LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

WESTERN SUBURBS SEWERAGE (NORTHERN MAIN SEWER).

(PARTICULARS RESPECTING THE CONTRACT OF MESSRS. CARTER, GUMMOW, AND COMPANY, FOR CONTRACT No. 77.)

*Ordered by the Legislative Assembly to be printed, 9 October, 1895.*

[Laid upon the Table in accordance with promise given in answer to Question No. 11, Votes No. 24, 9 October, 1895.]

SCHEDULE.

NO.	PAGE.
1. Report by Mr. C. H. Ohlfesen-Bagge, dated 21st September, 1894, respecting design for Western Outfall Sewer ...	1
2. Report by the same officer in regard to Messrs. Carter, Gummow, and Company's tender to construct Johnstone's Creek and White's Creek Aqueduct on the "Monier system" .....	5
3. List of tenders received for Contract No. 77, Johnstone's Creek and White's Creek Aqueduct .....	6
4. Report by Board of Reference to the Minister for Public Works in regard to above tenders, with minutes of the Minister thereon.....	6
5. Letter from Messrs. Carter, Gummow, and Company, dated 4th April, protesting against proposed supplementary specification in connection with Contract No. 77 .....	7
6. Report by the Engineer-in-Chief for Public Works on Messrs. Carter, Gummow, and Company's letter, with minutes thereon .....	7
7. Bond executed by Messrs. Carter, Gummow, and Company, in connection with Contract No. 77, with Annexures .....	7
8. Draft of Supplementary Specification in connection with Contract No. 77 .....	47
9. Report by Inspector G. A. Fowle, respecting dispute between Inspector Reid and Messrs. Carter, Gummow, and Company's foreman, in connection with concrete used on Contract No. 79 .....	47

No. 1.

C. H. Ohlfesen-Bagge, Esq., to Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

21 September, 1894.

WESTERN OUTFALL SEWER—4TH DIVISION—ABOUT 40 CHAINS IN LENGTH.

THREE designs are herewith submitted for the consideration of the Engineer-in-Chief, each design with an open aqueduct carried upon arches and piers. The aqueduct, or main carrier, is capable of discharging 11,000 cubic feet of sewage per minute, which is equal to two 6-foot diameter outfall sewers, running  $\frac{3}{4}$  full, with a gradient of 1 in 2,000.

The sewerage aqueducts have hitherto been constructed here in such a manner, method, and of such materials, that any competent tradesman, in his special line, obtainable in the Colony, could do the work.

Now, however, as it is a matter of the greatest importance to reduce the cost of the works, there seems to be no other way of accomplishing this object, but to adopt for this Colony a more or less experimental system of construction for these aqueducts,—of increasing the spans of arches, introducing arches with joints, of constructing the whole in concrete, and of constructing the whole of the work of concrete and mortar and iron.

In the old Home countries these novel systems of construction have caused in the commencement failures, owing to the works being carried out by more or less inexperienced and untrained engineers and artisans; hence the various State Governments would not entertain and construct works on these novel methods until special companies established themselves, who made it their special business to carry out such works with artisans who had had time to gain the necessary experience, and who had been practically and specially trained in the construction of such work.

It was only to such companies that works, which are termed purely and simply specialities, were entrusted, after they had given adequate security for the faithful, careful, and competent execution of same.

1st Scheme.

To be constructed on the system of Road-Engineer Koch, of Ulm, as reported by the Association of German Cement Manufacturers, in their publication of 1892.

The concrete aqueduct rests on 50-foot span arches, concrete piers, and pile foundations. The piers are to be built on sixteen 18-inch diameter hardwood round piles, assumed to be 30 feet in length; each pile will have to carry 25 tons.

The

The pile-heads to be cut off level at a depth of 7 feet below datum, and from 9 inches below heads of piles, for a depth of 3 feet. They are to be filled in between with rubble packing, to make a footing for the concrete foundation course; the latter to be built of sandstone concrete.

The pier itself to be built of bluestone concrete, rounded on top as shown, and the rounded surface to be covered  $\frac{1}{2}$ -inch thick with asphalt (bitumen and cork), while the faces of the skewback are to be covered with Val de Travers' asphalt,  $\frac{3}{8}$ -inch thick.

In former sewerage aqueducts, which were built on piers and brick arches, it was specified, in order to reduce the cost of the centering, that not less than six arches should be constructed at a time, which necessitated an abutment-pier at the end of each series of six arches. These abutment-piers are, for economical reasons, not to be introduced in any of these schemes. It will, therefore, be necessary to at once provide in the construction for more centerings, perhaps fifteen at a time, which would be sufficient for about one-third of the length of the aqueduct, as all arches built of concrete require at the very least four weeks' time to harden before the centres can be removed.

A concrete arch of 50 feet span settles the moment the centres are removed, the more rigid and the more watertight the centres are made, the less settlement of the arch takes place, which will vary from 5 inch to 1 inch accordingly, and the longer the centres are left under the arch, the less settlement takes place, provided always that the centres are made thoroughly watertight.

The removal of the centres has to be done with utmost care. The 50-foot span arches, having each a radius of 47 feet, and a rise of 7.2 feet, are 12 inches thick at the crown, and 18 inches at the springing, with a  $\frac{1}{2}$ -inch thick transverse butt-joint at the crown, filled in with Val de Travers' asphalt, and the total horizontal thrust at this joint is 235 tons, with a safety factor of 8.7 at the area of cross-section in centre of arch. The arches are calculated upon Scheffler's theory, as described in Ira O. Baker, C.E., treatise on masonry construction, pages 474 to 479, of 1891. This arch is given liberty to contract and expand, and move up and down without cracking; the tendency of concrete is the same as wrought-iron as regards expansion and contraction. The rise and fall of the arch should not exceed 1 inch at a difference of 60 degrees in the temperature.

The arches are to be built of bluestone concrete, and jointed, require very rigid centerings, and very careful, uniform, manipulation, handling, and filling in of the concrete.

After the arches are completed, the concrete between the haunches (spandrels) to be built in, the outer faces 18 inches thick of bluestone concrete, and the inner filling of gravel concrete in the proportion of 1 cement, 3 sand, and 6 gravel.

There is to be a vertical butt-joint over centre of pier of  $\frac{1}{2}$ -inch, filled in with  $\frac{1}{2}$ -inch mastic plate, the joint extends right across and from top of pier to 9 inches below invert of aqueduct, it is to allow the arch to expand and contract without causing cracks in the concrete.

The main carrier (aqueduct, 8 ft. 8 $\frac{1}{2}$  in. x 5 ft. 3 in.) is to be built of bluestone concrete, its side walls on the reservoir dam principle, and to prevent its cracking, in consequence of expansion and contraction taking place, the concrete is strengthened and held together longitudinally at the base of each side wall by four  $\frac{3}{4}$ -inch diameter iron bond-rods, and in the upper part of each side wall by six  $\frac{1}{2}$ -inch diameter iron bond-rods, spaced as shown, and walled in with the concrete as the work progresses. The cement adheres to the iron rods with a force of about 675 lb. to the square inch surface of iron rod.

Over the centre of each pier the concrete of aqueduct has a transverse vertical butt-joint,  $\frac{3}{8}$ -inch wide, filled in with mastic plate, and the joint is made watertight by a 5-in. x 10-in. channel built down in the side walls and underneath invert of carrier, filled in with mastic.

PROBABLE Estimate of the Cost of 58 feet length of Aqueduct, from centre line of Pier to centre line of Pier.

At per lineal foot, £9 11s. 5d.; or, at per lineal yard, £28 14s. 3d.

#### 2nd scheme.

The 2nd scheme proposed is to be built on the same principle, the rise and spans of arches, &c., as the 1st scheme, with the exception of the main carrier, which, although of the same internal dimensions, is to be built with much thinner side-walls, which reduces the outside width of aqueduct from 14 feet to 10 ft. 8 in., and thus materially diminishes the general quantities.

The side-walls of the aqueduct, being so much thinner, are to be strengthened, each wall, by vertical  $\frac{3}{4}$ -inch diameter wrought-iron bond-rods, spaced 2 ft. 7 $\frac{1}{2}$  in. from centre to centre, and nine longitudinal  $\frac{3}{4}$ -inch diameter wrought-iron bond-rods, spaced and built in as shown. Along the outside faces of copings a 4-in. x 2-in. x  $\frac{1}{2}$ -in. channel-iron to be built in, and transverse, 2 $\frac{1}{2}$  in. x 2 $\frac{1}{2}$  in. x  $\frac{3}{4}$  in. iron braces are to be placed, spaced 7 ft. 10 in. from centre to centre, and bolted on to the channel-iron of each side-wall.

The transverse butt-joints in concrete work of aqueduct are similar to those of the 1st scheme, with the exception of the 5-in. x 10-in. channel-joint round the aqueduct, which is to be left out in this instance, and a  $\frac{1}{2}$ -in. straight transverse joint is provided instead over centre line of pier, filled in with mastic plate.

The

The 50-foot span arch, with rise of 7.2 feet, is 12 inches thick in centre and 21 inches at the springing, and has a transverse butt-joint in the centre of  $\frac{1}{4}$  inch, filled in with asphalt (Val de Travers). The total horizontal thrust at centre is 144 tons, with a safety factor of 10 at the area of cross-section in centre of arch.

The piers to be built on twelve 18-inch diameter piles, filled in between at top, 3 feet deep, with rubble-stone packing to make sound footing for concrete pier. Each pile has to carry 22 tons, as against 25 tons of the 1st scheme.

The foundation courses under each pier to be built of sandstone concrete, the pier, arches, aqueduct, and outer faces of spandrels to be built of bluestone concrete, while the filling in between the haunches of arches to be done with gravel concrete.

PROBABLE Estimates of the Cost of 58 feet length of Aqueduct, from centre line of Pier to centre line of Pier.

At per lineal foot, £6 16s. 11.3d. ; or per lineal yard, £20 10s. 10d.

In support of the system applied for the construction of the two schemes just described, I can refer, amongst similar structures, to the one built by Mr. Road-Engineer Koch, of Ulm, as reported in the publication of the Association of German Portland Cement Manufactures in 1892, and to one road bridge built by Von Liebrand, as reported in the Proceedings of the Association of German Engineers of 28th July, 1894 (page 908).

Mr Koch's concrete bridge was built near Erbach, on the Danube, in Württemberg, with a jointed arch of 104.98-foot span, rise of arch 13 feet, thickness at the crown 1 ft. 7 $\frac{1}{2}$  in., and at the springing 2 ft. 4 in., and a width of roadway between parapets of 19 ft. 6 in. The arch was built in transverse slips 31.49 inches in width, with radiating end faces held by boards, well rammed. On removal of centering (after two months) the arch settled at the crown about 1.9685 inch, and after the road material had been placed in position the total settlement at the crown amounted to 4.7244 inches. This bridge was built by the Association of German Portland Cement Manufacturers.

Mr. Von Leibbrand's concrete bridge was built over the Danube in one arch of 162.5-foot span, with a rise of 16.25 feet, 3.25 feet thick in centre, and 3.6 feet thick at the springing. The arch rests on one side upon hard limestone rock, and on the other side on a pile foundation. The bridge is also a road bridge, 25 feet wide between parapets; it has been built near Münderkingen, in Württemberg, and has stood, at the time when it was reported, from 16th November, 1893, till 28th July, 1894.

These bridges carry roadways, whereas those of the two schemes herein described will have to carry an aqueduct, with such precautionary arrangements, however, which should be sufficient to prevent the concrete from cracking.

Drawings accompanying Schemes Nos. 1 and 2.

Schemes Nos. 1 and 2 are accompanied each by one sheet of drawing, showing the proposed general design, and one sheet of drawing showing diagram of forces on the arch and at the abutment pier at Muddy Creek. The blue lines in arches and abutments show the line of pressure as the result of Scheffler's theory, and the red lines in the other diagrams show the resultants in size and direction.

The diagram at side wall of aqueduct of the first scheme shows the resultant in position, size, and direction of water pressure and weight of water at a point 4.5 inches below top of wall when aqueduct is supposed to be running full up to level of top of coping.

3rd Scheme.

Proposed to be constructed on the Monier system, with concrete piers on pile foundations, 75-foot span arches of 80 feet radius, rise of arch 9.3 feet; spandrels of dwarf-piers and small arches carrying the aqueduct.

The piers to be built on 12 18-inch diameter piles, assumed to be 30 feet in length, each pile to carry 22.25 tons. Pile heads to be cut off level at a depth of 7 feet below datum. From 1 ft. 6 in. below heads of piles, and for a depth of 3 feet, the piles to be filled in between with rubblestone packing to ensure a solid foundation for the concrete foundation courses, to be built of bluestone concrete.

The piers to be built of bluestone concrete, excepting recesses for reception of footing of arch, which, when the latter is being built, will be filled in with cement mortar the same as arch.

The 75-foot span arch to be constructed on perfectly rigid and watertight box centering, of which no less than 10 should be provided at a time.

The arches to be 10 inches thick at the crown and 14 inches thick at the springing; total width, 9 ft. 5 in., to be constructed of cement mortar in the proportion of 1 to 3, strengthened by a wrought-iron network for the whole length and width, placed  $\frac{1}{2}$  inch above intrados of arch, and a similar network placed  $\frac{1}{4}$  inch below extrados of arch, extending from each springing for a length of about 29 feet up the arch. The building of each arch to be commenced at both ends simultaneously and continued towards the crown without intermission until completion.

The

The lower and upper wrought-iron network to consist of  $\frac{3}{4}$ -inch diameter longitudinal rods, spaced  $2\frac{1}{2}$  inches from centre to centre, and the cross-bars to be  $\frac{1}{2}$ -inch diameter rods, spaced 3 inches from centre to centre.

The total horizontal thrust at crown of arch is 180 tons, equal to 356 lb. per square inch of sectional area of same, whereas a square inch ought to stand 2,000 lb. (factor of safety, 5.618).

The spandrels, between extrados of main arches and underside of aqueduct, to be constructed of dwarf-piers and small arches as shown. The dwarf-piers to be built of bluestone concrete, but the plinths of said piers to be built of cement mortar of the same quality as to be used in the main arches, and simultaneously with the arches. Dwarf-piers to be 12 inches thick, excepting the 2-foot piers between main arches; all piers to be built of concrete up to springing of small arches, and above that level they are to be completed with cement mortar, built in simultaneously with the small arches. The upper part of central pier to be rounded off at top as shown, and covered 1 inch thick with asphalt (bitumen and cork).

The vertical 1-inch joint to be filled in with mastic plate, and the 3-inch by 4-inch channel joint to be filled in with mastic.

The piers in the first instance to be built up to level of springing throughout a length of 660 feet at a time, and, on completion of the piers of the second length of 660 feet, the small arches of a series of 60 at the time to be constructed over the piers over the first length of 660 feet, and so on, to ensure the whole structure being evenly and uniformly weighted as it progresses.

The piers are spaced 7 ft. 3 in. apart, and closed in at top with arches built of cement mortar (1 to 3) and wrought-iron. The small arches with a radius of 6 ft.  $7\frac{1}{2}$  in. and 13 inches rise, to be built on rigid watertight box centerings; they are to be 3 inches thick at the crown and 5 inches thick at the springing, 9 ft. 5 in. in width, and strengthened by a wrought-iron network of the same description as that for the 75-foot span arches, placed  $\frac{3}{4}$ -inch above intrados of arches.

The total horizontal thrust at crown of small arches is 13 tons, which gives 85 lb. per square inch of sectional area, equal to twenty-three times security.

The spandrels between extrados of small arches and underside of aqueduct and the narrow portion of spandrels near crown of main arch to be built in with fine bluestone (bluestone toppings) concrete.

The aqueduct to be 8 ft.  $1\frac{1}{2}$  in. wide at top and 5 ft. 3 in. deep, and, although a few inches less in width than the aqueducts of the 1st and 2nd schemes, its sides are less battered, and its bottom or invert being straighter, has the same cross-section area, and can therefore discharge the same quantity of sewage.

The side walls and invert to be constructed of cement mortar in the proportion 1 in 2, the side walls at the top to be  $4\frac{1}{2}$  inches thick, and at a depth of 3 ft. 9 in. from the top to be 6 inches thick; the level portion of invert to be also 6 inches thick. The walls and invert to be strengthened by wrought-iron network, one to be placed  $1\frac{1}{2}$  inch below inner face of aqueduct, and one to be placed vertical  $1\frac{1}{2}$  inch below outside faces of side walls of same.

These networks to be made of  $\frac{3}{4}$ -inch diameter longitudinal rods, with the exception of the six upper rods, in each side wall, which are to be  $\frac{1}{2}$ -inch diameter, all to be spaced  $2\frac{1}{4}$  inches from centre to centre, and the cross-bars to be  $\frac{3}{8}$ -inch diameter, spaced  $2\frac{1}{2}$  inches from centre to centre on the inside of aqueduct, while for the outside faces of same the longitudinal rods to be 3 inches and the vertical cross-bars 4 inches from centre to centre.

To prevent the aqueduct from cracking there is to be an inch butt-joint right across same over the centre of the main pier, to be filled in with mastic plate. The joint to be made water-tight by a 3-in. x 4-in. channel joint running vertically down the side walls and underneath invert of aqueduct, to be filled in with mastic.

The inner and outer surfaces of aqueduct, front elevation of main arches, dwarf-piers and small arches, and main piers all round, to be rendered  $\frac{5}{8}$ -inch thick with cement mortar (1 to 2).

The main piers of aqueduct are corbelled out on elevations of same, as shown, to be built up to the level of top of side walls, leaving an inch space between it and outer face of side wall, to be filled in with mastic plate.

#### Drawings accompanying the 3rd Scheme.

Scheme No. 3 is accompanied by one sheet of drawing, showing the proposed general design, and, by a second sheet of drawing showing diagrams of forces on the 75-foot span arches, loaded and not loaded, and on the 7-ft. 3-in. arches loaded only. The blue lines in the diagrams show the line of pressure as the result of Scheffler's theory, checked by the theory of elastic arches (by W. M. Cain, C.E.), and the red lines in the diagrams show the resultants in size and direction.

#### PROBABLE Estimates of the Cost of 83 feet length of Aqueduct from centre line of Pier to centre line of Pier.

*Calculations.*

All that we know so far of the mode of constructing works designed on the Monier system is described in pamphlets giving a number of works carried out by the patentees, accompanied by sketches and photos of said works, and furnishing the reason for which the work was carried out, and the sizes and dimensions on the sketch drawings, but giving no clue whatever as to any formula or principle that ought to be used in calculating the forces which should have to be contended with in the various structures enumerated in said pamphlets.

In order to meet this difficulty the radius of the 75-foot span arch of Scheme No. 3 had to be so selected that the centre line of forces (line of resistance) should always keep within the middle third of the arch ring.

The centre line of resistance was constructed by Scheffler's theory, and checked by the theory of elastic arches (W. M. Cain, C.E.), after which the thickness of the arch was determined in a manner so that at no part the compression exceeds 400 lb. per square inch, which, in this instance, fixed the minimum thickness of arch at 10 inches at the crown and at 14 inches at the springing, giving a safety factor of 5.618.

The wrought-iron network was mainly to be laid in as additional security, to strengthen the arch, on account of the low factor of safety, and the light structure of the arch.

Exactly the same system has been adhered to in the construction and calculation of the arches in the spandrels.

With respect to the aqueduct in connection with the 3rd scheme, on the Monier system, it must be borne in mind that the office also had to adopt its own method for ascertaining the strength and dimensions for the invert and sidewalls of same, which resulted in fixing the width of top of sidewall at  $4\frac{1}{2}$  inches, the outer faces of sidewalls to be vertical, and at a depth 3 ft. 9 in. from top of sidewall, the latter to 6 inches thick, the invert at end of side curve to be always 6 inches thick.

*Summary.*

Name of Scheme.	Span of Arch.	Rise of Arch.	Factor of Safety.	Cost per lineal foot.	Cost per lineal yard.	Length of Work.	Total Cost.
	feet	feet		£ s. d.	£ s. d.	feet	£ s. d.

Cost per lineal foot.    Cost per lineal yard.

Mr. Ahern's present outfall sewer, Contract No. 101, if calculated for two sewers  
of 6 feet diameter, would cost ... .. £10 16 1    £32 8 3

C. H. OHLFSEN-BAGGE.

No. 2.

Mr. C. H. Ohlsen-Bagge to The Commissioner and Engineer-in-Chief for Roads,  
Bridges, and Sewerage.

Sydney, 14 March, 1894.

The tenders for the construction of the northern main sewer, Annandale and Leichhardt sections, Contract No. 77, have now been checked, the lowest being that of Messrs. Carter, Gummow, & Co., at 28½ per cent. below schedule rates, amounting to £15,757 1s. 9d.

The following are the other tenderers:—

Messrs. J. M'Sweeney ... ..	At 25½ per cent. below schedule rates.
J. F. Carson ... ..	20 10 0
Gilliver and Curtis ... ..	18 7 6
Holloway Bros. ... ..	18 4 6
J. Stewart & Co.... ..	18 7 6
Howie Bros. ... ..	17 1 6
Hugh Owen ... ..	15
Phillips, Rhodes, and Broughton	13
R. and S. Butcher ... ..	11
E. Taylor ... ..	10 1 6
Maddison and Ewing ... ..	8 1 6
T. Williams ... ..	6 1 6
T. E. Spencer ... ..	5
Carter, Gummow, & Co. ... ..	Lump sum of £15,500.

With respect to Messrs. Carter, Gummow, & Co.'s second tender for a lump sum of £15,500, I find that it is accompanied by a special design on the "Monier" system.

The plans for the White's Creek and Johnstone's Creek aqueducts as designed in this office, for which tenders were invited, were prepared with a view to securing the most substantial and enduring structure at the most reasonable cost. At the time that this design was made, I had as full particulars regarding the "Monier" principle as it was possible to obtain in the colonies. I would also like to point out that in Europe this class of work is made a specialty, being patented, and is wholly in the hands of private companies, who are required to give a substantial guarantee for the stability of their work. I think it would not be advisable to construct at the outset a work of such importance on the "Monier" principle.

The total for the office design amounts to ... ..	£15,757
„ contractor's Monier design ... ..	15,500
Difference ... ..	£257

C. H. OHLFSEN-BAGGE.

ROBERT HICKSON,

Vice-President of Tender Board.

## No. 4.

## Report by Board of Reference.

Board of Reference.—Tenders for Contract No. 77, Main Northern Sewer, Annandale and Leichhardt Sections.

THE tenders for this work were submitted to the Board to-day. In doing so, Mr. Hickson pointed out that fifteen tenders had been received, the lowest being that of Carter, Gummow, & Co., at 28½ per cent. below schedule rates—amounting approximately to £15,757 1s. 9d. The same firm also submitted a lump sum tender for carrying out the work according to a plan sent in by them, for the sum of £15,500. The plan submitted is for constructing the work on the "Monier" arch principle. This system has been extensively used during recent years on the Continent of Europe, with successful results, and Mr. Hickson sees no reason why, under certain restrictions, the opportunity should not be taken to introduce the system in the public works of this Colony. The advantages claimed by the patentees are that works can be carried out at a much cheaper rate wherever this method of construction is used. Mr. Hickson said he had no doubt that the design submitted was thoroughly suitable, and likely to be effective, and as the main principles as regards size and inclination of sewer were as provided for in the departmental design, he was prepared to recommend it; but if it was decided to accept the tender, a short specification of the work should be included in the bond, and provision also made for the maintenance of the work by the contractors for a certain period after completion.

Mr. Hickson further said, that as Mr. Darley would be the responsible officer for carrying out this work, he had gone into the matter very thoroughly with that gentleman, and Mr. Darley was quite prepared to endorse his views.

The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principal is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to endorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration.

J. BARLING,

Chairman.

C. W. DARLEY,

Engineer-in-Chief, Harbours and Rivers.

ROBERT HICKSON,

Commissioner for Roads.

H. DEANE,

Engineer-in-Chief, Railway Construction.

W. L. VERNON,

Government Architect.

J. W. HOLLIMAN, Secretary,  
20 March, 1895.

Submitted.—J.B., 27/3/95. Before approving of this proposal I should like an estimate of the actual value of the work to be carried out by the contractors under the substituted scheme.—J.H.Y., 27/3/95. Mr. Hickson.—J.B., 28/3/95.

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system, as well as on the Department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the Departmental estimate for the work under consideration would be £22,000.—ROBERT HICKSON, 28/3/95. Under Secretary.

Submitted.—J. BARLING, 28/3/95. This is quite sufficient for me, and I now approve of the recommendation of the Board being carried out.—J.H.Y., 29/3/95. Accept.—D.C.McL. (pro. U.S.), 29/3/95.

## No. 5.

Messrs. Carter, Gummow, &amp; Co., to The Secretary for Public Works.

Sir,

North Sydney, 4 April, 1895.

We have the honor to draw your attention to the conditions upon which the acceptance of our tender depends for Contract No. 77, Balmain Sewerage Works, and to our conversation with you of even date in connection with security required for its due performance.

We respectfully submit that our personal sureties for the amount necessary, should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work.

We are a firm of sound financial standing, well and favourable known to your Department as contractors for many large and important contracts extending over a period of eight or nine years under the Departments of Harbours and Rivers, and Roads, Bridges, and Sewerage, which facts we trust will satisfy you as to our *bona fides* in this matter.

We have, &c.,  
CARTER, GUMMOW, & CO.

## No. 6.

The Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage to The Under Secretary for Public Works.

Sydney, 5 April, 1895.

The accompanying letter of 4th April, 1895, from Messrs. Carter, Gummow, & Co., is a protest against the stringent supplementary specification prepared by Mr. Norrie, at my suggestion, with regard to the alteration in the design of Contract No. 77.

The last paragraph of this specification states: "And the contractors shall enter into a bond to Her Majesty the Queen in the penal sum of £12,000, with two sufficient sureties in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the Monier system, &c., &c."

The amount of £12,000 is the sum it would cost the Department, at Departmental rates, to renew that portion of this sewer which is built on the Monier system.

It is right, however, to say, that the tendered rates for this portion of the work would only come to £9,000, but prices being abnormally low, I think it is only right to put in a sum at which the Department really values the work.

Messrs. Carter and Gummow ask that their own "personal sureties for the amount named," i.e. £12,000 (an amount which they do not dispute), "should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work."

They go on to say that they are "a firm of sound financial standing, well and favourably known to the Department as contractors." This is quite true. They are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible. At the same time, misfortunes happen the very soundest firms of contractors, and the Department must look a little way into the future. Their own bond for £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men, Mr. George Forrest and Mr. James Gillen. From inquiries made, I believe these men to be financially sound, and I think, if their names were accepted as the sureties in the penal sum of £6,000 each, the Department would be secured as far as it is reasonably possible to be.

This work will be carried out under Mr. Darley, and I recommend that the whole of the papers be sent him to give his opinion thereon.

ROBERT HICKSON.

Mr. Darley for report.—J.B., 5/4/95.

I concur with Mr. Hickson. I think in accepting a new patent of this kind, and adopting it in a large and costly contract, that the Department cannot be too careful in securing its position by leaving all the risk in the hands of the contractors and patentees. I, therefore, recommend that the personal names be required for further security. The names mentioned may, I think, be accepted.—C.D., Engineer-in-Chief, Metropolitan Sewerage Construction, 8/4/95.

For Minister's approval as to course suggested in regard to sureties.—J. BARLING, Under Secretary, 9/4/95. Approved.—J.H.Y., 10/4/95. Mr. Norrie.—J.N.O. P., 10/4/95. Messrs. Carter, Gummow, & Co., Auditor-General, Mr. Norrie, 11/4/95.

## No. 7.

Bond executed by Messrs. Carter, Gummow, and Company, with Annexures.

Agreement made this 16th day of May, in the year of our Lord 1895, between John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, of North Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or form of "Carter, Gummow, & Co." (and hereinafter styled or referred to as "the contractors"), of the one part, and Her Most Gracious Majesty Queen Victoria of the other part.

WHEREAS the Minister for Public Works of the said Colony (hereinafter called the said Minister) recently called for tenders by notice published in the *Government Gazette* (of which notice a copy is herewith annexed and marked "A"), for construction of the northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, as shown in the drawings relating thereto in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked "No. 1" to "No. 10," both inclusive and according to the specification, schedule to specification, general conditions, and special condition, which are herewith annexed and marked respectively "B," "C," "D," and "E." And whereas the contractors made the tender herewith annexed, marked "F," to provide the material and perform the various works

works required in and about the full and proper construction, erection, and completion of the said sewerage works agreeably to the said drawings, specification, schedule to specification, general conditions, and special condition, as modified by the supplementary specification, also hereunto annexed and marked "G," and the contractors' drawing, marked "No. 11," now in the office of the said Engineer-in-Chief for Metropolitan Sewerage Construction, and at or for the price or sum set out in the said tender. And whereas the said tender was accepted by the said Minister, and such acceptance (a copy of which is annexed hereto, and marked "H"), was duly notified to the contractors on the 11th day of April now last past, and the contractors have assented thereto, as per their letter annexed hereto, marked "I." And whereas the contractors have deposited the sum of £775 in the Bank of New Zealand, at Sydney, in the said Colony, in the name of the Under Secretary for Public Works, at interest upon fixed deposit, No. A22,187, dated the 29th day of April now last past for twelve months, and have handed the receipt for the same to the said Minister to be held by him as such Minister or the Minister for Public Works for the time being of the said Colony, on behalf of Her Majesty, as security for the due performance of this contract, and all other matters and things herein contained, and which, on the part of the contractors, are to be done and performed. And whereas the said contractors have, with two approved sureties, entered into bonds to Her said Majesty conditioned to secure the due performance of the removal of so much of the said works at their own cost as shall have been constructed on the "Monier System" if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said general conditions and supplementary specification respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. Now this agreement witnesseth that, in consideration of the premises, the contractors do hereby, for themselves, heirs, executors, and administrators, covenant with and to Her said Majesty the Queen, Her heirs, and successors: That they, the contractors, shall and will perform the various works required in and about the full and proper construction, erection, and completion of the said sewerage works in accordance in all things with the said specification, schedule to specification, general conditions, special condition, supplementary specification, and drawings, and at and after the price, and within the time in the said tender mentioned. And that they will well and truly remove so much of the said works at their own cost as shall have been constructed on the "Monier System" if the Engineer shall be dissatisfied with the same at any time during either of the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the full and uninterrupted flow of sewage during progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to, within thirty-nine weeks from the date of being called upon to do so. And it is hereby agreed and declared between and by the said parties hereto that the said copy, notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy, letter of acceptance of tender, and letter of assent thereto, marked as aforesaid, all being hereunto annexed as aforesaid, shall be read as incorporated in and forming part and parcel of these presents in like manner, and if the same had been herein written and set forth at length, and that the said several annexures, the said drawings, and these presents shall together be taken to be the contract between the said parties in respect of the said sewerage works amplified in manner following—that is to say, that the said general conditions shall at all times be read and construed as if the stipulation contained in the said letter of acceptance of tender as to the discharge of men (not domiciled in this Colony for six months previously to their employment on the said works) employed on the said works when called upon to do so, and the penalty for non-compliance therewith had been expressly set out in the said general conditions.

In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

Signed, sealed and delivered, by the said John Carter, in the presence of,—	} HAROLD F. NORRIE.	JOHN CARTER.
Signed, sealed and delivered, by the said Frank Moorhouse Gummow, by his attorney, John Carter, acting under power of attorney, dated the 2nd day of January, 1894, in the presence of,—	} HAROLD F. NORRIE.	FRANK MOORHOUSE GUMMOW, By his Attorney,—JOHN CARTER.
Signed, sealed and delivered, by the said David Graham Snodgrass, in the presence of,—	} HAROLD F. NORRIE.	D. G. SNODGRASS.

This is the agreement referred to in our respective bonds to Her Majesty the Queen.  
Dated this 16th day of May, A.D., 1895. GEORGE FORREST, }  
JAMES GILLEN, } Sureties.

Witness—HAROLD F. NORRIE.

KNOW all men by these presents,—That we, John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, of North Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of "Carter, Gummow, & Co." (and hereinafter referred to as the said contractors), are jointly and severally held, and firmly bound unto Her Most Gracious Majesty Queen Victoria, in the penal sum of £12,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs, or successors, for which payment, well and truly to be made, we bind ourselves, and each of us, our and each and every of our heirs, executors, and administrators jointly and severally firmly by these presents.

Sealed with our seals dated the 16th day of May, in the year of our Lord, 1895.

WHEREAS, by agreement bearing even date herewith, and expressed to be made between the said contractors of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern

northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, according to the copy notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy letter of acceptance of tender, and letter of assent thereto, thereunto annexed, and marked "A," "B," "C," "D," "E," "F," "G," "H," and "I" respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked No. 1 to No. 11, both inclusive.

And whereas the said contractors have severally offered to become and be bound to her said Majesty, her heirs, and successors, for the due removal of so much of the said works, at their own cost, as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same, at any time during either of the periods of maintenance set out in the said general conditions and supplementary specification respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. Now, the condition of the above-written bond and obligation is such that if the said contractors do, and shall well and truly remove so much of the said works at their own cost, as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same at any time during the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erection and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions and special condition, and the plans therein respectively referred to, within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void and of none effect, otherwise to remain in full force and virtue.

#### STATUTORY DECLARATION.

I, John Carter, of Sydney, in the Colony of New South Wales, contractor, do hereby solemnly declare and affirm that—

1. I am the duly constituted attorney of Frank Moorhouse Gummow, at present residing at Adelaide, in the province of South Australia, under and by virtue of a Deed Poll or Power of Attorney, under the hand and seal of the said Frank Moorhouse Gummow, dated the 2nd day of January, 1894.
2. From letters and telegrams recently received from the said Frank Moorhouse Gummow, I have every reason to believe, and I verily do believe, that the said Frank Moorhouse Gummow is still alive.
3. At the time of the execution by me as such Attorney as aforesaid of a bond to and agreement with Her Most Gracious Majesty Queen Victoria, and bearing date the 16th day of May, 1895, in connection with Contract No. 77, Sydney Sewerage Works, I had not nor have I since received notice of the revocation by death or otherwise, of the abovementioned Deed Poll or Power of Attorney.

And I make this solemn declaration as to the matters aforesaid according to the law in this behalf, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Sydney, this 16th } JOHN CARTER.  
day of May, 1895, before,— }  
HAROLD F. NORRIE, J.P.

Know all Men by these Presents,—That I, George Forrest, of Marrickville, in the Colony of New South Wales, householder, am held and firmly bound unto Her Most Gracious Majesty, Queen Victoria, in the penal sum of £6,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs or successors, for which payment well and truly to be made, I bind myself, my and each and every of my heirs, executors, and administrators firmly by these presents.

Scaled with my seal, dated the 16th day of May, in the year of our Lord, 1895.

WHEREAS by Agreement, bearing even date herewith, and expressed to be made between John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, carrying on business together as contractors, under the name, style, or form of "Carter, Gummow, and Company," and therein and hereinafter called the contractors, of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, according to the copy notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy letter of acceptance of tender, and letter of assent thereto, thereunto annexed, and marked "A," "B," "C," "D," "E," "F," "G," "H," and "I," respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked "No. 1" to "No. 11," both inclusive. And

And whereas the contractors have entered into a bond to Her said Majesty, dated the 16th day of May, 1895, conditioned to remove at their own cost so much of the said works as shall have been constructed on the "Monier System" if the engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said General Conditions and Supplementary Specification respectively, and for the re-erection and construction of the said works, and to provide for the free and uninterrupted flow of sewage during the progress of such re-building, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. And whereas I, the said George Forrest, have offered to become bound to Her said Majesty, her heirs and successors, for the due performance and fulfilment of the said contract, according to the said agreement, and the several annexures thereto, so far as the removal of a portion of the said works constructed on the "Monier System" is concerned, if the engineer shall be dissatisfied with the same at any time during either of the periods of maintenance referred to, and the re-erection of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at the contractor's expense, in the manner provided for in the original specification, schedule to specification, general conditions, and plans within the time lastly hereinbefore set out. Now the condition of the above-written bond and obligation is such that if the contractors do and shall well and truly remove so much of the said works as shall have been constructed on the "Monier System," if the engineer shall be dissatisfied with the same at any time during the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void, and of none effect, otherwise to remain in full force and virtue.

Signed, sealed, and delivered by the abovesigned }  
George Forrest, in the presence of,— }

GEORGE FORREST.

HAROLD F. NORRIE.

#### STATUTORY DECLARATION.

I, GEORGE FORREST, of Marrickville, in the Colony of New South Wales, householder, do hereby solemnly declare and affirm that I am possessed of property to the value of £6,000 sterling and more, and that such property consists of—Freehold property, £5,700; cash in bank, £300 sterling. And I make this solemn declaration as to the matters aforesaid, according to the law in this behalf made and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Marrickville, this 1st day }  
of June, 1895, before me,— }

GEO. FORREST.

ROBERT ANDERSON, J.P.

Know all Men by these Presents,—That I, James Gillan, of Dulwich Hill, in the Colony of New South Wales, householder, am held and firmly bound unto Her Most Gracious Majesty Queen Victoria, in the penal sum of £6,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs or successors, for which payment well and truly to be made I bind myself, my and each and every of my heirs, executors, and administrators firmly by these presents.

Sealed with my seal, dated the 16th day of May, in the year of our Lord, 1895.

WHEREAS, by agreement bearing even date herewith, and expressed to be made between John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, carrying on business together as contractors, under the name, style, or form, of "Carter, Gummow, & Co.," and therein and hereinafter called the contractors of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern main sewer, Leichhardt and Annandale sections, contract No. 77, Sydney sewerage, according to the copy notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy, letter of acceptance of tender, and letter of assent thereto, thereunto annexed and marked "A," "B," "C," "D," "E," "F," "G," "H," and "I" respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked "No. 1 to No. 11," both inclusive.

And whereas the contractors have entered into a bond to Her said Majesty, dated the 16th day of May, 1895, conditioned to remove at their own cost so much of the said works as shall have been constructed on the "Monier System" if the engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said general conditions and supplementary specifications respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special condition and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. And whereas I, the said James Gillan, have offered to become bound to Her said Majesty, her heirs, and successors for the due performance and fulfilment of the said contract, according to the said agreement and the several annexures thereto, so far as the removal of the portion of the said works constructed on the "Monier System" is concerned, if the Engineer shall be dissatisfied with the same, at any time during the periods of maintenance referred to and the re-erection of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding at the contractors expense, in the manner provided for in the original specification, schedule to specification, general conditions, and plans within the time lastly hereinbefore set out. Now the condition of the above-written bond and obligation is such that if the contractors do and shall well and truly remove so much of the said works as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same, at any time during either of the

the

the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void and of none effect, otherwise to remain in full force and virtue.

Signed, sealed, and delivered by the abovenamed }  
James Gillan, in the presence of,— } JAMES GILLAN.  
HAROLD F. NORRIE.

STATUTORY DECLARATION.

I, JAMES GILLAN, of Dulwich Hill, in the Colony of New South Wales, householder, do hereby solemnly declare and affirm that I am possessed of property to the value of £6,000 sterling and more, and that such property consists of—cash at Bankers, ; freehold and other property, . And I make this solemn declaration as to the matters aforesaid according to the law in this behalf made, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Sydney, this 27th day } JAMES GILLAN.  
of May, 1895, before me,— }  
HAROLD F. NORRIE, J.P.

“A.”

Department of Public Works, Sydney, 8 March, 1895.

TENDERS FOR PUBLIC WORKS.

TENDERS will be received at this office for the public works specified in the Schedule hereunder up to 11 o'clock a.m., of the various dates set forth in the second column.

All envelopes containing tenders must be addressed to the President of the Tender Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Tenderers may be in attendance when tenders are opened, and the name of the lowest tenderer will be announced, if possible, before the duties of the Board have terminated.

The following conditions will have to be strictly complied with, otherwise the tenders will not be taken into consideration :—

1st.—Each tender must state the time within which it is proposed to complete the work, and in every instance the full christian and surname or names of persons tendering.

2nd.—Every tender must contain an undertaking on the part of the person tendering to make the cash deposit provided for in the general conditions, and to be answerable for the due performance of the contract, in the event of the tender being accepted; and undertaking, in that event, to execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, for securing such performance.

3rd.—No tender will be considered which shall have been received after 11 o'clock a.m. on the day upon which tenders are to be received, unless there are circumstances which, in the opinion of the Board, render it desirable that it should be received.

4th.—Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5	0	0
For amounts exceeding £500 and not exceeding £1,000 ... ..	10	0	0

For all sums over £1,000, 1 per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the manager of the bank upon which it is drawn, or a bank draft.

5th.—Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

6th.—In the event of any tenderer failing to take up his tender, complete the contract agreement, and proceed with the contract, within the time specified, or withdrawing his tender within thirty days after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account of such contract shall be absolutely forfeited to the Crown, and shall be paid to the credit of the Consolidated Revenue of the Colony.

7th.—Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted, but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition from other work, at the pleasure of the President.

8th.—In the event of any contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.

All deposits, with the exception of that of the lowest tenderer, when practicable, will be returned to the persons entitled thereto immediately after the Board shall have adjourned; and the deposit made by the successful tenderer shall be returned to him on executing the contract agreement for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender will not be returnable until the service is satisfactorily completed.

It is to be understood that the Government does not bind itself to accept the lowest or any tender; and no tender will be accepted until the head of the Branch under whose directions the work is to be carried out has reported upon the whole of the tenders received.

J. H. YOUNG.

"B."

SPECIFICATION.

1. *Description of Contract.*

This contract comprises the provision by the contractor of all labour, machinery, tools, plant, and everything that may be necessary for the construction of the northern main sewer, Leichhardt and Annandale section, as described in detail in the specification, schedule to specification, special condition, and general conditions, and as shown on the following drawings:—

- No. 1. General plan showing sites of sewers, &c.
- No. 2. Longitudinal sections of main and branch sewers.
- No. 3. Cross sections of road deviations, &c.
- No. 4. General elevation of Johnstone's Creek aqueduct, road crossings, and details.
- No. 5. Details of Nelson-street crossing, general cross sections of sewer, &c.
- No. 6. General elevation of White's creek aqueduct, road crossings, &c.
- No. 7. Details of White's Creek aqueduct.
- No. 8. General details of White's Creek and Johnstone's Creek aqueducts.
- No. 9. Designs and details of shafts.
- No. 10. Details of Johnstone's Creek and White's Creek aqueducts.

2. *Materials.*

The materials are to be of the quality specified in clauses 7 to 39 of the schedule to specification.

The bricks to be used in these works to be of the quality and description specified in clauses 11 and 12 of the schedule to specification, excepting all red bricks to be used in piers, arches, haunches, spandrels, parapets, and in approaches to aqueducts, up to the level of underside of coping, which are to be as specified, but to be dry pressed bricks of approved manufacture, dimensions, form, and colour, as per sample to be seen at the Engineer's office. The dry pressed red bricks, when immersed in water twenty-four hours, not to increase in weight more than 7.85 per cent., and the average breaking strain of twelve bricks to be taken from each parcel not to be less than 5,553 lb. All brickwork is tinted red on plans and sections; the areas on elevations of aqueducts as arches, abutments, piers, spandrels, circular panels over piers, parapets, pilasters, corbels, &c., which are to be specially faced with red and white bricks, are tinted red and white accordingly. The white bricks round circular panels to be specially formed and radiated bricks. All white bricks to be double pressed plastic bricks, and as hereinbefore specified.

The sandstone to be used in these works to be of the quality specified in clause 15 of the schedule to specification, but the stone to be used in stop-blocks at ends of aqueducts, in copings, string courses, and skewbacks of the aqueducts herein described, to be Pyrmont bottom block sandstone, and as specified.

3. *Excavation.*

The excavation for all the works comprised in this contract to be executed in accordance with clauses 40 to 80, 83 to 87, and 107 of the schedule to specification.

The excavation for the foundations of piers, abutments, abutment-piers, and approaches to aqueducts, to be executed as specified in the schedule to specification, and to the various depths, widths, steps, &c., as shown on drawings, or to such lesser or greater depths and widths as may be directed, said excavations to be measured to the outside of timbering where such has been approved of.

All

All logs, existing pitching, masonry, brick, or concrete work, oval or circular drains, sewers, &c., met with in excavations shall, in the first instance, be put aside beyond actual site of works in separate spoil-banks, to be measured and paid for at schedule prices under items of excavation of open trenches, tunnels, shafts, &c.

This is the specification marked "B," referred to in our annexed agreement, with Her Majesty the Queen, dated the 16th day of May, A.D., 1895,—

JOHN CARTER.

FRANK MOOREHOUSE GUMMOW.

Witness—HAROLD F. NORRIE.

By his Attorney,—JOHN CARTER.

This is the specification marked "B," referred to in my annexed bond to Her Majesty the Queen, dated the 16th day of May, A.D., 1895.

Witness—H. F. NORRIE.

JAMES GILLAN.

This is the specification marked "B," referred to in my annexed bond to Her Majesty the Queen, dated 16th day of May, A.D., 1895.

Witness—H. F. NORRIE.

GEO. FORREST.

In connection with clause 63 of the schedule to specification it is to be understood that the Engineer may, according to the nature of the ground, allow a margin of lining round sewer not exceeding 3 inches, consisting of concrete below level of springing and of sand-packing above level of springing. The filling round brick or concrete shafts to be executed as specified in clause 90 of the schedule to specification.

In connection with clauses 72 and 73 of the schedule to specification it is to be distinctly understood that all sunps which the contractor may think necessary to sink on lines of sewers shall be sunk only on approved dimensions, and the cost of sinking, timbering, unwatering, removing the excavated materials, timbering, &c., and the filling in, to be defrayed entirely by the contractor.

Shafts are to be sunk as specified in clauses, 65, 66, 68 to 71 and 76 to the schedule to specification, and as shown on drawing; but if during the progress of the works the engineer may deem it necessary to omit any of the shafts shown, the contractor shall omit such shaft or shafts where ordered, and such omission shall not entitle him to any claim for loss, damage, or compensation; he shall be only entitled to be paid for the shafts ordered to be sunk at schedule rates.

The price of 1 cubic yard of excavation for all work comprised in this contract (excepting refilling and disposing of surplus materials) shall include the cost of all work herein specified and described in the various clauses of the schedule to specification herein enumerated.

#### 4. *Subducts.*

Subducts to be constructed on lines of tunnels and open trenches, where ordered, as specified in clauses 78 and 79 of the schedule to specification.

#### 5. *Filling.*

The filling in of all excavations, and in any situation comprised in this contract, including the filling in round shafts, concrete foundations of piers, abutment piers, approaches to aqueducts, retaining walls, and sand-packing over and round closing arch of sewers, &c., to be executed as shown, and as specified in clauses 85 to 97, and 101 to 107 of the schedule to specification.

The price of 1 cubic yard of filling in any situation comprised in this contract (except disposing of surplus materials) shall include the cost of all work herein specified and described in the various clauses of the schedule to specification herein enumerated.

#### 6. *Temporary and Permanent Shoring, Timbering, Piling, &c.*

The shoring and timbering, including all iron used in fixing same, required in the construction of these works to be provided, erected, placed in position, withdrawn, covered up, and measured up as specified in clauses 87, 125, and 126 of the schedule to specification.

If during the progress of the contract, in the opinion of the engineer, pile foundations under piers of aqueducts is considered necessary, it shall be executed as shown on drawing, and as specified in clauses 110 to 126 of schedule to specification.

The piles to be not less than 15 inches diameter at the small end, and 17.50 inches diameter at large end, and they are to be driven until a 20-cwt. ram falling 10 feet does not drive them more than  $\frac{1}{4}$  inch at the last stroke.

#### 7. *Ordnance Fences.*

Road embankments to be protected by sawn hardwood ordnance fences to the extent and as shown on drawings, and as specified in clauses 197, 210, and 211, of the schedule to specification. The fences required for this contract to be two-rail only, and all post to be 6 in. x 4 in. x 6 ft. long, the lower 2 feet to be walled into upper portion of concrete retaining walls. All woodwork, ironwork, &c., to be painted and tarred as specified in clauses 269, 270, and 273 of the schedule to specification.

#### 8. *Roadmaking.*

The different road deviations and roads under, over, and at sides of main sewer, within the resumed land or otherwise, along Crescent Lane, Nelson-street, Young-street, lanes on each side of same, along White's Creek and White-street, to be constructed on embankments, in excavations, and along surface of ground, to be formed, sloped, bored out, ballasted, metalled, &c., as shown on drawings, as may be directed and as specified in clauses 200 to 204 in the schedule to specification.

#### 9. *Tarred Metal Deck.*

All sand filling over sewer in aqueduct to be covered with tarred metal deck, as specified in clauses 205 to 208 of the schedule to specification. The metal to be used in decking for this contract to be of  $1\frac{1}{2}$ -inch gauge as specified in clause 140 of the schedule to specification. The tarred metal to be spread 3 inches thick over the sand-filling.

#### 10. *Sewers, Storm-water Channels, &c.*

The various works comprising this contract are to be executed in conformity with clauses 132 to 139 of the schedule to specification.

The Leichhardt and Annandale section of the Northern Main Sewer commences at 6 miles 51.2515 chains, to be built in open cutting of 4 ft. 6 in. x 3 ft. 6 in. internal dimensions, of concrete, extending for about 9 feet under Crescent Lane; it is then to cross the Johnston Creek Valley, built of concrete, brick,

brick, and stone, on piers, and ten flat brick arches of 12-foot span for the length of about 159.6 feet; on pile foundations, where ordered, and on piers and twelve elliptical brick arches of 48-foot span for a length of about 633.316 feet; on abutment piers and one flat arch of 57-foot span, over Nelson-street, for a length of about 76.333 feet and on rock foundation with one flat arch of 12-foot span, of concrete, brick, and stone facings, for a length of about 88 feet up to 6 miles 65.8478 chains. A water-escape drain consisting of 24-inch diameter stoneware pipe, about 130 feet in length, with gullies complete, and open rock cutting about 10 feet in length, from Nelson-street towards Johnstone's Creek, to be constructed as shown.

From 6 miles 65.8478 chains to 6 miles 67.30 chains the sewer to be built in open cutting of concrete; from 6 miles 67.30 chains to 6 miles 78.24 chains of brick and concrete in tunnel in rock, and from 6 miles 78.24 chains of 4 ft. 3 in. x 3 ft. 3 in. internal dimensions of brick and concrete in tunnel in rock up to 7 miles 5.1941 chains, and then of concrete only, in open cutting up to 7 miles 6.9091 chains.

The sewer then to cross the White Creek Valley, built of concrete, brick, and stone, on rock foundation and on piers, and seventeen flat brick arches of 12-foot span for a length of about 359.1 feet, on piers, and nine elliptical arches of 48-foot span for a length of about 474.09 feet, on abutment piers and one flat arch of 33-foot span over White-street for a length of about 58 feet, on which length the sewer to be provided with two storm-water escape weirs and 12 inch diameter stoneware vertical outlet pipes, discharging into a water-escape drain consisting of 24-inch diameter stoneware pipes about 200 feet in length, with gullies complete; and open cutting only about 10 feet in length, from White-street towards White's Creek, to be constructed as shown. The sewer then to be constructed on rock foundations and on piers and four flat brick arches of 12-foot span for a length of 241.79 feet up to 7 miles 23.0758 chains.

Then from 7 miles 23.0758 chains to 7 miles 23.9840 chains the sewer to be constructed of concrete only in open cutting, and from 7 miles 23.9840 chains to 7 miles 30.4840 chains the sewer to be constructed of brick and concrete in tunnel in rock, but the lining of this length of tunnel shall not be commenced until especially ordered.

A branch sewer in tunnel in rock of 3 ft. 3 in. x 2 ft. 2 in. internal dimensions, to be constructed along Johnstone-street, from Piper-street to Rose-street.

If, during the progress of the Contract, the Engineer may deem it necessary to omit or alter any of the sewers, shafts, junctions, drops, inlets, or other works shown or described in the clauses herein quoted, then the Contractor shall be bound to omit altogether, or alter, as may be ordered at the time, any sewers, shafts, junctions, drops, inlets, &c., as the case may be, and such omission or alteration shall not entitle him to any claim for loss, damage, or compensation. He shall be only entitled to be paid for the work actually ordered and carried out at the various schedule rates referring to such work.

#### 11. *Concrete work.*

The concrete to be used in foundations of all piers, and in all piers and abutment piers, for the 12-foot, 33-foot, 48-foot, and 57-foot span arches up to level of springing and top of plinths, in haunches and spandrels, between and over all arches between external brick-facings, up to level of underside of string course (6 inches below invert of sewer), in retaining walls along road deviations and roads, round storm-water discharge pipes, round stoneware pipe where directed, and where ordered in any situation in the construction of these works, to be sandstone concrete of the quality specified in clause 142 of the schedule to specification.

The concrete to be used in inner sewer lining (between brick facings) of aqueducts to be special bluestone concrete of the quality specified in clause 141 of the schedule to specification, except that in this instance the bluestone metal to be broken to a size to pass freely with its largest dimensions through a ring of  $\frac{3}{4}$  inch in diameter, to be screened and washed as specified in clause 140 of the schedule to specification.

The concrete to be used in lining sewers in tunnels, open cuttings, in ventilating shafts, drops, weir-chambers, inlets, flushing, gas-check, and other chambers, and where ordered in the construction of these works, to be bluestone concrete of the quality specified in clause 140 of the schedule to specification. The whole of the concrete work comprised in this contract to be commenced, executed, and completed (including the iron bond-rods in concrete lining of sewer on lines of aqueducts as described in clause 164 of the schedule to specification), as shown on drawings, and as specified in the schedule to specification in clauses 140 to 171.

#### 12. *Cement facing.*

All exposed, internal, and external concrete surfaces to be protected by cement facing prepared of cement and sand in the proportion of one cement to two of sand, except all internal concrete surfaces of sewer over aqueducts, which are to be protected by special cement facing prepared in the proportion of one cement to one of sand. The cement facing to be executed as specified in clauses 180 and 181 of the schedule to specification complete with all battered faces, recesses, chamfers, weatherings, &c., as shown, and as shall be directed.

#### 13. *Brickwork.*

The brickwork comprised in this contract to be executed and completed as shown on drawings, and as specified in clauses 172 to 179 of the schedule to specification, and clause 2, except that in this instance the 12-foot span arches in aqueducts are not to be built in  $4\frac{1}{2}$ -inch rings, but they are to be built in radiating through courses of rubbed and gauged or radiated bricks, as shown, and as shall be directed. The 48-foot span arches to be built as specified, and to be thickened out at the haunches, so as to abut against the sandstone concrete filling over piers between the arches, and between the external brick facings as shown.

#### 14. *Masonry.*

All freestone ashlar in skewbacks, stringcourses, copings, 6 ft. 8 in. x 2 ft. x 9 in. stop-blocks at ends of aqueducts, and steps, to be provided, dressed, set in cement and built in where shown on drawings and where directed, as specified in clauses 15, 182, and 183 of the schedule to specification, and in clause 2. The exposed faces of skewbacks to be finished with 2-inch parallel drafted margins along each exposed arris, stopped in at inner edges, and the surface of stones between to be picked down, the projecting parts to be level with true line of wall.

#### 15. *Squared bluestone pitching.*

Squared bluestone pitching to be provided and set round manhole covers, and where ordered, to be  $7\frac{1}{2}$  inches deep, and as specified in clause 186 of the schedule to specification.

16. *Squared freestone pitching and channelling.*

Squared freestone pitching to be set round gully gratings, and in road-channels as shown, and where ordered, as specified in clause 187 of the schedule to specification.

17. *Freestone curbing and gully covers.*

Freestone curbing to be set along edges of footpaths, at gully-gratings, &c., to be of the exact dimensions, dressed and sunk as shown, and as specified in clause 188 of the schedule to specification. Gully-covers, 3 ft. 3 in. x 3 ft. x 9 in., to be provided and set, dressed to the exact dimensions, where shown, as specified in clause 183 of the schedule to specification.

18. *Pipe-laying and jointing.*

The providing, laying, and jointing of glazed stoneware pipes to be executed as specified in clauses 13, 14, 137, 170, 189 to 194 of the schedule to specification.

19. *Scupper pipes, slate covers, &c.*

The 4-inch diameter glazed stoneware scupper-pipes along footpaths over sewer on lines of aqueducts to have cistern heads built of concrete, covered on top with 16 in. x 9 in. x 1 in. slate covers set in cement as shown.

20. *Cast-iron and wrought-iron work.*

All cast-iron ventilating grates and closed manhole covers with frames, gas-check frames, gully-gratings and frames, galvanised wrought-iron step-irons, &c., required for this contract to be supplied by the Government to the contractor, and to be received and removed by him when not required, as provided in clauses 264 and 265 of the schedule to specification. Contractor to place said ironwork in position, wall in, joint, and fix same in the works, as specified in clauses 138, 139, 168, and 170 of the schedule to specification, as shown on drawings, and as shall be directed.

21. *Order of works.*

The excavation of all shafts to be commenced simultaneously within three weeks after the date the contract has been signed and all shafts to be completed within nine weeks after commencement of excavation. The five working shafts shown on lines of tunnels provide seven working faces. The driving of the tunnels to be commenced from all faces simultaneously, and the average total progress at all working faces during every day of twenty-four hours to be not less than 11.666 feet or 70 feet during every week of six working days of tunnel excavation complete.

The various excavations of open trenches for sewers, piers, and abutment piers of aqueducts, approaches to same, roads, &c., to be commenced in each length from the different faces simultaneously. The piling where such has been ordered for foundations of piers of aqueducts, all pipelaying, concrete work, brickwork, masonry, &c., required in shafts, chambers, junctions, tunnels, foundations of piers, and abutment-piers of aqueducts to level of top of plinths and springing of arches, and in sewers in open cuttings approaching aqueducts, &c., to form the first part of the works.

The construction and completion of all brickwork, concrete work, and masonry of all piers, abutment piers, with all arches of 12-foot, 33-foot, 48-foot, and 57-foot span and spandrels up to level of tops of said arches, to form the second part of the works.

The construction and completion of all concrete work, brickwork, masonry, &c., of all sewers over aqueducts from top of arches to level of top of all parapets, including weir chambers storm-water discharge pipes, sand-filling and asphalt covering over aqueducts, road-making, road-repairing, and every other work required in the completion of the whole contract, to form the third part of the work.

In constructing the various items forming the first and second part of the works, it is to be distinctly understood that all piers and abutment piers for arches of 12-foot, 33-foot, 48-foot, and 57-foot span, must be built and completed up to level of springing and top of skewbacks, as the case may be, throughout each respective length of aqueduct over each valley, before any of the arches are commenced.

On completion and approval of all piers and abutment piers, each series of arches over each valley to be commenced (unless otherwise directed) at its eastern end, and to advance to its western end, with not less than six centres at a time for the arches of 48-foot span, and with five centres for the arches of 12-foot span, that is to say—

After the first six centres of 48-foot span and the first five centres of the 12-foot span arches are placed in position, the arches over same are to be built and completed one after another, then the spandrels between the 48-foot span arches are to be built with concrete between brick-facings to a height of 11 ft. 3 in. above the springing, after which the centres from underneath the first arch of each series, after the specified period allowed for settlement has expired, to be removed and at once to be re-erected over the sixth or seventh openings, as the case may be, then the centres from the second arch to be removed and re-erected over the seventh and eighth openings, and so on, and the same system to be continued until all arches of one aqueduct have been built and completed.

All centres of arches, cambered as shall be directed, to be strong enough in every part to carry the weight of each arch to be built thereon. Centres under the 12-foot span arches shall not be removed until fourteen days after the completion of each arch. Centres under the 48-foot span arches shall not be removed until twenty-eight days after completion of each arch, and the concrete and brickwork of spandrels between the arches from springing of arch to a height of 11 ft. 3 in. above same, and the centres of the 33-foot span and the 57-foot span arches shall not be removed until fourteen days after the completion of each arch, and until the centres of the adjoining arches at each side of each respective arch have been removed.

After all arches of one aqueduct have been completed as specified, and approved of, the concrete, brickwork, and masonry, as the case may be, to be built in between and above same, in horizontal layers transversely and parallel with gradient of sewer longitudinally, so that all arches of one aqueduct (except where otherwise directed) shall be gradually, uniformly, and equally weighted, as the superstructure rises to the levels hereinbefore specified.

22. *Schedule to specification, special condition, and conditions of contract.*

Notwithstanding that certain clauses of the schedule to specification are especially enumerated, it is to be understood that the schedule to specification, special condition, and the general conditions attached to the specification, shall be held binding in all matters relating to this contract, as far as the Engineer may deem the same applicable.

23. *Note.*

Parties tendering are particularly requested to observe that they must name only one rate of percentage above or below all the prices in schedule, and not one rate of percentage upon certain items, and another rate or rates upon others.

"C"

SCHEDULE TO SPECIFICATION.

*Land required for works.*

1. Access to the site of the works (other than by public roads) to be had by means of such land the Engineer may deem necessary.
2. For the purpose of sinking, working, and building shafts on lines of streets, and on private ground, the contractor to have temporary possession of an area of 24 ft. by 17 ft. at the site of each shaft, unless otherwise directed.
3. For the purpose of excavating open trenches, and for constructing the various works therein, and raising embankments over same, or where ordered, contractor to have temporary possession of such land, of the exact widths and lengths which, in the opinion of the Engineer, is required for these works.
4. The land herein referred to, to be set out by the Engineer upon receiving written application from the contractor. Such application must be made four weeks prior to the time the said land is required.

*Setting-out work.*

5. The centre lines of sewers, &c., are shown on general plans by full lines, which will be marked on the surface of the ground, the same as on plans, as the works proceed.
6. Contractor shall at his own cost and expense at any time—by day or by night, either on working days or on Sundays or holidays—render all such assistance and supply all such labour, plant, and lighting as the Engineer or Superintending Officer may require, to set out, to check such setting-out, or to inspect any portion of the works, which must for that purpose be left clear and free from any obstruction or impediment. During and for the performance of those operations, contractors shall be obliged to suspend any or all of his work, if required to do so by the superintending officer, and without having any claim for loss or damage on account of such temporary suspension.

*Materials.*

7. All materials supplied by the contractor are to be of the best quality and description of their respective kinds. Samples of each kind to be submitted for the approval of the Engineer, and retained in office; and, on approval having been obtained, they are to be delivered on the works ready for use, as per sample.
8. The contractor shall inform the Engineer of the sources whence the various materials are supplied, or of the places of their manufacture, and afford him every facility to inspect their supply or manufacture at any stage of the same.
9. Due notice shall be given by contractor to the Superintending Officer when any material is brought on the ground, all of which must be neatly stacked in regular heaps, submitted for approval, and approved of in writing by the Superintending Officer, before it may be used in the works. None but that so approved shall be used.
10. The contractor to provide approved gauge-boxes or scales for measuring or weighing all materials supplied.
11. Bricks to be double-pressed, of well-mixed material of approved quality and uniform fineness; to be new, sound, hard, and well-burnt kiln bricks, free from cracks and all other defects, equal in every respect to the sample brick to be seen at the Engineer's office. They are to have sharp arrises, and to be of approved dimensions, form, and colour, and, when ordered, to be specially moulded. Radiating and specially-formed bricks to be provided for all segmental shafts. All bricks to be subjected to the following tests:—
- (a) *Tensile strength.*—The tensile strength to be tested, in the departmental testing machine, by laying the brick horizontally on its base of 3 inches, between supports 7 inches apart, and the strain applied across the centre of the brick. An average breaking strain of twelve bricks to be taken, which must not be less than 8,000 lb.
- (b) *Porosity.*—Bricks immersed in water for twenty-four hours must not increase in weight more than 3 per cent.
- Should the twelve bricks fracture under the foregoing average strain, or prove more porous than 3 per cent., then the Engineer may reject the whole stack of bricks from which the twelve bricks were taken.
12. In the event of the contractor delivering bricks of a mixed description and quality, the Superintending Officer shall have the power to require of the contractor to have those bricks which, in his opinion, are suitable for the works, picked out and stacked where directed, and those unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the bricks so delivered by the contractor.
13. Stoneware pipes to be of well-ground and mixed material, of tough, tenacious, impervious quality, well-burnt, sound, hard, uniform in thickness, true in section, straight longitudinally, uniformly glazed both inside and outside, free from fire and other cracks, flaws, and ash-holes, the collar perfectly joined to the barrel, and in every way equal to sample pipe to be seen at the Engineer's office.

Pipes

Pipes to be of the following thicknesses and depth of collars, namely :—

Dimensions.

Pipes, inside diameter, 9 inches ; thickness,  $1\frac{1}{8}$  inch ; depth of collar, 2 inches.

"	"	12	"	"	1	"	"	2	"
"	"	15	"	"	$1\frac{1}{4}$	"	"	$2\frac{1}{4}$	"
"	"	16	"	"	$1\frac{3}{8}$	"	"	$2\frac{1}{2}$	"
"	"	18	"	"	$1\frac{1}{2}$	"	"	$2\frac{3}{4}$	"
"	"	21	"	"	$1\frac{5}{8}$	"	"	2	"
"	"	24	"	"	$1\frac{3}{4}$	"	"	$2\frac{3}{4}$	"

All parcels of pipes used in these works will be tested and submitted to the following crushing Tests, as applied in the departmental testing machine :—

24-inch diameter pipe, 165 lb. per square inch of bearing surface.

21	"	"	165	"	"	"
18	"	"	142	"	"	"
16	"	"	142	"	"	"
12	"	"	142	"	"	"
9	"	"	142	"	"	"

If the Engineer deems it necessary, the pipes will also be tested for porosity. Should the pipes fracture under the foregoing strains, or not prove impervious to water, then the Engineer may reject the whole parcel from which the pipes were taken.

14. In the event of the contractor delivering quantities of pipes, bends, and junctions of a mixed description and quality, the superintending officer shall have the power to require of the contractor to pick out and stack, where directed, those pipes, bends, and junctions which, in his opinion, are suitable for the works, and those unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the superintending officer shall have the power of rejecting the whole of the pipes, bends, and junctions so delivered by the contractor. Defective pipes, &c.

15. All sandstone used in the construction of these works to be hard, sound, and solid, of the best description, free from all defects, and as per sample to be seen in the Engineer's office, and to stand a crushing strain of 6,500 lb. per square inch. A tensile test will also be required; for this six stones must be prepared, 4 in. by 4 in. by 12 in.; these, when laid on their natural beds upon supports 10 inches apart, must give an average breaking strain of not less than 4,333 lb., the strain being applied across the centre of the stone. Sandstone.

16. All bluestone used in the construction of these works to be of the best description of basaltic bluestone obtainable, free from honeycomb and all defects, and as per sample to be seen at Engineer's office. Bluestone.

17. Sand to be sharp quartz sand, free from all earthy, loamy, or clayey matter, equal in quality to the sample of Nepean River sand to be seen at the Engineer's office, and to be washed perfectly clean whenever the Engineer deems it necessary. Sand.

18. The cement to be used throughout these works to be well packed in strongly-made casks; to be the best Portland cement, of approved brands and manufacture, delivered in thoroughly sound condition, fit for immediate use, and without requiring seasoning or air-slacking; to be free from any symptoms of staleness, caking, damage to the packing, hard or set lumps; and no barrel or portion of same to be used until it has been examined and approved. The Engineer may delay approval of any parcel of cement pending tests extending over a longer period than hereinafter specified. Samples taken from various casks, from each parcel brought on the works, to be submitted for testing. Such samples shall be taken out of the package in an equal section, extending from the surface to the centre of the cask. The cement, when gauged with water to a stiff paste, must set in a damp atmosphere in from one and a half to six and a half hours. Neat cement, of the consistency abovementioned, will be made into pats, kept in moist air until set, and then placed in water at a temperature of between 65° and 80° F., and also in Deval's hot bath, at a temperature of 180° F. These test pats will be examined from day to day, and should they show symptoms of blowing, or any alteration or variation in form or volume, or imperfect setting capacity, the whole parcel from which the cement was taken will be rejected. The cement shall weigh not less than 100 lb. per imperial striked bushel, filled from the hopper. Each cask shall contain not less than 374 lb., exclusive of weight of packing. The specific gravity to be not less than 3.00; but cement up to or exceeding the specified degree of fineness, if of a lighter weight than herein stipulated, but otherwise equal to the specified tests, may be accepted subject to the decision of the Engineer, provided that the deficiency in weight is made up in quantity. The cement must be ground so fine that the residue on a sieve of 6,400 meshes per square inch, without rubbing shall not exceed 20 per cent., and on a sieve of 14,500 meshes not more than 30 per cent. For the test for tensile strength, the cement will be gauged with three times its weight of standard sand (viz., sand from crushed sandstone, washed, dried, and sifted through a sieve of 400 and retained upon one of 900 meshes to the square inch), and mixed with an average of about 10 per cent. of their weight of water, and made into briquettes formed in moulds of 1 inch sectional area at the weakest part. Such briquettes to be kept in a damp atmosphere, and put into water twenty-four hours after they have been made, and remain in water at a temperature of between 60° and 70° F., until their tensile strength is tested. These briquettes must bear a tensile stress of not less than 100 lb. per square inch after seven days, and 200 lb. per square inch after twenty-eight days from being moulded. Cement, when tested neat, must bear a tensile stress of at least 300 lb. to the square inch after three days, two of them in water; and 450 lb. after seven days, six of them in water; and 550 lb. after twenty-eight days, twenty-seven of them in water. Briquettes shall also, after being in a damp atmosphere for twenty-four hours, be kept in water at a temperature of 180° F. for six days, when the tensile stress must be equal to that specified for twenty-eight days at normal temperature. The tensile strength will be ascertained in the Government testing-machine, with the load increasing at the rate of 200 lb. per minute, and the average breaking weight of six briquettes will be taken for each test. Any cement which absorbs in proportion more than 2 milligrams of carbonic acid to 3 grains of cement shall be taken as containing more than the permissible quantity of free lime or magnesia. Should the sample fail in any or all of these tests, or show irregularity in quality, or not show a proper progressive increase Cement.

Free lime.

in strength with age of briquette, then the Engineer may reject the whole parcel from which the sample was taken, and the contractor shall at once remove the said parcel of cement from the site of the works at his own expense; failing which, the Engineer may have it removed at the contractor's cost without further notice. Empty casks to be immediately broken up and removed from off the works. To facilitate the gauging of cement throughout the contract, cement casks will be taken as equal to holding 4 cubic feet; otherwise, the contractor to provide and make approved gauge-boxes, holding exactly 4 cubic feet, for measuring cement.

Contents of casks.

Delivery.

Cement is to be brought on the ground in quantities of not less than fifty casks, provided that this quantity is sufficient for fourteen days' supply, but in no case is less than fourteen days' supply (whatever that may prove to be) to be brought on the ground in one parcel; nor is the supply stored on works to be at any time less than fourteen days' supply. All cement to be kept on the ground in approved weather-tight sheds, under lock and key, which shall be in the custody of the Superintending Officer.

Storage.

Mortar.

19. The mortar to be used in these works to be composed of one part of Portland cement and of two parts of clean washed sharp sand, as described in clauses 17 and 18, the proportion of each to be correctly ascertained by measurement, the whole to be mixed with fresh water, as may be directed, to be well incorporated, and to be used fresh. Any mortar which has become hard or set to be at once rejected. All mortar to be mixed on approved sawn timber platforms close to where it is required.

Special mortar.

20. Special mortar, composed of 1 part of cement and 1 part of sand, and prepared as before described, to be provided and used in all portions of the work where specially specified or directed.

Grout.

21. The grout to be made of mortar as described in clause 20, to be mixed fluid in tubs, close to where it is required, and to be used fresh.

Puddle.

22. Puddle to consist of the best clay to be obtained in the district within a radius of 5 miles; to be carefully turned over and mixed with fresh clean water until the clay, in the opinion of the Engineer, has become of one even and uniform colour and plasticity.

Spun yarn.

23. Spun-yarn to be of the best description of  $\frac{3}{8}$  inch New Zealand flax.

Lead.

24. Lead to be of approved quality, of the best description of soft pig lead, and to be delivered in pigs, which must show the brand or mark of the manufacturer.

Wrought-iron and steel.

25. Wrought-iron and steel to be of the best description and quality, with square arrises, free from scales, blisters, laminations, and all other defects, and subject to tests hereinafter specified.

Tests.

26. The tests for rolled iron shall be as follows:—A piece of iron of such width as shall not exceed 2 inches, or exceed 1 square inch in cross-section, and of a sufficient length to have 10 inches under actual tension, shall be cut, as directed by the Engineer, from any plate or bar about to be used on the work, and the following tensile stresses shall be applied:—

	Stress per square inch without fracture.	Ultimate elongation.	Ultimate contraction of area.
Rolled girders... ..	20 tons	8 per cent.	10 per cent.
Plates—across grain ... ..	18 „	4 „	6 „
„ with grain ... ..	22 „	10 „	12 „
T, L, and bulb T bars ... ..	22 „	10 „	15 „
L bars ... ..	23 „	12 „	18 „
Square, flat, and round bars, and bolts over 4 inches sectional area ...	23 „	12 „	18 „
Square, flat, and round bars, and bolts up to 4 inches sectional area ...	24 „	12 „	25 „

Iron within 10 per cent. of above specified stress will be accepted if the contraction of area and elongation are proportionally higher.

The wrought-iron to be further tested for ductility, as follows:—

A plate planed and rounded on both edges, about 4 in. wide and 1 ft. long, shall bend cold over a slab, the corner of which is rounded to  $\frac{1}{2}$  inch radius, for the following angles, without showing any sign of injury or fracture:—

	With grain.	Across grain.
1 inch plate for ... ..	15 degrees	5 degrees
$\frac{3}{8}$ „ „ ... ..	25 „	10 „
$\frac{1}{2}$ „ „ ... ..	30 „	12 „
$\frac{5}{8}$ „ „ ... ..	35 „	15 „
$\frac{3}{4}$ „ „ ... ..	52 „	20 „
$\frac{7}{8}$ „ „ ... ..	70 „	30 „

27. Rivet-iron must be capable of being bent cold until the sides are in close contact, without sign of fracture on the convex side.

Steel.

28. The tests for rolled steel shall be as follows:—

The steel to be of a mild quality, having an ultimate tensile strength, either lengthways or crossways, of not less than 26 tons, and not more than 31 tons per square inch, on a test bar, cut in a similar manner to those for rolled iron, with a minimum elongation of 20 per cent., and a minimum contraction of area of 40 per cent.

Strips cut from any steel plate, angle, or bar, to be heated to a low cherry red, and cooled in water of 82 degrees Fahrenheit, must, when cold, stand bending double round a curve, of which the radius is not more than one-and-a-half times the thickness of the plates tested, without showing any sign of injury or fracture.

Cast-iron.

29. Cast-iron to be equal to No. 2 pig-iron, or of a proper mixture of No. 1 and No. 3 pig-iron, according to the description of iron-work and pattern; said iron to be of the best quality, tough, close-grained, and capable of being chipped and drilled without difficulty.

Tests.

30. Branded test-bars, 2 in. x 1 in. x 3ft. 6 in., to be cast vertically, in the presence of the Superintending Officer, from the cupola from which castings are being run, and to be then carefully marked with the date. These test-bars will be placed on bearings 3 feet apart, and submitted in the centre to a weight not exceeding 28 cwt., and the deflection caused by this weight must not be less than  $\frac{3}{8}$ -inch before fracture; if the bars do not stand this test to the satisfaction of the Engineer, then the whole of the castings which have been cast of iron of the same quality, shall be at once rejected.

31. All castings of every description, before they leave the foundry, to be carefully examined and weighed, to be slung on chains above ground, and to be sounded with a hammer, and they are again to be carefully examined, slung, and sounded with a hammer when delivery of same is taken at the site of the works. Tests of castings.

32. All straight pipes required in the contract, before delivery of same is taken on the works, shall be, at the foundry or at the site of the works, as shall be directed, duly proved under hydrostatic pressure equal to a column of water of 200 feet, and when under pressure to be thoroughly sounded quickly all over with a hammer of not less than 4 lb. Tests of pipes.

33. The gun-metal required throughout these works to be an alloy composed of eight parts of copper to one part of tin, unless otherwise specified. Gun-metal.

34. The tests for cast-steel shall be as follows:—

Bars turned to  $\frac{3}{4}$ -inch diameter for a sufficient length to have 5 inches under actual tension, shall have an ultimate tensile strength of not less than 26 tons per square inch, and a minimum elongation of 18 per cent. Cast-steel tests.

35. The cost of providing the materials and wrought and cast iron works, &c., herein described, required by the Engineer for testing purposes, and the carriage of same to the Public Works testing-room, place of manufacture, site of works, or to the University, as the case may be, and as shall be directed, shall be borne solely by the contractor; and any of the materials, or any part of the wrought-iron and gun-metal work, or any of the pipes, castings, &c., injured or broken by the testing, shall be immediately replaced by new and sound materials at contractor's expense; wrought-iron, gun-metal, cast-iron pipes, or other castings, to be again tested as before described, until the whole have been tested to the entire satisfaction of the Engineer. Cost of tests.

36. Timber to be of the best description, sound, straight, free from sap, large or loose knots, wanes, shakes, gum-veins, pipes, or other defects. Timber

37. Hardwood used in the works to be of approved timber.

Round timber to be carefully barked, the diameter given on drawing is to be measured at the small ends. Hardwood

Hewn timber is to be squared true on all sides, and dressed fair and clean with the adze, so as to show no axe-marks, to be of full dimensions, free from sapwood, and no heart timber must appear on the outside.

Sawn timber to have clean sharp arrises, to be cut die square, free from heart timber, and of the full dimensions shown or specified.

38. Softwood timber to be of the best Baltic or yellow deals, and of the exact dimensions specified when finished. Softwood.

39. Split posts and rails for fencing must be perfectly straight and cleanly split, free from large knots, splinters, and other defects. Split fencing timber.

#### *Earth-borings.*

40. When earth-borings have been taken the results have been shown on drawings, but the Government undertake no guarantee whatever regarding the kinds of soil that will be met with or the firmness or stratification of the ground to be excavated, or the amount of unwatering to be done, or the strength of the timbering that may be required, or the nature and extent of other precautions which may have to be adopted.

#### *Clearing and Grubbing.*

41. The areas of the sites for all excavations and of all embankments, together with a margin of 10 feet in width beyond all these areas, to be cleared and grubbed of all trees, scrub, stumps, roots (to the depth of same), and dead timber, and the whole of such trees, scrub, stumps, roots, and dead timber thus grubbed and cleared to be removed and cleared away from any lands set apart for the purposes of this contract. The cost of all clearing and grubbing to be covered by and included in the schedule price for excavation.

#### *Excavation.*

42. No excavation to be commenced on any portion of the contract until, in the opinion of the Engineer, sufficient building materials are on the ground, together with the necessary appliances and plant to ensure the uninterrupted progress and continuance of the works, after they once have been commenced, at any locality, without any delay or stoppage.

43. It is to be distinctly understood that, when sinking shafts and driving tunnels, the materials excavated, on their arrival at level of staging above mouth of shaft, are to be at once removed; and when materials, &c., are to be conveyed through shafts to the tunnel works, that all such materials, on arrival at mouth of shafts, must be at once conveyed to the works underground, as the contractor cannot be allowed to occupy a larger area than that authorised by the Engineer.

44. When excavating in open trenches, if ordered, the materials excavated and raised to the surface are to be at once removed; and when materials are being conveyed to open trenches, where they occur in public roads, they must be at once taken into the work, so as not to impede the usual traffic.

45. The road metal, ballast, pitching, wood-paving, concrete, asphalt, flagging, sodding, &c., when they are met with in excavation, are to be carefully removed, put aside, and stacked where directed.

46. The cross-sections of tunnel excavation are shown on Drawings, but they will vary with the solidity of the ground, and as the Engineer directs. Cross sections to vary.

47. Wherever the solidity of the ground permits it, the excavation in trenches for concrete or brickwork to be taken out with vertical sides to level of springing of sewer arch, and to the exact widths of concrete or brickwork shown on Drawings, and below that level to bottom of trench with curved or vertical sides, as shall be directed. Method of excavation in trenches with out timbering.

48. Where timbering is required, trenches 8 feet deep and under shall have vertical sides, and shall be 1 ft. 3 in. wider to outside of polling-boards than width of concrete or brickwork. Where trenches are over 8 feet deep and require timbering, they shall have vertical sides, and shall be 1 ft. 3 in. wider to outside of polling-boards than the width of the concrete or brickwork for the lower 8 feet. Above that level they shall be 2 feet wider to outside of polling-boards than concrete or brickwork. Width of trenches where timbering is required.

For embankments.

49. The excavation for foundation of embankments to be taken out, where ordered, 12 inches below surface of ground, and to such widths and lengths as shall be directed, or as ordered for benching.

Width of trenches. 50. The excavation in solid rock for pipe-trenches shall have vertical sides, and shall be of the following sizes, viz. :—

For 24-inch diameter stoneware pipe sewers...	...	...	3 ft. 9 in. wide.
21-inch	"	"	3 ft. 4 in. "
18-inch	"	"	3 ft. 0 in. "
15-inch	"	"	2 ft. 6 in. "
12-inch	"	"	2 ft. 0 in. "
9-inch	"	"	2 ft. 0 in. "

51. When timbering is not required in excavation in all other ground for pipe-trenches, the trenches shall be of the same widths as those in solid rock. Where timbering is required, the excavation for pipe-trenches 8 feet deep and under shall have vertical sides, and shall be of the following sizes to the outside of the polling-boards, viz. :—

24-inch diameter stoneware pipe-sewers...	...	...	4 ft. 0 in. wide.
21-inch	"	"	3 ft. 7 in. "
18-inch	"	"	3 ft. 3 in. "
15-inch	"	"	2 ft. 9 in. "
12-inch	"	"	2 ft. 3 in. "
9-inch	"	"	2 ft. 3 in. "

Width of trenches.

52. Where timbering is required, the excavation for pipe-trenches more than 8 feet deep shall have vertical sides, and shall be the widths given in clause 61 for the lower 8 feet and for any depth over and above 8 feet, the trenches shall be of the following sizes to the outside of the 1½-inch polling-boards (unless otherwise ordered in writing), viz. :—

24-inch diameter stoneware pipe-sewers...	...	...	4 ft. 9 in. wide.
21-inch	"	"	4 ft. 4 in. "
18-inch	"	"	4 ft. 0 in. "
15-inch	"	"	3 ft. 6 in. "
12-inch	"	"	3 ft. 0 in. "
9-inch	"	"	3 ft. 0 in. "

Checks. 53. Transverse and other checks to be excavated to receive pipe-sockets and junctions, and for the purpose of making the joints.

Cast-iron pipe trenches. 54. The trenches for the cast-iron pipe-sewers to be excavated to the depths and widths which the Engineer may order. Joint-holes to be excavated to the dimensions specified or ordered by the Engineer.

Trenches. 55. The excavation of trenches to be carried on in such a manner that they shall be always completed and approved for a length of 48 feet (unless otherwise directed) in advance of sewers or other works.

The use of explosives. 56. In ground which, in the opinion of the Engineer, does not require blasting, the excavation is to be carried on by means of picking, and when the ground, in the opinion of the Engineer, is hard and suitable for blasting, charges of compressed powder, not exceeding 4 inches in length by 1¼ inch in diameter, shall be used. The Engineer, however, reserves to himself the right of ordering any excavation which he may consider blasting would facilitate, to be taken out by means of charges of compressed powder not exceeding 2 inches in length by 1½ inch diameter, or he may prohibit the use of explosives altogether, when the excavation shall then be done by means of guttering and gadding. If explosives, other than compressed powder, are permitted to be used, the charges thereof will be determined by the Engineer.

Precautions. 57. When the use of explosives is authorised, the contractor shall use every precaution and carry on such operations with such limited charges of powder only, or other approved explosives, as will loosen the shale, rock, &c., without shattering the same; and to employ approved means to prevent, effectually and thoroughly, all stones or other materials from being thrown out of trench, tunnel mouth, or shaft.

Working hours. 58. Blasting will not be allowed between the hours of 10 p.m. and 6 a.m., nor after 1 p.m. on Saturdays, except by the written authority of the Engineer.

Drilling and charging holes. 59. Every hole drilled for blasting purposes will be measured by an inspector, and charged under his supervision.

Storage of explosives. 60. No larger quantity of explosives shall be taken underground than is likely to be used during any current shift.

Pipe-sewer tunnels. 61. When pipe-sewers are to be laid in tunnels, the dimensions of tunnel to be 4 ft. x 3 ft., exclusive of timbering.

Excessive excavation. 62. If the contractor has exceeded the sectional area of excavation ordered, he shall remove such extra excavation, and in the case of trenches make good and fill in same at sides of trench with approved materials, and at bottom of trench with concrete described in clause 142, at his sole cost; the actual cubic contents only of the excavation and of the concrete work shown on drawings and ordered for each special length of sewer in open trench shall be paid for; and in the case of excavation in tunnels and shafts the contractor shall remove such extra excavation, and make good and fill in same with concrete or brickwork, in the manner herein specified, at his sole cost; the actual cubic contents only of the excavation and of the brick and concrete work shown on drawings, and ordered for each special length of tunnel or shaft, shall be paid for.

Maximum allowance. 63. If, however, in cases where the use of explosives is ordered (and in no other case) the Engineer considers it impracticable to excavate any particular length of tunnel or shaft to the exact sectional area ordered, then he may, according to the nature of the ground, allow a margin of concrete lining not exceeding 3 inches over and above that ordered.

Starting tunnel excavation. 64. Unless otherwise directed, the excavation of the various tunnels to be commenced from the different faces described in the specification, simultaneously within the specified time after the date the contract has been signed.

Ventilation. 65. Ventilating fans or other approved means to be provided and worked by the contractor at all working shafts and tunnel faces where directed by the Engineer. 66.

66. In all cases where a greater thickness of lining, or a greater cross-section area of tunnel or shaft is ordered to be executed, from whatever cause, after the length of tunnel or shaft in question has been excavated to the profile ordered in the first instance, or if any portion of the excavation of open trench is ordered to be deepened, the excess of excavation so ordered shall be paid for at schedule rates for tunnel, shaft, or open trench excavation, as the case may be, and as the Engineer shall classify and direct at the time. Enlarging shaft or tunnel.

67. No concrete or brickwork shall be commenced until the portion of sewer excavation in tunnel or open trench to be operated upon has been cleaned and levelled, and until the Engineer has examined and approved of same. Inspection and approval.

68. Shafts are to be sunk at the various sites shown on longitudinal sections and on general plans, or in lieu of those shown, at such other sites as the Engineer from time to time may determine. Wherever shafts are ordered they are to be sunk truly plumb, and of the full dimensions shown on drawings, or as may be ordered at the time, clear of timbering. Shafts.

69. All excavation for shafts situated within the lengths of open trenches, is to be paid for as "excavation in open trench." Shafts in open trenches.

70. If the contractor desires, to suit his own convenience, to sink temporary shafts, they are to be sunk only at approved places, and on completion of work to be filled in, as specified in clause 95, to the satisfaction of the Engineer. The cost of sinking, timbering, unwatering, &c., and of filling in, withdrawing, or covering up timber of such shafts, to be defrayed entirely by the contractor. Temporary shafts.

All temporary shafts to be sunk to the dimensions directed, clear of timber.

71. All shafts, temporary or permanent, to be provided and fitted during their construction and completion, or during the progress of the contract, if deemed necessary by the Engineer, with approved winding engines and steel-wire ropes capable of resisting a strain equal to six times that of the working maximum strain, or with such other winding arrangements, ladders, staging, &c., as shall be directed and approved of by the Engineer. Shaft plant.

72. Where directed, sumps are to be sunk at the bottom of shafts not less than 6 feet deep below invert of sewer, and afterwards to be filled in with concrete, as specified in clause 142. Sumps.

73. Any other sumps which the contractor, for his own convenience, may think fit to sink on line of sewer, in tunnel, or in open trenches, during the construction of these works, are to be filled in with concrete, as specified in clause 142, and the cost of sinking, timbering, unwatering, and filling in with concrete and removing the materials, &c., to be defrayed entirely by the contractor.

74. The excavation for sub-ducts in tunnel and open trench to be made below invert of sewer, or as shall be directed, with a fall towards each working shaft or face, and of such dimensions and gradients as may be determined at the time. Sub-ducts.

75. Any material obtained from the excavation, which, in the opinion of the Engineer, is suitable for refilling or other works comprised in this contract, shall be put aside in separate spoil-banks beyond the site of the works. Material for "filling."

76. In the case of tunnel and shaft excavation, when "solid rock" or "more or less hard material," or "solid rock" and "more or less hard material" occur, provision is made on the longitudinal section and in the schedule of quantities for the materials to be classified under these headings. No guarantee is given as to the means which may be ordered for excavating such work. The actual excavation done in tunnels, shafts, and open trenches will, however, be paid for, not exceeding that ordered or specified. Classification of material from shafts and tunnels.

77. The schedule price for 1 cubic yard of excavation in any situation shall include the cost of taking out and placing said excavation aside in separate temporary spoil-banks beyond the actual site of work, together with the works comprised in clauses 41 and 107. Works covered by 1 cubic yard of excavation.

#### *Sub-ducts.*

78. Sub-ducts to be constructed, when decided on, along lines of tunnels and open trenches, commencing on each length midway, or thereabouts, between two working shafts or faces, 33 inches below invert of sewer, &c., or as shall be directed at the time, and having a fall towards each working shaft, or face of such gradients as may be determined at the time. Sub-ducts of 9 inches, or of a greater or less internal diameter, to be laid immediately underneath the timber floor of tunnel or open trench, or at sides of sewer, in hardwood boxes varying in size and dimensions as shown on drawing. Said boxes to be laid straight and true to levels decided upon, and the pipes to be laid therein, upon, and surrounded by sandstone chippings and quarry refuse. Dry sandstone packing, 4-inch gauge, to be put over pipes.

79. In solid and disintegrated rock the excavation for sub-duct to be executed as shown on cross-sections, and as shall be directed, and the sub-duct to consist of glazed stoneware spigot and faucet pipes of 9 inch internal diameter, more or less, as the case may be. The pipes to be jointed dry, and the filling above same up to under side of sewer lining, to be of dry stone, hand-packed, as before described. The Engineer may also, if he deems it necessary, order the pipes to be jointed altogether, or in part, with tarred gasket, 1½ inch deep, and cement mortar 1¾ inch deep. The mortar to be prepared of 1 part cement to 2 parts of sand.

#### *Existing Gas, Water, and Sewer Pipes, and Sewers.*

80. During the excavation and construction of these works, the contractor is to take every precaution and provide and execute all, which in the opinion of the Engineer is necessary, to prevent the existing gas, water, or sewer pipes, and sewers wherever met with, or that are adjacent to these works, from injury, and to maintain the same at his sole cost, until, in the opinion of the Engineer, the refilling of excavation and the general progress of the works render further precaution unnecessary. All damage to existing water, gas, or sewer pipes, and sewers, to be repaired at once by contractor at his own cost to the satisfaction of the Engineer.

#### *Railway and Tramway.*

81. Before proceeding to excavate underneath or near any railway or tramway, the contractor must give ample notice in writing to the District Railway or Tramway Engineer of his intention to commence operations; and he must adopt such precautions as the said Engineer may think necessary or prudent for the safety or preservation of the traffic over the said railway or tramway. The contractor will

will be held wholly responsible for all stoppage of traffic, delays, accidents &c., that he or his men may cause, no matter how brought about, during the execution of the work under or near any railway or tramway.

82. The Railway Commissioners may, if they consider it advisable, place a watchman or watchmen on all work to be executed under or near any railway or tramway, for the purpose of seeing that no danger to the traffic is allowed to occur; but this shall not relieve the contractor of any of the responsibilities set forth in the foregoing clause, and the expense of such watchman or watchmen is to be borne by the contractor.

*Diverting Water.*

83. During the construction of these works the contractor shall, at his own cost, do all work which may be required for the effectual diversion of surface-water, subsoil water, and storm-water across and beyond the site of the works, to keep the trenches free from water during the whole time the works are in progress, and in preventing any injury to the works by floods or any other causes.

*Diverting Sewage.*

84. During the construction of the works in general, and of all points of intersection of existing and new sewers, and until completion of all works connected therewith, the contractor, at his own cost, to execute all the works of every description required to prevent injury to private property or to the existing or new works by sewage, and erect and construct watertight fluming across sites of works for the purpose of conveying constantly the whole of the sewage which may flow in said sewers at any time, to the entire satisfaction of the Engineer.

*Unwatering.*

85. All water which, during the progress of the work, may drain into excavations, to be properly, effectively, and continually pumped out, and the whole to be kept dry until after the completion, setting, and hardening of all brick and concrete work and pipe sewers, at the sole cost of the contractor. The greatest care to be taken to prevent running water passing over any of the brick, concrete, and pipe-work until it has set perfectly hard; any concrete, mortar, and cement jointing exposed to wash of water must be taken up at once, and replaced by fresh concrete, mortar, and jointing, at contractor's expense.

*Temporary Bridges, Roads, Fences, &c.*

86. The contractor shall provide, erect, and maintain all necessary temporary bridges, footways, &c., over rivers, creeks, water-courses, open trenches, and underneath railways, tramways, roads, streets, and foot-paths, so as to ensure that the flow of water or traffic is uninterrupted, as the case may be, during the period of contract. He shall also provide, erect, and maintain all temporary fences, hoarding-barriers, night-lights, &c., necessary to thoroughly protect both the general public, land, and property; and shall also properly ballast the temporary roads which may be required for the convenience of the public, and which the Engineer may order.

In the event of the contractor refusing or neglecting to carry out any of the above work, the Engineer shall have power (after having given twenty-four hours' notice in writing of such intention) to do the same at the contractor's expense, and the cost thereof shall be charged to the contractor on account of this contract.

*Temporary Timbering.*

87. During the excavation the contractor to adopt every precaution, and provide all materials, as planking, strutting, shoring, timbering, piling, sheet-piling; all packing materials, as straw, asphalted felt, bags, tarred gasket, puddle, &c., and carefully execute (unless where otherwise specified) all piling, sheet-piling, timbering, &c., where they are required, and carefully and securely close up and pack against the outside of all joints and open spaces between polling-boards, sheet-piles, or timbering, wherever they occur, and caulk open joints where directed, and execute whatever may be required to prevent any buildings, or other superstructures, road and other surfaces over and adjacent to the line of sewer, from settling, cracking, being shaken, slipping, or falling in, and to prevent any portion of the floors, sides, roofs, and end faces of excavation, beyond the exact cross-sections and dimensions determined on, from slipping, falling, running in, or being forced through joints and open spaces in the timbering and sheet-piling, and maintain said timbering, piling, shoring, &c., where and when directed till completion of the works, to the entire satisfaction of the Engineer and at the contractor's sole cost.

*Filling.*

88. The materials referred to in clauses 75 and 93, to be used in filling in the spaces between sides of excavation, and of concrete and brickwork, over sewers, into headings, filling in abandoned open channels, low ground adjoining channels, into road and other embankments, &c., as shown on drawings and as ordered by the Engineer. Sand only to be used in filling over sewer between copings on lines of aqueducts. All filling, unless otherwise specified, to be brought up in level layers, spread 6 inches thick, each layer to be rammed (and watered if directed) until approved of, before the succeeding layer is put on. This filling to be carried up to the surface of the ground, or to such other level or slope, &c., as may be directed at the time. Embankments to be formed as shown on longitudinal sections, to be finished in horizontal layers 9 inches thick after spreading, to be well rammed (and watered when directed) until approved of before the succeeding layer is put on, with side slopes and top widths, as shown on drawings, or as may be determined at the time; to be finished with such benches and curves as shall be directed. Only iron-shod rammers of not less than 10lb. weight, of approved pattern, to be used, and one man to be employed in ramming to each man employed in filling.

89. Material only of approved quality shall be used in refilling the spaces between sides of pipes, &c., and sides of excavation, and over pipes, &c. The refilling to be done in level layers, spread 6 inches thick (and watered when directed), each layer to be carefully and separately rammed as hereinbefore specified. The lower layers up to level of top of pipes to be carefully packed and rammed solidly under and at sides of pipes and socket-joints with spades or other narrow tools. The filling to be done as above described, to such a distance below the level of the street, road, path, &c., as the case may be, to admit of the ballasting, metal, or other covering being replaced.

Embankments.

Rammers.

Filling pipe  
trenches.

90. On completion of concrete, brickwork, &c., in shafts, the space between the sides of excavation and outer face of brickwork or concrete to be filled in in 6-inch layers, well rammed (and watered where directed) with materials provided for in clauses 75 and 93, great care being taken in lowering the materials to the bottom, so that stones do not fall on top, or against sides of pipe-shafts, brick or concrete lining. Where stones are permitted to be used as filling they are to be put in in alternate layers with the earth, and at least 12 inches of earth to be placed nearest and round the pipe-shafts, brick or concrete lining.

91. Shafts not required as manholes or ventilators, on completion of contract, or when directed by the Engineer, to have all timber withdrawn (as specified in clause 95), and to be carefully filled in.

92. Where it is found necessary to carry the excavation deeper than the underside of concrete foundations, in order to obtain a compact solid bottom, the portion so excavated to be filled in to the underside of concrete foundation, or as may be directed, with good quarry filling, spread 6 inches thick, rammed and watered until approved. The price per cubic yard for providing and putting in position quarry filling is to be 1 cubic yard of "filling." Quarry filling.

93. All soil, sand, and other materials which the excavations of this contract do not supply, and which it is necessary to obtain for the completion of the embankments and filling of every description, the contractor shall procure, of approved quality, from any other source or land outside the limits of this contract. The cost of providing to be included in the price per cubic yard for "filling." Extra material required.

94. As the works proceed, all shoring, timbering, staging, temporary bridges, piling, sheet-piling, &c., shall be withdrawn, excepting permanent timbering, as shown on drawings, and in all other cases where, in the opinion of the Engineer, the withdrawing of the same is impracticable, or would endanger the safety of the works, buildings, streets, and other surfaces over and adjacent to the works, when the contractor must obtain an order in writing, signed by the Engineer, to the effect that piling, sheet-piling, shoring, timbering, &c., may be covered up. Timber left in.

95. In withdrawing timbering from open trenches and shafts, the same shall be commenced from bottom of excavation, or, as the Engineer may direct, from lowest practicable portion of same, and continued upwards; the contractor to exercise every precaution by means of intermediate shoring, plankings, props, &c., and the filling in around and above sewer and shaft lining to be carried on simultaneously with the withdrawing of the timbering. The cost of withdrawing to be included in the price per cubic yard for "filling." Withdrawing timbering.

96. Refilling into excavation shall be measured, the net dimensions of excavation, less the actual displacement of any permanent works. Any other "filling" shall be measured the actual cross-sections ordered. Measurement of "filling."

97. The schedule price for 1 cubic yard of filling in any situation shall include the cost of removing the materials from temporary spoil-banks, or from other sources outside the limits of this contract, and the depositing same in accordance with the plans and specification, together with the work and material described in clauses 92, 93, 95, and 107. Works covered by 1 cubic yard of filling.

#### *Surplus Material.*

98. The excavated material not required, or approved for filling, to be removed off the works to such places as shall be ordered, spread and trimmed, and to be paid for as lead. Lead on spoil.

99. The surplus materials to be measured, the actual net excavations less the actual net refilling. Measurements.

100. The distance of lead shall be measured from top of shaft or end of open cutting to centre of spoil-bank or other place of deposit. Length of lead.

#### *Restoration of Roads and other Surfaces.*

101. After the filling in of sewer trenches and shafts has been consolidated and approved, the surfaces of roads, streets, paths, &c., to be at once restored in the manner hereafter described, viz.: In the case of streets which are wood-blocked on concrete, the City Surveyor will replace same on behalf of the contractor, at the rate per square yard stated in specification; in the case of roads or streets which are ballasted and metalled, 9 inches of ballast shall be laid thereon, and after this has been blinded with selected and approved material, the metal put aside, as specified in clause No. 45, shall be evenly spread and rammed until approved; in the case of roads or streets which are ballasted only, 9 inches of ballast shall be laid thereon, and blinded as above; and in the case of other coverings, the surfaces to be restored to the same condition as they were before the commencement of the work. Materials damaged, injured, or otherwise not approved of as fit for reinstating surfaces, to be replaced by contractor with new, sound, and approved materials of their respective kinds, together with any additional ballast which may be required, over and above that found on the site of the excavation and referred to in clause 45. If, however, in the opinion of the Engineer, sufficient hard rock is excavated from the tunnels, shafts, and open cuttings, the contractor will be allowed to break such rock to a 4-inch gauge, and use same for restoring road surfaces. Wood-blocked streets.  
Ballasted and metalled str etc.  
Ballasted only streets.  
Damaged materials from road surfaces.  
4-inch gauge sandstone ballast.

102. Immediately the pipes are laid, or concrete and other work in connection with shafts, manholes, lampholes, &c., are executed, and the ground filled in over same in any length of sewer, it is to be distinctly understood that all surplus material is to be carted away, the road cleaned until approved, and the road and other surface to be made good, flush with surrounding surfaces of roads, paths, &c., to the satisfaction of the Municipal authorities and the Engineer, in accordance with the specification; and if the contractor fails to do this, the Engineer shall be at liberty, without further notice, to get the roads cleaned, and the road and other surfaces made good at contractor's cost. Clearing roads and streets.

103. The contractor shall maintain the surface of the roads, streets, &c., after the excavations have been filled in, where the streets, roads, &c., have been broken up or injured during the progress of the work, during the period of the contract time, and afterwards during the period of maintenance, and shall from time to time make good any sinkings in the surface, and shall provide any additional metal, ballast, or other material that may be necessary during these periods. Maintenance of roads, streets, &c.

104. The whole cost of work and materials in connection with the restoration of road and other surfaces to be solely borne by the contractor. Cost.

105. The contractor shall, at the termination of the period of maintenance, procure certificates from the Municipal authorities concerned, that the roads, &c., in their respective districts are in a satisfactory condition. Municipal certificates.

*Restoring Buildings, Walls, Fences, &c.*

106. All buildings, walls, fences, and works of any description met with on the site of the works, that it is found necessary to remove or that may be disturbed, are to be replaced or repaired, at the sole cost of the contractor, and left, at the completion of the works, in the same order and condition as they were before the commencement of the works.

*Trimming.*

107. On completion of all embankments, cuttings, and filling, all top surfaces and slopes to be dressed and trimmed off to the specified inclinations and surfaces, and to such other inclinations, slopes, and surfaces as may be directed at the time, and all materials accumulating after trimming and levelling top surfaces and slopes, &c., shall at the completion of the works be removed, carted away, or spread about, as may be directed by the Engineer; and the schedule rates for filling and excavation shall include and cover all costs for trimming and dressing surfaces, and of removing, carting away, or spreading about all superfluous accumulations at the conclusion of contract.

*Sodding.*

108. On completion of embanking and filling, where ordered, all top surfaces and slopes to be protected by sodding. The surfaces to be sodded are to be boxed out the widths and depths required for the reception of turf-lining. The materials boxed out to be dealt with as provided in clause 107. The sods to be the best obtainable within a radius of 5 miles, of approved quality, not less than 3 inches in thickness and 10 inches square, full cut, with square arrises, to be laid in approved bond on their flat beds, close jointed over all top surfaces of filling or embanking, to be beaten down as the work proceeds with proper tools, as shall be directed, and when finished to present throughout perfectly smooth and plain surfaces. If the season requires it, the turfing to be properly and regularly watered to ensure the grass taking fresh root. The boxing out and turfing to be carried out simultaneously, and no greater area to be boxed out at any time than can be covered with turfing during two working days. The price for sodding to cover all the work described in this clause.

*Soiling and Sowing.*

109. All slopes of embankments, cuttings, and fillings, after they have been trimmed, to be covered, when directed, with a layer of surface soil, to be carefully rolled, and when finished to be of a thickness of not less than 3 inches. All slopes, soiled or not soiled, or embankments, cuttings, or filling (where not sodded), after they have been trimmed, &c., and when ordered, to be sown with couch grass seed, as shall be directed, and to be rolled afterwards.

*Piling, Timbering, &c.*

Quantities of piling.

110. Piling to be executed as required and ordered, but the actual quantities required can only be ascertained during the progress of the excavations, and as the trial piles are sunk.

Delivery. Stacking.

111. The whole of the timber which in the opinion of the Engineer is required for each part of the various works, or for such portions of the same as he may determine at the time, shall be cut and delivered on the ground prior to contractor commencing the excavation of such part or portion of said work. All timber, when brought on the ground to be at once properly and carefully stacked on even plain surfaces, and all timbers to lay perfectly straight in the stacks; all timbers bent, split, unsound, or objected to on other grounds by the Engineer shall be removed by the contractor from the ground within twenty-four hours after such objections have been made known to him, and if he neglects to do so they shall be removed without further notice by the Engineer, at contractor's cost; all rejected timbers to be marked by a brand or axe-mark.

Dimensions.

112. All timbers required and delivered for each respective part of works, to be, when dressed, pointed, placed, and fixed in position, of the various lengths and dimensions indicated and shown on the drawings referring to such works, or of such other dimensions which the Engineer may deem suitable for the works.

Pointing piling.

113. All square or round piles shall be sharpened (pointed) at the lower end, the sharpened sides to be cut to a batter of 1 to 6, finished at lowest end with a flatter diamond-cut point, as shown on drawings; the lowest point to be exactly in the straight line of the true axis of the pile, and the sharpened sides to be cut true to the axis of pile to prevent same from twisting and slanting when being driven.

Pointing sheet-piles.

114. All lower ends of sheet-piles to be sharpened on one side only to an inclined edge as shown on drawings, and as shall be directed, to ensure the pile when being driven to drift towards the pile last driven; all sheet-piles of the same length and thickness within each respective panel to have their ends sharpened exactly the same as regards length of cut surface and inclination of bottom edge.

Dressing piles.

115. All round, square, and sheet piles to be straight-grown timber, and before being driven, all square, angle and guide piles to be faced truly straight on the sides against which sheet-piles are to be driven and finished as shown on plans; all round piles for staging across rivers, against which planked sides for concrete filling are to be fixed, to be finished with a straight adzed face the depth required for reception of said planking.

Ringing and shoeing piles.

116. All sheet-piles to be perfectly parallel, and, before being driven, to be truly faced and fitted to each other within each panel (between each pair of guide-piles), as shown on drawings, forming a straight close joint.

117. All round, square, and sheet-piles are to be hooped with wrought-iron rings at the top, such rings to be of not less than 2 in. x 1 in. iron for the square and round piles, and of not less than 2 in. x ½ in. iron for the sheet-piles; stronger rings to be provided and used when directed. All piles are to be pointed, as hereinbefore described, and where driven into hard ground, when directed and ordered, the points to be protected by wrought-iron steel-pointed shoes, weighing, except where otherwise directed, 28 lb. each for the main and guide piles, and 8 lb. each for the sheet-piles. All shoes to be provided and made of such shape and workmanship as the Engineer shall approve of. They are to be carefully and truly fitted and fixed on to points of piles, and the lowest points of shoes for the round and square piles to be fixed exactly in a straight line with the axis of each pile.

Lining out, &c.

118. The exact lines and positions of all piles shall be carefully and correctly ascertained and staked out by the contractor, to the satisfaction of the Engineer, and all stakes fixed in water or river-beds

to extend above high-water level before any piles are placed and driven. After the staking out, piles to be placed truly plumb, or to such batters as may be directed, in their respective positions between guide-wales. All sheet-piles to be placed, truly plumb, between each pair of guide-piles, and lowered into their respective positions between two walings, fitted and fixed on both sides of guide-piles, as shown on drawings.

119. After the excavations for the various foundations have been completed, timbered, and approved, the pile-driving as indicated on drawings, or where ordered, to be proceeded with as follows:— In order to ascertain the lengths of piles required for the foundations of the different piers and abutments, as indicated on drawings, the contractor is first to drive trial piles, in the manner hereinafter specified, in positions required for permanent purposes, one for each alternate pier, or as shall be directed. Any extra expense in connection with trial piles to be borne by the contractor. After the different lengths of piles required for the works have been in this manner ascertained, the permanent piles to be placed in their exact positions, and then to be driven perfectly plumb (or to such batters as may be directed) until tested and approved, as specified. Pile-driving.

120. Long piles from 25 feet and upwards, of 12 inches and greater diameters, to be driven with a ram weighing from 20 to 30 cwt., having a drop over head of pile of not less than 5 feet, the drop to increase in height as the pile is driven, as shall be directed. Any pile driven with a ram of 20 cwt. or more, as the case may be, falling 10 feet, to be driven until at the last stroke it does not drive more than the specified depth, and any pile not standing this test to be drawn when ordered, and to be replaced by a longer pile. Shorter piles may be driven with a ram of less weight than 20 cwt.; and when rams of lighter weight are allowed to be used over shorter piles, sheet-piles, &c., the height of drop to vary from 12 to 18 feet, as the Engineer shall direct. Weight and fall of ram.

121. All piles to be pitched of such lengths as will ensure good sound heads at the levels shown on drawings, or as may be given at the time by the Engineer. No pile shall be pitched until measured and marked by an officer of the Department, nor cut off until tested and approved. Tenons, 8 in. x 4 in. x 6 in. deep, to be neatly cut on pile heads. Any pile which may be too short, or which may have been driven out of plumb, or out of the stipulated batter, or which may split below the level of the required height when driven, to be at once drawn, and to be replaced by a sound pile, driven plumb, or battered, as the case may be, of the required length, at contractor's cost. The contractor must be careful not to pitch any pile which he is not satisfied will be long enough. Scarfing of piles is not permitted. The driving of piles to be commenced and carried on in such order of works as specified, and as shall be directed. Pitching piles.

122. Where close piling is shown on drawings, all angle-piles and guide-piles to be driven first, after which the upper guide-wales are to be fitted and fixed on to heads of main piles, and then the whole of the sheet-piles of one panel, after being prepared and fitted, to be lowered and placed into position for driving, after which they are to be driven each a few feet at a time, so that the whole panel of sheet-piles shall be driven to the specified depth, as near as possible together; in this manner each panel is to be driven, one after another, unless otherwise ordered. Close and sheet-piling.

123. As the sheet-piling and excavation between same proceeds, the lower guide-wales to be fitted and fixed together with all transverse, diagonal, and angle struts as shown on drawings, and with such additional and intermediate struts as the Engineer may deem necessary during the progress of the works. Timbering, framing, staging.

124. Capsills to be accurately mortised, placed upon bearing piles, and to bear truly on pile-heads. Transverse sleepers to be spaced as shown, placed upon capsills, halved out 1½ inch deep at points of intersection; and planks to be laid and close-fitted between sleepers upon the capsills. Sleepers and planks to be secured to capsills with wrought-iron ½-inch square 9-inch spikes. Capsills, transverse sleepers.

125. The net quantities of all permanent timbering, planking, and piling, as shown on drawing, and where ordered, and of all other shoring, timbering, piling, sheet-piling, which the Engineer has ordered to be covered up, shall be ascertained by measurement before any timbers are covered up, and paid for at schedule rates, which shall cover and include the cost of timber fixed in works, iron used in fixing same, wrought-iron shoes for piles, packing materials, &c. Net quantities.

126. The measurements to be taken to ascertain the net quantities of timber to be paid for under this contract, shall be as under, viz.:—For all hewn and sawn timber where ordered, in any situation in the construction of these works, the width multiplied by the depth and the actual length (tenons included) shall be the net measurement. For round timber, other than piles, ordered to be covered up, the diameter given is to be measured, exclusive of bark, at the smallest end, and the area of such diameter multiplied by the actual length fixed in the works, shall be the net measurement. For piles where ordered, in any situation in the construction of these works, the measurement shall be the actual number of lineal feet (tenons included) of each such pile as placed in position, driven, and fixed in the works. Measurements.

#### *Carpenter's Work.*

127. The whole of the carpenter's work for girders, planks, working-platforms, railings, &c., to be of the timbers specified or approved, and of the best workmanship, to be framed, fitted and fixed, finished, cleaned off, rough parts sand-papered (where directed), and completed in the best possible manner, in strict accordance with drawings, and measurements indicated and dimensions figured thereon, with all necessary nails, spikes, screw-bolts, drift-bolts, wood-screws, coach-screws, wrought-iron straps, stays, and other fastenings of the best quality and approved workmanship. All holes for bolts, spikes, nails, &c., to be bored with the exact augers, and all mortise holes and tenons, &c., to be cut so as to fit exactly, to prevent timbers from splitting. All timber split during the progress of the work and its term of maintenance to be at once replaced by sound timber. All scantlings requiring scarfing in places are to be joined together as shown on sections, and as shall be directed.

#### *Cylinders.*

128. The cylinders for piers, buildings, &c., to be bolted up in the necessary lengths, accurately placed in position, lowered, and the sinking proceeded with by weighting as long as cylinders continue to go down, the tops to be finished at same level. As the cylinders are sinking into the ground the materials inside to be removed by such excavating appliances as may be approved. On completing the excavation of each cylinder to secure and approved foundations, the water to be expelled by pressure of air or other approved

approved method, and on having ascertained the cylinder to be perfectly true in position and plumb, the bottom to be thoroughly cleaned and levelled, after which the concrete, as specified in clauses 140 to 145, and 148, to be filled in for the first 6 feet under air pressure, or as shall be directed, till twenty-four hours after having deposited same in position. Above this level the cylinders to be filled in with concrete, as specified, to level of top of cast-iron cap.

**Concrete filling.**  
**Sinking to greater depths.** 129. The sinking of cylinders to be continued, if required, to greater depths than shown on drawings; such additional depths to be paid for at schedule rate, which is to include all charges, except cost of extra lengths of cast-iron cylinder; a corresponding deduction to be made if secure foundations are obtained at lesser depths.

**Rock, &c.** 130. If rock, boulders, dead logs, &c., are met with in an irregular manner, or at one side, while sinking cylinders, the air-lock, or other approved method, must be applied, and the obstructions removed, so as to ensure the cylinders to sink plumb, and to rest on a perfectly flat and solid bottom; no powder or other explosives to be used in the removal of such obstacles. The sinking to be proceeded with as soon as possible after delivery of ironwork, to ensure the erection of bridges, &c., without delay.

**Fitting lengths.** 131. After the sinking is completed, making up or fitting lengths are to be provided and cast, at schedule rate, so as to bring the top of the cylinders to the exact level shown on drawings.

#### *Sewers, Storm-water Channels, &c.*

132. As the cross-section area of each respective length of tunnel and open trench has been excavated, cleaned, and approved, the sewers, storm-water channels, and other works specified, shown on drawing and determined by the Engineer, to be built therein.

**Tunnel lining.** 133. In rock and other compact formation the concrete and brick lining to be filled in solid between internal surfaces of sewer, storm-water channel, &c. (less, in the case of concrete,  $\frac{3}{8}$ -inch space required for cement facing), and surfaces of tunnel or open trench.

**Relieving arches.** 134. Under all shafts, when ordered, relieving arches of brick or concrete to be built of a thickness, form, and width, as shall be directed at the time. Under temporary shafts excavated by contractor for his own convenience, the extra brick and concrete work to be at the contractor's cost.

**Lining.** 135. The thickness and description of the lining, whether concrete only, of brick and concrete, or of brick only, required for the different portions of tunnels and open trenches, depends upon the nature of the ground through which they are driven or excavated, as the case may be, and shall be determined by the Engineer as the excavation advances.

136. In strong compact rock,  $4\frac{1}{2}$ -inch concrete and brick lining will be requisite; and, as the materials occur less compact, two or three rings of brickwork or brick and concrete lining, as shall be determined by the Engineer as the tunnel proceeds, may be required.

**Junctions and inlet chambers.** 137. Junction chambers for sub-main and reticulating pipes, upper inlet chambers in shafts for junctions with reticulating pipe-sewers, drop-shafts, penstock and gas-check chambers, flushing-stations, weir-chambers with storm-water discharge pipes, ventilating shafts, aqueducts on arches, and on wrought-iron girders, syphons, buildings, bridges, culverts, storm-water channel junctions, intersections with existing roads, sewer, and water pipes, branch inlets, man-holes, gullies, road work, &c., to be constructed in connection with main sewers, branch sewers, and storm-water channels of concrete, brickwork, masonry, cement-facing, iron, timber, stoneware, and cast-iron pipes, &c., of the exact sizes, heights, shapes, forms, curves, and with such ornamental red, white, and other bricks, panels, mouldings, piling, &c., as shown on drawings, and as may be ordered and directed at the time. Shafts to be built of concrete or brickwork, at the option of the Engineer, to the thickness and shape shown on drawings, or as shall be directed.

**Curved junctions.** Curved junctions for branch, oval, or pipe sewers, as shown on drawings, and where ordered, to be constructed in concrete, to enter the main sewers at such levels above the invert, with such radius and longitudinal fall as shown, or as shall be determined at the time.

**Cast-iron work.** 138. Cast-iron pipes, landing platforms,  $\perp$  bars, scupper boxes, gully gratings, girders, over weir and shaft-chambers, or other castings, flushing-valves, gas-check frames, penstocks, man-hole covers, saddles, stop-board grooves, &c., to be walled and built in, as shown on Drawings; at points of intersection, branch junctions, gas-check chambers, pipe ventilating shafts, where ordered, &c.

**Building in wrought-iron work.** 139. Step-irons, supports to wrought-iron ladders, holdfasts, ends of wrought and cast iron girders, bars, &c., to be built into side walls of shafts, and anchor bolts for fixing cast-iron frame for penstocks, gas-checks, &c., to be built into walls of shaft chambers, as shall be directed. Flap-traps to be built in where ordered. Permanent putlog holes in shapes of reveals, for temporary staging, are to be left in walls of gas-check chambers, shaft chambers, and shafts where directed; and, in all cases, unless otherwise ordered, the reveals are to be built round of the same thickness of brick or concrete as shown on walls of shafts or chambers at the places referred to. Putlog holes to be included in the schedule price for brickwork. Stop-board grooves to be formed in concrete where ordered.

#### *Concrete work.*

**Bluestone concrete.** 140. Bluestone concrete used in these works to be composed of one part of cement, two parts of sand, and four parts of bluestone metal. The bluestone metal to be broken to a size to pass freely with its largest dimensions, through a ring of  $1\frac{1}{2}$  inch in diameter, to be free from dirt, quarry refuse, and to be screened through a sieve of  $\frac{1}{8}$  inch meshes, and then to be washed with fresh water until approved.

**Special concrete.** 141. Special concrete, if required, to be composed of 2 parts of cement, 3 parts of sand, and 7 parts of bluestone metal, prepared as specified in clause 140.

**Sandstone concrete.** 142. Sandstone concrete, where ordered to be used in these works, to be composed of 1 part of cement, 2 parts of sand, and 5 parts of sandstone metal. The sandstone metal to be free from dirt, quarry refuse, sieved (as specified in clause 140), washed, and of a size to pass with its largest dimensions through a ring of 2 inches in diameter.

**Mixing.** 143. All concrete to be prepared close to where it is required on a sawn timber plank platform. All proportions to be correctly ascertained by measurement, the metal to be well washed when put on the platform and levelled at top, the sand to be placed in a level layer upon the metal, and the cement to be placed in a level layer upon the sand; after which all materials to be carefully mixed and turned over twice, and then the whole to be mixed with fresh clean water, and thoroughly turned over twice, and oftener if required, until, in the opinion of the Engineer, it shall be fit for the work before it leaves the platform;

platform; it shall then be conveyed to the works as shall be directed, and be used fresh. Referring to clause 10, the gauge boxes are to be made to the following internal dimensions, viz.:—For stone 3 feet square in plan, and for sand 2 ft. 6 in. square. The depth of each box to be made so as to give the correct proportion of material.

144. If the concrete is made by machinery, all materials to be prepared as previously described, then to be mixed dry, and afterwards with fresh clean water, as may be directed and as shall be approved of; to be used fresh. Mixing by machinery.

145. The different kinds of concrete described under clauses 140, 141, and 142, as bluestone concrete, special concrete, and sandstone concrete, respectively, shall be used in the various parts of these works as specified, and as may be ordered at the time.

146. After the excavation for foundation of each respective part of the works, and the piling, planking, timbering, staging, &c., for same have been completed, and the bottom of excavations has been cleared and approved, the concrete work to be built thereon to the exact dimensions, and of such forms and shapes as shown on the drawings referring to each respective part of said works. Order of work.

147. The contractor to provide, at his own cost, approved concrete boxes, centres, staging, shoring, planking, &c., of the exact forms, shapes, curves, &c., required; in a proper, secure, and substantial manner, due allowance being made for  $\frac{1}{8}$  inch thick cement-facing over all internal exposed surfaces of concrete work; and great care being taken that all centering and concrete boxes can be easily withdrawn. After completion of any portion of the concrete, the concrete boxes and the centering, as the case may be, shall not be removed until the Engineer or his superintending officer has given written permission to that effect. Boxing, timbering, centering.

148. The concrete, after it has been approved of, to be conveyed into cast-iron cylinders, shafts, excavations for piers, and other deep foundations, in skips of approved size, and to every other part of the work as may be directed, and as shall be approved of, and tipped into same and upon the surface of each layer from a height not exceeding 18 inches, to be quickly spread out in layers not exceeding 9 inches in thickness. Commencing at each part of the work at lowest level of excavation or surface of work, the concrete to be brought up in horizontal layers or parallel with specified longitudinal gradients of works; each layer, when spread, to be quickly and evenly rammed all over until approved of. Method of work.

149. In circular, oval, elliptical, and open channels, the concrete to be filled first into central pads, or, in accordance with the transverse curvature of invert or bottom of channel, into central strips, not exceeding 2 feet in width for wide open channels, then into bottom layer right up to extreme width at sides, and then into the curved sides, as shown on drawings, up to top of side walls in open channels, or to level of springing in closed channels. Below springing line.

150. After the concrete has been carried up to the level of springing, all concrete arches to be commenced at both walls or abutments simultaneously, and carried on towards centre line in radiating parallel strips, spread 9 inches thick, of the whole width of arch, or in lengths as specified in clauses 157 and 158, and as shall be directed at the time, and rammed as before described. Where the arch is thicker than 9 inches, the lower layer to be always completed throughout 12 inches in advance of the upper succeeding layer. Above springing line.

151. After completion of the closing arch, all concrete work above springing of the same, at sides of arch, in manholes, chambers, shafts, &c., to be carried up in the same manner as specified in clause 148, and of the exact dimensions, curves, and thicknesses, &c., as shown on drawings. Above arches.

152. No portion of the concrete work described in the previous clauses (unless otherwise directed in writing) to be covered up with earth or brickwork until it has been examined and approved of by the Engineer. Any leakage that may appear in each layer to be carefully attended to and be made good and repaired at the time, as shall be approved, before each succeeding layer is put on. Covering up work. Leakage.

153. All end faces of layers of concrete to be stopped back at each respective length of sewer or other work, as shall be directed, to be carefully washed clean with fresh water, and then to be grouted prior to each layer of the adjoining length being commenced and joined on to the same. Joining lengths.

154. No traffic shall pass over any fresh concrete work except where such is duly protected against injury by boarding, planks, or any other means approved of by the Engineer or superintending officer at the time. Injury to work.

155. In the event of any stoppage occurring to the work, from whatever cause, or in anticipation of rainfall, the contractor, before temporarily stopping work, shall finish it off at whatever level the work may be raised at the time, by thoroughly grouting the whole of the surface with cement grout. The contractor also to provide and have always on hand approved tarpaulins for the purpose of covering all fresh concrete work and brickwork, when ordered, so as to protect the same during all stoppages in the daytime and at night from sun and rain, and during hot or dry weather, to keep said tarpaulins watered to prevent the work from cracking and setting too quickly on the outside. Treatment after any stoppage.

156. In all cases where a layer at mid-day or at evening is left incomplete the said layer shall not be continued after any stoppage until the surface of the lower and the end of the upper layer have been washed clean and then grouted with cement grout.

157. The concrete and brickwork in sewers and channels to be built in open trenches, in three continuous lengths of 40 feet each (unless otherwise directed), that is to say, when the arching-in of the first 40 feet commences, the next length of 40 feet must be completed up to the springing of arch, and the third 40 feet length must be in progress, and the latter so timed that the work is raised up to springing of arch by the time the closing-in of the adjoining length commences. Order of work in open trench.

158. The concrete and brickwork in sewers and channels on completion of each length of tunnel to be carried on in each length, from the middle towards each end simultaneously, in three continuous lengths of 16 ft. 6 in. each, unless otherwise directed; that is to say, when the arching of the first 16 ft. 6 in. commences; the next 16 ft. 6 in. length must be in progress from height of invert up to the springing of arch; the third 16 ft. 6 in. length must be in progress between floor of tunnel and level of invert of sewer. Order of work in tunnel.

159. At all plinths for piers of arches and abutments, piers of arches, abutments, between wings of abutments, pilasters, foundations, of buildings, culverts, &c., unless otherwise directed, each layer to be completed right through the whole length and width of the work before the succeeding layer is put on. Where concrete has to be walled or filled in against and between brick facings or masonry, the latter in each case to be well wetted and grouted, and then to be covered with a coat of cement mortar  $\frac{1}{2}$  inch thick before Order of works. Sundry.

before the concrete is built against it, and it is to be brought up simultaneously with same in layers 6 inches thick after ramming, the brick or masonry facings, however, being always kept 6 inches (or more, as the case may be) higher than the concrete work up to the level of string-course or other defined limit, when the work has to be finished level all through.

Aqueeducts.

160. The brickwork, masonry, and concrete-filling between all arches and at sides of end-arches to be carried up simultaneously over the whole length and width of every aqueduct, building, or other structure (unless otherwise directed), so that all arches or other structures shall be simultaneously and equally weighted as the brick, stone, and concrete work rises against and over same.

Aqueeducts.

161. The concrete in piers of arches of aqueducts, abutments, and approaches to aqueducts to be carried up in the first instance from bottom of excavations to level of top of plinths; in the second instance to level of top of skewbacks; in the third instance to level of underside of string-course; and in the fourth instance to level of top of coping of aqueducts.

Aqueeducts.

162. When all piers and abutments of aqueducts have been built to level of springing of arches or to top of skewbacks, as the case may be, the concrete, brick, and stone arches, as specified, to be built one after another over the openings upon centres, cambered as shall be directed, of such number as shall be specified, strong enough in every part to carry the weight of the arch to be built thereon, till all openings of one aqueduct are arched over, after which the whole of the arches shall be allowed two weeks' time to set and harden before the brick and stone facings, and the concrete, &c., between the arches and at sides of end-arches is commenced. In filling in, between arches and at sides of end-arches the various layers of concrete, of the thickness specified in clauses 148 and 159, as the case may be, to be brought up extending on to extrados of arches till the thickness of each layer at its end is reduced to  $4\frac{1}{2}$  inches above extrados, when it is to be finished at the time with a radiating end face before the succeeding layer is put on. The junctions of the storm-water sewers to be constructed with such curves, shapes, forms, flat arches between wrought-iron rolled girders, &c., as shown on drawings. On completion of junctions, or any lengths of storm-water channel, as may be specified, to exact level of underside of iron girders, the latter to be laid transversely over side-walls of junctions or channels, bedded in and upon special cement mortar,  $\frac{3}{4}$ -inch thick, truly parallel to each other, and spaced 4 feet from centre to centre, or as may be specified, after which the concrete filling along side-walls, between and over ends of girders, to be completed. The arches of 4-foot span or thereabout, with a rise of 5 inches in centre between the girders, to be commenced from lower end, and to advance to the upper end of the junction or channel in each case (all girders being carefully stiffened and held in position by props, as shall be directed), with not less than twelve centres or as may be directed, of the exact width of junction or channel between side walls. The arches to be built as specified in clause 150, and on completion to form a level concrete decking 3 inches above level of top of girders.

Junctions.

Iron girders.

Jack arches.

Lining round sewer on arches.

163. The concrete lining round sewer on lines of aqueducts and approaches (between underside of string-course and underside of coping, unless where otherwise specified) to be brought up between brick and stone facings (where such occur) simultaneously with same, as specified in clause 159. The concrete to be finished transversely level with underside of copings. This work to be carried on along each line of aqueduct in the manner and in lengths as specified in clauses 161 and 162.

Bond-rods.

164. In conjunction with the concrete surrounding sewer, where the latter is built upon arches and in embankments, the contractor to provide, fit, place in position, and wall in with the concrete, longitudinally in each corner at top and bottom of concrete lining  $\frac{3}{8}$ -inch diameter bond-rods in 16-foot lengths. The ends to overlap 12 inches, and tied together with binding-wire, and, transversely,  $\frac{5}{8}$ -inch diameter bond-rods  $4\frac{1}{2}$  inches above soffit of sewer of such lengths as to fit between the outer brick lining, or as shall be directed, spaced 10 feet from centre to centre. The cost of providing, fitting, placing, and walling-in said bond-rods to be included in the schedule price per cubic yard of concrete.

Cracking.

165. Special care to be taken by contractor to prevent the concrete, &c., from cracking at ends of each respective and successive length of sewer and channel in any situation in consequence of the draught in same, by providing and carefully closing up ends of sewers or channels with canvas or wooden shields or doors, and by carrying the works on in continuous lengths, without delays and stoppages, so as to prevent air-cracks or shrinkage.

Repairing cracks.

166. Should, however, cracks occur at ends of any length of sewer, storm-water channel, or other work, during its construction and time of maintenance, they shall be opened up for their whole length and depth, and of such width as may be directed at the time, and filled in with neat cement mortar and grout by the contractor, at his own expense, to the satisfaction of the Engineer, or he may order such cracked parts of the works to be taken down and rebuilt at contractor's cost.

