know how much that would absorb of the remaining balance? I do not. I do not even know the route of the tramway.
27. Is it proposed to make either of these bridges out of the money derived from that land? I understand that that would be paid for with loan money.
28. You are not treating the work as having a claim on that land, but as one that will be paid for out of the General Loan Fund of the Colony? Yes.
29. *Mr. Copeland.*] Can you say whether there is any documentary evidence in the department as to the Government being committed to expend the money derived from the Field of Mars Common on bridges or anything else in the district? Not that I know of. There is nothing in our correspondence with regard to this bridge—I know that.
30. There is no correspondence whatever, as far as you know, which would lead one to believe that any such bargain had been made with the Field of Mars people? None that I know of.
31. You are treating this question simply on its merits? Yes.
32. And you do not think the public convenience requires this expenditure? I do not. The bridge undoubtedly would be a convenience, but it would be too dearly bought. They have got a very good road now which is only 1½ mile longer than the road will be across this bridge, so that I don't think the department would be justified in spending £26,000 on the bridge.
33. Do you think that if Tarban Creek were situated in any of the country districts the people would be likely to make a claim for a bridge? I do not know about their making a claim, but I do not think it would be granted.
34. Can you say what money the Government have spent in maintaining this road—to what class does it belong? I could not tell you from memory; I could get you the information.
35. Would any expenditure be saved in maintenance if the bridge were constructed? No; there would be an additional expenditure for maintenance, because we would have to maintain the bridge and the approach to it on either side in addition to the present road.
36. Do you know anything about the population of North Willoughby? No; I cannot tell you what the population is.
37. I suppose you have no statistics as to the number of conveyances or people which cross the Lane Cove Bridge? No.
38. In fact you have not provided yourself with any information of the kind because the department wish to withdraw the proposal? Yes.
39. *Vice-Chairman.*] We have a minute emanating from your department withdrawing the proposed work altogether, together with two other bridges? Yes.
40. Your opinion is that the work is not of such a character as to warrant the expenditure proposed, and that if it were desirable to construct a bridge that could be done for a considerably less amount? Yes.
41. The department does not go into the policy of constructing bridges—you are simply acting under the Minister, to carry out such directions as may be given? Yes.
42. You do not consider whether the population is great or small—I suppose the Minister has to do with that? Yes.
43. Your objections in connection with this bridge apply to the two other bridges before the Committee? Yes; those at Jerry's Plains and Bullock Island. The Bullock Island bridge is not exactly on all fours with this, but I will explain that presently.
44. *Mr. Dowell.*] If your answer to the Vice-Chairman was correct, that the Minister inquires into the population of a district, and the necessity for erecting a bridge, what are your reasons for recommending that this bridge shall not be constructed? My general observation of the traffic in the district. The exact number of inhabitants in the district, and the number of people that would use the bridge, would be obtained by the Minister.
45. Have you any knowledge of the population that would be served by the construction of this bridge at Five Dock and North Willoughby? Only a general knowledge.
46. You have nothing to guide you? A general knowledge obtained by going over the district several times.
47. Are you not aware that some representations have been made to the Government for the construction of this bridge? No; I am not aware of it.
48. Did the Minister give instructions to you to withdraw the bridge? No.
49. You suggested to the Minister that it should be withdrawn because you did not think that there was sufficient traffic to warrant the expenditure? Yes.
50. Yet you say you have no knowledge of the population residing at North Willoughby or Five Dock? As I said before, I have not an exact knowledge; I have a general knowledge, and from it I came to the conclusion that there was not sufficient population to justify the expenditure of £26,000 for this bridge.
51. Does the country appear to be fairly settled? About Hunter's Hill it is; but the inhabitants there generally use the steamers. North Willoughby is sparsely populated as yet.
52. Are you aware that there is a tramway in course of construction at Five Dock that would be very much served by the erection of this bridge? No.
53. Have any borings been taken at the site of the bridge? No. When it was decided to withdraw the proposal we thought that it was not necessary to go to the expense of drawings or borings, so neither have been prepared.
54. If I understand you, the bridge has been withdrawn because from your own personal observations you do not think there is sufficient traffic for it? The Minister has withdrawn it. He had my report and other evidence.
55. Your report to him? Yes.
56. On the strength of your report he has thought fit to withdraw the proposal? He has thought fit to withdraw it, I presume, because of that report.
57. *Mr. Trickett.*] Has Colonel Wells any personal knowledge of this bridge or of the requirements of the locality? I dare say he may have. Of course he knows the district very well.
58. Had he not some project for shortening the road route? Yes; we propose to shorten the road route by Salter-street, cutting off an angle? It is a very small thing.
- 59.

- R. Hickson, Esq.
20 Feb., 1890.
59. Was he not to get a right-of-way through some church property? Through the Asylum grounds; we could do that if it was found necessary.
60. *Mr. Hurley.*] You wish the proposal to be withdrawn because the district is well served by good roads and by steamers? Yes. The portion of the district that this bridge would specially serve—that is, the lower end of Hunter's Hill—is well served by steamers.

- J. A. M'Donald, Esq.
20 Feb., 1890.
- John Alexander M'Donald, Esq., M.I.C.E., and M.I.M.E., Engineer for Bridges, sworn, and examined:—
61. *Mr. Lee.*] You know the site of the proposed bridge over Tarban Creek, Parramatta River? Yes.
62. Have you any personal knowledge of it? I have been there myself two or three times.
63. Have you prepared any drawings with reference to it? A survey and sections have been made, but the work has proceeded no further.
64. Have you been in any way instrumental in the withdrawal of this proposal? I received instructions from the Engineer-in-Chief not to proceed further, after he himself had visited the site.
65. The suggestion did not come from you that this matter should not be proceeded with? The Engineer-in-Chief went out with me, when the survey was completed, to see the site, and he formed his own opinion on the matter.
66. Were you led to the conclusion that the proposal should be withdrawn in consequence of the bad position of the site? I have not expressed that opinion. The matter was decided by the Engineer-in-Chief.
67. Without reference to yourself? Of course he consulted with me.
68. Were borings taken? No.
69. No detailed work was done in connection with the bridge in consequence of the desire to withdraw the proposal? Yes.
70. As a matter of fact you take your instructions from the Engineer-in-Chief, and whether it is decided to go on with or to withdraw a work is a matter that does not rest with you? Yes.
71. You simply carry out your instructions? Yes.
72. *Mr. O'Sullivan.*] If the proposal was withdrawn, do you think it is likely that a wooden bridge would be constructed? That is a matter for the Engineer-in-Chief. I have received no instructions about it.
73. *Dr. Garran.*] You have not done anything in the way of preparing plans of either site? No.
74. Upon what is the calculation of expenditure based? The estimate that is given is not a guaranteed estimate in any way. It is simply an idea of the probable cost—it could not be guaranteed to the required 10 per cent.
75. What sort of bridge was it proposed to construct—one on iron piers? It was proposed to use iron piers and a composite structure at the one site, and higher up the creek to put a timber bridge.
76. With no iron in it? No iron.
77. The estimate before the Committee is only a rough estimate? Yes.

Colonel Frederick Wells, Engineer for Roads, sworn, and examined:—

- Col. F. Wells.
20 Feb., 1890.
78. *Mr. Humphery.*] Can you state whether you gave any advice or made any suggestions as to the withdrawal of the proposal now before the Committee? None; I have given no authoritative advice to anyone.
79. Have you examined the proposed site of this bridge? Yes, some few years ago.
80. Do you consider a bridge there necessary? I do not think it necessary—at any rate at present; I think it would be premature.
81. Why have you arrived at that conclusion? I scarcely think that the requirements of the neighbourhood of Hunter's Hill necessitate so expensive a bridge when an alternative road could be made at a much less cost that would do away with the necessity for it, and make very little difference in the distance.
82. Will you describe the alternative road that you consider would meet the requirements of the district? The road was surveyed, and the survey could be produced. It would head Tarban Creek at low water, or, if necessary, take in some reclaimed ground—which it is quite within the province of the Government to do—and then, by an arrangement which I made with the Marist Brothers, a road could be made that would ascend and meet at the same point; that would not make five minutes difference in the distance, and the bridge over the little creek at the head of Tarban would be an insignificant affair.
83. Can you state the distance from the proposed road which you describe to the iron swing-bridge? I cannot, because I am not at present in possession of the surveys. I was quite unaware that I was to be called upon, or else I could very possibly have traced the surveys in the office.
84. Can you state approximately the cost of the road you suggest? No, I cannot. The matter was thrown over for the bridge before it came to a head. Only the survey was made.
85. Can you say about how much longer the road would be? It is almost impossible to state from this map without a survey; I do not think it would be half a mile longer.
86. Would it need any bridge at all? A small bridge over Tarban Creek.
87. At what cost? If built well in iron, possibly £1,000 at the outside for the bridge without approaches.
88. Can you point out on the map where the bridge you proposed would be constructed? If I remember rightly, the route follows a road on the western boundary of the French Mission for a short distance; it then diverges to the right, and begins to make its gradient through allotments in the street up to the line proposed for the bridge.
89. By looking at the tracing now before you can you say whether the difference in distance will be more or less than half a mile? It will be 28 chains shorter as it scales.
90. That road could be constructed at a comparatively small cost, and a bridge costing only £1,000 would be needed? I do not think the cost of the bridge would exceed £1,000.
91. Would that bridge be suitable for all traffic? For all traffic. The cost of the reclamation of the flat at the head of Tarban Creek would of course have to be added on, but it would be insignificant in comparison with the cost of the proposed bridge. A small reclamation would have to be made at the head of the creek to recover a flat that is bare at low tide, which the Government could do with advantage.
92. *Mr. Trickett.*] Do I understand you to say that you made some arrangement with the Marist Brothers for right-of-way through their property? Yes; I had a verbal arrangement with the Rev. Father of the college, and he told me that he would have no objection to the route which I proposed, as it would not interfere with their grounds.

93. And on the score of expense and convenience, do you think that that road would answer all requirements for some time to come? I think it would. Col. F. Wells.
94. *Mr. O'Sullivan.*] Do you know if there is much traffic on the Lane Cove Bridge? Not very much traffic—there is a fair amount. 20 Feb., 1890.
95. There is not a very great settlement in North Willoughby to which this bridge gives access? There is not much traffic. There is settlement on the Lane Cove Road to which the bridge gives access.
96. Is that a favourite drive for people on a Sunday afternoon or a holiday? It is; but it is not crowded. I frequently drive along there myself.
97. *Mr. Dowel.*] You have visited the site coloured red? Yes.
98. You know the locality well? I know the whole of the bay from that side to the head.
99. And to Willoughby? Yes.
100. Can you inform the Committee as to the character of the country? Well, it is the usual North Shore country—barren, but capable of being made into good garden ground.
101. Is it suitable for buildings? Yes.
102. Is it pretty fairly settled upon at the present time? Not thickly.
103. Would the construction of a bridge have any effect in causing settlement there? I doubt it.
104. Can you inform the Committee at whose instance the first proposal to construct this bridge was made? I think it was by the Members and Mayor and Council of Hunter's Hill; they brought it forward and advocated it very strongly.
105. Did they receive a promise that a bridge should be constructed? I do not know. I know nothing further than that I examined the line which I mentioned for a road to avoid the large detour by the asylum.
106. *Mr. Hurley.*] Having in view the probability of a Local Government Bill being passed, do you not think that the construction of such bridges should be paid for by local taxation? I think they are too heavy in cost for local taxation, though I have no doubt that municipalities would be more careful about asking for bridges if they knew that if built they would have to pay interest on them.
107. The construction of such a bridge would not benefit a large number of the general public, would it? No, not beyond the road as a drive.

TUESDAY, 25 FEBRUARY, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN.)

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARBARD, Esq.

HENRY COPELAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Bridge over Tarban Creek, Parramatta River.

John Williams Deering, Esq., Metropolitan and Coast District Surveyor, sworn, and examined:—

108. *Mr. Trickett.*] What position do you occupy in the Government service? I am Metropolitan and Coast District Surveyor. J.W. Deering,
Esq.
25 Feb., 1890.
109. How long have you been in the Department of Lands? I have been in the Government service for thirty years. I first joined the Railway Department.
110. Have you had much to do with the sale of Crown lands? Yes; with the surveys and the preparing of public lands for sale.
111. Do you know a property on the Parramatta River called the Field of Mars? Yes; well.
112. You are aware, I suppose, of the circumstances connected with the sale of that property? Yes.
113. The Field of Mars Common Resumption Act was passed in 1874, was it not? Yes.
114. That Act provides "that the proceeds of the sale of the lands may be devoted towards defraying the cost of a bridge suitable for general traffic intended to be constructed by the Governor, with the advice of the Executive Council, across the Parramatta River." Do you know whether any other promise was made to construct any public works out of the moneys arising from the sale of the Field of Mars? There was a verbal statement made by Mr. Farnell at the time of the first sale that a tramway should be made, but it was a conversational statement.
115. To whom was it made? It was made at the time of the sale to the people present.
116. Mr. Farnell was Minister for Lands, and was present at the sale? Yes, and he made that statement. I never thought myself personally that it was binding.
117. The statement was that a tramway should be constructed to the Field of Mars? Yes. The people said, "Are you going to make a tramway, Mr. Farnell? Are we going to have a tramway?" and he answered in a somewhat conversational style, "Oh, you will have a tramway. Yes, you shall have a tramway." But it was not a Ministerial promise.
118. Do you know of a proposal that has emanated from the Works Department to erect a bridge over Tarban Creek, on the Parramatta River? Yes, I know there is such a proposal.
119. Was any promise ever made by the Lands Department or by any authoritative body that you are aware of that this bridge should be constructed out of the proceeds of the sale of the Field of Mars? Never.
120. You are quite sure of that? Yes. I might point out that the Act only mentions the building of one bridge, and the department has already built three bridges.
121. The Field of Mars Resumption Act refers to one bridge across the Parramatta River; that bridge has been erected, and two others besides? Yes, and we have made roads as well. We are, I admit, clearing the land for sale, but we have made roads. Up to 1887 there was an expenditure of £72,000 for roads, &c.
122. Do you know what the sale of the land realised? The area of land sold up to the present time is 1,712 acres, and the amount realised £96,203.
123. Do you think that amount has been expended on these improvements? The Government expended £72,000 on roads only as against £96,000 received.
124. Including the bridge? Not including the bridges. The building of both the bridges and the roads, with the maintenance of the former, has cost about £200,000. It has always appeared to me that on Mr. Farnell's verbal statement made on the ground the people of the Field of Mars are trying to build up a case.

- J. W. Deering, Esq.
25 Feb., 1890.
125. *Mr. Garrard.*] They have a very good foundation when they have the statement of the Minister, have they not? Not given in a verbal way like that. I do not think such a statement made at the time of sale would bind the Cabinet; but this is only my individual opinion.
126. *Mr. Copeland.*] The auctioneer has more authority on such an occasion than the Minister? Yes.
127. What area in the Field of Mars Common remains unsold? 3,600 acres.
128. *Mr. Garrard.*] What do you estimate is the value of that area? About £20 an acre average.
129. Would the land remaining unsold realise sufficient to build a tramway? At £20 an acre it would only realise £72,000.
130. What do you think the tramway would cost? I could not say. I have not seen the section, and do not know the depth of the cuttings.
131. Do you think it would cost more than £72,000? Yes, if it is to cross the Parramatta River bridge, and Tarban Creek bridge is to be erected.

THURSDAY, 6 MARCH, 1890.

Present:—

The Honorable JOHN LACKEY (VICE-CHAIRMAN).

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Bridge over Tarban Creek, Parramatta River.

Charles Edward Jeanneret, Esq., Mayor of Hunter's Hill, sworn, and examined:—

- C. E. Jeanneret, Esq.
6 Mar., 1890.
132. *Mr. Garrard.*] I believe you are Mayor of Hunter's Hill, and were at one time a Member of the Legislative Assembly? Yes.
133. Do you know the site of the proposed bridge across Tarban Creek? I do.
134. Is there very much traffic between the metropolis and Hunter's Hill to the places beyond the Lane Cove bridge? There is very considerable traffic there. Independently of other traffic, the establishment of colleges in that locality has added very largely to the traffic.
135. You allude to the Marist Brothers College at Hunter's Hill and the Riverview College on the northern side of Lane Cove River? Yes.
136. But do not the majority of the people visiting both Hunter's Hill and the college on the other side of Lane Cove travel by the steamers that touch at these places? Necessarily the majority go by the steamers, but a large number of people go by the road.
137. You are a very old resident of that locality? Yes; I have lived there for thirty-three years.
138. Can you give us any idea of the average number of vehicles that cross the Parramatta bridge with the view of going to Hunter's Hill, and the other places? I could not. I never made an estimate of the number of vehicles. The people at the bridge could give you accurate information on that point, as I believe it is their business to keep a record.
139. Do you know the estimated cost of the proposed bridge? I understand that it is estimated to cost £30,000.
140. Do you think the people are put to such straits that they require the expenditure of this large amount of money to overcome the obstacles in getting to Hunter's Hill? I think the bridge would be of very great benefit to the municipality of Hunter's Hill, and also the municipalities on the North Shore, and it would benefit the Government lands adjacent.
141. What would it save in point of time or distance in getting to Hunter's Hill? The distance from the northern side of the Parramatta Railway bridge to the southern side of the Lane Cove bridge by the present road is 150 chains. The distance by the proposed bridge would be 63 chains, so that the distance saved would be about one mile and a quarter.
142. Do you think that for the saving of that short distance the country would be justified in erecting a bridge across Tarban Creek as proposed? I think so, and one reason is that the district has a very large claim upon the Government on account of the proceeds of the Field of Mars Common. This common was given up to the Government on condition that the proceeds were to be kept in a separate account, and appropriated for local works.
143. The Committee have heard this assertion very frequently;—do you know the Act under which the Field of Mars Common was resumed? I am perfectly cognisant of that Act.
144. Is there anything in it relating to an agreement between the people and the Minister for Works? No. But there is a provision in the Act to the effect that the proceeds of the common should be placed to a separate account, and I am aware that the Government have given a promise, or stated in Parliament their intention, that all this money should be expended in the district.
145. Was this merely a general statement on the part of some member of the Government, or was it a Government statement? It was a Government statement. I think it is a principle recognised by the Government that the proceeds of the common should be devoted to local improvements after the building of bridges.
146. Suppose that promise was given, how would that affect the construction of this bridge? This bridge would be of very little benefit, if any, to the Field of Mars proper? It would be an immense benefit to the Field of Mars as well as to all persons residing in the parish of Hunter's Hill.
147. But the Field of Mars Common lies to the north-west of the proposed bridge? Hardly to the north-west. It lies to the west of north, but it stretches away a great deal to the north. The most valuable portion of the common, and that most likely to be largely populated, is in very close proximity to the site of the proposed bridge.
148. Can you tell us who were supposed to have rights to this common—merely the people about Gladesville and Ryde, or the people of Gladesville, Ryde, and Hunter's Hill? The people of Ryde, Hunter's Hill, and Gladesville have all equal rights to the common. The common was granted for the benefit of all persons having land in the parish of Hunter's Hill and the Field of Mars. Hunter's Hill is particularly mentioned.

C. E. Jeanneret, Esq.
6 Mar., 1890.

- 149. But the parish of Hunter's Hill extends beyond the mere municipality of Hunter's Hill? Of course it does.
- 150. And would include what is now known as Gladesville? Yes. It includes also what is known as Ryde. But the remotest portions of Hunter's Hill, even as far as Woolwich, have claims to the proceeds of the common equal to the claims of those living adjacent to the Field of Mars. In fact, we have the greatest say, for we were in the majority at the time of the surrender of the Field of Mars, and I think it was mainly at the instance of those living at our end that the common was given up. The Ryde people, and those living close to the common, were rather opposed to its surrender. But it was so far away from us that we preferred having it sold, and the proceeds applied to the benefit of the district.
- 151. As a matter of fact, if this bridge were erected it would be only the people living to the eastward of Joubert-street and the people on the other side of Lane Cove bridge who would be benefited? And a considerable number living on the western side of Joubert-street.
- 152. How many? A considerable population about there—Eltham, and all those places. But, of course, it would be principally for the benefit of those going beyond Lane Cove, and those on the eastern side of Joubert-street.
- 153. Do not the majority of the inhabitants of Hunter's Hill and Lane Cove generally use the ferries which travel to and from Sydney? They do.
- 154. And it is only a small number of the people, those who are carriage folks, who occasionally use the road? Yes, a comparatively small number.
- 155. Putting the Field of Mars promise, whatever it may be worth, on one side, and considering that the money be drawn out of the general tax-payer's pocket, do you think the Government would be justified in erecting the bridge as proposed? Apart from the claims we have, I would not venture to say that the Government would be justified in going to that large expenditure at the present time. Eventually it will have to be done, but at present we are in this position: we have had nothing whatever from the Government for Hunter's Hill. We have had no Government aid whatever for anything except the ordinary municipal allowance. We have had to do everything for ourselves while the other places higher up have received very great benefits. For instance, the construction of the Parramatta River bridge is comparatively of small benefit to Hunter's Hill while it is of very great benefit to Ryde and Gladesville.
- 156. If that is a small benefit this proposed bridge will be a small benefit? But this bridge will make it a large benefit. At present as we have to go more than double the distance round to reach the Parramatta River bridge it is practically of no use whatever to us. Any omnibus traffic or any other traffic that crosses that bridge is of no use to Hunter's Hill.
- 157. Do you see on the map a blue line showing an alternative scheme for a bridge in a different locality? Yes.
- 158. Do you think a bridge across there would suit the requirements of the people? I do not think it would be of any use at all.
- 159. Did you not commence a bridge there at one time? I commenced a little bridge, or an embankment across there. I do not think it would be of any use. It is more in connection with the ferry service.
- 160. And the bridge higher up still, shown on the map by a pencil line, would be of still less use? Yes. The bridge indicated by the blue line would be of use merely for foot passenger traffic.
- 161. But for a bridge to be of any great service to the people of Hunter's Hill and beyond Lane Cove bridge the site chosen by the Department and shown on the map by red lines would be the one? Undoubtedly. It would be a great benefit.
- 162. But you are of opinion that if there were no promise, nor anything in that way connected with the Field of Mars, the Government would hardly be justified in expending public money by constructing the bridge at the present time? I should not like to say they would be justified just at present. When you consider the large district of the North Shore and the very large traffic now going on right away to North Willoughby, and the large expenditure of Government money upon those roads, I think there is some warrant for doing it.
- 163. Is it not a fact that the greater part of the vehicular traffic for Riverview College and the land immediately around it goes at present via North Shore and Crow's Hill? By no means. There is a very large amount of traffic from Balmain. In fact, a surprising number of vehicles are to be met with along that way, and the number seems to be increasing every day. I drive there sometimes myself, and I meet them.
- 164. Do you know the tile works just before you come to the Lane Cove Road on the right hand side going up? Yes.
- 165. What road do they use to send their produce to Sydney? I cannot say. I know that a great many bricks come from the North Shore Brickworks across the bridge.
- 166. In order to serve their customers in the western suburbs? Yes. I also know that a great quantity of bricks come from Sydney. Although bricks are manufactured at the North Shore they seem to be sent from Sydney along that road to the North Shore.
- 167. *Mr. Copeland.*] Did I understand you to say that there is a provision in the Act that the proceeds of the Field of Mars Common should be dealt with differently to any other public revenue? Yes. You will find that according to the Field of Mars Resumption Act, the money is to be placed to a separate account, and the interpretation put upon that by the Government since has been that the money was to be devoted to local public purposes.
- 168. By what Government? By the Government in which Mr. Garrett was Minister for Lands when he gave a promise of the Executive in writing that certain things should be done for the district.
- 169. You have been a Member of Parliament representing a country constituency have you not? I have.
- 170. Can you mention any single instance where the proceeds of the sale of a common have been dealt with in any different way from the proceeds of any other land sale—that is to say, did the money go into a separate account, and was it used for the construction of special works? I presume the law has been carried out. Of course I have not seen the account.
- 171. Are you under the impression that there is an account? Yes, and it is controlled by the Lands Department.
- 172. And that account is available for the construction of public works? Not generally, but public works in pursuance of that Act.

C. E.
Jeanneret,
Esq.
6 March, 1890.

173. Do you think that the money for any of the bridges, or expenditure of any other kind has been taken out of this particular fund? I am under that impression.

174. You think the money has not come out of the consolidated revenue? Some of it must have done, because at the present time the account is overdrawn.

175. But can you give a single instance where the cost of any public work has been taken from this special fund, and where the money has not gone through the usual form of being voted or appropriated from either loan account or consolidated revenue? I moved for a return in Parliament of the money expended on the Field of Mars Common, and of the money derivable from the common, and I got the return, but whether the money expended was by special vote or otherwise I do not know. I presume it was in accordance with the Act.

176. You know that the Act says:—"And the proceeds of every such sale (after deducting therefrom any costs or charges incurred herein) shall be paid to the Colonial Treasurer, and by him be carried to the credit of a separate fund or account as part of the public revenue." You observe the words "as part of the public revenue." You have been a member of Parliament for a country constituency; can you mention a single instance where the proceeds of the sale of a town common has been dealt with differently to the proceeds of any other land sale? No, I cannot. I may be wrong, but I have always been under the impression from the provision of the Act, and the interpretation placed upon it by the Government that a separate account of the proceeds of the Field of Mars Common was being kept as against the expenditure upon the bridges.

177. Can you point out any speciality in this case as showing why the people who had the use of the commonage for many years should be dealt with differently to the people having the use of other commons in the colony? Certainly I can. The Field of Mars Common was given up to the Government on the express condition that certain local works were to be constructed out of the proceeds of it, and you will find that this is expressed in the Act.

178. When you say the common was given up, was it given up in any way differently to all the other commons that have been given up? Yes, it was. There was a special Act of Parliament on the petition of the people and the promise of the Government.

179. Why was that special Act of Parliament necessary? Because there was no other way of dealing with the matter.

180. Because the common was vested in trustees? I presume so.

181. And the land therefore had to be resumed at that time. You are aware that if the land had to be dealt with at the present time it would not have to be resumed by special Act of Parliament? Perhaps not. But the provisions of the Act expressly state what the money is for. The Act states how the money is to be applied.

182. But the recital in the Act refers only to a bridge? That is all. But there was a distinct announcement by the Government, as to which I can speak confidently because I was in the House at the time, that the whole of the proceeds of the common would be devoted to local works. This statement was made in the House by the Minister.

183. But is it not a fact that as a sop to the people for the loss of the common, the Government proposed to build the bridge, and that accounts for the other words in the Act in reference to a separate account being kept of the proceeds; because at that time it was not known whether or not the proceeds would realise enough to pay for the cost of the bridge? As a matter of fact, it was anticipated that the bridge would cost more than the common would realise.

184. And that explains the keeping of a separate account? Yes. It afterwards turned out in consequence of the largely increased value of land that the common would realise a great deal more than the cost of the bridge across the river.

185. The Government having completed their part of the contract in building that bridge, and one or two other bridges, besides taking a railway through a portion of the common, do you not think they have more than complied with all their stipulated agreements? The railway is of no advantage except to the portion of the common which is very remote indeed from Sydney, viz.: Carlingford.

186. It is an advantage to that portion of the common that was sold? No; not to the portion that was sold at the first two or three sales, none whatever.

187. The railway is of advantage to those portions that have been sold recently—since it was constructed? Unquestionably; but until the railway was constructed those portions were of no value at all.

188. What I want to get at is this: Can you furnish any reason why the proceeds from the sale of this common should be dealt with differently from the proceeds of the sale of any other common in the country? I think I have already given a reason. The common was voluntarily surrendered by the people to the Government on the express understanding that a bridge should be built across the Parramatta River. That bridge has been built. The sale of the common has realised or will realise very much more than the cost of the bridge. The Government have distinctly promised that any surplus arising shall be applied for the benefit of the district.

189. Which Government has distinctly promised? The Government in which Mr. Garrett was Minister for Lands.

190. Is there any written evidence of that statement? Yes; you will find it in *Hansard*. I will undertake to produce it. And not only that, but the Government have distinctly by a Minute of the Executive promised to do certain other works out of the proceeds of the common.

191. The same Government? Yes; the Government in which Mr. Garrett was Minister for Lands. I may say that the common has always been dealt with in the Lands Department as a special part of their business, and also the works upon it.

192. The sale of it belongs to the Lands Department; but has that department ever exercised any supervision over the expenditure of the proceeds? Yes it has.

193. In what direction? In the laying out of the common and the making of roads. They have exercised a great deal of control over it.

194. That was only the same control that they exercised over every other common? What I mean is that the Lands Department has exercised special supervision over the expenditure upon the roads. They have not only surveyed the roads, but they have been the means of getting them metalled and of having bridges constructed, and everything else in connection with the common has been done under the direction of the Lands Department.

195. You mean those new roads which were built recently by unemployed labour? Yes. I think the unemployed labour was used chiefly for clearing purposes; I do not think it was used so much for road-making.

196. I ask you, as a man who knows something of the country districts, whether the Lands Department exercised any more supervision over that common than they did over any other common in the country that they cut up and subdivided? I was always under the impression that they did.

197. Have they done anything more than they did at Willoughby? I am under the impression that they have. I only speak from conversations I have had about the common with Mr. Oliver, formerly of the Lands Department.

198. You are well acquainted with what is going on in the vicinity of Sydney; have they done anything more than what was done at Harbord, where there was a subdivision of Government land? Yes; they have done more than they have done anywhere else. If you go to the Field of Mars Common you will find a good macadamized road and good bridges. The places are aligned, and there are valuable reserves and all that kind of thing, where at present there is no population at all, and no traffic. That, I think, shows that they have dealt with it differently to the way in which they dealt with other commons. You will find some splendid bridges and some splendid macadamized roads and beautiful reserves in preparation for a large population; but there is at present no population there at all. I do not think there has been six houses built on the common yet.

199. But did not the Government do the same thing with the Holt-Sutherland Estate, which was private property? I do not know anything about the Holt-Sutherland Estate. I have not seen it for twenty years.

200. You know something about the Hornsby Estate? No; I have not been on that estate either for some years.

201. You have not told us how this right originated for the Field of Mars Commoners to be dealt with differently from the commoners in every other part of the colony? It arose in this way. There were 6,000 acres of land of very little value. The commoners asked the Government to resume that land, and build them a bridge across the river. The Government said, "You must first of all get a valuation made, and see if the proceeds of the land will pay for a bridge." We got Messrs. Richardson and Wrench to assess the common, and they valued it at £30,000, the estimated cost of a bridge at that time being £40,000. The Government then introduced and passed a bill, and on the condition that the bridge was to be built the common was surrendered. The Government then thought it would be wise to build the bridge first and sell the common afterwards. They built the bridge, and the first sale of the commonage land realised over £90,000. According to the estimate of the Lands Department, there still remains unsold £200,000 worth of land on the common. This may be slightly an over-estimate at the present time, because land is not as valuable as it was; but I have no doubt whatever that if the proposals of the Government are carried out the land will realise £200,000. In consequence of the Government not having carried out what they intended, I do not think that the £90,000 worth of land which has been sold would realise on a resale £25,000. In fact the land is practically useless in its present condition.

202. I suppose a very large number of people make use of the bridge across the Parramatta River? Yes. There is a surprising amount of traffic across the bridge from Balmain.

203. Would not that bridge have been constructed all the same if there had not been one single square inch of the Field of Mars Common? Certainly not.

204. You think the Government would not have built a bridge there, the same as they have done in other places, to meet the requirements of the people? I am quite sure they would not. They would not have entertained the idea for one moment.

205. Why would they not have treated those people the same as they treated the people of any other part of the colony? I do not know why, but they would not. The only thing that induced them to build the bridge was the surrender of the common. If the common had not been surrendered, I am quite confident that up to this day no bridge would have been built across the Parramatta River except the one required for railway purposes, which was built in the wrong place.

206. But you know that other bridges have been built where there has been a population? I do not know that such an expensive bridge has been built as that across the Parramatta River.

207. You know that there was a bridge built to accommodate the people of Cowra, for instance,—I mean an ordinary traffic bridge? But I would not compare that with the bridge across the Parramatta River. The Cowra Bridge is only a wooden structure, which cost, I suppose, about £15,000 or £20,000.

208. But you will admit that that bridge was built without any inducement, such as the giving up of a common? Yes, but the people could not cross the river without the bridge.

209. Could they have crossed the Parramatta River without a bridge? There was no population at that time to cross the river. There was no population in the district. The place has all grown up since the bridge was built.

210. But I suppose you are aware that the people of Cowra did cross the river without a bridge? I have no knowledge of the place before the bridge was built; but I should think it would be extremely difficult to cross it when the river was in flood.

211. Is it not a fact that the Government do as a matter of course build bridges in all parts of the colony where there is a necessity for them; or is it only in places where the people have a common to give up that they build bridges? There was no necessity for building the Parramatta bridge, and no justification for it at the time, unless the people could give the Government something in return for it, because the population there was very sparse. They had a punt by means of which they crossed the river, but having this large asset, which was vested in trustees, and which was considered to be to a large extent the property of the inhabitants, upon our giving up that property the Government were willing to construct a bridge.

212. You are aware that there are other commons that were in exactly the same position, and that have been taken away from the people and resumed under the present law? That is of recent date.

213. Within the last four or five years? Yes; but this common was surrendered nearly thirty years ago.

214. The reason it had to be done by special Act of Parliament was because the present laws were not then in existence? No doubt they were not thought of then.

215. Do you know that there is a large common between the Field of Mars and Richmond? Yes; the Ham Common as it is called.

C. E.
Jeanneret,
Esq.
6 Mar., 1890.

C. E.
Jeanneret,
Esq.
6 Mar., 1890.

216. Was anything done with the proceeds of that common? I do not think it has been sold.
217. You are aware that if a common similar to the Field of Mars had to be resumed now, all that would be necessary to be done would be for the Minister for Lands to lay on the table for so many days the proclamation resuming it from the Trustees for public purposes? I am aware of that. But of course, all lands are dealt with differently now to what they were thirty years ago. As you are aware the reservations of 100 feet were promised to be granted for nothing thirty years ago, and now they charge for them more than double their value.
218. There is nothing in the Field of Mars Common Resumption Act except provision for a bridge? That is all.
219. And the Government have complied with that condition and have provided that bridge? They have, and they have gone a little further.
220. And the only claim the people can make now for further expenditure is, because they set up a title to all the proceeds of the sale of the commonage lands? They did set up a claim, and the Government whether properly or improperly I do not say—acknowledged the justice of it, and I think you will find on reference to *Hansard* that not only Mr. Garrett, but also Sir Henry Parkes promised that all the proceeds of the common should be devoted to the improvement of the district. In fact, I believe, that Mr. Frank Farnell has a written promise from the Government to that effect.
221. But as far as your parliamentary experience goes you do not know of any other case in the colony that has been dealt with in the same way that you wish the proceeds of this land to be dealt with? I cannot say that I do.
222. I suppose you do know of other commons that have been sold where they had more land than was required, and where the proceeds of the sale have been placed to the Consolidated Revenue account? I have no recollection at present of any particular common, but I imagine such to be the case.
223. You know such to be the case, and that commons are being resumed every day and sold, and the proceeds paid into the Consolidated Revenue? Yes. I believe this is an exceptional case.
224. *Mr. Trickett.*] Are you Mayor of Hunter's Hill at the present time? I am.
225. What is the population of Hunter's Hill? I am not in a position to say accurately, but the Council Clerk informed me yesterday that he expected to be able to announce presently that the population was 4,000. I hardly think at present it is as large as that. I should say the population was not much more than 3,000.
226. What is the value of the ratable property? Our rates at one shilling in the £, realized £1,600 a year.
227. Has there been any public agitation in Hunter's Hill for this bridge? There is a very general desire for it, but the Hunter's Hill people do not agitate actively in favour of anything; they only agitate to oppose anything that is being done.
228. Have any public meetings been held? They do not hold public meetings over those matters in Hunter's Hill.
229. There has never been a public meeting in support of this bridge? No.
230. You know that there are three modes of crossing the creek that have been proposed—one is the expensive proposal at a cost of over £30,000; another is to cross the creek a little further up at Dimilia-street; and another to cross the creek further up again at the grounds of the Marist Brothers? Yes. The one by Dimilia-street would be of slight advantage. It would give you a horse track and a footway to the Parramatta River, but I think it would be hardly possible to make a good road up the hill, because the ascent is very steep and the distance short. I do not think you could make a good road by it unless you constructed a very high bridge, almost as high as the one proposed at Joubert-street.
231. When the members of the Committee were in the locality yesterday we saw the commencement of a road made across Dimilia-street;—when was that started? I started that twenty-five years ago.
232. What name was eventually given to it? I have since heard it called "Jeanneret's Folly."
233. And it has never been carried out up to the present time? The Government stopped us.
234. For what reason? Because they said we were cutting off the people above from access to the harbour. The people having the water frontages above, I believe made an objection and the Government stopped the work on that ground.
235. I noticed yesterday that stones were still being shot at the end of this embankment? I do not know whether they are extending it. I think Dr. Manning, in the interests of the asylum, is making a bit of a wharf there. I know that he wished to have the whole of that bay reclaimed, and has applied to have the water frontages to Gladesville Hospital filled in and reclaimed. With regard to the other proposed bridge higher up, midway between Dimilia-street and the present bridge, I do not think that would be of any use whatever. The distance saved would not be great, and the ascent and descent would be very much greater than that of the present road. Then, again, it would be expensive because a lot of private land would have to be resumed.
236. Do you advocate a bridge over Tarbau Creek in the interests of Hunter's Hill or in the interests of the Field of Mars? Well, in the interests of both.
237. But is not the Field of Mars much to the westward of Hunter's Hill? A portion of it is, but all the valuable portion of the Field of Mars lies closely adjacent to Hunter's Hill. As soon as you get away, say 50 chains, from the boundary of Hunter's Hill the Field of Mars Common becomes of comparatively little value. The price realised for land at the boundary of Hunter's Hill was £6 a foot, but when you get back some distance the price goes down to about £40 or £50 an acre.
238. If you were going to the nearest point of the Field of Mars how much would you save by going across the proposed bridge instead of by the present road? To the nearest part of the Field of Mars you would save a little more than half a mile.
239. Not more than half a mile? Between half and three-quarters of a mile.
240. So that really the chief advantage would be to the inhabitants of Hunter's Hill? Unquestionably; the inhabitants of Hunter's Hill would save about a mile and a quarter.
241. Have not the Government expended a large sum of money in connecting Hunter's Hill with North Shore by means of a bridge over Lane Cove River? Yes.
242. What is the distance of Hunter's Hill to the North Shore Ferry by that route? From Joubert-street to the North Shore Ferry it is, I think, about the same distance as it is to Sydney by Harris-street.
243. That is by the present road? Yes.
244. I suppose if there was a bridge connecting the North Shore with Sydney that would be a favourite route from Sydney to Hunter's Hill? Undoubtedly.

245. Is not Hunter's Hill a widespread municipality? There are no shops for any distance along the street. The main street from the Field of Mars to Woolwich—a distance of $2\frac{1}{2}$ miles—is very thickly populated.

246. But that is all to the eastward of this proposed bridge? Two miles of it would be.

247. And would not the people living along that 2 miles be better served by steamer communication with Sydney than by going away from Sydney and coming back by means of the road? They are served in that way now, but unquestionably the main traffic would always be by the river, especially if a tramway is constructed, as is expected. It is the same with regard to Balmain. The people of Balmain will go across by steamer instead of going to Sydney by Harris-street or Pyrmont.

248. Then I suppose we must look at this bridge as much in the nature of a luxury, and not a necessity? You cannot say that it is an absolute necessity at the present time. As I said before, if the inhabitants had not a special claim upon the Government it would, perhaps, be expecting rather much that the Government should construct that expensive bridge just at the present time, although in the near future I think the people might have a very strong claim for it.

249. You made some reference in your evidence to a statement in *Hansard*, and to some statement made by Mr. Garrett when he was Minister for Lands; would you look those up and forward them to the Secretary? Mr. Frank Farnell, who, I understand, is to be examined, has a much more accurate knowledge of the correspondence than I have, and no doubt he will be able to give you the information.

250. But you say there was a statement in *Hansard*? There was a statement made in the House which I shall be very glad to look up and send to the Committee.

251. *Dr. Garran.*] Reckoning from the obelisk in Macquarie Place, how far do you call it from Sydney to Solomon's Corner by Pyrmont Bridge? I think it is about $6\frac{1}{2}$ miles. It is $7\frac{1}{2}$ miles by Harris-street.

252. How far is it from the same point by way of North Shore and the Lane Cove Bridge? I think it is about the same distance.

253. Then so far as a person living at Solomon's Corner is concerned, if this bridge is made it will be as short to go one way as the other? Certainly not—they will save one mile and a quarter.

254. I thought you said it was the same distance? It is the same distance round both ways as the roads are at present, but if a bridge were put across Tarban Creek as proposed there would be a saving of about one mile and a quarter.

255. So far as the people on the North Shore side of Lane Cove are concerned they are reasonably provided for by the new railway are they not? I do not see that the railway is any great advantage to them.

256. Will they not make to the railway? I do not think so.

257. Do you believe that the people living there would cross this bridge and come to Sydney by road? Certainly not. I am speaking of the general population. I do not think that the railway is any use to the people over there at present.

258. But supposing the railway has a good terminus do you not think that it will accommodate the Lane Cove Road population? Yes, the Lane Cove-road, but not the Lane Cove River. It would run along the road.

259. Then you do not look at this bridge as being of any service to them whatsoever? I do not think it is of any service to them.

260. No service purely to Hunter's Hill? No, of service to the general community who like to drive about and see the country. It is a very nice drive—one of the best, if not the best drives about Sydney. You must have noticed the beauty of the drive yesterday.

261. Do you advocate it merely as a tourists route? It is to a large extent a tourists route. It is a very favourite drive from Sydney.

262. It is not so much required for the service of the Hunter's Hill residents as for the convenience of pleasure drivers? That is the case.

263. I understood you to say that you would not advocate this bridge on its own merits purely and simply, if it were not for the funds derivable from the Field of Mars Common? Well, it is my duty to advocate it as a representative of the municipality in these days when a man is bound to get everything he can.

264. I am speaking of the question on its merits? I hardly think, candidly speaking, that we should be justified in asking for the bridge if we had not some special claim.

265. Granting that this fund is still in existence as you contend, is there not also a supposed charge upon it on account of the new tramway? Yes a small amount—only about £19,520.

266. Do you not think, as Mayor of the municipality, that a tramway is on the whole a superior advantage to the proposed bridge? Unquestionably.

267. Then do you not think that the tramway expenditure should be the first charge upon any balance? I do.

268. Then even admitting that there is a sum of money available you do not propose to spend any money on this bridge until you have seen how much it will cost to make the tramway? No. I think the tramway is the first thing that should be considered.

269. Then on your own argument you would not vote anything for the bridge until you had seen whether the tramway would exhaust all the balance? If the tramway was to be secondary to the bridge I certainly should not, because I consider the tramway to be of paramount importance.

270. And you put the bridge second? Yes.

271. Then on your own showing this bridge should wait until we see whether the tramway will exhaust all the available resources? I do not think there is any question about available resources because the Government have already estimated the cost.

272. But they may have over-estimated the cost? But even making a liberal allowance for an over-estimate.

273. Surely as a man with a knowledge of finance you would say "let us see what the tramway will cost first"? Well if I had the disposal of the common I should carry out both works, for I am satisfied that by doing so the Government would be largely in pocket.

274. You would carry out both works if you had to pay any loss out of your own pocket afterwards? I should certainly take the risk of it if I had the common. I would pay for both if they would give me the balance of the common.

275.

C. E.
Jeanneret,
Esq.

6 Mar., 1890.

C. E.
Jeanneret,
Esq.
6 Mar., 1890.

275. At any rate you admit that the tramway has the first claim? Yes.
276. *Vice-Chairman.*] Have you any recollection of the circumstances under which the common known as the Field of Mars was originally granted? Yes.
277. It was granted to certain trustees for certain commoners? Yes.
278. I have just looked at the Act, and I see that those commoners were described as "settlers, cultivators, and other inhabitants of the Field of Mars and eastern farms, in the county of Cumberland." Do you know whether the residents of what are now called Hunter's Hill and Gladsville came within the category of the Field of Mars? They called them the eastern farms, I think.
279. Is it the case that certain grantees had Crown land in the eastern farms with the rights of commonage? I happen to be interested myself in one of the barren blocks that lie about Woolwich. It is utterly destitute of grass and would not feed a mouse, and yet it is described as one of the eastern farms. At any rate we all took part in the surrender of the common, and in fact the Hunter's Hill people were the principal agitators.
280. But the common was in the hands of trustees—those trustees being the Revd. Mr. Turner, Mr. Devlin, and Mr. Isaac Shepherd? Yes, they were elected by the commoners and we always took part in the election.
281. You had a vote in the elections? Yes.
282. You are sure of that? I am certain.
283. Did you own any part of the eastern farms yourself originally, which embraced commonage rights? Yes.
284. Were the commonage rights provided for in the original grant? All I know about it is that I was often called upon to vote for the election of trustees, and one thing and another. I had the right of depasturing my stock, and the right of cutting timber, which other people had not. No one could cut timber on the common, except these who had commonage rights, without express permission from the trustees.
285. You had that right? Yes.
286. Where was your property? At Hunter's Hill.
287. *Mr. Copeland.*] How did you get that right? By virtue of being a freeholder.
288. But did your Crown grant stipulate that you should have any special commonage rights? No, I do not think so. I do not think any of the grants specified that.
289. Then it was simply a common for the use of owners of land, just the same as every other common in the country, except that, along with a few others, it was dedicated for commonage use, and vested in the hands of trustees? Yes. I was under the impression that the parish of Hunter's Hill was more particularly described than appears to be the case from Mr. Lackey's quotation from the Act. When I speak of the parish of Hunter's Hill, I do not mean that portion which is now known as Hunter's Hill, as distinct from the parish of Ryde; but I refer to the whole of that district as the parish of Hunter's Hill. It is now the parish of Hunter's Hill.
290. *Vice-Chairman.*] Hunter's Hill was originally the name of a private property, was it not? I fancy Hunter's Hill is what is now called Ryde. What we call the Municipality of Hunter's Hill was comprised in not more than five or six grants, and a few whaling allotments, and that would embrace the whole parish of Hunter's Hill.
291. *Mr. Copeland.*] Do you know of a single grant, in the whole of that neighbourhood, that had any special conveyance of commonage rights, or any provision with reference to commonage rights? No, I do not.
292. Then it follows that this common was exactly the same as dozens of other commons in other parts of the country? It was granted as a common, and vested in trustees for the use of the people resident in the neighbourhood; but on account of its having been vested in trustees it could not be resumed by the Government at that time, without a special Act of resumption? I think it was vested and re-vested. I think there was a promise, or dedication in some way, and then there was a re-vesting under some special conditions.
293. *Mr. O'Sullivan.*] Would not a large proportion of the traffic that would cross the proposed bridge, be that of pleasure-seekers? A very large proportion of it—persons coming out for a drive, taking a circuit from Sydney to North Shore, and back again over the bridges. It is a favourite drive.
294. Do you think those pleasure-seekers would object very much to drive one mile and a quarter through that beautiful country? I do not think they would make any great objection, but still they would like to shorten the distance, because it is a good long drive—about 14 or 15 miles round—and a great many more would take the drive if it were a mile or so shorter.
295. If, as you admit, the population to the east of the bridge, at what we now call Hunter's Hill, are served by the ferry boats, and if a large proportion of the traffic across the bridge would be that of pleasure-seekers, there would seem to be no immediate necessity for this work? I think it might be taken into consideration that nearly all the people at Hunter's Hill are supplied with their necessaries from Sydney, and that all the working men going to work there drive round in their spring carts. I see great numbers of them going round that way, and the provisions are nearly all drawn by the road. All the business people in Sydney send their carts round that way.
296. Do you think that the construction of this bridge would be likely to militate against your chance of getting a tramway? I do not think it would in the slightest degree.
297. *Mr. Humphery.*] How long does the steamer take to travel between Hunter's Hill and Sydney? From Hunter's Hill wharf to Sydney from 25 to 30 minutes.
298. How long does it take to drive from Hunter's Hill to Sydney? It depends upon the speed of the horse. I can never do it under an hour and 10 minutes.
299. If the bridge were constructed the time would be reduced by 7 or 8 minutes, or at the most 10 minutes? The distance would be reduced by one mile and a quarter.
300. By a mile and 5 chains? That would be about 10 minutes.
301. So that there is a steamer journey of less than 30 minutes against a road journey of an hour? Yes. People would not drive into Sydney on business, that is certain.
302. Is there one public vehicle plying for hire between Hunter's Hill by the road? No.
303. Who are the people who travel from Hunter's Hill to Sydney by road? Only persons who want to drive round to see their friends—persons calling or something of that sort, and persons who want to go to Petersham,

Petersham, Ashfield, Burwood, or any of those western suburbs. All persons wanting to go to any of the western suburbs will, of course, drive; and also all people sending round provisions, goods, and building material, or anything of that sort.

C. E.
Jeanneret,
Esq.

304. If the bridge were constructed the saving in time would not exceed 10 minutes? Not for a swift-going vehicle, but I should think that a horse and cart conveying building material would save 20 or 25 minutes, besides avoiding some very steep grades.

6 Mar., 1890.

305. *Mr. Garrard.*] That would be a very slow horse? Well, it would save a good bit.

Frank Farnell, Esq., M.P., sworn, and examined:—

306. *Vice-Chairman.*] You are a member of the Legislative Assembly, representing Central Cumberland? Yes.

F. Farnell,
Esq., M.P.

307. How long have you represented that district? For three years.

308. You know the site of the proposed bridge over Tarban Creek? Yes.

6 Mar., 1890.

309. Do you think it is a desirable work? Well, there are other works of a more urgent character that might be carried out—for instance, there is a bridge over George's River at Liverpool. At the same time I think it is a necessity that the bridge should be constructed.

310. Do you know anything about the history of the Field of Mars Common? Yes; in 1804 the original grant was issued and trustees were appointed, but owing to disinclination on the part of the trustees to act, the deed of trust lapsed and new trustees were appointed in 1849. Time went on, and the people living at Ryde, Hunter's Hill, and Gladesville were anxious for a quicker means of getting to town. The only accommodation for crossing the river which existed in those days was afforded by a punt. They made a bargain with the Government that if two bridges were constructed, one over Iron Cove and one over the Parramatta River they would cede the Field of Mars Common to the Government on the understanding that if the common were sold the cost of the bridge should be taken from the proceeds, and any surplus should be spent on improvements in the district. In verification of this statement I may quote the following letter, written to Mr. Joubert by Mr. Fitzpatrick in 1861, when the latter gentleman was Under Secretary for Lands. It is as follows:—

Department of Lands, Sydney, 10 July, 1861.

Sir,

Referring to your letter of the 20th February last, submitting, on behalf of some residents of Hunter's Hill and Five Dock, observations in support of the petition presented by Messrs. Lyons, Blaxland, and others from certain persons holding a right of commonage over the Field of Mars Common, I am directed to inform you that, a report having been received from the Acting Surveyor General as to the value of the land, Mr. Secretary Robertson consulted his colleagues on this matter, and they concur in the desirability of obtaining legislative powers to enable the Government to sell the common, as prayed for in the petition under reference, and to apply the money derivable therefrom to the formation of a road and the construction of bridges, so as to connect the north side of the Parramatta River more directly with Sydney, as proposed by the petitioners. Any surplus funds to be expended in other public works of general advantage to the people having a right to enjoy the commonage reserve in question. I am to add that the necessary communication has been made to the Crown law officers, for the preparation of the requisite bill for the purpose.

I have, &c.,

MICHAEL FITZPATRICK.

In conformity with the request of the Minister for Lands a Bill was submitted to Parliament and passed, and it now stands on the Statute Book as 38 Victoria, No. 3.

311. That Act says nothing about building bridges? No; but a distinct promise was made that any surplus after paying for the erection of the bridges should be spent on works which would be of advantage to those who had a right over the common.

312. Do you recollect who were the commoners originally? The commoners were those people who were resident in the Ryde District.

313. Those holding certain grants which carried with them commonage rights? Yes.

314. Do you know who they were? I think Mr. Devlin was one, and the others were Mr. Squire and Mr. O'Donnell.

315. Certain grants were given in the early days to the occupants of what were called the eastern farms with the right of commonage? Yes.

316. What I want to get at is whether the neighbourhood in which the proposed bridges are to be constructed comprised land belonging to the original owners? Yes; it did.

317. Do you recollect who were the original holders of what are now called Gladesville and Hunter's Hill? My father's predecessors were holders of a large estate there containing, I think, 1,000 acres, and which was known as the Squire Estate.

318. That was near Ryde? No; it was within the present boundary of the Municipality of Hunter's Hill.

319. *Mr. Garrard.*] Where is the boundary of Hunter's Hill;—how close is it to Gladesville? Gladesville just joins Hunter's Hill.

320. It comes across Tarban Creek westerly? Tarban Creek forms a division between the Ryde Municipality and Hunter's Hill.

321. Hunter's Hill does not go into Gladesville? No.

322. You do not know of your own knowledge whether any of the grants for the eastern farms, Ryde, or Hunter's Hill, contained any special reference to the rights of the grantees to the common? That I could not say. I can only speak from hearsay.

323. There were certain grantees there, then a common was given to them, and there were no specific rights under their deed of grant to this common? I do not know the provisions contained in the deed.

324. Do you think the Government would be justified in spending money on a bridge at this particular place, which would serve so few people and cost so much, when after all it would only save about 1 mile and 5 chains? It saves backwards and forwards over 2 miles. As I said before, it is under peculiar circumstances that we ask for the construction of this bridge.

325. Putting on one side altogether any compact between the Government and the commoners as to the expenditure of money realised from the sale of the Field of Mars, do you think the Government would be justified in erecting a bridge there now, if the money had to come out of the ordinary consolidated revenue? If the money were to come out of the ordinary consolidated revenue and there were funds at the disposal of the Government, I should say, "Yes." But if the money were to come of a loan, I should say, "No;" because I do not believe in that principle. I have always opposed the building of bridges out of loan votes.

- F. Farnell,
Esq., M.P.
6 Mar., 1890
326. Is it not a fact that the people of Hunter's Hill and those on the northern side of Lane Cove River who would be served primarily by the erection of this bridge now go to and from Sydney principally by boats? A great many people travel by the boats, but a greater number of pleasure seekers drive round the road on Saturday afternoons and Sundays. And then there are a lot of people who live over Hornsby way who take a route across Lane Cove bridge, and right round past the Gladesville Asylum. The people of Hunter's Hill who have rights in connection with the Field of Mars, and who claim that this bridge should be built, are not influenced in the matter by selfish motives but are acting more in the interests of tourists and others who would use the bridge. It is in the interests of the general public that we are asking for this bridge, and not in the interests only of the people who live at Hunter's Hill.
327. So far as the people of Hunter's Hill are concerned very few of them would use it if it were built? They would all use it who had vehicles and wanted to go to Sydney.
328. How many people at Hunter's Hill have vehicles of their own? I do not know. There is a population in the district of about 4,000.
329. But as a matter of fact, when they come to town they usually come by the steamer? Yes; but if they wanted to visit any of the other suburbs they would have to go round by the road, which is not all that could be desired.
330. Will you look at this plan. The red line across Tarban Creek shows the proposal before the Committee. The blue line shows the alternative proposal of the Department for a bridge. Do you think the latter would be of any use to the people of Hunter's Hill and Lane Cove? If you could construct that at a somewhat less cost and make it a wooden instead of an iron bridge it would meet the requirements and would shorten the distance.
331. Not so much? No; but the people would be satisfied to take the alternative proposal.
332. And with regard to the proposal indicated by the pencil line further up? It would be better not to have it at all. We might just as well go right round.
333. *Mr. Trickett.*] With regard to people going to the Field of Mars, I apprehend that this bridge would not be of very much use? Yes, it would be of use to those people who have purchased land at the point nearest to Sydney.
334. But the Field of Mars is considerably to the west of Hunter's Hill, is it not? No, not exactly to the west, more to the north-west.
335. However, the bridge would be of greater benefit to the people of Hunter's Hill than to those living at the Field of Mars? It would be of equal benefit to the purchasers of the Field of Mars, who, I believe, had a promise that the bridge would be erected.
336. What promise was that? It was a sort of informal promise made by the Minister.
337. On what occasion was it made? It was made by my father when he was Minister for Lands; but I think his proposal was vetoed by the other members of the Cabinet—the same as the tramway proposal.
338. *Mr. Jeanneret*, in his evidence, said that some statement as to this bridge was made in Parliament by *Mr. Garrett*; do you know of any such statement? Not as to the bridge, but as to the tramway. I have had promise after promise.
339. But not as to the bridge? No.
340. We would be glad if you could enable us to ascertain whether any promise with regard to the bridge has ever been made; are you aware of any? I know it was stated by my father at the sale, or at any rate to the purchasers—it may have been stated by the auctioneer on my father's behalf,—that the bridge would be constructed. This matter was first taken up by *Mr. Tornaghi*, when he was Mayor of Hunter's Hill, about ten years ago, and I renewed the application a few months ago, with the result that the proposal was referred to this Committee, but further than that I know nothing. I do not know of any direct promise having been made in the Assembly.
341. Has there been any agitation for this bridge in Hunter's Hill that you are aware of? I know this, that when I first contested the constituency I advocated the construction of the bridge, and my sentiments were cheered, if that can be taken as any indication.
342. Do you not consider that the construction of this bridge at the present time at such a large expense would be more a luxury than a necessity? It is not of that urgent nature that other proposals might be, as, for instance, a bridge over George's River, where 30 lives have been lost, and where nothing has been done. I should say that that deserves to be attended to before Tarban Creek, most certainly.
343. You look upon it rather as completing the series of bridges? Yes.
344. That connecting the Parramatta bridge with the Lane Cove bridge, it would make a direct line of bridges in that direction? Yes.
345. I think in one of your letters to the Department you said that a foot-bridge might answer all purposes? Yes; I think a foot-bridge might answer. It would shorten the distance for foot passengers. At one time it was proposed to have a tramway running across the Parramatta River bridge, and I thought the people of Hunter's Hill might use the tramway, and that a foot-bridge would give them easier access to the tramway.
346. Even if the bridge were constructed, would not the greater part of the people of Hunter's Hill still go to Sydney by the steamers as the quickest and shortest route? There is no doubt about that.
347. *Mr. O'Sullivan.*] From your evidence I gather that you consider that this bridge is not a pressing work? No; it is not a pressing work.
348. And that, if the alternative bridge were constructed, that would satisfy the requirements of the district for some time to come? Yes. I should like to say in regard to the sale of the Field of Mars, that the highest price realised at the sale was £300 per acre. When my father was Minister for Lands he received an offer to purchase the whole common for £750,000, but he could not deal with the matter except by special Act of Parliament.

Angelo Tornaghi, Esq., sworn, and examined:—

- A. Tornaghi, Esq.
6 Mar., 1890
349. *Acting Chairman.*] You live in the neighbourhood of Hunter's Hill? Yes; I have lived there for twenty-eight years.
350. You know the site of the proposed bridge? Yes.
- 350½. Do you consider the work a desirable one? If a bridge were constructed there it would shorten the distance to Sydney by a mile and a quarter, and avoid a big hill. I may say that I was a large purchaser of land at the Field of Mars, and gave as much as £300 an acre because I heard that there was to be a bridge and a tramway, otherwise I would not have paid such a price. 351.