Allowance for rendering.

167. The concrete work comprised in this contract to be completed to the exact dimensions shown on drawings, less  $\frac{5}{8}$  inch at all exposed inner and outer surfaces, and after the boxes and centerings have been removed, all exposed outer and inner surfaces shall present compact, solid, even, plain faces. All faulty and honeycomb portions, cavities, holes, or other defects, to be at once repaired by the contractor, at his own cost, with concrete or mortar, as the case may require, to the satisfaction of the Engineer. No portion of the concrete work to be covered up with earth or brickwork until it has been examined and approved.

Bedding and fixing cast and wrought iron-work.

168. After the concrete or masonry has been built to the exact height and gradient (leaving sufficient space for jointing), the whole of the cast and wrought iron work, after having been washed clean with fresh water, is to be truly laid and jointed in its exact positions, lines and gradients, on fillets of mortar; and as the concrete rises against and around the castings, bond-rods, &c., leaving a space of not less than  $\frac{1}{2}$  inch all round between the concrete and iron, this space round the invert, or underneath bottom of plates and rods, as the case may be, to be filled in with grout or mortar, as shall be directed at the time, whilst above the springing line the outer surface of the castings, &c., to be grouted, and then to be covered with a coat of special mortar  $\frac{1}{2}$  inch thick before the concrete is built on to and around said pipes, castings, frames, &c.

Anchor-bolts.

169. All anchor-bolts in connection with cast-iron and wrought-iron work, to be placed in the exact positions required; to be washed clean, wetted, bedded upon, and surrounded with special mortar in each case before the concrete is built round same.

Laying and fixing cast-iron and stoneware pipes.

170. All stoneware or cast-iron pipes, &c., where they are shown to be or ordered to be surrounded with concrete, to be clean washed with fresh water, to be laid and jointed in the exact lines and gradients on fillets of mortar, and to be grouted all round as the concrete is being built round same. 171.

171. Prior to commencing any concrete which has to be built on to and against rock faces, all shaken and loose rock to be removed; all rock surfaces to be well cleaned, washed, and wetted, and all beds, open joints, and spaces between concrete and rock faces to be carefully filled in with cement mortar, and the cost of thus preparing rock faces, washing, grouting, flushing, &c., to be included in, and covered by the schedule price per cube yard for the concrete. Building on or against rock.

#### *Brickwork.*

172. In executing the brickwork in any situation in the construction of these works, all bricks to be thoroughly soaked in clean fresh water immediately before being used, and all work to be built with whole bricks (except where otherwise directed), of approved shape and dimensions, to ensure the bond of each particular part of the work being executed, in the manner as shown on drawings, and as may be ordered at the time, with  $\frac{1}{4}$ -inch joints, each brick to be set full upon and rubbed in cement mortar, and every course to be carefully and thoroughly grouted, and well wetted before the succeeding course is put on, care being taken to keep the inner and outer faces of work clean by placing fillets of mortar on outer and inner edges before grouting. Method of work.

173. The brickwork in arches up to 12-foot span to be built as shown on longitudinal and cross sections in radiating courses, with radiated bricks where ordered, in  $4\frac{1}{2}$ -inch rings, in approved bond, the bricks of each course to break joint over the centre of those above or below. Where the brickwork consists of two or more rings, said rings to be built simultaneously, the lower ring to be always completed throughout  $4\frac{1}{2}$  inches in advance of the upper succeeding ring, each brick to be set full upon and rubbed in cement mortar, and each ring to be keyed in centre and to be covered with a coat of cement mortar  $\frac{1}{2}$ -inch thick, to ensure the thorough bonding between the different rings. When completing any length of brick closing arch of main sewer, storm-water channels, &c., the courses at end of same to be stepped back, as shall be directed, and the end face of each ring or course to be well wetted, and then grouted, prior to each ring of the succeeding length being commenced. Radiating bricks.  
Stepping ends.

174. The brickwork in arches over 12-foot span to be built in radiating through-courses, of rubbed and gauged bricks if directed, in approved bond; to be commenced at both abutments simultaneously, the whole width of same, and to be completed in the most perfect manner throughout the full width and thickness of arch, and to be keyed in centre. Arches over 12-foot spans.

175. The brickwork in abutments, abutment piers, wings, parapets, pilasters, spandrels, piers, face-walls, &c., to be built of the various heights, thicknesses, and other dimensions, together with all recesses, projections, panelling, &c., and carried up at each special part or length of work simultaneously with the concrete and masonry, in English or other approved bond, in truly level courses or in courses truly parallel with longitudinal gradient of work, and in such other lines and curves as shown on drawings, or as may be ordered at the time. Where directed, all outer and inner faces of walls to be carried up straight, square, and plumb, with perfectly fair and even faces. Simultaneous progress of various works.  
Faces.

176. Weep-holes of the sizes shown, to be left through the brick walls where directed, and every thing to be made good where necessary. Weep-holes.

177. The brick-on-edge flooring of invert of storm-water channels on steep gradients, as shown on drawings, and where ordered, in any situation in the construction of these works, to be laid in approved bond; each brick to be set full upon and rubbed in special cement mortar, after which the whole of the surfaces of the brick-on-edge flooring to be carefully and thoroughly grouted. Brick inverts in storm-water channels.

178. The  $\frac{1}{2}$ -inch thick mortar covering (pargetting) of outside faces of brickwork or concrete of ventilating shafts, manholes, sewer-chambers, and sewers, as shown on drawings, shall not be measured and paid for as cement facing, but included in the measurement of the brick or concrete work, and paid for as such. Pargetting shafts.

179. All putlog holes to be filled in, taking particular care to match the bricks and the mortar. All external faces of brickwork to be thoroughly cleaned, and all joints to be raked (if ordered  $\frac{3}{4}$  inch deep), and pointed with special cement mortar, and to be finished off with a neatly struck and cut joint. Putlog holes.  
Pointing up.

#### *Cement Facing.*

180. The whole of the internal and external concrete (and brick surfaces, if ordered), where such is shown on drawings, and in any situation in the construction of these works, to be protected by a cement facing to be put on in two thicknesses; the facing throughout, when finished, to be  $\frac{5}{8}$  inch in thickness. All surfaces of concrete or brickwork to be well wetted before the cement facing is put on. The cement facing of all surfaces of works to be finished, as shown on drawings, and, where directed, with joints struck in imitation of ashlar masonry. Thickness.

181. The different kinds of cement facing with which the exposed surfaces of these works are to be protected, are:—Cement facing, prepared of cement and sand in the proportion of 1 of cement to 2 of sand; and special cement facing, prepared of cement and sand in the proportion of 1 of cement and 1 of sand. The different qualities of cement facing, as above described, to be executed in the various parts of these works as shall be specified, and as may be ordered at the time. Proportions.  
Qualities.

#### *Masonry.*

182. All freestone and bluestone ashlar of the exact sizes, forms, and shapes, to be built in where shown on drawings, and where directed, simultaneously with the concrete and brickwork. Stones to be washed clean and to be well wetted with fresh clean water immediately before being used, to be laid upon their natural beds in approved bond, and set solidly upon and in cement mortar in the exact positions required; after which all joints between stones, between stones and brickwork, and between stones and concrete, to be carefully filled in with grout. Prior to each succeeding course being put on, the surface of the previous course to be well wetted and washed clean. All ashlar stones to be properly lifted by lewisings, or as shall be directed when being placed in position. All beds and joints to be punched, axed, and picked, so as to form  $\frac{3}{4}$  inch joints throughout. All exposed joints of masonry and between masonry and brickwork, &c., to be carefully raked out,  $\frac{1}{2}$  inch deep, and filled in solid with special mortar, neatly pointed, finished flush with outside faces of work. All masonry to be left perfectly clean at completion of works. Method of building ashlar.

freestone ashlar.

183. Freestone ashlar, to be provided in any situation in the construction of these works, of the exact dimensions, moulded, sunk, weathered, throated, checked, grooved, radiated, curved, channeled, fine-axed, battered, hammer-dressed, worked, rubbed where directed, and finished off in the best possible manner, as shown on drawings, and in accordance with any details which the Engineer may provide during the progress of the works. All stones to be in lengths, as shown, and as shall be directed, with truly squared and axe-dressed beds, joints, and backs. All joints from exposed surfaces of stones, and from faces of concrete work, as the case may be, to be axed-in 2 inches deep. The plinths, where shown on drawings, to be weathered with 2 inches parallel drafted margin, under edge of weathering and at all external angles of same. All external faces of plinths, skewbacks, abutments, piers, wings of abutments, &c., to be pitched-faced, no part of which to project more than approved of beyond true line of wall, with a true pitched line along each exposed arris, and with 2-inch parallel drafted margin as shown. All capstones over pilasters to be of one stone. Holes for lewis-bolts to be sunk where directed, of the depth and size required. All quoins, of the exact sizes specified, to be set in and out bond to all angles.

Bluestone ashlar.

184. Bluestone ashlar to be provided in any situation in the construction of these works, of the exact dimensions, forms, shapes, moulded, weathered, throated, fine-axed, sunk for reception of cast-iron bearing plates; and faces of weir-crest stones to be radiated, and to have vertical bird's-mouth grooves sunk along centre line of joints, as shall be directed; to be built in with the concrete, brickwork, and freestone masonry, as the case may be, and as the latter rises, where shown on drawings and as may be directed, to be lewised and set as specified in clause 182. All stones to be washed clean and to be well wetted before being used. Holes for lewis and anchor bolts to be sunk, where directed, of the depth and size required.

Squared rubble masonry.

185. Squared freestone rubble masonry in any situation in the construction of these works, to be built of squared hammer-dressed throughstones, unless otherwise directed, in from 10 to 14 inch level courses, as may be directed at the time, or on lines of open channels in courses parallel with longitudinal gradient. Said masonry to be built straight, curved, battered, or sloped, every stone to be set full up on and in cement mortar. When the exposed face of wall is battered, the surface of each course to be at right angles with line of batter, the top course to be built of larger stones, level at top and squared at back. All stones to be punched, dressed, and picked to the exact thicknesses, sizes, and forms required, and set in the most approved bond, with joints throughout not exceeding  $\frac{1}{2}$ -inch in thickness. All stones to be washed clean and wetted with clean fresh water before being used. Every course to be carefully grouted before the succeeding course is put on. All masonry to be finished with a neatly struck and cut joint as the work proceeds, and to be left perfectly clean on completion.

#### *Squared Bluestone Pitching.*

186. Squared bluestone pitchers, in any situation in the construction of these works, to be set in sand, in regular 9-inch courses, lengthwise across the channel, in the most approved bond, and in single ring or course round manhole covers, &c. All stones to be dressed and picked so as to ensure the joints all through not to exceed  $\frac{1}{2}$ -inch in thickness. No stone to be less than 9 in. x 9 in. x 9 in., but to be longer, curved, and radiated if directed.

#### *Squared Freestone Pitching and Channelling.*

187. Squared freestone pitchers, in any situation in the construction of these works, to be set upon their natural beds in sand or in cement mortar, as may be specified, in regular 12-inch courses, lengthwise across the course of the channel, in approved bond, with  $\frac{1}{2}$ -inch wide joints throughout. No stone to be less than 12 inches deep, 12 inches wide, and 12 inches in length, but to be longer, curved, and radiated if directed. If the pitchers are set in cement, all stones to be washed clean and well wetted with clean fresh water before being used, to be set full upon and in cement mortar, and on completion of pitching, all joints to be carefully filled with cement grout. All pitching in road channels to be set in sand in regular courses parallel with kerb-stones, in approved bond, with  $\frac{1}{2}$ -inch joints, no stone to be less than 12 inches wide, 8 inches deep, unless otherwise specified, and 18 inches long, but to be longer, curved, and radiated, if directed. On completion of pitching set in sand all joints to be carefully filled in with sand.

#### *Freestone Kerbing.*

188. Kerb-stones in such lengths, picked and axe-dressed to such widths, depths, shapes, and forms, with squared and axed ends, insuring  $\frac{1}{4}$ -inch joints throughout, to be set upon their natural beds in sand, in any situation in the construction of these works, along such lines, levels, gradients, and curves as shown on drawings, and as may be directed at the time.

#### *Pipe-laying and Jointing.*

Glazed stoneware pipes.

189. After the trenches have been excavated to the exact depths, levels, and gradients, and after the foundation layer of concrete has been filled in where ordered, as the case may be (leaving sufficient room for jointing), glazed stoneware pipes of the required diameter to be laid thereon, along such lines, curves, and inclinations, as shown on general plans and longitudinal sections, true, straight, and solid; and for all vertical branch pipe-sewers and ventilating pipe-shafts, the pipes to be set true, straight, and plumb.

Foundations.

190. In clay or similar soil the pipes to rest direct and solid upon the soil. In rock they are to be laid as shown on drawing, on a 1-inch bed of poor mortar, composed of one part of cement and six parts of sand, the cost of same to be included in items for pipe-laying. In soil liable to be scoured out or easily shifted, they shall, if directed by the Engineer, be laid on sandstone concrete, as shown on drawing.

Laying.

191. In every case the pipes shall be laid in such a manner that their barrels shall bear firmly and evenly on their bed, the sockets being entirely free from pressure in the joint-hole, and the spigots concentric with the sockets.

Jointing pipes.

192. The pipes are to be jointed as follows:—The 6-inch pipes with tarred gasket  $\frac{1}{4}$  inch deep after setting, and special cement mortar  $1\frac{1}{4}$  inch deep within socket of pipe; the 9-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 10-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 12-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 15-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar

mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 16-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 18-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{4}$  inch deep within socket of pipe; the 21-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{7}{8}$  inch deep within socket of pipe; the 24-inch pipes with tarred gasket  $\frac{7}{8}$  inch deep after setting, and special cement mortar 2 inches deep within socket of pipe.

193. The tarred gasket to be placed in the faucet and set tight round spigot end of pipe, after which the remaining space in faucet to be cleaned, wetted, and filled in with stiff special cement mortar, packed in solid, splayed off outside to an angle of 45 degrees, and neatly finished off. The inner joints between pipes to be carefully filled with special cement mortar all round, neatly wiped off as a finish. Each pipe length thus finished to be carefully cleaned out before another pipe length is added. Inner joints.

194. Junction pipes of any desired size are to be laid into the line of pipe-sewers wherever required by the Engineer. The socket ends of all junction pipes, junction blocks, junction holes, ventilating pipes, and dead ends are to be protected against the ingress of foreign substances, and made easily accessible for effecting future connections, by being closed with earthenware discs having a temporary watertight joint all round, the cost of providing and fixing same to be included in items for pipe-laying. Junction pipes.

#### *Cast-iron Pipe-laying.*

195. After the pipe-trenches have been excavated to the exact depths, levels, and gradients required, cast-iron pipes of the diameters shown or ordered, to be laid along lines (curved or straight), and solid upon the bottom of the trench, or upon a foundation layer of concrete, and the vertical pipes placed as shown, leaving sufficient room for jointing. Cast-iron spigot and faucet pipes.

196. The pipes are to be jointed as follows:—The 6-inch and 7-inch diameter pipes with spun-yarn  $2\frac{3}{4}$  inch and 3 inch deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up; the 8-inch, 9-inch, and 10-inch diameter pipes with spun-yarn 3 inches,  $3\frac{1}{4}$  inches, and  $3\frac{1}{4}$  inches deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up; the 11-inch, 12-inch, 14-inch, 15-inch, and 18-inch diameter pipes with spun-yarn 3 inches, 3 inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches, and  $3\frac{1}{4}$  inches deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up; the 20-inch, 22-inch, 24-inch, 26-inch, 28-inch, 30-inch, 32-inch, 34-inch, and 36-inch diameter pipes with spun-yarn 3 inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches, and  $3\frac{1}{2}$  inches deep respectively after setting up, and soft lead 2 inches deep after setting up. Jointing.

197. Should the faucets of pipes used in these works, in places, be of greater or lesser depths than indicated in the previous clause, then the spun-yarn packing is to be of greater or lesser depths as may be required, the depths of the lead joints to remain as specified. Expansion joints to be made in the same manner, but of such special depth of lead joint, with or without spun-yarn packing as shown on drawings and as may be ordered at the time. All curves on lines of pipe-sewers to be accurately formed with the spigot and faucet joints of the pipes without any abrupt horizontal and vertical dip, rise, or bend. The spun-yarn to be tightly platted or laid round each spigot end, so as to fill the socket of each pipe after setting up to the exact depth specified, leaving in each instance the remaining depth of faucet for the specified lead joint, the latter to be made at each joint in the trench with one running, and when cold to be set up with proper irons to one smooth, even, plain surface all round the pipe, and  $\frac{1}{8}$  inch within socket of same. Expansion joints.

198. The setting up of all lead-joints to be made with a proper set of setting irons, commencing from outer surface of spigot end with  $\frac{1}{8}$  inch thick setting irons, and continuing towards outer edge of lead-joint, with setting irons advancing gradually by  $\frac{1}{16}$  inch in thickness at the time. Special setting irons to be used for setting up expansion joints. After the pipes have been laid and the joints of every description made, examined, and approved, they are at once to be covered up, but in no case are they to remain longer than twelve hours uncovered after they have been approved of. Curved pipe lines.

199. Faulty and objectionable lead joints to be immediately and carefully chiseled out (they are not allowed to be burnt out) and fresh lead joints to be made and set up until approved of. Attempts to repair defective joints are under no consideration to be permitted. Setting up lead joints.

#### *Road-making.*

200. The different roads shown on drawings, are to be formed 30 feet wide between edges of slopes, whether on embankments or in cuttings. The longitudinal gradients of approaches to be at an inclination of 1 in 20, or as shall be directed. All roadways to be formed with a crown, which at the centre line is to be 6 inches higher than the edges. Width, slopes, gradient, formation.

201. After the roadway has been formed and approved, it is to be carefully boxed out along centre line, if ordered, for the reception of the road material, 8 inches deep for ballast, and 4 inches deep for metal—12 inches in all, by a width of 24 feet. Boxing-out.

202. After the boxing-out has been completed, its bottom surface to be covered by a layer of 4-inch gauge sandstone ballast, spread 8 inches thick throughout, and then covered with bluestone metal spread 4 inches thick throughout. Ballasting and metalling.

203. After the metalling has been completed and approved, the whole of its surface to be covered with about one-eighth of its own bulk of bluestone chippings of a uniform thickness, after which the whole road surface to be watered and rolled until approved. Blinding.

204. The stone used for metalling to be basalt or other similar hard stone of approved quality; to be broken to angular fragments of a size to pass freely with their largest dimensions through a ring  $2\frac{1}{2}$  inches diameter, and to be free from dirt, quarry refuse, &c. Quality of metal, size.

The prices per cubic yard for bluestone metal and sandstone ballast for road surface to include the cost of providing and spreading blinding.

#### *Tarred Metal Deck.*

205. After the tarring of upper surface of metal flooring, and after the sand-filling over arches and abutments of aqueducts has been completed, levelled, and approved, or in any other situation in the construction of these works, the whole of these surfaces as shown on drawings, to the thicknesses figured or ordered at the time, to be covered with the tarred metal decking, as follows:—

206. The stone to be basalt, broken to a 2-inch gauge, free from dirt; the screenings to be crushed from the same stone, and to pass through a  $\frac{1}{16}$ -inch sieve. All stones and screenings to be perfectly clean and one for tar.

and dry, to be heated before admixture with tar. The tar to be coal-tar, free from all adulterations, and boiled a sufficient time to get rid of the light oils before being used.

The stones and screenings to be mixed with the boiled tar separately; to be then stacked where directed, so as to allow the surplus tar to drain away for at least three weeks before being laid in position.

207. The 2-inch stone to be spread over the whole bridge, upon the concrete filling of roadway, and upon the 7-inch thick sand layer of footpaths, between kerb-logs, to such thicknesses and surfaces, and with such curvature to roadway, when rolled, as shown in drawing, and to be then covered with about one-eighth of its own bulk of screenings. Both layers to be well rolled and cross-rolled with a 30-cwt. roller, having not less than a 3 feet width of face, until they form solid compact surfaces to the required levels and curvature.

208. The sides along kerb-logs and all places where the roller cannot work, to be well punned by hand with a flat-faced 42-lb. iron rammer. When approved by the Engineer, the whole of the surfaces to be brushed over with a coat of hot coal-tar, and a layer of heated fine bluestone screenings, with dust left in, spread over it.

#### *Coke Concrete Deck.*

209. Coke concrete to be provided, placed in position where directed in the manner specified for other concrete, and to be mixed as described in clause 143, but in the following proportions:—16 cubic feet of approved coke broken to a strict 1-inch gauge, 8 cubic feet of sand, and 1 cask of cement.

#### *Fencing.*

210. Fencing is to be erected in such line and situation, and of such description as shall be directed, and as marked out by the superintending officer, and of the form and to the dimensions marked on the drawings.

211. Ordnance fences to be provided, framed, fitted, and erected where ordered, of sawn hardwood timber, unless where otherwise specified, as viz.: Posts 6 in. x 4 in. x 6 ft. 6 in., top rail 4 in. x 4 in., intermediate and lower rails, 4 in. x 3 in. Posts spaced 6 ft. 6 in. from centre to centre, sunk in rock not less than 18 in., and into other ground not less than 2 ft. 6 in. deep. On road embankments, where ordered, posts to be 7 ft. 9 in. long, mortised into sills 9 in. diameter x 5 ft. long, secured by 1 inch diameter hardwood tree-nail, stayed to posts by 4 in. x 4 in. struts, secured to posts and sills by  $\frac{5}{8}$ -inch screw-bolts, and  $\frac{7}{16}$ -inch diameter spikes,  $7\frac{1}{2}$  inches long. Angle and end posts, 10 inches diameter at smallest end, x 8 feet long, to be sunk 3 feet deep in the ground, mortised 6 inches deep for reception of ends of rails. Tops of round posts to be protected by caps of 6 lb. sheet-lead, secured to posts by lead-headed nails 2 inches long, and wrought-iron 2 in. x  $\frac{1}{4}$  in. rings, secured each by four 3-inch wood screws. Sawn posts to be notched at top for reception of top rail and halved out for reception of intermediate and lower rails, spaced as shown. Top rail to be laid aris uppermost into notches, secured to posts with 2 in. x  $\frac{1}{2}$ -in. hoop-straps, and four 2-inch long wood screws to each strap. Intermediate and lower rails to be fitted flush with inner faces of sawn posts, and secured to each with two 4-inch wood screws. All sawn timber above ground to be planed, all scarf-joints of rails to be made as directed, over posts only, and all sills, struts, and ends of posts under ground to be charred thoroughly. The ground round posts to be well rammed, and the clearing spaces round ends of posts stepped in rock holes, to be carefully filled in with cement grout.

212. The split timber fencing may be of one or more of the three following descriptions:—

- 1st. Fence consisting of split hardwood posts, two split rails (wired if shown), and round posts where required.
- 2nd. Fence, consisting of split hardwood posts, three split rails, and round posts where required.
- 3rd. Fence consisting of split hardwood posts, two split rails, covered with split hardwood palings, with round posts where required.

213. Posts to be 6 ft. 6 in. long, 8 inches broad by  $2\frac{1}{2}$  inches thick, except those for the paling-fence, which shall be 7 feet long, with mortises 6 in. x 3 in., cut square to the gauge shown on the drawings. All posts to be charred for a length of 2 ft. 6 in. from the bottom, sunk 2 feet into the ground, set uniform and upright, and spaced 8 ft. 3 in. apart from centre to centre, and the earth well rammed in round them until the posts stand solid and firm.

214. Rails to be 9 feet long, the top rail not less than 7 in. x 2 in., and the bottom rail not less than 8 in. x 2 in. in the two-rail fencing, and in the three-rail fencing the centre rail to be not less than 8 in. x 2 in., and the bottom rail 7 in. x 2 in. Tenons to be 6 inches long, carefully adzed to fit closely into the mortises, shouldered square with the saw, and fitted so as to butt close up to the posts.

215. Palings are to be sound, straight, cleanly split, and free from sap, and of approved timber, 5 feet long, not less than 4 inches wide, and  $\frac{1}{2}$  inch thick. They are to be sawn off square, placed upright, close together, and to a straight line on top, and securely fixed by  $1\frac{1}{2}$  inch strong wire nails, two nails to every paling in each rail. They are to be further secured along the rails by galvanised hoop-iron of 18-gauge, 1 inch wide, well nailed by  $1\frac{1}{4}$  inch clout nails at intervals not exceeding 12 inches apart.

216. At all intersections with existing fences, and at all angles, a round post is to be provided and fixed, 9 inches in diameter, charred for a length of 3 feet from the bottom, and sunk 2 ft. 6 in. into the ground, and the earth well rammed in until the post stands solid and firm. These posts are to be of such length as to leave the top 6 inches above the upper rail. At existing fences the junctions are to be made good and connected with these posts, which are to be mortised for the rails to suit the fence in the same manner as shown on drawing.

217. Where necessary, posts, either round or split, are to have a hardwood strut 6 in. x 3 in., checked at upper end into the post, and secured by a 6 in. x  $\frac{1}{2}$  in. round spike. A hardwood stake, 3 ft. long x 8 in. x 3 in., to be driven close into the foot of the strut, as shown on drawing.

218. The crossing of ditches, watercourses, or hollows in the ground, are to be made secure, either by supporting the fence on logs, extra long posts, or as may be directed.

219. The fencing is to be erected to a true line on top, and is not to follow the minor irregularities of the ground.

220. The wire used in fences to be that known as No. 8 "best best annealed drawn," or other approved fencing wire; to be passed through the posts, which are to be bored for the purpose with a quarter ( $\frac{1}{4}$ ) inch auger, and strained tight by means of F. Morton & Co's., or other approved straining bracket, fixed to the straining posts by wood screws or spikes, so as to suit the gauge, as shown on the drawing. Fencing wire and straining brackets.

The works and materials comprised in clauses Nos. 217, 218, and 220 to be included in the schedule rates for fencing.

*Wrought-iron Work.*

221. All wrought-iron spindles, bolts,  $\perp$ ,  $\Gamma$ , and  $\sqcup$  irons, flat and round bar, plates, straps, axles, pins, anchor-bolts, rolled girders, nuts, washers, rods, rivets, holding-down bars, gratings, frames, keys, chains, &c., to be of the exact dimensions and forms shown on drawings. The greatest care to be taken in any welds to ensure perfect soundness, and the contractor to be at the expense of any test which the Engineer shall think fit to submit the welds to. All plates, bars, channel-irons, rods, &c., to be perfectly true and of even uniform thickness; all angle-irons and bars to be sound, uniform, and regular on edges; all joints and edges to be truly planed to the dimensions on drawings; all wrought-iron parts to be rolled or forged out of one piece, unless otherwise specified and directed. Ends of spindles, shackles, &c., to be forged with eye-holes, and holes for male and female joints of the exact forms. All bolts, handles, hand-rails, spindles, keys, chains, pins, axles, bars, crosses, &c., to be forged with projecting necks, and welded with ends of large diameters or otherwise for screw-ends, and made of the exact shapes, forms, dimensions, lengths, widths, and diameters shown on drawings, with angular and square threads, as the case may be, to all bolts, spindles, &c., with the correct pitch, angle, and depth. All portions fastened with screws, bolts, or rivets to fit close together. The chains attached to blades of penstocks, and the whole of the wrought-iron gratings, channel-irons, &c., connected therewith, wrought-iron girders to working platforms, hand-rails to platforms and stairs, to be galvanised before being fixed in the works. Wrought-iron work. Welds.

222. All joints in plate, angle,  $\Gamma$  irons, &c., to be made only in such positions as shown on drawings and where directed; and all covering plates, wrappers,  $\perp$ , and angle irons, to be truly cut at ends to insure a perfect fit. Joints.

223. All screw-bolts and screws to flanged pipes, penstocks, valves, all other castings and wrought ironwork of every description, to be of the exact diameters and lengths shown on drawings, with hexagon heads and nuts, and to be angular threaded with the correct pitch and angle of the Whitworth screw. Screw-bolts and screws.

224. Joints of shafts, spindles for penstocks, axle shafts for strainers and traveller, engines, &c., to be made by said shafts being truly turned and cut at ends, and cast-iron flanged and turned sockets, with turned spigot and faucet, the internal diameter of socket to be turned exactly, and slightly of less diameter than ends of shafts. Socket and ends of shafts to be grooved, as shown for steel key. Sockets to be heated and then fitted on to ends of shafts with keys, after which the flanges to be bolted together, forming coupling, as shown on drawings. Joints of shafts, &c.

225. All joints and working parts of wrought-iron on penstocks, valves, strainers, standards, engines, travelling cranes, travellers, gratings, troughs, louvre shutters, brackets, &c., to be turned, scraped, or ground and glazed bright, as the case may require, and as shall be directed. Joints and working parts.

226. All handles and levers for working penstocks, valves, strainers, travellers, travelling cranes, &c., to be ground and glazed bright. Handles and levers.

227. The rivets throughout to be made from  $\frac{1}{2}$ -inch,  $\frac{3}{8}$ -inch,  $\frac{1}{2}$ -inch,  $\frac{7}{8}$ -inch, 1-inch, and  $1\frac{1}{8}$ -inch iron respectively, with heads and necks, as shown on drawings. The Engineer may require any holes to be drilled and the bolts turned for same, or he may order bolts to be substituted for rivets, or other changes of the kind, in such places as he may consider necessary, without extra charge. Rivets and bolts.

228. All rivet, bolt, and screw-holes to correspond as to diameter and position with the drawings, and to be carefully drilled parallel, and at right angles with face of work. All the holes in booms of main girders, bearing plates, lattice bars, wrought-iron aqueduct pipes, rolled  $\perp$ , channel,  $\Gamma$ , and flat bar irons to be drilled—the respective pieces being clamped in their proper positions and secured under drill and bored right through; holes in cylinder bracing, cross-girders, and wind bracing girders may be punched. No drifting or rhymering to be done without the consent of the officer in charge, and then rhymering only when the plates can in no other way be made to coincide. Holes which are directed to be punched or drilled at the building site to be about  $\frac{1}{16}$  inch narrower than the diameter of the rivet required, so as to insure a good fit after its being enlarged with the rhymer. Where several holes meet each other in the parts to be united, a horizontal dislocation of not more than 5 per cent. of the diameter of the hole is allowable, the hole then to be made perfectly equal with the rhymer, and not by filing on one side, and rivet-bolts of proportionately large size to be used in holes thus enlarged. Holes for rivets, bolts, &c.

229. All rivets to be inserted at a bright heat, after being carefully freed from scales, into the duly cleared holes, to be quite firm after the head is completed. If not firm, rivets to be at once removed and replaced by others, and of larger size when directed. In putting together parts, care to be taken that none of them are forced into one-sided tension; any portions distorted in riveting the connections to be at once loosened and the faults remedied. All rivets to be finished with cup heads, and when countersunk the sinking to be drilled and the heads to be finished perfectly flush. All rivets and heads of bolts to be countersunk where plates, when fixed, will bear on other work, and where they form the inner surfaces of aqueduct pipes. All riveting to be done in the neatest and most workmanlike manner. Riveting.

230. Wrought-iron gratings to be of the exact dimensions, straight or curved, as the case may be, the bars spaced and riveted as shown, all bars to have rounded-off top surfaces. All hooks, rings, and chains attached to flushing valves, &c., to be galvanised before being fixed in the works. Wrought-iron gratings.

231. Wrought-iron ladders in lengths shown on drawing, and as may be ordered, consisting of  $2\frac{1}{2}$  in. x  $\frac{5}{8}$  in. uprights, spaced  $13\frac{3}{4}$  inches apart, and  $\frac{7}{8}$  inch round bar rungs spaced 12 inches from centre to centre. Joints of uprights to occur only at supports, where directed. Supports, spaced as shown, to consist of two 6 in. x 3 in. x  $\frac{3}{4}$  in. channel irons fixed to uprights with  $\frac{3}{4}$ -inch screw-bolts, stiffened off at ends, at top and bottom, with  $\frac{1}{4}$ -inch plates varying from 12 inches to  $13\frac{1}{2}$  inches in length, riveted on to top and bottom flanges of channel irons, as shown. Wrought-iron ladders.

*Cast-iron Work.*

232. The whole of the castings to be perfectly sound, free from all cold shuts, honeycomb, holes, or other defects; to be cast in dry sand moulds, unless where otherwise directed. Casting.

- Castings.** 233. All castings to be true in sectional form, straight longitudinally where shown to be so, or of such shapes, projections, curves, angles, and forms as shown on drawings; and each portion of such castings to be of equal strength and of the specified thickness throughout its respective length.
234. The external and internal surfaces of all castings to be perfectly clean and smooth and in strict accordance with sections.
- Casting cylinders and pipes.** 235. All cylinders and pipes to be cast vertically, with the socket or flanged end downwards; to be straight longitudinally; all straight pipes with faucet, or flanged, and with spigot ends, to have the latter cast 9 inches longer than shown on drawings; all cylinders to be cast with such head of metal as shall be directed. After the castings have been cleaned and coated, the head of metal over the cylinders, and the 9 inches at spigot ends of pipes to be cut off, so as to leave same perfectly square on section and true and equal in circumference, so as to fit the socket, leaving an equal space all round of the exact thickness shown on drawings for lead joints.
- Faucet ends.** 236. The faucet of each pipe or casting to be perfectly square and true, of the exact dimensions shown on drawings, and to be cast with a groove of the size and depth as required by the Engineer. The faucet of large circular and oval pipe for expansion joints to be cast as shown with an inner narrower faucet and projecting rim, and both inner sides of narrower faucet and of projecting rim to be truly turned and polished.
- Faucet for expansion joint.** 237. The feathers and flanges, where such are shown, to be of the exact widths, forms, and thicknesses, and all surfaces of contact to be planed and turned to true and even faces.
- Feathers and flanges.** 238. All spigot ends for expansion joints, where shown on drawings, to be cast with a recessed end for reception of wrought-iron ferrule on inner face, and a corresponding projecting face on the outside; said recessed inner and projecting outside faces to be truly turned and polished to the exact cross section for reception of lead joint, gun-metal packing ring, and wrought-iron cover-plate, as the case may be.
- Spigot ends for expansion joints.** 239. The thimbles for expansion joints for large, circular, and oval pipes, to be cast with faucets as described in clause 236, and with web-plates, ribs, and bed-plates cored out, with bosses truly bored for heads of anchor-bolts; the whole to be of the exact shapes, forms, and dimensions, as shown on drawings.
- Thimbles for expansion joints.** 240. The flanges of gas-check frames to be provided with a projecting face, planed and turned to true and even faces, of the exact dimensions shown on drawings.
- Gas-check frames.** 241. All holes in hinge-brackets at top of gas-check frames to be truly bored to the diameter required for the reception of hinge-bolts.
- Boring holes.** 242. All bolt-holes to be of the exact sizes, spaced as shown, and to be truly bored and turned.
- Bolt holes.** 243. All flange-joints, unless where otherwise directed, to be made tight with red lead.
- Flange joints.** 244. Frames of penstocks to be of the different parts, and of the exact shapes, forms, and dimensions, with all screw and bolt-holes, and the exact circular valve openings, with flanged end at back, projecting rim round opening in front and at sides of same, with cap-pieces on top, upright slide frames, flanged, bolted together, cored out with bosses and web-plates between, to receive front guide-plate, with inner projecting faces screwed into bosses of upright frames. Guide-pieces, with flange and web, faced on surface of contact, with boss in centre, the latter truly bored and turned for reception of brasses and spindle to pass through, fitted with bolt-holes, and screwed on to guide-plates.
- Penstock frames.** 245. All landing and other plates and grates to be complete with ribs, flanges, hinged and other lids, close or ventilating covers, girders of the exact shapes, forms, dimensions, projections, recesses, &c., as shown on drawing.
- Landing grates and plates.** 246. Valve blades to be of the exact diameters, forms, shapes, and dimensions, with circular projecting faces back and front, and vertical projecting faces corresponding with and bearing on projecting faces of guide-plates and framing, and vertical racks or brackets, with eye-holes truly bored for fixing foot of valve spindle, as the case may be. All seatings to be truly faced and bored out to receive gun-metal faces, and all stuffing boxes, glands, foot-step bearings, and journal-boxes, to be bored and turned and polished where directed.
- Valve blades for penstocks.** 247. All girders, brackets, standards, wheels for chains, and balance weights, tubes, boxes, glands, plunger-blocks, and boxes for lifting or turning spindles, as the case may be, foot-brackets for upper spindles, flanged pipes for spindles, street-boxes, &c., of the different parts, and of the exact lengths, forms, and dimensions, to be truly faced, turned, and polished at all joints, bored and turned for reception of screws, nuts, and brasses, with all bolts and screw-holes of the sizes shown, bolted at all joints, and all faces of flange-joints and working parts and other faces, where directed, to be truly planed, turned, faced, and scraped, to the necessary surfaces.
- Sundry ironwork to be turned and bored.** 248. All penstocks, scour-valves, &c., to be carefully and truly fitted and fixed together, with all lifting and turning-gear, gun-metal facings, spindles, wrought-iron work, street-boxes, screws, bolts, nuts, &c., complete, in strict accordance with drawings and dimensions figured thereon, and all valves to close watertight.
- Penstocks, scour-valves to be fitted.** 249. The frame and flap-valve of flushing valve, with bracket, pulley, &c., to be complete, with wrought-iron galvanised chain, to be cast of the exact diameter, shapes, forms, and dimensions; the flushing valves to have a projecting rim all round, the inner face truly faced and turned to a "V shape" of the exact dimensions, so that when the flap is placed in position the edge of the V rim to lie exactly against the centre line of the square tuck or lead-packing of opposite groove in frame, planed out to a dovetail for the purpose.
- Flushing valve.** 250. Couplings, flanged, turned, bored, faced, with turned and bored spigot and faucet, and bolt-holes of the exact diameters, to be of the exact forms and dimensions for making joints of valve-spindles, &c.
- Couplings.** 251. Cast-iron frame with 22-inch diameter opening, with non-ventilating lid fitting easily into frame, complete with sawn and tarred ironbark wood-bricks fitted into panels, the whole to be in strict accordance with drawings and dimensions shown thereon.
- Cast-iron frame.** 252. Scupper-pipes, with cistern-heads, and grating-cover for inlets of scupper-pipes, and plain cover-plates over inlets of scupper-pipes, as shown, to be cast to the exact shapes, forms, with the exact openings, and to the dimensions figured on drawings.
- Scupper-pipes, grating-covers, and cover-plates.** 253. All grooves for stop-boards to be cast with a connecting ledge at top, to be cut off when casting is completed. All grooves to be cast true, of the exact dimensions, shapes, and forms; and all working parts of frames and slide-valves, grooves, and stop-plates, to be truly planed and faced so as to fit, but not too tight. All stop-plates to be complete with wrought-iron shackles, 12-foot galvanised chain, hook, and rings.
- Stop-board grooves.**

*Gun-metal Work.*

254. All portions tinted yellow on drawings, as in nuts, bolts, shackles, bearings, and working parts, Gun-metal tinted yellow.  
nuts and naves of wheels, seatings of valves, penstocks, standards, hangers, and brackets, and all other brasses in working and lifting gear, &c., to be made of gun-metal. The gas-check flaps to be of muntz Gas-check flaps.  
or delta metal.

255. The whole of the castings to be solid and perfectly sound, and free from all honeycomb, holes, Castings.  
or other defects.

256. All spindles to be cast on end, having a riser on top of each not less than 3 feet in height, after Spindles.  
which they are to be turned and finished to the exact lengths and diameters; to be straight, and work true in stuffing boxes, nuts, glands, &c.

257. All screw ends and nuts, unless where otherwise specified and directed, to be angular, Nuts and screws.  
threaded with the correct pitch and angle; and all naves of wheels, nuts for lifting gear in standards and for off-let valves, bearing nuts of end brackets for shafts, &c., where shown, to be turned with the square thread and correct pitch, and angle of the Whitworth screw.

258. All nuts, naves, pins, lubricators, shackles, eyeholes, sockets, hinges, hinge-bolts, guide and other brasses in plummer blocks, brackets, standards, valves, penstocks, &c., to be truly bored, turned, General direc-  
faced, and finished to the exact lengths and diameters, shapes, and forms, and to be straight and work true on all bearings and working faces. work.

259. All projecting rims, straps, eye-hole brackets, &c., to be provided and fitted on to gas-check Gas-checks.  
flaps, to be cast of the sizes, shapes, and forms as shown on drawings, to be faced on surface of contact, Soldering.  
and to be soldered on to the flaps with zinc, after having been placed truly in position, and then riveted as shown. All gas-check flaps to be of the exact thickness shown on drawings. When the rims and straps for each flap are not cast in one casting, then they are to be cast in parts as shall be directed; and prior to fixing such parts in position, they are to be truly fitted and jointed together. All such joints to be scarfed and braced, as, viz., the edges filed or scraped clean and bright, covered with spelter and powdered borax, and exposed in a clear fire to a heat sufficient to melt the solder, which, for all scarf-joints, to be an alloy composed of four parts of copper to three of zinc. All scarf-joints to be placed where directed. All hinge axles to be truly turned. All links of shackles to be made with one joint, scarfed, brazed, and riveted together.

260. At expansion joints of large cast-iron pipes, where shown, a gun-metal packing ring of the Packing ring.  
size specified, to be provided, placed, and fitted round spigot end of pipe, carefully set up flush with end face of inner recess of faucet.

261. All portions of castings, as exposed surfaces of nuts, hinge-bolts, hinges, shackles, rims, straps, brackets, hooks, links, &c., are to be cleaned as they leave the mould, and all irregularities to be removed. All other portions of gun-metal work to be truly faced on all surfaces. All gun-metal facings and fittings to be truly turned and faced on all surfaces, to fit exactly, to be forced into positions, screwed where shown, and to sit perfectly firm and true.

*Wrought-iron Work, Gun-metal Work, and Cast-iron Work.*

262. The whole of the wrought-iron, cast-iron, and gun-metal work to be of first-rate quality and workmanship, in strict accordance with the specification and the dimensions and patterns shown on the drawings, and any details which the Engineer may provide during the progress of the contract. Quality and workmanship.

263. Wrought and cast ironwork and gun-metal work not to be more than 3 per cent. below the scheduled weight, and the contractor shall only be entitled to payment of the weights as per schedule, at Weights.  
the various prices set forth therein, and payment will not be made for any excess on such weights.

264. All ironwork and gun-metal work supplied by Government to the contractor to be delivered free of charge at the various sites of the works where they are required. For each article so delivered Contractor to  
the contractor shall give a written receipt, after which he shall be held solely responsible for same; and give a receipt  
shall, if any such article be lost, stolen, damaged, or destroyed, refund the cost to the Government. for ironwork  
supplied.

265. All ironwork and gun-metal work, &c., provided by the Government, which, at the completion Surplus iron-  
of the contract, by direction of the Engineer, has not been built or permanently fixed in the works, shall work.  
be conveyed by the contractor to the site of the Field Office, or to the iron store at Camperdown, as may be directed.

*Painting.*

266. All wrought-iron work (except where otherwise specified and directed) before leaving the foundry to be scraped and cleaned, and well coated with boiled linseed oil; and, prior to being fixed in position (excluding internal surfaces of circular and oval wrought-iron tubing, and excepting all working parts) after it has been cleaned and scraped free from scales, &c., and inspected, to receive two coats of anti-corrosive paint over all surfaces, and after being fixed in position, to be finished with two coats of best oil-colour, in approved tints. Wrought-iron  
work.

267. All bolt-heads, washers, nuts, straps, and all other exposed ironwork of timber bridges above level of kerbs, ordnance fencing, &c., to be finished with two coats of black varnish instead of oil-colour.

268. The whole of the cast-iron work to be properly cleaned immediately after completion; and, Cast-iron work.  
after being inspected, except where otherwise specified, to receive over all surfaces two coats of anti-corrosive paint (except working parts and joints), and to be finished afterwards with two coats of best oil-colour, in approved tints.

269. All carpenter's work of timber bridges above level of kerbs, and all ordnance fencing above ground, handrails, travelling cranes, &c., to be properly prepared, knotted and primed, and painted with four coats of best oil-colour, finished with approved tints. All tenons, mortises, notches, halvings, joints, scarfs and butting surfaces, to receive two coats of approved paint before being fixed in position. Carpenter's  
work.

270. No paint to be applied during or immediately after wet weather, or while surface of timber or metal work is wet; and an interval of forty-eight hours must elapse between each application.

*Tarring.*

271. All cast-iron cylinders, pipes, short lengths, bends, junctions, and any other castings, &c., Castings.  
which will be placed or laid under water, or which are to be covered up in earth, concrete, &c., and all non-ventilating man-hole covers, street-boxes, flushing-flaps and frames, scupper pipes, precipitating tanks, grooves,

grooves, landing plates and frames, grates, cover-plates, gully grates, &c., as soon they have been cast and inspected, to be properly cleaned and then heated, and whilst hot to be dipped or coated twice in hot gas-tar.

Wrought-iron work.

272. All flat, segmental, and buckled plates, rolled girders, bulb T irons, &c., before being placed in position, unless otherwise ordered, to receive one coat of tar, and after erection is completed, to receive a second coat; the tar to be coal tar, mixed with kerosene in the proportion of three of tar to one of kerosene, and applied hot.

Timber work.

273. Kerbs, flooring planks, timber in girders, longitudinal stringers, cross-girders, corbels, capsills, sills, piles, pier-bracing, abutment platforms, ends of handrail posts below level of tops of kerbs, to receive three coats of tar and composition; the first coat to be all tar laid on hot, the second and third coats to be composed of seven parts coal tar, four parts of Stockholm tar, and one part of pitch thoroughly melted together and applied hot, the last coat on top of deck to be well sprinkled with a layer of clean sharp sand and lime. All joints and butting surfaces to be well payed with the hot composition before fixing, and in finished work the composition to be poured into interstices and joints. Any timber inaccessible for tarring when fixed, to receive three coats before being placed in position.

274. No tar to be applied during or immediately after wet weather, or while surface of iron or timber is wet; and an interval of forty-eight hours to elapse between each application.

#### *Tar Varnish.*

Interior surfaces of wrought-iron work.

275. The whole of the interior surfaces (working parts and joints excepted) of the wrought-iron circular and oval tubes, cast-iron thinbles, expansion joint castings, short lengths of cast-iron circular and oval pipes, &c., after having been placed in position in the works, to be thoroughly cleaned of all scales, rust, and previous coating of linseed oil or paint, &c., and then to be coated twice with a tar-varnish composed of 30 gal. of coal tar, fresh, with all its naphtha retained, 6 lb. tallow, 1½ lb. resin, 3 lb. lamp-black, and 30 lb. freshly-slacked lime finely sifted; all materials to be approved of, and then to be intimately mixed as shall be directed, and applied hot, like paint.

#### *Day Labour.*

Prices given in schedule.

276. When "day labour" is required by the Superintending Officer to execute any works other than those for which a special price is given in the schedule of quantities and prices, the contractor shall provide the same at the several rates for "day labour" inserted in said schedule.

To include.

The price for day labour is to include supervision as well as all tools, lighting, and implements of every kind necessary for carrying on the work, and shall be returned in the usual monthly progress certificate.

Accounts to be sent in half-weekly.

277. The accounts for this "day labour" shall, however, be rendered by contractor to the Superintending Officer in half-weekly intervals, that is to say, during the forenoon of every Monday and Thursday, failing this he shall lose all claim to payments for the "day labour" performed by him during the preceding three days.

Length of day

278. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

#### *Measurements and Payments.*

Contractor to be present.

279. The contractor shall be present at all measurements, and, if required, assist in making the same. If he fail to attend after twenty-four hours' notice in writing has been delivered to him of the Superintending Officer's intention to take measurements, and clearly setting forth the locality of such intended operation, the measurements made by the Superintending Officer shall be binding on the contractor.

When and how measurements are to be made.

280. On satisfactory completion of any portion of the works, and at all other suitable times, the dimensions of such work shall be measured by the Superintending Officer, as specified, and recorded in a book kept for that purpose; and these quantities shall serve as the basis for arriving at the contract sum on completion of contract.

Progress payments.

281. For the purpose of making progress payments, the dimensions of still unfinished portions of the work will be measured in a summary way monthly, or as near as may be, but without prejudice to the ultimate acceptance or rejection of such unfinished portion of work.

Contractor to sign measurement book.

282. The contractor shall sign the measurement book each month, before the monthly progress payments are made, accepting the detailed quantities, prices, and amounts. Should he, however, disagree with the detailed quantities, prices, and amounts, he is at once to state in the measurement book in what particulars he disagrees, and the grounds of his disagreement; and unless this is done it is to be distinctly understood that the detailed quantities, prices, and amounts, as recorded in the measurement book, shall be binding.

Final measurements.

283. The final measurements, based upon the measurements made during the progress of the works, will be prepared within thirty days, or as nearly as may be after the completion of the work; and the contractor will be required to accept such measurement before the fixed deposit is returned.

#### *Junction with other Contracts.*

284. If two different contractors execute simultaneously two adjoining sections of the works, they shall be held jointly and severally responsible for effecting a proper junction of the sections.

#### *Suspension of Works.*

285. The contractor shall suspend the whole or any portion of the works, on receiving a written notice to that effect from the Engineer. He shall have no claim for loss or damage on this account, and such suspension shall in no wise vitiate the contract, but a commensurate extension of time for completing the works will be granted to the contractor, as set forth in clause 24 of the General Conditions.

#### *Duties.*

286. In the event of any materials being imported by contractor for use on this contract, no refund will be made of any duties which may be legally chargeable on such materials; and the contractor shall bear and pay all duty stamps, licenses, building or surveyor's fees or other charges or fees whatsoever legally demanded by any municipal or other authorities.

*Testing*

*Testing the Whole of the Works.*

287. It is to be distinctly understood that, on completion of the works, the Engineer shall have the power of ordering, and having the sewers, or portions of same, &c., closed in such order as he shall direct, and the whole of the sewers and aqueduct tubes, &c., filled with water for such a time as he may deem necessary for the purpose of testing the works; and any injuries, faults of whatsoever description, caused by or detected in consequence of such testing, to the work, shall be at once repaired, replaced by new work, and made good, the whole expense being borne solely by the contractor; and, after the completion of these repairs, replacing with new works, and making good any damages, injuries, faults, &c., the whole of the works shall again be tested, as before described, until they shall be satisfactory to the Engineer.

This is the schedule to specification marked "C" referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of May, A.D. 1895.

GEO. FORREST.

## D.

## GENERAL CONDITIONS.

*Interpretation of Terms.*

1. WHENEVER the terms hereafter explained in the present clause occur in these or any special conditions, or in the contract or specification, they shall be held to mean, and shall mean, as follows:—

"Government" shall mean the Government of New South Wales promoting this undertaking.

"Minister" shall mean the Secretary for Public Works of the Colony of New South Wales for the time being.

"Engineer" shall mean the Engineer-in-Chief having the principal charge of the works, or the person acting as such for the time being.

"Superintending Officer" shall mean any person or persons who may from time to time be entrusted with the superintendence of the works on behalf of the Government.

"Contractor" shall mean the person or persons who contracted to execute the works.

"Special conditions" shall mean any "special conditions" hereto attached and forming part of the contract; and such special conditions shall be read with the general conditions as part and parcel of the contract.

"Schedule of prices" shall mean the rates at which the contractor has offered or agreed to execute the contract, where the same is based on a schedule of prices; and be the basis on which the value of any extra works or of any deductions shall be calculated, and progress payments made, whether the contract be one of a schedule of prices or a bulk sum.

"Plans" shall mean and include all drawings referring to the works and explanatory of, or supplementary to, the specification.

"Works" shall mean the works set out in the specification and plans, or, in the event of there being no plans, in the specification only.

"Net claim" shall mean the sum claimed by the contractor after deducting therefrom the sum acknowledged by the Department to be due.

"Net award" shall mean the sum awarded on arbitration, after deducting therefrom the sum acknowledged by the Department to be due.

*Supply of Labour, Materials, and Plant.*

2. The contractor shall, except in so far as the specification may expressly state to the contrary, provide at his own cost and expense all labour, materials, and plant, and everything which the Engineer may consider necessary for the proper and complete performance of this contract. No materials or plant placed on the site of the works shall be removed therefrom, or otherwise disposed of, without the consent of the Engineer.

*Plans, Specifications, &c.*

3. The plans and specifications represent generally the form, dimensions, and description of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by scale. Or if there be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the plans, and the dimensions and materials given in the specification, the directions of the specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the plans, and not in the specification, or anything contained in the specification and not shown in the plans, shall be equally binding as if it were contained in both. If neither specification nor plans contain any mention of minor parts, which, in the opinion of the Engineer, are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided by the contractor without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are, included in this contract.

All

All works described in, or implied by, the specification or shown in any of the plans, or set forth in any lists or tables thereon, or attached thereto, as well as those expressly provided for, are to be made and executed in every detail conformably to the several plans already prepared or which may be prepared hereafter for the purpose of this contract, in strict accordance with the provisions of the specification and conditions, and to the entire satisfaction of the Engineer.

*Copies of Plans, &c.*

4. A copy of all plans and specifications required by the contractor for carrying on the works will be provided by the Government, but must be returned before a final certificate for the work can be given. Any additional copies which may be required and are supplied by the Department shall be paid for by the contractor at a rate to be fixed by the Engineer.

*Setting out Works.*

5. The works will be set out—that is to say, all necessary centre lines and levels will be given to the contractor—except in the case of buildings, when, in the absence of setting out, a block plan will be supplied, from which he must work; but the contractor must satisfy himself of the accuracy of the setting out, as no work incorrectly set out or improperly executed will be paid for.

*Protecting and maintaining Signals and Marks.*

6. All bench marks, pegs, and signals on the surface, and all alignments, and level marks underground put in by the Engineer or Superintending Officer for the purpose of checking the contractor's work, will be confided to the care of the contractor. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true position; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they may, if necessary, be replaced by the Engineer or Superintending Officer at the contractor's expense, and the cost thereof deducted from any moneys then due or thereafter becoming due to the contractor.

*Possession of Ground.*

7. In giving the contractor possession of the site it shall not be deemed that he is to have the exclusive possession, but only a limited possession; that is to say, such possession as will enable him to perform the works comprised in this contract. The Minister may at any time take possession of any portion of the works or ground or intended site of the works for the purpose of carrying on any other works or for any purpose whatsoever. The contractor must procure for himself all other land which he may deem requisite for any temporary purposes, or for his own convenience.

*Access to Works.*

8. The Engineer, or any other person authorised by him, shall have free and uninterrupted access at all times to the works, and during working hours to any workshop or premises, not on the site of the works, where materials may be in preparation or stored for the purpose of this contract. The contractor shall give the Engineer all particulars as to the mode and place of manufacture of any of the materials proposed to be used in connection with this contract, and shall facilitate in every way the inspection of the same.

*Contractor's Risk.*

9. The contractor shall take upon himself the whole risk of executing the works to the satisfaction of the Engineer, and in accordance with the plans, sections, and specifications.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer in charge to receive instructions from the Superintending Officer or Engineer, and to represent the contractor for all purposes of this contract.

Any notice or any written instructions to be given or delivered to the contractor under this contract shall be deemed to have been so given or delivered when given or delivered to the contractor or his representative at the work, or left at the contractor's usual or last-known place of abode or business.

*Order of Procedure.*

11. The Engineer shall have full power to decide in what order in point of time the various parts of the work or works comprised under this contract shall be carried out.

*Power of Entry.*

12. The Engineer shall have the power, at his discretion, without vacating this contract, to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this contract, and his doing so shall in no wise be held as a waiver of the responsibility of the contractor in respect of this contract, except in so far as any injury may accrue to such work so entered upon, by reason of any proved carelessness, to the satisfaction of the Engineer, of any employee of the Government, in which event the contractor shall be free from liability on account thereof, but not otherwise.

*Instructions to be obeyed.*

13. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the Superintending Officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

*Power to dismiss men.*

14. The Engineer may require the dismissal, within twenty-four hours by the contractor, of any agent, overseer, foreman, workman, or other person employed on the works, and in the event of the contractor refusing or neglecting to comply with such requisitions, all further payments on account of the work may be stopped until such dismissal is effected.

*Bad Materials or Improper Works to be removed.*

15. The contractor shall be bound to remove, within twenty-four hours, if written notice from the Engineer or Superintending Officer to that effect be given, any materials or work, whether fixed or not, which may appear to the Engineer to be of an inferior or improper description; and, in case of refusal, the Engineer shall have the power to get such materials or work removed at the contractor's expense, and to withhold all payments until such instructions have been complied with.

*Extra Works—Omissions of Works.*

16. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to order material or work of a different description to that specified, or to increase or diminish the dimensions or extent of any works to be done under this contract, or to alter their situation or vary the form or dimensions of any of the said works, or of any part thereof, or to make any deviation or to substitute one class of work for another, he shall have full power to do so, and to order and direct any such increase, diminution, alteration, deviation, or substitution, and the works involved in any such increase, alteration, deviation, or substitution, shall be executed by the contractor if of the class of works provided for in the schedule of prices, at such schedule prices; and no such increase, diminution, alteration, deviation, or substitution of works shall in any way annul or set aside this contract, or extend the time for the completion thereof, unless the Minister shall see fit to grant such extension; but such additions or alterations shall be measured and paid for, or deducted from the contractor's account, as the case may require, according to the schedule of prices. Provided that if any portion of the works so ordered to be done shall not be, in the opinion of the Engineer, of the same value or class of works provided for in the schedule of prices, the same shall be executed by the contractor at such prices as may be agreed upon with the Engineer; but if the contractor and Engineer cannot agree as to the price to be paid, the Engineer may order and direct the same to be done by such person or persons as he may think fit. Before any extra work, or work of an altered value or class, is undertaken by the contractor, it shall be imperative for him to procure an order in writing from the Engineer for carrying out such extra or variation of work, and the contractor shall not be entitled to any payment for such extras or variations unless he produce the written order for the same, as aforesaid, and he shall not be entitled to plead that the Engineer omitted to give such written order, as it is to be distinctly understood that the onus of obtaining such order shall be on the contractor. The contractor shall not be entitled to any other rate than the schedule rate on any plea that the work was in a different position or of a different class from, or in a more difficult position than that shown on plan or specification, or carried out under circumstances not contemplated in the specification, unless an agreement entitling him to payment by other than the schedule rates shall have been previously made and signed by the Engineer and the contractor.

*Valuation of Omissions.*

17. The Engineer shall have the power to direct the omission of the carrying out of any part or parts of the said works, but not amounting to the omission of the whole; and the value of such work so omitted in such case, calculated at the schedule rates, or in the event of there being no schedule rates, calculated on the basis of the proportionate value which such work bears to the lump sum, as ascertained by the Engineer, whose decision on that point shall be final, shall be deducted from the contract sum, subject, however, to arbitration clauses Nos. 36 to 41.

*Net Measurements.*

18. The whole of the work shall be executed and paid for according to the contract dimensions, and no allowance will be made for any excess of dimensions above those found on the working plans now exhibited, or which may be afterwards supplied, notwithstanding any general or local custom to the contrary, unless such excess has been expressly ordered. In the case of dressed masonry all cubic measurements will be taken at the extremes, and in the case of rock-faced masonry all measurements will be taken to the draft. With regard to timber, all framed work will be paid to extremes, but in no case will scarfs in hewn or round logs be paid for.

*Contractor liable for injury to adjoining Lands, Properties, &c.*

19. The contractor shall not commit any act of trespass, and shall effectually protect all adjoining properties and owners thereof against any loss, damage, or injury that may occur through the carrying on of the works, whether to buildings, goods, property of any kind, or to persons; and in case any such trespass be committed, or any such loss, damage, or injury occur, the contractor shall make full compensation, and shall make good all or any such loss, damage, or injury; and if any such compensation for trespass, or any such loss, damage, or injury be recovered against the Government in the first instance, it may be deducted from any money due or coming due to the contractor under this contract, or may be recoverable from the contractor or his sureties as liquidated damages in that respect incurred.

*Damages, &c., to be paid for by the Contractor.*

20. All damage, injury, or loss that may happen to the works from any cause whatever during their progress must be made good by the contractor at his own expense; and the whole of the works must be delivered up, complete in every respect, according to this contract, and the care and maintenance of all works under this contract shall remain with the contractor until the Engineer shall, by notice in writing under his hand, inform the contractor that he has taken charge thereof; and until such notice shall have been given, the contractor shall be responsible for all accidents, from whatever cause arising, and shall make good all damages thereto.

*Contractor not to Sublet Works or Assign Moneys.*

21. The contractor shall not assign or underlet this contract, or any part thereof, or assign or mortgage, charge or encumber all or any of the moneys payable or to become payable under this contract, or any other benefit whatsoever arising, or which may arise, under this contract, to any person without the consent in writing of the Minister being first obtained. The contractor for each and every breach of this condition shall be liable to pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor

contractor under this or any other contract with the Government. And any permission to assign or underlet works to be done under this contract shall not discharge the contractor from any liability in respect of this contract, and shall extend only to the permission actually given, but not so as to prevent any proceedings for any subsequent breach of this condition; and all rights under these conditions shall remain in full force, and shall be available as against any such subsequent breach.

*Truck System not allowed.*

22. The workmen and labourers of every class employed on the works shall be paid their wages in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods will on any pretence be allowed; nor shall the contractor, or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen and labourers of every class shall be paid on the works if it be possible, or in some building in the vicinity; and in no case shall they be paid at a public-house or other place where liquors or refreshments are sold. The contractor, for each and every breach of this condition, shall pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor under this or any other contract with the Government.

*Power of the Government to pay Workmen and Tradesmen.*

23. Before the payment of any money to the contractor, the Engineer may require from him a statutory declaration that the tradesmen supplying materials for or incidental to the works, and the workmen and labourers of every class employed on the works, have been paid their claims of every kind in full, in current coin of the Colony, and to the latest date at which such wages or claims are due; and the Engineer may withhold the payment of any money that may be due or become due to the contractor until such declaration has been made and delivered to him.

If the contractor shall fail or omit to pay the claims of any such tradesmen, workmen, or labourers, in the current coin of the Colony, it shall be lawful for the Minister or the Engineer, as often as the same shall happen, upon complaint of such failure or omission made by any such tradesman, workman, or labourer, and upon proof to the satisfaction of the Minister or Engineer of such failure or omission to pay the amount of such claim to such tradesman, workman, or labourer, and to deduct the same amount from any money then due or owing, or thereafter to become due or owing, to the contractor under this contract.

*Delay by Minister.*

24. If the contractor shall not be able to obtain possession of any portion of the ground required for the execution of the works to be done in connection with this contract, or if from the non-delivery, or any delay in the delivery to the contractor, of any materials which under this contract the Minister is to supply, or from any cause whatever arising out of the acts or defaults of the Minister, or any officers or servants in his employment, or from any accident happening to the said works during their progress not arising from the neglect or default of the contractor or his servants or workmen, the contractor shall be delayed or impeded in the execution of his contract, the contractor may from time to time within seven days of the happening or occurring of such act, default, or accident, apply in writing to the Engineer for an extension of time on account of such act, default, or accident, setting forth the cause of such application, and the Engineer shall, if the Minister think the cause sufficient, but not otherwise, allow by writing under his hand such an extension of time as the Minister shall think adequate; and the penalties, sets-off, and deductions to which under this contract the contractor is liable shall not attach until the expiration of such extension of time, but shall attach, and the contractor shall become liable to the same from the date of the expiration of such extended time or times. And unless the contractor shall make such application within the time and in the manner aforesaid, and unless and until the Minister shall allow such extension or extensions of time as aforesaid, the contractor shall not by reason of any delay arising from the cause or causes aforesaid, or any of them, be relieved in any way or to any extent of his liability to finish and complete the works within the time in this contract specified; and in default of his so doing, to pay and be subject to the liquidated damages, deductions, and sets-off as in these conditions provided; nor shall the Minister be deprived in any way or to any extent of his right to deduct or recover any sum or sums as liquidated damages, and not as or in the nature of a penalty or to make deductions or sets-off which under this contract he is entitled to make, deduct, set-off, or receive from the contractor for or by reason or on account of any delay in the completion of the work or any portion of the same, nor shall the rights, powers, and authorities by these conditions given to or vested in him be in any way affected.

*Patent Rights to be included.*

25. The contractor is to include in his tender the amount of all patent rights and royalties which may be claimed by any patentee or patentees for the manufacture and use of any portion of this work, and must undertake to liquidate the same when required to do so.

*Free Passes, &c.*

26. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Conditions not to be Waived.*

27. None of the conditions of this contract shall be varied, waived, and discharged, or released, either at law or in equity, unless by the express consent of the Minister, testified in writing under his hand.

*Progress Payments without Prejudice.*

28. No progress payment given to the contractor shall prevent the Engineer from at any future time before the final settlement rejecting all unsound materials and improper workmanship discovered subsequently to the giving of any previous payment; and notwithstanding any approval given or made by the Superintending Officer that portions or the whole of the works have been satisfactorily performed, the Engineer may require the contractor to remove or amend at any future time previously to the final payment

on

on account of the work, any work that may be found not in accordance with this contract; and the contractor must remove and amend at his own cost all such work when so required; and if he refuse or neglect to do so, the Engineer shall have the power to carry out such work, and to deduct the whole cost thereof from any moneys that may be due, or that may become due, to the contractor.

If, in the opinion of the Engineer, further inquiry is necessary or desirable before any progress payment is made, he shall have the power to withhold the certificate on which such payment would have been made, for any period which he may consider necessary for the purpose of such inquiry.

#### *Security.*

29. Within fourteen days after the notice of the acceptance of his tender shall have been given to the contractor, or posted to the address of his last-known place of business or residence, he shall deposit with the Minister, or at the option of the Minister, in some bank or banks in Sydney, upon fixed deposit in the name of the Minister, a sum calculated at the rate of £5 for every £100 or part thereof on the amount of his tender up to the sum of £100,000, and at the rate of £1 for every £100 or part thereof in addition, for any amount over that sum, to be held by the Minister as security for the due and proper performance and completion of this contract until the Engineer has certified that the whole of the work in the said contract has been completed to his satisfaction, or until this contract has been cancelled by the Minister under the power given to him in that respect under clause 32 of these conditions, in which last-mentioned event happening the money so deposited shall become forfeited to the Crown, and shall be held by the Colonial Treasurer, for and on behalf of Her Majesty the Queen, as liquidated damages. If, however, this contract shall not have been cancelled under the said clause, and if the works comprised in this contract are not completed within the time mentioned in clause 34 of these conditions, the liquidated damages which under the last-mentioned clause are made payable to the Minister may be deducted and taken from the money so deposited.

If the contractor fail to deposit the sum as hereinbefore provided within fourteen days from the acceptance of the tender, or if he fail to execute the contract for the due performance of the works mentioned in the said tender, the Minister shall have the option of and full power and authority to declare such acceptance to be annulled, in which case the amount of the preliminary deposit will be absolutely forfeited to the Crown, as provided by the Regulations of the Tender Board.

No tenderer will be authorised to proceed with the work tendered for until he has made the deposit as aforesaid, and has executed the required contract for the due performance of the said works, it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract, or the said moneys being deposited as aforesaid, he shall not have any right of action, claim, or demand against the Minister.

The contractor will be entitled to receive any interest that may be payable upon the fixed deposit of the money, if the money be placed in a bank at fixed deposit, as such interest becomes payable; but it is expressly declared that the Minister is not to be held liable or answerable in any way for any loss on the money so deposited, or for any loss of interest from the fixed deposit not being renewed.

#### *Payments.*

30. Progress payments may be made once in every month, unless the same shall become not payable by reason of anything contained in these conditions, on the certificate of the Engineer, as the work proceeds, in the proportion of 80 per cent. of the value of the work returned, until the sum retained reaches the amount of the deposit provided for in the preceding clause, when no further deductions will be made. The amount of the retention money will be held by the Minister, in addition to the cash security, unless otherwise provided for in the specification, until the Engineer has certified that the whole of the works have been satisfactorily completed, and the period specified for the maintenance of the said works has expired, and all accounts finally adjusted, when the retention money, in addition to the cash security, will be paid to the contractor; and it is expressly declared that until a certificate has been given by the Engineer to the Minister that the work done by the contractor has been executed and completed to his satisfaction, the contractor shall have no right or claim in respect of any work done or materials provided, nor to the payments from time to time to be made under this contract, or to the final payment upon the whole of the works being finished.

#### *Delay or Bad Work, Bankruptcy, &c.*

31. In case the Engineer shall be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the work or any part thereof, or in case the contractor shall at any time neglect or omit to carry out the instructions of the Engineer, or to dismiss any person employed when required, or shall neglect or omit to remove any materials or work which he is required to remove under condition 15 or in case the contractor shall assign or underlet this contract, or any part thereof, or assign or mortgage, charge or encumber, or attempt to assign, mortgage, charge or encumber, all or any of the moneys payable or to become payable under this contract, or any other benefit whatsoever arising or which may arise under this contract, without the consent in writing of the Minister being first obtained, or in case the contractor shall make default in insuring and keeping insured, in cases where insurance is specified, and depositing the policies and receipts for premiums in accordance with these conditions, or in case the contractor shall become bankrupt, or shall make an assignment of his estate for the benefit of creditors, or shall make an arrangement or composition with his creditors, then and in every such case the Minister shall be at liberty, without vitiating this contract, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to take the works wholly or partially out of the hands of the contractor and to employ or contract with any other person or persons to execute the same, and for that purpose to take possession of and use all horses, materials, plant, tools, implements and things on or about the said works, without making any allowances for the same, and all damages and expenses thereby incurred shall be ascertained and certified by the Engineer, and together with any sum payable as liquidated damages under these conditions shall be deducted from any money that may be then due or may thereafter become due to the contractor or may have been deposited by him; and if the money then due, or thereafter becoming due to the contractor, or deposited by him, be not sufficient for that purpose, the balance remaining unpaid shall be a debt due by the contractor to the Minister, and may be recovered accordingly.

*Cancellation of Contract.*

32. In any or either of the events mentioned in the last preceding clause of these conditions, the Minister shall have the option and full power and authority in lieu of proceeding under such clause, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to cancel this contract whether there are any works remaining to be done or not; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed, shall be taken by him as full payment for all works done under this contract; and upon notice in writing under the hand of the Minister that he, under the authority of this condition, cancels this contract, being given to the contractor, this contract shall be cancelled, and thereupon all sums of money that may be due to the contractor, or unpaid, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, shall be forfeited, and all sums of money held as security or named as liquidated damages for the non-fulfilment of this contract, within the time specified, shall also be forfeited and become payable to the Government, and the said implements and materials shall become and be the absolute property of the Government, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

*Insurance.*

33. The contractor shall from time to time, when required to do so by the terms of the specification, insure the works against loss or damage by fire, in an office to be approved in the name of the Minister for the amount of the full value of the work completed, as determined by the Engineer, and shall lodge with the Engineer the policies and receipts for the premiums for such insurance, and shall continue such policies until possession is given up to the Government; in default of which the Minister shall be at liberty to insure and deduct the amount of the premiums paid from any moneys payable to the contractor, and may refuse payment of any certificate until such policies and receipts are handed in as aforesaid; but this insurance is to be no limit or bar to the liability and obligation of the contractor to deliver up the works to the Minister completed in all respects according to the contract. In case of loss or damage by fire the moneys payable under any such insurance shall be received and retained by the Minister until the works are finally completed, and shall then be credited to the contractor in the final settlement of accounts in the event of the contract not having been previously cancelled under these conditions.

*Time of Completion, &c.*

34. The contractor shall complete the whole of the works comprised in this contract within seventy-eight weeks from the date of the acceptance of his tender, and in the event of their non-completion at the specified times, should the Engineer not have proceeded under clauses Nos. 31 and 32 of these conditions, or either of them, the contractor shall pay, by way of liquidated damages, and not as or in the nature of a penalty, the sum of \_\_\_\_\_ pounds sterling for every week, or for every part of a week, that shall elapse after such specified time, until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. The contractor shall have no right to a certificate for payment after the date specified in these conditions for the completion of this contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer, unless the time for the completion of this contract shall have been extended by the Minister, in which case such extended time shall become the time for the completion of this contract, and it is to be expressly understood that the fact of the time having been so extended shall not in any way be taken as a waiver of this contract, or as annulling or setting aside this contract in any respect, nor be taken as releasing the contractor from any of the responsibilities or obligations of this contract, which, in all other respects, shall remain the same as if the time had not been extended.

The like liability also shall hold good as to the obligation of the contractor in the event of any advance being made to him from the retention money, or on material on the ground and not *in situ*.

*Maintenance.*

35. The contractor will be bound to maintain the works for a period of three months after their final completion and use by the Government; and if any part should within that period show signs of weakness, or of giving way, or if any defective workmanship or materials be detected, the contractor, when called upon to do so, shall make good the same at his own expense, to the satisfaction of the Engineer, before any moneys held by the Government on account of this contract will be paid. It is also to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the contractor during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the contractor of any liabilities or obligations whatever in respect of his contract.

*Arbitration.*

36. The following matters shall be decided by the Engineer, whose decision shall be absolute and final:—(1) All questions or disputes which shall arise respecting the true construction or meaning of the plans or specification, or the quality of the workmanship, or quantity or quality of materials necessary for the whole or any part of the contract. (2) All questions and disputes when the net claim shall not amount to the sum of £500.

37. All questions and disputes not hereinbefore provided for shall, if the net claim be £500 or upwards, upon the completion of the works under the said contract, and before payment of the retention money and the money deposited as security for the due carrying out of the contract, be fixed and determined by arbitration as hereinafter provided.

38. If either party consider that he has claims in respect of any matter in which arbitration may be claimed, he shall, within one month of the date of the final certificate, furnish to the other party full particulars in writing of such claims, breaches, doubts, disputes, and differences in respect of which he desires arbitration, giving distinct and separate items, and the amount, if any, claimed under each item; and the other party may thereupon furnish particulars of all claims he has in respect of such matters, irrespective of the aggregate amount of such claims; and the party furnishing the same shall be bound by such particulars; and no claim not included in such statement shall be taken into consideration at such arbitration, or become subject of arbitration or action; and the claim or, respective claims so made as aforesaid shall be determined by arbitration, in the manner as hereinafter provided.

39. If both parties concur in the appointment of a single arbitrator, then the reference shall be to such single arbitrator; but if the parties for twenty-one days after the particulars first mentioned in the last preceding clause shall have been furnished, cannot concur in the appointment of a single arbitrator, the reference shall be to two arbitrators, one to be appointed by each party, or their umpire to be appointed in writing by such arbitrators before they commence the business of the reference; and the arbitration shall, subject to the express provisions herein contained, be made and held pursuant and subject to the Arbitration Act of 1892, or any statutory modification or re-enactment thereof for the time being in force.

40. The costs of and incidental to the arbitration shall be paid or borne by or between the parties in manner hereinafter mentioned, that is to say:—

1. If the sum awarded does not exceed the amount acknowledged by the Department to be due, the contractor shall pay all the costs of and incidental to the arbitration.
2. If the sum awarded shall amount to the sum claimed by the contractor, the Government shall pay all the costs of and incidental to the arbitration.
3. If the sum awarded exceeds the amount acknowledged by the Department to be due, but is less than the sum claimed by the contractor, the costs of both parties shall be added together and the total cost so ascertained shall be paid by the parties in the proportions following, namely:—The Government shall pay such sum as bears the same proportion to the total cost as the net award bears to the net claim, and the balance shall be paid by the contractor.

The award shall direct to, and by whom, and in what proportions the costs shall be paid, in accordance with the provisions hereinbefore contained; but the award need not specify the amount of such costs. Such amount shall, in the event of disagreement, be taxed or settled by the arbitrators or umpire, as between party and party, after the award is made. No costs shall be allowed as between solicitor and client. If either party shall be dissatisfied with the costs allowed by the arbitrators or umpire, the same may be taxed by the Prothonotary or other proper officer of the Supreme Court.

41. It is to be distinctly understood that all claims by either party to have any of the matters which may be submitted to arbitration so dealt with, must be made upon the whole of the work being completed, and before payment to the contractor of the retention money, or of the money deposited as security for the due performance of the contract, and that the acceptance by the contractor of payment of the retention money in cases where a bond to secure the completion of the works has been given, and in other cases of the retention money, or of any balance thereof, and of the money deposited as security for the due performance of the contract, shall be conclusive proof that the contractor has no such claim or claims.

#### "E."

#### RATES OF WAGES TO BE PAID.

Not less than the several rates of wages as set out in the schedule herein shall be paid by the contractor (or—in the event of the Minister approving of the sub-letting of any portion or portions of the works—by the sub-contractor) for the various services to be performed under this contract, and, in case of dispute as to the classification of workmen, the decision of the Engineer shall be final; the rates, however, do not include those to be paid to apprentices or boys.

With respect to overtime, the recognised rules of the particular trade then prevailing in the district where the work is situated shall be observed.

If it shall at any time be proved to the satisfaction of the Minister that the contractor or any approved sub-contractor is paying or has paid a lesser rate of wage for services rendered during the progress of the works to any workman employed thereon than is set out in the following schedule, the Minister shall have the option and full power and authority to cancel the contract, as if such breach was and is one of the events mentioned in clause 32 of the general conditions. Any permission to sub-let shall not discharge the contractor from any liability in respect of the rate of wages to be paid under this contract.

In all classes of labour, forty-eight hours shall be considered as a week's work. This rule, however, shall not apply to those workmen, the necessities of whose employment demand that longer hours shall be worked, as in the case of firemen, who usually have to get up steam in readiness for the day's work. The necessity for longer hours of labour in special cases shall be determined by the Engineer, whose decision shall be final.

The

The following is the schedule referred to :—

Trade.	Rate.
	s. d.
Carpenters .....	8 0 per day.
Masons .....	10 0 "
Bricklayers .....	9 0 "
Plasterers .....	9 0 "
Blacksmiths .....	8 6 "
Boilermakers and riveters .....	9 0 "

#### TENDER FORM.

IN pursuance of advertisement in the *Government Gazette* (I or we), the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected and lodged by (me or us), for the sum of £15,500, and to complete the same within eighteen months from the date of the acceptance of this tender; and (I or we) hereby undertake that (I or we) will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and (I or we) enclose herewith (our or my) cheque for the sum of £160 as a preliminary deposit; and (I or we) agree that such sum shall be absolutely forfeited if (I or we) at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted (I or we) fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which (I or we) agree to be bound.

Dated this 13th day of March, 1895.

JOHN CARTER.  
F. M. GUMMOW.  
D. S. SNODGRASS.

Witness,—A. R. BURKETT.

Carter, Gummow, & Co., Box No. 10, North Sydney.

#### TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work has to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 1 per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When the bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

"G."

SUPPLEMENTARY SPECIFICATION.

THE structure above the level of the skewbacks of main arches to be constructed as shown on drawing which accompanies the contractor's tender of cement mortar (except the cement facing), composed of one part of cement to three parts of sand, and wrought-iron rods on the "Monier system."

The foundations of piers are to be in conformity with the drawings attached to the contract, except as regards to the extra size necessitated by the larger pier shown on the contractor's plan, and are to be to the satisfaction of the Engineer.

Should the piers be required to be put down to a greater depth than shown on the drawings, or a greater number of them require piling than shown, the work is to be executed as ordered without extra payment being made.

The piers are to be built with sandstone concrete of the quality specified, and faced with cement mortar, composed of one part of cement and two parts of sand.

The cement facing of the structure, above the level of the springing of main arches is to be composed of one part of cement and one part of sand.

The works generally are to be carried out in accordance with the specification, schedule to specification, and the plans therein referred to, save and except such structural parts as are to be carried out under the "Monier system," or necessarily enlarged to meet the requirements of the contractor's plan, and within the time set out in the general conditions.

The contractors shall continue to maintain the said works at their own cost after the period of maintenance set forth in the general conditions, for a further period of three years, computed from such date to the satisfaction of the Engineer, whose decision shall be final and conclusive upon all points concerning workmanship and materials, and the permanency and durability of the said works, and the contractors shall enter into a bond to Her Majesty the Queen in the penal sum of £12,000, and find two sufficient sureties to enter into separate bonds in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the "Monier system," if the Engineer shall be dissatisfied with the same at any time during the said periods of maintenance, and to re-erect and  
construct

construct the said works at their own cost and expense in accordance with all things with the specification, schedule to specification, and plans therein referred to, within thirty-nine weeks from the date of being called upon so to do.

This is the supplementary specification marked "G" referred to in our annexed agreement with Her Majesty the Queen, dated the \_\_\_\_\_ day of \_\_\_\_\_ A.D. 1895.

GEO. FORREST.

"H."

Gentlemen,

Public Works Department, Sydney, 11 April, 1895.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 13th March last, is accepted for the construction of the northern main sewer, Leichhardt and Annandale Section, No. 77, at the sum of £15,500, in the terms set out in the supplementary specification, a copy of which is sent herewith, and subject to the following special conditions, viz. :—

That if it shall be represented to the Secretary for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegation be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men, and on such direction being conveyed to you under the hand of the Under Secretary for Public Works, you shall discharge such men forthwith, and in the event of your non-compliance with any such direction, the Minister shall have the power to declare this contract to be cancelled as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract modified by the supplementary specification above referred to, and the plan submitted with your tender, and to be completed within seventy-eight weeks from this date.

A fixed deposit receipt, in favour of the Secretary for Public Works, for the sum of £775 will be required as security for the due performance of contract within the stipulated time, and a personal bond in the sum of £12,000, and two bondsmen in the sum of £6,000 each in connection with the maintenance as set out in the supplementary specification. Will you be good enough to notify to me your assent to these terms, and at the same time submit the names of two responsible persons who are willing to act as your sureties.

I have to refer you to the Engineer-in-Chief for Metropolitan Sewerage Construction for further information, and to request that you will, when required to do so, call upon the officer in charge of bonds and contracts at this office with your sureties for the purpose of executing the necessary documents for the due observance of your contract.

I am, &c.,

J. BARLING,

Under Secretary.

Messrs. Carter, Gummow & Co., contractors, Box No. 10, North Sydney.

This is the copy acceptance marked "H" referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of May, A.D. 1895.

JOHN CARTER,  
FRANK MOORHOUSE GUMMOW  
(By his Attorney), JOHN CARTER.

## No. 8.

### Draft of Supplementary Specification.

The structure above the level of the skewbacks of main arches to be constructed as shown on drawing, which accompanied the contractor's tender, of cement mortar (except the cement facing), composed of one part of cement to three parts of sand, and wrought-iron rods on the "Monier system."

The foundations of piers are to be in conformity to the drawings attached to the contract, except with regard to the extra size necessitated by the larger pier shown on the contractor's plan, and are to be to the satisfaction of the Engineer.

Should the piers be required to be put down to a greater depth than shown on the drawings, or a greater number of them require piling than shown, the work is to be executed as ordered, without extra payment being made.

The piers are to be built with sandstone concrete of the quality specified, and faced with cement mortar composed of one part of cement and two parts of sand.

The cement facing of the structure above the level of the springing of main arches is to be composed of one part of cement and one part of sand.

The works generally are to be carried out in accordance with the specification, schedule to specification, and the plans therein referred to, save and except such structure parts as are to be carried out under the "Monier system," or necessarily enlarged to meet the requirements of the contractor's plan, and within the time set out in the general conditions.

The contractors shall continue to maintain the said works at their own cost after the period of maintenance set forth in the general conditions, for a further period of three years, computed from such date to the satisfaction of the Engineer, whose decision shall be final and conclusive upon all points concerning workmanship and materials, and the permanency and durability of the said sewer works, and the contractors shall enter into a bond with Her Majesty the Queen with two sufficient sureties in the penal sum of £12,000 to secure the removal of so much of the said works as shall have been constructed on the "Monier system," if the Engineer shall be dissatisfied with the same at any time during the said periods of maintenance, and to re-erect and construct the said works at their own cost and expense, in accordance with all things with the specification, and schedule to specification and plans, therein referred to, and within weeks from the date of being called upon so to do.

Would it not be desirable to take this opportunity for connecting the President of the Water Supply and Sewerage Board and Engineer-in-Chief for Sewerage Construction with the contract, in lieu of the Engineer-in-Chief for Roads, Bridges, and Sewerage. Would it not be possible for the contractors to take objection hereafter.—C.D., 4/4/95.

Mr. Norrie.—J.D., 4/4/95.

I suggested to Mr. Hickson yesterday the desirability of blotting out his signature and printed title on the conditions, substituting those of Mr. Darley, which was at once assented to. A reference will, too, be made on the agreement and bond to the plans being in Mr. Darley's office.—HAROLD F. NORRIE, 4/4/95.

Mr. Darley is to be styled, so far as he is connected with this Department, "Engineer-in-Chief for Metropolitan Sewerage Construction."—J.B., 5/4/95. Mr. Darley has the other papers; forward these to be placed with them.—Jno. P., 6/4/95.

## No. 9.

### Inspector G. A. Fowle to Resident-Engineer Weedon.

Sir,

19 February, 1894.

I beg to report that on several occasions I have had to complain about the time the sandstone concrete is mixed for packing brickwork in shafts. To-day two 20-foot mixings were made up at 2 p.m. at No. 5 shaft. This concrete will not be put down shaft for use till 5-30 p.m. I have instructed Connor's foreman, who has charge of this work, not to have the concrete mixed so long before being used. He states to me that he has to take his instructions from the firm.

I saw Mr. Snodgrass last Friday, and complained to him about this matter, when he promised it should not be mixed until one hour before it is required to be used. I spoke to road contractor's representative to-day, and he states that they shall mix the cement when convenient for themselves.

Inspector Reid informs me that on Saturday last, 17th February, about 1 p.m., at No. 6 shaft, it required half mixing 10 feet of sandstone concrete to finish brickwork packing in shaft. Henderson, bricklayer, working in shaft, was on mixing board, and started to assist labourer gauge the stone. Inspector Reid

Reid instructed Henderson to use the fork in place of shovel in filling gauge-box, as the stone which is broken close to mixing-board, is not free from refuse. Inspector Reid asked Henderson the second time to use fork. Henderson replied that it did not want forking. Connor's foreman came on the scene and said to Henderson, "Go on; don't take any notice of him; he is only a damn big buck navy."

G. A. FOWLE,  
Inspector.

When I first observed mixed concrete on the board at mouth of shaft No. 5, and found from Inspector Reid that it would not be used before evening. I pointed out to him that this was too long for it to stand, for, though mixed dry, the stone had been soaked with water and the sand wetted by the rain. He told me the matter had been inquired into and settled by yourself and the contractors. I am still of opinion that it is detrimental to the strength of the concrete for the cement to be mixed for hours with the other wetted materials before going into the work. I beg to point out that such friction as is evident by this report, between our inspector and the contractor's men should be put a stop to at once by removing the offending party from the works, as no satisfactory work can be done under the strained conditions obtaining at present.—S.H.W., 20/2/94.

Mr. Davis,—Ask Carter & Co. to see me.—R.R.P.H., 21/2/94.

The Engineer-in-Chief decided that Connor was to be removed from the North Shore contract, and that Reid was to leave when the work on Contract No. 79 was finished. Inspector Reid is also to go from Contract No. 79. I have already instructed Mr. Weedon to let Inspector Reid change places with Inspector Eyre.—J.D., 22/2/94. Mr. Weedon. Accordingly.—S.H.W., 23/2/94.

Sir,

5, Spring-street, Sydney, 3 April, 1893.

I have the honour to direct your attention to a patent, No. 4,084, issued on 3rd November, 1892, to Messrs. Carter, Snodgrass, and Baltzer, for the purpose of strengthening, and at the same time cheapening, the construction of sewer and other arches as described in such patent as "invention of improvements" in concrete, cement, and mortar building, and other constructions and manufactures.

I am desired by my clients to state that they are willing to dispose of their sole powers and rights granted in such patent, and to offer the same to your Department for the sum of £1,500.

I have, &c.,

The Hon. W. J. Lyne,  
Department of Works.

A. ARMSTRONG,  
Agent for Messrs. Carter & Co.

Mr. Hickson.—D.C.M'L. (*pro* U.S.), B.C., 4/4/93.  
this patent?—R.H., 5/4/93. Report herewith.

Does Mr. Bagge know anything about

#### Purchase of Messrs. Carter, Snodgrass, and Baltzer's Patent.

The patent herein referred to is, I believe, based upon the "System Monier." Monsieur Monier was the proprietor of a garden near Paris, who, in endeavouring to construct large and durable flower pots of cement mortar, which enclosed a frame of wire netting, detected the extraordinary strength of this material as compared with cement only, and in this manner speedily developed this system in manufacturing and constructing upon the same principle—bridges, roofs, gas and water tanks, ceilings, walls, &c., until the extraordinary strength of the Monier material became gradually very favourably known. Messrs. G. A. Wayfs & Co., in Berlin and Leipzig, are the patentees for Germany; they manufacture from the "Monier material" floors, wells, tanks, arched ceilings, roofs, bridges, stairs, pipes, columns, &c., in such a manner and to such an extent that the Monier system has been very creditably mentioned in the proceedings of the Association of Engineers in Germany since early in 1888.

The Monier construction system has been founded and developed by experiments on natural scale (which have been carefully watched by this Department for some years) and can only be carried on by persons trained in the works, or trained by experiments under the guidance of initiated persons; it should therefore be introduced here in a manufactory, and by an agent of the company experienced in the work, who should be in a position to offer the manufactured articles at their prices, subject to any tests which the authorities might deem necessary to enforce.

As regards the patent offered by Messrs. Carter, Snodgrass, and Baltzer, I have not had the opportunity of examining it to discover in what way it differs from the "Monier patent," nor do I know if the Monier system has been patented in this Colony; if it has not, I presume it is free to public use as it has been known in the Colony for some years.

The patentees might be requested to furnish a copy of their patent, with drawings and calculations of strength, so that further examination of its merits may be made.

C. H. OHLFSEN BAGGE, 7/4/93.

Ask one of the firm to see me.—R.H., 10/4/93. Carter & Co. informed.—F.C.P., 11/4/93.

I find Messrs. Carter & Co. have patented in Australia "Monier's patent concrete arch." This arch has been under my consideration for some time, long before it was patented here, and as soon as funds are available I have arranged for the erection of a small culvert on this principle, without a patent fee. In any case I could not recommend compliance with this request. A small fee per bridge might be granted if it is found desirable to erect any more on this design.—R.H., 12/4/93.

List to so inform.—J.B., 17/4/93. Approved by Minister.—W.J.L. Order No. 1,225.—D.C.M'L., 24/4/93. Inform.—J.B., 24/4/93. A. Armstrong, Esq., 28/4/93. Will Mr. Hickson kindly see me about this at his convenience.—J.B., 8/5/93. Put away for the present.—R.H., 16/6/93.

1895.

LEGISLATIVE ASSEMBLY.

NEW SOUTH WALES.

## MESSRS. CARTER, GUMMOW, & CO.'S CONTRACT AT BALMAIN.

(REPORT OF THE ENGINEER-IN-CHIEF FOR PUBLIC WORKS RESPECTING THE TERMS OF THE SPECIFICATION REFERRING TO SAND.)

*Ordered by the Legislative Assembly to be printed, 30 October, 1895.*

[Laid upon the Table in answer to Question No. 5, of 30th October, 1895.]

### Question.

- (5.) MESSRS. CARTER, GUMMOW, & CO.'S SEWERAGE CONTRACT AT BALMAIN:—MR. WILKS asked THE SECRETARY FOR PUBLIC WORKS,—
- (1.) Is it a fact that the specification for sewerage works of the contract of Messrs. Carter, Gummow, & Co., at Balmain, provides that the best Nepean River filtered sand is to be used in the work?
  - (2.) Is it a fact that in the works mentioned local sand is being used?
  - (3.) If so, what is the cost saved to the contractors by this concession, as the trade price for Nepean sand is 14s. per yard, and the local product is about 2s. per yard?

### Answer.

THE clause in the specification referring to sand is as follows:—

“The sand to be sharp, quartz sand, free from all earthy, loamy, or clayey matter, equal in quality to the sample of Nepean River sand to be seen at the Engineer's office, and to be washed perfectly clean whenever the Engineer deems it necessary.”

The sand used on the Johnson's Creek storm-water sewer is crushed sandstone, which, as will be seen from the following results, is better in quality than the Nepean sand referred to.

Description of Test.	Standard Sand.	Sample Sand.
Coefficient for tensile strain ... ..	100	{ 112 } and { 132 } average, 122.
Coefficient for crushing strain ... ..	100	{ 99 } { 101 } average, 101·33. { 104 }

No concession has been granted; and as long as a contractor supplies material equal to that specified, it is no concern of the Department what he pays for it.

ROBERT HICKSON,  
Engineer-in-Chief for Public Works.

1895.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## WATER SUPPLY AND SEWERAGE BOARD.

(CONTRACTS LET TO MESSRS. CARTER, GUMMOW, AND COMPANY.)

*Ordered by the Legislative Assembly to be printed, 19 September, 1895.*

E. M. Clark, Esq., M.P., to The Under Secretary for Public Works.

Sir,

Legislative Assembly, New South Wales, Sydney, 6 March, 1894.

As the portion of the North Shore Sewerage Works contained in Messrs. Carter & Co.'s contract is now nearly completed, I desire to bring under the notice of the Minister for Works that this work will be perfectly useless until that portion connecting Milson's Point at Jeffrey-street is completed, and to urge upon him the necessity for at once carrying out this part of the work. I may point out that it will serve a very large population, besides assisting to get rid of the offensive matter now finding its way into the harbour through the storm-water sewer at Careening Cove and other places, becoming more offensive every day, and a source of very numerous complaints. I understand that Messrs. Carter & Co., having the plant, would be able to carry out this work on very advantageous terms, to provide work for a large number of men now employed on their present works, who will otherwise be thrown on an overcrowded labour market by the completion of their present contract. As this work is absolutely necessary to the completion of the North Shore Sewerage Scheme, I would urge its being put in hand at once.

Yours, &amp;c.,

EDWARD M. CLARK.

Commissioner for Roads.—D. M'L. (for U.S.), B.C., 7/3/94.  
Report herewith.—O. BAGGE, 15/3/94.

For report.—R.R.P.H., 9/3/94.

M. O. Bagge, Esq., to The Engineer-in-Chief.

*Necessity for doing that portion of the North Shore Sewerage Works which connects Milson's Point at Jeffrey-street.*

THE present contract, No. 79, comprising a length of 1 mile 25·3 chains of the main North Shore Outfall Sewer, from Willoughby Bay to junction of Alfred and Mount Streets, is the first section of the North Shore Sewerage Works.

The second section should be "The Outlet Works," and the third section, which might be proceeded with simultaneously with the outlet works, would be the extension of the Main Outfall Sewer now asked for, from junction of Alfred and Mount Streets southwards to the junction of Campbell and Jeffrey Streets, being (including some minor branches) a total length of about 76·90 chains.

By way of comparison, I have prepared an office estimate of the cost of this extension, according to present prices, amounting, as per detail statement attached, approximately to £12,831 19s. 6d., and an estimate of the same work in accordance with the contract prices of Contract No. 79, of the Main Outfall Sewer in progress, which, as per detail statement attached, amounts approximately to £16,307 17s. 8d.

The detail plans of the outlet works are unavoidably very intricate, and it will take at least another month (if no other works come between) to complete the quantities.

The designs of the Main Outfall Sewer extension, between Mount and Jeffrey Streets, excepting general plan and section, have not yet been commenced.

M. O. BAGGE, 15/3/94.

There is no reason why this extension should not be gone on with at once. I cannot, however, see my way to recommend that it be carried out as an extension of the existing contract, which, at schedule rates, would amount to £16,307 17s. 8d., whereas the office estimate is £12,831 19s. 6d. The greater part of this difference lies in one item, "excavations in shafts," which in present contract, owing to their great depth, carries a very high price, viz., 78s. per cubic yard. This, Messrs. Carter & Co. are prepared to reduce to 40s. per cubic yard, which would reduce the total cost to £13,700, or about £1,000 above the office estimate. I believe, however, if tenders were invited, we could get the work done under the office estimate.—R.R.P.H., 22/3/94. Under Secretary.

Submitted.—J.B., 28/3/94.

Referring to the Minister's intimation this morning, that he was prepared to let Messrs. Carter & Co. carry out this work as an extension of their present contract, provided they agreed to do so for the departmental estimate of £12,831 19s. 6d., no claims whatsoever to be made for extras, and all payments to be made at the allowed schedule rates, I have had an interview with Mr. Carter, who is prepared, on the part of his firm, to comply with the Minister's decision. Submitted for formal approval.—R.R.P.H., 29/3/94.

For approval.—J.B., 30/3/94.      Accept.—J.B., 30/3/94.      Approved.—W.J.L., 30/3/94.

### Report by Board of Reference.

DEPARTMENT OF PUBLIC WORKS.—BOARD OF REFERENCE.

*Tenders for Contract No. 77 Main Northern Sewer.—Annandale and Leichhardt sections.*

THE tenders for this work were submitted to the Board to-day. In doing so, Mr. Hickson pointed out that fifteen tenders had been received, the lowest being that of Carter, Gummow, & Co., at 28½ per cent. below schedule rates, amounting approximately to £15,757 ls. 9d. The same firm also submitted a lump sum tender for carrying out the work according to a plan sent in by them for the sum of £15,500. The plan submitted is for constructing the work on the "Monier" arch principle. This system has been extensively used during recent years on the continent of Europe with successful results, and Mr. Hickson sees no reason why, under certain restrictions, the opportunity should not be taken to introduce the system in the public works of this Colony. The advantages claimed by the patentees are that works can be carried out at a much cheaper rate wherever this method of construction is used. Mr. Hickson said he had no doubt that the design submitted was thoroughly suitable and likely to be effective; and, as the main principles as regards size and inclination of sewer were as provided for in the departmental design, he was prepared to recommend it for adoption; but if it was decided to accept the tender, a short specification of the work should be included in the bond, and provision also made for the maintenance of the work by the contractors for a certain period after completion.

Mr. Hickson further said that, as Mr. Darley would be the responsible officer for carrying out this work, he had gone into the matter very thoroughly with that gentleman, and Mr. Darley was quite prepared to endorse his views.

The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to endorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration.

J. BARLING,

Chairman.

C. W. DARLEY,

Engineer-in-Chief for Harbours and Rivers.

ROBERT HICKSON,

Commissioner for Roads.

H. DEANE,

Engineer-in-Chief for Railway Construction.

W. L. VERNON,

The Government Architect.

J. W. HOLLIMAN, Secretary,  
20th March, 1895.

Submitted.—J.B., 27/3/95.      Before approving this proposal I should like an estimate of the actual value of the work to be carried out by the contractor under the substituted scheme.—J.H.Y.

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the "Monier" system as well as on the Department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the departmental estimate for the work under consideration would be £22,000.—ROBERT HICKSON, 28/3/95. Under Secretary.

Submitted.—J. BARLING, 28/3/95.      This is quite sufficient for me, and I now approve of the recommendation of the Board being carried out.—J.H.Y., 29/3/95.      Accept.—D. M'L. (for U.S.), 29/3/95.

1895.

## LEGISLATIVE ASSEMBLY.

## NEW SOUTH WALES.

## PUBLIC WORKS.

(REPORT FROM THE ENGINEER-IN-CHIEF FOR PUBLIC WORKS, TOGETHER WITH MINUTES,  
RESPECTING THE CONTRACTS LET TO MESSRS. CARTER, GUMMOW, & CO.)

*Ordered by the Legislative Assembly to be printed, 19 December, 1895.*

## The Engineer-in-Chief for Public Works to The Under Secretary for Public Works.

Department of Public Works, Engineer-in-Chief's Office, Sydney, 21 November, 1895.

As there appears a likelihood of the Session closing without an opportunity being given me of denying the statements made by Mr. Varney Parkes, as regards the connection of Messrs. Carter, Gummow, & Co., with the Public Works Department, and the charges made against myself personally, I am reluctantly compelled to bring the matter again before the Minister.

Although it may be thought, as, indeed, it has been said, that I am making too much of this matter, and that no one really takes any serious notice of these statements, I need hardly point out what a serious matter it would be if they were believed, and either the Minister, my officers, contractors, or the general public lost confidence in me; and there is always a fear of this taking place when charges such as Mr. Parkes has made are not contradicted.

I would, therefore, ask the Minister to consider the advisability of having these charges and statements thoroughly investigated by some independent authority, having full powers to call witnesses and examine them on oath.

ROBT. HICKSON,  
Engineer-in-Chief for Public Works.

Submitted.—J.B., 21/11/95.

Mr. Hickson may be informed that the statements to which he refers herein have never had the effect of diminishing the complete confidence I, as Minister, have always had in him in the important office he holds. That I cannot believe they will, in the slightest degree, affect his position with reference to his officers, contractors, or the general public, and that having consulted the Cabinet as to his request for a commission of inquiry, I am able to state that my colleagues agree with what I have above written. If Mr. Hickson desires to place any rebutting statement before the public I shall have much pleasure in laying it on the Table of the Assembly.—J.H.Y., 10/12/95.

Mr. Hickson.—J.B., 11/12/95.

## The Engineer-in-Chief for Public Works to The Under Secretary for Public Works.

Department of Public Works, Engineer-in-Chief's Office, Sydney, 17 December, 1895.

WHILE I cannot disguise the fact that I feel disappointed that the Minister could not see his way to have the charges made against me in connection with my dealings with the contracting firm of Messrs. Carter, Gummow, & Co. investigated by a Royal Commission, I quite understand the difficulties surrounding such a course, and very gratefully acknowledge the handsome way in which that decision is conveyed to me.

As a written reply to the charges is the only course now open to me, and as the Minister has kindly extended to me the privilege of such reply, I gladly avail myself of his permission, and ask that he will give the following statement such publicity as in his discretion he may deem desirable.

It is difficult in a report of this character to traverse all the charges in anything like an exhaustive manner, but I will endeavour to do so as clearly as possible, and in the order in which they appear in *Hansard*, avoiding all personalities, and confining myself to the simple facts of the case.

With the first portion of Mr. Parkes' statement, that "contracting in vast sums of public money must be conducted with the greatest purity possible," I entirely concur. I contend, and I speak with a fairly large experience of tendering, not only in Australia, but in England and Ireland, that the system adopted in the Public Works Department in this Colony compares favourably with any other with which I am acquainted, in fact the Department is so safeguarded with checks in its dealing with tenders that it would be practically impossible, without almost inconceivable collusion, to find a loophole for corrupt practices to creep in. The tenders are opened in public, and not only are the results published

to

to the world in the daily press, but complete lists of the tenders received and their amounts are at once exhibited in the most conspicuous parts of the public offices, and before being dealt with by the responsible officers. Every subsequent action is capable of being fully criticised by an observant public, in fact a greater publicity is given to all our transactions with tenders, so far as my experience goes, than is granted in any other country in the world.

To come now to the more specific charges, I have, for the sake of convenience, made extracts from Mr. Parkes' speech, giving my replies thereto in consecutive order.

During the week, or the week before, I asked the Secretary for Public Works whether Messrs. Gillan and Forrest were not sureties for the proper fulfilment of the contracts of this firm of Carter, Gummow, & Co. The reply I got was that Messrs. Gillan and Forrest were the sureties for those contractors. I wish honorable members to closely follow this matter. What I am about to read is a notice which appeared in the *Sydney Morning Herald* on the 13th of this month—that is, last Friday week—not very long ago. The notice shows that a dissolution of partnership took place, and that the very sureties for Carter, Gummow, & Co.—Messrs. Gillan and Forrest—are members of this business. The following is the notice:—

“Notice is hereby given that the partnership lately subsisting between us, the undersigned, John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, James Gillan, George Maddison, and Peter Ewing, as contractors, carrying on business in Adelaide (South Australia) and Sydney (New South Wales) under the name, style, or firm of Carter, Gummow, & Co., was on the 1st day of April, 1895, dissolved by mutual consent in so far as regards the said George Maddison and Peter Ewing, who retired as from that date from the said firm. All debts due or owing by the said firm will be received and paid by the said John Carter, David Graham Snodgrass, George Forrest, Frank Moorhouse Gummow, and James Gillan, who continue the business under the same style of Carter, Gummow, & Co.

“As witness our hands this 1st day of April, A.D. 1895.

(Signed)	F. M. GUMMOW.	GEORGE FORREST.
	JOHN CARTER.	GEORGE MADDISON.
	D. G. SNODGRASS.	PETER EWING.”
	JAMES GILLAN.	

This is a nice state of affairs! I wish to point it out to honorable members, if they do not quite realise it. If the Government accept sureties consisting of persons who are members of the firm of contractors, supposing the contractors go insolvent, or cheat the Government by defective work, suppose they enter into fraud to defeat the Government in large contracts of £30,000 or £50,000, what check is there upon them? The very specification which the Government issue makes it imperative that these sureties shall be disinterested persons altogether. The object of having sureties is to have men of means at the back of the contractors, so that if anything goes wrong—if the contractors go insolvent, or defraud the Government, if they carry out bad work—the Government can come down upon the sureties. But here is a case where these contracts total nearly £100,000, with sureties of their own partnership. This is a nice state of affairs.

I wish to go further, and to show that there has seldom been a case, taking it in this way, in which any private business would offer to give away contracts to the extent of £20,000 without offering them to competition and to tender. No private individual would ever dream of going into such a business transaction such as that. Yet this firm of contractors, Messrs. Carter, Gummow, & Co., have received between £45,000 and £50,000 of Government contracts without any tender. Not that there were no contractors to tender, because we know that at the present time of dearth of employment there were any number of contractors to tender, in order to keep their plant from being idle. They were willing to tender for the smallest work possible; yet this work is given out without tender to this special firm of contractors.

I asked the Secretary for Public Works last week what connection Mr. Hickson had with the firm and with this work. I was told that Mr. Hickson was the engineer to those contractors; but I am informed, upon the most reliable authority, that of a Mr. Maddison, the contractor, who has left this firm, that Mr. Hickson took the position as a partner in the firm, he being a son of the Engineer-in-Chief. Now, it is an unfortunate position that this firm should have been allowed contracts under such circumstances as these; their engineer having to communicate with his father, who is in a position in the Public Works Department, in which he could grant all sorts of concessions. This firm are the only contractors who during the last twelve months have received these numerous concessions. I have it upon the authority of Mr. Maddison, who has undertaken to produce a copy of the telegram, that a wire was sent in March, 1894, by one of this firm of contractors, Mr. Carter, to another member of the firm, Mr. Gummow, who was then in South Australia, to this effect:—“Mr. Hickson must be taken into the firm at any cost.” It was about this time that Mr. Hickson left the Department, as his father said, on the score of retrenchment, and took up his position as an alleged partner in this firm, or, as I have been informed by the Minister, their chief engineer.

With reference to Carter & Co.'s contracts with the Public Works Department, a cash deposit has in every case been taken, and in the case of Contract No. 77, at Balmain, an additional personal security has been given for the stability of that portion of the work constructed on the Monier system, valued by the Department at £12,000. The sureties in this case are Messrs. Forrest and Gillan, who are bound in the amount of £6,000 each, whilst the contractors, Messrs. Carter, Gummow, and Snodgrass are bound in the sum of £12,000 (£24,000 in all). This special precaution, which is unique in its way, was taken as the Monier system, though successful elsewhere, had not been previously tested in the colonies, and is far beyond the requirements of the specification, these being already covered by a cash fixed deposit of £775, which is held by the Department.

In this particular contract the Department recognises only Messrs. Carter, Gummow, and Snodgrass as contractors, and so long as the sureties have separate estates to the value of the security required, and on this point every care has been taken (see the printed papers laid on the Table of the House), I contend the Department has been properly safeguarded, especially when, as in this case, the personal security is over and above that usually demanded.

The firm has received one contract only without public tender, viz., Contract 79a, at North Sydney, amounting to £12,832; and even this was an extension of work already in hand.

This contract was given them by the late Minister for Public Works, on the representation of Mr. E. M. Clark, M.P., who pointed out the urgent necessity for pushing on that portion of the work, not only from a sanitary point of view, but so as to prevent some 120 men then employed by Messrs. Carter & Co. on the first section of the North Shore Sewerage Works from being thrown on the already congested labour market. Even so, the extension was granted only on the contractors agreeing to a reduction of £3,476 from schedule rates.

My son is not now, nor never was, a partner in the firm, and as he happened to be in Adelaide, and, as far as I know, knew nothing about the firm's transactions in Sydney, he did not communicate with me, either directly or indirectly, in connection with the firm's business.

I know nothing about the telegram alleged to have been sent in connection with the appointment of my son, having heard of it for the first time in Mr. Parkes' statement, and cannot understand how it could have been sent, seeing that my son left the Department in April, 1893, and that the telegram of March, 1894, is said to have been sent when he had already been in the employ of the firm for nearly twelve months.

Having established this connection between the Engineer-in-Chief's son and the firm, I intend presently to show what concessions were given to these contractors. In the first place, they competed for some sewerage works which were going on at Balmain. Honorable members are well aware that these contracts are tendered for nowadays at schedule prices, that is to say, quantities are taken out and the Government officers place schedule prices upon each of the items. Fifteen firms of contractors tendered for the works at Balmain at schedule prices, and the lowest tenderer was the firm of Messrs. Carter, Gummow, & Co. These contractors sent in a price ridiculously low as compared with the fourteen other firms tendering. Their tender was 28½ per cent. under the schedule prices. The next was 18½ per cent.

After their tender was accepted, and after they were notified of the acceptance, they were enabled to place plans in the department for the carrying out of the work upon an entirely new plan, called the Monier system. The other contractors had no opportunity of competing with the firm for the carrying out of the work upon this system. I am assured by other contractors that whereas Messrs. Carter, Gummow, & Co. obtained a contract at £15,500, they would have been willing to carry out the job at £12,500 to £13,200.

Under the schedule prices of which I have spoken there is one item put down for brickwork and cement arches, 2,020 yards at £2 10s. a yard. That was substituted under the Monier system by sandstone and concrete, put down at £1 8s. per cubic yard. There was that difference in the prices for the 2,020 yards. On that item alone a concession of £1,650 was made to these contractors. Honorable members will see that when such concessions are allowed, other contractors must be quite within the mark in saying that if they had had the opportunity they could have carried out the job at a figure from £2,300 to £3,000 below that paid to this particular firm.

The same firm within the last eighteen months received a contract for sewerage works at North Shore. They received their contract under a schedule tender, and their sureties as usual were those of their own firm. No query is made as to whether they are in a good financial state or as to whether they can provide good disinterested sureties.

After they had received the first contract the member for the district, no doubt with the best intentions and with the object of finding work for the unemployed, recommended that a certain extension should be carried out. The Engineer-in-Chief reported that as a matter of urgency certain extensions to the contract should be carried out along various streets. How is it possible that the work could have been urgent seeing that the outlet into the ocean for the whole of the sewerage scheme has not even been taken in hand? Until the outlet had been completed, how could the urgency of constructing branch lines of sewerage arise? Without any contract tendering, without any preparation of plans, without an effort to save the country unnecessary expenditure, a contract of £35,000 was given to this firm without competition for this extension work. It is no wonder that the contractors of this city complain of this contract being given.

In connection with this contract, I wish to point out that the Engineer-in-Chief, upon the 22nd March, 1894, wrote this minute:

"There is no reason why this extension should not be gone on with at once. I cannot, however, see my way to recommend that it be carried out as an extension of the existing contract, which, at schedule rates, would amount to £16,307 17s. 8d., whereas the office estimate is £12,831 19s. 6d. The greater part of this difference lies in one item, 'excavations in shafts,' which in present contract, owing to their great depth, carries a very high price, namely, 78s. per cubic yard. This Messrs. Carter & Co. are prepared to reduce to 40s. per cubic yard, which would reduce the total cost to £13,700, or about £1,000 above the office estimate. I believe, however, if tenders were invited we could get the work done under the office estimate.—R.R.P.H., 22/3/94."

It was about this time that Mr. Hickson, junior, became a member of the firm. I find this minute by the Engineer-in-Chief on the 29th of the same month.—

"Referring to the Minister's intimation this morning, that he was prepared to let Messrs. Carter & Co. carry out this work as an extension of their present contract, provided they agreed to do so for the departmental estimate of £12,831 19s. 6d., no claims whatsoever to be made for extras, and all payments to be made at the allowed schedule rates.—

That means that they might be allowed as extras—

"I have had an interview with Mr. Carter, who is prepared, on the part of his firm, to comply with the Minister's decision. Submitted for formal approval.—R.R.P.H., 29/3/94."

With the exception of the arrangement made, as stated above, on contract 79a, at North Sydney, no concessions have been made to Messrs. Carter, Gummow, & Co. Contract No. 77 (Balmain), which was let by public tender, and for which they were lowest tenderers, cannot be regarded as such, as they are allowed to construct the works in accordance with an alternative tender submitted with, and at the same time as, the others, at a slight gain in price to the Department, and under conditions of the most stringent nature in case of failure.

The tenders were fairly close. (See papers laid on Table of the House.) Mr. Parkes is, therefore, mistaken in stating that the second tender was only 18½ per cent. below schedule; it was 25½ per cent., as against Carter & Co.'s 28½ per cent., besides which, 28½ per cent. is not ridiculously low: it is not an uncommon thing to have tenders 30 per cent. below schedule.

The tender, with plans for carrying out the work under the Monier system, was deposited with the Tender Board at the same time as all other tenders, and was simply an alternative one. After very careful examination by Mr. Darley and myself, the system was thought worthy of trial, under the severe conditions imposed, and the alternative proposal was recommended by the Board of Reference for acceptance.

The materials used in the Monier arches and sewer, substituted for brick and concrete, was not sandstone and concrete; it was 3 to 1 compo., and was estimated by the Department at from 80s. to 90s. per cubic yard, not at 28s. as stated.

Cash security for £4,000 was taken in this case, as required by the specification. There were no sureties.

Contract 79a, an extension of the preceding work to Jeffrey's-street, was, as before stated, given to Messrs. Carter & Co. on the representations of the member for the district; but I strongly urged that tenders should be invited for the work, as I considered that it might be done more cheaply.

The cost of the extension which was taken at the departmental estimate was £12,832, not £35,000 as stated.

As already pointed out, my son was never a partner, nor did he take office under Messrs. Carter & Co. between the 22nd and 29th March, 1894, when the change of front is said to have taken place, but had already been in the employ of the firm in Adelaide since May, 1893.

In my second minute, quoted by Mr. Parkes, it will be seen that I distinctly stated that I forwarded the paper, on an intimation from the Minister that he (the Minister) was prepared to let the work to Messrs. Carter & Co., and I carefully abstained from making any recommendation, merely forwarding the paper for formal approval.

This was on the 30th March, 1894. How sudden a change! It is not the Minister who has to do with this. The Minister is generally led by the head of the department, it does not matter whether it is the present or the last Minister. The heads of these departments ought to be above reproach. There ought to be the greatest possible check put upon them. When we see a rapid change like this in a minute in a few days, after a son of the gentlemen concerned has taken office under the contractors, then there is some suspicion. It is impossible to make definite charges, but the case looks so grave that it ought to be filtered out in this House.

Mr. YOUNG: Does the honorable gentleman assert that the engagement of young Mr. Hickson took place in the meantime—during those two or three days?

Mr. V. PARKES: I believe it was during that time.

Mr. YOUNG: Does the honorable member assert that?

Mr. V. PARKES: I believe it was.

These gentlemen have a contract at Johnstone's Bay for what they call stormwater channelling. This stormwater channelling is taken through a lot of mud flats. For four or five weeks the Government employed about forty or fifty of the unemployed to drain the water off this land for the contractors. The Government actually employed the unemployed for this purpose. I can bring plenty of evidence on oath that forty or fifty men were employed for four or five weeks draining the water off the land where these gentlemen had to carry out their contract. The effect of that was to put £280 or £300 into the pockets of the contractors.

I could cite other concessions given to these gentlemen, information as to which has been given to me not by one contractor, but by twelve or fourteen. Innumerable concessions have been given to them, and it would only be wearying the House to particularise them.

Mr. YOUNG: Let us have them all while the honorable member is about it!

Mr. V. PARKES: If an inquiry is made the House will find that there has been an undue amount of favouritism towards not only these contractors but many others.

To show the artifice with which questions are answered by the Engineer-in-Chief, on the 19th instant I asked these simple questions of the Minister:

"(7.) What connection has a Mr. Hickson with this firm or with the works? (8.) Is this Mr. Hickson a son of the present Engineer-in-Chief?"

This was the reply:

"(7.) He is engineer to the contractors. (8.) He is the son of the Engineer-in-Chief for Public Works; but the Balmain contract referred to is being carried out under the supervision of the President of the Water and Sewerage Board and Engineer-in-Chief for Sewerage Construction, Mr. Darley."

Now, Mr. Darley has only been appointed to his present position about two months, and during all the time that this contract was being carried out it was under the Engineer-in-Chief.

Mr. YOUNG: No!

Mr. V. PARKES: The Engineer-in-Chief was the chief designer of it, and the contract was not carried out under Mr. Darley. I made sure of that fact.

The Minister, in his reply, went on to say:

"In the case of the other contract referred to, namely, the sewerage works at North Sydney, which was carried out under the supervision of the Engineer-in-Chief for Public Works, I am informed that Mr. Hickson, junior, had no connection with that work, being at that time in South Australia."

But Mr. Hickson has been going backwards and forwards between

The sand-pump dredging at Rozelle Bay, carried out by the Department, flooded the land through which Messrs. Carter & Co. had to construct the Johnstone's Creek stormwater channel. As this would have given them a claim for compensation, a drain had to be cut to take the water off their works, and place the land in the same condition as when tenders were received, Messrs. Carter & Co. providing flood-gates at their own cost to keep the tidal waters out. The cost of the drain was about £70; it is, therefore, difficult to see how £280 to £300 can have been put into the contractors' pockets. I am quite satisfied that, by my prompt action in this case, I saved the Department a large sum which the contractors could have claimed for the flooding of their works.

In any case this drain would have had to be made later on, to form an outfall for Johnstone's Creek during the progress of the continuation of the present work.

It is difficult to say what is meant by "innumerable concessions" to these and other contractors, and the only cases I can think of are those of Messrs. Gilliver and Curtis, at Rookwood, and Messrs. Johnston, O'Rourke, and Gordon, at Rusheutter's Bay. The first of these had a contract for partly draining the Rookwood Necropolis, and this was extended so as to embrace the whole cemetery, at an additional cost of £5,747, at their schedule prices. The second case can scarcely be looked on as a concession, as the contract provided for the construction of a part or the whole sewer, at the discretion of the Minister. This contingency was provided for in the specification, in case the adjacent landowners were unwilling to allow the sewer to be carried through their land without compensation. When the consent of all interested had been obtained, I directed the contractors—with the approval of the Minister—to carry out the whole work. The value of the extension was £2,071.

This contract was never under my supervision. It has, ever since the work commenced, been under Mr. Darley or Mr. J. M. Smail, who was acting Engineer-in-Chief for Metropolitan Sewerage construction, during Mr. Darley's absence in New Zealand.

My son had no connection with any contract of Messrs. Carter & Co.'s in New South Wales, until last August, when he returned from South Australia. He was in the latter Colony from May, 1893, and did not go backwards and forwards between here

here and South Australia. That makes no difference as to his connection with the firm. He is looking after their work in South Australia, and looking after their work here; and such an answer as that is, on the face of it, simply a blind, and it shows that there is some reason why there should be a full inquiry into the circumstances attending this contract.

Mr. LYNE: Before the honorable gentleman sits down perhaps I might be allowed to ask him a question. He said that the firm in question had contracts to the amount of £35,000, and he only referred to one of £13,000. What other contracts made up the total of £35,000?

Mr. V. PARKES: As far as I am informed there was a contract of £13,000, another of £10,800, and another of £11,000, all let without tender.

and South Australia in the interest of the firm. During the whole of this time (two years and three months) he got one holiday to visit Sydney on purely private business.

He has never communicated—directly or indirectly—with me or the office in connection with Messrs. Carter, Gummow, & Co.'s works, the whole of the transactions with the office having been carried out either through Mr. Carter or Mr. Gummow.

The only contract let to Carter & Co. without tender is, as before stated, the extension of the North Shore Sewerage Works to Jeffrey's-street (Contract 79a) for £12,832.

I am quite satisfied to leave this matter now in the Minister's hands, and through him to accept the verdict of the public, knowing that I have never had, during the whole course of my professional life, any dealings with contractors which I would be afraid to expose to the most searching inquiry.

Any impartial person reading these replies, which I have made as brief as possible, can, I feel certain, only come to the conclusion that Mr. Parkes has been wilfully misled by some evil-minded person whose motives were as impure as their statements were false.

ROBT. HICKSON,  
Engineer-in-Chief for Public Works.

### Minute by The Under Secretary for Public Works.

Department of Public Works, Sydney, 19 December, 1895.

Carter, Gummow, & Co.'s Contracts.

It is, I think, proper for me, in submitting this to the Minister, not only as Under Secretary but as Chairman of the Board of Reference, to express the entire confidence which the Board have in Mr. Hickson as one of its members. Every matter relating to the contracts which are referred to the Board is most critically examined, and I have great pleasure in saying that Mr. Hickson, as well as every other member of the Board, shows the utmost desire to have every phase of the various questions which arise in connection with tenders thoroughly enquired into, and to this end they willingly give all facilities to the Board.

I fully agree with Mr. Hickson in saying that it is difficult to conceive of any practical method of applying further checks in connection with our tender system. I do not think there is any country in the world where such publicity is given to proceedings in regard to this very important matter.

J. BARLING.

May be laid on Table of the Assembly.—J.H.Y., 19/12/95.

1895.

LEGISLATIVE ASSEMBLY.  
NEW SOUTH WALES.

CONTRACTS OF MESSRS. CARTER, GUMMOW, & CO.  
(RETURN RESPECTING.)

*Ordered by the Legislative Assembly to be printed, 22 October, 1895.*

RETURN to an *Order* made by the Honorable the Legislative Assembly of New South Wales, dated 10th October, 1895, That there be laid upon the Table of this House,—

“Copies of all papers and correspondence in connection with the contracts of Messrs. Carter, Gummow, & Co., at Marrickville, Balmain, North Sydney, Johnston’s Creek, and Stanmore, including the specification, schedule, &c., for original contracts, and for substituted ones, and all vouchers paid and details of same, and such other matter included in the transactions from commencement to the present date.”

(Mr. Parkes.)

SCHEDULE OF PAPERS REFERRING TO CONTRACT No. 69, SYDNEY SEWERAGE.

NO.	PAGE.
1. Engineer-in-Chief for Sewerage to Under Secretary for Public Works, recommending that tenders be invited. 30 October, 1893 .....	6
2. Engineer-in-Chief for Sewerage to Under Secretary for Public Works, recommending that time for opening tenders be extended to 13th December, 1893. Approved by Minister. 14 November, 1893 .....	6
3. Schedule of Tenders received by Tender Board. 13 December, 1893 .....	7
4. Engineer-in-Chief for Sewerage to Under Secretary for Public Works, reporting on tenders received. Recommendation of Board of Reference that Carter, Gummow, & Co.’s tender, at schedule rates, be accepted. 16 December, 1893. Approval of Minister; payment to be made in Funded Stock. 21 December, 1893 .....	66
5. Under Secretary for Public Works to Carter, Gummow, & Co., notifying the acceptance of their tender. 27 December, 1893 .....	70
6. Bond of annexures signed by contractors and bondsmen. 22 January, 1894 .....	70
7. Supervising-Engineer Davis to Engineer-in-Chief for Sewerage <i>re</i> cross-sections of sewer to be adopted. 18 January, 1894 .....	121
8. Supervising-Engineer Davis to Carter, Gummow, & Co., forwarding tracing showing different cross-sections of sewer lining to be adopted in connection with the contract 20 January, 1894 .....	123
9. Supervising-Engineer Davis to Carter, Gummow, & Co., respecting the sizes of shaft excavations. 18 January, 1894 .....	123
10. Supervising-Engineer Davis to Carter, Gummow, & Co., respecting the disposal of surplus material. 19 January, 1894 .....	124
11. Supervising-Engineer Davis to Carter, Gummow, & Co., in regard to the excavation of certain shafts. 21 January, 1894 .....	124
12. Supervising-Engineer Davis to Carter, Gummow, & Co., in regard to the excavation of certain shafts. 3 February, 1894 .....	124
13. Supervising-Engineer Davis to Carter, Gummow, & Co., in regard to the excavation of certain shafts. 19 February, 1894 .....	124
14. Supervising-Engineer Davis to Carter, Gummow, & Co., forwarding drawing showing modification in the details of certain shafts. 12 March, 1894 .....	124
15. Supervising-Engineer Davis to Inspector Milner, respecting application of contractors for substitution of tunnelling for open cutting at certain places. 2 May, 1894 .....	124
16. Supervising-Engineer Davis to Carter, Gummow, & Co., in regard to their proposal to substitute tunnelling for open cutting in the Illawarra Road. 23 June, 1894 .....	125

[12.] 258—A

[645 copies—Approximate Cost of Printing (labour and material), £536 19s. 0d.]

NO.	PAGE.
17. Supervising-Engineer Davis to Engineer-in-Chief for Sewerage, asking for instructions as to the pitching round man-hole covers, and rates of payment for same. 9 May, 1894 .....	125
18. Inspector Millner to Supervising-Engineer Davis, re extra lining required in connection with certain tunnels. 21 August, 1894. Decision of Engineer-in-Chief for Sewerage. 1 September, 1894.....	125
19. Supervising-Engineer Davis to Carter, Gummow, & Co., in regard to tunnel between 2 miles 40½ chains and 2 miles 45 chains. 28 June, 1894 .....	125
20. Carter, Gummow, & Co. to Under Secretary for Public Works, stating that they are willing to accept payments on account of contract in cash or funded stock at option of Department. 6 July, 1894. Minute by Minister, 10 July, 1894 .....	126
21. Council Clerk, Marrickville, to Commissioner for Roads, objecting to the removal of a culvert in Illawarra Road, and proposed substitution thereof of one to act as a syphon. 24 August, 1894.....	126
22. Supervising-Engineer Davis to Engineer-in-Chief for Sewerage. Report respecting letter to Council Clerk, Marrickville. 6 September, 1894 .....	126
23. Supervising-Engineer Davis to Carter, Gummow, & Co., instructing them to construct culvert and other works to obviate the construction of syphon. 12 September, 1894 .....	127
24. Carter, Gummow, & Co., to Engineer-in-Chief for Sewerage, applying for the payment of £1,000 out of the amount of retention money. 20 September, 1894. Recommendation of Engineer-in-Chief that request be acceded to. Approved by Minister, 21 September, 1894.....	127
25. Supervising-Engineer Davis to Engineer-in-Chief for Sewerage, recommending that one sewer instead of two, as originally proposed, be constructed from Premier-street to a point in the Terrace Road, where the Canterbury sewer branches off to that suburb. 21 September, 1894 .....	127
26. Supervising-Engineer Davis to Carter, Gummow, & Co., notifying decision arrived at in regard to substitution of one sewer for two between Premier-street and Illawarra Road. 11 October, 1894 .....	131
27. Carter, Gummow, & Co. to Engineer-in-Chief for Harbours and Rivers, accepting terms in regard to alteration in design referred to in letter of 11th October, 1894, provided they receive payment for filling in at a special rate of 5s. per cubic yard; 11 November, 1894. Engineer-in-Chief recommending that special rate be paid; 21 November, 1894. Approved by Minister; 29 November, 1894.....	131
28. Supervising-Engineer Davis to Carter, Gummow, & Co., notifying the approval of the Minister for payment of special rate referred to in preceding paper. 3 December, 1894.....	133
29. Supervising-Engineer Davis to Carter, Gummow, & Co., forwarding drawing showing the alteration in the chamber of the Premier-street shaft rendered necessary by the substitution of one sewer for two. 8 December, 1894 .....	133
30. Supervising-Engineer Davis to Engineer-in-Chief for Sewerage, recommending that the incomplete shaft at Premier-street be finished. 23 March, 1895 .....	133
31. Supervising-Engineer Davis to Carter, Gummow, & Co., authorising them to complete shaft at Premier-street. 25 March, 1895 .....	133
32. Voucher for £1,520, 16th progress payment, last made to date. 4 July, 1895 .....	133

#### SCHEDULE OF PAPERS REFERRING TO CONTRACT No. 72, SYDNEY SEWERAGE.

1. Schedule of tenders received by the Tender Board. 18 February, 1891.....	135
2. The Under Secretary for Public Works to Messrs. Carter & Co. notifying acceptance of their tender. 28 February, 1891 .....	135
3. Agreement, dated 16 March, 1891, signed by Carter & Co. for the due performance of the contract, and Memorandum of Agreement respecting extension of time. 19 April, 1892 .....	135
4. Final certificate in connection with contract. 23 September, 1892.....	162

#### SCHEDULE OF PAPERS REFERRING TO CONTRACT No. 77, SYDNEY SEWERAGE.

1. Engineer-in-Chief for Sewerage to the Under Secretary for Public Works. Minute recommending that tenders be invited. 18 February, 1895 .....	163
2. Schedule of tenders received by Tender Board. 13 March, 1895 .....	163
3. Principal Assistant Engineer to Engineer-in-Chief for Sewerage, reporting on tenders received. 14 March, 1895 .....	206
4. Minute of Board of Reference, recommending that under certain conditions the alternative tender of Carter, Gummow, & Co., for work on the Monier system, be accepted, 20 March, 1895. Minutes of Minister and Engineer-in-Chief thereon. Approval to accept. 29 March, 1895 .....	206
5. Under Secretary for Public Works to Carter, Gummow, & Co., notifying acceptance of their tender. 11 April, 1895 .....	207
6. Draft of supplementary specification prepared for execution by Carter, Gummow, & Co. ....	207
7. Estimate of the value of work to be performed, prepared for the purpose of ascertaining the amount of cash security to be lodged .....	208
8. Clerk in charge of Bonds and Contracts to Engineer-in-Chief for Public Works. Plans required in connection with the preparation of the contract agreement. 18 April, 1895 .....	208
9. Carter, Gummow, & Co. to the Minister for Public Works, respecting security required in accordance with Supplementary specification. 4 April, 1895.....	208
10. Engineer-in-Chief for Public Works and Engineer-in-Chief for Metropolitan Sewerage Construction report on above letter, and recommending that the stipulation as to sureties be adhered to, 5 April, 1895. Minister's approval of acceptance of Messrs. George Forrest and James Gillan as sureties. 10 April, 1895 .....	209
11. Contract agreement and annexures signed by Carter, Gummow, & Co. and sureties. 16 May, 1895 .....	209
12. Copy of fixed deposit receipt No. 22,187 for £775, issued by the Bank of New Zealand, and lodged as cash security. 29 April, 1895 .....	249
13. Clerk in charge of Bonds and Contracts to Under Secretary for Public Works, setting out the action taken in regard to the preparation of the contract agreement. 26 September, 1895 .....	249
14. Voucher for £723 9s. 2d., being second progress payment, the last made. 8 October, 1895.....	250

#### SCHEDULE OF PAPERS, REFERRING TO CONTRACT No. 79, SYDNEY SEWERAGE.

1. Engineer-in-Chief for Sewerage to Under Secretary for Public Works, recommending that tenders be invited. 14 May, 1891 .....	251
2. Schedule of Tenders received by Tender Board, 10 June, 1891. Recommendation of Engineer-in-Chief for Sewerage that the lowest offer, viz., that of Bond and Hudson be accepted at schedule rates. 10 June, 1891.	251
3. Messrs. Carter & Co. and Messrs. Gummow and Gillon to President of Tender Board, protesting against the acceptance of Bond and Hudson's tender, as that firm had failed to take up a previous contract. 10 June, 1895. Remarks of Engineer-in-Chief for Sewerage thereon. 20 June, 1891 .....	270
4. E. M. Clark, M.P., to the Minister for Public Works, urging that the work comprised in the contract be proceeded with. 30 July, 1891 .....	270
5. E. M. Clark, M.P., to the Minister for Public Works, again urging that the work be proceeded with. 18 August, 1891. Minister's minute thereon. 21 August, 1891.....	270
6. Bond and Hudson to Minister for Public Works, withdrawing their tender on the ground of delay in acceptance and applying for return of their deposit. 28 September, 1891. Approval of Minister to invite fresh tenders, 22 February, 1892, and subsequent approval to accept Carter & Co.'s tender. 23 February, 1892 .....	270
7. <i>Précis</i> of case up to return of Bond and Hudson's deposit. 29 January, 1892 .....	271
8. Chief Clerk to Tender Board Clerk, instructions to withdraw from <i>Government Gazette</i> notice inviting fresh tenders. 23 February, 1892 .....	271
9. Under Secretary for Public Works to Carter & Co., notifying the acceptance of their tender. 10 March, 1892 .....	271

NO.	PAGE.
10. Clerk in charge of Bonds and Contract to Engineer-in-Chief for Sewerage, forwarding agreement and release for execution by Carter & Co. and George Forrest. 3 March, 1892	272

7. Contract agreement, with annexures, executed by Carter, Gummow, & Co. 15 June, 1895 .....	397
8. Copy of voucher for £1,308 15s. 3d., being amount of first progress payment. 2 September, 1895 .....	433

## Contract No. 69, Sydney Sewerage.

### No. 1.

The Engineer-in-Chief for Sewerage to The Under Secretary for Public Works.  
Eastern Main Branch Sewer, Western Suburbs Sewerage Works.—Contract No. 69, Sydney Sewerage Works.