351. Is the proposed site the one where the people desire to have a bridge? Yes; the matter was decided long ago. A. Tornaghi,
Esq.
352. Is there any division of opinion as to the site? I have never heard of any.
353. All agree that it is the proper place? Yes. It is in a straight line from one bridge to the North Shore. It will be quite a straight line all through. 6 Mar., 1890.
354. In what parish is your property? Hunter's Hill.
355. Do you come under the denomination of a commoner. Are commonage rights attached to your property? No. The property I bought was in Ryde, but we expect to divide it and make it so that it will always be in Hunter's Hill. The common was in the Ryde district.
356. *Mr. Copeland.*] I believe you were present when the Field of Mars Common was sold by auction? Yes.
357. Did you make any purchases at that sale? Yes. Mr. Farnell was there, and he said there was to be a bridge and a tramway soon, and it was on the strength of that statement that I bought the land. I was the biggest buyer and paid a very high price.
358. I suppose there were a good many people present at the sale? Yes. At the second sale, which took place at the auction rooms, I bought some more land, and on that occasion the auctioneer stated that it had been decided in the Cabinet that there should be a tramway and communication to the spot.
359. Do you say that the auctioneer made that statement when he was selling the land? Yes; on the second occasion.
360. Did the auctioneer make any public statement when the first sale took place? No; the statement was made by Mr. Farnell.
361. The auctioneer himself made no public announcement at the first sale? No.
362. Did Mr. Farnell make a public announcement, or was it merely a conversation? He made it there. He said that a tramway would soon be there, that it would be a great convenience to go quickly to Sydney, and I bought land on that very account.
363. The Committee would like to know how Mr. Farnell made this statement. Did he get up and make a speech, or did he get on a stump and make the announcement? It is some years ago now, and I could not say. He was close to the auctioneer, and I heard him say that a tramway or communication would soon be made to the spot to bring it within 25 minutes of Sydney.
364. If this tramway is constructed, I suppose that all Mr. Farnell promised will have been carried out? From that point of view it might be so, but if I am not mistaken, I remember on one occasion going with a deputation to Mr. Lackey, then Minister for Public Works, when I heard it stated that a bridge was required.
365. Are you alluding to the bridge over Tarban Creek? Yes.
366. Did Mr. Farnell make any statement at the time of the auction sale to the effect that a bridge would be built by the Government over Tarban Creek? No; I do not remember that he made any statement of that kind.
367. Were you at the second sale? Yes.
368. And heard what was said by the auctioneer? Yes. The auctioneer said that the Cabinet had decided to have quick communication by tramway.
369. Did he make that statement publicly before the sale took place? Yes.
370. That a tramway was to be built? A tramway—very quick conveyance to the place.
371. But did the auctioneer make any reference to a bridge over Tarban Creek? No; that I do not remember.
372. Suppose the Government construct this tramway to the Field of Mars, will you not then consider that they have complied with all their promises? I suppose it is what I understood at the time, but the bridge was promised to us long ago. I was Mayor at the time, and I came to Sydney and went to some expense to have soundings taken.
373. Have you not had sufficient experience of Ministers to know that a great many things are promised that are not performed? But I think that when a Minister promises a thing it should be performed.
374. You know that promises are generally made under the supposition that they will be carried out if convenient? Well, this bridge is very much needed to open up all that country, and afford communication right through with the North Shore.
375. With regard to the first sale at the Field of Mars, are you quite sure that Mr. Farnell, standing alongside the auctioneer, made that public announcement? Yes, I am positive of that.
376. Before the sale took place? I cannot say whether it was before or after the sale, but I clearly heard Mr. Farnell, standing close by the auctioneer's side, make that statement.
377. What did he say? He said "We will soon have communication to go through in 20 or 30 minutes from Sydney."
378. *Mr. Garrard.*] By road? I believe he meant a tramway.
379. *Mr. Copeland.*] Did he mention the word tramway? I believe he did.
380. What year was that in? I cannot remember. It was five or six years ago. I bought on that day over £3,000 worth of land.
381. *Mr. Garrard.*] Will you tell us the name of the auctioneer who was on the ground, and also the auctioneer who sold at his rooms? I cannot recollect the names.
382. Were the auctioneers Messrs. Mills and Pile? It was the stout gentleman, Mr. Pile.
383. Was he the auctioneer on both occasions? Both Mr. Mills and Mr. Pile were at the sale on the ground, and at that which took place at the auction room there was only Mr. Pile.
384. *Mr. O'Sullivan.*] When you gave £300 per acre for the land did you have much competition? Yes, there was competition. Of course, directly it was stated that we should have such quick communication, there was competition at once. I should not have bought so much but for that statement, as I already had plenty of land.
385. Was it the competition that forced you to pay the £300, or were you induced to do so by the prospect of getting a tramway? It was the prospect of the tramway that caused the competition.
386. You believe that the prospect of getting a tramway induced a brisk competition? Certainly; it induced me to compete at all events.

TUESDAY, 11 MARCH, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN.)

The Hon. JOHN LACKEY.

The Hon. ANDREW GARRAN.

The Hon. FREDERICK THOMAS HUMPHERY.

The Hon. WILLIAM JOSEPH TRICKETT.

JACOB GARRARD, Esq.

HENRY COPELAND, Esq.

EDWARD WILLIAM O'SULLIVAN, Esq.

JOHN HURLEY, Esq.

The Committee further considered the proposed Bridge over Tarban Creek, Parramatta River.

George Pile, Esq., auctioneer, sworn, and examined.—

- G. Pile, Esq. 387. *Mr. Copeland.*] I believe you were the auctioneer who sold the land at the Field of Mars on the occasion of the first sale. Yes.
- 11 Mar., 1890. 388. Did you receive any instructions in writing from the Lands Department prior to the day of the sale? I do not recollect receiving any special written instructions beyond our appointment as the auctioneers for the sale.
389. Did you receive any authority in writing from the Department to make any statement with reference to the future intentions of the Government about spending the proceeds of the sale. No.
390. Did you at the time of the sale make any statement in a business way to the effect that the proceeds of the sale would be expended in constructing a tramway or in building bridges? No, neither verbally, nor in writing, did I make such a statement.
391. What statement did you make? At the first sale we, as auctioneers, made no promises on the ground, but promises were made in my hearing by the then Minister for Lands, Mr. Farnell.
392. Was that at the first or at the second sale? At the first sale. Mr. Farnell made this statement on the ground. We made no promises.
393. Did Mr. Farnell make the statement publicly, the same as you read out the conditions of sale? Mr. Farnell was surrounded by a number of friends and purchasers, and he told them in my hearing, not as to how he would expend the money, but that the Government would construct a tramway.
394. That was said merely in a conversational way? Yes.
395. It was not stated from the rostrum? No. But at the second sale we were authorized by the Department to promise a tramway.
396. What was the date of the first sale? It was about 1885, I think, and the second sale was held in our rooms a few days afterwards.
397. The second sale was merely to sell the odd pieces, I suppose? Yes.
398. On that occasion you were instructed in writing by the Department to make this promise? Probably by the officers of the Department.
399. By whom? By a Mr. De Lowe.
400. He instructed you to state that the Government would build a tramway to the Field of Mars? I think it was at that sale. I was informed that there was a Cabinet meeting over the question.
401. I suppose you made the statement? We did at the time of the sale. At the first sale the only promise made was by the Minister for Lands himself.
402. Do you think the making of that promise induced any persons to purchase lots? Yes. The general question asked of us by numbers of purchasers at the sale was, "will there be a tramway constructed, because otherwise how are we going to get to this land?" and we said: "We will make no promises at all." In point of fact, at the commencement of that sale I made no speech whatever; I simply read the conditions of sale.
403. At the first sale? Yes.
404. But at a subsequent sale, on the authority of the Department, you stated publicly, as a condition of the sale, that a tramway would be made? Yes.
405. Are you sure it was Mr. De Lowe who authorized you to make the statement? He was the principal who instructed us, there were two other clerks. My memory is quite clear that the instruction was given by one of the officers of the department, and I think it was Mr. De Lowe.
406. *Mr. Trickett.*] Was Mr. Farnell's promise made at the outset or at the conclusion of the sale? The sale was a very long one, and at the end of three hours I got down from the rostrum, and my partner, Mr. Mills, took my place. I went over to speak to Mr. Farnell. I had to wait a little while before I could get an opportunity of saying anything to him. But I heard him promise distinctly to a number of people—at least half-a-dozen—that there would be a tramway, or that the Government would construct a tramway.
407. Had much of the property been sold then? A very large quantity.
408. The bulk of it? When I got down from the rostrum I suppose that fully one-half of the land submitted to auction had passed the hammer, one way or the other.
409. Would that be the greater part that would be benefited by a tramway? I cannot say that. The lots are so irregularly arranged in numbers, jumping from one side to the other, that it is very difficult to say that.
410. If you do not remember who was the officer that gave the instructions to you, possibly you would remember when you received them—was it on the morning of the sale? It is such a long time ago that I cannot pretend to remember positively, but on the morning of the sale we were informed that there had been a Cabinet meeting, and we were authorised to announce that a tramway would be constructed to the Field of Mars, and we made the announcement.
411. Were many allotments sold at that sale? A considerable number.
412. *Mr. Garrard.*] For how long did Mr. Mills continue the sale after you left the rostrum on the first occasion? I got into my buggy almost at once and drove home as quickly as I could.
413. You don't know how much Mr. Mills sold that day. Did he sell as much as you did? About half as much in area.
414. Do you think that the making of this promise by Mr. Farnell had anything to do with the sales effected by him? I think so, for from what I subsequently heard, I think it had also with regard to a large

large portion of the land which I sold. Mr Farnell was surrounded by a number of friends and admirers, G. Pile, Esq. and he was within twenty yards of the rostrum for a considerable time before I got down.

415. So you have every reason to believe that Mr. Farnell made this promise some time prior to your getting down from the rostrum, and that it had a good deal to do with the success of your sale? I think that to a large extent the very high prices I got—three or four times the value—were due to the belief that there would be a tramway constructed to the ground. 11 Mar., 1890.

416. *Mr. O'Sullivan.*] You said just now that when Mr. Farnell made this statement he was surrounded by a number of friends and purchasers? Admirers I said.

417. But you used the word "purchasers" in the first instance. Would not that imply that it was made after the land had been sold to them? I cannot pretend to say that. I only know that what he said was heard not only by those he was addressing, but by others who were standing near him.

418. Could his voice be heard above the voices of the bidders? I think it was pretty well understood by the crowd that Mr. Farnell had promised that there should be a tramway.

419. Had he been promising that all the time the sale was on? I think that for a considerable portion of the time he had made the statement and it was generally understood that he had.

420. *Mr. Copeland.*] It was "in the air,"? Yes, like federation is now.

421. *Mr. Humphery.*] Do you remember the amount realized at the second sale, at which a distinct promise was given? I cannot recollect the amount, but the total sum realized at these sales was somewhere about £57,000.

422. *Mr. Hurley.*] Can you give us any idea as to the value per acre of the lands still unsold in the whole of the Common? I should think it is worth from £15 to £20 an acre.

423. Do you think it would average that price right through? I think so from what I know of the land.

Mr. Robert Henry De Low, Officer-in-charge of the Miscellaneous and Alienation Branches in the Lands Department, sworn, and examined:—

424. *Mr. Copeland.*] What position do you occupy in the Lands Department? I am officer-in-charge of the Miscellaneous and Alienation Branches. Mr. R. H. De Low.

425. You held a similar position when the Field of Mars Common was sold by subdivision? I was in charge of the Alienation Branch at the first sale, and in charge of both branches at the second sale. 11 Mar., 1890.

426. Do you remember giving instructions to Mr. Pile, of the firm of Mills & Pile, to sell the allotments at the first sale? I recollect that instructions were given to him, and I take it that they would go through me—of course with the authority of my superior officer.

427. Do you remember the instructions which were given at the second sale? Yes.

428. Do you remember giving those instructions yourself? I believe I gave them myself.

429. Did you give any instruction with reference to the auctioneer announcing that the Government had decided to build a tramway to the common? I do not recollect positively giving that instruction, but I have every reason to believe that I did, because I find a Cabinet minute amongst the papers.

430. Will you read the minute? It reads as follows:—"Cabinet authorize the Minister for Lands to announce in connection with the sale of the Field of Mars Common that the Government intend to construct a tramway to that locality." It is initialled H.P., and dated 18th April, 1887.

431. The Parkes Government were in office at that time? Yes.

432. Who was Minister for Lands then? Mr. Garrett.

433. I suppose you conveyed that decision to the auctioneers? I have every reason to believe I did.

434. I suppose, as a matter of fact, that decision was arrived at with a view to induce persons to buy the land? I have every reason to believe so from the papers. The sale to which reference is made there—the second sale—was announced to take place at the rooms of Mills & Pile, on the 24th March, 1887. Mr. Garrett announced to the Legislative Assembly a day or two before the date of the sale that he had decided to postpone the sale in order to consider the fate of the Land Bill then before Parliament, and the route which the tramway should take to the Field of Mars. The sale was postponed and it took place on the 5th May, 1887.

435. *Mr. Garrard.*] What is the date of the first sale? Saturday, 26th September, 1885.

436. And there was a continuation sale—which has been referred to as the second sale—in Mills & Pile's rooms two or three days afterwards? On Wednesday, the 30th September, that is part and parcel of the first sale.

437. You speak of it as one sale? Yes.

438. Did you give any instructions with reference to that sale? None whatever.

439. Were you on the ground on the Saturday? I was.

440. Was Mr. Farnell present? Yes, he was not near the auctioneers but in the crowd at the back.

441. Did you hear him promise or say anything in connection with the construction of a tramway? No. I heard no promise whatever made by Mr. Farnell.

442. Who officiated as auctioneer? Mr. Pile started the sale, and Mr. Mills relieved him when I should say he was really worn out.

443. Was much land sold after Mr. Mills mounted the rostrum? Yes a fair quantity.

444. Half as much as Mr. Pile had previously sold? I am not in a position to say that.

445. Were you close to Mr. Farnell during the sale? No.

446. So that, without you hearing it, he might have stated, not to the auctioneers, but to the people round about him that a tramway was to be constructed? It was possible for him to do so.

447. In connection with the continuation sale was any instruction given to Mills & Pile about the construction of a tramway? None whatever that I know of.

448. They had no instructions in addition to what they had for the previous Saturday's sale? None whatever.

449. You are quite sure that none were given? Quite, because they would have come through me if they had been given.

450. The second sale took place on the 5th May, 1887, were you present on that occasion? I was.

451. Was any promise held out by the auctioneer, on behalf of the Government, with reference to a tramway? I believe Mr. Pile announced the contents of the minute which I have just read.

452. On the ground? In the rooms, in Pitt-street.

453. There was no continuation of that sale? No.

£454.

Mr. R. H.
De Low.
11 Mar., 1890.

454. Were you instructed by the Minister, or by your superior officer, to inform Mr. Pile of the contents of the minute? I was instructed to convey the terms of the minute to the firm.
455. Do you think that the publication of that minute had anything to do with the getting of the prices which were obtained at the second sale? I think it influenced the sale.
456. Very much? I am not prepared to say that.
457. It had an influence on the sale? That it had an influence I feel certain.
458. There have been no other sales since then in connection with this common? There have been sales since then of parts of the Field of Mars, more particularly those near the Homebush-Waratah line. The parts referred to in the minute are those which are known in the office as the Lane Cove parts of the common.
459. Have there been any auction sales of parts of the common near Ryde? No; but there have been sales of the parts situated at Beecroft and Carlingford.
460. Was any promise made then about expending the proceeds of the sale in improving the district? Not that I know of.
461. As a matter of fact large improvements—particularly the construction of roads—had been made before the sales took place? Yes, by the Government.
462. How much was realised at the first sale, in 1885, and at the sale in 1887? Speaking from memory I believe that the sale held on the 26th and 30th September realised £62,000. I am not in a position to say what was realised at the sale in 1887.
463. Can you state the amount approximately—was it more or less? Far less.
464. Whatever promise was made about the tramway would only apply to the sale on the 5th May, 1887? In my opinion it would apply only to that sale.
465. *Mr. O'Sullivan.*] Had you heard anything of this promise before the sale of 1887? I had heard it rumoured that the Government had promised at the sale, on the 26th September, 1885, that a tramway would be made. I had heard it as a matter of talk amongst citizens.
466. Did it come before you, as a public officer, having charge of that sale? No.
467. The first official notification you got of the promise was the Minute of 1887? Yes.
468. *Chairman.*] Will you supply a return, showing what was realised for each allotment at the different sales? Yes.
469. *Mr. Garrard.*] Can you state whether the sale on the 5th May, 1887, comprised parts of the Lane Cove portion of the common, the same as the sale of 1885 did? It comprised the lots unsold on the 26th September, 1885, and a few in the Homebush-Waratah part of the common.
470. The bulk of the sale was virtually the ground which was unsold in 1885? The greater part of it was.
471. *Mr. Copeland.*] At either of these sales was any reference made to building a bridge over Tarban Creek with the money? Not that I know of.
472. Do you know that the Department were in any way committed to the building of a bridge over this creek? Only so far as I was aware from the contents of the Field of Mars Resumption Act.
473. Does it contain any reference to that bridge? Not by name.
474. It refers to a bridge across the Parramatta River? Yes.
475. And that bridge was built. Yes.
476. There is no reference in it to a bridge over Tarban Creek? None whatever.
477. You are not aware of your Department being committed in any way to building a bridge over the creek? No.
478. *Mr. Garrard.*] Is there any record in the office of the conditions under which the commoners gave up this common to the Government—is there any correspondence from the commoners agreeing to give up the common on certain conditions? It is some time since I looked through the papers, but I am of opinion that there is a very old letter amongst the papers containing some expressions to the effect that the people up there gave up their common on condition that money should be spent in the district.
479. Did not the Field of Mars Resumption Act virtually embrace, and was it not accepted by the Commoners as a contract of the Government with them? I am not quite prepared to speak on that point. My view of the matter, from my official knowledge, is this; the common was resumed because it was nothing more or less than a piece of waste land at the time, and it was not right that it should remain so close to Sydney without there being any means of alienating or dealing with it.
480. *Mr. Copeland.*] There were a number of alienations of land round this common in the early days of the colony—have you ever seen a copy of any of the original grants? No.
481. Do you know whether any of those original grants conveyed any right of commonage to the Field of Mars Common? No.
482. How did these people come into the position that they were able to dictate to the Government or to offer any terms to the Government as to what was to be done with the proceeds of the sale of the common? I do not know.
483. Was not the position taken up by these commoners different from the position taken up with reference to any other common in the colony? I think not.
484. Do you know any other instance where commoners have had the proceeds of the sale of their common expended or promised to be expended in constructing a bridge or a tramway? I do not.
485. Would you not be able under the present law to resume this common without any necessity for a special Act of Parliament? I am inclined to think not, unless it can be clearly shown that the use for which it was granted has failed.
486. But when land is required for public purposes can it not be resumed in this way by laying a notice on the table of the Assembly for so many days, and then if no objection be taken to the proposed resumption within that time the notice has the force of law? The 105th Section of the Act of 1884 requires, according to the way I have been reading it that the purposes of the trust shall have failed.
487. Do you remember that a large common was resumed during 1886, when I was in office, somewhere near Windsor? Yes; the Wilberforce Common.
488. No special Act of Parliament was passed in the case of that common, and it was vested in trustees the same as the Field of Mars was, was it not? Yes.
489. Under the present law there would be no necessity to pass a special Act of Parliament, in order to resume the Field of Mars Common, it would be resumed under the Act of 1884? No. In the case of the Wilberforce Common we did issue a notice under the 105th section of the Act of 1884. We thought at the

the time that the notice was effective, but shortly afterwards when the commoners called the whole action into question the Attorney-General gave it as his opinion that our notice under that section could in no way cut out the deed of grant, that the deed of grant having issued it must prevail, and therefore the action of the Department was all null and void.

Mr. R. H.
De Low.
11 Mar., 1890.

490. Who gave that opinion? I do not remember at this moment.

491. Has not that common been resumed? No.

492. *Mr. Lackey.*] I suppose you know from the circumstances under which the commoners held the Field of Mars Common that their rights were given in the early days of the colony? Yes.

493. You have heard of the Eastern Farms? Yes.

494. They consisted of grants of land by deed of grant, or by purchase out in the Ryde district and that locality? Yes.

495. And as an inducement to people to purchase or reside there, and cultivate commonage was given over the Field of Mars Common, was that not so? I am not acquainted with the early details, because the office records do not help us in that respect. I rather take that to be the correct view, following the old English precedent as regards commoners' and villagers' rights.

496. Of course you know that the locality was one of the earliest settled agricultural places in Australia? Yes.

497. And that a great number of farmers settled there and were given grants in the early days of the colony owing to its contiguity to Sydney, and its adaptability for agricultural pursuits? Yes.

498. I think the Ham Common was granted about the same time under similar circumstances? Yes.

499. Pasturage rights were given to the Ham Common on the banks of the Hawkesbury in addition to whatever rights were conveyed by the grants of land; so that the commoners in each instance had an inherent right to the common, and the common could not be taken away from them under similar conditions to those under which reserves can be taken under the present law;—has that point occurred in the administration of commonage rights in the Lands Office? Not that I am aware of.

500. I suppose you do not recollect much of the early history of the Field of Mars Common? Only as regards some of the trespasses there, the greater number of them were rather encroachers than trespassers on the common owing to mistaken boundaries.

501. Are you aware that the commoners never agreed unanimously to any single act? No.

502. Are you aware that a resolution or Bill was brought before Parliament in 1862 or 1863 to enable the Government to dispose of the common? I have seen either a resolution or a reference to the matter among the official papers.

503. It was brought forward by a commoner who was a member of the Assembly? I do not recollect the particulars.

504. Do you recollect the rights of commonage followed the issue of grants? I do not.

505. *Mr. Copeland.*] Did you ever know a Crown grant which did convey rights of commonage? I never knew of a case of that kind.

506. *Chairman.*] Under the "Field of Mars Resumption Act" the Government are required to carry the proceeds of the sale of this land to a separate account, are they not? Yes.

507. Has that been done? I have reason to believe it has been done in the Treasury books.

WEDNESDAY, 12 MARCH, 1890.

Present:—

JOSEPH PALMER ABBOTT, Esq. (CHAIRMAN).

The Hon. JOHN LACKEY,
The Hon. ANDREW GARRAN,
The Hon. FREDERICK THOMAS HUMPHERY,
The Hon. WILLIAM JOSEPH TRICKETT,

JACOB GARRARD, Esq.,
HENRY COPELAND, Esq.,
EDWARD WILLIAM O'SULLIVAN, Esq.,
JOHN HURLEY, Esq.

The Committee further considered the proposed bridge over Tarban Creek, Parramatta River.

Francis Kirkpatrick, Esq., Chief Inspector of Public Accounts, and Consulting Accountant, sworn, and examined:—

508. *Chairman.*] What is your position in the Treasury? I am Chief Inspector of Public Accounts and Consulting Accountant.

509. You are aware that in 1874 an Act was passed to authorise the resumption and sale of the Field of Mars Common? Yes.

510. Provision was made in that Act by which the proceeds of the sale should be carried to a separate account from the Consolidated Revenue; has that been done? No. I might, perhaps, explain to the Committee that the authority is to carry the money "to the credit of a separate fund." That generally means a trust account; but the Act goes on to say "or account as part of the public revenue," consequently it was credited to the public revenue.

511. Has it been carried to a separate fund or account? No; it has been carried to the public revenue included in the heading—"Auction sales, Crown Lands."

512. Then you have no account in the Treasury which will separately show the proceeds of the sale of the land resumed under the Act? Not separately.

513. And the proceeds have been carried to the general revenue account under the heading of Auction Sales? Yes.

514. And no separate account has been kept? No.

515. When was the first sale? In September, 1885.

516. What were the proceeds of the sale? Perhaps it would be more satisfactory if I were to put in a statement showing the whole amount realised, although it has not yet all been received. The total amount we have received from the sales of 1885 is £61,473 15s. 11d.

517. When did the Act giving credit come into operation? In 1887.

518. Has the whole of the money been paid on account of the sales of 1885? Yes.

519. When was the next sale? In October, 1886; it realised £6,637 5s. 9d.

520.

F.
Kirkpatrick,
Esq.
12 Mar., 1890.

F.
Kirkpatrick,
Esq.
12 Mar., 1890.

520. What was the acreage at each sale? I have not that information with me. I should like to explain that in connection with the sales of 1885 and 1886 there were balances unpaid, the deposits having been forfeited to the extent of £2,737 16s., which would, of course, reduce the figures I have given to that extent.
521. Why? Because we shall not receive the amount.
522. That is the whole amount paid to the Treasury? No, payable to the Treasury.
523. When was the next sale? In May, 1887; it realized £1,915 7s. 7d.
524. The credit system came in then. What balances are due on those sales now? It was impossible for me to ascertain in the limited time I had to make up this statement.
525. You only know the amount you have received? The total amount of the sales.
526. *Mr. Copeland.*] The first sale in 1887 was held before the Deferred Payments Bill was passed? Yes.
527. They were all cash sales prior to that time? Yes.
528. I take it that you are getting your information from the Lands Department? No, it is taken from our own books in the Treasury.
529. *Chairman.*] But the information as to the sales and the cash payment would be furnished in the first instance by the Lands Department? Undoubtedly.
530. *Mr. Garrard.*] I understand that the first three sales were lump sums before the deferred payment system came in, and are subject only to those lapses which have been mentioned? Yes, to the extent of £2,737 16s.
531. *Chairman.*] When was the next sale held? On the 9th July, 1887, at Beecroft, it realized £3,851 15s.
532. Was that the cash paid on the total amount? As I understand it, it is the total amount of the sale.
533. When was the next sale? At Beecroft, on the 27th August; it realised £8,095.
534. Do you mean to say that in the Treasury you have no means of showing what money has been paid on each of those sales? Yes, we have, but it would take some little time to take it out.
535. You can get a return for the Committee giving this information? Yes.
536. Do you know what sum has been debited against these proceeds for the erection of bridges over the Parramatta River, or any other river up there? I could not say.
537. Are there no accounts in the Treasury to show that? We could make it out.
538. As a charge against the general revenue but not as against these particular proceeds? We have not got a separate account of these particular proceeds.
539. What is the explanation for not carrying these amounts to a separate account—it is public revenue? It is.
540. Does that do away with the obligation to keep a separate account as the Legislature has said you shall do; the assessments under the Sheep Act and Rabbit Act are treated as part of the public accounts, but separate accounts are kept for each of them? Yes, they are different accounts, they are both trust accounts.
541. Is not this? This is a revenue account.
542. Do you not see that the Legislature has said that you shall keep a separate account. What right has the Treasury officers to say they shall not? I do not know, unless perhaps they may have understood it to mean that it is to form part of the revenue as stated in this section.
543. Can you give any reason why the Treasury has said there shall not be a separate account kept as this Act provides? I cannot give any reason except that it has not been done.
544. You have treated the proceeds as part of the public revenue, and carried them generally to the account under the head of auction sales? Just so.
545. *Mr. Copeland.*] Have you any separate account for the Church and School Lands? Yes.
546. Are the proceeds from these lands kept in a separate account? That is a trust account.
547. And it is kept separately? Entirely.
548. Still the proceeds are treated as revenue? At the end of the year the amount which is over and above what is required, is transferred to the consolidated revenue. It goes into the general revenue at the end of the year.
549. It is merely kept separately so as to comply with the Church and School Lands Act? Yes; and, furthermore, the expenditure all through the year is charged to the receipts of the year, and at the end of the year the balance is transferred to the consolidated revenue.
550. Was there anything to prevent you giving effect to this Act any more than there is to the Church and Schools Land Act, could you not have kept this account separately, the same as you have kept other accounts? The Church and School Lands account is not kept separately under revenue, it is kept separately as a trust fund; but the proceeds of the sale of the Field of Mars the law directs should be kept as part of the public revenue. There seems to have been some misunderstanding in that respect.
551. The Church and School Lands account is a separate and distinct account by itself? Yes.
552. No funds from any source except from the Church and School Lands are paid into that account? That is quite correct.
553. Is there any accountant's reason why these funds should not have been treated in exactly the same way as the Church and School Lands fund? No, with the exception, that the Act says it is to form part of the public revenue.
554. Does not the money from the Church and School Lands form part of the public revenue at the end of the year? Yes; the balance over and above what is required is transferred at the end of the year.
555. I suppose you are aware that the Act provides that the money shall be kept in a separate account, and that the proceeds shall be devoted towards building a bridge over the river? I am aware that the Act provides the funds shall be kept in a separate account. With reference to the appropriation, I think that it is a matter for Parliament, as the Act says that the proceeds of the sale "may" be applied—not "shall" be applied.
556. If I understand you aright the land sales at the Field of Mars realized a total of over £81,970? As a matter of fact, the total sales amount to £95,938 7s. 6d. less £2,737 16s., being the amount of the balances unpaid, the deposits having been forfeited.
557. There were other sales then? On the 10th March, 1888, there was a sale at Beecroft realizing £4,360 10s.; on 30th November, 1889, one at Carlingford, realizing £6,121 12s. 1d.; on the 7th December, one at Beecroft, realizing £2,153 10s.; and on the 19th December, one at the Field of Mars, realizing £1,329 11s. 2d.

558. There has been no special appropriation from that fund? I can scarcely answer your question, as the revenue is treated as a whole.
559. There has been no special appropriation from these particular proceeds? Not that I am aware of.
560. Can you state from what source the funds were provided for building the bridge over the Parramatta River? No, not at this moment.
561. At any rate, you can tell us that the money was not specially appropriated from the proceeds of these land sales? No, no separate account was kept of them.
562. Can you state the cost of the bridge over the Parramatta River, and of the bridge over Iron Cove? No; I have not looked up these matters.
563. *Chairman.*] Will you supply a return showing the cost of each bridge, and whether the money came from the general revenue or from the loan funds? I will obtain the information for the Committee.