Public Works Department, Sewerage Branch, 30 October, 1893.

HEREWITH is submitted for the approval of the Commissioner and Engineer-in-Chief, plans and specifications, in triplicate, for the above work.

Amount available, provided for in Vote, £830,000, for Western Suburbs Drainage, Loans Act, 53 Vic. No. 23. Estimated cost, £78,162 18s. 2d.

Plans and specifications to be exhibited at the Sewerage Office, Lincoln Inn Chambers, Elizabeth-street.

Tenders to close at 11 a.m., Wednesday, 15th November, 1893.

M. OHLFSEN BAGGÉ,  
Chief Assistant Engineer for Sewerage.

HEREWITH is forwarded for the approval of the Secretary for Public Works, and for insertion in the *Government Gazette* and local papers, an advertisement inviting tenders for the above.

The Under Secretary, B.C. ROBT. HICKSON,  
Commissioner and Engineer-in-Chief for Sewerage.

Engineer-in-Chief.—F.C.P., 30/10/93. Insert.—J.B., 30/10/93. Notice to *Gazette*, 30/10/93.  
Tenders for, 15/11/93.

### No. 2.

The Engineer-in-Chief for Sewerage to The Under Secretary for Public Works.

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 7 November, 1893.

#### *Minute Paper.*

*Subject*: Main Eastern Branch Sewer.

I FIND it will be quite impossible to be ready for inviting tenders for this work on the 15th instant. Specifications and plans on which tenders were to be invited are over two years old, and since that time considerable modifications and alterations in our sewerage plans have been suggested. The work is of too important a nature to rush through without full consideration. I therefore recommend that the time for the receipt of tenders be postponed till 13th December.

ROBT. HICKSON.

Extend time.—J.B., 7/11/93. Mr. Mitchell. Noted, *Gazette* and papers.—7/11/93. Approved.—W.J.L., 14/11/93. Roads.—D.C.M'L. (*pro* U.S.), B.C. 15/11/93.

#### PUBLIC WORKS DEPARTMENT.—SEWERAGE BRANCH.

Construction of Eastern Main Branch Sewer, Western Suburbs Sewerage.—Contract No. 69, Sydney Sewerage Works.

HEREWITH is submitted for the approval of the Commissioner and Engineer-in-Chief, plans and specifications, in triplicate, for the above work.

Amount available, provided for in vote, £830,000, for Western Suburbs Drainage, Loans Act, 53 Vic. No. 23. Estimated cost—£64,420 6s. 5d.

Plans and specifications to be exhibited at the Sewerage Office, Public Works Department.

Tenders to close at 11 a.m., Wednesday, 13th December, 1893.

The Commissioner and Engineer-in-Chief. M. OHLFSEN BAGGÉ,  
Chief Assistant Engineer for Sewerage.

HEREWITH is forwarded for the approval of the Secretary for Public Works, and for insertion in the *Government Gazette* and local papers, an advertisement inviting tenders for the above.

The Under Secretary, B.C. ROBT. HICKSON,  
Commissioner and Engineer-in-Chief for Sewerage.

Department of Public Works, Roads and Bridges Branch, Sydney, November, 1893.

TENDERS will be received up to 11 o'clock a.m. on Wednesday, 13th December, 1893, for the construction of Eastern Main Branch Sewer, Western Suburbs Sewerage Works, Contract No. 69, Sydney Sewerage.

Tenders to be addressed to the Sewerage Office, Sydney, where specifications, &c., may be seen.

## No. 3.

ROBT. HICKSON,  
Vice President of Tender Board.

D. C. M'Lachlan, 13/12/93. Tenders herewith checked.—O.C., Accountant. Mr. Davis,  
Principal Assistant Engineer for Sewerage, B.C.

No. 1. CARTER, GUMMOW, & Co.'s TENDER.  
(Bound up with Bond.)

No. 2.—JOHN AHEARN'S TENDER.

(Add error in addition, 9d. Items 54 to 70 inclusive, for which a general rate is asked, would, at contractor's prices for each item, average about £15 18s. 0½d. per ton. Items 78 to 82 inclusive, for which a general rate is asked, would, at contractor's prices, average about £9 0s. 1'07d. per ton.)

Department of Public Works, Roads and Bridges and Sewerage Branch.

TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by me for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and I do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and I enclose herewith my cheque for the sum of £471 as a preliminary Deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, I fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which I agree to be bound.

JOHN AHEARN,  
Burwood.

Dated this 13th day of December, 1893.

TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.
1	Excavation in road surfaces, sand, soil, pipeclay, shale, soft rock, where in the opinion of the Engineer blasting is unnecessary .....	cubic yard	19,320	2/-	1,932 0 0
2	Excavation in hard shale or rock, where gadding and guttering only is permitted .....	"	1,165	15/-	873 15 0
3	Excavation in hard shale or rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	1,165	10/-	582 10 0
4	Excavation in hard shale or rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	1,165	11/-	640 15 0
	Excavation in tunnels in "more or less hard materials," for sewers, pipe sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
5	Less hard excavation in clay, loose, and jointy shale, &c., where in the opinion of the Engineer blasting is unnecessary .....	"	810	10/-	405 0 0

	<b>TOTAL .....</b>		£		47,061 3 0

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

SUMMARY

## SUMMARY of Weights of Wrought and Cast Ironwork, including all Gun-metal.

(The number of Items underneath correspond with those of the Schedule of the Quantities and Prices.)

No. of Item.	Description of Item.	Number required.	Weight of each Item.				Total weight.						
			Ts.	ct.	qr.	lb.	Ts.	ct.	qr.	lb.			
<b>PENSTOCKS.</b>													
46	Cast-iron frame and penstock, with 6-ft. diameter opening, with all lifting gear, screw-bolts, anchor-bolts, and gun-metal, complete.....	3	6	5	1	22	18	16	1	10

## No. 3.—KERLE &amp; KERLE'S TENDER.

(Items 78 to 82 inclusive, for which a general rate was asked, would, at contractor's prices for each item, average about £9 16s per ton.)

Department of Public Works, Roads and Bridges and Sewerage Branch.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £500 as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

WALTER KERLE,  
HARRY WOOD KERLE,  
11, Bond-street.

Witness,—G. PILE,  
11, Bond-street.

## TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT NO. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.
1	Excavation in road surfaces, sand, soil, pipeclay, shale, soft rock, where in the opinion of the Engineer blasting is unnecessary .....	cubic yard	19,320	2/-	1,932 0 0
2	Excavation in hard shale or rock, where gadding and guttering only is permitted .....	"	1,165	10/-	582 10 0
3	Excavation in hard shale or rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter and such depths of bore-holes as shall be directed only are permitted .....	"	1,165	8/-	466 0 0
4	Excavation in hard shale or rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	1,165	8/-	466 0 0
5	Excavation in tunnels in "more or less hard materials," for sewers, pipe sewers, sub-ducts, &c. as specified in clause 3, as viz. :—				
5	Less hard excavation in clay, loose, and jointy shale, &c., where in the opinion of the Engineer blasting is unnecessary .....	"	810	7/-	283 10 0
6	Excavation in hard sandstone or shale, where gadding and guttering only is permitted .....	"	1,140	23/-	1,425 0 0
7	Excavation in hard sandstone, shale, ironstone, &c., where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted ..	"	1,140	23/-	1,311 0 0
8	Excavations in hard sandstone, shale, ironstone, &c., where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted ..	"	1,140	23/-	1,311 0 0
9	Excavation in tunnels in "solid rock" for sewers, pipe-sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
9	Excavation in hard rock, where gadding and guttering only is permitted .....	"	1,850	40/-	3,700 0 0
10	Excavation in hard rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	1,850	35/-	3,237 10 0
11	Excavation in hard rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	1,850	35/-	3,237 10 0
12	Excavation in "solid rock," in shafts, shaft chambers, and sumps, as specified in clause 3, as viz. :—				
12	Excavation in road surfaces, soil clay, pipeclay, shale, and soft rock only, where in the opinion of the Engineer blasting is unnecessary ..	"	130	4/-	26 0 0
13	Excavation in hard rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	445	20/-	415 0 0
14	Excavation in hard rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	445	20/-	415 0 0
15	Excavation in hard rock, where gadding and guttering only is permitted .....	"	445	23/-	511 15 0
16	Excavation in "more or less hard ground," in shafts, shaft chambers, and sumps, as specified in clause 3, as viz. :—				
16	Less hard excavation in road surfaces, soil, clay, pipeclay, loose and jointy shale, and soft rock, where in the opinion of the Engineer blasting is unnecessary .....	"	170	4/-	34 0 0
17	Excavation in hard sandstone or shale, where guttering and gadding only is permitted .....	"	115	3/-	17 5 0
18	Excavation in hard sandstone or shale, ironstone, &c., where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted .....	"	115	15/-	86 5 0
19	Excavation in hard sandstone or shale, ironstone, &c., where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	115	15/-	86 5 0

No. of Item.	Description or Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
20	Filling in at sides, round and over all concrete and brickwork of sewers, shafts, chambers, pipes, embankments, and tunnels, as specified in clause 5.....	cubic yard	15,220	2/-	£ 1,522 0 0

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

## SUMMARY of Weights of Wrought and Cast Ironwork, including all Gun-metal.

(The number of Items underneath correspond with those of the Schedule of the Quantities and Prices.)

Total amount to be deducted ..... £18 3 11

A general rate is asked for items 54 to 70 and 78 to 82, and the average rate, at the prices given by the contractor, would be in the first instance about £17 15s. 8½d. a ton, and in the latter about £10 0s. 11½d.

## Department of Public Works, Roads and Bridges and Sewerage Branch.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sowerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £600 as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

H. MCKENZIE & SONS,  
South Preston, Melbourne.

Witness,—JOHN MCGREGOR.

## TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.

101	One additional horse, supplied by Contractor .....	"	"	6/-	
	TOTAL .....		£	...	53,523 6 6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

**SUMMARY.**

## SUMMARY of Weights of Wrought and Cast Ironwork, including all Gun-metal.

(The number of Items underneath correspond with those of the Schedule of the Quantities and Prices.)

No. of Item.	Description of Item.	Number required.	Weight of each Item.	Total weight.
<b>PENSTOCKS.</b>

Department of Public Works, Roads and Bridges and Sewerage Branch.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £ as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

JUSTIN McSWEENEY.  
J. P. McMANUS,  
Randwick.

## TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.
1	Excavation in road surfaces, sand, soil, pipeclay, shale, soft rock, where in the opinion of the Engineer blasting is unnecessary .....	cubic yard	19,320	3/9	2,022 10 0
2	Excavation in hard shale or rock, where gadding and guttering only is permitted .....	"	1,165	4/-	233 0 0
3	Excavation in hard shale or rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted.....	"	1,165	5/-	2 1 5 0
4	Excavation in hard shale or rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	1,165	5/-	2 1 5 0
	Excavation in tunnels in "more or less hard materials," for sewers, pipe sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
5	Less hard excavation in clay, loose, and jointy shale, &c., where in the opinion of the Engineer blasting is unnecessary .....	"	810	20/-	6 0 0 0
6	Excavation in hard sandstone or shale, where gadding and guttering only is permitted .....	"	1,140	37/6	2,137 10 0
7	Excavation in hard sandstone, shale, ironstone, &c., where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,140	32/6	1,552 10 0
8	Excavations in hard sandstone, shale, ironstone, &c., where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted ..	"	1,140	32/6	1,552 10 0
	Excavation in tunnels in "solid rock" for sewers, pipe-sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
9	Excavation in hard rock, where gadding and guttering only is permitted .....	"	1,850	45/-	4,162 10 0
10	Excavation in hard rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted.....	"	1,850	35/-	3,237 10 0

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

## SUMMARY of Weights of Wrought and Cast Ironwork, including all Gun-metal.

(The number of Items underneath correspond with those of the Schedule of the Quantities and Prices.)

No. of Item.	Description of Item.	Number required.	Weight of each Item.	Total weight.
<b>PENSTOCKS.</b>				
46	Cast-iron frame and penstock, with 6-ft. diameter opening, with all lifting gear, screw-bolts, anchor-bolts, and gun-metal, complete.....	3	Ts. ct. qr. lb. 6 5 1 22	Ts. ct. qr. lb. 18 16 1 10

Department of Public Works, Roads and Bridges and Sewerage Branch.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £500 as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 12th day of December, 1893.

RICHARD HOLLOWAY,  
WILLIAM HOLLOWAY,  
Goulburn.

## TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz.:—

For amounts up to £500 inclusive ... ..	£5	0	0
For amounts exceeding £500 and not exceeding £1,000...	£10	0	0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.
1	Excavation in road surfaces, sand, soil, pipeclay, shale, soft rock, where in the opinion of the Engineer blasting is unnecessary .....	cubic yard	19,320	1/6	1,449 0 0

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

## SUMMARY of Weights of Wrought and Cast Ironwork, including all Gun-metal.

## No. 7.—JAMES F. CARSON'S TENDER.

Items 54 to 70, inclusive, for which a general rate is asked, would, at contractor's prices for each item, average about £14 18s. 6½d. per ton. Items 78 to 82, inclusive, for which a general rate is asked, would, at contractor's prices for each item, average about £9 0s. 0½d. per ton.

Department of Public Works, Roads and Bridges and Sewerage Branch.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £600 as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

JAMES FREDERICK CARSON,  
Arnccliffe.

Witness,—JNO. J. ROONIE.

## TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	... ..	£10 0 0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.

101	One additional horse, supplied by Contractor .....	"	"	7/6	
	TOTAL .....			£	57,239 0 0

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

SUMMARY

## SUMMARY of Weights of Wrought and Cast Ironwork, including all Gun-metal.

(The number of Items underneath correspond with those of the Schedule of the Quantities and Prices.)

No. of Item.	Description of Item.	Number required.	Weight of each Item.	Total weight.
<b>PENSTOCKS.</b>

Items 54 to 70, inclusive, for which a general rate was asked, would, at contractor's prices for each item, average £16 19s. 0d. a ton, and items 78 to 82, £10 5s. 4d. a ton.

## Department of Public Works, Roads and Bridges and Sewerage Branch.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £500 as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

ALEX. DEAN,  
JOHN ADAM DEAN,  
JAMES MORRISON DEAN,  
32 Castlereagh-street.

Witness,—GEO. CLARK.

## TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.
1	Excavation in road surfaces, sand, soil, pipeclay, shale, soft rock, where in the opinion of the Engineer blasting is unnecessary	cubic yard	19,320	3/-	2,898 0 0
2	Excavation in hard shale or rock, where gadding and guttering only is permitted	"	1,165	12/-	699 0 0
3	Excavation in hard shale or rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted	"	1,165	10/-	582 10 0
4	Excavation in hard shale or rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted	"	1,165	9/-	524 5 0
	Excavation in tunnels in "more or less hard materials," for sewers, pipe-sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
5	Less hard excavation in clay, loose, and jointy shale, &c., where in the opinion of the Engineer blasting is unnecessary	"	810	16/-	648 0 0
6	Excavation in hard sandstone or shale, where gadding and guttering only is permitted	"	1,140	20/-	1,140 0 0
7	Excavation in hard sandstone, shale, ironstone, &c., where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted	"	1,140	18/-	1,026 0 0
8	Excavations in hard sandstone, shale, ironstone, &c., where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted	"	1,140	18/-	1,026 0 0
	Excavation in tunnels in "solid rock" for sewers, pipe-sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
9	Excavation in hard rock, where gadding and guttering only is permitted	"	1,850	30/-	2,775 0 0
10	Excavation in hard rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted	"	1,850	25/-	2,312 10 0
11	Excavation in hard rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted	"	1,850	25/-	2,312 10 0
	Excavation in "solid rock," in shafts, shaft chambers, and sumps, as specified in clause 3, as viz. :—				
12	Excavation in road surfaces, soil, clay, pipeclay, shale, and soft rock only, where in the opinion of the Engineer blasting is unnecessary	"	130	12/-	78 0 0
13	Excavation in hard rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted	"	445	20/-	445 0 0
14	Excavation in hard rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted	"	445	20/-	445 0 0
15	Excavation in hard rock, where gadding and guttering only is permitted	"	445	30/-	667 10 0
	Excavation in "more or less hard ground," in shafts, shaft chambers, and sumps, as specified in clause 3, as viz. :—				
16	Less hard excavation in road surfaces, soil, clay, pipeclay, loose and jointy shale, and soft rock, where in the opinion of the Engineer blasting is unnecessary	"	170	12/-	102 0 0
17	Excavation in hard sandstone or shale, where guttering and gadding only is permitted	"	115	20/-	115 0 0
18	Excavation in hard sandstone or shale, ironstone, &c., where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted	"	115	20/-	115 0 0
19	Excavation in hard sandstone or shale, ironstone, &c., where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted	"	115	20/-	115 0 0

No. of Item.	Description or Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
20	Filling in at sides, round and over all concrete and brickwork of sewers, shafts, chambers, pipes, embankments, and tunnels, as specified in clause 5.	cubic yard	15,220	1/3	£ 951 5 0
21	Timber ordered in writing to be left in excavations, as specified in clause 9, including all iron used in fixing same	cubic foot	9,000	6/-	2,700 0 0
22	Removing existing culverts crossing the Illawarra Road, as specified in clause 12, including masonry, pitching, and timber decking	cubic yard	244	20/-	244 0 0
23	Sub-duct in hard rock, with tile covers, as specified in clause 8.	lineal yard	280	20/-	280 0 0
	Sub-duct, as specified in clause 8, in "more or less hard material," including dry or cement jointing for stoneware pipes:—				
24	Of 6 in. internal diameter	"	640	10/-	320 0 0
25	Of 9 in. internal diameter	"	640	15/-	480 0 0
	Sub-duct in water-charged loose ground, as specified in clause 8, including hardwood boxes with packing in same, and dry or cement jointing for pipes of:—

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

## SUMMARY of Weights of Wrought and Cast Ironwork, including all Gun-metal.

(The number of Items underneath correspond with those of the Schedule of the Quantities and Prices.)

No. of Item.	Description of Item.	Number required.	Weight of each Item.	Total weight.
<b>PENSTOCKS.</b>				
46	Cast-iron frame and penstock, with 6-ft. diameter opening, with all lifting gear, screw-bolts, anchor-bolts, and gun-metal, complete.....	3	Ts. ct. qr. lb. 6 5 1 22	Ts. ct. qr. lb. 18 16 1 10

	0	3	0	0	5	1

Items 54 to 70, inclusive, for which a general rate is asked, would, at tenderer's price for each item, average about £17 10s. 11d. per ton, and items 78 to 82, £9 14s. 1½d.

## Department of Public Works, Roads and Bridges and Sewerage Branch.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £500 as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

J. N. CAMPBELL LANGTREE,  
Hunter's Hill.

HUGH OWEN,  
99, Elizabeth-street, Paddington.

Witness,—V. TURNBULL, 261 George-street.

## TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5	0	0
For amounts exceeding £500 and not exceeding £1,000...	£10	0	0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

**SUMMARY**

## No. 10.—PARRY &amp; FARLEY'S TENDER.

Department of Public Works, Roads and Bridges and Sewerage Branch.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £500 as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

PARRY & FARLEY,  
158, The Strand, Sydney.

## TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000... ..	£10 0 0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
					£ s. d.
1	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				
1	Excavation in road surfaces, sand, soil, pipeclay, shale, soft rock, where in the opinion of the Engineer blasting is unnecessary .....	cubic yard	19,320	2/-	1,932 0 0
2	Excavation in hard shale or rock, where gadding and guttering only is permitted .....	"	1,165	12/-	699 0 0
3	Excavation in hard shale or rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted.....	"	1,165	9/-	524 5 0
4	Excavation in hard shale or rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted.....	"	1,165	8/-	466 0 0
	Excavation in tunnels in "more or less hard materials," for sewers, pipe-sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
5	Less hard excavation in clay, loose, and jointy shale, &c., where in the opinion of the Engineer blasting is unnecessary .....	"	810	25/-	1,012 10 0

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

SUMMARY

## SUMMARY of Weights of Wrought and Cast Ironwork, including all Gun-metal.

(The number of Items underneath correspond with those of the Schedule of the Quantities and Prices.)

Department of Public Works, Roads and Bridges and Sewerage Branch.

TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the Plans, Specification, Schedule to Specification, and General Conditions, which have been inspected by us for or at the rates entered in the Schedule of Quantities and Prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the Schedule of Quantities and Prices annexed hereto, or if not in Schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal Contract with Her Majesty the Queen, embodying the terms and Conditions above mentioned, and to provide the security required by clause 29 of the said General Conditions; and we enclose herewith our cheque for the sum of £500 as a preliminary Deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned Contract within fourteen days thereafter; and further, that this Tender is made subject to the Conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

Witness,—DANIEL STEWART.

J. STEWART & CO.,  
4, Mercantile Chambers, Park-street.

TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the Head of the Branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5	0	0
For amounts exceeding £500 and not exceeding £1,000...	£10	0	0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a Schedule of Rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavations in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.
1	Excavation in road surfaces, sand, soil, pipeclay, shale, soft rock, where in the opinion of the Engineer blasting is unnecessary .....	cubic yard	19,320	3/6	3,381 0 0
2	Excavation in hard shale or rock, where gadding and guttering only is permitted .....	"	1,165	6/-	349 10 0
3	Excavation in hard shale or rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	1,165	5/6	320 7 6
4	Excavation in hard shale or rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	1,165	5½/-	221 5 0
5	Excavation in tunnels in "more or less hard materials," for sewers, pipe-sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
5	Less hard excavation in clay, loose, and jointy shale, &c., where in the opinion of the Engineer blasting is unnecessary .....	"	810	30/-	1,215 0 0
6	Excavation in hard sandstone or shale, where gadding and guttering only is permitted .....	"	1,140	60/-	3,420 0 0
7	Excavation in hard sandstone, shale, ironstone, &c., where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted ..	"	1,140	54/-	3,078 0 0
8	Excavations in hard sandstone, shale, ironstone, &c., where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted ..	"	1,140	50/-	2,850 0 0
9	Excavation in tunnels in "solid rock" for sewers, pipe-sewers, sub-ducts, &c., as specified in clause 3, as viz. :—				
9	Excavation in hard rock, where gadding and guttering only is permitted .....	"	1,850	60/-	5,550 0 0
10	Excavation in hard rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted.....	"	1,850	56/-	5,180 0 0
11	Excavation in hard rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted.....	"	1,850	54/-	4,995 0 0
12	Excavation in "solid rock," in shafts, shaft chambers, and sumps, as specified in clause 3, as viz. :—				
12	Excavation in road surfaces, soil, clay, pipeclay, shale, and soft rock only, where in the opinion of the Engineer blasting is unnecessary ..	"	130	£4	520 0 0
13	Excavation in hard rock, where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted.....	"	445	70/-	1,557 10 0
14	Excavation in hard rock, where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	445	65/-	1,446 5 0
15	Excavation in hard rock, where gadding and guttering only is permitted .....	"	445	£4	1,780 0 0
16	Excavation in "more or less hard ground," in shafts, shaft chambers, and sumps, as specified in clause 3, as viz. :—				
16	Less hard excavation in road surfaces, soil, clay, pipeclay, loose and jointy shale, and soft rock, where in the opinion of the Engineer blasting is unnecessary .....	"	170	£4	680 0 0
17	Excavation in hard sandstone or shale, where guttering and gadding only is permitted.....	"	115	100/-	575 0 0
18	Excavation in hard sandstone or shale, ironstone, &c., where charges of powder not exceeding 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted .....	"	115	85/-	488 15 0
19	Excavation in hard sandstone or shale, ironstone, &c., where charges of powder not exceeding 4 in. in length by 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	115	80/-	460 0 0

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the Specification.

The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's Store or Field Office to the various sites of works along line of Main and Branch Sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with Specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

## No. 4.

The Engineer-in-Chief for Sewerage to The Under Secretary for Public Works.

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 14 December, 1893.

Minute Paper.

Subject: Eleven Tenders—Eastern Main Branch Sewer, Contract No. 69.

The tenders for Contract No. 69 have now been checked, the lowest tender being that of Messrs. Carter, Gummow, & Co. at £45,207 8s. 11d.

The other tenders were:—

	£	s.	d.
Messrs. John Ahearn, at .. . . . .	47,061	3	9
Kerle and Kerle, at .. . . . .	52,735	10	9
H. McKenzie & Sons, at .. . . . .	53,505	2	7
Justin McSweeney, at .. . . . .	54,623	18	2
Holloway Bros., at .. . . . .	55,104	8	9
J. F. Carson, at .. . . . .	57,239	0	9
Alex. Dean & Sons, at .. . . . .	58,165	10	8
Langtree & Owen, at .. . . . .	59,676	16	1
Parry and Farley, at .. . . . .	63,095	11	11
J. Stewart & Co. .. . . . .	68,171	6	9

Messrs. Carter, Gummow, & Co., being the lowest tenderers for the construction of the Western Suburbs Main Eastern Branch Sewer, Contract No. 69, I beg to recommend acceptance of their tender amounting to £45,207 8s. 11d., at schedule rates, on condition that they fill in and initial in their tender the average price per ton for all irregular castings, weighing in all 33 tons 12 cwt. 3 qrs. 12 lb., and the average price per ton for all cast-iron pipes, weighing in all 788 tons 8 cwt. 2 qrs. 27 lb.

C. H. OHLFSEN-BAGGE.

Not necessary.—R.H., 16/12/93. The Engineer-in-Chief. I recommend Carter, Gummow, & Co.'s tender at schedule rates.—R.H., 16/12/93. Under Secretary. Passed.—J.B., 18/12/93. Submitted to the Board of Reference, 18th December, 1893. The Board recommend acceptance of the tender of Carter, Gummow, & Co. at schedule rates.—J. W. HOLLIMAN, Secretary. Submitted.—J.B., 18/12/93. Approved; funded stock.—W.J.L., 21/12/93. Ask Messrs. Carter & Co. to call at 2 p.m. to morrow. Done, 21/12/93. Tender accepted, 27/12/93. Auditor-General informed, 27/12/93.

## No. 5.

## The Under Secretary for Public Works to Messrs. Carter, Gummow, &amp; Co.

Gentlemen,

Department of Public Works, Sydney, 27 December, 1893.

I have the honor, by the direction of the Secretary for Public Works, to inform you that your tender, dated the 13th day of December instant, is accepted for the construction, erection, and completion of Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and branches (Contract No. 69), at the rates set forth in your schedule of prices, on the conditions following, namely:—

In lieu of paying any sums that may become due to you under the contract in cash, the same shall be applied in the purchase, in your names, of Funded Stock, under the Funded Stock Act of 1892, and the issue to you of Funded Stock to an equal amount from time to time due to you under the contract shall be accepted by you in full satisfaction of the money due under the contract; and for the carrying out of such arrangement you undertake to sign any applications, vouchers, books, or other documents that may be necessary. As the Funded Stock is issued in amounts of £10, or of some multiple of £10, any odd sum remaining above the sum issued shall be carried to your credit and be included in the next payment.

If it shall be represented to the Minister for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegation be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men, and on such direction being conveyed in writing to you under the hand of the Under Secretary for Public Works you shall discharge such men forthwith, and in the event of your non-compliance with any such direction the Minister shall have power to declare this contract to be cancelled, as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the plans, specification, schedule to specification, and general conditions, and to be started immediately, and completed within eighteen months from this date.

The Secretary for Public Works is willing, in response to your verbal request, to accept two approved bondsmen in the sum of £4,520, as security for the due performance by you of the contract.

I have to refer you to the Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage for further information, and to request that you will call upon the officer-in-charge of bonds and contracts at this office, for the purpose of executing the necessary agreement, &c., for the due observance of your contract.

I must also request you to be good enough to acknowledge the receipt of this letter of acceptance, and to intimate to me your assent to the terms hereof.

I am, &amp;c.,

J. BURLING,

Under Secretary.

## No. 6.

## Bond executed by Messrs. Carter, Gummow, &amp; Co., with Annexures.

*Minute-paper.**Subject:—*Contract No. 69, Sydney Sewerage Works.

Department of Public Works, Bonds and Contract Branch, Sydney, 7 February, 1894.

THE bond and agreement herein duly prepared have been executed by the contractors, Messrs. Carter, Gummow, & Co., and their sureties, and stamped, and may now be forwarded to the Commissioner and Engineer-in-Chief for Roads and Bridges. The tender and all other papers herein are sent herewith.

The Under Secretary.

HAROLD F. NORRIE,

Officer-in-charge.

Roads.—D.C.M'L. (for U.S.) B.C., 8/2/94. Authority to return deposit, 8/2/94. Agreement handed to Accountant, Roads Branch. Mr. Davis to note.—F.C.P., 8/2/94. Seen.—J.D., 9/2/94.

Know all men by these presents,—That we, John Carter, David Graham Snodgrass, George Maddison, Peter Ewing, and Frank Moorhouse Gummow, of North Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of "Carter, Gummow, & Co." (and hereafter referred to as "the said contractors"), Charles James Henty and Robert Le Neve Scrutton, both of Sydney, in the Colony aforesaid, merchants (and hereinafter referred to as "the said sureties"), are jointly and severally held and firmly bound unto Her Most Gracious Majesty Queen Victoria in the penal sum of £4,520 sterling, to be paid in Sydney to Her said Majesty, her heirs or successors, for which payment well and truly to be made we bind ourselves and each of us, our and each and every of our heirs, executors, and administrators, jointly and severally, firmly by these presents.

Sealed with our seals, dated the 22nd day of January, in the year of our Lord 1894.

WHEREAS by agreement bearing even date herewith, and expressed to be made between the said contractors of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of Eastern Main Branch Sewer, Western Suburbs Drainage, from near the south building line of Premier-street to a point 4 chains north of the north building line of Emily-street, being called or known as Contract No. 69, Sydney Sewerage Works, according to the specification, schedule to specification, general conditions, tender, and schedule of quantities and prices, copy letter of acceptance of tender and letter of assent thereto, thereunto annexed, and marked "A," "B," "C," "D," "E," "F," and "G," respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Sewerage, and marked "No. 1" to "No. 27," both inclusive.

And whereas the said sureties have severally offered to become and be bound to Her said Majesty, her heirs and successors, for the due performance and fulfilment of the said contract in accordance with the said several annexures and drawings. Now the condition of the above-written bond and obligation is such

such that if the said contractors do and shall well and truly perform and fulfil the said contract as in the said agreement is recited, and every the terms, conditions, and stipulations thereof, within the time in that behalf provided. Then this obligation will be void and of none effect, otherwise to remain in full force and virtue.

Signed, sealed, and delivered by the said John } Carter, in the presence of,—	JOHN CARTER.
HAROLD F. NORRIE, J.P.	
Signed, sealed, and delivered by the said David } Graham Snodgrass, in the presence of,—	D. G. SNODGRASS

Signed, sealed, and delivered by the said Frank } Moorhouse Gummow, in the presence of,—	FRANK MOORHOUSE GUMMOW (By his Attorney, JOHN CARTER).
HAROLD F. NORRIE.	
Signed, sealed, and delivered by the said Charles } James Henty, in the presence of,—	CHAS. J. HENTY.
HAROLD F. NORRIE.	
Signed, sealed, and delivered by the said Robert } Le Neve Scrutton, in the presence of,—	R. L. SCRUTTON.
HAROLD F. NORRIE.	

Dear Sir,

Would you kindly lend me Carter, Gummow, & Co.'s bond and contract for Contract No. 69, Sydney Sewerage? I will return it as soon as possible.

The Treasury, Pay Branch, 17 May, 1894.

Yours, &c.,

S. R. CORKHILL,  
Paymaster.

Owen Carroll, Esq.

Received bond, Contract 69, Sydney Sewerage Works.—J. CONNELLY (for Paymaster), Treasury, 17/8/94. Lent to Mr. Peake, to be exhibited in Court.—E.H., 17/9/94.

*Minute-paper.*

*Subject* :—Advance on Cement Contract, No. 69, Sydney Sewerage.

Department of Public Works, Bonds and Contract Branch, Sydney, 29 March, 1894.

The memorandum, herein duly prepared, has been executed by the contractors, Messrs. Carter, Gummow, & Co., and stamped, and might now be forwarded to the Commissioner and Engineer-in-Chief for Roads and Bridges and Sewerage.

The other papers herein are with Sewerage.

HAROLD F. NORRIE,  
Officer-in-charge.

The Under Secretary.

Roads.—D.C.M'L. (for U.S.), B.C., 29/3/94. Mr. Davis. Seen.—J.D., 30/3/94.

"A."

MEMORANDUM.

In consideration of the Minister for Public Works, in and for the Colony of New South Wales, advancing to us the sum of £1,000, and of any future advances to be made to us, we hereby agree to repay to the said Minister for Public Works the said sum of £1,000, and future advances, together with interest at the rate of £6 per centum per annum on such sums respectively from the date of advance, on demand, and we hereby charge all moneys due or payable, or becoming due or payable to us under a certain contract for the construction of the Eastern Main Branch Sewer, Western Suburbs Drainage, Contract No. 69, Sydney Sewerage Works, in the said Colony, entered into by us with the Government of the said Colony; also all cement, building materials, and every other thing already used, or to be used in connection with our said contract, with the repayment of the said sum of £1,000, and any future advances and interest at the rate aforesaid; and we hereby undertake to give, whenever called upon to do so, a valid bill of sale to the said Minister for Public Works over the said cement, building materials, and every other thing used in connection with our said contract now stored in our premises at Illawarra Road, Marrickville, in the said Colony, or elsewhere, such bill of sale to contain a power of sale, and such other powers, provisos, and agreements as the said Minister for Public Works may be advised. Also further undertake to give immediate possession of same to the said Minister, or any person appointed by him for that purpose, whenever called upon to do so.

As witness our hands, at Sydney, this 27th day of March, A.D. 1894.

Witnesses to the signatures of John Carter, Frank } Moorhouse Gummow, and David Graham } Snodgrass,—	JOHN CARTER. F. M. GUMMOW (By his attorney, J. CARTER). D. G. SNODGRASS.
HAROLD F. NORRIE, J.P. JOSHUA J. FARR, J.P.	
Witness to the signatures of Peter Ewing and } George Maddison,—	GEORGE MADDISON. PETER EWING.
J. T. WARLOW DAVIES.	

This is memorandum marked "A," referred to in the annexed declaration of John Carter, made before me this 29th day of March, A.D. 1894.

HAROLD F. NORRIE, J.P.  
STATUTORY

## STATUTORY DECLARATION.

I, JOHN CARTER, of William-street, North Sydney, in the Colony of New South Wales, contractor, do hereby solemnly declare and affirm that—

1. I am the duly constituted attorney of Frank Moorhouse Gummow, at present residing in South Australia, under and by virtue of a deed-poll or power of attorney, under the hand and seal of the said Frank Moorhouse Gummow, dated the 2nd day of January, 1894.
2. At the time of the execution by me as such attorney as aforesaid of the annexed memorandum, marked "A," I had not, nor have I since received notice of the revocation, by death or otherwise, of the abovementioned deed-poll or power of attorney.

And I make this solemn declaration as to the matters aforesaid, according to the law in this behalf made, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Sydney, this 29th day }  
of March, 1894, before me,— }  
HAROLD F. NORRIE, J.P.

JOHN CARTER.

No. 526.

REGISTERED a letter for Carter, Gummow, and Co., Box 10, North Sydney, from Under Secretary, Works. J.V.

2 January, 1894.

TELEGRAM from Mr. J. Carter, North Sydney, to Mr. H. F. Norrie, Bonds and Contracts, Department of Public Works Office.

WILL call early Tuesday morning.

J. CARTER.

POWER of Attorney, Frank Moorhouse Gummow to John Carter.

Sir,

We have the honor to acknowledge receipt of the above from your office, under separate cover, as registered letter.

Box No. 10, North Sydney, 29 January, 1894.

We are, sir, &c.,

CARTER, GUMMOW, & CO.

Mr. Norrie, Bonds and Contracts, Public Works, Sydney.

AGREEMENT made this 22nd day of January, in the year of our Lord 1894, between John Carter, David Graham Snodgrass, George Maddison, Peter Ewing, and Frank Moorhouse Gummow, of North Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of "Carter, Gummow, & Co." (and hereinafter styled or referred to as "the contractors"), of the one part, and Her Most Gracious Majesty Queen Victoria of the other part.

WHEREAS the Minister for Public Works of the said Colony (hereinafter called "the said Minister") recently called for tenders, by notice published in the *Government Gazette* (of which notice a copy is hereunto annexed), for construction of Eastern Main Branch Sewer, Western Suburbs Drainage Works, from near the south building line of Premier-street to a point 4 chains north of the north building line of Emily-street, being called or known as Contract No. 69, Sydney Sewerage Works, as shown in the drawings relating thereto in the office of the Engineer-in-Chief for Roads, Bridges, and Sewerage, and marked "No. 1" to "No. 27," both inclusive, and according to the specification, schedule to specification, and general conditions, which are hereunto annexed, and marked respectively "A," "B," and "C." And whereas the contractors made the tender hereunto annexed, marked "D," to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the said sewer agreeably to the said drawings, specification, schedule to specification, and general conditions for or at the rates entered in the schedule of quantities and prices annexed to the said tender, and also hereunto annexed, marked "E." And whereas the said tender was accepted by the said Minister, and such acceptance (a copy of which is annexed hereto, and marked "F") was duly notified to the contractors on the 27th day of December last past, and the contractors, as per their letter annexed hereto, marked "G," have assented thereto. And whereas the contractors have, with the consent of the said Minister, entered into a bond to Her said Majesty, with two approved sureties conditioned to secure the due performance of this contract, and all other matters herein contained, and which on the part of the contractors are to be done and performed in lieu of providing the cash security mentioned in clause 29 of the said general conditions: Now this agreement witnesseth that, in consideration of the premises, the contractors do hereby, for themselves, their heirs, executors, and administrators, covenant with and to Her said Majesty the Queen, her heirs, and successors: That they, the contractors, shall and will perform the various works required in and about the full and proper construction, erection, and completion of the said works in accordance in all things with the said specification, schedule to specification, general conditions, and drawings, and at and after the rates or prices in the said schedule of quantities and prices. That all sums becoming due to the contractors under this contract shall be applied by the said Minister in the purchase, in the names of the said contractors, of Funded Stock under the Funded Stock Act of 1892. That the issue of Funded Stock to an amount equal to the amount from time to time due to them, the said contractors, will be accepted by them, the said contractors, in full satisfaction of the money due under this contract, and for the carrying out of such arrangement the contractors undertake to sign any applications, vouchers, books, or other documents that may be necessary. And it is hereby agreed and declared between and by the said parties hereto that the said specification, schedule to specification, general conditions, tender, schedule of quantities and prices, copy letter of acceptance of tender, and letter of assent thereto, marked as aforesaid, all being hereunto annexed as aforesaid, shall be read as incorporated in, and forming part and parcel of, these presents in like manner as if the same had been herein written and set forth at length, and that the said specification, schedule to specification, general conditions, tender, schedule of quantities and prices, copy letter of acceptance, letter of assent thereto, and the said drawings, and these presents shall together be taken to be the contract between the said parties

parties in respect of the said works, amplified in manner following—that is to say, that the said general conditions shall at all times be read and construed as if the stipulation contained in the said letter of acceptance of tender as to the discharge of men (not domiciled in this Colony for six months previously to their employment on the said works) employed on the said works when called upon to do so, and the penalty for non-compliance therewith had been expressly set out in the said general conditions.

In witness whereof the said parties to these presents have hereunto set their hands and seals, the day and year first before written.

#### STATUTORY DECLARATION.

I, JOHN CARTER, of Sydney, in the Colony of New South Wales, contractor, do hereby solemnly declare and affirm that—

1. I am the duly constituted attorney of Frank Moorhouse Gummow, at present residing at Adelaide, in the Province of South Australia, under and by virtue of a deed-poll or power of attorney, under the hand and seal of the said Frank Moorhouse Gummow, dated the 2nd day of January, 1894.
2. From letters and telegrams recently received from the said Frank Moorhouse Gummow, I have every reason to believe, and I verily do believe, that the said Frank Moorhouse Gummow is still alive.
3. All the time of the execution by me as such attorney as aforesaid of a bond to, and agreement with, Her Most Gracious Majesty Queen Victoria, and bearing date the 22nd day of January, 1894, in connection with Contract No. 69, Sydney Sewerage Works, I had not, nor have I since, received notice of the revocation, by death or otherwise, of the above-mentioned deed-poll or power of attorney.

And I make this solemn declaration as to the matters aforesaid according to the law in this behalf, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Sydney this 23rd } day of January, 1894, before,—	JOHN CARTER.
HAROLD F. NORRIE, J.P.	

Know all men by these presents,—That I, Frank Moorhouse Gummow, of Adelaide, in the Province of South Australia, contractor, do hereby constitute and appoint John Carter, of Sydney, in the Colony of New South Wales, contractor, my true and lawful attorney within the said Colony of New South Wales, for the purposes hereinafter expressed—that is to say, to ask, demand, sue for, recover, and receive all sums of money, goods, effects, and things now owing or payable or belonging to me, or which shall at any time or times hereafter be owing or belong to me, by virtue of any security, or upon any balance of accounts, or otherwise howsoever, and on payment, transfer, or delivery thereof respectively, to give, sign, and execute receipts, releases, and other discharges for the same, respectively, and on non-payment, non-transfer, or non-delivery thereof, or any part thereof, respectively, to commence, carry on, and prosecute any action or other proceeding whatsoever for recovering and compelling the payment, transfer, and delivery thereof respectively. And also to state, settle, adjust, compound, submit to arbitration, and compromise all actions, suits, accounts, reckonings, claims, and demands whatsoever, which now or hereafter shall or may be depending between me and any person or persons whomsoever, in such manner in all respects as my said attorney shall think fit. And also to sell and convert into money any goods, effects, or things which now belong, or at any time hereafter may belong, to me. And to sign, seal, deliver, and execute in my name and on my behalf all necessary assignments and transfers to the purchasers, assignees, grantees, or transferees thereof. And I authorise and direct my said attorney to pay all moneys which shall come to his hands by virtue of any of the powers herein contained, or so much thereof as shall remain after paying thereat the costs, charges, and expenses incurred by him in the exercise of any of the powers and authorities herein contained, into my account at \_\_\_\_\_, or otherwise to pay and apply the same as I shall from time to time, by letter or otherwise, direct. And I also authorise my said attorney to appear for me in any Court of Justice to any action or other proceeding which

may be instituted against me, or whereunto I shall be a party, and to defend the same, or sooner judgment to be had or given against me in any such action or other proceeding by default or otherwise, as my said attorney be advised or think proper. And also to enter into, make, sign, seal, execute, deliver, acknowledge, and perform any contract, agreement, deed, writing, or thing with the Government of New South Wales, or with any Minister of the Crown, or other person on behalf of said Government, or with any other person or persons, corporation or corporations whatsoever, for the construction or management of sewage works, or the discharge of sewage, or for any other purpose whatsoever (the generality of this power not being in any respect limited by specifying any particular purpose) that my said attorney may think proper, or that may be necessary or proper to be entered into, made, signed, sealed, executed, delivered, acknowledged, or performed, for effectuating the purposes aforesaid, or any of them. And also to make, sign, seal, execute and deliver, acknowledge, and perform an assignment or transfer of any such contract, agreement, deed, writing, or thing that my said attorney may think necessary or proper, and for all or any of the purposes of these presents, to use the name of me, the said Frank Moorhouse Gummow. And generally to do, execute, and perform any other act, deed, matter, or thing whatsoever, which ought to be done, executed, or performed, or which, in the opinion of my said attorney, ought to be done, executed, or performed, in or about my concerns, engagements, and business of any nature and kind whatsoever, as fully and effectually to all intents and purposes as I myself could do, if I were present and did the same in my proper person, it being my intent and desire that all matters and things respecting the same shall be under the full management and direction of my said attorney. And all and whatsoever my said attorney shall do or cause to be done in the premises, I hereby covenant with the said John Carter to ratify and confirm.

In witness whereof I have hereunto set my hand and seal this 2nd day of January, 1894.

Signed, sealed, and delivered by the said Frank }  
Moorhouse Gummow, in the presence of,— }

F. M. GUMMOW.

P. M. M. GLYNN, Solicitor, Adelaide.

E. B. COLTON, Public Notary, Adelaide.

To all to whom these presents shall come,—I, Edwin Blackler Colton, of Adelaide, in the Province of South Australia, notary public, duly authorised, admitted, and sworn, residing and practising in the city of Adelaide aforesaid, do hereby certify that I was present at Adelaide aforesaid, on the 2nd day of January, 1894, with Patrick M'Mahon Glynn, of Adelaide aforesaid, solicitor, and did see Frank Moorhouse Gummow, of Adelaide aforesaid, contractor, duly sign, seal, and execute the within written paper, writing, or power of attorney, and that the signature, "F. M. Gummow," thereto affixed, is of the proper handwriting of the said Frank Moorhouse Gummow, and that the signatures, "P. M. M. Glynn" and "E. B. Colton," thereto subscribed as witnesses, are of the proper handwriting of the said Patrick M'Mahon Glynn and of me, the said Edwin Blackler Colton.

In testimony whereof I have hereunto set my hand and affixed my seal of office to serve and avail as occasion may require.

Dated at Adelaide aforesaid, the 2nd day of January, 1894.

E. B. COLTON.

We, the undersigned, hereby certify that we have this day examined the writing contained on this and the two preceding pages with the original power of attorney and notarial certificate, and find the same to contain and be a true copy thereof.

Dated at Sydney this 23rd day of January, A.D. 1894.

Department of Public Works, Roads and Bridges and Sewerage Branch.

TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and Branches (Contract No. 69), agreeably to the plans, specification, schedule to specification, and general conditions, which have been inspected by us for or at the rates entered in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this Tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates or prices mentioned in the schedule of quantities and prices annexed hereto, or if not in schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said Tender, execute and deliver to the Minister for Public Works, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £460 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said Tender is opened withdraw same, or if, in the event of this Tender being accepted, we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this Tender is made subject to the conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of December, 1893.

Witness,—Jno. R. REID, North Sydney.

#### TENDER BOARD REGULATIONS.

No Tender shall be received after eleven a.m. on the day named for the receipt of such Tender unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the Tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of Tenders received for each work and the name of the lowest Tenderer; but no Tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the Tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the Tenders received, showing the work, the name of the Tenderer, and the amount of each Tender.

All envelopes containing Tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the Tender is submitted.

Every Tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of Tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful Tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful Tenderer shall be returned to him on his executing the bond for the fulfilment of the Contract. When the Contract is for a less sum than £200 the deposit with Tender shall not be returnable until the service is satisfactorily completed.

Any Tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any Tenderer failing to take up his Tender, complete the bond, and proceed with the Contract, within the time specified, or withdrawing his Tender after it shall have been opened, whether such Tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a Tenderer shall fail to proceed with a Contract as aforesaid, fresh Tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another Tender in the same series to be accepted; but the Tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In the event of any Contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.

In submitting a Tender, the full Christian name of the Tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the Tender. The omission of this information will render the Tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any Tender.

The Board-room shall be open for the admission of the public while the Tenders are being opened and declared.

CONTRACT No. 69.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Work.	Unit.	Probable Quantity.	Rate per Unit.	Amount.
	Excavation in open trenches, in more or less hard materials, and in hard rock, for sewers, branches, pipes, sub-ducts, &c., as specified in clause 3, as viz. :—				£ s. d.

101	One additional horse, supplied by Contractor	"	"	10/-	
	TOTAL			£	45,207 3 11

The rates quoted are shillings per cwt., not pounds. CARTER, GUMOW, & Co.

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, who must satisfy themselves as to their accuracy, which is not in any way guaranteed by the Government, and they are subject to omissions, deductions, or alterations.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, the period of maintenance, and up to the day of their being formally taken over by the Engineer.

Item No. 45 to include the cost of conveying the Government property from the Contractor's store or field office to the various sites of works along line of main and branch sewers, at man-holes, gas-check, and shaft-chamber, &c.

Prices for items Nos. 89, 90, 91, 92, 93, 94, 95, and 96 are to be for materials in strict accordance with specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case Contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the Contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other sources, and the Contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

Prices for items Nos. 97, 98, 99, 100, and 101 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

"F."

LETTER OF ACCEPTANCE.

Gentlemen,

27 December, 1893.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 13th day of December instant, is accepted for the construction, erection, and completion of Eastern Main Branch Sewer, Western Suburbs Sewerage, from Premier-street to Sebastopol-street and branches (Contract No. 69), at the rates set forth in your schedule of prices, on the conditions following, namely:—

In lieu of paying any sums that may become due to you under the contract in cash, the same shall be applied in the purchase, in your names, of Funded Stock under the "Funded Stock Act of 1892," and the issue to you of Funded Stock to an equal amount from time to time due to you under the contract shall be accepted by you in full satisfaction of the money due under the contract; and for the carrying out of such arrangement you undertake to sign any applications, vouchers, books, or other documents that may be necessary. As the Funded Stock is issued in amounts of £10, or of some multiple of £10, any odd sum remaining above the sum issued shall be carried to your credit and be included in the next payment.

If it shall be represented to the Minister for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegation be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men, and on such direction being conveyed in writing to you under the hand of the Under Secretary for Public Works you shall discharge such men forthwith, and in the event of your non-compliance with any such direction, the Minister shall have power to declare this contract to be cancelled, as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the plans, specification, schedule to specification, and general conditions, and to be started immediately, and completed within eighteen months from this date.

The Secretary for Public Works is willing, in response to your verbal request, to accept two approved bondsmen in the sum of £4,520 as security for the due performance by you of the contract.

I have to refer you to the Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage for further information, and to request that you will call upon the office-in-charge of bonds and contract at this office, for the purpose of executing the necessary agreement for the due observance of your contract.

I must also request you to be good enough to acknowledge the receipt of this letter of acceptance, and to intimate to me your assent to the terms hereof.

I am, &c.,

J. BARLING,

Under Secretary.

This is the copy letter of acceptance of tender marked "F," referred to in our annexed Bond to Her Majesty the Queen, dated the 22nd day of January, A.D. 1894.

Department of Public Works, Sydney, 24 November, 1893.

## TENDERS FOR PUBLIC WORKS.

TENDERS will be received at this office for the public works specified in the Schedule hereunder up to 11 o'clock a.m. of the various dates set forth in the second column.

All envelopes containing tenders must be addressed to the President of the Tender Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Tenderers may be in attendance when tenders are opened, and the name of the lowest tenderer will be announced, if possible, before the duties of the Board have terminated.

The following conditions will have to be strictly complied with, otherwise the tenders will not be taken into consideration:—

1st.—Each tender must state the time within which it is proposed to complete the work, and in every instance the full name or names of persons tendering, also the names in full, occupations, and addresses of proposed bondsmen.

2nd.—At the foot of every tender there must be a memorandum, signed by the party tendering and two responsible persons as sureties, agreeing to be answerable for the due performance of the contract in the event of the tender being accepted; and undertaking, in that event, that they will severally execute and deliver a bond to Her Majesty in the penal sum mentioned in the specification, or otherwise arranged for securing such performance.

3rd.—No tender will be considered which shall have been received after 11 o'clock a.m. on the day upon which tenders are to be received, unless there are circumstances which, in the opinion of the Board, render it desirable that it should be received.

4th.—Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz:—

For amounts up to £500 inclusive ... ..	£5	0	0
For amounts exceeding £500 and not exceeding £1,000 ... ..	10	0	0

For all sums over £1,000, 1 per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the manager of the bank upon which it is drawn, or a bank draft.

5th.—Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

6th.—In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account of such contract shall be absolutely forfeited to the Crown, and shall be paid to the credit of the Consolidated Revenue of the Colony.

7th.—Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted, but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

8th.—In the event of any contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.

All deposits, with the exception of that of the lowest tenderer, when practicable, will be returned to the persons entitled thereto immediately after the Board shall have adjourned; and the deposit made by the successful tenderer shall be returned to him on executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender will not be returnable until the service is satisfactorily completed.

It is to be understood that the Government does not bind itself to accept the lowest or any tender; and no tender will be accepted until the head of the Branch under whose directions the work is to be carried out has reported upon the whole of the tenders received.

WILLIAM JOHN LYNE.

FRANK MOORHOUSE GUMMOW  
(By his Attorney, JOHN CARTER).  
D. G. SNODGRASS.  
GEORGE MADDISON.  
PETER EWING.

Box No. 10, North Sydney, 8 January, 1894.

Sir, CONTRACT No. 69.—WESTERN SUBURBS SEWERAGE.

With reference to the acceptance of sureties in lieu of the fixed deposit security for the above contract, we have the honor to inform you that Messrs. Charles James Henty (of Parbury, Henty and Co., Merchants, Pitt-street), and Frederick Lassetter (of Messrs. Lassetter and Co., George-street, City), are prepared to become such sureties, and will sign any necessary documents in connection with the same when called upon to do so.

We are, &c.,  
CARTER, GUMMOW, & CO.

The Under Secretary for Public Works.

Are names satisfactory? Commissioner for Roads.—D.C.M'L. (*pro* U.S.), B.C., 9/1/94. Yes.—R.H., 10/1/94. Mr. Norrie.—D.C.M'L. (*pro* U.S.), 10/1/94.

“A.”

## SPECIFICATION.

## 1. Description of Contract.

THIS contract comprises the provision by the contractor of all labour, machinery, tools, plant, and everything that may be necessary for the construction of the Eastern Main Branch Sewer, as described in detail in the specification, schedule to specification, and general conditions, and as shown on the following drawings:—

- No. 1.—General plan showing sites of sewers, shafts, &c., and longitudinal section of this length of the Main Eastern Branch Sewer.
- No. 2.—Plans and longitudinal sections of main branches at Premier-street junction and Camden and Renwick streets branch sewers.
- No. 3.—Design of penstock, gas-check, junction chamber and shaft at Premier-street, showing positions of gas-checks, penstocks, and storm-water discharge weir, working platforms, &c.
- No. 4.—Alteration of penstock chamber and shaft at Premier-street.
- Nos. 5 to 10.—Designs of ventilating shafts, junctions, cross-sections of sewers, &c.
- Nos. 11 and 12.—Designs of culverts passing under duplicate pipe-sewer on the Illawarra Road at 3 miles and 43·31 chains, and over the 3-ft. 9-in. diameter cast-iron syphon, on the same road at 3 miles 9·67 chains.
- No. 13.—Enlarged general plans and longitudinal sections on natural scale of 3-ft. 9-in. diameter cast-iron syphon and cast-iron 2-ft. diameter scour-pipe along the Illawarra Road.
- No. 14.—Design of inlet and outlet wells for syphon along the Illawarra Road.
- No. 15.—Top view of inlet and outlet wells of syphon ventilating shaft and chamber at junction of 24-in. diameter, and 3-ft. 3-in. x 2-ft. 2-in. sewers, shaft with pipe-junctions, &c.
- No. 16.—Details of cast-iron 3-ft. 9-in. diameter syphon pipe, and 24-in. diameter flushing pipe, &c. †
- No. 17.—Enlarged plan and longitudinal section on natural scale of cast-iron, 3 ft. 6 in. diameter duplicate pipe-sewer; details of inlet and outlet chambers, man-holes, &c.
- No. 18.—Details of cast-iron 3-ft. 6-in. diameter duplicate pipe-sewer and design of penstock for 24 in. diameter pipe-sewer.
- No. 19.—Design of penstock with lifting gear for 3-ft. 9-in. diameter pipe-sewer.
- No. 20.—Design of penstock with lifting gear for 6-ft. diameter sewer.
- No. 21.—Design of wrought-iron gratings for inlet and outlet wells of syphon.
- No. 22.—Design of working platform for penstock chamber, Premier-street.
- No. 23.—Design of gas-check for 6-ft. 10-in. x 5-ft. 10-in. sewer.
- No. 24.—Design of gas-check for 6-ft. 8-in. x 5-ft. 8-in. sewer.
- No. 25.—Design of gas-check for 5-ft. 6-in. x 4-ft. 6-in. sewer.
- No. 26.—Design of gas-check for 5-ft. 2-in. x 4-ft. 2-in. sewer.
- No. 27.—Design of gas-check for 5-ft. 1-in. x 4-ft. 1-in. sewer.

## 2. *Materials.*

The materials are to be of the quality specified in clauses 11 to 38, 212, and 213 of the schedule to specification.

## 3. *Excavation.*

The excavation to be executed in accordance with clauses 45 to 54, 56 to 76, 79 to 84, 86, and 97 to 108 of the schedule to specification.

The excavation of the various tunnels to be commenced from not less than forty-three different faces simultaneously within four months, unless otherwise directed, after the date the contract has been signed.

The schedule prices for 1 cubic yard of excavation in open cutting, shafts, and tunnels respectively, shall include the cost of taking out and placing said excavation aside in separate temporary spoil banks beyond the actual site of work, together with the works comprised in clauses 47 and 90 of the schedule to specification.

## 4. *Removal of Culverts.*

The existing culverts, consisting of stone abutments, pitched bottoms, and hardwood decking, crossing the Illawarra Road, and specified in clause 12, to be taken up in such lengths as may be ordered at the time, removed and stacked where directed, at the price per cubic yard stated in the schedule of prices.

## 5. *Filling.*

The filling is to be executed in accordance with clauses 54, 55, 75, 86 to 90, and 93 to 101 of the schedule to specification.

The schedule price of one (1) cubic yard of filling is to apply to filling in any situation in the construction of these works, the removing the material from temporary spoil banks or from other sources outside the limits of this contract, and the depositing same in accordance with the plans and specification; together with the withdrawing of all timber and the works comprised under clauses 55, 89, 90, and 93 of the schedule to specification.

## 6. *Shafts.*

Shafts are to be executed in accordance with clauses 2, 65, 66, 97 to 101, and 107 of the schedule to specification.

## 7. *Sumps.*

Sumps to be sunk as specified in clauses 102 and 103 of the schedule to specification.

## 8. *Sub-ducts.*

Sub-ducts to be executed in accordance with clauses 104 and 105 of the schedule to specification.

## 9. *Permanent and Temporary Shoring, Timbering, and Bridges.*

Permanent and temporary shoring, timbering, and bridges to be executed as specified in clauses 56, 73, 74, 75, 114, 115, and 117 of the schedule to specification.

## 10. *Road-making.*

The embankment and road-making along line of Illawarra Road, between Charles-street and Addison Road, to be executed in accordance with clauses 137 to 143 of the schedule to specification.

## 11. *Ordnance Fencing.*

Sawn hardwood ordnance fencing to be executed as specified in clauses 25 and 26 of the specification, and clause 134 of the schedule to specification. The sawn hardwood handrails at ends of culverts required in this contract to be of the same description, but two-rail only.

## 12. *Sewers, Storm-water Channels, &c.*

The sewers and other works are to be executed in conformity with clauses 70, 81, 82, 146 to 155 of the schedule to specification.

Three junction chambers, five gas-check chambers, inlet and outlet wells, with penstock chambers and manholes at ends of syphon, overflow outlet, culvert crossing over syphon, junction chamber at both ends of duplicate pipe-sewer, with man-holes and pipe-junction chambers, and culvert crossing under pipe-sewers, thirteen ventilating and pipe-junction shafts, twelve ventilating shafts, and four pipe-ventilating shafts, spaced as shown on longitudinal sections and general plan, to be constructed as shown on drawings.

The existing creek which crosses the Illawarra Road at 3 miles 9.67 chains by a culvert built with stone abutments, 12 ft. 6 in. apart, pitched bottom and hardwood decking, 49 ft. 6 in. in length, to be taken up and removed, when ordered, to permit of the cast-iron 3 ft. 9 in. diameter syphon pipe, and the cast-iron 2 feet diameter scour-pipe to be laid in open trench underneath, and for the purpose of rebuilding and constructing said length of culvert over the syphon and scour-pipes in concrete 12 ft. 6 in. wide, between abutments, and 4 feet in height between invert and closing arch, with foundation walls on each side of pipe trench and closing arch over same, wing-walls, railings, road-making, &c., with such gradient arches, shapes, forms, dimensions, as shown on drawings.

The existing culvert across the Illawarra Road at 3 miles 43.34 chains, built with stone abutments and hardwood timber decking, 6 feet wide and 4 ft. 6 in. high, and about 61 ft. 5 in. in length, to be taken up and removed, when ordered, for the purpose of rebuilding and constructing instead a concrete culvert, in the shape of an inverted syphon, with cross-sections varying from 7 ft. 6 in. in width, by 5 feet in height between invert and closing arch, at both ends of culvert, to 7 ft. 6 in. in width by 4 feet in height, between invert and closing arch, for the central portion of same, with such vertical and horizontal curves, arches, shapes, forms, wing-walls, railings, open earth inlet and outlet channels, gradients, and of such lengths and dimensions as may be ordered at the time, to permit of the main eastern branch sewer (at this site a duplicate 3 ft. 6 in. diameter cast-iron pipe-sewer) to pass over said culvert, as shown on drawings.

## 13. *Concrete Work.*

The concrete to be used in foundations, packing over brick arches in rock tunnels, and at back of brick lining of shafts, in culverts, building round stoneware pipes, where ordered, and in sumps, to be of sandstone

sandstone concrete of the quality specified in clause 31 of schedule to specification. The concrete to be used for all other works in sewers, junctions, chambers, shafts, man-holes, &c., unless where otherwise directed, to be bluestone concrete of the quality specified in clause 29 of schedule to specification.

The concrete work to be executed as specified in clauses 29, 31, 32, 81, 82, 156 to 170, 173, 176 to 182, and 195 of the schedule to specification.

14. *Cement Coating.*

The cement coating to be executed as specified in clauses 183 and 184 of the schedule to specification.

All internal and external surfaces of concrete work only where ordered, to be protected by cement coating, consisting of cement and sand, in the proportion of one cement to two of sand.

15. *Brickwork.*

The brickwork is to be executed as specified in clauses 81, 168, 169, 185, 186, 189, 191, 193, 194, and 195 of the schedule to specification.

16. *Freestone Ashlar.*

Freestone ashlar to be executed as specified in clauses 197, 198, and 203 of the schedule to specification.

Copings, curbings, and stones on top of ventilating shafts to be pierced, picked, axed, and dressed to the exact sizes and forms shown on drawings.

17. *Squared Bluestone Pitching.*

Squared bluestone pitching to be executed as specified in clause 201 of the schedule to specification.

18. *Squared Freestone Pitching.*

Squared freestone pitching to be executed as specified in clause 202 of the schedule to specification.

19. *Stoneware Pipe-laying.*

The providing, laying, and jointing of glazed stoneware pipes to be executed as specified in clauses 17, 18, 19, 181, 204, 205, 206 of the schedule to specification.

20. *Cast-iron Pipe-laying.*

The cast-iron 3-ft. 9-in. diameter, 3-ft. 6-in. diameter, and 2-ft. diameter pipes to be laid and jointed, including providing lead and spun yarn, as specified in clauses 207 to 213, 272 and 273 of the schedule to specification.

21. *Wrought-iron Work.*

The wrought-iron work to be executed as specified in clauses 214 to 219, 221 to 225, 228 to 230, 263 to 265, 270 to 273, and 295 of the schedule to specification.

22. *Gun-metal Work.*

The gun-metal work to be executed as specified in clauses 216, 217, 231 to 238, 272, 273, and 295 of the schedule to specification.

23. *Cast-iron Work.*

The cast-iron work to be executed as specified in clauses 214 to 217, 239 to 257, 260 to 262, 267 to 273, and 295 of the schedule to specification.

24. *Manufacture of Ironwork.*

All wrought-iron, gun-metal, and cast-iron work required for this contract must be manufactured in the Colony of New South Wales.

25. *Painting.*

All wrought-iron work, cast-iron work, unless where otherwise specified, and the hand-rails at ends of culverts, to be painted as specified in clauses 276, 277, and 278 of the schedule to specification.

26. *Tarring.*

All cast-iron pipes, short lengths, bends, junctions, or other castings shown on drawings, where covered up or walled in, and hand-rail posts below level of top of kerbs, to be coated with tar, as specified in clauses 239, 280, and 281 of the schedule to specification.

27. *Schedule to Specification and General Conditions.*

Notwithstanding that certain clauses of the schedule to specification are specially enumerated, it is to be understood that the schedule to specification and the general conditions attached to the specification shall be held binding in all matters relating to this contract, as far as the Engineer may deem the same applicable.

This is the specification marked "A," referred to in our annexed Bond to Her Majesty the Queen, dated the 22nd day of January, A.D. 1894.

Witness,—HAROLD F. NORRIE.

CHAS. J. HENTY.  
R. L. SCRUTTON.

## "B."

## SCHEDULE TO SPECIFICATION.

*Site.*

1. Access to the site of the works to be had along all public roads, streets, or lanes, and along such strips or areas of land as the Engineer-in-Chief may deem it necessary to resume or temporarily provide for the purpose of the works.

2. For the purpose of sinking, working, and building shafts on lines of streets, and on private ground, when ordered, the contractor to have temporary possession of an area of 24 feet by 17 feet over the mouth of each shaft, unless otherwise directed.

3. For the purpose of excavating open cuttings for sewers, storm-water channels, piers, abutments, buildings, &c., and where ordered, for constructing and completing the various works therein, and raising embankments over same, contractor to have temporary possession of a strip or area of land the exact widths and lengths which, in the opinion of the Engineer, is required for these works in accordance with plans, sections, specifications, and with clause 7 of the general conditions.

4. All strips or areas of land for the site of the works, road connections and deviations, &c., hereinbefore referred to, to be set out by the Engineer, to whom written application for their temporary possession must be made by the contractor four weeks prior to the time the said land is required by him.

5. Exclusive of the quantity of fencing provided for in the contract for enclosing the works, the contractor shall provide and erect, where directed, to the satisfaction of the Engineer, all necessary fences to prevent trespass on land not at his disposal, or which the Government may require for other purposes connected with the contract, at his sole cost.

6. The contractor shall provide and erect all necessary temporary bridges over rivers, creeks, water-courses, drains, and underneath railways, tramways, roads, footpaths, and streets, boarding-barriers, &c., wherever directed to do so; and all fences, walls, railings, buildings, railways, tramways, walks, or streets, metalled, grassed, paved, pitched, or asphalted surfaces, to be left by the contractor at the completion of the works in the same order and condition as they were before the commencement of the works, at his sole cost, in strict accordance with the various stipulations and terms contained in clause 20 of the general conditions, to the entire satisfaction of the municipal authorities and of the Engineer.

7. Contractor shall also provide and maintain all boarding-barriers, night-lights, and properly ballasted temporary roads required by any municipal or other authorities having charge or control of streets or roads, or which may be required for the convenience or safety of the public; and he shall also make all arrangements, by temporary roads or bridges or otherwise, which may be required by any local authorities or by the Engineer, to prevent stoppage or delay of public traffic or any avoidable inconvenience to the public.

8. Should the contractor refuse or neglect to erect and maintain, either or both, any such temporary fences or other necessary accommodation, it shall be lawful for, but not obligatory on, the Engineer, after having given to the contractor twenty-four hours' notice in writing of his intention to do so, summarily, and without further process, to cause any such temporary hoarding, fences, gates, bridges, or other accommodation to be erected and maintained which he may deem necessary for the proper protection either of such lands or of the adjoining lands, or for the safety of the property of the owners and occupiers thereof or of the general public, and the cost of so doing shall be deducted from any money that may be or may become due to the contractor on account of this contract.

*Lines, Levels, Setting-out Work, and Inspection.*

9. The centre lines of main sewer, storm-water channels, and branch sewers, &c., are shown on general plans by full lines, which will be marked on the surface of the ground, the same as on plans, as the works proceed.

After setting-out, the centre lines of the works are to be preserved solely by reference to the pegs, iron nails, and other marks and signals which may be placed, fixed, and erected for the purpose of these works along their centre lines.

The gradients and levels of the works are to be preserved by reference to any bench-marks which the Engineer may deem necessary to establish along the lines of works during the progress of the contract, subject to check and adjustment, as shall be directed, from other bench-marks established beyond the site of the works.

10. Contractor shall also, at his own cost and expense, at any time—by day or by night, either on working days or on Sundays or holidays—render all such assistance and supply all such labour, plant, and lighting as the Engineer or Superintending Officer may require to set out, to check such setting-out, or to inspect any portion of the works, which must for that purpose be left clear and free from any obstruction or impediment. During and for the performance of those operations contractor shall be obliged to suspend any or all of his work if required to do so by the Superintending Officer, and without having any claim for loss or damage on account of such temporary suspension.

*Materials.*

11. All materials, as brick, stone, cement, timber, iron, sand, stoneware pipes, clay, lead, &c., which are to be supplied by the contractor, are to be of the best quality and description of their respective kinds. Samples of each kind to be submitted for the approval of the Engineer, and retained in office; and on approval having been obtained, they are to be delivered on the works ready for use, as per sample.

12. The contractor shall inform the Engineer of the sources whence the various materials are supplied, or of the places of their manufacture, and afford him every facility to inspect their supply or manufacture at any stage of the same.

13. Due notice shall be given by contractor to the Superintending Officer and overseer when any material is brought on the ground, all of which must be neatly stacked in regular heaps, submitted for approval, and approved of in writing by the Superintending Officer, before it may be used in the works; none but that so approved shall be used.

14. The contractor to make and provide proper and approved gauge-boxes or scales for measuring or weighing all materials supplied, whether specified to be broken or delivered to special sizes and mixed together in stated proportions or not.

15. Bricks to be of well-mixed material, of approved quality and uniform fineness; to be new, sound, hard, well-burnt kiln-bricks, free from cracks and all other defects, truly rectangular, with sharp arrises of approved dimensions and form; to be specially radiated where required for arching or curved  
and

and semi-circular work, and all red and white and specially moulded bricks for external works at aqueducts, buildings, &c., to be picked bricks of uniform and approved colour and shape. All bricks to be equal to sample bricks approved of, which must be sealed by the contractor and acknowledged as the sample or samples of the bricks to be used throughout the works.

Bricks used in these works will be subjected to the following tests, viz. :—

- (a) *Tensile strength*.—The tensile strength to be tested, in the departmental testing machine, by laying the brick horizontally on its base of 3 inches, between supports 7 inches apart, and the strain applied across the centre of the brick and distributed over a width of  $1\frac{1}{2}$  inch. An average breaking strain of twelve bricks to be taken, which must not be less than 8,000 lb.
- (b) *Porosity*.—Bricks immersed in water for twenty-four hours must not increase in weight more than 3 per cent.

Should the twelve bricks fracture under the foregoing average strain, or prove more impervious to water than 3 per cent., then the Engineer may reject the whole stack of bricks from which the twelve bricks were taken. The whole of the expense incurred in testing the bricks shall be borne solely by the contractor.

16. In the event of the contractor delivering quantities of bricks on the site of the works for the contract of a mixed description and quality, the officer in charge shall have the power to require of the contractor to have those bricks which, in his opinion, are suitable for the works, picked out and stacked where directed, and those defective or unsuitable removed from the site of the contract; and, in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the bricks so delivered by the contractor.

17. Stoneware pipes to be of well ground and mixed material, of tough, tenacious, impervious quality, well-burnt, sound, hard, uniform in thickness, true in section, straight longitudinally, uniformly glazed both inside and outside, free from fire and other cracks, flaws and ash-holes, the collar perfectly joined to the barrel, and in every way equal to sample pipe to be seen at the Engineer's office. Paving tiles to be of the same materials as the stoneware pipes, to be uniformly glazed on all sides, and of approved size and form.

Unless otherwise directed, the pipes to be of the following thicknesses and depth of collar, namely:—

Pipes, inside diameter, 9 inches; thickness, $\frac{1}{8}$ inches; depth of collar, 2 inches.						
"	"	12	"	"	1	"
"	"	15	"	"	$1\frac{1}{4}$	"
"	"	16	"	"	$1\frac{3}{8}$	"
"	"	18	"	"	$1\frac{1}{2}$	"
"	"	21	"	"	$1\frac{5}{8}$	"
"	"	24	"	"	$1\frac{3}{4}$	"

18. All parcels of pipes used in these works will be tested in the departmental testing machine, and submitted to the following crushing strains applied in the centre of the pipe:—

24 inches diameter pipe at 110 lb. per square inch of bearing surface.						
18	"	"	100	"	"	"
16	"	"	100	"	"	"
12	"	"	100	"	"	"
9	"	"	100	"	"	"

If the Engineer deems it necessary, the pipes will also be tested for porosity. Should the pipes fracture under the foregoing strains, or not prove impervious to water, then the Engineer may reject the whole of parcel from which the pipes were taken. The whole of the expense incurred in testing the pipes shall be borne solely by the contractor, and all pipes injured or broken by the testing shall be immediately replaced by sound pipes, subject to the foregoing tests, at contractor's cost.

19. In the event of the contractor delivering quantities of pipes, bends, and junctions, on the site of works for the contract of a mixed description and quality, the officer-in-charge shall have the power to require of the contractor to have those pipes, bends, and junctions which, in his opinion, are suitable for the works picked out and stacked where directed, and those defective or unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the pipes, bends, and junctions so delivered by the contractor.

20. *Stone*.—All stone used in the construction of these works for pitchers, concrete, or masonry, unless where otherwise specified, to be sound, solid, hard sandstone of the best description, free from all defects, and as per sample approved; to be duly subjected, when ordered, in the departmental testing machine, to a crushing strain of 5,892 lb. per square inch. The expense incurred in testing stone to be borne by the contractor.

21. Broken stone for ballast to be sound, solid stone, as specified in clause 20; to be broken to a size to pass freely with its largest dimensions through a ring of 4 inches in diameter. Broken stone for packing under and round sewer lining, about drains, &c., to be sound and solid, and broken to the same size as ballast.

22. Broken stone for bluestone concrete to be of basalt or other similar hard stone of approved quality; to be broken by hand or crushing machine, of a size to pass freely with its largest dimensions through a ring of  $1\frac{1}{2}$  inch in diameter; the whole of the metal to be free from dirt, quarry refuse, &c.; to be screened through a sieve of meshes  $\frac{1}{4}$  inch apart, and then to be washed with fresh water until approved, before it shall be deemed fit and suitable for these works.

23. Sand to be sharp quartz sand, free from all earthy, loamy, or clayey matter, equal in quality to the sample of Nepean River sand to be seen at the Engineer's office, and to be washed perfectly clean whenever the Engineer deems it necessary.

24. *Cement*.—The cement to be used throughout these works to be well packed in strongly-made casks, to be the best Portland cement, of approved brands and manufacture, delivered in thoroughly sound condition, fit for immediate use, and without requiring seasoning or air-slacking, to be free from any symptoms of staleness, caking, damage to the packing, hard or set lumps; and no barrel or portion of same

same to be used until it has been examined and approved by the Engineer, who may also delay approval of any brand of cement pending tests extending over a longer period than hereinafter specified. Samples taken from various casks (not exceeding six in number), and mixed together from each parcel brought on the works, to be submitted for testing:—The weight per striked bushel not to be less than 100 lb., and each cask shall contain not less than 337 lb. weight of cement, exclusive of weight of cask and packing. The specific gravity not to be less than 3.10. The cement, when passed through a wire sieve of 2,500 meshes per square inch, to leave a residue of not more than 10 per cent.; through a sieve of 5,806 meshes, not more than 25 per cent.; and through a sieve 14,400 meshes, not more than 40 per cent. Any cement which absorbs more than 2 milligrams of carbonic acid to 3 grams of cement shall be taken as containing more than the permissible quantity of free lime, and shall be liable to rejection. The cement when mixed neat with water, to give a tensile strength of not less than 250 lb. per square inch after three days' setting in water, 450 lb. after seven days, and 550 lb. after twenty-eight days. The cement to be "slow-setting," and when gauged with water to a stiff paste must set in a damp atmosphere of between 60° and 90° F., in from one and a half to six and a half hours. Neat cement of the consistency above mentioned to be made into pats kept in moist air until set, and then immersed in water at a temperature of between 60° and 80° F., and also placed in Faija's moist-heat and warm-bath apparatus at a temperature of 90° F., as to symptoms of blowing, or any alteration or variation of form or volume. The cement when mixed in the proportion of 1 of cement to 3 of standard sand (washed, dried, and sifted through a sieve of 400, and retained upon one of 900 meshes per square inch), and about 10.0 per cent. of the total weight of water, to give a tensile strength of not less than 150 lb. per square inch at seven days, and 230 lb. at twenty-eight days, the briquettes having been kept in a damp atmosphere, put in water twenty-four hours after they were made, and left in water at a temperature of between 60° and 80° F. The tensile strength will be ascertained in the departmental testing machine, with the load increased at the rate of 200 lb. per minute, and the average breaking weight of six briquettes will be taken for each test. Should the sample fail in any or all of these tests, or show irregularity in quality, or not show a proper progressive increase in strength with age of briquette, then the Engineer may reject the whole parcel from which the sample was taken, and the contractor shall at once remove the said parcel of cement from the site of the works at his own expense; failing which, the Engineer may have it removed at the contractor's cost without further notice. Empty casks to be immediately broken up and removed from off the works. To facilitate the gauging of cement throughout the contract, cement casks will be taken as equal to holding 4 cubic feet, otherwise the contractor to provide and make approved gauge-boxes, holding exactly 4 cubic feet, for measuring cement. Cement of a lighter weight than herein stipulated, but otherwise equal to the specified test, may be permitted to be used in the works, subject to the decision of the Engineer, and provided that the deficiency in weight is made up in quantity.

25. Cement is to be brought on the ground in quantities of not less than fifty barrels, provided that this quantity is sufficient for fourteen days' supply, but in no case is less than fourteen days' supply (whatever that may prove to be), to be brought on the ground in one parcel; nor is the supply stored on works to be at any time less than fourteen days' supply. All cement to be kept on the ground in approved weather-tight sheds, under lock and key, which shall be in the custody of the Superintending Officer.

26. *Mortar*.—The mortar to be used in these works to be composed of one part of Portland cement and of two parts of clean washed sharp sand, as described in clauses 23 and 24, the proportion of each to be correctly ascertained by measurement, the whole to be mixed with fresh water, as may be directed, to be well incorporated, and to be used fresh. Any mortar which has become hard or set to be at once rejected. All mortar to be mixed on approved sawn timber platforms close to where it is required.

27. Special mortar, composed of one part of cement and one part of sand, and prepared as before described, to be provided and used in all portions of the work where specially specified and directed.

28. *Grout*.—The grout to be made of mortar as described in clause 27, to be mixed fluid in tubs close to where it is required, and to be used fresh.

29. Bluestone concrete to be used in these works to be composed of the materials specified in clauses 22, 23, and 24, in the proportion of one part of Portland cement, two parts of sand, and four parts of bluestone metal.

30. Special concrete, if required, to be composed of two parts of Portland cement, three parts of sand, and seven parts of bluestone metal.

31. Sandstone concrete, where ordered to be used in these works, to be composed of one part of Portland cement, two parts of sand, and five parts of sandstone (as specified under clause 20) metal, free from dirt, quarry refuse, sieved (as specified in clause 22), washed, and of a size to pass with its largest dimensions through a ring of 2 inches in diameter. All materials to be mixed in the same manner as hereinafter specified for concrete.

32. All concrete to be prepared close to where it is required on sawn timber plank platform, all proportions to be correctly ascertained by measurement, the metal to be well washed when put on the platform and levelled at top, the sand to be placed in a level layer above the metal, and the cement to be placed in a level layer upon the sand; after which all materials to be carefully mixed and turned twice over, and then the whole to be mixed with fresh clean water, and thoroughly turned over twice, and oftener, until, in the opinion of the Engineer, it shall be well incorporated and fit for the work before it leaves the platform; it shall then be conveyed to the works as shall be directed, and to be used fresh.

33. If the concrete is made by machinery, all materials to be prepared as previously described, then to be mixed dry, and afterwards with fresh clean water, as may be directed and as shall be approved of; to be used fresh.

34. Puddle to consist of the best clay to be obtained in the district within a radius of 5 miles; to be carefully turned over and mixed with fresh clean water, as shall be directed, until the clay, in the opinion of the Engineer, has become of one even and uniform colour and plasticity.

35. Hardwood timber to be ironbark, blue or red gum, box, or other approved colonial hardwood, of the best description, sound, straight, free from sap, wanes, shakes, gum veins, cores, or other defects; all sawn timber to have clean sharp arrises, and to be of the full dimensions shown or specified, hewn timber to be square, smooth, and free from axe-marks; in round timber, the diameter given is to be measured at the smallest end, exclusive of bark. Posts and rails for fencing to be perfectly sound, straight, and cleanly split, posts to be backed off. All timbers to be perfectly straight, and the bark to be cleanly

cleanly removed from all round timber before being put on the ground. Softwood timber to be of the best Baltic or yellow deals, free from sap, shakes, and large or dead knots, and of the exact dimensions specified when finished.

36. *Wrought-iron*.—All wrought-iron work to be of the best description, quality, and workmanship, with square arrises, subject to tests hereinafter specified, and of the exact dimensions and forms shown on drawings.

37. *Bluestone road-metal*.—The stone used for metalling to be basalt or other similar hard stone of approved quality; to be broken to angular fragments of a size to pass freely with their largest dimensions through a ring  $2\frac{1}{2}$  inches in diameter, and to be free from dirt, quarry refuse, &c. For tarred metal-decking bluestone is to be used; but it shall be broken to pass with its largest dimensions through a ring 2 inches diameter, and as above.

38. *Bluestone*.—All bluestone used in the construction of these works for pitchers or masonry to be of the best description of basaltic bluestone obtainable, free from honeycomb and all defects, and as per sample approved.

#### GENERAL.

39. Earth-borings, have been taken along or close to the main line of sewer, storm-water channel, &c., the results of which are described on drawings; but the Government undertake no guarantee whatever regarding the kinds of soil that will be met with, or the firmness or stratification of the ground to be excavated, or the amount of unwatering to be done, or the strength of the timbering that may be required, or the nature and extent of other precautions which may have to be adopted.

40. *Providing materials, labour, &c.*—The contractor shall provide at his own cost and charges (except where otherwise specified) all materials, labour, tools, plant, tackle, cordage, cartage, machinery, scaffolding, staging, temporary bridges, planking, timbering, piling, centering, and everything necessary for the proper construction, erection, execution, and completion of the several works comprising this contract; all of which are to be approved before being used.

41. *Labour*.—All cartage and haulage and work done or to be performed by machinery shall be included in the term "Labour."

42. Plant shall mean and include all tools, utensils, stores, cement and other sheds, timber, scaffold, ladders, staging, centres, moulds, templates, coffer-dams, cordage, chains, tackle, boats, punts, rafts, sleepers, rails, waggons, trucks, trollies, engines, water and air pumps, boring and ventilating apparatus, signals, lights, diving bells and dresses, and every other thing necessary for the security, proper inspection, execution, completion, and specified maintenance of the several works.

43. All materials, plant, and prepared work, approved and accepted, for use in or on the works shall be considered, and shall be, the property of Her Majesty the Queen until completion of contract.

*Timber, Iron, Stone, Cement, Bricks, Sand, Appliances, Plant, &c., to be on the ground ready when required.*

44. The whole of the piles, sheet-piles, shoring, scaffolding, staging, temporary bridges, timber of every description, stone, cement, bricks, stoneware pipes, sand, iron, &c., together with all the necessary appliances and plant required in the construction of the various works comprised in this contract, shall be provided, prepared, delivered, and ready at the various sites of the works as they are required; to be driven in, erected, walled in, placed, and fixed in position at the various places shown on the different drawings, to ensure the whole of the works rising from the lowest levels and progressing without interruption, and in such a manner and in such order as may be specified or as may be directed.

45. No excavation to be commenced on any portion of the contract until, in the opinion of the Engineer, sufficient quantities of piles, sheet-piles, shoring, staging, temporary bridges, scaffolding, stone, cement, bricks, stoneware pipes, iron, sand, or other materials are on the ground, together with the necessary appliances and plant to ensure the uninterrupted progress and continuance of the works, after they once have been commenced, at any locality, without any delay or stoppage. Delays and stoppages in the progress of the works arising from disputes as to quality of materials, and from insufficient supply of any materials, plant, staging, temporary bridges, &c., and any damage or injury caused to the works in consequence of such stoppage or delay, shall be entirely and solely at the risk and cost of the contractor.

#### Excavation.

46. *Diverting surface, flood, and subsoil water, and unwatering*.—During the construction of these works the contractor shall, at his own cost, provide all materials, labour, fluming, pumping apparatus, and any other plant that may be required, and shall construct all temporary coffer or other dams around open trenches and excavations across low-lying grounds on lines of water-courses and drains above and below the site of the works, and do all other work and use all other precaution which may be required for the effectual diversion of surface water, subsoil water, and storm-water across and beyond the site of the works, for keeping the trenches free from water during the whole time the works are in progress, and in preventing any injury to the works by floods or any other causes.

47. *Clearing and grubbing*.—The areas of the sites for all excavations for main and branch sewers, storm-water channels, abutments, piers, &c., and the areas for seats of all embankments over main sewer and for road deviations and crossings, &c., and a margin of 10 feet in width beyond all these areas, to be cleared and grubbed of all trees, scrub, stumps, roots (to the depth of same), and dead timber, and the whole of such trees, scrub, stumps, roots, and dead timber thus grubbed and cleared to be removed and cleared away from any lands set apart for the purposes of this contract, described under clause 3, at the cost of the contractor, who shall be held solely responsible for the whole of the clearing being effected in a manner to the entire satisfaction of the Engineer. The cost of all clearing and grubbing to be covered by and included in the schedule price for excavation.

48. *Areas at mouth of shafts*.—It is to be distinctly understood that when sinking shafts on lines of streets, and, when ordered, on private grounds, &c., the materials excavated and raised, on their arrival at level of staging above mouth of shaft, are to be at once removed from off the streets or other surfaces, as the case may be; and when building materials, &c., are to be conveyed through shafts to the tunnel works, that all such materials on arrival at mouth of shafts must be at once conveyed to the works underground, as permission cannot be given to contractor to disturb and impede the usual traffic in the streets,

streets, or the usual occupation of the ground by the owners, as the case may be, beyond the possession for the time of an area not exceeding 24 feet by 17 feet, or less if ordered, over the mouth of each shaft, unless where otherwise determined and directed by the Engineer during the progress of the contract.

49. *Areas at open cuttings.*—When excavating for the foundations of the works in open cuttings, where ordered, the materials excavated and raised to the surface of the street or other ground, are to be at once removed from off the same; and when building materials, &c., are to be conveyed to the works, that the same, on arrival at open cutting, must be at once conveyed to the works in the same, as no allowance can be given to contractor to disturb or impede the usual traffic in the streets, or the usual occupation of the ground by the owner or the public beyond being in possession for the time of a strip of land of the exact width required for the works as described in clause 3, except in all cases where the contractor has obtained the necessary permission to occupy larger areas, in strict accordance with the provisions contained in clauses 19 and 20 of the general conditions.

50. *Diversion of sewage of existing sewers during the construction of the works.*—During the construction of the works in general, and of all points of intersection of existing and new sewers, and until completion of all works connected therewith, the contractor to provide all materials and labour and everything that may be necessary; and execute all the works of every description required to prevent all damage and injury, for which he shall be solely responsible, that may occur to private property or to the existing or new works by flooding with sewage, choking and bursting of sewers in consequence of insufficient and inadequate pumping apparatus, tanks, dams, fluming, &c., or any other cause; and erect and construct suitable tanks, pumps, watertight temporary dams across existing sewers, above and below points of intersection, and watertight adequate and secure fluming for the purpose of conveying constantly the whole of the sewage which may flow in said sewers at any time across said points of interception and intersection, at his sole cost, to the entire satisfaction of the Engineer.

51. *Removal of road metal, pitching, and wood paving, &c.*—Prior to commencing any excavation for shafts, junctions, sewers, storm-water channels, embanking, abutments, piers of aqueducts, &c., in open cutting (in accordance with the various stipulations and conditions contained in the specification and in clauses 19 and 20 of the conditions of contract), the sites for each work to be prepared by the removal of all surface soil, rubbish, sludge, and other objectionable matter, and of all road-metal, ballast, pitching, wood-paving, concrete, asphalt, flagging, &c., where such occur, as shall be directed. The materials so removed in the first instance to be laid and stacked aside, as the Engineer may direct, in different spoil-banks; and as the works proceed, the said materials, if approved of, to be used in the construction of or soiling of slopes of embankments, and in reinstating the metalled, pitched, and paved road or other surfaces, as the case may be, and those not approved of to be carted away to such places as shall be ordered, and to be paid for as lead.

52. All sods, road metal, pitching, ballast, wood-paving, concrete, &c., removed under the conditions of the foregoing clauses; and damaged, injured, or otherwise not approved of as fit for relaying, placing, setting, and fixing in the reformation and reinstatement of the various road and other surfaces (excepting wood-pavement, see clause 94), to be replaced by contractor with new, sound, and approved materials of their respective kinds, and therewith to reinstate and maintain, during continuance of contract, the various road and other surfaces, at his sole cost, as provided in clause 6, in a sound and satisfactory manner, in accordance with clause 20 of the general conditions, and to the entire satisfaction of the city or municipal authorities and of the Engineer.

53. The contractor shall, at the termination of the period of maintenance, procure certificates from the municipal authorities concerned, that the roads, &c., in their respective districts are in a satisfactory condition.

54. *All soft or loose soil, clay, soft and hard shale, rock, and other materials* obtained from excavations of open cuttings, tunnels, sub-ducts, sumps, shafts, abutments, piers of aqueducts, buildings, &c., if approved of shall, in the first instance, be put aside in separate spoil-banks beyond the site of the works, subsequently to be used in soiling slopes of embankments, refilling round and over pipes, and all concrete, masonry and brickwork, and into all excavations, road and other embankments, &c., as hereinafter specified, and as shall be directed at the time; and the surplus not so required shall be cleared away and removed by the contractor from the sites of all the works, and from the surfaces, streets, channels, and footpaths surrounding the same, to such places as shall be ordered, and to be paid for as lead.

55. All soil, sand, and other materials which the excavations of this contract do not supply, and which it is necessary to obtain for the completion of the embankments and filling of every description, as shown on drawings, the contractor shall procure, of approved quality, from any other source or land outside the limits of this contract. The cost of providing to be included in the price per cubic yard for "filling."

56. The excavation in tunnels as well as in open trenches requiring shoring, timbering, and close timbering, the same is to be executed as specified in clause 114, and the unwatering is to be executed as specified in clauses 46, 50, and 72.

57. The cross-sections of main sewer and branches, storm-water channels, &c., in tunnels and open trenches, shown on drawings, to vary in the quantities and thicknesses of brick and concrete work according to the depths, nature, and solidity of the ground and position under streets, &c., as shall be directed during the progress of the works.

58. Wherever the solidity of the ground permits it, the excavation in trenches for concrete or brickwork to be taken out with vertical sides to level of springing of sewer arch, and to the exact widths of concrete or brickwork shown on drawings, and below that level to bottom of trench with curved or vertical sides, as shall be directed.

Where timbering is required, trenches 8 feet deep and under shall have vertical sides, and shall be 1 ft. 3 in. wider to outside of polling-boards than width of concrete or brickwork. Where trenches are over 8 feet deep and require timbering, they shall have vertical sides, and shall be 1 ft. 3 in. wider to outside of polling-boards than the width of the concrete or brickwork for the lower 8 feet. Above that level they shall be 2 feet wider to outside of polling-boards than concrete or brickwork.

59. After the sites for the various excavations and embankments have been grubbed and cleared, the excavation for the foundations of the works of this contract to be executed to the various depths, level or inclined planes, gradients, steps, widths, batters, slopes, &c., as shown on drawings, and as shall

be directed, or to such greater or lesser depths and widths as the Engineer, during the progress of the works, from time to time, may determine and order, and they are to be measured, the net dimensions of the outside of the timbering as and where such has been approved of.

The excavation for foundation of embankments to be taken out in no case less than 12 inches below surface of ground, and to such widths and lengths as shall be directed.

60. The excavation in solid rock for pipe-trenches shall have vertical sides, and shall be of the following sizes, viz. :—

For 24-inch diameter stoneware pipe-sewers	...	...	...	3 ft. 9 in. wide.
21-inch do do do	...	...	...	3 ft. 4 in. do
18-inch do do do	...	...	...	3 ft. 0 in. do
15-inch do do do	...	...	...	2 ft. 6 in. do
12-inch do do do	...	...	...	2 ft. 0 in. do
9-inch do do do	...	...	...	2 ft. 0 in. do

61. When timbering is not required in excavation in all other ground for pipe-trenches, the trenches shall be of the same widths as those in solid rock. When timbering is required, the excavation for pipe-trenches 8 feet deep and under shall have vertical sides, and shall be of the following sizes to the outside of the polling-boards, viz. :—

24-inch diameter stoneware pipe-sewers	...	...	...	4 ft. 0 in. wide.
21-inch do do do	...	...	...	3 ft. 7 in. do
18-inch do do do	...	...	...	3 ft. 3 in. do
15-inch do do do	...	...	...	2 ft. 9 in. do
12-inch do do do	...	...	...	2 ft. 3 in. do
9-inch do do do	...	...	...	2 ft. 3 in. do

62. Where timbering is required, the excavation for pipe-trenches above 8 feet deep shall have vertical sides, and shall be the widths given in clause 61 for the lower 8 feet, and for any depth over and above 8 feet the trenches shall be of the following sizes to the outside of the 1½-inch polling-boards, unless otherwise ordered in writing, viz. :—

24-inch diameter stoneware pipe-sewers	...	...	...	4 ft. 9 in. wide.
21-inch do do do	...	...	...	4 ft. 4 in. do
18-inch do do do	...	...	...	4 ft. 0 in. do
15-inch do do do	...	...	...	3 ft. 6 in. do
12-inch do do do	...	...	...	3 ft. 0 in. do
9-inch do do do	...	...	...	3 ft. 0 in. do

63. Transverse and other cheeks to be excavated to receive pipe-sockets and junctions, and for the purpose of making the joints.

64. The trenches for the cast-iron pipe-sewers to be truly excavated to the exact lines, gradients, curves, depths, widths, &c., as shown on drawings, and as the Engineer may order from time to time. Man-holes or joint-holes not less than 3 feet in length to be excavated where directed, with such space at each side of pipe, and such clear space underneath same as shall be ordered at the time. No trenching to be commenced and carried on during wet weather.

The excavation of pipe-trenches to be carried on in such a manner that it shall be always completed and approved for a length of 48 feet (unless otherwise directed), in advance of any concrete, brickwork, penstocks, gas-checks, pipes, &c., so that when the laying of pipes has been completed in the first 48 feet of trench, the next 48 feet length of trench must be ready to receive pipes. No 48 feet length of trench to remain open more than eight days from the time of commencing the excavation to the time of the trench being filled in again to level of surface of street.

65. *Precaution.*—In all cases at excavations of open trenches, tunnel-mouths, and shafts, where sandstone, shale, or ironstone occurs, and the Engineer may consider that blasting may facilitate such excavations, and in tunnels through rock, shale, and ironstone, the contractor to use every precaution and carry on such operations with such limited charges of powder only, or other approved explosives, as will loosen the shale, rock, &c., without shattering the same; and to employ all necessary means, as temporary bridges, staging, chains, rope-nets, mats, or fagots, &c., to prevent effectually and thoroughly all stones and fragments of same, or other materials from being shot or thrown out of said trench, tunnel-mouth, and shaft excavations, as he shall be held solely responsible for any accident, damage, and injury resulting from such blasting to any person, works, or buildings, over the line of sewer or in the neighbourhood of same, &c., and as provided in clauses 19 and 20 of the general conditions. Blasting will not in any case be allowed between the hours of 10 p.m. and 6 a.m., nor after 1 p.m. on Saturdays, except by the written authority of the Engineer; every hole drilled for blasting purposes will be measured by an inspector, and charged under his supervision, and the work shall be carried on under such further regulations, in conformity with the provisions hereunder described, as the Engineer may make and shall consider necessary as the contract proceeds.

No larger quantity of explosive material shall be taken underground than is likely to be used during any current shift.

Storing of explosive material underground shall be, and hereby is, absolutely prohibited; and for its storage on the surface special directions will from time to time be issued by the Engineer in accordance with the provisions of the Act regulating storage and conveyance of explosives.

66. As regards the charges of powder required on the various portions of this contract to loosen the rock, shale, or ironstone without shattering the same, it is to be distinctly understood that only gadding and picking shall be allowed in ground which in the opinion of the Engineer is loose, jointy, or liable to slips, and when the ground, in the opinion of the Engineer, is hard and solid and suitable for blasting, that only powder, or other explosives, of approved quality shall be used, when ordered in writing, in charges of powder not exceeding 2 inches in length by 1½ inch in diameter, and not exceeding 4 inches in length by 1½ inch in diameter respectively. If other explosives are permitted to be used, the quantity and weight of such explosives relatively to powder to be carefully ascertained by the Engineer, and the respective charges made equivalent to those used in the case of powder.

67. Where the whole or any of the undermentioned items for the excavation appear in the schedule of quantities and prices of the contract, they shall be executed as follows:—

Under the headings of "Tunnel excavation in more or less hard ground," and "Open trench excavation in more or less hard ground;" subdivided under items—"Less hard excavation where, in the opinion of the Engineer, blasting is unnecessary." "Excavation in rock or hard shale, where gadding and guttering only are permitted." "Excavation in rock or hard shale, ironstone, &c., where blasting is permitted, with charges of powder, not exceeding 2 inches in length, and  $1\frac{3}{8}$  inch in diameter." "Excavation in hard rock, where blasting is permitted, with charges of powder, not exceeding 4 inches in length, and  $1\frac{3}{8}$  inch in diameter."

"Tunnel excavation in solid rock," subdivided under items—"Excavation in hard rock, where guttering and gadding only is permitted." "Excavation in hard rock, where blasting is permitted with charges of powder not exceeding 2 inches in length and  $1\frac{3}{8}$  inch in diameter." "Excavation in hard rock, where blasting is permitted, with charges of powder not exceeding 4 inches in length, and  $1\frac{3}{8}$  inch in diameter."

Excavation in shafts and sumps "in more or less hard ground," subdivided under items—"Less hard excavation where, in the opinion of the Engineer, blasting is unnecessary." "Excavation in rock or hard shale, where gadding and guttering only are permitted." "Excavation in rock or hard shale, ironstone, &c., where blasting is permitted, with charges of powder not exceeding 2 inches in length, and  $1\frac{3}{8}$  inch in diameter." "Excavation in hard rock, where blasting is permitted with charges of powder, not exceeding 4 inches in length, and  $1\frac{3}{8}$  inch in diameter."

Excavations in shafts and sumps in "solid rock," subdivided under items—"Excavation in hard rock, where gadding and guttering only is permitted." "Excavation in hard rock, where blasting is permitted, with charges of powder not exceeding 2 inches in length, and  $1\frac{3}{8}$  inch in diameter." "Excavation in hard rock, where blasting is permitted, with charges of powder not exceeding 4 inches in length and  $1\frac{3}{8}$  inch in diameter," and "Excavation in road surfaces, sand, soil, pipeclay, soft rock only," where, in the opinion of the Engineer, blasting is unnecessary.

No guarantee is given as to the relative qualities and quantities of excavation, as shown on longitudinal sections, or which may be found under the abovenamed items of the schedule, and in the execution of the work: they shall be paid for at schedule rates as they occur. The contractor shall not be entitled to claim any compensation for loss or damage in consequence of any alteration, increase, decrease, or omission the Engineer may order in writing of any of the respective quantities under the abovenamed items.

68. The excavations for main sewer, branches, storm-water channels, &c., as before described, may therefore vary from those shown on drawings, but the exact cross-sections will be determined by the Engineer as the works proceed; and all excavations, whether in tunnel, shaft, or open trench, will be measured the net dimensions only of the various cross-sections so determined and ordered by the Engineer.

69. With the exception of all portions where open trenches are ordered to be excavated, a heading of 4 feet by 3 feet, exclusive of timbering, to be driven for all lines of pipes, not exceeding 24 inches in diameter. The timbering to be executed as specified in clause 114.

70. The excavation for tunnels is assumed to be sandstone rock, shale, ironstone, &c., varying in hardness and solidity, and less compact material. In strong compact rock,  $4\frac{1}{2}$  inches concrete and brick lining will be requisite; and, as the materials occur less compact, two or three rings of brickwork or brick and concrete lining, as shall be determined by the Engineer as the heading proceeds, may be required.

71. The excavations for the tunnels in rock, shale, or ironstone, to be taken out to the exact form of the tunnel, leaving just room for the lining ordered. Great care to be taken in gadding or in blasting the rock, shale, &c., so that no portion of the sides, soffit, or invert of tunnel be removed beyond the exact dimensions determined on. In no case shall the excavation be taken out in advance of the brick and concrete lining in excess of internal dimensions of sewer, until the thickness of the lining of the succeeding length has been determined by the Engineer.

72. All water which, during the progress of the work, may accumulate in these excavations to be properly, effectively, and continually pumped out, and the whole to be kept dry until after the completion, setting, and hardening of all brick and concrete work; and the greatest care to be taken to prevent running water passing over any of the brick, concrete, and pipe-work until it has set perfectly hard; any concrete, mortar, and cement jointing exposed to wash of water must be taken up at once, and replaced by fresh concrete, mortar, and jointing at contractor's expense.

73. Great care to be taken while timbering (as specified in clause 114) that no portion of end faces, sides, floor, roof, or front faces of excavation in open trench, tunnel, shafts, &c., be removed, or fall in, beyond the exact dimensions determined on; and the contractor to provide and execute at his own cost whatever may be required to prevent such removal or falling in of the excavation, and the wet or dry material surrounding the timbering from being shaken, running, or forced through the joints of the polling-boards and open spaces between the wedges which keep the polling-boards in position; and to provide and have constantly in readiness, close to where they are required, all appliances and materials such as straw, bags, asphalted felt, tarred gasket, puddle, &c., and with the same carefully and securely close up and pack against the outside of the timbering, all such joints and open spaces wherever they occur; and caulk open joints if so directed; and attend to, execute, and maintain the said timbering till completion of the sewer works to the entire satisfaction of the Engineer.

74. In advancing the end faces of excavation in open trench and tunnel, particular precaution to be taken by the contractor that such advance is made in a careful, secure, and safe manner, by means of shoring, planking, polling-boards, props, and wedges, together with all packing and caulking materials.

75. In withdrawing timbering from open trenches and shafts, the same shall be commenced from bottom of excavation, or as the Engineer may direct, from lowest practicable portion of same, and continued upwards; the contractor to exercise every precaution by means of intermediate shoring, planking, props, &c., and the filling in around and above sewer and shaft lining, to be carried on simultaneously with the withdrawing of the timbering.

76. Throughout the excavation and timbering of open trenches, tunnels, and shafts, the contractor to take all due precaution against accidents, &c., during the progress of the works, whether arising from insufficient strength of timbering, bad workmanship, breakage of machinery, and plant, inefficient caulking

or

or packing of open joints and spaces, flood, or any other cause whatsoever, as he shall be held solely responsible for all damage, injury, or loss that may be occasioned during the progress of the works to the buildings, bridges, railways, tramways, streets, and other surfaces, above and adjacent to the excavations, to persons employed by the contractor, by Government, or otherwise, and to his own or other works; and the cost of all such damage, injury, and loss, shall be valued at the time by the Engineer (whose decision shall be held final and binding on the contractor), and shall be deducted from any money or security held by the Government, and due to the contractor on account of his contract.

77. *Railway and Tramway.*—Before proceeding to open excavation underneath any railway or tramway, the contractor must give ample notice in writing to the District Railway or Tramway Engineer of his intention to commence operations; and he must adopt such precautions as the said Engineer may think necessary or prudent for the safety or preservation of the traffic over the said railway or tramway. The contractor will be held wholly responsible for all stoppage of traffic, delays, accidents, &c., that he or his men may cause, no matter how brought about, during the execution of the work under or near any railway or tramway.

78. The Railway Commissioners may, if they consider it advisable, place a watchman or watchmen on all work to be executed under or near any railway or tramway, for the purpose of seeing that no danger to the traffic is allowed to occur; but this shall not relieve the contractor of any of the responsibilities set forth in the foregoing clauses, and the expense of such watchman or watchmen is to be borne by the contractor.

79. If the contractor has exceeded the sectional area of excavation as ordered, in consequence of injudicious timbering, gadding, blasting, slips, falling in of sides of excavation, or any other cause, which in the opinion of the Engineer should have been prevented by careful gadding, blasting, timbering, pumping out water, diversion of water, or by any other means, then the contractor shall remove each extra excavation, and make good and fill in same at sides of trench with approved materials, and at bottom of trench with concrete described in clause 31, at his sole cost; the actual cubic contents only of the excavation and of the concrete work shown on drawings and ordered for each special length of sewer in open trench, shall be paid for; and as regards excavation in tunnels, the contractor shall remove such extra excavation, and make good and fill in same with concrete or brickwork, in the manner herein specified, at his sole cost; the actual cubic contents only of the excavation and of the brick and concrete work shown on drawings, and ordered for each special length of tunnel, shall be paid for.

80. If, however, in cases where the use of explosives is ordered (and in no other case), the Engineer considers it impracticable to excavate any particular length of tunnel, or shaft, to the exact sectional area ordered, then he may, according to the nature of the ground, allow a margin of concrete lining not exceeding 3 inches over and above that ordered.

81. If, under the written authority of the Engineer, any portion of the excavation in tunnel has been enlarged or widened out for timbering or other purposes named in such instructions, then the contractor shall fill in such excess of excavation with concrete or brickwork in the manner herein described, and the extra excavations, concrete, or brickwork so built in, shall be paid for at schedule rates.

82. If, under the written authority of the Engineer, any portion of the excavation of open trenches has been deepened, then the contractor shall fill in such deeper excavation with concrete, in the manner herein described, and the extra excavation, or concrete, so built in, shall be paid for at schedule rates.

83. In all cases where a greater thickness of lining, or a greater cross-section area of tunnel or shaft is ordered to be executed, from whatever cause, after the length of tunnel or shaft in question has been excavated to the profile ordered in the first instance, the excess of excavation so ordered shall be paid for at schedule rates for tunnel or shaft excavation as the case may be, and as the Engineer shall classify and direct at the time. If such extra excavation, in the opinion of the Engineer, shall require special timbering and shoring, the same shall be dealt with in strict accordance with clause 114.

84. No concrete or brickwork shall be commenced until the portion of sewer excavation in tunnel or open trench to be operated upon has been cleaned and levelled, and until the Engineer has examined and approved of same.

85. The price of one cubic yard of all excavations to include the cost of all haulage, labour, timbering, unwatering, tools, implements, plant of every description necessary for taking out and putting said excavation in the first instance aside in separate and temporary spoil-banks beyond actual site of works; while the price of one cubic yard of filling at the sides of main sewer, piers, abutment, concrete, and masonry, into abutment chambers, over main sewer, &c., and into all embankments, shall include the cost of all haulage, labour, tools, implements, and plant of every description, carriage from temporary spoil-banks, procuring additional soil, quarry filling, sand, or other materials, at his own cost, from sources, places, or land outside the limits of this contract, and carriage from said places, and filling in, ramming, watering, and completing all filling in strict accordance with plans and specification.

86. *Measurement of excavation refilling and spoil.*—The excavation throughout these works to be measured, the net dimensions only of the various cross-sections shown on drawings, or determined at the time by the Engineer, and, where timbering has been ordered, the net dimensions only to the outside of said timbering. Refilling shall include filling into above described excavations, and also filling in abandoned open channels, low grounds adjoining channels, into road and other embankments, &c., as specified, shown on drawings, and as ordered by the Engineer, and shall be measured, the net dimensions of same, less the actual displacement of any permanent works, in strict accordance with the cross-sections ordered by the Engineer as the works proceed. The whole of the surplus materials to be measured, the actual net excavations less the actual net refilling as ascertained in accordance with the foregoing stipulations.

The distance of lead shall be measured from top of shaft or end of open cutting to centre of spoil-bank or other place of deposit.

#### *Filling.*

87. The materials obtained from all excavations to be dealt with as specified in clause 54. When gravel has been excavated it may, with the sanction of the Engineer, be used in special cases for refilling; otherwise sand, clay, loam, pipe-clay, soil, and soft rock, of approved quality only, shall be used for refilling. Rock and stone, unless where ordered, are not to be used for refilling at any of the trenches. Sand only to be used in filling over sewer between copings on lines of aqueducts. If the approved materials obtained from all excavations prove insufficient for refilling into all excavations, and filling into embankments,

embankments, &c., then the contractor to find and provide whatever may be required of approved materials (as specified in clauses 52, 55, and 89, &c.), to complete the refilling and embankments, &c., from any sources outside the limits of this contract. The approved materials, as shall be directed, to be used in filling in the spaces between sides of excavation and of concrete and brickwork of sewers, shafts, over sewers on lines of aqueducts, and in open trenches, into headings, round concrete work or masonry of piers, abutments, foundation walls of buildings, approaches of aqueducts, filling in abandoned open channels, low ground adjoining channels, into road and other embankments, &c., as shown on drawings and as ordered by the Engineer. All filling, unless otherwise specified, to be brought up in level layers, spread 6 inches thick, each layer to be rammed (and watered if directed) until approved of before the succeeding layer is put on. This filling to be carried up to the surface of the ground, or to such other level or slope, &c., as may be directed at the time. The spaces between the excavation (poing-boards where there are such) and the brick or concrete work of sewer in tunnels, unless otherwise directed, to be filled in with concrete; this filling to be carried on as the construction of sewers and shafts proceeds, and as the Engineer may direct at the time. Embankments to be formed for road deviations, road crossings, and over main sewer, as shown on longitudinal sections, to be finished in horizontal layers 9 inches thick, after spreading, if directed, one layer of broken stone succeeding one layer of sand or soil, each layer to be well rammed (and watered when directed) until approved of before the succeeding layer is put on, with side slopes at an inclination of five horizontal to four vertical, with a top width over main sewer, or for road embankments, as shown on drawings, or as may be determined at the time; to be finished with such benches and curves as shall be directed. Only iron-shod rammers of not less than 10 lb. weight, of approved pattern, to be used, and one man to be employed in ramming to each man employed in filling.

88. *Refilling of Pipe-trenches.*—Unless otherwise directed, sand, clay, loam, pipeclay, and soft rock of approved quality only shall be used in refilling the spaces between sides of pipes, &c., and sides of excavation, and over pipes, &c. The refilling to be done in level layers, spread 6 inches thick (and watered when directed), each layer to be carefully and separately rammed as hereinbefore specified. The lower layers up to level of top of pipes to be carefully packed and rammed solidly under and at sides of pipes and socket-joints with spades or other narrow tools. The filling to be done, as above described, to such a distance below the level of the street, road, path, &c., as the case may be, to admit of the ballasting, metal, or other covering being replaced.

89. Where it is found necessary to carry the excavation deeper than the under side of concrete foundations, in order to obtain a compact solid bottom, the portion so excavated, where ordered, to be filled in to the underside of concrete foundation, or as may be directed, with good quarry filling and sand (which shall be provided by the contractor), in alternate level layers spread 6 inches thick, rammed and watered until approved. The price per cubic yard of such filling is to be 1 cubic yard of "filling in," as described in clauses 85 and 86.

90. *Trimming.*—On completion of all embankments and cuttings, spreading, levelling, and filling over main sewer, &c., all top surfaces and slopes to be dressed and trimmed off to the specified inclinations and surfaces, and to such other inclination and slopes and surfaces as may be directed at the time, and all materials accumulating after trimming and levelling top surfaces and slopes, &c., shall at the completion of the works be removed, carted away, or spread about, as may be directed by the Engineer; and the schedule rates for filling and excavation shall include and cover all costs for trimming, dressing, spreading, levelling slopes and other surfaces, and of removing, carting away, or spreading about all superfluous accumulations at the conclusion of contract.

91. *Sodding.*—On completion of embanking and filling over main sewer, and where ordered, all top surfaces and slopes to be protected by sodding. Wherever directed, the surfaces to be sodded are to be boxed out the widths and depths required for the reception of turf-lining. The materials boxed out to be dealt with as provided in clause 90. The sods to be the best obtainable within a radius of 5 miles, of approved quality, not less than 3 inches in thickness and 10 inches square, full cut, with square arrises, to be laid in approved bond on their flat beds, close-jointed over all top surfaces of filling or embanking, to be beaten down as the work proceeds with proper tools, as shall be directed, and when finished to present throughout perfectly smooth and plain surfaces. If the season requires it, the turfing to be properly and regularly watered to ensure the grass taking fresh root. The boxing out and turfing to be carried out simultaneously, and no greater area to be boxed out at any time than what can be covered with turfing during two working days.

92. *Soiling and Sowing.*—All slopes of embankments, cuttings, and filling, after they have been trimmed, to be covered, when directed, with a layer of surface soil, as far as such is provided for in clause 51, to be carefully rolled, and when finished to be of a thickness of not less than 3 inches. All slopes, soiled or not soiled, of embankments, cuttings, or filling (where not sodded), after they have been trimmed, &c., and when ordered, to be sown with couch grass seed, as shall be directed, and to be rolled afterwards.

93. *Road Restoring.*—After the filling-in of sewer-pipes, trenches, and shafts has been consolidated and approved, as specified, the surface of roads, streets, paths, &c., to be at once restored in the manner hereafter described, viz., in the case of roads or streets which are ballasted and metalled, 9 inches of ballast shall be laid thereon, and after this has been blinded with selected and approved material, the metal put aside, as specified in clause 51, shall be evenly spread and rammed, until approved; in the case of roads or streets which are ballasted only, 9 inches of ballast shall be laid thereon, and blinded with selected and approved material; and in the case of other coverings, the surfaces to be restored to the same condition as they were before the commencement of the work. Any additional ballast which may be required, over and above that found on the site of the excavation, and referred to in clause 52, to be supplied by the contractor, and the cost of same to be included in schedule items for filling. If, however, in the opinion of the Engineer, sufficiently hard rock is excavated from the tunnels, shafts, and open cuttings, the contractor to be allowed to break rock to a 4-inch gauge, as specified in clause 21, and use same for restoring road surfaces.

94. The wood pavement and layer of concrete underneath, which during the progress of the contract (as referred to in clause 52), at sites of shafts and open trenches had to be taken up and removed, shall, as the works proceed, when directed, be replaced by the City Surveyor at 24s. per square yard at the contractor's cost, on receiving in each case three days notice from the contractor. The contractor to include the cost of restoring all wood-paving on concrete foundation in the manner herein specified, in his schedule prices for excavation and refilling.

95. *Cleaning Streets.*—Immediately the pipes are laid, or concrete and other work in connection with shafts, manholes, lamp-holes, &c., are executed, and the ground filled in over same in any length of sewer, it is to be distinctly understood that all surplus material is to be carted away, the road cleaned until approved, and the road and other surfaces to be made good, flush with surrounding surfaces of roads, paths, &c., to the satisfaction of the municipal authorities and the Engineer, in accordance with the specification, and if the contractor fails to do this, the Engineer shall be at liberty, without further notice, to get the roads cleaned, and the road and other surfaces made good at contractor's cost.

96. *Maintenance of Streets.*—The contractor shall maintain the surface of the roads, streets, &c., after the excavations have been filled in, where the streets, roads, &c., have been broken up or injured during the progress of the work, during the period of the contract time, and afterwards during the period of maintenance, and shall from time to time make good any sinkings in the surface, and shall provide any additional metal, ballast, or other material that may be necessary during these periods, in accordance with clauses 6 and 7.

#### *Shafts.*

97. Shafts are to be sunk at the various sites shown on longitudinal sections and on general plans, or in lieu of those shown on plan, at such other sites as the Engineer from time to time may determine. Wherever shafts are ordered, they are to be sunk truly plumb, and of the full dimensions, 6 ft. x 5 ft. sectional area, 6 ft. x 5 ft. 6 in., 7 ft. x 6 ft., 12 ft. x 5 ft., 18 ft. x 8 ft., or of such other sizes as may be ordered at the time, clear of timbering; the latter to be provided and fixed wherever considered necessary by the Engineer, in strict accordance with clause 114. On completion of concrete, brickwork, &c., in shafts, the space between the rock, shale, and earth sides and outer face of brickwork or concrete to be filled in in 6-inch layers, well rammed (and watered where directed) with materials provided for in clause 54; great care being taken in lowering the materials to the bottom of each respective layer, so that stones do not fall on top or against sides of pipe-shafts, brick or concrete lining, that stones, when directed, are put in in alternate layers with the earth or clay, and that at least 12 inches of earth be placed nearest and round the pipe-shafts, brick or concrete lining, well rammed.

98. For all shafts situated within the lengths, where ordered, of open trenches or cutting, the cost of excavating same, and afterwards filling in round brick and concrete work, is included in the cost of excavating and filling in open cuttings.

99. Shafts not required as manholes or ventilators, but ordered by the Engineer, to have, on completion of contract, or when directed, all timbers withdrawn; and they are at the same time to be carefully filled in as specified in clause 97, with material provided for in clause 54. The sinking, filling in, &c., of such shafts to be paid for at schedule rates.

100. *Temporary Shafts.*—If the contractor desires, to suit his own convenience, to sink temporary shafts, they are to be sunk only at approved places, and on completion of work to be filled in, as specified in clause 99, to the satisfaction of the Engineer. The cost of sinking, timbering, unwatering, &c., and of filling in, withdrawing, or covering up timber of such shafts, to be defrayed entirely by the contractor.

All temporary shafts to be sunk of the dimensions specified, or directed, clear of timber.

101. All shafts, temporary, or permanent, to be provided and fitted during their construction and completion, or during the progress of the contract, if deemed necessary by the Engineer, with approved winding engines and steel-wire ropes capable of resisting a strain equal to six times that of the working maximum strain, or with such other winding arrangements, ladders, staging, &c., as shall be directed and approved of by the Engineer.

#### *Sumps.*

102. Unless otherwise directed, sumps are to be sunk at the bottom of every shaft, not less than 6 feet deep below invert of sewer, and on completion of the works to be filled in with concrete, as specified in clause 31. Were sumps ordered to be sunk, the cost of sinking and filling same in with concrete to be paid for at schedule rates, and the removal of the excavated material to be paid for as lead.

103. Any other sumps which the contractor may think fit to sink on line of sewer, in tunnel, or in open trenches for his own convenience during the construction of these works, are to be filled in with concrete, as specified in clause 31, and the cost of sinking, timbering, unwatering, and filling in with concrete and removing the materials, &c., to be defrayed entirely by the contractor.

#### *Sub-ducts.*

104. Sub-ducts to be constructed, when decided on, along lines of tunnels and open trenches commencing on each length midway, or thereabouts, between two working shafts or faces, 33 inches below invert of main sewer, branches, &c., or as shall be directed at the time, and having a fall towards each working shaft, or face of such gradients as may be determined at the time, after the thickness of sewer-lining required for each length between shafts or faces has been ascertained and ordered. Sub-ducts of 9 inches, or of a greater or less internal diameter, if directed, to be laid immediately underneath the timber floor of tunnel or open trench, or at sides of sewer, in hardwood boxes varying in size and dimensions as shown on drawing. Said boxes to be laid straight and true to levels decided upon, and the pipes to be laid therein, upon, and surrounded by sandstone chippings and quarry refuse. Dry stone packing to be put over pipes, as specified in clause 21.

105. In solid and disintegrated rock the excavation for sub-duct to be executed as shown on cross-sections, and as shall be directed, and the sub-duct to consist of glazed stoneware spigot and faucet pipes of 9 inches internal diameter, more or less, as the case may be. The pipes to be jointed dry, and the filling above same up to underside of sewer lining, to be of dry stone, hand-packed, as above described. The Engineer may also, if he deems it necessary, order the pipes to be jointed altogether, or in part with tarred gasket,  $1\frac{1}{2}$  inch deep, and cement mortar,  $1\frac{3}{4}$  inch deep. The mortar to be prepared of one part cement to two parts of sand.

#### *Rock-boring, progress of Excavation, &c.*

106. Unless otherwise directed, the excavation of the various tunnels to be commenced from the different faces, described in the specification, simultaneously within the specified time after the date the contract has been signed.

The excavation of the various tunnels and open trenches to be carried on and continued without interruption, and to be completed in the most accurate manner in strict accordance with clauses 65, 66, and 67.

Night-shifts,

Night-shifts, between the hours of 10 p.m. and 6 a.m. can only be worked on receipt of a written permission, conditional or otherwise, to that effect from the Engineer, who, however, may withdraw such permission at any time in the same manner.

Blasting to be carried on by means of compressive air, percussive, or other rock-drill of approved pattern and manufacture, capable of excavating as each working face not less than 12 feet length of tunnel during every working week.

If required, all charges to be fired by means of electric fuse.

Approved blowing machines, with ventilating fans, &c., complete, capable of removing the foul air in one minute immediately after blasting at each working face of tunnel, to be provided, erected, and worked by contractor at all working shafts and tunnel faces where directed by the Engineer.

107. The excavation of shafts, where permitted to be sunk, and where sunk in rock and other ground to be executed in the same manner as specified for tunnels and open trenches in clauses 65, 66, and 67, and by means of the same appliances and machines as those specified to be used at the driving of the tunnels.

108. The whole of the excavations of tunnels and open trenches for sewers and storm-water channels, when ordered, to be executed with sumps and sump-ducts as above specified, and the tunnels to be commenced in the different lengths between working shafts, and to be carried on in each length from each end simultaneously, and the open trenches, unless otherwise directed, to be commenced in each length from each end simultaneously, and to be carried on in such a manner that the excavation on each end shall always be completed and approved of for a length of 40 feet in advance of the concrete, brickwork, &c., and that the total progress made on each working end during every working week shall not be less than 20 feet of open trench excavation complete.

*Existing Gas, Water, or Sewer Pipes, and Sewers.*

109. During the excavation and construction of these works, the contractor is to take every precaution to prevent damage or injury to existing gas, water, or sewer pipes, and sewers. Such pipes and sewers on being met with at sides, over, or crossing the excavations of these works, to be carefully and securely protected and supported, as the case may require, by chains, timbering, strutting, and underpinning, &c., to prevent said pipes or sewers from being shaken, bent, or broken, and the contractor to provide all materials, plant, and labour required for said timbering, strutting, and underpinning, &c., and maintain the same at his sole cost, until, in the opinion of the Engineer, the refilling of excavation and the general progress of the works render further precaution unnecessary. All damage to existing water, gas, or sewer pipes and sewers, to be repaired at once by contractor at his own cost, to the satisfaction of the Engineer.

*Sinking Cylinders for Piers, Buildings, &c.*

110. The cylinders for piers, buildings, &c., to be bolted up in the necessary lengths, to be accurately placed in position, lowered, and sinking proceeded with by weighting as long as cylinders continue to go down, the tops finishing at same level. As the cylinders are sinking into the ground the materials inside to be removed by such excavating appliances as may be approved. On completing the excavation of each cylinder down to the solid rock, the water to be expelled by pressure of air or other approved method, and on having ascertained the cylinders to be perfectly true in position and plumb, the bottom to be thoroughly cleaned and levelled, after which the concrete, as specified in clauses 156 to 182, to be filled in and walled up for the first 6 feet under air pressure, or as shall be directed, till twenty-four hours after having deposited same in position. Above this level the cylinders to be filled in with concrete, as specified, to level of top of cast-iron cap.

*Sinking to greater depths.*

111. The sinking of cylinders to be continued, if required, to greater depths than shown on drawings; such additional depths to be paid for at schedule rate, which is to include all charges, except cost of extra lengths of cast-iron cylinder. A corresponding deduction to be made if secure foundations are obtained at lesser depths.

*Rock, &c., in Cylinders.*

112. If rock, boulders, dead logs, &c., are met with in an irregular manner, or at one side, while sinking cylinders, the air-lock, or other approved method, must be applied, and the rock, boulders, dead logs, &c., removed, so as to ensure the cylinders to sink plumb and to rest on a perfectly flat and solid bottom; no powder or other explosives to be used in the removal of such obstacles. The sinking to be proceeded with as soon as possible after delivery of ironwork, as specified in clause 214, to ensure the erection of bridges, &c., without delay.

*Fitting lengths of Cylinders.*

113. The sinking to be so adjusted that, with the aid of fitting lengths, to be provided and cast at schedule rate, the tops of cylinders to be exactly up to the levels shown, as the wrought-iron bracing must be fixed precisely as shown on drawings.

*Permanent and Temporary Shoring, Timbering, Piling, Bridges, &c.*

114. *Shoring, Timbering, Piling, Temporary Bridges, &c.*—During the excavation for sewers, buildings, piers of aqueduct, abutments, storm-water channels, shafts, cast-iron cylinders, &c., the contractor to adopt every precaution, and provide all materials, as planking, strutting, shoring, timbering, piling, sheet-piling, all packing materials, as straw, asphalted felt, bags, tarred gasket, puddle, &c., and all labour, and carefully execute, at his own cost (unless where otherwise specified), all piling, sheet-piling, &c., as shown on drawings, and where ordered, and wherever considered necessary by the Engineer, and to his entire satisfaction, all sheet-piling, temporary scaffolding, staging, bridges (over rivers, creeks, water-courses, and open drains, underneath lines of railways, tramways, streets or footpaths, so as to ensure during the period of the contract the undisturbed traffic and flow of water as the case may be in all channels, drains, water-courses, creek, or river, and the undisturbed traffic along all railways, tramways, streets, &c.), and strong shoring, and in sandy, water-charged, or loose soil, close timbering, piling, and sheet-piling, and provide all appliances, and have all packing materials, as above enumerated, close to where they are required, and with the same carefully and securely close up and pack against the outside  
of

of the timbering all joints and open spaces between poling-boards, sheet piles, or wedges, wherever they occur, and caulk open joints where directed, and execute whatever may be required to prevent any buildings, or other superstructures, road and other services over and adjacent to the line of sewer, from settling, cracking, being shaken, slipping, or falling in, and to prevent any portion of the floors, sides, roofs, and end faces of excavation, beyond the exact cross sections and dimensions determined on, from slipping, falling, running in, or being forced through joints and open spaces in the timbering and sheet-piling, and maintain said timbering, piling, shoring, temporary bridges, &c., where and when directed, till completion of the works, to the entire satisfaction of the Engineer.

115. As the works proceed, all shoring, timbering, staging, temporary bridges, piling, sheet-piling, &c., shall be withdrawn, excepting all permanent timbering, planking, and piling below abutments, piers of aqueduct, storm-water channels, buildings, sewers, &c., as shown on drawings where ordered under other works, and in all other cases where, in the opinion of the Engineer, the withdrawing of the same is impracticable, or would endanger the safety of the works, buildings, streets, and other surfaces over and adjacent to the works, when the contractor must obtain an order in writing, signed by the Engineer, to the effect that piling, sheet-piling, shoring, timbering, &c., may be covered up.

116. The net quantities of all permanent timbering, planking, and piling below abutment, piers of aqueduct, storm-water channels, buildings, sewers, &c., as shown on drawing, and where ordered under other works, and all other shoring, timbering, piling, sheet-piling, which the Engineer has ordered to be covered up, shall be ascertained by measurement before any timbers are covered up, and paid for at schedule rates, which shall cover and include the cost of all timber, iron used in fixing same, wrought-iron shoes for piles, packing material, carriage, and all appliances and labour, complete, as fixed in position in the works.

117. The measurements to be taken to ascertain the net quantities of temporary and permanent timbering, planking, shoring, staging, sheet-piling, piling, shall be as under, viz.:—For all hewn and sawn timber in temporary shoring, staging, piling, sheet-piling, and timbering, ordered to be covered up, or, in permanent piling, wedges, planking, platforms over piles below piers of aqueducts, under storm-water channels, in bridges, buildings, sheet-piling, &c., as shown on drawings, and where ordered, in any situation in the construction of these works, the width multiplied by the depth and the actual length (tenons included), fitted, framed, and fixed in the works, shall be the net measurement. For all round timber used in temporary staging, shoring, timbering, and piling, but ordered to be covered up, the diameter given is to be measured, exclusive of bark, at the smallest end, and the area of such diameter multiplied by the actual length fixed in the works, shall be the net measurement. For all permanent piles under piers of aqueducts, storm-water channels, buildings, in bridges, &c., as shown on drawings, and where ordered, in any situation in the construction of these works, the diameter given on drawings or otherwise ordered, to be measured, exclusive of bark, at the smallest end of pile, and the net measurement shall be the actual number of lineal feet (tenons included) of each such pile as placed in position driven, and fixed in the works.

#### *Piling, Timbering, &c.*

118. The probable extent and quantities of piling is shown on longitudinal sections of works, and in the schedule of quantities and prices, but no guarantee is given that these quantities will correspond with those actually required. They may be more or less, as the actual quantities required can only be ascertained during the progress of the excavations, and as the trial piles are sunk.

119. *Delivery and Stacking Timber, &c.*—The whole of the timber which, in the opinion of the Engineer, is required for each part of the various works, or for such portion of the same as he may determine at the time, shall be cut and delivered barked on the ground prior to contractor commencing the excavation of such part or portion of said work. All timber when brought on the ground to be at once properly and carefully stacked on even plain surfaces, and all timbers to lay perfectly straight in the stacks; all timbers bent, split, unsound, or objected to on other grounds by the Engineer, shall be removed by the contractor from the ground within twenty-four hours after such objections have been made known to him, and if he neglects to do so they shall be removed without further notice by the Engineer at contractor's cost; all rejected timbers to be marked by a brand or axe-mark.

120. *Dimensions of Timbers.*—All timbers required and delivered for each respective part of works to be, when dressed, pointed, placed, and fixed in position, of the various lengths and dimensions indicated and shown on the drawings referring to such works, or of such other dimensions which the Engineer may deem suitable for the works; all holes for screw-bolts, drift-bolts, spikes, nails, &c., to be bored with the exact augers, and all mortise holes and tenons to be cut so as to fit exactly.

121. *Pointing Piles.*—All square or round piles shall be sharpened (pointed) at the lower end, the sharpened sides of which being cut to a batter of 1 to 6, finished at lowest end with a flatter diamond-cut point, as shown on drawings; the lowest point to be exactly in the straight line of the true axis of the pile, and the sharpened sides to be cut true to the axis of pile to prevent same from twisting and slanting when being driven.

122. All lower ends of sheet-piles to be sharpened on one side only to an inclined edge as shown on drawings, and as shall be directed, to ensure the pile when driven to drift towards the pile last driven; all sheet-piles of the same length and thickness within each respective panel to have their ends sharpened exactly the same as regards length of cut surface and inclination of bottom edge.

123. *Dressing Piles.*—All round, square, and sheet-piles to be straight-grown timber, and, before being driven, all square, angle, and guide-piles to be faced truly straight on the sides against which sheet-piles are to be driven and finished as shown on plans; all round piles for staging across rivers, against which planked sides for concrete filling are to be fixed, to be finished with a straight adzed face the depth required for reception of said planking.

All sheet-piles to be perfectly parallel, and, before being driven, to be truly faced and fitted to each other within each panel (between each pair of guide-piles), as shown on drawings, forming a straight close joint.

124. *Iron Rings and Shoes.*—All round and square and sheet piles, to prevent them from splitting when being driven, are to be hooped with wrought-iron rings at the top, such rings to be of not less than 2-in. x 1-in. iron for the square and round piles, and of not less than 2-in. x ½-in. iron for the sheet-piles; stronger rings to be provided and used when directed. All piles are to be pointed, as hereinbefore described, and where driven into hard ground, when directed and ordered, the points to be protected by wrought-iron

wrought-iron steel-pointed shoes, weighing, except where otherwise directed, 28 lb. each for the main and guide piles, and 8 lb. each for the sheet-piles. All shoes to be provided and made of such shape and workmanship as the Engineer shall approve of. They are to be carefully and truly fitted and fixed on to points of piles, and the lowest points of shoes for the round and square piles to be fixed exactly in a straight line with the axis of each pile.

125. *Staking out Lines and placing Piles.*—The exact lines and positions of all piles on land and in water, across rivers, at ends of storm-water channels, or, where ordered, in any situation in the construction of these works, shall be carefully and correctly ascertained and staked out by the contractor, to the satisfaction of the Engineer; and all stakes fixed in water or river-beds to extend above high-water level before any piles are placed and driven. After the staking out, piles to be placed vertically, truly plumb, or to such batters as may be directed, in their respective positions, between guide-wales provided and fixed on scaffold-staging which supports the pile-engine. All sheet-piles to be placed, truly plumb, between each pair of guide-piles, and lowered into their respective positions between two walings, as shown on drawings, fitted and fixed on both sides of guide-piles.

126. *Pile-driving.*—After the excavations for the various foundations have been completed, timbered, and approved, the pile driving as indicated on drawings, or where ordered, to be proceeded with as, viz.:—Prior to commencing the driving of piles at the various sites shown on drawings, in order to ascertain the lengths of same required for the foundations of the different piers and abutments, contractor to drive trial piles, in the manner specified hereinafter, in positions required for permanent purposes, one for each alternate pier, or as shall be directed. After the different lengths of piles required for the works have been in this manner ascertained, the permanent piles to be placed in their exact positions, and then to be driven perfectly plumb (or to any batters directed) into the ground, to the various depths indicated on drawings, or to such greater or lesser depths as the Engineer may direct during the progress of the works.

127. Long piles from 25 feet and upwards, of 12 inches and greater diameters, to be driven with a ram weighing from 20 to 30 cwt., having a drop over head of pile, after the latter has been placed in position, of not less than 5 feet, the drop, as shall be directed, to increase in height as the pile is driven. Any pile driven with a ram of 20 cwt. or more, as the case may be, falling 10 feet, to be driven until at the last strike it does not drive more than the specified depth; and any pile not standing this test to be drawn when ordered, and to be replaced by a longer pile. Shorter piles may be driven with a ram of less weight than 20 cwt., but in due proportion to the weight of the pile, and the weight the pile has to carry, as shall be directed. When rams of lighter weight are used over shorter piles, sheet-piles, &c., the height of drop to vary from 12 to 18 feet, as the Engineer shall direct.

128. All piles to be pitched at contractor's cost, of such lengths as will ensure good sound heads at the levels shown on drawings, or as may be given at the time by the Engineer. Tenons, 8 in. x 4 in. x 6 in. deep, to be neatly cut on pile-heads. Any pile which may be too short, or which may have been driven out of plumb, or out of the stipulated batter, or which may split below the level of the required height or otherwise when driven, to be at once drawn, and to be replaced by a sound pile, driven plumb, or battered, as the case may be, of the required length, at contractor's cost. The contractor must be careful not to pitch any pile which he is not satisfied will be long enough. Scarfing of piles is not permitted. The driving of piles to be commenced and carried on in such order of works as specified, and as shall be directed.

129. Where close piling is shown on drawings, all angle-piles and guide-piles to be driven first, after which the upper guide-wales are to be fitted and fixed on to heads of main piles, and then the whole of the sheet-plates of each panel, after being prepared and fitted, to be lowered and placed into position, with their lower ends into the mud, between each pair of guide-piles, after which they are to be driven each a few feet, more or less, at the time, so as to be driven to the specified depth with each other, thus completing the sheet-piling of each panel, one after another, unless otherwise directed.

130. *Timbering, Framing, Staging.*—As the sheet-piling and excavation between same proceeds, the lower guide-wales to be fitted and fixed together with all transverse, diagonal, and angle struts, as shown on drawings, and with such additional and intermediate struts as the Engineer may deem necessary during the progress of the works.

Capsills to be accurately mortised, placed upon bearing-piles, and to bear truly on pile-heads. Transverse sleepers, spaced as shown, placed upon capsills, halved out  $1\frac{1}{4}$  inches deep at points of intersection, and planks to be laid and close-fitted between sleepers upon the capsills. Sleepers and planks to be secured to capsills with wrought-iron  $\frac{1}{2}$ -inch square 9-inch spikes.

131. *Lewisings.*—Where piles are shown to be driven through soil overlying rock, and lewising has been specified or ordered, the ground for each pile to be excavated the depth shown on drawing, or to such greater or lesser depth as will, in the opinion of the Engineer, ensure the lewis-shaped hole being cut in solid rock, with its bottom, sides, and ends carefully rough-tooled to exact lines and dimensions. Wedges of well-seasoned hardwood, accurately shaped, to be then inserted, with their bevelled faces fitting as close as possible against the tapered side of hole. Foot of pile to be then stepped between the two hardwood wedges, in the exact position, and the whole driven tight home with a ram of approved weight, until foot of pile is perfectly rigid. Piles to be secured to projecting heads of wedges with screw-bolts, as specified.

Where square holes are directed to be sunk in solid rock for feet of piles, they are to be sunk of the dimensions and depths ordered, after which the feet of piles to be stepped into same and the spaces between foot of pile and rock sides of hole to be filled in with cement grout. On completion of lewising, the trenches to be filled in with the material excavated in 6-inch layers, well rammed.

#### *Carpenter's and Joiner's Work.*

132. The whole of the carpenter's and joiner's work for floors, door frames, doors, stairs, window frames and sashes, plates, uprights, girders, planks, working platforms, railings, &c., to be of the best well-seasoned approved sawn ironbark, or of the best Baltic or yellow deal, as the case may be, of the quality specified under clause 35, and as shall be directed, and of the best workmanship, to be framed, fitted and fixed, finished, cleaned off, rough parts sand-papered (where directed), and completed in the best possible manner, in strict accordance with drawings and measurements indicated and dimensions figured thereon, with all necessary nails, spikes, screw-bolts, drift-bolts, wood-screws, coach-screws, wrought-iron straps, stays and other fastenings of the best quality and approved workmanship. All

holes for bolts, spikes, nails, &c., to be bored with the exact augers, and all mortise holes and tenons, &c., to be cut so as to fit exactly, to prevent timbers from splitting. All timber split during the progress of the work and its term of maintenance to be at once replaced by sound timber. All scantlings requiring scarfing in places are to be joined together as shown on sections, and as shall be directed; all scantlings supporting floors, railings, &c., to be scarfed together only over approved supports.

#### *Sheathing.*

133. As soon as capsills are in position, the landward side of abutments to be sheathed with 4-inch sawn hardwood planking from at least 1 foot below natural formation to underside of capsill; the sheathing to be secured to piles and wings by  $7\frac{1}{2}$ -inch spikes,  $\frac{5}{8}$  inch diameter, two at each intersection.

#### *Ordnance Fencing.*

134. Ordnance fences to be provided, framed, fitted, and erected where ordered, of sawn hardwood timber, unless where otherwise specified, as, viz. :—Posts 6 in. x 4 in. x 6 ft. 6 in., top rail 4 in. x 4 in., intermediate and lower rails 4 in. x 3 in. Posts spaced 6 ft. 6 in. from centre to centre, sunk, in rock not less than 18 inches, and into other ground not less than 2 ft. 6 in. deep. On road embankments, where ordered, posts to be 7 ft. 9 in. long, mortised into sill 9 inches diameter x 5 feet long, secured by 1-inch diameter hardwood tree-nail, stayed to posts by 4-in. struts, secured to posts and sills by  $\frac{5}{8}$ -inch screw-bolts and  $\frac{5}{8}$ -inch diameter spikes  $7\frac{1}{2}$  inches long. Angle and end posts, 10 inches diameter at smallest end x 8 feet long, to be sunk 3 feet deep in the ground, mortised 6 inches deep for reception of ends of rails. Tops of round posts to be protected by caps of 6-lb. sheet lead, secured to posts by lead-headed nails 2 inches long and wrought-iron 2-inch x  $\frac{1}{4}$ -inch rings, secured each by four 3-inch wood-screws. Sawn posts to be notched at top for reception of top-rail and halved out for reception of intermediate and lower rails, spaced as shown. Top rail to be laid aris uppermost into notches, secured to posts with 2-inch by  $\frac{1}{2}$ -inch hoop-straps and four 2 inches long wood-screws to each strap. Intermediate and lower rails to be fitted flush with inner faces of sawn posts, and secured to each with two 4-inch wood-screws. All sawn timber above ground to be planed, all scarf-joints of rails to be made as directed, over posts only, and all sills, struts, and ends of posts underground to be charred thoroughly. The ground round posts to be well rammed, and the clearing spaces round ends of posts stepped in rock holes to be carefully filled in with cement grout.

#### *Split Hardwood Two-rail Close-paling Fence.*

135. Split hardwood two-rail close-paling fence to be provided, framed, fitted, and erected where ordered, as, viz. :—Angle-posts to be straight, not less than 10 inches diameter at smallest end, x 8 feet long, to be placed at all angles and ends, and sunk 3 feet in the ground. Common posts to be straight split, 9 in. x 3 in. x 7 ft. 6 in. long, spaced to admit of two panels to the rod, and sunk 2 ft. 6 in. in the ground. Ends of all posts, where underground, to be thoroughly charred. Wherever directed, posts to be mortised into 9 inches diameter x 5-foot sills, stayed by 4 in. x 3 in. struts, secured to posts and sills x  $\frac{5}{8}$ -inch screw-bolts, and  $\frac{5}{8}$ -inch diameter x  $7\frac{1}{2}$ -inch spikes. In rock, angle and end posts to be squared and sunk 1 ft. 6 in. deep, and common posts to be squared and sunk 12 inches deep, and to be run in with cement grout. Sills and struts to be well charred. All posts to be carefully mortised with a 2-inch auger, and all mortise holes to be 8 in. x 2 in. in the clear. Upper mortise-holes to be 6 inches below top of posts, and lower mortise-holes to be 9 inches above surface of ground.

Rails, clearly split and straight, 8 in. by  $2\frac{1}{2}$  in., to be of length to admit of two panels to the rod. Ends of rails to be truly adzed and dressed so as to fill mortise-hole exactly (no wedges being allowed), to overlap the posts, where passing each other in the mortise-hole, not less than 2 inches. The earth to be well rammed round posts at fixing same, to be rammed again from time to time, and at completion of work, so as to leave the posts firm in the ground.

Palings to be clearly split, straight, stout, of fairly uniform thickness; to be 5 feet long and 6 inches wide; to be placed plumb, close-fitted, on outside of fence; heads level with tops of posts, bounded on the outside with 1-in. x  $\frac{1}{8}$ -in. full galvanised hoop-iron, laid over centre line of rails, and secured to same with  $1\frac{1}{2}$ -inch galvanised wrought-iron clout-nails, one to each paling, at each rail.

Slip-panels, 10 feet wide, to be provided where directed; posts for slip-panels to be of the same length, diameter, and description as angle-posts; to be mortised for slip-rails as shall be directed. Where the fence has to cross creeks, the panels to be of the length directed. Rails for slip-panels and creek crossings to be of the same depth and thickness as common rails, but to be of the exact lengths required for these places, and to be braced, where crossing creeks, diagonally and vertically on both sides of fence, as shall be directed.

#### *Split Hardwood Fence.*

136. *Split Hardwood Three-rail Fence* to be provided, framed, fitted, and erected where ordered, as, viz. :—Angle-posts to be straight, not less than 10 inches diameter at smallest end x 8 feet long, to be placed at all angles and ends, and sunk 3 feet in the ground. Common posts to be straight split 9 in. x 3 in. x 7 ft. 6 in. long, spaced to admit of two panels to the rod, and sunk 2 ft. 6 in. in the ground. Where directed, posts to be mortised into 9-inch diameter x 5-foot sills, stayed by 4-in. x 3-in. struts, secured to posts and sills by  $\frac{5}{8}$ -inch screw-bolts and  $\frac{5}{8}$ -inch diameter x  $7\frac{1}{2}$ -inch spikes. In rock, angle and end posts to be squared and sunk 1 ft. 6 in. deep, and common posts to be squared and sunk 12 inches deep, and to be run in with cement grout. Ends of all posts, sills, and struts, where underground, to be thoroughly charred. All posts to be carefully mortised with a 2-inch auger, and all mortise-holes to be 8 in. x 2 in. in the clear. Upper mortise-holes to be 6 inches below top of posts, lower mortise-holes to be 9 inches above surface of ground, and the centre of mortise-holes to be spaced at equal distances between the two. Rails clearly split and straight, 8 in. by  $2\frac{1}{2}$  in., to be of lengths to admit of two panels to the rod. Ends of rails to be truly adzed and dressed so as to fill mortise-holes exactly (no wedges being permitted), to overlap the posts where passing each other in the mortise-hole not less than 2 inches. The earth to be well rammed round posts at fixing same, to be rammed again from time to time, and at completion of work, so as to leave the posts firm in the ground, upright, in the exact lines, and as shall be directed. Slip-panels, 10 feet wide, to be provided where directed, posts for slip-panels to be of the same length, diameter, and description as angle-posts, to be mortised for slip-rails as shall be directed. Where the fence

fence has to cross creeks, the panels to be of the lengths directed. Rails for slip-panels and creek crossings to be of the same depth and thickness as common rails, but to be of the exact lengths required for these places, and to be braced, where crossing creeks, diagonally and vertically on both sides of fence, as shall be directed.

*Split Two-rail and Wire Fence.*—Split posts in embankment to be 8 in. x  $2\frac{1}{2}$  in., mortised, where directed, into a sill 9 inches diameter x 5 feet long, and supported by two 4-in. x  $2\frac{3}{4}$ -in. struts, to be secured to posts and sills by  $\frac{3}{8}$ -inch bolts and  $\frac{1}{8}$ -inch spikes  $7\frac{1}{2}$  inches long, as shown; where embankments are less than 2 feet high, split posts to be sunk 2 feet in the ground, or squared and sunk 1 foot into rock, as may be required; the earth round posts to be well rammed; posts in rock to be run in with special mortar. Corner or end posts, 12 inches diameter, to be sunk 2 ft. 6 in. in the ground, or squared and sunk 1 ft. 6 in. into rock, as may be required; the earth round posts to be well rammed; posts in rock to be run in with special mortar. Top rail to be 7 in. x 2 in., lower rail to be 8 in. x 2 in. each x 9 feet long. Tenons at ends of rails to be 6 inches long, adzed carefully to fit into 6-in. x 3-in. mortises, shouldered square with the saw, and finished so as to butt close up to posts. Black fencing wire, No. 4 gauge, to be placed between rails, to pass through holes bored in posts, and to be properly strained in position. Posts to be set uniform and upright, and fencing to be erected to a true line at top, and not to follow the lesser irregularities of the ground, and all timber under or in contact with the ground to be charred thoroughly.

#### *Road-making.*

137. The different roads shown on drawings, leading under, over, and at sides of the line of sewers, storm-water channels, &c., and across the resumed land on either side of same, are to be formed on embankments, in cuttings, and as level crossings, as the case may be. Said roadways to be constructed 30 feet wide between edges of slopes, whether on embankments or in cuttings, and in either case the slopes, unless otherwise directed, to be trimmed to an inclination of  $1\frac{1}{2}$  horizontal to 1 vertical. The longitudinal gradients of approaches to be at an inclination of 1 in 20, or as shall be directed. The formation width of roadways to be formed with a convex curvature, the centre line of which to be 6 inches higher than the edges.

138. After the sites for road cuttings, embankments, or level crossings have been grubbed and cleared, the various cuttings, where ordered, to be excavated to the exact depths, gradients, and inclinations directed, and the materials obtained from each excavation to be dealt with as provided in clauses 47, 51, and 54.

139. All road embankments to be formed and carried up to the exact heights, widths, gradients, and inclinations, as specified in clause 87, and as shall be directed; and the whole traffic to be well distributed, and to pass over each succeeding layer as put on.

The materials for road embankments to be obtained from sewer excavations and from other sources, as specified in clause 87.

140. After the roadway, in cutting, embankment, or level crossings, has been formed and approved, it is to be carefully boxed out along centre line for the reception of the road material, 8 inches deep for ballast and 4 inches deep for metal—12 inches in all, by a width of 24 feet.

141. After the boxing out has been completed, its bottom surface to be covered by a layer of sand-stone ballast, as specified in clause 21, to be spread 8 inches thick throughout; and after completion of the ballasting, its surface to be covered with bluestone metal, as specified in clause 37, to be spread 4 inches thick throughout.

142. After the metalling has been completed and approved, the whole of its surface to be covered with about one-eighth of its own bulk of fine sandstone or bluestone chippings or quarry refuse of a uniform thickness, after which the whole road surface to be watered and rolled until approved.

143. On completion of cuttings and embankments, all slopes to be trimmed and dressed to even and straight faces to the specified inclinations, and then to be sown with couch grass seed, as shall be directed.

#### *Tarred Metal Deck.*

144. After the tarring of upper surface of metal flooring, and after the sand-filling over arches and abutments of aqueducts has been completed, levelled, and approved, or in any other situation in the construction of these works, the whole of these surfaces as shown on drawings, to the thicknesses figured or ordered at the time, to be covered with the tarred metal decking, as follows:—

The stone to be basalt, broken to a 2-inch gauge, as specified in clauses 37 and 38, free from dirt, the screenings to be crushed from the same stone, and to pass through a  $\frac{1}{8}$ -inch sieve. All stones and screenings to be perfectly clean and dry, to be heated before admixture with tar. The tar to be coal-tar, free from all adulterations, and boiled sufficient time to get rid of the light oils before being used.

The stones and screenings to be mixed with the boiled tar separately; to be then stacked where directed, so as to allow the surplus tar to drain away for at least three weeks before being laid on the bridge.

The 2-inch stone to be spread over the whole bridge, upon the concrete filling of roadway, and upon the 7-inch thick sand layer of footpaths, between kerb-logs, to such thicknesses and surfaces, and with such curvature to roadway, when rolled, as shown in drawing, and to be then covered with about one-eighth of its own bulk with screenings. Both layers to be well rolled and cross-rolled with a 30-cwt. roller, having not less than a 3-foot width of face, until they form solid compact surfaces to the required levels and curvature.

The sides along kerb-logs and all places where the roller cannot work to be well punned by hand with a flat-faced 42-lb. iron rammer. When approved by the Engineer, the whole of the surfaces to be brushed over with a coat of hot coal-tar, and a layer of heated fine bluestone screenings, with dust left in, spread over it.

#### *Coke Concrete Deck.*

145. Coke concrete to be provided, placed in position where directed in the manner specified for other concrete, and to be mixed as described in clause 32, but in the following proportions:—16 cubic feet of approved coke broken to a strict 1-inch gauge, 8 cubic feet of approved clean sand as specified in clause 23, and one full cask of cement (equivalent to four of coke, two of sand, and one of cement).

*Sewers,*

*Sewers, Storm-water Channels, &c.*

146. As the cross-section area of each respective length of tunnel and open trench for each respective length of sewer, storm-water channel, syphon, pipe-sewer, foundation for bridges, buildings, &c., has been excavated, cleaned, and approved, the sewers, storm-water channels, and other works of the dimensions specified to be built therein, with such pipes and with such concrete and brick-lining, backing, walls round pipe-sewers, masonry, brickwork, concrete work, &c., as shown on the various drawings referring to each respective work, and as shall be determined by the Engineer whenever the excavation has advanced sufficiently to enable him to do so.

147. In very wet ground and under buildings the lining of tunnel to be executed of an extra thickness, and in brickwork only with concrete backing were required right up to timbering or rock, as the case may be, as shall be directed.

148. In dry and compact rock excavation the concrete lining to be filled in solid between internal surfaces of sewer, storm-water channel, &c. (less  $\frac{1}{2}$ -inch space required for cement rendering), and surfaces of tunnel or open trench.

149. Under all shafts, when ordered, relieving arches of brick or concrete to be built of a thickness, form, and width as shall be directed at the time of occurrence. Under temporary shafts excavated by contractor for his own convenience, the extra brick and concrete work to be at the contractor's cost.

150. The thickness and description of the lining, whether concrete only, of brick and concrete, or of brick only, required for the different portions of tunnels and open trenches, depends upon the nature of the ground through which they are driven or excavated, as the case may be, and shall be determined by the Engineer as the excavation advances.

151. Junction chambers for sub-main and reticulating pipes, upper inlet-chambers in shafts for junctions with reticulating pipe-sewers, drop-shafts, penstock and gas-check chambers, flushing stations, weir-chambers with storm-water discharge pipes, ventilating shafts, aqueducts on arches, and on wrought-iron girders, syphons, buildings, bridges, culverts, storm-water channel junctions, intersections with existing roads, sewer and water-pipes, branch inlets, man-holes, gullies, road-work, &c., to be constructed in connection with main sewers, branch sewers, and storm-water channels of concrete, brickwork, masonry, rendering, iron, timber, stoneware, and cast-iron pipes, &c., of the exact sizes, heights, shapes, forms, curves, and with such ornamental red, white, and other bricks, panels, mouldings, piling, &c., as shown on drawings, and as may be ordered and directed at the time. Unless otherwise shown and directed, brick-shafts to be built of 9-inch and 14-inch brickwork, with four vertical or battered corners, as the case may be, and curved sides between same and freestone caps at top, pierced and prepared for seat of cast-iron frames of ventilating grates, &c. All inlet openings of branch sewers, reticulating pipes, branch inlets, inlet-bends, &c., to be securely closed for the time being with brickwork in cement, stoneware, or other covers, &c., to be provided by contractor, and set in cement mortar all round, or as shall be directed, and left water-tight. Curved junctions for branch, oval, or pipe sewers, as shown on drawings, and where ordered, to be constructed in concrete; to enter the main sewers at such levels above the invert, with such radius and longitudinal fall as shown, or as shall be determined at the time.

152. Cast-iron, flanged, oval, circular, or straight, junction, bent, plain, and faucet and spigot pipes, landing platforms,  $\perp$  bars, scupper boxes, gully gratings, girders over weir and shaft-chambers, or other castings, flushing-valves, gas-check frames, penstocks, man-hole covers, saddles, stop-board grooves, &c., to be walled and built in, as shown on drawings, at points of intersection, branch junctions, gas-check chambers, pipe ventilating shafts, were ordered, &c.

153. Step-irons, supports to wrought-iron ladders, holdfasts, ends of wrought and cast iron girders, bars, &c., to be built into side walls of shafts, and anchor bolts for fixing cast-iron frame for penstocks, gas-checks, &c., to be built into walls of shaft-chambers, as shall be directed. Flap-traps to be built in where ordered and directed. Permanent putlog holes in shapes of reveals, for temporary staging, are to be left in walls of gas-check, shaft-chambers, and shafts where directed; and, in all cases, unless otherwise ordered, the reveals are to be built round of the same thickness of brick or concrete, as shown on walls of shafts or chambers at the places referred to. Putlog holes to be included in the schedule price for brick-work. Stop-board grooves to be formed in concrete, where ordered.

154. In order to prevent the tunnel excavation, through rock for the various intercepting pipe-sewers, from becoming conductors of subsoil water, said headings, as described in clause 69, after the various lines of stoneware pipes have been laid in same and jointed, and as each 66-foot length of same has been approved and filled in again, to be closed up, when ordered, by a concrete wall 12 inches in thickness, to be built round pipe-sewer and across the heading, making in each case a water-tight joint with rock faces of floor, sides, and roof of heading.

155. In the event of it being deemed necessary by the Engineer during the progress of the works to omit, alter, or change any of the hereinbefore (clauses 151 to 154) described works, and construct and carry out other works of different design and construction instead, then the contractor shall be bound to omit or carry out, as the case may be, and execute any such works with the materials and *workmanship* so required at the various schedule rates referring to such items of works, and as shall be directed and specified hereinafter.

*Concrete Work.*

156. The different kinds of concrete described under clauses 29, 30, and 31, as bluestone concrete, special concrete, and sandstone concrete, respectively, shall be used in the various parts of these works as specified, and as may be ordered at the time.

157. After the excavation for foundation of each respective part of the works, and the piling, planking, timbering, staging, &c., for same have been completed, and after the bottom of excavations has been cleared and approved, the concrete work to be built thereon to be built thereon of the lengths, gradients, widths, heights, and with such square, circular, or other shaped openings, or chambers, recesses, arches, pilasters, batters, lines, curves, &c., of the exact dimensions and of such forms and shapes as shown on the drawings referring to each respective part of said works.

158. The contractor to find, provide, and make at his own cost, all concrete boxes, centres, staging, shoring, planking, &c., of the exact forms, shapes, curves, &c., required, in a proper, secure, and substantial manner, due allowance being made for  $\frac{1}{2}$ -inch thick cement facing over all internal exposed surfaces of concrete work; and great care being taken that all centering and concrete boxes can easily be withdrawn, except where otherwise directed. The designs for centering, concrete boxes, &c., are to be approved

approved by and to the entire satisfaction of the Engineer. After completion of any portion of the concrete or brickwork, the concrete boxes and the centering, as the case may be, shall not be removed until all provisions of the specification, and those contained in clauses 172 and 173 respecting centering, have been complied with, and until the Engineer or his Superintending Officer has given written permission to that effect.

159. The concrete, after it has been approved of, to be conveyed into cast-iron cylinders, shafts, excavations for piers, and other deep foundations, in skips of approved size, and to every other part of the work, as may be directed, and as shall be approved of, and tipped into same and upon the surface of each layer from a height not exceeding 18 inches, to be quickly spread out in layers not exceeding 9 inches in thickness. Commencing at each part of the work at lowest level of excavation or surface of work, the concrete to be brought up in horizontal and even layers, and on lines of sewer, side-entrance, pipe sewers, junctions, shaft chambers, abutments, piers, arches, over-arches walls, &c., unless where otherwise directed, in even layers, parallel with specified longitudinal gradients of works; each layer, when spread, to be 9 inches thick (or less where ordered or specified) throughout before ramming, and, after spreading, to be quickly and evenly rammed all over until approved of, and then allowed time to set before the succeeding layer is put on.

160. In circular, oval, elliptical, and open channels, the concrete to be filled first into central pads, or, in accordance with the transverse curvature of invert or bottom of channel, into central strips, not exceeding 2 feet in width for wide open channels, then into bottom layer right up to extreme width at sides, and then into the curved sides, as shown on drawings, up to top of side walls in open channels, or to level of springing in closed channels.

161. After the concrete has been carried up to the level of springing, all concrete arches to be commenced at both walls or abutments simultaneously, and carried on towards centre line in radiating parallel strips, spread 9 inches thick, of the whole width of arch, or in lengths as specified in clauses 168 and 169, and as shall be directed at the time, and rammed as before described, and, where the arch is thicker than 9 inches, the lower layer to be always completed throughout 12 inches in advance of the upper succeeding layer.

162. After completion of the closing arch all concrete work above springing of the same, at sides of arch, in man-holes, chambers, shafts, &c., to be carried up in the same manner as specified in clause 159, and of the exact dimensions, curves, and thicknesses, &c., as shown on drawings.

163. No portion of the concrete work described in the previous clauses (unless otherwise directed in writing) to be covered up with earth or brickwork until it has been examined and approved of by the Engineer. Any leakage that may appear in each layer to be carefully attended to and be made good and repaired at the time, as shall be approved, before each succeeding layer is put on.

164. All end faces of layers of concrete to be stepped back at each respective length of sewer or other work, as shall be directed, to be carefully washed clean with fresh water, and then to be grouted prior to each layer of the adjoining length being commenced and joined on to the same.

165. After the lower layer has set to the satisfaction of the Engineer, its top surface to be carefully washed until approved, and then to be grouted all over prior to each succeeding layer of concrete being put on. No traffic shall pass over any lower layer or fresh concrete work except where such is duly protected against injury by boarding, planks, or any other means approved of by the Engineer at the time.

166. *In the event of any stoppage* occurring to the work, from whatever cause, or in anticipation of rainfall, the contractor, before temporarily stopping work, shall finish it off at whatever level the work may be raised at the time, by thoroughly grouting the whole of the surface with cement grout. The contractor also to provide and have always on hand approved tarpaulins for the purpose of covering therewith, where and whenever directed by the Engineer to do so, all fresh concrete work and brickwork, when ordered, so as to protect the same, during all stoppages in the daytime and at night, from sun and rain, and during hot or dry weather, to keep said tarpaulins watered to prevent the concrete work from cracking and setting too quickly on the outside.

167. In all cases where a layer at mid-day or at evening is left incomplete, the said layer shall not be continued after any stoppage until the surface of the lower and the end of the upper layer have been washed clean and then grouted with cement grout.

168. The concrete and brickwork of main and branch sewers and storm-water channels in open trench to be commenced in accordance with clause 108, in the different lengths of open trenches, and to be carried up in each and from each end of same simultaneously, in not less than three continuous lengths of 40 feet each (unless otherwise directed). That is to say, when the arching-in of the first 40 feet commences, the next length of 40 feet must be completed up to the springing of arch, and the third 40-foot length must be in progress, and the latter so timed that the work is raised up to springing of arch by the time the closing-in of the adjoining length commences.

169. The concrete and brickwork of main and branch sewers and storm-water channels in tunnel to be commenced, in accordance with clause 108, in the different lengths of tunnels, and to be carried on in each, from the middle towards each end simultaneously, in not less than three continuous lengths of 16 ft. 6 in. each—that is to say, when the arching of the first 16 ft. 6 in. commences the next 16-ft. 6-in. length must be in progress from height of invert up to the springing of arch, the third 16-ft. 6-in. length must be in progress between floor of tunnel and level of invert of sewer, and in the fourth 16-ft. 6-in. length the excavation and timbering of tunnel must at this time be completed and ready to receive concrete foundation of sewer.

170. At all plinths for piers of arches and abutments, piers of arches, abutments, between wings of abutments, pilasters, foundations of buildings, culverts, &c., unless otherwise directed, each layer to be completed right through the whole length and width of the work before the succeeding layer is put on. Where concrete has to be walled or filled in against and between brick facings or masonry, the latter in each case to be well wetted and grouted, and then to be covered with a coat of cement mortar  $\frac{1}{2}$  inch thick before the concrete is built against it, and it is to be brought up simultaneously with same in layers 6 inches thick after ramming; the brick or masonry facings, however, being always kept 6 inches (or more, as the case may be) higher than the concrete work, up to level of string-course, or other defined limit, when the work has to be finished level all through.

171. The brickwork, masonry, and concrete-filling between all arches and at sides of end-arches to be carried up simultaneously over the whole length and width of every aqueduct, building, or other structure (unless otherwise directed), so that all arches or other structures shall be simultaneously and equally weighted as the brick, stone, and concrete work rises against and over same.

172. The concrete in piers of arches of aqueducts, abutments, and approaches to aqueducts, to be carried up in the first instance from bottom of excavations to level of top of plinths, in the second instance to level of top of skewbacks, in the third instance to level of underside of string-course, and in the fourth instance to level of top of coping of aqueducts.

173. When all piers and abutments of aqueducts have been built to level of springing of arches or to top of skewbacks, as the case may be, the concrete, brick, and stone arches, as specified, to be built one after another over the openings upon centres, cambered as shall be directed, of such number as shall be specified, strong enough in every part to carry the weight of the arch to be built thereon, till all openings of one aqueduct are arched over, after which the whole of the arches shall be allowed two weeks time to set and harden before the brick and stone facings, and the concrete, &c., between the arches and at sides of end-arches is commenced. In filling in between arches and at sides of end-arches the various layers of concrete, of the thickness specified in clauses 159 and 170, as the case may be, to be brought up extending on to extrados of arches till the thickness of each layer at its end is reduced to  $4\frac{1}{2}$  inches above extrados, when it is to be finished at the time with a radiating end-face before the succeeding layer is put on. The junctions of the new storm-water sewers to be constructed with such curves, shapes, forms, flat arches between wrought-iron rolled girders, &c., as shown on drawings. On completion of junctions, or any lengths of storm-water channel, as may be specified, to exact level of underside of iron girders, the latter to be laid transversely over side-walls of junctions or channels, bedded in and upon special cement mortar,  $\frac{3}{4}$  inch thick, truly parallel to each other, and spaced 4 feet from centre to centre, or as may be specified, after which the concrete filling along side-walls, between and over ends of girders, to be completed. The arches of 4-foot span, or thereabout, with a rise of 5 inches in centre, between the girders, to be commenced from lower end, and to advance to the upper end of the junction or channel in each case (all girders being carefully stiffened and held in position by props, as shall be directed), with not less than 12 centres, or as may be directed of the exact width of junction or channel between side-walls. The arches to be built as specified in clause 161, and on completion to form a level concrete decking 3 inches above level of top of girders.

174. The concrete lining round sewer on lines of aqueducts and approaches (between underside of string-course and underside of coping, unless where otherwise specified) to be brought up between brick and stone facings (where such occur) simultaneously with same, as specified in clause 170. The concrete to be finished transversely level with underside of copings. This work to be carried on along each line of aqueduct in the manner and in lengths as specified in clauses 172 and 173.

175. In conjunction with the concrete surrounding sewer, where the latter is built upon arches and in embankments, the contractor to provide, fit, place in position, and wall-in with the concrete, longitudinally in each corner at top and bottom of concrete lining  $\frac{3}{4}$ -inch diameter bond-rods in 16-foot lengths. The ends to overlap 12 inches, and tied together with binding-wire, and, transversely,  $\frac{3}{4}$ -inch diameter bond-rods  $4\frac{1}{2}$  inches above soffit of sewer of such lengths as to fit between the outer brick lining, or as shall be directed, spaced 10 feet from centre to centre. The cost of providing, fitting, placing, and walling-in said bond-rods, to be included in the schedule price per cubic yard of concrete.

176. Special care to be taken by contractor to prevent the concrete, &c., from cracking at ends of each respective and successive length of open, covered, or closed, sewer and storm-water channel in any situation in the construction of these works, in consequence of the draught in same, by providing and carefully closing up ends of sewers or storm-water channels with canvass or wooden shields or doors. Great care shall also be taken in the construction of sewers and storm-water channels on lines of aqueducts, in tunnels, and in open trenches by carrying the works on in continuous lengths, without delays and stoppages, so as to prevent air-cracks or shrinkage.

177. Should, however, cracks occur at ends of any length of sewer, storm-water channel, or other work, during its construction and time of maintenance, they shall be opened up for their whole length and depth, and of such width as may be directed at the time, and filled in with neat cement mortar and grout by the contractor at his own expense to the satisfaction of the Engineer, or he may order such cracked parts of the works to be taken down and rebuilt at the time of occurrence at contractors' cost.

178. The concrete work comprised in this contract to be completed of the exact dimensions shown on drawings, less  $\frac{1}{8}$  inch at all exposed inner and outer surfaces, and after the boxes and centerings have been removed, all exposed outer and inner surfaces shall present compact, solid, even, plain faces. All faulty and honeycomb portions, cavities, holes, or other defects to be at once repaired by the contractor, at his own cost, with concrete or mortar, as the case may require, to the satisfaction of the Engineer. No portion of the concrete work to be covered up with earth or brickwork until it has been examined and approved. In all cast-iron cylinders shown on drawings, the concrete shall be built in solid between cast-iron walls of same, and as hereinbefore described.

179. At the sites of all bed and bearing plates, penstock, sluice-gate, gas-check, stop-board, stop-plate, and valve frames, cast-iron man-hole covers, and all circular, oval, straight, or bent pipes, covers, landing platforms, gully-gratings, scupper-boxes,  $\perp$  bars, girders over weir and shaft-chambers, &c., after the concrete or masonry has been built to the exact height and gradient (leaving sufficient space for jointing), the whole of the cast and wrought iron work, after having been washed clean with fresh water, is to be truly laid and jointed or set perfectly plumb or otherwise, as the case may be, and as shall be directed, in the exact positions, lines and gradients, on fillets of mortar; and as the concrete rises against and around the castings, bond-rods, &c., leaving a space of not less than  $\frac{1}{2}$  inch all round between the concrete and iron, this space round the invert, or underneath bottom of plates and rods, as the case may be, to be filled in with special grout, or mortar, as shall be directed at the time, whilst above the springing line the outer surface of the castings, &c., to be grouted with special grout, and then to be covered with a coat of special mortar  $\frac{1}{2}$  inch thick before the concrete is built on to and around said pipes, castings, frames, &c.

180. All anchor-bolts in connection with cast-iron bed and bearing plates, wrought-iron ladders, landings, sluice-gate, gas-check, valves, and all other frames, &c., to be placed in the exact positions required; to be washed clean, wetted, bedded upon and surrounded with special mortar in each case before the concrete is built round the same.

181. All stoneware or cast-iron pipes, down-pipes, &c., where they are shown to be or ordered, to be surrounded with concrete, to be clean washed with fresh water, to be truly placed, laid, erected, and jointed in the exact lines and gradients on fillets of mortar, and to be grouted all round with special grout as the concrete is being built all round same.

182. The whole of the concrete work of main, branch, and pipe sewers, and storm-water channels, including all foundations, piers, abutments with wings, arches, buildings, gullies, weirs, with all string-courses, copings, ventilating shafts, chambers, gutters, side entrance, junctions, &c., to be completed in strict accordance with specification and drawings, and of the exact shapes, forms, projections, mouldings, curves, panels, pilasters, and dimensions shown thereon, and as shall be directed, and to be left complete and clean on all external and internal exposed faces.

#### *Cement Coating.*

183. The whole of the internal and external concrete surfaces, and brick surfaces where ordered, of sewers, storm-water channels, buildings, and other works, where such is shown on plans, and in any situation in the construction of these works where directed, to be protected by a cement coating to be put on in two thicknesses, excepting where otherwise directed; the coating throughout, when finished, to be  $\frac{5}{8}$  inch in thickness. All surfaces of concrete or brickwork to be well wetted before the cement coating is put on. The cement coating of all surfaces of works, including string-courses, caps, copings, cornicing, weatherings, chamfers, mouldings, &c., to be finished of the exact thicknesses, dimensions, forms, faces, lines, curved, straight, circular, or otherwise, and with joints struck in imitation of ashlar masonry, as shown on drawings, and as shall be directed.

184. The different kinds of cement coating with which the exposed surfaces of these works are to be protected, are:—Cement facing, prepared of cement and sand in the proportion of one of cement to two of sand, and special cement facing, prepared of cement and sand in the proportion of one of cement and one of sand. The cement and sand to be of the qualities specified in clauses 23 and 24 respectively. The different qualities of cement coating, as above described, to be executed in the various parts of these works as shall be specified, and as may be ordered at the time.

#### *Brickwork.*

185. The brickwork required in the construction of storm-water channels, ventilating shafts, buildings, main sewers, arches up to 12-foot span, piers, abutments, abutment-piers, and arches over 12-foot span, with spandrels, pilasters, parapet walls, and where ordered in any situation in the construction of these works, to consist of materials and mortar described in clauses 15, 16, 23, 24, 26, and 27, as shall be directed. All brickwork is tinted red on general plans; the areas on all elevations of aqueducts, arches over 12-foot span, parapets, abutments, piers, &c., which are to be specially faced with white and red and radiated bricks, are tinted white and red accordingly. All bricks to be thoroughly soaked in clean fresh water immediately before being used, and all work to be built with whole bricks (except where otherwise directed) of approved shape and dimensions, to ensure the bond of each particular part of the work being executed, in the manner as shown on drawings, and as may be ordered at the time, with  $\frac{1}{4}$ -inch joints, each brick to be set full and rubbed in cement mortar, and every course to be carefully and thoroughly grouted and well wetted before the succeeding course is put on, as shall be directed, care being taken to keep the inner and outer faces of work clean by placing fillet of mortar on outer and inner edges before grouting.

186. The brickwork in sewer lining, shafts, storm-water channels, and aqueduct arches up to 12-foot span, to be of the forms, shapes, thickness, dimensions, curves, and gradients shown on longitudinal and cross sections to be built in radiating courses, with radiated bricks where ordered, in  $4\frac{1}{2}$ -inch rings, in approved bond, the bricks of each course to break joint over the centre of those above or below. Where the brickwork consists of two or more rings, said rings to be built simultaneously, the lower ring to be always completed throughout  $4\frac{1}{2}$  inches in advance of the upper succeeding ring, each brick to be set full upon and rubbed in cement mortar, and each ring to be keyed in centre, and to be covered with a coat of cement mortar  $\frac{1}{2}$  inch thick, to ensure the thorough bonding between the different rings. All arches up to 12-foot span to be built as specified in clause 173, and to be commenced at both abutments simultaneously, the full width of same, and all closing arches of main sewers to be built in lengths of 40 feet, and 16 ft. 6 in. respectively, in conformity with clauses 168 and 169. At completing any length of brick closing arch of main sewer, storm-water channels, &c., the courses at end of same to be stepped back, as shall be directed, and the end face of each ring or course to be well wetted, and then grouted, prior to each ring of the succeeding length being commenced.

187. The brickwork in arches over 12-foot span, to be built as hereinbefore specified, in conformity with clause 173, not in  $4\frac{1}{2}$ -inch rings, but in radiating through-courses, of rubbed and gauged bricks, if directed, in approved bond; to be commenced at both abutments simultaneously, the whole width of same, and to be completed in the most perfect manner throughout the full width and thickness of arch, keyed in centre.

188. The brickwork in abutments, abutment-piers, wings, parapets, pilasters, spandrels, piers, face-walls, &c., to be built of the various heights, thicknesses, and other dimensions, together with all recesses, projections, panneling, &c., and carried up at each special part or length of work, simultaneously with the concrete and masonry, in English or other approved bond, in alternate courses of headers and stretchers, unless otherwise directed, each brick to break joint with the one above and underneath, in truly level courses or in courses truly parallel with longitudinal gradient of work, and in such other lines and curves as shown on drawings, or as may be ordered at the time. All outer and inner faces, where directed, of walls, to be carried up straight, square, and plumb, with perfectly fair and even faces.

189. All pilasters, projections, recesses, circular and other panneling, abutments, piers, wings, spandrels, parapets, arches, &c., in outside faces of work, to be built neatly and accurately of plain, radiated, moulded, and formed white and red bricks, as shown on drawings. All inner faces of walls and arches, and where directed, to be finished with a neat flat joint, and pointed; and all arches and other brickwork to be finished on all exposed faces with a neatly struck and cut joint. All pointing up home to all copings, cap-stones, string-courses, key-stones, projections, and recesses, to be carefully executed; and all freestone and bluestone ashlar, in connection with the brickwork, to be carefully bedded and set in cement mortar and walled-in where shown. All cement pointing, wherever directed, to be executed, and  
everything

everything to be made good where necessary, and all external faces of brickwork to be thoroughly cleaned at completion of work. Weep-holes of the sizes shown, to be left through the brick walls where directed.

190. The brick-on-edge flooring of inverts of storm-water channels on steep gradients, as shown on drawings, and where ordered, in any situation in the construction of these works, to be laid in approved bond; each brick to be set full and rubbed in special cement mortar, after which the whole of the surfaces of the brick-on-edge flooring to be carefully and thoroughly grouted with special grout.

191. The  $\frac{1}{2}$ -inch thick mortar covering (pargeting) of outside faces of brickwork or concrete of ventilating shafts, man-holes, sewer-chambers, and sewers, as shown on drawings, shall not be measured and paid for as cement facing, but simply as mortar covering  $\frac{1}{2}$ -inch thick; the cost of which to be provided for, and included in the schedule prices per cubic yard for brickwork and concrete.

192. *Brickwork in Buildings, Chimneys, &c.*—The whole of the brickwork of external walls of buildings, chimneys, &c., of the various thicknesses, heights, and other dimensions, together with all door and window openings, reveals, recesses, projections, bracketing, corbeling, &c., as shown on drawings, to be at each building carried up together, in truly level courses, (no portion of the brickwork of each building at any time to be raised higher than 12 inches above any other portion, excepting at the gables above level of eaves of roofs), in old English, or other similar approved bond; four courses to 1 foot in height, well bedded and grouted as before specified, care being taken to keep the inner and outer faces of the work clean, by placing fillet of mortar on outer and inner edges before grouting.

Both outer and inner faces of walls to be carried up straight, square, and plumb, with fair even faces, and all inner faces to be finished with flat neatly pointed joints.

All pilasters, projections, recesses, reveals, cornicing, bracketing, corbeling, panels in outside faces of walls to be built neatly and accurately of white, red, plain, formed, and moulded bricks, as shown on drawings.

193. *The arches over all openings* to be built in a similar manner as specified for arches under clauses 186 and 187, and for the buildings especially they are to be built of rubbed and gauged bricks in radiating courses with  $\frac{1}{4}$ -inch joints throughout, abutting against rubbed skewbacks; every brick to be set full and rubbed in cement mortar, to be turned in the most perfect manner of the full thickness of walls, in single rings of  $4\frac{1}{2}$  inches, in two rings, and of such bond and of such thicknesses as shown on drawings, and as shall be directed; all arches to be commenced from both skewbacks simultaneously and keyed in centre. All inner faces of arches, and where directed, to be finished with a neat flat joint and pointed.

194. *General.*—All putlog holes to be filled in, taking particular care to match the bricks and the mortar. All pointing up home to all copings, sills, and other projections to be executed. All splays, rakes, and chasings, whether for lead flashing or otherwise, to be executed. All freestone and bluestone ashlar, and all ironwork in connection with superstructures, to be carefully bedded in cement mortar, and walled-in where shown, and as shall be directed. All wood bricks to be provided, bedded, and walled-in for fixing door frames, and where directed. All cement pointing at lead flashings, round ironwork, freestone ashlar, stones under iron shoes of rafters, iron girders, round ends of purlins, &c., to be executed, and everything to be made good where necessary and directed. All floor-joists to be bedded in cement mortar where directed.

All external faces of brickwork to be thoroughly cleaned, all joints to be raked  $\frac{3}{4}$  inch deep; to be pointed with special cement mortar, and to be finished off with a neatly struck and cut joint.

195. Prior to commencing any concrete or brickwork, which has to be built on to and against rock faces, all shaken and loose rock to be removed; all rock surfaces to be well cleaned, washed, and wetted, and all beds, open joints, and spaces between concrete or brickwork and rock faces to be carefully filled in with cement mortar, and flushed and grouted every course as the brickwork proceeds; and the cost of thus preparing rock faces, washing, grouting, flushing, &c., to be included in, and covered by the schedule price per cubic yard for the concrete and brickwork herein referred to.

#### *Power to get Bricks elsewhere.*

196. Should the contractor, at the commencement or during the progress of the contract, at any time fail to provide the specified bricks in any or in such quantities as in the opinion of the Engineer shall be deemed necessary to ensure the progress of the works as specified, then in all such cases the Engineer shall have the power to supply the same from any other sources; and all additional costs and charges thereby occasioned, over and above the contract prices for brickwork, shall be incurred solely by the contractor, who shall only be paid for the net quantity of brickwork actually ordered at Schedule rates, less the cost of the bricks so delivered on the works by the Engineer; and the contractor shall have no claim for loss, damage, or compensation, on account of the exercise of such power by the Engineer.

#### *Masonry.*

197. All freestone and bluestone ashlar of the exact sizes, forms, and shapes, to be built in where shown on drawings and where directed simultaneously with the concrete and brickwork; said stones to be washed clean and to be well wetted with fresh clean water immediately before being used, to be set upon their natural beds full upon and in cement mortar in approved bond, in the exact positions required, truly level, or as may be directed at the time; after which all joints between stones, between stones and brickwork, and between stones and concrete, to be carefully filled in with grout when directed. Prior to each succeeding course being put on, the surface of the previous course to be well wetted and washed clean, as shall be directed. All ashlar stones to be properly lifted by lewisings, or as shall be directed when being placed in position. All beds and joints to be punched, axed, and picked, so as to form  $\frac{3}{8}$ -inch joints throughout. All exposed joints of masonry and between masonry and brickwork, &c., to be carefully raked out,  $\frac{3}{8}$  inch deep, and filled in solid with special mortar, neatly pointed, finished flush with outside faces of work. All masonry to be left perfectly clean at completion of works.

198. *Freestone Ashlar.*—Freestone ashlar, of the quality specified in clause 20, to be provided for plinths, abutments, skewbacks, and piers of aqueducts, keystones of arches, voussoirs, string-courses, capstones for abutments and pilasters, newels, pilasters on corbels, parapet copings, steps for spiral stairs in shafts, and other steps where shown on drawings, cornicing for pedestals of chimneys, coping for gables of buildings, window sills, bedstones under bearing points and iron shoes of rafters, corbels under girders, cover stones over gullies, stones on top of ventilating shafts, curb stones round bases of buildings, flagging over

over drains in filter beds, kerbing and channeling, &c., and where ordered in any situation in the construction of these works, of the exact dimensions, moulded, sunk, weathered, throated, checked, grooved, radiated, curved, channiced, fine-axed, battered, hammer-dressed, worked, rubbed where directed, and finished off in the best possible manner, as shown on Drawings, and in accordance with any details which the Engineer may provide during the progress of the works. All stones to be in lengths, as shown, and shall be directed, with truly squared and axe-dressed beds, joints, and backs. All joints from exposed surfaces of stones, and from faces of concrete work, as the case may be, to be axed in 2 inches deep. The plinths, where shown on Drawings, to be weathered with 2-inch parallel drafted margin, under edge of weathering and at all external angles of same. All external faces of plinths, skewbacks, abutments, piers, wings of abutments, &c., to be pitch-faced, no part of which to project more than approved of beyond true line of wall, with a true pitched line along each exposed arris, and with 2-inch parallel drafted margin as shown. Capstones of abutments and piers to be of the dimensions shown, unless otherwise directed; the centre stone to be of bluestone. All capstones over pilasters to be of one stone. Holes for lewis bolts to be sunk where directed, of the depth and size required. All quoins, of the exact sizes specified, to be set in and out bond to all angles.

199. *Bluestone Ashlar*.—Bluestone ashlar of the quality specified in clause 38 to be provided for all abutments, piers, abutment piers, stones at bottom of sump-holes of precipitating wells, bedstones, under cast-iron bedplates or bearing points, semi-circular stones forming weir crests of precipitating wells, door sills, and where ordered in any situation in the construction of these works, of the exact dimensions, forms, shapes, moulded, weathered, throated, fine-axed, sunk for reception of cast-iron bearing-plates; and faces of weir-crest stones to be radiated, and to have vertical bird's-mouth grooves sunk along centre line of joints, as shall be directed; to be built in with the concrete, brickwork, and freestone masonry, as the case may be, and as the latter rises, where shown on Drawings and as may be directed; to be lewis and set as specified in clause 197. All stones to be washed clean and to be well wetted before being used. Holes for lewis and anchor bolts to be sunk, where directed, of the depth and size required.

200. *Squared Freestone Rubble Masonry*.—Squared rubble masonry in side walls of open channels, retaining walls, and where ordered in any situation in the construction of these works, to be built of squared hammer-dressed through stones, unless otherwise directed, in from 10 to 14 inch level courses, as may be directed at the time, or on lines of open channels in courses parallel with longitudinal gradient. Said masonry to be built straight, curved, battered, or sloped, every stone to be set full up on and in cement mortar, as specified in clause 26. When the exposed face of wall is battered, the surface of each course to be at right angles with line of batter, the top course to be built of larger stones, level at top and squared at back. All stones to be punched, dressed, and picked to the exact thicknesses, sizes, and forms required, and set in the most approved bond, with joints throughout not exceeding  $\frac{1}{2}$  inch in thickness. All stones to be washed clean and wetted with clean fresh water before being used. Every course to be carefully grouted as directed before the succeeding course is put on. All masonry to be finished with a neatly struck and cut joint as the work proceeds, and to be left perfectly clean on completion.

#### *Squared Bluestone Pitching.*

201. Squared bluestone pitchers, in channel bottoms, round manhole covers, ventilating grates, valve covers, and where ordered, in any situation in the construction of these works, to be set in sand, in regular 9-inch courses, lengthwise across the channel, in the most approved bond, and in single ring or course round manhole covers, &c. All stones to be dressed and picked so as to ensure the joints all through not to exceed  $\frac{1}{2}$  inch in thickness. No stone to be less than 9 inches x 9 inches x 9 inches, but to be longer, curved, and radiated as shall be directed.

#### *Squared Freestone Pitching and Channeling.*

202. Squared freestone pitchers, in bottom of open channels, or in any situation in the construction of these works, to be set upon their natural beds in sand or in cement mortar, as may be specified, in regular 12-inch courses, lengthwise across the course of the channel, in approved bond, with  $\frac{1}{2}$  inch wide joints throughout. No stone to be less than 12 inches deep, 12 inches wide, and 12 inches in length, but to be longer, curved, and radiated as shall be directed, to insure a good bond. If the pitchers are set in cement, all stones to be washed clean and well wetted with clean fresh water before being used, to be set full up and in cement mortar, and on completion of pitching all joints to be carefully filled with cement grout. All pitching in road channels to be set in sand in regular courses parallel with kerb-stones, in approved bond, with  $\frac{1}{2}$ -inch joints, no stone to be less than 12 inches wide, 8 inches deep, unless otherwise specified, and 18 inches long, but to be longer, curved and radiated as may be directed. On completion of pitching set in sand all joints to be carefully filled in with sand.

#### *Freestone Kerbing.*

203. Kerb-stones in such lengths, picked and axe-dressed to such widths, depths, shapes, and forms, with squared and axed ends, insuring  $\frac{1}{4}$ -inch joints throughout, to be set upon their natural beds in sand along edges of footpaths, edges of road embankments, and over sewers, round bases of buildings, and where ordered in any situation in the construction of these works, along such lines, levels, gradient, and curves as shown on Drawings, and as may be directed at the time.

#### *Pipelaying and Jointing.*

204. *Glazed Stoneware Pipes*.—After the trenches have been executed, as specified in clauses 60 to 63, to the exact depths, levels, and gradients, and after the foundation layer of concrete has been filled in where ordered, as the case may be (leaving sufficient room for jointing), glazed stoneware pipes of the quality specified in clause 17, and of the required diameter, to be laid thereon, along such lines, curves, and inclinations, as shown on general plans and longitudinal sections, as may be ordered at the time, true, straight, and solid (for all vertical branch pipe-sewers and ventilating pipe-shafts, the pipes to be set true, straight, and plumb).

*Foundation*.—In clay or similar soil the pipes to rest direct and solid upon the soil. In rock they are to be laid on a 1-inch bed of poor mortar, as shown on Drawing, cost of same to be included in items for pipe-laying. In loose sand and other soil liable to be scoured out or easily shifted, they shall, if directed by the Engineer, be laid on sandstone concrete, as shown on Drawing.

*Laying.*—In every case they shall be laid in such a manner that their barrels shall bear firmly and evenly on their bedding material, the sockets being entirely free from pressure in the joint-hole, and the spigots concentric with the sockets. The pipes are to be jointed as, viz. :—

205. The 6-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{1}{4}$  inch deep within socket of pipe; the 9-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 10-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 12-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 15-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 16-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 18-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{4}$  inch deep within socket of pipe; the 21-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{4}$  inch deep within socket of pipe; the 24-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar 2 inches deep within socket of pipe.

206. After the tarred gasket has been placed in position and set tight round the pipe, and after the joint above has been cleaned and wetted, stiff special cement mortar, as specified in clause 27, to be packed in solid, splayed off outside and finished with a carefully struck and cut joint, after which the inner joints between two pipes to be likewise carefully filled with the same cement mortar all round, neatly wiped off as a finish. Each pipe length when thus finished to be carefully cleaned out before another pipe length is added. No length of pipe-trench to remain open more than eight days from the time of commencement of excavation to the time of the trench being filled in again to level of surface of street or other ground.

Junction pipes of any desired size are to be laid into the line of pipe-sewers wherever required by the Engineer. The socket ends of all junction pipes, junction blocks, junction holes, and dead ends are to be protected against the ingress of foreign substances, and made easily accessible for effecting future connections, by being closed with earthenware discs having a temporary watertight joint all round, the cost of fixing same to be included in items for pipe-laying.

207. *Cast-iron Spigot and Faucet Pipes.*—After the pipe-trenches have been excavated, as specified in clause 64, the exact depths, levels, and gradients, cast-iron pipes of the diameters shown or ordered to be laid along lines, curved or straight, and solid upon the bottom of the trench, or upon a foundation layer of concrete, as the case may be (all vertical ventilating and sewer-pipes to be placed in their exact positions, and to be set true, straight, and plumb, or as shown on Drawings), leaving sufficient room for jointing each pipe-joint in the trench, and to be jointed with well caulked New Zealand flax spun-yarn and soft pig-lead, as viz. :—

208. The 6-inch and 7-inch diameter pipes with spun-yarn  $2\frac{1}{2}$  inches and 3 inches deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up; the 8-inch, 9-inch, and 10-inch diameter pipes with spun-yarn 3 inches,  $3\frac{1}{2}$  inches, and  $3\frac{1}{2}$  inches deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up; the 11-inch, 12-inch, 14-inch, 16-inch, and 18-inch diameter pipes with spun-yarn 3 inches, 3 inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches, and  $3\frac{1}{2}$  inches deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up; the 20-inch, 22-inch, 24-inch, 26-inch, 28-inch, 30-inch, 32-inch, 34-inch, and 36-inch diameter pipes with spun-yarn 3 inches,  $3\frac{1}{2}$  inches, and  $3\frac{1}{2}$  inches deep respectively after setting up, and soft lead 2 inches deep after setting up.

209. Should the faucets of pipes used in these works, in places, be of greater or lesser depths than indicated in the previous clause, then the spun-yarn packing is to be of greater or lesser depths as may be required, the depths of the lead joints to remain as specified. Expansion joints to be made in the same manner, but of such special depth of lead joint, with or without spun-yarn packing as shown on Drawings, and as may be ordered at the time. All curves on lines of pipe-sewers to be accurately formed with the spigot and faucet joints of the pipes without any abrupt horizontal and vertical dip, rise, or bend. The spun-yarn to be tightly platted or laid round each spigot end, so as to fill the socket of each pipe after setting up to the exact depth specified, leaving in each instance the remaining depth of faucet for the specified lead joint, the latter to be made at each joint in the trench with one running, and when cold to be set up with proper irons to one smooth, even, plain surface all round the pipe, and  $\frac{1}{8}$  inch within socket of same.

210. The setting up of all lead joints to be made with a proper set of setting irons, commencing from outer surface of spigot end with  $\frac{1}{8}$ -inch thick setting irons, and continuing towards outer edge of lead joint with setting irons, advancing gradually by  $\frac{1}{8}$  inch in thickness at the time. Special setting irons to be used for setting up expansion joints. After the pipes have been laid and the joints of every description made, examined, and approved, they are at once to be covered up, as shown on Drawings, and as specified in clause 88, but in no case are they to remain longer than twelve hours uncovered after they have been approved of.

#### *Faulty Joints.*

211. Faulty and objectionable lead joints to be immediately and carefully chiselled out (they are not allowed to be burnt out) and fresh lead joints to be made and set up until approved of. Attempts to repair defective joints are under no consideration to be permitted.

#### *Lead.*

212. The lead required to all spigot and faucet joints, and where directed, to be of approved quality, of the best description of soft pig lead, and to be delivered in pigs as they leave the mines in Great Britain and Ireland. The pigs must show the brand or mark of the home manufacturer or company.

#### *Spun-yarn.*

213. The spun-yarn required to all spigot and faucet joints to be of the best description of  $\frac{1}{4}$ -inch New Zealand flax, and as per sample approved.

*Ironwork to be ready when required.*

214. The whole of the cast and wrought ironwork of every description required in the construction of storm-water channels, main and branch sewers, &c., as shown on Drawings, and described in the specification, shall be provided, prepared, completed, and ready at the various sites of the works as it is required, so as to be erected, walled in, jointed, placed in position, and fixed at the various places shown simultaneously with the concrete work, masonry, brickwork, carpenters' work, earthwork, &c., to ensure the whole of the works rising in level layers, and progressing without interruption, and in such order as specified, and as may be directed from time to time.

215. In all cases where the necessary ironwork, &c., is not in readiness when required, the works or portions of same thereby effected, shall be stopped until all materials and articles necessary have been provided, approved, tested, and delivered at the site of the works, and any delay in the prosecution of the work so caused, and any damage or injury ensuing to the works and adjacent works, streets, lands, fences, buildings, &c., in consequence of such stoppage and delay, shall be entirely and solely at the risk and cost of the Contractor.

216. Should the Contractor fail to provide and deliver the whole or any portion of the foregoing cast-iron, gun-metal, and wrought-iron work, or straight and curved pipes, special castings, grates, valves, cover-plates, brackets, thimbles, plates, &c., where and when required, as specified in clauses 214 and 215, then the Engineer shall have the power to supply the same from any other source at Contractor's risk and cost; and all additional costs and charges, including cost of patterns, over and above the Contract prices shall be borne solely by the Contractor.

*Wrought Ironwork, Gun-metal Work, and Cast Ironwork.*

217. The works under this heading comprises all cast and wrought ironwork required in the construction of all storm-water channels, main and branch sewers and outfall works, as:—Lattice wrought-iron girder bridges, oval and circular wrought-iron aqueduct tubing, cast-iron hinge-bearings on rollers, cast-iron cylinders for bridges, buildings, precipitating wells, &c.; wrought-iron bracings, wrought-iron saddle-girders, cast-iron bearing plates, expansion joints, thimbles, cast-iron oval and circular, spigot and faucet and flanged, straight and bent pipes, wrought-iron roofs, steam engines, air-compressors, pumps, ejectors, steam-boilers, air-vessels, tanks, shafting, pulleys, brakes, gearings, winches, travelling cranes, penstocks, street-boxes, wrought-iron platform gratings, valves, gas-checks, wrought-iron hand-railings, cast-iron ventilating grates, manhole covers, flushing flaps, cast-iron grooves for stop-plates, landing plates, wrought-iron ladders, gully-gratings, scupper-boxes, &c. The whole of the wrought ironwork and castings to be provided with all gun-metal work and castings of any other description, pig lead, spun-yarn, and other jointing materials, all rivets, screw-bolts, anchor-bolts, lewis-bolts, together with all carriage, plant, hoisting tackle, &c., as specified in clause 40, and all labour required in testing, fitting, fixing, setting, erecting, placing in position, laying and jointing the whole of the hereinbefore described ironwork complete, in strict accordance with the specification and the dimensions and patterns shown on the Drawings, and any details which the Engineer may provide during the progress of the Contract; and the Contractor shall only be entitled to payment of the weights returned in the Schedule of Quantities at the various prices set forth therein, and payments will not be made for any excess on such weights.

*Wrought Ironwork.*

218. All wrought-iron spindles, bolts, L, T, and U irons, flat and round bar, plates, straps, axles, pins, anchor-bolts, rolled girders, nuts, washers, rods, rivets, holding-down bars, gratings, frames, keys, chains, &c., to be of the best description and quality, free from scales, blisters, laminations, and all other defects, of approved manufacture and workmanship, with square arrises, and of the exact dimensions and forms shown on Drawings. The greatest care to be taken in any welds to ensure perfect soundness, and the Contractor to be at the expense of any test which the Engineer shall require to test such welds as being made perfect. All plates, bars, channel-irons, rods, &c., to be perfectly true and of even uniform thickness; all angle irons and bars to be sound, uniform, and regular on edges; all joints and edges to be truly planed to the dimensions on Drawings; all portions fastened with rivets, screws, or bolts, to fit closely together; all wrought-iron parts to be rolled or forged out of one piece, unless otherwise specified and directed; all covering-plates, wrappers, angle, T, L, and plate, bar irons, &c., to be truly cut at ends, to ensure a perfect fit; all screw-bolts and screws to flanged pipes, valve spindles, and wrought ironwork of every description, to be of the exact diameters and lengths required and shown on Drawings, with hexagon heads and nuts, unless where otherwise directed. Ends of spindles, shackles, &c., to be forged with eye-holes, and holes for male and female joints of the exact forms. All bolts, handles, hand-rails, spindles, keys, chains, pins, axles, bars, crosses, &c., to be forged with protecting necks, and welded with ends of enlarged diameters or otherwise for screw-ends, and made of the exact shapes, forms, dimensions, lengths, widths, and diameters shown on Drawings, with angular and square threads, as the case may be, to all bolts, spindles, &c., with the correct pitch, angle, and depth, all portions fastened with bolts and rivets to fit closely together. The chains attached to blades of penstocks, and the whole of the wrought-iron gratings, channel-irons, &c., connected therewith, wrought-iron girders to working platforms, handrails to platforms and stairs, to be galvanized before being fixed in the works. All lewis and anchor-bolts to be fixed in walls in the exact positions shown on Drawings, and as shall be directed. Wrought-iron galvanized 1 inch diameter tubing for hand rail at mouth of shaft, where shown on Drawings, and round spiral staircase in shaft, to be fitted and fixed in position, bent, screwed at ends, between cast-iron standards and holdfasts let into circular brick wall, joined together with union screws as shown. Handrails of the same tubing and make to be fixed and fitted between wrought-iron standards along working platform for raising and closing penstocks in shafts.

219. Wrought-iron platform gratings over wells of manholes at inlet and outlet ends of syphon to be made of 2½-inch x 1-inch hinge bars, forged with circular projecting necks, and 1½ inch diameter hinge-pins, of ½-inch x 2½-inch flat bar iron framing at sides and ends, forged and bent and riveted on to ends of hinge bars, as shown. The two longitudinal bars to be pierced for reception of ¾-inch square cross bars, the latter to be spaced as shown, and riveted on to longitudinal bars. The gratings to rest on channel-iron girders, hinge brackets, &c., built into walls of wells, and riveted and spaced as shown.

220. *All joints in plate, angle, T irons, &c.*, to be made only in such positions as shown on Drawings and where directed; and all covering plates, wrappers, T, and angle irons to be truly cut at ends to ensure a perfect fit.

221. *All screw-bolts and screws* to flanged pipes, penstocks, valves, all other castings and wrought ironwork of every description, to be of the exact diameters and lengths shown on Drawings, with hexagon heads and nuts, and to be angular threaded with the correct pitch and angle of the Whitworth screw.

222. *Joints of shafts*, spindles for penstocks, axle shafts for strainers and traveller, engines, &c., to be made by said shafts being truly turned and cut at ends, and cast-iron flanged and turned sockets, with turned spigot and faucet, the internal diameter of socket turned exactly and slightly of less diameter than ends of shafts. Sockets and ends of shafts to be grooved, as shown, for steel key. Sockets to be heated and then fitted on to ends of shafts with keys, after which the flanges to be bolted together, forming coupling as shown on Drawings.

223. *All joints and working parts* of wrought-iron on penstocks, valves, strainers, standards, engines, travelling cranes, travellers, gratings, troughs, louvre shutters, brackets, &c., to be turned, scraped, or ground and glazed bright, as the case may require, and as shall be directed.

224. *All handles and levers* for working penstocks, valves, strainers, travellers, travelling cranes, &c., to be ground and glazed bright.

225. The rivets and bolts to be made of the very best quality of iron, and to be tested both for direct tension and hot shortness. The rivets throughout to be made from  $\frac{1}{2}$ -inch,  $\frac{3}{4}$ -inch,  $\frac{1}{2}$ -inch,  $\frac{7}{8}$ -inch, 1-inch,  $1\frac{1}{4}$ -inch iron respectively, with heads and necks, as shown on Drawings. All screw-bolts and screws to flanged pipes, other castings, and wrought-iron work of every description to be of the exact diameters and lengths shown on Drawings, with hexagon heads and nuts, the threads to be accurately screwed to Whitworth's standard. The Engineer may require any holes to be drilled and the bolts turned for same, or he may order bolts to be substituted for rivets, or other changes of the kind, in such places as he may consider necessary, without extra charge.

226. All rivet, bolt, and screw-holes, to correspond as to diameter and position with the Drawings, and to be carefully drilled parallel and at right angles with face of work. All the holes in booms of main girders, bearing plates, lattice bars, wrought-iron aqueduct pipes, rolled L, channel, T, and flat bar irons to be drilled—the respective pieces being clamped in their proper positions and secured under drill and bored right through; holes in cylinder bracing, cross girders, and wind bracing girders may be punched. No drifting or rimering to be done without the consent of the officer in charge, and then rimering only when the plates can in no other way be made to coincide. Holes which are directed to be punched or drilled at the building site to be about  $\frac{1}{16}$ -inch narrower than the diameter of the rivet required, so as to insure a good fit after its being enlarged with the rimer. Where several holes meet each other in the parts to be united, a horizontal dislocation of not more than 5 per cent. of the diameter of the hole is allowable, the hole then to be made perfectly equal with the rimer, and not by filing on one side, and rivet bolts of proportionately large size to be used in holes thus enlarged.

227. All rivets to be inserted at a bright heat, after being carefully freed from scales, into the duly cleared holes, to be quite firm after the head is completed. If not firm, rivets to be at once removed and replaced by others, and of larger size when directed. In putting together parts, care to be taken that none of them are forced into one-sided tension; any portions distorted in riveting the connections to be at once loosened and the faults remedied. All rivets to be finished with cup heads, and when countersunk the sinking to be drilled and the heads to be finished perfectly flush. All rivets and heads of bolts to be countersunk where plates when fixed will bear on other work, and where they form the inner surfaces of aqueduct pipes. All riveting to be done in the neatest and most workmanlike manner.

228. Wrought-iron gratings to be of the exact dimensions, straight or curved, as the case may be, the bars spaced and riveted as shown, all bars to have rounded-off top surfaces. All hooks, rings, and chains attached to flushing valves, &c., to be galvanized before being fixed in the works.

229. Wrought-iron ladders in lengths shown on Drawings, and as may be ordered, consisting of  $2\frac{1}{2}$ -inch x  $\frac{5}{8}$ -inch uprights, spaced  $13\frac{3}{4}$  inches apart, and  $\frac{7}{8}$ -inch round bar rungs spaced 12 inches from centre to centre. Joints of uprights to occur only at supports, where directed. Supports, spaced as shown, to consist of two 6-inch x 3-inch x 3-inch x  $\frac{3}{4}$ -inch channel irons fixed to uprights with  $\frac{3}{4}$ -inch screw-bolts, stiffened off at ends, at top and bottom, with  $\frac{1}{4}$ -inch plates varying from 12 inches to  $13\frac{1}{2}$  inches in length, riveted on to top and bottom flanges of channel irons, as shown. Projecting ends of supports are for walling into sides of shafts.

230. *The whole of the wrought ironwork* hereinbefore specified to be of first-rate quality and workmanship, of the exact forms and dimensions shown on Drawings, and any details which the Engineer may provide during the progress of the Contract. Wrought ironwork not to be more than 3 per cent. below the estimated weight; if below the 3 per cent. margin, wrought-iron work will be condemned, and if above the estimated weight, the excess weight will not be paid for.

#### *Gun-metal Work.*

231. All portions on Drawings in nuts, bolts, shackles, bearings and working parts, nuts and naves of wheels, seatings of valves, penstocks, standards, hangers and brackets, and all other brasses in working and lifting gear, &c., tinted yellow, to be made of gun-metal. The gas-check flaps to be of Muntz or Delta metal.

232. *The gun-metal required* throughout these works to be an alloy composed of eight parts of copper to one part of tin, unless otherwise specified. The whole of the castings to be solid and perfectly sound, and free from all honeycomb, holes, or other defects.

233. All spindles to be cast on end, having a riser on top of each not less than 3 ft. in height, after which they are to be turned and finished to the exact lengths and diameters; to be straight, and work true in stuffing boxes, nuts, glands, &c.

234. *All screw ends and nuts*, unless where otherwise specified and directed, to be angular, threaded with the correct pitch and angle; and all naves of wheels, nuts for lifting gear in standards, and for offset valves, bearing nuts of end brackets for shafts, &c., where shown, to be turned with the square thread and correct pitch and angle of the Whitworth screw.

235. *All nuts, naves, pins, lubricators, shackles, cycholes, sockets, hinges, hinge-bolts, guide and other brasses in plummer blocks, brackets, standards, valves, penstocks, &c., to be truly bored, turned, faced, and finished to the exact lengths and diameters, shapes, and forms, and to be straight and work true on all bearings and working faces.*

236. All projecting rims, straps, eyehole brackets, &c., to be provided and fitted on to gas-check flaps; to be cast of the sizes, shapes, and forms as shown on drawings; to be faced on surfaces of contact, and to be soldered on to the flaps with zinc, after having been placed truly in position, and then riveted as shown. All gas-check flaps to be of the exact thickness shown on drawings. When the rims and straps for each flap are not cast in one casting, then they are to be cast in parts as shall be directed; and prior to fixing such parts in position, they are to be truly fitted and jointed together. All such joints to be scarfed and braced, as viz.—the edges filed or scraped clean and bright, covered with spelter and powdered borax, and exposed in a clear fire to a heat sufficient to melt the solder, which, for all scarf-joints, to be an alloy composed of four parts of copper to three of zinc. All scarf-joints to be placed where directed. All hinge axles to be truly turned. All links of shackles to be made with one joint, scarfed, brazed, and riveted together.

At expansion joints of large cast-iron pipes, where shown, a gun-metal packing ring,  $2\frac{1}{2}$  inches deep and  $\frac{1}{4}$  inch thick, or any other size as may be specified, to be provided, placed, and fitted round spigot end of pipe, carefully set up flush with end-face of inner recess of faucet.

237. All portions of castings, as exposed surfaces of nuts, hinge-bolts, hinges, shackles, rims, straps, brackets, hooks, links, &c., to be left as they leave the mould, but to be cleaned, and all irregularities to be removed. All other portions of gun-metal work to be truly faced on all surfaces. All gun-metal facings and fittings to be truly turned and faced on all surfaces, to fit exactly, to be forced into positions, screwed where shown, and to sit perfectly firm and true.

238. All gun-metal work to be of the exact forms and dimensions shown on drawings, and all workmanship to be of first-rate quality, and satisfactory to the Engineer.

#### *Cast Ironwork.*

239. The whole of the castings of pipes, inlet and outlet pipes, thimbles, short, flanged, and plain ends, couplings, standards, bends, branches, junctions, guide-pipes for valve spindles, socket-pipe-frames with grooves, for penstocks, landing plates and frames, and gratings, valves, grooves, covering plates, street-boxes, gas-check frames, girders, guide brackets, cylinders, hinge-bearings on rollers and without rollers, bearing plates, bed plates, sliding plates, expansion joint-pipes, faucet and spigot and flanged short pipes, saddles, flap-valves, man-hole covers with ventilating grates, scupper-pipes with gratings and cover-plates, &c., to be cast of No. 2 pig-iron, or of a proper mixture of No. 1 and No. 3 pig-iron according to the quality of the iron and the nature of the pattern; said iron to be of the best quality, tough, close-grained, and capable of being chipped and drilled without difficulty, perfectly sound, free from all cold shuts, honeycomb, holes, or other defects; to be cast in dry sand moulds, unless where otherwise directed; and the whole of the castings of the pipes, plates, ventilating grates and frames, penstocks, flushing valves, junctions, branches, bends, street-boxes, circular-plates (excepting penstocks, valves, gas-check frames, and where otherwise specified), as soon as they have been cast, to be properly cleaned and then heated, and whilst hot to be dipped or coated in gas-tar.

240. All castings to be true in sectional form, straight longitudinally where shown to be so, or of such shapes, projections, curves, angles, and forms as shown on drawings; and each portion of such castings to be of equal strength and of the specified thickness throughout its respective length.

241. The external and internal surfaces of all castings to be perfectly clean and smooth and in strict accordance with sections.

242. All cylinders and pipes to be cast vertically, with the socket or flanged end downwards; to be straight longitudinally, and of equal strength and thickness throughout the entire body of the pipe; all straight pipes with faucet, or flanged, and with spigot ends, to have the latter cast 9 inches longer than shown on drawings, all cylinders to be cast with such head of metal as shall be directed; and, after the castings have been cleaned and coated, the head of metal over the cylinders, and the 9 inches at spigot ends of pipes to be cut off, so as to leave same perfectly square on section and true and equal in circumference, so as to fit the socket, leaving an equal space all round of the exact thickness shown on drawings for lead joints.

243. The faucet of each pipe or casting to be perfectly square and true, of the exact dimensions shown on drawings, and to be cast with a groove of the size and depth as required by the Engineer. The faucet of large circular and oval pipe and thimble for expansion joints to be cast as shown with an inner narrower faucet and projecting rim, and both inner sides of narrower faucet and of projecting rim to be truly turned and polished.

244. The feathers and flanges, where such are shown, to be of the exact widths, forms, and thicknesses, and all surfaces of contact to be planed and turned to true and even faces. All flange-joints, unless where otherwise directed, to be made tight with red lead. All bolt-holes to be drilled of the exact sizes, and spaced as shown.

245. All spigot ends for expansion joints, where shown on drawings, to be cast with a recessed end for reception of wrought-iron ferrule on inner face, and a corresponding projecting face on the outside, said recessed inner and projecting outside faces to be truly turned and polished to the exact cross-section for reception of lead joint, gun-metal packing ring, and wrought-iron cover-plate, as the case may be.

246. The thimbles for expansion joints for large, circular, and oval pipes, to be cast with faucets as described in clause 243, and, with web-plates, ribs, and bed-plates cored out, with bosses truly bored for heads of anchor-bolts; the whole to be of the exact shapes, forms, and dimensions, as shown on drawings.

247. The flanges of gas-check frames to be provided with a projecting face, planed and turned to true and even faces, of the exact dimensions shown on drawings.

248. All holes in hinge-brackets at top of gas-check frames to be truly bored to the diameter required for the reception of hinge-bolts.

249. All bolt-holes to be of the exact sizes, spaced as shown, and to be truly bored and turned.

250. All flange-joints, unless where otherwise directed, to be made tight with red lead.

251. Frames of penstocks to be of the different parts, and of the exact shapes, forms, and dimensions, with all screw and bolt-holes, and the exact circular valve openings, with flanged end at back, projecting rim round opening in front and at sides of same, with cap-pieces on top, upright slide frames, flanged, bolted together, cored out with bosses and web-plates between, to receive front guide-plate, with inner projecting faces screwed into bosses of upright frames. Guide-pieces, with flange and web, faced on surface of contact, with boss in centre, the latter truly bored and turned for reception of brasses and spindle to pass through, fitted with bolt-holes, and screwed on to guide plates.

252. All landing and other plates and grates to be complete with ribs, flanges, hinged and other lids, close or ventilating covers, girders of the exact shapes, forms, dimensions, projections, recesses, &c., as shown on drawing.

253. Valve blades to be of the exact diameters, forms, shapes, and dimensions, with circular projecting faces back and front, and vertical projecting faces corresponding with and bearing on projecting faces of guide-plates and framing, and vertical racks or brackets, with eye-holes truly bored for fixing foot of valve spindle as the case may be. All seatings to be truly faced and bored out to receive gun-metal faces, and all stuffing boxes, glands, foot-step bearings, and journal-boxes, to be bored and turned and polished where directed.

254. All girders, brackets, standards, wheels for chains, and balance weights, tubes, boxes, glands, plummer-blocks, and boxes for lifting or turning spindles, as the case may be, foot-brackets for upper spindles, flanged pipes for spindles, street-boxes, &c., of the different parts, and of the exact lengths, forms, and dimensions, to be truly faced, turned, and polished at all joints, bored and turned for reception of screws, nuts, and brasses, with all bolts and screw-holes of the sizes shown, bolted at all joints, and all faces of flange-joints and working parts and other faces, where directed, to be truly planed, turned, faced, scraped, to the necessary surfaces.

255. All penstocks, scour-valves, &c., to be carefully and truly fitted and fixed together, with all lifting and turning-gear, gun-metal facings, spindles, wrought-iron work, street-boxes, screws, bolts, nuts, &c., complete, in strict accordance with drawings and dimensions figured thereon, and all valves to close watertight.

256. The frame and flap-valve of flushing valve, with bracket, pulley, &c., to be complete, with wrought-iron galvanized chain, to be cast of the exact diameter, shapes, forms, and dimensions; the flushing valves to have a projecting rim all round, the inner face truly faced and turned to a "V shape" of the exact dimensions, so that when the flap is placed in position the edge of the V rim to lie exactly against the centre line of the square tuck or lead-packing of opposite groove in frame, planed out to a dovetail for the purpose.

257. Couplings, flanged, turned, bored, faced, with turned and bored spigot and faucet, and bolt-holes of the exact diameters, to be of the exact forms and dimensions for making joints of valve-spindles, &c.

258. Cast-iron frame with 22-inches diameter opening, with ventilating or non-ventilating lid to fit into easily, complete with sawn and tarred ironbark wood-bricks fitted into panels, and cast-iron circular dirt-box 8 inches deep, the whole to be in strict accordance with drawings and dimensions shown thereon.

259. Scupper-pipes, with cistern-heads, and grating-cover for inlets of scupper-pipes, and plain cover-plates over inlets of scupper-pipes, as shown, to be cast to the exact shapes, forms, with the exact openings, and to the dimensions figured on drawings.

260. All grooves for stop-boards to be cast with a connecting ledge at top, to be cut off when casting is completed. All grooves to be cast true, of the exact dimensions, shapes, and forms; and all working parts of frames and slide-valves, grooves, and stop-plates, to be truly planed and faced so as to fit, but not too tight. All stop-plates to be complete with wrought-iron shackle, 12-feet galvanized chain, hook and rings.

261. The whole of the cast-iron work hereinbefore specified to be completed in the most workman-like manner, in strict accordance with the drawings and dimensions figured thereon, and such directions and other details which the Engineer may provide during the progress of the works; and all gas-checks, penstocks, valves, man-hole covers, landing and other grates, pipes, bends, standards, brackets, couplings, street-boxes, grooves, &c., with all working, turning, and lifting gear, and with all wrought-iron and gun-metal work, after having been fitted and fixed together, to be fixed truly in position as shown on drawings, and to be left in perfect working order, and all lifting and turning-gear to work freely without shake.

262. Castings not to be more than 3 per cent. below the estimated weight; if below the 3 per cent. margin, castings will be condemned, and if above the estimated weight, the excess weight will not be paid for.

#### *Tests of Wrought-iron and Steel.*

263. The tests for rolled iron shall be as follows:—A piece of iron of such width as shall not exceed 2 inches, or exceed 1 square inch in cross-section for a sufficient length, to have 10 inches under actual tension, shall be cut, as directed by the Engineer, from any plate or bar about to be used on the work, and the following tensile stresses shall be applied:—

	Stress per sq. in. without fracture.	Ultimate elongation.	Ultimate contraction of area.
Rolled girders... ..	20 tons	8 per cent.	10 per cent.
Plates—across grain ... ..	18 "	4 "	6 "
with grain ... ..	22 "	10 "	12 "
T, L and bulb T bars ... ..	22 "	10 "	15 "
L bars... ..	23 "	12 "	18 "
Square, flat, and round bars, and bolts over 4 inches sectional area ...	23 "	12 "	18 "
Square, flat, and round bars, and bolts up to 4 inches sectional area ...	24 "	12 "	25 "

Iron within 10 per cent. of above specified stress will be accepted if the contraction of area and elongation are proportionally higher.

The wrought-iron to be further tested for ductility, as follows:—

A plate planed and rounded on both edges, about 4 inches wide and 1 foot long, shall bend cold over a slab, the corner of which is rounded to  $\frac{1}{4}$ -inch radius, for the following angles, without showing any sign of injury or fracture:—

1-inch plate for	...	...	...	With grade.	Across grade.
				15 degrees	5 degrees
$\frac{3}{4}$	"	...	...	25 "	10 "
$\frac{1}{2}$	"	...	...	30 "	12 "
$\frac{1}{4}$	"	...	...	35 "	15 "
$\frac{3}{8}$	"	...	...	52 "	20 "
$\frac{1}{2}$	"	...	...	70 "	30 "

264. Rivet-iron must be capable of being bent cold, until the sides are in close contact without sign of fracture on the convex side.

265. The tests for rolled steel shall be as follows:—

The steel to be of a mild quality, having an ultimate tensile strength, either lengthways or crossways, of not less than 26 tons, and not more than 31 tons per square inch, on a test bar, cut in a similar manner to those for rolled iron, with a minimum elongation of 20 per cent., and a minimum contraction of area of 40 per cent.

Strips cut from any steel plate, angle, or bar, to be heated to a low cherry red, and cooled in water of 82 degrees Fahrenheit, must, when cold, stand bending double round a curve, of which the radius is not more than one-and-a-half times the thickness of the plates tested, without showing any sign of injury or fracture.

#### *Tests for Cast-steel.*

266. The tests for cast-steel shall be as follows:—

Bars turned to  $\frac{3}{4}$  inch diameter for a sufficient length to have 5 inches under actual tension, shall have an ultimate tensile strength of not less than 26 tons per square inch, and a minimum elongation of 18 per cent.

#### *Testing Cast-iron.*

267. During the progress of the works, the Engineer, or any Inspector of Works appointed by him, shall be authorised at any time to examine all operations carried on at the foundry or other place where the wrought and cast ironwork, &c., comprised in this contract, are made; and during the progress of the works, at any time the Engineer or his inspector shall be authorised to cause, from the iron of any cupola, used for casting these works, a straight bar to be cast vertically 3 ft. 6 in. long, and 2 inches deep, by 1 inch in width, to be placed on bearings 3 feet apart, and to be submitted in the centre to a weight not exceeding 28 cwt., with a deflection not less than  $\frac{3}{4}$  inch before fracture, and if said bar does not stand this test to the satisfaction of the Engineer, or his inspector, then the whole of these castings which have been cast of iron of the same quality, shall be at once condemned and rejected.

268. All castings of every description, before they leave the foundry, to be carefully examined and weighed, to be slung on chains above ground, and to be sounded with a hammer, and they are again to be carefully examined, slung, and sounded with a hammer when delivery of same is taken at the site of the works.

269. All straight pipes required in the contract, before delivery of same is taken on the works, shall be, at the foundry or at the site of the works, as shall be directed, duly proved under hydrostatic pressure equal to a column of water of 200 feet, and when under pressure to be thoroughly sounded quickly all over with a hammer of not less than 4 lb.

#### *The Cost of Tests of Wrought and Cast Iron.*

270. The whole of the expense incurred in testing the wrought and cast ironworks, &c., hereinbefore described, including testing machine, carriage, plant, and labour of every description, shall be borne solely by the contractor; and any part of the wrought-iron and gun-metal work, and any of the pipes, castings, &c., injured or broken by the testing, shall be immediately replaced by new and sound wrought-iron, gun-metal, cast-iron pipes, or other castings, to be again tested as before described, until the whole have been tested to the entire satisfaction of the Engineer.

#### *Weights.*

271. The contractor, at his own expense, to provide means of accurately ascertaining in the presence of the Engineer, the weights of all pieces of the metal-work, and all portions to have weights legibly marked thereon in white paint.

#### *Security or Safety of Ironwork provided by Government or Contractor.*

272. Should any engines, cylinders, pipes, valves, penstocks, gas-checks, bends, special castings, gratings, wrought-ironwork, &c., comprised in this contract, and provided either by Government or the contractor, be lost, stolen, destroyed, broken, or otherwise injured during the loading, transit from the foundry to the works, unloading, after delivery has taken place at the various sites of the works, placing, building in, erecting and laying same into position in the works of every description, as the case may be, in consequence of careless or incautious jointing, or cutting out of joint, insufficient sheds or other covering to protect said articles of ironwork from the weather or from theft, or from any other cause while in the possession of the contractor; or should, in consequence of any breakage of plant, carriage, staging, &c., any accident occur to the works, public or private property, to any person engaged on the works or otherwise, the contractor shall, in all these cases, be held solely responsible; and the Engineer, whose decision shall be held final and binding on the contractor, shall have the power of valuing the cost of such breakage, accident, injury, loss, theft, &c., and deduct same from any moneys that may be, or may become due to the contractor on account of this contract.

273. Contractor shall likewise keep all ironwork in good and sufficient repair, and renew all moving and working parts, which may have become worn out, to the satisfaction of the Engineer during the whole time it is under his care.

274. All ironwork supplied by Government to the contractor to be delivered free of charge at the various sites of the works where they are required. For each article so delivered the contractor shall give

give a written receipt, after which he shall be held solely responsible for same; and shall, if any such article be lost, stolen, damaged, or destroyed, refund the cost to the Government, as specified above in clause 272.

275. All ironwork, &c., provided by the Government, which, at the completion of the contract, by direction of the Engineer, has not been built or permanently fixed in the works, shall be conveyed by the contractor to the site of the Field Office, or as may be directed.

*Painting.*

276. *Wrought-ironwork.*—All wrought-ironwork (except where otherwise specified and directed) before leaving the foundry to be scraped and cleaned, and well coated with boiled linseed oil; and, prior to being fixed in position, excluding internal surfaces of circular and oval wrought-iron tubing, and excepting all working parts, after it has been cleaned and scraped free from scales, &c., and inspected, to receive two coats of anti-corrosive paint over all surfaces, and after being fixed in position, to be finished with two coats of best oil-colour, in approved tints.

All bolt-heads, washers, nuts, straps, and all other exposed ironwork of timber bridges above level of kerbs, ordnance fencing, &c., to be finished with two coats of black varnish instead of oil-colour.

277. *Cast-ironwork.*—The whole of the cast-ironwork to be properly cleaned immediately after completion; and, after being inspected, except where otherwise specified, to receive over all surfaces two coats of anti-corrosive paint (except working parts and joints), and to be finished afterwards with two coats of best oil-colour, in approved tints.

This includes all parts of cylinders above water-level or surface of the ground, as the case may be, outside exposed surfaces of cast-iron thimbles, expansion joint castings, short and long pipes, and any other castings on lines of aqueducts.

278. *Carpenter's and Joiner's Work.*—All carpenter's work of timber bridges above level of kerbs, and all ordnance fencing above ground, handrails, travelling cranes, &c., and all joiner's work in frames, transoms, doors, windows, stairs, &c., to be properly prepared, knotted and primed, and painted with best oil-colour four coats, finished with approved tints. All tenons, mortises, notches, halvings, joints, scarfs and butting surfaces, to receive two coats of approved paint before being fixed in position. Frames, transoms, windows, and entrance doors to be finished bronze or as may be directed.

No paint to be applied during or immediately after wet weather, or while surface of timber or metal-work is wet; and an interval of forty-eight hours must elapse between each application.

*Tar Varnish.*

279. The whole of the interior surfaces (working parts and joints excepted) of the wrought-iron circular and oval tubes, cast-iron thimbles, expansion joint castings, short lengths of cast-iron circular and oval pipes, &c., for lines of aqueducts, after having been placed in position in the works, to be thoroughly cleaned of all scales, rust, and previous coating of linseed oil or paint, &c., and then to be coated twice with a tar-varnish composed of 30 gal. of coal tar, fresh, with all its naphtha retained, 6 lb. tallow, 1½ lb. resin, 3 lb. lamp-black and 30 lb. fresh-slacked lime finely sifted; all materials to be approved of and then to be intimately mixed, as shall be directed, and applied hot, like paint.

*Tarring.*

280. All cast-iron cylinders, pipes, short lengths, bends, junctions, and any other casting, &c., which will be placed or layed under water, or which are to be covered up in earth, concrete, &c., and all ventilating and non-ventilating man-hole covers, street boxes, flushing-flaps and frames, scupper-pipes, precipitating tanks, groves, landing plates and frames, grates, cover-plates, gully-grates, &c., as soon as they have been cast and inspected, to be properly cleaned and then heated, and whilst hot to be dipped or coated in hot gas-tar twice, unless otherwise directed.

281. All flat, segmental, and buckled plates, rolled girder, bulb T irons, &c., of decking of culverts, bridges, &c., over storm-water channels and sewers, before being placed in position, to receive one coat of tar, and after erection is completed, to receive a second coat; the tar to be coal tar, mixed with kerosene in the proportion of three of tar to one of kerosene, and applied hot.

Kerbs, flooring planks, timber in girders, longitudinal stringers, cross-girders, corbels, capsills, sills, piles, pier-bracing, abutment platforms, ends of handrail posts below level of tops of kerbs, to receive three coats of tar and composition; the first coat to be all tar, laid on hot, the second and third coats to be composed of seven parts coal tar, four parts of Stockholm tar, and one part of pitch, thoroughly melted together and applied hot, the last coat on top of deck to be well sprinkled with a layer of clean sharp sand and lime. All joints and butting surfaces to be well paved with the hot composition before fixing, and in finished work the composition to be poured into interstices and joints. Any timber inaccessible for tarring when fixed, to receive three coats before being placed in position.

No tar to be applied during or immediately after wet weather, or while surface of iron or timber is wet; and an interval of forty-eight hours to elapse between each application.

*Notice for Inspection.*

282. The contractor shall give notice to the Engineer of the commencement or completion of the undermentioned work, and formally submit it for inspection before proceeding to place, execute, or cover it up, viz. :—

Excavation of trenches and tunnels in hard and soft rock, shale, ironstone, earth.

Piling, sheet-piling, timbering.

Excavation for foundations, pipe-trenches, cylinders, tanks.

Withdrawing of timber in excavation, and cutting off piling and timbering under water.

Laying of foundations.

Laying of pipes and placing, building in, and fixing in position all ironworks.

Placing centering in position, and removing centering.

Keying of arches.

Striking of centres.

Placing concrete boxes in position, and shifting of concrete boxes.

Filling in round all works, into pipe trenches, and all other excavations.

Filling in low ground at sides of storm-water channels into embankments.

Commencing concrete work, brick work, masonry, carpenter's work, and commencing cement facing.

233. The contractor shall also keep a register, and give daily written notice to the Engineer of, viz. :—

- Number, length, and dimensions of sawn piles put on the ground.
- Number, length, and minimum diameter of round piles put on the ground.
- Actual length of piles before ramming.
- The day each pile is set.
- Weight of ram used for pile-driving.
- Depth of each pile driven at the last stroke.
- Total depth to which each pile is driven.
- Number of men employed at pile-driving.
- Number and weight of all prepared items of wrought ironwork brought on the ground.
- Number and weight of all prepared cast ironwork, valves, penstocks, travelling cranes, frames, &c., put on the ground.
- Number and weight of all cast-iron pipes, bends, T pieces, distance pipes, inlet and outlet pipes, &c., put on ground.

*Testing the Whole of the Works.*

234. It is to be distinctly understood that, on completion of the works, the Engineer shall have the power of ordering and having the main sewers, or portions of same, &c., closed in such order as he shall direct, and the whole of the sewers and aqueduct tubes, &c., filled with water for such a time as he may deem necessary, for the purpose of testing the works; and any injuries, faults of whatsoever description, leakage, breakage, &c., of valves, tubes, pipes, iron, masonry, brickwork, concrete-work, &c., caused by or detected in consequence of such testing, to the work of every description, joints, &c., shall be at once repaired, replaced by new work where ordered, and made good; the whole expense incurred in plant, materials, and labour required to replace with new work, effect repairs, and make good any faults, leakage, damage, or injuries to any portion of the works, shall be borne solely by the contractor; and, after the completion of these repairs, replacing with new works, and making good any damages, injuries, faults, &c., the whole of the works shall again be tested, as before described, until they shall have been proved perfectly watertight, sound, clean, and in first-class working condition, to the entire satisfaction of the Engineer. If the result of the test or examination be satisfactory the work will be formally taken over by the Engineer, who will issue a certificate to that effect, whereupon the period of maintenance shall begin.

*Junctions with other Contracts.*

235. If two different contractors execute simultaneously two adjoining sections of the works, they shall be held jointly and severally responsible for effecting a proper junction of the sections.

*Correctness of Information Supplied.*

236. It is hereby expressly understood that the contractor is bound to completely and thoroughly inform himself of every circumstance connected with or relating to the work, and of the correctness or otherwise of any information contained in or supplied by the drawings or specification; as he shall have no claim on account of any errors, omissions, or inaccuracies, that may be found in these documents after the contract shall have been signed, and since he has to provide in his tender for every contingency that may arise.

The contractor must himself compare the copies of drawings and specifications supplied to him, under clause 4 of the general conditions, with the original, as no claim will be allowed for any errors therein.

*Suspension of Works.*

237. On receiving a written notice to that effect from the Engineer, contractor shall suspend the whole or any portion of the works, as may be directed in such notice. He shall have no claim for loss or damage on this account, unless the suspension exceeds one month; and such suspension shall in no wise vitiate the contract, but a commensurate extension of time for completing the works will be granted to the contractor.

*Compensation for Alteration of Design.*

238. Contractor shall not be entitled to claim or receive any compensation whatever over and above payment for the actual increase of quantities at schedule rates, and, where there are no schedule rates, at such rates as shall be determined at the time by the Engineer for any additions to, deviations from, or alterations of the various designs comprised in this contract, as viz. :—

Variations in manholes, junctions, flushing chambers, &c., and in consequence of meeting with any existing gas, water, or sewer pipes or sewers, as referred to and in accordance with clause 109, the position of which it is impossible to ascertain until the ground for the construction of the works comprising this contract is opened up,—

- Variations in the extent and quantity of piling.
- " lengths of piles.
- " inclination of slopes and gradients.
- " lines of sewers and stormwater channels.
- " lengths of open trenches.
- " lengths of tunnels.
- " depth, shape, or size of excavation for sewer, storm-water channels, intersecting arrangements, &c.
- " depth, shape, or size of concrete or brick work of sewers, storm-water channels, intersecting arrangements, &c.
- " internal diameter of pipe-sewers.
- Any decrease in quantities to be deducted as provided for.

*Schedule Prices to include Contingent Services.*

239. That the price for providing, making, fitting, painting, coating, testing, and delivering, placing, and erecting each respective item of work enumerated in the schedule of quantities and prices hereto annexed shall mean and include the cost for each item respectively of all materials, excavation, filling, piling, carpenter's work, concrete, brickwork, masonry, cast-iron, wrought-iron, and gun-metal work, &c., patterns,

patterns, labour, carriage, workmanship, tools, painting, tarring, scaffolding, and plant of every description necessary for constructing, completing, coating, painting, tarring, testing, delivering, placing in position, erecting, &c., where specified, and maintaining each respective item of work in strict accordance with specification and drawings.

*Measurements and Payments.*

290. The contractor shall be present at all measurements, and, if required, assist in making the same. If he fail to attend after twenty-four hours' notice in writing has been delivered to him of the superintending officer's intention to take measurements, and clearly setting forth the locality of such intended operation, the measurements made by the superintending officer shall be binding on the contractor.

291. On satisfactory completion of any portion of the works, and at all other suitable times, the dimensions of such work shall be measured by the superintending officer, and recorded in a book kept for that purpose; and these quantities shall serve as the basis for arriving at the contract sum on completion of contract.

292. For the purpose of making progress payments, the dimensions of still unfinished portions of the work will be measured in a summary way monthly, or as near as may be, but without prejudice to the ultimate acceptance or rejection of such unfinished portion of work.

293. The contractor shall sign the measurement book each month, before the monthly progress payments are made, accepting the detailed quantities, prices, and amounts. Should he, however, disagree with the detailed quantities, prices, and amounts, he is at once to state in the measurement book in what particulars he disagrees, and the grounds of his disagreement; and unless this is done it is to be distinctly understood that the detailed quantities, prices, and amounts, as recorded in the measurement book, shall be binding.

294. The final measurements, based upon the measurements made during the progress of the works, will be prepared within thirty days, or as nearly as may be after the completion of the work, as provided in clause 284; and the contractor will be required to accept such measurement before any part of the retention money will be paid, or the fixed deposit returned.

295. As provided in clauses 217, 230, and 262, the contractor shall only be entitled to payment for ironwork, &c., as per weights in schedule of quantities annexed hereto, at the rate of prices set forth therein; and payment will not be made for any excess over such weights.

*Duties.*

296. In the event of any materials being imported by contractor for use on this contract, no refund will be made of any duties which may be legally chargeable on such materials; and the contractor shall bear and pay all duty stamps, licenses, building or surveyor's fees, or other charges or fees whatsoever, legally demanded by any municipal or other authorities.

*Payments of Royalties and Testing Fees.*

297. Before final payment is made the contractor must satisfy the Engineer that all claims for patent rights or royalties and testing fees have been paid.

*Jobbing.*

298. When desired by the superintending officer so to do, contractor shall furnish to said officer any skilled artisans, labourers, or carts with horses and drivers for the performance of such services as the aforesaid officer may desire to be performed in connection with, for, on, or near the works under the contract.

299. Contractor shall supply those artisans, labourers, &c., with the necessary plant and lighting, and shall be paid for all services thus rendered the full amount provided therefor in the schedule of prices under the head of "jobbing," at the end of every month, or as nearly as may be thereafter. The accounts for this "jobbing" shall, however, be rendered by contractor to the superintending officer or overseer in half-weekly intervals, that is to say, during the forenoon of every Monday and Thursday, failing which he shall lose all claim to payments for the jobbing performed by him during the preceding three days.

300. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

*Maintenance.*

301. During the whole time of construction and during the "period of maintenance" referred to in clauses 46, 50, 52, and 96 hereof, and in clause 32 of the General Conditions, contractor shall keep and maintain in good and sufficient repair all the works executed or in course of execution, and make good all injury or loss which may happen or occur to them, or to any materials, or plant, or anything else in connection with the works under this contract.

302. Even after the expiration of the period of maintenance, contractor will still be held liable for all defects in the works which were not visible, or which may have been kept secret at the time of the works being taken over by the Engineer, since he is, and hereby distinctly agrees to be, *responsible for all faults or neglects of, or all deception practised by his agent, overseers, or workmen, irrespective of the time at which such faults, neglects, or deceptions may be detected.*

This is the schedule to specification marked "B," referred to in our annexed bond to Her Majesty the Queen, dated the 22nd day of January, A.D. 1894.

"C."

## GENERAL CONDITIONS.

*Interpretation of Terms.*

1. WHENEVER the terms hereafter explained in the present clause occur in these or any special conditions or in the contract or specification, they shall be held to mean, and shall mean, as follows:—

"Government" shall mean the Government of New South Wales promoting this undertaking.

"Minister" shall mean the Secretary for Public Works of the Colony of New South Wales for the time being.

"Engineer" shall mean the Engineer-in-Chief having the principal charge of the works, or the person acting as such for the time being.

"Superintending Officer" shall mean any person or persons who may from time to time be entrusted with the superintendence of the works on behalf of the Government.

"Contractor" shall mean the person or persons who contracted to execute the works.

"Special conditions" shall mean any "special conditions" hereto attached and forming part of the contract; and such special conditions shall be read with the general conditions as part and parcel of the contract.

"Schedule of prices" shall mean the rates at which the contractor has offered or agreed to execute the contract, where the same is based on a schedule of prices; and be the basis on which the value of any extra works or of any deductions shall be calculated, and progress payments made, whether the contract be one of a schedule of prices or a bulk sum.

"Plans" shall mean and include all drawings referring to the works and explanatory of, or supplementary to, the specification.

"Works" shall mean the works set out in the specification and plans, or, in the event of there being no plans in the specification only.

"Net claim" shall mean the sum claimed by the contractor after deducting therefrom the sum acknowledged by the Department to be due.

"Net award" shall mean the sum awarded on arbitration, after deducting therefrom the sum acknowledged by the Department to be due.

*Supply of Labour, Materials, and Plant.*

2. The contractor shall, except in so far as the specification may expressly state to the contrary, provide at his own cost and expense all labour, materials, and plant, and everything which the Engineer may consider necessary for the proper and complete performance of this contract. No materials or plant placed on the site of the works shall be removed therefrom, or otherwise disposed of, without the consent of the Engineer.

*Plans, Specifications, &c.*

3. The plans and specifications represent generally the form, dimensions, and description of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by scale. Or if there be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the plans, and the dimensions and materials given in the specification, the directions of the specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the plans, and not in the specification, or anything contained in the specification and not shown in the plans, shall be equally binding as if it were contained in both. If neither specification nor plans contain any mention of minor parts, which, in the opinion of the Engineer, are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided by the contractor without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are, included in this contract.

All works described in, or implied by, the specification or shown in any of the plans, or set forth in any lists or tables thereon, or attached thereto, as well as those expressly provided for, are to be made and executed in every detail conformably to the several plans already prepared or which may be prepared hereafter for the purpose of this contract, in strict accordance with the provisions of the specification and conditions, and to the entire satisfaction of the Engineer.

*Copies of Plans, &c.*

4. A copy of all plans and specifications required by the contractor for carrying on the works will be provided by the Government, but must be returned before a final certificate for the work can be given. Any additional copies which may be required and are supplied by the Department shall be paid for by the contractor at a rate to be fixed by the Engineer.

*Setting out Works.*

5. The works will be set out—that is to say, all necessary centre lines and levels will be given to the contractor—except in the case of buildings, when in the absence of setting out, a block plan will be supplied, from which he must work; but the contractor must satisfy himself of the accuracy of the setting out, as no work incorrectly set out or improperly executed will be paid for.

*Protecting and maintaining Signals and Marks.*

6. All bench marks, pegs, and signals on the surface, and all alignments, and level marks underground put in by the Engineer or Superintending Officer for the purpose of checking the contractor's work, will be confided to the care of the contractor. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true position; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they may, if necessary, be replaced by the Engineer or Superintending Officer at the contractor's expense, and the cost thereof deducted from any moneys then due or thereafter becoming due to the contractor.

*Possession*

*Possession of Ground.*

7. In giving the contractor possession of the site it shall not be deemed that he is to have the exclusive possession, but only a limited possession, that is to say, such possession as will enable him to perform the works comprised in this contract. The Minister may at any time take possession of any portion of the works or ground or intended site of the works for the purpose of carrying on any other works or for any purpose whatsoever. The contractor must procure for himself all other land which he may deem requisite for any temporary purposes or for his own convenience.

*Access to Works.*

8. The Engineer, or any other person authorised by him, shall have free and uninterrupted access at all times to the works, and during working hours to any workshop or premises, not on the site of the works, where materials may be in preparation or stored for the purpose of this contract. The contractor shall give the Engineer all particulars as to the mode and place of manufacture of any of the materials proposed to be used in connection with this contract, and shall facilitate in every way the inspection of the same.

*Contractor's risk.*

9. The contractor shall take upon himself the whole risk of executing the works to the satisfaction of the Engineer, and in accordance with the plans, sections, and specifications.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer in charge to receive instructions from the Superintending Officer or Engineer, and to represent the contractor for all purposes of this contract.

Any notice or any written instructions to be given or delivered to the contractor under this contract shall be deemed to have been so given or delivered when given or delivered to the contractor or his representative at the work, or left at the contractor's usual or last-known place of abode or business.

*Order of Procedure.*

11. The Engineer shall have full power to decide in what order in point of time the various parts of the work or works comprised under this contract shall be carried out.

*Power of Entry.*

12. The Engineer shall have the power, at his discretion, without vacating this contract, to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this contract, and his doing so shall in no wise be held as a waiver of the responsibility of the contractor in respect of this contract, except in so far as any injury may accrue to such work so entered upon, by reason of any proved carelessness, to the satisfaction of the Engineer, of any employee of the Government, in which event the contractor shall be free from liability on account thereof, but not otherwise.

*Instructions to be obeyed.*

13. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the Superintending Officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

*Power to dismiss men.*

14. The Engineer may require the dismissal within twenty-four hours by the contractor of any agent, overseer, foreman, workman, or other person employed on the works, and in the event of the contractor refusing or neglecting to comply with such requisitions, all further payments on account of the work may be stopped until such dismissal is effected.

*Bad Materials or improper works to be removed.*

15. The contractor shall be bound to remove within twenty-four hours, if written notice from the Engineer or Superintending Officer to that effect be given, any materials or work, whether fixed or not, which may appear to the Engineer to be of an inferior or improper description; and in case of refusal, the Engineer shall have the power to get such materials or work removed at the contractor's expense, and to withhold all payments until such instructions have been complied with.

*Extra Works—Omissions of Works.*

16. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to order material or work of a different description to that specified, or to increase or diminish the dimensions or extent of any works to be done under this contract, or to alter their situation or vary the form or dimensions of any of the said works, or of any part thereof, or to make any deviation or to substitute one class of work for another, he shall have full power to do so, and to order and direct any such increase, diminution, alteration, deviation, or substitution, and the works involved in any such increase, alteration, deviation, or substitution, shall be executed by the contractor if of the class of works provided for in the schedule of prices, at such schedule prices; and no such increase, diminution, alteration, deviation, or substitution of works shall in any way annul or set aside this contract, or extend the time for the completion thereof, unless the Minister shall see fit to grant such extension; but such additions or alterations shall be measured and paid for, or deducted from the contractor's account as the case may require, according to the schedule of prices. Provided that if any portion of the works so ordered to be done shall not be, in the opinion of the Engineer, of the same value or class of works provided for in the schedule of prices, the same shall be executed by the contractor at such prices as may be agreed upon with the Engineer; but if the contractor and Engineer cannot agree as to the price to be paid, the Engineer may order and direct the same to be done by such person or persons as he may think fit. Before any extra work, or work of an altered value or class, is undertaken by the contractor, it shall be imperative for him to procure an order in writing from the Engineer for carrying out such extra or variation of work, and the contractor shall not be entitled to any payment for such extras or variations unless he produce the written order for the same, as aforesaid, and he shall not be entitled to plead that the Engineer omitted to give such written order,

order, as it is to be distinctly understood that the onus of obtaining such order shall be on the contractor. The contractor shall not be entitled to any other rate than the schedule rate on any plea that the work was in a different position or of a different class from, or in a more difficult position than that shown on plan or specification, or carried out under circumstances not contemplated in the specification, unless an agreement entitling him to payment by other than the schedule rates shall have been previously made and signed by the Engineer and the contractor.

*Valuation of Omissions.*

17. The Engineer shall have the power to direct the omission of the carrying out of any part or parts of the said works, but not amounting to the omission of the whole; and the value of such work so omitted in such case, calculated at the schedule rates, or in the event of there being no schedule rates, calculated on the basis of the proportionate value which such work bears to the lump sum, as ascertained by the Engineer, whose decision on that point shall be final, shall be deducted from the contract sum, subject, however, to arbitration clauses Nos. 36 to 41.

*Net Measurements.*

18. The whole of the work shall be executed and paid for according to the contract dimensions, and no allowance will be made for any excess of dimensions above those found on the working plans now exhibited, or which may be afterwards supplied, notwithstanding any general or local custom to the contrary, unless such excess has been expressly ordered. In the case of dressed masonry all cubic measurements will be taken at the extremes, and in the case of rock-faced masonry all measurements will be taken to the draft. With regard to timber, all framed work will be paid to extremes, but in no case will scarfs in hewn or round logs be paid for.

*Contractor liable for injury to adjoining Lands, Properties, &c.*

19. The contractor shall not commit any act of trespass, and shall effectually protect all adjoining properties and owners thereof against any loss, damage, or injury that may occur through the carrying on of the works, whether to buildings, goods, property of any kind, or to persons, and in case any such trespass be committed, or any such loss, damage, or injury occur, the contractor shall make full compensation, and shall make good all or any such loss, damage, or injury, and if any such compensation for trespass, or any such loss, damage, or injury be recovered against the Government in the first instance, it may be deducted from any money due or coming due to the contractor under this contract, or may be recoverable from the contractor or his sureties as liquidated damages in that respect incurred.

*Damages, &c., to be paid for by the Contractor.*

20. All damage, injury, or loss that may happen to the works from any cause whatever during their progress must be made good by the contractor at his own expense; and the whole of the works must be delivered up, complete in every respect, according to this contract, and the care and maintenance of all works under this contract shall remain with the contractor until the Engineer shall, by notice in writing under his hand, inform the contractor that he has taken charge thereof; and until such notice shall have been given, the contractor shall be responsible for all accidents, from whatever cause arising, and shall make good all damages thereto.

*Contractor not to Sublet Works or Assign Moneys.*

21. The contractor shall not assign or underlet this contract, or any part thereof, or assign or mortgage, charge, or encumber all or any of the moneys payable or to become payable under this contract, or any other benefit whatsoever arising, or which may arise, under this contract, to any person without the consent in writing of the Minister being first obtained. The contractor for each and every breach of this condition shall be liable to pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor under this or any other contract with the Government. And any permission to assign or underlet works to be done under this contract shall not discharge the contractor from any liability in respect of this contract, and shall extend only to the permission actually given, but not so as to prevent any proceedings for any subsequent breach of this condition; and all rights under these conditions shall remain in full force, and shall be available as against any such subsequent breach.

*Truck System not allowed.*

22. The workmen and labourers of every class employed on the works shall be paid their wages in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods will on any pretence be allowed; nor shall the contractor, or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen and labourers of every class shall be paid on the works if it be possible, or in some building in the vicinity; and in no case shall they be paid at a public-house or other place where liquors or refreshments are sold. The contractor for each and every breach of this condition shall pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor under this or any other contract with the Government.

*Power of the Government to pay Workmen and Tradesmen.*

23. Before the payment of any money to the contractor, the Engineer may require from him a statutory declaration that the tradesmen supplying materials for or incidental to the works, and the workmen and labourers of every class employed on the works, have been paid their claims of every kind in full, in current coin of the Colony, and to the latest date at which such wages or claims are due; and the Engineer may withhold the payment of any money that may be due or become due to the contractor until such declaration has been made and delivered to him.

If the contractor shall fail or omit to pay the claims of any such tradesmen, workmen, or labourers, in the current coin of the Colony, it shall be lawful for the Minister, or the Engineer, as often as the same shall

shall happen upon complaint of such failure or omission made by any such tradesman, workman, or labourer, and upon proof to the satisfaction of the Minister or Engineer of such failure or omission to pay the amount of such claim to such tradesman, workman, or labourer, and to deduct the same amount from any money then due or owing, or thereafter to become due or owing, to the contractor under this contract.

*Delay by Minister.*

24. If the contractor shall not be able to obtain possession of any portion of the ground required for the execution of the works to be done in connection with this contract, or if from the non-delivery, or any delay in the delivery to the contractor, of any materials which under this contract the Minister is to supply, or from any cause whatever arising out of the acts or defaults of the Minister, or any officers or servants in his employment, or from any accident happening to the said works during their progress not arising from the neglect or default of the contractor or his servants or workmen, the contractor shall be delayed or impeded in the execution of his contract, the contractor may from time to time within seven days of the happening or occurring of such act, default, or accident, apply in writing to the Engineer for an extension of time on account of such act, default, or accident, setting forth the cause of such application, and the Engineer shall, if the Minister think the cause sufficient, but not otherwise, allow by writing under his hand such an extension of time as the Minister shall think adequate; and the penalties, sets-off, and deductions to which under this contract the contractor is liable shall not attach until the expiration of such extension of time, but shall attach, and the contractor shall become liable to the same, from the date of the expiration of such extended time or times. And unless the contractor shall make such application within the time and in the manner aforesaid, and unless and until the Minister shall allow such extension or extensions of time as aforesaid, the contractor shall not by reason of any delay arising from the cause or causes aforesaid, or any of them, be relieved in any way or to any extent of his liability to finish and complete the works within the time in this contract specified; and, in default of his so doing, to pay and be subject to the liquidated damages, deductions, and sets-off as in these conditions provided; nor shall the Minister be deprived in any way or to any extent of his right to deduct or recover any sum or sums as liquidated damages, and not as or in the nature of a penalty or to make deductions or sets-off which under this contract he is entitled to make, deduct, set-off, or receive from the contractor for or by reason or on account of any delay in the completion of the work or any portion of the same, nor shall the rights, powers, and authorities by these conditions given to or vested in him be in any way affected.

*Patent Rights to be included.*

25. The contractor is to include in his tender the amount of all patent rights and royalties which may be claimed by any patentee or patentees for the manufacture and use of any portion of this work, and must undertake to liquidate the same when required to do so.

*Free Passes, &c.*

26. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Conditions not to be waived.*

27. None of the conditions of this contract shall be varied, waived, and discharged, or released either at law or in equity, unless by the express consent of the Minister, testified in writing under his hand.

*Progress Payments without Prejudice.*

28. No progress payment given to the contractor shall prevent the Engineer from at any future time before the final settlement rejecting all unsound materials and improper workmanship discovered subsequently to the giving of any previous payment; and notwithstanding any approval given or made by the Superintending Officer that portions or the whole of the works have been satisfactorily performed, the Engineer may require the contractor to remove or amend at any future time previously to the final payment on account of the work any work that may be found not in accordance with this contract; and the contractor must remove and amend at his own cost all such work when so required; and if he refuse or neglect to do so, the Engineer shall have the power to carry out such work, and to deduct the whole cost thereof from any moneys that may be due, or that may become due to the contractor.

If, in the opinion of the Engineer, further inquiry is necessary or desirable before any progress payment is made, he shall have the power to withhold the certificate on which such payment would have been made, for any period which he may consider necessary for the purpose of such inquiry.

*Security.*

29. Within fourteen days after the notice of the acceptance of his tender shall have been given to the contractor, or posted to the address of his last known place of business or residence, he shall deposit with the Minister, or at the option of the Minister in some bank or banks in Sydney, upon fixed deposit in the name of the Minister, a sum calculated at the rate of £5 for every £100 or part thereof on the amount of his tender up to the sum of £100,000, and at the rate of £1 for every £100 or part thereof in addition, for any amount over that sum, to be held by the Minister as security for the due and proper performance and completion of this contract until the Engineer has certified that the whole of the work in the said contract has been completed to his satisfaction, or until this contract has been cancelled by the Minister under the power given to him in that respect under clause 32 of these conditions, in which last-mentioned event happening the money so deposited shall become forfeited to the Crown, and shall be held by the Colonial Treasurer, for and on behalf of Her Majesty the Queen, as liquidated damages. If, however, this contract shall not have been cancelled under the said clause, and if the works comprised in this contract are not completed within the time mentioned in clause 31 of these conditions, the liquidated damages which, under the last-mentioned clause are made payable to the Minister, may be deducted and taken from the money so deposited.

If the contractor fail to deposit the sum as hereinbefore provided within fourteen days from the acceptance of the tender, or if he fail to execute the contract for the due performance of the works mentioned in the said tender, the Minister shall have the option of and full power and authority to declare such acceptance to be annulled, in which case the amount of the preliminary deposit will be absolutely forfeited to the Crown, as provided by the regulations of the Tender Board.

No

No tenderer will be authorised to proceed with the work tendered for until he has made the deposit as aforesaid, and has executed the required contract for the due performance of the said works, it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract, or the said moneys being deposited as aforesaid, he shall not have any right of action, claim, or demand against the Minister.

The contractor will be entitled to receive any interest that may be payable upon the fixed deposit of the money, if the money be placed in a bank at fixed deposit, as such interest becomes payable, but it is expressly declared that the Minister is not to be held liable or answerable in any way for any loss on the money so deposited or for any loss of interest from the fixed deposit not being renewed.

#### *Payments.*

30. Progress payments may be made once in every month, unless the same shall become not payable by reason of anything contained in these conditions, on the certificate of the Engineer, as the work proceeds, in the proportion of 80 per cent. of the value of the work returned, until the sum retained reaches the amount of the deposit provided for in the preceding clause, when no further deductions will be made. The amount of the retention money will be held by the Minister, in addition to the cash security, unless otherwise provided for in the specification, until the Engineer has certified that the whole of the works have been satisfactorily completed, and the period specified for the maintenance of the said works has expired, and all accounts finally adjusted when the retention money, in addition to the cash security, will be paid to the contractor; and it is expressly declared that until a certificate has been given by the Engineer to the Minister that the work done by the contractor has been executed and completed to his satisfaction, the contractor shall have no right or claim in respect of any work done or materials provided, nor to the payments from time to time to be made under this contract, or to the final payment upon the whole of the works being finished.

#### *Delay or Bad Work, Bankruptcy, &c.*

31. In case the Engineer shall be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, or in case the contractor shall at any time neglect or omit to carry out the instructions of the Engineer, or to dismiss any person employed when required, or shall neglect or omit to remove any materials or work which he is required to remove under condition 15, or in case the contractor shall assign or underlet this contract, or any part thereof, or assign or mortgage, charge or encumber, or attempt to assign, mortgage, charge or encumber, all or any of the moneys payable or to become payable under this contract, or any other benefit whatsoever arising or which may arise under this contract, without the consent in writing of the Minister being first obtained, or in case the contractor shall make default in insuring and keeping insured, in cases where insurance is specified, and depositing the policies and receipts for premiums in accordance with these conditions, or in case the contractor shall become bankrupt, or shall make an assignment of his estate for the benefit of creditors, or shall make an arrangement or composition with his creditors, then and in every such case the Minister shall be at liberty, without vitiating this contract, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to take the works wholly or partially out of the hands of the contractor and to employ or contract with any other person or persons to execute the same, and for that purpose to take possession of and use all horses, materials, plant, tools, implements and things on or about the said works, without making any allowances for the same, and all damages and expenses thereby incurred shall be ascertained and certified by the Engineer, and together with any sum payable as liquidated damages under these conditions shall be deducted from any money that may be then due or may thereafter become due to the contractor or may have been deposited by him; and if the money then due, or thereafter becoming due to the contractor, or deposited by him, be not sufficient for that purpose, the balance remaining unpaid shall be a debt due by the contractor to the Minister, and may be recovered accordingly,

#### *Cancellation of Contract.*

32. In any or either of the events mentioned in the last preceding clause of these conditions, the Minister shall have the option and full power and authority in lieu of proceeding under such clause, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to cancel this contract whether there are any works remaining to be done or not; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed, shall be taken by him as full payment for all works done under this contract; and upon notice in writing under the hand of the Minister that he, under the authority of this condition, cancels this contract, being given to the contractor, this contract shall be cancelled, and thereupon all sums of money that may be due to the contractor, or unpaid, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, shall be forfeited, and all sums of money held as security or named as liquidated damages for the non-fulfilment of this contract within the time specified shall also be forfeited and become payable to the Government, and the said implements and materials shall become and be the absolute property of the Government, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

#### *Insurance.*

33. The contractor shall from time to time, when required to do so by the terms of the specification, insure the works against loss or damage by fire, in an office to be approved in the name of the Minister for the amount of the full value of the work completed, as determined by the Engineer, and shall lodge with the Engineer the policies and receipts for the premiums for such insurance, and shall continue such policies until possession is given up to the Government; in default of which the Minister shall be at liberty to insure and deduct the amount of the premiums paid from any moneys payable to the contractor, and may refuse payment of any certificate until such policies and receipts are handed in as aforesaid; but this insurance is to be no limit or bar to the liability and obligation of the contractor to deliver up the works to the Minister completed in all respects according to the contract. In case of loss or damage by fire the moneys payable under any such insurance shall be received and retained by the Minister until the works are finally completed, and shall then be credited to the contractor in the final settlement of accounts in the event of the contract not having been previously cancelled under these conditions.

#### *Time*

*Time of Completion, &c.*

34. The contractor shall complete the whole of the works comprised in this contract within seventy-eight weeks from the date of the acceptance of his tender, and in the event of their non-completion at the specified times, should the Engineer not have proceeded under clauses Nos. 31 and 32 of these conditions, or either of them, the contractor shall pay, by way of liquidated damages, and not as or in the nature of a penalty, the sum of twenty pounds sterling for every week, or for every part of a week that shall elapse after such specified time, until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. The contractor shall have no right to a certificate for payment after the date specified in these conditions for the completion of this contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer, unless the time for the completion of this contract shall have been extended by the Minister, in which case such extended time shall become the time for the completion of this contract, and it is to be expressly understood that the fact of the time having been so extended shall not in any way be taken as a waiver of this contract, or as annulling or setting aside this contract in any respect, nor be taken as releasing the contractor from any of the responsibilities or obligations of this contract, which, in all other respects, shall remain the same as if the time had not been extended.

The like liability also shall hold good as to the obligation of the contractor in the event of any advance being made to him from the retention money, or on material on the ground and not *in situ*.

*Maintenance.*

35. The contractor will be bound to maintain the works for a period of three months after their final completion and use by the Government; and if any part should within that period show signs of weakness, or of giving way, or if any defective workmanship or materials be detected, the contractor, when called upon to do so, shall make good the same at his own expense, to the satisfaction of the Engineer, before any moneys held by the Government on account of this contract will be paid. It is also to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the contractor, during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the contractor of any liabilities or obligations whatever in respect of his contract.