F.
Kirkpatrick,
Esq.
12 Mar., 1890.

PARLIAMENTARY STANDING COMMITTEE ON PUBLIC WORKS.

Bridge over Tarban Creek, Parramatta River.

APPENDIX.

A.

PRECIS OF PAPERS RELATING TO THE PROPOSED BRIDGE OVER TARBAN CREEK, PARRAMATTA RIVER.

THE papers in this case, as submitted, are very meagre, and are evidently incomplete. It is admitted that there are other papers, and efforts are being made to recover them from the Lands Department (Surveyor-General's Branch). The following is the case as disclosed by the available papers—

18/9/83.—Mr. Rothwell, in compliance with instructions, submitted section, &c. of Tarban Creek, and estimated the cost of a bridge of one span of 450 feet, or three spans of 150 feet, at £30,000, without approaches.

21/1/84.—The same officer submitted an estimate for a bridge of five spans of 100 feet each—amount, £24,048—stating that that span was the most economical that could be adopted.

7/7/85.—In accordance with a resolution of the Borough Council of North Willoughby, the Mayor addressed the Minister, urging that the Tarban Creek bridge might be constructed as speedily as possible to complete the communication between Sydney and Lane Cove.

Mr. Bennett minuted that a bridge here would cost £18,000, and would shorten the distance from Sydney to the North Shore by 1½ mile. It was with a view to this bridge that the site of the Lane Cove bridge was changed to Figtree.

16/7/85.—The Mayor of Hunter's Hill addressed the Minister, urging the same point, and was informed, in reply, that favourable consideration would be given to the matter.

17/9/88.—Mr. F. Farnell, M.P. wrote to the Minister, expressing a hope that the Government would, without delay, carry out this "desirable and necessary" work.

Mr. Bennett minuted that, doubtless, a bridge would shorten the distance—at a cost of £18,000—and that a bridge *must* be built some day.

1889.—Mr. Secretary Bruce Smith minuted that this bridge was intended to complete the line of communication by the shortest route between the Parramatta iron bridge and the bridge over Lane Cove, giving access to the North Shore, and that it would save 1½ mile.

An amount of £24,000 was placed on the Draft Loan Estimates for this bridge, of which the following is the official account:—"This will either be an arch, in steel, of 370 feet span, with steel approaches, or iron lattice bridge, 600 feet long, on iron piers. Until borings are taken the most economical of the two designs cannot be ascertained."

This bridge was referred for the consideration and report of the Public Works Committee.

10/2/90.—Mr. Hickson minuted that he was of opinion that Tarban Creek Bridge should be withdrawn from the Committee, as it could be constructed for less than £20,000; and, in any case, further investigation was necessary as to whether any expenditure was justifiable in this case.

The Minister directed to withdraw all the iron bridges, except Cowra, and to explain to the Committee.

C. A. B., 17/2/90.

B.

EXTRACT FROM MINUTE PAPER BY THE COMMISSIONER AND ENGINEER-IN-CHIEF FOR ROADS AND BRIDGES TO THE UNDER SECRETARY FOR PUBLIC WORKS, &c.

"JERRY'S Plains and Tarban Creek Bridges should also be withdrawn, as they can be erected for an amount under £20,000, and in any case further investigation is necessary as to whether any expenditure at those places is justifiable."

C.

LETTER FROM THE UNDER SECRETARY FOR PUBLIC WORKS PROPOSING THE WITHDRAWAL OF THE BRIDGE FROM INQUIRY.

Sir,

Public Works Department, Sydney, 25 February, 1890.

With reference to the three proposals for construction of bridges, viz., at Tarban Creek, Jerry's Plains, and Bullock Island, which are now before your Honorable Committee, I would desire to point out that when I appeared before the Committee in regard to these matters I asked, on behalf of the Minister, that the proposals might be negatived, on the ground that since the introduction by him of a new system of dealing with bridges, it had been ascertained that these particular works could be carried out for a very much less sum than that submitted to Parliament as the estimated cost.

The Minister now learns that the professional officers of the Department, and especially the Commissioner for Roads, have given evidence to the effect that there is no necessity at all for these works, and I have therefore to point out that the evidence upon which the Minister determined to submit the proposals to Parliament was that of the late Commissioner for Roads, who was then the official adviser of the Government on such matters. As, however, the Minister finds that the present Commissioner holds opinions differing from those of his predecessor, he is desirous of reviewing the matters not only from the standpoint of cost, but also from the more radical one of necessity; and I have therefore to ask on these further grounds that the proposals may be negatived.

I have, &c.,

J. BARLING.

Under Secretary.

J. P. Abbott, Esq., M.P., Chairman of the Public Works Committee.

D.

[To Evidence of Mr. R. H. De Loo.]

F.

FIELD OF MARS COMMON RESUMPTION.

An Act to authorize the Resumption and Sale of the Field of Mars Common. [Assented to, 25th June, 1874.]

WHEREAS by a certain instrument bearing date the eleventh day of August in the year one thousand eight hundred and four under the seal of the territory of New South Wales and under the hand of His Excellency Philip Gidley King Esquire then Captain General and Governor-in-Chief of the said territory the lands hereinafter in the Schedule hereto described were allotted as Common lands for the use of the settlers cultivators and other inhabitants of the district of the Field of Mars and Eastern Farms in the County of Cumberland in the Colony of New South Wales. And whereas by a deed of grant under the Great Seal of the said Colony bearing date the tenth day of November one thousand eight hundred and forty-nine it was amongst other things recited that the said first-recited instrument was deemed insufficient in law for the purpose of securing and regulating the right of Common intended to be thereby granted And it was further recited that by a certain Act of the Governor and Legislative Council of New South Wales passed in the eleventh year of the reign of Her present Majesty intituled "An Act to enable Trustees of Commons in New South Wales to have perpetual succession and to empower them to regulate the use of such lands as may be granted as Commons within the said Colony and for other purposes relating thereto" certain provisions were made for the purposes in the title to the said Act mentioned And whereas by the said lastly-recited deed of grant the lands therein particularly described (being the lands also described in the Schedule hereto) were given and granted unto the Reverend George Edward Turner Duncan Mackellar and James Devlin and their successors to be appointed as in and by the said Act provided as trustees of the Field of Mars Common situated in the district formerly known as the Field of Mars and Eastern Farms upon the trusts and subject to the reservations and conditions thereinafter in such deed of grant expressed And whereas the said Act of the eleventh year of Her present Majesty was repealed by an Act passed in the thirty-sixth year of Her Majesty's reign and numbered twenty-three being the "Commons Regulation Act of 1873" and other provisions for the incorporation of trustees and the regulation of Commons have amongst other things been thereby enacted but no provision has been made for the surrender or resumption of Common Lands And whereas it is deemed expedient that the lands included in such grant as aforesaid and known as the Field of Mars Common shall be resumed by the Crown free from all trusts affecting the same in order that such lands may be sold and that the proceeds of the sale thereof may be devoted towards defraying the cost of a bridge suitable for general traffic intended to be constructed by the Governor with the advice of the Executive Council across the Parramatta River at some point to be hereafter determined by the Governor with the said advice Be it therefore enacted by the Queen's Most Excellent Majesty by and with the advice and consent of the Legislative Council and Legislative Assembly of New South Wales in Parliament assembled and by the authority of the same as follows:—

38 VICTORIA,
No. 8.
Preamble.

1. From and after the day of the passing of this Act the land described in the Schedule hereto being the land known as the Field of Mars Common together with the fee-simple and inheritance thereof is hereby declared to be resumed by and to be vested in Her Majesty her heirs and successors absolutely free from all trusts conditions reservations rights-of-way Common easements and other rights whatsoever.

2.

Land to be surveyed &c.

2. It shall be lawful for the Governor with the advice of the Executive Council to cause a survey and plan of the said land so resumed to be made in which plan shall be marked out such roads streets public thoroughfares and other reserves for public purposes and also such subdivisions or allotments of the said land for the purposes of sale as the Governor with the said advice may think proper to reserve or make. And such plan when completed shall be open for inspection without fee at all reasonable hours at the office of the Secretary for Lands and at such other places as he may appoint.

Sale of land resumed.

3. The land so resumed as aforesaid shall at such times (not being less than one calendar month after the completion of the said plan) and at such places as may be appointed by the Secretary for Lands be put up for sale by public auction. And fourteen days notice at the least of every such sale shall be given by publication in the *Gazette*. And in such notice the allotments to be sold shall be designated in accordance with the said plan. And the Crown shall have all powers of sale and grant in respect of such lands as are incident by law to the sale of Crown lands and the proceeds of every such sale (after deducting therefrom any costs or charges incurred thereon) shall be paid to the Colonial Treasurer and by him be carried to the credit of a separate fund or account as part of the Public Revenue.

Short title.

4. This Act may be cited as the "Field of Mars Common Resumption Act of 1874."

SCHEDULE.

ALL that piece or parcel of land situate in the county of Cumberland parishes of South Colah the Field of Mars and Hunter's Hill containing six thousand two hundred and thirty-five acres Bounded first by the north side-line of Haynes' thirty acres in the parish of Hunter's Hill commencing at a marked rock on Lane Cove River being the north-east corner of the said thirty acres and bearing south seventy-four degrees forty-five minutes west then by the north side-line of Everard's thirty acres bearing west nineteen degrees forty-five minutes north then by part of the east side-line of Sarah Field's sixty acres bearing north nineteen degrees forty-five minutes east then by the north side-line of the said sixty acres bearing west nineteen degrees forty-five minutes north then by part of the west side-line of the said sixty acres bearing south nineteen degrees forty-five minutes west by the north side-line of Tyrrell's thirty acres bearing west thirty-one degrees forty-five minutes north then by part of the east side-line of Raven's two hundred and eighty-five acres bearing north thirty-one degrees forty-five minutes east then by the north side-line of the grants to Raven Morrison Hatton and by part of the north side-line of Lawrel's thirty acres bearing west thirty-one degrees forty-five minutes north then by the east side-line of Small's thirty acres bearing north thirty-one degrees forty-five minutes east then by part of the south side-line of Brown's one hundred and fifty acres bearing east thirty-one degrees forty-five minutes south then by the south side-line of Connor's one hundred and forty acres bearing east thirty-one degrees forty-five minutes south then by the east side-line of Connor's one hundred and forty acres bearing north thirty-one degrees forty-five minutes east then by the north side-lines of the grants to Connor's and Weaver's bearing west thirty-one degrees forty-five minutes north then by part of the east side-line of Kent's five hundred and seventy acres bearing north thirty-one degrees forty-five minutes east then by the north side-line of the said five hundred and seventy acres bearing west thirty-one degrees forty-five minutes north then by the west side-line of the said five hundred and seventy acres bearing south thirty-one degrees forty-five minutes west then by the north-east side-line of Moore's grant bearing north thirty-two degrees twenty minutes west then by the north-west side-line of Bradyn's two hundred acres bearing west thirty-eight degrees ten minutes south then by the north-west side-line of Harding's twenty-five acres bearing west twenty-four degrees ten minutes south then by a reserved road of one chain width dividing it from the grants of Kent's one hundred and seventy acres and four hundred and sixty acres bearing north twenty-four degrees ten minutes west to a creek then by that creek bearing north and westerly (being the northern boundary of Kent's four hundred and sixty acres and some Crown land) to Rowland Hassel's one hundred acres then by a part of the north-east side-line of the said one hundred acres bearing north twenty-one degrees west then by a part of the south-east side-line of Savage's two hundred and ninety acres bearing east twenty-one degrees north then by the north east side-line of the grants to Savage Russell and by a part of the north-east side-line of Pincham's fifty acres bearing north twenty-one degrees west then by a line bearing east twenty-five degrees forty-five minutes south to the Lane Cove River and by that river bearing easterly and southerly to the aforesaid marked rock advertised as number four in the Government notice dated the twenty-ninth day of August one thousand eight hundred and forty-eight.

[One plan.]

1890.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

BRIDGES AT MORPETH AND HINTON.

(REPORT BY THE EXAMINERS OF PUBLIC WORKS PROPOSALS.)

*Ordered by the Legislative Assembly to be printed, 26 November, 1890.*Public Works Department, New South Wales,
Office of Examiners of Public Works Proposals, 27 October, 1890.

Report by the Examiners of Public Works Proposals on the proposed bridges at Morpeth and Hinton.

The construction of bridges over the Hunter River, at Morpeth, and on the Paterson River, at Hinton, has been agitated for many years. The movement may probably have commenced or have been concurrent with the proposals for bridging these rivers at the other places at which bridges have been built, for it is claimed that their construction, and the consequent determination of the general traffic along the permanent thoroughfares thus opened, has had the effect of reducing Morpeth from the position of a centre of commerce, of diverting from it the traffic from the whole of the country between the Hunter and the Paterson Rivers, and east of the Paterson, and of rendering it dependent solely upon the small tract of country in its immediate vicinity, and upon the advantages it possesses in being at once at the head of the navigable portion of the rivers and the terminal point of a branch from the main line of railway.

2. The Paterson River was bridged in 1864 at Woodville (the Dunmore bridge), on the direct line of road from Seaham, on the Williams, towards West Maitland; and the Belmore bridge, over the Hunter River, was built in 1869, at the Falls, at the north end of West Maitland. By these two bridges the communication with West Maitland from the districts east of the Hunter and Paterson Rivers was completed. During 1865 the Hunter River was bridged (the Pituaeree bridge) at a point opposite East Maitland, on a road connecting at Largs with the main road between the Belmore and the Dunmore bridges. Thus the traffic was afforded permanent approaches to both East and West Maitland, and to the main line of railway. The following tolls were levied on these bridges until abolished on 31st December, 1882:—

Foot passengers	1d.
Vehicles	6d.
Horses drawing or not drawing	3d.
Cattle	2d.
Sheep, lambs, &c.	2d.

But the tolls on the ferries on the approaches to Morpeth have remained in force all along.

3. It is claimed that the course of a large part of the traffic had up to that time been through Hinton and across the Hunter River below the confluence of the Paterson to Morpeth. Prior to the erection of the bridge the service of all the roads leading from the districts east of the Hunter and Paterson Rivers to West and East Maitland and to Morpeth was carried across the rivers by punts. By the substitution of bridges for punts for access to East and West Maitland it is contended that the interests of Morpeth trade suffered twofold injustice, for not only was the trade of the place diverted by the creation of sure means of access in all weathers to other centres, but, while Morpeth trade was left with a handicap of ferry charges upon all traffic entering or leaving the place, these restrictions were removed from the traffic to the other places, for the bridges were freed from tolls on December 31st, 1882.

4. As a proof that the course of traffic was in those days through Morpeth, it is stated that the punts for which bridges have been substituted were worked at lower rentals than those by which access was had to Morpeth. And this condition of things, as affecting Morpeth, has hitherto been relieved only by the substitution, in 1876, of a steam ferry for the hand punt at the Hinton crossing over the Hunter River.

5. The sole means of access to Morpeth from the districts lying between the Hunter and Paterson Rivers are by two hand punts, which are worked over the Hunter River. From the districts lying between the Paterson and Williams Rivers the only access is by the steam ferry at Hinton.

6. The districts served by the two hand punts over the Hunter River, near Morpeth, are traversed by the roads already noticed as bifurcating at Largs, and leading across the Pituaeree and Belmore bridges to East and West Maitland; and the whole of the country north of Hinton village, extending to Seaham

Seaham and Clarence Town, on the Williams River, is carried by the same road which crosses the Paterson at Woodville by the Dunmore bridge. Thus the area served by the Hinton steam ferry is reduced to a small tract in the immediate neighbourhood of Hinton.

7. The traffic from the districts on the Upper Williams, about Dungog, is served by two distinct routes. The direct and shortest road crosses the Bollarobba range of hills, and traverses the valley of the Paterson, passing close to West and East Maitland. The second route passes down the valley of the Williams River, avoiding the Bollarobba Range, through Clarence Town and Seaham, and thence it cuts across the country south-westwards to the Wine-shop, a point within 3 miles both of Hinton steam ferry and the Dunmore bridge over the Paterson. At this point the road bifurcates. The distance thence to Morpeth *via* the Hinton steam ferry is 4 miles, while to West and East Maitland *via* the bridges over the Paterson and Hunter Rivers the distance is 8 miles.

8. This road, from the Upper Williams through Clarence Town, though some miles longer than that *via* the Paterson Valley, is the route taken by all heavy traffic and live stock for Maitland, as by it the Bollarobba Range is avoided, and a tolerably level road is secured throughout.

9. A permanent bridge over the Williams at Clarence Town gives access to this road from Stroud, where the main north road from Hexham and Raymond Terrace to the Manning River is met. At the extreme south end of this long road from the north the communication with the railway is at Hexham by a steam ferry. This is the route traversed by the mails to and from the north coast districts. Hexham is distant 40 miles from Stroud.

10. The communication between Stroud and East and West Maitland, *via* Clarence Town, is uninterrupted, as the whole is securely bridged. The distance from Stroud to the nearest accessible points on the railway are here given for comparison:—

From Stroud to Hexham, crossing the Hunter River by steam ferry	... 40 miles
From Stroud to West Maitland and to East Maitland, crossing the Williams, Paterson, and Hunter Rivers by bridges	... 46½ "
From Stroud to Morpeth, crossing the Williams River by bridge, branching off the Maitland road at the Wine-shop, and crossing the Hunter River by steam ferry	... 42½ "

11. It seems, therefore, that Morpeth is on a par with Hexham as regards accessibility, as both can only be reached by a steam ferry, but that it is 2½ miles further from Stroud. As compared with West and East Maitland, Morpeth is a mile nearer to Stroud, but these places are reached over bridges which secure passage at all times.

12. The distances by the railway from Newcastle to the points met by these roads are:—

From Newcastle to Hexham	... 10 miles.
" to East Maitland	... 18 "
" to West Maitland	... 20 "
" to Morpeth	... 22 "

13. In former times, during the prosperity that is claimed to have existed in Morpeth, it is probable that the traffic from the Upper Williams passed through that place by way of Hinton ferry. In 1880, however, the Williams River Company commenced running steamers, with the result that this waterway has served the whole district very effectually. Clarence Town is at the head of navigation on the Williams, and the shipping-port for all the districts in the valley of the river on the north. About half of the traffic that passes through Stroud is also said to be brought for shipment to Clarence Town. The outlet for the other half is *via* Raymond Terrace, which is but a few miles further. The whole of the timber from the Upper Williams north of Dungog is shipped at Clarence Town, except such as is required for local consumption in Maitland. Sailing vessels, drawing up to 13 feet 6 inches of water, are loaded here with timber for the intercolonial trade, and barges for the trade of Newcastle. It is said that the depth of water in the Williams admits of vessels of deeper draught than in the Hunter, but that the volume of trade is not sufficient to support larger vessels than are used. These vessels trade with Newcastle only, so all goods destined for other ports must be transhipped at Newcastle. Timber destined for delivery at places north of Maitland is sent thence by water to Newcastle, and despatched by train in preference to the road journey across to Maitland. The staple product of the lands on the Upper Williams is maize. The market for this is in Newcastle, whence it is despatched inland. During 1889, 25,000 bags of maize were shipped from Clarence Town to Newcastle. It seems that for a very long series of years Newcastle has been the chief market for maize grown in these districts. The Sydney market has all along been supplied from the northern rivers, and the demand in Newcastle has generally been greater than the local supply, but this state of things has lately been modified by delivery being made at Newcastle from the northern rivers. It is, therefore, highly improbable than any direct trade with Sydney can be done in maize grown north of Clarence Town in competition with the sea-borne product of the northern parts of the coast. Oaten hay is produced in large quantities on the Williams below Clarence Town. The market for this also is Newcastle. There can be no trade in this direct with Sydney in competition with the product of other ports, which are generally of superior quality. There is no lucerne grown on the Williams above Clarence Town, and all produced below it is taken by the steamers in passing. The chief market for live stock is Maitland. All accounts agree that for stock, whether intended for transport to Sydney or Newcastle, or for sale in Maitland, the route *via* Hinton and Morpeth is the most suitable. It appears there is a decided preference for the sea route over that by railway, and that the steamers on the Hunter carry much larger numbers of stock than those on the Williams; also, that transhipment at Newcastle is avoided by the Hunter River steamers being used, and the railway at Morpeth gives a choice of routes and markets to the senders. For stock intended for shipment or sale in East Maitland the advantage in distance is nil in the route *via* Morpeth, but the road is less uneven, and is said to be more suitable in other respects. There is again a large quantity of timber on lands between the Paterson and Williams Rivers in situations, for which Morpeth is the nearest point of shipment by rail or vessel. For transport of such goods the punts may be taken to be unsuitable.

14. The conclusion drawn from the inquiry into the trade from the Williams River districts is that, as the live stock and timber traffic usually take the route *via* Clarence Town, the opening of a certain route to Morpeth would deflect much of it to that place; that the passenger traffic now carried on the Williams is unimportant, being given at six passengers each way daily, but it is said that there is

a gain of four or five hours in the journey to Sydney by the Morpeth route; that in farm produce there would be absolutely no traffic between Clarence Town and Morpeth; and, finally, that no appreciable development or progress could be expected to result in the Upper Williams River districts by the small advantages to be gained by better communication with Morpeth.

15. The districts traversed by the Paterson River are comparatively limited in area, but they are of exceptional richness, and capable of very great development. It is futile now to speculate on what may have been the course and extent of the traffic from these districts in the past. This course has now been determined by the main thoroughfares that have been created to West and East Maitland, and it remains but to complete these works by bridging or other devices, so as to make these roads passable at all times, to render the outlet from the Paterson districts to their natural markets perfect.

16. Reference is here made to a point on the road near the Dunmore bridge which is deeply submerged by floods, and to two places, one on each side of the Pitnacree bridge, which are not only submerged but impassable for some time after the subsidence of the water. These three difficulties having been referred to by witnesses as evidence of the need for opening another road into Morpeth, it is necessary to mention them, and to point out that they are defects in the continuity of the road which do not affect the material question in any way.

17. It cannot now be doubted that, whatever injury may have been done to the interests of Morpeth in the past by the opening of these roads, their course has been wisely determined on in the interests of the community, and they have efficiently served their purpose.

18. One of the proposals forming the subject of this inquiry is a bridge over the Paterson River at Hinton, as a substitute for the steam punt that is working over the Hunter River below the confluence of the Paterson. As this bridge alone would be of no use, it would necessitate the construction of another over the Hunter River at Morpeth, and of a road across Phoenix Park connecting them. This latter bridge is strongly advocated as a measure of necessity in the interests of the farmers on Phoenix Park, who suffer so greatly by floods, to enable them to remove their stock and goods to a place of safety.

19. It is further urged that this bridge would be the means of diverting the traffic from Phoenix Park, which is now carried by the steamers, to the railway.

20. The Commissioner for Roads has supplied, for comparison with these proposals, an estimate for a bridge over the Hunter River at the steam-ferry site, which, however, can be considered merely as improving the access to and from Morpeth.

21. The full extent of country on the left banks of the Paterson and Hunter Rivers from which traffic might be taken into Morpeth has been calculated liberally to include the whole of the river frontage and cultivable land adjoining from the Dunmore bridge down to the confluence of the Williams with the Hunter. The cultivable land only has been taken, and not the grazing land.

22. The farmers estimate that this area is capable of carrying lucerne over two-thirds of the whole, and maize and potatoes over the remaining third, with pumpkins among the maize. The cultivation is necessarily of the highest class of which the farmers are capable, since the acres are each estimated at £50 to £70 in value, and are actually rented from £2 to £2 10s. per acre.

23. The total area included is 2,843 acres, divided among ninety-one farmers, and distributed as follows:—

	Fronting on Hunter.	Fronting on Paterson.	Inland.	Total.
Woodville	180	225	405
Wallalong	535	535
Bonthorne	30	225	393	648
Nulla Nulla	45	200	245
Down Park	65	65	130
Queen Reach	225	60	285
Osterly	95	95
Nelson's Plains	460	15	475
M'Clement's Swamp	25	25
	920	940	983	2,843

24. The possible production from this acreage, according to the scales given in the evidence, would be, of:—

Lucerne	9,450 tons, or 28,400 bales.
Maize	500 „ 27,000 bushels.
Pumpkins	9,000 „ 63,000 dozens.
Potatoes and onions	480 tons.
Total	19,460 tons.

25. The number of farmers is 91, giving a population of 455, to which should be added the population of Hinton 475, and of Bonthorne 40, and an estimate of say 400 for residents along the Williams, whose farms are served by that waterway, and are consequently not included, but who individually may fairly claim to derive benefit by improved access to Morpeth. The total thus becomes 1,370.

26. Of this area 1,860 acres are comprised in farms having frontages on the Paterson or Hunter River, and consequently in direct communication with the steamers, and 983 acres are on farms lying back from the river frontage, from which all produce has to be carted for shipment.

27. The distinction is seen to be a very important one when the manner in which the transport of farm produce is conducted is understood. On the farms having water-frontage the homesteads and barns are on the water's edge wherever practicable, and the shipment takes place direct into the droghers. But in the case of the farms having no such frontage the produce must be carted to the water's edge through the neighbouring farm lands, by permission of the tenant, in order that shipment may be made at all. The inquiry has shown that this is the universal practice, and it is believed that it will be continued in the case of all produce grown alongside the water. None of it will in any case be carted to a distant railway station;

station; but from the farms having no water-frontage the necessity for carting may, and very likely will, have the effect of diverting much of the produce to the railway, if an access by a bridge over the river were afforded.

28. The acreage affected, however, is but one-half of the acreage fronting on water, and a proportion only of the produce from this half will be taken to the railway. This portion will probably consist of the lucerne only, for transport to Sydney, and, at a liberal estimate, may be set down at 1,000 tons per annum.

29. The farms are all served by good roads which lead to the steam ferry and to Morpeth, or *via* Largs to East and West Maitland; in fact, some part of the area included is nearer to Maitland than to Morpeth.

Dunmore bridge to West Maitland	6½ miles.
" " East Maitland	5 "
" " Morpeth <i>via</i> Wine-shop and Hinton	7 "

30. The contention by the advocates for the bridges is, that the punt service is inconvenient, and the tolls are all but prohibitive; that proper full loads cannot be carried over the punts, and that they are obliged to adopt the course of using the steamers, and are precluded from trading to Sydney. Thus the traffic is lost to the railway revenue, and the farmers are debarred from availing themselves of the Sydney market, which has now been opened to their use by the construction of the Hawkesbury bridge.

31. The service of the steam ferry at Hinton has been minutely inquired into. It was instituted in 1876 in place of a hand punt. The engine is of 12 horse-power, the length of the punt is 52 feet, exclusive of flap, and width 22 feet. Its capacity is 140 tons of load. It can carry on a trip six single horse-carts and 10 free horses, or 6 tons of load on an 8-horse waggon. It has taken over fifty-six head of horned cattle at one time. The tolls levied are as follows:—

Each horse, drawing or not drawing	3d.
Each vehicle	6d.
Each head of cattle, drawing or not drawing	2d.
Each sheep under 100 in number	½d.
Each sheep over 100 in number	¾d.
Goods not in vehicles, per cwt.	3d.

One charge to include passing and repassing once a day. In addition, the rates for a period of a week or a month are more favourable.

32. In a special report, Mr. J. Coombs, the engineer in charge, stated that each trip, including loading and unloading, can be made in one minute, and on an average in good weather and water that forty trips can be made in an hour. The approaches on both sides are pitched with stones. The greatest depth of water that can be worked in is 4 feet above H.W.S.T., but, as the strength of the current, which is variable, and the wind affect this, the maximum depth may be taken to be 3 feet 6 inches above H.W.S.T. Owing to the floods this year the ferry was not worked during five days in February and nine and a half days during March. There is a rise and fall of tide of 4 feet at this point on the river. The highest flood recorded was on March 14th this year, when it measured 13 feet 8½ inches above H.W.S.T. The following information on the receipts and expenditure on this ferry has been obtained.

		Receipts.			Expenditure.		
		£	s.	d.	£	s.	d.
1880	487	9	9	561	3	3
1881	489	1	7	976	8	11
1882	(seven months)	296	6	4	338	17	4
1884	526	5	3		
1889	505	14	9	820	0	0

These details give an average loss on working of about £300 per annum. The service is stopped once each month on a regularly-appointed day at 3 p.m. until the next morning for overhaul and repairs. The service is admitted to be excellent, and no improvement can be suggested.

33. The township of Hinton is on the left bank of the Paterson, within half a mile of its confluence with the Hunter. It is well situated on a hill, round which the flood-waters circulate from the Paterson through M'Clement's swamps, joining the Hunter some miles lower down at Green Rocks. The roads, both southwards towards the steam ferry and northwards towards the Wine-shop and Senham, are deeply submerged by floods. There is here a wharf at which droghers call, and where it is stated 5,000 bales of hay are annually shipped. These are transhipped at Morpeth to the large steamers, which never pass up the Paterson. The population of the town is 475. The Public School has 134 children on the roll. There are two banks. A steam flour-mill, which has been idle for many years, as also has an engineering works which formerly employed twenty-five hands. On the hill in the vicinity are five vineyards, aggregating 83 acres. Morpeth is distant under 2 miles *via* the steam ferry, and East Maitland 5 miles; West Maitland, *via* the Wine-shop and Dunmore Bridge, is distant 12 miles. The site for the proposed bridge over the Paterson is at this township. The place is dependent entirely upon the agricultural interests in the midst of which it is situated, but it claims to have suffered decadence in common with Morpeth from the same causes, *viz.*, the diversion of traffic by other routes to West and East Maitland. The tolls on the ferry are a tax upon its necessary communication with the railway, and the uncertainty of this communication drives traffic to take the longer route.