*Arbitration.*

36. The following matters shall be decided by the Engineer, whose decision shall be absolute and final:—(1) All questions or disputes which shall arise respecting the true construction or meaning of the plans or specification, or the quality of the workmanship, or quantity or quality of materials necessary for the whole or any part of the contract. (2) All questions and disputes when the net claim shall not amount to the sum of five hundred pounds.

37. All questions and disputes not hereinbefore provided for shall, if the net claim be five hundred pounds or upwards, upon the completion of the works under the said contract, and before payment of the retention money and the money deposited as security for the due carrying out of the contract, be fixed and determined by arbitration as hereinafter provided.

38. If either party consider that he has claims in respect of any matter in which arbitration may be claimed, he shall, within one month of the date of the final certificate, furnish to the other party full particulars in writing of such claims, breaches, doubts, disputes, and differences in respect of which he desires arbitration, giving distinct and separate items, and the amount, if any, claimed under each item; and the other party may thereupon furnish particulars of all claims he has in respect of such matters, irrespective of the aggregate amount of such claims; and the party furnishing the same shall be bound by such particulars; and no claim not included in such statement shall be taken into consideration at such arbitration, or become subject of arbitration or action; and the claim or respective claims so made as aforesaid shall be determined by arbitration, in the manner as hereinafter provided.

39. If both parties concur in the appointment of a single arbitrator, then the reference shall be to such single arbitrator; but if the parties for twenty-one days after the particulars first mentioned in the last preceding clause shall have been furnished, cannot concur in the appointment of a single arbitrator, the reference shall be to two arbitrators, one to be appointed by each party, or their umpire to be appointed in writing by such arbitrators before they commence the business of the reference; and the arbitration shall, subject to the express provisions herein contained, be made and held pursuant and subject to the Arbitration Act of 1892 or any statutory modification or re-enactment thereof for the time being in force.

40. The costs of and incidental to the arbitration shall be paid or borne by or between the parties in manner hereinafter mentioned, that is to say:—

1. If the sum awarded does not exceed the amount acknowledged by the Department to be due, the contractor shall pay all the costs of and incidental to the arbitration.
2. If the sum awarded shall amount to the sum claimed by the contractor, the Government shall pay all the costs of and incidental to the arbitration.
3. If the sum awarded exceeds the amount acknowledged by the department to be due, but is less than the sum claimed by the contractor, the costs of both parties shall be added together and the total cost so ascertained shall be paid by the parties in the proportions following, namely:—The Government shall pay such sum as bears the same proportion to the total cost as the net award bears to the net claim, and the balance shall be paid by the contractor.

The award shall direct to and by whom and in what proportions the costs shall be paid, in accordance with the provisions hereinbefore contained; but the award need not specify the amount of such costs. Such amount shall, in the event of disagreement, be taxed or settled by the arbitrators or umpire, as between party and party, after the award is made. No costs shall be allowed as between solicitor and client. If either party shall be dissatisfied with the costs allowed by the arbitrators or umpire, the same may be taxed by the Prothonotary or other proper officer of the Supreme Court.

41. It is to be distinctly understood that all claims by either party to have any of the matters which may be submitted to arbitration so dealt with, must be made upon the whole of the work being completed, and before payment to the contractor of the retention money or of the money deposited as security for the due performance of the contract, and that the acceptance by the contractor of payment of the retention money in cases where a bond to secure the completion of the works has been given, and

and in other cases of the retention money or of any balance thereof, and of the money deposited as security for the due performance of the contract. shall be conclusive proof that the contractor has no such claim or claims.

Roads and Bridges and Sewerage Branch,  
Department of Public Works.

ROBT. HICKSON,  
Commissioner and Engineer-in-Chief,  
Roads, Bridges, and Sewerage.

Sureties—Contract No. 69, Western Suburbs Sewerage.

Sir, Box No. 14, North Sydney, 29 January, 1894.

With reference to the above we have to inform you that Mr. Frederic Lassetter will be unable to sign the necessary documents in connection with the same owing to his immediate and permanent removal to England.

We have, therefore, to ask you to be good enough to allow the name of Mr. Robert LeNere Scrutton, of R. L. Scrutton & Co., Merchants, City, to be substituted for that of Mr. Lassetter.

We are, &c.,  
CARTER, GUMMOW, & CO.

Under Secretary for Public Works, Sydney.

Is name satisfactory?—D.C.M'L. (pro U.S.), B.C., 30/1/94. Commissioner for Roads. Yes.—  
R.R.P.H., 1/2/94. Mr. Norrie.—D.C.M'L. (pro U.S.), 1/2/94.

No. 7.

Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

Minute Paper.

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 18 January, 1894.

Subject:—Contract No. 69. Eastern Branch, Western Suburbs, cross-sections of sewer to be adopted.

Provision has been made in this contract for constructing the sewers and shafts wholly in concrete, or in brick and concrete. With a view of ascertaining which would be the cheaper method to adopt, I have had comparative estimates prepared at the contract schedule rates, which I attach.

I beg to recommend that the following sections for sewers be adopted:—

- (a) For open cutting—No. 2 cross-section.
- (b) For tunnels where timber is required—No. 3 cross-section.
- (c) For tunnels in soft ground where timbering is not required—No. 5 cross-section.
- (d) For tunnels in hard ground—No. 6 cross-section.

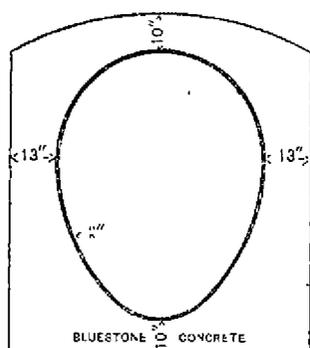

It will be seen that the cheaper shafts are those built with brick, and I recommend that this description of shaft be adopted.

Approved.—R.R.P.H., 19/1/94. Messrs. Carter, Gummow, & Co., 20/1/94. Mr. Millner to note.—J.D., 20/1/94. Noted.—W.J.M., 21/1/94. File.—J.D., 1/2/94. The Engineer-in-Chief has decided that in the case of Sydenham-road sewer, in open cutting, the No. 3 section, may be adopted instead of No. 2, on the understanding that the No. 2 is put in other open cuttings, and that in the case of Sydenham-road specially selected material be put in the sides and round the arch up to the level of crown.—J.D., 9/3/94. Mr. Millner. Noted.—W.J.M., 9/3/94. File.—J.D., 13/3/94.

J. DAVIS.

COMPARATIVE estimate for constructing sewers and shafts wholly in concrete or in brick and concrete.

No. 8.

## Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen,

Department of Public Works, Sydney, 20 January, 1894.

I have the honor to enclose, for your information, a tracing showing the different cross-sections of sewer lining which the Engineer-in-Chief has decided to adopt on your Sewerage Contract No. 69.

With regard to cross-sections Nos. 5 and 6, you will receive instructions as the work proceeds which of these sections will be used.

The shafts will be built of bricks where such are shown on contract drawings.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 9.

## Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen,

Department of Public Works, Sydney, 18 January, 1894.

I beg herewith to enclose a list of the sizes of shaft excavation. The sizes are to the inside of the timber, and do not include the extra excavation required for the chambers, down pipes, &c. This additional excavation may either be done at the time you are sinking the shafts, or afterwards, as it suits your convenience. Where sumps are required they are to be sunk the size of the shafts, Mr. Millner will decide at the time a shaft is excavated whether a sump will be necessary, and give you instructions accordingly.

With reference to the excavation in tunnels in "more or less hard material," which in the opinion of the engineer requires blasting, I have to inform you that any ground of this description in the lower part of the tunnels where timbering is used in the upper part, must be taken out for two ring lining without the use of blasting by means of guttering and gadding and will be paid for under schedule item No. 6.

With regard to other lengths of the tunnels requiring blasting, special instructions will be issued for each length.

As to tunnels in "more or less hard material" which require timbering, I have to request that you will excavate the same to the cross-sections shown in the margin.

The tunnels in "solid rock" are to be excavated for one ring lining by means of 4-inch charges of compressed powder.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

No. 10.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Department of Public Works, Sydney, 19 January, 1894.

I have the honor to inform you that you are at liberty for the present to dispose of the surplus material as you find it convenient, and that you will be paid for same under schedule item No. 43.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 11.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Department of Public Works, Sydney, 24 January, 1894.

Referring to clause 6 of the specification, I have the honor to inform you that you may excavate shafts No. 4 at 2 m. 33 chs. 5 lks. from 9 feet below the surface, No. 5 at 2 m. 40 chs. 50 lks. from 6 feet below the surface, and No. 14 at 3 m. 69 chs. from 18 feet below the surface, with the use of 4-inch charges of compressed powder.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 12.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Department of Public Works, Sydney, 3 February, 1894.

Referring to clause 6 of the specification, I have the honor to inform you that you may excavate shafts No. 2A at 3 m. 23 chs. 90 lks. from 3 feet below the surface, No. 3 at 2 m. 38 chs. from 7 feet below the surface, No. 3A at 2 m. 34 chs. from 3 feet below the surface, No. 11 at 3 m. 33 chs. 85 lks. from 27 feet below the surface, and No. 10 at 3 m. 30 chs. 28-13 lks. from 26 feet below the surface, with the use of 4-inch charges of compressed powder.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 13.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 19 February, 1894.

Referring to clause 6 of the specification, I have the honor to inform you that you may excavate shafts No. 2 at 2 m. 22 chs. 80 lks. from 10 feet below the surface, and No. 6 at 2 m. 69 chs. 70 lks. from 18 feet below the surface, with the use of 4-inch charges of compressed powder.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 14.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 12 March, 1894.

I have the honor to forward herewith an additional drawing, showing slight modification in the details of shafts at 2 m. 73 chs. 863 lks. and Emily-street, and the upper portion of the pipe-shafts. You will notice that the cast iron plates shown on the drawing attached to the contract, on the ledges at the bottom of the shafts, are substituted for boards, that the sandstone-ashlar at the top of the shafts is substituted for concrete, and that the top of the pipe-shafts is altered. Will you please bear in mind that these alterations apply to the whole of the shafts in your contract.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 15.

Supervising-Engineer Davis to Inspector Millner.

*Minute Paper.*Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 2 May, 1894.*Subject* :—Contract No. 69.—Substituting tunnelling for open cutting.

I UNDERSTAND that the contractors wish to substitute tunnelling for open cutting in two or three instances. They must write, asking permission to do this, before any excavation is paid for in such cases, as it will be necessary to clearly understand on what conditions the concession is granted. Will you please see contractors with reference to this matter. J.D.

I have seen contractors and verbally informed them of this.—W.J.M., 14/5/94. Mr Davis. This might now be filed.—J.D., 22/5/94.

No. 16.

125

## No. 16.

## Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Department of Public Works, Sewerage Branch, 23 June, 1894.

I understand it is your intention to substitute tunnelling for open cutting in the Illawarra-road for a portion or the whole of the length between 2 m. 54 chs. and 2 m. 87 chs., and I desire to inform you that there will be no objection to this course, but it must be distinctly understood that you will be paid as though the excavation had been done in the manner shown on the drawings attached to the contract.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

## No. 17.

## Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch, Sydney, 9 May, 1894.

*Subject* :—Contract No. 69, Eastern Branch, Western Suburbs—Pitching round Man-hole Covers.

As some of the man-holes on this contract are being constructed, I should like the Engineer-in-Chief's decision as to the kind of pitching, if any, which is to be put round the man-hole covers.

Twelve square yards of squared bluestone pitching were included in the schedule of quantities, which the contractors have priced at £50 per square yard. The quantity likely to be used if the whole of the man-holes are to be pitched will be 35 square yards, which, at schedule rates, will amount to £1,750.

Special bluestone concrete will answer the same purpose as bluestone pitchers, and will only cost 9 cubic yards, at 50s. = £22 10s.

The fair price for bluestone pitching is about 25s. per square yard, and, as the schedule rate is so much higher than the market rate, the question arises whether the pitching should not be omitted. If, however, this course is considered to be unfair to the contractors, then only the quantity included in the schedule of quantities need be carried out.

J.D.

We cannot in fairness omit an item for which, no doubt, the price is absurdly high, while we know that on other items the price is equally low. Where bluestone pitchers are shown on drawing contractors must be paid for same at schedule rates.—R.R.P.H., 11/5/94.

Mr. Millner to note.—J.D., 11/5/94. Noted.—W.J.M., 14/5/94. Mr. Davis. File.—J.D., 15/5/94.

## No. 18.

## Inspector Millner to Supervising-Engineer Davis.

Sewerage Office, Arncliffe, 21 August, 1894.

Contract 69, *re* extra lining of Tunnel, between 2 miles 38 chains and 2 miles 45 chains.

I THINK that it will be advisable that the extra lining of tunnel (ordered between 2 miles 40½ chains and 2 miles 45 chains) should start at 2 miles 38 chains. The ground in this extra 2½ chains is of a very similar nature to the other.

W. J. MILLNER.

Register.—J.D., 23/8/94. Will Mr. Piper please attach the paper referred to?—J.D., 25/8/94. Has Mr. Millner these papers?—J.D., 28/8/94. Previous papers, 94-1,078, Mr. Davis, 25/6/94. I have not got these papers.—W.J.M., 29/8/94. Mr. Davis. What will the extra cost be?—J.D., 31/8/94. Mr. Adams. The extra cost from 2 miles 38 chains to shaft at 2 m. 40 chs. 50 lks. will be £206 3s. 9d.—W.E.A., 31/8/94.

Will the Engineer-in-Chief please approve of 10 inches of lining for this length of tunnel? It was driven for 5 inches in the first instance. The ground has proved to be of a soft nature, and therefore requiring an extra thickness of lining. This additional work is fully provided for in the contract, and included in schedule of quantities.—J.D., 31/8/94. Engineer-in-Chief.

Approved.—R.R.P.H., 1/9/94. Contractors informed. Mr. Millner to note.—J.D., 7/9/94. Noted.—W.J.M., 11/9/94. File.—J.D., 17/9/94.

## No. 19.

## Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 28 June, 1894.

I have to request that you will please excavate the tunnel between 2 miles 40½ chains and 2 miles 45 chains, to admit of two ring lining being put in. The excavation you will be paid for under item No. 9, and the bluestone concrete and additional brickwork under items Nos. 32 and 33 respectively.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

126

No. 20.

Messrs. Carter, Gummow, &amp; Co. to The Under Secretary for Public Works.

Sir, North Sydney, 6 July, 1894.

With reference to our contract No. 69, Sydney Sewerage, we are willing that the Government shall exercise the option of paying us all sums now due or to accrue due in respect of this contract, either in cash or Funded Stock, as may be thought fit.

We have, &amp;c.,

JOHN CARTER.  
FRANK MOORHOUSE GUMMOW  
(By his Attorney, JOHN CARTER).  
D. G. SNODGRASS.  
GEORGE MADDISON.  
PETER EWING.

Witness,—ROBERT MILLER, J.P.

We, the sureties named in the bond in connection with the above contract, consent hereto.

Witness,—FRED. WOOLCOTT-WALEY, J.P.

CHAS. J. HENTY.  
R. L. SCRUTTON.

Treasury informed, 9/7/94. For approval.—J.B., 10/7/94. Approved.—W.J.L. Accountant  
Roads to note.—F.C.P., 24/7/94. Seen;—Mr. II. to note.—O.C., 24/7/94. Mr. Wallwork,—Please  
place with Bond Ct. 69.—E.H., 24/7/94.

No. 21.

The Council Clerk, Marrickville, to The Commissioner for Roads.

Sir, Borough of Marrickville, Town Hall, 24 August, 1894.

I am directed by his Worship the Mayor to draw your attention to the enclosed letter, received by him from the borough engineer, and to request that the Department will cause such steps to be taken in this matter as may be deemed necessary, so as to avert what would be an intolerable and continuous nuisance.

I have, &amp;c.,

HENRY H. BROWN,  
Council Clerk.

For report.—R.R.P.H., 27/8/94. Report herewith.—J.D., 6/9/94. Council Clerk.—J.D., 13/9/94.

Sir,

I have the honor to bring before your notice the following:—The Government Sewerage Department is taking up a culvert on the Illawarra-road, near Addison-road, and intend substituting one that will act as a syphon. It is needless for me to point out the nuisance and trouble this will be to the Council. But I wish to bring under your notice the fact that it is quite unnecessary to have a syphon. Below the culvert there is a fall of 4 ft. 6 in. in 7½ chains, which if worked out would give sufficient fall for the drain, and clear the culvert altogether. As it is a matter of great importance, I have brought it before your notice without loss of time.

I am, &amp;c.,

J. P. WEBSTER.

No. 22.

Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

Department of Public Works, Roads and Bridges  
and Sewerage Branch, Sydney, 6 September, 1894.

*Subject*:—Contract No. 69, Eastern Branch Sewer, Western Suburbs, Culvert under Sewer near Addison-road.

This culvert is shown on the contract drawings to be built as a syphon under the Eastern Branch Sewer. Syphons are always objectionable, and should, if possible, be avoided, especially where, as in this case, there will be large quantities of heavy silt carried with the water, which will undoubtedly settle in it.

With a view of finding out whether the syphon in this instance could be dispensed with, I have had levels taken of the stream below the culvert, and I find that by lowering the bed of the creek for a length of 287 feet, and carrying the culvert 75 feet to the east of the Illawarra-road, to support a cottage which is built on the edge of the creek, the syphon need not be constructed.

The cost of lowering the creek and extending the culvert will be about £125, and I would strongly recommend that this extra be incurred.

J. D.

Longitudinal section of creek and drawing of proposed culvert submitted with this report.  
Approved.—R.R.P.H., 6/9/94. Mr. Davis. Contractors informed.—J.D., 13/9/94. Mr. Millner to  
see. Seen.—W.J.M., 14/9/94. File.—J.D., 17/9/94.

No. 23.

127

No. 23.

Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 12 September, 1894.  
Referring to your Contract No. 69, I have the honor to inform you that the Engineer-in-Chief has decided to dispense with the syphon culvert under the sewer near Addison Road, and to substitute a culvert, as shown on the sketch handed to you by Mr. Millner. Will you please also extend the culvert as shown to support the cottage built on the edge of the creek, and deepen the creek to give an outlet for the culvert.

You will be paid at schedule rates for this work.

I have, &c.,  
J. DAVIS,  
Supervising Engineer for Sewerage.

No. 24.

Messrs. Carter, Gummow, &amp; Co. to The Engineer-in-Chief for Sewerage.

Contract No. 69, Western Suburbs Sewerage.

Sir,

North Sydney, 20 September, 1894.

Having now completed a considerable portion of the above contract, for the performance of which your Department hold security to the extent of about £6,800, being £4,500 as guaranteed by our sureties and £2,300 retention money for work already done, we have the honor to ask you to allow the payment to us of £1,000 from the latter amount, leaving £5,800 still remaining as security for the due fulfilment of the remaining portion of the work.

We would remind you that our sureties are two of the most reliable firms in the city, viz., Parbury, Henty, & Co., Pitt-street, and R. L. Scrutton & Co, Clarence-street; and also that the amount of security required had the contract been accepted in the ordinary way would not have exceeded £4,500.

We have, &c.,

CARTER, GUMMOW, & CO.

Personal security has been given on this contract for double the usual amount of cash security; so that, in addition to the retention money, which amounts to nearly £2,300, the Department has security for £4,520, making a total of personal and cash security for the due performance of the contract of £6,820. The amount of the contract is £45,207, of which there has been about £30,000 worth of work done. This being the case, and the personal security being Messrs. Henty & Co. and Mr. R. L. Scrutton (firms, I suppose, which are safe), I think £1,000 of the retention money might be returned.—J.D., 21/9/94, Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

Recommended.—R.H., 21/9/94. Under Secretary. For approval.—J.B., 21/9/94. Approved.—J.H.Y., 21/9/94. Mr. Millner to include in next progress return.—J.D., 21/9/94. Included.—W.J.M., 24/9/94. Accountant.—J.D., 26/9/94. Voted.—O.C. (per E.H.), 2/10/94. Mr. Piper.

No. 25.

Supervising-Engineer Davis to The Engineer-in-Chief for Sewerage.

Department of Public Works, Roads and Bridges and Sewerage Branch,

Sydney, 21 September, 1894.

*Minute Paper.*

*Subject*:—Western Branch, Western Suburbs, recommending that a single sewer be substituted for the two sewers originally proposed.

In the original scheme for the drainage of the western suburbs two sewers are provided to run side by side from Premier-street to a point in the Terrace Road where the Canterbury sewer branches off to that suburb, a length of 70 chains. Over twelve months ago the survey was completed for the two sewers, and in anticipation of them being continued the length of tunnelling and lining from Premier-street to the Illawarra Road was included in the contract for the eastern branch. The tunnel is now driven for the two sewers for this length, and the lining will be proceeded with in a few days.

With a view of seeing how the cost of a single sewer would compare with that of a double one, estimates have been prepared which I attach. They show that the double sewer—

For the length from Premier-street to Terrace Road, exclusive of shafts and aqueduct, to be ... ..	£	s.	d.
And the single sewer, 7 ft. 8 in. x 6 ft. 8 in., to be, on same basis ... ..	22,867	3	9
	13,758	13	9
Saving in favour of one sewer ... ..	8,108	10	0
To this must be added saving in shafts ... ..	1,000	0	0
And saving in cost of aqueduct ... ..	1,500	0	0
Total saving in favour of one sewer... ..	10,608	10	0

The

The only objection to the single sewer is in the fact that the flow line will be raised 5½ inches, and this will affect the area drained by the Canterbury branch to that extent.

I have consulted with Mr. Bagge as to the desirability of making the proposed change, and he quite agrees with me that it should be made.

I beg, therefore, on the score of economy that the single sewer should be substituted for the double sewer.

I have seen Messrs. Carter & Co. with reference to making the change in the length between Premier-street and Illawarra Road, and they are willing to build the single in place of the double sewer, provided they are recouped for any expense they may have gone to in making centering for this particular length. If the Engineer-in-Chief so decides, the two sewers could be built, and a chamber and shaft built at Illawarra Road to connect the single and double sewer, as shown on attached tracing.

J. DAVIS.

One sewer from Premier-street approved.—R.H., 24/9/94.

Will Mr. Millner please note and report what expense the contractors have been put to in preparing centering. I will then write contractors, instructing them to carry out the single sewer in lieu of double one.—J.D., 24/9/94. Mr. Millner.

Noted and report herewith.—W.J.M., 29/9/94. Contractors informed.—J.D., 11/10/94. Will Mr. Bagge please have drawings prepared for Illawarra Road shaft, providing for inlet from east, and also of any alteration he wishes made in invert of Premier-street chamber.—J.D., 11/10/94. Mr. Bagge. Mr. Baltzer for details.—W.C.O.-B., 11/10/94. Details are nearly finished.—W.C.O.-B., 15/10/94.

Resident Engineer's Office, Arncliffe, 9 October, 1893.

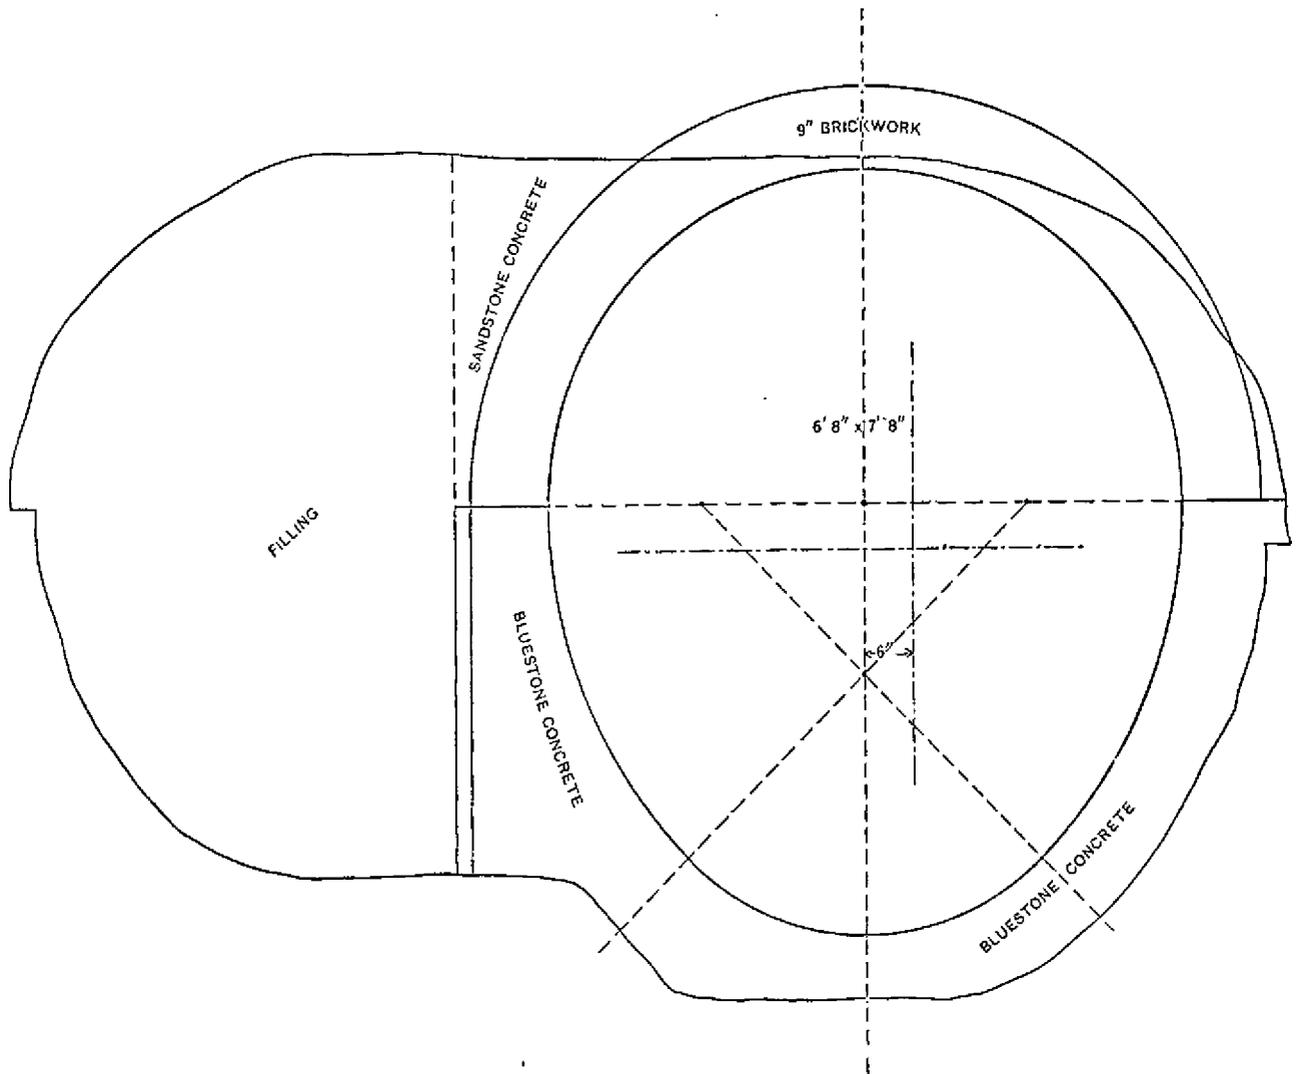

CONTRACT No. 69.—Alteration of Sewer, Premier-street to Illawarra Road.

THE attached tracing shows the cross section of tunnel excavation between Premier-street shaft and Illawarra Road, and the distance the centre line will require to be moved to substitute the 7 ft. 8 in. x 6 ft. 8 in. sewer for the duplicate sewer.

W. J. MILLNER.

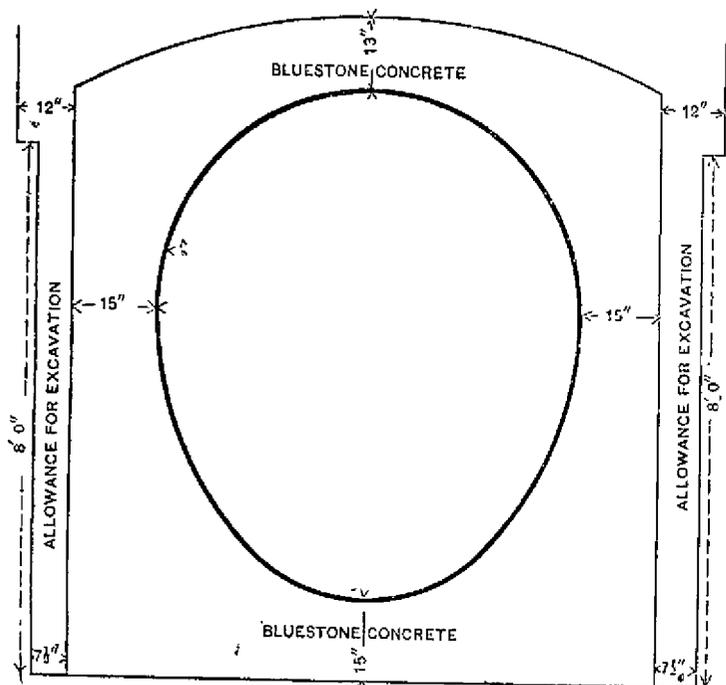

Mr. Davis.

Altering road	...	...	£ s. d. 3 0 0

£37 10 0

Mr. Davis.

W. J. MILLNER.

No. 26.

Supervising-Engineer Davis to Messrs. Carter, Gummow, & Co.

Gentlemen, Department of Public Works, Sewerage Branch, 11 October, 1894.

Referring to the conversation which I recently had with you, and to the interview which Mr. Millner had with you two weeks ago respecting the substituting of a single sewer for the double one, shown on contract drawings, between Premier-street shaft and the shaft at the Illawarra Road, I have the honor to inform you that the Engineer-in-Chief has decided to substitute a 7 ft. 8 in. x 6 ft. 8 in. sewer for the double one, and that you will be allowed for the expense you have been put to in connection with the double sewer, as arranged with Mr. Millner, viz., £37 10s.

The cross section of sewer will be as shown on attached tracing. Drawings will be forwarded in a few days of the shaft at the Illawarra Road, and of any slight alteration it may be necessary to make in the inverts of the Premier-street shaft chamber.

In the meantime you will please proceed with the construction of the single sewer, as shown on the tracing attached.

I have, &c,

J. DAVIS,  
Supervising Engineer for Sewerage.

No. 27.

Messrs. Carter, Gummow, & Co., to The Engineer-in-Chief for Sewerage.

Sir,

Marrickville, 11 November, 1894.

In reply to your letter of 11th October, with regard to alteration of design between Premier-street shaft and Illawarra Road, we beg leave to state that we will accept the terms therein, provided a special item be arranged for the filling at the rate of 5s. per cubic yard.

Yours, &c.,

CARTER, GUMMOW, & CO.,

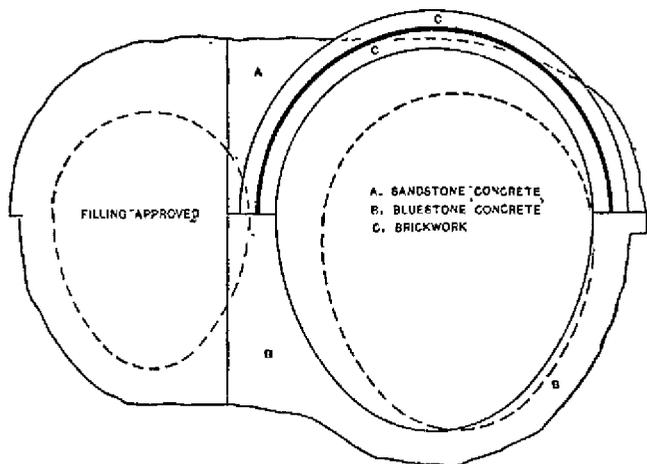

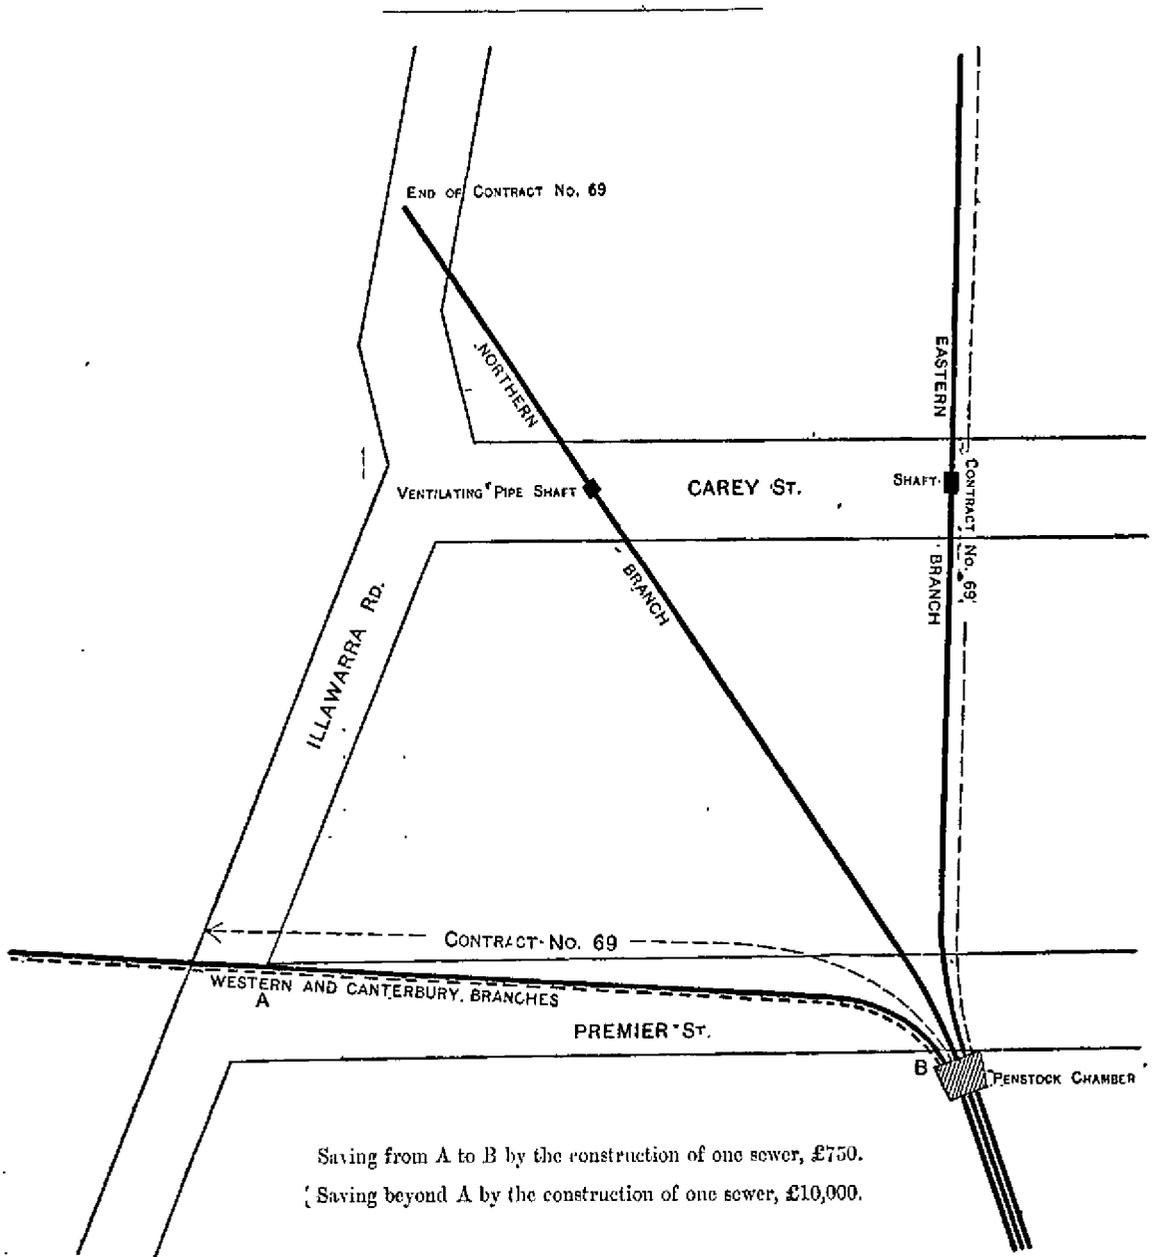

Contract No. 69.

Mr. Davis.—R.H., 11/11/94. Commissioner for Roads.—D.C.M'L., (pro U.S.) B.C., 15/11/94. Will Mr. Weedon please let me have quantity of filling.—J.D., 17/11/94. Quantity of filling, due to alteration in design, 410 cubic yards.—S.H.W., 20/11/94. The

The schedule rate for filling is 6d. per cubic yard, but it is manifest that the contractors, in giving this low price, did not contemplate doing the kind of filling required in connection with the western branch sewer, between Premier-street and Illawarra Road. The 5s. asked is, I consider, a little high, but I suppose, as they will lose something by the reduction of concrete and brickwork, occasioned by the alteration, it will be just to take this into account, and allow them what they ask. There will be about 400 cubic yards of this filling, which, at 5s. per cubic yard, would amount to £100. I recommend that the price named be approved.—J.D., 21/11/94. Commissioner and Engineer-in-Chief for Roads, Bridges, and Sewerage.

This addition is caused by an alteration in the original design, which has the effect of reducing the cost of the work in this contract by about £750, and a further reduction on the whole work of £10,000. Recommended for approval.—R.H., 21/11/94.

For approval.—J.B., 28/11/94. Approved.—J.H.Y., 29/11/94. Roads.—D.C.M'L., (*pro* U.S.), B.C., 29/11/94. Seen.—R.H., 30/11/94. Mr. Weedon to note.—J.D., 4/12/94. Noted.—S.H.W., 6/12/94. File.—J.D., 7/12/94.

Dotted lines indicate original duplicate sewers; full lines indicate sewer as carried out.

No. 28.

## Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 3 December, 1894.

In reply to yours of the 11th ultimo, accepting the terms stated in mine of the 11th October, relative to the alteration of design between Premier-street shaft and Illawarra Road, conditionally upon a special item being arranged for the filling at the rate of 5s. per cubic yard, I have the honour to inform you that the Minister has approved of your being paid for the filling in of this length at the price you name.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

No. 29.

## Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 8 December, 1894.

Referring to my letter of the 11th October last, informing you that the Engineer-in-Chief had decided to substitute one sewer for the two shown on the contract drawing between Premier-street and Illawarra Road, and instructed you to proceed with the construction of the single sewer, I now beg to forward herewith the drawing showing the alteration which this change necessitated in the chamber of the Premier-street shaft.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

(Through Mr. Millner.)

No. 30.

## Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 23 March, 1895.*Minute Paper.**Subject:—Shaft at Premier-street.*

THE present size of the shaft at Premier-street, excavated under contract No. 62, is 12 ft. x 5 ft. In Messrs. Carter & Co.'s contract, No. 69, provision has been made for enlarging the shaft to 14 ft. x 7 ft., and to line it with brickwork. The top of the shaft is left open, and surrounded by an iron railing, which would not prevent children and others getting into this shaft.

I do not think that there is any necessity to make the shaft larger than it is at the present time, and the iron railing would certainly be dangerous.

I recommend that the shaft be not increased in size, that it be lined with bluestone concrete, and that it be arched over, and a manhole cover be put on in the usual way. The saving that will thereby be effected will amount to £50.

J.D.

Approved.—R.P.H., 25/3/95. Messrs. Carter, Gummow, & Co., 25/3/95. Mr. Millner to note.—J.D., 25/3/95. Noted.—W.J.M., 29/3/95. Mr. Davis. File.—J.D., 30/3/95.

No. 31.

## Supervising-Engineer Davis to Messrs. Carter, Gummow, &amp; Co.

Gentlemen, Public Works Department, Sewerage Branch, 25 March, 1895.

I have the honor to request that instead of enlarging the Premier-street shaft to the size (14 ft. x 7 ft.) shown on the contract drawings and lining it with brickwork, that you will please line the shaft with bluestone concrete in the usual way, not increasing its size; and instead of putting the iron fencing round the top as shown on contract drawings, that you put a concrete arch with manhole cover as is the habit in such cases.

I have, &amp;c.,

J. DAVIS,

Supervising Engineer for Sewerage.

Messrs. Carter, Gummow, & Co.,  
Contractors for Contract No. 69.

No. 32.

I recommend acceptance of Carter & Co.'s tender at schedule rates.

R. R. P. HICKSON

23rd February, 1891.

Vice-President of Tender Board.

### No. 2.

#### The Under Secretary for Public Works to Messrs. Carter and Co.

Sir,

Department of Public Works, Sydney, 28 February, 1891.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 18th instant, is accepted for Contract No. 72, Sydney Sewerage, Construction of a Stormwater Sewer, Munni-street to Shea's Creek, at your schedule of prices.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract, and to be completed within eight months from this date.

I have to refer you to the Commissioner for Roads for further information, and to request that you will call upon the Officer in Charge of Bonds and Contracts at this office, for the purpose of executing the necessary documents for the due observance of your Contract.

I am, &c.,

J. BARLING,

Under Secretary.

### No. 3.

#### Agreement.

Department of Public Works, Bonds and Contract Branch,  
Sydney, 28 May, 1892.

*Minute Paper.*

*Subject:—Re Extension of Time, Munni-street Sewer, Contract No. 72.*

THE Memo. of Agreement herein duly prepared, has been executed by The Honorable the Minister and the Contractors, Messrs. Carter & Co., and stamped, and may now be forwarded to the Commissioner and Engineer-in-Chief for Sewerage.

The Tender, and all other papers herein, are sent herewith.

H. F. NORRIE,

Officer in Charge (*pro V.C.L.*)

#### MEMORANDUM OF AGREEMENT

MADE this 19th day of April, in the year of our Lord 1892, between the Honorable William John Lyne, the Minister for Public Works, in and for the Colony of New South Wales (hereinafter referred to as "the said Minister,") of the one part, and John Carter, David Graham Snodgrass, and George Forest, of North Sydney, in the said Colony, contractors, carrying on business together under the name, style, or firm of "Carter & Co.," and hereinafter referred to as "the said contractors." Whereas by a certain agreement in writing, bearing date the 16th day of March, 1891, the said contractors covenanted with Her Majesty the Queen, her heirs or successors, to find and provide all the materials, tools, plant, labour, and every other thing requisite and necessary for and performance of the various works required in and about the

the full and proper construction, erection, and completion of Munni-street, Macdonald-street, Mitchell Road to Shea's Creek storm-water channel, known as contract No. 72, Sydney and Suburbs Storm-water Drainage, in accordance in all things with the printed notice tender specification, general conditions, and special conditions, thereunto annexed, and the plans or drawings relating thereto, and therein referred to, and to complete and finish the whole of the said works on or before the 28th day of October, 1891. And whereas the said works are still unfinished and not completed, and the said contractors have applied to and requested the said Minister to extend the time for the completion of the said works until the 18th day of August, 1892, which the said Minister hath consented to do. Now these presents witnesseth, that in consideration of the premises the said Minister, acting on behalf of the Government of the said Colony, doth hereby extend the time for completion of the works in the said agreement, tender, specification, general conditions, and special conditions, mentioned or referred to, until the 18th day of August, 1892, and that the said contractors do hereby jointly and severally covenant, promise, and agree with the said Minister that they, the said contractors, shall, and will, well and truly complete the whole of the works mentioned in the specification, general conditions, and special conditions, and the plans or drawings therein referred to, mentioned or shown, in accordance in all things with the said tender, specification, general conditions, special conditions, and plans and drawings, on or before the 18th day of August, 1892; and further, that at all times hereafter the said agreement shall be read and considered, as if the said 18th day of August, 1892, had been named in and by the said agreement, tender, specification, general conditions, and special conditions, as the day on or before which the said works were to be completed and finished by the said contractors; and that the said agreement shall not be considered as altered, or the stipulations, provisoes, and agreements therein or in the said specification, general conditions, and special conditions, in any way barred, waived, or departed from in any respect, other than as to the time within which the said works are to be completed, but that Her Majesty the Queen, her heirs and successors, the said Minister and his successors in office, and the Government of the said Colony, shall have all and every the rights, powers, and authorities, cause and causes of action, and suits, claims, and demands, given to or vested in her, or them, in and by the said agreement, tender, specification, general conditions, and special conditions in all respects against the said contractors, and each and every of them, as if the said 18th day of August, 1892, had been the day or time originally named in and appointed for the completion of the said works; and that all, and singular, the penalties, forfeitures, sum or sums of money, rights, and privileges which would accrue to, or vest in Her said Majesty the Queen, her heirs or successors, the said Minister and his successors in office, or the Government of the said Colony, for or by reason, or on account of the said works not being completed and finished within the time named, and according to the said tender, specification, general conditions, special conditions, and the said agreement shall accrue to, or vest in Her said Majesty, her heirs or successors, the said Minister and his successors in office, or the Government of the said Colony, if the said works shall not be completed and finished in all things on or before the 18th day of August, 1892; and that the said agreement shall at all times be read and considered as if the said 18th day of August, 1892, was, and is the time therein named for the completion of the said works, instead of the said 28th day of October, 1891; and, lastly, that in consideration of such extension of time, as aforesaid, the said contractors shall not have any claim or demand against the Crown, or the Colonial Government, or the said Minister, for any alleged failure or delay on the part of the said Government in not setting out the said works, or furnishing plans or detailed drawings, or in not supplying machinery or materials, or otherwise arising out of any supposed failure, neglect, or default on the part of the said Government; and all such claims and demands are hereby expressly waived and surrendered. In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

Signed, sealed, and delivered by the said William John Lyne, }  
 the Minister for Public Works in and for the Colony of }  
 New South Wales, but not so as to incur or come under }  
 any personal liability in respect of the premises, in the }  
 presence of,— } J. BARLING. } WILLIAM JOHN LYNE.

 V. C. LUMSDAINE.

Signed, sealed, and delivered by the said George Forest, in }  
 the presence of,— } GEO. FOREST.  
 HAROLD F. NORRIE, J.P.

AGREEMENT made this 16th day of March, in the year of our Lord 1891, between John Carter, David Graham Snodgrass, and George Forest, all of Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of "Carter & Co.," hereinafter styled or referred to as "The Contractors" of the one part, and Her Most Gracious Majesty Queen Victoria of the other part.

Whereas the Minister for Public Works of the said Colony recently called for tenders for the providing of all materials, labour, and every other thing requisite and necessary for, and the performance of all the works required in and about the construction, erection, completion, and maintenance of a storm-water sewer from Munni-street, Macdonald-street, Mitchell Road to Shea's Creek, in the said Colony, as shown in the drawings relating thereto, and according to the specification, and under and subject to the general conditions and special conditions which are hereunto annexed. And whereas the contractors made the tender hereunto annexed, marked "C," for the providing of all plant and materials, labour, tools, and every other thing requisite and necessary for, and the performance of all the works required in and about the full and proper construction, erection, and completion and maintenance of the said works in accordance in all things with the specification, and under and subject to the general conditions and special conditions relating to the said works, and in accordance with the several plans or drawings relating

relating thereto in the office of the Engineer-in-Chief for Sewerage, and marked No. "1" to No. "5" inclusive, and at or for the rates or prices mentioned and set out in the schedule of quantities and prices to the said tender, and to complete the said works within eight months from the date of acceptance of the said tender; that is to say, on or before the 28th day of October, 1891, as mentioned in the first clause of the said special conditions. And whereas the Minister for Public Works of the said Colony, acting on behalf of the Government of the said Colony, hath accepted the said tender of the contractors, and the contractors have, in compliance with the requirement in clause 6 of the said special conditions, deposited the sum of £900 in the Bank of New Zealand, at Sydney aforesaid, in the name of the Minister for Public Works aforesaid, at interest, upon fixed deposit, number 286,855, dated the 10th day of March, 1891, for twelve months, and have handed the receipt for same to the Minister for Public Works, to be held by him as such Minister, or the Minister for Public Works for the time being of the said Colony, on behalf of Her Majesty, as security for the due performance of this contract, and all other matters and things herein contained, and which on the part of the contractors are to be done and performed. Now this agreement witnesseth that in consideration of the premises the contractors do hereby for themselves, their heirs, executors, and administrators, covenant with and to Her said Majesty the Queen, Her heirs and successors.

That they, the contractors, shall and will find and provide all the materials, labour, plant, tackle, tools, implements, carriage, machinery, scaffolding, and every other thing requisite and necessary for, and shall and will perform the various works required in and about the full and proper construction, erection, completion, and maintenance of a storm-water channel commencing at the junction of Union and Munni Streets, Macdonaldtown, in the said Colony, and extending more or less along the line of creek to Macdonald-street, and along that street; thence south along the course of the creek to its intersection with Mitchell Road; thence again in a southerly direction along the course of the creek to the northern angle of a Chinese garden; and thence in an easterly direction across a slight ridge to Shea's Creek, being a total distance of 77 chains and  $\frac{3}{4}$  of a chain, together with all manholes, junctions, &c., connected therewith, with such extensions or omissions as may be ordered in writing, being a portion of the works for Sydney Sewerage; this present contract being called or referred to as contract No. 72, in accordance in all things with the specification hereunto annexed marked A, and the general conditions and special conditions hereunto annexed marked B and D, and with the several plans or drawings relating thereto in the office of the Engineer-in-Chief for Sewerage, and numbered "1" to "5" inclusive, and which are signed by the contractors, and at or for the rates or prices set out in the said schedule of quantities and prices to the said tender; it being also hereby declared that any additions to or deductions from the said works, mentioned or set out in the said specification, or shown in the said plans, are to be paid or allowed for as the case may be, at and according to the rates or prices in the said schedule of quantities and prices. And shall and will complete the whole of the said works within eight months from the date of acceptance of the said tender; that is to say, on or before the 28th day of October, 1891, as mentioned and provided in clause 1 of the said special conditions in accordance in all things with the said specification, general conditions, special conditions, and plans. And it is hereby agreed and declared between and by the said parties hereto that the said specification, general conditions, and special conditions marked respectively as aforesaid, and the said tender marked as aforesaid, all being hereunto annexed as aforesaid, shall be read as incorporated in and forming part and parcel of these presents in like manner as if the same had been herein written and set forth at length, and that the said specification, general conditions, and special conditions, and tender, and these presents, shall together be taken to be the contract between the said parties in respect of the said works, and that all and whatsoever by the said specification, general conditions, and special conditions, or any or either of them, is to be done by the contractors, or shown on the said plans, shall be done in accordance therewith in all things by the contractors, their executors or administrators; and that all and whatsoever materials, goods, matters, and things which by the said specification, general conditions, and special conditions are to be supplied by the contractors in and about the construction and completion of the said works, shall be found, provided, and supplied by the contractors, their executors or administrators, in accordance in all things with the said specification, general conditions, special conditions, and plans. And it is hereby agreed that if the contractors, their executors or administrators, shall make default in proceeding with the said works or supplying the materials which, under the said specification, general conditions and special conditions, are to be supplied by the contractors, or in completing and finishing the said works in accordance in all things with the said specification, general conditions, and special conditions, and all things therein contained, and within the time for the completion of the said works as mentioned or provided in the said first clause of the said special conditions, the said sum of £900, so deposited as security for the due performance of this contract, shall be and become forfeited to Her Majesty the Queen, and may be used, paid, and applied so far as the same may be required in and about carrying out and completing the works in the said specification mentioned; and if any balance shall remain after the said works are completed the same shall remain to the credit of the Consolidated Revenue of the said Colony; and that the right of Her Majesty to deal with the said sum of £900 in manner aforesaid shall be in addition to all, any, or other rights or remedies which Her Majesty the Queen, or the Government of New South Wales, shall or may have or be entitled to against the contractors under these presents, or under the said specification, general conditions, and special conditions, or any or either of them, or otherwise for any breach or breaches of this contract.

In witness whereof the said parties to these presents have hereunto set their hands and seals, the day and year first before written.

HAROLD F. NORRIE.		

Department of Public Works, Sydney, 13 February, 1891.

TENDERS FOR PUBLIC WORKS.

TENDERS will be received at this office, for the public works specified in the Schedule hereunder, up to 11 o'clock a.m. of the various dates set forth in the second column.

All envelopes containing tenders must be addressed to the President of the Tender Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Tenderers may be in attendance when the tenders are opened, and the name of the lowest tenderer will be announced, if possible, before the duties of the Board have terminated.

The following conditions will have to be strictly complied with, otherwise the tenders will not be taken into consideration:—

- 1st.—Each tender must state the time within which it is proposed to complete the work, and in every instance the full name or names of persons tendering, also the names in full, occupations, and addresses of proposed bondsmen.
- 2nd.—At the foot of every tender there must be a memorandum, signed by the party tendering and two responsible persons as sureties, agreeing to be answerable for the due performance of the contract, in the event of the tender being accepted; and undertaking, in that event, that they will severally execute and deliver a bond to Her Majesty, in the penal sum mentioned in the specification, or otherwise arranged, for securing such performance.
- 3rd.—No tender will be considered which shall have been received after 11 o'clock a.m. on the day upon which tenders are to be received, unless there are circumstances which, in the opinion of the Board, render it desirable that it should be received.
- 4th.—Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz.:—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000 ... ..	10 0 0

For all sums over £1,000, 1 per cent. of the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a Bank draft.

- 5th.—Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal and rejected accordingly.
- 6th.—In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all monies deposited by him on account of such contract shall be absolutely forfeited to the Crown, and shall be paid to the credit of the Consolidated Revenue of the Colony.
- 7th.—Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted, but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.
- 8th.—In the event of any contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.

All deposits, with the exception of that of the lowest tenderer, when practicable, will be returned to the persons entitled thereto, immediately after the Board shall have adjourned; and the deposit made by the successful tenderer shall be returned to him on executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200, the deposit with tender will not be returnable until the service is satisfactorily completed.

It is to be understood that the Government does not bind itself to accept the lowest or any tender and no tender will be accepted until the head of the branch under whose directions the work is to be carried out has reported upon the whole of the tenders received.

BRUCE SMITH.

*Notes.*

1. All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

2. The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

3. Prices for items Nos. 29, 30, 31, 32, and 33 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

4. The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer-dams, fluming, temporary bridges, roads, pumping, gasket-filling, diverting watercourses and surface water, diverting and maintaining the traffic along roads, crossing over pipe-sewers, disposal and removal of surplus soil, reinstating all roads and other surfaces, &c, and any other thing necessary in executing and completing each respective item, in accordance with plans and specifications.

5. Tenderers are to state prices for all items, whether quantities are given or not.

This is the schedule of quantities and prices referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of March, A.D. 1891.

"A."

SPECIFICATION of the several works required in the construction of a storm-water channel commencing at junction of Union and Munni Streets, and extending, more or less, along the line of creek to Macdonald-street and along this street; thence south along the course of the creek to its intersection with Mitchell Road; thence again in a southerly direction along the course of the creek to the northern angle of a Chinese garden; and thence in an easterly direction across a slight ridge to Shea's Creek, being a total distance of 77·38 chains, together with all manholes, junctions, &c, connected therewith, in accordance with the accompanying drawings, with such extensions or omissions as may be ordered in writing, viz. :—

1. *Description of Drawings.*

1. Drawing No. 1.—General plan and longitudinal section.
- " No. 2.—Cross-sections.
- " No. 3.—Details of inlets, cross-sections of channel, manholes, outlet-end, piling, plank-floor, &c.
- " No. 4.—Details of large junction, intersection with 18-inch pipe-sewer, inlets, &c.
- " No. 5.—Details of wrought-iron girder, cast-iron ventilating and other gratings.

2. *Extent of Contract.*

2. The works comprised in this contract consists in the necessary excavation, shoring, timbering, piling, unwatering, concrete, brickwork, stonework, rendering, re-filling, pipe-laying, carpenter's work, ironwork, pitching, paving, ballasting, metalling, leading surplus materials to spoil, &c., required in the construction of the following, viz. :—

From Shea's Creek to	20 chains	open channel	11 ft. 6 in. x 7 ft. 6 in.
"	20 chains to 28 "	oval sewer	10 ft. 6 in. x 6 ft. 6 in.
"	28 " to 39.12 "	"	10 ft. 6 in. x 6 ft.
"	39.12 " to 39.77 "	junction of two creeks, with flat concrete decking between wrought-iron rolled girders.	
"	39.70 " to 48.17 "	oval sewer	7 ft. 2 in. x 6 ft.
"	48.17 " to 58 "	circular sewer of	6 ft. internal diameter.
"	58 " to 62.50 "	"	of 5 ft. 10 in. internal diameter.
"	62.50 " to 66 "	"	of 5 ft. 2 in. internal diameter.
"	66 " to 72 "	"	of 3 ft. internal diameter.
"	72 " to 76.58 "	"	of 2 ft. 6 in. internal diameter.

in open cutting in mud, sand, loam, clay, shale, and ironstone, as shown on longitudinal section, and as shall be directed, with all branches, junctions, curves, manholes, flushing chambers, sub-ducts, road-making, and all other works in connection with those herein enumerated, and the maintenance of the whole of the works for a period of three months after they have been formally taken over by the Engineer.

3. It is to be understood that the lower 13 or 27 chains of the channel shall not be constructed until the Engineer gives a written order to that effect; and the Engineer shall have the power to suspend the execution of these portions of the work, or any other part of the contract, or to reduce the length of the contract by the extent of the said 13 or 27 chains, or any other part of the sewer shown on the drawings, that he may consider necessary, and the contract shall not thereby be invalidated, nor shall the contractor be entitled to any compensation on account of such temporary suspension of any part or parts of the contract or permanent reduction of same.

4. Supply of Materials, &c.—Contractor to supply, at his own expense, all labour, plant, and materials of any sort whatever for the due performance of the contract.

3. *Site.*

5. Access to the site of the works to be had along centre lines where such are shown to be along lines of streets, and along all public roads which cross the centre lines of the Munni-street to Shea's Creek storm-water channel.

6. For the purpose of excavating open cuttings, where ordered, for sewers, &c., and for constructing and completing the various works therein, contractor to have temporary possession of a strip of land the exact widths which in the opinion of the Engineer is required for these works.

7. All areas of strips of land hereinbefore referred to to be set out by the Engineer, to whom written application for their temporary possession must be made by the contractor two weeks prior to the time the said land is required by him.

Such possession, however, not to be exclusive, but subject to the right of entry of the Engineer, his officers, and other persons, carts and horses, &c., required for any purposes of the Government at any time.

8. Any other lands required by the contractor for temporarily depositing materials, or for any other purposes in connection with the contract, he will have to procure at his own cost, in strict accordance with clause 6 of the conditions of contract.

9. The contractor shall provide and erect all necessary fences, temporary bridges over the open trenches, where directed, for the use of residents through whose ground the sewer has to be built, and underneath tramways, footpaths, and streets, boarding-barriers, &c., wherever directed to do so, and all fences, walls, railings, walks, or streets, metalled, grassed, paved, pitched, or asphalted surfaces, to be left by the contractor at the completion of the works in the same order as they were before the commencement of the works, at his sole cost, in strict accordance with the various stipulations and terms contained in this specification, and in clause 2 of the conditions of contract, to the entire satisfaction of the city or municipal authorities, and of the Engineer-in-Chief.

4. *Lines, Levels, and Setting-out Work.*

10. The centre lines of main sewer and branch sewers are shown on general plan, drawing No. 1, by full red lines, which will be marked on the surface of the ground, the same as on plan, as the works proceed.

After setting out, the centre lines of the works are to be preserved solely by reference to the iron nails, pegs, and other marks and signals which may be placed, fixed, and erected for the purpose of these works along their centre lines.

The gradients and levels of the works are to be preserved by reference to any bench-marks which the Engineer may deem necessary to establish along the lines of works during the progress of the contract, subject to check and adjustment, as shall be directed, from other bench-marks established beyond the site of the works.

5. *Materials.*

11. All materials, as brick, stone, cement, timber, iron, sand, stoneware pipes, clay, lead, &c., which are to be supplied by the contractor, are to be of the best quality and description of their respective kinds. Samples of each kind to be submitted for the approval of the Engineer, and retained in office; and on approval having been obtained, they are to be delivered on the works ready for use, as per sample.

12. The contractor shall inform the Engineer of the sources whence the various materials are supplied, or of the places of their manufacture, and afford him every facility to inspect their supply or manufacture at any stage of the same.

13. The contractor to make and provide proper and approved gauges or scales for measuring or weighing all materials supplied, whether specified to be broken or delivered to special sizes, and mixed together in stated proportions or not.

14. Bricks to be of well-mixed material of approved quality and uniform fineness; to be new sound, hard, well-burnt kiln bricks, free from cracks and all other defects, truly rectangular, with sharp arrises, of approved dimensions and form; to be specially moulded where required for arching inner and outer rings of sewers and circular or segmental shafts, and equal to sample bricks to be seen at the Engineer's office, and which must be sealed by the contractor and acknowledged as a sample of the bricks to be used throughout the works. Bricks used in these works will be subjected to the following tests, viz. :—

- (a) *Tensile strength*.—The tensile strength to be tested, in the departmental testing machine, by laying the brick horizontally on its base of 3 inches between supports 7 inches apart, and the strain applied across the centre of the brick and distributed over a width of  $1\frac{1}{2}$  inch. An average breaking strain of twelve bricks to be taken, which must not be less than 8,000 lb.
- (b) *Porosity*.—Bricks immersed in water for twenty-four hours must not increase in weight more than 3 per cent.

Should the twelve bricks fracture under the foregoing average strain, or prove more impervious to water than 3 per cent., then the Engineer may reject the whole stack of bricks from which the twelve bricks were taken. The whole of the expense incurred in testing the bricks shall be borne solely by the contractor.

15. In the event of the contractor delivering quantities of bricks on the site of the works for the contract of a mixed description and quality, the officer in charge shall have the power to require of the contractor to have those bricks which, in his opinion, are suitable for the works picked out and stacked where directed, and those defective or unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the bricks so delivered by the contractor.

16. Stoneware pipes to be of well ground and mixed material, of tough, tenacious, impervious quality, well burnt, sound, hard, uniform in thickness, true in section, straight longitudinally, uniformly glazed both inside and outside, free from fire or other cracks, flaws, and ash-holes, the collar perfectly joined to the barrel, and in every way equal to sample pipe to be seen at the Engineer's Office. Paving tiles to be of the same materials as the stoneware pipes, to be uniformly glazed on all sides and of approved size and form.

Pipes to be of the following thicknesses and depth of collar, namely :—

Pipes, inside diameter, 9 inches;	thickness, $1\frac{1}{8}$ inch;	depth of collar, 2 inches.
Do do 12 inches;	do 1 inch;	do 2 inches.
Do do 15 inches;	do $1\frac{1}{2}$ inch;	do $2\frac{1}{4}$ inches.
Do do 16 inches;	do $1\frac{3}{8}$ inch;	do $2\frac{1}{4}$ inches.
Do do 18 inches;	do $1\frac{1}{2}$ inch;	do $2\frac{3}{8}$ inches.
Do do 21 inches;	do $1\frac{5}{8}$ inch;	do $2\frac{5}{8}$ inches.
Do do 24 inches;	do $1\frac{3}{4}$ inch;	do $2\frac{3}{4}$ inches.

All parcels of pipes used in these works will be tested in the departmental testing machine, and submitted to the following crushing strains, applied in the centre of the pipe :—

24-inch diameter pipe at 110 lb. per square inch of bearing surface.
18-inch do 100 lb. do do.
16-inch do 100 lb. do do.
12-inch do 100 lb. do do.
9-inch do 100 lb. do do.

If the Engineer deems it necessary, the pipes will also be tested for porosity. Should the pipes fracture under the foregoing strains, or not prove impervious to water, then the Engineer may reject the whole of parcel from which the pipes were taken. The whole of the expense incurred in testing the pipes shall be borne solely by the contractor, and all pipes injured or broken by the testing shall be immediately replaced by sound pipes, subject to the foregoing tests, at contractor's cost.

17. Stone.—All stone used in the construction of these works for pitchers or masonry, unless where otherwise specified, to be sound, solid, hard sandstone, of the best description, free from all defects, and as per sample approved.

18. Broken stone for ballast to be sound, solid stone, as specified in clause 17; to be broken to a size to pass freely with its largest dimensions through a ring of 4 inches in diameter. Broken stone for packing round sewer-lining, above drains, &c., to be sound and solid, and broken to the same size as ballast.

19. Broken stone for bluestone concrete to be of basalt or other similar hard stone of approved quality; to be broken by hand or crushing machine, of a size to pass freely with its largest dimensions through a ring of  $1\frac{1}{2}$  inch in diameter; the whole of the metal to be free from dirt, quarry refuse, &c.; to be screened through a sieve of meshes  $\frac{1}{2}$  inch apart, and then to be washed with fresh water until approved, before it shall be deemed fit and suitable for these works.

20. Sand to be sharp quartz sand of approved quality, free from all earthy, loamy, clayey matter, &c., and washed perfectly clean whenever the Engineer deems it necessary.

21. Cement.—The cement to be used throughout these works to be the best Portland cement, of approved brands and manufacture, free from hard or set lumps, and no barrel or portion of same to be used until it has been examined and approved by the Engineer. Samples from each parcel brought on the works to be submitted for testing :—The weight per struck bushel not to be less than 100 lb., and not to exceed 116 lb. The specific gravity not to be less than 3.08. The cement, when passed through a wire sieve of 2,500 meshes per square inch, to leave a residue of not more than 10 per cent., through a sieve of 5,800 meshes not more than 25 per cent., and through a sieve of 14,400 meshes not more than 40 per cent. The cement, when mixed neat with  $16\frac{1}{2}$  per cent. by weight of water, to give a tensile strength of not less than 250 lb. per square inch after three days' setting in water, 445 lb. after seven days, and 550 lb. after twenty-eight days. The cement is to be "slow setting" unless a quick-setting cement is specially ordered. The cement, when mixed in the proportion of 1 of cement to 3 of standard sand, and 10.6 per cent. of the total weight of water, to give a tensile strength of not less than 100 lb. per square inch at seven days, and from 200 to 230 lb. at twenty-eight days. The tensile strength will be ascertained

in the departmental testing machine, with the load increasing at the rate of 200 lb. per minute, and the average breaking weight of six briquettes will be taken for each test. Should the sample fail in any or all of these tests, or not show a proper progressive increase in strength with age of briquette, then the Engineer may reject the whole parcel from which the sample was taken, and the contractor shall at once remove the said parcel of cement from the site of the works at his own expense, failing which, the Engineer may have it removed at the contractor's cost without further notice. Empty casks to be destroyed, as provided in clause 14 of the General Conditions. To facilitate the gauging of cement throughout the contract, cement casks will be taken as equal to holding 4 cubic feet, otherwise the Contractor to provide and make approved gauge boxes, holding exactly 4 cubic feet, for measuring cement. Cement of a lighter weight than herein stipulated, but otherwise equal to the specified test, may be permitted to be used in the works, subject to the decision of the Engineer-in-Chief, and provided that the deficiency in weight is made up in quantity.

22. Mortar.—The mortar to be used in these works to be composed of 1 part of Portland cement and of 2 parts of clean washed sharp sand, as described in clauses 20 and 21, the proportion of each to be correctly ascertained by measurement; the whole to be mixed with fresh water, as may be directed, to be well incorporated, and to be used fresh. Any mortar which has become hard or set to be at once rejected. All mortar to be mixed upon approved sawn timber platforms, close to where it is required.

23. Special mortar, composed of 1 part of cement and 1 part of sand, and prepared as before described, to be provided and used in all portions of the work where especially specified and directed.

24. Grout.—The grout to be made of mortar as described in clause 23, to be mixed fluid in tubs close to where it is required, and to be used fresh.

25. Bluestone concrete.—The concrete to be used in these works to be composed of 1 part of Portland cement, 2 parts of sand, and 4 parts of bluestone metal.

26. Special concrete, if required, to be composed of 2 parts of Portland cement, 3 parts of sand, and 7 parts of bluestone metal.

27. Sandstone concrete, where ordered to be used in these works, to be composed of 1 part of Portland cement, 2 parts of sand, and 5 parts of sandstone (as specified under clause 17) metal, free from dirt, quarry refuse, sieved (as specified in clause 19), washed, and of a size to pass with its largest dimensions through a ring of 2 inches in diameter. All materials to be mixed in the same manner as hereinafter specified for concrete.

28. Puddle to consist of the best clay to be obtained in the district within a radius of 5 miles; to be carefully turned over and mixed with fresh clean water, as shall be directed, until the clay, in the opinion of the Engineer, has become of one even and uniform colour and plasticity.

29. Hardwood timber to be ironbark, blue or red gum, box, or other approved colonial hardwood, of the best description, sound, straight, free from sap, wanes, shakes, gum-veins, cores, or other defects; to have clean sharp arrises, and to be of the fullest dimensions shown or specified; in round timber, the diameter given is to be measured at the smallest end, exclusive of bark.

30. Wrought-iron.—All wrought-ironwork to be of the best description, quality, and workmanship, with square arrises, and of the exact dimensions and forms shown on drawings. All wrought-iron to be double H. or B.B. Crown brand, and all ironwork, when finished, to be heated and then dipped in or coated with gas-tar.

31. Bluestone road-metal.—The stone used for metalling to be basalt or other similar hard stone of approved quality; to be broken to angular fragments of a size to pass freely with their largest dimensions through a ring  $2\frac{1}{2}$  inches in diameter, and to be free from dirt, quarry refuse, &c.

32. Bluestone.—All bluestone used in the construction of these works for pitchers or masonry to be of the best description of basaltic bluestone obtainable, free from honeycomb and all defects, and as per sample approved.

#### 6. General.

33. Earth-borings have been taken along or close to the line of sewer, the results of which are described on Drawing No. 1; but no guarantee is given that the ground to be excavated will be free from subsoil water, or that the proportion of materials will correspond with that shown on longitudinal section, or that there will be more or less subsoil water than indicated.

34. Diverting surface water and unwatering.—The prices set forth in schedule accompanying tender for the works comprised in this contract to cover and include the cost of all materials and labour, and everything that is necessary for executing the works of every description required for the proper and effectual deviation of all creek, surface, and subsoil drainage from the sites of the works; in constructing temporary coffer or other dams across the low-lying ground above and below the site of the works; in diverting said creek, subsoil, and surface water, from time to time, as the progress of the contract may require; in providing and constructing adequate and secure fluming, pumping apparatus, &c., for conducting undisturbedly all freshets, and the usual quantity of water flowing in the existing creek, across the site of the works on or near lines of lowest ground; in keeping all trenches and excavations constantly unwatered, and in preventing any injury to the same by floods or any other cause.

35. Diversion of sewage of existing sewers during the construction of the Works.—During the construction of the works in general, and of all points of intersection of existing and new sewers, and until completion of all works connected therewith, the contractor to provide all materials and labour and everything that may be necessary, and execute all the works of every description required to prevent (and be solely responsible for) all damage and injury which may occur to private property or to the existing or new works by floods, flooding with sewage, choking and bursting of sewers in consequence of insufficient and inadequate pumping apparatus, tanks, dams, fluming, &c., or any other cause, and erect and construct suitable tanks, pumps, watertight temporary dams across existing sewers above and below points of intersection, and watertight adequate and secure fluming for the purpose of conveying constantly the whole of the sewage which may flow in sewers at any time across said points of intersection, at his sole cost, to the entire satisfaction of the Engineer-in-Chief.

36. The contractor to adopt every precaution and provide all materials, piling, planking, shoring, labour, &c., and carefully execute, erect, and construct, at his own cost, any timbering and shoring wherever required and directed; and also watertight temporary coffer or other dams at junctions of creeks across outlet end of sewer, &c., or to prevent effectually the water from other creeks and from Shea's Creek at low or high water level from entering the site of the works, or such portions of same that may be operated.

operated upon at the time, during the term of the contract or as shall be directed, as the contractor shall be held solely responsible for all damage and injury which may occur to private property, to existing or new works, by floods, in consequence of insufficient and inadequate piling, timbering, pumping apparatus, dams, sluices, fluming, or any other cause.

7.—*Excavation.*

37. The excavations for sewers, manholes, junctions, curves, &c., to be executed to the depths, widths, and gradients shown on longitudinal and cross sections, and according to the nature and solidity of the ground.

38. All trenches excavated in rock to be taken out to the exact cross sections of the concrete work, as shown on drawings, while in compact, loamy, clayey, or other material of sufficient solidity, all trenches to be excavated at bottom level transversely, and 6 inches wider at each side than the exact width required for the concrete, and the sides from bottom of trench to surface of ground to be excavated with a batter of 1 in 8, unless otherwise directed.

39. In less compact or soft ground the trenches for foundations of sewers, manholes, &c.; to be excavated to such depths and widths as shall be directed and determined during the progress of the works. The excavation for foundations of sewers, manholes, &c., may therefore vary in depths and widths from those shown on drawings, but the exact cross sections of all excavations will be determined by the Engineer as the works proceed. All excavations to be taken out to the widths and depths herein specified, clear of any shoring and timbering wherever such may be required.

If the 13 or 27 chains of the outlet end of proposed storm-water sewer (as provided in clause 3) should not be excised from present contract, then, pending the completion of proposed ship-canal to its junction with proposed storm-water sewer, an open channel, when ordered, to be excavated to such gradients, depths, and cross sections, from the junction of the two channels to the present head of said ship-canal, a distance of about 32 chains, as shown on drawing No. 1, and as shall be determined at the time.

40. The excavation in "solid rock" for pipe trenches shall have vertical sides, and shall be of the following sizes, viz. :—

For 24-inch diameter stoneware pipe-sewers	...	...	...	3 ft. 9 in. wide.
21-inch do do do	...	...	...	3 ft. 4 in. do
18-inch do do do	...	...	...	3 ft. 0 in. do
15-inch do do do	...	...	...	2 ft. 6 in. do
12-inch do do do	...	...	...	2 ft. 0 in. do
9-inch do do do	...	...	...	2 ft. 0 in. do

41. When timbering is not required in excavation in all other ground for pipe-trenches, the trenches shall be of the same widths as those in "solid rock." Where timbering is required, the excavation for pipe trenches 8 feet deep and under, shall have vertical sides, and shall be of the following sizes to the outside of the polling-boards, viz. :—

24-inch diameter stoneware pipe-sewers	...	...	...	4 ft. 0 in. wide.
21-inch do do do	...	...	...	3 ft. 7 in. do
18-inch do do do	...	...	...	3 ft. 3 in. do
15-inch do do do	...	...	...	2 ft. 9 in. do
12-inch do do do	...	...	...	2 ft. 3 in. do
9-inch do do do	...	...	...	2 ft. 3 in. do

42. Where timbering is required, the excavation for pipe-trenches about 8 feet deep shall have vertical sides, and shall be the widths given in clause 41 for the lower 8 feet, and for any depth over and above 8 feet the trenches shall be of the following sizes to the outside of the 1½-inch polling-boards, unless otherwise ordered in writing, viz. :—

24-inch diameter stoneware pipe-sewers	...	...	...	4 ft. 9 in. wide.
21-inch do do do	...	...	...	4 ft. 4 in. do
18-inch do do do	...	...	...	4 ft. 0 in. do
15-inch do do do	...	...	...	3 ft. 6 in. do
12-inch do do do	...	...	...	3 ft. 0 in. do
9-inch do do do	...	...	...	3 ft. 0 in. do

43. *Shoring, Timbering, and Temporary Bridges.*—During the excavation for sewers, branch sewers, and pipe-sewers, in open cuttings, for junctions, points of intersection, flushing chambers, pipe-trenches, curves, manholes, crossing over or underneath existing road bridges, existing gas, water and sewer pipes, and oval or circular brick sewers, &c.; the contractor to adopt every precaution, as specified in clause 36, and provide all materials, as planking, strutting, shoring, timbering, &c., and labour, and carefully execute and construct, at his own cost, wherever considered necessary by the Engineer, and to his entire satisfaction, temporary bridges underneath Mitchell Road and other lines of streets or foot-paths, so as to ensure during the period of the contract, the undisturbed traffic along said streets, &c.; and execute approved strong and secure shoring and strutting and underpinning where the sewer passes under existing pipes and brick sewers, and in sandy or loose soil close timbering, or any other work that may be required to prevent any buildings over and adjacent to the line of sewer, and all other super-structures, road-surfaces, earth, rock, or other materials at top and sides of excavations from settling, cracking, being shaken, slipping, or falling in.

As the works proceed, all shoring, timbering, temporary bridges, &c., shall be withdrawn, except in cases where, in the opinion of the Engineer, the withdrawing of the same is impracticable, or would endanger the safety of the works and buildings, existing pipes, sewers, &c., streets, and other surfaces, over and adjacent to same, when the contractor must obtain an order, signed by the Engineer-in-Chief, to the effect that shoring, timbering, &c., may be covered up, with a statement of the quantities, which shall be measured before being covered up, and paid for at schedule rates.

44. *Pipe-sewers.*—Transverse and other checks to be excavated to receive pipe sockets and junctions, and for the purpose of making joints. No portion of pipe trench to be opened up anywhere until a sufficient number of pipes are on the ground ready for laying, and no greater length of the trench to be opened up at any time, at any place, than into which pipes can be laid and jointed during two working days.

45. If the contractor has exceeded the sectional area of excavation as shown he shall remove such extra material and make good and fill in same at sides of trench with good material, and at bottom with sand filling or concrete, as may be directed, at his sole cost.

46. The contractor will be paid only for the actual excavation done, not exceeding that due to the widths, batter, and dimensions, described in clauses 33 to 42. Any increase in width or batter which the contractor may think fit to take out for his own convenience, or which he may be compelled to take out by force of circumstances, will not be measured, but shall be covered by schedule prices. If, however, under the written authority of the Engineer, any portion of the excavation has been deepened or widened out on account of bad foundation or for other purposes, the extra excavation so ordered will be paid for at schedule rates.

47. Disposal of Soil.—Any sludge, filth, or other objectionable matter that may be met with in the excavations, shall not be used for refilling, but shall be kept separate from the approved soil, loaded into covered carts during the same day on which it is excavated, and disposed of as directed,—to be paid for as specified under refilling, clauses 60 and 61.

48. No concrete-work or pipe-laying shall be commenced until the portion of excavation to be operated upon has been cleaned and levelled, and until the Engineer or Superintending Officer has examined and approved of same; and no work shall be covered up until it has been examined and approved, and its covering up has been authorised by the Engineer or Superintending Officer.

49. Sumps.—Any sumps which the contractor may think fit to sink on line of sewer for his own convenience during the construction of these works, are to be filled in with concrete, as specified, and the cost of sinking, timbering, unwatering, and filling in concrete and removing the materials, &c., to be entirely borne by the contractor.

50. Removal of road metal, pitching, rubble masonry, timber-decking, &c.—Prior to commencing any excavation for a manhole, junctions, concrete or pipe sewers, road or street intersection, &c., in open cutting (in accordance with the various stipulations and conditions contained in this specification and in clauses 6 and 11 of the Conditions of Contract), the sites for each work to be prepared by the removal of all road-metal, ballast, pitching, asphalt, existing stone abutments of bridges, timber-decking, &c., where such occurs, as shall be directed. The materials so removed in the first instance to be laid and stacked aside, as the Engineer may direct, in different spoil-banks; and as the works proceed, the said materials, if approved of, to be used in reinstating the metalled, pitched, and paved road-surfaces, as the case may be, and those not approved of to be carted away to such places as shall be ordered, the cost of such work to be included in the price for one cubic yard of excavation.

51. All sods, road-metal, pitching, ballast, &c., removed and damaged, injured, or otherwise not approved of as fit for re-laying, placing, setting, and fixing in the re-formation and reinstatement of the various road and other surfaces, to be replaced by contractor with new, sound, and approved materials of their respective kinds, and therewith to reinstate and maintain during continuance of contract, the various road and other surfaces, at his sole cost, as provided in clause 9, in a sound and satisfactory manner, in accordance with clause 11 of the General Conditions of Contract, and to the entire satisfaction of the Municipal authorities and of the Engineer-in-Chief.

52. It is to be distinctly understood that when excavating for the foundations of the works and open channels where ordered, the materials excavated and raised to the surface of the street, or other ground, are to be at once removed from off the same; and when building materials, &c., are to be conveyed to the works, that the same, on arrival at open cutting, must be at once conveyed to the works in the same, as no allowance can be given to contractor to disturb or impede the usual traffic in the streets, or the usual occupation of the ground by the owner or the public beyond being in possession for the time of a strip of land of the exact width required for the works, as described in clause 6, except in all cases where the contractor has obtained the necessary permission to occupy larger areas, in strict accordance with the provisions contained in clauses 6 and 11 of the Conditions of Contract.

53. The different materials as sludge, filth, sods, road-metal, ballast, mud, sand, loam, clay, shale, and ironstone, masonry, timber-decking, &c., met with in all excavations for the construction of these works, shall in the first instance be put aside beyond actual site of the works in separate spoil-banks; they are to be measured and paid for under one item as "general excavation," and then to be used in filling in round concrete and over same, and filling into abandoned portions of existing open channels, as hereinafter specified in clauses 55 to 62, and as shall be directed.

54. The price of one cubic yard of excavation for all sewers, manholes, junctions, curves, open channels, &c., shall include the cost of all labour, tools, implements, plant of every description, timbering, shoring temporary bridges underneath streets, lanes, roads, &c., diverting surface water, unwatering, putting all excavations in the first instance to temporary spoil-banks, reinstating all fences, walls, walks, streets, roads, metalling, grassed, paved, or asphalted surfaces, as they were before the commencement of the works, and completing these works in strict accordance with plans and specifications.

#### VIII.—Refilling, Road-restoring, &c.

55. Refilling.—Unless otherwise directed, sand, clay, loam, pipe clay, and soft rock of approved quality only shall be used in refilling the spaces between sides of pipes, sewers, &c., and sides of excavation, and over pipes, sewers, &c. The refilling to be done in level layers, spread 6 inches thick, each layer to be carefully and separately rammed as hereinbefore specified. The lower layers up to level of top of pipes to be carefully packed and rammed solidly under and at sides of pipes and socket-joints with spades or other narrow tools. The filling to be done, as above described, to such a distance below the level of the street, road, path, &c., as the case may be, to admit of the ballasting, metal, or other covering being replaced. Only iron-shod rammers of not less than 10 lb. weight, of approved pattern, to be used, and one man to be employed in ramming to each man to be employed in filling. Filling into embankments and into abandoned portions of existing open channels, to be done as above described, except that the layers shall be 9 inches thick, and all slopes of embankments to be dressed to such inclines as shall be directed.

56. Road-restoring.—After the filling-in of sewer-trenches has been consolidated and approved, as specified, the surfaces of roads, streets, paths, &c., to be at once formed or restored, as the case may be, in the manner hereinafter described, viz., in the case of roads or streets which are ballasted and metalled, 9 inches of ballast shall be laid thereon, and after this has been blinded with selected and approved

approved material, the metal put aside, as specified in clause 54, shall be evenly spread and rammed until approved; in the case of roads or streets which are ballasted only, 9 inches of ballast shall be laid thereon and blinded with selected and approved material; and in the case of other coverings the surfaces to be restored to the same condition as they were before the commencement of the work. Any additional ballast which may be required over and above that found on the site of the excavation, and referred to in clause 50, to be supplied by the contractor, and the cost of same to be included in schedule items for filling.

57. *Cleaning Streets.*—Immediately the pipes are laid, or concrete, and other work in connection with manholes, lampholes, &c., are executed, and the ground filled in over any length of sewer, it is to be distinctly understood that all surplus material is to be carted away, the road cleaned until approved, and the road and other surfaces to be made good, flush with surrounding surfaces of roads, paths, &c., to the satisfaction of the Municipal authorities and the Engineer, in accordance with the specification; and if the contractor fails to do this the Engineer shall be at liberty, without further notice, to get the roads cleaned, and the road and other surfaces made good at contractor's cost.

58. *Maintenance of Streets.*—The contractor shall maintain the surface of the roads, streets, &c., after the trenches have been filled in, where the streets, roads, &c., have been broken up or injured during the progress of the work, during the period of the contract time, and afterwards during the period of maintenance, and shall from time to time make good any sinkings in the surface, and shall provide any additional metal, ballast, or other material that may be necessary during these periods, in accordance with clause 9.

59. If required by the Engineer, the contractor shall, at the termination of the period of maintenance, procure certificates from the Municipal authorities concerned, that the roads, &c., in their respective districts are in a satisfactory condition.

60. The price of one cubic yard of filling round all concrete and brickwork of sewers, curves, junctions, manholes, into old creek channels, embankments, &c., from all excavations, and any other sources outside the limit of the contract, shall include the cost of all labour, tools, implements, and plant of every description, carriage from temporary spoil-banks, or getting additional materials from other places outside the contract, excavating, filling-in, ramming, watering, and completing all filling-in in strict accordance with plans and specifications. It shall also include the removal and disposal of all rubbish, sludge, and other objectionable matter, as well as any excess of material beyond that required for refilling; these materials to be immediately removed from site of works and deposited in such places as shall be approved.

61. All refilling to be measured the net dimensions of excavation, less the actual net displacement of the permanent works.

62. Where it is found necessary to carry the excavation deeper than the underside of concrete foundations, in order to obtain a compact solid bottom, the portion so excavated to be filled in to the underside of concrete foundation with good quarry filling (which shall be provided by the contractor), in level layers 6 inches thick, rammed and watered until approved. The price per cubic yard of such filling-in to be one cubic yard of "filling-in" as described in clauses 60 and 61.

#### *Turfing.*

63. On completion of all refilling and filling at sides of concrete work, and pitching, into abandoned open channels, and where ordered, all top surfaces and slopes to be protected by sodding. Prior to sods being laid all surfaces to be levelled off, trimmed, and dressed to such level or inclined planes and slopes as shall be directed. The sods to be the best obtainable within a radius of 5 miles, of approved quality, not less than 3 inches in thickness and 10 inches square at top and bottom, full cut, with square arrises, to be laid in approved bond on their own flat beds, close jointed, over all top surfaces of filling, to be beaten down as the work proceeds with proper tools, as shall be directed, and when finished to present throughout perfectly smooth and plain surfaces. If the season requires it, the turfing to be properly and regularly watered to ensure the grass taking fresh root. The levelling and trimming of the ground and the turfing to be carried out simultaneously, and no greater area to be levelled and trimmed at any time than can be covered with turfing during two working days.

#### *IX.—Timber, Stone, Cement, Sand, Appliances, Plant, &c., to be on the ground ready when required.*

64. No excavations to be commenced on any portion of the contract until, in the opinion of the Engineer, sufficient quantities of piles, sheet-piles, shoring, staging, scaffolding, stone, bricks, cement, sand, or other materials are on the ground, together with the necessary appliances and plant, to insure the uninterrupted progress and continuance of the works, after they once have been commenced, at any locality, without any delay or stoppage. Delays and stoppages in the progress of the works arising from disputes as to quality of materials, and from insufficient supply of any materials, plant, &c., and any damage or injury caused to the works in consequence of such stoppage and delay, shall be entirely and solely at the risk and cost of the contractor.

#### *X.—Sub-ducts.*

65. Where ordered, sub-ducts to be constructed in hard-wood boxes, along lines of open trenches, 24 inches below invert of sewer, or as shall be directed at the time. The said boxes to be laid straight and true to levels decided upon, and 6-inch pipes to be laid therein, upon and surrounded by sandstone chippings and quarry refuse. Dry stone packing to be put over pipes, as specified in clause 18.

#### *XI.—Storm-water Channel, &c.*

66. Manholes and flushing-chambers to be built with sandstone concrete, to the forms and dimensions shown on Drawing No. 2, as may be ordered at the time.

67. Junctions and points of intersection, where ordered, to be formed in sides of manhole-chambers and sewers, &c., and worked into sewer channel with such curves, shapes, forms, centre piers, arches, &c., as shown on drawings. Step-irons of  $\frac{3}{4}$ -inch round iron to be built into the concrete 15 inches apart, vertically, for giving excess to manholes. Grooves to be formed for flushing-boards and flushing-valves, to be built in where directed.

68. A cast-iron ventilating grating to be placed over each manhole flush with the surface of the street, and surrounded to a width of 9 inches with sandstone pitchers, bedded on paving sand, set with full joints, and well rammed, cast-iron gratings to be placed over all manholes on line of sewer in open ground, flush with the formed surface of same, to be surrounded with pitchers as before. 69.

69. After the cross-section and depth of trench for each respective length of sewer, according to the more or less solid nature of the ground, has been determined, excavated, cleaned and approved, the sewers, together with the manholes, flushing-chambers, junctions, curves, &c., to be built therein with sandstone concrete in the manner described in clauses 78 to 95.

70. Where the ground is found to be very bad, the contractor shall, upon being ordered in writing to do so, construct timber platforms. The whole of the timber used in this work to be coated with two coats of the best kerosene tar. Transverse ground sleepers 12 in. x 12 in. spaced 6 feet from centre to centre, to be laid to exact depths and levels, and longitudinal sleepers 10 in. x 10 in. to be laid on top of same with butt joints, with 10 in. x 4 in. fish-plates 3 feet long underneath each joint, and bolted to the sleepers with two  $\frac{5}{8}$ -inch drift bolts. The planking to consist of planks 9 in. x 3 in. sawn hardwood the width of the sewer, or longer if required, and spiked to sleepers with 7-inch spikes, one to each bearing; the spikes to be drifted down and cleaned off. All timber split, from whatever cause, to be replaced with sound timber. Before the plank-floor is laid down the spaces between ground and longitudinal sleepers to be filled in with sand, well rammed and watered as shall be directed.

71. Guide piles, walings, and sheet piling at outlet end of channel, and where ordered.—Hardwood piles, 12-inch diameter at small end, to be provided, and to be driven perfectly plumb to a depth as shown on drawings, and as shall be directed. Any pile out of line, or split during driving, to be drawn and another sound one driven in its place. Piles to be fitted with wrought-iron, steel-pointed shoes, weighing 28 lb. each, of approved pattern, secured to piles with  $\frac{1}{2}$ -inch round iron spikes. The piles to be driven with a ram weighing 20 cwt., with fall when in position of not less than 5 feet, the fall to be increased as the pile is driven as the case may require, and as may be directed. The side surfaces of piles to be adzed to a flat face for sheet piling to butt against, and the top shouldered to receive walings. Double walings, each 10 in. x 6 in., and central walings 10 in. x 10 in. to be provided and secured to piles by 1-inch galvanised bolts. Sheet piling, 3 in. by 9 in. to be provided, and to be placed between walings and driven down to the depths shown on drawings, and as shall be directed; to be driven close and wedged up. All piling badly driven to be drawn and fresh piling substituted. The guide piles to be rung with 3 in. x  $\frac{3}{4}$  in. rings, and sheet piling with  $1\frac{1}{2}$  in. x  $\frac{1}{2}$  in. hoops. The plank floor of 9 in. x 3 in. planks over heads of piles to be provided and constructed as specified in clause 70.

72. As the contractor must provide all coffer-damming at his own cost, the above described work may form part and be in conjunction with any timber work for same, but only such piling and timbering described in clauses 47, 70, and 71, as ordered, will be paid for under schedule rate.

#### *Pipe-sewers.*

73. Foundation.—In clay or similar soil the pipes to rest direct and solid upon the soil. In rock, they are to be laid on a 1-inch bed of poor mortar; cost of same to be included in items for pipe-laying. In loose sand and other soil liable to be scoured out or easily shifted, they shall, if directed by the Engineer, be laid on and surrounded by sandstone concrete, as ordered.

74. Laying.—In every case they shall be laid in such a manner that their barrels shall bear firmly and evenly on their bedding material, the sockets being entirely free from pressure in the joint-hole, and the spigots concentric with the sockets, and to be jointed, viz.:

75. The 6-inch pipes with tarred gasket,  $\frac{1}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 9-inch pipes with tarred gasket,  $\frac{1}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 10-inch pipes with tarred gasket,  $\frac{1}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 12-inch pipes with tarred gasket,  $\frac{1}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 15-inch pipes with tarred gasket,  $\frac{3}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 16-inch pipes with tarred gasket,  $\frac{3}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 18-inch pipes with tarred gasket,  $\frac{3}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe; the 24-inch pipes with tarred gasket,  $\frac{3}{8}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within the socket of the pipe.

76. After the tarred gasket has been placed in position and set tight round the pipe, and after the joint above has been cleaned and wetted, stiff special cement mortar to be packed in solidly, splayed off outside and finished with a carefully struck and cut joint, after which the inner joint between two pipes to be likewise carefully filled with special cement mortar all round, neatly wiped off as a finish. Each pipe length when thus finished to be carefully cleaned out before another pipe length is added.

77. Junction pipes of any desired size are to be laid into the line of pipe-sewers wherever required by the Engineer. The socket ends of all junction pipes, junction blocks, junction holes, and dead ends are to be protected against the ingress of foreign substances, and made easily accessible for effecting future connections, by being closed with earthenware discs having a temporary watertight joint all round.

#### *Concrete Work.*

78. The concrete to be used in these works to be sandstone concrete of the quality specified in clause 27.

79. The contractor to find, provide, and make, at his own cost, all concrete boxes, centres, staging, shoring, planking, &c., of the exact forms, shapes, curves, &c., required in a proper, secure, and substantial manner, due allowance being made for  $\frac{3}{8}$  inch thick cement facing over all internal exposed surfaces of concrete work, and great care being taken that all centering and concrete boxes can easily be withdrawn, except where otherwise directed. The designs for centering, concrete boxes, &c., are to be approved by and to the entire satisfaction of the Engineer. After completion of any portion of the concrete or brickwork, the concrete boxes and the centering, as the case may be, shall not be removed until the Engineer or his superintending officer, has given written permission to that effect.

80. The concrete to be prepared on a clean timber platform of the necessary size. The stone to be well washed when put on the platform and levelled on top; the sand to be placed on top of stone, and cement on top of sand; the whole is then to be carefully turned over three times while dry, and then mixed with clean fresh water applied from a rose, as shall be directed; to be thoroughly incorporated before being used, and to be used fresh.

81. If the concrete is made by machinery, all materials to be prepared as previously described; then to be mixed dry, and afterwards with fresh clean water, as may be directed, and as shall be approved of; to be used fresh.

82. The concrete, after it has been approved of, to be conveyed to the work as may be directed, and as shall be approved of, and tipped into same and upon the surface of each layer from a height not exceeding 18 inches. Commencing at each part of the work at lowest level of excavation, the concrete to be brought up in horizontal and even layers, and on lines of sewer, branch and pipe-sewers, manholes, junctions, ventilating-chambers, &c., unless where otherwise directed, in even layers, parallel with specified longitudinal gradients of works. Each layer when spread to be 9 inches thick throughout before ramming, and, after spreading, to be quickly and evenly rammed all over until approved of, and then allowed time to set before the succeeding layer is put on.

83. After the concrete has been carried up to the level of springing, all concrete arches to be commenced at both walls or abutments simultaneously, and carried on towards centre line in radiating parallel strips, spread 9 inches thick, of the whole width of arch, or in lengths as specified in clause 95 and as shall be directed at the time, and rammed as before described, and, where the arch is thicker than 9 inches, the lower layer to be completed throughout, and then allowed time to set and harden before the succeeding layer is put on.

84. After completion of the brick closing arch, all concrete work above springing of same, at sides of arch, in manhole chambers, shafts, &c., to be carried up in the same manner as specified in clause 82, and of exact dimensions, curves, and thicknesses, &c., as shown on drawings.

85. No portion of the concrete work described in the previous clauses (unless otherwise directed in writing) to be covered up with earth or brickwork until it has been examined and approved of by the Engineer. Any leakage that may appear in each layer to be carefully attended to, and be made good and repaired at the time, as shall be approved, before each succeeding layer is put on.

86. All end faces of layers of concrete to be stepped back at each respective length of sewer or other work, as shall be directed; to be carefully washed clean with fresh water, and then to be grouted prior to each layer of the adjoining length being commenced and joined on to the same.

87. After the lower layer has set to the satisfaction of the Engineer its top surface to be carefully washed until approved, and then to be grouted all over prior to each succeeding layer of concrete being put on.

88. In the event of any stoppage occurring to the work, from whatever cause, or in anticipation of rainfall, the contractor, before temporarily stopping work, shall finish it off at whatever level the work may be raised at the time, by thoroughly grouting the whole of the surface with cement-grout. The contractor also to provide and have always on hand approved tarpaulins for the purpose of covering there-with, where and whenever directed by the Engineer to do so, all fresh concrete work and brickwork, when ordered, so as to protect the same, during all stoppages in the daytime and at night, from sun and rain, and during hot or dry weather, to keep said tarpaulins watered to prevent the concrete work from cracking and setting too quickly on the outside.

89. In all cases where a layer at mid-day or at evening is left incomplete, the said layer shall not be continued after any stoppage until the surface of the lower and the end of the upper layer have been washed clean and then grouted with cement grout.

90. At the sites of all flushing-valve or stop-board frames, cast-iron covers over manholes, ventilating chambers, &c., after the concrete has been built to the exact height and gradient (leaving sufficient space for jointing), the whole of the cast-iron work, after having been washed clean with fresh water, is to be truly laid and jointed or set perfectly plumb or otherwise, as the case may be, and as shall be directed, in the exact positions, lines, and gradients, on fillets of mortar; and as the concrete rises against and around the castings, leaving a space of not less than  $\frac{1}{2}$  inch all round between the concrete and iron, this space round the invert, or underneath bottom of plates, as the case may be, to be filled in with special grout, or mortar, as shall be directed at the time, whilst above the springing line the outer surface of the castings to be grouted with special grout, and then to be covered with a coat of special mortar  $\frac{1}{2}$  inch thick before the concrete is built on to and around said pipes, castings, and frames.

91. The junction of the two creeks between 39.12 chains and 39.77 chains to be constructed with such curves, shapes, forms, flat arches between wrought-iron rolled girders, &c., as shown on drawings. On completion of junction to exact level of underside of transverse iron girders, the latter to be laid transversely over side walls of junction, bedded in and upon special cement mortar,  $\frac{1}{2}$  inch thick, truly parallel to each other, and spaced 4 feet from centre to centre, after which the cement filling alongside walls between and over ends of girders to be completed. The arches of 4 feet span, with a rise of 5 inches in centre, between the girders, to be commenced from north end, and to advance to the south end of junction (all girders being carefully stiffened and held in position by props as shall be directed) with not less than 11 centres of the exact width of junction between side walls. The arches to be built as specified in clause 83, and on completion to form a level concrete decking 3 inches above level of top of girders.

The intersecting point of proposed 18-inch diameter sewer, passing transversely through new storm-water channel near Mitchell Road, to be constructed and formed by said storm-water channel being gradually widened from its proper width of 10 ft. 6 in. above point of intersection to 15 ft. 6 in., and again drawn in to its proper width of 10 ft. 6 in. below said point of intersection (on a total length of 24 feet) with a pier 18 inches thick in centre, as shown on drawing, care being taken that the same cross-section area is maintained throughout the length of the intersecting chamber; 2 ft. x 2 ft. openings to be left at present in side-walls and centre pier of sewer for insertion of said 18-inch diameter pipe sewer, said openings to be temporarily closed with brickwork in cement 9 inches thick.

92. All anchor-bolts in connection with cast-iron frames to be placed in the exact positions required, to be washed clean, wetted, bedded upon, and surrounded with special mortar in each case before the concrete is built round same.

93. All stoneware pipes, where they are shown to be or ordered to be surrounded with concrete, to be clean washed with fresh water, to be truly laid and jointed in the exact lines and gradients on fillets of mortar, and to be grouted all round with special grout as the concrete is being built all round same.

94. On completion of concrete work, and after the boxes and centering have been removed, the outer faces shall present compact, solid, even, plain surfaces. All faulty portions, cavities, holes, or other defects shall be at once repaired by the contractor, at his own cost, with concrete or mortar, as the case may require, to the satisfaction of the Engineer.

95. The concrete of sewers in open trench to be commenced in accordance with clauses 2 and 116 in the different lengths of open trenches, and to be carried up in each and from each end of same simultaneously, in not less than three continuous lengths of 40 ft. each (unless otherwise directed);—that is to

say, when the arching-in of the first 40 feet commences, the next length of 40 feet must be completed up to the springing of arch, and the third 40 feet length must be in progress, and the latter so timed that the work is raised up to springing of arch by the time the closing-in of the adjoining length commences.

*Brickwork.*

96. The brickwork required in sewers, &c., to consist of the materials and mortar described under clauses, 14, 15, 20, 21, and 22. All circular work to be built of radiating bricks, unless otherwise directed. All bricks to be thoroughly soaked in clean fresh water for not less than 5 minutes, immediately before being used. All work to be built with whole bricks, and all walls in English bond, with  $\frac{1}{4}$ -inch joints, in alternate courses of headers and stretchers, each brick to break joint with the one above and underneath, and to be set full and rubbed in cement mortar. Every course to be carefully and thoroughly grouted, and well wetted before the succeeding course is put on. All work, wherever directed, to be finished on all outside and inside faces with a neatly struck joint. The brickwork of sewers, &c., to be of the thickness, dimensions, curves, and gradient shown on longitudinal and cross-sections, and as shall be determined and directed from time to time by the Engineer as each portion of excavation becomes ready for concrete or brick lining. Wherever brick lining for sewer is ordered it shall be built in radiating courses in  $4\frac{1}{2}$ -in. rings, each brick to be set full, and rubbed in cement mortar, with joints not exceeding  $\frac{1}{4}$  inch in thickness, in approved bond, the bricks of each course to break joint over the centre of those of the adjoining course. On completion of each ring of brickwork its whole surface to be carefully and thoroughly grouted, and then covered with a coat of cement mortar, collar-joint  $\frac{1}{2}$  inch thick. Before commencing each succeeding ring the surface underneath to be well wetted and grouted to ensure the thorough bonding of the joints. At completing any length of brick lining, the courses at end of same to be stepped back as shall be directed, and the end face of each ring or course to be well wetted and then grouted prior to each ring of the succeeding length being commenced.

97. The brickwork of sewer to be carried on in conformity with clause 95, and in such a manner that when the arching-in of one length of 40 feet commences the lining of invert of the next 40 feet in length must commence at the same time, and as the arching-in of the one length is completed the adjoining length must be completed up to the springing of arch.

98. Wherever concrete is to be built on to and against brickwork, or brickwork on to and against concrete, the latter in each case to be well wetted and grouted, and then to be covered with a coat of cement mortar, collar joint  $\frac{1}{2}$  inch thick, before the concrete or brickwork is built against it.

99. Prior to commencing any concrete or brickwork which has to be built on to and against rock faces, all shaken and loose rock to be removed, all rock surfaces to be well cleaned, washed, and wetted, and all beds, open joints, and spaces between concrete or brickwork and rock faces to be carefully filled in with cement mortar, and flushed and grouted every course as the brickwork proceeds; and the cost of thus preparing rock faces, washing, grouting, flushing, &c., to be included in, and covered by, the Schedule price per cube yard for the concrete and brickwork herein referred to.

*Pymont Sandstone.*

100. Pymont sandstone ashlar of the quality specified in clause 17 to be provided where ordered in any situation in the construction of these works, to be worked, pierced, dressed, picked to the exact sizes, dimensions, forms, and shapes as shown on drawings or as may be directed, to be set full upon and in cement mortar, and to be finished, when directed, with a neatly cut and struck joint.

*Bluestone Ashlar.*

101. Bluestone ashlar, of the quality specified in clause 32, to be provided in blocks or otherwise when ordered, in any situation in the construction of these works, to be worked, pierced, grooved, picked, axed, and dressed to the exact sizes, dimensions, forms, and shapes, as shall be shown on detail drawings, or as may be directed; to be washed clean and well wetted before setting, and to be set in the exact positions required, truly level, on fillets of mortar under the four corners of each stone, or under and between outer edges of joints as may be directed at the time, after which all joints between stones and between stones and concrete to be filled in with grout. All joints to be  $\frac{1}{4}$  inch wide, to be carefully raked out  $\frac{3}{4}$  inch deep, and filled in solid with special mortar, neatly pointed, finished flush with exposed faces of stones.

*Ironwork.*

102. Rolled girders, sheared, or cut, as shown on drawing No. 5, to be supplied, delivered, and fixed, as specified in clause 91, and to be paid for at per cwt. under schedule item No. 18. The contractor to provide means of weighing same in the presence of the inspecting officer. Should the girders be below the specified weights, payment will be made on actual weights; but any weight above that specified will not be paid for.

The following will be required:—

Depth of Girder.	Width of Flange.	Thickness of Web.	Length of Girder.	Weight in lb. per foot run.	Number required.
14 inches.	6 inches.	$\frac{3}{4}$ inch.	Varying from 12 feet to 18 feet.	60	10

103. All girders that are bent or twisted shall be heated and straightened.

104. The wrought-iron in girders must be free from scales, blisters, laminations, and all other defects, of approved manufacture, and equal in quality to the best Staffordshire plate. The ten lengths of the girders are respectively as, viz.:—12 feet, 12 feet, 12 feet, 12 feet 3 inches, 12 feet 9 inches, 13 feet 6 inches, 14 feet 3 inches, 15 feet 3 inches, 16 feet 6 inches, and 18 feet.

105. The test for wrought-iron shall be as follows:—A piece of 1-inch sectional area, of such shape and cut from such a bar as may be determined, with a length of at least 7 inches, under tension shall bear a strain of—

18 tons without elongation exceeding  $\frac{1}{8}$  inch;  
21 " " " " "  $\frac{1}{4}$  "  
23 " " " " "  $\frac{3}{8}$  "

and to elongate  $\frac{3}{8}$  inch with a strain of 24 tons before fracture.

106.

106. The whole of the wrought-iron work to be properly cleaned and then heated, and while hot to be dipped or coated with two coats of hot gas tar, to be applied with brush.

107. The girders to be solidly bedded in the concrete on a  $\frac{1}{2}$ -inch joint of special mortar, and finished off inside and outside with a neat cut and struck joint.

108. The castings to be provided of the grates and frames, &c., shown on drawing No. 5, to be cast of No. 2 pig-iron or of a proper mixture of No. 1 and No. 3 pig-iron, according to the quality of the iron and the nature of the pattern; said iron to be of the best quality, tough, close-grained, and capable of being chipped and drilled without difficulty, perfectly sound, free from all cold shuts, honeycomb, holes, or other defects; to be cast in dry sand moulds, unless where otherwise directed; and the whole of the castings of the pipes, plates, ventilating and other grates and frames, as soon as they have been cast, to be properly cleaned and then heated, and whilst hot to be dipped or coated in gas tar.

109. All castings to be true in sectional form, straight longitudinally where shown to be so, or of such shapes, projections, curves, angles, and forms as shown on drawings; and each portion of such castings to be of equal strength and of the specified thickness throughout its respective length. The ventilating grates to be complete with tarred sawn ironbark wood-bricks fitted into panels of covers, as shown.

110. The external and internal surfaces of all castings to be perfectly clean and smooth and in strict accordance with sections.

111. The cast-iron work hereinbefore specified to be completed in the most workmanlike manner in strict accordance with the drawings and dimensions figured thereon, and such directions and other details which the Engineer may provide during the progress of the works; and all grates, &c., with all wrought-iron work, to be left in perfect working order.

#### *Cement Coating.*

112. The whole of the internal and external surfaces of sewers, man-holes, chambers, &c., where such is shown on plans, and where directed, to be protected by a cement coating, to be put on in two thicknesses, consisting of mortar of one part of cement to two parts of clean sharp sand. The coating throughout, when finished, to be  $\frac{1}{2}$  inch in thickness.

113. All surfaces to be well watered before mortar is applied.

#### *Sandstone Pitching.*

114. Contractor to provide and find, where ordered, squared sandstone pitchers 9 inches deep throughout, no stone to be less than 9 in. x 9 in. x 9 in., but to be larger and longer, if ordered, curved and radiating, as shall be directed; to be worked, fitted, and set in sand, one ring round all man-hole covers, with  $\frac{1}{2}$ -inch joints between pitchers and cast-iron frames, as ordered.

#### *Existing Gas, Water, or Sewer Pipes, and Sewers.*

115. During the excavation and construction of these works the contractor is to take every precaution to prevent damage or injury to existing gas, water, or sewer pipes, and sewers. Such pipes and sewers on being met with at sides, over, or crossing the excavations of these works, to be carefully and securely protected and supported, as the case may require, by chains, timbering, strutting, and under-pinning, &c., to prevent said pipes or sewers from being shaken, bent or broken, and the contractor to provide all materials, plant, and labour required for said timbering, strutting, and under-pinning, &c., and maintain the same at his sole cost until, in the opinion of the Engineer, the refilling of excavation and the general progress of the works render further precaution unnecessary.

#### *XII.—General Progress, and order of Works.*

116. The contractor, immediately after he gets possession of the ground, shall commence the sewer throughout the length of the contract, unless otherwise directed, and proceed with the earth-work, concrete, and other works connected therewith in the manner described in clause 95. The progress made every working week with excavation, filling in, concrete, pitching, roadwork, &c., required in the construction of the sewer and all other works, shall not be less than 160 feet of sewer complete.

#### *XIII.—Notice for Inspection.*

117. The contractor shall give notice to the Engineer of the commencement or completion of the under-mentioned work, and formally submit it for inspection before proceeding to place, execute, or cover it up, viz.:—

- Excavation of trenches.
- Excavation for foundations.
- Withdrawing of timber in open excavation, &c.
- Laying of foundation.
- Laying of pipes or sub-ducts.
- Placing centering in position.
- Keying of arches.
- Striking of centres.
- Shifting of concrete boxes.
- Filling in round concrete and pipe-sewers and man-holes into open trenches, sumps, &c.

#### *XIV.—Power to use any part of the Work.*

118. The Engineer-in-Chief shall have the power, at his discretion, without vacating this contract to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this contract, and his doing so shall in nowise be held as a waiver of the responsibility of the contractor in respect to his contract, except in so far as any injury may accrue to such work so entered upon by reason of any proved carelessness of any employé of the Government, in which event the contractor shall be free from liability on account thereof, but not otherwise.

#### *XV.—Maintenance.*

119. The contractor will be bound to maintain the works for a period of three months after their final completion and use by the Government; and if any part should within that period show signs of weakness

weakness or of giving way, or should any defective workmanship or materials be detected, the contractor, when called upon to do so, shall make good same at his own cost, to the satisfaction of the Engineer-in-Chief, before the reserve balance will be paid. It is to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the contractor, during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the contractor of any liabilities or obligations whatever in respect of his contract.

*Conditions of Contract.*

120. The special and general conditions attached to this specification shall be held binding on all matters relating to this contract as far as the Engineer-in-Chief may deem the same applicable.

This is the specification marked "A." referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of March, A.D. 1891.

Witness,—HARROLD F. NORRIE, J.P.

JOHN CARTER.  
D. G. SNODGRASS.  
GEO. FORREST.

"B."

1. *Interpretation of Terms.*

Whenever the terms, hereafter explained in the present clause, occur in the conditions of contract and in the specification, they shall be held to mean, and shall mean as follows:—

- "Minister" shall mean the Secretary of Works of the Colony of New South Wales for the time being or any person legally acting for him.
- "Engineer" shall mean the Engineer-in-Chief duly appointed by the Minister to have principal charge of the works.
- "Assistant Engineer" shall mean the person duly appointed by the Engineer-in-Chief to act in his behalf.
- "Superintending Officer" shall mean any person, who may from time to time be notified to the contractor by the Engineer-in-Chief as being entrusted with the local superintendence of the works.
- "Overseer" shall mean any person, who may from time to time be appointed by the Engineer-in-Chief, to supervise the works or any part thereof under the immediate direction of the Superintending Officer.
- "Contractor" shall mean "Contractors," when two or more persons have tendered or contracted jointly for the work.
- "Special Conditions" shall mean the "Special Conditions," hereto attached and forming part of the contract; such Special Conditions shall be deemed to be, and shall be, incorporated with the General Conditions.
- "Schedule Price" shall mean the rate, at which the contractor has offered and agreed to execute the kind of work under consideration.
- "Contract Sum" shall mean the sum total, resulting from the finally certified quantities, ascertained in the manner provided in clause 16, and calculated at the schedule rates or arranged prices.
- "Drawings" shall mean and include any plan, section, general or detail drawing, sketch, or illustration referring to the works and explanatory of, or supplementary to, the specification.
- "Extra Work" shall mean any kind or description of work, not comprised in the "Schedule of Prices," and other than those, the distinct mention of which may have been inadvertently omitted in the specifications or drawings and for which provision is made in clause 3 of these conditions.
- "Labour."—All cartage and haulage and work done or to be performed by machinery shall be included in the term "Labour."
- "Plant" shall mean and include all tools, utensils, stores, sheds, timber, scaffold, centres, moulds, templates, coffer dams, cordage, chains, tackle, boats, punts, rafts, sleepers, rails, waggons, trucks, trollies, engines, water and air pumps, boring and ventilating apparatus, signals, lights, diving bells and dresses, and every other thing necessary for the security, proper execution, completion, and specified maintenance of the several works.

2. *Extent of Contract.*

The contractor shall, except in so far as the specification may expressly state to the contrary, provide at his own cost and expense all labour, material, and plant, and everything else necessary for the proper and complete performance of the contract. Supply of labour, materials, and plant.

All works described in, or implied, by the specification, or shown in any of the drawings, or set forth in any lists or tables thereof or attached thereto as well as those expressly herein provided for under clauses 3 and 4, are to be made and executed in every detail conformably to the several drawings, already prepared, or that may be prepared hereafter for the purpose of this contract, in strict accordance with the provisions of the specification and conditions, both general and special, and to the entire satisfaction of the Engineer. Execution of works.

Should any work be not so executed, it shall be at the sole risk of the contractor, and shall be immediately altered and amended at the contractor's cost and expense.

The contractor shall, at his own expense, set out accurately and to the satisfaction of the Superintending Officer, all the works comprised in this contract, in strict accordance with the drawings and specifications, and shall be solely responsible for their being so set out and executed, and that notwithstanding the Superintending Officer or Overseer may have assisted the contractor in setting out the same. Setting out.

Contractor

Contractor shall also at his own cost and expense at any time—by day or by night, either on working days or on Sundays or holidays—render all such assistance, and supply all such labour, plant, and lighting, as the Engineer or Superintending Officer may require to check such setting out, or to inspect any portion of the works, which must for that purpose be left clear and free from any obstruction or impediment. During and for the performance of those operations contractor shall be obliged to suspend any or all of his work, if required to do so by the Superintending Officer, and without having any claim for loss or damage on account of such temporary suspension.

All bench marks, pegs and signals on the surface, and all alignments and level marks underground, put in by the Engineer or Superintending Officer for the purpose of checking the contractor's work, will be pointed out to the contractor and confided to his care. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true positions; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they shall be replaced by the Engineer or Superintending Officer at the contractor's expense, and the cost thereof deducted from any moneys, then or thereafter due to the contractor.

If two different contractors execute simultaneously two adjoining sections of the works, they shall be held jointly and severally responsible for effecting a proper junction of the sections.

During the whole time of construction and during the "period of maintenance," referred to in clauses 10 and 18 hereof and more particularly described in clause 3 of the special conditions, contractor shall keep and maintain in good and sufficient repair all the works, executed or in course of execution, and make good all injury or loss, which may happen or occur to them, or to any materials, or plant, or anything else in connection with the works under this contract.

### 3. *Specification and Drawings.*

The specification and the drawings (if any), referred to in the specification, shall be taken to explain each other; and anything contained in the specification or in any of the drawings shall be equally binding on contractor, as if it were contained in all.

Any dimensions, written or figured on the drawings, shall usually be taken in preference to measurements by scale; but in cases of doubt in this respect, or in case of any discrepancy between the drawings, specifications, and conditions, or any ambiguity or defective description in them, such doubt, discrepancy, ambiguity or defective description shall not invalidate the contract, but shall be rectified by the Engineer if he deem it requisite, and the contractor shall have no claim for compensation for damages on account of such discrepancy, ambiguity, or defective description.

If neither specification nor drawings contain any mention of minor parts of works, which are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided, made, and executed by the contractor, without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are, included in the several schedule prices.

It is hereby expressly understood, that the contractor is bound to completely and thoroughly inform himself of every circumstance connected with, or relating to, the work, and of the correctness or otherwise of any information contained in, or supplied by, the drawings or specification, as he shall have no claim on account of any errors, omissions, or inaccuracies, that may be found in those documents after the contract shall have been signed, and since he has to provide in his tender for every contingency that may arise.

A copy of the conditions, specifications, and drawings will be furnished to contractor free of charge, but he must himself compare the same with the original, as no claim will be allowed for any errors therein.

All copies of drawings, &c., supplied to contractor are to be returned to the Engineer on completion of contract.

### 4. *Increase or Decrease of Works.*

The contractor is to execute in like manner and with the same quality of materials, as provided for the works, expressly mentioned in specification and drawings, any extensions, additions, deviations, alterations, or extra works, which the Engineer may require by an order in writing.

The work, executed under this clause, will be measured up and paid for at schedule rates in the same manner, as provided for the other works under this contract; and if it comprise any work not specified in contract and in schedule of prices, a special agreement shall be made between the Engineer and the contractor, and signed at the time of giving the order for such work.

In case the above-named parties shall be unable to agree on the value of such extra work, the Engineer shall be at liberty and fully authorised to have it executed by whomsoever he may think fit.

No extra work, extensions, or any additions, deviations, or alterations whatever, which may be claimed by contractor, will be recognised or admitted under any circumstances, if done or executed without, or contrary to, an order in writing from the Engineer as aforesaid, and the production of such order shall be a condition precedent to contractor receiving payment for them.

The Minister, or the Engineer, acting on his behalf, may from time to time by writing under his hand require the omission of any particular portion or part of the works, described in the specification or shown on drawings; and the contractor shall have no claim for loss of profit, sustained damage, or other compensation on account of any such omission.

### 5. *Possession of Lands.*

The Minister shall, within one month from the date of the signing of the contract by the contractor, put the latter in possession of such parts of the land, required for the execution of the permanent works and spoil banks or access to either, as in the opinion of the Engineer may be necessary for their commencement. And the Minister shall also from time to time put contractor in possession of such other parts of the land, as may, in the opinion of the Engineer, be necessary for the vigorous prosecution and timely completion of all the works.

The contractor must, however, procure for himself all other land, which he may deem requisite for any temporary purposes or for his own convenience; but the Minister will, at the expense of the contractor and only to the extent of any legal powers, possessed by the Governor or Minister, assist the contractor in procuring such land or in procuring materials, suitable for the construction of the works, from any adjoining lands. Should

Protecting and maintaining signals and marks.

Junction of different Contracts. Maintenance.

Specification and Drawings to explain each other. Written dimensions to be preferred to scaling.

Omission of minor parts.

Errors of information at Contractor's risk.

Supply of Drawings and Specifications.

Quality.

Quantity. Prices of extra works.

If value cannot be agreed upon.

Omission of portion of the work.

Lands to be provided by the Minister.

Land to be provided by Contractor.

Should any delay take place in giving to the contractor possession of any land required for the construction of the works aforesaid, such delay shall not be deemed a breach of contract, or give contractor any claim for compensation, but the contractor shall be entitled to a commensurate extension of time for the completion of the whole works. Delay in getting possession.

Nothing herein contained shall at any time prevent the Minister or any person duly authorised by him from entering upon and making use of such lands or any portion thereof for any purpose whatever. Possession not exclusive.

#### 6. *Trespass.*

The contractor shall not enter upon any lands outside the limits of the lands, defined by, and held in possession by him under clause 5 hereof for the construction of the works or for any purpose whatever in connection with this contract, without the distinct consent in writing of the occupier and owner of such lands, and shall not, without the permission in writing of the Engineer or Superintending Officer, remove any trees or structures within the limits of the lands defined in said clause 5 hereof. Private lands.

Nor shall he open or throw down any part of a fence without making sufficient provision by temporary fences, gates, or other necessary accommodation, to be erected and maintained at contractor's cost, for preventing persons or animals from trespassing or straying from, or into, any enclosure, affected thereby. Cutting of trees.

Nor shall he interfere with any private or public road without making proper temporary provision for the convenience of owners or users thereof. Roads.

Any costs or damage incurred by the Government through any legal process on account of any trespass caused by the act or negligence of the contractor or his workmen, shall be considered as payment made to the contractor under this contract, and shall be deducted accordingly at the time of final payment to him. Damage caused.

Should the contractor refuse or neglect to erect and maintain, either or both, any such temporary fences or other necessary accommodation, it shall be lawful for, but not obligatory on, the Engineer, after having given to the contractor twenty-four hours' notice in writing of his intention to do so, summarily, and without further process, to cause any such temporary hoarding, fences, gates, bridges, or other accommodation to be erected and maintained, which he may deem necessary for the proper protection either of such lands or of the adjoining lands, or for the safety of the property of the owners and occupiers thereof or of the general public, and the cost of so doing shall be deducted as provided hereinbefore. If not fenced by contractor, Engineer to have power to do so.

#### 7. *Subletting, Assigning.*

The contractor shall not sublet any portion of the works, nor enter into any subcontract for the execution thereof or any portion thereof, nor shall he assign all or any of the moneys payable or to become payable under the contract, or all or any part of any other benefit whatsoever arising to him or which may arise under the contract, without the consent in writing of the Minister; and no assignment without such consent shall have any effect or be in any way recognised. No subletting or assigning.

#### 8. *Progress of Works.*

It shall be lawful for, but not obligatory on, the Engineer or Superintending Officer to direct in writing the contractor to carry out the works in such order and in such manner as he shall deem fit; and Work to be carried out under the direction of the Engineer.

If the contractor shall fail to make such progress with the works as the Engineer or the Superintending Officer shall deem sufficient to insure their completion within the specified time; or

If he refuse or fail in the opinion of the Engineer or Superintending Officer to use due diligence in carrying out any particular part of the work, which the Engineer or Superintending Officer shall have directed him in writing to carry out forthwith; or

If he shall use or employ bad or insufficient material, or shall execute any work in an imperfect manner or not to the satisfaction of the Engineer or Superintending Officer; or Non-compliance.

If he shall fail or neglect to take down or remove such work, or to rectify any such work for seven days after being required to do so in writing by the Engineer or Superintending Officer; or

If he shall fail to employ what in the opinion of the Engineer or Superintending Officer is a sufficient number of men on the works; or

If he shall suspend work without the Engineer's order or sanction in writing; or

If the contractor shall in the judgment of the Engineer commit a wilful breach of the contract;

Then, and in any of such cases, it shall be lawful for the Minister to do at his option any of the following things, that is to say:—

(a) The Minister or the Engineer may, on giving written notice to the contractor of his intention so to do, forthwith cause additional men to be employed and additional materials and plant to be purchased, and the cost of so doing may be deducted from any moneys, then due, or which may thereafter become due to the contractor. (a) employing additional men.

(b) Or the Minister may, by notification in writing under his hand, delivered to the contractor, absolutely determine this contract without further process; and from and after the delivery of such notice as aforesaid, the contract shall be absolutely determined, and on such determination the money, which shall have been previously paid to the contractor under the contract, shall be deemed to be the full value of the work executed, and shall be taken and accepted by the contractor in full payment and satisfaction of all claims and demands under the contract; and the balances retained, including amount deposited as security, together with all materials and plant, then being in or near or upon the works for the purpose of being used or employed in or about the same, shall remain the absolute property of Her Majesty, and may be disposed of as the Minister may think fit. (b) absolute determination of contract.

#### 9. *Bankruptcy.*

If the contractor shall become bankrupt or insolvent, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Minister, on behalf of Her Majesty, by notice in writing under his hand, to determine the contract by such notice, and for Her Majesty either to carry on the works under the Engineer's direction or to recontract with another contractor to proceed with and complete

complete the same upon such terms, stipulations, and conditions, as shall be deemed expedient by the Minister; and all the then remaining materials and plant may be used in and applied for the purpose of the works; and on the final completion of the works the surplus of such materials and plant shall be delivered to the contractor's assignees or trustees, but without any payment or allowance for any loss or diminution, wear, tear, or injury, they may have sustained in the meantime; and any losses, damages, costs, or expenses, which shall, in the opinion of the Engineer have been sustained by Her Majesty by reason of the premises, shall be deducted from the deposit money and the balance retained after payment of the progress payment; and the residue of such deposit money and percentages (if any), or any securities, in which the same may be invested (but without any interest thereon), shall belong and be paid or delivered to the said assignees or trustees; and if there should be no residue, but a deficiency, the amount of such deficiency may be proved for as a debt against the estate of the contractor.

#### 10. *Suspension and Completion.*

**Completion.** The whole of the works under this contract shall be completed on or before the day set forth in clause 1 of the special conditions as the "date of completion of contract," and formally delivered up to the Engineer in perfect order and repair, and to his entire satisfaction.

**Extension of time.** In the event of any alterations, deviations, additions, or extra works being required to be executed by contractor, or in the event of any delay arising under this clause, or under clauses 5 and 15 hereof, the Engineer may allow such an extension of time (if any), as he shall think adequate for the proper carrying out of such alterations, deviations, additions, or extra works, or for the delay caused (if any).

**Liquidated damages.** The Minister, on behalf of the Queen shall be entitled to deduct or set off for each and every week's delay after the date mentioned as the date of completion of contract, or after the expiration of the "extension of time" (if any), allowed under this clause as and by way of liquidated damages, the sum mentioned in clause 2 of the special conditions.

**Suspension.** Such damages shall be deducted from the final balance and the cash security lodged by the contractor in accordance with clause 20 of these conditions and with clauses 5 and 6 of the special conditions, or at the option of the Minister, from any other moneys payable to the contractor under this contract.

On receiving a written notice to that effect from the Engineer, contractor shall suspend the whole or any portion of the works, as may be directed in such notice. He shall have no claim for loss or damage on this account, unless the suspension exceeds one month, and such suspension shall in no wise vitiate the contract, but a commensurate extension of time for completing the works will be granted to the contractor.

**Testing.** When, in the judgment of the Engineer, the whole of the works appear to be completed, they shall be tested or examined as may be provided in the specification; if the result of the test or examination be satisfactory, they will be formally taken over by the Engineer, who will issue a certificate to that effect, whereupon the period of maintenance shall begin.

**Maintenance.**

#### 11. *Safety of Works and Persons.*

**Reinstating defects.** Contractor shall be liable for the reinstating or making good of any thing whatsoever, which may be removed, displaced, damaged, or destroyed during the performance of the works, or by reason of the same; and he shall also be solely responsible for all defects to, and failures in, the works, during the whole time of construction and the period of maintenance, whether the said defects arise from insufficient foundations, defective construction, bad materials, or any other cause within the contractor's control, or from the inclemency of the weather, landsprings, or similar cause.

**Hoardings, roads, &c.** Contractor shall also provide and maintain all hoarding-barriers, night-lights, and properly ballasted temporary roads, required by any municipal or other authorities having charge or control of streets or roads, or which may be required for the convenience or safety of the public; and he shall also make all arrangements by temporary roads or bridges or otherwise, which may be required by any local authorities or by the Engineer, to prevent stoppage or delay of public traffic or any avoidable inconvenience to the public.

**Liability for accidents, &c.** During the whole time of construction of the works, and during the period of their maintenance contractor shall be liable for any accident, damage, or injury whatsoever to the public or to any individual, which may be caused by his operations or his neglect, and also for the safety of any adjacent roads, streets, cellars, vaults, pavements, walls, houses, and buildings, and shall be bound to remove any scaffolding, timbering, &c., as occasion may require or when ordered by the Engineer to do so; and in case of emergency or probable danger to life or property the Engineer, without notice to contractor, may there and then provide or employ, at contractor's cost, such labour, materials, and plant, as may be necessary to meet the exigency, of which the Engineer himself shall be the sole judge. All such cost to be deducted from any sum then or thereafter due to the contractor under this contract.

No opening is to be made in any street until a sufficient quantity of approved bricks or other material is on the ground to complete the length to be opened. Should any delay or dispute arise as to the supply of bricks or material, to prevent inconvenience to the public, the Engineer shall have power to direct any opening made to be filled up and the surface restored at contractor's cost, amount to be deducted from any money due to the contractor.

#### 12. *Agency, Notice, Right of Entry.*

**Agency.** When the contractor is not personally present on the works he must at all times during their progress have a responsible agent on the ground, who shall be deemed to be, and shall be, authorised to represent him for all purposes of this contract.

In case the contractor or his responsible agent shall not be immediately available at any point of the works, the instructions given by the Engineer, in writing, to any overseer, foreman, or workman, employed on the works by contractor, shall have the same effect as if they were given to the contractor or his authorised agent.

**Delivery of notice.** Any written instrument or notice to be given or delivered to the contractor under this contract shall be deemed to have been so given or delivered, when it is given or delivered to the contractor or his representative on the works, or left at the contractor's usual or last known place of abode or business.

**Entry on works.** The Engineer and any other person duly authorised by him shall have power at all times to enter upon all or any portion of the works; and to travel by any engine, lift, cage, carriage, truck, trolley, or other vehicle, which the contractor may be using on, or near, or in connection with the works; and to make examination

examination of any work, fixed or unfixed, or in any state of progress, and of any materials or plant in use or intended to be used for the purposes of this contract; and the contractor shall give or afford facility for the exercise by the Engineer and other duly authorised persons of the powers given under this clause, and shall for that purpose cause the motion of any vehicle, engine, or other machinery to be arrested, when requested so to do.

Due notice shall be given by contractor to the Superintending Officer or overseer before any piles are swung and commenced to be driven; on the completion of all excavations for foundations, or otherwise, and before any foundations are laid therein; when foundation rings for wells are to be laid, and before the well-sinking commences; before the filling in of the wells, of other structures, or of sewer or pipe trenches is proceeded with; before centres are struck; before and after tunnel soles are laid, and at such other stages of progress of the works, as may be specially directed in the specification. Progress notice.

### 13. Dismissal and Mode of Payment of Men.

The Engineer or Superintending Officer may, for incompetency or misconduct, or inattention to orders, or other sufficient cause, require the dismissal within twenty-four hours by the contractor of any agent, overseer, foreman, workman, or other person employed by him on the works; and in the event of the contractor refusing or neglecting to comply with such requisition all further payments on account of the contract may be stopped until such dismissal is carried out. Dismissal.

The workmen, tradesmen, and labourers of every class or kind, employed on the works under this contract shall be paid their wages or other earnings in full in money, current coin of the Colony, at least once in every fortnight, and no ticket or other system of payment by goods of any sort, provisions, or liquor will be allowed on any pretence whatever. Cash payment.

Nor shall the contractor or any person employed by him, or in any way connected with him, establish any shop for the supply of liquors, provisions, or goods, nor shall the contractor cause or oblige his workmen to take their necessaries or goods of any kind from any person in particular. Truck system.

The workmen or labourers of every kind or class shall be paid on the works (if it be possible) or in some building adjoining; and in no case shall they be paid at a public-house or other place where spirituous or fermented liquors or refreshments are sold.

Before the payment of any money to the contractor, the Minister may require from the contractor a statutory declaration that the tradesmen and labourers of every kind employed on the works to which these conditions refer, have been paid their wages and claims of every kind in full money, the current coin of the Colony, and to the latest date to which such wages or claims are due; and the Minister may withhold the payment of any money that may be due or become due to the contractor until such declaration shall have been made and delivered to him. Statutory declaration.

### 14. Material.

All approved materials, plant, and prepared work brought upon the ground for use in or on the works shall be considered, and shall be the property of Her Majesty the Queen until completion of contract; and contractor shall not take away, remove, or dispose of any such material or plant or prepared work without the written authority of the Superintending Officer. Ownership.

All materials supplied by contractor for, and used in, the works shall be the best of their respective kinds, and in conformity with any further particular directions that may be contained in the specification. Quality.

Due notice shall be given by contractor to the Superintending Officer and overseer when any material is brought on the ground, all of which must be neatly stacked in regular heaps, submitted for approval, and approved of in writing by the Superintending Officer, before it may be used in the works; none but that so approved shall be used. Arrival on ground.  
Approval.

The contractor, if so directed, shall remove entirely off the ground any inferior or improper material, or alter or remove any improper or unworkmanlike work at his own expense within twenty-four hours after a written notice in that behalf shall have been served upon him by the Engineer or Superintending Officer. Removal.

After the expiration of the time stated in such notice, it shall be lawful for, but not obligatory upon, the Engineer or Superintending Officer at any time to remove and, if necessary, to destroy any such material, or to pull down or alter any such work, and to replace or rebuild the same. The expense of so doing shall be deducted from any moneys then due, or that may thereafter become due, to the contractor under this contract.

Cement is to be brought on the ground in quantities of not less than fifty barrels, at least ten clear days before it is intended to be used in the works, and kept in weather-tight sheds under lock and key. After having been tested and approved of, the approved barrels will be marked on the outside, and their contents may be used. After they are empty, they shall, in the presence of the Superintending Officer or any person deputed by him, be broken up, and thereupon removed off the works. Storing.

The use by the contractor on the works of blasting powder or any other explosive material shall be confined strictly to the limits, which will be set by an order in writing of the Engineer as to locality, time, quantity, particular kind of material, and precautions to be taken during its use. Explosives.

In any case, no larger quantity of explosive material shall be taken underground than is likely to be used during any current shift. Quantities.

Storing of explosive material underground shall be, and hereby is, absolutely prohibited; and for its storage on the surface special directions will from time to time be issued by the Engineer in accordance with the provisions of the Act, regulating storage and conveyance of explosives. Storing underground prohibited.

Should contractor exceed the limits of such order, or not strictly observe the special directions in regard to use, the Engineer shall have power to appoint, at the contractor's expense, inspectors of powder, in whose presence alone the explosives may be made use of, and who shall have entire charge of all matters connected with their storage or supply to the works. Inspectors of powder.

If the contractor shall be found to have supplied materials or executed work not in accordance with the true intent and meaning of the specification and conditions of this contract, and if the Engineer shall elect to allow such materials to be used or such executed work to remain, he shall have power to fix the price to be paid for any such material or work, and contractor shall be bound by the Engineer's valuation. Reduced prices.

15. *Government Property.*

Delivery.	Should the Minister furnish to the contractor for the purposes of this contract, any materials, or plant, or other article of value, all of which are hereafter in this clause and in the specification included under the term "Government property," the contractor shall give a detailed receipt in writing to the Superintending Officer at the time of delivery and before taking possession thereof.
Protecting.	If required to do so by the Superintending Officer, contractor shall erect, at his own expense, sheds or other covering to protect such property from the weather or from theft.
Repairs.	He shall likewise make good any loss or injury which may happen to it from any cause whatever, and shall keep it in good and sufficient repair and renew all moving and working parts, which may have become worn out, to the satisfaction of the Engineer or Superintending Officer during the whole time it is under his care.
Returning.	On the completion of the contract, all such property shall be returned to the Engineer, unless otherwise directed in the specification; and for that purpose shall be removed, after having been put into a thorough state of repair, to the place or places mentioned in the specification, and there neatly stacked or arranged, as the Superintending Officer may require.
Discharge.	The latter shall thereupon give a detailed receipt in writing for everything so returned, and until such receipt shall have been given, the property shall be deemed to be, and shall be, under the care of the contractor.
Delay in delivery.	Should any delay occur in supplying contractor with any drawings, or specifications, or any Government property which may be specified to be supplied or delivered to contractor by the Minister, the contractor shall have no claim for compensation for any such delay other than that (if any) particularly set forth in the specification; but the contractor shall be entitled to such reasonable extension of time for the completion of the works as shall be fixed by the Engineer.

16. *Measurements, Quantities, and Accounts.*

Net measurements.	Except in cases for which the specification distinctly prescribes another method or rule of ascertaining measurements or weights, the <i>net</i> measurements, according to the actual dimensions or weights, will always be taken, notwithstanding any custom to the contrary. The surplus soil to be removed shall be calculated as equal to the volume of the soil actually displaced by the foundations, sewers, shafts, or other works.
Surplus soil.	
Quantity.	
Lead.	The distance of removal shall be measured from top of shaft or end of open cutting to centre of spoil-bank or other place of deposit. The schedule price for excavation shall cover all haulage in tunnels or cuttings, unless otherwise specified.
In contractor's presence.	The contractor shall be present at all measurements, and, if required, assist in making the same. If he fail to attend after twenty-four hours' notice in writing has been delivered to him of the Superintending Officer's intention to take measurements and clearly setting forth the locality of such intended operation, the measurements made by the Superintending Officer shall be binding on the contractor.
Time.	On the satisfactory completion of any part or portion of the works, and at all other suitable times, the dimensions of such piece of work shall be measured by the Superintending Officer, recorded on drawings, kept or to be made for the purpose, and the quantities ascertained therefrom and entered into a quantity book, to serve as basis for arriving at the contract sum on completion of the contract.
Check accounts.	Within forty-eight hours of such measurement having been effected, contractor shall furnish to the Engineer an account of the work thus intended to have been finally measured up, showing in detail the dimensions, quantities, prices, and value, specifying day of measuring, in whose presence measured, and signed by contractor.
Progress measurements.	For the purpose of making progress payments the dimensions of still unfinished, but otherwise satisfactorily performed, portions of the work will be measured in a summary way monthly, or as near as may be, but without prejudice to the ultimate acceptance or rejection of such portions of work.
Monthly accounts.	On the day following the conclusion of such summary measurement, contractor shall furnish to the Superintending Officer an account of all work done during the preceding month, giving detail, quantities, prices, and approximate value of all unfinished work, and, for every structure separately, total quantities, prices, and exact value of all completed work.
Final account.	Any final account to be presented by the contractor must be on similar form, and under the same heads as the printed tender form, with additional items at foot of same.

17. *Jobbing.*

Jobbing.	When desired by the Superintending Officer so to do, contractor shall furnish to said officer any skilled artizans, labourers, or carts with horses and drivers for the performance of such services, as the aforesaid officer may desire to be performed in connection with, for, on, or near the works under the contract.
Paid monthly in full.	Contractor shall supply those artizans, labourers, &c., with the necessary plant and lighting, and shall be paid for all services thus rendered the full amount provided therefor in the schedule of prices, under the head of "jobbing," at the end of every month, or as nearly as may be thereafter. The accounts for this "jobbing" shall, however, be rendered by contractor to the Superintending Officer or overseer in half-weekly intervals, that is to say, during the forenoon of every Monday and Thursday, failing which he shall lose all claim to payments for the jobbing performed by him during the preceding three days.
Half-weekly accounts.	

18. *Progress and Final Payments.*

Monthly progress payments.	No payments shall be legally due to contractor until after the entire completion of the contract; but progress payments on account, subject to all deductions herein provided for, will be made monthly, or as nearly so as may be, during the continuance of the contract, on the certificate in writing of the Engineer, at rates not exceeding those stated in clause 4 of the special conditions.
Balance.	The balance of the moneys due for works executed under this contract, less 5 per cent. and less the deductions properly to be made hereunder, will be paid within thirty days, or as nearly as may be, after the Engineer shall have certified under his hand that all the works under the contract, less those of maintenance, have been fully and satisfactorily completed, and that such balance, less the 5 per cent., is due to contractor. Provided

Provided that if the amount for maintenance, as entered by contractor in his tender, shall appear to the Engineer to be insufficient, the Minister may retain, on the declaration to that effect in writing by the Engineer, either the whole or any part of the sum otherwise deemed payable to contractor, till all the works under the contract, including those of maintenance, shall have been finally and satisfactorily executed. Insufficient balance.

The said five (5) per cent., together with the "cash security," provided for in clause 20 of these conditions, will be retained until after the expiration of the "period of maintenance" more particularly described in clause 3 of the special conditions, and shall be paid to contractor (less the costs of any repairs or defects, should the contractor fail to execute the same), on the production of a certificate from the Engineer that all the works under the contract, including those of maintenance, have been finally and satisfactorily executed. Final payment.

No progress payments will be made after the date specified for the completion of the contract, until the whole of the works shall have been properly completed to the satisfaction of the Engineer. No progress payment after expiration of contract time.

If, in the opinion of the Engineer, further inquiry is desirable or necessary, before payment is made on any certificate, the Engineer shall have power to suspend the payment of all or any part of the amount mentioned in any such certificate for a period not exceeding one month from the date at which, in the ordinary course, the money would have been paid, and no interest shall be due or accruing on any money the payment of which shall have been so suspended. Suspension of payment.

No certificate given to the contractor for any purpose whatever during the progress of the work, shall prevent the Engineer, at any time before the final payment, from rejecting any unsound material or improper workmanship, which may be discovered in the work, or from requiring the contractor to remove or amend at his own cost any work which may be found not to have been performed in accordance with the contract, or from deducting from any money which may be due or become due to the contractor, the whole amount, which may have been paid to the contractor for such material or work. Certificates without prejudice.

The obtaining of the Engineer's certificate that all the works under the contract, including those of maintenance, have been finally and satisfactorily executed, shall be a condition precedent to any claim or cause of action in respect of work done, as well as to the final payment to be made hereunder. No claim without certificate.

#### 19. Arbitration Clause.

1. All questions or disputes which shall arise respecting the true construction or meaning of the drawings or specification, or the quality of the workmanship, or quantity or quality of materials necessary for the whole or any part of the contract, and all questions and disputes respecting the matters next hereinafter mentioned, when the aggregate amount claimed in respect of such last mentioned matters shall not amount to the sum of one thousand pounds, shall be decided by the Engineer-in-Chief for Roads, Bridges, and Sewerage, whose decision shall be absolute and final.

2. But all questions as to the cancellation of the contract, as to the right of the contractor to extension of time, as to the infliction of penalties, as to the true value of any extra work that has not been previously agreed upon, or as to the value of work omitted from the works specified to be done under the contract, shall, if the aggregate amount of the claims in respect of such matters shall be one thousand pounds or upwards, upon the completion of the works under the said contract, and before payment of the retention money and the money deposited as security for the due carrying out of the contract, be fixed and determined by arbitration as hereinafter provided.

3. If the contractor or the Minister in charge of the Department under which the works in the contract have been or are being carried out, considers that he has claims in respect of the several matters mentioned in paragraph 2, as those in which arbitration may be claimed, he shall furnish to the other of them full particulars in writing of such claims, breaches, doubts, disputes, and differences in respect of which he desires arbitration, giving distinct and separate items, and the amount, if any, claimed under each item; and the other party may thereupon furnish particulars of all claims he has in respect of such matters, irrespective of the aggregate amount of such claims; and the party furnishing the same shall be bound by such particulars; and no claim not included in such statement shall be taken into consideration at such arbitration, or become subject of arbitration or action; and the claim or respective claims so made as aforesaid shall be determined by arbitrators, to be appointed as hereinafter provided, that is to say—

4. If the Engineer-in-Chief for Roads, Bridges, and Sewerage, and the contractor concur in the appointment of a single arbitrator, then the matter and question aforesaid shall be referred to and decided by such single arbitrator; but if the Engineer-in-Chief for Roads, Bridges, and Sewerage, and the contractor cannot concur in the appointment of a single arbitrator, each party, on the request in writing of the other party, shall, by writing under his hand, nominate and appoint an arbitrator, to whom the said questions and matters shall be referred. Every such appointment shall be delivered to the arbitrator, and be deemed a submission to arbitration on the part of the party by whom the same shall have been made, and neither party shall have power to revoke the same without the consent in writing of the other, nor shall the death of either party operate as a revocation.

5. And if, for twenty-one days after the notice in writing by the contractor or by the Engineer-in-Chief for Roads, Bridges, and Sewerage, that the contractor and the Engineer-in-Chief for Roads, Bridges, and Sewerage cannot agree shall have been served, and for seven days after a request in writing to appoint an arbitrator shall have been served by the one party on the other, such last-mentioned party fail to appoint such arbitrator, then, upon such failure, the party making the request, and having himself appointed an arbitrator, may appoint such arbitrator to act on behalf of both parties; and the arbitrator may proceed to hear and determine the matter or question between the contractor and the Engineer aforesaid, and in such case the award or determination of such single arbitrator shall be final. If, before the matter so referred shall be determined, either arbitrator shall die or become incapable, the party by whom such arbitrator was appointed may nominate and appoint some other person as arbitrator to act in his place; and if, for the space of seven days after notice in writing from the other party for that purpose, he fail to do so, the remaining or other arbitrator may proceed *ex parte*; and in case the matter in dispute shall stand referred to a sole arbitrator in default of the appointment by the other party, and such sole arbitrator shall die, the party by whom he was appointed shall appoint another sole arbitrator in his place; and every arbitrator so to be substituted in either of the cases aforesaid, shall have the same powers and authorities as were vested in the former arbitrator at the time of his death or disability.

6. If more than one arbitrator shall be appointed, such arbitrators shall, before they enter into the matter or question referred to them, nominate and appoint, by writing under their hands, an umpire to decide on the matter so referred; and if such umpire shall die or become incapable of acting, they shall forthwith, after such death or incapacity, appoint another umpire in his place, and the decision of every such umpire on the matters referred to him shall be final.

7. If, in either of the cases aforesaid, the said arbitrators shall refuse, or shall, for seven days after request of either party, neglect to appoint an umpire, a Judge of the Supreme Court, upon application made to him by either party, shall appoint an umpire, whose decision shall be final.

8. If a single arbitrator shall be appointed, and he shall die or become incapable to act before he shall have made his award, the matters referred to him shall be determined by arbitrators appointed hereunder, as if the arbitrator so dying had not been appointed.

9. If more than one arbitrator be appointed, and either of them shall refuse or for seven days neglect to act, the person by whom such defaulting arbitrator was appointed shall, within seven days after notice in writing, proceed to appoint another arbitrator to act for the arbitrator so refusing or neglecting, or the other arbitrator may proceed *ex parte*; and the decision of such other arbitrator shall be as effectual as if he had been the single arbitrator appointed by both parties.

10. If more than one arbitrator shall be appointed, and neither of them shall refuse or neglect to act, as aforesaid, then if such arbitrators shall fail to make their award within thirty days after the day on which the last of such arbitrators shall have been appointed, or within such further time as may be granted by a Judge of the Supreme Court on application by either party, the matters so referred to them shall be determined by the umpire appointed as aforesaid.

11. The arbitrators, or any two of them, shall have power to hear, receive, and examine evidence; and the witnesses on any reference herein may be examined on oath and affirmation. Neither of the parties hereto shall be at liberty to appear before the arbitrators by counsel or solicitor.

12. The award of the arbitrator or arbitrators or umpire shall be in writing, ready to be delivered to either party within the time appointed for making the said award. This submission may be made a rule of the Supreme Court. The amount of costs, umpire's and arbitrators' fees, shall be decided by the arbitrators, arbitrator, or umpire; the amount of costs, including arbitrators' and umpire's fees and witnesses' expenses, the items thereof being shown in the account annexed to said award.

13. If upon an arbitration in respect of claims made by the contractor the sum awarded to the contractor shall be less than one-half of the amount of his said claim, all the costs, charges, and expenses of and incident to the said arbitration and award shall be borne and paid by the contractor; but if the amount awarded shall exceed one-half of the amount of the said claim, then each party shall pay his own costs and one-half of the arbitrator's and umpire's fees.

14. It is to be distinctly understood that all claims by the contractor or by the Minister to have any of the matters which under paragraph No. 2 may be submitted to arbitration so dealt with, must be made upon the whole of the work being completed, and before payment to the contractor of the retention money or of the money deposited as security for the due performance of the contract, and that the acceptance by the contractor of payment of the retention money in cases where a bond to secure the completion of the works has been given, and in other cases of the retention money or of any balance thereof, and of the money deposited as security for the due performance of the contract, shall be conclusive proof that the contractor has no such claim or claims.

15. The Engineer shall not be required to defend or answer, or be made a party to, any bill, claim, action, or other proceedings at law or in equity at the instance of the contractor.

16. The exercise by the Minister, Engineer, or Superintending Officer, of any of their respective powers shall not relieve the contractor from any liability to which he may be subject for any breach of the contract.

17. None of the clauses or provisions of the specification, or of these conditions, or of any other part of this contract, shall be varied, waived, discharged, or released, either at law or equity, unless by the express consent in writing of the Minister.

#### 20. Tender, Cash Security, &c.

Tenders to be sent in on a private form, accompanied by the printed schedule of prices, with all the blanks properly filled in, and addressed, as directed in the advertisement, calling for tenders.

The approximate quantities only are given as a guidance to intending contractors, and the contract being at a schedule of prices, will be subject to such extensions, extras, additions, deductions, enlargements, deviations, alterations, and omissions as therein provided. The Minister will be only liable to pay for the actual measured quantity of each respective kind of work done and ordered at the rates set forth in the schedule, and if there be no rate in the schedule for any that may be ordered, then at such rate as shall be fixed by the Engineer-in-Chief, whether such measured quantities shall be less or more than the quantity stated in the schedule of quantities and prices.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz.:—For amounts of £300, and up to £500, £5; for amounts exceeding £500, and not exceeding £1,000, £10; for all sums over £1,000, 1 per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a Treasury deposit receipt, or a cheque in favour of the President of the Board, endorsed by the manager of the bank upon which it is drawn. Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

All deposits, with the exception of that of the lowest tenderer, when practicable, will be returned by the Secretary to the persons entitled thereto, immediately after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract.

Within seven days from the date of notification in writing to any tenderer of the acceptance of his tender by the Minister, the successful tenderer must lodge with the Colonial Treasurer in cash, the sum named in clause 6 of the special conditions, which sum will be retained as security for the due performance of the contract, until after the expiration of the "period of maintenance," and returned to the contractor (if at all) only on the day of final payment, and less any deductions, which hereunder may properly be made therefrom.

Within

Engineer no party to lawsuits.

Liability to remain.

Provisions not to be varied.

Form of tender.

Schedule rates of contract.

Deposit with tender.

Returning of preliminary deposit.

Cash security.

Within three days after lodging the aforesaid deposit, the successful tenderer shall attend at the office of the Crown Solicitor, and execute the contract. Signing of contract.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract within the time specified, all moneys deposited by him on account of such contract shall be absolutely forfeited to the Crown, and shall be paid to the credit of the Consolidated Revenue of the Colony, and the Minister shall be at liberty to accept next lowest or invite fresh tenders. Forfeiture of cash security.

The Board shall not be bound to accept the lowest or any tender. Lowest or any tender.

The contractor shall bear and pay all duty stamps, licences, building or surveyor's fees, or other charges or fees whatsoever, legally demanded by any municipal or other authorities, also the amount of all patent rights and royalties due to any patentee. Stamps, fees, &c.

No tenderer will be allowed to proceed with the work tendered for until he shall have signed the required contract. Commencement of work.

Department of Public Works, Sewerage Branch,  
Sydney, 22nd January, 1891.

ROBT. HICKSON,  
Engineer-in-Chief for Sewerage.

These are the General Conditions marked "B" referred to in our annexed Agreement with Her Majesty the Queen, dated the 16th day of March, A.D. 1891.

JOHN CARTER,  
D. G. SNODGRASS,  
GEO. FORREST.

Witness—HAROLD F. NORRIE, J.P.

"D."

SPECIAL CONDITIONS.

*Clause 10 of General Conditions.*

1. The "date of completion of contract" shall be eight months from the date of acceptance of tender—that is to say, the 28th day of October, 1891.

*Clause 10 of General Conditions.*

2. The sum to be deducted or set off as or for "liquidated damages," shall be £20 sterling a week.

*Clauses 2, 10, and 18 of General Conditions.*

3. The "period of maintenance" shall be three calendar months from the date of the certificate of the Engineer that all the works under the contract, less those of maintenance, have been fully and satisfactorily completed.

*Clause 18 of General Conditions.*

4. The "rates of progress payment" shall be 90 per cent. of the value of work actually done performed, and delivered, as the Engineer may approve of as fit and necessary for the work.

*Clause 20 of General Conditions.*

5. The "Treasury deposit receipt" to accompany the tender shall be as required by clause 20 of the general conditions.

6. The sum to be lodged with the Under Secretary for Public Works as security shall be a Bank deposit receipt, in the name of the Secretary for Public Works, for £900 sterling.

*Clause 2 of General Conditions.*

7. Even after the expiration of the period of maintenance, contractor will still be held liable for all defects in the works which were not visible, or which may have been kept secret, at the time of the works being taken over by the Engineer, since he is, and hereby distinctly agrees to be, *responsible for all faults or neglects of, or all deception practised by, his agents, overseers, or workmen, irrespective of the time at which such faults, neglects, or deceptions may be detected.*

*Clause 3 of General Conditions.*

8. Although the information in possession of the Government has been freely placed at the disposal of the tenderers, by being noted on the drawing or otherwise, the Government undertake no guarantee whatever regarding the kinds of soil that will be met with, or the firmness or stratification of the ground to be excavated, or the amount of unwatering to be done, or the strength of the timbering that may be required, or the nature and extent of other precautions which may have to be adopted.

*Clause 4 of General Conditions.*

9. Contractor shall not be entitled to claim or receive any compensation whatever over and above payment for the actual increase of quantities at schedule rates, and where there are no schedule rates, at such rates as shall be determined at the time by the Engineer-in-Chief, for any additions to, deviations from, or alterations of the various designs comprised in this contract. These conditions shall also apply to, viz., variations in manholes, flushing chambers, &c., and in consequence of meeting with any existing gas, water, or sewer pipes or sewers, as referred to and in accordance with clause 115 of the specification, the position of which it is impossible to ascertain until the ground for the construction of the works comprising this contract is opened up,—

Variations in inclination of slopes and gradients.

„ lengths of open trenches.

„ depth, shape, or size of excavation for sewer, &c.

„ depth, shape, or size of concrete of sewers, manholes, flushing chambers, &c.

„ internal diameter of pipe sewers.

„ alteration or extension of sewer lines.

Any decrease in quantities to be deducted as provided for.

*Clause*

*Clause 11 of General Conditions, paragraph 6.*

10. Cement is to be brought on the ground in quantities not less than fifty barrels, provided that this quantity is sufficient for fourteen days' supply, but in no case is less than fourteen days' supply (whatever that may prove to be) to be brought on the ground in one parcel; nor is the supply stored on works to be at any time less than fourteen days' supply.

*Clause 8 of General Conditions.*

11. Suspension of works and non-compliance with clauses 64, 95, and 116 of the specification on the part of the contractor shall constitute a wilful breach of contract.

*Clause 18 of General Conditions.*

12. The acceptance by contractor of the final payment shall be deemed equivalent to a distinct declaration on his part that he has no further demands on the Government in respect to this contract.

These are the Special Conditions marked "D," referred to in our annexed Agreement with Her Majesty the Queen, dated the 16th day of March, A. D. 1891.

JOHN CARTER,  
D. G. SNODGRASS,  
GEO. FORREST.

TENDER FOR CONTRACT NO. 72, SYDNEY AND SUBURBS STORM-WATER DRAINAGE.

To the Honorable the Minister for Public Works, Bridge-street, Sydney, N.S.W.

I [We], the undersigned, do hereby tender and offer to construct, completely finish, and maintain the various works for contract No. 72, Sydney and suburbs storm-water drainage, in accordance with the conditions of contract, specifications, and drawings, prepared for that purpose in your Department, for or at the rates particularly entered in the accompanying Schedule of Prices, and enclose herewith Treasury deposit as required by clause 20 of the General Conditions.

Should this tender be accepted I [we] undertake to lodge with the Under Secretary for Public Works, within seven days from the notification of the acceptance of this tender, a bank deposit receipt, in the name of the Secretary for Public Works, for the sum of £900 sterling, as security for the due performance of the contract.

In the event of my [our] failing to do so, or to sign the required contract within the time specified in clause 20 of the General Conditions, I [we] hereby distinctly agree to forfeit to the Queen the sum deposited with this tender.

31	Ordinary labourer, supplied by contractor .....	"	10	...	.....
32	Cart with one horse and driver, supplied by Contractor .....	"	5	...	.....
33	One additional horse, supplied by Contractor .....	"	5	...	.....
<b>MAINTENANCE.</b>					
34	Three months' maintenance after formal delivery of works .....	lump sum	.....	...	.....
Total .....		.....	.....	...	.....

*Notes.*

1. All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the Specification.
2. The above Schedule Prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.
3. Prices for items Nos. 29, 30, 31, 32, and 33 are to be for such as are able-bodied and efficient. The Schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.
4. The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centring, concrete boxes, unwatering, coffer-dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads, crossing over pipe-sewers, disposal and removal of surplus soil, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with Plans and Specifications.
5. Tenderers are to state prices for all items, whether quantities are given or not.

## Final Certificate.

Contractor's name—CARTER & CO.

I hereby certify that I examined the work generally and found it in accordance with specifications, and have checked the quantities with the plans, and that they generally agree with same, and that rates are correct.

C. H. OHLFSEN-BAGGÉ,  
Chief Assistant Engineer.

I certify that the amount charged in this voucher as to computations, castings, and rates is correct, that the service has been faithfully performed, and that the expenditure is duly authorised in terms of the Audit Act.

ROBT. HICKSON,  
Head of the Department.

Received on the \_\_\_\_\_ day of \_\_\_\_\_ 189\_\_\_\_, the sum of eight hundred and sixteen pounds seventeen shillings and seven pence, sterling, in full payment for the whole of the works mentioned in the above account, the quantities stated having been finally agreed upon, and settled to be the whole of the work done and materials provided, for which payment is to be made in respect of the Contract for Munni-stroet to Shea's Creek, S.W. Sewer, Ct. 72, and all extra works in connection with the said Contract, and we declare that the sum hereby acknowledged to be received by us includes the percentages retained until the final completion of the work, and is in full payment and satisfaction of all our claims for or in respect of, or arising out of our Contract for the said work, and for everything in connection therewith, in respect whereof we have any claim whatsoever.

Contract

## Contract No. 77, Sydney Sewerage.

### No. 1.

The Engineer-in-Chief for Sewerage to The Under Secretary for Public Works.

Northern Main Sewer, Leichhardt and Annandale Sections.—Contract No. 77.

HEREWITH is submitted for the approval of the Commissioner and Engineer-in-Chief, plans and specifications, in triplicate, for the above sewerage works.

Amount available, £388,000. Estimated cost, £22,037 17s. 8d.

Plans and specifications to be exhibited at the Sewerage Office, Public Works Department, Bridge-street.

Tenders to close at 11 a.m., Wednesday, 13th March, 1895.

The Commissioner and Engineer-in-Chief.

C. H. OHLFSEN-BAGGÉ,

Chief Assistant Engineer for Sewerage.

HEREWITH is forwarded for the approval of the Secretary for Public Works, and for insertion in the *Government Gazette* and local papers, an advertisement inviting tenders for the above.

The Under Secretary.—B.C.

ROBT. HICKSON,

Commissioner and Engineer-in-Chief for Sewerage.

For approval to invite tenders.—J.B., 18/2/95.      Approved.—J.H.Y., 18/2/95.      Notice to *Gazette*, 18/2/95.      Tenders for, 13/3/95.

### No. 2.

#### Schedule of Tenders received by Tender Board.

Wednesday, 13 March, 1895.

LIST OF TENDERS received for construction of the Northern Main Sewer, Leichhardt and Annandale Sections. Contract No. 77, Sydney Sewerage.

Number of tenders received ... ..	Fifteen.
Estimated amount ... ..	£22,037 17s. 8d.
Amount of lowest tender ... ..	28½ per cent. below schedule rates.
Name of lowest tenderer ... ..	Carter, Gummow, & Co.
Vote ... ..	£830,000. 53 Vic. No. 33.

	Amount.	Deposit.	Nature.
*1. Carter, Gummow, & Co. ... ..	28½ per cent. B.S.	£160	Cheque.
2. J. M'Sweeney ... ..	25½    "	166	"
3. J. F. Carson ... ..	20 1/10    "	177	"

12. Maddison and Ewing... ..	8½    "	220	"
13. T. Williams ... ..	6½    "	205	"
14. T. E. Spencer ... ..	5    "	200	"
*15. Carter, Gummow, & Co. ... ..	For lump sum of £15,500	160	"

ROBT. HICKSON,

Vice President of Tender Board.

## No. 1.—CARTER, GUMMOW, &amp; CO.'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette* we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at 28½ per cent. under the prices affixed to each item, in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or if not in schedule, at a price to be agreed upon at the time, and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £160 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

JOHN CARTER.  
F. M. GUMMOW.  
D. G. SNODGRASS.

Witness,—A. N. BURKITT.

Carter, Gummow, & Co., Box No. 10, North Sydney.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	...	...	...	...	...	£5	0	0
For amounts exceeding £500 and not exceeding £1,000...	...	...	...	...	...	£10	0	0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	300	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted..	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted .	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers, spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard...	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	" ...	2,750	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Plymouth bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	180	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 ....	each ...	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	" ...	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	" ...	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod ...	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	" ...	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :—			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :—			
38	For the first half-mile of lead .....	cubic yard	4,580	-/9
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	ewt. ...	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each ...	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only ...	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked .....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb. ...	"	-/4
51	Portland cement (clause 2) .....	cask	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day ...	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	" ...	"	10/-
54	Ordinary labourer, supplied by Contractor .....	" ...	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	" ...	"	11/-
56	One additional horse, supplied by Contractor .....	" ..	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 2.—J. McSWEENEY'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by me, at 25½ per cent. below the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and I do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and I enclose herewith my cheque for the sum of £166 as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which I agree to be bound.

Dated this 13th day of March, 1895.

JUSTIN McSWEENEY,  
Box 914, G.P.O.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	...	...	...	...	...	£5	0	0
For amounts exceeding £500 and not exceeding £1,000...	...	...	...	...	...	£10	0	0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—

27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each	4	18/6
29	Supply, place in position, and set in cement, sluto-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	"	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard..	8	12/3
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	"	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	"	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :-			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/3
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :-			
38	For the first half-mile of lead .....	cubic yard	4,580	-/0
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt.	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb.	"	-/4
51	Portland cement (clause 2) .....	cask	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	"	"	10/-
54	Ordinary labourer, supplied by Contractor .....	"	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	"	"	11/-
56	One additional horse, supplied by Contractor .....	"	"	5/3

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 3.—J. F. CARSON'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by me, at 20·01 per cent. below the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and I do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and I enclose herewith my cheque for the sum of £177 as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which I agree to be bound.

Dated this 12th day of March, 1895.

Witness,—JNO. J. ROONIE.

J. F. CARSON,  
Bay-street, Croydon.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	...	...	...	...	...	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	...	...	...	...	...	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

## CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted...	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted..	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	900	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	500	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers, spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard...	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	"	2,700	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity	Rate per Unit.
25	Pymont bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	130	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	"	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	"	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	"	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :-			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :-			
38	For the first half-mile of lead .....	cubic yard	4,580	-/0
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt.	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb.	"	-/4
51	Portland cement (clause 2) .....	cask	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	"	"	10/-
54	Ordinary labourer, supplied by Contractor .....	"	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	"	"	11/-
56	One additional horse, supplied by Contractor .....	"	"	5/3

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 4.—GILLIVER AND CURTIS'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 17), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at 18 $\frac{7}{8}$  per cent. below the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £180 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

WM. GILLIVER,  
CHARLES HENRY CURTIS,  
Rookwood.

Witness,—J. B. STACK, Rookwood.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

## CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted ..	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted .	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, sub ducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore holes as shall be directed only are permitted .	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-

13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 5 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	"	2,700	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Plymouth bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	130	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot.	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each ...	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	"	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard ...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	"	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod ...	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	"	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :-			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/3
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :-			
38	For the first half-mile of lead .....	cubic yard	4,580	-/0
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron steps, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt. ...	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each ...	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only ...	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb. ...	"	-/4
51	Portland cement (clause 2) .....	cask ...	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day ...	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	"	"	10/-
54	Ordinary labourer, supplied by Contractor .....	"	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	"	"	11/-
56	One additional horse, supplied by Contractor .....	"	"	5/-

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c, and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 5.—HOLLOWAY BROTHERS' TENDER.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at 18 $\frac{1}{4}$  per cent. under the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £180 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 12th day of March, 1895.

RICHARD HOLLOWAY,  
WILLIAM HOLLOWAY,  
LEONARD HOLLOWAY,  
Goulburn.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	...	...	...	...	...	£5	0	0
For amounts exceeding £500 and not exceeding £1,000...	...	...	...	...	...	£10	0	0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted...	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers, spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard...	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	" ...	2,750	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Plymouth bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	130	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each ...	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	" ...	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard ...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	" ...	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod ...	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	" ...	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :-			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 107 of the schedule to specification, as viz. :-			
38	For the first half-mile of lead .....	cubic yard	4,580	1/9
39	For every further quarter of a mile of lead .....	"	4,580	1/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt. ...	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each ...	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	"	"	3/-
49	Oregon timber, in scantlings or planks .....	cubic foot.	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb. ...	"	1/4
51	Portland cement (clause 2) .....	cask ...	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day ...	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	" ...	"	10/-
54	Ordinary labourer, supplied by Contractor .....	" ...	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	" ...	"	11/-
56	One additional horse, supplied by Contractor .....	" ...	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 6.—J. STEWART &amp; CO.'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at 18½ per cent. below the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £220 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

Witness,—DANIEL STEWART.

J. STEWART & CO.,  
4 Mercantile Chambers, Castlereagh-street.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000... ..	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted..	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted..	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore holes as shall be directed only are permitted .	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq yard...	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	"	2,700	2/3

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Plymouth bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	130	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each ...	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	" ...	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	" ...	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod ...	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	" ...	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :-			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/0
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 107 of the schedule to specification, as viz. :-			
38	For the first half-mile of lead .....	cubic yard	4,580	-/0
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, firing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt. ...	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each ...	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only ...	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	lb. "	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb. ...	"	-/4
51	Portland cement (clause 2) .....	cask ...	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day ...	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	" ...	"	10/-
54	Ordinary labourer, supplied by Contractor .....	" ...	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	" ...	"	11/-
56	One additional horse, supplied by Contractor .....	" ...	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 7.—HOWIE BROTHERS' TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at 17½ per cent. under the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £182 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

ARCHIBALD HOWIE,  
JOHN HOWIE,  
Darling-street, Balmain.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	... ..	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Worka.	Unit.	Probable Quantity.	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted...	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—	"		
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,000	67/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filing between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	60/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers, spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard...	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	"	2,760	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Plymouth bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	180	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot.	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each ...	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	" ...	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard ...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	" ...	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod ...	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	" ...	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :—			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :—			
38	For the first half-mile of lead .....	cubic yard	4,580	-/9
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt. ...	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each ...	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only ...	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked .....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb. ...	"	-/4
51	Portland cement (clause 2) .....	cask ...	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day ...	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	" ...	"	10/-
54	Ordinary labourer, supplied by Contractor .....	" ...	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	" ...	"	11/-
56	One additional horse, supplied by Contractor .....	" ...	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c. and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 8.—HUGH OWEN'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 17), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by me, at 15 per cent. below the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and I do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and I enclose herewith my cheque for the sum of £190 as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which I agree to be bound.

Dated this 13th day of March, 1895.

HUGH OWEN,  
99 Elizabeth-street, Paddington.

Witness,—ALEX. AMOSS.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	...	...	...	...	...	...	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	...	...	...	...	...	...	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted...	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness; as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers, spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard...	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	" ...	2,750	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Plymouth bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	130	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	"	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	"	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	"	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :-			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :-			
38	For the first half-mile of lead .....	cubic yard	4,580	-/9
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt.	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb.	"	-/4
51	Portland cement (clause 2) .....	cask	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor .....	"	"	10/-
54	Ordinary labourer, supplied by Contractor .....	"	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	"	"	11/-
56	One additional horse, supplied by Contractor .....	"	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 9.—PHILLIPS, RHODES, AND BROUGHTON'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at 13 per cent. below the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £190 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

T. S. PHILLIPS,  
B. RHODES,  
A. BROUGHTON,  
335A George-street, City.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000 ... ..	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted...	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	870	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	130	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	800	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers, spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard...	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	"	2,760	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Pyrmont bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	180	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/0
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each ...	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	" ...	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	" ...	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod ...	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	" ...	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :—			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :—		^	
38	For the first half-mile of lead .....	cubic yard	4,580	-/9
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt. ...	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each ...	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb. ...	"	-/4
51	Portland cement (clause 2) .....	cask ...	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day ...	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	" ...	"	10/-
54	Ordinary labourer, supplied by Contractor .....	" ...	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	" ...	"	11/-
56	One additional horse, supplied by Contractor .....	" ...	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 10.—R. AND S. BUTCHER'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at 11 per cent. below the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £200 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

R. AND S. BUTCHER,  
Holtermann-street, North Sydney.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	...	...	...	...	...	...	£5	0	0
For amounts exceeding £500 and not exceeding £1,000...	...	...	...	...	...	...	£10	0	0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, scuts of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 8, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted...	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted..	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted..	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted..	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers, spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	"	2,750	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Plymouth bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/0
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clause 2, 10, 14, and 21 .....	"	130	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	"	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	"	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	"	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :—			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 105 of the schedule to specification, as viz. :—			
38	For the first half-mile of lead .....	cubic yard	4,580	-/9
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt.	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked.....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb.	"	-/4
51	Portland cement (clause 2) .....	cask	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	"	"	10/-
54	Ordinary labourer, supplied by Contractor .....	"	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	"	"	11/-
56	One additional horse, supplied by Contractor .....	"	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 11.—E. TAYLOR'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Amundale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at 10½ per cent. under the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £192 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

E. TAYLOR,  
CHARLES J. FOORD,  
408 Darling Road, Balmain.

Witness,—J. BENELDRUM.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz:—

For amounts up to £500 inclusive...	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened, and declared.

CONTRACT

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21:—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-

55	Cart, with one horse and driver, supplied by Contractor .....	" ...	"	11/-
56	One additional horse, supplied by Contractor .....	" ...	"	5/5

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 12.—MADDISON AND EWING'S TENDER.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by us, at  $8\frac{1}{2}$  per cent. below the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and we do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £220 as a preliminary deposit; and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

GEORGE MADDISON,  
PETER EWING,  
Palace-street, Petersham.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

## CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted...	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	"	2,750	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Fyrmont bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	130	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	"	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	"	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	"	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :—			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :—			
38	For the first half-mile of lead .....	cubic yard	4,580	-/9
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt.	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete.....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb.	"	-/4
51	Portland cement (clause 2) .....	cask	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	"	"	10/-
54	Ordinary labourer, supplied by Contractor .....	"	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	"	"	11/-
56	One additional horse, supplied by Contractor .....	"	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads, and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 13.—T. WILLIAMS'S TENDER.

## TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by me, at 6½ per cent. under the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and I do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and I enclose herewith my cheque for the sum of £ as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which I agree to be bound.

Dated this 13th day of March, 1895.

THOS. WILLIAMS,  
Islington Terrace, Forest Lodge.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	£5	0	0
For amounts exceeding £500 and not exceeding £1,000...	£10	0	0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—

28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each ...	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	" ...	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard ...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	" ...	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and tarring, as specified in clause 7 .....	rod ...	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	" ...	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :-			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	32/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/9
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :-			
38	For the first half-mile of lead .....	cubic yard	4,580	-/9
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt. ...	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each ...	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 9-in. layers and ramming, complete .....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	12/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb. ...	"	-/4
51	Portland cement (clause 2) .....	cask ...	"	18/-
52	Artizan or mechanic, supplied by Contractor .....	day ...	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	"	"	10/-
54	Ordinary labourer, supplied by Contractor .....	"	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	"	"	11/-
56	One additional horse, supplied by Contractor .....	"	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

## No. 14.—T. E. SPENCER'S TENDER.

## TENDER FORM.

In pursuance of advertisement in the *Government Gazette*, I, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected by me, at 5 per cent. under the prices affixed to each item in the schedule of quantities and prices annexed hereto, and to complete the same within eighteen months from the date of the acceptance of this tender; and I do hereby agree that any additions to or deductions from the said works shall be paid or allowed for, as the case may be, at and after the rates quoted above, or, if not in schedule, at a price to be agreed upon at the time; and I hereby undertake that I will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and I enclose herewith my cheque for the sum of £200 as a preliminary deposit; and I agree that such sum shall be absolutely forfeited if I at any time within thirty days after the said tender is opened withdraw the same, or if in the event of this tender being accepted I fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board regulations, printed on the back hereof, and by which I agree to be bound.

Dated this 13th day of March, 1895.

THOS. E. SPENCER,  
17 Boyce-street, Glebe Point.

## TENDER BOARD REGULATIONS.

No tender shall be received after 11 a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive...	... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000...	... ..	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

CONTRACT

## CONTRACT No. 77.—This is the Schedule of Quantities and Prices hereinbefore referred to.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
	Excavation in open trenches in more or less hard materials, and in hard rock, for foundations of abutment-piers, and piers of arches of aqueducts, main sewers, retaining walls, gullies, seats of embankments for road deviations, road cuttings, storm-water overflow and storm-water discharge and other pipe-sewers, &c., including removing pitching, masonry, brick or concrete work, drains, &c., met with in excavations as specified in clauses 3, 4, 6, 10, and 21 :—			
1	Excavation in road surfaces, soil, sand, loam, clay, ironstone, soft rock only .....	cubic yard	4,243	2/-
2	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	140	7/-
3	Excavation in hard rock where charges of powder 4 in. in length x 1½ in. in diameter, and such depths of bore-holes as shall be directed only are permitted ..	"	1,160	6/-
	Excavation in tunnels in solid rock for main and branch sewers, junctions, subducts, curves, &c., as specified in clauses 3, 4, 10, and 21 :—			
4	Excavation in hard rock where guttering and gadding only is permitted .....	"	90	65/-
5	Excavation in hard rock where charges of powder 2 in. in length x 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted.....	"	100	60/-
6	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	1,000	57/6
	Excavation in more or less hard materials and in solid rock, in shafts and shaft-chambers, as specified in clauses 3, 6, 10, and 21 :—			
7	Excavation in road surfaces, loam, ironstone, shale, and soft rock only.....	"	70	6/-
8	Excavation in hard rock where charges of powder 2 in. in length by 1½ in. in diameter, and such depth of bore-holes as shall be directed only are permitted...	"	4	22/6
9	Excavation in hard rock where charges of powder 4 in. in length by 1½ in. in diameter, and such depth of bore holes as shall be directed only are permitted..	"	70	20/-
10	Excavation in hard rock where guttering and gadding only is permitted .....	"	2	30/-
11	Filling in at sides, round and over all concrete and brickwork of main sewer in open cutting round manhole shafts, chambers, retaining walls, gullies, round abutment piers, and piers of arches of aqueducts, round all pipe-sewers in tunnels and open trenches, into embankments for road deviations, including all sand-filling over main sewer between parapets of aqueducts and in tunnels, restoring all road and other surfaces, trimming, &c., as specified in clauses 5, 6, 10, and 21 .....	"	2,300	1/-
12	Tarred metal deck over sand-filling between parapet walls of aqueducts, and where ordered, complete, including all screenings, hot coal-tar coatings, &c., as specified in clause 9.....	"	95	48/-
13	Sandstone ballast provided, placed in position, and spread 8 in. thick on road formation, 3 feet thick ballast-packing between heads of piles when directed and where ordered, as specified in clause 8 .....	"	740	4/-
14	Bluestone road metal provided, placed in position, and spread 4 in. thick on road formations, and where ordered, as specified in clause 8 .....	"	370	12/-
15	Bluestone screenings provided, placed in position, and spread over road formations, as specified in clause 8 .....	"	180	5/-
16	Subducts in more or less hard materials, when ordered, of glazed stoneware pipe of 6 in. internal diameter, provided and executed as specified in clause 4 .....	lineal yard	50	1/6
17	Timber ordered in writing to be left in excavations, as specified in clause 6, including all iron used in fixing same .....	cubic foot	300	1/8
18	Supplying and fixing hardwood round timber in piles, where ordered, including providing and fixing all iron shoes and other ironwork used in driving same.....	lineal foot	960	4/-
19	Sandstone concrete, in any situation, in any shape, form or thickness, as specified in clauses 10, 11, and 21 .....	cubic yard	2,350	28/-
20	Bluestone concrete, in any situation, in any shape, form, or thickness, as specified in clauses 10, 11, and 21 .....	"	590	50/-
21	Special bluestone concrete in inner lining of sewers (between brick facings) of aqueducts, including providing, placing in position, and walling in of iron bond rods, as specified in clauses 10, 11, and 21 .....	"	1,000	60/-
22	Brickwork in cement in facings, arches, circular panels, pilasters, corbels, piers, spandrels, parapets, of specially selected white and red bricks, in sewer linings, and in any situation, as specified in clauses 2, 10, 13, and 21 .....	"	2,020	50/-
23	Cement facing, 1 to 2, in any situation where ordered, as specified in clause 12.....	sq. yard...	2,960	2/3
24	Special cement facing, 1 to 1, to all internal surfaces of concrete lining of sewers over aqueducts, as specified in clause 12 .....	"	2,750	2/6

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate per Unit.
25	Pyrmont bottom-block sandstone ashlar, set in cement, in skewbacks to arches over Nelson and White Streets, to string courses and copings of aqueducts, in stop-blocks at ends of aqueducts and in any situation where ordered, as specified in clauses 2, 10, 14, and 21.....	cubic foot.	13,250	3/6
26	Freestone ashlar set in cement in steps along lines of raised footpaths as specified in clauses 2, 10, 14, and 21.....	"	130	3/-
27	Supply and set in position freestone curbing as specified in clause 17 .....	lineal foot.	650	2/6
28	Supply and set freestone gully-covers, where ordered, as specified in clause 17 .....	each	4	18/6
29	Supply, place in position, and set in cement, slate-covers over cistern heads of scupper-pipes on lines of aqueducts, as specified in clause 19 .....	"	40	2/-
30	Supply and set round manhole covers, and where ordered, squared bluestone pitchers, as specified in clause 15 .....	sq. yard...	8	12/6
31	Squared freestone pitchers to be supplied and set in any situation, 6 in. deep, as specified in clause 16 .....	"	320	8/-
32	Supply and fix two-rail ordnance fencing, complete with all ironwork, painting and larring, as specified in clause 7 .....	rod	50	18/-
33	Supply and fix, where ordered, hardwood, split, two-rail and wire fence, as specified in clauses 212 to 220 of the schedule to specification .....	"	100	8/-
	Providing laying, and jointing glazed stoneware plain, junction and bend pipes in trenches, shafts, &c., including providing and fixing discs complete, as specified in clause 18, as viz. :—			
34	24-in. diameter storm-water overflow pipes .....	lineal yard	120	33/-
35	12-in. diameter vertical drop pipes from weir chambers .....	"	20	6/3
36	9-in. diameter pipes in shafts .....	"	15	5/-
37	4-in. diameter scupper-pipes .....	"	64	1/6
	Removal of surplus materials from all excavations as specified in clauses 98 to 100 of the schedule to specification, as viz. :—			
38	For the first half-mile of lead .....	cubic yard	4,580	-/0
39	For every further quarter of a mile of lead .....	"	4,580	-/4
40	Receiving, fixing, and jointing any metalwork as cast-iron frames with manhole coverings or gully gratings, gas-check frames, galvanised wrought-iron step-irons, &c., supplied by Government at the site of the works, as specified in clause 20 .....	cwt.	125	4/-
41	Flap-traps, providing, delivering, and building in, including providing and fixing discs .....	each	10	25/-
42	Permanent puddle, where ordered in any situation in the construction of these works (temporary puddle ordered for purposes of execution of work not to be paid for), as specified in clause 22 of the schedule to specification, including spreading in 2-in. layers and ramming, complete.....	cubic yard	Rate only	10/-
43	Special bluestone concrete, in any situation, as specified in clause 11 .....	"	"	60/-
44	Bluestone metal (clause 11), 1½-in. gauge, stacked .....	"	"	13/-
45	Sandstone metal (clause 11), 2-in. gauge, stacked .....	"	"	4/-
46	Bluestone metal (clause 8), 2½-in. gauge, stacked.....	"	"	12/-
47	Sharp, clean, washed sand (clause 2), stacked .....	"	"	7/6
48	Sawn hardwood, in scantlings or planks (clause 2) .....	cubic foot.	"	3/-
49	Oregon timber, in scantlings or planks .....	"	"	3/-
50	Wrought-iron, in bolts, screws, nails, spikes, straps, &c. (clause 2) .....	lb.	"	-/4
51	Portland cement (clause 2) .....	cask	"	13/-
52	Artizan or mechanic, supplied by Contractor .....	day	"	11/-
53	Quarryman or other skilled labourer, supplied by Contractor.....	"	"	10/-
54	Ordinary labourer, supplied by Contractor .....	"	"	8/-
55	Cart, with one horse and driver, supplied by Contractor .....	"	"	11/-
56	One additional horse, supplied by Contractor .....	"	"	5/6

The quantities are not guaranteed as correct, and are merely for the guidance of Tenderers, being subject to omissions, deductions, alterations, and additions.

All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in accordance with the specification.

The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

Prices for items Nos. 52, 53, 54, 55, and 56, are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, coffer dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over pipe-sewers, disposal and removal of surplus materials on completion of contract, reinstating all roads and other surfaces, &c., and any other thing necessary in executing and completing each respective item, in accordance with plans and specification.

No. 15.—CARTER, GUMMOW, & CO.'S TENDER.  
(Bound up with Bend.)

No. 3.

The Principal Assistant Engineer to The Engineer-in-Chief for Sewerage.

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 14 March, 1894.

*Subject*:—Fifteen tenders for the construction of the Northern Main Sewer, Annandale and Leichhardt sections, Contract No. 77.

THE tenders for the construction of the Northern Main Sewer, Annandale and Leichhardt sections, Contract No. 77, have now been checked, the lowest being that of Messrs. Carter, Gummow, & Co., at 28½ per cent. below schedule rates, amounting to £15,757 1s. 9d.

The following are the other tenderers:—

Messrs.				At 25½ per cent. below schedule rates.
J. M'Sweeney	...	...	...	At 25½ per cent. below schedule rates.
J. F. Carson	...	...	...	„ 20¼ ” ”
Gilliver and Curtis	...	...	...	„ 18¾ ” ”
Holloway Bros.	...	...	...	„ 18¾ ” ”
J. Stewart & Co.	...	...	...	„ 18½ ” ”
Howie Bros.	...	...	...	„ 17½ ” ”
Hugh Owen	...	...	...	„ 15 ” ”
Phillips, Rhodes, and Broughton	...	...	...	„ 13 ” ”
R. and S. Butcher	...	...	...	„ 11 ” ”
E. Taylor...	...	...	...	„ 10½ ” ”
Maddison and Ewing	...	...	...	„ 8½ ” ”
T. Williams	...	...	...	„ 6½ ” ”
T. E. Spencer	...	...	...	„ 5 ” ”
Carter, Gummow, & Co.	...	...	...	Lump sum of £15,500.

With respect to Messrs. Carter, Gummow, & Co.'s second tender for a lump sum of £15,500, I find that it is accompanied by a special design on the "Monier" system.

The plans for the White's Creek and Johnstone's Creek aqueducts as designed in this office, for which tenders were invited, were prepared with a view to securing the most substantial and enduring structure at the most reasonable cost. At the time that this design was made, I had as full particulars regarding the "Monier" principle as it was possible to obtain in the colonies. I would also like to point out that in Europe this class of work is made a speciality, being patented, and is wholly in the hands of private companies, who are required to give a substantial guarantee for the stability of their work. I think it would not be advisable to construct at the outset a work of such importance on the "Monier" principle.

The total for the office design amounts to	...	...	...	...	£15,757

C. H. OILFSEN-BAGGÉ.

No. 4.

Report by Board of Reference.

Board of Reference.—Tenders for Contract No. 77, Main Northern Sewer, Annandale and Leichhardt sections.

THE tenders for this work were submitted to the Board to-day. In doing so, Mr. Hickson pointed out that fifteen tenders had been received, the lowest being that of Carter, Gummow, & Co., at 28½ per cent. below schedule rates—amounting approximately to £15,757 1s. 9d. The same firm also submitted a lump sum tender for carrying out the work according to a plan sent in by them, for the sum of £15,500. The plan submitted is for constructing the work on the "Monier" arch principle. This system has been extensively used during recent years on the Continent of Europe, with successful results, and Mr. Hickson sees no reason why, under certain restrictions, the opportunity should not be taken to introduce the system in the public works of this Colony. The advantages claimed by the patentees are that works can be carried out at a much cheaper rate wherever this method of construction is used. Mr. Hickson said he had no doubt that the design submitted was thoroughly suitable, and likely to be effective, and as the main principles as regards size and inclination of sewer were as provided for in the Departmental design, he was prepared to recommend it for adoption; but if it was decided to accept the tender, a short specification of the work should be included in the bond, and provision also made for the maintenance of the work by the contractors for a certain period after completion.

Mr. Hickson further said, that as Mr. Darley would be the responsible officer for carrying out this work, he had gone into the matter very thoroughly with that gentleman, and Mr. Darley was quite prepared to endorse his views.

The

The Board, in view of the fact that Messrs. Darley and Hickson are satisfied that the principle is a sound one, and that the adoption of the plan will result in considerable economy, are prepared to endorse the recommendation of these gentlemen, and now submit the matter for the Minister's consideration.

J. BARLING,  
Chairman.  
C. W. DARLEY,  
Engineer-in-Chief, Harbours and Rivers.  
ROBERT HICKSON,  
Commissioner for Roads.  
H. DEANE,  
Engineer-in-Chief, Railway Construction.  
W. L. VERNON,  
Government Architect.

J. W. HOLLIMAN, Secretary,  
20 March, 1895.

Submitted.—J.B., 27/3/95. Before approving of this proposal I should like an estimate of the actual value of the work to be carried out by the contractors under the substituted scheme.—J.H.Y., 27/3/95. Mr. Hickson.—J.B., 28/3/95.

To comply fully with the Minister's minute would mean the taking out of quantities in the plan submitted by Messrs. Carter and Gummow. This would take at least a week to do. I think, however, I can answer sufficiently for the Minister to come to a decision. When plans were being prepared for the extension of the sewers on to the sewage farm, estimates were made for the work on the Monier system, as well as on the Department's designs. The result was that the estimate of both works was practically the same. Applying that comparison to this case, it would mean that the Departmental estimate for the work under consideration would be £22,000.—ROBT. HICKSON, 28/3/95. Under Secretary.

Submitted.—J. BARLING, Under Secretary for Public Works, 28/3/95. This is quite sufficient for me, and I now approve of the recommendation of the Board being carried out.—J.H.Y., 29/3/95. Accept.—D.C.McL. (*pro. U.S.*), 29/3/95.

#### No. 5.

The Under Secretary for Public Works to Messrs. Carter, Gummow, & Co.

Gentlemen,

Department of Public Works, Sydney, 11 April, 1895.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 13th March last, is accepted for the construction of the northern main sewer, Leichhardt and Annandale sections No. 77, at the sum of £15,500, in the terms set out in the supplementary specification, a copy of which is sent herewith, and subject to the following special conditions, viz. :—

That if it shall be represented to the Secretary for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegation be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men, and on such direction being conveyed to you, under the hand of the Under Secretary for Public Works, you shall discharge such men forthwith; and in the event of your non-compliance with any such direction, the Minister shall have the power to declare this contract to be cancelled as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract, modified by the supplementary specification above referred to, and the plan submitted with your tender, and to be completed within seventy-eight weeks from this date.

A fixed deposit receipt, in favour of the Secretary for Public Works, for the sum of £775, will be required as security for the due performance of contract within the stipulated time, and a personal bond in the sum of £12,000, and two bondsmen in the sum of £6,000 each, in connection with the maintenance as set out in the supplementary specification. Will you be good enough to notify to me your assent to these terms, and at the same time submit the names of two responsible persons who are willing to act as your sureties.

I have to refer you to the Engineer-in-Chief for Metropolitan Sewerage Construction for further information, and to request that you will, when required to do so, call upon the officer in charge of bonds and contracts at this office with your sureties for the purpose of executing the necessary documents for the due observance of your contract.

I have, &c.,

J. BARLING,  
Under Secretary.

#### No. 6.

#### Draft of Supplementary Specification.

THE structure above the level of the skewbacks of main arches to be constructed as shown on drawing, which accompanied the contractor's tender, of cement mortar (except the cement facing), composed of one part of cement to three parts of sand, and wrought-iron rods on the "Monier system."

The foundations of piers are to be in conformity to the drawings attached to the contract, except as regards the extra size necessitated by the larger pier shown on the contractor's plan, and are to be to the satisfaction of the Engineer.

Should the piers be required to be put down to a greater depth than shown on the drawings, or a greater number of them require piling than shown, the work is to be executed as ordered, without extra payment being made.

The piers are to be built with sandstone concrete of the quality specified, and faced with cement mortar composed of one part of cement and two parts of sand.

The cement facing of the structure above the level of the springing of main arches is to be composed of one part of cement and one part of sand.

The works generally are to be carried out in accordance with the specification, schedule to specification, and the plans therein referred to, save and except such structure parts as are to be carried out under the "Monier system," or necessarily enlarged to meet the requirements of the contractor's plan, and within the time set out in the general conditions.

The

The contractors shall continue to maintain the said works at their own cost after the period of maintenance set forth in the general conditions, for a further period of three years, computed from such date to the satisfaction of the Engineer, whose decision shall be final and conclusive upon all points concerning workmanship and materials, and the permanency and durability of the said sewer works, and the contractors shall enter into a bond with Her Majesty the Queen with two sufficient sureties in the penal sum of £12,000 to secure the removal of so much of the said works as shall have been constructed on the "Monier system," if the Engineer shall be dissatisfied with the same at any time during the said periods of maintenance, and to re-erect and construct the said works at their own cost and expense, in accordance with all things with the specification, and schedule to specification and plans, therein referred to, and within weeks from the date of being called upon so to do.

Would it not be desirable to take this opportunity for connecting the President of the Water Supply and Sewerage Board and Engineer-in-Chief for Sewerage Construction with the contract, in lieu of the Engineer-in-Chief for Roads, Bridges, and Sewerage? Would it not be possible for the contractors to take objection hereafter?—C.D., 4/4/95.

Mr. Norrie.—J.D., 4/4/95.

I suggested to Mr. Hickson yesterday the desirability of blotting out his signature and printed title on the conditions, substituting those of Mr. Darley, which was at once assented to. A reference will, too, be made in the agreement and bond to the plans being in Mr. Darley's office.—HAROLD F. NORRIE, 4/4/95.

Mr. Darley is to be styled, so far as he is connected with this Department, "Engineer-in-Chief for Metropolitan Sewerage Construction."—J.B., 5/4/95. Mr. Darley has the other papers; forward these to be placed with them.—Jno. P., 6/4/95.

#### The Clerk in charge of Bonds and Contracts to The Engineer-in-Chief for Public Works.

*Minute Paper.*

Department of Public Works, Bonds and Contracts Branch, Sydney, 18 April, 1895.

*Subject:*—Cont. No. 77, Northern Main Sewer.

In order to enable me to prepare the necessary bond herein, I should be furnished with the plans at your earliest convenience.

H. F. NORRIE,  
Officer in charge  
(Per V.C.L.)

These plans were sent to the Water and Sewerage Board on the 17/4/95.—H. T. EVANS, 20/4/95. Received by Water and Sewerage Board; returned herewith.—T.G., 23/4/95. Mr. Davis. The necessary plans, specification, and conditions have been sent to W. and S. Board. Now forwarded to Mr. Norrie.—J. DAVIS, for Engineer-in-Chief for Public Works.

### No. 9.

#### Messrs. Carter, Gummow, & Co., to The Minister for Public Works.

Sir,

North Sydney, 4 April, 1895.

We have the honor to draw your attention to the conditions upon which the acceptance of our tender depends for Contract No. 77, Balmain Sewerage Works, and to our conversation with you of even date in connection with security required for its due performance.

We respectfully submit that our personal sureties for the amount necessary should be taken for its completion and maintenance and as a sufficient guarantee for the proper carrying out of the work.

We are a firm of sound financial standing, well and favourably known to your Department as contractors for many large and important contracts extending over a period of eight or nine years under the Departments of Harbours and Rivers, and Roads, Bridges, and Sewerage, which facts we trust will satisfy you as to our *bona fides* in this matter.

We have, &c.,

CARTER, GUMMOW, & CO.

No. 10.

## No. 10.

## The Engineer-in-Chief for Sewerage to The Under Secretary for Public Works.

*Minute Paper.*

Department of Public Works, Roads and Bridges and Sewerage Branch,

Sydney, 5 April, 1895.

THE accompanying letter of 4th April, 1895, from Messrs. Carter, Gummow, & Co., is a protest against the stringent supplementary specification prepared by Mr. Norrie, at my suggestion, with regard to the alteration in the design of Contract No. 77.

The last paragraph of this specification states:—"And the contractors shall enter into a bond with Her Majesty the Queen in the penal sum of £12,000, with two sufficient sureties in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the Monier system, &c., &c."

The amount of £12,000 is the sum it would cost the Department, at Departmental rates, to renew that portion of this sewer which is built on the Monier system.

It is right, however, to say that the tendered rates for this portion of the work would only come to £9,000; but, prices being abnormally low, I think it is only right to put in a sum at which the Department really values the work.

Messrs. Carter and Gummow ask that their own "personal sureties for the amount named," *i.e.*, £12,000 (an amount which they do not dispute), "should be taken for its completion and maintenance, and as a sufficient guarantee for the proper carrying out of the work."

They go on to say that they are "a firm of sound financial standing, well and favourably known to the Department as contractors." This is quite true; they are a firm in which I have every confidence. They have done a great deal of work under me, and I can testify that their aim always has been to turn out the very best class of work possible. At the same time, misfortunes happen the very soundest firms of contractors, and the Department must look a little way into the future. Their own bond for £12,000 would be really of no use if they were unfortunate enough in the meantime to become bankrupt.

I think, therefore, it is right that the sureties should be insisted upon. They give the names of two men, Mr. George Forrest and Mr. James Gillen. From inquiries made I believe these men to be financially sound; and, I think, if their names were accepted as the sureties in the penal sum of £6,000 each the Department would be secured as far as it is reasonably possible to be.

This work will be carried out under Mr. Darley, and I recommend that the whole of the papers be sent him to give his opinion thereon.

ROBT. HICKSON,  
Engineer-in-Chief for Public Works.

Mr. Darley for report.—J.B., 5/4/95. I concur with Mr. Hickson. I think in accepting a new patent of this kind, and adopting it on a large and costly contract, that the Department cannot be too careful in securing its position by leaving all the risk on the hands of the contractors and patentees. I therefore recommend that the personal names be required for further surety. The names mentioned may, I think, be accepted.—C.D., Engineer-in-Chief, Metropolitan Sewerage Construction, 8/4/95.

For Minister's approval as to course suggested in regard to sureties.—J. BARLING, Under Secretary for Public Works, 9/4/95. Approved.—J.H.Y., 10/4/95. Mr. Norrie.—Jno. P., 10/4/95.

## No. 11.

## Contract of Agreement and Annexures.

*Minute Paper.*

Department of Public Works, Bonds and Contracts Branch, Sydney, 3 June, 1895.

*Subject*:—Contract No. 77, Northern Main Sewer, Annandale and Leichhardt Sections. (Carter, Gummow, & Co.)

THE agreement, &c., herein duly prepared, have been executed by the contractors and sureties, and stamped, and might now be forwarded to the Engineer-in-Chief for Public Works.

The tender, and all other papers herein, are sent herewith.

HAROLD F. NORRIE,  
Officer in Charge.

Engineer-in-Chief, Metropolitan Sewerage Construction, to note, and if he wishes to retain to place in a safe for security.—Jno. P. (*pro.* U.S.), 4/6/95. Mr. Smail.

Agreement made this 16th day of May, in the year of our Lord 1895, between John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, of North Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or form of "Carter, Gummow, & Co." (and hereinafter styled or referred to as "the contractors"), of the one part, and Her Most Gracious Majesty Queen Victoria, of the other part.

WHEREAS the Minister for Public Works of the said Colony (hereinafter called the said Minister) recently called for tenders by notice published in the *Government Gazette* (of which notice a copy is hereunto annexed and marked "A"), for construction of the northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, as shown in the drawings relating thereto in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked "No. 1" to "No. 10," both inclusive, and according to the specification, schedule to specification, general conditions, and special condition, which are hereunto annexed and marked respectively "B," "C," "D," and "E." And whereas the contractors made the tender hereunto annexed, marked "F," to provide the material and perform the various

works required in and about the full and proper construction, erection, and completion of the said sewerage works agreeably to the said drawings, specification, schedule to specification, general conditions, and special condition, as modified by the supplementary specification, also hereunto annexed and marked "G," and the contractors' drawing, marked "No. 11," now in the office of the said Engineer-in-Chief for Metropolitan Sewerage Construction, and at or for the price or sum set out in the said tender. And whereas the said tender was accepted by the said Minister, and such acceptance (a copy of which is annexed hereto, and marked "H"), was duly notified to the contractors on the 11th day of April now last past, and the contractors have assented thereto, as per their letter annexed hereto, marked "I." And whereas the contractors have deposited the sum of £775 in the Bank of New Zealand, at Sydney, in the said Colony, in the name of the Under Secretary for Public Works, at interest upon fixed deposit, No. 22,187, dated the 29th day of April now last past for twelve months, and have handed the receipt for the same to the said Minister to be held by him as such Minister or the Minister for Public Works for the time being of the said Colony, on behalf of Her Majesty, as security for the due performance of this contract, and all other matters and things herein contained, and which, on the part of the contractors, are to be done and performed. And whereas the said contractors have, with two approved sureties, entered into bonds to Her said Majesty conditioned to secure the due performance of the removal of so much of the said works at their own cost as shall have been constructed on the "Monier System" if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said general conditions and supplementary specification respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. Now this agreement witnesseth that, in consideration of the premises, the contractors do hereby, for themselves, heirs, executors, and administrators, covenant with and to Her said Majesty the Queen, Her heirs, and successors: That they, the contractors, shall and will perform the various works required in and about the full and proper construction, erection, and completion of the said sewerage works in accordance in all things with the said specification, schedule to specification, general conditions, special condition, supplementary specification, and drawings, and at and after the price, and within the time in the said tender mentioned. And that they will well and truly remove so much of the said works at their own cost as shall have been constructed on the "Monier System" if the Engineer shall be dissatisfied with the same at any time during either of the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the full and uninterrupted flow of sewage during progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to, within thirty-nine weeks from the date of being called upon to do so. And it is hereby agreed and declared between and by the said parties hereto that the said copy, notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy, letter of acceptance of tender, and letter of assent thereto, marked as aforesaid, all being hereunto annexed as aforesaid, shall be read as incorporated in and forming part and parcel of these presents in like manner, and if the same had been herein written and set forth at length, and that the said several annexures, the said drawings, and these presents shall together be taken to be the contract between the said parties in respect of the said sewerage works amplified in manner following—that is to say, that the said general conditions shall at all times be read and construed as if the stipulation contained in the said letter of acceptance of tender as to the discharge of men (not domiciled in this Colony for six months previously to their employment on the said works) employed on the said works when called upon to do so, and the penalty for non-compliance therewith had been expressly set out in the said general conditions.

In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

Signed, sealed and delivered, by the said John Carter, in the presence of,—	} HAROLD F. NORRIE.	JOHN CARTER.
Signed, sealed and delivered, by the said Frank Moorhouse Gummow, by his attorney, John Carter, acting under power of attorney, dated the 2nd day of January, 1894, in the presence of,—	} HAROLD F. NORRIE.	FRANK MOORHOUSE GUMMOW. (By his Attorney, JOHN CARTER).
Signed, sealed and delivered, by the said David Graham Snodgrass, in the presence of,—	} HAROLD F. NORRIE.	D. G. SNODGRASS.

This is the agreement referred to in our respective bonds to Her Majesty the Queen.  
Dated this 16th day of May, A.D., 1895.

	GEORGE FORREST,	} Sureties.
	JAMES GILLAN,	

Witness—HAROLD F. NORRIE.

KNOW all men by these presents,—That we, John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, of North Sydney, in the Colony of New South Wales, contractors, carrying on business together under the name, style, or firm of "Carter, Gummow, & Co." (and hereinafter referred to as the said contractors), are jointly and severally held, and firmly bound unto Her Most Gracious Majesty Queen Victoria, in the penal sum of £12,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs, or successors, for which payment, well and truly to be made, we bind ourselves, and each of us, our and each and every of our heirs, executors, and administrators jointly and severally firmly by these presents.

Scaled with our seals dated the 16th day of May, in the year of our Lord, 1895.

WHEREAS, by agreement bearing even date herewith, and expressed to be made between the said contractors of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern

northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, according to the copy notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy letter of acceptance of tender, and letter of assent thereto, thereunto annexed, and marked "A," "B," "C," "D," "E," "F," "G," "H," and "I" respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked No. 1 to No. 11, both inclusive.

And whereas the said contractors have severally offered to become and be bound to her said Majesty, her heirs, and successors, for the due removal of so much of the said works, at their own cost, as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same, at any time during either of the periods of maintenance set out in the said general conditions and supplementary specification respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. Now, the condition of the above-written bond and obligation is such that if the said contractors do, and shall well and truly remove so much of the said works at their own cost, as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same at any time during the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions and special condition, and the plans therein respectively referred to, within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void and of none effect, otherwise to remain in full force and virtue.

#### STATUTORY DECLARATION.

I, JOHN CARTER, of Sydney, in the Colony of New South Wales, contractor, do hereby solemnly declare and affirm that—

1. I am the duly constituted attorney of Frank Moorhouse Gummow, at present residing at Adelaide, in the province of South Australia, under and by virtue of a Deed Poll or Power of Attorney, under the hand and seal of the said Frank Moorhouse Gummow, dated the 2nd day of January, 1894.
2. From letters and telegrams recently received from the said Frank Moorhouse Gummow, I have every reason to believe, and I verily do believe, that the said Frank Moorhouse Gummow is still alive.
3. At the time of the execution by me as such Attorney as aforesaid of a bond to and agreement with Her Most Gracious Majesty Queen Victoria, and bearing date the 16th day of May, 1895, in connection with Contract No. 77, Sydney Sewerage Works, I had not nor have I since received notice of the revocation by death or otherwise of the abovementioned Deed Poll or Power of Attorney.

And I make this solemn declaration as to the matters aforesaid according to the law in this behalf, and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Sydney, this 16th }  
day of May, 1895, before,— } JOHN CARTER.  
HAROLD F. NORRIE, J.P.

Know all Men by these Presents,—That I, George Forrest, of Marrickville, in the Colony of New South Wales, householder, am held and firmly bound unto Her Most Gracious Majesty, Queen Victoria, in the penal sum of £6,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs or successors, for which payment well and truly to be made, I bind myself, my and each and every of my heirs, executors, and administrators firmly by these presents.

Sealed with my seal, dated the 16th day of May, in the year of our Lord, 1895.

WHEREAS by agreement, bearing even date herewith, and expressed to be made between John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, carrying on business together as contractors, under the name, style, or form of "Carter, Gummow, and Company," and therein and hereinafter called the contractors, of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern main sewer, Leichhardt and Annandale sections, Contract No. 77, Sydney Sewerage, according to the copy notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy letter of acceptance of tender, and letter of assent thereto, thereunto annexed, and marked "A," "B," "C," "D," "E," "F," "G," "H," and "I," respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked "No. 1" to "No. 11," both inclusive. And

And whereas the contractors have entered into a bond to Her said Majesty, dated the 16th day of May, 1895, conditioned to remove at their own cost so much of the said works as shall have been constructed on the "Monier System" if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said General Conditions and Supplementary Specification respectively, and for the re-erection and construction of the said works, and to provide for the free and uninterrupted flow of sewage during the progress of such rebuilding, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special condition, and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. And whereas I, the said George Forrest, have offered to become bound to Her said Majesty, her heirs and successors, for the due performance and fulfilment of the said contract, according to the said agreement, and the several annexures thereto, so far as the removal of a portion of the said works constructed on the "Monier System" is concerned, if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance referred to, and the re-erection of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at the contractor's expense, in the manner provided for in the original specification, schedule to specification, general conditions, and plans within the time lastly hereinbefore set out. Now the condition of the above-written bond and obligation is such that if the contractors do and shall well and truly remove so much of the said works as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same at any time during the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void, and of none effect, otherwise to remain in full force and virtue.

Signed, sealed, and delivered by the abovenamed }  
 George Forrest, in the presence of, — }

GEO. FORREST.

#### STATUTORY DECLARATION.

I, GEORGE FORREST, of Marrickville, in the Colony of New South Wales, householder, do hereby solemnly declare and affirm that I am possessed of property to the value of £6,000 sterling and more, and that such property consists of—Freehold property, £5,700; cash in bank, £300 sterling. And I make this solemn declaration as to the matters aforesaid, according to the law in this behalf made and subject to the punishment by law provided for any wilfully false statement in any such declaration.

Taken and declared at Marrickville, this 1st day }  
 of June, 1895, before me, — }  
 ROBERT ANDERSON, J.P.

GEO. FORREST.

Know all Men by these Presents,—That I, James Gillan, of Dulwich Hill, in the Colony of New South Wales, householder, am held and firmly bound unto Her Most Gracious Majesty Queen Victoria, in the penal sum of £6,000 sterling, to be paid in Sydney, in the said Colony, to Her said Majesty, her heirs or successors, for which payment well and truly to be made I bind myself, my and each and every of my heirs, executors, and administrators firmly by these presents.

Sealed with my seal, dated the 16th day of May, in the year of our Lord, 1895.

WHEREAS, by agreement bearing even date herewith, and expressed to be made between John Carter, Frank Moorhouse Gummow, and David Graham Snodgrass, carrying on business together as contractors, under the name, style, or form, of "Carter, Gummow, & Co.," and therein and hereinafter called the contractors of the one part, and Her said Majesty of the other part, the said contractors covenanted to perform the various works required in and about the full and proper construction, erection, and completion of the northern main sewer, Leichhardt and Annandale sections, contract No. 77, Sydney sewerage, according to the copy notice, specification, schedule to specification, general conditions, special condition, supplementary specification, tender, copy, letter of acceptance of tender, and letter of assent thereto, thereunto annexed and marked "A," "B," "C," "D," "E," "F," "G," "H," and "I" respectively, and certain drawings relating thereto, now in the office of the Engineer-in-Chief for Metropolitan Sewerage Construction, and marked "No. 1 to No. 11," both inclusive.

And whereas the contractors have entered into a bond to Her said Majesty, dated the 16th day of May, 1895, conditioned to remove at their own cost so much of the said works as shall have been constructed on the "Monier System" if the Engineer shall be dissatisfied with the same at any time during either of the periods of maintenance set out in the said general conditions and supplementary specifications respectively, and for the re-erection and construction of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding, at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, special condition and plans therein respectively referred to, and within thirty-nine weeks from the date of being called upon to do so. And whereas I, the said James Gillan, have offered to become bound to Her said Majesty, her heirs, and successors for the due performance and fulfilment of the said contract, according to the said agreement and the several annexures thereto, so far as the removal of the portion of the said works constructed on the "Monier System" is concerned, if the Engineer shall be dissatisfied with the same, at any time during the periods of maintenance referred to and the re-erection of the said works, and for the free and uninterrupted flow of sewage during the progress of such rebuilding at the contractors expense, in the manner provided for in the original specification, schedule to specification, general conditions, and plans within the time lastly hereinbefore set out. Now the condition of the above-written bond and obligation is such that if the contractors do and shall well and truly remove so much of the said works as shall have been constructed on the "Monier System," if the Engineer shall be dissatisfied with the same, at any time during either of the

the

the respective periods of maintenance set out in the said general conditions and supplementary specification, and re-erect and construct the said works, and provide for the free and uninterrupted flow of sewage during the progress of such rebuilding at their own expense, in accordance in all things with the said specification, schedule to specification, general conditions, and special condition, and the plans therein respectively referred to within thirty-nine weeks from the date of being called upon to do so. Then this obligation will be void and of none effect, otherwise to remain in full force and virtue.

HAROLD F. NORRIE, J.P.

JAMES GILLAN.

“A.”

Department of Public Works, Sydney, 8 March, 1895.

#### TENDERS FOR PUBLIC WORKS.

TENDERS will be received at this office for the public works specified in the Schedule hereunder up to 11 o'clock a.m. of the various dates set forth in the second column.

All envelopes containing tenders must be addressed to the President of the Tender Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Tenderers may be in attendance when the tenders are opened, and the name of the lowest tenderer will be announced, if possible, before the duties of the Board have terminated.

The following conditions will have to be strictly complied with, otherwise the tenders will not be taken into consideration:—

- 1st.—Each tender must state the time within which it is proposed to complete the work, and in every instance the full christian and surname or names of persons tendering.
- 2nd.—Every tender must contain an undertaking on the part of the person tendering to make the cash deposit provided for in the General Conditions and to be answerable for the due performance of the contract in the event of the tender being accepted; and undertaking, in that event, to execute and deliver to the Minister for Public Works a valid legal contract with Her Majesty the Queen for securing such performance.
- 3rd.—No tender will be considered which shall have been received after 11 o'clock a.m. on the day upon which tenders are to be received, unless there are circumstances which, in the opinion of the Board, render it desirable that it should be received.
- 4th.—Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz:—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000 ... ..	10 0 0

For all sums over £1,000, 1 per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the manager of the bank upon which it is drawn, or a bank draft.

- 5th.—Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.
- 6th.—In the event of any tenderer failing to take up his tender, complete the contract agreement, and proceed with the contract within the time specified, or withdrawing his tender within thirty days after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account of such contract shall be absolutely forfeited to the Crown and shall be paid to the credit of the Consolidated Revenue of the Colony.
- 7th.—Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted, but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.
- 8th.—In the event of any contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.

All deposits, with the exception of that of the lowest tenderer, when practicable, will be returned to the persons entitled thereto immediately after the Board shall have adjourned; and the deposit made by the successful tenderer shall be returned to him on executing the contract agreement for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender will not be returnable until the service is satisfactorily completed.

It is to be understood that the Government does not bind itself to accept the lowest or any tender; and no tender will be accepted until the head of the Branch under whose directions the work is to be carried out has reported upon the whole of the tenders received.

J. H. YOUNG.

## "B."

## SPECIFICATION.

1. *Description of Contract.*

This contract comprises the provision by the contractor of all labour, machinery, tools, plant, and everything that may be necessary for the construction of the Northern Main Sewer, Leichhardt and Annandale Section, as described in detail in the specification, schedule to specification, special condition, and general conditions, and as shown on the following drawings:—

- No. 1. General plan showing sites of sewers, &c.
- No. 2. Longitudinal sections of main and branch sewers.
- No. 3. Cross-sections of road deviations, &c.
- No. 4. General elevation of Johnstone's Creek aqueduct, road crossings, and details.
- No. 5. Details of Nelson-street crossing, general cross-sections of sewer, &c.
- No. 6. General elevation of White's creek aqueduct, road crossings, &c.
- No. 7. Details of White's Creek aqueduct.
- No. 8. General details of White's Creek and Johnstone's Creek aqueducts.
- No. 9. Designs and details of shafts.
- No. 10. Details of Johnstone's Creek and White's Creek aqueducts.

2. *Materials.*

The materials are to be of the quality specified in clauses 7 to 39 of the schedule to specification.

The bricks to be used in these works to be of the quality and description specified in clauses 11 and 12 of the schedule to specification, excepting all red bricks to be used in piers, arches, haunches, spandrels, parapets, and in approaches to aqueducts, up to the level of underside of coping, which are to be as specified, but to be dry-pressed bricks of approved manufacture, dimensions, form, and colour, as per sample to be seen at the Engineer's office. The dry-pressed red bricks, when immersed in water twenty-four hours, not to increase in weight more than 7.85 per cent., and the average breaking strain of twelve bricks to be taken from each parcel not to be less than 5,553 lb. All brickwork is tinted red on plans and sections; the areas on elevations of aqueducts as arches, abutments, piers, spandrels, circular panels over piers, parapets, pilasters, corbels, &c., which are to be specially faced with red and white bricks, are tinted red and white accordingly. The white bricks round circular panels to be specially formed and radiated bricks. All white bricks to be double pressed-plastic bricks, and as hereinbefore specified.

The sandstone to be used in these works to be of the quality specified in clause 15 of the schedule to specification, but the stone to be used in stop-blocks at ends of aqueducts, in copings, string-courses, and skewbacks of the aqueducts herein described, to be Pymont bottom block sandstone, and as specified.

3. *Excavation.*

The excavation for all the works comprised in this contract to be executed in accordance with clauses 40 to 80, 83 to 87, and 107 of the schedule to specification.

The excavation for the foundations of piers, abutment-piers, and approaches to aqueducts, to be executed as specified in the schedule to specification, and to the various depths, widths, steps, &c., as shown on drawings, or to such lesser or greater depths and widths as may be directed, said excavations to be measured to the outside of timbering where such has been approved of.

All

All logs, existing pitching, masonry, brick, or concrete work, oval or circular drains, sewers, &c., met with in excavations shall, in the first instance, be put aside beyond actual site of works in separate spoil-banks, to be measured and paid for at schedule prices under items of excavation of open trenches, tunnels, shafts, &c.

In connection with clause 63 of the schedule to specification it is to be understood that the Engineer may, according to the nature of the ground, allow a margin of lining round sewer not exceeding 3 inches, consisting of concrete below level of springing and of sand-packing above level of springing. The filling round brick or concrete shafts to be executed as specified in clause 90 of the schedule to specification.

In connection with clauses 72 and 73 of the schedule to specification it is to be distinctly understood that all sumps which the contractor may think necessary to sink on lines of sewers shall be sunk only of approved dimensions, and the cost of sinking, timbering, unwatering, removing the excavated materials, timbering, &c., and the filling in, to be defrayed entirely by the contractor.

Shafts are to be sunk as specified in clauses 65, 66, 68 to 71, and 76 of the schedule to specification, and as shown on drawing; but if during the progress of the works the Engineer may deem it necessary to omit any of the shafts shown, the contractor shall omit such shaft or shafts where ordered, and such omission shall not entitle him to any claim for loss, damage, or compensation; he shall be only entitled to be paid for the shafts ordered to be sunk at schedule rates.

The price of 1 cubic yard of excavation for all work comprised in this contract (excepting refilling and disposing of surplus materials) shall include the cost of all work herein specified and described in the various clauses of the schedule to specification herein enumerated.

#### 4. *Subducts.*

Subducts to be constructed on lines of tunnels and open trenches, where ordered, as specified in clauses 78 and 79 of the schedule to specification.

#### 5. *Filling.*

The filling in of all excavations, and in any situation comprised in this contract, including the filling in round shafts, concrete foundations of piers, abutment piers, approaches to aqueducts, retaining walls, and sand-packing over and round closing arch of sewers, &c., to be executed as shown, and as specified in clauses 85 to 97, and 101 to 107 of the schedule to specification.

The price of 1 cubic yard of filling in any situation comprised in this contract (except disposing of surplus materials) shall include the cost of all work herein specified and described in the various clauses of the schedule to specification herein enumerated.

#### 6. *Temporary and Permanent Shoring, Timbering, Piling, &c.*

The shoring and timbering, including all iron used in fixing same, required in the construction of these works to be provided, erected, placed in position, withdrawn, covered up, and measured up as specified in clauses 87, 125, and 126 of the schedule to specification.

If during the progress of the contract, in the opinion of the Engineer, pile foundation under piers of aqueducts is considered necessary, it shall be executed as shown on drawing, and as specified in clauses 110 to 126 of schedule to specification.

The piles to be not less than 15 inches diameter at the small end, and 17.50 inches diameter at large end, and they are to be driven until a 20-cwt. ram falling 10 feet does not drive them more than  $\frac{1}{4}$  inch at the last stroke.

#### 7. *Ordnance Fences.*

Road embankments to be protected by sawn hardwood ordnance fences to the extent and as shown on drawings, and as specified in clauses 197, 210, and 211 of the schedule to specification. The fences required for this contract to be two-rail only, and all post to be 6 in. x 4 in. x 6 ft. long, the lower 2 feet to be walled into upper portion of concrete retaining walls. All woodwork, ironwork, &c., to be painted and tarred as specified in clauses 269, 270, and 273 of the schedule to specification.

#### 8. *Roadmaking.*

The different road deviations and roads under, over, and at sides of main sewer, within the resumed land or otherwise, along Crescent Lane, Nelson-street, Young-street, lanes on each side of same, along White's Creek and White-street, to be constructed on embankments, in excavations, and along surface of ground, to be formed, sloped, bored out, ballasted, metalled, &c., as shown on drawings, as may be directed and as specified in clauses 200 to 204 in the schedule to specification.

#### 9. *Tarred Metal Deck.*

All sand filling over sewer in aqueduct to be covered with tarred metal deck, as specified in clauses 205 to 208 of the schedule to specification. The metal to be used in decking for this contract to be of  $1\frac{1}{2}$ -inch gauge as specified in clause 140 of the schedule to specification. The tarred metal to be spread 3 inches thick over the sand-filling.

#### 10. *Sewers, Storm-water Channels, &c.*

The various works comprising this contract are to be executed in conformity with clauses 132 to 139 of the schedule to specification.

The Leichhardt and Annandale section of the Northern Main Sewer commences at 6 miles 51.2515 chains, to be built in open cutting of 4 ft. 6 in. x 3 ft. 6 in. internal dimensions, of concrete, extending for about 9 feet under Crescent Lane; it is then to cross the Johnstone Creek Valley, built of concrete, brick, and stone, on piers, and ten flat brick arches of 12-foot span for a length of about 159.6 feet; on pile foundations, where ordered, and on piers and twelve elliptical brick arches of 48-foot span for a length of about 633.316 feet; on abutment piers and one flat arch of 57-foot span, over Nelson-street, for a length of about 76.333 feet, and on rock foundation with one flat arch of 12-foot span, of concrete, brick, and stone facings, for a length of about 88 feet up to 6 miles 65.8478 chains. A water-escape drain consisting of 24-inch diameter stoneware pipe, about 130 feet in length, with gullies complete, and open rock cutting about 10 feet in length, from Nelson-street towards Johnstone's Creek, to be constructed as shown.

From 6 miles 65.8478 chains to 6 miles 67.30 chains the sewer to be built in open cutting of concrete; from 6 miles 67.30 chains to 6 miles 78.24 chains of brick and concrete in tunnel in rock, and from 6 miles 78.24 chains of 4 ft. 3 in. x 3 ft. 3 in. internal dimensions of brick and concrete in tunnel in rock up to 7 miles 5.1941 chains, and then of concrete only, in open cutting up to 7 miles 6.9091 chains.

The

The sewer then to cross the White Creek Valley, built of concrete, brick, and stone, on rock foundation and on piers, and seventeen flat brick arches of 12-foot span for a length of about 359.1 feet, on piers, and nine elliptical arches of 48-foot span for a length of about 474.09 feet, on abutment piers and one flat arch of 33-foot span over White-street for a length of about 58 feet, on which length the sewer to be provided with two storm-water escape weirs and 12 inch diameter stoneware vertical offset pipes, discharging into a water-escape drain consisting of 24-inch diameter stoneware pipes about 200 feet in length, with gullies complete; and open cutting only about 10 feet in length, from White-street towards White's Creek, to be constructed as shown. The sewer then to be constructed on rock foundations and on piers and four flat brick arches of 12-foot span for a length of 241.79 feet up to 7 miles 23-0758 chains.

Then from 7 miles 23-0758 chains to 7 miles 23-9840 chains the sewer to be constructed of concrete only in open cutting, and from 7 miles 23-9840 chains to 7 miles 30-4840 chains the sewer to be constructed of brick and concrete in tunnel in rock, but the lining of this length of tunnel shall not be commenced until especially ordered.

A branch sewer in tunnel in rock of 3 ft. 3 in. x 2 ft. 2 in. internal dimensions, to be constructed along Johnstone-street, from Piper-street to Rose-street.

If, during the progress of the contract, the Engineer may deem it necessary to omit or alter any of the sewers, shafts, junctions, drops, inlets, or other works shown or described in the clauses herein quoted, then the contractor shall be bound to omit altogether, or alter, as may be ordered at the time, any sewers, shafts, junctions, drops, inlets, &c., as the case may be, and such omission or alteration shall not entitle him to any claim for loss, damage, or compensation. He shall be only entitled to be paid for the work actually ordered and carried out at the various schedule rates referring to such work.

#### 11. *Concrete Work.*

The concrete to be used in foundations of all piers, and in all piers and abutment piers, for the 12-foot, 33-foot, 48-foot, and 57-foot span arches up to level of springing and top of plinths, in haunches and spandrels, between and over all arches between external brick-facings, up to level of underside of string-course (6 inches below invert of sewer), in retaining walls along road deviations and roads, round storm-water discharge pipes, round stoneware pipe where directed, and where ordered in any situation in the construction of these works, to be sandstone concrete of the quality specified in clause 142 of the schedule to specification.

The concrete to be used in inner sewer lining (between brick facings) of aqueducts to be special bluestone concrete of the quality specified in clause 141 of the schedule to specification, except that in this instance the bluestone metal to be broken to a size to pass freely with its largest dimensions through a ring of  $\frac{3}{4}$  inch in diameter, to be screened and washed as specified in clause 140 of the schedule to specification.

The concrete to be used in lining sewers in tunnels, open cuttings, in ventilating shafts, drops, weir-chambers, inlets, flushing, gas-check, and other chambers, and where ordered in the construction of these works, to be bluestone concrete of the quality specified in clause 140 of the schedule to specification. The whole of the concrete work comprised in this contract to be commenced, executed, and completed (including the iron bond-rods in concrete lining of sewer on lines of aqueducts as described in clause 164 of the schedule to specification), as shown on drawings, and as specified in the schedule to specification in clauses 140 to 171.

#### 12. *Cement Facing.*

All exposed, internal, and external concrete surfaces to be protected by cement facing prepared of cement and sand in the proportion of one cement to two of sand, except all internal concrete surfaces of sewer over aqueducts, which are to be protected by special cement facing prepared in the proportion of one cement to one of sand. The cement facing to be executed as specified in clauses 180 and 181 of the schedule to specification complete with all battered faces, recesses, chamfers, weatherings, &c., as shown, and as shall be directed.

#### 13. *Brickwork.*

The brickwork comprised in this contract to be executed and completed as shown on drawings, and as specified in clauses 172 to 179 of the schedule to specification, and clause 2, except that in this instance the 12-foot span arches in aqueducts are not to be built in  $4\frac{1}{2}$ -inch rings, but they are to be built in radiating through courses of rubbed and gauged or radiated bricks, as shown, and as shall be directed. The 48-foot span arches to be built as specified, and to be thickened out at the haunches, so as to abut against the sandstone concrete filling over piers between the arches, and between the external brick facings as shown.

#### 14. *Masonry.*

All freestone ashlar in skewbacks, string-courses, copings, 6 ft. 8 in. x 2 ft. x 9 in. stop-blocks at ends of aqueducts, and steps, to be provided, dressed, set in cement and built in where shown on drawings and where directed, as specified in clauses 15, 182, and 183 of the schedule to specification, and in clause 2. The exposed faces of skewbacks to be finished with 2-inch parallel drafted margins along each exposed arris, stopped in at inner edges, and the surface of stones between to be picked down, the projecting parts to be level with true line of wall.

#### 15. *Squared Bluestone Pitching.*

Squared bluestone pitching to be provided and set round manhole covers, and where ordered, to be  $7\frac{3}{4}$  inches deep, and as specified in clause 186 of the schedule to specification.

#### 16. *Squared Freestone Pitching and Channelling.*

Squared freestone pitching to be set round gully gratings, and in road-channels as shown, and where ordered, as specified in clause 187 of the schedule to specification.

#### 17. *Freestone Curbing and Gully Covers.*

Freestone curbing to be set along edges of footpaths, at gully-gratings, &c., to be of the exact dimensions, dressed and sunk as shown, and as specified in clause 188 of the schedule to specification. Gully-covers, 3 ft. 3 in. x 3 ft. x 9 in., to be provided and set, dressed to the exact dimensions, where shown, as specified in clause 183 of the schedule to specification.

### 18. *Pipe-laying and Jointing.*

The providing, laying, and jointing of glazed stoneware pipes to be executed as specified in clauses 13, 14, 137, 170, 189 to 194 of the schedule to specification.

### 19. *Scupper Pipes, Slate Covers, &c.*

The 4-inch diameter glazed stoneware scupper-pipes along footpaths over sewer on lines of aqueducts to have cistern heads built of concrete, covered on top with 16 in. x 9 in. x 1 in. slate covers set in cement as shown.

### 20. *Cast-iron and Wrought-iron Work.*

All cast-iron ventilating grates and closed manhole covers with frames, gas-check frames, gully-gratings and frames, galvanised wrought-iron step-irons, &c., required for this contract to be supplied by the Government to the contractor, and to be received and removed by him when not required, as provided in clauses 264 and 265 of the schedule to specification. Contractor to place said ironwork in position, wall in, joint, and fix same in the works, as specified in clauses 138, 139, 168, and 170 of the schedule to specification, as shown on drawings, and as shall be directed.

### 21. *Order of Works.*

The excavation of all shafts to be commenced simultaneously within three weeks after the date the contract has been signed and all shafts to be completed within nine weeks after commencement of excavation. The five working shafts shown on lines of tunnels provide seven working faces. The driving of the tunnels to be commenced from all faces simultaneously, and the average total progress at all working faces during every day of twenty-four hours to be not less than 11.666 feet or 70 feet during every week of six working days of tunnel excavation complete.

The various excavations of open trenches for sewers, piers, and abutment piers of aqueducts, approaches to same, roads, &c., to be commenced in each length from the different faces simultaneously. The piling where such has been ordered for foundations of piers of aqueducts, all pipe-laying, concrete work, brickwork, masonry, &c., required in shafts, chambers, junctions, tunnels, foundations of piers, and abutment piers of aqueducts to level of top of plinths and springing of arches, and in sewers in open cuttings approaching aqueducts, &c., to form the first part of the works.

The construction and completion of all brickwork, concrete work, and masonry of all piers, abutment piers, with all arches of 12-foot, 33-foot, 48-foot, and 57-foot span and spandrels up to level of tops of said arches, to form the second part of the works.

The construction and completion of all concrete work, brickwork, masonry, &c., of all sewers over aqueducts from top of arches to level of top of all parapets, including weir chambers, storm-water discharge pipes, sand-filling and asphalt covering over aqueducts, road-making, road-repairing, and every other work required in the completion of the whole contract, to form the third part of the work.

In constructing the various items forming the first and second part of the works, it is to be distinctly understood that all piers and abutment piers for arches of 12-foot, 33-foot, 48-foot, and 57-foot span, must be built and completed up to level of springing and top of skewbacks, as the case may be, throughout each respective length of aqueduct over each valley, before any of the arches are commenced.

On completion and approval of all piers and abutment piers, each series of arches over each valley to be commenced (unless otherwise directed) at its eastern end, and to advance to its western end, with not less than six centres at a time for the arches of 48-foot span, and with five centres for the arches of 12-foot span, that is to say—

After the first six centres of 48-foot span and the first five centres of the 12-foot span arches are placed in position, the arches over same are to be built and completed one after another, then the spandrels between the 48-foot span arches are to be built with concrete between brick-facings to a height of 11 ft. 3 in. above the springing, after which the centres from underneath the first arch of each series, after the specified period allowed for settlement has expired, to be removed and at once to be re-erected over the sixth or seventh openings, as the case may be, then the centres from the second arch to be removed and re-erected over the seventh and eighth openings, and so on, and the same system to be continued until all arches of one aqueduct have been built and completed.

All centres of arches, cambered as shall be directed, to be strong enough in every part to carry the weight of each arch to be built thereon. Centres under the 12-foot span arches shall not be removed until fourteen days after the completion of each arch. Centres under the 48-foot span arches shall not be removed until twenty-eight days after completion of each arch, and the concrete and brickwork of spandrels between the arches from springing of arch to a height of 11 ft. 3 in. above same, and the centres of the 33-foot span and the 57-foot span arches shall not be removed until fourteen days after the completion of each arch, and until the centres of the adjoining arches at each side of each respective arch have been removed.

After all arches of one aqueduct have been completed as specified, and approved of, the concrete, brickwork, and masonry, as the case may be, to be built in between and above same, in horizontal layers transversely and parallel with gradient of sewer longitudinally, so that all arches of one aqueduct (except where otherwise directed) shall be gradually, uniformly, and equally weighted, as the superstructure rises to the levels hereinbefore specified.

### 22. *Schedule to Specification, Special Condition, and Conditions of Contract.*

Notwithstanding that certain clauses of the schedule to specification are especially enumerated, it is to be understood that the schedule to specification, special condition, and the general conditions attached to the specification, shall be held binding in all matters relating to this contract, as far as the Engineer may deem the same applicable.

### 23. *Note.*

Parties tendering are particularly requested to observe that they must name only one rate of percentage above or below all the prices in schedule, and not one rate of percentage upon certain items, and another rate or rates upon others.

This is the specification marked "B," referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of May, A.D. 1895,—

JOHN CARTER.  
FRANK MOORHOUSE GUMMOW.

GEO. FORREST.

"C"

SCHEDULE TO SPECIFICATION.

*Land required for works.*

1. Access to the site of the works (other than by public roads) to be had by means of such land the Engineer may deem necessary.
2. For the purpose of sinking, working, and building shafts on lines of streets, and on private ground, the contractor to have temporary possession of an area of 24 feet by 17 feet at the site of each shaft, unless otherwise directed.
3. For the purpose of excavating open trenches, and for constructing the various works therein, and raising embankments over same, or where ordered, contractor to have temporary possession of such land, of the exact widths and lengths which, in the opinion of the Engineer, is required for these works.
4. The land herein referred to to be set out by the Engineer upon receiving written application from the contractor. Such application must be made four weeks prior to the time the said land is required.

*Setting-out work.*

5. The centre lines of sewers, &c., are shown on general plans by full lines, which will be marked on the surface of the ground, the same as on plans, as the works proceed.
6. Contractor shall at his own cost and expense at any time—by day or by night, either on working days or on Sundays or holidays—render all such assistance and supply all such labour, plant, and lighting as the Engineer or Superintending Officer may require, to set out, to check such setting-out, or to inspect any portion of the works, which must for that purpose be left clear and free from any obstruction or impediment. During and for the performance of those operations, contractors shall be obliged to suspend any or all of his work, if required to do so by the superintending officer, and without having any claim for loss or damage on account of such temporary suspension.

*Materials.*

7. All materials supplied by the contractor are to be of the best quality and description of their respective kinds. Samples of each kind to be submitted for the approval of the Engineer, and retained in office; and, on approval having been obtained, they are to be delivered on the works ready for use, as per sample.
8. The contractor shall inform the Engineer of the sources whence the various materials are supplied, or of the places of their manufacture, and afford him every facility to inspect their supply or manufacture at any stage of the same.
9. Due notice shall be given by contractor to the Superintending Officer when any material is brought on the ground, all of which must be neatly stacked in regular heaps, submitted for approval, and approved of in writing by the Superintending Officer, before it may be used in the works. None but that so approved shall be used.
10. The contractor to provide approved gauge-boxes or scales for measuring or weighing all materials supplied.
11. Bricks to be double-pressed, of well-mixed material of approved quality and uniform fineness; to be new, sound, hard, and well-burnt kiln bricks, free from cracks and all other defects, equal in every respect to the sample brick to be seen at the Engineer's office. They are to have sharp arrises, and to be of approved dimensions, form, and colour, and, when ordered, to be specially moulded. Radiating and specially-formed bricks to be provided for all segmental shafts. All bricks to be subjected to the following tests:—
- (a) *Tensile strength.*—The tensile strength to be tested, in the departmental testing machine, by laying the brick horizontally on its base of 3 inches, between supports 7 inches apart, and the strain applied across the centre of the brick. An average breaking strain of twelve bricks to be taken, which must not be less than 8,000 lb.
- (b) *Porosity.*—Bricks immersed in water for twenty-four hours must not increase in weight more than 3 per cent.
- Should the twelve bricks fracture under the foregoing average strain, or prove more porous than 3 per cent., then the Engineer may reject the whole stack of bricks from which the twelve bricks were taken.
12. In the event of the contractor delivering bricks of a mixed description and quality, the Superintending Officer shall have the power to require of the contractor to have those bricks which, in his opinion, are suitable for the works, picked out and stacked where directed, and those unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the bricks so delivered by the contractor.
13. Stoneware pipes to be of well-ground and mixed material, of tough, tenacious, impervious quality, well-burnt, sound, hard, uniform in thickness, true in section, straight longitudinally, uniformly glazed both inside and outside, free from fire and other cracks, flaws, and ash-holes, the collar perfectly joined to the barrel, and in every way equal to sample pipe to be seen at the Engineer's office.

Pipes

Pipes to be of the following thicknesses and depth of collars, namely:—

Dimensions.

Pipes, inside diameter, 9 inches; thickness,  $1\frac{1}{8}$  inch; depth of collar, 2 inches.

"	"	12	"	"	1	"	"	2	"
"	"	15	"	"	$1\frac{1}{4}$	"	"	$2\frac{1}{4}$	"

12	"	"	142	"	"	"
9	"	"	142	"	"	"

If the Engineer deems it necessary, the pipes will also be tested for porosity. Should the pipes fracture under the foregoing strains, or not prove impervious to water, then the Engineer may reject the whole parcel from which the pipes were taken.

14. In the event of the contractor delivering quantities of pipes, bends, and junctions of a mixed description and quality, the superintending officer shall have the power to require of the contractor to pick out and stack, where directed, those pipes, bends, and junctions which, in his opinion, are suitable for the works, and those unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the Superintending Officer shall have the power of rejecting the whole of the pipes, bends, and junctions so delivered by the contractor. Defective pipes, &c.

15. All sandstone used in the construction of these works to be hard, sound, and solid, of the best description, free from all defects, and as per sample to be seen in the Engineer's office, and to stand a crushing strain of 6,500 lb. per square inch. A tensile test will also be required; for this six stones must be prepared, 4 in. by 4 in. by 12 in.; these, when laid on their natural beds upon supports 10 inches apart, must give an average breaking strain of not less than 4,333 lb., the strain being applied across the centre of the stone. Sandstone.

16. All bluestone used in the construction of these works to be of the best description of basaltic bluestone obtainable, free from honeycomb and all defects, and as per sample to be seen at Engineer's office. Bluestone.

17. Sand to be sharp quartz sand, free from all earthy, loamy, or clayey matter, equal in quality to the sample of Nepcan River sand to be seen at the Engineer's office, and to be washed perfectly clean whenever the Engineer deems it necessary. Sand.

18. The cement to be used throughout these works to be well packed in strongly-made casks; to be the best Portland cement, of approved brands and manufacture, delivered in thoroughly sound condition, fit for immediate use, and without requiring seasoning or air-slacking; to be free from any symptoms of staleness, caking, damage to the packing, hard or set lumps; and no barrel or portion of same to be used until it has been examined and approved. The Engineer may delay approval of any parcel of cement pending tests extending over a longer period than hereinafter specified. Samples taken from various casks, from each parcel brought on the works, to be submitted for testing. Such samples shall be taken out of the package in an equal section, extending from the surface to the centre of the cask. The cement, when gauged with water to a stiff paste, must set in a damp atmosphere in from one and a half to six and a half hours. Neat cement, of the consistency abovementioned, will be made into pats, kept in moist air until set, and then placed in water at a temperature of between 65° and 80° F., and also in Deval's hot bath, at a temperature of 180° F. These test pats will be examined from day to day, and should they show symptoms of blowing, or any alteration or variation in form or volume, or imperfect setting capacity, the whole parcel from which the cement was taken will be rejected. The cement shall weigh not less than 100 lb. per imperial striked bushel, filled from the hopper. Each cask shall contain not less than 374 lb., exclusive of weight of packing. The specific gravity to be not less than 3.00; but cement up to or exceeding the specified degree of fineness, if of a lighter weight than herein stipulated, but otherwise equal to the specified tests, may be accepted subject to the decision of the Engineer, provided that the deficiency in weight is made up in quantity. The cement must be ground so fine that the residue on a sieve of 6,400 meshes per square inch, without rubbing shall not exceed 20 per cent., and on a sieve of 14,500 meshes not more than 30 per cent. For the test for tensile strength, the cement will be gauged with three times its weight of standard sand (viz., sand from crushed sandstone, washed, dried, and sifted through a sieve of 400 and retained upon one of 900 meshes to the square inch), and mixed with an average of about 10 per cent. of their weight of water, and made into briquettes formed in moulds of 1 inch sectional area at the weakest part. Such briquettes to be kept in a damp atmosphere, and put into water twenty-four hours after they have been made, and remain in water at a temperature of between 60° and 70° F., until their tensile strength is tested. These briquettes must bear a tensile stress of not less than 100 lb. per square inch after seven days, and 200 lb. per square inch after twenty-eight days from being moulded. Cement, when tested neat, must bear a tensile stress of at least 300 lb. to the square inch after three days, two of them in water; and 450 lb. after seven days, six of them in water; and 550 lb. after twenty-eight days, twenty-seven of them in water. Briquettes shall also, after being in a damp atmosphere for twenty-four hours, be kept in water at a temperature of 180° F. for six days, when the tensile stress must be equal to that specified for twenty-eight days at normal temperature. The tensile strength will be ascertained in the Government testing-machine, with the load increasing at the rate of 200 lb. per minute, and the average breaking weight of six briquettes will be taken for each test. Any cement which absorbs in proportion more than 2 milligrams of carbonic acid to 3 grains of cement shall be taken as containing more than the permissible quantity of free lime or magnesia. Should the sample fail in any or all of these tests, or show irregularity in quality, or not show a proper progressive increase Cement.

in

in strength with age of briquette, then the Engineer may reject the whole parcel from which the sample was taken, and the contractor shall at once remove the said parcel of cement from the site of the works at his own expense; failing which, the Engineer may have it removed at the contractor's cost without further notice. Empty casks to be immediately broken up and removed from off the works. To facilitate the gauging of cement throughout the contract, cement casks will be taken as equal to holding 4 cubic feet; otherwise, the contractor to provide and make approved gauge-boxes, holding exactly 4 cubic feet, for measuring cement.

Contents of casks.

Delivery.

Cement is to be brought on the ground in quantities of not less than fifty casks, provided that this quantity is sufficient for fourteen days' supply, but in no case is less than fourteen days' supply (whatever that may prove to be) to be brought on the ground in one parcel; nor is the supply stored on works to be at any time less than fourteen days' supply. All cement to be kept on the ground in approved weather-tight sheds, under lock and key, which shall be in the custody of the Superintending Officer.

Storage.

Mortar.

19. The mortar to be used in these works to be composed of one part of Portland cement and of two parts of clean washed sharp sand, as described in clauses 17 and 18, the proportion of each to be correctly ascertained by measurement, the whole to be mixed with fresh water, as may be directed, to be well incorporated, and to be used fresh. Any mortar which has become hard or set to be at once rejected. All mortar to be mixed on approved sawn timber platforms close to where it is required.

Special mortar.

20. Special mortar, composed of 1 part of cement and 1 part of sand, and prepared as before described, to be provided and used in all portions of the work where specially specified or directed.

Grout.

21. The grout to be made of mortar as described in clause 20, to be mixed fluid in tubs, close to where it is required, and to be used fresh.

Puddle.

22. Puddle to consist of the best clay to be obtained in the district within a radius of 5 miles; to be carefully turned over and mixed with fresh clean water until the clay, in the opinion of the Engineer, has become of one even and uniform colour and plasticity.

Spun yarn.

23. Spun-yarn to be of the best description of  $\frac{3}{4}$  inch New Zealand flax.

Lead.

24. Lead to be of approved quality, of the best description of soft pig lead, and to be delivered in pigs, which must show the brand or mark of the manufacturer.

Wrought-iron and steel.

25. Wrought-iron and steel to be of the best description and quality, with square arrises, free from scales, blisters, laminations, and all other defects, and subject to tests hereinafter specified.

Tests.

26. The tests for rolled iron shall be as follows:—A piece of iron of such width as shall not exceed 2 inches, or exceed 1 square inch in cross-section, and of a sufficient length to have 10 inches under actual tension, shall be cut, as directed by the Engineer, from any plate or bar about to be used on the work, and the following tensile stresses shall be applied:—

	Stress per square inch without fracture.	Ultimate elongation.	Ultimate contraction of area.
Rolled girders...	20 tons	8 per cent.	10 per cent.
Plates—across grain ...	18 „	4 „	6 „
„ with grain ...	22 „	10 „	12 „
T, L, and bulb T bars ...	22 „	10 „	15 „
L bars ...	23 „	12 „	18 „
Square, flat, and round bars, and bolts over 4 inches sectional area ...	23 „	12 „	18 „
Square, flat, and round bars, and bolts up to 4 inches sectional area ...	24 „	12 „	25 „

Iron within 10 per cent. of above specified stress will be accepted if the contraction of area and elongation are proportionally higher.

The wrought-iron to be further tested for ductility, as follows:—

A plate planed and rounded on both edges, about 4 in. wide and 1 ft. long, shall bend cold over a slab, the corner of which is rounded to  $\frac{1}{2}$  inch radius, for the following angles, without showing any sign of injury or fracture:—

1 inch plate for	With grain.		Across grain.	
	15 degrees	5 degrees	10 degrees	5 degrees
3/4	25	10	12	10
1/2	30	12	15	12
1/4	35	15	20	15
1/8	52	20	30	20
1/4	70	30	30	30

27. Rivet-iron must be capable of being bent cold until the sides are in close contact, without sign of fracture on the convex side.

Steel.

28. The tests for rolled steel shall be as follows:—

The steel to be of a mild quality, having an ultimate tensile strength, either lengthways or crossways, of not less than 26 tons, and not more than 31 tons per square inch, on a test bar, cut in a similar manner to those for rolled iron, with a minimum elongation of 20 per cent., and a minimum contraction of area of 40 per cent.

Strips cut from any steel plate, angle, or bar, to be heated to a low cherry red, and cooled in water of 82 degrees Fahrenheit, must, when cold, stand bending double round a curve, of which the radius is not more than one-and-a-half times the thickness of the plates tested, without showing any sign of injury or fracture.

Cast-iron

29. Cast-iron to be equal to No. 2 pig-iron, or of a proper mixture of No. 1 and No. 3 pig-iron, according to the description of iron-work and pattern; said iron to be of the best quality, tough, close-grained, and capable of being chipped and drilled without difficulty.

Tests.

30. Branded test-bars, 2 in. x 1 in. x 3 ft. 6 in., to be cast vertically, in the presence of the Superintending Officer, from the cupola from which castings are being run, and to be then carefully marked with the date. These test-bars will be placed on bearings 3 feet apart, and submitted in the centre to a weight not exceeding 28 cwt., and the deflection caused by this weight must not be less than  $\frac{3}{8}$  inch before fracture; if the bars do not stand this test to the satisfaction of the Engineer, then the whole of the castings which have been cast of iron of the same quality, shall be at once rejected.

31. All castings of every description, before they leave the foundry, to be carefully examined and weighed, to be slung on chains above ground, and to be sounded with a hammer, and they are again to be carefully examined, slung, and sounded with a hammer when delivery of same is taken at the site of the works. Tests of castings.

32. All straight pipes required in the contract, before delivery of same is taken on the works, shall be, at the foundry or at the site of the works, as shall be directed, duly proved under hydrostatic pressure equal to a column of water of 200 feet, and when under pressure to be thoroughly sounded quickly all over with a hammer of not less than 4 lb. Tests of pipes.

33. The gun-metal required throughout these works to be an alloy composed of eight parts of copper to one part of tin, unless otherwise specified. Gun-metal.

34. The tests for cast-steel shall be as follows:—

Bars turned to  $\frac{3}{4}$ -inch diameter for a sufficient length to have 5 inches under actual tension, shall have an ultimate tensile strength of not less than 26 tons per square inch, and a minimum elongation of 18 per cent. Cast-steel tests.

35. The cost of providing the materials and wrought and cast iron works, &c., herein described, required by the Engineer for testing purposes, and the carriage of same to the Public Works testing-room, place of manufacture, site of works, or to the University, as the case may be, and as shall be directed, shall be borne solely by the contractor; and any of the materials, or any part of the wrought-iron and gun-metal work, or any of the pipes, castings, &c., injured or broken by the testing, shall be immediately replaced by new and sound materials at contractor's expense; wrought-iron, gun-metal, cast-iron pipes, or other castings, to be again tested as before described, until the whole have been tested to the entire satisfaction of the Engineer. Cost of tests.

36. Timber to be of the best description, sound, straight, free from sap, large or loose knots, wanes, shakes, gum-veins, pipes, or other defects. Timber.

37. Hardwood used in the works to be of approved timber.

Round timber to be carefully barked, the diameter given on drawing is to be measured at the small ends. Hardwood.

Hewn timber is to be squared true on all sides, and dressed fair and clean with the adze, so as to show no axe-marks, to be of full dimensions, free from sapwood, and no heart timber must appear on the outside.

Sawn timber to have clean sharp arrises, to be cut die square, free from heart timber, and of the full dimensions shown or specified.

38. Softwood timber to be of the best Baltic or yellow deals, and of the exact dimensions specified when finished. Softwood.

39. Split posts and rails for fencing must be perfectly straight and cleanly split, free from large knots, splinters, and other defects. Split fencing timber.

#### *Earth-borings.*

40. When earth-borings have been taken the results have been shown on drawings, but the Government undertake no guarantee whatever regarding the kinds of soil that will be met with or the firmness or stratification of the ground to be excavated, or the amount of unwatering to be done, or the strength of the timbering that may be required, or the nature and extent of other precautions which may have to be adopted.

#### *Clearing and Grubbing.*

41. The areas of the sites for all excavations and of all embankments, together with a margin of 10 feet in width beyond all these areas, to be cleared and grubbed of all trees, scrub, stumps, roots (to the depth of same), and dead timber, and the whole of such trees, scrub, stumps, roots, and dead timber thus grubbed and cleared to be removed and cleared away from any lands set apart for the purposes of this contract. The cost of all clearing and grubbing to be covered by and included in the schedule price for excavation.

#### *Excavation.*

42. No excavation to be commenced on any portion of the contract until, in the opinion of the Engineer, sufficient building materials are on the ground, together with the necessary appliances and plant to ensure the uninterrupted progress and continuance of the works, after they once have been commenced, at any locality, without any delay or stoppage.

43. It is to be distinctly understood that, when sinking shafts and driving tunnels, the materials excavated, on their arrival at level of staging above mouth of shaft, are to be at once removed; and when materials, &c., are to be conveyed through shafts to the tunnel works, that all such materials, on arrival at mouth of shafts, must be at once conveyed to the works underground, as the contractor cannot be allowed to occupy a larger area than that authorised by the Engineer.

44. When excavating in open trenches, if ordered, the materials excavated and raised to the surface are to be at once removed; and when materials are being conveyed to open trenches, where they occur in public roads, they must be at once taken into the work, so as not to impede the usual traffic.

45. The road metal, ballast, pitching, wood-paving, concrete, asphalt, flagging, sodding, &c., when they are met with in excavation, are to be carefully removed, put aside, and stacked where directed.

46. The cross-sections of tunnel excavation are shown on Drawings, but they will vary with the solidity of the ground, and as the Engineer directs. Cross-sections to vary.

47. Wherever the solidity of the ground permits it, the excavation in trenches for concrete or brickwork to be taken out with vertical sides to level of springing of sewer arch, and to the exact widths of concrete or brickwork shown on Drawings, and below that level to bottom of trench with curved or vertical sides, as shall be directed. Method of excavation in trenches without timbering.

48. Where timbering is required, trenches 8 feet deep and under shall have vertical sides, and shall be 1 ft. 3 in. wider to outside of polling-boards than width of concrete or brickwork. Where trenches are over 8 feet deep and require timbering, they shall have vertical sides, and shall be 1 ft. 3 in. wider to outside of polling-boards than the width of the concrete or brickwork for the lower 8 feet. Above that level they shall be 2 feet wider to outside of polling-boards than concrete or brickwork. Width of trenches where timbering is required.

For embankments.

49. The excavation for foundation of embankments to be taken out, where ordered, 12 inches below surface of ground, and to such widths and lengths as shall be directed, or as ordered for benching.

Width of trenches.

50. The excavation in solid rock for pipe-trenches shall have vertical sides, and shall be of the following sizes, viz. :—

For 24-inch diameter stoneware pipe sewers...	...	...	3 ft. 9 in. wide.
21-inch " " " " " " " " " " " "	...	...	3 ft. 4 in. "
18-inch " " " " " " " " " " " "	...	...	3 ft. 0 in. "
15-inch " " " " " " " " " " " "	...	...	2 ft. 6 in. "
12-inch " " " " " " " " " " " "	...	...	2 ft. 0 in. "
9-inch " " " " " " " " " " " "	...	...	2 ft. 0 in. "

51. When timbering is not required in excavation in all other ground for pipe-trenches, the trenches shall be of the same widths as those in solid rock. Where timbering is required, the excavation for pipe-trenches 8 feet deep and under shall have vertical sides, and shall be of the following sizes to the outside of the polling-boards, viz. :—

24-inch diameter stoneware pipe-sewers...	...	...	4 ft. 0 in. wide.
21-inch " " " " " " " " " " " "	...	...	3 ft. 7 in. "
18-inch " " " " " " " " " " " "	...	...	3 ft. 3 in. "
15-inch " " " " " " " " " " " "	...	...	2 ft. 9 in. "
12-inch " " " " " " " " " " " "	...	...	2 ft. 3 in. "
9-inch " " " " " " " " " " " "	...	...	2 ft. 3 in. "

Width of trenches.

52. Where timbering is required, the excavation for pipe-trenches more than 8 feet deep shall have vertical sides, and shall be the widths given in clause 61 for the lower 8 feet and for any depth over and above 8 feet, the trenches shall be of the following sizes to the outside of the  $1\frac{1}{2}$ -inch polling-boards (unless otherwise ordered in writing), viz. :—

24-inch diameter stoneware pipe-sewers...	...	...	4 ft. 9 in. wide.
21-inch " " " " " " " " " " " "	...	...	4 ft. 4 in. "
18-inch " " " " " " " " " " " "	...	...	4 ft. 0 in. "
15-inch " " " " " " " " " " " "	...	...	3 ft. 6 in. "
12-inch " " " " " " " " " " " "	...	...	3 ft. 0 in. "
9-inch " " " " " " " " " " " "	...	...	3 ft. 0 in. "

Checks.

53. Transverse and other checks to be excavated to receive pipe-sockets and junctions, and for the purpose of making the joints.

Cast-iron pipe trenches.

54. The trenches for the cast-iron pipe-sewers to be excavated to the depths and widths which the Engineer may order. Joint-holes to be excavated to the dimensions specified or ordered by the Engineer.

Trenches.

55. The excavation of trenches to be carried on in such a manner that they shall be always completed and approved for a length of 48 feet (unless otherwise directed) in advance of sewers or other works.

The use of explosives.

56. In ground which, in the opinion of the Engineer, does not require blasting, the excavation is to be carried on by means of picking, and when the ground, in the opinion of the Engineer, is hard and suitable for blasting, charges of compressed powder, not exceeding 4 inches in length by  $1\frac{3}{8}$  inch in diameter, shall be used. The Engineer, however, reserves to himself the right of ordering any excavation which he may consider blasting would facilitate, to be taken out by means of charges of compressed powder not exceeding 2 inches in length by  $1\frac{3}{8}$  inch diameter, or he may prohibit the use of explosives altogether, when the excavation shall then be done by means of guttering and gadding. If explosives, other than compressed powder, are permitted to be used, the charges thereof will be determined by the Engineer.

Precautions.

57. When the use of explosives is authorised, the contractor shall use every precaution and carry on such operations with such limited charges of powder only, or other approved explosives, as will loosen the shale, rock, &c., without shattering the same; and to employ approved means to prevent, effectually and thoroughly, all stones or other materials from being thrown out of trench, tunnel mouth, or shaft.

Working hours.

58. Blasting will not be allowed between the hours of 10 p.m. and 6 a.m., nor after 1 p.m. on Saturdays, except by the written authority of the Engineer.

Drilling and charging holes.

59. Every hole drilled for blasting purposes will be measured by an inspector, and charged under his supervision.

Storage of explosives.

60. No larger quantity of explosives shall be taken underground than is likely to be used during any current shift.

Pipe-sewer tunnels.

61. When pipe-sewers are to be laid in tunnels, the dimensions of tunnel to be 4 ft. x 3 ft., exclusive of timbering.

Excessive excavation.

62. If the contractor has exceeded the sectional area of excavation ordered, he shall remove such extra excavation, and in the case of trenches make good and fill in same at sides of trench with approved materials, and at bottom of trench with concrete described in clause 142, at his sole cost; the actual cubic contents only of the excavation and of the concrete work shown on drawings and ordered for each special length of sewer in open trench shall be paid for; and in the case of excavation in tunnels and shafts the contractor shall remove such extra excavation, and make good and fill in same with concrete or brickwork, in the manner herein specified, at his sole cost; the actual cubic contents only of the excavation and of the brick and concrete work shown on drawings, and ordered for each special length of tunnel or shaft, shall be paid for.

Maximum allowance.

63. If, however, in cases where the use of explosives is ordered (and in no other case) the Engineer considers it impracticable to excavate any particular length of tunnel or shaft to the exact sectional area ordered, then he may, according to the nature of the ground, allow a margin of concrete lining not exceeding 3 inches over and above that ordered.

Starting tunnel excavation

64. Unless otherwise directed, the excavation of the various tunnels to be commenced from the different faces described in the specification, simultaneously within the specified time after the date the contract has been signed.

Ventilation.

65. Ventilating fans or other approved means to be provided and worked by the contractor at all working shafts and tunnel faces where directed by the Engineer. 66.

66. In all cases where a greater thickness of lining, or a greater cross-section area of tunnel or shaft is ordered to be executed, from whatever cause, after the length of tunnel or shaft in question has been excavated to the profile ordered in the first instance, or if any portion of the excavation of open trench is ordered to be deepened, the excess of excavation so ordered shall be paid for at schedule rates for tunnel, shaft, or open trench excavation, as the case may be, and as the Engineer shall classify and direct at the time. Enlarging shaft or tunnel.

67. No concrete or brickwork shall be commenced until the portion of sewer excavation in tunnel or open trench to be operated upon has been cleaned and levelled, and until the Engineer has examined and approved of same. Inspection and approval.

68. Shafts are to be sunk at the various sites shown on longitudinal sections and on general plans, or in lieu of those shown, at such other sites as the Engineer from time to time may determine. Wherever shafts are ordered they are to be sunk truly plumb, and of the full dimensions shown on drawings, or as may be ordered at the time, clear of timbering. Shafts.

69. All excavation for shafts situated within the lengths of open trenches, is to be paid for as "excavation in open trench." Shafts in open trenches.

70. If the contractor desires, to suit his own convenience, to sink temporary shafts, they are to be sunk only at approved places, and on completion of work to be filled in, as specified in clause 95, to the satisfaction of the Engineer. The cost of sinking, timbering, unwatering, &c., and of filling in, withdrawing, or covering up timber of such shafts, to be defrayed entirely by the contractor. Temporary shafts.

All temporary shafts to be sunk to the dimensions directed, clear of timber.

71. All shafts, temporary or permanent, to be provided and fitted during their construction and completion, or during the progress of the contract, if deemed necessary by the Engineer, with approved winding engines and steel-wire ropes capable of resisting a strain equal to six times that of the working maximum strain, or with such other winding arrangements, ladders, staging, &c., as shall be directed and approved of by the Engineer. Shaft plant.

72. Where directed, sumps are to be sunk at the bottom of shafts not less than 6 feet deep below invert of sewer, and afterwards to be filled in with concrete, as specified in clause 142. Sumps.

73. Any other sumps which the contractor, for his own convenience, may think fit to sink on line of sewer, in tunnel, or in open trenches, during the construction of these works, are to be filled in with concrete, as specified in clause 142, and the cost of sinking, timbering, unwatering, and filling in with concrete and removing the materials, &c., to be defrayed entirely by the contractor.

74. The excavation for sub-ducts in tunnel and open trench to be made below invert of sewer, or as shall be directed, with a fall towards each working shaft or face, and of such dimensions and gradients as may be determined at the time. Sub-ducts.

75. Any material obtained from the excavation, which, in the opinion of the Engineer, is suitable for refilling or other works comprised in this contract, shall be put aside in separate spoil-banks beyond the site of the works. Material for "filling."

76. In the case of tunnel and shaft excavation, when "solid rock" or "more or less hard material," or "solid rock" and "more or less hard material" occur, provision is made on the longitudinal section and in the schedule of quantities for the materials to be classified under these headings. No guarantee is given as to the means which may be ordered for excavating such work. The actual excavation done in tunnels, shafts, and open trenches will, however, be paid for, not exceeding that ordered or specified. Classification of material from shafts and tunnels.

77. The schedule price for one (1) cubic yard of excavation in any situation shall include the cost of taking out and placing said excavation aside in separate temporary spoil-banks beyond the actual site of work, together with the works comprised in clauses 41 and 107. Works covered by 1 cubic yard of excavation.

#### *Sub-ducts.*

78. Sub-ducts to be constructed, when decided on, along lines of tunnels and open trenches, commencing on each length midway, or thereabouts, between two working shafts or faces, 33 inches below invert of sewer, &c., or as shall be directed at the time, and having a fall towards each working shaft, or face of such gradients as may be determined at the time. Sub-ducts of 9 inches, or of a greater or less internal diameter, to be laid immediately underneath the timber floor of tunnel or open trench, or at sides of sewer, in hardwood boxes varying in size and dimensions as shown on drawing. Said boxes to be laid straight and true to levels decided upon, and the pipes to be laid therein, upon, and surrounded by sandstone chippings and quarry refuse. Dry sandstone packing, 4-inch gauge, to be put over pipes.

79. In solid and disintegrated rock the excavation for sub-duct to be executed as shown on cross-sections, and as shall be directed, and the sub-duct to consist of glazed stoneware spigot and faucet pipes of 9 inch internal diameter, more or less, as the case may be. The pipes to be jointed dry, and the filling above same up to under side of sewer lining, to be of dry stone, hand-packed, as before described. The Engineer may also, if he deems it necessary, order the pipes to be jointed altogether, or in part, with tarred gasket,  $1\frac{1}{2}$  inch deep, and cement mortar  $1\frac{3}{8}$  inch deep. The mortar to be prepared of 1 part cement to 2 parts of sand.

#### *Existing Gas, Water, and Sewer Pipes, and Sewers.*

80. During the excavation and construction of these works, the contractor is to take every precaution and provide and execute all, which in the opinion of the Engineer is necessary, to prevent the existing gas, water, or sewer pipes, and sewers wherever met with, or that are adjacent to these works, from injury, and to maintain the same at his sole cost, until, in the opinion of the Engineer, the refilling of excavation and the general progress of the works render further precaution unnecessary. All damage to existing water, gas, or sewer pipes, and sewers, to be repaired at once by contractor at his own cost to the satisfaction of the Engineer.