34. The bridge over the Hunter River at the steam ferry has been estimated to cost, including approaches, £51,000. This bridge must of necessity have swing openings to allow the passage of vessels. The annual cost of working this will amount nearly to the loss now suffered on the ferry. As pointed out before, this estimate has apparently been made for comparison with that for the two bridges connecting with a road across Phoenix Park. The proposal has never been seriously entertained, as it affords no relief to the farmers on Phoenix Park, and but partially satisfies the requirements of Morpeth, affording merely a through road to the railway for traffic from the immediate neighbourhood, the amount of which has already been estimated, and for a possible traffic from Clarence Town and the Upper Williams, which cannot be depended on with confidence.

35. The construction of a bridge over the Paterson at Hinton can be considered only in conjunction with another over the Hunter at Morpeth. The latest estimates for these works are, as given by the Commissioner for Roads and Bridges:—

	£	s.	d.
Bridge over the Hunter River, and the railway connecting with Crown-street, Morpeth	11,215	0	0
Road construction, 125 chains	3,750	0	0
Bridge over Paterson River, at Hinton	26,000	0	0
Total	£40,965	0	0

The bridge over the Paterson must have a lift span or a swing, as headway is required for droghers. The working expenses of this will be an annual charge.

36. A bridge over the Hunter at Morpeth must necessarily be built to such a height as to allow of headway for the rolling stock on the railway line, which will also have to be spanned, and to connect with the streets in Morpeth; so there will be ample space under it for the passage of droghers. It should be situated above the wharves, and the point beyond which the large steamers have never yet run; but if the improvements in the course of the Hunter River, as recommended by Mr. Gordon, are completed, there must be a swing span in this bridge also, to enable the large ocean-going steamers to pass, for Mr. Gordon proposes to make a new channel sufficient to carry such vessels up to West Maitland.

37. From the deck-levels of both these bridges over the Hunter and Paterson the roads will have to be carried down to the surface of the lands on Phoenix Park at the steepest practicable gradient. The distance between the bridges has been given at 125 chains, and the cost of this piece of road alone at £3,750. The evidence given has pointed to a ridge of land running parallel with the water's edge, at a distance of 4 or 5 chains from it, which is 5 or 6 feet above the general level of the land on Phoenix Park, immediately adjoining, and but 2 feet or so below the level of the highest floods. This ridge is given as being the best line for a road connecting the two bridges. There are three insuperable objections to its adoption:—(1.) The descending gradients from both the bridges will run out into the Park considerably past this ridge; (2.) A line of road along it would cut off the water-frontage from a considerable area of land, and entail a large sum in compensation; and (3.) A road in this position would be eminently inconvenient to the majority of residents on the Park. The objection to any direct road connecting the bridges is, that it would cross the general direction of the flood-waters, which have moulded the land into long hollows and ridges. This is, however, unavoidable, and is best met by avoiding the direct route. The roads already existing should be utilised to the utmost. Land resumption and compensation will thus be avoided. There is a road from Largs, traversing the Park to about its centre, and bifurcating there. One branch connects with the Morpeth punt, and the other passes down to Beattie's Point (at the confluence of the Paterson and Hunter Rivers). This will make a roundabout route between the bridges, but, in consideration of the advantages shown for it, the extra distance to be travelled is immaterial. It has been in use ever since Phoenix Park has been settled upon, and, even if another direct road is formed, it cannot now be abandoned, as the communications of so many farms depend upon it. It is greatly in need, not of repair, but of construction. There is no demand for another road for local purposes, but the need for expenditure on the existing roads is imperative.

38. The *Statistical Register* gives the following details of the town of Morpeth at the end of the year 1889:—

Population	1,450
Number of dwellings... ..	251
Average annual rental	£3,410
Capital value of all property	£115,173
Length of roads and streets—made	6 miles 7 chains
" " unmade	3 miles 53 chains

There are two banks doing business in the town. The register of the Public School shows 151 children, of whom thirty cannot attend school while the river is in flood. Mr. Myles M'Rae, M.P., states that a mill property which had cost the Honorable J. Rundle £18,000 was purchased by him for £800. Another property has lately been purchased for a sum which formerly was the annual rental given for it. Mr. R. Waddy, the manager of the Commercial Bank, is of opinion that the value of real estate in Morpeth has declined 50 per cent. during the last ten years. There is ample room for expansion into a very large town. The land is all at great elevation above flood-level, and eminently well suited for sites for residential and industrial purposes.

39. The total area of the farm lands on Phoenix Park is 1,158½ acres, divided into thirty-nine farms, averaging 30 acres each, and two aggregating 5 acres. These are in occupation by forty-one families, who are nearly all tenants. The resident population would thus amount to 205. They have all been in occupation of the same lands for long periods extending up to thirty years. The original grant comprised 2,000 acres, which included a portion of the lands now called Golden Grove, outside of Phoenix Park, and thus are considered to be beyond the limits entitled to consideration in this inquiry. It is claimed, however, that, in the event of the Hunter River being bridged at Morpeth, the produce from a considerable area in this locality will thereby be enabled to reach that market and the railway at a saving of 3 miles in distance as compared with West Maitland, and 1½ mile as compared with East Maitland. This is true, but no estimate can be based on the speculation as to the proportion of the farmers who will abandon the good existing roads, and the markets in which they have traded so many years.

40. Of the area given for Phoenix Park, farms aggregating 373 acres have water-frontage on the Hunter, and 348½ acres have water-frontage on the Paterson, and two farms, aggregating 42 acres, front on both rivers at their confluence. The acreage of farms in the interior having no frontage is 395. This means, nearly, that one-fourth of the produce of lands on Phoenix Park has to be carted from the farms on which it is produced to a place of shipment, whereas three-fourths are shipped direct on to the droghers from the barns on the water's edge.

41. Two wharves have been provided by the steamer companies on the Park opposite Morpeth. These are both approached by roads, on which, however, no public money has ever been spent. The inducement

inducement offered by the companies to shipment at these wharves is that no droghage is charged, whereas on all lucerne carried by drogher from other places a charge of 6d. per bale is made for droghage to Morpeth, if intended for transport by steamer, and, if consigned by railway, the charge is 1s. 6d. per bale.

42. The total production of lands on the Park, calculated on the same scale as before, the whole area being cultivable, is of—

Lucerne	3,870 tons, or 11,610 bales.
Maize	300 tons, or 14,000 bushels.
Potatoes and onions	370 tons.
Pumpkins	3,500 tons, or 24,500 dozen.

Making a total of (say) 8,000 tons. Of this, the proportion due to the farms having no water-frontage, viz., one-fourth, equal to 2,000 tons, having to be carted for shipment, may be taken as likely to be transported over a bridge to Morpeth. Of the other three-fourths, viz., 6,000 tons, a portion may also be included, since variation in markets and competition in Sydney, besides the saving of ferry tolls, and the ease and certainty with which the railway will be reached, will certainly increase the quantity carried by the railway. Of this quantity, therefore, 1,000 tons may fairly be taken credit for in an estimate of this nature, making a total of 3,000 tons which may be carried over the bridge, and possibly become available as tonnage for the railway. Of lucerne alone the quantity will be 4,353 bales, or 1,451 tons.

43. The annual returns by the Railway Commissioners show the following operations at Morpeth:—

	tons.
During 12 months ending 30th June, 1889, the total tonnage of general goods despatched was	13,800
During the same period the hay despatched amounted to 2,114 bales, or	705
During the 12 months ending 30th June, 1890, the total tonnage of general goods despatched was	11,105
During the same period the hay despatched amounted to 1,106 bales, or	367
It is seen again, by a specially-prepared return for the 12 months ending 31st December, 1889, that the total tonnage of general goods despatched was	16,754
During the same period the hay despatched amounted to 1,524 bales, or	508

44. The Hawkesbury bridge was opened for traffic on 1st May, 1890, thus opening a direct road to Sydney by rail, but during that month there was a severe flood in the Hunter, which killed nearly the whole of the crops and plants. The hay despatched from Morpeth during the first four months of 1889 was 339 tons, or 1,017 bales, but for the last eight months of the same year the total tonnage was 169 tons, or 507 bales only. During March, 1890, there was another destructive flood, so the total tonnage shown for the year ending 30th June, 1890, which may be said to have seen two destructions of crops, amounted to only 367 tons, or 1,106 bales. It seems, therefore, that the despatch of hay from Morpeth by railway can be fairly tested only by the operations during the year ending 30th June, 1889, which, however, were somewhat curtailed by the flood during the preceding month (May). The total was 705 tons, or 2,114 bales, of lucerne, and of general goods the total was 13,800 tons. The following extracts from the reports of the Railway Commissioners are here given to show the importance of Morpeth as compared with the neighbouring stations, East and West Maitland.

	Morpeth.		East Maitland.		West Maitland, including High-st.	
	June 30, 1889.	June 30, 1890.	June 30, 1889.	June 30, 1890.	June 30, 1889.	June 30, 1890.

"	19,776	9,606	19,298

45. The directors of the steamer companies have declined to supply information regarding the quantity of goods carried by the steamers from Morpeth. As, however, the droghers collect goods from all parts of the rivers between Paterson township and Maitland down to Raymond Terrace and deliver their cargoes at Morpeth, where they are transhipped into the large steamers, the totals which alone could be obtained from the company's books would be of no service in this inquiry. The droghage charged by the companies on goods intended for transport by railway has very naturally been fixed at a prohibitively high rate. Mr. P. O'Keefe, the local managing director of the H.R.N.S.N. Co. at Morpeth, has stated that his company has several times over-shipped 40,000 bales of hay in the twelve months. This was before the opening of the Hawkesbury bridge.

46. The claims of Morpeth are based on the loss of its trade, carried by its diversion into other channels and the continuance of tolls upon everything approaching it from the whole of the country upon which it is dependent; but the claims of the farmers on Phoenix Park are based on actual hardships and losses suffered from floods, and upon a legitimate desire to be connected with the capital by the readiest means of communication possible.

47. The extent of the damage caused by floods seems to depend upon their duration. The lucerne plant is not always killed by a flood, though the crop is invariably destroyed. The fertilising power of the flood-water seems in some measure to be a recompense for the damage done, but the direct loss caused by two such floods as those of May, 1889, and March, 1890, is very great. As the inquiry was in progress during the flood of March the action of the water during that time was easy to trace, but the accounts of other

other previous floods, and the frequency of their recurrence, and the conditions generally leading up to them, could not be unravelled. The commencement of the flood over the Park was at the north-west corner, where a narrow neck of land divides the two rivers. By this all communication with *terra firma* was at once cut off from the inhabitants of the Park. From this point the course of the water was diagonally across the Park, and also backwards into the Gordon Grove property. Within a short time the waters of the Paterson were joined to those from the Hunter, and then the flood, passing around along the Paterson to the low places near the confluence of the rivers, flowed back and met the advancing current from the north-west, after which there was scarcely any current at all over the flooded land. This is confirmed by a resident farmer, David Jarvis, whose farm of 19 acres, which he has held for twenty-six years, fronts on both rivers at this narrow place. When a flood is expected it is said that numbers of people watch the waters at this place for indications of further rising before removing their stock and movables to places of safety. Floods of such severity are of very rare occurrence—in fact, prior to these two, the last flood of the kind was in 1875. Thus, there had been thirteen years of immunity. There is a sense of security engendered by such immunity, and the damage done by the flood when it does come is all the greater. A flood may be expected, and prepared for, but the water may subside before reaching the point of overflow, and a repetition of such fears and wasted precautions leads to the omission of all precaution at the very time when a severe flood is really about to happen.

48. Mention has been made of wharves that have been provided on Phoenix Park, opposite Morpeth, for receipt of produce. No droghage is charged by the companies on produce taken delivery of there. The freights charged by both steamer companies on the principal articles produced in these districts are, from Morpeth or from wharves on Phoenix Park to Sydney:—

	s.	d.
Hay, per bale	3	0
Droghage on hay, if per steamer, per bale	0	6
" " if per railway, per bale	1	6

Thus, on hay carried to the steamer by drogher, the freight to Sydney is 3s. 6d. per bale, but if delivered at the steamer wharf the freight is only 3s. per bale.

	s.	d.
Potatoes (12 bags to the ton) per ton	7	6
Onions (1½ bags to the ton), per ton	7	6
Maize (3½ bushels to the bag), per bag	0	9
Droghage on grain or bags-stuff, per bag	0	3

The freights to Sydney by rail are as follows:—

	s.	d.
Hay, 36s. 7d. per truck of 14 bales, equivalent to, per bale	2	7½
Thus, for hay delivered to the railway by drogher, the freight to Sydney amounts to, per bale	4	1½
If delivered by cart from Phoenix Park, the toll on a cart and horse with 3 bales being 9d., or 3d. per bale, the freight to Sydney becomes	2	10½
Potatoes, average rate, per ton	10	1
Onions, " " "	11	4
Maize, " " "	10	1
Equivalent to per bag	0	7½

The following recapitulation makes these hay freights clear:—

	s.	d.
To Sydney, railway freight only, per bale	2	7½
" by rail, but carted over ferry, per bale	2	10½
" by rail, but delivered by drogher, per bale	4	1½
" by steamer, freight only, per bale	3	0
" by steamer, but delivered by drogher, per bale	3	6

These and the maize freights are distinctly in favour of transport by railway, but for all other produce the steamer freights are much more favourable.

49. The conditions regulating the delivery to consignees, storage, and demurrage in Sydney have been a good deal commented on. The following particulars make these points clear also:—

The railway rule is that on hay arriving at Darling Harbour demurrage at the rate of 5s. per truck per diem (4½d. per bale) is charged after the expiration of twelve working hours.

The company's rule is, in their own words, "A charge of 1d. per bale per day, or portion of a day, to be paid before delivery, will be made on hay remaining on this company's premises over fourteen days, exclusive of the day of arrival."

The H.R.S.N. Co. have stores in Sydney capable of holding 20,000 bales of wool or hay, or 20,000 tons of grain, and sales are permitted to be held there.

50. The sale of hay is said to be very much affected by the damage done to the exterior of the bales by the treatment they get while being loaded into the droghers from the river banks. There are very few small jetties along these rivers. The absence of all appliances for handling these heavy bales is noticeable. The practice for a full generation has been to roll the bales along planks laid from the bank of the river to the deck of the drogher, or, for lack of planks, over the surface of the ground or the mud. On the Manning River there is a jetty of some sort on the frontage of every farm on the river, where the bank shelves so much as to prevent the drogher coming alongside. The main crop in that district is maize. These bags cannot be rolled on board, but must be carried, so, without a jetty, the loading could hardly be effected at all. Similar arrangements would, on these rivers, save all the damage, and reduce the labour of loading to the last point.

51. Mr. Myles M'Rae has insisted very much on the fact that, the traffic being forced on to the water carriage by the obstacles in the way of delivery to the railway, the sole market open to producers is at the Market and Lane Street wharves, which become glutted and adverse to sellers. Probably, in view of such a condition of things in the past, the companies have given exceptionally ample accommodation and liberal terms of storage, which can only be met by the railways by following the same course.

Storage

Storage on railway trucks beyond the usual limit of time is impracticable, and it is doubtful that the transference of any considerable portion of the tonnage from the stores to the trucks will give much relief to the sellers, since the element of time during which the stock can be retained will remain against them. As to whether the railways could practically supply storage accommodation for farm produce at the metropolitan terminus, the figures to hand give a sufficiently clear answer. If one company—the Hunter River Company—working within comparatively narrow limits, requires room of 20,000 tons of storage for a traffic which has probably reached its limit in expansion, how vast must be the requirement for a system of railway covering the whole Colonies.

52. The foregoing investigation was made by the Examiners by direction of the Hon. the Minister for Public Works, during April and May of the current year. It contains, with the appendices, all the available information on the subject, and it is believed to represent impartially the actual state of the case as it stands now, with respect to the disabilities under which the town of Morpeth labours, the actual cost of the traffic, the possible deviations that may be caused in it by construction of new communications, the action of floods over Phoenix Park, and the losses caused by them.

53. The conclusion drawn from this is, that the great bulk of the traffic on the Upper Williams cannot now be drawn out of the channels in which it flows into Morpeth, that the volume of traffic that would probably be attracted through Morpeth by the construction of a bridge crossing the river on its approach is insignificant, in consideration of the great expense entailed, and the impediments that would be imposed upon the traffic on the river.

54. The immediate and prospective value of a waterway navigable by ocean-going craft is incalculable. No structure should be placed over it which curtails its usefulness in any degree, except for national objects, such as are served by a main line of railway. The interests to be served by bridging at the Hinton steam-ferry site, or at Hinton township, are altogether local, or contained within narrow limits, and are not considered to be important enough to justify the construction of a bridge at either place.

55. With regard to Phoenix Park, the report by Mr. Gordon contains recommendations which, if acted upon, are calculated by him to alter the action of the floods altogether, and thus to relieve the farmers on that tract of what must be taken to be their substantial grounds of complaint. Apart from these recommendations, it is considered that the immense capacity of production of the lands on the Park justify the expenditure of public money on its internal communications and its approach to a railway station, but, in view of the radical changes that are contemplated in the Report, no action should be taken.

STANLEY ALEXANDER,
HARRY GILLIAT,

Under Secretary for Public Works.

Examiners.

Bridges at Morpeth and Hinton.

(Evidence in connection with Inquiry of the Examiners of Public Works Proposals, together with Appendices.)

Ordered by the Legislative Assembly to be printed, 27th November, 1890.

Witnesses examined.

Inquiry into Morpeth and Hinton Bridges.

Morpeth, 12 March, 1890.

*Mr. Gilliat.] G. H. Stephens, farmer, Phoenix Park:—*He thinks there are from 7,000 to 8,000 tons of lucerne hay grown yearly on Phoenix Park alone for market; owing to the inconvenience and danger of crossing by the punts it is only possible to do so with half a load; he takes his hay to East Maitland; this is 5 miles further than if delivered at Morpeth; the freight by train is 27s. 6d. per truck; a truck-load is fourteen

fourteen bales; the freight from Morpeth by steamer is 3s. per bale; hay, when picked up by drogher, is charged 6d. per bale, but if the hay is to be shipped by rail he has always paid 1s. per bale, but the drogher will only take it as a favour; there is no direct road between the site of the proposed bridges; there is a road to the junction of the two rivers: it would be necessary to resume a road; the best road and least liable to flood would be along the banks of the river; the cost would not be less than £60 per acre; half of this line has not been flooded for the last fifteen years, that is between the bridge site and Reid's shed; the other portion is lower land, but the present road between the steam punt and Hinton is still lower; the point marked red A. is where the flood-water first breaks across; the tolls charged at the punts are 6d. per vehicle and 3d. per horse; the traffic from the Clarence Town Road would come to the railway if the bridges were erected, as the road is so much shorter; the produce of at least 2,000 acres north of the Paterson, which now goes by the Dunmore Bridge, would come to Morpeth; when the punts stop working residents of Hinton have to go round by the Belmore Bridge to reach Morpeth.

GEO. H. STEPHENS.

Received, 16/4/90; the Falls punt was let the year (1869) prior to the erection of Belmore Bridge for £28 5s. per year; the Pitnacree punt I have not been able to get the amount; the Paterson punt, the year prior to erection of bridge, £15 per year.

GEO. H. STEPHENS.

Statement *re* Phoenix Park Bridge.

1st. That a rise of 1 foot above high tide the punt is not workable, consequently we are not able to move stock or produce, which has to remain surrounded by water; and if the flood-water rises to any height are swept away and lost. This I have seen frequently during thirty-six years' residence on Phoenix Park. If we had a bridge we could remove whatever stock or produce we have to the high land at Morpeth any time while the river kept within its banks.

2nd. That the bridge would also be a great boon to surrounding districts, especially to Phoenix Park and adjoining estates; we would then be able to get our produce to the railway, which would be largely patronised, whereas by the delays and dangers of the punts we are unable to do so, and consequently have to find other ways to send it.

3rd. I have not gone into statistics showing the probable amount of traffic that would ensue on the erection of bridges as proposed—the argument that receipts from ferries did not justify the expenditure. I may state the punts in this district (that have been superseded by bridges) let at very low rentals prior to their erection. The bridges I allude to are Belmore, Pitnacree, Dunmore, and Paterson. The punt at Dunmore was a private one.

Some eight or ten years ago I was one of a deputation that waited on the Minister for Works and presented a petition, signed by upwards of 2,000 residents of surrounding districts, in favour of the bridges now asked for.

GEO. H. STEPHENS.

Morpeth, 12 March, 1890.

Mr. Gilliat.] *J. G. White*, cabinet-maker, Morpeth:—The Dunmore bridge is a wooden one; there is no road between the proposed bridges across Phoenix Park; there is a road along the bank of the Hunter to the junction of the Paterson—about a mile; that road does not extend up the bank of the Paterson; the land for a road to connect the bridges would have to be resumed; the value would be about £50 per acre: this road is liable to be flooded; the flood-water breaks across first at the narrow neck between the Hunter and Paterson, marked with a red A, preventing the farmers from removing their stock to the Dunmore bridge or the high land at Largs; believes the construction of the bridges would bring the greater portion of the traffic through Morpeth; it would come from Dungog, Clarence Town, Stroud, and Gloucester; the road is much shorter by Morpeth; the punts both stop when the river rises from 3 to 4 feet above high-water level.

J. G. WHITE,

Cabinet-maker and Joiner.

Morpeth, 11 March, 1890.

WHEN I arrived in Morpeth in January, 1839, the whole of the exports and the imports of the Northern District passed through Morpeth up to the time the railway started. Also all the traffic, with a very little exception, from Dungog, Clarence Town, Port Stephens, &c., until the bridges were built at Dunmore, Pitnacree, and West Maitland, when the Morpeth trade was diverted to East and West Maitland. Teams used to come to Morpeth loaded with cedar and other produce, and either ship or sell and take what goods they required from the Morpeth tradesmen, but now nothing of the sort occurs; as I mentioned before, all that trade has gone through the bridges. Another drawback to Morpeth is that the heavy loaded teams will not come this way in consequence of the danger in crossing the punts to their horses or bullocks, and this very day it is difficult to get across the Morpeth punt except at high tide. If we had two bridges after the style of the Dunmore bridges it would greatly benefit Morpeth and the surrounding district, and would also be the means of augmenting the railway traffic.

J. G. WHITE.

Thomas Campbell, Alderman and ex-Mayor, Morpeth.

Sir,

Morpeth, 12 March, 1890.

During a residence of ten years in Morpeth, I have observed the great necessity that exists for the erection of bridges at Morpeth and Hinton, for the following reasons:—

1st. To enable the residents of Phoenix Park, Hinton, Wallalong, Seaham, Clarence Town, and intervening places to reach the railway at Morpeth. The only means of access at present is by punts, and during times of flood the punts are off, and people desirous of reaching Morpeth from any of the above-mentioned places are obliged to travel round by Belmore Bridge, and through West Maitland, an extra distance of about 15 miles, and numbers of these people are unable to remove their live stock to high ground, which in many cases are swept away by flood-waters.

2nd. Within a radius of about 5 miles of the proposed bridges the area of land under cultivation is about 6,000 acres, which, at a low estimate, at 5 tons per acre, would give 30,000 tons of produce yearly.

yearly. Some of this is sent up country by train, but owing to the expense and danger attached to the punts, the majority of it is shipped by steamers to Newcastle and Sydney. This estimate is exclusive of all dairy produce and live stock in the district between Morpeth and Dungog. The live stock are obliged to travel *via* Belmore Bridge to market, numbers of them being afterwards shipped at Morpeth.

3rd. The residents of Morpeth and surrounding districts are justly entitled to as good means of access to their natural markets as are residents of other localities, who can travel over bridges free, whilst we are compelled to use punts, and pay for doing so.

4th. Timber bridges could be constructed at a comparatively small cost, as I believe good timber for bridge-building can be obtained in the district, and the present cost of working the Hinton punt would materially lessen the interest on the cost of construction.

For these reasons I advocate the erection of bridges at Morpeth and Hinton.

THOMAS CAMPBELL,
Alderman and ex-Mayor.

The tolls payable at the Morpeth and Hinton punts are as follows:—

Dray, buggy, &c.	6d.
Horse	3d.
Foot passenger	1d.

I understand there is a loss of about £350 a year on the working expenses of the Hinton punt; this amount would, I think, nearly pay interest on the cost of one of the bridges.

THOMAS CAMPBELL,
Alderman and ex-Mayor.

Morpeth, 14 March, 1890.

Mr. Gilliat.] *Thomas Campbell*, Alderman and ex-Mayor, Morpeth:—Farmers are unable to bring across more than two bales in a one-horse dray, for which the punt toll is 9d.; I concur with Mr. Stuart's opinion as to the site of the proposed bridge over the Paterson; in 1887 there were thirteen freshets in the river, and the punt was idle for at least three months; the cost of land required for the road between the bridges would be about £60 sterling per acre.

THOMAS CAMPBELL.

12 March, 1890.

Mr. Gilliat.] *Mat. Murphy*, contractor, Morpeth:—Has been a resident of the district all his life, and remembers all the floods since 1857; lives within 100 yards of the Morpeth punt; land would have to be resumed for a road between the two bridges; the best line would be along the high land on the bank of the Hunter; the value per acre would be £50; does not consider that anyone but the freeholders through whose land the road will pass should bear any portion of the cost of resumption; within a radius of 6 miles considers there are 10,000 acres that would benefit by the erection of the bridge; a lot of pastoral country at the back would also benefit by getting their stock to the railway in a shorter distance; the 10,000 acres referred to produces an average of about 4 tons of hay annually; from want of the bridges the farmers are at a loss by being obliged to ship per drogher and steamer; the hay especially is soiled, and loses in value by being rolled down the bank, and then by transhipment; to land hay at Morpeth for shipment per steamer the droghers charge 6d. per bale; to deliver hay at the same wharf to go by rail they charge 1s. 6d. per bale, and often refuse to bring it; the water breaks over its banks at the Hunter at the place marked A in red before it does anywhere else in the neighbourhood; I consider timber bridges would be quite suitable and much cheaper; they could be erected for £9 sterling per foot for the main span, and £6 sterling per foot for the approach; the facilities for obtaining timber are as good as anywhere.

MAT. MURPHY.

Morpeth, 14 March, 1890.

Mr. Gilliat.] *George Boland*, school-master, Morpeth:—Mr. Boland, master of the Morpeth Public School, has thirty children on the roll, who are prevented from attending when the punt ceases working; since January, 1890, this has occasioned a loss of about three weeks; about ten months ago for eight or ten days the same number of children were prevented from attending; during his three years of residence there have been several floods each year.

GEORGE BOLAND.

Morpeth, 14 March, 1890.

Mr. Gilliat.] *Patrick O'Keefe, Esq., J.P.*, Local Managing Director of the H.R.N.S.N. Co. at Morpeth:—Has resided for fifty-four years in the district; the bridge would be of the greatest value to enable the farmers to save their stock in time of flood; the farmers own from four to ten or fifteen horses and brood mares, heavy draught stock, some of the brood mares costing £130 sterling, and most of the farmers have several valuable cows; they have large stocks of poultry, which in flood-time are lost by their inability to remove them; the same thing applies to their stock of pigs; the farmers often have stocks of pressed hay waiting for a market; this could be brought over to Morpeth if there were bridges, but which now cannot be removed in flooded or even wet weather by drogher, owing to the muddy or flooded state of the river banks; it is impossible to estimate the large value of the goods and stock that are thus imperilled by the want of the bridges; he thinks the Belmore bridge that cost upwards of £25,000 does not take 30 per cent. of the traffic; that would cross the Morpeth bridge if erected; the same remark applies to the Pitnacree bridge; Morpeth is the natural centre for all the farmers on the other side of the river; he knows this from his connection with the S.S. Co.; the greater part of the Bolwarra, all of the Dunmore and Phoenix Park produce, and most of the trade of the Paterson come to Morpeth by drogher; of this a great deal would be brought in by the farmers themselves if the bridges were built, as the drogher cannot always attend when required, and the farmers may wish to meet a good market; at the very lowest 10,000 acres of first-class land, from which our company has several times overshipped 40,000 bales of hay, in the twelve months, comes to Morpeth, in addition to large quantities of maize, potatoes, pumpkins, and onions, besides a considerable number of cattle, pigs, horses, poultry, &c.; the average production of lucerne hay is about 5 tons per acre, and the average net profit is about £3 per ton;

ton; is of opinion that inexpensive wooden bridges would be amply sufficient; would go to no expense in resuming land for a road between the two bridges; he would like to add that the tonnage of farm produce from Morpeth exceeds the combined export of Maitland and Newcastle; the vicinity of Morpeth is the most productive and richest farming land, not only of the Hunter, but of New South Wales.

P. O'KEEFE.

Morpeth, 14 March, 1890.

Mr. Gilliat.] *Captain William Adams*, late commander of the steamer "Coonabarra," and Newcastle A.S.N. and Newcastle Companies:—Has been trading and running up the Hunter River for forty years; as a fact the Hunter River is not navigable above Morpeth or above the junction of the Paterson for the smallest sea-going steamers at present running here; no sea-going steamers have ever run up the Paterson; he took the "Illalong" 3 miles up once just as a test, and had a job to get down again; the "Illalong" was about 400 tons; is not aware of any sea-going steamers ever going higher than the Morpeth punt; considers a headway of 25 feet would be sufficient for any drogher trading in the rivers; is convinced that the bridges are of great importance to the district; putting the benefit they would be to Phoenix Park on one side, the advantage that would be gained by affording direct communication to the residents of Clarence Town, Dungog, Stroud, and all the surrounding country would be of the greatest value; it would complete the communication to those districts; thinks from his observations that the punts cease working with a fresh of about 2 feet above high water; in a flood like the present, which is within 2 feet of the highest here, the bridges would have kept communication open from the time the punts stopped working; under present conditions all communication will be suspended for a week at least.

WM. ADAMS.

Morpeth, 14 March, 1890.