#### *Railway and Tramway.*

81. Before proceeding to excavate underneath or near any railway or tramway, the contractor must give ample notice in writing to the District Railway or Tramway Engineer of his intention to commence operations; and he must adopt such precautions as the said Engineer may think necessary or prudent for the safety or preservation of the traffic over the said railway or tramway. The contractor will

will be held wholly responsible for all stoppage of traffic, delays, accidents &c., that he or his men may cause, no matter how brought about, during the execution of the work under or near any railway or tramway.

82. The Railway Commissioners may, if they consider it advisable, place a watchman or watchmen on all work to be executed under or near any railway or tramway, for the purpose of seeing that no danger to the traffic is allowed to occur; but this shall not relieve the contractor of any of the responsibilities set forth in the foregoing clause, and the expense of such watchman or watchmen is to be borne by the contractor.

*Diverting Water.*

83. During the construction of these works the contractor shall, at his own cost, do all work which may be required for the effectual diversion of surface-water, subsoil water, and storm-water across and beyond the site of the works, to keep the trenches free from water during the whole time the works are in progress, and in preventing any injury to the works by floods or any other causes.

*Diverting Sewage.*

84. During the construction of the works in general, and of all points of intersection of existing and new sewers, and until completion of all works connected therewith, the contractor, at his own cost, to execute all the works of every description required to prevent injury to private property or to the existing or new works by sewage, and erect and construct watertight fluming across sites of works for the purpose of conveying constantly the whole of the sewage which may flow in said sewers at any time, to the entire satisfaction of the Engineer.

*Unwatering.*

85. All water which, during the progress of the work, may drain into excavations, to be properly, effectively, and continually pumped out, and the whole to be kept dry until after the completion, setting, and hardening of all brick and concrete work and pipe sewers, at the sole cost of the contractor. The greatest care to be taken to prevent running water passing over any of the brick, concrete, and pipe-work until it has set perfectly hard; any concrete, mortar, and cement jointing exposed to wash of water must be taken up at once, and replaced by fresh concrete, mortar, and jointing, at contractor's expense.

*Temporary Bridges, Roads, Fences, &c.*

86. The contractor shall provide, erect, and maintain all necessary temporary bridges, footways, &c., over rivers, creeks, water-courses, open trenches, and underneath railways, tramways, roads, streets, and foot-paths, so as to ensure that the flow of water or traffic is uninterrupted, as the case may be, during the period of contract. He shall also provide, erect, and maintain all temporary fences, hoarding-barriers, night-lights, &c., necessary to thoroughly protect both the general public, land, and property; and shall also properly ballast the temporary roads which may be required for the convenience of the public, and which the Engineer may order.

In the event of the contractor refusing or neglecting to carry out any of the above work, the Engineer shall have power (after having given twenty-four hours' notice in writing of such intention) to do the same at the contractor's expense, and the cost thereof shall be charged to the contractor on account of this contract.

*Temporary Timbering.*

87. During the excavation the contractor to adopt every precaution, and provide all materials, as planking, strutting, shoring, timbering, piling, sheet-piling; all packing materials, as straw, asphalted felt, bags, tarred gasket, puddle, &c., and carefully execute (unless where otherwise specified) all piling, sheet-piling, timbering, &c., where they are required, and carefully and securely close up and pack against the outside of all joints and open spaces between polling-boards, sheet-piles, or timbering, wherever they occur, and caulk open joints where directed, and execute whatever may be required to prevent any buildings, or other superstructures, road and other surfaces over and adjacent to the line of sewer, from settling, cracking, being shaken, slipping, or falling in, and to prevent any portion of the floors, sides, roofs, and end faces of excavation, beyond the exact cross-sections and dimensions determined on, from slipping, falling, running in, or being forced through joints and open spaces in the timbering and sheet-piling, and maintain said timbering, piling, shoring, &c., where and when directed till completion of the works, to the entire satisfaction of the Engineer and at the contractor's sole cost.

*Filling.*

88. The materials referred to in clauses 75 and 93, to be used in filling in the spaces between sides of excavation, and of concrete and brickwork, over sewers, into headings, filling in abandoned open channels, low ground adjoining channels, into road and other embankments, &c., as shown on drawings and as ordered by the Engineer. Sand only to be used in filling over sewer between copings on lines of aqueducts. All filling, unless otherwise specified, to be brought up in level layers, spread 6 inches thick, each layer to be rammed (and watered if directed) until approved of, before the succeeding layer is put on. This filling to be carried up to the surface of the ground, or to such other level or slope, &c., as may be directed at the time. Embankments to be formed as shown on longitudinal sections, to be finished in horizontal layers 9 inches thick after spreading, to be well rammed (and watered when directed) until approved of before the succeeding layer is put on, with side slopes and top widths, as shown on drawings, or as may be determined at the time; to be finished with such benches and curves as shall be directed. Only iron-shod rammers of not less than 10 lb. weight, of approved pattern, to be used, and one man to be employed in ramming to each man employed in filling.

Embankments.

Rammers.

Filling pipe trenches.

89. Material only of approved quality shall be used in refilling the spaces between sides of pipes, &c., and sides of excavation, and over pipes, &c. The refilling to be done in level layers, spread 6 inches thick (and watered when directed), each layer to be carefully and separately rammed as hereinbefore specified. The lower layers up to level of top of pipes to be carefully packed and rammed solidly under and at sides of pipes and socket-joints with spades or other narrow tools. The filling to be done as above described, to such a distance below the level of the street, road, path, &c., as the case may be, to admit of the ballasting, metal, or other covering being replaced.

90. On completion of concrete, brickwork, &c., in shafts, the space between the sides of excavation and outer face of brickwork or concrete to be filled in in 6-inch layers, well rammed (and watered where directed) with materials provided for in clauses 75 and 93, great care being taken in lowering the materials to the bottom, so that stones do not fall on top, or against sides of pipe-shafts, brick or concrete lining. Where stones are permitted to be used as filling they are to be put in in alternate layers with the earth, and at least 12 inches of earth to be placed nearest and round the pipe-shafts, brick or concrete lining.

91. Shafts not required as manholes or ventilators, on completion of contract, or when directed by the Engineer, to have all timber withdrawn (as specified in clause 95), and to be carefully filled in.

92. Where it is found necessary to carry the excavation deeper than the underside of concrete foundations, in order to obtain a compact solid bottom, the portion so excavated to be filled in to the underside of concrete foundation, or as may be directed, with good quarry filling, spread 6 inches thick, rammed and watered until approved. The price per cubic yard for providing and putting in position quarry filling is to be 1 cubic yard of "filling." Quarry filling.

93. All soil, sand, and other materials which the excavations of this contract do not supply, and which it is necessary to obtain for the completion of the embankments and filling of every description, the contractor shall procure, of approved quality, from any other source or land outside the limits of this contract. The cost of providing to be included in the price per cubic yard for "filling." Extra material required.

94. As the works proceed, all shoring, timbering, staging, temporary bridges, piling, sheet-piling, &c., shall be withdrawn, excepting permanent timbering, as shown on drawings, and in all other cases where, in the opinion of the Engineer, the withdrawing of the same is impracticable, or would endanger the safety of the works, buildings, streets, and other surfaces over and adjacent to the works, when the contractor must obtain an order in writing, signed by the Engineer, to the effect that piling, sheet-piling, shoring, timbering, &c., may be covered up. Timber left in.

95. In withdrawing timbering from open trenches and shafts, the same shall be commenced from bottom of excavation, or, as the Engineer may direct, from lowest practicable portion of same, and continued upwards; the contractor to exercise every precaution by means of intermediate shoring, plankings, props, &c., and the filling in around and above sewer and shaft lining to be carried on simultaneously with the withdrawing of the timbering. The cost of withdrawing to be included in the price per cubic yard for "filling." Withdrawing timbering.

96. Refilling into excavation shall be measured, the net dimensions of excavation, less the actual displacement of any permanent works. Any other "filling" shall be measured the actual cross-sections ordered. Measurement of "filling."

97. The schedule price for one (1) cubic yard of filling in any situation shall include the cost of removing the materials from temporary spoil-banks, or from other sources outside the limits of this contract, and the depositing same in accordance with the plans and specification, together with the work and material described in clauses 92, 93, 95, and 107. Works covered by 1 cubic yard of filling.

#### *Surplus Material.*

98. The excavated material not required, or approved for filling, to be removed off the works to such places as shall be ordered, spread and trimmed, and to be paid for as lead. Lead on spoil.

99. The surplus materials to be measured, the actual net excavations less the actual net refilling. Measurements.

100. The distance of lead shall be measured from top of shaft or end of open cutting to centre of spoil-bank or other place of deposit. Length of lead.

#### *Restoration of Roads and other Surfaces.*

101. After the filling in of sewer trenches and shafts has been consolidated and approved, the surfaces of roads, streets, paths, &c., to be at once restored in the manner hereafter described, viz.: In the case of streets which are wood-blocked on concrete, the City Surveyor will replace same on behalf of the contractor, at the rate per square yard stated in specification; in the case of roads or streets which are ballasted and metalled, 9 inches of ballast shall be laid thereon, and after this has been blinded with selected and approved material, the metal put aside, as specified in clause No. 45, shall be evenly spread and rammed until approved; in the case of roads or streets which are ballasted only, 9 inches of ballast shall be laid thereon, and blinded as above; and in the case of other coverings, the surfaces to be restored to the same condition as they were before the commencement of the work. Materials damaged, injured, or otherwise not approved of as fit for reinstating surfaces, to be replaced by contractor with new, sound, and approved materials of their respective kinds, together with any additional ballast which may be required, over and above that found on the site of the excavation and referred to in clause 45. If, however, in the opinion of the Engineer, sufficient hard rock is excavated from the tunnels, shafts, and open cuttings, the contractor will be allowed to break such rock to a 4-inch gauge, and use same for restoring road surfaces. Wood-blocked streets.  
Ballasted and metalled streets.  
Ballasted only streets.  
Damaged materials from road surfaces.  
4-inch gauge sandstone ballast.

102. Immediately the pipes are laid, or concrete and other work in connection with shafts, manholes, lampholes, &c., are executed, and the ground filled in over same in any length of sewer, it is to be distinctly understood that all surplus material is to be carted away, the road cleaned until approved, and the road and other surface to be made good, flush with surrounding surfaces of roads, paths, &c., to the satisfaction of the Municipal authorities and the Engineer, in accordance with the specification; and if the contractor fails to do this, the Engineer shall be at liberty, without further notice, to get the roads cleaned, and the road and other surfaces made good at contractor's cost. Clearing roads and streets.

103. The contractor shall maintain the surface of the roads, streets, &c., after the excavations have been filled in, where the streets, roads, &c., have been broken up or injured during the progress of the work, during the period of the contract time, and afterwards during the period of maintenance, and shall from time to time make good any sinkings in the surface, and shall provide any additional metal, ballast, or other material that may be necessary during these periods. Maintenance of roads, streets, &c.

104. The whole cost of work and materials in connection with the restoration of road and other surfaces to be solely borne by the contractor. Cost.

105. The contractor shall, at the termination of the period of maintenance, procure certificates from the Municipal authorities concerned, that the roads, &c., in their respective districts are in a satisfactory condition. Municipal certificates.

*Restoring Buildings, Walls, Fences, &c.*

106. All buildings, walls, fences, and works of any description met with on the site of the works, that it is found necessary to remove or that may be disturbed, are to be replaced or repaired, at the sole cost of the contractor, and left, at the completion of the works, in the same order and condition as they were before the commencement of the works.

*Trimming.*

107. On completion of all embankments, cuttings, and filling, all top surfaces and slopes to be dressed and trimmed off to the specified inclinations and surfaces, and to such other inclinations, slopes, and surfaces as may be directed at the time, and all materials accumulating after trimming and levelling top surfaces and slopes, &c., shall at the completion of the works be removed, carted away, or spread about, as may be directed by the Engineer; and the schedule rates for filling and excavation shall include and cover all costs for trimming and dressing surfaces, and of removing, carting away, or spreading about all superfluous accumulations at the conclusion of contract.

*Sodding.*

108. On completion of embanking and filling, where ordered, all top surfaces and slopes to be protected by sodding. The surfaces to be sodded are to be boxed out the widths and depths required for the reception of turf-lining. The materials boxed out to be dealt with as provided in clause 107. The sods to be the best obtainable within a radius of 5 miles, of approved quality, not less than 3 inches in thickness and 10 inches square, full cut, with square arrises, to be laid in approved bond on their flat beds, close jointed over all top surfaces of filling or embanking, to be beaten down as the work proceeds with proper tools, as shall be directed, and when finished to present throughout perfectly smooth and plain surfaces. If the season requires it, the turfing to be properly and regularly watered to ensure the grass taking fresh root. The boxing out and turfing to be carried out simultaneously, and no greater area to be boxed out at any time than can be covered with turfing during two working days. The price for sodding to cover all the work described in this clause.

*Soiling and Sowing.*

109. All slopes of embankments, cuttings, and filling, after they have been trimmed, to be covered, when directed, with a layer of surface soil, to be carefully rolled, and when finished to be of a thickness of not less than 3 inches. All slopes, soiled or not soiled, or embankments, cuttings, or filling (where not sodded), after they have been trimmed, &c., and when ordered, to be sown with couch grass seed, as shall be directed, and to be rolled afterwards.

*Piling, Timbering, &c.*

Quantities of piling.

110. Piling to be executed as required and ordered, but the actual quantities required can only be ascertained during the progress of the excavations, and as the trial piles are sunk.

Delivery. Stacking.

111. The whole of the timber which in the opinion of the Engineer is required for each part of the various works, or for such portions of the same as he may determine at the time, shall be cut and delivered on the ground prior to contractor commencing the excavation of such part or portion of said work. All timber, when brought on the ground to be at once properly and carefully stacked on even plain surfaces, and all timbers to lay perfectly straight in the stacks; all timbers bent, split, unsound, or objected to on other grounds by the Engineer shall be removed by the contractor from the ground within twenty-four hours after such objections have been made known to him, and if he neglects to do so they shall be removed without further notice by the Engineer, at contractor's cost; all rejected timbers to be marked by a brand or axe-mark.

Rejection.

Dimensions.

112. All timbers required and delivered for each respective part of works, to be, when dressed, pointed, placed, and fixed in position, of the various lengths and dimensions indicated and shown on the drawings referring to such works, or of such other dimensions which the Engineer may deem suitable for the works.

Pointing piling.

113. All square or round piles shall be sharpened (pointed) at the lower end, the sharpened sides to be cut to a batter of 1 to 6, finished at lowest end with a flatter diamond-cut point, as shown on drawings; the lowest point to be exactly in the straight line of the true axis of the pile, and the sharpened sides to be cut true to the axis of pile to prevent same from twisting and slanting when being driven.

Pointing sheet-piles.

114. All lower ends of sheet-piles to be sharpened on one side only to an inclined edge as shown on drawings, and as shall be directed, to ensure the pile when being driven to drift towards the pile last driven; all sheet-piles of the same length and thickness within each respective panel to have their ends sharpened exactly the same as regards length of cut surface and inclination of bottom edge.

Dressing piles.

115. All round, square, and sheet piles to be straight-grown timber, and before being driven, all square, angle and guide piles to be faced truly straight on the sides against which sheet-piles are to be driven and finished as shown on plans; all round piles for staging across rivers, against which planked sides for concrete filling are to be fixed, to be finished with a straight adzed face the depth required for reception of said planking.

Ring and shoeing piles.

116. All sheet-piles to be perfectly parallel, and, before being driven, to be truly faced and fitted to each other within each panel (between each pair of guide-piles), as shown on drawings, forming a straight close joint.

117. All round, square, and sheet-piles are to be hooped with wrought-iron rings at the top, such rings to be of not less than 2 in. x 1 in. iron for the square and round piles, and of not less than 2 in. x 1/2 in. iron for the sheet-piles; stronger rings to be provided and used when directed. All piles are to be pointed, as hereinbefore described, and where driven into hard ground, when directed and ordered, the points to be protected by wrought-iron steel-pointed shoes, weighing, except where otherwise directed, 28 lb. each for the main and guide piles, and 8 lb. each for the sheet-piles. All shoes to be provided and made of such shape and workmanship as the Engineer shall approve of. They are to be carefully and truly fitted and fixed on to points of piles, and the lowest points of shoes for the round and square piles to be fixed exactly in a straight line with the axis of each pile.

Lining out, &c.

118. The exact lines and positions of all piles shall be carefully and correctly ascertained and staked out by the contractor, to the satisfaction of the Engineer, and all stakes fixed in water or river-beds

to

to extend above high-water level before any piles are placed and driven. After the staking out, piles to be placed truly plumb, or to such batters as may be directed, in their respective positions between guide-wales. All sheet-piles to be placed, truly plumb, between each pair of guide-piles, and lowered into their respective positions between two walings, fitted and fixed on both sides of guide-piles, as shown on drawings.

119. After the excavations for the various foundations have been completed, timbered, and approved, the pile-driving as indicated on drawings, or where ordered, to be proceeded with as follows:— In order to ascertain the lengths of piles required for the foundations of the different piers and abutments, as indicated on drawings, the contractor is first to drive trial piles, in the manner hereinafter specified, in positions required for permanent purposes, one for each alternate pier, or as shall be directed. Any extra expense in connection with trial piles to be borne by the contractor. After the different lengths of piles required for the works have been in this manner ascertained, the permanent piles to be placed in their exact positions, and then to be driven perfectly plumb (or to such batters as may be directed) until tested and approved, as specified. Pile-driving.

120. Long piles from 25 feet and upwards, of 12 inches and greater diameters, to be driven with a ram weighing from 20 to 30 cwt., having a drop over head of pile of not less than 5 feet, the drop to increase in height as the pile is driven, as shall be directed. Any pile driven with a ram of 20 cwt. or more, as the case may be, falling 10 feet, to be driven until at the last stroke it does not drive more than the specified depth, and any pile not standing this test to be drawn when ordered, and to be replaced by a longer pile. Shorter piles may be driven with a ram of less weight than 20 cwt.; and when rams of lighter weight are allowed to be used over shorter piles, sheet-piles, &c., the height of drop to vary from 12 to 18 feet, as the Engineer shall direct. Weight and fall of ram.

121. All piles to be pitched of such lengths as will ensure good sound heads at the levels shown on drawings, or as may be given at the time by the Engineer. No pile shall be pitched until measured and marked by an officer of the Department, nor cut off until tested and approved. Tenons, 8 in. x 4 in. x 6 in. deep, to be neatly cut on pile heads. Any pile which may be too short, or which may have been driven out of plumb, or out of the stipulated batter, or which may split below the level of the required height when driven, to be at once drawn, and to be replaced by a sound pile, driven plumb, or battered, as the case may be, of the required length, at contractor's cost. The contractor must be careful not to pitch any pile which he is not satisfied will be long enough. Scarfing of piles is not permitted. The driving of piles to be commenced and carried on in such order of works as specified, and as shall be directed. Pitching piles.  
Short piles.

122. Where close piling is shown on drawings, all angle-piles and guide-piles to be driven first, after which the upper guide-wales are to be fitted and fixed on to heads of main piles, and then the whole of the sheet-piles of one panel, after being prepared and fitted, to be lowered and placed into position for driving, after which they are to be driven each a few feet at a time, so that the whole panel of sheet-piles shall be driven to the specified depth, as near as possible together; in this manner each panel is to be driven, one after another, unless otherwise ordered. Close and sheet-piling.

123. As the sheet-piling and excavation between same proceeds, the lower guide-wales to be fitted and fixed together with all transverse, diagonal, and angle struts as shown on drawings, and with such additional and intermediate struts as the Engineer may deem necessary during the progress of the works. Timbering, framing, staging.

124. Capsills to be accurately mortised, placed upon bearing piles, and to bear truly on pile-heads. Transverse sleepers to be spaced as shown, placed upon capsills, halved out 1½ inch deep at points of intersection; and planks to be laid and close-fitted between sleepers upon the capsills. Sleepers and planks to be secured to capsills with wrought-iron ½-inch square 9-inch spikes. Capsills, transverse sleepers.

125. The net quantities of all permanent timbering, planking, and piling, as shown on drawing, and where ordered, and of all other shoring, timbering, piling, sheet-piling, which the Engineer has ordered to be covered up, shall be ascertained by measurement before any timbers are covered up, and paid for at schedule rates, which shall cover and include the cost of timber fixed in works, iron used in fixing same, wrought-iron shoes for piles, packing materials, &c. Net quantities.

126. The measurements to be taken to ascertain the net quantities of timber to be paid for under this contract, shall be as under, viz.:—For all hewn and sawn timber where ordered, in any situation in the construction of these works, the width multiplied by the depth and the actual length (tenons included) shall be the net measurement. For round timber, other than piles, ordered to be covered up, the diameter given is to be measured, exclusive of bark, at the smallest end, and the area of such diameter multiplied by the actual length fixed in the works, shall be the net measurement. For piles where ordered, in any situation in the construction of these works, the measurement shall be the actual number of lineal feet (tenons included) of each such pile as placed in position, driven, and fixed in the works. Measurements.

#### *Carpenter's Work.*

127. The whole of the carpenter's work for girders, planks, working-platforms, railings, &c., to be of the timbers specified or approved, and of the best workmanship, to be framed, fitted and fixed, finished, cleaned off, rough parts sand-papered (where directed), and completed in the best possible manner, in strict accordance with drawings, and measurements indicated and dimensions figured thereon, with all necessary nails, spikes, screw-bolts, drift-bolts, wood-screws, coach-screws, wrought-iron straps, stays, and other fastenings of the best quality and approved workmanship. All holes for bolts, spikes, nails, &c., to be bored with the exact augers, and all mortise holes and tenons, &c., to be cut so as to fit exactly, to prevent timbers from splitting. All timber split during the progress of the work and its term of maintenance to be at once replaced by sound timber. All scantlings requiring scarfing in places are to be joined together as shown on sections, and as shall be directed.

#### *Cylinders.*

128. The cylinders for piers, buildings, &c., to be bolted up in the necessary lengths, accurately placed in position, lowered, and the sinking proceeded with by weighting as long as cylinders continue to go down, the tops to be finished at same level. As the cylinders are sinking into the ground the materials inside to be removed by such excavating appliances as may be approved. On completing the excavation of each cylinder to secure and approved foundations, the water to be expelled by pressure of air or other approved

approved method, and on having ascertained the cylinder to be perfectly true in position and plumb, the bottom to be thoroughly cleaned and levelled, after which the concrete, as specified in clauses 140 to 145, and 148, to be filled in for the first 6 feet under air pressure, or as shall be directed, till twenty-four hours after having deposited same in position. Above this level the cylinders to be filled in with concrete, as specified, to level of top of cast-iron cap.

Concrete filling. Sinking to greater depths. 129. The sinking of cylinders to be continued, if required, to greater depths than shown on drawings; such additional depths to be paid for at schedule rate, which is to include all charges, except cost of extra lengths of cast-iron cylinder; a corresponding deduction to be made if secure foundations are obtained at lesser depths.

Rock, &c. 130. If rock, boulders, dead logs, &c., are met with in an irregular manner, or at one side, while sinking cylinders, the air-lock, or other approved method, must be applied, and the obstructions removed, so as to ensure the cylinders to sink plumb, and to rest on a perfectly flat and solid bottom; no powder or other explosives to be used in the removal of such obstacles. The sinking to be proceeded with as soon as possible after delivery of ironwork, to ensure the erection of bridges, &c., without delay.

Fitting lengths. 131. After the sinking is completed, making up or fitting lengths are to be provided and cast, at schedule rate, so as to bring the top of the cylinders to the exact level shown on drawings.

#### *Sewers, Storm-water Channels, &c.*

132. As the cross-section area of each respective length of tunnel and open trench has been excavated, cleaned, and approved, the sewers, storm-water channels, and other works specified, shown on drawing and determined by the Engineer, to be built therein.

Tunnel lining. 133. In rock and other compact formation the concrete and brick lining to be filled in solid between internal surfaces of sewer, storm-water channel, &c. (less, in the case of concrete,  $\frac{1}{8}$ -inch space required for cement facing), and surfaces of tunnel or open trench.

Relieving arches. 134. Under all shafts, when ordered, relieving arches of brick or concrete to be built of a thickness, form, and width, as shall be directed at the time. Under temporary shafts excavated by contractor for his own convenience, the extra brick and concrete work to be at the contractor's cost.

Lining. 135. The thickness and description of the lining, whether concrete only, of brick and concrete, or of brick only, required for the different portions of tunnels and open trenches, depends upon the nature of the ground through which they are driven or excavated, as the case may be, and shall be determined by the Engineer as the excavation advances.

136. In strong compact rock,  $4\frac{1}{2}$ -inch concrete and brick lining will be requisite; and, as the materials occur less compact, two or three rings of brickwork or brick and concrete lining, as shall be determined by the Engineer as the tunnel proceeds, may be required.

Junctions and inlet chambers. 137. Junction chambers for sub-main and reticulating pipes, upper inlet chambers in shafts for junctions with reticulating pipe-sewers, drop-shafts, penstock and gas-check chambers, flushing-stations, weir-chambers with storm-water discharge pipes, ventilating shafts, aqueducts on arches, and on wrought-iron girders, syphons, buildings, bridges, culverts, storm-water channel junctions, intersections with existing roads, sewer, and water pipes, branch inlets, man-holes, gullies, road work, &c., to be constructed in connection with main sewers, branch sewers, and storm-water channels of concrete, brickwork, masonry, cement-facing, iron, timber, stoneware, and cast-iron pipes, &c., of the exact sizes, heights, shapes, forms, curves, and with such ornamental red, white, and other bricks, panels, mouldings, piling, &c., as shown on drawings, and as may be ordered and directed at the time. Shafts to be built of concrete or brickwork, at the option of the Engineer, to the thickness and shape shown on drawings, or as shall be directed. Curved junctions for branch, oval, or pipe sewers, as shown on drawings, and where ordered, to be constructed in concrete, to enter the main sewers at such levels above the invert, with such radius and longitudinal fall as shown, or as shall be determined at the time.

Cast-iron work. 138. Cast-iron pipes, landing platforms,  $\perp$  bars, scupper boxes, gully gratings, girders, over weir and shaft-chambers, or other castings, flushing-valves, gas-check frames, penstocks, man-hole covers, saddles, stop-board grooves, &c., to be walled and built in, as shown on Drawings; at points of intersection, branch junctions, gas check chambers, pipe ventilating shafts, where ordered, &c.

Building in wrought-iron work. 139. Step-irons, supports to wrought-iron ladders, holdfasts, ends of wrought and cast iron girders, bars, &c., to be built into side walls of shafts, and anchor bolts for fixing cast-iron frame for penstocks, gas-checks, &c., to be built into walls of shaft chambers, as shall be directed. Flap-traps to be built in where ordered. Permanent putlog holes in shapes of reveals, for temporary staging, are to be left in walls of gas-check chambers, shaft chambers, and shafts where directed; and, in all cases, unless otherwise ordered, the reveals are to be built round of the same thickness of brick or concrete as shown on walls of shafts or chambers at the places referred to. Putlog holes to be included in the schedule price for brick-work. Stop-board grooves to be formed in concrete where ordered.

#### *Concrete work.*

Bluestone concrete. 140. Bluestone concrete used in these works to be composed of one part of cement, two parts of sand, and four parts of bluestone metal. The bluestone metal to be broken to a size to pass freely with its largest dimensions, through a ring of  $1\frac{1}{2}$  inch in diameter, to be free from dirt, quarry refuse, and to be screened through a sieve of  $\frac{1}{8}$  inch meshes, and then to be washed with fresh water until approved.

Special concrete. 141. Special concrete, if required, to be composed of 2 parts of cement, 3 parts of sand, and 7 parts of bluestone metal, prepared as specified in clause 140.

Sandstone concrete. 142. Sandstone concrete, where ordered to be used in these works, to be composed of 1 part of cement, 2 parts of sand, and 5 parts of sandstone metal. The sandstone metal to be free from dirt, quarry refuse, sieved (as specified in clause 140), washed, and of a size to pass with its largest dimensions through a ring of 2 inches in diameter.

Mixing. 143. All concrete to be prepared close to where it is required on a sawn timber plank platform. All proportions to be correctly ascertained by measurement, the metal to be well washed when put on the platform and levelled at top, the sand to be placed in a level layer upon the metal, and the cement to be placed in a level layer upon the sand; after which all materials to be carefully mixed and turned over twice, and then the whole to be mixed with fresh clean water, and thoroughly turned over twice, and oftener if required, until, in the opinion of the Engineer, it shall be fit for the work before it leaves the platform;

platform; it shall then be conveyed to the works as shall be directed, and be used fresh. Referring to clause 10, the gauge boxes are to be made to the following internal dimensions, viz.:—For stone 3 feet square in plan, and for sand 2 ft. 6 in. square. The depth of each box to be made so as to give the correct proportion of material.

144. If the concrete is made by machinery, all materials to be prepared as previously described, then to be mixed dry, and afterwards with fresh clean water, as may be directed and as shall be approved of; to be used fresh. Mixing by machinery.

145. The different kinds of concrete described under clauses 140, 141, and 142, as bluestone concrete, special concrete, and sandstone concrete, respectively, shall be used in the various parts of these works as specified, and as may be ordered at the time.

146. After the excavation for foundation of each respective part of the works, and the piling, planking, timbering, staging, &c., for same have been completed, and the bottom of excavations has been cleared and approved, the concrete work to be built thereon to the exact dimensions, and of such forms and shapes as shown on the drawings referring to each respective part of said works. Order of work.

147. The contractor to provide, at his own cost, approved concrete boxes, centres, staging, shoring, planking, &c., of the exact forms, shapes, curves, &c., required; in a proper, secure, and substantial manner, due allowance being made for  $\frac{3}{8}$  inch thick cement-facing over all internal exposed surfaces of concrete work; and great care being taken that all centering and concrete boxes can be easily withdrawn. After completion of any portion of the concrete, the concrete boxes and the centering, as the case may be, shall not be removed until the Engineer or his Superintending Officer has given written permission to that effect. Boxing, timbering, centering.

148. The concrete, after it has been approved of, to be conveyed into cast-iron cylinders, shafts, excavations for piers, and other deep foundations, in skips of approved size, and to every other part of the work as may be directed, and as shall be approved of, and tipped into same and upon the surface of each layer from a height not exceeding 18 inches, to be quickly spread out in layers not exceeding 9 inches in thickness. Commencing at each part of the work at lowest level of excavation or surface of work, the concrete to be brought up in horizontal layers or parallel with specified longitudinal gradients of works; each layer, when spread, to be quickly and evenly rammed all over until approved of. Method of work.

149. In circular, oval, elliptical, and open channels, the concrete to be filled first into central pads, or, in accordance with the transverse curvature of invert or bottom of channel, into central strips, not exceeding 2 feet in width for wide open channels, then into bottom layer right up to extreme width at sides, and then into the curved sides, as shown on drawings, up to top of side walls in open channels, or to level of springing in closed channels. Below springing line.

150. After the concrete has been carried up to the level of springing, all concrete arches to be commenced at both walls or abutments simultaneously, and carried on towards centre line in radiating parallel strips, spread 9 inches thick, of the whole width of arch, or in lengths as specified in clauses 157 and 158, and as shall be directed at the time, and rammed as before described. Where the arch is thicker than 9 inches, the lower layer to be always completed throughout 12 inches in advance of the upper succeeding layer. Above springing line.

151. After completion of the closing arch, all concrete work above springing of the same, at sides of arch, in manholes, chambers, shafts, &c., to be carried up in the same manner as specified in clause 148, and of the exact dimensions, curves, and thicknesses, &c., as shown on drawings. Above arches.

152. No portion of the concrete work described in the previous clauses (unless otherwise directed in writing) to be covered up with earth or brickwork until it has been examined and approved of by the Engineer. Any leakage that may appear in each layer to be carefully attended to and be made good and repaired at the time, as shall be approved, before each succeeding layer is put on. Covering up work. Leakage.

153. All end faces of layers of concrete to be stepped back at each respective length of sewer or other work, as shall be directed, to be carefully washed clean with fresh water, and then to be grouted prior to each layer of the adjoining length being commenced and joined on to the same. Joining lengths.

154. No traffic shall pass over any fresh concrete work except where such is duly protected against injury by boarding, planks, or any other means approved of by the Engineer or Superintending Officer at the time. Injury to work.

155. In the event of any stoppage occurring to the work, from whatever cause, or in anticipation of rainfall, the contractor, before temporarily stopping work, shall finish it off at whatever level the work may be raised at the time, by thoroughly grouting the whole of the surface with cement grout. The contractor also to provide and have always on hand approved tarpaulins for the purpose of covering all fresh concrete work and brickwork, when ordered, so as to protect the same during all stoppages in the daytime and at night from sun and rain, and during hot or dry weather, to keep said tarpaulins watered to prevent the work from cracking and setting too quickly on the outside. Treatment after any stoppage.

156. In all cases where a layer at mid-day or at evening is left incomplete the said layer shall not be continued after any stoppage until the surface of the lower and the end of the upper layer have been washed clean and then grouted with cement grout.

157. The concrete and brickwork in sewers and channels to be built in open trenches, in three continuous lengths of 40 feet each (unless otherwise directed), that is to say, when the arching-in of the first 40 feet commences, the next length of 40 feet must be completed up to the springing of arch, and the third 40 feet length must be in progress, and the latter so timed that the work is raised up to springing of arch by the time the closing-in of the adjoining length commences. Order of work in open trench.

158. The concrete and brickwork in sewers and channels on completion of each length of tunnel to be carried on in each length, from the middle towards each end simultaneously, in three continuous lengths of 16 ft. 6 in. each, unless otherwise directed; that is to say, when the arching of the first 16 ft. 6 in. commences; the next 16 ft. 6 in. length must be in progress from height of invert up to the springing of arch; the third 16 ft. 6 in. length must be in progress between floor of tunnel and level of invert of sewer. Order of work in tunnel.

159. At all plinths for piers of arches and abutments, piers of arches, abutments, between wings of abutments, pilasters, foundations, of buildings, culverts, &c., unless otherwise directed, each layer to be completed right through the whole length and width of the work before the succeeding layer is put on. Where concrete has to be walled or filled in against and between brick facings or masonry, the latter in each case to be well wetted and grouted, and then to be covered with a coat of cement mortar  $\frac{1}{2}$  inch thick before Order of works. Sundry.

before the concrete is built against it, and it is to be brought up simultaneously with same in layers 6 inches thick after ramming, the brick or masonry facings, however, being always kept 6 inches (or more, as the case may be) higher than the concrete work up to the level of string-course or other defined limit, when the work has to be finished level all through.

Aqueducts.

160. The brickwork, masonry, and concrete-filling between all arches and at sides of end-arches to be carried up simultaneously over the whole length and width of every aqueduct, building, or other structure (unless otherwise directed), so that all arches or other structures shall be simultaneously and equally weighted as the brick, stone, and concrete work rises against and over same.

Aqueducts.

161. The concrete in piers of arches of aqueducts, abutments, and approaches to aqueducts to be carried up in the first instance from bottom of excavations to level of top of plinths; in the second instance to level of top of skewbacks; in the third instance to level of underside of string-course; and in the fourth instance to level of top of coping of aqueducts.

Aqueducts.

162. When all piers and abutments of aqueducts have been built to level of springing of arches or to top of skewbacks, as the case may be, the concrete, brick, and stone arches, as specified, to be built one after another over the openings upon centres, cambered as shall be directed, of such number as shall be specified, strong enough in every part to carry the weight of the arch to be built thereon, till all openings of one aqueduct are arched over, after which the whole of the arches shall be allowed two weeks' time to set and harden before the brick and stone facings, and the concrete, &c., between the arches and at sides of end-arches is commenced. In filling in, between arches and at sides of end-arches the various layers of concrete, of the thickness specified in clauses 148 and 159, as the case may be, to be brought up extending on to extrados of arches till the thickness of each layer at its end is reduced to  $4\frac{1}{2}$  inches above extrados, when it is to be finished at the time with a radiating end face before the succeeding layer is put on. The junctions of the storm-water sewers to be constructed with such curves, shapes, forms, flat arches between wrought-iron rolled girders, &c., as shown on drawings. On completion of junctions, or any lengths of storm-water channel, as may be specified, to exact level of underside of iron girders, the latter to be laid transversely over side-walls of junctions or channels, bedded in and upon special cement mortar,  $\frac{1}{2}$ -inch thick, truly parallel to each other, and spaced 4 feet from centre to centre, or as may be specified, after which the concrete filling along side-walls, between and over ends of girders, to be completed. The arches of 4-feet span or thereabout, with a rise of 5 inches in centre between the girders, to be commenced from lower end, and to advance to the upper end of the junction or channel in each case (all girders being carefully stiffened and held in position by props, as shall be directed), with not less than twelve centres or as may be directed, of the exact width of junction or channel between side walls. The arches to be built as specified in clause 150, and on completion to form a level concrete decking 3 inches above level of top of girders.

Junctions.

Iron girders.

Jack arches.

Lining round sewer on arches.

163. The concrete lining round sewer on lines of aqueducts and approaches (between underside of string-course and underside of coping, unless where otherwise specified) to be brought up between brick and stone facings (where such occur) simultaneously with same, as specified in clause 159. The concrete to be finished transversely level with underside of copings. This work to be carried on along each line of aqueduct in the manner and in lengths as specified in clauses 161 and 162.

Bond-rods.

164. In conjunction with the concrete surrounding sewer, where the latter is built upon arches and in embankments, the contractor to provide, fit, place in position, and wall in with the concrete, longitudinally in each corner at top and bottom of concrete lining  $\frac{5}{8}$ -inch diameter bond-rods in 16-foot lengths. The ends to overlap 12 inches, and tied together with binding-wire, and, transversely,  $\frac{5}{8}$ -inch diameter bond-rods  $4\frac{1}{2}$  inches above soffit of sewer of such lengths as to fit between the outer brick lining, or as shall be directed, spaced 10 feet from centre to centre. The cost of providing, fitting, placing, and walling-in said bond-rods to be included in the schedule price per cubic yard of concrete.

Cracking.

165. Special care to be taken by contractor to prevent the concrete, &c., from cracking at ends of each respective and successive length of sewer and channel in any situation in consequence of the draught in same, by providing and carefully closing up ends of sewers or channels with canvas or wooden shields or doors, and by carrying the works on in continuous lengths, without delays and stoppages, so as to prevent air-cracks or shrinkage.

Repairing cracks.

166. Should, however, cracks occur at ends of any length of sewer, storm-water channel, or other work, during its construction and time of maintenance, they shall be opened up for their whole length and depth, and of such width as may be directed at the time, and filled in with neat cement mortar and grout by the contractor, at his own expense, to the satisfaction of the Engineer, or he may order such cracked parts of the works to be taken down and rebuilt at contractor's cost.

Allowance for rendering.

167. The concrete work comprised in this contract to be completed to the exact dimensions shown on drawings, less  $\frac{5}{8}$  inch at all exposed inner and outer surfaces, and after the boxes and centerings have been removed, all exposed outer and inner surfaces shall present compact, solid, even, plain faces. All faulty and honeycomb portions, cavities, holes, or other defects, to be at once repaired by the contractor, at his own cost, with concrete or mortar, as the case may require, to the satisfaction of the Engineer. No portion of the concrete work to be covered up with earth or brickwork until it has been examined and approved.

Bedding and fixing cast and wrought iron-work.

168. After the concrete or masonry has been built to the exact height and gradient (leaving sufficient space for jointing), the whole of the cast and wrought iron work, after having been washed clean with fresh water, is to be truly laid and jointed in its exact positions, lines and gradients, on fillets of mortar; and as the concrete rises against and around the castings, bond-rods, &c., leaving a space of not less than  $\frac{1}{2}$  inch all round between the concrete and iron, this space round the invert, or underneath bottom of plates and rods, as the case may be, to be filled in with grout or mortar, as shall be directed at the time, whilst above the springing line the outer surface of the castings, &c., to be grouted, and then to be covered with a coat of special mortar  $\frac{1}{2}$  inch thick before the concrete is built on to and around said pipes, castings, frames, &c.

Anchor-bolts.

169. All anchor-bolts in connection with cast-iron and wrought-iron work, to be placed in the exact positions required; to be washed clean, wetted, bedded upon, and surrounded with special mortar in each case before the concrete is built round same.

Laying and fixing cast-iron and stoneware pipes.

170. All stoneware or cast-iron pipes, &c., where they are shown to be or ordered to be surrounded with concrete, to be clean washed with fresh water, to be laid and jointed in the exact lines and gradients on fillets of mortar, and to be grouted all round as the concrete is being built round same. 171.

171. Prior to commencing any concrete which has to be built on to and against rock faces, all shaken and loose rock to be removed; all rock surfaces to be well cleaned, washed, and wetted, and all beds, open joints, and spaces between concrete and rock faces to be carefully filled in with cement mortar, and the cost of thus preparing rock faces, washing, grouting, flushing, &c., to be included in, and covered by the schedule price per cube yard for the concrete. Building on or against rock.

#### *Brickwork.*

172. In executing the brickwork in any situation in the construction of these works, all bricks to be thoroughly soaked in clean fresh water immediately before being used, and all work to be built with whole bricks (except where otherwise directed), of approved shape and dimensions, to ensure the bond of each particular part of the work being executed, in the manner as shown on drawings, and as may be ordered at the time, with  $\frac{1}{4}$ -inch joints, each brick to be set full upon and rubbed in cement mortar, and every course to be carefully and thoroughly grouted, and well wetted before the succeeding course is put on, care being taken to keep the inner and outer faces of work clean by placing fillets of mortar on outer and inner edges before grouting. Method of work.

173. The brickwork in arches up to 12-foot span to be built as shown on longitudinal and cross sections in radiating courses, with radiated bricks where ordered, in  $4\frac{1}{2}$ -inch rings, in approved bond, the bricks of each course to break joint over the centre of those above or below. Where the brickwork consists of two or more rings, said rings to be built simultaneously, the lower ring to be always completed throughout  $4\frac{1}{2}$  inches in advance of the upper succeeding ring, each brick to be set full upon and rubbed in cement mortar, and each ring to be keyed in centre and to be covered with a coat of cement mortar  $\frac{1}{2}$ -inch thick, to ensure the thorough bonding between the different rings. When completing any length of brick closing arch of main sewer, storm-water channels, &c., the courses at end of same to be stepped back, as shall be directed, and the end face of each ring or course to be well wetted, and then grouted, prior to each ring of the succeeding length being commenced. Radiating bricks.  
Stepping ends.

174. The brickwork in arches over 12-foot span to be built in radiating through-courses, of rubbed and gauged bricks if directed, in approved bond; to be commenced at both abutments simultaneously, the whole width of same, and to be completed in the most perfect manner throughout the full width and thickness of arch, and to be keyed in centre. Arches over 12-foot spans.

175. The brickwork in abutments, abutment piers, wings, parapets, pilasters, spandrels, piers, face-walls, &c., to be built of the various heights, thicknesses, and other dimensions, together with all recesses, projections, panelling, &c., and carried up at each special part or length of work simultaneously with the concrete and masonry, in English or other approved bond, in truly level courses or in courses truly parallel with longitudinal gradient of work, and in such other lines and curves as shown on drawings, or as may be ordered at the time. Where directed, all outer and inner faces of walls to be carried up straight, square, and plumb, with perfectly fair and even faces. Simultaneous progress of various works.  
Faces.

176. Weep-holes of the sizes shown, to be left through the brick walls where directed, and every thing to be made good where necessary. Weep-holes.

177. The brick-on-edge flooring of invert of storm-water channels on steep gradients, as shown on drawings, and where ordered, in any situation in the construction of these works, to be laid in approved bond; each brick to be set full upon and rubbed in special cement mortar, after which the whole of the surfaces of the brick-on-edge flooring to be carefully and thoroughly grouted. Brick inverts in storm-water channels.

178. The  $\frac{1}{2}$ -inch thick mortar covering (pargetting) of outside faces of brickwork or concrete of ventilating shafts, manholes, sewer-chambers, and sewers, as shown on drawings, shall not be measured and paid for as cement facing, but included in the measurement of the brick or concrete work, and paid for as such. Pargetting shafts.

179. All putlog holes to be filled in, taking particular care to match the bricks and the mortar. All external faces of brickwork to be thoroughly cleaned, and all joints to be raked (if ordered  $\frac{3}{4}$  inch deep), and pointed with special cement mortar, and to be finished off with a neatly struck and cut joint. Putlog holes.  
Pointing up.

#### *Cement Facing.*

180. The whole of the internal and external concrete (and brick surfaces, if ordered), where such is shown on drawings, and in any situation in the construction of these works, to be protected by a cement facing to be put on in two thicknesses; the facing throughout, when finished, to be  $\frac{5}{8}$  inch in thickness. All surfaces of concrete or brickwork to be well wetted before the cement facing is put on. The cement facing of all surfaces of works to be finished, as shown on drawings, and, where directed, with joints struck in imitation of ashlar masonry. Thickness.

181. The different kinds of cement facing with which the exposed surfaces of these works are to be protected, are:—Cement facing, prepared of cement and sand in the proportion of 1 of cement to 2 of sand; and special cement facing, prepared of cement and sand in the proportion of 1 of cement and 1 of sand. The different qualities of cement facing, as above described, to be executed in the various parts of these works as shall be specified, and as may be ordered at the time. Proportions.  
Qualities.

#### *Masonry.*

182. All freestone and bluestone ashlar of the exact sizes, forms, and shapes, to be built in where shown on drawings, and where directed, simultaneously with the concrete and brickwork. Stones to be washed clean and to be well wetted with fresh clean water immediately before being used, to be laid upon their natural beds in approved bond, and set solidly upon and in cement mortar in the exact positions required; after which all joints between stones, between stones and brickwork, and between stones and concrete, to be carefully filled in with grout. Prior to each succeeding course being put on, the surface of the previous course to be well wetted and washed clean. All ashlar stones to be properly lifted by lewisings, or as shall be directed when being placed in position. All beds and joints to be punched, axed, and picked, so as to form  $\frac{3}{4}$  inch joints throughout. All exposed joints of masonry and between masonry and brickwork, &c., to be carefully raked out,  $\frac{3}{4}$  inch deep, and filled in solid with special mortar, neatly pointed, finished flush with outside faces of work. All masonry to be left perfectly clean at completion of works. Method of building ashlar.

Freestone ashlar.

183. Freestone ashlar, to be provided in any situation in the construction of these works, of the exact dimensions, moulded, sunk, weathered, throated, checked, grooved, radiated, curved, channeled, fine-axed, battered, hammer-dressed, worked, rubbed where directed, and finished off in the best possible manner, as shown on drawings, and in accordance with any details which the Engineer may provide during the progress of the works. All stones to be in lengths, as shown, and as shall be directed, with truly squared and axe-dressed beds, joints, and backs. All joints from exposed surfaces of stones, and from faces of concrete work, as the case may be, to be axed-in 2 inches deep. The plinths, where shown on drawings, to be weathered with 2 inches parallel drafted margin, under edge of weathering and at all external angles of same. All external faces of plinths, skewbacks, abutments, piers, wings of abutments, &c., to be pitched-faced, no part of which to project more than approved of beyond true line of wall, with a true pitched line along each exposed arris, and with 2-inch parallel drafted margin as shown. All capstones over pilasters to be of one stone. Holes for lewis-bolts to be sunk where directed, of the depth and size required. All quoins, of the exact sizes specified, to be set in and out bond to all angles.

Bluestone ashlar.

184. Bluestone ashlar to be provided in any situation in the construction of these works, of the exact dimensions, forms, shapes, moulded, weathered, throated, fine-axed, sunk for reception of cast-iron bearing plates; and faces of weir-crest stones to be radiated, and to have vertical bird's-mouth grooves sunk along centre line of joints, as shall be directed; to be built in with the concrete, brickwork, and freestone masonry, as the case may be, and as the latter rises, where shown on drawings and as may be directed, to be lowised and set as specified in clause 182. All stones to be washed clean and to be well wetted before being used. Holes for lewis and anchor bolts to be sunk, where directed, of the depth and size required.

Squared rubble masonry.

185. Squared freestone rubble masonry in any situation in the construction of these works, to be built of squared hammer-dressed throughstones, unless otherwise directed, in from 10 to 14 inch level courses, as may be directed at the time, or on lines of open channels in courses parallel with longitudinal gradient. Said masonry to be built straight, curved, battered, or sloped, every stone to be set full up on and in cement mortar. When the exposed face of wall is battered, the surface of each course to be at right angles with line of batter, the top course to be built of larger stones, level at top and squared at back. All stones to be punched, dressed, and picked to the exact thicknesses, sizes, and forms required, and set in the most approved bond, with joints throughout not exceeding  $\frac{1}{2}$  inch in thickness. All stones to be washed clean and wetted with clean fresh water before being used. Every course to be carefully grouted before the succeeding course is put on. All masonry to be finished with a neatly struck and cut joint as the work proceeds, and to be left perfectly clean on completion.

*Squared Bluestone Pitching.*

186. Squared bluestone pitchers, in any situation in the construction of these works, to be set in sand, in regular 9-inch courses, lengthwise across the channel, in the most approved bond, and in single ring or course round manhole covers, &c. All stones to be dressed and picked so as to ensure the joints all through not to exceed  $\frac{1}{2}$  inch in thickness. No stone to be less than 9 in. x 9 in. x 9 in., but to be longer, curved, and radiated if directed.

*Squared Freestone Pitching and Channeling.*

187. Squared freestone pitchers, in any situation in the construction of these works, to be set upon their natural beds in sand or in cement mortar, as may be specified, in regular 12-inch courses, lengthwise across the course of the channel, in approved bond, with  $\frac{1}{2}$ -inch wide joints throughout. No stone to be less than 12 inches deep, 12 inches wide, and 12 inches in length, but to be longer, curved, and radiated if directed. If the pitchers are set in cement, all stones to be washed clean and well wetted with clean fresh water before being used, to be set full upon and in cement mortar, and on completion of pitching, all joints to be carefully filled with cement grout. All pitching in road channels to be set in sand in regular courses parallel with kerb-stones, in approved bond, with  $\frac{1}{2}$ -inch joints, no stone to be less than 12 inches wide, 8 inches deep, unless otherwise specified, and 18 inches long, but to be longer, curved, and radiated, if directed. On completion of pitching set in sand all joints to be carefully filled in with sand.

*Freestone Kerbing.*

188. Kerb-stones in such lengths, picked and axed-dressed to such widths, depths, shapes, and forms, with squared and axed ends, insuring  $\frac{1}{4}$ -inch joints throughout, to be set upon their natural beds in sand, in any situation in the construction of these works, along such lines, levels, gradients, and curves as shown on drawings, and as may be directed at the time.

*Pipe-laying and Jointing.*

Glazed stone-ware pipes.

189. After the trenches have been excavated to the exact depths, levels, and gradients, and after the foundation layer of concrete has been filled in where ordered, as the case may be (leaving sufficient room for jointing), glazed stoneware pipes of the required diameter to be laid thereon, along such lines, curves, and inclinations, as shown on general plans and longitudinal sections, true, straight, and solid; and for all vertical branch pipe-sewers and ventilating pipe-shafts, the pipes to be set true, straight, and plumb.

Foundations.

190. In clay or similar soil the pipes to rest direct and solid upon the soil. In rock they are to be laid as shown on drawing, on a 1-inch bed of poor mortar, composed of one part of cement and six parts of sand, the cost of same to be included in items for pipe-laying. In soil liable to be scoured out or easily shifted, they shall, if directed by the Engineer, be laid on sandstone concrete, as shown on drawing.

Laying.

191. In every case the pipes shall be laid in such a manner that their barrels shall bear firmly and evenly on their bed, the sockets being entirely free from pressure in the joint-hole, and the spigots concentric with the sockets.

Jointing pipes.

192. The pipes are to be jointed as follows:—The 6-inch pipes with tarred gasket  $\frac{1}{4}$  inch deep after setting, and special cement mortar  $1\frac{1}{4}$  inch deep within socket of pipe; the 9-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 10-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 12-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 15-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar

mortar  $1\frac{3}{8}$  inch deep within socket of pipe ; the 16-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{1}{2}$  inch deep within socket of pipe ; the 18-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{4}$  inch deep within socket of pipe ; the 21-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{7}{8}$  inch deep within socket of pipe ; the 24-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar 2 inches deep within socket of pipe.

193. The tarred gasket to be placed in the faucet and set tight round spigot end of pipe, after which the remaining space in faucet to be cleaned, wetted, and filled in with stiff special cement mortar, packed in solid, splayed off outside to an angle of 45 degrees, and neatly finished off. The inner joints between pipes to be carefully filled with special cement mortar all round, neatly wiped off as a finish. Each pipe length thus finished to be carefully cleaned out before another pipe length is added. Inner joints.

194. Junction pipes of any desired size are to be laid into the line of pipe-sewers wherever required by the Engineer. The socket ends of all junction pipes, junction blocks, junction holes, ventilating pipes, and dead ends are to be protected against the ingress of foreign substances, and made easily accessible for effecting future connections, by being closed with earthenware discs having a temporary watertight joint all round, the cost of providing and fixing same to be included in items for pipe-laying. Junction pipes.

#### *Cast-iron Pipe-laying.*

195. After the pipe-trenches have been excavated to the exact depths, levels, and gradients required, cast-iron pipes of the diameters shown or ordered, to be laid along lines (curved or straight), and solid upon the bottom of the trench, or upon a foundation layer of concrete, and the vertical pipes placed as shown, leaving sufficient room for jointing. Cast-iron spigot and faucet pipes.

196. The pipes are to be jointed as follows :—The 6-inch and 7-inch diameter pipes with spun-yarn  $2\frac{3}{4}$  inch and 3 inch deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up ; the 8-inch, 9-inch, and 10-inch diameter pipes with spun-yarn 3 inches,  $3\frac{1}{4}$  inches, and  $3\frac{1}{4}$  inches deep respectively after setting up, and soft lead  $1\frac{1}{2}$  inch deep after setting up ; the 11-inch, 12-inch, 14-inch, 15-inch, and 18-inch diameter pipes with spun-yarn 3 inches, 3 inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches, and  $3\frac{1}{4}$  inches deep respectively after setting up, and soft lead  $1\frac{3}{4}$  inch deep after setting up ; the 20-inch, 22-inch, 24-inch, 26-inch, 28-inch, 30-inch, 32-inch, 34-inch, and 36-inch diameter pipes with spun-yarn 3 inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{4}$  inches,  $3\frac{1}{2}$  inches,  $3\frac{1}{2}$  inches, and  $3\frac{1}{2}$  inches deep respectively after setting up, and soft lead 2 inches deep after setting up. Jointing.

197. Should the faucets of pipes used in these works, in places, be of greater or lesser depths than indicated in the previous clause, then the spun-yarn packing is to be of greater or lesser depths as may be required, the depths of the lead joints to remain as specified. Expansion joints to be made in the same manner, but of such special depth of lead joint, with or without spun-yarn packing as shown on drawings and as may be ordered at the time. All curves on lines of pipe-sewers to be accurately formed with the spigot and faucet joints of the pipes without any abrupt horizontal and vertical dip, rise, or bend. The spun-yarn to be tightly platted or laid round each spigot end, so as to fill the socket of each pipe after setting up to the exact depth specified, leaving in each instance the remaining depth of faucet for the specified lead joint, the latter to be made at each joint in the trench with one running, and when cold to be set up with proper irons to one smooth, even, plain surface all round the pipe, and  $\frac{1}{8}$  inch within socket of same. Expansion joints.

198. The setting up of all lead-joints to be made with a proper set of setting irons, commencing from outer surface of spigot end with  $\frac{1}{8}$  inch thick setting irons, and continuing towards outer edge of lead-joint, with setting irons advancing gradually by  $\frac{1}{8}$  inch in thickness at the time. Special setting irons to be used for setting up expansion joints. After the pipes have been laid and the joints of every description made, examined, and approved, they are at once to be covered up, but in no case are they to remain longer than twelve hours uncovered after they have been approved of. Curved pipe lines.

199. Faulty and objectionable lead joints to be immediately and carefully chiseled out (they are not allowed to be burnt out) and fresh lead joints to be made and set up until approved of. Attempts to repair defective joints are under no consideration to be permitted. Setting up lead joints.

#### *Road-making.*

200. The different roads shown on drawings, are to be formed 30 feet wide between edges of slopes, whether on embankments or in cuttings. The longitudinal gradients of approaches to be at an inclination of 1 in 20, or as shall be directed. All roadways to be formed with a crown, which at the centre line is to be 6 inches higher than the edges. Faulty joints.

201. After the roadway has been formed and approved, it is to be carefully boxed out along centre line, if ordered, for the reception of the road material, 8 inches deep for ballast, and 4 inches deep for metal—12 inches in all, by a width of 24 feet. Width, slopes, gradient, formation.

202. After the boxing-out has been completed, its bottom surface to be covered by a layer of 4-inch gauge sandstone ballast, spread 8 inches thick throughout, and then covered with bluestone metal spread 4 inches thick throughout. Boxing-out.

203. After the metalling has been completed and approved, the whole of its surface to be covered with about one-eighth of its own bulk of bluestone chippings of a uniform thickness, after which the whole road surface to be watered and rolled until approved. Ballasting and metalling.

204. The stone used for metalling to be basalt or other similar hard stone of approved quality ; to be broken to angular fragments of a size to pass freely with their largest dimensions through a ring  $2\frac{1}{2}$  inches diameter, and to be free from dirt, quarry refuse, &c. Blinding.

The prices per cubic yard for bluestone metal and sandstone ballast for road surface to include the cost of providing and spreading blinding. Quality of metal, size.

#### *Tarred Metal Deck.*

205. After the tarring of upper surface of metal flooring, and after the sand-filling over arches and abutments of aqueducts has been completed, levelled, and approved, or in any other situation in the construction of these works, the whole of these surfaces as shown on drawings, to the thicknesses figured or ordered at the time, to be covered with the tarred metal decking, as follows :—

206. The stone to be basalt, broken to a 2-inch gauge, free from dirt ; the screenings to be crushed from the same stone, and to pass through a  $\frac{1}{16}$ -inch sieve. All stones and screenings to be perfectly clean Stone for tar.

and dry, to be heated before admixture with tar. The tar to be coal-tar, free from all adulterations, and boiled a sufficient time to get rid of the light oils before being used.

Tarring and  
stacking.

The stones and screenings to be mixed with the boiled tar separately; to be then stacked where directed, so as to allow the surplus tar to drain away for at least three weeks before being laid in position.

Laying and  
rolling.

207. The 2-inch stone to be spread over the whole bridge, upon the concrete filling of roadway, and upon the 7-inch thick sand layer of footpaths, between kerb-logs, to such thicknesses and surfaces, and with such curvature to roadway, when rolled, as shown in drawing, and to be then covered with about one-eighth of its own bulk of screenings. Both layers to be well rolled and cross-rolled with a 30-cwt. roller, having not less than a 3 feet width of face, until they form solid compact surfaces to the required levels and curvature.

Punning.

208. The sides along kerb-logs and all places where the roller cannot work, to be well punned by hand with a flat-faced 42-lb. iron rammer. When approved by the Engineer, the whole of the surfaces to be brushed over with a coat of hot coal-tar, and a layer of heated fine bluestone screenings, with dust left in, spread over it.

#### *Coke Concrete Deck.*

209. Coke concrete to be provided, placed in position where directed in the manner specified for other concrete, and to be mixed as described in clause 143, but in the following proportions:—16 cubic feet of approved coke broken to a strict 1-inch gauge, 8 cubic feet of sand, and 1 cask of cement.

#### *Fencing.*

Land to be  
fenced where  
required.

210. Fencing is to be erected in such line and situation, and of such description as shall be directed, and as marked out by the Superintending Officer, and of the form and to the dimensions marked on the drawings.

Ordnance  
fencing.

211. Ordnance fences to be provided, framed, fitted, and erected where ordered, of sawn hardwood timber, unless where otherwise specified, as viz.: Posts 6 in. x 4 in. x 6 ft. 6 in., top rail 4 in. x 4 in., intermediate and lower rails 4 in. x 3 in. Posts spaced 6 ft. 6 in. from centre to centre, sunk in rock not less than 18 in., and into other ground not less than 2 ft. 6 in. deep. On road embankments, where ordered, posts to be 7 ft. 9 in. long, mortised into sills 9 in. diameter x 5 ft. long, secured by 1-inch diameter hardwood tree-nail, stayed to posts by 4 in. x 4 in. struts, secured to posts and sills by  $\frac{3}{8}$ -inch screw-bolts, and  $\frac{1}{16}$ -inch diameter spikes,  $7\frac{1}{2}$  inches long. Angle and end posts, 10 inches diameter at smallest end, x 8 feet long, to be sunk 3 feet deep in the ground, mortised 6 inches deep for reception of ends of rails. Tops of round posts to be protected by caps of 6-lb. sheet-lead, secured to posts by lead-headed nails 2 inches long, and wrought-iron 2-in. x  $\frac{1}{4}$ -in. rings, secured each by four 3-inch wood screws. Sawn posts to be notched at top for reception of top rail and halved out for reception of intermediate and lower rails, spaced as shown. Top rail to be laid aris uppermost into notches, secured to posts with 2-in. x  $\frac{3}{4}$ -in. hoop-straps, and four 2-inch long wood screws to each strap. Intermediate and lower rails to be fitted flush with inner faces of sawn posts, and secured to each with two 4-inch wood screws. All sawn timber above ground to be planed, all scarf-joints of rails to be made as directed, over posts only, and all sills, struts, and ends of posts under ground to be charred thoroughly. The ground round posts to be well rammed, and the clearing spaces round ends of posts stepped in rock holes, to be carefully filled in with cement grout.

Description of  
split timber  
fences.

212. The split timber fencing may be of one or more of the three following descriptions:—

- 1st. Fence consisting of split hardwood posts, two split rails (wired if shown), and round posts where required.
- 2nd. Fence, consisting of split hardwood posts, three split rails, and round posts where required.
- 3rd. Fence, consisting of split hardwood posts, two split rails, covered with split hardwood palings, with round posts where required.

Posts.

213. Posts to be 6 ft. 6 in. long, 8 inches broad by  $2\frac{1}{2}$  inches thick, except those for the paling-fence, which shall be 7 feet long, with mortises 6 in. x 3 in., cut square to the gauge shown on the drawings. All posts to be charred for a length of 2 ft. 6 in. from the bottom, sunk 2 feet into the ground, set uniform and upright, and spaced 8 ft. 3 in. apart from centre to centre, and the earth well rammed in round them until the posts stand solid and firm.

Rails.

214. Rails to be 9 feet long, the top rail not less than 7 in. x 2 in., and the bottom rail not less than 8 in. x 2 in. in the two-rail fencing, and in the three-rail fencing the centre rail to be not less than 8 in. x 2 in., and the bottom rail 7 in. x 2 in. Tenons to be 6 inches long, carefully adzed to fit closely into the mortises, shouldered square with the saw, and fitted so as to butt close up to the posts.

Palings.

215. Palings are to be sound, straight, cleanly split, and free from sap, and of approved timber, 5 feet long, not less than 4 inches wide, and  $\frac{1}{2}$  inch thick. They are to be sawn off square, placed upright, close together, and to a straight line on top, and securely fixed by  $1\frac{1}{2}$ -inch strong wire nails, two nails to every paling in each rail. They are to be further secured along the rails by galvanised hoop-iron of 18-gauge, 1 inch wide, well nailed by  $1\frac{1}{4}$ -inch clout nails at intervals not exceeding 12 inches apart.

Round posts.

216. At all intersections with existing fences, and at all angles, a round post is to be provided and fixed, 9 inches in diameter, charred for a length of 3 feet from the bottom, and sunk 2 ft. 6 in. into the ground, and the earth well rammed in until the post stands solid and firm. These posts are to be of such length as to leave the top 6 inches above the upper rail. At existing fences the junctions are to be made good and connected with these posts, which are to be mortised for the rails to suit the fence in the same manner as shown on drawing.

Posts strutted  
where necessary.

217. Where necessary, posts, either round or split, are to have a hardwood strut 6 in. x 3 in., checked at upper end into the post, and secured by a 6-in. x  $\frac{1}{2}$ -in. round spike. A hardwood stake, 3 ft. long x 8 in. x 3 in., to be driven close into the foot of the strut, as shown on drawing.

Crossing ditches  
or sudden  
depressions.

218. The crossing of ditches, watercourses, or hollows in the ground, are to be made secure, either by supporting the fence on logs, extra long posts, or as may be directed.

219. The fencing is to be erected to a true line on top, and is not to follow the minor irregularities of the ground.

220. The wire used in fences to be that known as No. 8 "best best annealed drawn," or other approved fencing wire; to be passed through the posts, which are to be bored for the purpose with a quarter ( $\frac{1}{4}$ ) inch auger, and strained tight by means of F. Morton & Co's., or other approved straining bracket, fixed to the straining posts by wood screws or spikes, so as to suit the gauge, as shown on the drawing. Fencing wire and straining brackets.

The works and materials comprised in clauses Nos. 217, 218, and 220 to be included in the schedule rates for fencing.

#### *Wrought-iron Work.*

221. All wrought-iron spindles, bolts,  $\perp$ ,  $\Gamma$ , and  $\sqcup$  irons, flat and round bar, plates, straps, axles, pins, anchor-bolts, rolled girders, nuts, washers, rods, rivets, holding-down bars, gratings, frames, keys, chains, &c., to be of the exact dimensions and forms shown on drawings. The greatest care to be taken in any welds to ensure perfect soundness, and the contractor to be at the expense of any test which the Engineer shall think fit to submit the welds to. Wrought-iron work.  
All plates, bars, channel-irons, rods, &c., to be perfectly true and of even uniform thickness; all angle-irons and bars to be sound, uniform, and regular on edges; all joints and edges to be truly planed to the dimensions on drawings; all wrought-iron parts to be rolled or forged out of one piece, unless otherwise specified and directed. Welds. Ends of spindles, shackles, &c., to be forged with eye-holes, and holes for male and female joints of the exact forms. All bolts, handles, hand-rails, spindles, keys, chains, pins, axles, bars, crosses, &c., to be forged with protecting necks, and welded with ends of large diameters or otherwise for screw-ends, and made of the exact shapes, forms, dimensions, lengths, widths, and diameters shown on drawings, with angular and square threads, as the case may be, to all bolts, spindles, &c., with the correct pitch, angle, and depth. All portions fastened with screws, bolts, or rivets to fit close together. The chains attached to blades of penstocks, and the whole of the wrought-iron gratings, channel-irons, &c., connected therewith, wrought-iron girders to working platforms, hand-rails to platforms and stairs, to be galvanised before being fixed in the works.

222. All joints in plate, angle,  $\Gamma$  irons, &c., to be made only in such positions as shown on drawings and where directed; and all covering plates, wrappers,  $\Gamma$ , and angle irons to be truly cut at ends to insure a perfect fit. Joints.

223. All screw-bolts and screws to flanged pipes, penstocks, valves, all other castings and wrought-iron work of every description, to be of the exact diameters and lengths shown on drawings, with hexagon heads and nuts, and to be angular threaded with the correct pitch and angle of the Whitworth screw. Screw-bolts and screws.

224. Joints of shafts, spindles for penstocks, axle shafts for strainers and traveller, engines, &c., to be made by said shafts being truly turned and cut at ends, and cast-iron flanged and turned sockets, with turned spigot and faucet, the internal diameter of socket to be turned exactly, and slightly of less diameter than ends of shafts. Sockets and ends of shafts to be grooved, as shown for steel key. Sockets to be heated and then fitted on to ends of shafts with keys, after which the flanges to be bolted together, forming coupling, as shown on drawings. Joints of shafts, &c.

225. All joints and working parts of wrought-iron on penstocks, valves, strainers, standards, engines, travelling cranes, travellers, gratings, troughs, louvre shutters, brackets, &c., to be turned, scraped, or ground and glazed bright, as the case may require, and as shall be directed. Joints and working parts.

226. All handles and levers for working penstocks, valves, strainers, travellers, travelling cranes, &c., to be ground and glazed bright. Handles and levers.

227. The rivets throughout to be made from  $\frac{1}{2}$ -inch,  $\frac{3}{8}$ -inch,  $\frac{1}{2}$ -inch,  $\frac{7}{8}$ -inch, 1-inch, and  $1\frac{1}{8}$ -inch iron respectively, with heads and necks, as shown on drawings. The Engineer may require any holes to be drilled and the bolts turned for same, or he may order bolts to be substituted for rivets, or other changes of the kind, in such places as he may consider necessary, without extra charge. Rivets and bolts.

228. All rivet, bolt, and screw holes to correspond as to diameter and position with the drawings, and to be carefully drilled parallel, and at right angles with face of work. All the holes in booms of main girders, bearing plates, lattice bars, wrought-iron aqueduct pipes, rolled  $\perp$ , channel,  $\Gamma$ , and flat bar irons to be drilled—the respective pieces being clamped in their proper positions and secured under drill and bored right through; holes in cylinder bracing, cross-girders, and wind bracing girders may be punched. No drifting or rhymering to be done without the consent of the officer in charge, and then rhymering only when the plates can in no other way be made to coincide. Holes which are directed to be punched or drilled at the building site to be about  $\frac{1}{8}$  inch narrower than the diameter of the rivet required, so as to insure a good fit after its being enlarged with the rhymer. Where several holes meet each other in the parts to be united, a horizontal dislocation of not more than 5 per cent. of the diameter of the hole is allowable, the hole then to be made perfectly equal with the rhymer, and not by filing on one side, and rivet-bolts of proportionately large size to be used in holes thus enlarged. Holes for rivets, bolts, &c.

229. All rivets to be inserted at a bright heat, after being carefully freed from scales, into the duly cleared holes, to be quite firm after the head is completed. If not firm, rivets to be at once removed and replaced by others, and of larger size when directed. In putting together parts, care to be taken that none of them are forced into one-sided tension; any portions distorted in riveting the connections to be at once loosened and the faults remedied. All rivets to be finished with cup heads, and when countersunk the sinking to be drilled and the heads to be finished perfectly flush. All rivets and heads of bolts to be countersunk where plates, when fixed, will bear on other work, and where they form the inner surfaces of aqueduct pipes. All riveting to be done in the neatest and most workmanlike manner. Riveting.

230. Wrought-iron gratings to be of the exact dimensions, straight or curved, as the case may be, the bars spaced and riveted as shown, all bars to have rounded-off top surfaces. All hooks, rings, and chains attached to flushing valves, &c., to be galvanised before being fixed in the works. Wrought-iron gratings.

231. Wrought-iron ladders in lengths shown on drawing, and as may be ordered, consisting of  $2\frac{1}{2}$ -in. x  $\frac{3}{4}$ -in. uprights, spaced  $13\frac{3}{4}$  inches apart, and  $\frac{7}{8}$ -inch round bar rungs spaced 12 inches from centre to centre. Joints of uprights to occur only at supports, where directed. Supports, spaced as shown, to consist of two 6-in. x 3-in. x  $\frac{3}{4}$ -in. channel irons fixed to uprights with  $\frac{3}{4}$ -inch screw-bolts, stiffened off at ends, at top and bottom, with  $\frac{1}{4}$ -inch plates varying from 12 inches to  $13\frac{1}{2}$  inches in length, riveted on to top and bottom flanges of channel irons, as shown. Wrought-iron ladders.

#### *Cast-iron Work.*

232. The whole of the castings to be perfectly sound, free from all cold shuts, honeycomb, holes, or other defects; to be cast in dry sand moulds, unless where otherwise directed. Casting.

- Castings.** 233. All castings to be true in sectional form, straight longitudinally where shown to be so, or of such shapes, projections, curves, angles, and forms as shown on drawings; and each portion of such castings to be of equal strength and of the specified thickness throughout its respective length.
234. The external and internal surfaces of all castings to be perfectly clean and smooth and in strict accordance with sections.
- Casting cylinders and pipes.** 235. All cylinders and pipes to be cast vertically, with the socket or flanged end downwards; to be straight longitudinally; all straight pipes with faucet, or flanged, and with spigot ends, to have the latter cast 9 inches longer than shown on drawings; all cylinders to be cast with such head of metal as shall be directed. After the castings have been cleaned and coated, the head of metal over the cylinders, and the 9 inches at spigot ends of pipes to be cut off, so as to leave same perfectly square on section and true and equal in circumference, so as to fit the socket, leaving an equal space all round of the exact thickness shown on drawings for lead joints.
- Faucet ends.** 236. The faucet of each pipe or casting to be perfectly square and true, of the exact dimensions shown on drawings, and to be cast with a groove of the size and depth as required by the Engineer. The faucet of large circular and oval pipe for expansion joints to be cast as shown with an inner narrower faucet and projecting rim, and both inner sides of narrower faucet and of projecting rim to be truly turned and polished.
- Faucet for expansion joint.** 237. The feathers and flanges, where such are shown, to be of the exact widths, forms, and thicknesses, and all surfaces of contact to be planed and turned to true and even faces.
- Feathers and flanges.** 238. All spigot ends for expansion joints, where shown on drawings, to be cast with a recessed end for reception of wrought-iron ferrule on inner face, and a corresponding projecting face on the outside; said recessed inner and projecting outside faces to be truly turned and polished to the exact cross section for reception of lead joint, gun-metal packing ring, and wrought-iron cover-plate, as the case may be.
- Spigot ends for expansion joints.** 239. The thimbles for expansion joints for large, circular, and oval pipes, to be cast with faucets as described in clause 236, and with web-plates, ribs, and bed-plates cored out, with bosses truly bored for heads of anchor-bolts; the whole to be of the exact shapes, forms, and dimensions, as shown on drawings.
- Thimbles for expansion joints.** 240. The flanges of gas-check frames to be provided with a projecting face, planed and turned to true and even faces, of the exact dimensions shown on drawings.
- Gas-check frames.** 241. All holes in hinge-brackets at top of gas-check frames to be truly bored to the diameter required for the reception of hinge-bolts.
- Boring holes.** 242. All bolt-holes to be of the exact sizes, spaced as shown, and to be truly bored and turned.
- Bolt holes.** 243. All flange-joints, unless where otherwise directed, to be made tight with red lead.
- Flange joints.** 244. Frames of penstocks to be of the different parts, and of the exact shapes, forms, and dimensions, with all screw and bolt holes, and the exact circular valve openings, with flanged end at back, projecting rim round opening in front and at sides of same, with cap-pieces on top, upright slide frames, flanged, bolted together, cored out with bosses and web-plates between, to receive front guide-plate, with inner projecting faces screwed into bosses of upright frames. Guide-pieces, with flange and web, faced on surface of contact, with boss in centre, the latter truly bored and turned for reception of brasses and spindle to pass through, fitted with bolt-holes, and screwed on to guide-plates.
- Penstock frames.** 245. All landing and other plates and grates to be complete with ribs, flanges, hinged and other lids, close or ventilating covers, girders of the exact shapes, forms, dimensions, projections, recesses, &c., as shown on drawing.
- Landing grates and plates.** 246. Valve blades to be of the exact diameters, forms, shapes, and dimensions, with circular projecting faces back and front, and vertical projecting faces corresponding with and bearing on projecting faces of guide-plates and framing, and vertical racks or brackets, with eye-holes truly bored for fixing foot of valve spindle, as the case may be. All seatings to be truly faced and bored out to receive gun-metal faces, and all stuffing boxes, glands, foot-step bearings, and journal-boxes, to be bored and turned and polished where directed.
- Valve blades for penstocks.** 247. All girders, brackets, standards, wheels for chains, and balance weights, tubes, boxes, glands, plummer-blocks, and boxes for lifting or turning spindles, as the case may be, foot-brackets for upper spindles, flanged pipes for spindles, street-boxes, &c., of the different parts, and of the exact lengths, forms, and dimensions, to be truly faced, turned, and polished at all joints, bored and turned for reception of screws, nuts, and brasses, with all bolts and screw-holes of the sizes shown, bolted at all joints, and all faces of flange-joints and working parts and other faces, where directed, to be truly planed, turned, faced, and scraped, to the necessary surfaces.
- Sundry ironwork to be turned and bored.** 248. All penstocks, scour-valves, &c., to be carefully and truly fitted and fixed together, with all lifting and turning gear, gun-metal facings, spindles, wrought-iron work, street-boxes, screws, bolts, nuts, &c., complete, in strict accordance with drawings and dimensions figured thereon, and all valves to close watertight.
- Penstocks, scour-valves to be fitted.** 249. The frame and flap-valve of flushing valve, with bracket, pulley, &c., to be complete, with wrought-iron galvanised chain, to be cast of the exact diameter, shapes, forms, and dimensions; the flushing valves to have a projecting rim all round, the inner face truly faced and turned to a "V shape" of the exact dimensions, so that when the flap is placed in position the edge of the V rim to lie exactly against the centre line of the square tuck or lead-packing of opposite groove in frame, planed out to a dovetail for the purpose.
- Flushing valve.** 250. Couplings, flanged, turned, bored, faced, with turned and bored spigot and faucet, and bolt-holes of the exact diameters, to be of the exact forms and dimensions for making joints of valve-spindles, &c.
- Couplings.** 251. Cast-iron frame with 22-inch diameter opening, with non-ventilating lid fitting easily into frame, complete with sawn and tarred ironbark wood-bricks fitted into panels, the whole to be in strict accordance with drawings and dimensions shown thereon.
- Cast-iron frame.** 252. Scupper-pipes, with cistern-heads, and grating-cover for inlets of scupper-pipes, and plain cover-plates over inlets of scupper-pipes, as shown, to be cast to the exact shapes, forms, with the exact openings, and to the dimensions figured on drawings.
- Scupper-pipes, grating-covers, and cover-plates.** 253. All grooves for stop-boards to be cast with a connecting-ledge at top, to be cut off when casting is completed. All grooves to be cast true, of the exact dimensions, shapes, and forms; and all working parts of frames and slide-valves, grooves, and stop-plates, to be truly planed and faced so as to fit, but not too tight. All stop-plates to be complete with wrought-iron shackles, 12-foot galvanised chain, hook, and rings.
- Stop-board grooves.**

*Gun-metal Work.*

254. All portions tinted yellow on drawings, as in nuts, bolts, shackles, bearings, and working parts, nuts and naves of wheels, seatings of valves, penstocks, standards, hangers, and brackets, and all other brasses in working and lifting gear, &c., to be made of gun-metal. The gas-check flaps to be of Muntz or delta metal. Gun-metal tinted yellow.  
Gas-check flaps.

255. The whole of the castings to be solid and perfectly sound, and free from all honeycomb, holes, or other defects. Castings.

256. All spindles to be cast on end, having a riser on top of each not less than 3 feet in height, after which they are to be turned and finished to the exact lengths and diameters; to be straight, and work true in stuffing boxes, nuts, glands, &c. Spindles.

257. All screw ends and nuts, unless where otherwise specified and directed, to be angular, threaded with the correct pitch and angle; and all naves of wheels, nuts for lifting gear in standards and for off-let valves, bearing nuts of end brackets for shafts, &c., where shown, to be turned with the square thread and correct pitch, and angle of the Whitworth screw. Nuts and screws.

258. All nuts, naves, pins, lubricators, shackles, eyeholes, sockets, hinges, hinge-bolts, guide and other brasses in plummer blocks, brackets, standards, valves, penstocks, &c., to be truly bored, turned, faced, and finished to the exact lengths and diameters, shapes, and forms, and to be straight and work true on all bearings and working faces. General directions for finished work.

259. All projecting rims, straps, eyehole brackets, &c., to be provided and fitted on to gas-check flaps, to be cast of the sizes, shapes, and forms as shown on drawings, to be faced on surface of contact, and to be soldered on to the flaps with zinc, after having been placed truly in position, and then riveted as shown. All gas-check flaps to be of the exact thickness shown on drawings. When the rims and straps for each flap are not cast in one casting, then they are to be cast in parts as shall be directed; and prior to fixing such parts in position, they are to be truly fitted and jointed together. All such joints to be scarfed and braced, as, viz., the edges filed or scraped clean and bright, covered with spelter and powdered borax, and exposed in a clear fire to a heat sufficient to melt the solder, which, for all scarf-joints, to be an alloy composed of four parts of copper to three of zinc. All scarf-joints to be placed where directed. All hinge axles to be truly turned. All links of shackles to be made with one joint, scarfed, brazed, and riveted together. Gas-checks.  
Soldering.

260. At expansion joints of large cast-iron pipes, where shown, a gun-metal packing ring of the size specified, to be provided, placed, and fitted round spigot end of pipe, carefully set up flush with end face of inner recess of faucet. Packing ring.

261. All portions of castings, as exposed surfaces of nuts, hinge-bolts, hinges, shackles, rims, straps, brackets, hooks, links, &c., are to be cleaned as they leave the mould, and all irregularities to be removed. All other portions of gun-metal work to be truly faced on all surfaces. All gun-metal facings and fittings to be truly turned and faced on all surfaces, to fit exactly, to be forced into positions, screwed where shown, and to sit perfectly firm and true.

*Wrought-iron Work, Gun-metal Work, and Cast-iron Work.*

262. The whole of the wrought-iron, cast-iron, and gun-metal work to be of first-rate quality and workmanship, in strict accordance with the specification and the dimensions and patterns shown on the drawings, and any details which the Engineer may provide during the progress of the contract. Quality and workmanship.

263. Wrought and cast ironwork and gun-metal work not to be more than 3 per cent. below the scheduled weight, and the contractor shall only be entitled to payment of the weights as per schedule, at the various prices set forth therein, and payment will not be made for any excess on such weights. Weights.

264. All ironwork and gun-metal work supplied by Government to the contractor to be delivered free of charge at the various sites of the works where they are required. For each article so delivered the contractor shall give a written receipt, after which he shall be held solely responsible for same; and shall, if any such article be lost, stolen, damaged, or destroyed, refund the cost to the Government. Contractor to give a receipt for ironwork supplied.

265. All ironwork and gun-metal work, &c., provided by the Government, which, at the completion of the contract, by direction of the Engineer, has not been built or permanently fixed in the works, shall be conveyed by the contractor to the site of the Field Office, or to the iron store at Camperdown, as may be directed. Surplus iron-work.

*Painting.*

266. All wrought-iron work (except where otherwise specified and directed) before leaving the foundry to be scraped and cleaned, and well coated with boiled linseed oil; and, prior to being fixed in position (excluding internal surfaces of circular and oval wrought-iron tubing, and excepting all working parts) after it has been cleaned and scraped free from scales, &c., and inspected, to receive two coats of anti-corrosive paint over all surfaces, and after being fixed in position, to be finished with two coats of best oil-colour, in approved tints. Wrought-iron work.

267. All bolt-heads, washers, nuts, straps, and all other exposed ironwork of timber bridges above level of kerbs, ordnance fencing, &c., to be finished with two coats of black varnish instead of oil-colour.

268. The whole of the cast-iron work to be properly cleaned immediately after completion; and, after being inspected, except where otherwise specified, to receive over all surfaces two coats of anti-corrosive paint (except working parts and joints), and to be finished afterwards with two coats of best oil-colour, in approved tints. Cast-iron work.

269. All carpenter's work of timber bridges above level of kerbs, and all ordnance fencing above ground, handrails, travelling cranes, &c., to be properly prepared, knotted and primed, and painted with four coats of best oil-colour, finished with approved tints. All tenons, mortises, notches, halvings, joints, scarfs and butting surfaces, to receive two coats of approved paint before being fixed in position. Carpenter's work.

270. No paint to be applied during or immediately after wet weather, or while surface of timber or metal work is wet; and an interval of forty-eight hours must elapse between each application.

*Tarring.*

271. All cast-iron cylinders, pipes, short lengths, bends, junctions, and any other castings, &c., which will be placed or laid under water, or which are to be covered up in earth, concrete, &c., and all non-ventilating man-hole covers, street-boxes, flushing-flaps and frames, scupper pipes, precipitating tanks, grooves,

grooves, landing plates and frames, grates, cover-plates, gully grates, &c., as soon they have been cast and inspected, to be properly cleaned and then heated, and whilst hot to be dipped or coated twice in hot gas-tar.

Wrought-iron work.

272. All flat, segmental, and buckled plates, rolled girders, bulb T irons, &c., before being placed in position, unless otherwise ordered, to receive one coat of tar, and after erection is completed, to receive a second coat; the tar to be coal tar, mixed with kerosene in the proportion of three of tar to one of kerosene, and applied hot.

Timber work.

273. Kerbs, flooring planks, timber in girders, longitudinal stringers, cross-girders, corbels, capsills, sills, piles, pier-bracing, abutment platforms, ends of handrail posts below level of tops of kerbs, to receive three coats of tar and composition; the first coat to be all tar laid on hot, the second and third coats to be composed of seven parts coal tar, four parts of Stockholm tar, and one part of pitch thoroughly melted together and applied hot, the last coat on top of deck to be well sprinkled with a layer of clean sharp sand and lime. All joints and butting surfaces to be well payed with the hot composition before fixing, and in finished work the composition to be poured into interstices and joints. Any timber inaccessible for tarring when fixed, to receive three coats before being placed in position.

274. No tar to be applied during or immediately after wet weather, or while surface of iron or timber is wet; and an interval of forty-eight hours to elapse between each application.

#### *Tar Varnish.*

Interior surfaces of wrought-iron work.

275. The whole of the interior surfaces (working parts and joints excepted) of the wrought-iron circular and oval tubes, cast-iron thimbles, expansion joint castings, short lengths of cast-iron circular and oval pipes, &c., after having been placed in position in the works, to be thoroughly cleaned of all scales, rust, and previous coating of linseed oil or paint, &c., and then to be coated twice with a tar-varnish composed of 30 gal. of coal tar, fresh, with all its naphtha retained, 6 lb. tallow, 1½ lb. resin, 3 lb. lamp-black, and 30 lb. freshly-slacked lime finely sifted; all materials to be approved of, and then to be intimately mixed as shall be directed, and applied hot, like paint.

#### *Day Labour.*

Prices given in schedule.

276. When "day labour" is required by the Superintending Officer to execute any works other than those for which a special price is given in the schedule of quantities and prices, the contractor shall provide the same at the several rates for "day labour" inserted in said schedule.

To include.

The price for day labour is to include supervision as well as all tools, lighting, and implements of every kind necessary for carrying on the work, and shall be returned in the usual monthly progress certificate.

Accounts to be sent in half-weekly.

277. The accounts for this "day labour" shall, however, be rendered by contractor to the Superintending Officer in half-weekly intervals, that is to say, during the forenoon of every Monday and Thursday, failing this he shall lose all claim to payments for the "day labour" performed by him during the preceding three days.

Length of day.

278. The schedule rates per day are for the day of eight hours. In the event of overtime and night-work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day-work.

#### *Measurements and Payments.*

Contractor to be present.

279. The contractor shall be present at all measurements, and, if required, assist in making the same. If he fail to attend after twenty-four hours' notice in writing has been delivered to him of the Superintending Officer's intention to take measurements, and clearly setting forth the locality of such intended operation, the measurements made by the Superintending Officer shall be binding on the contractor.

When and how measurements are to be made.

280. On satisfactory completion of any portion of the works, and at all other suitable times, the dimensions of such work shall be measured by the Superintending Officer, as specified, and recorded in a book kept for that purpose; and these quantities shall serve as the basis for arriving at the contract sum on completion of contract.

Progress payments.

281. For the purpose of making progress payments, the dimensions of still unfinished portions of the work will be measured in a summary way monthly, or as near as may be, but without prejudice to the ultimate acceptance or rejection of such unfinished portion of work.

Contractor to sign measurement book.

282. The contractor shall sign the measurement book each month, before the monthly progress payments are made, accepting the detailed quantities, prices, and amounts. Should he, however, disagree with the detailed quantities, prices, and amounts, he is at once to state in the measurement book in what particulars he disagrees, and the grounds of his disagreement; and unless this is done it is to be distinctly understood that the detailed quantities, prices, and amounts, as recorded in the measurement book, shall be binding.

Final measurements.

283. The final measurements, based upon the measurements made during the progress of the works, will be prepared within thirty days, or as nearly as may be after the completion of the work; and the contractor will be required to accept such measurement before the fixed deposit is returned.

#### *Junction with other Contracts.*

284. If two different contractors execute simultaneously two adjoining sections of the works, they shall be held jointly and severally responsible for effecting a proper junction of the sections.

#### *Suspension of Works.*

285. The contractor shall suspend the whole or any portion of the works, on receiving a written notice to that effect from the Engineer. He shall have no claim for loss or damage on this account, and such suspension shall in no wise vitiate the contract, but a commensurate extension of time for completing the works will be granted to the contractor, as set forth in clause 24 of the General Conditions.

#### *Duties.*

286. In the event of any materials being imported by contractor for use on this contract, no refund will be made of any duties which may be legally chargeable on such materials; and the contractor shall bear and pay all duty stamps, licenses, building or surveyor's fees or other charges or fees whatsoever legally demanded by any municipal or other authorities.

*Testing*

*Testing the Whole of the Works.*

287. It is to be distinctly understood that, on completion of the works, the Engineer shall have the power of ordering, and having the sewers, or portions of same, &c., closed in such order as he shall direct, and the whole of the sewers and aqueduct tubes, &c., filled with water for such a time as he may deem necessary for the purpose of testing the works; and any injuries, faults of whatsoever description, caused by or detected in consequence of such testing, to the work, shall be at once repaired, replaced by new work, and made good, the whole expense being borne solely by the contractor; and, after the completion of these repairs, replacing with new works, and making good any damages, injuries, faults, &c., the whole of the works shall again be tested, as before described, until they shall be satisfactory to the Engineer.

This is the schedule to specification marked "C" referred to in our annexed agreement with Her Majesty the Queen, dated the 16th day of May, A.D. 1895.

GEO. FORREST.

*"D."*

## GENERAL CONDITIONS.

*Interpretation of Terms.*

1. WHENEVER the terms hereafter explained in the present clause occur in these or any special conditions, or in the contract or specification, they shall be held to mean, and shall mean, as follows :—

"Government" shall mean the Government of New South Wales promoting this undertaking.

"Minister" shall mean the Secretary for Public Works of the Colony of New South Wales for the time being.

"Engineer" shall mean the Engineer-in-Chief having the principal charge of the works, or the person acting as such for the time being.

"Superintending Officer" shall mean any person or persons who may from time to time be entrusted with the superintendence of the works on behalf of the Government.

"Contractor" shall mean the person or persons who contracted to execute the works.

"Special conditions" shall mean any "special conditions" hereto attached and forming part of the contract; and such special conditions shall be read with the general conditions as part and parcel of the contract.

"Schedule of prices" shall mean the rates at which the contractor has offered or agreed to execute the contract, where the same is based on a schedule of prices; and be the basis on which the value of any extra works or of any deductions shall be calculated, and progress payments made, whether the contract be one of a schedule of prices or a bulk sum.

"Plans" shall mean and include all drawings referring to the works and explanatory of, or supplementary to, the specification.

"Works" shall mean the works set out in the specification and plans, or, in the event of there being no plans, in the specification only.

"Net claim" shall mean the sum claimed by the contractor after deducting therefrom the sum acknowledged by the Department to be due.

"Net award" shall mean the sum awarded on arbitration, after deducting therefrom the sum acknowledged by the Department to be due.

*Supply of Labour, Materials, and Plant.*

2. The contractor shall, except in so far as the specification may expressly state to the contrary, provide at his own cost and expense all labour, materials, and plant, and everything which the Engineer may consider necessary for the proper and complete performance of this contract. No materials or plant placed on the site of the works shall be removed therefrom, or otherwise disposed of, without the consent of the Engineer.

*Plans, Specifications, &c.*

3. The plans and specifications represent generally the form, dimensions, and description of the several works. Where any discrepancy exists between the dimensions as indicated by the scale and those marked in figures, the figures are to be considered as correct, and are to be taken in all cases in preference to the measurements by scale. Or if there be any discrepancy between the figures or dimensions, or the form of construction, or the material as indicated in the plans, and the dimensions and materials given in the specification, the directions of the specification shall be adopted; and in all cases of defective description, or any ambiguity, the explanation given by the Engineer shall be binding upon the contractor. Also, anything contained in the plans, and not in the specification, or anything contained in the specification and not shown in the plans, shall be equally binding as if it were contained in both. If neither specification nor plans contain any mention of minor parts, which, in the opinion of the Engineer, are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided by the contractor without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are, included in this contract.

All

All works described in, or implied by, the specification or shown in any of the plans, or set forth in any lists or tables thereon, or attached thereto, as well as those expressly provided for, are to be made and executed in every detail conformably to the several plans already prepared or which may be prepared hereafter for the purpose of this contract, in strict accordance with the provisions of the specification and conditions, and to the entire satisfaction of the Engineer.

*Copies of Plans, &c.*

4. A copy of all plans and specifications required by the contractor for carrying on the works will be provided by the Government, but must be returned before a final certificate for the work can be given. Any additional copies which may be required and are supplied by the Department shall be paid for by the contractor at a rate to be fixed by the Engineer.

*Setting out Works.*

5. The works will be set out—that is to say, all necessary centre lines and levels will be given to the contractor—except in the case of buildings, when, in the absence of setting out, a block plan will be supplied, from which he must work; but the contractor must satisfy himself of the accuracy of the setting out, as no work incorrectly set out or improperly executed will be paid for.

*Protecting and maintaining Signals and Marks.*

6. All bench marks, pegs, and signals on the surface, and all alignments, and level marks underground put in by the Engineer or Superintending Officer for the purpose of checking the contractor's work, will be confided to the care of the contractor. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true position; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they may, if necessary, be replaced by the Engineer or Superintending Officer at the contractor's expense, and the cost thereof deducted from any moneys then due or thereafter becoming due to the contractor.

*Possession of Ground.*

7. In giving the contractor possession of the site it shall not be deemed that he is to have the exclusive possession, but only a limited possession—that is to say, such possession as will enable him to perform the works comprised in this contract. The Minister may at any time take possession of any portion of the works or ground or intended site of the works for the purpose of carrying on any other works or for any purpose whatsoever. The contractor must procure for himself all other land which he may deem requisite for any temporary purposes, or for his own convenience.

*Access to Works.*

8. The Engineer, or any other person authorised by him, shall have free and uninterrupted access at all times to the works, and during working hours to any workshop or premises, not on the site of the works, where materials may be in preparation or stored for the purpose of this contract. The contractor shall give the Engineer all particulars as to the mode and place of manufacture of any of the materials proposed to be used in connection with this contract, and shall facilitate in every way the inspection of the same.

*Contractor's Risk.*

9. The contractor shall take upon himself the whole risk of executing the works to the satisfaction of the Engineer, and in accordance with the plans, sections, and specifications.

*Contractor to be represented.*

10. The contractor at all times during the progress of the works, when he is not personally superintending them, must have a responsible agent or overseer in charge to receive instructions from the Superintending Officer or Engineer, and to represent the contractor for all purposes of this contract.

Any notice or any written instructions to be given or delivered to the contractor under this contract shall be deemed to have been so given or delivered when given or delivered to the contractor or his representative at the work, or left at the contractor's usual or last-known place of abode or business.

*Order of Procedure.*

11. The Engineer shall have full power to decide in what order in point of time the various parts of the work or works comprised under this contract shall be carried out.

*Power of Entry.*

12. The Engineer shall have the power, at his discretion, without vacating this contract, to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this contract, and his doing so shall in no wise be held as a waiver of the responsibility of the contractor in respect of this contract, except in so far as any injury may accrue to such work so entered upon, by reason of any proved carelessness, to the satisfaction of the Engineer, of any employee of the Government, in which event the contractor shall be free from liability on account thereof, but not otherwise.

*Instructions to be obeyed.*

13. Should the contractor refuse or neglect to carry out the instructions of the Engineer or the Superintending Officer, the Engineer shall have the power of suspending the usual monthly certificate until such instructions have been complied with.

*Power to Dismiss Men.*

14. The Engineer may require the dismissal, within twenty-four hours by the contractor, of any agent, overseer, foreman, workman, or other person employed on the works, and in the event of the contractor refusing or neglecting to comply with such requisitions, all further payments on account of the work may be stopped until such dismissal is effected.

*Bad*

*Bad Materials or Improper Works to be removed.*

15. The contractor shall be bound to remove, within twenty-four hours, if written notice from the Engineer or Superintending Officer to that effect be given, any materials or work, whether fixed or not, which may appear to the Engineer to be of an inferior or improper description; and, in case of refusal, the Engineer shall have the power to get such materials or work removed at the contractor's expense, and to withhold all payments until such instructions have been complied with.

*Extra Works—Omissions of Works.*

16. If at any time whilst the works are in hand it shall be deemed expedient by the Engineer to order material or work of a different description to that specified, or to increase or diminish the dimensions or extent of any works to be done under this contract, or to alter their situation or vary the form or dimensions of any of the said works, or of any part thereof, or to make any deviation or to substitute one class of work for another, he shall have full power to do so, and to order and direct any such increase, diminution, alteration, deviation, or substitution, and the works involved in any such increase, alteration, deviation, or substitution, shall be executed by the contractor if of the class of works provided for in the schedule of prices, at such schedule prices; and no such increase, diminution, alteration, deviation, or substitution of works shall in any way annul or set aside this contract, or extend the time for the completion thereof, unless the Minister shall see fit to grant such extension; but such additions or alterations shall be measured and paid for, or deducted from the contractor's account, as the case may require, according to the schedule of prices. Provided that if any portion of the works so ordered to be done shall not be, in the opinion of the Engineer, of the same value or class of works provided for in the schedule of prices, the same shall be executed by the contractor at such prices as may be agreed upon with the Engineer; but if the contractor and Engineer cannot agree as to the price to be paid, the Engineer may order and direct the same to be done by such person or persons as he may think fit. Before any extra work, or work of an altered value or class, is undertaken by the contractor, it shall be imperative for him to procure an order in writing from the Engineer for carrying out such extra or variation of work, and the contractor shall not be entitled to any payment for such extras or variations unless he produce the written order for the same, as aforesaid, and he shall not be entitled to plead that the Engineer omitted to give such written order, as it is to be distinctly understood that the onus of obtaining such order shall be on the contractor. The contractor shall not be entitled to any other rate than the schedule rate on any plea that the work was in a different position or of a different class from, or in a more difficult position than that shown on plan or specification, or carried out under circumstances not contemplated in the specification, unless an agreement entitling him to payment by other than the schedule rates shall have been previously made and signed by the Engineer and the contractor.

*Valuation of Omissions.*

17. The Engineer shall have the power to direct the omission of the carrying out of any part or parts of the said works, but not amounting to the omission of the whole; and the value of such work so omitted in such case, calculated at the schedule rates, or in the event of there being no schedule rates, calculated on the basis of the proportionate value which such work bears to the lump sum, as ascertained by the Engineer, whose decision on that point shall be final, shall be deducted from the contract sum, subject, however, to arbitration clauses Nos. 36 to 41.

*Net Measurements.*

18. The whole of the work shall be executed and paid for according to the contract dimensions, and no allowance will be made for any excess of dimensions above those found on the working plans now exhibited, or which may be afterwards supplied, notwithstanding any general or local custom to the contrary, unless such excess has been expressly ordered. In the case of dressed masonry all cubic measurements will be taken at the extremes, and in the case of rock-faced masonry all measurements will be taken to the draft. With regard to timber, all framed work will be paid to extremes, but in no case will scarfs in hewn or round logs be paid for.

*Contractor liable for injury to adjoining Lands, Properties, &c.*

19. The contractor shall not commit any act of trespass, and shall effectually protect all adjoining properties and owners thereof against any loss, damage, or injury that may occur through the carrying on of the works, whether to buildings, goods, property of any kind, or to persons; and in case any such trespass be committed, or any such loss, damage, or injury occur, the contractor shall make full compensation, and shall make good all or any such loss, damage, or injury; and if any such compensation for trespass, or any such loss, damage, or injury be recovered against the Government in the first instance, it may be deducted from any money due or coming due to the contractor under this contract, or may be recoverable from the contractor or his sureties as liquidated damages in that respect incurred.

*Damages, &c., to be paid for by the Contractor.*

20. All damage, injury, or loss that may happen to the works from any cause whatever during their progress must be made good by the contractor at his own expense; and the whole of the works must be delivered up, complete in every respect, according to this contract, and the care and maintenance of all works under this contract shall remain with the contractor until the Engineer shall, by notice in writing under his hand, inform the contractor that he has taken charge thereof; and until such notice shall have been given, the contractor shall be responsible for all accidents, from whatever cause arising, and shall make good all damages thereto.

*Contractor not to Sublet Works or Assign Moneys.*

21. The contractor shall not assign or underlet this contract, or any part thereof, or assign or mortgage, charge or encumber all or any of the moneys payable or to become payable under this contract, or any other benefit whatsoever arising, or which may arise, under this contract, to any person without the consent in writing of the Minister being first obtained. The contractor for each and every breach of this condition shall be liable to pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the

contractor under this or any other contract with the Government. And any permission to assign or underlet works to be done under this contract shall not discharge the contractor from any liability in respect of this contract, and shall extend only to the permission actually given, but not so as to prevent any proceedings for any subsequent breach of this condition; and all rights under these conditions shall remain in full force, and shall be available as against any such subsequent breach.

*Truck System not allowed.*

22. The workmen and labourers of every class employed on the works shall be paid their wages in full, in money, current coin of the Colony, at least once in every month, and no ticket or other system of payment by provisions, liquors, or goods will on any pretence be allowed; nor shall the contractor, or any person or persons employed by him, or in any way connected with him, establish any shop for the supply of provisions, liquors, or goods; nor shall the contractor oblige his workmen to take provisions, liquors, or goods of any kind from any person in particular. The workmen and labourers of every class shall be paid on the works if it be possible, or in some building in the vicinity; and in no case shall they be paid at a public-house or other place where liquors or refreshments are sold. The contractor, for each and every breach of this condition, shall pay to the Government the sum of £50 as and for liquidated damages; and the sum or sums payable as such damages may be deducted from any sum or sums due to the contractor under this or any other contract with the Government.

*Power of the Government to pay Workmen and Tradesmen.*

23. Before the payment of any money to the contractor, the Engineer may require from him a statutory declaration that the tradesmen supplying materials for or incidental to the works, and the workmen and labourers of every class employed on the works, have been paid their claims of every kind in full, in current coin of the Colony, and to the latest date at which such wages or claims are due; and the Engineer may withhold the payment of any money that may be due or become due to the contractor until such declaration has been made and delivered to him.

If the contractor shall fail or omit to pay the claims of any such tradesmen, workmen, or labourers, in the current coin of the Colony, it shall be lawful for the Minister or the Engineer, as often as the same shall happen, upon complaint of such failure or omission made by any such tradesman, workman, or labourer, and upon proof to the satisfaction of the Minister or Engineer of such failure or omission to pay the amount of such claim to such tradesman, workman, or labourer, and to deduct the same amount from any money then due or owing, or thereafter to become due or owing, to the contractor under this contract.

*Delay by Minister.*

24. If the contractor shall not be able to obtain possession of any portion of the ground required for the execution of the works to be done in connection with this contract, or if from the non-delivery, or any delay in the delivery to the contractor, of any materials which under this contract the Minister is to supply, or from any cause whatever arising out of the acts or defaults of the Minister, or any officers or servants in his employment, or from any accident happening to the said works during their progress not arising from the neglect or default of the contractor or his servants or workmen, the contractor shall be delayed or impeded in the execution of his contract, the contractor may from time to time within seven days of the happening or occurring of such act, default, or accident, apply in writing to the Engineer for an extension of time on account of such act, default, or accident, setting forth the cause of such application, and the Engineer shall, if the Minister think the cause sufficient, but not otherwise, allow by writing under his hand such an extension of time as the Minister shall think adequate; and the penalties, sets-off, and deductions to which under this contract the contractor is liable shall not attach until the expiration of such extension of time, but shall attach, and the contractor shall become liable to the same from the date of the expiration of such extended time or times. And unless the contractor shall make such application within the time and in the manner aforesaid, and unless and until the Minister shall allow such extension or extensions of time as aforesaid, the contractor shall not by reason of any delay arising from the cause or causes aforesaid, or any of them, be relieved in any way or to any extent of his liability to finish and complete the works within the time in this contract specified; and in default of his so doing, to pay and be subject to the liquidated damages, deductions, and sets-off as in these conditions provided; nor shall the Minister be deprived in any way or to any extent of his right to deduct or recover any sum or sums as liquidated damages, and not as or in the nature of a penalty or to make deductions or sets-off which under this contract he is entitled to make, deduct, set-off, or receive from the contractor for or by reason or on account of any delay in the completion of the work or any portion of the same, nor shall the rights, powers, and authorities by these conditions given to or vested in him be in any way affected.

*Patent Rights to be included.*

25. The contractor is to include in his tender the amount of all patent rights and royalties which may be claimed by any patentee or patentees for the manufacture and use of any portion of this work, and must undertake to liquidate the same when required to do so.

*Free Passes, &c.*

26. No free passes on any of the Government Railways will be granted either to the contractor or his agents, nor will any materials or articles of any description be conveyed free of charge.

*Conditions not to be Waived.*

27. None of the conditions of this contract shall be varied, waived, and discharged, or released, either at law or in equity, unless by the express consent of the Minister, testified in writing under his hand.

*Progress Payments without Prejudice.*

28. No progress payment given to the contractor shall prevent the Engineer from at any future time before the final settlement rejecting all unsound materials and improper workmanship discovered subsequently to the giving of any previous payment; and notwithstanding any approval given or made by the Superintending Officer that portions or the whole of the works have been satisfactorily performed, the Engineer may require the contractor to remove or amend at any future time previously to the final payment

on

on account of the work, any work that may be found not in accordance with this contract; and the contractor must remove and amend at his own cost all such work when so required; and if he refuse or neglect to do so, the Engineer shall have the power to carry out such work, and to deduct the whole cost thereof from any moneys that may be due, or that may become due, to the contractor.

If, in the opinion of the Engineer, further inquiry is necessary or desirable before any progress payment is made, he shall have the power to withhold the certificate on which such payment would have been made, for any period which he may consider necessary for the purpose of such inquiry.

#### *Security.*

29. Within fourteen days after the notice of the acceptance of his tender shall have been given to the contractor, or posted to the address of his last-known place of business or residence, he shall deposit with the Minister, or at the option of the Minister, in some bank or banks in Sydney, upon fixed deposit in the name of the Minister, a sum calculated at the rate of £5 for every £100 or part thereof on the amount of his tender up to the sum of £100,000, and at the rate of £1 for every £100 or part thereof in addition, for any amount over that sum, to be held by the Minister as security for the due and proper performance and completion of this contract until the Engineer has certified that the whole of the work in the said contract has been completed to his satisfaction, or until this contract has been cancelled by the Minister under the power given to him in that respect under clause 32 of these conditions, in which last-mentioned event happening the money so deposited shall become forfeited to the Crown, and shall be held by the Colonial Treasurer, for and on behalf of Her Majesty the Queen, as liquidated damages. If, however, this contract shall not have been cancelled under the said clause, and if the works comprised in this contract are not completed within the time mentioned in clause 34 of these conditions, the liquidated damages which under the last-mentioned clause are made payable to the Minister may be deducted and taken from the money so deposited.

If the contractor fail to deposit the sum as hereinbefore provided within fourteen days from the acceptance of the tender, or if he fail to execute the contract for the due performance of the works mentioned in the said tender, the Minister shall have the option of and full power and authority to declare such acceptance to be annulled, in which case the amount of the preliminary deposit will be absolutely forfeited to the Crown, as provided by the Regulations of the Tender Board.

No tenderer will be authorised to proceed with the work tendered for until he has made the deposit as aforesaid, and has executed the required contract for the due performance of the said works, it being hereby declared that for all or any work done or materials found and provided by the contractor before the due execution of the said contract, or the said moneys being deposited as aforesaid, he shall not have any right of action, claim, or demand against the Minister.

The contractor will be entitled to receive any interest that may be payable upon the fixed deposit of the money, if the money be placed in a bank at fixed deposit, as such interest becomes payable; but it is expressly declared that the Minister is not to be held liable or answerable in any way for any loss on the money so deposited, or for any loss of interest from the fixed deposit not being renewed.

#### *Payments.*

30. Progress payments may be made once in every month, unless the same shall become not payable by reason of anything contained in these conditions, on the certificate of the Engineer, as the work proceeds, in the proportion of 80 per cent. of the value of the work returned, until the sum retained reaches the amount of the deposit provided for in the preceding clause, when no further deductions will be made. The amount of the retention money will be held by the Minister, in addition to the cash security, unless otherwise provided for in the specification, until the Engineer has certified that the whole of the works have been satisfactorily completed, and the period specified for the maintenance of the said works has expired, and all accounts finally adjusted, when the retention money, in addition to the cash security, will be paid to the contractor; and it is expressly declared that until a certificate has been given by the Engineer to the Minister that the work done by the contractor has been executed and completed to his satisfaction, the contractor shall have no right or claim in respect of any work done or materials provided, nor to the payments from time to time to be made under this contract, or to the final payment upon the whole of the works being finished.

#### *Delay or Bad Work, Bankruptcy, &c.*

31. In case the Engineer shall be at any time dissatisfied with the mode of proceeding, or at the rate of progress of the works or any part thereof, or in case the contractor shall at any time neglect or omit to carry out the instructions of the Engineer, or to dismiss any person employed when required, or shall neglect or omit to remove any materials or work which he is required to remove under condition 15, or in case the contractor shall assign or underlet this contract, or any part thereof, or assign or mortgage, charge or encumber, or attempt to assign, mortgage, charge or encumber, all or any of the moneys payable or to become payable under this contract, or any other benefit whatsoever arising or which may arise under this contract, without the consent in writing of the Minister being first obtained, or in case the contractor shall make default in insuring and keeping insured, in cases where insurance is specified, and depositing the policies and receipts for premiums in accordance with these conditions, or in case the contractor shall become bankrupt, or shall make an assignment of his estate for the benefit of creditors, or shall make an arrangement or composition with his creditors, then and in every such case the Minister shall be at liberty, without violating this contract, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to take the works wholly or partially out of the hands of the contractor and to employ or contract with any other person or persons to execute the same, and for that purpose to take possession of and use all horses, materials, plant, tools, implements and things on or about the said works, without making any allowances for the same, and all damages and expenses thereby incurred shall be ascertained and certified by the Engineer, and together with any sum payable as liquidated damages under these conditions shall be deducted from any money that may be then due or may thereafter become due to the contractor or may have been deposited by him; and if the money then due, or thereafter becoming due to the contractor, or deposited by him, be not sufficient for that purpose, the balance remaining unpaid shall be a debt due by the contractor to the Minister, and may be recovered accordingly.

#### *Cancellation*

*Cancellation of Contract.*

32. In any or either of the events mentioned in the last preceding clause of these conditions, the Minister shall have the option and full power and authority in lieu of proceeding under such clause, and without prejudice to any right that may have accrued to liquidated damages under any of these conditions, to cancel this contract whether there are any works remaining to be done or not; and in such case the moneys which shall have been previously paid to the contractor on account of the works executed, shall be taken by him as full payment for all works done under this contract; and upon notice in writing under the hand of the Minister that he, under the authority of this condition, cancels this contract, being given to the contractor, this contract shall be cancelled, and thereupon all sums of money that may be due to the contractor, or unpaid, together with all implements in his possession, and all materials provided by him, upon the ground upon which the work is being carried on, or adjacent thereto, shall be forfeited, and all sums of money held as security or named as liquidated damages for the non-fulfilment of this contract, within the time specified, shall also be forfeited and become payable to the Government, and the said implements and materials shall become and be the absolute property of the Government, and with the moneys so forfeited and payable as aforesaid shall be considered as ascertained damages for breach of contract.

*Insurance.*

33. The contractor shall from time to time, when required to do so by the terms of the specification, insure the works against loss or damage by fire, in an office to be approved in the name of the Minister for the amount of the full value of the work completed, as determined by the Engineer, and shall lodge with the Engineer the policies and receipts for the premiums for such insurance, and shall continue such policies until possession is given up to the Government; in default of which the Minister shall be at liberty to insure and deduct the amount of the premiums paid from any moneys payable to the contractor, and may refuse payment of any certificate until such policies and receipts are handed in as aforesaid; but this insurance is to be no limit or bar to the liability and obligation of the contractor to deliver up the works to the Minister completed in all respects according to the contract. In case of loss or damage by fire the moneys payable under any such insurance shall be received and retained by the Minister until the works are finally completed, and shall then be credited to the contractor in the final settlement of accounts in the event of the contract not having been previously cancelled under these conditions.

*Time of Completion, &c.*

34. The contractor shall complete the whole of the works comprised in this contract within seventy-eight weeks from the date of the acceptance of his tender, and in the event of their non-completion at the specified times, should the Engineer not have proceeded under clauses Nos. 31 and 32 of these conditions, or either of them, the contractor shall pay, by way of liquidated damages, and not as or in the nature of a penalty, the sum of \_\_\_\_\_ pounds sterling for every week, or for every part of a week, that shall elapse after such specified time, until their completion, and which sum or sums may be deducted from any money payable to the contractor under this or any other contract. The contractor shall have no right to a certificate for payment after the date specified in these conditions for the completion of this contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer, unless the time for the completion of this contract shall have been extended by the Minister, in which case such extended time shall become the time for the completion of this contract, and it is to be expressly understood that the fact of the time having been so extended shall not in any way be taken as a waiver of this contract, or as annulling or setting aside this contract in any respect, nor be taken as releasing the contractor from any of the responsibilities or obligations of this contract, which, in all other respects, shall remain the same as if the time had not been extended.

The like liability also shall hold good as to the obligation of the contractor in the event of any advance being made to him from the retention money, or on material on the ground and not *in situ*.

*Maintenance.*

35. The contractor will be bound to maintain the works for a period of three months after their final completion and use by the Government; and if any part should within that period show signs of weakness, or of giving way, or if any defective workmanship or materials be detected, the contractor, when called upon to do so, shall make good the same at his own expense, to the satisfaction of the Engineer, before any moneys held by the Government on account of this contract will be paid. It is also to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the contractor during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the contractor of any liabilities or obligations whatever in respect of his contract.

*Arbitration.*

36. The following matters shall be decided by the Engineer, whose decision shall be absolute and final:—(1) All questions or disputes which shall arise respecting the true construction or meaning of the plans or specification, or the quality of the workmanship, or quantity or quality of materials necessary for the whole or any part of the contract. (2) All questions and disputes when the net claim shall not amount to the sum of £500.

37. All questions and disputes not hereinbefore provided for shall, if the net claim be £500 or upwards, upon the completion of the works under the said contract, and before payment of the retention money and the money deposited as security for the due carrying out of the contract, be fixed and determined by arbitration as hereinafter provided.

38. If either party consider that he has claims in respect of any matter in which arbitration may be claimed, he shall, within one month of the date of the final certificate, furnish to the other party full particulars in writing of such claims, breaches, doubts, disputes, and differences in respect of which he desires arbitration, giving distinct and separate items, and the amount, if any, claimed under each item; and the other party may thereupon furnish particulars of all claims he has in respect of such matters, irrespective of the aggregate amount of such claims; and the party furnishing the same shall be bound by such particulars; and no claim not included in such statement shall be taken into consideration at such arbitration, or become subject of arbitration or action; and the claim or respective claims so made as aforesaid shall be determined by arbitration, in the manner as hereinafter provided.

39. If both parties concur in the appointment of a single arbitrator, then the reference shall be to such single arbitrator; but if the parties for twenty-one days after the particulars first mentioned in the last preceding clause shall have been furnished, cannot concur in the appointment of a single arbitrator, the reference shall be to two arbitrators, one to be appointed by each party, or their umpire to be appointed in writing by such arbitrators before they commence the business of the reference; and the arbitration shall, subject to the express provisions herein contained, be made and held pursuant and subject to the Arbitration Act of 1892, or any statutory modification or re-enactment thereof for the time being in force.

40. The costs of and incidental to the arbitration shall be paid or borne by or between the parties in manner hereinafter mentioned, that is to say:—

1. If the sum awarded does not exceed the amount acknowledged by the Department to be due, the contractor shall pay all the costs of and incidental to the arbitration.
2. If the sum awarded shall amount to the sum claimed by the contractor, the Government shall pay all the costs of and incidental to the arbitration.
3. If the sum awarded exceeds the amount acknowledged by the Department to be due, but is less than the sum claimed by the contractor, the costs of both parties shall be added together and the total cost so ascertained shall be paid by the parties in the proportions following, namely:—The Government shall pay such sum as bears the same proportion to the total cost as the net award bears to the net claim, and the balance shall be paid by the contractor.

The award shall direct to, and by whom, and in what proportions the costs shall be paid, in accordance with the provisions hereinbefore contained; but the award need not specify the amount of such costs. Such amount shall, in the event of disagreement, be taxed or settled by the arbitrators or umpire, as between party and party, after the award is made. No costs shall be allowed as between solicitor and client. If either party shall be dissatisfied with the costs allowed by the arbitrators or umpire, the same may be taxed by the Prothonotary or other proper officer of the Supreme Court.

41. It is to be distinctly understood that all claims by either party to have any of the matters which may be submitted to arbitration so dealt with, must be made upon the whole of the work being completed, and before payment to the contractor of the retention money, or of the money deposited as security for the due performance of the contract, and that the acceptance by the contractor of payment of the retention money in cases where a bond to secure the completion of the works has been given, and in other cases of the retention money, or of any balance thereof, and of the money deposited as security for the due performance of the contract, shall be conclusive proof that the contractor has no such claim or claims.

SPECIAL CONDITIONS.

*Rates of Wages to be Paid.*

Not less than the several rates of wages as set out in the schedule herein shall be paid by the contractor (or—in the event of the Minister approving of the sub-letting of any portion or portions of the works—by the sub-contractor) for the various services to be performed under this contract, and, in case of dispute as to the classification of workmen, the decision of the Engineer shall be final; the rates, however, do not include those to be paid to apprentices or boys.

With respect to overtime, the recognised rules of the particular trade then prevailing in the district where the work is situated shall be observed.

If it shall at any time be proved to the satisfaction of the Minister that the contractor or any approved sub-contractor is paying or has paid a lesser rate of wage for services rendered during the progress of the works to any workman employed thereon than is set out in the following schedule, the Minister shall have the option and full power and authority to cancel the contract, as if such breach was and is one of the events mentioned in clause 32 of the general conditions. Any permission to sub-let shall not discharge the contractor from any liability in respect of the rate of wages to be paid under this contract.

In all classes of labour, forty-eight hours shall be considered as a week's work. This rule, however, shall not apply to those workmen, the necessities of whose employment demand that longer hours shall be worked, as in the case of firemen, who usually have to get up steam in readiness for the day's work. The necessity for longer hours of labour in special cases shall be determined by the Engineer, whose decision shall be final.

The

The following is the schedule referred to :—

Trade.	Rate.
	s. d.
Carpenters .....	8 0 per day.
Masons .....	10 0 "
Bricklayers .....	9 0 "
Plasterers .....	9 0 "
Blacksmiths .....	8 6 "
Boilermakers and riveters .....	9 0 "
Fitters .....	9 0 "
Painters .....	7 6 "
Plumbers .....	8 6 "
Shipwrights .....	9 6 "
Copper and brass workers .....	9 0 "
Moulders .....	7 0 "
Engine drivers .....	7 6 "
Workmen not included in the foregoing list .....	6 0 "

Department of Public Works, Roads, Bridges, and Sewerage Branch.

TENDER FORM.

IN pursuance of advertisement in the *Government Gazette*, we, the undersigned, do hereby tender to provide the material and perform the various works required in and about the full and proper construction, erection, and completion of the Northern Main Sewer, Leichhardt and Annandale section (Contract No. 77), agreeably to the plans, specification, schedule to specification, special condition, and general conditions, which have been inspected and lodged by us for the sum of £15,500, and to complete the same within eighteen months from the date of the acceptance of this tender; and we hereby undertake that we will, within fourteen days from the date of notification of the acceptance of the said tender, execute and deliver to the Minister for Public Works, a valid legal contract with Her Majesty the Queen, embodying the terms and conditions above mentioned, and to provide the security required by clause 29 of the said general conditions; and we enclose herewith our cheque for the sum of £160 as a preliminary deposit: and we agree that such sum shall be absolutely forfeited if we at any time within thirty days after the said tender is opened withdraw same, or if, in the event of this tender being accepted, we fail to complete the above-mentioned contract within fourteen days thereafter; and further, that this tender is made subject to the conditions contained in the Tender Board Regulations, printed on the back hereof, and by which we agree to be bound.

Dated this 13th day of March, 1895.

CARTER, GUMMOW, & CO.,  
Box No. 10, North Sydney.

Witness,—A. R. BURKITT.

TENDER BOARD REGULATIONS.

No tender shall be received after eleven a.m. on the day named for the receipt of such tender, unless there are circumstances which, in the opinion of the Members of the Board then sitting, render it desirable to do so.

It shall be the duty of the President, Vice-President, or the senior member present, as the case may be, as soon as the tenders shall have been opened and the necessary particulars ascertained, to publicly announce the number of tenders received for each work and the name of the lowest tenderer; but no tender shall be accepted until the head of the branch, under whose directions the work is to be carried out, has reported upon the whole of the tenders received.

The Secretary shall, as soon as practicable after the Board has adjourned, exhibit in a conspicuous position, in the Public Works Office, a full statement of the tenders received, showing the work, the name of the tenderer, and the amount of each tender.

All envelopes containing tenders must be addressed to the President of the Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000... ..	£10 0 0

For all sums over £1,000 one per cent. on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a bank draft.

All

All deposits, with the exception of that of the successful tenderer, shall be returned by the Secretary to the person entitled thereto, as soon as possible after the Board shall have adjourned, and the deposit made by the successful tenderer shall be returned to him on his executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200 the deposit with tender shall not be returnable until the service is satisfactorily completed.

Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal, and rejected accordingly.

In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all moneys deposited by him on account thereof or in connection therewith, shall be forfeited to the Crown, and in such case be paid to the credit of the Consolidated Revenue of the Colony.

Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted; but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

In submitting a tender, the full Christian name of the tenderer must be given, or when the offer is in the name of a firm, the names in full of each member. When bondsmen are required, the names in full, occupations, and addresses must be stated in the tender. The omission of this information will render the tender liable to be declared informal.

The Board shall not be bound to accept the lowest or any tender.

The Board-room shall be open for the admission of the public while the tenders are being opened and declared.

#### SUPPLEMENTARY SPECIFICATION.

The structure above the level of the skewbacks of main arches to be constructed as shown on drawing which accompanies the contractor's tender of cement mortar (except the cement facing), composed of one part of cement to three parts of sand, and wrought-iron rods on the "Monier system."

The foundations of piers are to be in conformity with the drawings attached to the contract, except as regards to the extra size necessitated by the larger pier shown on the contractor's plan, and are to be to the satisfaction of the Engineer.

Should the piers be required to be put down to a greater depth than shown on the drawings, or a greater number of them require piling than shown, the work is to be executed as ordered without extra payment being made.

The piers are to be built with sandstone concrete of the quality specified, and faced with cement mortar, composed of one part of cement and two parts of sand.

The cement facing of the structure, above the level of the springing of main arches is to be composed of one part of cement and one part of sand.

The works generally are to be carried out in accordance with the specification, schedule to specification, and the plans therein referred to, save and except such structural parts as are to be carried out under the "Monier system," or necessarily enlarged to meet the requirements of the contractor's plan, and within the time set out in the general conditions.

The contractors shall continue to maintain the said works at their own cost after the period of maintenance set forth in the general conditions, for a further period of three years, computed from such date to the satisfaction of the Engineer, whose decision shall be final and conclusive upon all points concerning workmanship and materials, and the permanency and durability of the said works, and the contractors shall enter into a bond to Her Majesty the Queen in the penal sum of £12,000, and find two sufficient sureties to enter into separate bonds in the penal sum of £6,000 each, to secure the removal of so much of the said works as shall have been constructed on the "Monier system," if the Engineer shall be dissatisfied with the same at any time during the said periods of maintenance, and to re-erect and  
construct

construct the said works at their own cost and expense in accordance with all things with the specification, schedule to specification, and plans therein referred to, within thirty-nine weeks from the date of being called upon so to do.

This is the supplementary specification marked "G" referred to in our annexed agreement with Her Majesty the Queen, dated the \_\_\_\_\_ day of \_\_\_\_\_ A.D. 1895.

GEO. FORREST.

"H."

Gentlemen,

Public Works Department, Sydney, 11 April, 1895.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated the 13th March last, is accepted for the construction of the northern main sewer, Leichhardt and Annandale Section, No. 77, at the sum of £15,500, in the terms set out in the supplementary specification, a copy of which is sent herewith, and subject to the following special conditions, viz. :—

That if it shall be represented to the Secretary for Public Works at any time during the progress of this contract that an undue number of men are being employed thereon who have not been domiciled in this Colony for six months previously to such employment, and such allegation be proved to his satisfaction, the Minister shall have the power to call upon you to discharge any or all such men, and on such direction being conveyed to you under the hand of the Under Secretary for Public Works, you shall discharge such men forthwith, and in the event of your non-compliance with any such direction, the Minister shall have the power to declare this contract to be cancelled as if this stipulation had been expressly set out in the cancellation clause of the general conditions relating to this contract.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract modified by the supplementary specification above referred to, and the plan submitted with your tender, and to be completed within seventy-eight weeks from this date.

A fixed deposit receipt, in favour of the Secretary for Public Works, for the sum of £775 will be required as security for the due performance of contract within the stipulated time, and a personal bond in the sum of £12,000, and two bondsmen in the sum of £6,000 each in connection with the maintenance as set out in the supplementary specification. Will you be good enough to notify to me your assent to these terms, and at the same time submit the names of two responsible persons who are willing to act as your sureties.

I have to refer you to the Engineer-in-Chief for Metropolitan Sewerage Construction for further information, and to request that you will, when required to do so, call upon the officer in charge of bonds and contracts at this office with your sureties for the purpose of executing the necessary documents for the due observance of your contract.

I am, &c.,

J. BARRLING,

Under Secretary.

Messrs. Carter, Gummow & Co., contractors, Box No. 10, North Sydney.

#### Fixed Deposit Receipt.

(Due 29th April, 1896.)

BANK OF NEW ZEALAND.

Incorporated by Act of the General Assembly.

No. A22187.

*Deposit Receipt.*

Sydney, N.S.W., 29 April, 1895.

RECEIVED from 22187, the Under Secretary for Public Works, the sum of seven hundred and seventy-five pounds as a fixed deposit, repayable at the end of twelve months, bearing interest for that period only at the rate of three and one-half per cent. per annum from the date hereof.

For the Bank of New Zealand—

GEO. A. WILSON, Manager,  
 S. H. BATCHELOR (for Accountant).

£775.

[Not transferable.]

When payment of this receipt is required, this receipt must be returned duly endorsed.

### No. 13.

#### The Clerk-in-charge of Bonds and Contracts to The Under Secretary for Public Works.

*Contract No. 77.*

THE tender of Messrs. Carter, Gummow, and Snodgrass, trading as "Carter, Gummow, & Co.," was on 11th April last accepted for the above work. On the 29th of the same month they placed £775 (five per cent. on the estimated contract amount) to the credit of the Under Secretary with the Bank of New Zealand, Sydney, as security for the due performance of their contract; and on 16th May following executed the contract documents, it being stipulated that the contractors were to remove so much of the works at their own cost as should have been constructed on the "Monier" system, if the Engineer should be dissatisfied with the same at any time during either of the periods of maintenance set out in the general conditions and supplementary specifications respectively, and to rebuild according to the original plans and specifications, and to provide for the uninterrupted flow of sewage during such rebuilding. For more abundant caution the contractors were also asked to enter into a joint and several bond in the sum of £6,000, and to provide two sureties in the sum of £3,000, each to secure the due carrying out of these stipulations. The contractors executed such a bond on 16th May last, and on the same date Messrs. James Gillan, of Dulwich Hill, householder, and George Forrest, of Marrickville, householder, entered into similar bonds in the sums already named. The sureties furnished the usual statutory declarations that they were respectively worth £6,000 over and above all their just debts and liabilities of every kind.

Drafts of agreement and bonds (three) are sent herewith.

HAROLD F. NORRIE,

26th September, 1895.

Clerk-in-charge of Bonds and Contracts.

## No. 14.

## Voucher for £723 9s. 2d.

CONTRACT No. 77 (Sydney Sewerage).—Progress Return, No. 2, showing quantity and value of work executed or fixed, and material advanced on, on the 8th day of October, 1895.

Estimated cost of work, £15,500. Progress payments, £666 10s. 2d.; present advance, £723 9s. 2d.; total, £1,389 19s. 4d.

D. C. M'LACHLAN,  
10/6/91.

I recommend acceptance of Bond and Hudson's tender at schedule rates.—R.H., 10/6/91. Under Secretary. J. BARLING, Vice-President of Tender Board.

## No. 1.—BOND AND HUDSON'S TENDER.

TENDER for Contract No. 79, Sydney Sewerage.

To the Honorable the Minister for Public Works, Bridge-street, Sydney, N.S.W.

We, the undersigned, do hereby tender and offer to construct, completely finish, and maintain the various works for Contract No. 79, Sydney Sewerage, in accordance with the conditions of contract, specifications, and drawings, prepared for that purpose in your Department, for or at the rates particularly entered in the accompanying schedule of prices, and enclose herewith deposit, as required by clause 20 of the general conditions.

Should this tender be accepted, we undertake to lodge with the Under Secretary for Public Works, within seven days from the date of notification of acceptance of this tender, a bank deposit receipt in the name of the Secretary for Public Works for the sum of two thousand pounds sterling, as security for the due performance of the contract.

In the event of our failing to do so, or to sign the required contract within the time specified in clause 20 of the general conditions, we hereby distinctly agree to forfeit to the Queen the sum deposited with this tender.

Sydney, 10th June, 1891.

BOND AND HUDSON,  
88, Sussex-street.

CONTRACT No. 79.—Schedule of quantities and prices for constructing and completing 1 mile 25·3 chains, more or less, of the main outfall sewer, North Shore, branch and pipe sewers, shafts, junctions, &c., subject to omissions, extras, extensions, additions, enlargements, deviations, or alterations, as provided by the conditions of contract.

The quantities in this schedule are not guaranteed as correct, but are merely given for the guidance of intending contractors, this being a schedule of Prices Contract.

## NOTES.

1. All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the specification.

2. The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

3. Items Nos. 31, 32, and 33 to include the cost of conveying the Government property from the contractor's store or field office to the various sites of works along line of main and branch sewers, at man-holes, gas-check, and shaft chamber, &c.

4. Prices for items Nos. 36, 37, 38, 39, 40, 41, 42, and 43 are to be for materials in strict accordance with specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other source, and the contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

5. Prices for items Nos. 44, 45, 46, 47, and 48 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day work.

6. The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over main and pipe sewers, reinstating all road and other surfaces, &c., or any other thing necessary in executing and completing each respective item, in strict accordance with plans and specifications.

## NOTES.

1. All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the specification.

2. The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

3. Items Nos. 31, 32, and 33 to include the cost of conveying the Government property from the contractor's store or field office to the various sites of works along line of main and branch sewers, at man-holes, gas-check, and shaft chamber, &c.

4. Prices for items Nos. 36, 37, 38, 39, 40, 41, 42, and 43 are to be for materials in strict accordance with specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other source, and the contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

5. Prices for items Nos. 44, 45, 46, 47, and 48 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day work.

6. The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over main and pipe sewers, reinstating all road and other surfaces, &c., or any other thing necessary in executing and completing each respective item, in strict accordance with plans and specifications.

## No. 4.—D. SHEEHY'S TENDER.

TENDER for Contract No. 79, Sydney Sewerage.

To the Honorable the Minister for Public Works, Bridge-street, Sydney, N.S.W.

I, the undersigned, do hereby tender and offer to construct, completely finish, and maintain the various works for Contract No. 79, Sydney Sewerage, in accordance with the conditions of contract, specifications, and drawings, prepared for that purpose in your Department, for or at the rates particularly entered in the accompanying schedule of prices, and enclose herewith deposit, as required by clause 20 of the general conditions.

Should this tender be accepted, I undertake to lodge with the Under Secretary for Public Works, within seven days from the date of notification of acceptance of this tender, a bank deposit receipt in the name of the Secretary for Public Works for the sum of two thousand pounds sterling, as security for the due performance of the contract.

In the event of my failing to do so, or to sign the required contract within the time specified in clause 20 of the general conditions, I hereby distinctly agree to forfeit to the Queen the sum deposited with this tender.

DANIEL SHEEHY,  
Goodhope-street, Paddington.

CONTRACT No. 79.—Schedule of quantities and prices for constructing and completing 1 mile 25·3 chains, more or less, of the main outfall sewer, North Shore, branch and pipe sewers, shafts, junctions, &c., subject to omissions, extras, extensions, additions, enlargements, deviations, or alterations, as provided by the conditions of contract.

The quantities in this schedule are not guaranteed as correct, but are merely given for the guidance of intending contractors, this being a schedule of Prices Contract.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate.	Amount.
					£ s. d.
	Excavation in tunnels, in hard rock, for sewer, branches, pipe-sewers, junctions, curves, &c., as specified in clauses 38, 42, 45, 48 to 63, including sub-ducts, timbering, unwatering, and removing the excavated materials beyond actual site of works, as viz. :—				
1	Excavation in hard rock, where gadding only is permitted.....	cubic yard	800	6/5/-	5,000 0 0
2	Excavation in hard rock, where charges of powder 2 inches in length by 1½ inch in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	835	£4	3,340 0 0

## NOTES.

1. All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the specification.

2. The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

3. Items Nos. 31, 32, and 33 to include the cost of conveying the Government property from the contractor's store or field office to the various sites of works along line of main and branch sewers, at man-holes, gas-check, and shaft chamber, &c.

4. Prices for items Nos. 36, 37, 38, 39, 40, 41, 42, and 43 are to be for materials in strict accordance with specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other source, and the contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

5. Prices for items Nos. 44, 45, 46, 47, and 48 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day work.

6. The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over main and pipe sewers, reinstating all road and other surfaces, &c., or any other thing necessary in executing and completing each respective item, in strict accordance with plans and specifications.

## No. 6.—LEMM AND SPENCER'S TENDER.

TENDER for Contract No. 79, Sydney Sewerage.

To the Honorable the Minister for Public Works, Bridge-street, Sydney, N.S.W.

We, the undersigned, do hereby tender and offer to construct, completely finish, and maintain the various works for Contract No. 79, Sydney Sewerage, in accordance with the conditions of contract, specifications, and drawings, prepared for that purpose in your Department, for or at the rates particularly entered in the accompanying schedule of prices, and enclose herewith deposit, as required by clause 20 of the general conditions.

Should this tender be accepted, we undertake to lodge with the Under Secretary for Public Works, within seven days from the date of notification of acceptance of this tender, a bank deposit receipt in the name of the Secretary for Public Works for the sum of two thousand pounds sterling, as security for the due performance of the contract.

In the event of our failing to do so, or to sign the required contract within the time specified in clause 20 of the general conditions, we hereby distinctly agree to forfeit to the Queen the sum deposited with this tender.

F. LEMM,  
Balmain.  
THOS. E. SPENCER,  
Boyce-street, Glcbe Point.

CONTRACT No. 79.—Schedule of quantities and prices for constructing and completing 1 mile 25·3 chains, more or less, of the main outfall sewer, North Shore, branch and pipe sewers, shafts, junctions, &c., subject to omissions, extras, extensions, additions, enlargements, deviations, or alterations, as provided by the conditions of contract.

The quantities in this schedule are not guaranteed as correct, but are merely given for the guidance of intending contractors, this being a schedule of Prices Contract.

No. of Item.	Description of Works.	Unit.	Probable Quantity.	Rate.	Amount.
					£ s. d.
1	Excavation in tunnels, in hard rock, for sewer, branches, pipe-sewers, junctions, curves, &c., as specified in clauses 38, 42, 45, 48 to 63, including sub-ducts, timbering, unwatering, and removing the excavated materials beyond actual site of works, as viz. :—				
1	Excavation in hard rock, where gadding only is permitted.....	cubic yard	800	£6	4,800 0 0
2	Excavation in hard rock, where charges of powder 2 inches in length by 1½ inch in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	835	£5	4,175 0 0
3	Excavation in hard rock, where charges of powder 4 inches in length by 1½ inch in diameter, and such depth of bore-holes as shall be directed only are permitted .....	"	3,000	95/-	14,250 0 0
	Excavation in shafts, shaft-chambers, and sumps, as specified in clauses 39, 52, 53, 71, and 72, including timbering, unwatering, and removing the excavated materials beyond actual site of works, as viz. :—

## NOTES.

1. All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the specification.

2. The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

3. Items Nos. 31, 32, and 33 to include the cost of conveying the Government property from the contractor's store or field office to the various sites of works along line of main and branch sewers, at man-holes, gas-check, and shaft chamber, &c.

4. Prices for items Nos. 36, 37, 38, 39, 40, 41, 42, and 43 are to be for materials in strict accordance with specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other source, and the contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

5. Prices for items Nos. 44, 45, 46, 47, and 48 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day work.

6. The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over main and pipe sewers, reinstating all road and other surfaces, &c., or any other thing necessary in executing and completing each respective item, in strict accordance with plans and specifications.

## No. 3.

Messrs. Carter & Co. and Messrs. Gummow and Gillan to The President of Tender Board.

Sir,

Sydney, 10 June, 1891.

We have the honor to enter our protests against the acceptance of the tender of Messrs. Bond and Hudson for Contract No. 79, North Shore sewerage, on the following grounds:—

1. That the tender of Messrs. Bond and Hudson for Contract No. 56, Potts' Point sewerage, was accepted by your Board and not taken up by them.
2. Upon fresh tenders being called the tender of Mr. G. E. Hudson was the lowest, but was not accepted by the Board, in accordance with their rules and regulations.

Upon these grounds we, as tenderers for the North Shore sewerage, beg to protest against the tender of Messrs. Bond and Hudson being now accepted.

We have, &c.,

GUMMOW AND GILLAN,  
CARTER & CO.

Let me have papers *re* Bond and Hudson's tender for Contract 56.—R.H., 10/6/91. Herewith.—J.C.P., 10/6/91. Mr. Hickson for report.—J.B., 10/6/91.

In January, 1890, C. S. Bond (afterwards Bond and Hudson) tendered for Sewerage Contract No. 56, at a ridiculously low figure, and, as anticipated, had to throw up the contract and forfeit deposit. They were the lowest again when fresh tenders were invited, but did not get the work, they being ineligible under the Tender Board Regulations, clause 14. The same firm now (some sixteen months later) are the lowest tenderers for Sewerage Contract 79, and it is contended by the writers of the within letter that their tender should not be accepted. I cannot recommend that this course be taken. It is true, under clause 14, they can be excluded from competing for other works at the pleasure of the President. But in all fairness there must be some limit (when no fraudulent action has taken place) to this prohibition; and it seems to me, after sixteen months, all bar to their tendering should be removed. In recommendation on face of tender.—R.H., 10/6/91. Under Sec.

Resubmit when we deal with the tenders.—J.B., 30/12/91.

## No. 4.

E. M. Clark, Esq., M.P., to The Secretary for Public Works.

Sir,

Parliament House, Sydney, 30 July, 1891.

I understand that tenders were accepted some time ago for the outfall sewerage to Long Bay, St. Leonards. The successful contractors were, I understand, Messrs. Bond and Hudson; and, as the work is a very urgent one, I think they should be compelled to go on with the work.

Trusting you will hurry the matter on.

I have, &c.,

EDWARD M. CLARK.

Resubmit with the tender, which I do not think has been accepted.—J.B., 3/8/91. Tenders for Contract No. 79 (91/1524) and all previous papers submitted, 13/7/91.—R.H., 3/8/91. All papers herewith.—D.C.M'L., 4/8/91. To stand over.—J.B., 7/7/91. Roads, B.C. Seen.—R.H., 8/9/91

## No. 5.

E. M. Clark, Esq., M.P., to The Secretary for Public Works.

Sir,

Parliament House, Sydney, 18 August, 1891.

I shall be glad to know how far the matter of proceeding with the "outfall sewer to Middle Harbour," in my electorate, has progressed.

I might say I wrote you on the matter a fortnight ago.

Yours, &c.,

EDWARD M. CLARK.

91/1,991, and all previous papers, sent Under Secretary, 4/8/91. Tenders are awaiting acceptance; amount, £36,900, loan.—J.B., 19/8/91. Submitted.—J.D., 19/8/91. Inform must stand over until the question of further loan expenditure has been determined.—B.S., 21/8/91. Inform to-day.—J.B., 21/8/91. E. M. Clark, Esq., M.P., 21/8/91. Seen.—R.H., 24/8/91.

## No. 6.

Messrs. Bond and Hudson to The Secretary for Public Works.

*In re* Contract No. 79, Sydney Sewerage Works.

Dear Sir,

88, Sussex-street, Sydney, 28 September, 1891.

On 10th June, of this year, we had the pleasure of submitting a tender for the above works, and, we believe, were successful in being the lowest tenderers.

We have been anticipating the acceptance of our tender for some months, but not hearing from your Department, we have, in the meantime, entered upon other obligations, and must consequently respectfully ask you to permit us to withdraw our tender, and to return us the deposit attached thereto now lying in your hands, viz., £369.

We are, &c.,

C. B. BOND

(Bond and Hudson).

How

## 271

How does this matter stand?—D.C.M'L., 30/9/91. Messrs. Bond and Hudson's tender was recommended for acceptance on 10/6/91. Papers herewith.—F.C.P., 1/10/91. Return deposit.—J.B., 2/10/91. Accountant to return deposit, 2/10/91. I recommend that fresh tenders be invited.—R.H., 6/10/91. Under Secretary. Submitted.—J.B., 9/10/91. Approved.—W.J.L., 22/2/92. Insert notice, 22/2/92. Notice to *Gazette*, 22/2/92. Tenders for 9th March, 1892.

Since writing my minute of 6/10/91, complications have arisen with Carter & Co., *re* their contract No. 72 having been stopped. They have made large claims on this account, some of which no doubt could not be entertained, but on some items they have made a good case. They are prepared, if they obtained this work, to waive all claims on No. 72. As their tender is a reasonable one, and some £3,600 below the estimate, I think it might fairly be accepted. If this course were adopted, work would be given at once to a large number of men.—R.H., 23/2/92. Under Secretary. Important.

As Mr. Hickson thinks Messrs. Carter & Co. could make good a claim for something like £2,000 as compensation on Contract 72 (Moni-street, partly), should they be willing to forego this claim, their tender may be accepted for construction of the main outfall sewer, North Sydney—£39,890, as worked out at schedule rates. If this firm will not agree to the condition imposed, fresh tenders to be invited.—W.J.L., 23/2/92.

Mr. Hickson.—D.C.M'L., for U.S., B.C., 23/2/92. Please see me with Messrs. Carter & Co.—J.B., 23/2/92. Mr. Hickson.

## No. 7.

*Précis* of case up to return of Messrs. Bond and Hudson's deposit.

Department of Public Works, Roads and Bridges and Sewerage Branch,  
Sydney, 29 January, 1892.

*Minute Paper.*

*Subject* :—North Shore Outfall Sewer, Contract No. 79, Sydney Sewerage Works.

TENDERS were received on the 10th June, 1891, for this work, that of Messrs. Bond and Hudson, at £37,254 10s, being the lowest. On the same date Messrs. Carter and Co. and Messrs. Gummow and Gillan conjointly wrote in protesting against the acceptance of Bond and Hudson's tender, as that firm had, on a previous occasion, thrown up a contract, but the protest was not allowed on account of the lapse of time, and as no fraudulent action had taken place, their tender was therefore recommended for acceptance.

On 28th September, 1891, Messrs. Bond and Hudson wrote in asking for the return of their deposit, and to be allowed to withdraw their tender owing to the delay in acceptance of same, and their having entered into other large engagements.

The deposit was returned accordingly on the 7th October, 1891.  
The Engineer-in-Chief for Sewerage.

F.E.P., 29/1/92.

*Subject* :—Main Outfall Sewer, North Sydney.

WITHDRAW notice inviting tenders for the above.

Done, 23/2/92. Put with the papers, 25/2/92.

## No. 9.

## The Under Secretary for Public Works to Messrs. Carter &amp; Co.

Sirs, Department of Public Works, Sydney, 10 March, 1892.

I have the honor, by direction of the Secretary for Public Works, to inform you that your tender, dated 10th June last, is accepted for construction of the North Shore Main Outfall Sewer, from near Long Bay to Mount-street—Contract No. 79, Sydney Sewerage—at your schedule of prices.

The work is to be carried out in strict accordance with the several contract exhibits relating to this contract, and to be completed within twenty-four months from this date.

I have to refer you to the Commissioner for Roads for further information, and to request that you will call upon the officer in charge of Bonds and Contracts at this office, for the purpose of executing the necessary documents for the due observance of your contract.

I am, &c.,  
J. BARLING,  
Under Secretary.

## No. 10.

The Clerk in Charge of Bonds and Contracts to The Engineer-in-Chief for Sewerage.  
Department of Public Works, Bonds and Contracts Branch, Sydney, 3 March, 1892.

*Minute Paper.*

*Subject:—Re Main Outfall Sewer, North Sydney.*

THE agreement and release herein for execution by Messrs. Carter & Co. and George Forrest is sent herewith, together with the papers sent to me as instructions to prepare same.

The amount of stamp duty payable herein is £1 2s.

The plans are also sent herewith.

HAROLD F. NORRIE,  
Per V.C.L.

The Commissioner and Engineer-in-Chief for Roads and Bridges.

This tender might now be accepted conditionally on contractors signing bond and depositing a sum of £2,000.—R.H., 8/3/92. Under Secretary. Ask them to call, 8/3/92. Done, 9/3/92. Send letter of acceptance and get documents signed when the deposit is paid.

## No. 11.

## Contract Agreement, with Annexures.

Department of Public Works, Bonds and Contract Branch, Sydney, 14 March, 1892.

*Minute Paper.*

*Subject:—Re Main Outfall Sewer, North Sydney.*

Contract No. 79, Sydney Sewerage.

THE agreement herein duly prepared has been executed by the contractors, Messrs. Carter & Co., and stamped, and may now be forwarded to the Engineer-in-Chief for Sewerage.

The tender and all other papers herein are sent herewith.

HAROLD F. NORRIE,  
Officer in Charge,  
Per V.C.L.

AGREEMENT made this 10th day of March, in the year of our Lord 1892, between John Carter and David Graham Snodgrass, of Glebe and North Shore respectively, in the Colony of New South Wales, contractors, carrying on business together at the Glebe aforesaid, as contractors, under the name, style, or firm, of "Carter & Co.," and hereinafter styled or referred to as "the contractors," of the first part, George Forrest, of Glebe aforesaid, contractor, of the second part, and Her Most Gracious Majesty Queen Victoria of the third part.

Whereas the Minister for Public Works, of the said Colony, recently called for tenders by notice published in the *Government Gazette* (of which notice a copy is hereunto annexed), for the providing of all materials, labour, and every other thing requisite and necessary for, and the performance of all the works required in and about the construction, erection, and completion of the North Shore Main Outfall Sewer from near Long Bay to Mount-street, in the said Colony, as shown in the drawings relating thereto, and according to the specification, and under and subject to the general conditions and special conditions which are hereunto annexed, and marked respectively "A," "B," and "C." And whereas the contractors made the tender hereunto annexed, marked "D," for the providing of all plant and materials (except such materials as in and by the said specification are mentioned as to be supplied by the Government of the said Colony), labour, tools, and every other thing requisite and necessary for, and the performance of, all the works required in and about the full and proper construction, erection, and completion, and maintenance, of the said works in accordance, in all things, with the said specification, and under, and subject to, the said general conditions and special conditions, and in accordance with the several plans or drawings, relating thereto, in the office of the Engineer-in-Chief for Sewerage, and marked "No. 1," "No. 2," "No. 3," "No. 3a," and "No. 4" to "No. 8," inclusive, and at or for the rates or prices mentioned and set out in the schedule of quantities and prices to the said tender, and to complete the said works within twenty-four months from the date of the acceptance of the said tender, that is to say, on or before the 10th day of March, 1894, as mentioned in the first clause of the said special conditions. And whereas the said contractors and the said George Forrest, carrying on business under the name, style, or firm, of "Carter & Co.," sometime since entered into a contract with Her said Majesty for the construction and maintenance of a storm-water sewer from Munni-street, Macdonald-street, Mitchell-road, to Shea's Creek storm-water channel, in the said Colony—the said contract being called or known as Contract No. 72, Sydney and Suburbs Storm-water Drainage. And whereas the said contractors and the said George Forrest, in carrying out the said contract, made a claim for certain extra works in connection therewith, amounting in all to the sum of £4,050 9s. 6d., which said claim they have agreed, by letter annexed hereto, marked "E," to waive in consideration of the said Minister accepting the present tender of the contractors for the said main outfall sewer, North Shore. And whereas the Minister for Public Works of the said Colony, acting on behalf of the Government of the said Colony, hath accepted the said tender of the contractors on condition that the said contractors and the said George Forrest execute the release hereinafter contained, waiving their said claims on Contract No. 72 hereinbefore referred to. And whereas the contractors have, in compliance with the requirement in clause six of the said special conditions, deposited the sum of £2,000 in the Bank of New Zealand, at Sydney aforesaid, in the name of the Under Secretary for Public Works, aforesaid, at interest, upon fixed deposit Number A7667, dated the 10th day of March, 1892, for twelve months, and have handed the receipt for same to the said Minister for Public Works, to be held by him as such Minister, or the Minister for Public Works for the time being of the said Colony, on behalf of Her Majesty, as security for the due performance of this contract, and all other matters and things herein contained, and which, on the part of the contractors, are to be done and performed. Now this agreement witnesseth that, in pursuance of the said agreement to waive the said claims on said Contract No. 72, and for the consideration aforesaid, and of the sum of 10s. on the execution hereof to the said George Forrest, paid by Her said Majesty (the receipt, whereof the said George Forrest doth hereby admit and acknowledge). They, the

said

said contractors and the said George Forrest do respectively hereby release Her said Majesty, her heirs and successors, the said Minister, and his successors in office, the constructing authority, and his successors, and the Government of the said Colony from all and singular the said claim or claims, and all actions, claims, costs, damages, expenses, and demands which they, the said several parties, hereto of the first and second parts, respectively, now have, or shall, or may, or otherwise could, or might, hereafter have, claim, or demand of, from, or against Her said Majesty, her heirs or successors, or the said Minister, or his successors in office, or the constructing authority, or his successors, or the Government of the said Colony or any of them, respectively, on account of the said claim for extra work, or otherwise on said Contract No. 72, and all interest for or in respect of the same, or for or on account of any other thing relating thereto. And this agreement also witnesseth that in consideration of the premises the contractors do hereby for themselves, their heirs, executors, and administrators, covenant with and to Her said Majesty the Queen her heirs and successors: That they, the contractors, shall and will find and provide all the materials (except such materials as in the said specification are mentioned as to be supplied by the said Government), labour, plant, tackle, tools, implements, carriage, machinery, scaffolding, and every other thing requisite and necessary for, and shall and will perform the various works required in and about the full and proper construction, erection, completion, and maintenance of the main outfall sewer, North Shore, commencing at nought chains, near Long Bay, and extending under private land to Grassmere-street near the eastern boundary of Cammeray Park, under Cammeray Park to corner of Alfred and Ernest Streets, and along Alfred-street to Mount-street, where it terminates, being a total length of about 1 mile 25·8 chains, together with shafts, branches, &c, connected therewith, being a portion of the work for Sydney sewerage—this present contract being called or referred to as “Contract No. 79”—in accordance in all things with the said specification, general conditions, and special conditions, and with the said several plans, or drawings, and which are signed by the contractors, and at or for the rates, or prices, set out in the said schedule of quantities and prices to the said tender. It being also hereby declared that any additions to or deductions from the said works mentioned, or set out in the said specification, or shown in the said plans, are to be paid or allowed for, as the case may be, at and according to the rates or prices in the said schedule of quantities and prices. And shall and will complete the whole of the said works within twenty-four months from the date of acceptance of the said tender, that is to say, on or before the 10th day of March, 1894, in accordance in all things with the said specification, general conditions, special conditions, and plans. And it is hereby agreed and declared between and by the said parties hereto that the said specification, general conditions, special conditions, and tender, all being marked as aforesaid, and the said schedule of quantities and prices, all being hereunto annexed, as aforesaid, shall be read as incorporated in and forming part and parcel of these presents in like manner as if the same had been herein written and set forth at length, and that the said specification, general conditions, special conditions, tender, and schedule of quantities and prices, and these presents shall together be taken to be the contract between the said parties in respect of the said works, and that all and whatsoever by the said specification, general conditions, and special conditions, or any, or either, of them is to be done by the contractors or shown on the said plans shall be done in accordance therewith in all things by the contractors, their executors, or administrators, and that all and whatsoever materials, goods, matters, and things, which by the said specification, general conditions, and special conditions, are to be supplied by the contractors in and about the construction and completion of the said works shall be found, provided, and supplied by the contractors, their executors or administrators, in accordance in all things with the said specification, general conditions, special conditions, and plans. And it is hereby agreed that if the contractors, their executors, or administrators, shall make default in proceeding with the said works, or supplying the materials which, under the said specification, general conditions, and special conditions, are to be supplied by the contractors, or in completing and finishing the said works in accordance in all things with the said specification, general conditions, and special conditions, and all things therein contained and within the time for the completion of the said works as mentioned or provided in the said first clause of the said special conditions, the said sum of £2,000 so deposited as security for the due performance of this contract shall be and become forfeited to Her Majesty the Queen, and may be used, paid, and applied so far as the same may be required in and about carrying out and completing the works in the said specification mentioned, and if any balance shall remain, after the said works are completed, the same shall remain to the credit of the Consolidated Revenue of the said Colony, and that the right of Her Majesty to deal with the said sum of £2,000 in manner aforesaid shall be in addition to all, any, or other rights or remedies which Her Majesty the Queen or the Government of New South Wales shall or may have or be entitled to against the contractors under these presents, or under the said specification, general conditions, and special conditions, or any or either of them or otherwise for any breach or breaches of this contract.

In witness whereof the said parties to these presents have hereunto set their hands and seals the day and year first before written.

#### MEMORANDUM.

THE return of the security lodged for the due performance of the above contract is and will be accepted by us without prejudice to any of the rights of the constructing authority to enforce the penalties prescribed by the contract, by reason of the non-completion within the time specified, and to all other rights of the constructing authority.

As witness our hands at Sydney this twentieth day of June, A.D. 1894.

Witness,—HAROLD F. NORRIS, J.P.

JOHN CARTER.  
D. G. SNODGRASS.  
Department

Department of Public Works, Sydney, 9 June, 1891.

TENDERS FOR PUBLIC WORKS.

TENDERS will be received at this office, for the public works specified in the Schedule hereunder, up to 11 o'clock a.m. of the various dates set forth in the second column.

All envelopes containing tenders must be addressed to the President of the Tender Board, and have legibly endorsed upon them the name of the work for which the tender is submitted.

Tenderers may be in attendance when the tenders are opened, and the name of the lowest tenderer will be announced, if possible, before the duties of the Board have terminated.

The following conditions will have to be strictly complied with, otherwise the tenders will not be taken into consideration :—

1st.—Each tender must state the time within which it is proposed to complete the work, and in every instance the full name or names of persons tendering, also the names in full, occupations, and addresses of proposed bondsmen.

2nd.—At the foot of every tender there must be a memorandum, signed by the party tendering and two responsible persons as sureties, agreeing to be answerable for the due performance of the contract, in the event of the tender being accepted; and undertaking, in that event, that they will severally execute and deliver a bond to Her Majesty, in the penal sum mentioned in the specification, or otherwise arranged, for securing such performance.

3rd.—No tender will be considered which shall have been received after 11 o'clock a.m. on the day upon which tenders are to be received, unless there are circumstances which, in the opinion of the Board, render it desirable that it should be received.

4th.—Every tender must, as a guarantee of good faith, be accompanied by a preliminary deposit, calculated according to the following scale, viz. :—

For amounts up to £500 inclusive ... ..	£5 0 0
For amounts exceeding £500 and not exceeding £1,000 ... ..	10 0 0

For all sums over £1,000, 1 per cent, on the amount of tender up to a maximum deposit of £500. Such deposit to be in the form of a cheque in favour of the President of the Board, endorsed by the Manager of the Bank upon which it is drawn, or a Bank draft.

5th.—Any tender which may be received without such preliminary deposit shall, unless otherwise directed by the Board, be deemed to be informal and rejected accordingly.

6th.—In the event of any tenderer failing to take up his tender, complete the bond, and proceed with the contract, within the time specified, or withdrawing his tender after it shall have been opened, whether such tender shall have been accepted or not, all monies deposited by him on account of such contract shall be absolutely forfeited to the Crown, and shall be paid to the credit of the Consolidated Revenue of the Colony.

7th.—Whenever a tenderer shall fail to proceed with a contract as aforesaid, fresh tenders shall be invited at short notice for the work, unless in the opinion of the President there are circumstances which make it desirable for another tender in the same series to be accepted, but the tenderer by whose default such a course has been rendered necessary shall be excluded from the competition, and from any competition for other works, at the pleasure of the President.

8th.—In the event of any contract being tendered for at a schedule of rates, the approximate quantities as given of each item must be worked out and a total sum shown.

All deposits, with the exception of that of the lowest tenderer, when practicable, will be returned to the persons entitled thereto, immediately after the Board shall have adjourned; and the deposit made by the successful tenderer shall be returned to him on executing the bond for the fulfilment of the contract. When the contract is for a less sum than £200, the deposit with tender will not be returnable until the service is satisfactorily completed.

It is to be understood that the Government does not bind itself to accept the lowest or any tender; and no tender will be accepted until the head of the branch under whose directions the work is to be carried out has reported upon the whole of the tenders received.

BRUCE SMITH.

## TENDER for Contract No. 79, Sydney Sewerage.

To the Honorable the Minister for Public Works, Bridge-street, Sydney, N.S.W.

We, the undersigned, do hereby tender and offer to construct, completely finish, and maintain the various works for Contract No. 79, Sydney Sewerage, in accordance with the conditions of contract, specifications, and drawings, prepared for that purpose in your Department, for or at the rates particularly entered in the accompanying schedule of prices, and enclose herewith deposit, as required by clause 20 of the general conditions.

Should this tender be accepted, we undertake to lodge with the Under Secretary for Public Works, within seven days from the date of notification of acceptance of this tender, a bank deposit receipt in the name of the Secretary for Public Works for the sum of two thousand pounds sterling, as security for the due performance of the contract.

In the event of our failing to do so, or to sign the required contract within the time specified in clause 20 of the general conditions, we hereby distinctly agree to forfeit to the Queen the sum deposited with this tender.

June 10th, 1891.

JOHN CARTER,  
North Shore.  
D. G. SNODGRASS,  
North Shore.

This is the tender marked "D" referred to in our annexed agreement with Her Majesty the Queen, dated the 10th day of March, A.D. 1892.

JOHN CARTER,  
D. G. SNODGRASS.

Witness,—V. C. LUMSDAINE.

CONTRACT No. 79.—Schedule of quantities and prices for constructing and completing 1 mile 25·3 chains, more or less, of the main outfall sewer, North Shore, branch and pipe sewers, shafts, junctions, &c., subject to omissions, extras, extensions, additions, enlargements, deviations, or alterations, as provided by the conditions of contract.

The quantities in this schedule are not guaranteed as correct, but are merely given for the guidance of intending contractors, this being a schedule of Prices Contract.

No. of Item.	Description of Works.	Unit.	Probable Quantity	Rate.	Amount.
					£ s. d.
	Excavation in tunnels, in hard rock, for sewer, branches, pipe-sewers, junctions, curves, &c., as specified in clauses 38, 42, 45, 48 to 68, including sub-ducts, timbering, unwatering, and removing the excavated materials beyond actual site of works, as viz :—				
1	Excavation in hard rock, where gadding only is permitted .....	cubic yard	800	63/-	2,520 0 0
2	Excavation in hard rock, where charges of powder 2 inches in length by 1½ inch in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	835	61/-	2,545 15 0
3	Excavation in hard rock, where charges of powder 4 inches in length by 1½ inch in diameter, and such depth of bore-holes as shall be directed only are permitted .....	"	3,000	60/-	9,000 0 0
	Excavation in shafts, shaft-chambers, and sumps, as specified in clauses 39, 52, 53, 71, and 72, including timbering, unwatering, and removing the excavated materials beyond actual site of works, as viz :—				
4	Excavation in road surfaces, sand, soil, clay, pipeclay, shale, and soft rock only .....	"	75	78/-	292 10 0
5	Excavation in hard rock, where gadding only is permitted .....	"	361	83/-	1,498 3 0
6	Excavation in hard rock, where charges of powder 2 inches in length by 1½ inch in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	500	79/-	1,975 0 0
7	Excavation in hard rock, where charges of powder 4 inches in length by 1½ inch in diameter, and such depths of bore-holes as shall be directed only are permitted .....	"	2,500	78/-	9,750 0 0
8	Filling in round brick and concrete work of ventilating and intercepting shafts and chambers, man-holes, and into all shafts, as specified in clauses 40, 41, 42, 43, 71, and 72, including withdrawing of timber, depositing in layers, replacing road and other surfaces, ramming, &c. ....	"	120	1/-	6 0 0
9	Timber ordered in writing to be left in tunnels, shafts, as specified in clauses 36 and 37, including all iron used in fixing same .....	cubic feet	500	-/1	2 1 8
10	Sub-duct in hard rock, with tile covers, as specified in clauses 76 and 77	lineal yard	250	-/1	1 0 10

This is the Schedule of Quantities and Prices referred to in our annexed agreement with Her Majesty the Queen, dated the 10th day of March, A.D. 1892.

Witness,—V. C. LUMSDAINE.

JOHN CARTER,  
D. G. SNODGRASS.

#### NOTES.

1. All work herein enumerated shall be understood as being placed in position where specified and ordered, and in complete working condition, in strict accordance with the specification.

2. The above schedule prices include, in every case, continual maintenance of the works during the whole time of construction, and up to the day of their being formally taken over by the Engineer.

3. Items Nos. 31, 32, and 33 to include the cost of conveying the Government property from the contractor's store or field office to the various sites of works along line of main and branch sewers, at man-holes, gas-check, and shaft chamber, &c.

4. Prices for items Nos. 36, 37, 38, 39, 40, 41, 42, and 43 are to be for materials in strict accordance with specification, delivered on the works ready for use, and only the actual net quantities ordered and approved of shall be paid for. In case contractor's prices are considered too high by the Engineer at the time such materials may be required, or if the contractor fail to deliver such materials at the time required and ordered, then the Engineer shall have the power to supply the same from any other source, and the contractor shall have no claim for loss or compensation on account of the exercise of such power by the Engineer.

5. Prices for items Nos. 44, 45, 46, 47, and 48 are to be for such as are able-bodied and efficient. The schedule rates per day are for the day of eight hours. In the event of overtime and night work being ordered, it is to be paid for at 25 per cent. advance on the time rates set down for day work.

6. The whole of the foregoing prices to include all labour, tools, implements, plant, machinery, shoring, timbering, centering, concrete boxes, unwatering, dams, fluming, temporary bridges, roads, pumping, gasket filling, diverting water-courses and surface water, diverting and maintaining the traffic along roads crossing over main and pipe sewers, reinstating all road and other surfaces, &c., or any other thing necessary in executing and completing each respective item, in strict accordance with plans and specifications.

"B."

"E."

Sir,

St. John's Road, Glebe, 26 February, 1892.

With reference to our interview with you this morning in connection with contract No. 79, Main Outfall Sewer, North Shore, we do ourselves the honor to notify you that in consideration of our tender for the same being accepted, we are willing and hereby agree to forego all claims for compensation in our contract No. 72, Munni-street Storm-water Channel, Alexandria.

J. Barling, Esq.,  
Under Secretary for Public Works.

We are, &c.,  
CARTER & CO.

Mr. Norrie to prepare the bond at once. Mr. Hickson will explain.—J.B., 25/2/92. Urgent Bond for contract No. 72 herewith.—F.C.P., 29/2/92. Mr. Norrie.

This is the letter marked "E" referred to in our annexed agreement with Her Majesty the Queen, dated the 10th day of March, A.D., 1892.

Witness,—V. C. LUMSDAINE.

JOHN CARTER.  
D. G. SNODGRASS.  
GEO. FORREST.

"A."

*Sydney Sewerage, Contract No. 79 (Main Outfall Sewer, North Shore).*—Specification of the several works required in the construction of the Main Outfall Sewer, North Shore, commencing at 0 chains near Long Bay, and extending under private land to Grassmere-street, near the eastern boundary of Cammeray Park, under Cammeray Park to corner of Alfred and Ernest Streets, and along Alfred-street to Mount-street, where it terminates, being a total distance of about 1 mile 25·3 chains; together with shafts, branches, &c., connected therewith, in accordance with the accompanying Drawings, with such extensions or omissions at both ends, and throughout the length of the contract, as may be ordered in writing, viz. :—

#### 1. Description of Drawings.

1. Drawing No. 1.—General plan.
- " No. 2.—Longitudinal section.
- " No. 3.—Details of shafts at Falcon-street. No. 3 A; details of shafts.
- " No. 4.—Details of shafts.
- " No. 5.— " "
- " No. 6.— " "
- " No. 7.—Cross-sections of sewer, &c.
- " No. 8.—Details of shafts.

#### 2. Extent of Contract.

2. The works comprised in this contract consist in the necessary amount of earth and rock excavation, puddling, shoring, timbering, under-pinning, centering, scaffolding, unwatering, concrete, brickwork, pipe-laying, carpenter's work, ironwork (with exception of the materials supplied by Government, as set forth in clause 131), pitching, paving, ballasting, metalling, masonry, leading surplus materials to spoil, embankment, &c., required in the construction of the Main Outfall Sewer, North Shore, in tunnels through rock, as shown on longitudinal section, and as shall be directed, with all gas-checks, penstocks, junctions, curves, shafts, inlet chambers, pipe-sewers, ventilating shafts, sub-ducts, road-making, &c., and all other works in connection with those herein enumerated, and the maintenance of the whole of these works for a period of three months after they have been formally taken over by the Engineer.

2A. The contractor must include in his Schedule, rates for excavation, the cost of clearing and forming a temporary roadway from Ernest-street to shaft at 27·5 chains in Cammeray Park; and also the cost of providing a tramway or roadway from the shaft at 0 chains to Long Bay, for conveying the surplus materials from this shaft to the Long Bay.

#### 3. Site.

3. Access to the site of the works to be had along its centre lines where such are shown to be along lines of streets, and along all public roads which cross the centre lines of the Main Outfall Sewer, North Shore.

4. Access to shaft in Cammeray Park will be given along a strip of land from Ernest-street, and access to shaft at 0 chains from the Long Bay will also be provided along a strip of land 66 feet wide.

5. For the purpose of sinking, working, and building shafts on lines of streets, and on private ground, when ordered, the contractor to have temporary possession of an area of 24 ft. by 17 ft. over the mouth of each shaft, unless otherwise directed.

6. All areas of strips of land round mouths of shafts hereinbefore referred to, to be set out by the Engineer, to whom written application for their temporary possession must be made by the contractor two weeks prior to the time the said land is required by him.

Such possession, however, not to be exclusive, but subject to the right of entry of the Engineer, his officers, and other persons, carts and horses, &c., required for any purposes of the Government at any time.

7. Any other lands required by the contractor for temporarily depositing materials, erecting winding engines, or for any other purposes in connection with the contract, he will have to procure at his own cost, in strict accordance with clause 6 of the conditions of contract.

8. The contractor shall provide and erect all necessary fences, temporary bridges underneath foot-paths and streets, hoarding-barriers, &c., wherever directed to do so, and all fences, walls, railings, walks, or streets, metalled, grassed, paved, pitched, or asphalted surfaces, to be left by the contractor at the completion of the works in the same order as they were before the commencement of the works, at his sole cost, in strict accordance with the various stipulations and terms contained in clause 41 of this specification, and clause 2 of the conditions of contract, to the entire satisfaction of the city municipal authorities and of the Engineer-in-Chief.

#### 4. Lines, Levels, and Setting-out Work.

9. The centre line of sewer is shown on general plan, drawing No. 1, by a full line, which will be marked on the surface of the ground, the same as on plan, as the works proceed.

After setting-out, the centre line of the works is to be preserved solely by reference to the iron nails, pegs, and other marks and signals which may be placed, fixed, and erected for the purpose of these works along its centre line.

The gradients and levels of the works are to be preserved by reference to any bench-marks which the Engineer may deem necessary to establish along the lines of works during the progress of the contract, subject to check and adjustment, as shall be directed, from other bench-marks established beyond the site of the works.

#### 5. Materials.

10. All materials, as brick, stone, cement, timber, iron, sand, stoneware pipes, clay, lead, &c., which are to be supplied by the contractor, are to be of the best quality and description of their respective kinds. Samples of each kind to be submitted for the approval of the Engineer, and retained in office; and on approval having been obtained, they are to be delivered on the works ready for use, as per sample.

11. The contractor shall inform the Engineer of the sources whence the various materials are supplied, or of the places of their manufacture, and afford him every facility to inspect their supply or manufacture at any stage of the same.

12. The contractor to make and provide proper and approved gauges or scales for measuring or weighing all materials supplied, whether specified to be broken or delivered to special sizes and mixed together in stated proportions or not.

13. Bricks to be of well-mixed material of approved quality and uniform fineness; to be new, sound, hard, well-burnt kiln bricks, free from cracks and all other defects, truly rectangular, with sharp arrises, of approved dimensions and form; to be specially moulded where required for arching inner and outer rings of sewers and circular or segmental shafts, and equal to sample brick to be seen at the Engineer's office, and which must be sealed by the contractor and acknowledged as a sample of the bricks to be used throughout the works. Bricks used in these works will be subjected to the following tests, viz.:—

- (a) *Tensile strength*.—The tensile strength to be tested, in the departmental testing machine, by laying the brick horizontally on its base of 3 inches, between supports 7 inches apart, and the strain applied across the centre of the brick and distributed over a width of  $1\frac{1}{2}$  inch. An average breaking strain of twelve bricks to be taken, which must not be less than 8,000 lb.
- (b) *Porosity*.—Bricks immersed in water for twenty-four hours must not increase in weight more than 3 per cent.

Should the twelve bricks fracture under the foregoing average strain, or prove more impervious to water than 3 per cent., then the Engineer may reject the whole stack of bricks from which the twelve bricks were taken. The whole of the expense incurred in testing the bricks shall be borne solely by the contractor.

14. In the event of the contractor delivering quantities of bricks on the site of the works for the contract of a mixed description and quality, the officer in charge shall have the power to require of the contractor to have those bricks which in his opinion are suitable for the works picked out and stacked where directed, and those defective or unsuitable removed from the site of the contract; and in the event of the contractor refusing or failing to comply with such request within twelve hours from the time it has been made, then in all such cases the superintending officer shall have the power of rejecting the whole of the bricks so delivered by the contractor.

15. Stoneware pipes to be of well ground and mixed material, of tough, tenacious, impervious quality, well burnt, sound, hard, uniform in thickness, true in section, straight longitudinally, uniformly glazed both inside and outside, free from fire or other cracks, flaws, and ash-holes, the collar perfectly joined to the barrel, and in every way equal to sample pipe to be seen at the Engineer's Office. Paving tiles to be of the same materials as the stoneware pipes, to be uniformly glazed on all sides and of approved size and form.

Pipes to be of the following thicknesses and depth of collar, namely:—

Pipes, inside diameter, 9 in. ;	thickness, $1\frac{1}{8}$ in. ;	depth of collar, 2 in.
Do do 12 in. ;	do 1 in. ;	do 2 in.
Do do 15 in. ;	do $1\frac{1}{2}$ in. ;	do $2\frac{1}{2}$ in.
Do do 16 in. ;	do $1\frac{3}{8}$ in. ;	do $2\frac{1}{4}$ in.
Do do 18 in. ;	do $1\frac{1}{2}$ in. ;	do $2\frac{3}{4}$ in.
Do do 21 in. ;	do $1\frac{3}{8}$ in. ;	do $2\frac{3}{8}$ in.
Do do 24 in. ;	do $1\frac{3}{4}$ in. ;	do $2\frac{3}{4}$ in.

All parcels of pipes used in these works will be tested in the departmental testing machine, and submitted to the following crushing strains applied in the centre of the pipe:—

24 inches diameter pipe at 110 lb. per square inch of bearing surface.
18 " " 100 " " "
16 " " 100 " " "
12 " " 100 " " "
9 " " 100 " " "

If the Engineer deems it necessary, the pipes will also be tested for porosity. Should the pipes fracture under the foregoing strains, or not prove impervious to water, then the Engineer may reject the whole of parcel

parcel from which the pipes were taken. The whole of the expense incurred in testing the pipes shall be borne solely by the contractor, and all pipes injured or broken by the testing shall be immediately replaced by sound pipes, subject to the foregoing tests, at contractor's cost.

16. *Stone*.—All stone used in the construction of these works for pitchers, or masonry, unless where otherwise specified, to be sound, solid, hard sandstone of the best description, free from all defects, and as per sample approved.

17. Broken stone for ballast to be sound, solid stone, as specified in clause 18; to be broken to a size to pass freely with its largest dimensions through a ring of 4 inches in diameter. Broken stone for packing round sewer lining, above drains, &c., to be sound and solid, and obtained from rock excavation, broken to the same size as ballast.

18. Broken stone for bluestone concrete to be of basalt or other similar hard stone of approved quality; to be broken by hand or crushing machine, of a size to pass freely with its largest dimensions through a ring of 1½ inch in diameter; the whole of the metal to be free from dirt, quarry refuse, &c.; to be screened through a sieve of meshes ½ inch apart, and then to be washed with fresh water until approved, before it shall be deemed fit and suitable for these works.

19. Sand to be sharp quartz sand, of approved quality, free from all earthy, loamy, clayey matter, &c., and washed perfectly clean whenever the Engineer deems it necessary.

20. *Cement*.—The cement to be used throughout these works to be well packed in strongly-made casks, to be the best Portland cement, of approved brands and manufacture, delivered in thoroughly sound condition, fit for immediate use, and without requiring seasoning or air-slacking, to be free from any symptoms of staleness, caking, damage to the packing, hard or set lumps; and no barrel or portion of same to be used until it has been examined and approved by the Engineer. Samples taken from various casks (not exceeding six in number), and mixed together from each parcel brought on the works, to be submitted for testing:—The weight per struck bushel not to be less than 100 lb., and each cask shall contain not less than 387 lb. weight of cement, exclusive of weight of cask and packing. The specific gravity not to be less than 3.10. The cement, when passed through a wire sieve of 2,500 meshes per square inch, to leave a residue of not more than 10 per cent.; through a sieve of 5,806 meshes, not more than 25 per cent.; and through a sieve 14,400 meshes, not more than 40 per cent. The cement when mixed neat with water, to give a tensile strength of not less than 250 lb. per square inch after three days' setting in water, 450 lb. after seven days, and 550 lb. after twenty-eight days. The cement is to be "slow-setting," and when gauged with water to a stiff paste must set in a damp atmosphere of between 60° and 90° F., in from one and a half to six and a half hours. Neat cement of the consistency above mentioned to be made into pats kept in moist air until set, and then immersed in water at a temperature of between 60° and 80° F., and also placed in Faija's moist-heat and warm-bath apparatus at a temperature of 90° F., as to symptoms of blowing, or any alteration or variation of form or volume. The cement when mixed in the proportion of one of cement to three of standard sand (washed, dried, and sifted through a sieve of 400, and retained upon one of 900 meshes per square inch), and about 10.0 per cent. of the total weight of water, to give a tensile strength of not less than 150 lb. per square inch at seven days, and 230 lb. at twenty-eight days, the briquettes having been kept in a damp atmosphere, put in water twenty-four hours after they were made, and left in water at a temperature of between 60° and 80° F. The tensile strength will be ascertained in the departmental testing machine, with the load increasing at the rate of 20 lb. per minute, and the average breaking weight of six briquettes will be taken for each test. Should the sample fail in any or all of these tests, or not show a proper progressive increase in strength with age of briquette, then the Engineer may reject the whole parcel from which the sample was taken, and the contractor shall at once remove the said parcel of cement from the site of the works at his own expense; failing which, the Engineer may have it removed at the contractor's cost without further notice. Empty casks to be destroyed, as provided in clause 14 of the general conditions. To facilitate the gauging of cement throughout the contract, cement casks will be taken as equal to holding 4 cubic feet, otherwise the contractor to provide and make approved gauge-boxes, holding exactly 4 cubic feet, for measuring cement. Cement of a lighter weight than herein stipulated, but otherwise equal to the specified test, may be permitted to be used in the works, subject to the decision of the Engineer-in-Chief, and provided that the deficiency in weight is made up in quantity.

21. *Mortar*.—The mortar to be used in these works to be composed of one part of Portland cement and of two parts of clean washed sharp sand, as described in clauses 19 and 20, the proportion of each to be correctly ascertained by measurement, the whole to be mixed with fresh water, as may be directed, to be well incorporated, and to be used fresh. Any mortar which has become hard or set to be at once rejected. All mortar to be mixed up on approved sawn timber platforms close to where it is required.

22. Special mortar, composed of one part of cement and one part of sand, and prepared as before described, to be provided and used in all portions of the work where especially specified and directed.

23. *Grout*.—The grout to be made of mortar as described in clause 21, to be mixed fluid in tubs close to where it is required, and to be used fresh.

24. *Bluestone Concrete*.—The concrete to be used in these works to be composed of one part of Portland cement, two parts of sand, and four parts of bluestone metal.

25. Special concrete, if required, to be composed of two parts of Portland cement, three parts of sand, and seven parts of bluestone metal.

26. Sandstone concrete, where ordered to be used in these works, to be composed of one part of Portland cement, two parts of sand, and five parts of sandstone (as specified under clause 16) metal, free from dirt, quarry refuse, sieved (as specified in clause 18), washed, and of a size to pass with its largest dimensions through a ring of 2 inches in diameter. All materials to be mixed in the same manner as hereinafter specified for concrete.

27. All concrete to be prepared close to where it is required on sawn timber plank platform, all proportions to be correctly ascertained by measurement, the metal to be well washed when put on the platform and levelled at top, the sand to be placed in a level layer above the metal, and the cement to be placed upon the sand; after which all materials to be carefully mixed and turned twice over, and then the whole to be mixed with fresh clean water, and thoroughly turned over twice, and oftener if required, until, in the opinion of the Engineer, it shall be well incorporated and fit for the work before it leaves the platform; it shall then be at once conveyed to the works as shall be directed, and to be used fresh.

28. If the concrete is made by machinery, all materials to be prepared as previously described, then to be mixed dry, and afterwards with fresh clean water, as may be directed and as shall be approved of; to be used fresh.

29. Puddle to consist of the best clay to be obtained in the district within a radius of 5 miles ; to be carefully turned over and mixed with fresh clean water, as shall be directed, until the clay, in the opinion of the Engineer, has become of one even and uniform colour and plasticity.

30. Hardwood timber to be ironbark, blue or red gum, box, or other approved colonial hardwood, of the best description, sound, straight, free from sap, wanes, shakes, gum veins, cores, or other defects ; to have clean sharp arrises, and to be of the fullest dimensions shown or specified ; in round timber the diameter given is to be measured at the smallest end, exclusive of bark.

31. *Wrought-iron*.—All wrought-iron work to be of the best description, quality, and workmanship, with square arrises, and of the exact dimensions and forms shown on drawings. All wrought iron to be double H or BB Crown brand, and all ironwork, when finished, to be heated and then dipped in or coated with gas tar.

32. *Bluestone road-metal*.—The stone used for metalling to be basalt or other similar hard stone of approved quality ; to be broken to angular fragments of a size to pass freely with their largest dimensions through a ring  $2\frac{1}{2}$  inches in diameter, and to be free from dirt, quarry refuse, &c.

33. *Bluestone*.—All bluestone used in the construction of these works for pitchers or masonry to be of the best description of basaltic bluestone obtainable, free from honeycomb and all defects, and as per sample approved.

#### 6. General.

34. Earth-borings, have been taken along or close to the main line of sewer, the results of which are described on drawing No. 2 ; but no guarantee is given that the ground to be excavated will be free from subsoil water, or that the proportion of materials will correspond with that shown on longitudinal section.

35. *Diverting surface water and unwatering*.—The prices set forth in schedule accompanying tender for the works comprised in this contract to cover and include the cost of all materials and labour, and everything that is necessary for executing the works of every description required for the proper and effectual deviation of all surface and subsoil drainage from the sites of the works ; in constructing temporary coffer or other dams across the low-lying ground above and below the site of the works, in diverting said subsoil and surface water, from time to time, as the progress of the contract may require ; in providing and constructing adequate and secure fluming for conducting undisturbedly all freshets across the site of the works on or near lines of lowest ground ; in providing and finding all necessary pumping apparatus ; in keeping all trenches and excavations constantly unwatered, and in preventing any injury to the same by floods or any other cause.

36. *Shoring, Timbering, and Temporary Bridges*.—During the excavation for sewers, headings, branch sewers, and pipe-sewers, in tunnels, for shafts, junctions, gas-check chambers, curves, crossings over or underneath existing gas, water and sewer pipes, and oval or circular brick sewers, &c., the contractor to adopt every precaution and provide all materials, as planking, strutting, shoring, timbering, &c., and labour, and carefully execute and construct, at his own cost, wherever considered necessary by the Engineer, and to his entire satisfaction, temporary bridges, underneath lines of streets or footpaths, so as to ensure during the period of the contract, the undisturbed traffic along said streets, &c. ; and execute approved strong and secure shoring and strutting and underpinning where the sewer passes underneath buildings existing pipes and brick sewers, and in sandy or loose soil close timbering, or any other work that may be required to prevent any buildings over and adjacent to the line of sewer, and all other super-structures, road-surfaces, earth, rock, or other materials at top and sides of excavations from settling, cracking, being shaken, slipping, or falling in.

37. As the works proceed, all shoring, timbering, temporary bridges, &c., shall be withdrawn, except in cases where, in the opinion of the Engineer, the withdrawing of the same is impracticable, or would endanger the safety of the works and buildings, existing pipes, sewers, &c., streets, and other surfaces, over and adjacent to same, when the contractor must obtain an order, signed by the Engineer-in-Chief, to the effect that shoring, timbering, &c., may be covered up, with a statement of the quantities, which shall be measured before being covered up, and paid for at schedule rates.

38. The different materials met with in excavating main outfall sewer and branches, junctions, sub-ducts, &c., in tunnel, as hard sandstone or other rock, to be measured and paid for under items Nos. 1, 2, or 3 of the schedule as "Tunnel excavation in solid rock," subject to the conditions contained in clauses 52 and 53.

39. The different materials met with in excavating shafts and sumps, as road-metal, wood-paving, made ground, sand, shale, ironstone, clay, watercharged in places, pipeclay, soft sandstone (water-charged more or less), sound hard rock, &c., to be measured and paid for under items Nos. 4, 5, 6, or 7 of the schedule as "excavation in shafts and sumps," subject to the conditions contained in clauses 52 and 53.

40. *Removal of road-metal, pitching, and wood-paving, &c.*—Prior to commencing any excavation for shaft, junctions, branch sewer, &c., in open cutting (in accordance with the various stipulations and conditions contained in this specification, and in clauses 6 and 11 of the conditions of contract), the sites for each work to be prepared by the removal of all road-metal, ballast, pitching, wood-paving, concrete, asphalt, flagging, turfing, &c., where such occurs, as shall be directed. The materials so removed in the first instance to be laid and stacked aside, as the Engineer may direct, in different spoil-banks ; and as the works proceed, the said materials, if approved of, to be used in reinstating the metalled, pitched, and paved road or other surfaces, as the case may be, and those not approved of to be carted away to such places as shall be ordered, and to be paid for as lead.

41. All sods, road-metal, pitching, ballast, wood-paving, concrete, &c., removed under the conditions of the two foregoing clauses, and damaged, injured, or otherwise not approved of as fit for relaying, placing, setting, and fixing in the reformation and reinstatement of the various road and other surfaces, to be replaced by contractor with new, sound, and approved materials of their respective kinds, and therewith to reinstate and maintain, during continuance of contract, the various road and other surfaces, at his sole cost, as provided in clause 8, in a sound and satisfactory manner, in accordance with clause 11 of the general conditions of contract and to the entire satisfaction of the municipal authorities and of the Engineer-in-Chief.

If required by the Engineer the contractor shall, at the termination of the period of maintenance, procure certificates from the municipal authorities concerned, that the roads, &c., in their respective districts are in a satisfactory condition.

42. *All soft or loose soil, clay, soft and hard rock, and other materials* obtained from tunnels, subducts, sumps, shafts, &c., if approved of shall, in the first instance, be put aside in separate spoil-banks beyond the site of the works, subsequently to be used in refilling round and over pipes, and all concrete, masonry and brickwork, and into all excavations, as hereinafter specified, and as shall be directed at the time; and the surplus not so required shall be cleared away and removed by the contractor from the sites of all the works, and from the surfaces, streets, channels, and footpaths surrounding the same, and disposed of by the contractor, or carted to such places as shall be ordered, and paid for as lead.

The surplus material from shaft at O chains is to be conveyed to the Long Bay, and deposited and spread below high-water mark, as shall be directed, and paid for under Schedule Item No. 29.

43. *Areas at mouth of shafts.*—It is to be distinctly understood that when sinking shafts on lines of streets, and, when ordered, on private ground, &c., the materials excavated and raised, on their arrival at level of staging above mouth of shaft, are to be at once removed from off the streets or other surfaces, as the case may be; and when building material, &c., are to be conveyed through shafts to the tunnel works, that all such materials on arrival at mouth of shafts must be at once conveyed to the works underground, as permission cannot be given to contractor to disturb and impede the usual traffic in the streets, or the usual occupation of the ground by the owners, as the case may be, beyond the possession for the time of an area not exceeding 24 ft. x 17 ft., or less if ordered, over the mouth of each shaft, unless where otherwise determined and directed by the Engineer-in-Chief during the progress of the contract.

44. *Diversion of sewage of existing sewers during the construction of the works.*—During the construction of the works in general, and of all points of intersection of existing and new sewers, and until completion of all works connected therewith, the contractor to provide all materials and labour and everything that may be necessary; and execute all the works of every description required to prevent (and be solely responsible for) all damage and injury which may occur to private property or to the existing or new works by floods, flooding with sewage, choking and bursting of sewers in consequence of insufficient and inadequate pumping apparatus, tanks, dams, fluming, &c., or any other cause; and erect and construct suitable tanks, pumps, watertight temporary dams across existing sewers, above and below points of intersection, and watertight, adequate, and secure fluming, for the purpose of conveying constantly the whole of the sewage which may flow in said sewers at any time across said points of intersection, at his sole cost, to the entire satisfaction of the Engineer-in-Chief.

45. *Measurement of excavation, refilling, and spoil.*—The excavation throughout these works to be measured the net dimensions only of the various cross-sections shown on drawings, or determined at the time by the Engineer, and, where timbering has been ordered, the net dimensions only to the outside of said timbering. All refilling of above described excavations to be measured the net dimensions of same, less the actual net displacement of the permanent works. The whole of the surplus materials to be measured the actual net excavation less the actual net refilling as ascertained in accordance with the foregoing stipulations.

#### 7. *Main Outfall Sewer, North Shore, in Tunnels, through Rock, &c.*

46. The works comprised under the main outfall sewer, North Shore, in tunnels, through rock, &c., consist in the whole of the works of this contract as enumerated in clause 2, and as shown on drawings, and any details which the engineer may provide during the progress of the contract.

47. The internal dimensions of the main outfall sewer are—

From 0 chains to 50 chains	... ..	4 ft. x 3 ft.
„ 50 „	1 milc 25·20 chains	4 ft. x 2 ft. 8 in.

48. The excavation in tunnels, requiring shoring, timbering, and close timbering, the same is to be executed as specified in clause 36, and the unwatering is to be executed as specified in clauses 35, 44, and 60.

49. The cross-sections of sewer in tunnels to be as shown on drawings No. 7, to vary in the quantities and thicknesses of brick and concrete work according to the depths, nature, and solidity of the ground, and position under streets, &c., as shall be directed during the progress of the works.

50. The excavations for the works enumerated in clause 46, to be executed to the various depths, level, or inclined planes, gradients, steps, widths, batters, slopes, curves, longitudinal and cross-sections, &c., as shown on drawings, and any details which the Engineer may provide during the progress of the contract, and to such lesser or greater depths and widths as the Engineer-in-Chief shall direct and approve of from time to time during the progress of the works.

51. Wherever the solidity of the ground permits it, the excavation to be taken out with vertical or curved sides, as the case may be, the net dimensions only of the various cross-sections of the works, as shown on drawings and ordered.

52. *Precaution.*—In all cases at excavations of open trench, and shafts, where rock occurs, and blasting may facilitate such excavations, and in tunnels through rock, the contractor to use every precaution and carry on such operations with such limited charges of powder only, or other approved explosives, as will loosen the rock without shattering the same, and to employ all necessary means, as temporary bridges, staging, chains, rope-nets, fagots, or mats, &c., to prevent effectually and thoroughly all stones and fragments of same, or other materials from being shot or thrown out of said trench, tunnel, and shaft excavations, as he shall be held solely responsible for any accident, damage, and injury resulting from such blasting to any persons, works, or buildings, over the line of sewer or in the neighbourhood of same, &c., and as provided in clause 11 of the conditions of contract under the heading "Liability for Accidents, &c." Blasting will not in any case be allowed between the hours of 10 p.m. and 6 a.m., nor after 1 p.m. on Saturdays, except by the written authority of the Engineer; every hole drilled for blasting purposes will be measured by an inspector, and charged under his supervision, and the work shall be carried on under such further regulations, in conformity with paragraph 7 of clause 14 of the general conditions, as the Engineer may make and shall consider necessary as the contract proceeds.

53. As regards the charges of powder required on the various portions of this contract to loosen the rock without shattering the same, and in order to minimise as much as possible the risk of injuring or damaging buildings over or in the neighbourhood of the line of sewer; it is to be distinctly understood that only powder, or other explosives, of approved quality shall be used, and, when ordered in writing, by the Engineer, in charges of powder not exceeding 2 inches in length by 1½ inch in diameter, and not exceeding 4 inches in length by 1½ inch in diameter respectively. If other explosives are permitted to be used, the quantity and weight of such explosives relatively to powder to be carefully ascertained by the Engineer, and the respective charges made equivalent to those used in the case of powder. 51.

54. The schedule of quantities and prices provides for the excavation of this contract being executed as follows, viz. :—

“Tunnel excavation in solid rock,” subdivided under items—“Hard rock excavation, where gadding only is permitted.” “Hard rock excavation, where blasting is permitted with charges of powder not exceeding 2 inches in length and  $1\frac{1}{2}$  inch in diameter.” “Hard rock excavation, where blasting is permitted, with charges of powder not exceeding 4 inches in length, and  $1\frac{1}{2}$  inch in diameter.”

Excavation in shafts and sumps, subdivided under items—“Hard rock excavation, where gadding only is permitted.” “Hard rock excavation, where blasting is permitted, with charges of powder not exceeding 2 inches in length, and  $1\frac{1}{2}$  inch in diameter.” “Hard rock excavation, where blasting is permitted with charges of powder not exceeding 4 inches in length and  $1\frac{1}{2}$  inch in diameter,” and “excavation in road surfaces, sand, soil, pipe-clay, soft rock only.”

55. No guarantee is given as to the relative quantities of excavation which may be found under the abovenamed items of the schedule in the execution of the work, and they shall be paid for as they occur. The contractor shall not be entitled to claim any compensation for loss or damage in consequence of any alteration, change, increase, decrease, or omission, as the Engineer may order in writing, of any of the respective quantities under the abovenamed items beyond the actual respective rates per cubic yard named in the schedule of quantities and prices for such excavation “in solid rock,” with 2 in. or 4 in. charges of powder or no explosives respectively.

56. The excavations for sewer, branches, &c., as before described, may therefore vary from those shown on drawings, but the exact cross-sections will be determined by the Engineer as the works proceed.

57. A heading of 4 ft. x 3 ft., exclusive of timbering, to be driven for all lines of pipes. The timbering to be executed as specified in clause 36. In good bearing material, all pipes to be laid on solid ground, as hereinafter specified, after which the open trench or heading, as the case may be, to be filled in with approved earth, as specified in clause 60. In less solid soil, where ordered, the pipes are to be laid and jointed on a layer of concrete 9 inches thick, and then to be surrounded with a concrete relieving arch 9 inches thick, as shown on general cross-section, drawing No. 7.

58. The excavation for tunnels is assumed to be sandstone rock, varying in hardness and solidity, and less compact material. In strong compact rock,  $4\frac{1}{2}$  inches concrete and brick lining will be requisite, and, as the materials occur less compact, two or three rings of brickwork or brick and concrete lining, as shall be determined by the Engineer as the heading proceeds, may be required.

59. The excavations for the tunnels in rock, to be taken out to the exact form of the tunnel, leaving just room for the lining ordered. Great care to be taken in gadding or in blasting the rock, so that no portion of the sides, soffit, or invert of tunnel be removed beyond the exact dimensions determined on. In no case shall the excavation be taken out in advance of the brick and concrete lining in excess of internal dimensions of sewer, until the thickness of the lining of the succeeding length has been determined by the Engineer.

60. All water which, during the progress of the work, may accumulate in these excavations to be properly, effectually, and continually pumped out, and the whole to be kept dry until after the completion, setting, and hardening of all brick and concrete work; and the greatest care to be taken to prevent running water passing over any of the brick, concrete, and pipe-work until it has set perfectly hard; any concrete, mortar, and cement jointing exposed to wash of water must be taken up at once, and replaced by fresh concrete, mortar, and jointing at contractor's expense.

61. Great care to be taken while timbering that no portion of end faces, sides, floor, roof, or front faces of excavation in tunnel, or open trench, as the case may be, be removed, or fall in, beyond the exact dimensions determined on; and the contractor to provide and execute at his own cost whatever may be required to prevent such removal or falling in of the excavation, and the wet or dry material surrounding the timbering from being shaken, running, or forced through the joints of the poling-boards and open spaces between the wedges which keep the poling-boards in position; and to provide and have constantly in readiness, close to where they are required, all appliances and materials such as straw, bags, asphalted felt, tarred gasket, puddle, &c., and with the same carefully and securely close up and pack against the outside of the timbering, all such joints and open spaces wherever they occur; and caulk open joints if so directed; and attend to, execute, and maintain the said timbering till completion of the sewer works to the entire satisfaction of the Engineer-in-Chief.

62. In advancing the end faces of excavation in tunnel, particular precaution to be taken by the contractor that such advance is made in a careful, secure, and safe manner, by means of shoring, planking, poling-boards, props, and wedges, together with all packing and caulking materials.

63. In withdrawing timbering from shafts, the same shall be commenced from bottom of excavation, or as the Engineer may direct, from lowest practicable portion of same, and continued upwards; the contractor to exercise every precaution by means of intermediate shoring, planking, props, &c., and the filling in around and above sewer to be carried on simultaneously with the withdrawing of the timbering.

64. Throughout the excavation and timbering of tunnels and shafts, the contractor to take all due precaution against accidents, &c., during the progress of the works, whether arising from insufficient strength of timbering, bad workmanship, breakage of machinery, and plant, inefficient caulking or packing of open joints and spaces, flood, or any cause whatsoever, as he shall be held solely responsible for all damage, injury, or loss that may be occasioned during the progress of the works to the buildings, bridges, railways, tramways, streets, and other surfaces, above and adjacent to the excavations, to persons employed by the contractor, by Government, or otherwise, and to his own or other works; and the cost of all such damage, injury, and loss, shall be valued at the time by the Engineer-in-Chief (whose decision shall be held final and binding on the contractor), and shall be deducted from any money or security held by the Government, and due to the contractor on account of his contract.

65. If the contractor has exceeded the sectional area of excavation as ordered, in consequence of injudicious timbering, gadding, blasting, slips, falling in of sides of excavation, or any other cause, which in the opinion of the Engineer should have been prevented by careful gadding, blasting, timbering, pumping out water, diversion of water, or by any other means, then the contractor shall remove such extra excavation, and make good and fill in same with concrete described in clause 26, at his sole cost, the actual cubic contents only of the excavation and of the concrete work or brickwork shown on drawings, and ordered for each special length of sewer, shall be paid for.

66. If, under the written authority of the Engineer, any portion of the excavation in tunnel has been enlarged or widened out for timbering or other purposes named in such instructions, then the contractor shall fill in such excess of excavation with concrete or brickwork in the manner herein described, and the extra excavations, concrete, or brickwork so built in, shall be paid for at schedule rates.

67. In all cases where a greater thickness of lining, or a greater cross-section area of tunnel is ordered to be executed, from whatever cause, after the length of tunnel in question has been excavated to the profile ordered in the first instance, the excess of excavation so ordered shall be paid for at schedule rate. If such extra excavation, in the opinion of the Engineer, shall require special timbering and shoring, the same shall be dealt with in strict accordance with clause 36.

68. No concrete or brickwork shall be commenced until the portion of sewer excavation in tunnel to be operated upon has been cleaned and levelled, and until the Engineer has examined and approved of same.

69. *Filling.*—The materials obtained from all excavations to be dealt with as specified in clause 43. The most approved materials, as shall be directed, to be used in filling in the spaces between sides of concrete work of sewer, brick, and pipe-shafts, &c., in level layers, spread 6 inches thick, each layer to be rammed and watered, if directed, until approved of, before the succeeding layer is put on. This filling to be carried up to a height of not less than 5 feet above top of sewer; and the filling from this level round ventilating shafts up to surface of ground, to be carried up in level layers, spread 9 inches in thickness, each layer to be rammed and watered, when directed, until approved, before the succeeding layer is put on. The spaces between the excavation (poling-boards) and the brickwork or concrete of sewer in tunnels, to be filled in, unless where this is directed to be done with concrete, with hand-packed broken stone, as specified in clause 17, or other approved materials, in 6-inch layers, each layer to be well rammed until approved, before the next layer is put on. The filling and packing to be carried on simultaneously with, and as the construction of sewer, brick, and pipe-shaft, &c., proceeds, and as the Engineer may direct at the time. Only iron-shod rammers of not less than 10 lb. weight, of approved pattern, to be used, and one man to be employed in ramming to each man to be employed in filling.

70. *Maintenance of Streets.*—The contractor shall maintain the surface of the roads, streets, &c., where the streets, roads, &c., have been broken up or injured during the progress of the work, during the period of the contract time, and afterwards during the period of maintenance, and shall from time to time make good any sinkings in the surface, and shall provide any additional metal, ballast, or other material that may be necessary during these periods, in accordance with clauses 8 and 41.

71. *Shafts.*—Shafts are to be sunk at the various sites shown on longitudinal section and on general plan, drawings Nos. 1 and 2, or, in lieu of those shown on plan, at such other sites as the Engineer from time to time may determine. Wherever shafts are ordered, they are to be sunk truly plumb, and of the full dimensions, 24 ft. x 17 ft. sectional area (or of such other sizes as may be ordered at the time), clear of timbering; the latter to be provided and fixed wherever considered necessary by the Engineer, in strict accordance with clause 36. On completion of concrete, brickwork, &c., in shafts, the spaces between the rock, and earthsides and outer face of brickwork or concrete to be filled in in 9-inch layers, well rammed (and watered where directed) with materials provided for in clause 42, great care being taken in lowering the materials to the bottom of each respective layer, so that stones do not fall on top or against sides of pipe-shafts, brick or concrete lining, that stones are put in in alternate layers with the earth or clay, and that at least 12 inches of earth be placed nearest and round the brick or concrete lining of pipe-shafts, well rammed.

72. Shafts not required as manholes or ventilators, but ordered by the Engineer, to have, on completion of contract, or when directed, all timber withdrawn; and they are at the same time to be carefully filled in as specified in clause 69, with material provided for in clause 42, the first 5 feet over sewer with specially selected and approved materials. The sinking, filling in, &c., of such shafts to be paid for at schedule rates.

73. *Temporary Shafts.*—If the contractor desires, to suit his own convenience, to sink temporary shafts, they are to be sunk only at approved places, and on completion of work to be filled in, as specified in clause 72, to the satisfaction of the Engineer. The cost of sinking, timbering, unwatering, &c., and of filling in, withdrawing, or covering up timber of such shafts, to be defrayed entirely by the contractor.

All temporary shafts to be sunk of the dimensions specified, or directed, clear of timber.

74. All shafts, temporary, or permanent, to be provided and fitted during their construction and completion, or during the progress of the contract, if deemed necessary by the Engineer, with approved winding engines and steel-wire ropes capable of resisting a strain equal to six times that of the working maximum strain, with cages and such other winding arrangements, ladders, staging, &c., as shall be directed and approved of by the Engineer.

75. *Sumps.*—Sumps are to be sunk at the bottom of every shaft, 6 feet deep below invert of sub-ducts, and on completion of the works to be filled in with concrete, as specified in clause 26. Where shafts are ordered to be sunk, the cost of sinking sump-holes and filling same in with concrete to be paid for at schedule rates, and the removal of the excavated material to be paid for as lead.

Any other sumps which the contractor may think fit to sink on line of sewer trenches for his own convenience during the construction of these works, are to be filled in with concrete, as specified in clause 26, and the cost of sinking, timbering, unwatering, and filling in with concrete and removing the materials, &c., to be defrayed entirely by the contractor.

76. *Sub-ducts.*—Sub-ducts to be constructed, when decided on, along lines of tunnels, commencing on each length midway, or thereabouts, between the working shafts or faces, 33 inches below invert of sewer, branches, &c., or as shall be directed at the time, and having a fall towards each working shaft of such gradients as may be determined at the time, after the thickness of sewer-lining required for each length  
between

NOTE CLERICAL ERROR IN CLAUSE 71 :—For sectional area of shaft read "9 ft. x 6 ft." in lieu of "24 ft. x 17 ft." as printed.—F. W. B., 9/6/91.

between shafts or faces has been ascertained and ordered. Sub-ducts of 9 inches, or of a greater or less internal diameter, if directed, to be laid immediately underneath the timber floor of tunnel or open trench, or at sides of sewer, in hardwood boxes varying in size and dimensions as shown on drawing No. 7. Said boxes to be laid straight and true to levels decided upon, and the pipes to be laid therein, upon, and surrounded by sandstone chippings and quarry refuse. Dry stone packing to be put over pipes, as specified in clause 17.

77. In solid compact rock, the sub-duct to be excavated true to cross-section, drawing No. 7, of not less than 9 in. x 7 in. internal dimensions, to be covered with 12 in. x 6 in. x 2 in. paving tiles, laid dry on rock faces prepared and dressed for the purpose. The filling above tiles up to concrete lining of invert of sewer to be executed with dry stones, 4-inch gauge, hand-packed, carefully rammed, and as shall be directed.

78. In disintegrated rock the excavation for sub-duct to be executed as shown on cross-sections, drawing No. 7, and as shall be directed, and the sub-duct to consist of glazed stoneware spigot and faucet pipes of 9 inches internal diameter, more or less, as the case may be. The pipes to be jointed dry, and the filling above same up to underside of sewer, to be of dry stone, hand-packed, as above described. The Engineer may also, if he deems it necessary, order the pipes to be jointed altogether, or in part with tarred gasket,  $1\frac{1}{2}$  inch deep, and cement mortar,  $1\frac{3}{4}$  inch deep. The mortar to be prepared of one part cement to two parts of sand.

#### *Rock-boring Machines and Progress of Excavation.*

79. The excavation of the various tunnels to be commenced from not less than twenty-three different faces simultaneously within nine months, unless otherwise directed, after the date the contract has been signed, to be carried on and continued without interruption, by day and night shifts, unless otherwise directed, as specified in clause 51, and to be completed in the most careful and accurate manner. All rock in tunnels to be taken out as specified in clauses 52 and 53, and where blasting is permitted, by means of compressed air, percussive, or other rock-drill, and blowing machines with ventilating fans, &c., complete, of approved pattern and manufacture, capable of excavating at each working face not less than 12 feet length of tunnel during every working week, and of removing the foul air in one minute immediately after blasting at each working face. *If required, all charges to be fired by means of electric fuse.*

80. The excavation of shafts, where sunk in rock, to be executed in the same manner as specified for tunnels in clauses 52 and 53, and by means of the same appliances and machines as those specified to be used at the driving of the tunnels.

81. The whole of the tunnel excavation, with sub-ducts, shafts, sump-holes, &c., to be carried on as hereinbefore specified, in a manner that the total average progress made at all working faces during every day of twenty-four hours, shall not be less than 46 feet length of tunnel excavation complete.

82. *Existing Gas, Water, or Sewer Pipes, and Sewers.*—During the excavation and construction of these works, the contractor is to take every precaution to prevent damage or injury to existing gas, water, or sewer pipes, and sewers. Such pipes and sewers on being met with at sides, over, or crossing the excavations of these works, to be carefully and securely protected and supported, as the case may require, by chains, timbering, strutting, and underpinning, &c., to prevent said pipes or sewers from being shaken, bent, or broken, and the contractor to provide all materials, plant, and labour required for said timbering, strutting, and underpinning, &c., and maintain the same at his sole cost, until, in the opinion of the Engineer, the refilling of excavation and the general progress of the works render further precaution unnecessary. All damage to existing water, gas, or sewer pipes and sewers, to be repaired at once by contractor at his own cost, to the satisfaction of the Engineer.

#### *Sewer.*

83. As the cross-section area of each respective length of tunnel has been determined, excavated, cleaned, and approved, and after the cross-section and depth of trench for each respective length of sewer has been excavated, cleaned, and approved, the egg-shaped sewers, &c., of the internal dimensions specified in clause 46, to be built therein with such pipes and with such concrete and brick-lining, and backing, and walls round pipe-sewers, and of such thickness, as shown on the various drawings referring to each respective length of sewer, and as shall be determined by the Engineer whenever the excavation of sewer in tunnel has advanced sufficiently to enable him to do so.

84. In very wet ground and under buildings the lining of tunnel to be executed of an extra thickness, and in brickwork only with concrete backing where required right up to timbering or rock, as the case may be, as shall be directed.

85. In dry and compact rock excavation the concrete lining to be filled in solid between internal surfaces of sewer (less  $\frac{1}{8}$ -inch space required for cement rendering) and of tunnel.

86. Under all shafts, when ordered, relieving arches of brick or concrete to be built of a thickness, form, and width as shall be directed at the time of occurrence. Under temporary shafts excavated by contractor for his own convenience, the extra brick and concrete work to be at the contractor's cost.

87. The thickness and description of the lining, whether concrete only, of brick and concrete, or of brick only, required for the different portions of tunnels depends upon the nature of the ground through which they are driven, and shall be determined by the Engineer as the excavation of external cross-section of sewer for each respective length of tunnel advances.

88. Three gas-check chambers, two junction chambers, eleven shaft-chambers for ventilating shafts, one shaft-chamber for ventilating pipe-shafts, eleven ventilating shafts, one ventilating pipe-shaft, six inlet chambers at head of drop pipes, where ordered, spaced as shown on longitudinal section and general plan, and as shall be directed, to be built in connection with these lengths of sewer of concrete, brickwork, freestone, bluestone, stoneware pipes, &c., of the exact sizes, heights, shapes, forms, curves, and dimensions as shown on drawings. All brick shafts to be built, unless where otherwise directed, of 9-inch and 14-inch brickwork and bluestone concrete, with four vertical or battered corners, as the case may be, and curved sides between same, with freestone caps at tops, pierced and prepared for seat of cast-iron frames of ventilating grates, &c.

89. Junctions for branch pipe-sewers, as shown on drawings, to be constructed in concrete, where ordered, to enter the sewers at such level above the invert, with such radius and longitudinal fall as shown, or as shall be determined at the time. All inlet openings of branch and intercepting sewers, unless otherwise directed, to be securely closed for the time being with earthenware, cast-iron, or other covers, set in cement mortar all round, or as shall be directed, and left water-tight.

90. Cast-iron, flanged, circular, or otherwise straight, junction, bent, plain, and faucet and spigot pipes, or other castings, sluice gates, wrought-iron ladders, gratings, &c., gas-check frames, man-hole covers, saddles, stop-board grooves, &c., to be walled and built in, as shown on drawings, at points of intersection, branch junctions, gas-check or other chambers, pipe ventilating shafts, where ordered, &c.

91. Step-irons to be built into side walls of shafts, and anchor bolts for fixing wrought-iron ladders, gratings, and cast-iron frame for gas-check, to be built in as shall be directed. Trapped junction blocks to be built in where ordered and directed. Permanent putlog holes in shapes of reveals, for temporary staging, are to be left in walls of gas-check, shaft-chambers, and shafts where directed; and, in all cases, unless otherwise ordered, the reveals are to be built round of the same thickness of brick or concrete, as shown on walls of shafts or chambers at the places referred to. Putlog holes to be included in the schedule price for brickwork. Stop-board grooves to be formed in concrete, and cement faced, as shall be directed.

92. In the event of it being deemed necessary by the Engineer during the progress of the works (see clause 10 of the Special conditions) to omit, alter, or change any of the shafts, chambers, arches, pipe shafts, and other works connected therewith, and construct and carry out other works of different design and construction instead, or fewer, or additional shafts, chambers, arches, pipe shafts, &c., where ordered in any situation in connection with these works, then the contractor shall be bound to omit or carry out, as the case may be, and execute any such works with the materials and *workmanship* so required at the various schedule rates referring to such items of works, *and as shall be directed and specified hereinafter.*

#### *Concrete Works.*

93. The concrete to be used in foundations of sewer, and in arching and building round stoneware pipes, packing over brick arch in tunnels, where ordered, and in sumps, to be of sandstone concrete of the quality specified in clause 26. The concrete to be used for all other works in sewers, junctions, chambers, shafts, manholes, &c., unless where otherwise directed, to be bluestone concrete of the quality specified in clause 24.

94. The contractor to find, provide, and make at his own cost, all concrete boxes, centres, staging, shoring, planking, &c., of the exact forms, shapes, curves, &c., required, in a proper, secure, and substantial manner, due allowance being made for  $\frac{3}{4}$ -inch thick cement facing over all internal exposed surfaces of concrete work; and great care being taken that all centering and concrete boxes can easily be withdrawn, except where otherwise directed. The designs for centering, concrete boxes, &c., are to be approved by and to the entire satisfaction of the Engineer. After completion of any portion of the concrete or brickwork, the concrete boxes and the centering, as the case may be, shall not be removed until the Engineer or his Superintending Officer has given written permission to that effect.

95. The concrete, after it has been approved of, to be conveyed to the work as may be directed, and as shall be approved of, and tipped into same and upon the surface of each layer from a height not exceeding 18 inches. Commencing at each part of the work at lowest level of excavation, the concrete to be brought up in horizontal and even layers, and on lines of sewer, branch and pipe sewers, junctions, gas-check and shaft chambers, inspecting chambers, &c., unless where otherwise directed, in even layers parallel with specified longitudinal gradients of works; each layer, when spread, to be 9 inches thick throughout before ramming, and, after spreading, to be quickly and evenly rammed all over until approved of, and then allowed time to set before the succeeding layer is put on.

96. After the concrete has been carried up to the level of springing, all concrete arches to be commenced at both walls or abutments simultaneously, and carried on towards centre line in radiating parallel strips, spread 9 inches thick, of the whole width of arch, or in lengths as specified in clause 107, as shall be directed at the time, and rammed as before described, and, where the arch is thicker than 9 inches, the lower layer to be always completed throughout, 12 inches in advance of the upper succeeding layer, and then allowed time to set and harden before the succeeding layer is put on.

97. After completion of the brick closing-arch, all bluestone concrete work above springing of same, at sides of arch, in manhole chambers, gas-check chambers, shafts, &c., to be carried up in the same manner as specified in clause 95, and of exact dimensions, curves, and thicknesses, &c., as shown on drawings.

98. No portion of the concrete work described in the previous clauses (unless otherwise directed in writing) to be covered up with earth or brickwork until it has been examined and approved of by the Engineer. Any leakage that may appear in each layer to be carefully attended to and be made good and repaired at the time, as shall be approved, before each succeeding layer is put on.

99. All end faces of layers of concrete to be stepped back at each respective length of sewer or other work, as shall be directed, to be carefully washed clean with fresh water, and then to be grouted prior to each layer of the adjoining length being commenced and joined on to the same.

100. After the lower layer has set to the satisfaction of the Engineer, its top surface to be carefully washed until approved, and then to be grouted all over prior to each succeeding layer of concrete being put on.

101. In the event of any stoppage occurring to the work, from whatever cause, or in anticipation of rainfall, the contractor, before temporarily stopping work, shall finish it off at whatever level the work may be raised at the time, by thoroughly grouting the whole of the surface with cement grout.

102. In all cases where a layer at mid-day or at evening is left incomplete, the said layer shall not be continued after any stoppage until the surface of the lower and the end of the upper layer have been washed clean and then grouted with cement grout.

103. At the sites of all gas-check and sluice-gate frames, cast-iron manhole covers over stop-boards, branch junctions, and all circular or bent pipes, covers, &c., after the concrete has been built to the exact height and gradient (leaving sufficient space for jointing), the whole of the cast-iron work, after having been washed clean with fresh water, is to be truly laid and jointed or set perfectly plumb or otherwise, as the case may be, and as shall be directed, in the exact positions, lines, and gradients, on fillets of mortar; and

and as the concrete rises against and around the castings, leaving a space of not less than  $\frac{1}{2}$  inch all round between the concrete and the iron, this space round the invert, or underneath bottom of plates, as the case may be, to be filled in with special grout, or mortar, as shall be directed at the time, whilst above the springing line the outer surface of the castings to be grouted with special grout, and then to be covered with a coat of special mortar,  $\frac{1}{2}$  inch thick, before the concrete is built on to and around said pipes, castings and frames.

104. All anchor-bolts in connection with cast-iron frames to be placed in the exact positions required, to be washed clean, wetted, bedded upon, and surrounded with special mortar in each case before the concrete is built round same.

105. All stoneware pipes, where they are shown to be, or ordered to be, surrounded with concrete, to be clean washed with fresh water, to be truly laid and jointed in the exact lines and gradients on fillets of mortar, and to be grouted all round with special grout as the concrete is being built all round same.

106. On completion of concrete work, and after the boxes and centering have been removed, the outer faces shall present compact, solid, even, plain surfaces. All faulty portions, cavities, holes, or other defects shall be at once repaired by the contractor, at his own cost, with concrete or mortar, as the case may require, to the satisfaction of the Engineer. The centering shall not be removed until the Superintending Officer has given written authority to that effect.

107. The concrete and brickwork of sewer in tunnel to be commenced, in accordance with clause 79, in the different lengths of tunnels, and to be carried on in each from each end simultaneously, in not less than three continuous lengths of 16 ft. 6 in. each—that is to say, when the arching of the first 16 ft. 6 in. commences the next 16 ft. 6 in. length must be in progress from height of invert up to the springing of arch, the third 16 ft. 6 in. length must be in progress between floor of tunnel and level of invert of sewer, and in the fourth 16 ft. 6 in. length the excavation and timbering of tunnel must at this time be completed and ready to receive concrete foundation of sewer.

108. When a length of arch is completed the same must be protected from the influences of the weather and sun by bags, or other approved means, and kept constantly moist until it has been examined and ordered to be covered up.

109. The whole of the concrete work of branch, pipe-sewers, including all ventilating shafts, chambers, gas-check chambers, junctions, &c., to be completed in strict accordance with specification and drawings, and of the exact shapes, forms, and dimensions shown thereon, and as shall be directed.

#### *Brickwork.*

110. The brickwork required in lining tunnels, branch sewers, sewers in open trenches, and shafts, to consist of the materials and mortar described under clauses 13, 19, 20, and 21. All circular work and arches of shafts, or elsewhere, to be built of radiating bricks, unless otherwise directed. All bricks to be thoroughly soaked in clean fresh water for not less than five minutes, immediately before being used. All work to be built with whole bricks, and all walls in English bond, with  $\frac{1}{4}$ -inch joints, in alternate courses of headers and stretchers, each brick to break joint with the one above and underneath, and to be set full and rubbed in cement mortar. Every course to be carefully and thoroughly grouted, and well wetted before the succeeding course is put on. All work, wherever directed, to be finished on all outside and inside faces with a neatly struck joint. The brickwork of tunnel lining, branch sewers, sewers in open trenches, &c., to be of the thickness, dimensions, curves, and gradient shown on longitudinal and cross-sections, and as shall be determined and directed from time to time by the Engineer as each different portion of tunnel or open trench excavation becomes ready for concrete or brick lining. Wherever brick lining for sewer is ordered, it shall be built in radiating courses in  $4\frac{1}{2}$ -in. rings, each brick to be set full, and rubbed in cement mortar, with joints not exceeding  $\frac{1}{4}$  inch in thickness, in approved bond, the bricks of each course to break joint over the centre of those of the adjoining course. Where the brickwork consists of two or more rings, said rings to be built simultaneously, the lower ring to be always completed throughout  $4\frac{1}{2}$  inches in advance of the upper succeeding layer of each ring of brickwork, to be carefully and thoroughly wetted and grouted, and then covered with a coat of cement mortar, collar-joint  $\frac{1}{2}$  inch thick, to ensure the thorough bonding of the joints and the different rings of brickwork. At completing any length of brick lining, the courses at end of same to be stepped back as shall be directed, and the end face of each ring or course to be well wetted and then grouted prior to each ring of the succeeding length being commenced.

111. The brickwork of sewer in tunnels to be carried on in conformity with clause 107, and in such a manner that when the arching-in of one length of 16 ft. 6 in. commences the lining of invert of the next 16 ft. 6 in. length must commence at the same time, and as the arching-in of one length is completed the adjoining length must be completed up to springing of arch.

112. Wherever concrete is to be built on to and against brickwork, or brickwork on to and against concrete, the latter in each case to be well wetted and grouted, and then to be covered with a coat of cement mortar, collar joint  $\frac{1}{2}$  inch thick, before the concrete or brickwork is built against it.

113. Prior to commencing any concrete or brickwork which has to be built on to and against rock faces, all shaken and loose rock to be removed, all rock surfaces to be well cleaned, washed, and wetted, and all beds, open joints, and spaces between concrete or brickwork and rock faces to be carefully filled in with cement mortar, and flushed and grouted every course as the brickwork proceeds; and the cost of thus preparing rock faces, washing, grouting, flushing, &c., to be included in, and covered by, the Schedule price per cube yard for the concrete and brickwork herein referred to.

114. *Cement Coating.*—The whole of the internal and external surfaces of sewers, man-holes, chambers, &c., where such is shown on plans, and where directed, to be protected by a cement coating, to be put on in two thicknesses, consisting of mortar of one part of cement to two parts of clean sharp sand. The coating throughout, when finished, to be  $\frac{5}{8}$  inch in thickness.

115. *Pymont Sandstone.*—Pymont sandstone ashlar of the quality specified in clause 16 to be provided for top courses of all ventilating shafts, or where ordered in any situation in the construction of these works, to be worked, pierced, dressed, picked to the exact sizes, dimensions, forms, and shapes as shown on drawings or as may be directed, to be set full upon and in cement mortar, and to be finished, when directed, with a neatly cut and struck joint.

*Bluestone*

116. *Bluestone Ashlar*.—Bluestone ashlar, of the quality specified in clause 33, to be provided in blocks or otherwise, when ordered, in any situation in the construction of these works, to be worked, pierced, grooved, picked, axed, and dressed to the exact sizes, dimensions, forms, and shapes, as shall be shown on detail drawings, or as may be directed; to be washed clean and well wetted before setting, and to be set in the exact positions required, truly level, full upon and in cement mortar, and as may be directed at the time, after which all joints between stones, and between stones and concrete, to be filled in with grout. All joints to be  $\frac{3}{4}$  inch wide, to be carefully raked out  $\frac{3}{4}$  inch deep, and filled in solid with special mortar, neatly pointed, finished flush with exposed faces of stones.

117. *Bluestone Pitching*.—Contractor to provide and find, where ordered, squared bluestone pitchers 9 inches deep throughout, no stone to be less than 9 in. x 9 in. x 9 in., but to be larger and longer, curved and radiating, as shall be directed, to be worked, fitted, and set in sand, one ring round all man-hole covers, with  $\frac{1}{2}$ -inch joints between pitchers and cast-iron frames, as ordered.

#### *Pipe-sewers.*

118. After the foundation layer of concrete has been filled in or the ground excavated, as the case may be, to the exact depths, levels, and gradients (leaving sufficient room for jointing), glazed stoneware pipes of the quality specified in clause 15, and of the required diameter, to be laid thereon, along such lines, curves, and inclinations, as shown on general plan and longitudinal section, as may be ordered at the time, true, straight, and solid (for all vertical branch pipe-sewers and ventilating pipe-shafts, the pipes to be set true, straight, and plumb), and to be jointed, viz. :—

119. The 6-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{1}{4}$  inch deep within socket of pipe; the 9-inch pipes with tarred gasket  $\frac{1}{2}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 10-inch pipes with tarred gasket  $\frac{1}{2}$  in. deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 12-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 15-inch pipes with tarred gasket  $\frac{5}{8}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 16-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{3}{8}$  inch deep within socket of pipe; the 18-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar  $1\frac{7}{8}$  inch deep within socket of pipe; the 24-inch pipes with tarred gasket  $\frac{3}{4}$  inch deep after setting, and special cement mortar 2 inches deep within socket of pipe.

120. After the tarred gasket has been placed in position and set tight round the pipe, and after the joint above has been cleaned and wetted, stiff cement mortar to be packed in solid, splayed off outside and finished with a carefully struck and cut joint, after which the inner joints between two pipes to be likewise carefully filled with cement mortar all round, neatly wiped off as a finish. Each pipe length when thus finished to be carefully cleaned out before another pipe length is added.

121. All spigot and faucet vertical cast-iron 9-inch and 12-inch diameter ventilating and sewer-pipes to be jointed with well caulked  $\frac{3}{4}$ -inch-diameter New Zealand flax spun-yarn and soft pig lead. The spun-yarn to be tightly laid round spigot-end, so as to fill the socket of 9-inch pipe to a depth of 3 inches, and the 12-inch pipe, to a depth of  $3\frac{1}{2}$  inches, after setting up, leaving for the lead joint a depth of  $1\frac{1}{2}$  inch all round for the 9-inch pipe, and a depth of  $1\frac{7}{8}$  inch all round for the 12-inch pipe; the lead joint to be made with one running, and when cold to be set up with proper setting irons to one smooth even plain surface all round the pipe and  $\frac{1}{8}$  inch within socket of same.

#### *8. Power to get Bricks elsewhere, or substitute Concrete.*

122. Should the contractor, at the commencement or during the progress of the contract, at any time fail to provide the specified bricks in any or in such quantities as in the opinion of the Engineer shall be deemed necessary to ensure the progress of the works as stipulated in clauses Nos. 107, 111, and 128, then in all such cases the Engineer shall have the power to supply the same from any other sources, and all additional costs and charges thereby occasioned over and above the contract prices for brickwork shall be incurred solely by the contractor, who shall only be paid for the net quantity of brickwork actually ordered at schedule rates, less the cost of the bricks so delivered on the works by the Engineer; and the contractor shall have no claim for loss, damage, or compensation on account of the exercise of such power by the Engineer.

123. In the event of the specified bricks not being provided by the contractor, and not being procurable by the Engineer from other sources, at any time they are required in the construction of the works, then in all such cases the Engineer shall have the power, whenever he may deem it practicable and suitable to do so, to substitute concrete instead, as described in clauses Nos. 24 and 26, excepting in the case of the  $4\frac{1}{2}$ -inch brick-lining to intrados of sewer, wherever such are shown on the drawings, which must be adhered to; and the contractor shall have no claim for loss, damage, or compensation, on account of the exercise of such power by the Engineer; and he shall be only paid for the net quantity of concrete so ordered in any situation of the work at schedule rates.

#### *9. Order of Works.*

124. The contractor shall, immediately after he gets possession of the ground or any part thereof respectively, commence the various works comprising this contract and proceed to execute the same.

125. Contractor shall provide at his own cost and charges (except where otherwise specified) all materials, labour, tools, plant, tackle, cordage, machinery, scaffolding, staging, planking, timbering, centering, concrete boxes, and everything necessary for the proper construction, erection, execution, and completion of the several works comprising this contract, all of which are to be approved before being used.

126. No excavation to be commenced on any portion of the contract, particularly in tunnels through earth, clay, &c., underneath buildings, streets, &c., until, in the opinion of the Engineer, sufficient quantities of timbering, shoring, staging, scaffolding, cement, bricks, sand, or other materials are ready for immediate use, together with the necessary appliances and plant to ensure the speedy and uninterrupted progress

and

and continuance of the works after they once have been commenced at any locality, without any delay or stoppage. Delays and stoppages in the progress of the works, arising from disputes as to the quality of materials and insufficient supply of any materials, plant, &c., and any danger or injury caused to buildings, to the works of this contract, and adjoining or adjacent works and buildings, or streets, tramways, lands, fences, &c., in consequence of such stoppage and delay, and be entirely and solely at the risk and cost of contractor.

127. Working faces—The working faces available for excavating and constructing the main outfall sewer, North Shore, &c., unless otherwise directed during the progress of the contract, are as follows, viz.:—One working face from shaft at 0 chains, two working faces from shaft at 16.05 chains; two working faces from shaft at 27.5 chains; two working faces from shaft at 38.83 chains; two working faces from shaft at 49.88 chains; two working faces from shaft at 61.22 chains; two working faces from shaft at 72.12 chains; two working faces from shaft at 1 m. 2.63 chains; two working faces from shaft at 1 m. 8.5 chains; two working faces from shaft at 1 m. 13.9 chains; two working faces from shaft at 1 m. 19.5 chains; two working faces from shaft at 1 m. 25.2 chains. The shaft at 0 chains will not be available for constructing sewer, only for excavation.

#### X.—General Progress of Works.

128. The whole of the works as excavating, tunnelling, unwatering, timbering, with all sub-ducts, sumps, shafts, pipes, chambers, temporary headings, filling, concrete, brickwork, masonry, pitching, road-making, fencing, temporary bridges, carting surplus materials to spoil, &c., required in constructing of the main outfall sewer, North Shore, intercepting branches, and all other works connected therewith, shall be executed as hereinbefore specified, and carried on in a manner as viz.:—

That after the working faces are opened up, the average total progress made during one working week with the sewer in tunnel at all working faces, shall not be less than 276 ft. in length of the main outfall sewer, North Shore, complete, as above described.

#### XI.—Power to make use of parts of Work.

129. The Engineer-in-Chief shall have the power, at his discretion, without vacating this contract to enter upon, by himself or his agents, and make use of any part or parts of the work comprised under this contract, and his doing so shall in no wise be held as a waiver of the responsibility of the contractor in respect to his contract, except in so far as any injury may accrue to such work so entered upon by reason of any proved carelessness of any employé of the Government, in which event the contractor shall be free from liability on account thereof, but not otherwise.

#### XII.—Maintenance.

130. The contractor will be bound to maintain the works for a period of three months after their final completion and use by the Government; and if any part should within that period show signs of weakness or of giving way, or should any defective workmanship or materials be detected, the contractor, when called upon to do so, shall make good same at his own cost, to the satisfaction of the Engineer-in-Chief, before the reserve balance will be paid. It is to be distinctly understood that the Government shall have the full, free, and unrestricted use of the said works, without any interference whatever on the part of the contractor, during the currency of this period of maintenance; and such use of the said works on the part of the Government shall not be held as relieving the contractor of any liabilities or obligations whatever in respect of his contract.

#### XIII.—Government Property.

131. All iron and other metal work in gas-checks, anchor-bolts, ladders, gratings, landings, platforms, staples, manhole covers, ventilating grates, lamphole boxes, sluice-gate, oval and circular, straight and bent pipes, branches, junctions, step-irons, and all earthenware covers for branch sewer junctions, trapped junction blocks, &c., to be supplied by the Government as the works proceed and when required, and to be delivered to the contractor free of charges within the resumed land, or, if approved of, at the site set apart as the contractor's yard or store.

132. For each article so delivered the contractor shall give a written receipt, after which he shall be held solely responsible for same, and shall refund to the Government, out of any moneys that may be or may become due to him on account of this contract, the cost of anything (as ascertained and valued by the Engineer) that may be lost, stolen, damaged, or destroyed of said articles during the term of this contract and the period of maintenance.

133. All Government property which, at the completion of the contract, by direction of the Engineer, has not been built or permanently fixed in the works, shall be conveyed by the contractor, as may be directed, to the site of the Field Office, and there to be dealt with in accordance with clause 15 of the general conditions.

#### XIV.—Notice for Inspection.

134. The contractor shall give notice to the Engineer of the commencement or completion of the undermentioned work, and formally submit it for inspection before proceeding to place, execute, or cover it up, viz.:—

- Excavation of trenches, shafts, and tunnels in rock or earth.
- Excavation for foundations.
- Withdrawing of timber in tunnel, shafts, &c.
- Laying of foundation.
- Laying of pipes or sub-ducts.
- Placing centering in position.
- Keying of arches.
- Striking of centres.
- Shifting of concrete boxes.
- Filling in round branch and pipe-sewers into man-holes, sumps, &c.

*XV.—Conditions of Contract.*

135. The special and general conditions attached to this specification shall be held binding on all matters relating to this contract as far as the Engineer-in-Chief may deem the same applicable.

This is the specification marked "A" referred to in our annexed agreement with Her Majesty the Queen, dated the 10th day of March, A.D., 1892.

Witness—V. C. LUMSDAINE.

JOHN CARTER.  
D. G. SNODGRASS.

## "B."

## GENERAL CONDITIONS.

1. *Interpretation of Terms.*

Whenever the terms, hereafter explained in the present clause, occur in the conditions of contract and in the specification, they shall be held to mean, and shall mean as follows:—

- "Minister" shall mean the Secretary of Works of the Colony of New South Wales for the time being or any other person legally acting for him.
- "Engineer" shall mean the Engineer-in-Chief duly appointed by the Minister to have principal charge of the works.
- "Assistant Engineer" shall mean the person duly appointed by the Engineer-in-Chief to act in his behalf.
- "Superintending Officer" shall mean any person, who may from time to time be notified to the contractor by the Engineer-in-Chief as being entrusted with the local superintendence of the works.
- "Overseer" shall mean any person, who may from time to time be appointed by the Engineer-in-Chief, to supervise the works or any part thereof under the immediate direction of the Superintending Officer.
- "Contractor" shall mean "Contractors," when two or more persons have tendered or contracted jointly for the work.
- "Special Conditions" shall mean the "Special Conditions," hereto attached and forming part of the contract; such Special Conditions shall be deemed to be, and shall be, incorporated with the General Conditions.
- "Schedule Price" shall mean the rate, at which the contractor has offered and agreed to execute the kind of work under consideration.
- "Contract Sum" shall mean the sum total, resulting from the finally certified quantities, ascertained in the manner provided in clause 16, and calculated at the schedule rates or arranged prices.
- "Drawings" shall mean and include any plan, section, general or detail drawing, sketch, or illustration referring to the works and explanatory of, or supplementary to, the specification.
- "Extra Work" shall mean any kind or description of work, not comprised in the "Schedule of Prices," and other than those, the distinct mention of which may have been inadvertently omitted in the specifications or drawings and for which provision is made in clause 3 of these conditions.
- "Labour."—All cartage and haulage and work done or to be performed by machinery shall be included in the term "Labour."
- "Plant" shall mean and include all tools, utensils, stores, sheds, timber, scaffold, centres, moulds, templates, coffer dams, cordage, chains, tackle, boats, punts, rafts, sleepers, rails, waggons, trucks, trollies, engines, water and air pumps, boring and ventilating apparatus, signals, lights, diving bells and dresses, and every other thing necessary for the security, proper execution, completion, and specified maintenance of the several works.

2. *Extent of Contract.*

Supply of labour,  
materials, and  
plant.

The contractor shall, except in so far as the specification may expressly state to the contrary, provide at his own cost and expense all labour, material, and plant, and everything else necessary for the proper and complete performance of the contract.

Execution  
works.

All works described in, or implied, by the specification, or shown in any of the drawings, or set forth in any lists or tables thereon or attached thereto as well as those expressly herein provided for under clauses 3 and 4, are to be made and executed in every detail conformably to the several drawings, already prepared, or that may be prepared hereafter for the purpose of this contract, in strict accordance with the provisions of the specification and conditions, both general and special, and to the entire satisfaction of the Engineer.

Should any work be not so executed, it shall be at the sole risk of the contractor, and shall be immediately altered and amended at the contractor's cost and expense.

Setting out.

The contractor shall, at his own expense, set out accurately and to the satisfaction of the Superintending Officer, all the works comprised in this contract, in strict accordance with the drawings and specifications, and shall be solely responsible for their being so set out and executed, and that notwithstanding the Superintending Officer or Overseer may have assisted the contractor in setting out the same.

Contractor

Contractor shall also at his own cost and expense at any time—by day or by night, either on working days or on Sundays or holidays—render all such assistance, and supply all such labour, plant, and lighting, as the Engineer or Superintending Officer may require to check such setting out, or to inspect any portion of the works, which must for that purpose be left clear and free from any obstruction or impediment. During and for the performance of those operations contractor shall be obliged to suspend any or all of his work, if required to do so by the Superintending Officer, and without having any claim for loss or damage on account of such temporary suspension.

All bench marks, pegs and signals on the surface, and all alignments and level marks underground, put in by the Engineer or Superintending Officer for the purpose of checking the contractor's work, will be pointed out to the contractor and confided to his care. He shall, at his own expense, take all proper and reasonable precaution and care to preserve and maintain them in their true positions; in the event, however, of their being disturbed or obliterated by accident or from any other cause whatever, they shall be replaced by the Engineer or Superintending Officer at the contractor's expense, and the cost thereof deducted from any moneys, then or thereafter due to the contractor.

Protecting and maintaining signals and marks.

If two different contractors execute simultaneously two adjoining sections of the works, they shall be held jointly and severally responsible for effecting a proper junction of the sections.

Junction of different Contracts. Maintenance.

During the whole time of construction and during the "period of maintenance," referred to in clauses 10 and 18 hereof and more particularly described in clause 3 of the special conditions, contractor shall keep and maintain in good and sufficient repair all the works, executed or in course of execution, and make good all injury or loss, which may happen or occur to them, or to any materials, or plant, or anything else in connection with the works under this contract.

### 3. Specification and Drawings.

The specification and the drawings (if any), referred to in the specification, shall be taken to explain each other; and anything contained in the specification or in any of the drawings shall be equally binding on contractor, as if it were contained in all.

Specification and Drawings to explain each other.

Any dimensions, written or figured on the drawings, shall usually be taken in preference to measurements by scale; but in cases of doubt in this respect, or in case of any discrepancy between the drawings, specifications, and conditions, or any ambiguity or defective description in them, such doubt, discrepancy, ambiguity or defective description shall not invalidate the contract, but shall be rectified by the Engineer if he deem it requisite, and the contractor shall have no claim for compensation for damages on account of such discrepancy, ambiguity, or defective description.

Written dimensions to be preferred to scaling.

If neither specification nor drawings contain any mention of minor parts of works, which are reasonably and obviously necessary for the satisfactory completion of the works, such parts are to be provided, made, and executed by the contractor, without any extra charge, as if they were specially mentioned, and shall be deemed to be, and hereby are, included in the several schedule prices.

Omission of minor parts.

It is hereby expressly understood, that the contractor is bound to completely and thoroughly inform himself of every circumstance connected with, or relating to, the work, and of the correctness or otherwise of any information contained in, or supplied by, the drawings or specification, as he shall have no claim on account of any errors, omissions, or inaccuracies, that may be found in those documents after the contract shall have been signed, and since he has to provide in his tender for every contingency that may arise.

Errors of information at Contractor's risk.

A copy of the conditions, specifications, and drawings will be furnished to contractor free of charge, but he must himself compare the same with the original, as no claim will be allowed for any errors therein.

Supply of Drawings and Specifications.

All copies of drawings, &c., supplied to contractor are to be returned to the Engineer on completion of contract.

### 4. Increase or Decrease of Works.

The contractor is to execute in like manner and with the same quality of materials, as provided for the works, expressly mentioned in specification and drawings, any extensions, additions, deviations, alterations, or extra works, which the Engineer may require by an order in writing.

Quality.

The work, executed under this clause, will be measured up and paid for at schedule rates in the same manner as provided for the other works under this contract; and if it comprise any work not specified in contract and in schedule of prices, a special agreement shall be made between the Engineer and the contractor, and signed at the time of giving the order for such work.

Quantity. Prices of extra works.

In case the abovenamed parties shall be unable to agree on the value of such extra work, the Engineer shall be at liberty and fully authorised to have it executed by whomsoever he may think fit.

If value cannot be agreed upon.

No extra work, extensions, or any additions, deviations, or alterations whatever, which may be claimed by contractor, will be recognised or admitted under any circumstances, if done or executed without, or contrary to, an order in writing from the Engineer as aforesaid, and the production of such order shall be a condition precedent to contractor receiving payment for them.

The Minister, or the Engineer, acting on his behalf, may from time to time by writing under his hand require the omission of any particular portion or part of the works, described in the specification or shown on drawings; and the contractor shall have no claim for loss of profit, sustained damage, or other compensation on account of any such omission.

Omission of portion of the work.

### 5. Possession of Lands.

The Minister shall, within one month from the date of the signing of the contract by the contractor, put the latter in possession of such parts of the land, required for the execution of the permanent works or access to same, as in the opinion of the Engineer may be necessary for their commencement. And the Minister shall also from time to time put contractor in possession of such other parts of the land, as may, in the opinion of the Engineer, be necessary for the vigorous prosecution and timely completion of all the works.

Lands to be provided by the Minister.

The contractor must, however, procure for himself all other land, which he may deem requisite for any temporary purposes or for his own convenience; but the Minister will, at the expense of the contractor and only to the extent of any legal powers possessed by the Governor or Minister, assist the contractor in procuring such land or in procuring materials, suitable for the construction of the works, from any adjoining lands.

Land to be provided by Contractor.

Should

**Delay in getting possession.** Should any delay take place in giving to the contractor possession of any land required for the construction of the works aforesaid, such delay shall not be deemed a breach of contract, or give contractor any claim for compensation, but the contractor shall be entitled to a commensurate extension of time for the completion of the whole works.

**Possession not exclusive.** Nothing herein contained shall at any time prevent the Minister or any person duly authorised by him from entering upon and making use of such lands or any portion thereof for any purpose whatever.

#### 6. *Trespass.*

**Private lands.** The contractor shall not enter upon any lands outside the limits of the lands, defined by, and held in possession by him under clause 5 hereof for the construction of the works or for any purpose whatever in connection with this contract, without the distinct consent in writing of the occupier and owner of such lands, and shall not, without the permission in writing of the Engineer or Superintending Officer, remove any trees or structures within the limits of the lands defined in said clause 5 hereof.

**Cutting of trees.** Nor shall he open or throw down any part of a fence without making sufficient provision by temporary fences, gates, or other necessary accommodation, to be erected and maintained at contractor's cost, for preventing persons or animals from trespassing or straying from, or into, any enclosure, affected thereby.

**Roads.** Nor shall he interfere with any private or public road without making proper temporary provision for the convenience of owners or users thereof.

**Damage caused.** Any costs or damage incurred by the Government through any legal process on account of any trespass caused by the act or negligence of the contractor or his workmen, shall be considered as payment made to the contractor under this contract, and shall be deducted accordingly at the time of final payment to him.

**If not fenced by contractor, Engineer to have power to do so.** Should the contractor refuse or neglect to erect and maintain, either or both, any such temporary fences or other necessary accommodation, it shall be lawful for, but not obligatory on, the Engineer, after having given to the contractor twenty-four hours' notice in writing of his intention to do so, summarily, and without further process, to cause any such temporary hoarding, fences, gates, bridges, or other accommodation to be erected and maintained, which he may deem necessary for the proper protection either of such lands or of the adjoining lands, or for the safety of the property of the owners and occupiers thereof or of the general public, and the cost of so doing shall be deducted as provided hereinabove.

#### 7. *Sub-letting, Assigning.*

**No sub-letting or assigning.** The contractor shall not sub-let any portion of the works, nor enter into any sub-contract for the execution thereof or any portion thereof, nor shall he assign all or any of the moneys payable or to become payable under the contract, or all or any part of any other benefit whatsoever arising to him or which may arise under the contract, without the consent in writing of the Minister; and no assignment without such consent shall have any effect or be in any way recognised.

#### 8. *Progress of Works.*

**Work to be carried out under the direction of the Engineer.** It shall be lawful for, but not obligatory on, the Engineer or Superintending Officer to direct in writing the contractor to carry out the works in such order and in such manner as he shall deem fit; and

**Non-compliance.** If the contractor shall fail to make such progress with the works as the Engineer or the Superintending Officer shall deem sufficient to insure their completion within the specified time; or  
 If he refuse or fail in the opinion of the Engineer or Superintending Officer to use due diligence in carrying out any particular part of the work, which the Engineer or Superintending Officer shall have directed him in writing to carry out forthwith; or  
 If he shall use or employ bad or insufficient material, or shall execute any work in an imperfect manner or not to the satisfaction of the Engineer or Superintending Officer; or  
 If he shall fail or neglect to take down or remove such work, or to rectify any such work for seven days after being required to do so in writing by the Engineer or Superintending Officer; or  
 If he shall fail to employ what in the opinion of the Engineer or Superintending Officer is a sufficient number of men on the works; or  
 If he shall suspend work without the Engineer's order or sanction in writing; or  
 If the contractor shall in the judgment of the Engineer commit a wilful breach of the contract;

Then, and in any of such cases, it shall be lawful for the Minister to do at his option any of the following things, that is to say:—

**(a) employing additional men.** (a) The Minister or the Engineer may, on giving written notice to the contractor of his intention so to do, forthwith cause additional men to be employed and additional materials and plant to be purchased, and the cost of so doing may be deducted from any moneys, then due, or which may thereafter become due to the contractor.

**(b) absolute determination of contract.** (b) Or the Minister may, by notification in writing under his hand, delivered to the contractor, absolutely determine this contract without further process; and from and after the delivery of such notice as aforesaid, the contract shall be absolutely determined, and on such determination the money, which shall have been previously paid to the contractor under the contract, shall be deemed to be the full value of the work executed, and shall be taken and accepted by the contractor in full payment and satisfaction of all claims and demands under the contract; and the balances retained, including amount deposited as security, together with all materials and plant, then being in or near or upon the works for the purpose of being used or employed in or about the same, shall remain the absolute property of Her Majesty, and may be disposed of as the Minister may think fit.

#### 9. *Bankruptcy.*

**Bankruptcy.** If the contractor shall become bankrupt or insolvent, or shall make an assignment of his estate for the benefit of his creditors, it shall be lawful for the Minister, on behalf of Her Majesty, by notice in writing under his hand, to determine the contract by such notice, and for Her Majesty either to carry on the works under the Engineer's direction or to recontract with another contractor to proceed with and complete

complete the same upon such terms, stipulations, and conditions as shall be deemed expedient by the Minister; and all the then remaining materials and plant may be used in and applied for the purpose of the works; and on the final completion of the works the surplus of such materials and plant shall be delivered to the contractor's assignees or trustees, but without any payment or allowance for any loss or diminution, wear, tear, or injury they may have sustained in the meantime; and any losses, damages, costs, or expenses which shall, in the opinion of the Engineer, have been sustained by Her Majesty by reason of the premises, shall be deducted from the deposit money and the balance retained after payment of the progress payment; and the residue of such deposit money and percentages (if any), or any securities in which the same may be invested (but without any interest thereon), shall belong and be paid or delivered to the said assignees or trustees; and if there should be no residue, but a deficiency, the amount of such deficiency may be proved for as a debt against the estate of the contractor.

#### 10. *Suspension and Completion.*

The whole of the works under this contract shall be completed on or before the day set forth in clause 1 of the special conditions as the "date of completion of contract," and formally delivered up to the Engineer in perfect order and repair, and to his entire satisfaction. Completion.

In the event of any alterations, deviations, additions, or extra works being required to be executed by contractor, or in the event of any delay arising under this clause, or under clauses 5 and 15 hereof, the Engineer may allow such an extension of time (if any) as he shall think adequate for the proper carrying out of such alterations, deviations, additions, or extra works, or for the delay caused (if any). Extension of time.

The Minister, on behalf of the Queen, shall be entitled to deduct or set off for each and every week's delay after the date mentioned as the date of completion of contract, or after the expiration of the "extension of time" (if any) allowed under this clause, as and by way of liquidated damages, the sum mentioned in clause 2 of the special conditions. Liquidated damages.

Such damages shall be deducted from the final balance and the cash security lodged by the contractor in accordance with clause 20 of these conditions and with clauses 5 and 6 of the special conditions, or at the option of the Minister, from any other moneys payable to the contractor under this contract.

On receiving a written notice to that effect from the Engineer, contractor shall suspend the whole or any portion of the works, as may be directed in such notice. He shall have no claim for loss or damage on this account, unless the suspension exceeds one month, and such suspension shall in no wise vitiate the contract, but a commensurate extension of time for completing the works will be granted to the contractor. Suspension.

When, in the judgment of the Engineer, the whole of the works appear to be completed, they shall be tested or examined as may be provided in the specification; if the result of the test or examination be satisfactory, they will be formally taken over by the Engineer, who will issue a certificate to that effect, whereupon the period for maintenance shall begin. Testing.  
Maintenance.

#### 11. *Safety of Works and Persons.*

Contractor shall be liable for the reinstating or making good of any thing whatsoever which may be removed, displaced, damaged, or destroyed during the performance of the works, or by reason of the same; and he shall also be solely responsible for all defects to, and failures in, the works during the whole time of construction and the period of maintenance, whether the said defects arise from insufficient foundations, defective construction, bad materials, or any other cause within the contractor's control, or from the inclemency of the weather, landsprings, or similar cause. Reinstating defects.

Contractor shall also provide and maintain all boarding-barriers, night-lights, and properly-ballasted temporary roads required by any municipal or other authorities having charge or control of streets or roads, or which may be required for the convenience or safety of the public; and he shall also make all arrangements by temporary roads or bridges or otherwise, which may be required by any local authorities or by the Engineer, to prevent stoppage or delay of public traffic or any avoidable inconvenience to the public. Boardings, roads, &c.

During the whole time of construction of the works, and during the period of their maintenance, contractor shall be liable for any accident, damage, or injury whatsoever to the public or to any individual, which may be caused by his operations or his neglect, and also for the safety of any adjacent roads, streets, collars, vaults, pavements, walls, houses, buildings, or other structures, and shall be bound to erect, fix, secure, or remove any scaffolding, timbering, &c., as occasion may require or when ordered by the Engineer to do so; and in case of emergency or probable danger to life or property the Engineer, without notice to contractor, may provide or employ, at contractor's cost, such labour, materials, and plant, as may be necessary to meet the exigency, of which the Engineer himself shall be the sole judge. All such cost to be deducted from any sum then or thereafter due to the contractor under this contract. Liability for accidents, &c.

No opening is to be made in any street until a sufficient quantity of approved material and plant are on the ground to complete the length to be opened. Should any delay or dispute arise as to the supply of any material, the Engineer shall have power to direct any opening made to be filled up and the surface restored at contractor's cost, amount to be deducted from any money due to the contractor.

#### 12. *Agency, Notice, Right of Entry.*

When the contractor is not personally present on the works he must at all times during their progress have a responsible agent on the ground, who shall be deemed to be, and shall be, authorised to represent him for all purposes of this contract. Agency.

In case the contractor or his responsible agent shall not be immediately available at any point of the works, the instructions given by the Engineer, in writing, to any overseer, foreman, or workman employed on the works by contractor, shall have the same effect as if they were given to the contractor or his authorised agent.

Any written instrument or notice to be given or delivered to the contractor under this contract shall be deemed to have been so given or delivered when it is given or delivered to the contractor or his representative on the works, or left at the contractor's usual or last known place of abode or business. Delivery of notice.

The Engineer and any other person duly authorised by him shall have power at all times to enter upon all or any portion of the works; and to travel by any engine, lift, cage, carriage, truck, trolley, or other vehicle which the contractor may be using on, or near, or in connection with the works; and to make examination Entry on works.

examination of any work, fixed or unfixed, or in any state of progress, and of any materials or plant in use or intended to be used for the purposes of this contract; and the contractor shall give or afford facility for the exercise by the Engineer and other duly authorised persons of the powers given under this clause, and shall for that purpose cause the motion of any vehicle, engine, or other machinery to be arrested when requested so to do.

Progress notice.

Due notice shall be given by contractor to the Superintending Officer or overseer before any piles are swung and commenced to be driven; on the completion of all excavations for foundations, or otherwise, and before any foundations are laid therein; when foundation rings for wells are to be laid, or cylinders to be sunk, and before the sinking commences; before the filling in of the wells, cylinders, or other structures, or of sewer or pipe trenches is proceeded with; before centres are struck; before and after tunnel soles are laid; and at such other stages of progress of the works as may be specially directed in the specification.

### 13. *Dismissal and Mode of Payment of Men.*

Dismissal.

The Engineer or Superintending Officer may, for incompetency or misconduct, or inattention to orders, or other sufficient cause, require the dismissal within twenty-four hours by the contractor of any agent, overseer, foreman, workman, or other person employed by him on the works; and in the event of the contractor refusing or neglecting to comply with such requisition all further payments on account of the contract, may be stopped until such dismissal is carried out.

Cash payment.

The workmen, tradesmen, and labourers of every class or kind, employed on the works under this contract shall be paid their wages or other earnings in full in money, current coin of the Colony, at least once in every fortnight, and no ticket or other system of payment by goods of any sort, provisions, or liquor will be allowed on any pretence whatever.

Truck system.

Nor shall the contractor or any person employed by him, or in any way connected with him, establish any shop for the supply of liquors, provisions, or goods, nor shall the contractor cause or oblige his workmen to take their necessaries or goods of any kind from any person in particular.

The workmen or labourers of every kind or class shall be paid on the works (if it be possible) or in some building adjoining; and in no case shall they be paid at a public-house or other place where spirituous or fermented liquors or refreshments are sold.

Statutory declaration.

Before the payment of any money to the contractor, the Minister may require from the contractor a statutory declaration that the tradesmen and labourers of every kind employed on the works to which these conditions refer have been paid their wages and claims of every kind in full money, the current coin of the Colony, and to the latest date to which such wages or claims are due; and the Minister may withhold the payment of any money that may be due, or may become due, to the contractor until such declaration shall have been made and delivered to him.

### 14. *Material.*

Ownership.

All approved materials, plant, and prepared work brought upon the ground for use in or on the works shall be considered, and shall be, the property of Her Majesty the Queen until completion of contract; and contractor shall not take away, remove, or dispose of any such material or plant or prepared work without the written authority of the Superintending Officer.

Quality.

All materials supplied by contractor for, and used in, the works shall be the best of their respective kinds, and in conformity with any further particular directions that may be contained in the specification.

Arrival on ground.

Due notice shall be given by contractor to the Superintending Officer and overseer when any material is brought on the ground, all of which must be neatly stacked in regular heaps, submitted for approval, and approved of in writing by the Superintending Officer, before it may be used in the works; none but that so approved shall be used.

Removal.

The contractor, if so directed, shall remove entirely off the ground any inferior or improper material, or alter or remove any improper or unworkmanlike work at his own expense within twenty-four hours after a written notice in that behalf shall have been served upon him by the Engineer or Superintending Officer.

After the expiration of the time stated in such notice, it shall be lawful for, but not obligatory upon, the Engineer or Superintending Officer at any time to remove and, if necessary, to destroy any such material, or to pull down or alter any such work, and to replace or rebuild the same. The expense of so doing shall be deducted from any moneys then due, or that may thereafter become due, to the contractor under this contract.

Storing.

Cement is to be brought on the ground in quantities of not less than fifty barrels, at least ten clear days before it is intended to be used in the works, and kept in weather-tight sheds under lock and key. After having been tested and approved of, the approved barrels will be marked on the outside, and their contents may be used. After they are empty, they shall, in the presence of the Superintending Officer or any person deputed by him, be broken up, and thereupon removed off the works.

Explosives.

The use by the contractor on the works of blasting powder or any other explosive material shall be confined strictly to the limits, which will be set by an order in writing of the Engineer as to locality, time, quantity, particular kind of material, and precautions to be taken during its use.

Quantities.

In any case no larger quantity of explosive material shall be taken underground than is likely to be used during any current shift.

Storing underground prohibited.

Storing of explosive material underground shall be, and hereby is, absolutely prohibited; and for its storage on the surface special directions will from time to time be issued by the Engineer in accordance with the provisions of the Act regulating storage and conveyance of explosives.

Inspectors of powder.

Should contractor exceed the limits of such order, or not strictly observe the special directions in regard to use of explosives, the Engineer shall have power to appoint, at the contractor's expense, inspectors of powder, in whose presence alone the explosives may be made use of, and who shall have entire charge of all matters connected with their storage or supply to the works.

Reduced prices.

If the contractor shall be found to have supplied materials or executed work not in accordance with the true intent and meaning of the specification and conditions of this contract, and if the Engineer shall elect to allow such materials to be used or such executed work to remain, he shall have power to fix the price to be paid for any such material or work, and contractor shall be bound by the Engineer's valuation.

15. *Government Property.*

Should the Minister furnish to the contractor for the purposes of this contract any materials, or plant, or other articles of value, all of which are hereafter in this clause and in the specification included under the term "Government property," the contractor shall give a detailed receipt in writing to the Superintendent Officer at the time of delivery and before taking possession thereof. Delivery.

If required to do so by the Superintendent Officer, contractor shall erect, at his own expense, sheds or other covering to protect such property from the weather or from theft. Protecting.

He shall likewise make good any loss or injury which may happen to them from any cause whatever, and shall keep them in good and sufficient repair, and renew all moving and working parts which may become worn out, to the satisfaction of the Engineer or Superintendent Officer, during the whole time they are under his care. Repairs.

On the completion of the contract, all such property shall be returned to the Engineer, unless otherwise directed in the specification; and for that purpose it shall be removed, after having been put into a thorough state of repair, to the place or places mentioned in the specification, and there neatly stacked or arranged, as the Superintendent Officer may require. Returning.

The latter shall thereupon give a detailed receipt in writing for everything so returned, and until such receipt shall have been given the property shall be deemed to be, and shall be, under the care of the contractor. Discharge.

Should any delay occur in supplying contractor with any drawings, or specifications, or any Government property which may be specified to be supplied or delivered to contractor by the Minister, the contractor shall have no claim for compensation for any such delay other than that (if any) particularly set forth in the specification; but the contractor shall be entitled to such reasonable extension of time for the completion of the works as shall be fixed by the Engineer. Delay in delivery.

16. *Measurements, Quantities, and Accounts.*

Except in cases for which the specification distinctly prescribes another method or rule of ascertaining measurements or weights, the *net* measurements, according to the actual dimensions or weights, will always be taken, notwithstanding any custom to the contrary. The surplus materials to be removed from excavations shall be calculated as equal to the space actually occupied by the permanent works. Net measurements.  
Surplus soil.  
Quantity.

The distance of lead shall be measured from top of shaft or end of open cutting to centre of spoil-bank or other place of deposit. The schedule price for excavation shall cover all haulage in tunnels or cuttings, unless otherwise specified. Lead.

The contractor shall be present at all measurements, and, if required, assist in making the same. If he fail to attend after twenty-four hours' notice in writing has been delivered to him of the Superintendent Officer's intention to take measurements, and clearly setting forth the locality of such intended operation, the measurements made by the Superintendent Officer shall be binding on the contractor. In contractor's presence.

On the satisfactory completion of any part or portion of the works, and at all other suitable times, the dimensions of such piece of work shall be measured by the Superintendent Officer, recorded on drawings, kept or to be made for the purpose, and the quantities ascertained therefrom and entered into a quantity book, to serve as the basis for arriving at the cost of contract on completion of same. Time.

Within forty-eight hours of such measurements having been effected, contractor shall furnish to the Engineer an account of the work thus intended to have been finally measured up, showing in detail the dimensions, quantities, prices, and value, specifying day of measuring, in whose presence measured, and signed by contractor. Check accounts.

For the purpose of making progress payments, the dimensions of still unfinished portions of the work will be measured in a summary way monthly, or as near as may be, but without prejudice to the ultimate acceptance or rejection of such portions of work. Progress measurements.

On the day following the conclusion of such summary measurement, contractor shall furnish to the Superintendent Officer an account of all completed work and work done during the preceding month, giving detail quantities, prices, and approximate value of each. Monthly accounts.

Any final account to be presented by the contractor must be on similar form, and under the same heads as the printed tender form, with additional items at foot of same. Final account.

17. *Jobbing.*

When desired by the Superintendent Officer so to do, contractor shall furnish to said officer any skilled artizans, labourers, or carts with horses and drivers, for the performance of such services as the aforesaid officer may desire to be performed in connection with, for, on, or near the works under the contract. Jobbing.

Contractor shall supply those artizans, labourers, &c., with the necessary plant and lighting, and shall be paid for all services thus rendered the full amount provided therefor in the schedule of prices, under the head of "jobbing," at the end of every month, or as nearly as may be thereafter. The accounts for this "jobbing" shall, however, be rendered by contractor to the Superintendent Officer or overseer in half-weekly intervals, that is to say, during the forenoon of every Monday and Thursday, failing which he shall lose all claim to payments for the jobbing performed by him during the preceding three days. Paid monthly in full.  
Half-weekly accounts.

18. *Progress and Final Payments.*

No payments shall be legally due to contractor until after the entire completion of the contract; but progress payments on account, subject to all deductions herein provided for, will be made monthly, or as nearly so as may be, during the continuance of the contract, on the certificate in writing of the Engineer, at rates not exceeding those stated in clause 4 of the special conditions. Monthly progress payments.

The balance of the moneys due for works executed under this contract, less 5 per cent. and less the deductions properly to be made hereunder, will be paid within thirty days, or as nearly as may be, after the Engineer shall have certified under his hand that all the works under the contract, less those of maintenance, have been fully and satisfactorily completed, and that such balance, less the 5 per cent., is due to contractor. Balance.  
Provided

Insufficient balance. Provided that if the amount for maintenance, as entered by contractor in his tender, shall appear to the Engineer to be insufficient, the Minister may retain, on the declaration to that effect in writing by the Engineer, either the whole or any part of the sum otherwise deemed payable to contractor, till all the works under the contract, including those of maintenance, shall have been finally and satisfactorily executed.

Final payment. The said five (5) per cent., together with the "cash security" provided for in clause 20 of these conditions, will be retained until after the expiration of the "period of maintenance" more particularly described in clause 3 of the special conditions, and shall be paid to contractor (less the costs of any repairs or defects, should the contractor fail to execute the same) on the production of a certificate from the Engineer that all the works under the contract, including those of maintenance, have been finally and satisfactorily executed.

No progress payment after expiration of contract time. No progress payments will be made after the date specified for the completion of the contract until the whole of the works shall have been properly completed to the satisfaction of the Engineer.