Mr. Gilliat.] *Richard Waddy* is the Manager of the Commercial Bank, Morpeth; has resided here twelve and a half years; considers the construction of the two bridges at Morpeth and Hinton would be of material benefit to the farmers of the district, Phoenix Park, Wallalong, Dunmore, Hinton, and the upper portion of Nelson's Plains; does not consider that the construction of the bridges would induce the settlers from the Clarence Town road to bring their produce from Morpeth; the only gain would be that they would escape the charge of the punt, while the distance is no less; the steam punt works very well, with the exception that with a fresh in the river of 3 feet above high water it has to stop working; thinks it is difficult to bring a full load across at low water; considers a full load to be three bales; the most a cart with one horse can bring across is two bales; the farmers on Phoenix Park and Dunmore prefer to go round by East Maitland to coming to Morpeth, owing to the delay and danger to their horses and carts in crossing the Morpeth punt; that naturally takes the business of the farmers to Maitland instead of to Morpeth, which would be their natural market if they had the facilities for reaching it; the bridges would facilitate the traffic by train and steamer; the acreage that would benefit by these bridges extends from the upper portion of Nelson's Plains on the east to Dunmore and Wallalong on the north-west; all of this land may be valued at an average of £60 per acre; the average production of lucerne hay, the principal crop, is at least 5 tons per acre; the net profit of the hay will average £2 per ton; the great proportion of this land is under water in the present flood (14 March, 1890); estimates the acreage at 7,000 acres of first-class land; owing to the want of facilities in reaching Morpeth by the settlers, estimates that during the last twelve years real estate in the town has declined 50 per cent.; considers that during ordinary seasons the existing roads, although of a somewhat lower level than along the bank of the Hunter, would answer all purposes for connecting the bridges; to resume land for a direct road between the bridges would cost £75 per acre.

See Mr. Waddy's note attached, explaining this statement.

R. WADDY.

Reporting on Morpeth and Hinton Bridges.

— Gilliat, Esq.,
Dear Sir,

Commercial Banking Company of Sydney, Morpeth, 14 March, 1890.

Regarding my evidence as given to you to-day respecting these bridges, there is one point upon which there may be a misconception therein. Referring to the residents of Clarence Town coming to Morpeth or going to Maitland, I stated that the bridges would not offer any inducement for them to come to Morpeth, as the distance would not be shortened; what I mean by this is, that the fact of the bridges being there would not make the road any shorter to Morpeth than it is at present by the punt. It is a self-evident fact that the road to Maitland is much longer than to Morpeth, but the fact of the bridges being built would not, I think, give the residents there any further inducement to bring produce to Morpeth, even though the road were shortened. As the residents generally of those parts send their produce by river drogher or by the W.R.S.N. Co. to Newcastle and Sydney, they might possibly come through Morpeth to Maitland, but that would not be much advantage to us.

Yours, &c.,

R. WADDY.

Morpeth, 14 March, 1890.

Mr. Gilliat.] *J. Lavis*, storekeeper, Hinton:—A rise of 3 feet above high tide will stop the steam-punt at Hinton; has been compelled to drive round by the Belmore bridge and West Maitland, a round of 15 miles, three times already during this year; is unable to take more than half a load across when the punt is working owing to the steepness of the approaches.

J. LAVIS.

Morpeth, 14 March, 1890.

Mr. Gilliat.] *J. D. Beattie*, farmer, Phoenix Park:—There is no road between the sites of the proposed bridges; the best line for that road would be as close to the bank of the river as convenient; that is the highest ground; the land for the road would have to be resumed; the cost would be from £50 to £60 sterling per acre; from 3 to 4 feet above high-water level will stop the punts working; the first water in a flood breaks across at the point marked red A on tracing, and stock must be removed before that passage becomes too deep. Stock are removed in anticipation of a flood, and sometimes no flood to necessitate it comes; for information of the state of the upper river they are dependent upon a telephone at Hinton, and this is always carried away in flood-time owing to the cable being submerged; the homesteads within Phoenix Park are at least from fifty to sixty in number.

J. D. BEATTIE,
Morpeth,

Morpeth, 14 March, 1890.

*Mr. Gilliat.] Mr. Frank Murphy, Morpeth, farmer and produce dealer:—*Has been a resident of the district all his life; considers that the punt at Morpeth stops working with a rise of 2 feet above high tide; when the fresh falls the punt frequently cannot be used from several days to a week, owing to the state of the approaches, which will not admit of a horse and cart getting on to the punt; has offered from 5s. to 10s. more per ton for hay delivered in Morpeth than the price on Phoenix Park; considers it dangerous to cross the punt with a full load, say of five bales; does not think it safe to cross with more than two, and this would not pay the farmer who has a toll of 9d. to pay for dray and one horse each time he crosses; wishes to add that by watching the tide and crossing at high-water three bales could be taken across without danger; during westerly winds that sometimes last for a week, occasionally for a fortnight, it is almost impossible to cross even with a saddle-horse; has waited for six hours to cross himself, and has been obliged to ride 7 miles by the Pitnacree bridge to reach his own house, a quarter of a mile from the punt; it is the force of the wind that prevents the punt from working; wishes to add that when the Paterson is in high flood the current in the Hunter is not so strong with a 2-foot rise, and the punt is sometimes able to work at that height; does not think any improvement could be made in working the punts; the punts are often stopped with a fresh of a foot above high water by the heavy timber coming down; it would be necessary to resume land for a road between the two bridges; the land is not worth more than £50 sterling per acre; although he considers the frontage to the river more valuable, does not consider it worth more than £50 sterling; the road is through freehold, but as the whole of the farmers in the surrounding district would have the value of their land enhanced by the bridge communication they should share the cost of resumption amongst themselves, or else reduce the price to a very low one; within the Phoenix Park there are 2,000 acres producing lucerne hay, about 5 tons per acre; with bridge communication the farmer would save at least 5s. per ton by being able to deliver on this side of the river; at present the farmers have to cart nearly the same distance and pay 5s. more; shipping by steamer and drogher the hay is soiled and deteriorated by rolling down the bank and transshipping into the steamer, while by delivering from the dray into the truck the hay is delivered clean and bright in Sydney, and from 3s. to 4s. per ton cheaper, and quite 5s. per ton in better order.

FRANK MURPHY.

*Mr. Gilliat.] Robert Hamilton, farmer, Phoenix Park:—*He lives at Wallalong; there are about 2,000 acres on the estate; the average crop of lucerne hay is about 5 tons per acre; the whole of this is shipped per steamer to Sydney; if the bridges were erected the whole would go by truck from Morpeth; by doing so it would get more quickly to market, and could meet a rising market with quicker sales and returns, and better condition in the trucked hay; can ship by truck much cheaper than by steamer.

ROBERT HAMILTON.

Bonded Warehouse, Morpeth, 13 March, 1890.

*Mr. Gilliat.] J. W. Pulver, Esq.:—*Is a resident of the district for the last twenty years; is of opinion that the site at the Queen's Wharf at Hinton is the better one for the bridge, as affording a better approach on the Hinton side, owing to the road from the Queen's Wharf to the punt being considerably under water in flood-time; wishes to say that the mails for Dungog, Clarence Town, Seaham, and Hinton go *via* Morpeth, and at present are dependent upon the steam-ferry over the Hunter at Hinton; this ferry stops working at every fresh in the river, and every fourth Tuesday for overhaul; he has at present orders waiting to be delivered by coach at Dungog and Clarence Town which have been delayed over ten days owing to traffic being suspended through the want of bridges.

JOHN W. PULVER.

West Maitland, 22 March, 1890.

*Mr. Gilliat.] J. B. R. Robertson, Esq., J.P.:—*Resides at Oakhampton Farm, 3 miles from West Maitland; he considers that a bridge from Morpeth across the Hunter is one of the greatest importance; Phoenix Park is one of the richest agricultural districts in the Colony; it has been called the garden of the Colony; it is a large agricultural district, on which an immense quantity of produce is grown, which would be brought to the railway if the bridge were built, and would soon recoup the cost; he is aware that the traffic is frequently stopped during floods, so that people on the other side have no communication with Morpeth at all; he knows of no place where a bridge is more required than at Morpeth; has been aware of the necessity of the bridge for the last thirty years; the preceding remarks apply to both Hinton and Morpeth bridges; the acreage of alluvial land that would be served by these bridges would amount to 10,000 acres, including Phoenix Park, Hinton, Miller's Forest, and Nelson's Plains; land has been recently sold at Phoenix Park for £100 per acre; the value of the acreage, excluding Phoenix Park, is from £60 to £70 per acre; the average production of lucerne hay, the principal crop, is about 5 tons per acre; has known the water to rise in the river at Phoenix Park 37 feet; thinks that a fresh of 4 or 5 feet will stop the punt from working; is landlord of farms on Phoenix Park, but in any case is convinced that the bridges are most desirable for the people of the district; is of opinion that the traffic for Sydney from Clarence Town and Stroud would come to the railway at Morpeth as the shortest road.

Mr. Alexander.] His property on Phoenix Park lies about central; he does not consider that the land having water-frontage on the river is of any greater value than that in the interior by reason of this frontage; the majority of farms on Phoenix Park have access to the river by roads which abut the river, there is no public wharf on the water-frontage of Phoenix Park, excepting opposite Morpeth; this wharf belongs to the Hunter River S. N. Co.; farmers do require to make provision in the way of temporary jetties and wharves from which to load the droghers.

Mr. Gilliat.] Is a director of the Hunter River N.S.N. Co.

J. B. R. ROBERTSON.

Morpeth, 24 March, 1890.

*Mr. Gilliat.] Mr. James Read, farmer, Phoenix Park:—*His farm is on Phoenix Park, about 300 yards below the steamship company's wharf, on the bank of the river; can give no estimate of the number of acres of alluvial land that would benefit by the bridges, or the amount of produce; 6 feet of a fresh will cause the punt to stop running; has known the Morpeth punt to be stopped by a strong westerly

westerly wind for three days; the westerly winds do not affect the steam-punt so much; he generally grows hay; sends his hay by the droghers; rolls the hay down the bank on planks; in wet weather the hay is injured by doing this; pays 6d. per bale to take it to the steamer; the same rate is charged per bale from the Paterson, 20 miles away; the steamers' wharf is not a quarter of a mile from his farm: he pays 3s. per bale per steamer to Sydney; could send from the Morpeth railway-station to Darling Harbour for less than 2s. per bale by truck; he is charged 1s. 6d. per bale by the drogher if he ships by railway, but does not think the drogher would take it; considers the average yield of hay about 5 tons; does not use the punt to bring over produce; during ten years has not taken more than 6 tons of hay that way; with a good horse has been unable to take up an empty dray from the Morpeth punt; at high-water can take a ton over; the risk is, however, too great to horse and dray to induce him to use the punt.

Mr. Alexander.] His farm is fronting on the Hunter from opposite new company's wharf down to junction of Paterson; his house is about a mile from the Morpeth punt, but by the road it is $1\frac{1}{2}$ mile; up to the railway-station the distance from his house would be $2\frac{1}{2}$; in addition to this distance is the chance of damage on the punt; on the other hand he does damage to hay in loading on drogher; drogher, 6d.; steamer, 3s.—3s. 6d., against less than 2s. by rail; if the bridge were built the cartage to railway-station would be 2 miles; it has occurred to him that the steamers' company might reduce their charges to less than by rail if bridge were built, but he does not think they can carry the hay for less than present charges; even if they did so reduce, would rather send by rail, because of expedition and care in handling; in his opinion a road across Phoenix Park should come from Queen's Wharf, where the bridge should be, and the road should run down the right bank of the Paterson to the Government Road at junction, then follow this road up to junction of Morpeth and Largs Road; from junction of Paterson and Hunter along left bank of Hunter there is a tolerably high ridge 30 rods back from Hunter frontage; a road along this would require a bridge, but along the line he proposes no bridge would be required; a large part of this road would pass through his land; he would not give it free; would ask £— per acre; depends on the land passed through; would rather not say.

Mr. Gilliat.] Considers the land on Phoenix Park as being worth £50 to £60 sterling per acre.

JAMES READ.

*Mr. Gilliat.] Mr. James Stuart, of Hinton, builder and contractor:—*Has resided in the district twenty-six years; produce is loaded on to the drogher from what are called wharves—that is, a place sloped down the banks, from which planks are laid to the drogher, and the hay is rolled down the incline on board; is not aware of any wharves or jetties on either the Hunter or Paterson; he is aware that produce suffers by shipping per drogher to such an extent as to decrease its market price; there are 5,000 bales of hay carried annually to the Hinton wharf for shipment per drogher that would go by rail if the bridges were made: the difference of value of hay on the Hinton and Morpeth sides is only that of cartage or drogherage; the Hinton steam-punt is taken off for overhaul once every month; the punt is off from 3 in the afternoon till the next morning; there is a regular day each month for this overhaul; it is known through the district; considers it a necessary work, but that it could be done at night after the traffic has stopped; a strong westerly wind will frequently stop the Morpeth punt working for a day; it is not so bad in its effect at the Hinton steam-ferry, but he has seen that stopped.

Previous
evidence
attached.

Mr. Alexander.] Is not a farmer; owns no farming land; this evidence given about farming is from his connection with farmers and knowledge of the district: place of business is at Hinton; the seven punts referred to in his statement comprise two at Raymond Terrace, one at Seaham, and one each at Hinton Morpeth, Largs, and Hexham—totalling seven punts, not six; there is no wharf on left bank of Hunter at Hinton at which live stock could be loaded on to ocean steamers, so it all has to travel round by the bridges and back to Morpeth to head of navigation; Messrs. Holms, of Clarence Town; Mr. Fisher, of Brandon; Mr. Carmichael, of Seaham; Mr. Reynolds, of Tocol; another runholder near Hinton;—these have to drive stock all the way round; if these bridges were built stock would come direct to steamer or rail at Morpeth; regarding the statement as to the quantity of ironbark timber in the district, he means to say that the timber left is in paddocks on private lands which have not yet been parted with; as a matter of fact, there is plenty of timber in the district still; squared ironbark delivered in Morpeth costs about 1s. 6d. per foot, and round timber about 10d. or 1s.; has tendered for a shed in Sydney, and expects to get his timber in Morpeth—ironbark; all this timber will be brought him by bullock-teams, not by water, and this timber might come from Seaham, as a tender has been given from that place by road all the way round; if these bridges had been built this timber could be brought direct at less cost; within last twelve months has built a hay-shed on Phoenix Park of large round timber brought from Seaham round by the bridges.

JAMES STUART.

First-class timber has been obtained within 5 miles of Hinton, and shipped to New Zealand for bridge-building; is of opinion that the best site for the bridge across the Paterson would be below Hinton, and nearer the junction of the Hunter; his reasons are that the banks are higher and better, that the road connecting the bridges would be along higher land, and parallel with the current; it would be necessary to resume land for this road; estimates the value to be from £60 to £70 per acre; there are about fifty or sixty homesteads within the bight formed by the two rivers, *i.e.*, Phoenix Park.

JAMES STUART,

Builder and Contractor,

President of the Hinton Progress Committee.

“Royal Hotel,” Morpeth, 25 March, 1890.

*Mr. Alexander.] Daniel John Carmody, farmer, Nelson's Plains:—*Farms 34 acres leasehold, about $1\frac{1}{2}$ mile from confluence of Williams River; there is a road to Hinton—fair road—about 5 miles to Hinton Ferry; has to cross by Williams to get to Raymond Terrace steam-wharf about 3 miles; utmost load that can be taken on Williams punt in dray is a ton; takes about an hour to get to wharf; has never carted produce to Morpeth to go by rail; does not consider it worth while; sends goods by drogher; his farm fronts river; has made up a small jetty on his farm to load from; jetty is fairly convenient; have sometimes to wait a week for a drogher until others are attended to; water at jetty is sufficient for drogher;

drogher; his jetty is the only one thereabouts he believes which is so favoured; others have to wait for tides; pays 3s. 6d. per bale sending by steamer, including drogher; the proposed bridges at Morpeth and Hinton would affect him in this way, that when he has business at Maitland he would have to go round by road by existing bridges when floods are out: for instance, to get to Morpeth to-day he had to leave his horse on left bank of Hunter at Hinton, because punt has stopped running; would pay to send produce by rail to Sydney from his farm if bridges were built, as he could despatch two loads daily.

Mr. Gilliat.] Each of these loads would be three bales of lucerne and five bales of oaten hay; considers his hay is injured by forwarding by steamer; one of his neighbours ships from his jetty; his other neighbours have jetties, but most of them have to wait for high water to enable the drogher to get alongside; he obtains all his supplies from Raymond Terrace, Morpeth, and Maitland; a storekeeper in Morpeth and one in Maitland send round frequently for orders; they deliver the orders at his house; thinks that punt at the Williams will stop working with a 3-foot rise.

D. J. CARMODY.

A westerly wind affects the working of the punt; there is but one man in charge, and he is unable to work it without assistance from the persons crossing; the toll is 6d. per vehicle, and 3d. per horse; the punt is leased; the tenant pays £57 sterling per annum.

D. J. CARMODY.

Largs, "Butcher's Arms," 29 March, 1890.

Mr. Alexander.] *Malcolm M' Rae*, farmer:—Leasehold 60 acres, 40 acres cultivated, close to Largs, fronting on Paterson River; ships hay by drogher generally, sometimes by rail at Maitland; he has a small wharf on his land; cannot load at this when there is a flood or a fresh; then he has to send to West Maitland; cannot get to East Maitland at flood-time; distance to West Maitland is 5 miles; to Morpeth Bridge, if built, would be 2½ miles; potatoes and onions ought not to be sent by drogher, because it entails an extra handling; such articles are carted either to steamer or to rail; would sooner travel 4 miles round than take his horses over a punt, because they are not quiet on a punt; droghers are sometimes so full of work that they cannot take away the hay; has had hay waiting a fortnight; has carted hay to East Maitland in order to get it away when drogher failed him; the distance is 3½ miles; though the distance is only 1 mile further than to Morpeth by a bridge, yet this Morpeth bridge could be reached during moderate flood when the Pitnacree bridge cannot be got at, because the flood is passing across at Paterson on this side the bridge, and at Porter's on the other side also; produces yearly 30 or 40 tons potatoes and 10 or 15 tons of onions; his hay has not been damaged in loading on to the droghers from his own wharf; Bolwarra and many Dunmore farmers use Bolwarra wharf; but the new courses of the river lately developed are likely to cut off this wharf altogether; there is no proper wharf; the bank has merely been cut away to allow of loading on to the droghers.

Mr. Gilliat.] After a flood the road into East Maitland *via* Pitnacree is impassable for a month; this has been the case ever since he knew it for thirty-five years; the last flood has destroyed all the lucerne-fields in this neighbourhood; the cost of ploughing and resowing is not less than £2 stg. per acre; a planting of lucerne will last six or seven years; has known it to do so fourteen; has had three plantings of lucerne destroyed in one year by floods; in good seasons he gets 6 tons of lucerne per acre, and about 40 to 50 bushels of maize per acre.

MALCOLM M'RAE.

Largs, "Butcher's Arms," 29 March, 1890.

Mr. Alexander.] *Mr. Charles Cummins*, farmer:—Dunmore Estate, leasehold 33 acres, 15 acres only cultivation, rest grazing, about half a mile from Largs, towards Dunmore Bridge; would use a bridge at Morpeth occasionally for potatoes and onions because these being perishable goods they have to be sent away quickly; his average production per annum about 15 tons of potatoes and 8 tons of onions; is affected by floods; the bridge at Morpeth would not enable him to save any goods.

Mr. Gilliat.] Sends his hay and maize by drogher; pays 3s. 6d. per bale of hay to Sydney; from his farm to Morpeth punt is about 2½ miles; thinks with 2s. per bale by rail it is cheaper to ship by drogher; there are other reasons why he prefers to do so; one is that when going by train it is only allowed to stop a certain number of hours on the truck; it must be sold or else removed and stored; if the latter extra expense is incurred, while if shipped by steamer it is unloaded and stored at the company's wharf in Sydney, where it can remain for a fortnight without charge if it is desired to hold for a rising market.

Mr. Alexander.] Consigns his hay to an agent in Sydney; the hay is sold in Darling Harbour when it goes by rail.

Mr. Gilliat.] With a rise in the Hunter of 28 feet on the Belmore bridge the water overflows the road at the entrance to Phoenix Park; is certain of this from personal investigation; this rise covers the low land at the neck, and commences to flow into the Park; considers the mean reading at the Belmore bridge at the height of the last flood was 34.6 feet; this was on Thursday afternoon the 13th instant; during the last flood the water flooded the neck between 8 and 9 a.m. on Wednesday the 12th instant; is convinced that the inhabitants on Phoenix Park are entitled to a bridge; throughout the rest of the district there are free bridges; around Morpeth they have only punts, and have to pay tolls to use these.

Mr. Alexander.] His farm does not front on water; has to draw his produce to Bolwarra public wharf, about a mile from his farm, and ship it then on droghers; the produce spoken of above as being sent by rail to advantage he to East Maitland.

CHARLES CUMMINS.

Largs, "Butcher's Arms," 29 March, 1890.

Mr. Gilliat.] *David Jarvis*, farmer:—His farm is on the neck between the Hunter and Paterson Rivers forming the entrance to Phoenix Park; the bridges are necessary in time of flood; the want has been long felt, and they have been agitated for since he was a boy; has lived there for more than thirty-five years; the water from the Hunter first breaks over its banks during flood on his farm and flows across the farm into the Paterson; this is the first part of the Phoenix Park flooded, and persons cannot get into Largs except by boat; his house is raised 1 foot from the ground; during the last flood there were 2 feet of water in the house; did not remove his family; when the Park is flooded there is a good deal of current,

current, but not so strong as on his farm; the current is not all over the Park, but in certain parts; the logs and driftwood on the Park are brought in by the current; has known a flood 18 inches higher than the last; this was in March, 1875; the flood was then 4 feet high in his house; he measured this; the last flood he did not measure; the water must have been higher; sends a good deal of his produce by drogher; the hay he loads by rolling down the bank; pays 3s. 6d. per bale for hay by steamer to Sydney; if it was cheaper to ship by rail, and there was a bridge, he would take it to Morpeth; forgets the freight on hay by rail; does not use the Morpeth punt because it would require three horses, especially at low tide, to take over three bales; this is because the pull out is so heavy; the punt stops working with a fresh of about 4 feet, or even less; unless he could cross the punt at high-water would rather go by Pitnacree bridge to East Maitland; this is about 4 or 5 miles round; does not consider accidents in using the punt arc frequent; having to pay 9d. for a horse and dray at the punt often prevents his using the punt; the average size of the farms is about 30 acres; lucerne averages about 5 tons per acre; maize about 40 bushels; on Phoenix Park the whole of the lucerne will have to be resown; it was destroyed by the late flood; will get nothing from the land until November next; it will cost about £2 15s. sterling per acre to prepare and replant the land; the duration of a planting of lucerne is about five or six years.

Mr. Alexander.] When flood breaks over from the Hunter River it first flows down the park, and then back towards Dunmore and Golden Grove; then, after it has risen a little higher, it flows into the Paterson; when at the highest the floods keep the same three directions; droghers have been working in Paterson and Hunter for twenty-six years to his knowledge, and he has been sending by them all along; would use the bridge to Morpeth if he found it to his advantage; he would have to cart to Morpeth, whereas now the droghers come to his barn; keeps two horses and a dray carrying three bales; the saving in freight would have to be set against labour in this carting; no damage has been done to his hay by loading on the droghers; some crops have to be taken to Sydney quickly, such as maize, potatoes, and new hay; there would be a decided advantage in sending these by train, also poultry and pigs; at present he sends very little by rail from Maitland; when roads are passable, East Maitland, *via* Pitnacree bridge, is nearer than West Maitland; he can only say, regarding sending by rail from Morpeth, if bridge were built, that he would have to find out if it would be really to his advantage to send by rail from Morpeth before he could say that he would do so; the bridge to Morpeth would be useful for communication with doctor, or when under need to go across by night; at present would sooner go to Maitland than be delayed at the punt; the bridge would not enable him to save much goods; it might be of such service occasionally; have often seen numbers of farmers from the Park collect on his farm, watching to see if flood is going to rise on the bank from the Hunter; and if it does so, then they go off quickly and drive their cattle across; if there was a bridge at Morpeth the farmers would, as soon as they found water rising over the land at this spot, drive and take away all their live stock and any goods that could be taken quickly across the bridge; they would have more time to save their goods; they would not be cut off as they are at present; the hay is usually stored high up; this, of course, could not be taken away; the live stock and would be saved.

Mr. Gilliat.] The water broke over his farm during the last flood at about 9 o'clock a.m.; is not sure whether it was Tuesday or Wednesday.

Mr. Alexander.] Leases 19 acres, which extends from river to river.

DAVID JARVIS.

Mr. Gilliat.] The water during the last last flood broke over the entrance to Phoenix Park at 9 a.m. on Wednesday, the 12th of March, and was about fifteen hours in getting all over the Park; the flood was highest in his house about Thursday afternoon at 5 o'clock; since giving evidence this morning has measured the flood-level, and finds that it was 22 inches above the floor; he also measured the flood-level of 1875, and finds that it was 38 inches from the floor.

DAVID JARVIS.

Clarence Town, 31 March, 1890.

Mr. Gilliat.] *James C. Miller*, Manager of the Williams River S.S. Co.—Has resided in the district for fourteen years; considers that little, if any, produce would go to Morpeth if the bridges were constructed; the carriage would be too costly; is not aware of the cost of carriage from Dungog or Clarence Town to Maitland or Morpeth, but from Maitland to Dungog it is 25s. per ton; believes the distance through Clarence Town is 38 miles; cost of carriage per steamer to Newcastle is 6d. per bag for maize, and to Sydney 13d.; very little hay is shipped from Clarence Town; some is shipped lower down, between Seaham and Raymond Terrace; the freight is 18d. per bale to Newcastle, and to Sydney from 3s. to 3s. 6d.; for the year 1889 there were 25,000 bags of maize shipped from this district; out of that only fifteen bags went to Morpeth; in the first quarter of 1890 sixty bags have been transhipped at Raymond Terrace for Morpeth; the bulk of this 25,000 bags was consigned to Newcastle, and was chiefly for local consumption; quite seven-eighths of the maize is shipped by the local storekeepers; the steamers run daily, leaving Clarence Town at 9-30 every morning, picking up passengers and cargo on their way down; their traffic is confined chiefly to the Williams; their passenger traffic does not exceed six daily.

Mr. Alexander.] The market for oaten hay carried by their steamers is mostly in Newcastle, as the quality is not so good as the southern and western, but that of lucerne is mostly in Sydney; the traffic by river between Clarence Town and Morpeth, both ways, transhipped at Raymond Terrace, would not amount to £10 per annum, even at the present exceptionally low rate of freights; have three steamers drawing, "Coorei," 9 feet. "Favourite," about 8 feet, "Williams," about 7 feet; "Coorei" is 92 tons burthen, "Favourite," about 60 tons, "Williams," about 40 tons; there are no droghers in this river; the sailing vessels that come here can load down to 13 feet 6 inches; the "Coonanbara" is the largest steamer that has come up here; loaded, she draws in this river 9 feet to 9 feet 6 inches; can go up to the Falls, about half a mile further up; the bridge is close to the Falls; this company has been working ten years on this river; does not consider that the erection of bridges at Morpeth and Linton would affect the trade on the river; freight to Newcastle on hardwood is 1s. per cent.; on cedar, 1s. 6d.; from Newcastle to Sydney would be 1s. 6d. per cent. in addition on cedar; the road from Clarence Town to Creek, on the Raymond Terrace and Stroud Road, is almost impassable; this is shown by the fact that though the distance from

Creek to Raymond Terrace is 8 to 10 miles further than to Clarence Town, the traffic goes to Raymond Terrace in preference; the state of this road affects the business of the steamer company seriously; the company offer these advantages, storage and weighing free, and several local buyers.

JAMES C. MILLER.

Clarence

Clarence Town, 31 March, 1890.

Mr. Gilliat.] *Joseph Windross*, manager for J. C. Ellis, of Sydney and Newcastle, a resident in the district for eleven and a half years:—Having heard Mr. Dart's evidence with regard to maize he concurs with it; in the event of the bridges being constructed he believes a considerable traffic in saw-mill timber (logs) would go that way; a saw-mill proprietor has told him that the distance round by the present bridges is so great that he cannot afford to draw them; the teamsters have informed him they could afford to haul if they could get to Morpeth; it would be a saving of 3 miles to East Maitland; believes that a quantity of timber between Clarence Town and Morpeth would be hauled into the latter place for shipment to Newcastle; the freight from Clarence Town to Newcastle is 3s. per 100 feet super., and the haulage would be about the same to Morpeth as to Clarence Town; there is a lot of saw-mill timber in that direction.

Mr. Alexander.] The timber that would go to Maitland as noted above would be in log; a good deal of timber is sent from Clarence Town to Newcastle on lighters; much of this is sent up country; Mr. J. Ellis has now a contract for Government, for 1890, for supply of all timber on Northern Line; this timber he will send to Newcastle on lighters; it will be loaded there on train and distributed along the line; it is a question whether for delivering in Morpeth it would not be cheaper to take it by road, and if so then the route *via* the proposed bridges would certainly be adopted; timber is loaded in Clarence Town for all ports but he sends all his in lighters to Newcastle, where it is transhipped for ports; he is now shipping for New Zealand; this timber could not be taken direct to Morpeth and shipped at once in sea-going vessels because the depth of water at Morpeth will not admit of vessels of the same draught as can come to Clarence Town; the draught admissible here is 13 feet at spring tides; not sure of the depth of water between Morpeth and Raymond Terrace.

Mr. Gilliat.] The reason he has discontinued shipping timber from Clarence Town by sea-going vessels is that Mr. Ellis has made other arrangements for doing so, but he may revert at any time to the former practice; has known the "City of Brisbane" to come up to Clarence Town.

Mr. Alexander.] The price of squared ironbark is 14d. per foot in Clarence Town; of round piles, 5d. to 1s.

JOSEPH WINDROSS.

Mr. Gilliat.] Passengers having to go by steamer from Clarence Town to Newcastle lose two days going by road *via* Morpeth to catch the train; they can be back in Clarence Town the same night; business people leaving Clarence Town lose three days going to Sydney and back, and only one day by train *via* Morpeth.

JOSEPH WINDROSS.

Clarence Town, 31 March, 1890.

Mr. Alexander.] *S. W. Dark*, storekeeper:—Resided here for twenty-three or twenty-four years; deals in produce, principally maize: Clarence Town is the port for all the Williams north of this; and much of the traffic from the Port Stephens District also; there is a bridge here across the Williams, on the road from Stroud; from Dungog is the principal traffic; the market for nearly all the grain is Newcastle; at times such as the present, when floods in northern rivers have raised the price in Sydney, maize is consigned to the Sydney market direct, but such rises are only of a temporary nature; Newcastle must, in his opinion, continue to be the market, because there is not enough maize produced in these and the Hunter River districts to supply the consumption in Newcastle itself; of cedar there is a large quantity shipped here; vessels drawing 13 feet of water trade here of from 400 to 600 tons burthen; considers that for goods there would be very little traffic to Morpeth, even if the bridges are built, because the difference in cost of freight from Morpeth to Sydney, and from Clarence Town to Sydney, would not compensate for the land carriage from Clarence Town to Morpeth; there is not enough hay, either lucerne or oaten, grown in this district for its own consumption; freight to Newcastle of maize by steamer is 6d. per bag, and to Sydney 1s. 4d. per bag (not quite sure of this latter); inclusive of all charges to Sydney; Maitland is the principal market for fat cattle; these go by road; these districts are used for fattening all along the Williams; these would be sent to Morpeth to the rail if the bridges were built, if a trade by rail with Sydney is in existence; considers that for passengers and light traffic the bridges to Morpeth would be a great convenience to these districts, but no goods would be taken there.

Mr. Gilliat.] Cannot state the cost of carriage per ton to Maitland, the traffic is so unimportant; believes that nineteen-twentieths of the maize grown in the district is purchased from the producer in Dungog and Clarence Town, and shipped by the local buyers to Newcastle.

S. W. DARK.

Clarence Town, 31 March, 1890.

Mr. Alexander.] *E. S. Field*, storekeeper:—Has been here for eighteen months; deals in produce of all sorts; for all stations north of Maitland he considers that it would be cheaper to do according to existing practice, *viz.*, to send by steamer to Newcastle, and to use the train thence, rather than to cart from here to Morpeth; at present only dairy produce and eggs and poultry are sent to West Maitland to the weekly market; freight to Newcastle by these boats is 5s. per ton, 6d. per bag; to Sydney, 1s. 3d. or 1s. 4d. per bag; does not think that including cartage it would pay to send by rail from Morpeth or Maitland; not much maize goes to Sydney by sea from Clarence Town; Newcastle is the market; considers that the bridges would facilitate passenger traffic by rail; a person could leave at noon and get to Sydney same evening; the saving would be about four or five hours in favour of the train from Morpeth or West Maitland; up to this year and in former years the price of maize in Newcastle ranged higher than in Sydney; this was due to the supply from the northern rivers to Sydney, but John See has been running steamers to Newcastle lately, and altered the conditions; supplies have also been brought from New Zealand.

Mr. Gilliat.] Thinks the bulk of the maize grown is purchased by local buyers before shipping to Newcastle; has no knowledge of the cost of carriage per ton to Morpeth or Maitland; can give no information about fat stock.

E. S. FIELD.

Mr.

1 April, 1890.

*Mr. Alexander.] C. A. Beck, Manager, A.J.S. Bank:—*Has been here between five and six years; the bulk of goods traffic goes from Stroud to Raymond Terrace, though the distance to Clarence Town is shorter; it is principally maize, potatoes, and bacon; a fair proportion, less than half, comes to Clarence Town; this is the port for all districts on north of Clarence Town and on right bank of Williams; farmers all around, especially at Dungog, are shareholders in this steamer company, and are consequently interested; Dungog is 15 miles from Clarence Town; all its goods come here; occasional drayloads of cedar arrive in Clarence Town, and some few do pass on to Maitland, but the bulk goes by river; considers that the existing steamer service on the river serves the districts north of this place efficiently, and that the erection of bridges at Morpeth and Hinton would be a great convenience, but it would not induce an alteration of the trade route in his opinion.

Mr. Gilliat.] There is a considerable traffic in fat stock passes through Clarence Town; the calves only are shipped by the river steamers; large stock go on to West Maitland to the market there; is aware that Mr. Holmes in this neighbourhood, the principal cattle-dealer and grazier, ships calves by steamer from Morpeth, and occasionally large stock; the bridges would save between 5 and 6 miles from Dungog to Maitland, and might induce a certain increase in stock traffic; the bridges would not affect the timber traffic; the principal passenger traffic from Clarence Town to Dungog is by steamer to Newcastle, and thence by steamer or train to Sydney; considers this is the more convenient way, as passengers can take the night boat from Newcastle; to do this one has to leave Clarence Town at 9:30 a.m. every day, and reaches Newcastle from 2 to 4 p.m.; the coach taking the mail leaves for Morpeth, *via* Hinton, at 12:30 p.m., reaching Morpeth about two hours later; this is of course subject to the punt at Hinton being able to work; when the punt is not working the mails have to go round by the and Belmore bridges to West Maitland.

Mr. Alexander.] Stroud is 30 miles from Clarence Town.

C. A. BECK.

Clarence Town, 1 April, 1890.

*Mr. Alexander.] W. J. Croker, grazier and timber merchant:—*Owns 1,800 acres freehold, and leases 5,500 acres, all in the neighbourhood, and on both sides of river Williams; he charters sailing vessels for ocean trade, and lighters for Newcastle trade; deals largely in stock; principal market for both buying and selling stock is West Maitland; East Maitland would suit better than West if it could be got at; it cannot well be got at now, or rather it is not now more suitable than West Maitland, because, even by

bridge it is very little nearer, and also that by this bridge the road is frequently impassable; for stock going to Sydney he would use the train at Morpeth if the bridges were built; also if he were sending by steamer, because the steamers trading to that place are so much larger than those coming to Clarence Town; also for stock to be sold in East Maitland he would travel them by these bridges; ships on steamers calves, fat cattle, and horses, and milking cows for Sydney; considers the sea route is best for such; has never sent by rail, because he thinks they are less knocked about on vessels; steamers on Williams, can only take about four cows or twenty calves, or four horses at once; these, if to go to Sydney, would have to be transhipped in Newcastle; the steamers on Hunter can take about forty or fifty cows, or about thirty horses at once, and then go direct without transhipping; the Hunter River steamers could come here as far as draught of water is concerned, but there is not trade enough for them on the Williams; they used to come here at one time; is of opinion that the Morpeth and Hinton bridges would be of great service to the stock trade of these northern districts; they would be of no use for timber trade from the Williams, but from the Paterson to the Clarence Town side for timber to be delivered in Maitland or at stations north the best route would be *via* these bridges if built.

Mr. Gilliat.] Mr. had the Government contract for timber in the northern district for five years, during which contract he supplied him with the timber; last year Mr. Ellis had this contract, and he supplied him also with the timber for twelve months; if the bridges were constructed he would cut the timber from the Paterson and truck it at Morpeth; this would comprise from 400 to 500 logs annually (girders); in his shipments of stock he would be guided by the prices ruling in Sydney or Maitland, and would ship to the highest market, but in either case it would be the shortest route to go *via* Morpeth; the freight for large stock from Clarence Town to Sydney is 20s. per head; the freight per steamer from Morpeth is 17s. per head; this is the cheaper route of the two, apart from the advantage of sending down a large mob at once; the freight for timber from Clarence Town to Newcastle by drogher is 3d. per foot for running foot piles and cube foot girders; in supplying contract, if delivered in Morpeth *via* the bridges, this freight would be saved, and fully 3d. more expense of loading and trucking to Maitland; this refers to timber that would be cut between the Paterson and Clarence Town; there are large quantities of timber in that direction; is now in treaty with Mr. T. Cooper for 500 acres of timber there.

Mr. Alexander.] This timber (some of it) would have to be delivered at a railway station. As the case stands at present he would deliver it by road to West Maitland, but if the bridges were built he would cart *via* Hinton and deliver at Morpeth, and he considers that the saving in distance by this route is worth 3d. per foot.

WILLIAM J. CROKER.

Morpeth, 2 April, 1890.

*Mr. Alexander.] Mr. James Coombs, engineer, steam ferry, Roads Department:—*Has been in charge of the steam ferry for sixteen years, but has known the district since 1856; steam ferry was first instituted in 1876; the same steam-punt is working now; engines are rated at 12 h.p.; length, exclusive of slopes, 52 feet; width, clear, 22; she can carry 140 tons of load; can carry six single-horse carts and about ten horses in addition when packed; have known this to be done on several occasions; has known this ferry boat to take across an eight-horse waggon with 6 tons of loading; there is no room for more, but a few loose horses might be put in also; for such a team he considers that no improvement could be made on the Hinton side; but on the Morpeth side the stone-pitched pavement, which has been down for eighteen years, might be improved by being replaced with smaller stones; these are very large, and make rough travelling; on the Hinton side the approach is pitched also, but with proper-sized stones, bluestone; on the Morpeth side the stones are sandstone; floods cover these approaches with silt, and when floods subside this has to be cleared away; this causes some inconvenience to traffic; remembers one accident on

this

this ferry punt; it happened thus: a jibbing horse with a loaded cart behind it, on arrival at Hinton side, refused to leave the punt, backed the cart through the chains, which he broke, and fell off the flap, cart and all, into the river; have never known any other accident from the punt; have known harness to be broken by horses entering or leaving the punt, but believes this was due chiefly to the rottenness of the harness; does not remember any accident having happened to the mail-cart; the ordinary rise and fall of spring tides is 4 feet, but with a southerly gale outside this tide may rise another 6 inches; the ferry is more convenient for traffic during high than low tide, because at high tides the grades on the approaches are less steep than at low tides; on the Morpeth side one of the guide-posts is more down the approach than on the Hinton side; this limits the working of the punt to a certain height of water; this height is 3 feet 6 inches above high water of spring tides; if the Morpeth and Hinton posts were made on same level some advantage in length of working would be gained, but the time for stopping the punt is usually controlled by the rate of the current, so at the outside a rise of 4 feet of water may be taken as the utmost depth of water above high spring tide in which the punt can be safely worked; returns, weekly, are sent into head office of the traffic; the tolls are the same now as from the beginning; the number of horned cattle that have been taken over at one time is fifty-six; the depth of water in the channel 20 feet from the Hinton approach is 40 feet at high water; does not know of any rock being in the bed; respecting the Morpeth punt, capacity is about 40 tons; have seen two three-horse teams with loads of gravel on her at once; the approaches are pitched; an improvement might be made on the Morpeth side by repitching with smaller stones; but the Phoenix Park approach he considers to be in very fair condition; cannot call to mind any accident having happened on this punt due to defective construction or working of the punt or approaches; considers that she compares very well as a hand punt with any on the river; it is leased; no returns are sent in of traffic; considers that no more damage is done to vehicles in getting off and on this punt than on punts in general; this punt is off before the steam-punt: it cannot run in strong current; cannot tell the rise, but any strong current, or a strong westerly gale, on a falling tide, will stop the punt; portion of the river bottom on the Morpeth side is hard clay; on the other side it is mud.

Mr. Gilliat.] With good horses, 6 tons can be taken out of the steam punt at any tide; will furnish a statement* of the days the punt has not worked during the first quarter of the present year, and the cause of prevention; the maximum height of the 15th March flood, 1890, was 13 feet 8½ inches at the Hinton steam punt; this is the highest flood he has known; the road between Hinton and the punt within 100 yards of the river was covered with about 5 feet of water; the Morpeth side was flooded half-way to the town; he brought a boat nearly to Mr. Gordon's house: on the Hinton side the flood-water extended all the way to the hotel in the township; if the tolls were reduced or removed considers the produce traffic would be largely increased; they were removed a few years ago for eleven months, during which time the traffic was almost doubled, comprising a great deal of heavy traffic; great quantities of farm produce were brought across which is now sent by the droghers; if the tolls were reduced or removed at the Morpeth punt it would increase the light traffic, but no other.

Mr. Alexander.] The greatest depth of water between Morpeth and the punt on the road was about 4 feet.

JAMES COOMBS.

Proposed Bridges at Morpeth and Hinton.

Stanley Alexander, Esq.,

Dear Sir,

I received yours of the 23rd last night, delayed in being addressed to Hinton, but I now respectfully enclose the test and result of time with punts running. If the vehicles are prompt in coming in, we can go over and return in two minutes, including loading and discharging, and on an average it is possible to do about forty trips an hour, although we have never been instructed to do so.

Yours, &c.,

JAS. COOMBS,

Hinton Ferry,

Morpeth.

Re Statement Hinton Ferry.

Examiners Public Works Proposals.

I RESPECTFULLY submit for your information numbers of days that steam-punt was not available for vehicular traffic during the recent floods for quarter ending 31st March:—

January	Nil.
February	5 days.
March	9½ days.
Total	14½ days.

I wish to state that it is only vehicular traffic that is stopped during flood-time at this ferry. At all times communication has been kept up either by boat or steam launch for foot passengers and light goods. Such an extraordinary time of delay through flood-water has not been known at this ferry during the fourteen years the steam-punt has been stationed here, and I do not suppose the like has ever been known at this ferry before.

Correction.—Please insert fourteen years instead of sixteen years, an error which was made by me in giving evidence at Morpeth, as you will observe from 1876 to 1890 to be fourteen years' term of steam-punts working here.

J. COOMBS,

Hinton Ferry.

"Royal Hotel," Morpeth, 2 April, 1890.

Mr. Alexander.] *James Spence*, engineer, New Hunter River S.N. Co., on the drogher "Anna Maria":—She draws 4½ feet loaded, 56 tons register, about 70 or 80 tons gross; 25 h.p.; can carry 200 bales of hay, or about 700 bags of maize; never carries cattle: occasionally gets pigs, no horses; works principally between Paterson township up the Hunter to wharf and down to Raymond Terrace; some of the farmers have jetties; if none, they go alongside the bank and lay two 24-foot planks ashore, and roll the bags or bales on board; hears a good deal of talk about the damage to hay in loading, but does not consider that much damage is done: farmers do make jetties where water is shallow or loading on droghers

* Attached.

droghers could not be done; charges for droghage, 6d. per bale for hay going by steamer; for hay going by train the charge is 1s. 6d. per bale, which includes loading on the train; by steamer to Sydney, including droghage, the charge on hay is 3s. 6d. per bale; the "Boomerang" draws loaded about 10 feet 6 inches (not quite sure of this); there are plenty of droghers for all the work; each company has one at Morpeth, and others come up from Newcastle.

Mr. Gilliat.] When the banks are cut away to load hay or corn the farmers lay planks or poles to protect it from being soiled; bales of hay, bags of maize, or any produce are not left on the banks from day to day, but if notice is given at the office or as the drogher passes up the river it is picked up on the return journey; it has happened, though very rarely, that the drogher returns loaded, and is unable to take the produce as promised; produce left exposed to the weather in this way he would endeavour to remove on the following day; only remembers one or two cases in which the produce was left out all night; as a rule he does not bring the drogher into Morpeth fully loaded; gives no preference to produce to be shipped by steamer over that going by rail; the extra 1s. freight charged for produce for the railway was put on some eight or ten years ago to check the large consignments of hay sent up the Northern line; the height of crane and funnel above water-level when light is 24 feet; 24 feet is about the headway that would be required for all the droghers trading here.

JAMES SPENCE.

"Royal Hotel," Morpeth, 2 April, 1890.

Mr. Gilliat.] *Duncan Sims, J.P.*, agricultural engineer—Resident in the district forty-seven years; is of opinion that until steps are taken to regulate or straighten the course of the river the construction of bridges is inadvisable; the position of the bridge is an illustration of what he means; the construction of the upper bridge at Belmore and the extension of the railway has diverted the traffic that originally came to Morpeth; does not consider the trade would be brought back by the construction of the proposed bridges; they would be more a convenience to light traffic than for produce; does not consider the reduction or removal of the tolls would increase the traffic.

D. SIMS, J.P.,
(Per H. GILLIAT).

"Royal Hotel," Morpeth, 2 April, 1890.

William Morrow, sergeant of police:—Has been here almost two years; at East Maitland four years previous to coming here; according to Constable Murphy's note-book there are thirty-one farms on Phoenix Park; has observed a fair traffic in cattle from Dungog passing across Hinton punt to be shipped by steamer for Sydney at Morpeth; has a recollection of a mob of horses having been brought here round by Maitland shipped in Morpeth for Sydney.

W. MORROW.

Phoenix Park, 12 May, 1890.

Mr. Alexander.] *John McFadyen*, farmer (tenant) on 50 acres, close to Morpeth punt:—Each steamer company has an acre of land on Phoenix Park, opposite their own wharf; on this land they each have a wharf and a shed; all goods delivered at these wharves are carried by the companies steamers free of droghage, viz., at the same freight as from Morpeth; the road to these wharves joins the main road near Morpeth punt; this is a surveyed road through private property which has been in use all along as an approach to the companies' wharves; there is also another road approach to the wharves from the Beattie's Point road; no Government money has ever been spent on these roads.

JOHN M'FADYEN.

Narrowgut, 12 May, 1890.

Mr. Alexander.] *George Blundell*, farmer, Narrowgut, half a mile from Morpeth; 16½ acres leasehold on property of the Close family; has been on this farm thirty-seven years; his frontage is not on the Hunter River, but on the creek from Hume's lagoon; sends hay, corn, and potatoes to Sydney by steamer; carts to steamer with his own teams; pays 3s. and 3s. 6d. per bale freight, according to size; on potatoes freight is 10s. per ton, twelve bags per ton; onions the same, but fourteen bags per ton; dairy and garden and orchard produce is sold in Morpeth market; has never sent goods by train; the reason he sends by steamer is that the companies house goods in Sydney for a fortnight free of charge, but if sent by rail goods must be sold from the truck within a certain number of hours; his neighbours on this part of Narrowgut, who have no water-frontage, all despatch their goods in the same way; further away, past the creek, all farms have water-frontage; when roads are good they all despatch in the same way, because they save cost of droghage by doing so, but when roads are not good they ship by drogher; the same course is adopted by all farmers, his immediate neighbours, who have water-frontage.

GEORGE BLUNDELL.

Phoenix Park, 12 May, 1890.

Mr. Alexander.] *Mr. G. H. Stephens*, farmer, Phoenix Park, gives list of farmers on Phoenix Park having frontage on a river:—

David Jervis...	19 acres, fronting both rivers—tenant.
Dennis Maher	14½ acres, fronting Paterson River—tenant.
D. O'Toole	19 acres, fronting Paterson River—tenant.
W. Eliason	25 acres, fronting Paterson River—tenant.
P. Maher	25 acres, fronting Paterson River—tenant.
G. H. Stevens	50 acres, fronting Paterson River—tenant.
A. Hooke	46 acres, fronting Paterson River—freehold.
Mrs. Morris	46 acres, fronting Paterson River—freehold.
R. Wilkinson	50 acres, fronting Paterson River—freehold.
D. Hickey	30 acres, fronting Paterson River—tenant.
A. Richardson	18 acres, fronting Paterson River—tenant.
J. Beattie	25 acres, fronting Paterson River—freehold.
W. Gear (Beattie's Pr.)	23 acres, fronting Paterson and Hunter Rivers—freehold.

J.

J. Read	28 acres, fronting Hunter River—freehold.
J. Maher	22 acres, fronting Hunter River—tenant.
M. Duggan	24 acres, fronting Hunter River—tenant.
T. Wright	25 acres, fronting Hunter River—tenant.
— Baker	2 acres, fronting Hunter River—freehold.
J. Wright	20 acres, fronting Hunter River—tenant.
G. H. Stevens	3 acres, fronting Hunter River—freehold.
M. Maher	47 acres, fronting Hunter River—tenant.
J. M'Fadden	50 acres, fronting Hunter River—tenant.
J. Campbell	26 acres, fronting Hunter River—freehold.
Mrs. Maher	36 acres, fronting Hunter River—freehold.
J. Aitchison	34 acres, fronting Hunter River—freehold.
P. Grace	26 acres, fronting Hunter River—freehold.
J. Campbell	30 acres, fronting Hunter River—freehold.

Total... .. 763½ acres with water-frontage.

Farmers on Phoenix Park not having frontage to river:—

J. O'Toole, 32 acres—18 acres, freehold; 14 acres, tenant.	G. Lawler, 28 acres—tenant.
R. M'Cann, 20 acres—freehold.	J. Lawler, 26 acres—tenant.
T. Wright, 16 acres—freehold.	J. Corbett, 26 acres—tenant.
J. Harris, 50 acres—tenant.	J. Hawley, 25 acres—tenant.
J. Handley, 16 acres—tenant.	P. Burke, 25 acres—freehold.
J. Gliesan, 25 acres—tenant.	T. M'Mann, 18 acres—freehold.
P. Holborn, 36 acres—tenant.	Total—395 acres without water-frontage.
E. Pearce, 52 acres—tenant.	Total—1,158½ acres of land farmed on Phoenix Park.

The original grant of Phoenix Park included a portion of Golden Grove. The total of grant was 2,000 acres. The list now given of holdings comprises the whole of the lands, to the best of his recollection, now called Phoenix Park.

Considers that the acreage under lucerne is generally about two-thirds of the whole acreage. Of the rest the chief part would be planted in maize and the rest in potatoes. Of pumpkins, which are grown through the corn, each acre can be relied on to produce 10 tons (7 dozen to the ton) in a fair season. Not a great many onions are produced. Green barley is produced for private consumption.

Mr. Gilliat.] From nearest portions of Bolwarra, Golden Grove, and Dunmore, all produce, when not loaded on droghers, is carted to East Maitland over Pittwater Bridge. When this road is impassable all but the hay is carted through Phoenix Park to the wharf or occasionally to the train.

GEO. H. STEPHENS.

Hinton, 13 May, 1890.

Mr. Alexander.] *James Stuart*, builder and contractor, Hinton, has gone over the names of farmers on Woodville, Warralong, Nulla Nulla, Park, Swan Reach, Osterley, Nelson's Plains, given in *Mr. Geering's* evidence, and wishes to add the following, viz.:—

On Woodville.—G. Bishop, 50 acres, tenant; Logan, 60 acres, freehold, 20 acres, tenant. These do not front the river.

On Warralong.—Kelly and Clarke, 40 acres, tenant; A King, 30 acres, tenant. These farms have water-frontage.

On —W. Byron, 20 acres, tenant. This farm does not front water.

On M'Clement's Swamp there are fully 1,000 acres which would be all good for cultivation in lucerne and maize if drained. There is a prospect of this being done. It is owned by several owners, all freehold, on M'Clement's Swamp Corner, 25 acres. These do not front water.

On Nulla Nulla Estate.—Has frontage—F. Moore, 5 acres, freehold. No frontage—T. Mann, 20 acres, tenant; W. O'Brien, 40 acres, tenant; T. O'Brien, 30 acres, tenant; J. Watson, 30 acres, tenant=125.

On Osterley Estate.—Has frontage—O'Rourke, 15 acres, freehold.

On Nelson's Plains.—Has frontage—Davis, 25 acres, tenant; J. Fortc, 25 acres, tenant; G. Footc, 25 acres, tenant; J. Goswell, 30 acres, tenant. No frontage—W. Halpin, 15 acres, tenant. Has frontage—J. Priddle, 40 acres, tenant; J. Pearce, 30 acres, tenant=190.

In Hinton there are three stores, two hotels, post and telegraph office, police station, places of worship, Anglican, Presbyterian, and Baptist, resident Ministers two, Public School, steam flour-mill, not working, also two banks, agricultural implement factory, School of Arts. The population of the place, 475, is dependent upon the agricultural industries. There are fifty-six electors on electoral roll with residence or householders in Hinton. The site is very well fitted for a township, being very extensive, and raised above floods, capable of carrying a large population. There are five vineyards on this hill aggregating about 83 acres under vines. *Mr. Christian* has applied for right to mine for coal here. The flood during March rose 4 feet on the road between Hinton and , and about 3 feet on the road to the punt. It mounted up the street from Queen's Wharf as far as the junction with the main road. Regarding the decadence of Hinton since the bridges were built directing traffic to Maitland,—in 1864, when he came here, the two machine factories were flourishing, employing fully twenty-five hands. There was a tobacco factory. The hotel let for £120 per annum, now the rent is £60. The trade from the Williams and Paterson came through here. The steam flour-mill, now silent, was working in those days.

JAMES STUART.

Barethorne, 13 May, 1890.

Mr. Alexander.] *H. Geering*, blacksmith and land-owner:—Has been here forty-two years; property is at Barethorne, about 70 acres. List of land-holders having farms fronting on Paterson River, commencing from the bridge, at Woodville:—H. Croker, 90 acres, tenant; D. Newton, 25 acres, tenant; T. Butler, 20 acres, tenant; N. Carter, 20 acres, tenant; J. Volnier, 25 acres, tenant; total, 180 acres

acres. Without water-frontage—Mrs. Carter, 20 acres, freehold; T. Carter, 25 acres, tenant; T. Watson, 30 acres, tenant; Carl Volnier, 20 acres, tenant; total, 95 acres. Fronting Paterson River—J. M'Donnell, 40 acres, tenant; M. Clarke, 30 acres, tenant; J. M'Donald, 50 acres, tenant; W. Read, 30 acres, tenant; A. M'Murry, 30 acres, tenant; W. Wingartner, 30 acres, tenant; J. Carroll, 50 acres, tenant; J. Hickie, 50 acres, tenant; J. King, 50 acres, tenant; J. See, 25 acres, tenant; J. Todd, 25 acres, tenant; R. Hamilton, 25 acres, tenant; Mrs. Tidyman, 30 acres, tenant; total, 465 acres. Fronting on Paterson River—W. Christian, 70 acres, freehold; Mrs. See, 20 acres, freehold; J. Morrow, 40 acres, tenant; Mrs. Cameron, 20 acres, tenant; W. Morrow, 30 acres, tenant; J. Whiffen, 25 acres, tenant; H. Morrow, 20 acres, tenant. Fronting on Hunter—W. Stevens, 30 acres, tenant; total, 255 acres. Not fronting on Paterson—H. Gearing, 30 acres, freehold; H. and A. Beevis, 30 acres, freehold; Miss Pearce, 70 acres, freehold; P. Flynn, 20 acres, tenant; C. Tidyman, 25 acres, tenant; W. Digby, 18 acres, tenant; J. Minslorne, 100 acres, tenant; T. Watkins, 40 acres, freehold; J. Macpherson, 40 acres, freehold; total, 373 acres. Total, Barethorne, 628 acres. The above comprises all arable land between Dunmore bridge and half a mile beyond Hunter steam-ferry, and extending back between Barethorne and Hinton as far as M'Clement's Swamp; considers that the farmers on Woodville Estate would carry lucerne over two-thirds of the whole, and that the other third would be planted in corn similarly on the Barethorne lands; the rent paid for lucerne land on river is £3 per acre, and on swamp land £2 per acre; for maize-growing; the above average of crop and rent also applies to Warralong lands. The following farms are on the left bank of Hunter River:—The Nulla Nulla Estate, Wilson; Mrs. Smith, 20 acres, freehold; W. Gear, 20 acres, tenant. Not fronting river:—F. Wilson, 25 acres, freehold; W. Newman, 20 acres, tenant; J. Priddle, 20 acres, tenant; J. Pearce, 15 acres, tenant. Total, 120 acres. The following farms are on left bank of Hunter River:—The Park Estate, Mrs. Mann. Fronting Hunter River:—W. Bunt, 25 acres, tenant; T. Mann, 40 acres, freehold. Not fronting Hunter River:—J. Hicks, 20 acres, tenant; T. Burgess, 20 acres, tenant; W. Somers, 25 acres, tenant. Total, 130 acres. The following farms are on left bank of Hunter River:—Swan Reach Estate, John Eaves. Fronting Hunter River:—R. Bailey, 30 acres, tenant; J. Hayes, 30 acres, tenant; A. Kennedy, 25 acres, tenant; J. Dwyer, 25 acres, tenant; T. Donnelly, 35 acres, tenant; R. Watson, 30 acres, tenant; T. Watson, 30 acres, tenant; P. Shannon, 60 acres, tenant. Not fronting Hunter River:—J. O'Rourke, 20 acres, tenant. Total, 285 acres. The following farmers are on left bank of Hunter River:—Osterley Estate, Mr. Hickey. Fronting Hunter River:—J. Reynolds, 30 acres, freehold; P. Reynolds, 20 acres, freehold; H. Johnson, 30 acres, tenant. Total, 80 acres. The following farmers are on left bank of Hunter River:—Nelson's Plains, John Eaves. Fronting Hunter River:—S. Foote, 25 acres, tenant; M. Malcolm, 30 acres, tenant; R. Carroll, 30 acres, tenant; A. Parsons, 40 acres, tenant; S. Brown, 40 acres, tenant; T. Hallwell, 30 acres, tenant; W. Newman, 20 acres, tenant; J. Perrott, 40 acres, tenant; J. Camody, 30 acres, tenant. Total, 285 acres. At Barethorne is his blacksmith's shop, containing lathes, steam-hammer, and much machinery for making agricultural implements; has made hay-presses, mowing machinery, and all classes of tools and machinery required by farmers; has to bring his coal from Morpeth—not by river, but by road; also gets it from Five-mile Creek beyond East Maitland; this also is brought over the Hinton punt; uses about 40 tons of coal per annum, and would use more if more easily got; uses wood fuel as much as possible; all steel and iron for work he gets up from Sydney by steamer; the amount of work turned out by him has diminished very much of late years; Carisford is a private township, as Barethorne, of no importance.

JOHN F. BUTLER,
Council Clerk.

3 April, 1890.

Mr. Alexander.] Myles M. Rae, M.L.A.—Has interest in Morpeth: owns the mill property only there; notices in the annual report for 30th June, 1889, by the Railway Commissioners that 151 trucks, loaded, were despatched from Morpeth with hay; wishes to explain on this that the Hawkesbury bridge was only opened on 1st May, 1889, and that there was a severe flood in the river in May, 1889, so that though traffic to Sydney by rail only obtained for eight months of that year, 151 trucks at 14 bales gives 2,114 bales=705 tons; notice also that for the year ending 31st December, 1889, the railway returns show 508 tons of hay despatched; this gives 1,524 bales; on this points out that up to May, when the flood occurred, the tonnage amounted to 339, or 1,017 bales; and that for the eight months after the flood 169 tons=507 bales only were despatched; these supplies come from a limited area—from Narrow-gut and Brisbane-field, including about 500 acres; also Berryfield, about another 100 acres; were the bridges built fully twenty times that area would be affected, extending down to Raymond Terrace along the Hunter, but as regards the country along the Williams to Seaham, from the confluence with the Hunter; does not consider that all the hay would be brought to Morpeth; farmers on that side who have no frontage do now occasionally send produce to Hinton, and if the bridges were constructed many more farmers would do so, even from the banks of the Williams; this would be to take advantage of cheapness of carriage and of the facilities afforded by Darling Harbour (see paragraph on this subject later on); the railway does not insist on charging demurrage on trucks detained loaded in Darling Harbour, if they are satisfied that reasonable despatch is being used; also produce at Darling Harbour is sold every day or so by auction, and the purchaser has to bear the risk of demurrage; as to the permission said to be given by the steamer companies to store hay at their sheds in Sydney, the fact is that commission agents are compelled to sell hay as it arrives when the market is fairly supplied; failing this the charge is 3d. per bale per day; this exorbitant charge compels agents to sell at a reduction rather than submit; wishes to point out that the opening of the Hawkesbury bridge has introduced elements into the trade in hay which in their effects upon it can hardly be foretold; that there have been two very severe floods since the bridge was opened; both these killed nearly the whole of the plant; as an extensive buyer of hay, he points out the fact that farmers in Phoenix Park will not accept 5s. or 7s. per ton extra for hay on condition of its being carted across the river to Morpeth; has inspected the details of statistics collected by the Examiners; notices that these comprise lands from the confluence of the Hunter and Williams Rivers along the bank of the Hunter and Paterson to Dunmore bridge; also the whole of Phoenix Park; points out that in his opinion the lands of Golden Grove and Dunmore up to the main road between Dunmore bridge and Largs, so far as the bridge, should be included, because the distance to Morpeth is less, to most of the farmers, than to Maitland, and also because at Morpeth they have the choice of two markets; that is that they have the option of sending produce to Darling Harbour by rail

or

or to the wharves in Sydney; also because there is a weekly market in Morpeth; none in East Maitland, and that in West Maitland is too far; the saving in distance from Largs to Morpeth, as compared with West Maitland, is $3\frac{1}{2}$ miles; regarding storage at Darling Harbour, auction sales are held three times weekly, and trucks are allowed to be detained forty-eight hours; a shed has been constructed for storage of hay, free of charge, for a reasonable time; regarding the lands along the Williams, which have not been included in Examiners' statistics, wishes to add that the bridges would enable the farmers on those lands to send their produce to Morpeth and participate in the competition which takes place in Morpeth amongst the local buyers at auction sales; buyers from Newcastle on the south, and from stations up the line to Tamworth on the north, come to Morpeth in dry seasons or buy through agents there; the delivery to this market is now restricted by the lack of communication; farmers are compelled to pay 1s. 6d. per bale droghage for delivery to the rail at Morpeth.

Mr. Gilliat.] The hay grown upon the Williams River is chiefly eaten; the land is not of the same rich alluvial character as that fronting the Paterson and the Hunter River; a fair average of oaten hay is $1\frac{1}{2}$ ton to the acre; with reference to droghage charges of 1s. 6d. per bale for hay consigned to railway covers the cost of loading on trucks, but the cost of trucking is a mere trifle, as the distance between the drogher's wharf and the siding does not exceed 100 feet, and the drogher crew is assisted by the railway porters; the charge made for loading by the railway is 1s. per truck, but is seldom enforced; the steam-packet companies made an arrangement with him, owing to the difficulty in inducing the farmers to cart to Morpeth, to put lucerne hay into his store for 1s. 6d. per bale, but agreed to allow a rebate of 1s. per bale, provided the same hay was reshipped to Sydney by their steamers, but if forwarded by rail the 1s. 6d. was enforced; is distinctly of opinion that the construction of the bridges would open to the railway at least 10,000 tons of hay per annum, the most of which is now prevented from coming into Morpeth by the tolls imposed at the ferry, the suspension of the traffic during freshes or floods, and the danger or risk in crossing the punt; wishes to say that the bridges would effect a saving of £1,200 in transit, and £2,500 in deterioration occasioned by shipping into drogher, and transhipping from drogher to wharf at Morpeth, reshipment to steamer, and unloading on to Sydney wharves; the deterioration is to the appearance of the bale, from the knocking about and lifting with hay-hooks and exposure; he makes these statements as an expert; the income to the railway would be £3,000 per annum.

Mr. Alexander.] Is aware that both steamer companies have wharves on Phoenix Park at which produce is received and despatched by steamer free of droghage; these are used only by a few farmers in the immediate vicinity; attaches as part of this evidence a corrected copy of a letter addressed to the Minister for Public Works of 24th August, 1880.

MYLES M'RAE.

Legislative Assembly, Sydney, 24 August, 1880.

Hon. Bruce Smith, Minister for Works,—

The following are undeniable reasons why the bridge at Morpeth and the other at Hinton should be at once proceeded with in the interests of the townspeople of Morpeth and Hinton, the agriculturists of the electorate of Morpeth, and the taxpayers of New South Wales:—

- 1st. Because, by the action of previous Governments providing, during the past twenty-five years, free access to East and West Maitland by the construction of the Pinacree, Dunmore, Belmore, and Victoria bridges, and at the same time neglecting to construct the bridges referred to, equally important, the legitimate traffic has been completely diverted from Morpeth and Hinton to Maitland to such an extent that recently the fee-simple of a property at Morpeth has been sold for the annual rental derivable therefrom some eighteen years ago. I myself purchased a mill from the Hon. J. Rundle, Esq., for £800 which at the time stood him in £18,000.
2. The bridges are urgently required to connect the rich agricultural lands of Phoenix Park, Dunmore, Wallalong, Hinton, Swan Reach, and Burrora, with Morpeth, thereby enabling the producers of those places to send their produce to the metropolitan markets by the Great Northern Railway, the freight by rail being cheaper than by steamer, and making the branch line to Morpeth highly reproductive to the State, an enormous trade awaiting the construction of the bridges. Up to the present time the steam companies have had a monopoly, besides their charge for droghage being 6d. per bale on hay brought to their head-quarters, Morpeth, and afterwards forwarded by their steamers to Sydney; but if the farmer wishes to send his hay to the Great Northern Railway the companies increase their charges for droghage to 1s. 6d. per bale, protection in favour of the latter to the extent of 200 per cent.; whereas, if the bridges were constructed, the farmers would cart their hay to Morpeth, and put it on the railway trucks, thereby getting rid of the charge altogether. This is not the worst feature. All the hay shipped to Sydney by steamer lands on the Market Wharf and the Lime-street Wharf. An extra quantity arriving, the buyers withhold their hands, and immediately a fall in price takes place; whereas, if half of the hay arrived by railway at Darling Harbour and Milson's Point, no such fall would take place in the price of hay, and the farmers, who are already handicapped by the importations from the adjoining colonies, would be in a better position to compete, the cartage from the Market Wharf to Milson's Point alone being 7s. 6d. per ton.

Morpeth is the head of the navigation of the Hunter and Paterson Rivers, and situated on the southern bank of the Hunter River, is fully 100 feet above the level of the highest flood ever known on the Hunter; hence, everything else being equal, the bridges erected, has attractions and material for development that Maitland does not possess, the latter place being subject to inundation. If the late Squire Close had accepted a reasonable price thirty or forty years ago for allotments of land in Morpeth, his prices averaging then up to £500 per acre, the greater portion of West Maitland to-day would have been a lucerne paddock, and Morpeth would have been the principal town in the northern district.

The richest lands of the valley of the Hunter stretch forth from the northern bank of the Hunter, opposite the town of Morpeth, almost as far as the eye can see, embracing both sides of the Paterson River; hence, the town of Morpeth, through the non-erection of the bridges, is actually cut off its bread and butter, the trade naturally belonging to it. I venture to say that there is not another instance of the kind in New South Wales. To give you an idea of the trade, a greater tonnage has been shipped annually at Morpeth, until recently, than at Newcastle.

Yours faithfully,

MYLES M'RAE.

Morpeth and Hinton Bridges.

Messrs. Gilliat and Alexander, Examiners of Public Works,—
Gentlemen,

Parliament House, Sydney, 23 June, 1880.

I wish you to append the following to my evidence concerning the construction of the bridges at Hinton and Morpeth.

I find, upon reference to Coghlan's Statistical Register, Part 4, referring to the state of agriculture in New South Wales during the year ending 31st March, 1880, that the Morpeth electorate produced 22,147 tons lucerne and sown grasses, while all the other electorates in New South Wales only produced 43,153 tons, not half the tonnage produced in my electorate. Had it not been for the May flood, 1880, which killed a great deal of the plant, the tonnage would have been nearly double, and equal to the production of all the electorates of New South Wales.

I wish also to remind you that the tonnage of lucerne hay and sown grasses produced in East Maitland, West Maitland, and the Hunter electorates during the year ending 31st March, 1880, was, according to the same authority, Coghlan, 9,988 tons, a little over a third of that produced in my electorate, still they have got and are getting splendid bridges.

If

If a private company owned the branch railway at Morpeth the first thing they would do in order to encompass and participate in the patronage of the enormous production of that electorate would be to make terms with the Government concerning the Hinton and Morpeth punts, and afterwards allow all traffic to cross them free of charge; immediately afterwards start constructing the bridges; after constructed, sinking the punts into the bottom of the river.

The railway now is like a pig with one ear, nay, half an ear, at the mouth of the biggest tonnage in New South Wales, awaiting the bridging of the Hunter at Morpeth and Paterson at Hunter.

Yours faithfully,

W. Gilliat, Esq.,
Sir,

Hinton Ferry, 21 June, 1890.

In reference to yours of the 16th instant, I beg to state there was a high fresh in the Hunter River on Tuesday, 18th February, 1890, about 8 feet above high-water mark. 2nd. Also another one on Monday, the 24th February, same month, the maximum rise being 11 feet above high-water mark. 3rd. The last-named flood partly submerged the Phoenix Park.

Yours obediently,

JAS. COOMBS.

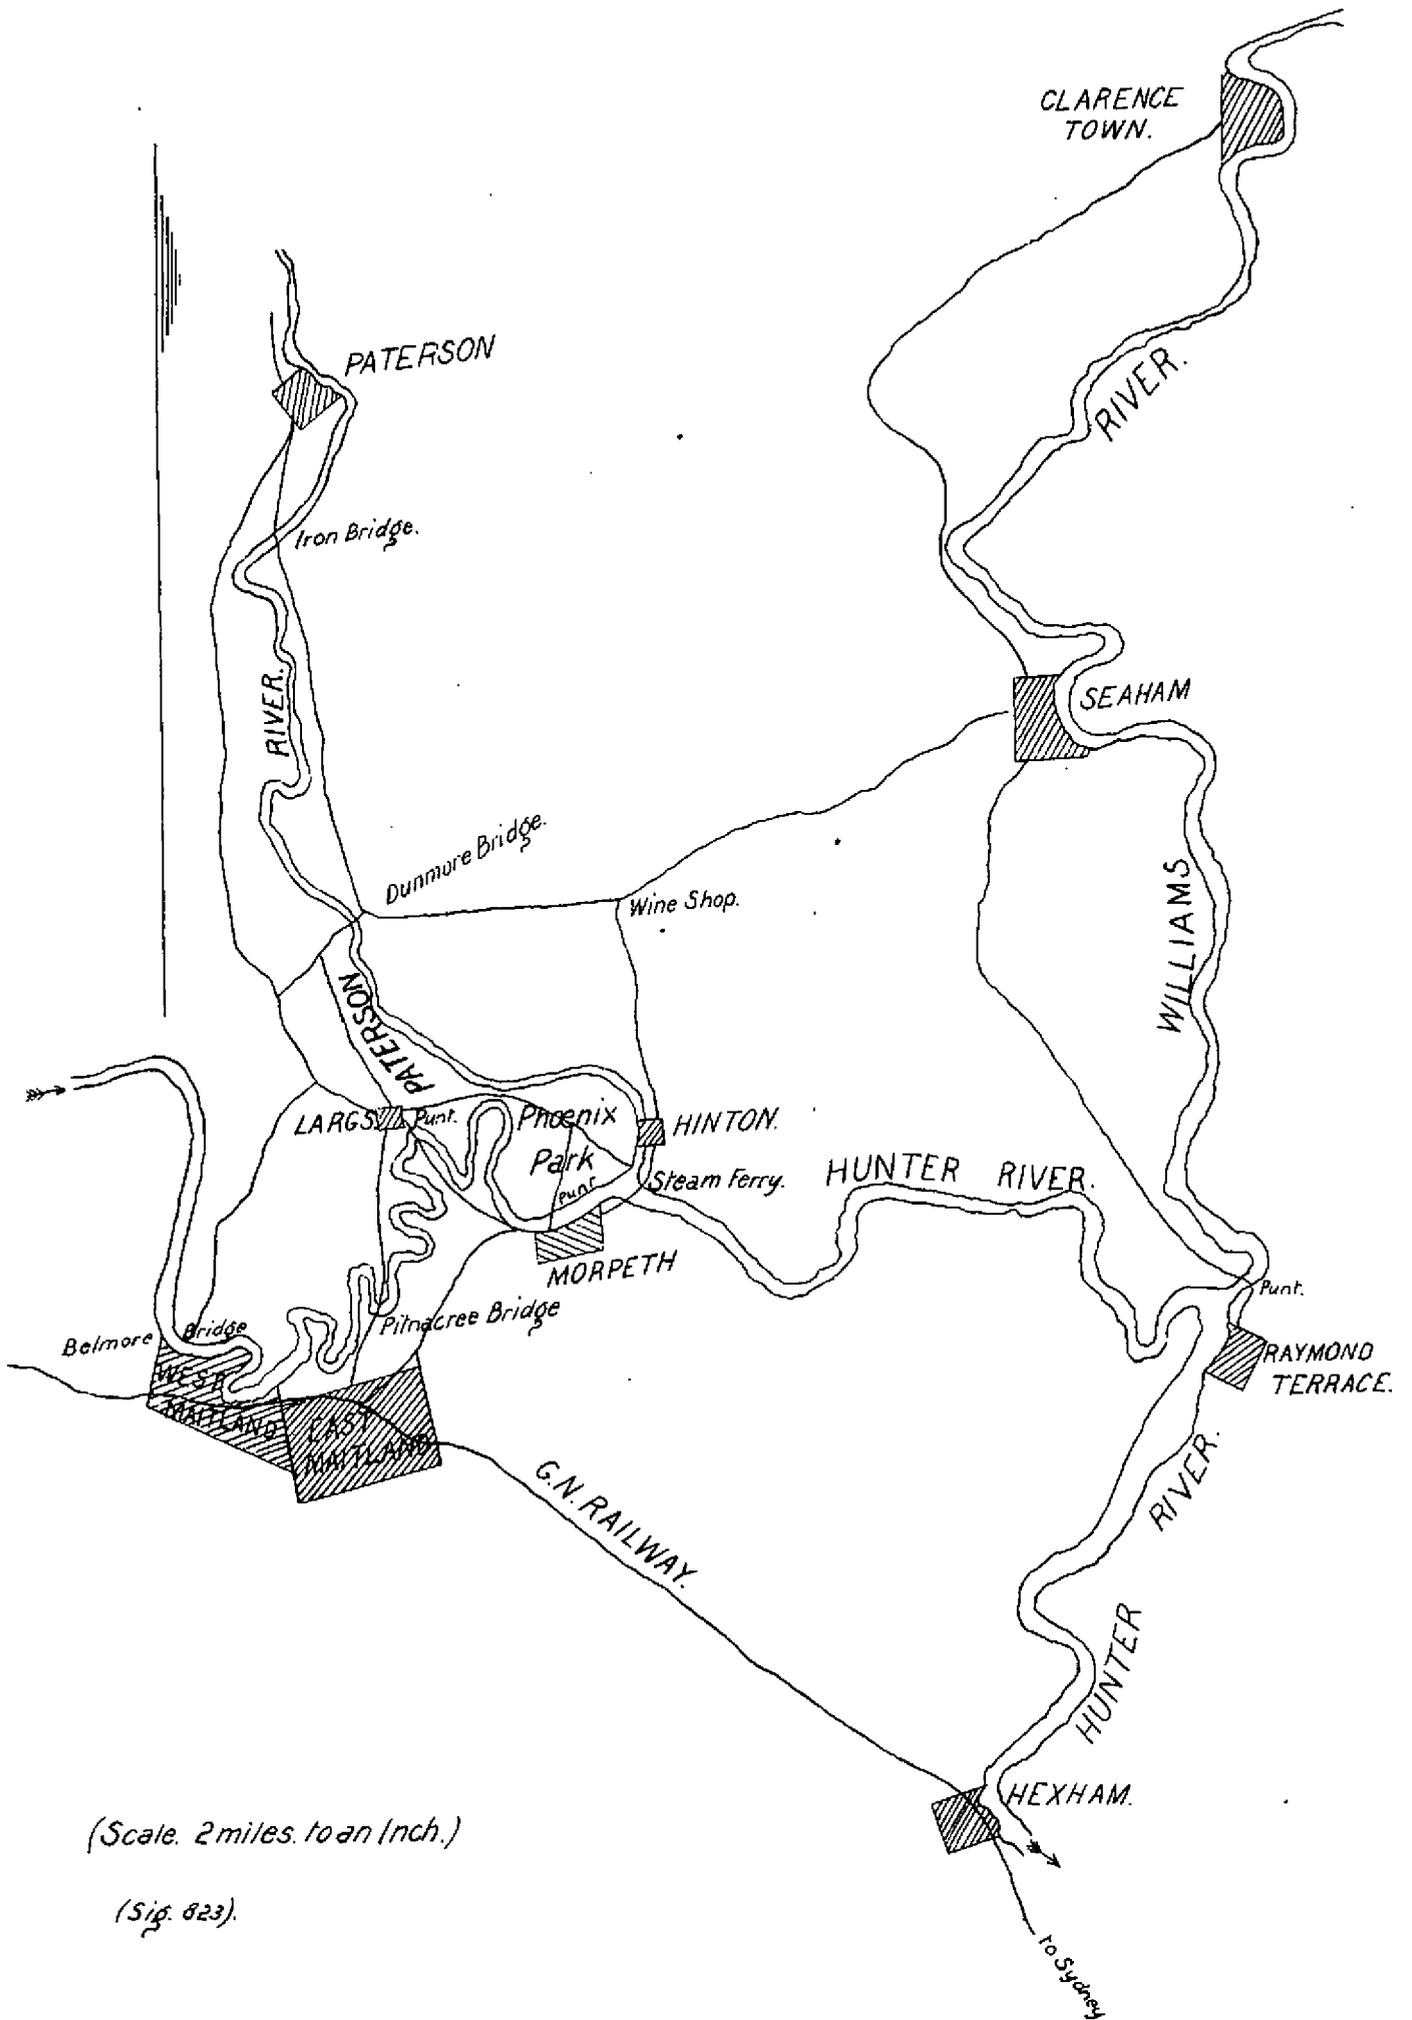

[Two Plans.]

No. 1.

Mr. A. R. Terry to The Secretary for Public Works.

Bridge to connect Sydney with North Shore.

Sir,

Frances Cottage, Point Piper Road, Woollahra, Sydney, 19 March, 1884.

Referring to the plans submitted by me in April, 1881, for a bridge to be constructed to connect Sydney with North Shore, and upon which a report was ordered to be prepared by the Commissioner for Roads, I have the honor to request you will order me to be furnished with a copy of the Report in question.

I have, &c.,

ALLEN R. TERRY.

Does Mr. Bennett know anything of this matter?—F.A.W., 20/11/84.

Roads.—J.R., B.C., 21/11/84.

There does not appear to have been any report made, after seeing the drawings, as the agreement with Mr. Garbett made it unnecessary. The only opinion given was that without seeing the drawings I thought an arch of 1,500 feet impracticable; I think so still.—W.C.B., 28/11/84.

Department of Public Works, Sydney, 18 March, 1884.—Mr. Flynn inquire if there are highly coloured drawings of a bridge to the North Shore, one arch springing from rock, by a Mr. Terry; they were missing for some time and ultimately found, Mr. FitzGerald or Mr. Burton may know.

Can find no trace of this drawing.—R. D. FITZGERALD. Can find no trace of this plan.—A.

R. BURTON.

No. 2.

610—

[920 copies—Approximate Cost of Printing (labour and material), £3 3s. 3d.]

No. 2.

Minute by The Colonial Secretary.

17 July, 1887.

North Shore Bridge.

It is but a question of time when the suburb of St. Leonards will be joined to the metropolis by a bridge.

It is impossible to believe that with the very rapidly increasing population of the northern shores of the harbour, the people will long remain satisfied with the present system of communication.

The creation of a tram system, already decided upon by the Executive, will tend to develop St. Leonards and its surroundings with further numbers, while the fortifications of Middle Harbour, Middle Head, torpedo stations, &c., point to the necessity for a means of passage across the harbour more certain and rapid than the present. A bridge is, therefore, in my opinion, a necessity for the immediate future.

I should be glad if Mr. Moriarty will have the necessary soundings made across the harbour, and, in conjunction with Mr. Whitton, report on the best form of bridge to join the two shores.

The co-operation of Messrs. Whitton and Moriarty is desirable in this proposed structure. Upon the former will devolve the necessity of considering the propriety of a bridge for connecting the northern railway with the city, and on the latter, more particularly, the plan for making provision for protecting the shipping interest of the port.

Engineer-in-Chief for Harbours and Rivers.

G.R.D.

No. 3.

Mr. E. Pritchard to The Secretary for Public Works.

Sir,

Railway Contractor's Office, Chatswood, North Shore, 30 August, 1887.

I have the honor to inform you that plans and details of a bridge from Sydney to North Shore have been prepared under my direction.

In the event of your Government being willing to entertain any scheme for the erection of the proposed bridge on the guarantee principle, I shall be glad to submit the whole proposal for your favourable consideration at such a time as will best suit your convenience.

I have, &c.,

E. PRITCHARD

(Per J. M'KAY).

There are papers about a guarantee bridge. I think they were laid upon the table of the House some five or six years ago.—*CH. A. G.*, 8/9/87. Herewith.—*A. R.*, 12/9/87.

It would seem, from Mr. Pritchard's letter, that the submission of his proposal—that is, the scheme of erecting and working the bridge, rates of toll to be charged, &c.—is dependent upon the Government expressing their willingness to entertain it on the guarantee principle. A similar proposal was before the Government in 1881—Mr. Garbett's scheme, the Government to guarantee $3\frac{1}{2}$ per cent., "less net receipts," on an outlay not exceeding £750,000. The amount named was to be the full extent of the liability of the Government. If the bridge cost more, no interest upon a larger capital than £750,000 was to be guaranteed, but the Government were to have the benefit of this outlay short of the amount named. The only advantage in the guarantee principle is that the Company or firm guaranteed would charge toll for the use of the bridge which, possibly, would amount to a sum equal to the interest guaranteed. If, however, it were a Government bridge, public pressure would no doubt be brought to bear to make it a free bridge.—*CH. A. G.*, 12/9/87.

Seen; put by for the present.—*J. S.*, 22/9/87.

No. 4.

Extract from the *Sydney Daily Telegraph*, Thursday, January 12, 1888.

REPRESENTATIVES appointed by the Municipal Councils of St. Leonards, North Willoughby, Victoria, East St. Leonards, and Manly, appointed upon a resolution introduced into the Council of St. Leonards by Alderman F. Punch, and endorsed by the four Councils named, to the effect that the construction of a high-level bridge connecting Sydney and St. Leonards should be a work undertaken to mark the centenary of the Colony, held a meeting at the offices of Mr. Armstrong, 70, Pitt-street, yesterday, at which the five Councils were represented. Captain B. Jenkins, Mayor of St. Leonards, was voted to the chair, and the five mayors were appointed a Committee to prepare a statement of facts and statistics for presentation to Sir Henry Parkes at a deputation arranged for to-morrow. Alderman M'Mahon, F. Punch, and A. Armstrong were appointed hon. secretaries to the Committee.

The question of unity of action in the matter of agitating for the erection of a bridge was discussed, and it was resolved that those present resolve themselves into a North Shore Bridge League, and preliminary steps were taken to that effect.

Mr. Bennett.—*J. S.*, B.C., 12/1/88. Road very urgent. Mr. Flynn.—Get previous papers. This matter was some two years ago given over to Mr. Whitton and Mr. Moriarty to report on.—*W. C. B.*, 14/1/88. Herewith, 84-10,772.

Mr. Dibbs' minute of 17/7/87 asks for a report on this from Mr. Whitton and Mr. Moriarty. I am still of the same opinion as I was in 1878, except that I would not advise a three-span bridge in the event of a bridge being built at all. Subsequent experience warrants the erection of a single span with half spans.—*W. C. B.*, P.W.O., 30/1/88.

Will Mr. Whitton and Mr. Moriarty kindly say what steps they have taken in the matter?—*J. R.*, B.C., 2/2/88. No steps have been taken, as Sir John Fowler furnished Sir Henry Parkes with a design for a bridge some time ago.—*J. W.*, 22/6/88. Under Secretary.—*P. W. O.*, 26/6/88. B.C. Submitted, 27/6/88. Put by for the present.—*J. S.*, 29/6/88.

Memo. handed in by Deputation.

Bridge to St. Leonards.

Submitted, 19/1/88.

THE united Municipal Councils of St. Leonards, East St. Leonards, Victoria, North Willoughby, and Manly submit for the consideration of your Government that the time has arrived for commencing the important undertaking of connection between the northern and southern shores of Port Jackson, for the following reasons:—

- 1st. The undertaking is in every way a fitting one to mark the first centenary of the Colony, its certain effect being an important development of the utility of an already world-famed port by providing means for the utilisation of both sides, instead of, as in the first century of the Colony's growth, restricting accommodation of shipping and wharfage to the south side only.
- 2nd. The vast area of Crown lands which will be enormously advanced in value will, at the enhanced value which such undertaking would cause to accrue in the course of a limited time, render the cost of such undertaking one of direct profit to the State. The area of such land, embracing only within the suburban area of Sydney, is approximately *sixteen thousand acres*, the greater part of which, it is estimated, would be increased in value by five times its present selling price. Such increased value, it is assumed, would far more than return to the State the cost of erection of a high-level bridge.
- 3rd. In order to render the recent extensions of the Great Northern Railway more profitable, it is essential that the through line from Queensland to Adelaide should pass directly through the city of Sydney, and the existing detour from Hornsby to Sydney be avoided, as a line calculated to add materially to the discomforts and delays of travel upon what must eventually prove the most important line of railway within Australasia.
- 4th. The importance of such means of connection of the intercolonial system of railways jointly with the increased area of harbour accommodation, which connection with the north would develop, must prove an enormous national advantage, and one calculated to aid materially in the more rapid development of the Colony's growth and importance.
- 5th. The present rapid growth of the Colony, and the proved value of its resources, pastoral, agricultural, and mining, render the difficulty of raising capital for sound undertakings slight, and especially so at the present time when the price of money on the London market is so low that capital can be obtained on especially easy terms.
- 6th. That increased facilities for the transmission of heavy goods would have the effect of developing the manufacture of potters' clay, into a class of goods largely used throughout the colonies, now imported at a severe loss owing to such a class of goods suffering severely in loss by breakages, and the freight being excessive. The deposits of clay for manufacturing all classes of potters' goods, found in the immediate vicinity of St. Leonards are proved to be equal to the most superior Staffordshire clays for all classes of delf-wares, and for the inferior goods such as drain-pipes, tilings, bricks, &c.
- 7th. The amount of the traffic passing between Sydney and St. Leonards, in 1884, amount to *two millions* of ferry passengers and *one hundred thousand* horses and vehicles, and it may fairly be assumed that this traffic has since increased by at least 50 per cent. In addition to this traffic a very large number of persons interested in lands lying between St. Leonards and Manly, would drive to their residences, and a large increase of traffic would follow such communication as would be offered by a bridge, and this traffic, it may be anticipated, would, at slight toll, return a fair interest upon cost. Such direct connection would undoubtedly have the effect of populating the northern suburbs to an extent equal to that already settled south and west of Sydney, and the traffic which at present exists may fairly be assumed to more than double itself immediately upon direct connection being established, and continue to increase and multiply to sufficient extent to render the bridge a good paying investment of State money.
- 8th. Within a radius of 10 miles northward of Hornsby and through the Lane Cove District through which the branch line of railway from the Great Northern Railway is being constructed, large areas of land suitable for the growth of fruit exist, and the difficulties of bringing to market the produce of these lands has had a deterrent effect in the development of this really important industry. With increased facilities for reaching the Metropolis a considerable impetus may be relied upon to be given to the growth and shipment of the production of a large area of country now comparatively idle.

For these reasons the boroughs named asked the favour of full consideration being given by your Government to a question which, as they are aware, has already occupied much attention, and which various public statements show, has during the past six years been warmly advocated by successive administrations, and by a large section of the representatives of the people.

Presented by Deputation.—H.P., 13/1/88.

No. 6.

Mr. R. J. Hardy to The Colonial Secretary.

Dear Sir,

Sydney, 10 February, 1888.
